Notes: The whole or part of 159 Ordinance Survey blocks are being offered at this time. Some blocks have been split into separate awards. *SU81c is an extension to IGAS PL240 licence.

"Type" is the primary prospectivity identified in the application, but a PEDL licence covers any hydrocarbon and is not limited to this classification

S - Shale, CBM - Coalbed Methane, V - Abandoned Mine Methane Vent, C - Conventional

The above work programmes are provisional and Applicants may seek further discussions with the Oil and Gas Authority or decline to accept the offer.

A Firm commitment activity must be completed in the initial term (first 5 years) of the licence. A Drill-or-Drop leaves the decision whether or not to drill entirely with the licensee. If a well is to be drilled, it should be planned to complete drilling within the Initial Term.

2D is a two-dimensional seismic geologic survey to image a plane through the subsurface of the earth. 3D is a three-dimensional geologic survey to image a volume in the subsurface.
