

"ANYONE CAN TEST POSITIVE FOR PRACTICALLY ANYTHING WITH A PCR TEST"

Dr. Kary Mullis PhD, inventor of the PCR test.

"RT-PCR detects the presence of viral genetic material in a sample but is not able to distinguish whether an infectious virus is present."

Understanding cycle threshold (CT) in SARS-Cov-2 RT-PCR gov.uk publication (PDF).

The PCR test is used for 'Covid-19' and has been carried out on a large number of people. It detects the presence of minute amounts of genetic material from various (often dead) viruses, the Covid-19 virus among them, but does not necessarily mean the person is currently infected with a live virus.

This material produces a 'positive' result, which is then called a 'case', enabling ministers to spread panic at the number of 'cases' and lock down the country, shut small businesses, and wreck the economy, as well as stopping families and friends getting together and enjoying the normalities of a work, social and cultural life. It is all based on false positive results, because the PCR test cannot test for a live virus. **It's all an illusion. You can research for yourself and ask 'why?'**

TOTAL UK DEATHS JAN - OCT 2020

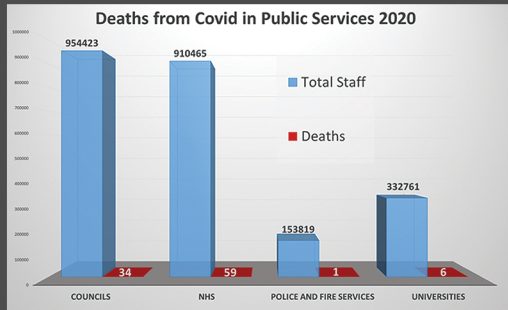

DEATHS FROM COVID
1,614 - 0.3%

ALL OTHER DEATHS
482,868 - 99.7%

ALL OTHER DEATHS
DEATHS FROM COVID

SOURCE: NHS ENGLAND - www.england.nhs.uk/statistics/statistical-work-areas/covid-19-daily-deaths

This chart shows the number of deaths with Covid on the death certificate and with no comorbidities. All these emergency measures for 0.3% of deaths. Why?

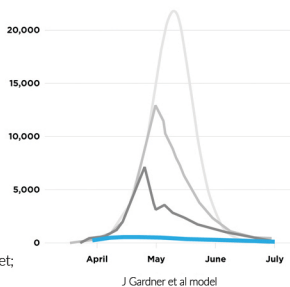

Data from FOI requests by Mark Oakford

Public service workers like police and NHS are in contact with hundreds of people daily. Yet their mortality rate is just 4.2 per 100,000. What pandemic?

Predictions of COVID-19 patients in Swedish ICUs vs. actual

Legend: Predictions (grey line), Actual (blue line)

SOURCE: Svenska Intensivvårdsregistret; Johan Norberg at The Spectator

J Gardner et al model

Sweden didn't lock down, and is now enjoying a fully normal, mask-free, open social and cultural life. Why isn't every one?

COVID-19 SURVIVAL RATES

AGE 0-19 99.997%
 AGE 20-49 99.98%
 AGE 50-69 99.5%
 AGE 70+ 94.6%

SOURCE: www.cdc.gov/coronavirus/2019-ncov/hcp/planning-scenarios.html#table-1

The average age of death from Covid is 82.4. The survival rate for Covid is the same as it is for the 'flu. There is no new disease to be afraid of.
