Carbon-13

Carbon-13 (¹³C) is a natural, stable isotope of carbon with a nucleus containing six protons and seven neutrons. As one of the environmental isotopes, ...

Isotope mass: 13.003355 Da Protons (Z): 6
Natural abundance: 1.109% Neutrons (N): 7

Detection by mass spectrometry · Uses in science · Production

People also ask

What does carbon-13 do?

C-13 is used for instance in organic chemistry research, studies into molecular structures, metabolism, food labeling, air pollution and climate change. C-13 is also used in breath tests to determine the presence of the helicobacter pylori bacteria which causes stomach ulcer.

Carbon -13 NMR: Explanation, Spectroscopy, Use & Shifts

Carbon-13 is a relatively rare isomer. It only makes up about one percent of all carbon atoms. However, we use samples containing large numbers of molecules.
