62850369	Maureen Butterly			No		Unsure	Unsure	SP11 contains strong and appropriate objectives for protecting landscapes, biodiversity, ecological networks, and heritage assets. However, the strategic allocations – particularly those in Pill and Easton-in-Gordano – do not comply with these principles, and the Local Plan does not demonstrate that they can meet the environmental standards outlined in SP11. As a result, SP11 is not sound, because the Plan: • applies SP11 inconsistently, • fails to justify how environmentally sensitive sites can be developed without significant harm, • does not demonstrate that mitigation is deliverable or effective, and • conflicts with national policy on biodiversity, Green Belt, landscape protection and heritage conservation. 1. The allocation of 1,100 dwellings at Pill/Easton-in-Gordano conflicts directly with SP11's requirements to protect biodiversity, ecological networks and horseshoe bat habitats SP11 specifically requires the Plan to: • Conserve priority habitats • Protect ecological networks • Support the North Somerset Nature Parks for horseshoe bats • Ensure development avoids lighting impacts • Protect wildlife corridors • Secure biodiversity net gain But the Pill/E-in-Gordano sites are located within or adjacent to: • the North Somerset & Mendip Bats SAC consultation zones, • key foraging corridors for horseshoe bats, • established wildlife corridors linked to the Severn Estuary SSSI, • areas with hedgerow networks and traditional pasture that are explicitly identified as high-value bat habitat. The Plan does not show: • any site-specific ecological capacity assessments, • how light spill will be controlled, • how foraging habitats will be protected or replaced, • how connectivity will be maintained, • how Nature Park principles will be applied (the policy only lists Wolvershill, Woodspring and Nailsea/Backwell as locations, not Pill/E-in-Gordano), • how biodiversity net gain will be achieved on or near these constrained sites. This makes the Plan not justified and not consistent with national policy (NPPF Section 15). 2. The Plan does not demonstrate that the strategic allocations can protect the landscape character and settlement identity as required by SP11 SP11 requires development to: • Protect valued landscapes, • Respect settlement identity, • Maintain strategic gaps, • Reflect the Landscape Character Assessment, • Protect the coast and its setting. However: • Pill/E-in-Gordano sits in a highly sensitive landscape setting between the Severn Estuary, rolling pastures, and wooded ridgelines. • The proposed allocations – including Pill Green and Lodway Farm – would significantly erode the rural setting and identity of the village. • No landscape capacity assessment has been published demonstrating that these areas can accommodate 1,100 homes without harm. • The Plan appears to apply more stringent protections in the south of the district than in the north, leading to inconsistency. This undermines the effectiveness of SP11. 3. The Plan does not demonstrate protection of the "best and most versatile agricultural land" SP11 requires the Plan to protect BMV land (Grades 1–3a). Several Pill/E-in-Gordano sites include BMV agricultural land. The Plan: • does not provide site-specific soils data, • does not justify loss of BMV land, • does not apply the sequential preference for lower-value land. This omission makes SP11 not justified. 4. No evidence shows that biodiversity net gain is deliverable at Pill/E-in-Gordano SP11 requires deliverable biodiversity net gain (BNG), but: • the Pill/E-in-Gordano sites are relatively small, • almost all greenfield, • contain established ecological value, • lack adjacent land for habitat creation, • lie near the SAC where additional mitigation cannot simply be "off-site". Without identified mitigation land, the required BNG is unlikely to be achievable. This means the Plan is not effective.	o make SP11 justified, effective, and consistent with national policy, the following modifications are required: 1. Require site-specific ecological assessments and HRA-level analysis before strategic allocations are confirmed The Plan cannot demonstrate compliance with SP11 without detailed ecological evidence. Required modifications: Insert wording requiring all strategic allocations—especially those within or near SAC/SSSI influence zones—to be supported by: Site-specific ecological impact assessments, HRA-level assessments (including bat foraging and commuting modelling), Lighting impact modelling, Habitat connectivity assessments. Require this evidence to be published before submission of the Local Plan, not deferred to the planning application stage. Remove or reduce allocations where ecological harm cannot be mitigated. 2. Amend SP11 to require Nature Parks or equivalent strategic mitigation for all locations affecting horseshoe bat habitats—not only Wolvershill, Woodspring, Nailsea and Backwell. The omission of Pill/Easton-in-Gordano from the Nature Parks strategy creates an internal policy inconsistency. Required modifications: Add Pill/Easton-in-Gordano as an area requiring a Nature Park or equivalent mechanism if strategic development is retained. Require identification of suitable land for habitat creation now, not post-adoption. Ensure long-term management obligations, funding and land control are secured. 3. Require evidence that biodiversity net gain (BNG) is realistically deliverable for each strategic allocation. BNG is unlikely to be achieved on small or ecologically constrained sites. Required modifications: Add policy text requiring each allocation to demonstrate available land, mechanisms and funding for delivering BNG. Remove or reduce allocations where BNG cannot be delivered on-site or within the local ecological network. Require demonstration that off-site BNG will not undermine SAC/SSSI integrity. 4. Require landscape and visual impact assessments (LVIA) for all strategic sites affecting rural settings, settlement edges or Green Belt. SP11 requires protection of valued landscapes, but LVIAs are not provided. Required modifications: Insert wording requiring LVIAs for all strategic allocations, including Pill/Easton-in-Gordano. Require the Plan to remove or scale back housing allocations where LVIAs show unacceptable landscape harm or settlement coalescence. 5. Include a requirement to demonstrate protection of settlement identity and strategic gaps using clear, published criteria. The Plan currently asserts this protection but does not evidence it. Required modifications: Publish criteria for assessing separation and settlement identity. Reassess all allocations—particularly Pill/Easton-in-Gordano—against these criteria. Reduce or remove allocations where settlement identity would be harmed. 6. Require soils assessments and justification for the loss of Best and Most Versatile (BMV) agricultural land. SP11 requires protection of BMV land, but the Plan lacks evidence. Required modifications: Require site-specific agricultural land classification surveys. Remove or reduce allocations where BMV land loss cannot be justified under NPPF policy. Insert wording prohibiting major development on BMV land unless all reasonable alternatives have been exhausted. 7. Strengthen SP11 to require the avoidance of ecological harm before resorting to mitigation. The current wording allows harm to be mitigated even where avoidance is possible. Required modifications: Insert the mitigation hierarchy explicitly: avoid		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								5. SP11 requires the creation of Nature Parks for horseshoe bats – but Pill/Easton-in-Gordano is excluded despite its ecological sensitivity The justification states that Nature Parks will be established at: • Wolvershill, • Woodspring, • Nailsea & Backwell, • Council-led or privately-led parks in other areas (e.g., Yatton/Cleeve). No Nature Park is proposed for Pill/E-in-Gordano, despite: • high bat sensitivity, • loss of foraging habitat, • major light spill risks, • proximity to the SAC. This creates an internal policy conflict – SP11 recognises the sensitivity, but the site allocations do not provide the mitigation mechanism. 6. SP11 requires development to protect heritage assets, but the Pill/E-in-Gordano allocations lack heritage impact assessments SP11 emphasises: • conservation areas, • listed buildings, • archaeological sites, • historic landscapes. But the strategic allocations at Pill/E-in-Gordano include: • historic field patterns, • hedgerows, • potential archaeological interest, • proximity to conservation areas. No Heritage Impact Assessments (HIAs) are provided. This omission renders the policy not justified. 7. SP11 requires green/blue infrastructure enhancement, but the Plan does not evidence that strategic allocations can accommodate it The Pill/E-in-Gordano area is constrained by: • steep topography, • existing drainage patterns, • flood risk zones (e.g., Markham Brook), • limited space for SuDS and green buffers. No evidence is provided to show these sites can deliver the required green and blue infrastructure. Summary SP11's objectives are appropriate, but the Local Plan does not demonstrate that the strategic allocations – particularly the 1,100 homes at Pill/Easton-in-Gordano – can: • protect ecological networks, • conserve sensitive landscapes, • safeguard BMV agricultural land, • achieve biodiversity net gain, • maintain settlement identity, • protect bat habitats or SAC/SSSI features, • deliver Nature Parks, • or mitigate heritage impacts. Therefore, SP11 is not sound under the tests of justification, effectiveness, and consistency with national policy.	> minimise > mitigate > compensate. Require removal of allocations where significant ecological harm cannot be avoided. 8. Require Heritage Impact Assessments (HIAs) for all strategic allocations with potential to affect heritage assets or historic landscapes. No HIAs have been provided for several strategic sites. Required modifications: Add text requiring HIAs for allocations near conservation areas, historic field patterns, known archaeological features and listed buildings. Remove or amend allocations where heritage harm cannot be avoided. 9. Include a policy mechanism to prevent development where light pollution would harm bat habitats or dark landscapes. Light-sensitive habitats are especially relevant at Pill/Easton-in-Gordano. Required modifications: Insert wording requiring lighting strategies that maintain dark corridors, with measurable thresholds and monitoring. Remove allocations where darkness cannot be preserved due to site layout, topography or proximity to settlement edges. 10. Require green/blue infrastructure (GBI) provision to be realistic and deliverable. Several strategic sites have physical or hydrological constraints. Required modifications: Add a requirement for every strategic allocation to include a GBI Delivery Plan showing drainage capacity, SuDS feasibility, habitat connectivity, and long-term stewardship. Remove or alter allocations where GBI cannot be delivered effectively (e.g., floodplain adjacency at Markham Brook). Summary Modification To be sound, SP11 must be strengthened to: Require ecological, landscape, heritage and soils evidence before confirming allocations; Apply Nature Park and ecological mitigation requirements consistently (including Pill/Easton-in-Gordano); Ensure BNG, habitat connectivity and the mitigation hierarchy are deliverable; Protect valued landscapes and settlement identity using evidenced criteria; Remove or reduce allocations where environmental harm cannot be avoided. Without these modifications, SP11 fails the soundness tests of justification, effectiveness, and consistency with national policy (NPPF Section 15).		
30921569	Lucy Byrne			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	Unsure	The Council hasn't taken sufficient account of the protection of wildlife and habitats in Pill and Easton-in Gordano in its assessment of the release of land from the Green Belt (SP7) There is a lack of clear strategies and mitigation policies in the Local Plan, without sufficient funding plans to ensure sufficient protection of wildlife and habitats in the potential development areas around Pill (see LP4 and Schedule 1) The best grade 2 agricultural land around the village is not being protected, in accordance with Section 15 of the National Planning Policy Framework.	Proper local consultations with ecology experts who know the locations well should be undertaken. refer to the reccomendations in the wild service ecology review that was a supporting document for the Pill neighbourhood plan https://pillanddistrictplan.org/environment-and-landscape/wild-service-ecology-review/		
31037185	Nigel Cooke			Yes		Yes	Yes				
58629377	T Crane			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	Unsure	I support the intent of SP 11 to protect and enhance heritage assets, landscapes and biodiversity, but the Local Plan's proposals for Nailsea and Backwell contradict this policy rendering it unsound. The plan would release Green-Belt land and allocate development on flood-prone, ecologically rich areas (including land adjacent to a Site of Special Scientific Interest), causing irreversible harm to habitats and landscape character. The proposed "Nature Park" and bat-mitigation measure amount to after-the-fact compensation rather than avoiding harm. Consequently, the plan fails to meet statutory obligations under the National Planning Policy Framework (NPPF), the Habitats Regulations and the council's own sustainability objectives. Reasoned justification: Conflict with NPPF and statutory duties: The NPPF requires plans to conserve and enhance the natural environment and to avoid significant harm to biodiversity and designated sites. It also sets out a mitigation hierarchy: avoid, then mitigate, then compensate. SP 11 echoes these principles by stating that development should protect habitats and secure net biodiversity gains. The Local Plan proposes to allocate about 3 500 dwellings on land north of Nailsea and east of Backwell that currently forms part of the Green Belt and includes low-lying meadows, rhynes and wildlife corridors. Some of this land is adjacent to a Site of Special Scientific Interest (SSSI) and supports protected bat species. Developing these areas would destroy mature habitats and disrupt ecological networks. The policy's proposed mitigation of a new Nature Park and contributions to bat-habitat provision does not respect the mitigation hierarchy. Creating a new park after the destruction of existing habitats cannot replace the complexity and ecological value of the original environment. This approach is inconsistent with the NPPF, which requires harm to be avoided in the first place, and with the council's sustainability objective to "protect and where possible enhance biodiversity". Flood risk and environmental harm: SP 11 should ensure that development avoids areas at risk of flooding and protects natural floodplains. Yet the plan proposes housing on land around Jacklands Lake, Moorend Spout and	Avoid development on ecologically sensitive and flood-prone land: Amend LP 3 and SP 3 to remove allocations on land adjacent to the SSSI, floodplains and key wildlife corridors. Retain Green-Belt boundaries around Jacklands Lake, Moorend Spout and Backwell Lake. Direct growth to brownfield sites and less sensitive areas. Strengthen the mitigation hierarchy: Require proposals to demonstrate how they have avoided harm to habitats and species before considering mitigation or compensation. Only if avoidance is demonstrably impossible should off-site compensation (such as a Nature Park) be considered, and it must deliver measurable biodiversity net gain. Comprehensive ecological assessment: Mandate site-specific ecological impact assessments that cover protected species (bats, birds, badgers, amphibians), habitats (rhynes, wetlands, hedgerows) and cumulative effects. Require these assessments to inform site boundaries and design, ensuring that important habitats are retained and enhanced. Commit to net biodiversity gain and habitat connectivity: SP 11 should specify a minimum percentage for biodiversity net gain (e.g. 10% in line with Environment Act requirements) and ensure that development maintains and strengthens habitat corridors. The proposed Nature Park should be delivered early and connected to existing habitats, not as a late compensatory measure. Integrate flood-management with ecological objectives: Require developments to incorporate natural flood-management solutions, such as protecting and restoring wetlands, creating attenuation ponds and retaining rhynes—that provide ecological benefits and reduce downstream flood risk. Mandate all planning applications to prove that new housing does not increase flood risk elsewhere.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Backwell Lake, which have experienced flooding in recent years. DP 9 (Flood risk) requires development to avoid flood-risk areas and incorporate sustainable drainage, but allocating flood-prone Green-Belt land directly contradicts this. Converting natural floodplains to housing increases downstream flood risk and reduces biodiversity. The proposed idea of wetland on Nailsea Moors is welcome, but it will not offset the loss of existing wetlands and rhynes that would be built over. Green-Belt and landscape character: One of the five purposes of the Green Belt is to assist in safeguarding the countryside from encroachment and to preserve the setting and special character of historic towns. SP 11 emphasises protecting landscapes and their setting. The plan's release of Green-Belt land for development at Nailsea and Backwell undermines these purposes. It would erode the openness of the countryside, create coalescence between settlements, and harm the landscape character of the Nailsea Moors and Backwell hills. The "Golden Rules" cited in LP 3 are not exceptional circumstances; they are generic requirements (affordable housing, infrastructure, green space) that should apply to any development. They do not justify losing Green-Belt land that provides ecosystem services and cultural value. Inadequate protection for protected species and habitats: The plan acknowledges that contributions to a Nature Park are needed to offset impacts on bats, but it does not ensure that existing flight corridors and roosting sites will be maintained. Lighting, noise and fragmentation from new roads and housing will disturb bat populations. Similarly, no specific measures are described to protect other protected species, such as birds, amphibians and invertebrates, or to ensure the continuity of hedgerows and rhynes that support biodiversity. Cumulative impacts and lack of assessment: SP 11 requires consideration of cumulative impacts on the historic and natural environment. The Local Plan has not provided a comprehensive cumulative assessment of how the combined developments at Nailsea, Backwell, Woodspring and Wolvershill will affect ecological networks, flood risk and landscape character. Without such assessment, the policy cannot be considered justified or effective	Protect landscape character: Include landscape-sensitivity studies in the evidence base and use them to guide the scale and design of development. Preserve long-distance views and the separation between Nailsea, Backwell and surrounding villages.		
31072289	Jeanne Craske			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Allocations around Nailsea and Backwell will harm conservation areas, bat habitats and floodplains.	Utilise suitable brownfield sites.		
9138657	Home Builders Federation		Home Builders Federation	No	• Justified • Effective • Consistent with national policy				Policy SP11 is not considered to be sound as it is not effective, justified or consistent with national policy The simple reference to securing biodiversity net gain fails to reflect the national mandatory requirement for 10% Biodiversity Net Gain that is currently being introduced by the Government. The final Statutory Instruments to enable the mandatory BNG requirements in the Environment Act have now been laid before Parliament, and the policy went 'live' on Feb 12th 2024. A vague reference to BNG is therefore ineffective and the policy should instead make specific reference to the 10% mandatory Biodoversty Net Gain. Without such clarification the Plan will not be consistent with current national policy. However, as we have already mentioned the BNG Guidance is currently under review so it will be important that the Plan reflects the most current DEFRA and MHCLG policy and guidance on this issue. This serves as a further example of the structural problem of the Plan in having vague and unspecific and unnecessary overarching policies when the detail is located elsewhere in subject specific policies. Again, HBF questions what this overview policy adds to the Local Plan and what developers could do to show compliance with it, when it is so vague and nonspecific. HBF suggests this policy could be deleted in its entirety as the Plan itself set out the matters around the historic and natural environment are already covered in twelve other main policies listed at the end of this section. 49543265	Grahame Dixie		Backwell Residents Association	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	Unsure	Summary and Conclusion The LP contains noble words about the need for and importance of protecting our county's Best and Most Versatile Land (BMV) The data demonstrates that NSC's actions contradict this stated intension. NSC own data is that 17% of the county is grade 1 and 2 land. If NSC had in place an effective policy of protecting our BMV, then a lower proportion than this of the land area allocated for building would be of grade 1 & 2 land. Analysis of NSC's own report demonstrates this is not the case. The LP identifies 60 sites where housing is projected on existing agricultural land. However, 57% of these sites are on grade 1&2. This evidence shows that far from protecting high quality agricultural land, in reality NSC is preferentially selecting BMV for building. There is then a radical contradiction in the LP between the thought and the action. The LP needs to; (i) Insist that all building application include independent soil evaluations , (ii) Communicate to the developers that preference would be given to applications on poor quality agricultural land, (iii) Benchmark the approval of sites on grade 1 and 2 land against the proportion of NSC land area of this quality land to monitor that the LP's stated BMV objectives are being effectively implemented.		1. Insist that all building application include independent soil evaluation 2. Communicate to the developers that preference would be given to applications on poor quality agricultural land, as well as brown field sites 3. Benchmark the approval of sites on grade 1 and 2 land against the proportion of NSC land area of this quality land	Best and Most Versitale Agricultutral Land DIXIE notes.docx
31088129	Bloor Homes South West	Turley		No	• Positively prepared • Justified • Effective		No	Policy SP11 (Historic and Natural Environment) We support the broad aims and aspirations of this draft policy. However, we do have concerns regarding the wording and the level of detail the policy seeks to set out. Some of the terminology proposed is vague at present, and we consider it may be challenging/ difficult for planning applications to demonstrate how they adhere to the various requirements. It contrasts with part (d) of paragraph 16 of the NPPF which states plans should contain policies that	Some of the detail may be best refined and streamlined to be less generic. Alternatively, some of the lengthy wording may be better captured as accompanying paragraphs to support the policy itself. 					• Consistent with national policy			are clearly written and unambiguous, so it is evident how a decision maker should react to development proposals. We welcome the caveat at the start of the second paragraph in the policy that confirms the bullet point examples apply only 'where appropriate', albeit some of the detail may be best refined and streamlined to be less generic. Alternatively, some of the lengthy wording may be better captured as accompanying paragraphs to support the policy itself.			
30898817	Ciara Donegan-Davies			Yes		Yes	Yes				
63052097	Stephanie Fowler	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes		We would observe that this policy captures a broad range of objectives, including landscape, heritage, ecology, green and blue infrastructure together with settlement identity and strategic gaps. In respect of the latter, it is noted that this is, in its own terms, 'strategic' in nature and, like the Green Belt, not for the purposes of highlighting or assessing landscape or other character or quality; it is simply a tool for resisting development. This should therefore be omitted from the policy as it unduly conflates specific characteristics with spatial planning initiatives. It is noted that the policy seeks to 'protect the best and most versatile agricultural land' and this objective is supported as consistent with national planning policy. It would not be reasonable or appropriate to go beyond this in terms of unduly restricting development in areas of higher agricultural quality, however, given the need to balance the objective of protecting BMV land with securing the right development in the right places, with associated technical requirements.		R001v3_NSLP_Reg19_Fowler.Dec25.pdf
62836257	L Power			No	• Positively prepared • Justified • Effective	No	No	You state "Proposals should aim to avoid, then minimise adverse impacts on biodiversity by retaining habitat as far as possible and compensate for any loss or habitat or biodiversity feature to ensure no net loss." If you truly support this, you would REMOVE Land off Churchill Avenue, Clevedon from your consultations (of which there have been multiple over recent years). Bats, river etc - protect this green space and never consult on it again!	You state "Proposals should aim to avoid, then minimise adverse impacts on biodiversity by retaining habitat as far as possible and compensate for any loss or habitat or biodiversity feature to ensure no net loss." If you truly support this, you would REMOVE Land off Churchill Avenue, Clevedon from your consultations (of which there have been multiple over recent years).	How were local residents informed of this consultation? What ecological surveys have been carried out? Why have there been multiple consultations about the same site, and why have different names been used throughout these consultations? Why are you picking on one if the poorest parts of the town, taking away this green space from the flats on Churchill Avenue?	
51511393	Natural England		Natural England					Whilst we welcome the specific reference to the establishment and delivery of North Somerset Nature Parks in this policy, we strongly recommend that the Definition of Nature Parks includes reference to the fact that a key feature of Nature Parks will be grazing, preferably using cattle. "Greater Horseshoe bat populations are sustained by foraging habitat which consists primarily of permanently-grazed pastures interspersed with blocks or strips of deciduous woodland or substantial hedgerows." For Lesser Horseshoe bats, "it has been found that landscapes that were most important contained a high proportion of woodland, parkland and grazed pasture, linked with linear features, such as overgrown hedgerows." Where a requirement for a Nature Park as mitigation for loss of bat foraging habitat and landscape connectivity has been established, it is key that each Nature Park provides a diversity of prey species for Horseshoe bats. Grazing will be an essential part of land management to achieve this. The requirement to graze areas of land will play a part in determining the locations, sizes and layouts of Nature Parks, due to the need to balance the needs of livestock against factors such as public access. It will be essential that these factors are considered at the outset when masterplanning the strategic development locations, in particular. We also recommend reference to a clear vision for Nature Parks, perhaps through use of a Case Study or Studies to inform the evidence base. Nature Parks can provide multiple ecosystem services, but their primary purpose will be to protect, enhance and connect Horseshoe bat habitat.	We strongly recommend that the Definition of Nature Parks includes reference to the fact that a key feature of Nature Parks will be grazing, preferably using cattle. We also recommend reference to a clear vision for Nature Parks, perhaps through use of a Case Study or Studies to inform the evidence base.		Reg 19 Soundness Response Dec 2025.docx
57020033	Stuart Hunt			Yes		Yes	Yes				
58528577	Mrs Mary Theresa Kingston		Ms Mary Kingston	Unsure	• Effective	Unsure	Yes		Housing development at Woodhill Nursery in Congresbury will detract from the landscape and scenic beauty of Cadbury Hill Fort Scheduled Ancient monument. Not just from the perspective from the ground looking up, but also from the top of the ancient Hill Fort looking down. No matter how carefully planned the lighting requirements are for potential new houses - there will be disruption to the horseshoe bats which cannot be monitored, controlled or enforced. Headlights from cars>, Summer Barbeques? will anybody enforce a ban on lighting up houses at Christmas? The allotments at the end of Woodhill should be ringfenced from future development and identified as a local green space to ensure access to the countryside and benefits of working with nature are preserved for those who do not enjoy the luxury of their own gardens. Locating a school on Smallway/the end of Woodhill, would destroy the strategic gap between Yatton and Congresbury, disturb bat commuting routes, add light pollution to an important area for greater and lesser Horseshoe bats.		
39179649	Adrian Mealing			No	• Positively prepared	Yes	Yes	I consider Policy SP11 to be unsound because it is not positively prepared, not justified, not effective, and not consistent with national policy. SP11 states that the Local Plan will protect and enhance the historic environment, natural	To make SP11 sound, the Plan must include: A detailed, site-specific ecological assessment and SAC mitigation strategy for Congresbury, including: Preservation of dark corridors,		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					' Justified ' Effective ' Consistent with national policy			environment, biodiversity networks, designated sites, landscape character, and heritage assets. However, the housing allocations for Congresbury fundamentally conflict with these objectives. My concerns are as follows: 1. SP11 is not positively prepared The policy requires the plan to protect biodiversity, landscape character and heritage, yet the allocations in Congresbury (183 dwellings) lie adjacent to or within areas of significant environmental and heritage sensitivity, including: The North Somerset & Mendip Bats SAC sustenance zones, Core dark corridors used by horseshoe bats, The landscape setting of Cadbury Hill Fort (Scheduled Monument), Environmentally sensitive rhynes and meadows, Areas requiring the flood risk Sequential Test. SP11 is therefore not aligned with the spatial decisions made elsewhere in the plan. 2. SP11 is not justified SP11 requires evidence-led protection of environmental assets. However: The Plan provides no site-specific ecological assessment for the Congresbury allocations. No evidence has been provided demonstrating that bat flightlines and foraging habitats can be safeguarded. The Woodhill Nurseries allocation is acknowledged to affect the setting of Cadbury Hill Fort, yet the plan does not explain why harm is unavoidable or justified. No Landscape and Visual Impact Assessments (LVIAs) have been undertaken for the allocated sites. No cumulative environmental assessment is provided despite three allocations within a small geographic area. This means SP11 is not supported by the required technical evidence and is therefore unjustified. 3. SP11 is not effective SP11 cannot be implemented because the Plan does not provide: A mitigation strategy for the Bats SAC, Defined dark corridor protection zones, Environmental buffers around bat habitats and rhynes, A heritage-led masterplan for development near Cadbury Hill Fort, Flood resilience measures or hydrological modelling for sequential test areas. Without actual, deliverable mechanisms, SP11 cannot achieve the outcomes it describes. 4. SP11 is not consistent with national policy The NPPF requires: great weight to be given to conservation of designated heritage assets (NPPF 200), development to avoid biodiversity net loss and protect ecological connectivity (NPPF 179–182), application of the Sequential Test for flood risk (NPPF 159–161), avoidance of unacceptable landscape impacts (NPPF 174). The Congresbury allocations contradict these principles: Development at Woodhill Nurseries intrudes into the wider setting of Cadbury Hill Fort (Scheduled Monument). The sites lie within internationally significant horseshoe bat sustenance zones, with no provided mitigation. Ecological network fragmentation is likely. One site requires the Sequential Test yet was allocated despite alternative lower-risk locations elsewhere in North Somerset. Therefore, SP11 fails to reflect national policy requirements for historic and natural environment protection.	Sustenance zone protection, Habitat buffering and enhancement, Coordinated lighting and landscape strategy. A full heritage impact assessment for the Woodhill Nurseries allocation and surrounding landscape, demonstrating how harm to the setting of Cadbury Hill Fort will be avoided. A defined Landscape Strategy for Congresbury identifying rural edges, key views, green infrastructure networks, and rural character protections. Removal or modification of any allocation partially within higher flood-risk areas, unless the Sequential Test can be met and evidenced. A cumulative environmental impact assessment covering all three Congresbury allocations. Without these modifications, SP11 cannot be delivered and remains unsound.		
58582945	Nailsea Action Group		Nailsea Action Group	No	' Justified ' Effective	Unsure	Unsure	Nailsea Action Group's focus in this section is the preservation of our natural environment. In the spirit of SP11's clauses "Conserve, restore and enhance priority habitats, ecological networks and the protection and recovery of priority species;" and "Preserve and enhance conservation areas," Nailsea Action Group, for example, strongly supports the restoration of Netcott's Meadow located at the end of Bucklands End, now neglected by its current owner. Under the previous owners the site was well managed by the Avon Wildlife Trust, but this organisation is no longer permitted access. This meadow was, until 2017, the only remnant of species-rich, damp, unimproved grassland in the area, and was well known for its orchids, damp-loving plants, insects and birds, lying on the southern edge of the parish of Nailsea and adjoining Backwell Lake, which is a Nature Reserve. Because of its importance, and the threats to it, the meadow was made the subject of an EIA (Agriculture) Regulations in 2017 by Natural England. Netcott's Meadow had been designated as a County Wildlife Site for many years, and identified as the only Coronation Meadow in what was the county of Avon under a scheme devised by the now King https://coronationmeadows.org.uk/meadow/netcotts-meadow-nailsea. It has been listed in the current North Somerset Local Plan as a Local Green Space for planning purposes, and is also included in a proposed extension of the Green Belt around the southern edge of Nailsea. The current owner is ignoring all these identifications, allowing the meadow to return to scrubland with the intention of building dwellings on the site.	Enforce Policy DP35		
57928993	Kevin Payne			No	' Justified ' Effective ' Consistent with national policy	Unsure	Unsure	I object to Strategic Policy SP11 because the Plan does not provide adequate evidence that development around Pill and Easton-in-Gordano will avoid, mitigate, and provide measurable biodiversity net gain. The area includes sensitive ecological zones, such as consultation zones for the North Somerset & Mendip Bats SAC and proximity to the Severn Estuary SSSI. The plan lacks up-to-date habitat surveys and fails to consider ancient woodland and priority habitat buffers, weakening its biodiversity soundness. The Plan does not show clear, funded, or deliverable strategies for habitat protection or ecological buffers. There is also no assurance that high-quality agricultural land and wildlife corridors will be adequately protected. Flood risk near Markham Brook and Pill Green is significant, and the policy does not clearly ensure sequential testing or mitigation for areas at high risk of flooding. As a result, SP11 is not justified, not effective, and not consistent with NPPF paragraphs 174–182.	To make SP11 sound, the Council must provide site-specific, funded strategies to protect habitats and species, secure biodiversity net gain, maintain ecological buffers, and protect high-quality agricultural land. It must also ensure that flood risk is fully assessed using sequential testing and that development is restricted or mitigated in high-risk areas. Without these measures, allocations around Pill and Easton-in-Gordano should be reconsidered.		
51429825	Mike Priaulx		Swifts Local Network: Swifts & Planning Group	No	' Effective ' Consistent with national policy	Yes	Yes	We support the reference in SP11 to swift bricks in the justification to the policy, but it is not effective nor consistent with national policy because they don't include the content of NPPG Natural Environment 2025 paragraph 017 (link: https://www.gov.uk/guidance/natural-environment), with regard to numbers of swift bricks, nor swift bricks being a universal nest brick for a range of small bird species, nor inclusion of the best-practice guidance references.	To make the plan sound, effective and consistent with national policy, please add the text from NPPG Natural Environment 2025 paragraph 017 (link: https://www.gov.uk/guidance/natural-environment), especially with regard to at least one swift brick per dwelling for new developments, swift bricks being a universal nest brick for small bird species, and the sources of best-practice guidance referenced in this paragraph of the NPPG. I copy this key text from the NPPG here for reference: "swifts rely on urban cavities for nesting, and the national loss of suitable nesting sites through building renovation has been part of the reason for the species' decline. Developments should include integrated nest boxes (commonly known as swift bricks) where possible, with the general aim across a development of a minimum of one nest box per unit. Nest boxes can provide important habitat for other species as well as swifts, such as starlings and sparrows. Extensive guidance is available on wildlife friendly features, including the National Design Guide and National Model Design Code which illustrate how well-designed places can support rich and varied biodiversity by facilitating habitats and routes for wildlife. 62776065	Paul Segar			Yes						I support all the points outlined in this policy, especially conserving the landscape and scenic beauty and minimising the visual impact of any development. Protecting the conservation areas and buildings and heritage architecture of significance is very important, as is respecting the landscape surrounding these settlements.	
51079969	Justin Saunders		Pill and Easton-In-Gordano Parish Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	Yes	Policy LP4 is not consistent with this policy. The green belt land for all sites in LP4, other than Ham Green, is either grade 1 or grade 2 agricultural land. This is "best and most versatile agricultural land". The Pill Road and Pill Green farmland sites, in addition to being grade 2 land adjoin and are above a river where uncommon wildlife have been observed in the area of ancient woodland either in or adjacent to the new development areas proposed. No specific buffering is proposed and destruction of some of the ancient woodland will take place for an inappropriate active travel route to link these two sites to the existing secondary school.	LP4 needs to be withdrawn and reconsidered through greater use of areas that have been built within current settlement boundaries.		
30736993	Kath Scargill									I support the active travel green routes and the reopening of the train station	
31062913	R Storrar		KWAW	Yes		Yes	Yes			I fully support this policy, as it is vital to protect the historic and natural environment. Without the historic buildings and their settings, for example a village and the surrounding landscape, being preserved them the county becomes a bland expanse of housing estates or industrial complexes. Many villages rely on tourism and North Somerset is a highly valued holiday destination. These holidaymakers want to experience the idyllic rural lifestyle, and this includes the chance to see a variety of wildlife and natural features, unblighted by housing estates. The protection of the rural habitats of the Greater and Lesser Horseshoe bats is essential. They rely on areas with no light pollution, so the establishment of Nature Parks to cover all their feeding zones should be a priority.	
62846721	Cleeve Parish Council		Cleeve Parish Council					We do not consider the North Somerset Local Plan 2041: Pre-Submission Plan to be sound. Based on the detailed representations of Cleeve Parish Council, we believe the Plan fails three of the tests of soundness set out in NPPF paragraph 36: Positively Prepared, Justified, and Effective. 1. Positively Prepared The Plan does not adequately address the needs of young people or newly forming households, nor does it ensure that new development will be properly supported by essential infrastructure. The	Policy SP11: Historic and natural environment: Cleeve Parish Council welcomes the development of Nature Parks, recognising also that the management of the parks provides job opportunities. Where such Nature Parks are proposed by developers as mitigation, such proposals should require independent and expert		Submission on behalf of Cleeve Parish Council in respect of Pre.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								repeated use of discretionary language (“will be expected”, “should have regard to”) leaves critical requirements—such as drainage, healthcare capacity, active travel connections, affordable housing percentages, biodiversity measures, renewable energy deployment, and sustainable design—insufficiently guaranteed. The Plan also fails to provide a clear and sustainable policy position on future growth at Bristol Airport, or on how Green Belt releases will be compensated or justified. As a result, the Plan does not convincingly meet the district’s needs in a sustainable and deliverable way. 2. Justified The policy choices taken in the Plan do not always represent the most appropriate strategy when tested against reasonable alternatives. The evidence base appears inadequate or incomplete in several areas, including: (a) the justification for Green Belt releases at Bristol Airport; (b) the robustness of climate-adaptation measures given the known risks of flooding, sea level rise, extreme heat, and pressure on water resources; (c) the lack of evidence demonstrating that non-mandatory design guidance will achieve sustainable outcomes; (d) the omission of low-rise flats in existing towns as a viable and necessary option for delivering affordable housing for young people; and (e) insufficient assessment of the landscape, safety, environmental and carbon impacts of airport-related growth, including the absence of a cumulative emissions assessment. In each case, reasonable and more sustainable policy alternatives have not been adequately explored. 3. Effective The Plan’s delivery mechanisms are weak and do not provide confidence that its policies will be realised. Critical infrastructure (roads, drainage, healthcare, active travel routes, mass transit provision and energy resilience) is not tied to development in a sufficiently enforceable manner. Policies that rely on voluntary interpretation or “expectations” are unlikely to secure required outcomes, particularly in relation to affordable housing percentages, design quality, biodiversity net gain, native woodland expansion, protection of commons, and the safeguarding of Best and Most Versatile agricultural land. Policies concerning Bristol Airport do not demonstrate effective cross-boundary working or credible mitigation strategies, while the approach to flood-risk management does not provide sufficient assurance that developments requiring the Exception Test would be safe, sustainable, or financially deliverable. As drafted, there is insufficient certainty that the Plan can be implemented as intended.	reporting to justify the benefit of the mitigation. Cleeve Parish Council would like the policy to acknowledge the importance of the Western Forest, and NSC’s role in working with landowners to increase the amount of native species tree cover, both in joining up existing blocks of woodland and in increasing the density of trees in field boundaries. See also Policy DP37: Trees, woodlands and hedges:		
62471329	Environment Agency		Environment Agency	Yes						Agree with policy no mention or link to DP9 or SP2.	
58636097	Nancy Wedin			Yes		Yes	Yes	I strongly agree with this as Wrington is a village which prides itself on its historical land, with beautiful old constructions that make up its identity and distinctiveness. Our village is a Special Area of Conservation. I completely agree also that biodiversity and all species of wildlife must continue to be protected and conserved.			
58415265	Mr D Wheeler			No		No	No	Basically the wildlife in the countryside is dwindling fast probably faster than ever before. Not nearly enough is done to protect the wild life. Major construction on greenbelt land does not help. Any green field developement has a major impacr on wildlife. So habitat should first the protected as many of the species are in law (but this does not stop developers). Then additional habitat should be creates where possible inclusing wild flow meadows, ponds, hedging, trees etc. At the moment it seems that council highways departments are chopping down trees all over the county just because falling branches could cause a hazard to vehicles. This must stop. Far more cars are damaged due to pot holes in roads due to poor council maintenence	See above		
58493633	J Wills			No	' Justified	No	No	NSC has not properly considered: Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset. Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm and Black Rock. The strategic ecological importance of these sites in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. The fact that both areas were added to the Green Belt in the late 1980s due to their high ecological value.	Do not build these houses		
58471489	B Wilson			No	' Justified	Unsure	Unsure	Using green belt land next to an ancient woodland is irresponsible. Places like Weston big wood are precious and to encroach on the land around it would be detrimental to the flora and fauna of the area.	No building next to ancient woodland		

SP12: Minerals

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
29254593	Tarmac Trading	Steve Lamb	Tarmac Trading Limited	Yes		Yes	Yes			Tarmac Trading Limited believe that the Local Plan is Legally Compliant, Sound and has met the Duty to Cooperate with regard to the minerals related policies in the Plan, namely policies SP12, LP16, LP17, LP18, DP30 and DP31. The policies meet the legal requirements in terms of minerals by virtue of identifying sufficient potential construction aggregate resources during, and at the end of the Plan period and also in the safeguarding of working sites, ancillary operations and appropriate mineral resources. The minerals policies are sound as they have been positively prepared and are consistent with national policy in terms of allocations and safeguarding. The Duty to Cooperate has been met in the provision of crushed rock between North Somerset and South Gloucestershire.	
31037185	Nigel Cooke			Yes		Yes	Yes				
32925633	Bath and North East Somerset Council		Bath and North East Somerset Council							A minerals safeguarding area is identified on the policy maps north of Nempnett Thrubwell (identified as Freemans Quarry off the A38 near Bristol Airport within the Local Plan Policy LP14). Within this area a preferred minerals working area and areas of search for minerals have been identified. The policy incorporates measures including adherence with existing	North Somerset Local Plan Reg 19

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 										development management policies relating to such things as air quality, noise, transport, biodiversity and also requires that 'The amount of mineral extracted per year and the level of vehicle movements to and from the quarry must not exceed existing permitted levels at the quarry.' The above policy approach appears to be reasonable and justified. Given the proximity to the shared boundary B&NES would request further dialogue and engagement on the approach to minerals working, including on relevant planning applications.	Consultation 2025 FINAL.pdf
62865825	G Davies			Yes		Yes	Yes				
40891777	Breedon Trading Ltd		Breedon Trading Ltd.	Unsure		Yes	Yes	The Company supports the policy commitment to a steady and adequate supply of aggregates, and seeking to maintain a land bank for crushed rock of at least 10 years throughout the Plan period. It also supports the policy to safeguard permitted limestone workings from inappropriate development which could adversely affect mineral production. It is felt, however, that the reference to recycled aggregates implies that it forms part of the maintenance of the steady and adequate supply of aggregates, which in the Company's view would be contrary to paragraph 226 of NPPF.	The council will plan for a steady and adequate supply of aggregates, by seeking to maintain a land bank for crushed rock of at least 10 years, and allocating areas for mineral working where necessary, having regard to the need to promote deliverability of permitted reserves of crushed rock. It will also seek to encourage the provision of facilities for the production of recycled aggregate.		
31062913	R Storrar		KWAW	Yes		Yes	Yes			This policy makes sense, it is important to identify and protect possible mining sites. It is also important that existing sites are worked, as they provide much needed employment.	
62471329	Environment Agency		Environment Agency							Agree with policy no mention or link to DP9 or SP2.	
58415265	Mr D Wheeler							Durnford Quarry in Long Ashton causes many problems to locals. It may no mlonger be a quarry but it recycles aggregates which is good (but this has substantially increased traffic to the quarry. Mud is taken from the quarry on the wheels of vehilcles and dumped on Clerken Combe. This mud is then splattered on road signs so they are illegible, the cats eyes are covered in mud and no longer work. The quarry could avoid this by simply keeping the vehicles visiting the quarry separate those working on the quarry. This is not done as it would make things more complicated for the quarry and more expensive. This will cause an accident one day (if it has not already). This quarry needs to be included in the plan.			

SP13: Waste

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 59945953	Rich Coleman			No	• Positively prepared • Justified • Effective			North Somerset Council has proven itself to be incompetent with regards waste management. £360K on red recycling bags that are rotting and cannot be recycled. The proposed booking system for recycling centres appears not to have been thought through with no consideration with regards access for transport in the local area and flytipping. Recently announced that plastic waste won't generate funds originally stated ?	Inquiry to be held into whole function.		

Policy LP1: Strategic location: Wolvershill (north of Banwell)

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
29403105	Diverse Partnerships Yatton Ltd	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	Our client has no comments to make upon these allocations beyond noting the concerns stated above about their ability to fully contribute to the housing supply within the plan period. The policies themselves further articulate the points made in Section 2 above, by setting out the need for full masterplans prior to the making of any applications, design codes and infers the potential for changes from the published Infrastructure Delivery Plan. It is noted that Strategic Location LP1 is already subject to 3no. live applications, and it remains unclear whether the policy will in effect require withdrawal of these. These all indicates substantive work is required, that in the case of LP2 at the very least, will likely delay application submission and so the overall expected timetables for such large scale development. Therefore, while our client has no objection to the strategic locations their scale and scope indicate that they are unlikely to deliver their full yield during the plan period and so will require further allocations to deliver the identified housing target.			NSC Reg 19 Diverse Partnerships Yatton Ltd Reps Dec 25 - Redacted.pdf
63043809	Wain Homes	Russell Smith	Wain Homes						Policy LP1 states that a new mixed-use strategic location is proposed at Wolvershill (north of Banwell) to accommodate around 3,300 dwellings, including 990 affordable homes. It is a central element of the spatial strategy and evidencing its delivery is fundamental to the soundness of the plan.		North Somerset Local Plan Regulation 19 Wain Homes.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									As set out in our representations to SP8, the Council has not provided evidence of the anticipated delivery from this site.Policy LP1 states that “a single masterplan covering the entire allocation and proposed development, delivery plan and supporting design codes will be prepared to guide its coordinated and comprehensive development and the creation of a sustainable community.” However, outline planning applications have been submitted ahead of any development delivery plan and the formulation of a single masterplan, which brings into question the effectiveness of this requirement of the policy and raises questions about the timescales required to secure detailed planning permissions. As we noted in our representations to the SA, the assessment against Objective 1.4 indicates that infrastructure requirements for the site were not assessed at SA stage. The Infrastructure Delivery Plan published in October 2025, reveals the high levels of infrastructure investment required. The Additional Sites Viability Addendum also published in October 2025, concludes that viability is challenging on the site and it does not provide evidence that the 30% affordable housing requirement of LP1 will be deliverable. Overall, while Wain Homes supports the principle of development in this sustainable location, it has significant concerns that the amount of homes attributed to this site in Policy SP8 will not come forward within the plan period. Further evidence should be provided for Examination, including a site specific topic paper, delivery programmes and statements of common ground with the various controlling interests and infrastructure providers.		
51524513	Bellway Homes Ltd	tor&co	Bellway Homes Ltd	Unsure					Bellway note that a Wolvershill Masterplan Framework SPD will be prepared for the proposed strategic allocation, as referred to within the policy. Bellway wish to reserve the right to comment on its detail as soon as a draft version can be shared. Only then can the bulleted requirements of the allocation be sufficiently justified, refined and/or clarified – such as 17, 19 and 22. Bellway understand the document is due to be considered by Cabinet in February 2026 and as a key stakeholder, would welcome any engagement with the Council prior to its publication.	Bellway strongly support the identification of the strategic location at Wolvershill (north of Banwell) to accommodate around 3,300 homes under Draft Policy LP1. The allocation forms a critical part of the solution to meeting North Somerset's local housing need and will provide a mix of much needed market and affordable homes, with new infrastructure, in one of the most highly sustainable and suitable locations within the district, being well related to the principal settlement of Weston-super-Mare and in line with the council's proposed spatial strategy for new residential development. Given the increase in the housing target, there will be a need to boost the supply of homes and seek to increase density and site capacity at strategic growth locations where appropriate, including at the proposed Wolvershill site allocation. In this context, Bellway would highlight that it has an option over a small parcel of land referred to as ‘Land east of Summer Lane’ within the allocation. This Site is suitable and available for development in the immediate term, expected to accommodate circa 130 new homes with public open space, play areas and a green/dark corridor for linking habitats. The Site can help address local housing need as part of the overall draft strategic growth location and wider masterplanning for this site. Initial technical work has been undertaken to explore the feasibility of development, in line with the wider strategic allocation and masterplan for Wolvershill, which has informed the Framework Masterplan attached at Appendix 2. This demonstrates that the whole Bellway Site, as shown as part of the draft strategic allocation, represents a suitable site for development. The technical work progressed to date has not identified any fundamental constraints that would prevent the delivery of housing on the site. The site is available now and would meet the definition of deliverable and developable in the NPPF. Bellway is in liaison with the adjoining landowners that make up the strategic allocation to ensure that the proposals align with	20251212 504317 JE - North Somerset Reg 19 (Reps obo Bellway Homes).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										the wider comprehensive proposals for the proposed allocation. Bellway is aware of and supports the principle of the emerging proposals to date informing the three live outline planning applications (ref. 24/P/2446/OU2; 24/P/2690/OU2; 25/P/0046/OU2). The Site and wider strategic allocation offer the opportunity to secure sustainable, plan-led development, delivering a significant portion of housing across the plan period to help provide resilience for the district in terms of its housing land supply. Further, the site itself can deliver homes early in the plan period, to assist with the Council's 5-year housing land supply position. Bellway note that a Wolvershill Masterplan Framework SPD will be prepared for the proposed strategic allocation, as referred to within the policy. Bellway wish to reserve the right to comment on its detail as soon as a draft version can be shared. Only then can the bulleted requirements of the allocation be sufficiently justified, refined and/or clarified – such as 17, 19 and 22. Bellway understand the document is due to be considered by Cabinet in February 2026 and as a key stakeholder, would welcome any engagement with the Council prior to its publication. Please note, we have provided more specific points regarding the affordable housing requirement under Draft Policy DP43 (Affordable Housing) and suggested Gypsy, Traveller and Travelling Showpeople requirement under Draft Policy DP44 (Gypsies, Travellers and Travelling Showpeople).	
63094305	Harrow Estates	Boyer		No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No		The draft LP identifies three additional strategic locations for growth, Wolvershill, Banwell(Policy LP1), Woodspring, South West Bristol (Policy LP2) and Nailsea/Backwell (Policy LP3)and Housing Allocations (Policy LP5). However, the evidence base demonstrates that all three locations face substantial barriers to delivery, infrastructure dependencies, viability constraints and uncertainties over timescales. As a result, the reliance placed upon them makes the Spatial Strategy ineffective and undermines the delivery of the housing requirement set out in Policy SP8 over the Plan Period. Harrow remain seriously concerned that the Banwell Bypass, which the Council identifies as the essential gateway infrastructure to enable the Wolvershill strategic allocation, lacks a credible and evidenced delivery programme. The updated Stage 7 Transport Assessment continues to treat the Bypass as a committed scheme, yet provides no confirmed construction timetable, no funding certainty beyond the headline HIF allocation, and no risk assessment demonstrating that the scheme can be delivered early in the plan period. The Assessment itself acknowledges that existing congestion, safety issues and severance on the A371 will persist in the absence of the Bypass, and that Wolvershill's entire access strategy is dependent upon the Bypass being operational. However, no modelling is presented to confirm its performance under Local Plan growth scenarios. Several associated interventions (including active travel links and bus service upgrades) also remain unprogrammed and unfunded. In short, the evidence base relies on optimistic assumptions rather than evidence, exposing the allocation to serious delivery risk. Given that the Stage 7 Assessment confirms Wolvershill is wholly reliant on the Bypass for safe access, network capacity, and the delivery of sustainable transport modes, the absence of a secured delivery programme renders the allocation premature and unsound. Any delay or change to the Bypass would immediately compromise the ability of Wolvershill to come forward, with knock-on effects for dependent schemes across the A371 corridor and the wider network. The allocation therefore represents a high-risk strategy built on infrastructure that is not yet guaranteed, not yet modelled in detail for cumulative impacts, and not yet aligned with a confirmed phasing plan. On this basis, Harrow Estates considers that reliance on the Banwell Bypass fundamentally undermines the deliverability and effectiveness of Policy LP1. Notwithstanding this, it is noted that the Banwell Bypass is funded		251211 Land East of Failand Reg 19 Reps.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									through Homes England's Housing Infrastructure Fund (HIF). However, despite the availability of headline funding and the recent condition amendment, the Council continues to rely on an indicative delivery date of 2026 without providing any robust programme, contractual certainty, or mitigation strategy should this timescale slip. As the strategic modelling outputs remain unknown, the real effects of the bypass its timing, capacity benefits, and wider impacts are still speculative. It is therefore entirely premature for the Council to propose such a substantial strategic allocation where the foundational infrastructure is neither secured nor understood in operational terms. The delivery of development at Wolvershill is wholly reliant on the effective implementation and full integration of the Banwell Bypass with the wider transport network. This dependency arises before the Council has even commenced collaborative masterplanning or design coding work with landowners and developers as required by LP1. Harrow Estates note that the Infrastructure Delivery Plan (IDP, November 2023) identifies the Bypass (TR3) as "time critical," yet simultaneously lists several further dependent schemes such as the A371, Banwell and Sandford active-travel improvements (TR34) as essential. These remain undeliverable until the Bypass is completed. The implication is that a single delay in one major scheme will halt multiple others, rendering the entire spatial strategy fragile and at high risk of failure. In terms of viability, Harrow welcome the Council's recognition that Wolvershill requires a more detailed viability review. However, the high-level viability evidence prepared by DixonSearle Partnership raises fundamental concerns:"3.5.24… Values around VL3 (c. £4,000/sq.m) likely being needed to support viability at 35–40% AH, without the school provision… Rising costs potentially reducing the VL3 40% AH outcome to a deficit… VL5 plus, a significant increase from current, would be needed to support all cumulative costs…3.5.25… Indications appear only slightly more positive… pointing upwards of 30% AH at this time rather than clearly at 40% or thereabouts." Whilst Harrow Estates acknowledge that the assessment is high level and may shift over time, it remains the case that the viability of this allocation is uncertain, fragile, and heavily dependent on optimistic assumptions about future market conditions. DixonSearle's own commentary confirms that the policy requirements set by NSC are ambitious to the point of risk, and that achieving the full policy burden including affordable housing, strategic infrastructure contributions, school provision, and net zero requirements is unlikely without a major and unproven increase in values. 8.9 It is noted in the council Viability Addendum (October 2025) highlights the fact that delivery of strategic allocations identified in the Regulation 19 Plan, and Wolvershill in particular, face material deliverability risks arising from marginal development viability. The Addendum shows that viability at the policy's expected affordable housing levels is not achievable in current market conditions, with positive outcomes only at very low affordable housing proportions and viability becoming marginal even at 25 per cent. At 35 per cent affordable housing, the Addendum concludes that development is unlikely to be viable without substantial changes to cost assumptions, increased sales values or significant public subsidy. This is reinforced by the fact that there are no direct new-build comparable in the strategic area to evidence the level of value uplift the Plan implicitly relies on. While nearby schemes such as Parklands Village (Weston) currently achieve values in the region of £3,500 to £4,000 per square metre, the Addendum emphasises that large-scale development at Wolvershill would need to establish its own stronger value something which cannot be assumed at plan-making stage. The strategic allocations are also heavily dependent on major infrastructure that is both costly and, in several cases, not yet confirmed or fully defined. This creates a further viability burden that erodes the capacity of these sites to meet policy requirements. Taken together, the Council's own evidence indicates that the deliverability of the strategic sites is uncertain, reliant on unproven value growth and contingent upon infrastructure that may not be secured in practice. On this basis, the Plan's reliance on these locations to deliver significant housing growth and policy-level obligations is not supported by the available evidence, nor does it meet the NPPF expectation that allocations should be demonstrably viable and deliverable at the point of adoption. Harrow therefore maintain that allocating such a large, infrastructure-dependent strategic site at Banwell is fundamentally flawed. It is detached from the region's primary economic centre (Bristol), contradicts the Plan's sustainability objectives, and cements an inherently less sustainable pattern of development that increases car dependency and infrastructure strain. The allocation at Wolvershill is not justified, not effective, and not supported by robust or complete evidence and therefore		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 									cannot be considered sound.		
21449761	Bloor Homes South West (Wolvershill)	Turley		No	• Positively prepared • Justified • Effective • Consistent with national policy		No	Summary of representation (see full attached document) Policy LP1 for the Wolvershill strategic location is supported in principle as it represents a significant opportunity for the delivery of sustainable development within North Somerset. The are changes suggested to detailed elements of this policy that are considered beneficial for the purposes of clarity and effectiveness, or where it is considered that evidence suggests that a different approach should be pursued. The changes suggested to Policy LP1 can be summarised as follows: Confirm and clarify the capacity for 3,300 dwellings to be delivered at the Wolvershill Strategic Location and within the plan period to 2041; Reframe the affordable housing requirements for Policy LP1 based on a percentage figure, in line with any final figure set by Policy DP43 for all greenfield sites, or a bespoke rate for the Policy LP1 allocation based on final viability testing (accounting fully for all policy requirements); Identify specific locations of M5 crossing points referenced in policy text on a supporting plan or diagram to improve clarity; Clarify and confirm specific requirements for healthcare facilities within the development or as off-site contributions, with costs fully accounted for as part of viability assessment; Clarify density expectations for Strategic Location with reference to terms “medium” and “high” density used within the strategic location policy; Clarify expectations and requirements for the North Somerset Nature Park in terms of how the Council expects this to be delivered, and how it is to managed and maintained; Remove the requirement for “A strategy to support and maximise climate change resilience will be required including an approach to maximising carbon storage and other measures across the development with exploration of opportunities for community-based renewable energy generation” – these aspects are adequately covered by other policies within the plan; Remove requirement for “Defined areas of green infrastructure should be planted with wildflower species within a wider natural landscape setting”; Remove or amend the requirement for treatment of historic farmsteads, to ensure that this requirement is clearly stated and aligns with other policies within the plan on heritage assets and placemaking principles; Remove requirement that “Rainwater should be treated as a resource and proposals should maximise its reuse”; Clarify justification for all recreation provision to be sought via Policy LP1, including specifically the requirement for outdoor tennis courts; Reflect amendments required to clarify provision to be made for the effective delivery of Primary Education places with the development; and Remove requirement for gypsy and traveller provision (or contributions) from with Policy LP1, in line with comments made on Policy DP44.	Changes as above.		Reps on Behalf of Bloor Homes to NS LP 2041 Reg 19 Consultation (Wolvershill) merged.pdf
51710305	Wain Estates (Wolvershill)	Tetlow King Planning	Wain Estates	No	• Effective			We are pleased that draft Policy LP1 allocates Wolvershill (north of Banwell) as a mixed use strategic location to accommodate 3,300 dwellings including affordable housing, 3ha employment and other uses. The strategic location includes Wain Estates’ land, which is identified on the site location plan at Appendix 1. We strongly support draft Policy LP1 and the allocation of the strategic location. The allocation is a clear and logical preferential site in the Council’s spatial strategy. It is outside of the main constraints in North Somerset – Green Belt to the north; Flood risk to the west; and National Landscape to the south of the District. The release of land at this location is a requirement of the HIF funding that was awarded to fund Banwell bypass, which was granted permission in 2023 and is under construction. We do have concerns over the wording of some elements of the draft Policy. Our responses to the draft Policy and our requested amendments are provided below. Housing The allocation may be suitable for 3,300 homes and we do not object to this approach in draft Policy LP1, but the Consortium considers delivery at this level would go beyond the Plan period; it would be realistic to assume circa 2,800 homes could be delivered by 2042, with the remaining 500 in the next plan period. Affordable Housing Draft Policy LP1 states that “A new mixed use strategic location is proposed at Wolvershill (north of Banwell) at the location defined on the Policies Map to accommodate around 3,300 dwellings, including 990 affordable homes.” It is considered that the draft Policy should set out the requirement for affordable housing as a percentage instead of a numerical figure. This would allow for flexibility in the event that the final number of dwellings is not exactly 3,300. This amendment would also be consistent with draft Policy DP43: Affordable Housing, which sets out the requirement for affordable housing as a percentage of the total number of dwellings on a site. The affordable housing requirement is reduced to the equivalent 30%, which reflects the 30% for greenfield land in amended Policy DP43 Affordable Housing. Wain Estates supports the reduction in affordable housing from the previous 38.5% requirement, which was inconsistent with draft Policy DP43. As set out in the viability evidence6, an affordable housing requirement of more than 30% creates viability issues; indeed, the evidence demonstrates ‘relatively challenging viability’ even at 25% affordable housing: “In scenario 1 [2,800 dwellings], positive viability can be seen where 10% affordable housing is assumed but viability becomes marginal with 25% affordable housing except at the highest value level tested. Scenario 2 [3,300 dwellings] shows slightly stronger results with 25% affordable housing potentially being viable at the mid to higher value part of the tested values range. In any event, it appears that as much as 35% affordable housing is unlikely to be viable (without some form of change to infrastructure/ values or cost assumptions and / or significant additional subsidy) in either scenario – although some level of ‘additionality’ beyond the development funded AH levels / tenure	See attached full document for specific suggested changes to Policy LP1.		0707-06.M23 Wain Estates NS Pre Submission Reg 19 Local Plan 12.12.25 with Appendices.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								make up should not be ruled out as the LP framework acknowledges…" It is critical that any percentage sought is viability tested, with the final position based on all other infrastructure and obligations sought from the development. Masterplan, Delivery Plan and Design Codes Draft Policy LP1 states "A single masterplan covering the entire allocation and proposed development, delivery plan and supporting design codes will be prepared to guide its coordinated and comprehensive development and the creation of a sustainable community. This will include a phasing strategy linking the delivery of development parcels to infrastructure provision." Together, the consortium – the three main land promoters Wain Estates, Ainscough Strategic Land and Bloor Homes South West – have and are continuing to work together to prepare a single comprehensive masterplan for the strategic location. We also recognise that there are additional landowners within the strategic location who have also expressed an interest in bringing their land forward for development. The consortium and other land owners and promoters are engaging with the Council in the preparation of its emerging draft SPD for Wolvershill (north of Banwell). It is the consortium's intention that the emerging masterplan will cover the whole Wolvershill strategic location. We welcome this engagement and collaboration with the Council and support the requirement of draft Policy LP1 to prepare a single masterplan and delivery plan. It is important that these plans are prepared in parallel with the Examination of the Plan to ensure timely delivery of the dwellings within the Plan period. Wain Estates supports the insertion of supporting text which allows for further guidance in the form of a Masterplan Framework or SPD to be prepared providing further detail for the allocation. This ensures flexibility in the determination of application proposals at Wolvershill. Extensive work has been undertaken on a Strategic Design Code for Wolvershill strategic location by the consortium which can be referenced by the policy and its supporting text. Whilst Bloor as a housebuilder is preparing a detailed design code for its site this is not possible for Wain Estates and ASL as land promoters and a degree of flexibility is therefore required in the draft policy to respond to this. Further design coding can be undertaken to inform reserved matters when the housebuilder is known. Wain Estates therefore requests that this element of draft Policy LP1 is amended (see attached full document for suggested changes). Complement Banwell Village "The new development must complement Banwell village in respect of the scale and range of facilities and encourage integration between the existing and new communities" We support this element of the draft Policy. Banwell Bypass "The proposed development is reliant upon, and must be integrated effectively with the design and delivery of the Banwell Bypass" We support this element of the draft Policy. It is essential that Banwell bypass enables access for pedestrians and cyclists between Banwell and Wolvershill. Transport consultants for the consortium are continuing to engage regularly with the Council and highway officers overseeing the Banwell bypass project. Strategic Gap "A Strategic Gap is defined between the new development area and Banwell to retain the character and setting of Banwell" Whilst the provision of the Strategic Gaps is accepted, there is greater need for flexibility within draft Policies LP1 and also LP10: Strategic Gaps to allow for the provision of community facilities and other active Green Infrastructure uses that will provide beneficial amenity for the communities of Banwell and Wolvershill. The Strategic Gap should not be unusable space that separates the two communities. Sensitively Responding to Existing Uses Policy LP1 requires development proposals to demonstrate how they have sensitively responded to existing uses on site including existing business and residential areas. Wain Estates does not object to this although these matters would be considered in detail at Reserved Matters stage and broader related issues are being considered as part of our outline submission. Walking and Cycling Routes "The creation of attractive, easily accessible, safe and direct walking, wheeling (wheelchairs, mobility scooters and other wheel-based mobility aids), and cycling routes linking the new development with local facilities, within Banwell and into Weston-super-Mare, Parklands, and Worle, including the three M5 crossing points (two road bridges and a direct cycle/pedestrian access into ParklandsVillage). This is likely to require alterations to the future role and function of a section of Wolvershill Road to facilitate active travel in the centre of the development in order to achieve this. Creation of new cycle and pedestrian links to Parklands to be delivered during the initial phases of residential development;" The draft Policy requires the facilitation of active travel at the centre of the development. We support this element of the draft Policy. The emerging masterplan and draft SPD for Wolvershill must maximise the use of these connections including the crossing points over the M5, which mean that the strategic location is not isolated by the M5. Public Transport "The creation of effective public transport links into Weston-super-Mare, Parklands, and Worle, employment areas and other destinations such as railway stations, transport hubs (including designated bus corridors) and improving accessibility for existing Banwell residents" We support this element of the draft Policy. Transport consultants for the consortium are continuing to engage regularly with the Council and highway officers to deliver effective public transport links. Densities		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The draft Policy states that development at Wolvershill will comprise predominately medium to high densities. Whilst Wain Estates does not object in principle to higher densities, we would suggest that the draft Policy is amended to clarify that higher densities are encouraged at the western edge adjacent to the noise barrier. (See attached full document for suggested changes). Transport Measures, IDP and J21A J21A Draft Policy LP1 has been amended: “Provision of a package of transport measures as identified in the Infrastructure Delivery Plan including provision of a transport hub at the local centre, delivery of key access junctions onto the Banwell Bypass and wider transport mitigation schemes. Development proposals should ensure that any future planning and delivery of a new motorway junction on the M5 south of J21 is not precluded;” The Council’s evidence base does not clearly justify the requirement for a new motorway junction on the M5 south of J21 – known at J21A - at Wolvershill strategic location and it is noted that National Highways has not requested that one is planned for and delivered now or in the future. For these reasons, whilst Wain Estates does not object to this element of the draft Policy in principle, we would object to future planning for a new motorway junction at this location if it precludes the planning and delivery of the other requirements of draft Policy LP1, particularly for the required housing and employment. IDP The draft Infrastructure Delivery Plan (IDP) October 2025 provides an overarching strategy for the delivery of various types of infrastructure related to Wolvershill strategic location. It identifies infrastructure: transport, education, environmental, social and utilities. The IDP also includes a schedule of projects/improvements proposed, relevant to Wolvershill. The majority of these projects and improvements relate to improving transport links and ensuring the allocation provides active travel routes to and from the site. Wain Estates has no objection to this in principle and details of active travel measures are being discussed with the Council as part of the outline application. We would also like to add that detail measures/design would be provided at Reserved Matters stage. The other remaining projects and improvements relate to major transport schemes such as the Banwell Bypass which is currently being delivered. There is also no further comment regarding the traffic signal improvements proposed at the bypass. The IDP includes extensive provision for transport measures including active travel off site and these interventions require further critical review and costing. This must form part of the viability testing to inform the overall package of planning obligations sought from Wolvershill. This process will be undertaken as part of the determination of the Consortium’s outline planning applications. National Landscape “The development must respect the landscape setting, including minimising any adverse impact on the Mendip Hills National Landscape through sensitive design” We support this element of the draft Policy. Please also see our below response to draft Policy DP39, which fails to allow for allocations for development in the Plan including at our site at Wolvershill (north of Banwell) where there will be views of the National Landscape. The wording of draft Policy LP1 recognises this and is supported. Local Centre “The creation of a mixed-use local centre focused on Wolvershill Road to form the heart of the new community with a high quality public realm, planned with the provision of a community space from the outset of development but with the ability to grow and develop in step with the development and its needs. Other mixed uses to include retail, business space appropriate to a local centre location, extra care accommodation, healthcare provision, family and children’s centre services, residential, and a transport hub, all set within a high-quality public realm with public space and appropriate species selection and planting of trees;” We support this element of the draft Policy. The masterplan and draft emerging SPD show a local centre. This is informed by a ‘Community Facilities Assessment’ (April 2022, Lichfields) that was submitted by the consortium along with previous representations on the draft Preferred Options Local Plan. Routes to Parklands and Worle “The creation of safe, attractive and direct walking, wheeling (wheelchairs, mobility scooters and other wheel-based mobility aids), cycling and public transport links to existing facilities at Parklands and Worle. This is likely to require alterations to the future role and function of Wolvershill Road in order to achieve this” We support this element of the draft Policy. Liveable Neighbourhoods “Liveable neighbourhoods within the scheme should be planned for to ensure convenient and safe walking and cycling access to the local centre and key facilities” We support this element of the draft Policy. Ecology, Habitat and Nature Park “The development must deliver ecological, habitat and environmental enhancement, particularly in relation to horseshoe bats, linking habitat between the scarp and along key green corridors between new development and Banwell. The eastern fringe of the development in particular will be a focus for ecological and environmental mitigation, with provision of a new North Somerset Nature Park to provide bat mitigation, provision of land for biodiversity and habitat enhancement. ‘Dark corridors’ for bats will be provided on agreed green corridors within and adjacent to the development effectively integrating with mitigation agreed through the Banwell Bypass project;” Wain Estates supports this requirement and has no comment on the proposed wording. The ecology parameters form a key part of the masterplan framework with a number of east to west bat corridors through the strategic		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								location. Clarity would be welcomed regarding the North Somerset Nature Park in terms of who is responsible for delivering and managing this facility. Clarity is also required regarding its timescale for delivery given that the Council notes that this is the preferred means of achieving mitigation for horseshoe bats. Green Infrastructure “Green infrastructure should form an interconnected and multifunctional network throughout the development and where appropriate with integrated sustainable drainage systems including rain gardens and other features. Additional woodland and tree planting surrounding and throughout the development will be required, including as part of the landscaping adjacent to the M5 motorway;” We support this element of the draft Policy. The consortium will continue engagement with the Council in the preparation of the masterplan and emerging draft SPD for Wolvershill. “Defined areas of green infrastructure should be planted with wildflower species within a wider natural landscape setting” We object to this element of the draft Policy because it is unnecessary and vague and is already required by other draft Policies. We request that this text is deleted from draft Policy LP1. Setting of Historic Farmsteads “The setting of historic farmsteads will be sensitively addressed including through the creation of open space designed around these features to provide a visual buffer, allowing their historical significance to be reflected, contributing to the wider sense of place. Additional design measures will be required to address these assets including appropriate materials and design styles, lower surrounding development heights, and lower density of street patterns allowing for views to the features and to avoid overdominance of them;” Wain Estates requests that the above element of the draft Policy is deleted. The setting of these assets will be considered through the general heritage policies of the Plan as well as the NPPF and PPG. This will ensure that they only need to be sensitively addressed if their significance merits this. Climate Change Resilience “A strategy to support and maximise climate change resilience will be required including an approach to maximising carbon storage and other measures across the development with exploration of opportunities for community-based renewable energy generation;” Wain Estates objects to this new policy requirement for climate resilience, sustainable energy and building performance are covered by other draft Policies. There is a risk that this element of draft Policy LP1 will require provision in addition to other draft Policies and impact on development viability. Heritage “Where appropriate, heritage and archaeological features will be integrated into the development including any identified archaeology that should be reflected in the new development including appropriate interpretation to maximise the recreational and educational value of the assets;” We request that this element of the draft Policy is amended, (see attached document for suggested changes). Employment Draft Policy LP1 states “The provision of a minimum of 3ha of new employment delivered through the creation of a new business park and potential for smaller-scale business land provision as part of the mixed-use local centre”. This is broadly in line with draft Policy SP9, which includes a requirement to strengthen and reinforce the role of Weston-super-Mare as the principal economic centre alongside housing growth with 43.6 ha of employment proposed for the settlement. We also note the latest Employment Land Supply Background Paper (2025) which forms part of the evidence base. In section 4.4 it states that studies/evidence: “Reconfirmed business land opportunities at Weston-super-Mare, that is preferred over Wolvershill”. As a result, the employment allocated at Wolvershill has been reduced to 3ha. We agree with the findings of the evidence and support allocation of employment that can be viably delivered. On this basis, Wain Estates supports this element of draft Policy LP1 in principle. A reduction in employment at Wolvershill also allows for the future planning and delivery of a new motorway junction on the M5 south of J21 is not precluded. (see our comments below on J21A). Our only requested change is to delete “a minimum of” to ensure consistency with draft Policy SP9. “Effective management and treatment of surface water, controlling run-off into surrounding watercourses and integrating into the green infrastructure network. Provision of sustainable drainage adjacent to new highway will also be supported;” We support this element of the draft Policy. The consortium will continue engagement with the Council in the preparation of the masterplan and emerging draft SPD for Wolvershill. Rainwater “Rainwater should be treated as a resource and proposals should maximise its reuse;” Wain Estates considers that rainwater can be adequately covered in the general development management policies of the Plan. It is noted that none of the other strategic locations include this requirement. Recreation “Provision for recreation including indoor facilities as part of a new community hall, outdoor sports pitches and changing facilities, three outdoor tennis courts, a skatepark, and a multi-use games area.” Wain Estates supports the provision for formal recreation opportunities at Wolvershill and along with Ainscough		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Strategic Land and Bloor Homes South West has had extensive discussions with NSC including its Leisure Team and made extensive provision within the masterplan framework and associated planning applications. All aspects of NSC requests for the site are currently addressed through the Consortium's proposals though we query the specific requirement to provide three tennis courts as we do not consider there to be sufficient evidence to substantiate this. This is a late addition to the policy and to the discussions in relation to the three planning applications. We are advised that this would include three outdoor tarmac floodlit tennis courts to Sport England standards with 3m fencing and installed with an LTA approved automatic gate access system. A facility would have an online booking system and be managed by the community or trust. To inform this request NSC Leisure has liaised with the LTA. In correspondence NSC has referred to its Playing Pitch Strategy (which does not form part of the evidence base) which we are informed recommends working with the LTA to identify a location within Weston-super-Mare for a 3-court site to address the increase in demand that is likely to be generated by housing development in the area. The need for this facility clearly arises across a far wider catchment and would be to address existing gaps in provision which would be exacerbated by new development proposed within the Local Plan. There are a number of proposed allocations within the wider Weston-super-Mare area as well as Council owned land including parks which could address this specific need which should not fall to the Wolvershill development. There is no evidence to justify its requirement as part of draft LP1 policy and further justification is required with the relevant documents added to the evidence base. In addition, it is not clear why floodlighting would be essential for this facility, on the basis that outdoor tennis facilities are most likely to be well used and attractive in the spring and summer months, when darkness is less of a restriction on useability. Given the acknowledged ecological sensitivity of the Wolvershill site, it is considered that any provision to be made should not be contingent on the provision of floodlighting. If it is, then the allocation site is very restricted in relation to where the tennis courts could be provided; for example, the land to the south of the bypass where the football pitches are to be provided is not suitable for floodlighting. To ensure that the most appropriate recreation facilities in the most appropriate locations can be provided, Wain Estates requests that this element of draft Policy LP1 is amended to make it clear that provision can be provided on or off-site: "Provision for on-site, or contributions to off-site, recreation including indoor facilities as part of a new community hall, outdoor sports pitches and changing facilities, three outdoor tennis courts, a stakepark, and a multi-use games area." Education Draft Policy LP1 identifies the principles with which the development must comply, including the following in relation to education provision: "Educational facilities located within the new development, including delivery of three 420 place primary schools (to include early years provision in line with government requirements) within a safe walking route from the new homes, access to additional early years settings and walkable access to services used by children and families within a reasonable distance;" "Financial contribution towards off-site secondary, special educational needs and Post 16 education provision;" Wain Estates supports the revised wording for this element of the draft policy in terms of secondary school provision, as previously the text required the applicant to investigate or deliver additional secondary capacity on site. This has now changed to provide financial contributions towards off-site secondary provision. This approach is supported as the number of homes proposed does not generate the need for a new secondary school on site. In relation to primary school provision, draft Policy LP1 now outlines a requirement for the provision of "three 420 place primary schools…within a safe walking route from the new homes…". This has been adapted from the previous consultation draft, which required the allocation to provide "up to 1,260 primary school places across two to three primary schools". Whilst the total number of primary school places that are required remains unchanged (equivalent to six forms of entry), the previous requirement provided for considerably more flexibility in respect of the way in which the primary education facilities would be provided. We note that there has been no explanation or justification for this change in approach. Further, draft Policy LP1 refers to 3 x 2FE schools, but then in the supporting text requires that "…each new primary school should be accommodated on a minimum site size of 2.4 hectares". 2.4ha is the site area required for a 3FE school (exceeding the requirements stipulated in the area guidelines for mainstream schools prepared by the Department for Education and the Education Funding Agency, which refers to 2.23ha for a 3FE school, and 1.6ha for a 2FE school. We object to this revised policy text and the supporting text as it does not provide sufficient flexibility in how pupil places can be provided on site. This should be via x2 schools, capable of delivering up to 3FE, each with a site area of up to 2.4ha. Policy LP1 should simply require up to 1,260 pupil places for 3,300 dwellings, with the supporting text stating that a 3FE school requires a land area of 2.4ha. Lichfields' previous Education Reviews (April 2022 and May 2023) concluded there is a requirement for two primary schools only, with the land provided to NSC with a financial contribution towards construction and fit out, to ensure equity of this infrastructure delivery across the site. This remains Lichfields' position, as set out in detail in the appended Education Review (November 2025) – see Appendix 3 – which states: 1.Detailed analysis clearly shows there is a need to provide 5-6 forms of entry (6FE for the 3,300 home expanded allocation figure, albeit some would be beyond the plan period). 2.This would be best delivered across two primary schools, meeting the statutory maximum walking distances, and making most efficient use of land. 3.Each of ASL and Bloor's applications include 2.4ha of land for a primary school, which would allow up to 3FE to be delivered at each; this is sufficient to meet need for 1,260 pupils from 3,300 homes. 4.It is our position that the first school to open should provide 3FE, likely required in circa 2030/31. 5.The second school to open should provide 2FE but with the land provided to expand to 3FE if/when required, likely to open in 2037/38 (when the first school is at c. 92% capacity). 6.The Consortium should gift the land for the school sites to NSC and then make a financial contribution via S106 to fund delivery of the new schools (contributions sought from all applications within the strategic growth location). Gypsy and Traveller Pitches "Provision should be made for a minimum of 18 gypsy and traveller pitches within the site, or alternatively through the provision of suitable land offsite along with a financial contribution to support delivery."			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Wain Estates accepts that financial contributions for Gypsy and Traveller pitches are required, however, the Policy should be amended to require financial contributions only as there is no scope within the allocation to provide these. The draft Policy should also be amended so that it is for the Council – not developers - to identify and deliver the site/pitches, with no further involvement from developers. In the supporting text it is also mentioned that pitches should be delivered on-site, this wording should also be removed to allow for off-site contributions. This element of draft Policy LP1 should be amended (see attached document for suggested changes). Landscaped Noise Barrier Along M5 “The development will be located having regard to any noise or other environmental impacts, and suitable mitigation will be delivered to address any impacts including provision of a landscaped noise bund barrier designed for its attractiveness and wildlife value located adjacent to the M5. This feature should respond to the topography of the site, be of varying width, and should facilitate the delivery of a recreational cycle and walking route surrounding the Wolvershill development;” Wain Estates’ specialist consultants – Architect, Landscape, Noise, Ecologist, Arboriculturist – are preparing the design of a landscaped noise barrier located along the M5. The landscaped barrier and strip will provide noise mitigation, landscaping, habitat retention and creation for attractiveness and wildlife and biodiversity value along its length. It will facilitate a recreational route. The linear landscaped strip alongside the west boundary and M5 will provide a variable width due to the pattern of hedgerows which will be retained or replanted; the site’s contours; and topography. This variable width is not less that 30m, averaging between 35 and 40m and has wider areas up to 100m. The landscaped strip is wider than is required – at its narrowest width – to accommodate connectivity along the western boundary of the strategic location from the North Somerset and Mendip Bat SAC that is located south of the strategic location. Noise consultant Hydrock has undertaken noise modelling based on noise level data measured on site to demonstrate that the noise barrier as proposed provides sufficient mitigation to allow BS 8233:2014 internal noise level criteria to be achieved within proposed dwellings provided suitable acoustic façade specifications are provided. Whilst this element of draft Policy LP1 is supported we request that the wording is amended to refer to a landscaped noise barrier instead of bund. This allows flexibility for a noise barrier consisting of a bund and fence on top, which would be screened by planting, and would safely restrict access to the M5 motorway. “The development will be located having regard to any noise or other environmental impacts, and suitable mitigation will be delivered to address any impacts including provision of a landscaped noise bund barrier designed for its attractiveness and wildlife value located adjacent to the M5. This feature should respond to the topography of the site, be of varying width, and should facilitate the delivery of a recreational cycle and walking route surrounding the Wolvershill development;” Character Areas “The creation of distinct character areas across the development, particularly distinct residential neighbourhoods, with materials, and design, referencing the local context and demonstrating best practice in placemaking. To include high quality design solutions for access points into the site, the local centre, business sites, and the immediate vicinity of educational buildings.” We support this element of the draft Policy. Development Phasing The justification text of the draft Policy refers to development phasing and that that the IDP sets out broad phasing of infrastructure. It states that planning applications are expected to reflect the IDP and phasing outlined in the schedules. Several estimated timeframes for the major infrastructure projects are vague and it is unclear at this point whether they can be achieved, these dates should be scrutinised in more detail at examination. With regards to specific schemes outlined in the IDP phasing, scheme SO14 states the skate park/wheel park area of 2882m2 is required with a proposed concrete skate park of around 570m2. These proposed areas are excessive and Wain Estates object; it has already been agreed with Officers that reduced skate park area of 458m2 is acceptable and SO14 should be amended to reflect this along with removal of the 2882m2 requirement. Wain Estates would also request that scheme ENV17 (noise barrier) delivery is amended to prior to occupation on a phased basis. Therefore, timing should be phased pre-occupation approach.		
51455297	St Philips	Richard Grant	St Philips	No	• Justified • Effective	Yes	Yes	Policy LP1 - Wolvershill 2.11 Policy LP1 of the draft NSLP allocates the land at Wolvershill (north of Banwell) as a strategic location for growth. It allocates the land north of Banwell and to the east of the M5 motorway for a mix of uses, including up to 3,300 new homes, 3 ha of employment land and a new local centre. It is noted that the policy requires 990 of the homes to be affordable. This is a 18% increase on the figure in the previous Regulation 19 draft Local Plan, which provided for up to 2,800 new homes of which 980 should be affordable. The change shows that the proportion of affordable homes at the Wolvershill has reduced from 35% to 30%. 2.12 We support in principle the allocation of the land at Wolvershill (north of Banwell) as a strategic location for growth, and also the area of land shown on the Policies Map that comprises the allocated site. 2.13 However, we have some detailed comments regarding specific elements of the policy which we believe are necessary to make the policy effective. Our main concerns are as follows: a. Although we support the policy allocating the strategic location for 3,300 new homes, we are concerned that the wording of the policy states that the allocation will deliver “up to 3,300” new homes. Given the size and diverse range of uses proposed for the site, and also given that the policy makes clear that there will be further masterplanning work required to develop the detail of the proposals, limiting the number of new homes to no more than 3,300 dwellings would seem to be an inflexible approach. The actual number of new homes will only be clarified through the masterplanning of the site and then through detailed planning applications coming forward as the site is delivered. It seems equally possible that the number of dwellings eventually delivered could be greater than or less than 3,300 homes. Clearly, the final number will need to reflect a housing mix at the site which meets the needs of current and future residents, which will influence densities across the site. It should also be noted that given that scale of housing need in North Somerset, and that Wolvershill is the only strategic location not within Green Belt, the capacity at the site should not be artificially limited. We would therefore suggest that the policy should refer to the strategic location delivering ‘around 3,300 homes’ to ensure it sets out a realistic and flexible position. We would note that providing flexibility around the number of homes to be provided at larger allocations seems to be an	See Comments Above		23003 Wolvershill St Philips NSLP Reg 19 Pt2 FINAL.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								acceptable approach accepted by Inspectors on other Local Plans. For example, the South West Rugby development, as set out in Policy DS8 of the adopted Rugby Borough Local Plan 2011-2031 describes the delivery of “around 5,000 dwellings”. The Plymouth and South West Devon Joint Local Plan, in Policy PLY44 – Woolwell Sustainable Urban Extension and Country Park refers to “in the order of 2,000 new homes). Furthermore, it is noted that LP3 – Strategic Location: Nailsea and Backwell of the North Somerset Local Plan Preferred Options refers to around 3,500 homes over the plan period on sites with extant planning permission and new allocations. b. Paragraph 2 of Policy LP1 sets out that “The development will create a new low carbon community with high quality placemaking and a clear sense of identity. It will be designed to ensure that walking, cycling and public transport are the most convenient and attractive ways to move around the development and access services and facilities”. Although we support the emphasis on providing a low carbon community, we are concerned that the policy also needs to recognise that there will be a need for residents to be able to access facilities and employment in Weston-super-Mare, and further afield, by a range of modes of transport. It would therefore be helpful if the policy could also contain a reference to the need to ensure safe and convenient access to Weston-super-Mare, nearby railway stations and the M5 motorway using low carbon modes of transport primarily, but recognising that convenient access to the highway network will also be required. We would suggest that these points could be addressed by changes to the policy, for example, by referring to connectivity with the M5 motorway. c. Paragraph 3 of the policy sets out that a single masterplan, delivery plan and supporting design codes will be produced to guide delivery of the strategic location, and also that a phasing plan should be agreed. The supporting text then sets out that applications should be accompanied by a single comprehensive masterplan for Wolvershill, and sets out greater detail on a number of issues that it is assumed the masterplan should cover – including phasing and certain strategic infrastructure elements. This detail is welcomed in principle. However, it is noted that there is only limited reference to a Wolvershill Masterplanning Framework SPD. Given the size of the strategic location and the variety of landowners and developers who are involved, it is considered that an SPD will be important to setting an objective position regarding the detail of the principles that the development should deliver. We welcome and support the commitment to produce an SPD to guide delivery of the proposals, but consider that the policy should provide a clearer commitment to its production. d. In terms of the detail of Policy LP1, there seem to be several criteria, all of which deal with transport related matters in some detail. For example, criteria 5, 6, 10, and 12 all deal with the transport details of the proposals and there seems to be repetition of points regarding safe walking and cycling routes, and access to Weston-super-Mare and Worle for facilities and strategic transport. It would seem that the policy could be simplified if these criteria could be combined into one or two criteria which together set out a clear vision for transport and movement, which would then be expanded upon in the SPD. In addition, it would be helpful if the policy could also draw out the need to consider access to facilities in the new development and in Weston-super-Mare and further afield by all modes of transport. e. Bullet Point 11 sets out that “The development will comprise predominantly medium to high density living in well-designed buildings, with the highest densities close to the new local centre, facilities and public transport nodes”. As set out above, although there is no objection in principle to the emphasis on medium and high density, we are concerned that the precise housing mix on the site and the densities to be achieved should be driven by the housing mix that is needed and detailed masterplanning of the site. There will clearly be areas suitable for medium and high density housing, and certainly this may be the case around the Local Centre and at the most accessible parts and key transport corridor routes of the site. However, there will also be a need for areas of larger family homes delivered at a lower density, and the policy should not present obstacles to the delivery of a variety of house types to meet a range of needs. It is therefore suggested that the policy text recognises that density and housing mix will be something developed through the SPD and the masterplanning processes. f. Bullet point 24 of Policy LP1 sets out educational requirements for the development. The bullet point sets out that three 420 place primary schools will be required to serve the development. It is noted that these requirements have increased since the previous Regulation 19 draft Local Plan was published, which required two 420 place primary schools and one 210 place Primary School. Clearly, the scale of the strategic location has increased since the previous draft Local Plan, and this increase will have led to an increase in the number of primary school age children from the development. However, these requirements seem overly prescriptive, going into precise details of the number of places required at each primary school. This approach seems inflexible and could harm the effectiveness of the policy, given that the actual need for places could change over time as the site is delivered. In particular, there is an acknowledged trend of reducing school rolls across the country, which may mean that by the time the development is being delivered fewer school places will be needed. This may mean that more children could attend existing primary schools nearby, and/or that addition school provision at the strategic location could be provided more efficiently. It would be helpful if information could be set out in evidence, when the Local Plan is submitted for Examination, explaining how the need for three large primary schools has been calculated, with reference to projected should rolls and capacities in other nearby schools. We would note that the large 5,000 home extension to Rugby, South West Rugby referred to above only requires 2x 2 form entry primary schools to be provided, and the Woolwell extension to Plymouth only requires the provision of one additional primary school. The Sherford new community to the east of Plymouth provides planned growth of around 5,500 new homes and requires three additional primary schools to be provided. We therefore have some reservations regarding the need for three new primary schools to serve 3,300 new homes at Wolvershill. g. It is noted that the justification to the policy sets out that that each school site should be 2.4ha, and should be located to avoid busy roads and achieve safe travel to school by walking and cycling. Both of the sites controlled by St Philips are located alongside Wolvershill Road, which it seems clear will retain vehicle access and could be relatively busy compared to other parts of the strategic location which could be planned to ensure that travel to school is safe and by non-car modes. In addition, given the size of the two St Philips sites, if either were to be suggested for a school use, there would be little if any land left over for residential uses, providing little incentive for development unless equalisation agreements could be facilitated with the developers controlling the majority of the site. h. Given these complications, it is suggested that setting out such detail in the policy and justification is unnecessary and unhelpful at this time. It would seem more helpful to set the principle of the need to provide educational facilities in the policy, the detail of how levels of need will be ascertained in the SPD, and the size of schools required as part of the planning application process. The SPD could also helpfully indicate the broad location of the school sites that are required, and phasing of delivery, ensuring that they are placed in locations that are deliverable. i. Bullet point 26 states the provision of 18 Gypsy and Traveller pitches should be made within the site, or in suitable off-site locations along with financial contributions. It is unclear how these pitches are to be delivered. If they are to be within the site, the SPD should suggest locational requirements and the Masterplan should set out where they may be provided. If off-site, the SPD should set out how these pitches will be delivered and what contributions are needed. j. Finally, the draft NSLP clearly sets out a range of detailed development management policies which set out requirements for all development to comply with across the District. For example, Policies DP5 and DP6 set out			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								detailed guidance on climate adaptation and net zero development. It would be helpful if Policy LP1 could set out the general development management policies which also apply to the delivery of the strategic location, and make clear that the SPD will also contain guidance on ensuring that these requirements should be considered across the whole site as part of the Framework Masterplanning processes.			
62718401	Ian Bowen		Mendip Hills National Landscape	No	• Consistent with national policy	Yes	Yes	Policy LP1 is not consistent with national policy it omits, contrary to NPPF paras 58, 189 and 190(c) in particular (and relevant parts of the PPG) reference to the need for s106 planning obligations and/or CIL monies which may be necessary to address off-site recreational pressures within the Mendip Hills National Landscape, resulting from new development within or near the designated area	Policy LP1: Insert the following text at the end of Bullet Point 7: The development must respect the landscape setting, including minimising any adverse impact on the Mendip Hills National Landscape through sensitive design, landscaping and contributions to off-site nature recovery and improvements to key recreational routes and destinations		
30301601	Ainscough Strategic Land	Chris Price	Ainscough Strategic Land	No	• Justified			ASL supports the principle of draft Policy LP1 and the identification of Wolvershill as a Strategic Location for growth. Policy LP1 will support the delivery of much needed housing alongside other land uses, creating a sustainable new community for North Somerset. ASL has collaborated with the other two main site promoters Bloor Homes and Wain Estates in the preparation of a comprehensive Masterplan Framework for the site to ensure the overall vision and its necessary infrastructure and facilities are delivered in a sustainable manner. Wolvershill is a clear and logical location for a new sustainable community in North Somerset in respect of the proposed spatial strategy, particularly given the infrastructure commitments related to the Banwell Bypass scheme which is scheduled for completion in mid-2027. This provides a good level of certainty through the plan process of site deliverability and the strategic infrastructure required to deliver the strategic location. ASL, along with Bloor Homes and Wain Estates, have a positive ongoing dialogue with both Banwell Parish Council and NSC Officers, with workshop sessions held in 2023 and 2024 to inform the evolution of the Masterplan Framework by the Consortium which has now been published and accompanies the Consortium's planning applications. All three parties have submitted outline planning applications supported by Environmental Statements in the past year (ASL 25/P/0046/OU2; Bloor Homes 24/P/2690/OU2; and Wain Estates 24/P/2446/OU2). Discussions are now well progressed with NSC with a timeline agreed to determination for all three applications in Spring 2026. The Masterplan Framework provides the key structure and principles on which the three planning applications have been based. As is inevitable with a site of this size at this stage of the Local Plan process, there are some elements of the proposed policy that require refinement or further clarification. We discuss these elements in detail below, with comments on the specific policy requirements to follow. We request that Policy LP1 is updated accordingly. A separate note confirming all of the proposed changes to the policy wording is included at Appendix 3 of the attached representations. See attachment for full detailed submissions on the following subjects: Strategic Location Boundary Housing Delivery Masterplan, Delivery Plan, Design Codes Education Requirements Development Principles	See Section 6 of attachment for detailed marked up proposed changes to Policy LP1. A separate note confirming all of the proposed changes to the policy wording is included at Appendix 3.		61683 - NSC Reg 19 Representations December 2025 2-12-25.pdf
51477249	Burrington Parish Council		Burrington PC	Unsure	• Consistent with national policy	Yes	Unsure	On previous drafts of the local plan we expressed concern that a wider range of sites for housing would be needed to avoid challenges to the supply of housing land and the ad hoc addition of sites through planning appeals, especially in view of the substantial increase in housing requirements arising from the new standard method of calculating housing requirements. We can see that North Somerset Council has now made significant changes to the settlement strategy to include new large sites for housing which now include a substantial urban extension south west of Bristol ('Woodspring'), a number of strategic housing sites at Nailsea and Backwell, some of which already have planning consent, the 'Wolvershill' strategic allocation north of Banwell and strategic sites at Pill and Easton-in-Gordano, as well as continuing development adjoining Weston-super-Mare (Parklands Village and Winterstoke Village), new site allocations at Clevedon and Portishead and redevelopment sites within Weston, some of which are carried forward from the Site Allocations Plan of 2018.It seems to us that the Council has thus sought to identify a realistic and as wide as possible range of options to accommodate the increased housing requirement. Some rural settlements like Churchill and Winscombe are also making significant contributions to housing land supply, although some sites were committed through planning appeals which means that they are not always well integrated with the existing settlement (or other appeal sites). Committed housing sites in the larger villages do not therefore always achieve the aims set in the Core Strategy for 'Service Villages' in terms of more self-containment in jobs and services, protecting the character of the settlement, or achieving improvements in public transport.	More detail is required about the allocated housing sites to demonstrate their feasibility, desirability and consistency with other planning policies– in the form of a development brief		
58533409	Paul Goddard		Lower Laurel Farm	No	• Justified	Unsure	Unsure	1. Inadequate and inconsistent consultation Throughout the preparation of the plan and subsequent use of subcontractors, there has been no consistent or meaningful engagement with residents living in the affected area. This land was previously designated as Green Belt, meaning any proposed development requires the highest possible standard of transparency, community involvement, and evidence of exceptional circumstances. However: Wain Estates did not undertake adequate public consultation, Consultation materials have been inconsistent, incomplete, and in some cases misleading, and Communications with the Local Planning Authority (LPA) have contained statements that contradict facts on the ground. This falls well below the expectations set out in the NPPF's requirement for early, proportionate and effective engagement with local communities, and undermines both public confidence and the integrity of the planning process. 2. Lack of justification for need, scale, type, and location of housing The applicant has not demonstrated any robust evidence of local housing need that would justify a development of this scale or type in this specific location. Key points include:	Missed strategic opportunity: Weston-super-Mare as an affordable commuter alternative to Bristol Weston-super-Mare is situated less than 30 minutes from Bristol by train, offering a realistic and attractive location for the large number of young professionals and key workers currently priced out of Bristol's housing market. A properly planned housing strategy should: Prioritise the creation of well-located, affordable flats and apartments in accessible areas such as central WSM. Such a plan would provide much greater quantity of dwellings versus the loss of green belt. Support sustainable transport patterns by maximising proximity to existing rail infrastructure. Regenerate existing neighbourhoods and previously developed land to accommodate this demographic. Instead, this proposal places significant housing growth on the outskirts, on Green Belt land, in a location that is less connected, less sustainable, and less aligned with the needs of the very demographic the Council claims it wishes to support. WSM has the potential to become a thriving commuter town,		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Weston-super-Mare has significant numbers of vacant or under-used properties within its existing housing stock. No clear strategy has been presented for regenerating or re-occupying existing homes, despite national policy prioritising the effective use of land, particularly previously developed or existing housing assets. The proposed housing mix does not reflect a proven, locally evidenced need; rather, it mirrors speculative market-led assumptions. The NPPF requires that LPAs and developers prioritise brownfield land, existing housing regeneration, and design-led, need-based development. This proposal does not satisfy those principles. 3. Evidence of weak local demand for the proposed housing type A directly comparable development at the edge of Banwell — completed in 2025 — demonstrates clear market saturation: 50% of the houses remain unsold, despite being of the same size, price point, and typology as those proposed at Wolvershill. This strongly indicates insufficient demand for further like-for-like market housing. Approving another large-scale estate of the same character would risk long-term under-occupancy, contrary to planning objectives that require developments to be economically sustainable, responsive to local demand, and deliverable. This undermines the applicant's justification and calls into question the development's viability and long-term contribution to housing supply. 4. Failure to demonstrate "exceptional circumstances" for former Green Belt release As this site formerly formed part of the Green Belt, the applicant must clearly evidence exceptional circumstances. None have been demonstrated. The NPPF is clear that Green Belt release must only occur where: all alternative options have been exhausted, the development responds to a specific and proven local need, and impacts are fully justified and unavoidable. Given the presence of unused homes, under-occupied new estates, and available redevelopment opportunities elsewhere in WSM, these tests have not been met. Conclusion For the reasons set out above—including inadequate consultation, lack of need, evidence of market oversupply, and failure to justify use of former Green Belt land	helping to relieve housing pressure in Bristol. This opportunity is undermined by an approach that relies on peripheral, car-dependent, Green Belt development rather than targeted regeneration and sustainable urban intensification. Economic and social regeneration opportunities are being ignored A well-designed policy for WSM should be oriented towards: Revitalising the town centre, Reversing decline in leisure and retail, and Stimulating the local service economy through increased footfall and resident spending. However, large estates on former Green Belt land do not support these goals because: They create dispersed growth rather than a consolidated, economically beneficial resident base near the town's core. They divert investment away from the renewal of struggling central areas. They fail to leverage the existing infrastructure (rail, retail, commercial) that could support a more dynamic and sustainable economy. A strategy focused on attracting young professionals—who are currently unable to buy in Bristol—would be economically transformative for WSM. Yet this proposal does not align with such a strategy, nor does it appear the Council has considered this alternative vision before opting to release Green Belt land.		
43203041	National Highways		National Highways							The policy proposes a major mixed-use development at Wolvershill, north of Banwell, for around 3,300 homes, a business park and supporting infrastructure. The development is to be guided by a comprehensive masterplan and Delivery Plan with phased delivery tied to infrastructure provision. Appropriate mechanisms will be required to ensure the timely and efficient delivery of infrastructure. The policy requires that development proposals must create attractive, accessible, safe and direct active travel routes to local facilities. The site lies to the east of the M5 motorway, and active travel routes will therefore include three crossing points over the M5, comprising the Wolvershill Road and Knightcott Road overbridges and an existing accommodation bridge. National Highways has been consulted on planning applications for 2,655 homes and employment on the site, and work is ongoing to demonstrate the SRN impacts of the proposed development, alongside the wider allocation for 3,300 homes. As part of the application process, National Highways is in discussions with landowners regarding the required scope of improvements to the accommodation bridge over the M5. It is welcome that the policy refers to effective management and treatment of surface water, noise mitigation requirements, and landscaping adjacent to the M5 motorway. Given the location of the site alongside the motorway, environmental impacts of	NSC Reg19 Local Plan Consultation.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										the proposed development and the motorway itself will require careful attention. Whilst we consider that policy wording appropriately highlights the requirements for the site, National Highways will continue to explore these matters with landowners as part of the live applications for the site. The policy advises that the development should not preclude any future planning and delivery of a new motorway junction on the M5 south of J21. National Highways is aware of the aspiration locally for a new motorway junction to the east of Weston-super-Mare, but this does not currently feature in any National Highways delivery programme. Without prejudice to our ongoing review of the Local Plan transport evidence, we understand that North Somerset Council is looking to future-proof a potential location that may be required to underpin growth beyond the plan period. It will be important to ensure that any option for a new motorway junction has due regard for the safety and operational integrity of the M5. We recommend that further consideration of junction design, spacing and implications for National Highways asset should inform any setting aside of land and have separately written to the Council on this matter. The policy requires provision of a package of transport measures as identified in the Infrastructure Delivery Plan (IDP). Comments on the IDP are set out later in this letter. It is noted Policy LP1 does not link the Wolvershill development to the M5 J21 Bypass Scheme referred to in Schedule 7 of the Pre-Submission Plan. The Bypass Scheme is shown on the Policies Map and would connect Wolvershill Road and the A370 to the east of the M5. Such a link could impact on future use of Wolvershill Road and associated active travel provision, and further discussion on this proposal would be welcomed by National Highways.	
31062913	R Storrar		KWAW	Yes		Yes	Yes			Given the huge number of houses that need to be built in order to meet the Government targets, it makes sense to concentrate the necessary housing where it is most sustainable. This follows the guidelines laid out already in the Local Plan.	
58534081	Verto Homes	tor&co (Jacqueline Mulliner)	Verto Homes	No	• Positively prepared • Effective • Consistent with national policy	Yes	No	The NPPF (para 22) expects plans to be prepared to cover a minimum 15 year period from adoption. The February 2025 LDS anticipated submission of the plan for examination in October 2025 with adoption November 2026. Slippage has already occurred, pushing adoption into 2027. On this basis, the plan period should extend to 4042. SP8 sets the housing requirement for the District, this being 1,580 dpa across the plan period based on the standard methodology (SM LHN). Setting aside concerns regarding the plan period (which is too short), we agree that the starting point for setting the requirement should be the standard method but are concerned that a further uplift has not been contemplated, specifically to help with the unmet need generated from Bristol and Bath, or to assist further with affordability, or to support infrastructure provision. The NPPF is clear about needing to boost housing land supply, to meet objectively assessed needs and to provide for needs that cannot be met within neighbouring areas, supported by the PPG which states, “Where authorities plan for higher growth this should not normally have to be thoroughly justified at examination.” In terms of unmet need, whilst the Duty to Cooperate is not being ‘saved’ under transitional arrangements moving to the new plan-making system, the Government and national policy continues to expect collaboration and effective cooperation over unmet need. For context, North Somerset lies within the wider Bristol City Housing Market Area (comprising Bristol City, North Somerset and South Gloucestershire, where the void in addressing Bristol’s unmet need has persisted over several years, through failed attempts at joint strategic planning. At the present time, the Bristol Local Plan emerging requirement of 1,925 homes a year leaves an annual unmet need of 1,037 homes (BC SM LHN 2,962 dpa). Bristol has asked all of the relevant neighbouring authorities to assist but North Somerset’s Duty to Cooperate compliance statement states that, “The evidence supporting the local plan demonstrates that North Somerset does not have capacity to meet some of Bristol’s needs at this time.” However, this is not the case, the evidence does no such thing, and despite differing evidence supporting the Bristol Local Plan examination which clearly anticipates some help from North Somerset, to be actioned through the current local plan preparation, an uplift in North Somerset’s housing numbers has simply not been contemplated and has not therefore been tested in the Sustainability Appraisal.	Extend the plan period to 2042, which would have consequences for development requirements across the plan period. Also an uplift in the housing requirement must be considered and tested through the SA, and if appropriate additional land allocations made to meet the need. An uplift in the housing provision at the villages should be made, presenting a settlement hierarchy approach whereby larger villages such as Banwell can be identified as sustainable locations to deliver the additional growth needed. This more refined settlement hierarchy approach should be secured in the plan, with the allocation of land for housing between the existing settlement of Banwell and the by-pass, outside the proposed strategic gap. The allocation of this land would deliver 250 – 300 homes at a sustainable location.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The SA is clear that it tests the SM LHN and tests difference spatial options to meet that need (e.g. see SA para 2.28). What it doesn't do is test a higher growth option which renders the plan unsound, it is not positively prepared and not justified or effective in meeting overall housing requirements. The knock-on effect of failing to assist in meeting the unmet need will be to increase affordability issues, as pressure for housing is increased. Whilst the plan will fail to address affordability issues in full, no consideration was given to increasing the housing requirement to better redress the acute problem. Finally, in order to deliver the infrastructure necessary to support the delivery of housing, a more flexible and positive approach should be taken to the housing requirement, to ensure development is viable. In conclusion, the SA is flawed, because it fails to consider the option of a higher housing requirement (higher growth scenario) and the plan strategy is therefore unjustified, ineffective, and unsound. Moving to the spatial distribution of the housing requirement, there is greater capacity at Banwell, particularly noting the anticipated completion of the Banwell by-pass in 2027 which presents a significant change in the village's circumstances, characteristics, and status. The highway itself provides a new defensible development boundary to the settlement, which should be utilised to deliver additional 'developable' housing capacity. This land is well-related to the north-eastern edge of Banwell, and sits outside the proposed strategic gap to the north of Banwell. It can be developed such that it is not subject to flood constraints (contrary to the SHLAA assessment which is flawed in this respect - given the scale of the site there is potential to introduce a sequential approach whereby the developable area avoids areas of flood risk).			
62471329	Environment Agency		Environment Agency	Yes						Agree with policy and the reference to delivery of gypsy and traveller accommodation. These sites must be sequentially located outside of areas of flood risk. No mention or link to DP9: Flood Risk and SP2: Climate Change policies within the main policy text.	
51572577	BNSSG ICB		NHS Property Services						Health infrastructure capacity will need to be significantly increased to support the demand from the proposed Wolvershill allocation in Banwell and neighbouring Weston-super-Mare.We note that a key development principle of Policy LP1 is to provide "healthcare provision" as part of "the creation of a mixed-use local centre focused on Wolvershill Road to form the heart of a new community […]". Policy LP1 later adds that "subject to confirming needs generated by the development, the development must ensure suitable land provision is made available to facilitate the provision of appropriate healthcare infrastructure onsite or appropriate financial contributions towards healthcare for new and/or improved facilities off-site". BNSSG ICB generally supports the inclusion of the above policy wording as it provides a degree of certainty that healthcare requirements will be met either on- or off-site. We are however concerned that the policy only makes reference to securing "land provision" on-site. To ensure the Plan is positively prepared and effective, we propose the following modification to Policy LP1: Proposed Amendments to Policy LP1 (remove…Subject to confirming needs generated by the development, the development must ensure suitable land provision is made available to facilitate the provision of appropriate healthcare infrastructure onsite or appropriate financial contributions towards healthcare for new and/or improved facilities off-site) (insert…Development will ensure the provision of appropriate primary care infrastructure on-site or through appropriate financial contributions towards primary care for new and/or improved facilities off-site to support new development. On-site healthcare provision should be provided as a turnkey, fully fitted out facility (ready for occupation) constructed at developer cost to NHS specification provided leased at a peppercorn rent for the entirety of occupation) We acknowledge that there has been constructive joint-working between ourselves and North Somerset Council regarding primary care provision on this site to date. We recommend that the Council continues to engage with BNSSG ICB on this matter to ensure that adequate primary care provision can be secured. This will ensure compliance with paragraphs 20c and 35 of the NPPF.		NSC Reg 19 Local Plan - NHS BNSSG ICB Response 101225.pdf

Policy LP2: Strategic location: Woodspring (south west of Bristol)

63005121	Taylor Wimpey (Woodspring)	Nick Matthews (Savills)	Taylor Wimpey	No	• Effective	Yes	Yes	Summary of Representation • Woodspring is a justified, deliverable, and sustainable location for strategic development which would deliver a number of significant public benefits. • Taylor Wimpey supports the allocation in principle but seeks amendments to policy wording to ensure soundness and deliverability. • The Sustainability Appraisal (SA), Spatial Strategy, Site Selection and Capacity Paper, and Green Belt Background Paper, which collectively endorse Woodspring as a justified location. • Woodspring is deliverable and developable strategic location. • Woodspring is sustainable strategic location when the 'policy on' proposals for the site are assessed against the objectives of the Sustainability Appraisal.	Please see attachment for full details and marked up copy of proposed amendments to Policy LP2.		LP2.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								• The Council's Green Belt Review provides clear justification for releasing Woodspring from the Green Belt due to exceptional circumstances. • Despite the in principle support, Taylor Wimpey has objections to the following elements of Policy LP2: - Affordable Housing: Careful consideration needs to be given to the viability of development alongside the comprehensive package of infrastructure sought. - Comprehensive Development: Taylor Wimpey supports comprehensive masterplanning but objects to requiring all parties to "agree" the masterplan, as this could create a veto and delay delivery. A more flexible approach is proposed. - Employment Land: Taylor Wimpey objects to the requirement for 10 ha of employment land, due to the lack of evidence and potential conflict with housing delivery priorities. - Education: Taylor Wimpey supports on-site provision but objects to specifying the number of schools in policy; a needs-based, flexible approach should be preferred instead. - Open Space: Taylor Wimpey supports open space provision but requests policy specify community use agreements for school sports facilities. - Heritage: Objects to policy wording that seeks to "avoid all harm" to heritage assets, proposing alignment with national policy that allows for "less than substantial harm" to be weighed against public benefits. - Gypsy and Traveller Accommodation: Objects to the requirement for 18 pitches on-site, arguing the need is better met at existing sites and that alternative locations have been dismissed without sound justification. • Changes are proposed to the draft Policy which address each of the objections. Please see attachment for full representations and proposed modifications.			
29403105	Diverse Partnerships Yatton Ltd	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	Our client has no comments to make upon these allocations beyond noting the concerns stated above about their ability to fully contribute to the housing supply within the plan period. The policies themselves further articulate the points made in Section 2 above, by setting out the need for full masterplans prior to the making of any applications, design codes and infers the potential for changes from the published Infrastructure Delivery Plan. It is noted that Strategic Location LP1 is already subject to 3no. live applications, and it remains unclear whether the policy will in effect require withdrawal of these. These all indicates substantive work is required, that in the case of LP2 at the very least, will likely delay application submission and so the overall expected timetables for such large scale development. Therefore, while our client has no objection to the strategic locations their scale and scope indicate that they are unlikely to deliver their full yield during the plan period and so will require further allocations to deliver the identified housing target.			NSC Reg 19 Diverse Partnerships Yatton Ltd Reps Dec 25 - Redacted.pdf
63043809	Wain Homes	Russell Smith	Wain Homes						A new mixed-use strategic growth location is proposed at Woodspring on land released from the Green Belt at the allocation defined on the Policies Map to accommodate up to 3,500 dwellings. However, the Council has not provided evidence of the deliverability of development at this location. As per our comments in relation to SP8, Wain Homes has significant concerns that the number of homes attributed to the location will not come forward, if at all. Policy LP2 states that in accordance with the 'Golden Rules' set out in the NPPF, development on this released Green Belt site will be required to deliver 50% affordable housing. The Additional Sites Viability Addendum indicates at best marginal viability at the upper end of the values range tested. Serious question marks must therefore hang over the deliverability of any development at this location. Policy LP2 states that developers must work together to produce a single masterplan and design code for the allocated area. Currently, no planning applications or scoping opinion requests have been submitted in relation to the development locations. Without any evidence to the contrary, it must be assumed that achieving any detailed planning permissions will take in excess of five years. It seems highly unlikely that any homes will be delivered in this location before the early 2030's. As a result, even in best case scenarios, delivery of up to 2,000 homes during the plan period appears highly optimistic. Overall, Wain Homes has significant concerns about deliverability of development in this location and the amount of homes attributed to this site in Policy SP8. Further evidence should be provided for Examination, including a site specific topic paper, delivery programmes and statements of common ground with the various controlling interests and infrastructure providers.			North Somerset Local Plan Regulation 19 Wain Homes.pdf
63094305	Harrow Estates	Boyer		No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No		Harrow welcomes the release of grey belt land in sustainable locations close to Bristol. The draft allocation recognises the need for housing to be located closer to Bristol given its role as major employer for the west. Whilst it is an initial step in the right direction to meeting theunmet need of Bristol, it does raise questions on whether the proposed allocation will deliver the targeted 2,500 homes during this plan period. We do not share the Council's optimism towards the targeted number of homes to be completed by 2041. Lichfield's in their 2024 "Start to Finish" paper provide detailed research which provides key insight into the timeframe for the delivering large-		251211 Land East of Failand Reg 19 Reps.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									scale, greenfield development, from achieving planning permission to the construction of the first dwelling; and subsequent build out rates. The evidence demonstrates that overall lead in time for sites of 2,000+ dwelling take on average 6.5 years to get through various stages of planning. The table above clearly highlights that even for the development to get through various planning application stages including gaining an outline consent, detailed design stage and then planning to first dwelling could take on average 6.5 years. This is a significant time constraint that places large implications on the associated site, requiring securing the necessary permissions and, potential phasing of the scheme, all before the end of the plan period where there are no already live planning applications for the site. Given the plan has a length of 15-years this equates to almost half of the Plan's life span before the first dwelling is completed on average taken from the above table. Lichfield's analysis of large-scale sites indicates that on occasion, some developments can achieve high build rates, like Oakley Vale in North Northampton and Berryfields Development in Buckinghamshire, which reached peak build out rates of 520 and 562 dwelling per annum (dpa). However, maintaining such rates is challenging due to various complexities and uncertainties that influence developers' build-out pace, including economic fluctuations and market conditions. Over their respective lifespans of the named developments they averaged respectively build out rates of 162 and 251 dpa. Furthermore, Lichfield's analysis of schemes of 2,000+ dwellings indicated an upper and lower quartile range for build out rates of between 100 and 188 dpa, as demonstrated in the table below. Assuming a planning application is submitted for the proposed allocation concurrently with adoption of the Local Plan in late 2026, it will be unable to contribute positively towards the first five years of the Plan period. The earliest feasible contribution from the proposed development is expected from late-2032 onwards. This timeline leaves 8.5 years for the proposed allocation to be completed within the remaining plan period. Even under favourable market conditions and with a contractor capable of delivering the necessary build rate, a minimum build out rate of 437.5 dpa is required to achieve the full number of proposed homes within the remaining 8.5 years of the plan period. This represents an extremely unrealistic expectation for both the council and the developer to meet in order to fulfil the Plan's housing requirement by 2041. The research provided above indicates that build out rates could peak at around this number, however, it is unlikely this level of building rates to be sustained over the duration of remaining years of the plan would be near impossible to achieve. It is more likely the development would have an average of between 100-188 dpa as stated for schemes over 2,000+ units. The table below provides an indication on the likely timeframes which the Woodspring site would likely be built out and the number of years it would take for the development to be completed by: (Table. Please see attached document) On this basis, it is a reasonable assumption that the Woodspring site will deliver around half the number of homes before 2041, approximately a 50% short of the Plan's requirement for 3,500 dwellings at Woodspring by 2041. For the plan to be deemed sound, NSC must find alternative small sites that are available and ready to deliver with live planning application at the start of the Local Plan period. Whilst they should also allocate additional housing to meet this shortfall on sites close to Bristol.		
63143425	Long Ashton Nature Conservation and Environment Trust		-					"The LANCE Trust was formed in April 2021 and is dedicated to stopping and reversing the decline in wildlife habitats and species throughout the parish and beyond. Working with local residents and key stakeholders, we believe that, by working together, we can help species decline, restore habitats, improve the health of our soils, increase our wellbeing and help mitigate the effects of climate change and biodiversity loss. However the development proposals contained in North Somerset's Pre-Submission Local Plan 2041 gives the trustees much concern. Much of the 'green space' in Long Ashton is either farmed fairly intensively whilst public spaces such as Ashton Court, Leigh Woods and other areas are subjected to ever-increasing human pressure. The proposal to develop large areas in and around Woodspring Golf Course is of particular concern since the large rich, mixed mosaic habitat (ancient woodland, scrub, rough grassland, wetlands, water courses and veteran trees) offers food, shelter and homes to a variety of wildlife that is unparalleled in terms of density and richness compared to the rest of the parish. The Trust is aware of the sterling work done by the Green Belt Working Party comprised of highly experienced town planners and architects that has taken the trouble to write three reports that have been submitted to North Somerset Council. The Trust endorses all three of these reports since they outline a sound strategy that should development go ahead on this site should ensure that it will be aspirational, positive, sustainable and future-proofed against the ongoing onslaught of climate change and biodiversity loss. None of the high volume house-builders should be entrusted in developing the masterplan for an invaluable site such as this. Instead, it's a great opportunity for highly experienced planning consultants to work with NSC in order to develop a master-plan that will tick all the boxes for a high quality, sustainable, green development that puts high-value green spaces and corridors at its heart. A truly ambitious project that NSC could be proud of.			
62995553	Del Piero Ltd	Rapleys						The Plan's spatial strategy prioritises locating new development "in or close to urban areas where there is an existing or proposed wide range of facilities, services and jobs, and [with] opportunities to encourage active and sustainable travel". It recognises that North Somerset is heavily constrained and that "exceptional circumstances apply for the release of land from the Green Belt" (SP3 and SP7), with releases taken through a sequential approach prioritising previously developed land, then grey belt, then other Green Belt locations.	To ensure the Plan is effective and positively prepared, we request the following modifications: Policy LP2 (Woodspring): add a clause enabling the local planning authority to approve adjacent, sustainably located residential parcels		Barrow Gurney Report.pdf BARROW GURNEY 11 12 2025.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The Woodspring strategic location south-west of Bristol is identified for up to 3,500 dwellings, master planned as a distinct, sustainable community with high quality design, active travel and public transport connections, and substantial green infrastructure. Policy LP2 sets out the development principles and the 'Golden Rules' requirements for Green Belt release, including 50% affordable housing, infrastructure improvements and provision of publicly accessible green spaces. We strongly support the overall thrust of SP3 and LP2. However, the Plan should explicitly include a mechanism to bring forward additional sustainably located sites around Woodspring and Barrow Gurney to (i) ensure timely delivery and flexibility; (ii) maximise affordable housing supply in the early years; and (iii) capture the benefits of co-location with emerging infrastructure and employment. This is fully consistent with SP3's emphasis on accessibility and urban adjacency, with SP7's grey belt sequencing, and with LP2's call for a comprehensive, cohesive settlement structure at Woodspring. Housing need and affordable housing delivery: Policy SP8 sets a minimum of 23,700 dwellings 2026–2041 (1,580 dpa), with 3,500 attributed to Woodspring. The Plan rightly elevates the importance of affordable housing. At Woodspring and other Green Belt release sites, the Plan requires "Delivery of 50% affordable housing on each site" in accordance with DP43 (LP2 'Golden Rules'). Enabling additional adjacent land to come forward early as part of the comprehensive masterplan would therefore provide substantial affordable output in the first five years post-adoption, strengthening the five-year supply and increasing affordable completions at a time of acute need, while remaining entirely consistent with the Plan's strategic distribution and the Golden Rules provisions in SP7 and LP2. This approach is also compatible with SP1's requirement to "support the delivery of a variety and choice of housing, including specialist and affordable housing to meet local needs", and with the Plan's sustainability objectives to "deliver affordable or specialist housing where it is most needed". Sustainability, access and services: transport and movement: The Long Ashton / Barrow Gurney fringe is exceptionally well-placed to meet SP10's transport hierarchy, minimising the need to travel by private car and prioritising walking, wheeling, cycling and public transport. LP2 requires Woodspring to connect into Bristol, Parson Street station, the proposed mass transit corridor to the Airport, and the wider Metrobus/bus network, with specific emphasis on addressing severance caused by Colliters Way and relationships with the A38. It further requires neighbourhoods built to "high standards of active travel" with safe, direct routes to local centres, schools and facilities. In addition, LP11 explicitly proposes the expansion of the Long Ashton Transport Hub during the plan period - an anchor for sustainable accessibility on the A370 corridor - alongside the Mass Transit scheme between Bristol Airport and Bristol City Centre. Bringing forward our clients' sites alongside the Woodspring allocation would help fund and phase these improvements, stitch neighbourhoods into the active travel network, and meet DP15's requirement that new development be designed and located to maximise non-car travel options. Given LP2's stipulation that "vehicular access routes onto Colliters Way and the A38 will be designed to prevent through traffic diverting through the area", well-located sites on the edge of Woodspring offer the opportunity to masterplan permeable but controlled street networks that prioritise buses and active modes while managing rat-running. Environmental quality, Nature Park and Flood Risk: LP2 requires a new Nature Park at Woodspring "with appropriate maintenance regimes," connectivity to roosts, and protection of key bat flight corridors, together with strategic green buffers and enhancement of the Yanley ridge. The promoted sites can contribute to extending this corridor with additional land, funding and habitat management to the Nature Park network, thereby strengthening biodiversity net gain and long-term ecological resilience. This approach would be fully aligned with SP11 and DP36. LP2 also requires "a comprehensive flood risk assessment … including site-specific detailed modelling of Barrow Gurney Reservoir and its potential flood risk," with high-quality SuDS embedded from the outset and any culvert capacity improvements (Colliters Brook) secured with maintenance access. Our clients propose to undertake fluvial modelling and integrated SuDS design consistent with DP9 and DP10, plan layouts to avoid more vulnerable uses in any areas of higher risk and liaise with Bristol Water and the Environment Agency on mitigations and long-term management. This is directly responsive to LP2 and the wider flood risk framework in DP9. Proximity to employment and community infrastructure: The Epic employment campus is already consented between Long Ashton and Bristol, with the Plan confirming it "will remain [in the] Green Belt" and that "very special circumstances" were found due to "significant economic benefits … and the absence of suitable sites outside the Green Belt." (LP22 justification). Allocating adjacent residential sites would place new homes close to high-quality jobs, reduce commuting distances and car dependency, and support SP9's aim to strengthen the role of the Bristol fringe and Woodspring in providing accessible employment opportunities. LP2 itself provides for around 10 ha of new employment land within Woodspring, reinforcing the case for co-located housing to create mixed, balanced communities. LP2 also requires substantial on-site social infrastructure, including "one new secondary school … and	where (a) they are master planned as part of the Comprehensive development plan; (b) they meet the 'Golden Rules' (including 50% affordable housing); (c) they deliver or fund Nature Park land, active travel links across and strategic flood risk mitigations to Ashton Brook with potential capacity upgrades). This will provide necessary flexibility and early affordable housing delivery aligned with LP2's principles and SP3's spatial strategy. Policies Map / LP9 (Green Belt): identify a reserve area of grey belt on the Long Ashton / Barrow Gurney fringe (to be delineated through examination discussions and the Comprehensive Masterplan) for potential phased release if monitoring demonstrates under-delivery at Woodspring or a shortfall against the affordable housing trajectory. This would reflect SP7's sequential approach and DP12's recognition of grey belt circumstances. SP8 / Housing Trajectory (supporting text): include the promoted land within the years 1–5 reserve supply, with explicit phasing triggers linked to Infrastructure Delivery Plan items (Long Ashton Transport Hub expansion; mass transit safeguarding; active travel bridges/underpasses; Nature Park establishment), ensuring infrastructure and housing are delivered in step. LP11 (Transport) and DP15 (Active and sustainable transport): reference the delivery role of adjacent sites in funding and constructing severance-reducing active travel infrastructure across Colliters Way and A38, consistent with LP2's transport principles and the JLTP4 strategy. These modifications are modest, targeted and fully consistent with the Plan's strategy. They add clarity and flexibility, strengthen affordable housing delivery, and ensure environmental, and transport outcomes are secured early. Soundness and legal compliance of Suggested Amendments: Positively prepared: The modifications secure additional, sustainably located capacity in or close to urban areas with strong public transport and active travel potential (SP3), and they provide flexibility to meet objectively assessed needs, including affordable homes, in line with the Plan's Golden Rules for Green Belt releases. Justified: The promoted locations are adjacent to the Woodspring strategic site and major transport corridors; the Plan already identifies these corridors and hubs for enhancement (LP11), and requires integration with Parson Street, Metrobus and mass transit (LP2). The modifications exploit established infrastructure intentions and deliverability advantages. Effective: By embedding reserve/adjacent parcels within the Comprehensive Masterplan and design codes, and linking release to infrastructure triggers, delivery risks are mitigated. The approach supports the five-year supply and strengthens the affordable trajectory (LP2: 50% affordable housing). Consistent with national policy: The Plan's own justification recognises grey belt and exceptional circumstances; our approach follows the Plan's sequential framework (SP7, DP12) and flood risk requirements (DP9) including reservoir modelling for Barrow Gurney (LP2).		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								at least three new primary schools" and healthcare, community and leisure provision. Our clients' sites can assist in delivering these facilities, in line with SP4 and DP63, securing timely delivery consistent with LP2's phasing and delivery requirements. Design quality, placemaking and net-zero construction: The Woodspring site requires master planning and design codes at the outline stage, delivering legible neighbourhoods and high-quality public realm. Any additional sites brought forward adjacent to the allocation would be master planned to coordinate with the same comprehensive design framework to avoid piecemeal development, comply with SP4 and DP1, and achieve DP6's net-zero construction requirements (including ultra-low energy homes and maximised on-site renewables), thereby contributing to North Somerset's carbon neutrality ambition. Conclusion: We commend the Council's strategic focus on sustainable growth at Woodspring and the Bristol fringe, and its firm commitment to affordable housing, active travel and ecological enhancement. To ensure the Plan is resilient, flexible and deliverable, our clients seek modest but important modifications to enable adjacent, grey-belt, sustainably located parcels near the former Barrow Gurney Hospital and next to the Woodspring scheme to come forward within the Comprehensive Masterplan. These sites are well-accessed and serviced, directly supportive of the transport hierarchy, capable of meeting the 50% affordable housing Golden Rule, and able to contribute land and funding to Nature Park habitat and flood resilience (including Barrow Gurney Reservoir modelling). The requested changes will enhance the Plan's soundness and give the Inspector confidence that housing—especially affordable housing—will be delivered early and in the right places.			
58598465	Andrew Boswell Brown		None	Unsure		Unsure	Yes		First, Woodspring will result in significant loss of a great community recreational asset in the golf course and also a significant reduction in green wildlife corridor and controlled habitat area. This controlled access it plays an outsize contribution to the area and is in effect a mini reserve. If building is to go ahead then it needs to have a high consideration for establishing both water course and wildlife corridors through the site. On the Northern boundary there should be a significant fenced / non accessible corridor to compliment the existing habit along Yanly Farm boundary. This corridor would serve its primary role together with sight line protection from / to Bristol and Long Ashton, noise mitigation through construction and later during occupation. The development needs to meet community requirements and not just be a collection of soulless energy inefficient minimum regulation boxes. The area around Flax Bourton / Old Farliegh Court is an example of good quality desirable community enhancing housing. Developers must not be allowed to join Woodspring and urbanise / create a sprawling suburb that's indistinguishable from a Bristol suburb. Housing must include detached single story dwellings to deliver for older / disabled. Yanley Lane must be closed at commencement of works. Access only to pedestrians, cyclists, farmers and emergency services. In Hamlet of Yanley we have a height restriction on bridge. To mitigate times of Lane closure into Long Ashton due electrical / water works etc.. developers must have an access plan for Yanley Hamlet residents.		
39279329	N Boswell Brown			Unsure		Unsure	Unsure	I do not know the legalities of this plan although the legalities of building on green belt land should be brought into question of course. What is the point of having land designated to green belt if it is then to be developed?	There needs to be absolute agreement and accountability of the developers to an acceptable and sustainable way in which this land is developed. Too often developers agree to certain requirements only to not meet their obligations on project completion. It is essential that this development has very high standards in terms of future-proofing against the challenges of climate change. Biodiversity has decreased enormously and we need to mitigate against this as much as possible with any development. Therefore it is imperative that plans must include a significant proportion of land that is allocated to green spaces - woodland, orchards, allotments, parks and walkways. Ensuring pedestrianisation is prioritised and car use is discouraged as much as possible by having access to walkways, cycle routes and public transport - but also ensuring key services are in close proximity such as shops, doctors surgery, schools and employment opportunities. There must be a great deal of thought put into access to the development and traffic congestion - which is already a problem in this area. Yanley Lane will need to be made access only for residents and I am very concerned of the build up of traffic on the A38. Flooding is also already as issue which will be made worse by development on this green land. There will need to be wide nature corridors in and around the development including at the ridge of Yanley Lane to ensure more tree planting to mitigate against the extra pollution and to preserve the view from housing. There must be strong agreement to the variety of housing built to ensure there is a mix of housing to serve the community, affordable housing and accessible housing, including bungalows for those with mobility limitations, often neglected by developers - having a flat entrance to a two storey home is not sufficient to tick the accessible housing box.		
61524321	South West Water Limited [SWWL; the Undertaker]		South West Water Limited [SWWL; the Undertaker] (trading as	Yes		Yes	Yes			South West Water (trading as Bristol Water) support this local plan as legally sound as we have been consulted regarding the sites in the local plan. For the policy LP2: Strategic location:	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 	(trading as Bristol Water)		Bristol Water)							Woodspring (south west of Bristol) agrees with the food risk and land conditions as to mitigate the impact of the flood risk from Barrow Gurney Reservoir a comprehensive flood risk assessment must be undertaken and sequential test assessment completed. South West Water (trading as Bristol Water) as the operator of Barrow Gurney Reservoir will want to work with and approve any proposed mitigation measures that will be required to mitigate the flood risk from the nearby reservoir.	
32925633	Bath and North East Somerset Council		Bath and North East Somerset Council							Development Site Allocations With regards to the sites proposed to be allocated for housing development there does not appear to be cross boundary strategic issues of relevance to B&NES. As referenced above, Woodspring (adjacent to south west Bristol) has been identified as a strategic development location and is expected to accommodate a total of 3,500 homes. Additionally, land at Colliter's Way (situated directly adjacent to the boundary with Bristol to the east, and north-east of the B&NES boundary) is identified for allocation to accommodate residential development providing 215 dwellings. It is noted that Bristol has also identified land adjacent to Elsbert Drive, Bishopsworth within their boundary for residential development in their Publication Draft Local Plan. Ongoing dialogue and consideration of any potential impacts of individual development sites and cumulatively on communities within B&NES e.g. in terms of transportation and on the highway network would be welcomed both through plan-making and at the planning application stage.	North Somerset Local Plan Reg 19 Consultation 2025 FINAL.pdf
62827489	Cllr Mike Dunn		North Somerset Council	Unsure		Unsure	Unsure		On behalf of my constituents I would like to ensure the plan reflects the needs of the local community and the environment. We value good quality, affordable housing in a mix of sizes, positive outcomes for climate and nature, and an investment in infrastructure (e.g. public transport, active travel, doctors, nurseries/schools) to accommodate the needs of both existing and future residents of the ward.		
62857633	James Durie	James Durie	James Family C/O Duries	Unsure		Unsure	Unsure	We are unsure - please see representation below and attached which sets out what changes we consider are needed to the policy. Duries represent the James family who own Castle Farm – edged red on the attached plan forming part of the proposed strategic allocation covered by Policy LP2. The James Family welcome the proposed allocation in the latest Local Plan consultation and have made representations into the Call for Sites and Additional Sites consultation undertaken by North Somerset Council in February and March 2025. We are aware that the vast majority, if not the entirety, of the rest of the proposed allocation is owned and/or controlled by Taylor Wimpey, and North Somerset Council are aware that as part of their promotion of the land the James family and their representatives have participated constructively and collaboratively with the Council and with Taylor Wimpey in a number of master planning workshops through the autumn of 2025. We have also made some previous brief suggestions relating to a draft of the LP2 policy on 22 August 2025. Whilst to date these very early stages of master planning workshops have only looked at very high level broad concepts, all parties have satisfied themselves that the land controlled by Taylor Wimpey is not in any way contingent upon the Castle Farm site coming forward for development or infrastructure nor is the reverse the case i.e. no Taylor Wimpey land is required in advance of the Castle Farm site coming forward. This does not mean that both parcels would not continue to be properly considered through the proper identification of constraints and opportunities and development of the masterplan as is demanded by the draft policy, but it is clearly important that the ability to separately deliver the two parcels remains the case, otherwise in the absence of any agreement between the owners and/or developers of each site there is a risk of failure. The policy therefore needs amendment to reflect and enable this. The comments below therefore we hope will be read in this context where there remains a willingness/ desire on behalf of the James Family to continue to engage in this process and to work with Taylor Wimpey and North Somerset Council. Depending on the further findings particularly in relation to some of the constraints identified in he policy, and some of the infrastructure requirements, disagreement at some point is ossible however undesirable. In the 4th line of draft policy LP2 therefore we are not sure how the policy can compel developers to work together in this way. The ultimate arbiter must be North Somerset Council as to the configuration of the Master Plan. We have previously suggested, and as referred to in Policy LP1 relating to the strategic location at Wolvershill, an SPD would seem a good way to ensure the Master Plan (and the Policy) is tested and is deliverable. We are not sure why LP2 does not have similar supporting text as a fall back in the event the parties have failed to agree a Master Plan for the whole allocation. And we	We are unsure - please see representation attached which sets out what changes we consider are needed to the policy.	We are unsure - please see representation attached which sets out what changes we consider are needed to the policy.	2025-12-11 Reps Reg 9 _JRD.pdf NSC CfS CastleFarm Plan.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								would suggest wording is included in LP2 to this effect. Clearly it is essential that a Master Plan framework exists before applications are determined to ensure all the necessary infrastructure and uses etc are delivered across the whole site. Together with provision at the same time allowing individual parcels to come forward separately. Comprehensive Development 2nd bullet point requires a comprehensive masterplan to be submitted with “the” planning application. There will inevitably be more than one planning application and this would seem to conflict slightly with latter section under Design which refers to Sub Area Masterplans. Transport The Master Planning workshops had already identified some difficulties in creating “accessible high quality walking and cycling connections” to and from Dundry, Yanley and Long Ashton. Furthermore the requirement not to prejudice the future delivery of a mass transport route must surely be identified at this stage. The impacts of this together with the other requirements for transport related infrastructure set out in the IDP needs to be costed to confirm both the capacity of the site and the viability of different parcels. Local Centre Services Facilities and employment The 5th bullet point refers to the provision of around 10 hectares of new employment land. The location of this within the overall master plan as well as the secondary school and primary schools must all be identified and agreed to ensure the Policy is sound, with such agreement forming part of the SPD and/or at the very least evidence base supporting the policy. Given the location and scale of the Castle Farm site whilst there may be some scope to provide part of the employment allocation (as part of a high quality local centre) the vast majority of this and of the education provisions will need to be provided elsewhere within the master plan. Flood Risk and Land Conditions The James family have to date not been party to much of the conversations with the water company, their engineers and other parties so we do not have much of an understanding as to what the full implications of the reservoir overspill modelling nor hat the solutions might be. But we intend to engage in the future with the water company, the council and Taylor Wimpey, etc to understand the technical constraints. These are fundamental to the capacity of the allocation and potentially to deliverability of the parts of the site. Reference is made to the upgrade of the culvert from Yanley Lane to Hanging Hill Wood. This culvert runs beneath an old landfill site and we would imagine would be prohibitively expensive to upgrade. Such works are not likely o be a pre-condition to the development of the Castle Farm land. Phasing It was acknowledged during the various earlier master planning workshops that Castle Farm would properly form one of a small number of Phase 1 areas to be released. This would come forward by way of a separate planning application and therefore the policy we would suggest should reflect this.			
38530913	Professor Colin Fudge		Greenbelt Working Party for the Parish Councils of Dundry and Long Ashton	No	• Effective	Unsure	Yes				Response to NSC Local plan 25.11.25.pdf Appendix A environmental information final issue.pdf Woodspring Sketch SPD_Graphics ISSUE 25.08 12-2.pdf
39286433	Andy Garrett			Unsure		Unsure	Unsure		I cannot see a specific comment saying as such, but my belief was that Yanley Lane would be closed to through traffic should this development be accepted. As a resident of Glebe Road (the residential street at the end of Yanley Lane in Long Ashton), I would only support the development if I knew closure of the road between Woodspring and Yanley itself was confirmed and guaranteed.		
51511393	Natural England		Natural England					As this major allocation is within 600m of a significant Lesser Horseshoe bat maternity roost , our recommendation is that the policy should make clear that, as part of the Nature Park requirement, the development will need to include a generous woodland buffer at the extreme western edge.	The policy should make clear that, as part of the Nature Park requirement, the development will need to include a generous woodland buffer at the extreme western edge. 39209121	Tina Jennings			No	• Positively prepared • Justified • Effective	Unsure	No	North Somerset Has not fully taken into consideration. The expansion of Bristol airport It has not considered the joining of Withywoood to Dundry with no clear open space.There are four fields behind my house between Hiridge, Withywood and Dundry If these are built on there will no clear identification between North Somerset and Bristol The green space is valued by all especially by a deprived area's of South Bristol	The A38 around south Bristol is already over loaded with Air port expansion. If this is not looked at in depth before any house building. South Bristol will be grid locked		
31035265	William Jones			Yes		Yes	Yes				
31035265	William Jones			Yes		Yes	Yes		I am writing in respect of Policy LP2 Woodspring development and the development of 3500 houses and associated infrastructure on green belt that has significant value in respect of water courses, ancient woods, fields and wildlife corridors. If the land is to be developed then it should be to a high standard that recognises climate change challenges and the need for a people first community with sustainability at its heart and ease of walking/cycling/ with access to local services/shops/schools/ doctors surgery etc. In respect of the proximity of the proposed site to the hamlet of Yanley then there are some very specific concerns: 1. The need for an extended wildlife/green corridor running the length of Yanley Ridge that restricts any new development including gardens to a level of 50m below the site boundary. 2. Yanley Lane be closed to all through traffic but remains accessible for walkers/cyclists/horse riders/farmers and emergency vehicles.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									3. Footpaths are retained 4. Spring Lines and water issues are identified and a suitable plan implemented to deal with increasing levels of flash flooding 5. Old establishes trees are identified and protected It is essential that a working party be established to work with the developer comprising of all stakeholders		
39210209	Sarah Le Flohic			Unsure		Unsure	Unsure		My concerns focus on two areas: 1. Yanley Lane is an extremely narrow country lane, connecting to Long Ashton via a single carriageway road bounded by existing housing. At present there is a through connection to the A38, which unfortunately reasonably frequently becomes completely clogged with traffic under current arrangements. There is reference/implication in the document that this will no longer be a through route (apart from pedestrians & cycles) - it is crucial that this is strengthened and implemented in the final development arrangements, to ensure that access from the Long Ashton end of the road continues to extend to/near to the ridge. 2. Any development remains below the ridge to protect the current views/rural nature of this area as well as maintaining a crucial wildlife corridor		
31109409	Harvey Lilley			No	• Positively prepared • Justified	Unsure	No	In terms of Duty to Cooperate I am concerned that many of the projects will be purely developer led particularly the massive development of 3500 houses at Woodspring. This will encourage a too dense footprint, a mix that will abandon social and affordable housing when it comes to the crunch and will ignore reasonable calls for all developments going forward to be as close to carbon neutral as possible, have real consideration for environmental concerns and be purely housing estates reliant on cars. Local voices as already articulated by on of your planning officers will be steamrollered by what in the short term is being used as a vehicle for growth that will do untold damage to the countryside/ greenbelt and will not deal with the real housing issues faced by the young and those at the lower end of the income scale.			
43203041	National Highways		National Highways							A new mixed-use strategic growth location is proposed at Woodspring on land released from the Green Belt to accommodate up to 3,500 dwellings. Whilst the proposed allocation is located some distance from the SRN, National Highways welcome the need for developers to work together to produce a single masterplan and a Delivery Plan to outline the delivery and phasing of required infrastructure.	NSC Reg19 Local Plan Consultation.pdf
30658209	N Moorcroft			No	• Justified	Yes	Yes	Firstly I feel this abhorrent breach of the Green Belt by the acceptance of the building of the EPIC site was a complete dereliction of responsibility by both the Planning Officers and North Somerset Council with absolutely zero gain for the community as a whole indeed to the detriment of the community. It has heralded a wholesale sacking of the greenbelt and its protections and this document is proof of its destruction. I have specific comments in relation to the employment development in the green belt:We think that the two sites allocated for employment opportunies are completely inappropriate because of both landscape value, historic views of Ashton Court Estate, Brunel’s Suspension Bridge and Royal York Crescent and other listed buildings in Clifton (see Historic England comments) and Hanging Hill woodland. We suggest these be retained as green belt and then they would act as a clear green edge between Bristol and the new development areas. The employment opportunities could be allocated on other sites closer to the A38 and e.g. linked to Castle Farm.or better located near the conurbation of Weston Super Mare The WECA Spacial Development Strategy we understand will not be completed until later in 2027.due to is failure of previous leadership This strategy will affect in a major way the transportation corridor reservations that will be needed for a masterplan. This period could be used to complete an NSC led master planning approach particularly if it was included within the amended Local Plan.We think that there has been a totally inadequate appreciation and understanding of both the visual quality, nature significance animal migration and water movements in the Woodspring golf course area and adjoining topography and the sloping fields leading up to the village and church at Dundry. These are locally known to include many very waterlogged sites - land which currently reduces the poten/al extent of flooding in southern Bristol. We think that this understanding and appreciation of the value of the outstanding landscape which is to be taken out of the green belt requires some form of compensation to the existing and new residents of the developed area in the form of how the development is designed, what additional spaces are available for community recreation specifically walks into the future. In addition, the identification of a new area of green belt is necessary to compensate for the loss of open land to built development. There are a number of smaller but significant issues that are of concern for the residents of Yanley hamlet and Dundry village. These include: a) b) c) d) e) That the development on the Woodspring golf course site should allow for a wildlife corridor in the form of a saddle over the ridge restricting development including gardens in a band 75m below the site boundary. That this area remains in the green belt and is enhanced appropriately through tree planting etc. Due to the pressures from the consented EPIC development site and the proposed new housing development, before any housing development can be commenced that Yanley Lane is gated to through external traffic but remains accessible for walkers, cyclists, horse riders, farmers, immediately adjacent neighbours and emergency vehicles in a design that is agreed with the local community. That footpaths are retained in existing locations most importantly including the Historic Monarch’s Way through the lower flank of Dundry Hill and across the Woodspring area That spring lines and water issues are identified early in the process, and all water is retained on the surface and integrated into commensurately sized damp habitat That veteran and legacy oaks in particular are adequately , safeguarded and retained as part of the landscape structure of any development Suggested alternative approach to Policy LP2 We conclude our response with a suggested alterna3ve approach to Policy LP2 which we think provides a process that would meet the strategic objec)ves of North Somerset Council.This approach would involve engagement with the existing and new communities and the opportunity to design a special place to live that is resilient in rela/on to both climate and nature. The planning approach would be predicated on deep analysis and evidence base, leading to a design approach that delivers an advanced and future-proof model for this locality to be enjoyed equally by the new community and the existing residents. 1. 2. 3. 4. A new strategic growth location is proposed for a new settlement of about 3500 houses at Woodspring based on Garden Village principles. The delivery will be phased through the plan period			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								following a process of detailed examination, strategic policy formulation and master planning. North Somerset Council should establish a leadership group and Project Delivery Board involving WECA, relevant parties such as Homes England and most importantly include independent local community representatives. The project delivery board apparently intend to commission work that will form the basis of a site- specific SPD that will include: - A detailed hydrology of the area throughout the valley along with flooding constraints, both fluvial and related to the nearby overground reservoirs some of these watercourses are the most volatile in North Somerset and seem to be ignored by those who report to North Somerset. Most importantly this plan has little or no regard for those in the lower levels of the Valley where despite SUDS little will be done to ameliorate the vastly increased runoff created inevitably by urbanisation , The hydrological report commissioned by NSC for the SBLR has turned out to be very inaccurate to the point of being farcical and local opinion proved to be accurate I trust that this time more local opinion will be included rather than an academic who knows little of the minutiae that has contributed and manifested itself in the flood plain regularly flooding. Assessing in detail the topography, ecology and landscape quality of the area - Preparing a definitive corridor for a future Bristol –airport mass transit route that will inform the master planning process. - Defining a community engagement strategy - Establishing a bespoke independent design review group for the project - Considering the stewardship legacy for the necessary community and public infrastructure, including managing assets for the benefit of the community - Formulating a strategic masterplan and design brief for the new community Developers prepare detailed masterplans and design codes in accordance with the SPD The Plan must include infrastructure for the newly created communities prior to their completion and this new community should have zero impact on the existing community in `Long Ashton These facilities should consist of Schools,Community Hub,Large green spaces ,Bus Services ,Health Centre all created at the time of the rest of the development with all road exits directed towards the Bristol City Conurbation via the A38 In regards to any traveller site being considered ,I would consider this site to be totally unsuitable			
58582945	Nailsea Action Group		Nailsea Action Group								
58582945	Nailsea Action Group		Nailsea Action Group	Yes		Unsure	Unsure			Nailsea Action Group agrees with this allocation as it satisfies the criteria stated in SP3 for a new build area. It is close to employment locations, has adequate transport to all the facilities of a large city and will result in a consequent reduction in car travel.	
30945217	B Northover			Yes		Yes	Yes			Although it is regrettable that it is necessary to build on the Greenbelt, I consider that a separate and distinct settlement is the best solution. It must be recognised that much employment is available within Bristol and the proximity of this site to the City makes sense, provided there are appropriate public transport links and cycle paths.	
11678657	Bristol City Council		Bristol City Council	No	• Positively prepared	Yes	Yes	This representation relates to a limited part of this strategic location – the area of land east of Colliters Way/north of the A38 Bridgwater Road, a parcel of approximately 6.5 hectares. Bristol City Council maintains the position that this area should remain a largely undeveloped and green area in the Green Belt. The adjacent land in Bristol is in the Green Belt and is proposed to remain as Green Belt in the well advanced emerging Bristol Local Plan. This land is also a Site of Nature Conservation Interest (SNCI). It is acknowledged that the 'Green Infrastructure and Landscape' development principles for Policy LP2 state that 'development must retain and enhance strategic green buffers to maintain visual separation from Bristol'; however, the boundary for LP2 as shown on the Policies Map does not enable the degree of continued separation from Bristol which would be assured by retaining the land in the Green Belt. By retaining this land in the Green Belt, the area would act as a strategic green corridor by linking the adjoining Green Belt land and SNCI in Bristol with the Hanging Hill Wood area in North Somerset. Bristol City Council acknowledges the rest of proposed strategic allocation LP2 at Woodspring (SW Bristol) for the proposed residential capacity of up to 3,500 homes and looks forward to continuing to engage and collaborate with North Somerset Council regarding the development of this location.			
31033025	K Simmons			Unsure		Unsure	Unsure		In order to safeguard the existing village of Long Ashton the future of Yanley Lane needs to be considered. It is still a "rat run" despite the SBL. In view of proposals should the lane be closed off? There will be an increased flood risk with so many houses..Yanley Lane flods regularly..what can be done to further mitigate risk? The ridge at Yanley needs to be protected as a green buffer zone along the entire length and enlarged to protect the ridge landscape. Local footpaths need to be retained across the area.		
30736993	Kath Scargill			Yes	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	No	That the housing at the Woodspring golf course will meet the needs of Bristol housing		We need more housing to support the young people	
31062913	R Storrar		KWAW	Yes		Yes	Yes			Houses built here are the most sustainable, given their proximity to Bristol. The safeguards put in place by NSC should protect the historic landscape and features being affected.	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 12476353	Historic England (R Torkildsen)		Historic England					The North Somerset Site Allocations Historic Environment Assessments (HEA) (Avalon, September 2025) considers the likely impact of proposed allocations on the affected heritage assets and helpfully indicates a potential design approach to positively respond and limit harm to their significance. The application of this evidence to do so will help to ensure the Plan provides a positive strategy for the conservation of the historic environment in accordance with paragraph 203 of the National Planning Policy Framework. In relation to the proposed allocation to the south west of Bristol, the North Somerset Local Plan Landscape Sensitivity Assessment (LSA) by Wardell Armstrong in 2017 defines the site as highly sensitive, and the HEA emphasises the positive contribution it makes to the significance of many important heritage assets. As local authorities have a legal duty under Section 66 of the Planning (Listed Buildings and Conservation Areas) Act 1990 to “have special regard to the desirability of preserving” the settings of listed buildings, and need to afford great weight to the conservation of designated heritage assets (NPPF paragraph 212), it is appropriate for you to take account of the HEA “to avoid or minimise any conflict between the heritage asset’s conservation and any aspect of the proposal” (NPPF paragraph 208). The HEA declares the likely significant adverse impact on many designated heritage assets unless certain measures are deployed. It highlights how, with care, heritage and landscape-led masterplanning can help to ensure a development to the north of the A38 and a portion (I) to the south west of the site, that might be delivered which minimises harm and positively responds to the immediate and wider heritage sensitivities. It identifies areas for strategic landscaping and an appropriate built form. There is however no such mitigation offered by the HEA in relation to a portion of the site on rising land (B) to the south of the A38. The impact on the significance of affected heritage from development here would therefore be notable, particularly in relation to the urbanisation of views from Ashton Court, Dundry and Bristol’s townscape where panoramic views are evident towards Dundry from the Suspension Bridge and Clifton & Hotwells Conservation Area. No doubt Bristol City Council may wish to comment on this significant cross-boundary matter. As the HEA was only completed in September, it may be understandable that its recommendations may not have informed, nor its advice, included in the Plan. To address this matter and ensure it can be demonstrated that the Plan has been positively prepared, is justified, effective and accords with national policy, we strongly recommend that modifications are undertaken. The North Somerset Green Belt Assessment (Stage 2) (October 2025) considers the contribution of the site to the five purposes of Green Belts. 1) To check the unrestricted sprawl of large built-up areas 2) To prevent neighbouring towns from merging into one another 3) To assist in safeguarding the countryside from encroachment 4) To preserve the setting and special character of historic towns 5) To assist in urban regeneration by encouraging the recycling of derelict and other urban land As with the HEA, it emphasises that the portion of the proposed allocation to the south of the A38 is the most significant. The assessment also considers that this parcel is the only portion of the greater site that could not, potentially, be defined as Grey Belt. The purpose of the Green Belt Assessment and of identification of potential Grey Belt is to allow for a consideration of more focused development on less valuable parts of the Green Belt and conversely safeguard those areas of Green Belt of particular significance. Consequently, due to the importance of conserving the historic environment in an appropriate manner to secure the delivery of sustainable development in accordance with national policy, we would recommend that the potion of the greater site on rising land (B) to the south of the A38 be omitted and other opportunities are considered, perhaps informed by an urban capacity study and Grey Belt assessment.	We would recommend that the potion of the greater site on rising land (B) to the south of the A38 be omitted and other opportunities are considered, perhaps informed by an urban capacity study and Grey Belt assessment.		20251210 NSCLP Reg 19 response Dec 2025 RT.docx
62471329	Environment Agency		Environment Agency							The Main River Colliter’s Brook runs along the edge of the site within Hanging Hill Wood which also contains a small area of Flood Zone 3. There are a number of ordinary watercourses across the site, some are culverted. Development should sequentially be located away from the area of Flood Zone 3 and the watercourse around Yanley Lane. The flood zone extent is also increasing along the Colliter’s Brook along the northern edge of the site allocation (near Hanging Hill Wood). Increased run off from the development would go down the Colliter’s brook to the Longmoor Brook then down the Longmoor culvert. Capacity of the brooks and tunnel would need to be considered. There is a non EA culvert on the Colliter’s Brook from Yanley Lane going to Hanging Hill Wood at the edge of site that is in a poor condition. Capacity of this would need to be considered. Whilst an internal CCTV inspection on the culvert has previously been undertaken by the Environment Agency, access is difficult. Culvert access improvements in this location are beneficial. Development proposals must include details of ongoing maintenance for the watercourse. Vehicle access strips should be retained for future emergency access. Site allocation close to Barrow Gurney		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										Reservoir. All sources of flood risk will need to be assessed. As a new strategic site, consideration will need to be made for Long Ashton Flood Storage Area (which is just under the size required for reservoir designation). Future development may need to contribute to both the future maintenance of this dam and further flood risk mitigation measures. With climate change, space will need to be made available to safeguard land to ensure the future provision of flood risk infrastructure required within the area surrounding Long Ashton. This strategic solution (i.e. a pond) is a long-term requirement, with the site location currently unknown. Policy wording comments: •We support the development of a comprehensive masterplan and support new Nature Park and Green Infrastructure corridors. •We support the site specific modelling of Barrow Gurney reservoir for site wide master planning and use of sustainable drainage systems (SuDs) and the sequential approach to different vulnerability uses. •We support the Sequential Test being required. •We support the culvert upgrades and future maintenance access and improvements required.	
58415265	Mr D Wheeler			No	• Positively prepared • Justified • Effective	No	No	This is being built on Green belt land protected by law. Wildlife species protected by law will simply be destroyed. Schools and health care facilities must be provided and phased with the development so that facilities are available are houses are occupied. This is a massive development and local vehicular traffic out of Bristol will grind to a halt (which it already frequently does). There is only one lane open on gthe main road from county gates this is insufficient. This will affect all those existing North Somerset Residents who travel into Bristol every day- and there are lots of them! Local electricity, gas water and sewage will not cope with this extra demand. Already electricity use in home is increasing massively each year. This plan is basically ill considered, illegal and has not been properly thought through.			
51572577	BNSSG ICB		NHS Property Services						This strategic development location, with an indicative capacity of up to 3,500 dwellings, would create a significant population uplift, which, in turn, would create very significant pressures on local primary care facilities. The delivery of this strategic development would require a significant increase in primary care infrastructure in South West Bristol and Long Ashton to support demand from the growth earmarked in Policy LP2. Policy LP2 makes the following reference to healthcare: “provision for healthcare, community, recreation and leisure facilities must be provided to meet the needs generated by the new development”. To ensure the Plan is positively prepared and effective, we propose the following modification to Policy LP2: Proposed Amendments to Policy LP2 Subject to confirming needs generated by the development, the development must ensure suitable land provision is made available to facilitate the provision of appropriate healthcare infrastructure onsite or appropriate financial contributions towards healthcare for new and/or improved facilities off-site (insert…Development will ensure the provision of appropriate primary care infrastructure on-site or through appropriate financial contributions towards primary care for new and/or improved facilities off-site to support new development. On-site healthcare provision should be provided as a turnkey, fully fitted out facility (ready foroccupation) constructed at developer cost to NHS specification provided leased at a peppercorn rent for the entirety of occupation.) We recommend that the Council engages with BNSSG ICB on this proposed development to ensure that adequate primary care provision can be secured. This will ensure compliance with paragraphs 20c and 35 of the NPPF.		NSC Reg 19 Local Plan - NHS BNSSG ICB Response 101225.pdf
4618561	Barrow		Barrow	No				Barrow Gurney Parish Council is particularly concerned about the combined effects of 3 pro-posed new			Local Plan

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 	Gurney Parish Council		Gurney Parish Council					developments in the north of the district: at Woodspring (to provide circa 3,500 new homes, 10ha employment, one senior school to cater for c1,600 students, 2 or 3 primary schools and a new neighbourhood centre); the proposed further expansion of Bristol Airport from the present 12mmpa limit to 15mppa, and the EPIC campus between Colliters Way and the A38 - for which planning permission has already been granted. Taken together these developments will have an enormous impact on the already congested road network, in particular on Colliters Way and the A38. Colliters Way is already heavily congest-ed during peak traffic flows in the morning and evening, and will be to a much greater extent once the EPIC development becomes operational. The Woodspring development will span large areas of countryside on either side of the A38, which is also regularly congested between Lime Kiln roundabout and the airport owing to the large volume of passengers travelling to or from the air-port by car or taxi. It is no secret that car parking revenue is Bristol Airport's primary source of funding. The proportion of passengers arriving by public transport however is, we understand, the lowest of any airport in Britain at around 15%. It is inevitable that access to and from Woodspring will generate an enormous increase in traffic along the A38 and smaller rural roads in the vicinity. Taken individually, there is an incoherence in the thinking behind each proposal: NSC is putting forward a sustainable community at Woodspring, but does nothing to link it to the city by rapid transit, surely a "must". Bristol Airport informs of its intention to expand its passenger throughput to 15mppa, a 50% in-crease on its current throughput. Any expansion should similarly be preceded by a rapid transit route between the City centre and the airport. Putting the two expansion proposals together provides an overwhelmingly powerful case for a mass rapid transit route between the City centre and the airport to be defined at the outset as the primary action so that the development of each can move forward with certainty and new development at Woodspring can be built around the route. The impact of the EPIC proposals (a new European HQ for the US Tech Giant, including new office buildings, a 3,000 seater auditorium and training facilities on a 90ha site, which together could create 2,150 jobs) can only compound pressure on the highway network in this part of the city and adds further weight to the crying need for an integrated mass rapid transit system from which employees at EPIC can also benefit. From the Parish Council's own perspective the impact of these developments on Barrow Gurney village will be very significant, largely owing to the increased volume of traffic on these three roads. When either the A38 or A370 is congested, usually as a result of congestion on Colliters Way, a great deal of traffic re-routes along the B3130 which, like Colliters Way, provides a link be-tween the two. This road is, however, demonstrably unsuitable for increased traffic, with 3 sections of road passing through the village conservation area being restricted to single file, one-way at a time only traffic and a 7.5 ton weight limit. Despite these limitations it is designated as the recommended satnav route between Portbury on the M5 and Bristol Airport. We do not consider the Local Plan (2041) Pre-submission Plan to be sound for the reasons out-lined above and embellished in our comments on Policies LP2, LP11 and LP12. Policy LP2: Strategic location: Woodspring (south west of Bristol) (Page 58) Developers must work together to produce a single masterplan and design code for the al-located area. The development will deliver a new standalone sustainable community with a distinct character and identity. Proposals must demonstrate how the development will function as a cohesive and independent community, with a strong sense of place and clearly de-fined boundaries that prevent coalescence with surrounding communities, including the Bristol urban edge. A high standard of design will be required to reflect the site's unique landscape and heritage context, incorporating a mix of uses, high quality green and blue infrastructure, and active travel connections internally and to surrounding areas. The development must ensure that walking, cycling, and public transport are the most convenient and attractive ways to move into, out of and around the site, with safe and legible routes providing easy access to key services and facilities. The layout and strategic phasing of infrastructure must be guided by a comprehensive masterplan and design framework to shape a well-integrated and vibrant new community. Whilst we accept that NSC is being required by government to release land within the Green Belt in order to be able to fulfil its housing allocation during the plan period, and are in agreement that this being the case it should comprise a standalone sustainable community, we strongly disagree with the proposal that developers should work together to produce a single masterplan and de-sign code for the allocated area. Any masterplan should be prepared by North Somerset Council itself, or if necessary by an independent body appointed by North Somerset to supervise production of a cohesive masterplan on the Council's behalf utilising the extensive variety of skills re-quired. Under the sub-heading Transport (pages 59/60, bullets 3 and 4) the policy states: • Development proposals must demonstrate that they do not prejudice the future delivery of a high-quality, segregated mass transit route between Bristol City Centre and Bristol Airport, in line with Policy LP11. Opportunities for the route to pass through or alongside the site should be safeguarded where appropriate, and development layouts should sup-port integration with the future mass transit network. • Development proposals must ensure that they do not prejudice the future delivery of transport hubs. In any planning application consideration should be given to how these elements could be integrated into the future development. This may require significant parking provision to support transport hub access for residents from North Somerset and beyond. As the mass transit route and its infrastructure are further defined, development layouts should retain flexibility to accommodate this, ensuring seamless integration with emerging transport proposals. It is our strongly held view that the new development at Woodspring should be infrastructure-led and that a mass transit corridor route alignment should be identified prior to commencement of development. Built development should be designed to fit around the infrastructure that will pro-vide the means of public transport by which residents will travel to and from their destinations, notably Bristol city centre and the Airport. Construction of the rapid transit route should preferably take place in conjunction with development as the settlement grows. It is not sufficient to state that "opportunities for the route to pass through or alongside the site should be safeguarded where appropriate." With 3,500 new dwellings to be built predominantly between the A38, A370 and Colliters Way, together with 10ha of employment land, 3 or 4 schools and a new neighbourhood centre, it is in-evitable that these roads will become very much more congested than at present unless and until a new rapid transit			response 12.25 NT final.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								link to the city is available. The A38 in particular, as the principal corridor be-tween Bristol and the Airport, is particularly vulnerable because it is almost exclusively single carriageway only. It is entirely unsuitable for upgrading to a mass transit corridor for public transport because it cannot realistically be converted to a dual carriageway by virtue of the Barrow Tanks reservoirs on either side along a substantial proportion of its length. In which case it is logical that an alternative mass transit route through the Woodspring development should be considered and that this would provide the spine of the development by which access to the north (Bristol) and south (airport) could be obtained. It could (and should) determine where the core neighbourhoods should be located and help to shape the vision for the entire new settlement. CONCLUSIONS Woodspring BGPC believes that the Master Plan for Woodspring cannot be left to developers as proposed, but should, indeed MUST be led by NSC and/or suitably qualified, independent and experienced planning consultants. Woodspring, Transport and the Airport We also do not believe the proposed development of a new settlement comprising 3,500 dwellings, 10ha employment land, 3 or 4 new schools, a new neighbourhood centre and much more besides, at Woodspring is a sound planning proposition until and unless a firm route alignment for a rapid transit connection between Bristol and the new settlement has been established. Logically it would be sensible to define a continuous mass rapid transit route between the City centre and the airport as a priority, so that development at Woodspring can be planned with greater certainty based upon an established route alignment, and reliance on using private trans-port to get to the city or the airport would be significantly diminished. It would also ensure that if the airport were ever permitted to expand to 15mppa over time (which we as a Parish Council would prefer not to be the case) it could encourage greater use of public transport to enable it to do so. To suggest that developers should make allowances for a route to be threaded through the Woodspring development in the future, once development is well underway, gives a strong indication that the plan has not been positively or effectively prepared. Until an alignment for a new, high quality, segregated, mass transit route between Bristol City Centre and the airport is defined as a principal policy requirement, we consider proposals for the development at Woodspring and the future expansion of Bristol Airport would have an unacceptable impact on the existing transport network to the south west of Bristol, and in this regard we consider the Local Plan (2041) Pre-submission Plan (Reg 19) to be unsound. Please see full comments attached.			

Policy LP3: Strategic location: Nailsea and Backwell

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
61656193	Kate Wickens			No	‣ Justified ‣ Effective		Yes	The increase of 3500 houses to Nailsea and Backwell (LP3) would increase car usage, rather than be mitigated by the provisions in the local plan. Page 67 states “ Nailsea is a main town on the A370 corridor.” It’s not as it is 2 miles from the town centre to Backwell crossroads, the current junction with the A370. The local plan appears to be directing Nailsea residents to Bristol via bus via the A370. This would be particularly an issue for the residents of the site planned north of Nailsea (381 dwellings). Developments generally north of Nailsea would need new bus routes as the reasonable distance requirement would only be met in certain areas of the development. Nailsea town centre is 1.5 miles to Nailsea and Backwell railway station. Behaviour change as written about on Page 149 is unlikely regarding developments north of Nailsea as the distance to the train station and the A370 bus corridor is not attractive to walk to and the route to the station, especially the return up a steep hill with a curve on the brow of it, will not appeal to the less confident cyclist. Station is currently not accessible to those with mobility issues due to the length of the ramp from ground level to the station platform north bound of the distance from the car park, to the ramp to the platform south bound. There are no toilet facilities at the station either. New employment land “must facilitate effective active travel links to the railway station” For that designated to be built north of Nailea, this is unlikely for the same reasons. Car usage is more likely to rise. The local plan does not consider the road issues that Nailsea has regarding adequate main roads out of the town in all directions. An increase of 3500 houses, would increase the road usage issues because the infrastructure issues have not been adequately addressed.			
64415137	Miller Homes (Locking Parklands)	Tom Rocke		No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	No		Issue • Whether it is appropriate to categorise Nailsea and Backwell as a strategic location given that they are separate settlements which have differing status in the settlement hierarchy and are intended to perform different strategic roles Soundness Test(s) • Positively Prepared • Justified • Effective • Consistent with National Policy 3.3 For the reasons identified in earlier representations, it is inappropriate to combine Nailsea and Backwell as a single strategic location, and which has accounted for the allocation of a disproportionate scale of growth to Backwell, which is a village settlement. 3.4 There is considerable potential for additional growth at Weston-super-Mare and Nailsea, in locations outside the Green Belt, and which can contribute to infrastructure enhancements. Changes Sought

Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									Policy LP3 • Amend the policy to exclude Backwell form this strategic location. • Amend Schedule 1 to redistribute growth from Backwell to Nailsea and Weston-super-Mare • Review Schedule 1 to afford priority to growth on medium sized sites at Weston-super-Mare that are well related to the existing urban area, including the Weston Villages, ahead of Green Belt locations in accordance with sequential approach that underpins the spatial strategy.		
63359201	Nailsea Holdings LVA LLP	Matthew Kendrick	Nailsea Holdings LVA LLP	Unsure	‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure		The policy refers to meeting the 'Golden Rules' that NPPF sets out, specifically it sets out that the proposed allocations that lie within the Green Belt, including LVAs site at North Nailsea, must deliver 50% affordable housing to meet this. This is a slightly incorrect interpretation of the Golden Rules policy in respect of current planning applications, specifically we refer you to paragraph 157 of the NPPF which states: '.....the affordable housing contribution required to satisfy the Golden Rules is 15 percentage points above the highest existing affordable housing requirement which would otherwise apply to the development, subject to a cap of 50%.' Currently policy CS16 requires sites in NSC to provide 30% affordable housing. In accordance with the NPPF's policy referenced above our planning application for the North Nailsea site, 24/P/1586/OU2, proposes to provide 45% affordable housing. This level of affordable housing has been considered in viability terms, alongside the other likely contributions that will be required in respect of this site, and accepted as being a level that the applicants can bear without rendering the development unviable. The wider contributions also include unilaterally offered improvements to the sports pitches that lie within the site and the provision of a new community building to allow for their efficient use, which has been formulated in consultation with Nailsea Juniors FC. If the affordable housing contribution were to be pushed to 50% this separate contribution may not be possible due to viability concerns. Accordingly, given the benefits associated with the delivery of the pitch improvements and associate changing facilities we ask that the policy be amended to reflect NPPF policy and the correct affordable housing requirement of 45% be applied. We also note the extensive range of infrastructure measures that policy LP3 sets out. While in principle we consider that land at North Nailsea should be making contributions towards appropriate infrastructure the list is extensive and little information has been provided to suggest it would not render development in the area unviable. While the Infrastructure Delivery Plan (IDP) that is contained in the LP evidence base lacks detail we have used it, also informed by our experience of other strategic projects and the cost of similar infrastructure, to estimate the total cost of the infrastructure that LP3 refers to as follows: (please see attached document) While the above makes no allowance for bus improvements along the A370 or other site specific S106 requests that are likely to be made (contributions towards off-site recreational facilities, specific highway junction works, BNG where off site mitigation is required etc.) it already illustrates the scale of S106 burdens that are being expected to be borne by developers which are higher than nearly all the other parts of the UK that we work in. Given this we strongly recommend that the Council needs to consider these contributions in more detail and assess them in a viability appraisal that is specific to Nailsea/ Backwell to ensure that development is not rendered impossible due to sites becoming unviable. CIL will also be applicable to development in the area and an analysis of what that will fund, and how it correlates to S106 to avoid double counting also needs further explanation and clarity in either the Policy or supporting text. These requirements are even more relevant given that our clients land at North Nailsea, proposed as an allocation, is expected to deliver elevated levels of affordable housing. In addition, not all developments in this area will have the same impact. For example the transport assessment, associated modelling and analysis that supports the application for North Nailsea (Ref: 24/P/1586/OU2) has not identified any significant impacts arising from this development on the junctions in the south of Nailsea and in Backwell due to the trip distribution related to it. This is logical given this site's location on the northern edge of the urban area, where most trips beyond the town would travel north east of north west. Therefore, requiring this site to contribute towards improvements to the Backwell		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									Crossroads and Station Road Traffic Light Junction is not justified as the transport evidence does not point to any material impacts arising on these junctions. In light of these considerations regarding the potential burden of financial contributions we request that the plan and evidence base be amended in the following ways: • The text of LP3 needs to have more flexibility and make reference to the fact that not all of the developments will have the same impacts, and therefore certain mitigation measures listed in the policy may not be relevant to all – we would suggest the following text change: 'Where the assessed impacts of specific development indicate a need for mitigation, proposals will make a proportionate contributions towards the delivery of a package of measures including:.....'; • The reference to 50% affordable housing should be amended to 45%; • Further costings analysis needs to be supplied to determine if the package of measures is deliverable without rendering development in the area unviable, and if this is identified as an issue, sources of external funding separate to developer contributions will need to be sought; and • Connected to the above a specific viability appraisal of development in Nailsea/Backwell should be undertaken. Separate to these comments we are broadly supportive of the policy. Nailsea should clearly be a focus for development for the reasons we set out in our previous representations due to the range of facilities it provides, available jobs (with national statistics showing it is well contained relative to other settlements in NSC) and the public transport available, which includes both bus and rail. For the avoidance of doubt our current application is considered to be in accordance with the emerging policy LP3, subject to the correction to the affordable housing requirement to bring that into line with NPPF policy. This is because it will locate much needed housing in close proximity to the town centre and other facilities that already exist there, which means it is a sustainable and accessible location for such use, and through the provision of publicly accessible open space, which opens up the River Yeo corridor for wider use and provides a much improved football facility as mentioned above, which exceeds policy standards in this regard

										land and funding for new education facilities, other leisure facilities and the delivery of green infrastructure including mitigation and enhancement for protected species.	
63175041	Crest Nicholson Operations Ltd	Savills (Victoria Button)		No	• Effective	Yes	Yes	This representation has been submitted by Savills on behalf of Crest Nicholson Operations Ltd (herein referred to as 'Crest Nicholson' or 'Crest'). This representation is in response to North Somerset Council's (NSC) Local Plan Regulation 19 Consultation, in the context of Crests on-going promotion of land at Poplar Farm, Nailsea for residential development, which has been identified as an allocation for 130 dwellings. Crest Nicholson strongly support the identification of Nailsea as a strategic location for growth within Policy LP3 – Strategic Location: Nailsea and Backwell. Notwithstanding, Crest has objections to the elements of Policy LP3 relating to the requirement for a development proposal to demonstrate how it will support the delivery of a package of measures. Previous Representations Crest Nicholson submitted representations to the previous Pre-submission Plan (November 2023) Regulation 19 consultation in January 2024, as part a consortium of developers in response to draft Policy SP3 (Spatial Strategy). These representations acknowledged that, whilst the content of Policy SP3 and its translation into Site Selection Methodology were not in themselves objectionable, the policy failed to articulate how the broad principles it contained could be applied to North Somerset in a manner which secures the sustainable development that the plan's vision and strategic priorities seek to achieve. One particularly important factor considered to have a bearing on strategy was the location of housing needs in North Somerset and from where the need for new housing arises. 4. Crest Nicholson also submitted omission site representations to draft Policy LP2 regarding land at Poplar Farm, in response to this consultation. These representations not only explained why the site is a suitable and sustainable location for residential development, but also, in doing so, justified why Nailsea is a sustainable settlement capable of accommodating additional housing development above that allocated in that previous Pre-submission Plan (November 2023), in a sustainable manner to address housing need. As set out in these previous representations, Nailsea offers a wide range of services and facilities that support a high degree of self-containment, which include: • Primary schools • Secondary school with sixth form college • GP surgeries • Dentists • Veterinary surgery • Leisure centre • Library • Mizzymead Recreation Centre and The Grove Sports Centre & Social Club • Various sports clubs • High street and Crown Glass Shopping Centre • Tesco, Waitrose, Co-op and Iceland supermarkets • Restaurants, pubs and cafés • Bed and Breakfasts • Employment opportunities Whilst there is a range of employment within Nailsea, evidence shows that a number of residents travel beyond the town, principally to the major employment opportunities within the Bristol Urban Area. There are, however, various opportunities for this commute to be made via sustainable modes of travel, including by train, bus and bicycle. Nailsea and Backwell train station offers frequent and short duration train services to Bristol Temple Meads and to Weston-Super-Mare. According to website thetrainline.com there are seven services that leave Nailsea and Backwell station between 7:00am – 8:30am during the typical working week (Mon-Fri). The proposed extension and reopening of Nailsea and Backwell railway station platforms will further improve public transport accessibility for both existing and future residents of Nailsea. In addition, the X8 and X9 bus routes operate from Nailsea into Bristol City Centre. For those wishing to travel by active modes, the Festival Way cycle path provides a good quality route which, according to the Sustrans website is approximately 14km from the centre of Nailsea through to Bristol City Centre. Support for Nailsea as a Strategic Development Location In the context of previous representations, Crest Nicholson welcomes the redistribution of strategic growth within the Pre-submission Regulation 19 Plan (October 2025) and strongly supports the identification of Nailsea and Backwell as one of four strategic development locations. Nailsea is a highly justified and sustainable location for accommodating future growth, offering the capacity to deliver new homes alongside new infrastructure. The inclusion of Nailsea as a strategic development location for growth will help meet identified local housing needs while contributing to the delivery of the plan's wider objectives for sustainable development.	Objections Despite the in principle support, Crest Nicholson has objections to the elements of Policy LP3, specifically the policy's lack of clarity on the requirement development proposals to set out how they will support the delivery of specified measures. While it is appreciated that a package of transport related infrastructure will be required to support development proposals and this is not objected to, the policy lacks clarity on how different elements are expected to be funded. Clarity should be provided on which infrastructure items are to be funded through S106 contributions and which are to be funded via CIL. Site-specific mitigation measures that are necessary to make a development acceptable in planning terms should be secured through S106 obligations, whereas strategic improvements intended to support growth across the wider area should be funded through CIL. The schemes identified to be funded through CIL should meet the tests set out in The Community Infrastructure Levy Regulations 2010, Section 122, which are as follows: "A planning obligation may only constitute a reason for granting planning permission for the development if the obligation is (a) necessary to make the development acceptable in planning terms; (b) directly related to the development; and (c) fairly and reasonably related in scale and kind to the development.' Conclusions Crest strongly supports the identification of Nailsea as a strategic growth location in Policy LP3. Nailsea is a highly justified and sustainable location for accommodating future development. However, further clarity is needed on the funding arrangements for transport-related infrastructure, and any schemes proposed to be funded through CIL should comply with the statutory tests set out in The Community Infrastructure Levy Regulations 2010, Section 122.	Conclusions Crest strongly supports the identification of Nailsea as a strategic growth location in Policy LP3. Nailsea is a highly justified and sustainable location for accommodating future development. However, further clarity is needed on the funding arrangements for transport-related infrastructure, and any schemes proposed to be funded through CIL should comply with the statutory tests set out in The Community Infrastructure Levy Regulations 2010, Section 122.	
63186689	Vistry Group	Boyer	Vistry Group	Yes		Yes				Vistry supports the identification of Nailsea as a Strategic Location within draft Policy LP3 and welcomes the increase to 225 homes from 75 homes reflecting the deliverability of Vistry's land at Hanham Way. The land at Hanham Way, forms a part of the land referred to as land at north west Nailsea, which benefits from a resolution to grant planning permission. The partially consented scheme is correctly detailed in the accompanying Schedule 1 as a large site for residential development. Whilst Vistry support the intention to ensure development	North Somerset Local Plan Pre-submission Plan - Representation form Policy LP3.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 										proposals in Nailsea deliver a package of new transport infrastructure and a coordinated approach to mitigation, there is the need for contributions to be proportionate and for the delivery of their land at north west Nailsea not to be held up by wider phasing and infrastructure delivery. In accordance with national policy and guidance ID: 23b-002-20190901, planning obligations must always comply with the relevant tests, they must be: • necessary to make the development acceptable in planning terms; • directly related to the development; and • fairly and reasonably related in scale and kind to the development. In this case Vistry are in the process of finalising the s106 Agreement with the Council and are eager to progress to Reserved Matters without delay. Development to the north of Hanham Way, Nailsea, is in accordance with adopted Policy SA1 North west Nailsea and draft Policy LP2 Strategic location at Nailsea and Policy LP5 Housing allocations set out in Schedule 1. The NPPF identifies three dimensions of sustainable development: economic, social and environmental. We have summarised the proposed site allocation against each of these roles, in accordance with paragraph 8 of the NPPF below: Economic Role • New home bonus to enable the Council to spend within the local community; • Additional council tax receipts to pay for local services; • A boost to the local economy in terms of construction work in building the new homes; • A boost to local shops and services from increased trade because of the new homes; and • S.106 Obligations and CIL payments to help deliver local infrastructure needs. Social Role • Provision of up to 150 homes to fulfil housing need at a local level; • 30% affordable homes with a tenure split between affordable and shared ownership; • More choice in private and affordable housing options within Nailsea; • Provision of a mix of family homes, range of homes within the scheme allowing for people to move around the proposed site and create a community within the area; • Near to community sport provision, including football and rugby clubs; and • Health and well-being benefits of the provision of a new community recreation resource including walking routes, play spaces, community growing and allotments. Environmental Role • Enabling the Council to maintain a five-year housing land

										supply and housing trajectory to the end of the current plan period, thus safeguarding other land in less sustainable locations from development; • Delivering housing to fulfil the Council's Spatial Strategy; • Improved pedestrian and cycle connectivity to the to surround area; • The provision of quality public open space and enhanced green infrastructure; • The provision of linear attenuation basins to the west of the developed part of the site offering a sustainable urban drainage system (SuDS) which also offer a wetland habitat for wildlife; • A substantial ecological buffer (up to 50m) along the western and north western boundary of the site to conserve natural habitat where wildlife can thrive, and bat flight paths are protected; and • Onsite 10% biodiversity net gain (due to on-site constraints)	
29403105	Diverse Partnerships Yatton Ltd	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	Our client has no commentary upon this policy beyond acknowledging the inconsistency in approach between Backwell and Yatton and set out in the above commentary.			NSC Reg 19 Diverse Partnerships Yatton Ltd Reps Dec 25 - Redacted.pdf
63094305	Harrow Estates	Boyer		No	• Positively prepared • Justified • Effective • Consistent with national policy	No		While Policy LP3 identifies that extensive new infrastructure is essential to support the proposed quantum of development, at Strategic Location: LP3 Nailsea and Backwell, there is a fundamental lack of certainty that such infrastructure particularly strategic transport interventions will be delivered in a timely or coordinated way. The strategy is underpinned by12 separate sites coming forward broadly in tandem, yet no mechanism is in place to ensure that these sites will contribute synchronously to the required infrastructure. Without a binding delivery framework or specific commitment for each individual sites, could ultimately prevent the council from unlocking this growth area. The Local Plan risks enabling housing growth ahead of critical infrastructure, exacerbating existing pressures on the road network, community facilities, and local services. The council's reliance on incremental planning applications to deliver the required infrastructure is particularly problematic. As noted above, several sites within the Nailsea and Backwell Strategic Growth Location have already been permitted or are under construction, yet the cumulative infrastructure burden identified in LP3 has not been secured. This raises legitimate concerns over how North Somerset Council will retrospectively coordinate contributions from a patchwork of partially approved or ongoing schemes. In the absence of a comprehensive, front-loaded infrastructure strategy, the result is likely to be piecemeal growth, where development outpaces the infrastructure needed to mitigate its impacts. This undermines the very purpose of designating the area as a strategic growth location. The proposed East of Backwell Link Road is a central pilar to unlock growth in this location and the infrastructure strategy and is repeatedly cited as essential to alleviating severe congestion on the A370 corridor and at Backwell Crossroads. However, the emerging evidence base provides no assurance that the route is financially viable or technically deliverable within the plan period. With no commitment or funding from central government being cited. The proposed link road will have to work with Network Rail due to the requirement to cross the railway line and extensive works across sensitive and constrained land carries significant engineering complexity and environmental implications. Yet neither cost estimates nor confirmed funding mechanisms have been published. The absence of a secured funding for the proposed link road does raises question whether the council are being overly optimistic. This uncertainty is compounded by the heavy dependence on developer contributions to deliver the relief road and associated transport infrastructure. Developer-led funding is inherently unpredictable for such a high-cost, strategic scheme, particularly when development is fragmented across multiple land parcels and multiple land promoters. Harrow have serious doubt on whether the relief road can be delivered in time to support the planned 3,728 homes. In the DixonSearle Additional Sites Viability Addendum it highlights the Transport Infrastructure cost at a Total of £38,053,154 for the new link road. This equates to £25,825 per dwelling but only for 2,195 dwellings accounted for in the viability assessment. This goes back to the question of the council's lack of control of the amount of development already happening in this location and whether the patchwork of application will all contribute to the infrastructure requirements. This in turn raises questions whether the 2,195 homes can viably achieve the level of transport infrastructure developer contribution required in order to aid the delivery of the link road. In addition to the transport issues, the Plan remains vague about the delivery of essential non-transport infrastructure such as education, health, green infrastructure and community facilities. While LP3 lists categories of infrastructure required, bar outlining Grove Farm, Backwell providing a primary school, there is a lack of specifically identifying which key infrastructure will be delivered by each of the 12 allocated sites. This lack of detail undermines the robustness of the spatial strategy and fails to demonstrate that the growth is sustainable or compliant with national tests of soundness particularly "effectiveness" and "justified."			251211 Land East of Failand Reg 19 Reps.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								Given these issues, Harrow maintains significant concerns regarding the deliverability of the infrastructure that underpins Policy LP3. Until the council provides a comprehensive or a full commitment for the proposed infrastructure plan to be completed. Harrow questions whether the Strategic Growth Location can be considered capable of delivering the scale of development proposed in a sustainable manner. In its current form, the policy risks permitting substantial growth without ensuring the timely provision of the supporting infrastructure that is essential to its success. Over-reliance on windfall sites North Somerset emerging LP Policy SP8 for 24,495 supply that are proposed over the plan period 3,000 homes are considered to be windfall sites. The policy justifies its approach by stating that small scale windfalls will account for 12% of the draft housing requirement. 8.30 Historic data from North Somerset Annual monitoring report shows that between 2006-07 and 2023-24 a total of 3,112 dwellings were delivered via small-site windfall (over 9 dwellingsthat are unallocated or not pre-identified in the plan), averaging approximately 173 dwellings per annum which evidently underpins the Council's windfall allowance assumption. However, the annual completions are ranging from 96 to a high of 292 in a given year, underscoring the inherent unpredictability of windfall supply. This fluctuation means that over a 15-year plan period, relying on a fixed 200 dpa allowance risks under-delivery if windfall rates decline even modestly for a few years. Embedding that allowance in the baseline supply treats windfall as certain rather than contingent. Effectively converting a historically irregular source into a foundation for future housing supply. The 2025 Spatial Strategy paper explicitly includes a "small site windfall allowance" as part of its baseline under Step 1: Existing commitments and windfall which sites alongside sites that already have consent or extant allocations. The paper states that this allowance is "trend based with a small uplift to account for national policy changes," and quantifies the allowance at 200 dwellings per annum, amounting to 3,000 dwellings over the 15-year plan period. That is a substantial number, representing a core part of the "baseline supply" not just a minor buffer or contingency. Given that NSC have proposed an average windfall allowance that is above the council's average windfall during the period of 2006-07 and 2023-24 raising concerns that the council have overcompensated their windfall allowance in their housing supply; which could amount to a shortfall of 405 homes over the plan period. In summary, the evidence base demonstrates that the three strategic locations (Wolvershill, Woodsrping and Nailsea/Backwell) cannot deliver the quantum of development relied upon by the draft LP.		
41434017	Wain Homes (Severn Valley) Limited	J Millard	Wain Homes (Severn Valley) Limited	No	• Justified • Effective	Yes	Yes	Policy LP3 is intended to provide the strategic policy framework for future development at the Nailsea and Backwell strategic growth location, comprising 3,278 dwellings - 15% of the total LHN for the district. 1.2 This level of development is to be provided through extant planning permissions and new allocations. Schedule 1 to this Regulation 19 Local Plan identifies 1,817 dwellings at Nailsea and 1,683 dwellings at Backwell. This equates to a total of 3,500 dwellings, with a further 228 identified through windfall. 1.3 The Spatial Strategy Site Selection and Capacity Paper (October 2025) explains that individual sites have been assessed through the SHLAA which determines whether sites should be discounted due to constraints. Sites which pass the 'first sieve' are then subject to a secondary constraints assessment, those sites which pass both stages of assessment are taken forward to the "further assessment" stage as explained within the Site Selection and Capacity Paper. 1.4 Site HE20233 passed both the 'first sieve' and the secondary assessment but is then discounted at the 'further assessment' Stage with the SHLAA Appendix 1 ('Site data and assessment') referencing 'heritage' as the justification for it being discounted. Heritage is noted as being a secondary constraint that 'significantly affects' the site and its suitability for development. Paragraph 1.5 of the SHLAA Appendix 2 ('further site assessment') lists HE20233 as a site location that has been excluded through the 'further assessment' stage. 1.5 It is evident that the principal justification given for excluding site HE20233 relates to heritage constraints. This is confirmed at Table E.1 of the Sustainability Appraisal (SA) Report which sets out the Council's reasons for selecting or rejecting site options, for site HE20233 the reason that is given is as follows: "The site was discounted as part of the Further SHLAA Assessment as a result of heritage constraints." 1.6 The SA Residential Proformas produced as part of the supporting evidence base assesses HE20233 against SA Objective 3.5 (Heritage) and concludes that the site will have a 'significant negative' (--) effect and has been assessed as 'red' in relation to potential effect on setting. There is no detail as to the nature of this effect or any reference to which heritage asset(s) this conclusion is based. 1.7 Table D1 of the SA sets out the site assessment criteria and against SA Objective 3.5 it explains that the approach taken is to: "Draw on the 'RAG' rating of the Council's historic environment officers regarding potential effects of development at site options." 1.8 The source of this assessment is simply given as being the "Council's historic environment ratings". Within the main SA Report [paragraph 5.46] it states that: "Judgements about the likely effects of the residential site options on the historic environment have been based on information provided by North Somerset Council. Sites have been rated by North Somerset Council as either red, amber or green in relation to the likely effects on the historic environment." 1.9 The SA goes on [paragraph 5.47] to explain that where a site is scored 'red', this means that development at these sites "is expected to result in harm to the setting of one or more heritage asset(s) with little chance of mitigation through masterplanning." 1.10 No further information is presented within the evidence base that supports this this conclusion. The SA implies that there has been consideration as to the opportunities for mitigation, However, no information has been presented to explain how such conclusions were reached which is a significant failure of the	The principles and objectives of the Spatial Strategy are supported. However, there is concern that the spatial distribution of development is informed by a site selection process which is inconsistent and not justified. As a strategic location, opportunities to support sustainable development options at Nailsea should be maximised and based on a sound process through which sites are assessed. Our representations set out concerns regarding the site selection process in respect of Land Northeast Nailsea which we consider is based on an inconsistent approach and excludes this site, which if allocated, would be entirely consistent with the overarching approach set out in the Spatial Strategy. As such, the selection and assessment of site options at Nailsea should be revisited to ensure this is based on sound basis.		North Somerset LP Reg 19 Blue Fox Planning obo Wain Homes Severn Valley.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								site selection process. 1.11 For site HE20233 the assessment related to heritage impacts is absent of any meaningful evidence to explain how and why the assessment process considers heritage assets (and setting) to be a constraint of such significance to discount the entirety of this site as an appropriate development location. 1.12 It is noted that a Historic Environment Assessment (October 2025) has been prepared which is intended to provide additional analysis of the potential impact on heritage assets (including below ground) and their settings. However, the October 2025 Assessment only subjects those sites which are identified as proposed allocations to further detailed assessment. Therefore, for Site HE20233, due to it being excluded at the SHLAA 'further assessment' stage, on heritage grounds, has not been subject to any detailed assessment. 1.13 Land which forms site HE20233 has been consistently promoted by Wain Homes and has also been subject to an EIA Screening Opinion (LPA Ref: 24/P/2701/EA1) and pre-application advice (LPA Ref: 25/P/0475/PR2). 1.14 In issuing their formal EIA Screening Opinion, the Council concluded that the proposals will most likely give rise to "localised impacts", noting that there is potential for negative impacts upon the Scheduled Monument [ref: 1011259, a Deserted Medieval Village], but concluded that the proposals would not constitute EIA development. For heritage impacts, the EIA Screening Opinion concluded that a Heritage Statement, with an archaeological desk-based assessment and geophysical survey would need to accompany any planning application. A similar requirement was also identified through the pre-application process, noting that this pre-application response did not conclude that heritage assets render the site unsuitable for development. 1.15 Given the EIA Screening and Pre-Application process for site HE20233, this brings in to question the basis for discounting this site on heritage grounds, which is particularly relevant given the apparent absence of any detailed analysis presented as part of this Regulation 19 consultation to justify the approach. There is a reliance on a "officer assessment" which is not presented in any of the supporting documents, and which appears to be a key driver in the scoring of this site as (--) through the SA and its rejection at the SHLAA Further Assessment Stage. 1.16 It is noted that land to the west of HE20233 (Site HE20136) which is a proposed allocation, through the SA process has the same score against SA Objective 3.5, i.e. Significant negative (--) 'red', yet this this is not applied as a constraint that renders the site unsuitable for development, with it being a proposed allocation ('Land north of Nailsea') to provide for 381 dwellings. This also raises questions as to the assumption in the SA that a 'red' score means there 'is little chance of mitigation through masterplanning'. This has been applied to HE2033 as a reason to reject this site option, yet for other sites which are proposed to be allocated, there is greater flexibility and acceptance of the potential for mitigation. This represents an inconsistent approach which lacks any evidence to explain why sites which have the same SA score are treated so differently. 1.17 Another example of the inconsistencies in the approach regarding heritage matters and site HE20233 can be found within the October 2025 Historic Environment Assessments background paper. Within this document it sets out a high-level summary of the heritage context for the proposed Woodsprings allocation and states that: "A large area of this site has high heritage sensitivity and there is potential for harm to a number of highly graded heritage assets. A detailed design code and a heritage-led masterplan will be required to mitigate harm" (Page 10 October 205 Historic Environment Assessments) 1.18 The same summary/assessment is also given to the proposed allocation on Land to the East of Backwell, there being a 'high' heritage sensitivity that should been addressed through the masterplanning process. This reinforces our concerns that the extent to which heritage matters dictate whether a site option is suitable is applied inconsistently throughout the site selection process and results in a flawed assessment process that is neither justified or effective, rendering the process unsound. 1.19 It is understood that the process of identifying sites as allocations to meet the growth requirements over the plan period requires planning judgement to be made, but this does not negate the need for consistency in the approach. It is fundamentally flawed to apply constraints across sites on an inconsistent basis, particularly where there is a lack of information/evidence to support the judgments made and how a constraint is considered to be absolute on one site, yet a consideration that needs to be carefully managed and addressed through the development on another. 1.20 Through the SA process, against the SA objectives for Site HE20233 significant effects (--) are also identified against the following objectives: - ✧ 1.3 Promote the optimal use of land which supports regeneration, maximises re-use of previously developed (brownfield) land and protects the rural economy ✧ 3.4 Objective 3.4: Minimise impact on and where appropriate enhance sensitive landscapes 1.21 Despite this SA scoring (i.e. the same as for the heritage SA objective), these are not advanced as matters which form the basis for rejecting this land as a suitable development option. This raises further concerns as to the assessment process, as it appears that identified significant effects (--) carry differing weight in the assessment process, whereby such a level of effect against one SA objective (SA Objective 3.5) can render an entire site option unsuitable, but for other significant effects (such as SA Objective 1.3), this does not provide a basis on which is site is deemed to be unacceptable. 1.22 In respect of SA Objective 1.3, as a greenfield site negative effects are identified		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								automatically, the significance of any effect is determined by the agricultural land classification, with those site options which are subgrade 3 scoring [--?] and those which are grade 1 or 2 scoring [--]. 1.23 The SA residential proforma for site HE20233 concludes that the site contains land classified as grade 1-2, however this is based on broad DEFRA Mapping which also indicates that the site contains areas of subgrade 3. Irrespective of its precise agricultural land classification the Best and Most Versatile Agricultural Land Topic Paper [October 2025] recognises that a significant number of proposed allocations are on land which is classified as BMV (subgrade 1, 2 and 3a), it is evidently not a constraint that is unique to Site HE20233, nor is it a basis upon which this site was discounted as a potential allocation within the Regulation 19 Local Plan. 1.24 In respect of SA Objective 3.4 [Landscape] the sensitivity of Site HE20233 should be considered in the wider context of the landscape around Nailsea. The March 2018 Landscape Sensitivity Assessment which forms the basis of the SA assessment identifies all land around Nailsea and Backwell, including land which is proposed to be allocated as being of 'high sensitivity'. It is therefore not applied as a constraint to development on sites which this Regulation 19 Local Plan has deemed appropriate for allocation. 1.25 Alongside those SA objectives where site HE20233 is assessed as having negative effects, the site scores positively against a range of SA objectives, these being: ◈ 1.1: Ensure a range of job opportunities are easily accessible without having to use a car ◈ 1.2: Provide opportunities to improve economic wellbeing and reduce inequalities by providing good access to education and training. ◈ 2.2: Deliver affordable or specialist housing where it is most needed to meet the needs of North Somerset's population ◈ 2.3: Achieve reasonable access to a wide range of community, Education, town centre and healthcare facilities. ◈ 2.5: Achieve healthy living opportunities promoting good access to healthcare centres, open spaces, Public Rights of Way, Walking and cycling opportunities, and outdoor leisure activities ◈ 3.3: Reduce the need to travel by car to minimise environmental impacts of unsustainable forms of travel, including transport related carbon emissions and air pollution. Ensure good access to infrastructure that promotes travel by active modes (walking and cycling). 1.26 Through the SA process it is clear that Site HE20233 is well located to support a sustainable pattern of development, noting that against a range of SA objectives, the assessment recognises that the site provides opportunity to access a range of services and facilities by sustainable means. 1.27 Through the EIA Screening process (24/P/2701/EA1), the historic environment context of site HE20233 was set out and it was explained that the site contains a scheduled ancient monument, "Deserted medieval settlement 300m ESE of Wraxall House (NHLE)". This asset is barely (if at all) appreciable from the ground or within satellite imagery. The significance of this asset is wholly derived from its buried archaeological and historic interests. Moreover, the proposed development area does not extend on to the land of the Scheduled Monument. 1.28 Through the proposed development, opportunities exist to enhance both the understanding of this asset, and improve appreciation of it, resulting in a direct and clear benefit associated with this asset. The presence of this asset within the site area does not automatically require an EIA which should be based on judgment as to whether the likely effects will be significant. Necessary controls and assessments related to this asset and its setting can be adequately addressed through the submission of relevant heritage and archaeological assessments as part of a planning application. It was the conclusion of North Somerset Council through the EIA Screening process that the proposals would not give rise to a level of effect that would warrant this to be considered through an Environmental Statement, with the potential for negative effects to be considered through the normal planning application submissions. 1.29 This demonstrates that the Reg 19 site assessment process is flawed and inconsistent with recent, and more detailed assessments undertaken by the Council on heritage matters through the EIA Screening process. 1.30 In respect of other heritage assets, within 1km of the site there are 19 Listed Buildings. The closest Listed Building is Grade II Wraxall House (NHLE 1311646), located just outside of the western site boundary. There is little intervisibility between Wraxall House and the majority of the site, with intervisibility limited to the north-east of this asset and the south western corner of the site. 1.31 To the north of the Site is a cluster of Listed Buildings within Wraxall village, including the Grade I Listed Church of All Saints (NHLE 1158033). Whilst the Site is not visible from the church at ground level, some (albeit limited) visibility of the church tower may be possible from within the Site itself. This view however is not considered to be a key view of the asset which contributes to any material extent to its significance and any potential changes to this view, as a result of development within the Site, would not harm the significance of the Church or preclude development. 1.32 In respect of the Grade II Listed Wraxall Church of England Primary School (NHLE 1320984) there may be a degree of intervisibility with the site. However, the key views of the asset from Bristol Road to the north can be preserved. It is not anticipated that this intervisibility would preclude development within the Site. Likewise, distanced views from Grade II Listed Former Boys School and Old School House (NHLE 1146521) to the east would not be anticipated to preclude			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								development. 1.33 The remaining Listed Buildings within proximity share no intervisibility with the Site and it would be anticipated that their settings would be unaffected by development on the scale proposed. One Registered Park is located c.1km to the east of the Site; Grade II* Tyntesfield (NHLE 1000570). 1.34 Through a sensitive design scheme and detailed assessment of heritage assets and their setting, there are opportunities to support development at site HE20233 without resulting in a level of harm that would indicate that development should be restricted. Such assessments do not constitute a significance of likely effects that would warrant assessment and consideration through the EIA process. This was accepted by the Council in their EIA Screening Opinion. 1.35 Through the pre-application process (25/P/0475/PR2) the impact on heritage, conservation and archaeology was identified as a matter that would require any future planning application to include a Heritage and Archaeological Assessment. This pre-application process did not conclude that the development at site HE20233 would be unsuitable due to the impacts on heritage assets. 1.36 Therefore, for the Reg 19 site selection process to conclude that site HE20233 is constrained by heritage assets to such an extent as to render the site unsuitable for development, is entirely at odds with the Council's own assessment of this site through the EIA Screening and pre-application process. It demonstrates the failures of the site selection process as it relates to site HE20233. 1.37 Land at HE20233 is therefore considered to represent a genuine development opportunity which, in contrast to the Reg 19 site assessments process, can support a pattern of development that responds positively and sensitively to known heritage assets and their setting. 1.38 Furthermore, as recognised through this Regulation 19 consultation, the site is capable of being identified as 'grey belt' owing to the weak contribution this land makes to the purposes of the Green Belt. This, alongside it's edge of settlement location at a strategic location for growth over the plan period, supports our position that this land represents a suitable, sustainable and deliverable site option and should be identified through this Local Plan as an allocation. 1.39 The accompanying Vision Document sets out the emerging development proposals, with details focusing on the landscape, as well as access and movement through the site and connecting to the existing networks, avoidance of areas of flood risk and the sensitive accommodation and protections to identified heritage assets. 1.40 The Vision Document formed the basis of the representations submitted at previous Local Plan stages, and through the EIA Screening and Pre-Application process. Whilst proposals continue to evolve, in summary the Vision includes: ◈ Approximately 120 dwellings with associated open space; ◈ Access via Bristol Road/Clevedon Road (B3130), along with potential pedestrian links to existing neighbourhoods and networks; ◈ Hierarchy of streets, creating a legible residential environment. A main street, with connected residential streets and followed by shared surface streets and private drives at the edge of the development area; ◈ Associated landscaping and ecological enhancements; and ◈ Incorporating existing heritage assets into proposals and landscape strategy. 1.41 Alongside this Vision, an Opportunities and Constraints Plan and Illustrative Masterplan illustrate how a development scheme may come forward. 1.42 In the context of the significant uplift in housing delivery needed to meet the LHN, Site HE20233 represents a genuinely deliverable and sustainable development opportunity that can be delivered in the short term, in a manner that is entirely consistent with the overarching principles of the Spatial Strategy. The decision to discount this site through the preparation of this Reg 19 Local Plan has been demonstrated within these representations as being flawed and unsound. 1.43 To address this, the site assessment for HE20233 should be revisited and a consistent approach applied to the significance of constraints, in this case heritage assets, so that this land is considered on a fair and equitable basis. In doing so, it is our position that this would support the decision for this site to be identified as a proposed allocation within this Local Plan. 1.44 PLEASE SEE ATTACHED DOCUMENT

The scale of development proposed at Backwell village which represents an 81% increase in the village population and the associated harmful impacts this scale of development would have on the character and community of Backwell; 2. The proposals direct substantial housing to locations with limited employment opportunities (existing or proposed), contrary to the local plan's sustainable development objectives. 3. The strategic location is wholly dependent on delivery of		251118 Local Plan Reg 19 2025 reps FINAL.pdf R01 - Transport Statement - Rev 3 FINAL.pdf Hydrology LP3 BPC_NTC Appendix_2.2-compressed.pdf Hydrology LP3 BPC_NTC Appendix_2.1-compressed.pdf Hydrology LP3 BPC_NTC Appendix_9-compressed.pdf Hydrology LP3 BPC_NTC Appendix_7-compressed.pdf Hydrology LP3 Summary BPC_NTC Part 2 (1).pdf Hydrology LP3 Summary BPC_NTC Part 1 (1).pdf

									a strategic rail crossing which is a complex and challenging project which fails to offer appropriate mitigation for growth at Nailsea or Backwell. The proposed crossing brings significant impacts and engineering challenges which are reliant on the full agreement and cooperation of Network Rail. However, the Pre-Submission Local Plan provides no certainty of costs or funding, no evidence that a viable design solution can be achieved with the agreement of Network Rail and no certainty that the road would be completed in a timely manner. 4. The deficiencies of the Strategic Flood Risk Assessment (October 2025) which fail to evidence the extent of flood risk at Nailsea and Backwell, particularly in association with land East of Backwell, land south of Nailsea and the strategic rail crossing, which are affected by surface water and fluvial flooding and the need to apply the sequential approach to these and other sites allocated under Policy LP3; 5. The substantive loss of best and most versatile agricultural land around Nailsea and Backwell; the strategic development location is 100% reliant on development of grade 1 and 2 agricultural land. Contrary to the Framework, no consideration has been given to poorer quality alternative locations; 6. The loss of important bat foraging grounds, closely associated with the Brockley Hall Stables SSSI and the impact of the population of greater and lesser Horseshoe Bats. Population Growth 1.79 Nailsea Town Council accepts that as a town it should be a focus for growth, as supported by the Urban Focus approach in the early iterations of the spatial strategy. However, objection is raised to the identification of Nailsea and Backwell as a strategic development location, which is expected to accommodate the highest level of growth outside Weston-Super-Mare. 1.80 As detailed in response to Policy SP8, the population of Nailsea in 2021 was 15,917 and Backwell had a population of c4,800 in 2021. This equates to an approximate combined population of c.20,700. 1.81 Policy LP3 proposes to direct 3,728 dwellings to Nailsea and Backwell, of which 1,683 are allocated to Backwell. This equates to an additional 8,574 persons (based on 2.3 persons per household)4 and a 42% increase in the combined population of Nailsea and Backwell. 1.82 The figures are even more stark when the scale of growth proposed for Backwell is extrapolated. Using the same formula to calculate population generated by this scale of development, the population of Backwell would increase by 3,871 persons over the plan period, representing an 81% increase in the population of Backwell village. 1.83 The substantial scale of population growth directed to Backwell through this Local Plan is wholly disproportionate to the existing settlement and coupled with the significant growth proposed for Nailsea, will place undue pressure on existing facilities, services and infrastructure and it will have a significant, detrimental impact on the character and nature of the area and its communities. Employment 1.84 Backwell is a commuter village around 7 miles from Bristol. There are limited employment opportunities in the village; the village has a small number of shops and other services and facilities in the village centre, along with health services, schools and leisure facilities and a petrol station. An extant planning permission exists at Coles Quarry for the construction of industrial units. However, it is evident that the majority of employed residents travel to work outside the village or work from home. 1.85 The proposals to direct 1,684 dwellings to Backwell is wholly unsustainable, having regard to the limited availability of employment in the village and the wider area. The Sustainability Appraisal acknowledges that the majority of employment opportunities are in Bristol and Weston-Super-Mare (paragraph 5.4) and this is reflected in the travel to work data. Accordingly, the SA recommends directing development to these parts of the District (paragraph 5.5) on the basis of the significant positive effects arising from development in these locations. SA objective 1.2 further supports this position. Paragraph 5.7 of the SA advises that Weston and Bristol provide access to the highest concentration of existing businesses and residents will have good access to a wide variety of jobs.

									Importantly, it is acknowledged that residential site options well-related to Clevedon, Nailsea and Portishead provide access to a more limited concentration of businesses which would provide “some access” to employment and training (paragraph 5.7, SA). 1.86 The SA Employment Proformas highlight an anomaly in the assessment of sites. The SA assessment of SA_ID_54 (Land East of Backwell) for employment uses, gives the site a (4 North Somerset average household size, Census 2021) significant positive score against objective 1.1 (ensuring a range of job opportunities are easily accessible without having to use a car. This is based on the site being within 1.8km of the Settlement boundary of Weston-Super-Mare, Clevedon, Nailsea or Portishead. SA_ID_56 (Woodspring Strategic Location) is assessed for the same employment use. This major urban extension to Bristol performs more poorly against objective 1.1 than East Backwell because it is up to 2.7km away from one of the main towns in North Somerset, despite its close proximity to the City of Bristol. This highlights a clear flaw in the SA methodology which skews the findings in favour of employment at the village of Backwell over an urban extension to a major city. 1.87 It is evident that employment opportunities should be directed to locations which are well⟐related to Bristol or Weston-Super-Mare, and housing should be planned accordingly to maximise accessibility to new employment. The Bristol conurbation and approved Epic employment campus provide excellent job opportunities over the plan period and beyond and the Local Plan should maximise housing delivery in this area to achieve sustainable patterns of development. The allocation of land for housing and employment on land East of Backwell is contrary to the evidence presented through the SA and therefore unsound. Transport Mitigation Strategy 1.88 The Preferred Options to the Local Plan 2038 first mooted proposals for strategic scale development at Nailsea and Backwell (Policy LP3). The proposals were broadly the same as those proposed through this Pre-Submission version of the plan. 1.89 The policy was justified by the Council purely based on Backwell’s relative proximity to Nailsea and the train station. “Nailsea is a main town within North Somerset and a focus for growth as part of the preferred spatial strategy for development. Given its proximity to Nailsea and the train station, growth opportunities at nearby Backwell have also been considered and form part of the draft proposals” (page 26, Preferred Options) 1.90 The Preferred Options recognised that “very significant transport interventions would be required to support growth and avoid adverse impacts upon the existing transport network.” (page 26, Preferred Options) 1.91 The Nailsea and Backwell Transport Position Statement, prepared by NSC, dated September 2023, (see attached) advised that “the housing numbers proposed at Nailsea Backwell in the Reg 18 draft Local Plan were such that their combined impacts upon Backwell Crossroads would have been severe. Therefore we investigated a strategic mitigation that would have provided a “Backwell Crossroads Bypass”…This would be a major investment which would require external funding of which there is no certainty. It would also have had notable environmental, visual and heritage impacts, with technical and stakeholder delivery challenges.” For these reasons the proposed strategic scale of development at Nailsea and Backwell and the associated rail crossing were removed from the Pre-Submission Local Plan 2023. 1.92 In support of the Pre-Submission Local Plan published in November 2023, the Spatial Strategy and Capacity Paper advised that “further technical work has concluded that the scale of growth at Nailsea/Backwell is constrained by the lack of deliverability of essential strategic transport mitigations.” (paragraph 3.1). It elaborates further “The Preferred Options proposed Nailsea/Backwell as a strategic growth location subject to, in particular, deliverable strategic transport mitigations being identified. This related to a potential new road crossing of the railway to alleviate capacity issues at Backwell crossroads and Station Road. The transport evidence at the time indicated that the rail crossing could be either to the west or east of Backwell and could be a bridge or a tunnel. None of these options are straightforward given flooding issues which could affect any crossing under the railway and the visual impact of a bridge crossing a railway on an embankment.

Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									Further technical assessment following Preferred Options resulted in a preference being for a bridge crossing to the East of Backwell. However, taking account of potential development contributions and other sources of funding, the costs of delivery were prohibitive which meant that delivery was highly unlikely over the plan period." Paragraph 3.12, Spatial Strategy and Capacity Paper, November 2023). 1.93 The conclusions drawn at the time of the 2023 Pre-Submission Local Plan were that the scale of development in the area and Nailsea and Backwell were no longer proposed as a strategic growth location in the plan (paragraph 3.14). 1.94 These factors remain entirely relevant. There has been no material change in circumstances since the 2023 Local Plan and no significant change to the development proposals other than confirmation that a new rail crossing would be sited to the east of Backwell. 1.95 The Spatial Strategy and Capacity Paper (October 2025) offers no explanation for the selection of the strategic growth locations and very limited justification for the reversal of previous decisions to direct substantial development to the village of Backwell. 1.96 Neither the Pre-Submission Local Plan 2025 or the accompanying Spatial Strategy and Capacity Paper (October 2025) justify the reversal of previous decisions made through the Local Plan preparation process. The spatial strategy as presented through Policy SP3 fails to justify, through appropriate evidence that Nailsea and Backwell represents a sustainable location as a strategic development location. 1.97 BPC and NTC has commissioned John Russell Transport Planning to review the Nailsea and Backwell strategic location in the context of the Transport Mitigation Strategy. The accompanying technical report identifies serious flaws in the transport evidence to support the identification of Nailsea and Backwell as a strategic location for development, the mitigation achieved through the strategic rail crossing and the deliverability of this infrastructure. Crucially, the Local Plan has failed to recognise that the two settlements are served by different parts of the highway network and as a result the proposed strategic rail crossing would not mitigate the transport impacts of growth at Nailsea and therefore it does not justify the allocation of land East of Backwell for 889 homes. 1.98 John Russell Transport Planning recommends an alternative approach is adopted which would support growth at Nailsea, as one of the main towns in North Somerset and deliver appropriate transport mitigation through improvements to the B3130 and B3128 which carry most trips from Nailsea. 1.99 Please refer to the accompanying report by JR Transport Planning for full details of BPC and NTC's objections to Policy LP3 on transport grounds. Flooding 1.100 The Local Plan Pre-Submission has failed to acknowledge the nature and extent of flood risk within and around Nailsea and Backwell when identifying the area as a strategic development location. 1.101 Nailsea is an island surrounded by land in flood zone 3. The flood zone aligns with the River Kenn to the south, the flood plain of which has historically maintained the town's physical separation from Backwell. Backwell Lake has recently been designated as a surface water reservoir which brings with it a duty to safeguard the reservoir from flooding and overtopping. 1.102 Backwell has a large surface water catchment area which incapsulates the fast-moving surface water flow paths from Backwell Hill, directing water onto and over the A370, onto land East of Backwell and north to the River Kenn, north of the railway line. The flood risk around Nailsea and Backwell is further complicated by ground conditions, with the Yanley fault line extending across land East of Backwell and south of Nailsea. 1.103 NTC and BPC are aware that the Council has commissioned a Local Flood Risk Management Strategy – Scheme Opportunities Assessment (March 2025), prepared by Wallingford HydroSolutions Ltd. The report assessed 24 communities in North Somerset at risk of surface water		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									flooding and identified mitigation options. Backwell is identified as one such community and is ranked within the top 10 of communities to potentially benefit from SuDS interventions. 1.104 Despite the evidence of surface water and fluvial flood risk and the presence of Backwell Lake (reservoir), the Council has failed to demonstrate that it has adequately assessed the impact of strategic development at Nailsea and Backwell on flood risk, or undertaken the sequential pproach (and exception test, where appropriate) in determining whether this represents a a suitable location for development, at lowest risk of flooding. 1.105 BPC and NTC has commissioned Chris Whitlow and Associates Ltd to review the Local Plan and Strategic Flood Risk Assessment in respect of flood risk. The accompanying technical note highlights the deficiencies within the Council's Strategic Flood Risk Assessment, provides additional evidence and modelling to explain the likely extent of flood risk within the area and the flood risks associated with the proposed identification of Nailsea and Backwell as a strategic development location. 1.106 The Council has failed to take account of the flood risks associated with development at Nailsea or Backwell, particularly in respect of land west of Nailsea (Poplar Farm), land East of Backwell, land south of Nailsea, and the road infrastructure proposed to access these allocations and has therefore failed to appropriately apply the sequential test and exception test. Accordingly, Policy LP3 is unsound. Best and Most Versatile Agricultural Land 1.107 In preparing local plans, local planning authorities should distinguish between the hierarchy of international, national and locally designated sites, allocate land with the least environmental or amenity value, where consistent with other policies in this Framework (paragraph 188, the Framework). In doing so, footnote 65 advises that where significant development of agricultural land is demonstrated to be necessary, areas of poorer quality land should be preferred to those of a higher quality. 1.108 The proposed designation of Nailsea and Backwell as a strategic location for development runs contrary to footnote 65 of the Framework. 1.109 The Agricultural Land Classification Map for the Southwest (Natural England) illustrates the concentration of grade 1 and 2 agricultural land around Nailsea and Backwell, with limited availability elsewhere in North Somerset. See below. Key: Dark Blue (Grade 1); Light Blue (Grade 2), Green (Grade 3), Yellow (Grade 4); Brown (Grade 5). Orange and Red – non-agricultural uses. 1.110 The Best and Most Versatile Agricultural Land Background Paper (October 2025) acknowledges that only 7% (2,522ha) of all agricultural land within North Somerset is Grade 1, with a further 10% (3,842ha) Grade 2. 60% (22,469ha) falls into Grade 3. In response, the Local Plan includes a policy DP53 which, in accordance with the Framework, serves to safeguard Grade 1 and 2 land, directing significant development to poorer quality soils. 1.111 However, the Local Plan has failed to take this approach in establishing its spatial strategy and identifying suitable land for residential development. Based on the HELAA (Appendix 1) Site Data and Assessments, the total area of sites allocated in Nailsea and Backwell which occupy best and most versatile land is 269.83 hectares, of which up to 95 hectares is Grade 1 and at least 92 hectares is Grade 25. With a total of circa 187 hectares of Grade 1 and 2 agricultural land to be lost as a consequence of the strategic development location at Nailsea and Backwell, this represents about 4% of the entire Grade 1 and 2 land within North Somerset and almost 4% of the Grade 1 land. 1.113 It is acknowledged that some of these sites already benefit from planning permission, a resolution to grant or are under construction, however, most notably, land at East Backwell (circa 52 hectares) is wholly Grade 1 and all land allocated at Backwell is Grade 1 or 2, whilst 50% of the sites in Nailsea are also Grade 2. 1.114 The Best and Most Versatile Agricultural Land Background Paper states that land East of Backwell is "part of a wider package of strategic allocations around		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									Nailsea and Backwell is considered justified on the basis that without it the development of key infrastructure in the form of a new link road connecting Nailsea and Backwell would not be deliverable. This wider sustainability benefit outweighs the loss of BMV land in this location." 1.115 This justification is also applied to land south of Nailsea (Grade 2). 1.116 However, as evidenced through the submissions by John Russell Transport Planning on behalf of BPC and NTC, the proposed new link road does not represent suitable mitigation for development at Nailsea or Backwell. The proposed road link would not mitigate the adverse impacts of the development proposed at Nailsea and Backwell and the viability and deliverability of the infrastructure, crossing the railway line from Bristol Temple Meads to Weston-Super-Mare on an embankment, affected by flood risk, will be extremely challenging and uncertain. In the absence of evidence that the Council has appraised all other reasonable alternatives for delivery of housing on poorer quality soils and on the basis that the proposed strategic rail crossing does not provide convincing justification for the loss of Grade 1 agricultural land at East of Backwell, the Local Plan has failed to comply with the Framework (footnote 65). The proposed strategic location for development would result in an irreversible loss of best and most versatile agricultural land, of the highest quality. The Council has provided no compelling evidence to justify the departure from national policy and accordingly, Policy LP3 is unsound. North Somerset and Mendip Bats SAC 1.117 The North Somerset and Mendip Bats Special Area of Conservation is an internationally importance designation under the European Habitats Directive centred around Sites of Special (5 Grove Farm (Grade 1 and 2) is included in full as Grade 1 (hence the figure is referred as "up to"). Some of this would be Grade 2 which would increase this figure (hence this is referred to as "at least"). Scientific Interest including the Brockley Hall Stables, a summer maternity roost for the Greater Horseshoe Bats. The roost lies approximately 1 kilometre from the western boundary of Backwell and approximately 2 kilometres from the south-western extent of Nailsea with tracts of farmland separating the roost from the settlements. 1.118 The latest draft of the North Somerset and Mendip Bats SAC Supplementary Planning Document (October 2025) records a peak population at the roost of 757 bats in 2020, however sincethen there has been a rapid decline in the population, with only 180 adults recorded in 2025. See below. This is likely to be attributed to the recent expansion of Bristol Airport and the development of housing to the West End of Nailsea, although further evidence is required to confirm this. 1.119 This evidence raises serious concerns regarding the health and long-term sustainability of the Greater Horseshoe Bat (GHB) population at the SSSI which is not reflected in roosts elsewhere in North Somerset. The fall in population is believed to be symptomatic of the bats needing to travel further to new foraging sites and therefore relocating to sites closer to new foraging locations, although further evidence is required and it is of deep concern that the numbers are falling so dramatically in this primary maternity roost. 1.120 There is likely to be a strong correlation between the location of the Brockley Hall Stables SSSI and the prevalence of cattle-grazed pasture and semi-natural woodland around Brockley, Backwell and Nailsea. The Habitat Regulations Assessment prepared by AECOM to support the Local Plan recognises that the Greater horseshoe bats preferentially forage in permanent pastures that are interspersed with deciduous woodland and hedgerows. Of the top five feeding areas for GHB, 38.6% is cattle-grazed pasture. Substantial on-site compensatory habitat will be required, as illustrated through Table 7 of the HRA. Paragraph 6.80 of the HRA refers to the identification of a Nature Park in the Nailsea/Backwell area. This is referenced in policy LP3, however, the policy wording indicates that the Nature Park would form part of any development proposals at Nailsea and Backwell, secured by condition or planning application. The policy draws no differentiation between Nature Park provision or any standard HEP compensatory habitat provision on individual sites. In the absence of a strategic approach or ouncil control of Nature Parks, the proposals would not provide a contiguous area of enhanced		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									bat habitat, nor would there be any standardised management regime. The provision of cattle grazed pasture will be eroded by the development proposals and the viability of introducing cattle grazing into Nature Parks would be undetermined by the relatively small scale of the parks, limiting their suitability for farming tenants and their proximity to new residential development. 1.121 The identification of a strategic development area in close proximity to the Bat SAC and a SSSI which is evidently under threat, with disparate mitigation land, is likely to place this internationally important designation at further risk of demonstrable harm, contrary to the Habitat Regulations. Other matters 1.122 BPC and NTC are concerned that the success of the strategic location is reliant on a package of new transport infrastructure, including the strategic rail crossing, estimated by the Council to cost around £30million. The policy is worded to require “a strategic and coordinated approach to mitigation, particularly the provision of a package of new transport infrastructure”. This places the emphasis on transport infrastructure, which given the costs involved, could place a significant burden on the developments at the expense of other infrastructure, such as community facilities and services. Although the importance of timely delivery of infrastructure is recognised in the Infrastructure Delivery Plan, there is limited information provided in the Infrastructure Delivery Plan Schedules of the nature of the proposals, the likely costs, the availability of funds and the timing of delivery. 1.123 In addition, the East Backwell and North Nailsea proposals occupy land which is currently located within the Green Belt. Accordingly, the policy requires delivery of 50% affordable housing to comply with the Framework, placing a further developer obligation and cost upon the developers, further reducing funds available for other new or improved local infrastructure. As a result, BPC and NTC are concerned that the strategic development location’s reliance on expensive road infrastructure and the increased affordable housing obligation will result in the delivery of housing with very limited provision of infrastructure to assimilate the development into the existing community and mitigate the adverse impacts on the existing residents and their access to local services and facilities. 1.124 The policy requires a phasing strategy to be provided with all planning applications detailing how the development proposed will support the delivery of infrastructure in line with the Infrastructure Delivery Plan. This should include details of infrastructure to be provided on◈site or through off-site contributions. 1.125 As drafted the policy proposes a developer-led approach to the delivery of infrastructure, rather than a policy driven approach. Further clarity is required through the policy to establish the nature and scale of contributions which should be secured from the constituent allocations. 1.126 With reference to the IDP schedule, item SO4 identifies health care, but fails to specify the scale or nature of infrastructure required to support this scale of development. This must be clarified through the IDP to ensure adequate provision is secured from developments to meet the identified needs. 1.127 In respect of education, the IDP provides for 3 primary schools in the Nailsea and Backwell area (ED7 Grove Farm, ED13 East Backwell and ED14 South Nailsea). However, ED7 states hat only land to accommodate a primary school would be provided (despite Schedule 1 requiring provision of a primary school on site). This is reflected in the Council’s decision on planning application 23/P2618/OU2. ED7 states that the school would be funded by developer contributions on other strategic sites in Backwell, i.e. East Backwell. No justification is provided or why the Council has not sought funding for the school from the developer of Grove Farm and why it relies upon the allocation of East Backwell to be confirmed through this Local Plan in order to secure such funding. 1.128 Land at East Backwell is also required to fund another primary school on-site (ED13), alongside a 50% affordable housing requirement due to its location in the Green Belt and the strategic transport mitigation package, which includes the on-site provision of the strategic rail crossing. This places a significant burden upon the		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									allocation, which could undermine its viability and therefore its ability to meet the infrastructure requirements within policies LP3 and LP5 in full. 1.129 For the reasons set out above, Policy LP3 is unjustified, ineffective and conflicts with he Framework. The policy is therefore unsound. Proposed Allocations 1.130 BPC and NTC do not oppose proportionate growth at Nailsea, recognising its role as one of the main towns in North Somerset. It also acknowledges that several allocations are based on extant planning permissions. However, objection is raised to the proposed allocations of Pound Lane (100 dwellings), Poplar Farm (130 dwellings) and land South of Nailsea (582 dwellings). All three sites are relatively remote from the town centre and would not encourage residents to use active travel to access services. In addition, Poplar Farm and land South of Nailsea sites are highly constrained by flood risk and drainage issues. 1.131 The Government flood maps for planning show that land at Poplar Farm is almost entirely at risk of flooding when climate change is taken into account for the period 2070-2125. See screenshot of Government mapping (see attached) 1.132 It is also noted that this also applies to land North-West of Nailsea, however NTC acknowledges that this site benefits from partial consent and is carried forward from the allocated in the Adopted Site Allocations DPD. With the extent of flooding forecast to increase from the west of Nailsea, it is ill-advised to allocate Poplar Farm, which would put further residents at risk of flooding within the life of these properties. The site allocation should therefore be deleted. 1.133 A live planning application for land south of Nailsea 23/P/1145/OUT has been sat with the Council since 2023. The proposed vehicular access to the residential development relies upon a connection from Station Road (south of Backwell Lake), which crosses through Flood Zone 3, within the flood plain associated with the River Kenn, and crossing the River Kenn itself. The applicant has submitted three hydraulic models to the Environment Agency to model the impact of the proposed access. Most recently, the Environment Agency has commented on the third model (letter dated 14 November 2025) and advised that they maintain their objection to the proposed development as the model is not suitable for use within a Flood Risk Assessment. 1.134 Given the repeated attempts to agree a hydraulic model, it is highly questionable whether land south of Nailsea can be modelled to demonstrate that it would not result in increased flood risk on-site or to properties downstream of the proposals. In the absence of evidence of an alternative vehicular access to the allocation, within the applicant's control, which would avoid development in the flood plain, the allocation of land South of Nailsea is unsound and should be deleted. 1.135 Land at Pound Lane lies adjacent to the Moor Sprout Nature Reserve and Local Green Space. Moor End Spout Nature Reserve. NTC is concerned that the development of the site, adjacent to this nature reserve which is linked via rhynes to the Tickenham and Nailsea Moors SSSI and UK Priority Habitat could have an adverse impact on the reserve. It is acknowledged that additional land is included in the Pound Lane allocation to provide environmental and ecological mitigations between the proposed development and the nature reserve. There is no evidence within the local plan that the impact of the allocation on the SSSI has been taken into account. The SA residential proforma for Land at Pound Lane HE20225 identifies a ignificant negative/ uncertain impact due to the site's close proximity to a nationally designated biodiversity site. The site is also considered to have a significant negative impact on Objective 3.4 due to the site's high landscape sensitivity. 1.136 This is a relatively small site which would deliver limited benefits for the town beyond housing, in a location which is environmentally sensitive and respect of landscape and ecology. In addition, the site lies in close proximity to areas at risk of flooding, now and in the long term. 1.137 For these reasons NTC objects to the allocation of the site and requests its deletion.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									1.138 Backwell has been subject to several planning applications for residential development which have been approved or, in the case of Grove Farm, benefit from a resolution to grant outline planning permission. The committed development proposals already deliver 795 dwellings over the plan period in Backwell. With the exception of Grove Farm, all sites will be under construction over the next 12 months. These schemes have been approved on the basis of residual capacity within the Backwell Crossroads, with some mitigation measures to enhance capacity. No major transport mitigation measures are required. With the exception of land provided for a primary school and new public open space, the extant planning permissions fail provide funding or on-site provision of additional community infrastructure and therefore place additional strain on the existing, limited village services which support the residents of Backwell and its rural hinterlands, including Brockley and Flax Bourton parishes. 1.139 The delivery of 795 dwellings continues to represent a 40% increase in the population of Backwell, a substantial increase over the plan period. However, BPC recognises that this scale of development has been assessed through the decision-making process and is committed and therefore deliverable. However, this scale of development alone will place significant pressure on existing services. In the absence of adequate employment opportunities within a reasonable walking/cycling distance and without any realistic prospect of increased public transport services, this scale of development is at the upper limit of what the village can sustain over this plan period. 1.140 The delivery of a further 889 dwellings on land East of Backwell would more than double the allocation of houses to Backwell over the plan period and would require substantial new road infrastructure which would have significant harmful impacts on the natural and built environment. Depending on the design solution to cross the railway line, impacts could include landscape visual impacts, flood risk and likelihood of increased flood risk downstream of the rail crossing and adverse impacts on the setting of Grade 1 and 2 listed buildings, including The National Trust's Tyntesfield House (Grade 1) and the associated Registered Park and Gardens. The adverse impacts of an 80% increase in the village population , including the substantial additional pressure placed on the local community's services and facilities, would not be outweighed by the benefit of delivering 889 additional homes to meet North Somerset's housing needs and are not justified on the basis that the rail crossing would mitigate trips generated by the development proposed in Nailsea. Accordingly, the allocation of land East of Backwell should be deleted. 1.141 The Council has failed to demonstrate that it has considered alternative locations to accommodate development outside Nailsea and Backwell. Summary of Objection 1.142 NTC and BPC object strongly to the scale of development proposed on the basis that it is not positively prepared, unjustified, ineffective and contrary to the Framework and therefore unsound, in particular: - The Sustainability Appraisal strongly favoured the Urban Approach to the spatial strategy, which directed development to the main towns, but not the village of Backwell; - The Council has failed to provide sufficient evidence to overturn its decision in 2023 to remove Nailsea and Backwell as a strategic location for development and its fundamental concerns regarding the deliverability of the strategic rail crossing. - The Council has failed to include hydraulic flood modelling of the Nailsea and Backwell area and take into account all evidence of flood risks in the preparation of the SFRA, or taking into account the development constraints imposed by the water aquifer affecting sites at Nailsea and Backwell. - There is no evidence that the Council considered alternative locations which would involve development of lower quality agricultural land, or which are further away from the North Somerset and Mendip Bat SAC and which could be delivered without the need for substantial new road infrastructure. Policy Amendments Sought 1.143 To achieve a sound plan, Policy LP3 should be deleted and the status of Nailsea and Backwell should be returned to that of "town" and "village" and dealt with		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									under the terms of Policies SP5 and SP6 respectively. 1.144 The proposed allocations of Poplar Farm (130 dwellings), Land at Pound Lane (100 dwellings), Land South of Nailsea (582 dwellings) and Land East of Backwell (889 dwellings) should be deleted from the Local Plan. Accordingly, Nailsea would be required to deliver 1,005 dwellings and Backwell would deliver 794 dwellings over the plan period. This would equate to a population growth of c.16% and 38% in Nailsea and Backwell respectively. The transport mitigation strategy for Nailsea should be revised to include improvements to the B3130 and B3128. The proposed strategic rail crossing should be deleted from the plan. 1.145 Through these amendments, the scale of growth proposed at Nailsea and Backwell and the nature of the mitigation required would be justified, aligning with the findings of the Sustainability Appraisal. The removal of the need for the strategic rail crossing and the uncertainties and challenges regarding its deliverability and funding would remove a significant obstacle to the delivery of housing in Nailsea and Backwell, therefore providing greater confidence that the housing is deliverable within the plan period. The removal of land south of Nailsea and Land East of Backwell, in addition to the strategic rail crossing would substantially reduce the risk of flooding to these communities, maintain a good degree of physical separation between the two settlements and minimise the impact of development on the setting of The National Trust's Grade 1 Tyntesfield House. 1.146 BPC and NTC therefore strongly urge the Council to make these changes to the Plan to achieve a sustainable scale of development for Nailsea and Backwell which could be deliverable over the plan period. 1.147 Alternative locations should be re-examined to accommodate the residual c1,600 removed through the deletion of the Nailsea and Backwell strategic location. 1.148 The Sustainability Appraisal recognises that land to the east of the District, closer to Bristol represents some of the most sustainable locations for development, with access to a wide range of employment, education, services and higher order facilities. It also performs best in respect of maximising opportunities for active travel, use of public transport and minimising the need to travel by car. The agricultural land is generally lower in quality and flood risk is generally low. 1.149 Land South of Long Ashton (HE20139) is 71.76 hectares of land sited between Long Ashton nd the A370, close to the junction with the A4174 Bristol ring road. The SHLAA Appendix 1 Site Data and Assessment notes that the site has no hard constraints and lies inside broad location boundaries which are suitable for development. The site passed the baseline assessment and further assessment, with an assessed capacity of 1,394 dwellings. The site is identified as one of several sites at Long Ashton which have potential for further consideration, with a total capacity of 2,403 dwellings (See Table 19, SHLAA, October 2025). 1.150 The site is further assessed through the Sustainability Appraisal: Reasonable Alternatives Residential Proformas. A comparison of the SA findings for this site against Land East of Backwell is provided below. (see attached) 2 COMPARISON OF SA_ID_150 LAND EAST OF BACKWELL AND HE20139 LAND SOUTH OF LONG ASHTON SA Objective SA_ID_150 HE20139 (see attached) 2.1 It is evident that the two sites perform relatively similarly, with matching scores against 7 of the 15 objectives. The Long Ashton site outperforms Land East of Backwell on a further 3 objectives. Land East of Backwell records a better score and appears to perform better in respect of objectives 2.3 (access to facilities), 2.4 (community cohesion), 3.3 (sustainable travel access), 3.5 (heritage setting) and 3.6 (biodiversity impact). 2.2 However, there are evident flaws in this appraisal. - Objective 2.3 - The SHLAA finds both sites are within 720m of a local centre but not a town or district centre. However, it assigns a negligible effect to Backwell and a significant negative effect to Long Ashton. This is despite the Long Ashton site's close proximity to Bristol, a major employment centre and the availability of a wide range of shops and services within 2.5 kilometres of the site, in the		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									vicinity of Winterstoke Road, Ashton, Bristol. - Objective 2.4 – The SHLAA finds both sites are “of a scale (at least medium, see Table D.3 in the main SA Report) which supports existing and potentially some new services and facilities.” However, the SA assigns a minor positive (0) to Long Ashton and a minor positive (+) to Backwell. - Objective 3.3 – The SHLAA assigns a major positive to Land East of Backwell on the basis of its proximity to a railway station, and only a minor positive to Long Ashton due to the train station despite the significantly closer relationship the site has with Bristol, the opportunity for a railway station to be opened adjacent to the site to serve Long Ashton and the proximity to the Park and Ride facility on the A370, within 1.6km of the site. - Objective 3.5 – The SHLAA assigns a significant negative to Long Ashton and a minor negative effect to Backwell in respect of the impact of development on heritage assets and thei setting. Although the land South of Long Ashton was not assessed through the Historic Environment Assessments (Avalon), the adjoining land to the south (HEA1: Woodspring) was assessed. Although there are some heritage assets recorded in the vicinity of both sites which are of high sensitivity to change, the overall conclusions of the assessment were that, with mitigation the impact of the proposed development of 3,500 homes on heritage assets would be medium to low. It is reasonable to apply similar conclusions to the proposals for land South of Long Ashton. - Objective 3.6 – The SHLAA records a significant negative/ uncertain score for Long Ashton due to the site’s proximity to internationally or nationally designated biodiversity or geodiversity sites, compared with a minor negative for Backwell. However, the Habitat Regulations Assessment accompanying the plan demonstrates that the impacts of development of 3,500 homes on the adjoining land at Woodspring is capable of being mitigated to a level which would not cause harm to these designated sites. It is therefore reasonable to assume that a similar approach could be adopted for land South of Long Ashton. 2.3 If these flaws and anomalies are removed the findings for both sites are broadly the same. NTC and BPC are concerned that the Council has applied a degree of bias in reaching its conclusions on these sites to support the pre-determined allocation of land East of Backwell, Without firstly considering reasonable alternatives. This is endorsed by the findings of the Sustainability Appraisal. 2.4 Land South of Long Ashton occupies land of a poorer agricultural quality and should be considered ahead of land east of Backwell, in accordance with footnote 65 of the Framework. The site occupies a highly sustainable location, in close proximity to Bristol and the proposed urban extension to the SW of Bristol (Woodspring) which would deliver 3,500 homes over the plan period. In addition, the site lies adjacent to the £400 million approved EPIC employment campus (Policy LP22), which forms the anchor to the West of England Growth Strategy (2025) (See North Somerset Growth Gateway strategy) and therefore aligns with the SA in respect of the delivery of housing alongside major employment centres, minimising the distance for residents to travel to work and maximising the opportunity to travel by active travel modes 2.5 The allocation of land South of Long Ashton would almost entirely compensate for the deletion of the Nailsea and Backwell strategic location for development. A modest further allocation of land would be required to deliver the residual housing requirement, of circa 100 dwellings. This could be achieved through revisiting the Council’s sequential approach to site identification (Spatial Strategy Site Selection and Capacity Paper (October 2025), page 9), in particular, step 4, to identify further opportunities for development at sustainable villages outside the Green Belt (excluding Backwell). BPC and NTC consider there are further opportunities for development in the other sustainable villages which are more proportionate in scale, with less environmental harm and strain on services/infrastructure. The Local Plan proposes to allocate only 268 dwellings to the villages (outside the strategic locations). Notwithstanding the spatial strategy to focus growth at the urban areas, the rural areas must receive adequate housing to meet local needs, and the local plan should specify a neighbourhood designated area figure for each area.		
62777185	Ed Aldred			No	Justified	Unsure	Unsure	The field should not be included in the Grove Farm / Rodney Road housing allocation. For West Leigh families and many residents, this land has clear current and future value for children’s play, wellbeing, informal learning and outdoor activities. Housing numbers can be met through existing allocations, meaning this field is not required to deliver			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								the Plan's overall housing target. Policy LP3 prioritises the provision of new green infrastructure and open space. This field already fulfils that purpose and should be protected, not built on. The land functions as an important environmental buffer between the school and surrounding housing, helping reduce noise, air pollution, overheating and loss of biodiversity affecting children. Once built on, this green space will be irreversibly lost. Protection now is the only opportunity to secure long-term community value. The site has strong potential for designation as Local Green Space, as it is: demonstrably special to the local community, local in character, and offers clear recreational, educational, health and ecological benefits. Development here would represent avoidable harm to children's outdoor provision, at a time when national policy strongly emphasises active travel, outdoor learning, physical activity and mental wellbeing.			
21468225	Cassie and Brian Allsop		None. Just residents	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	My home has been in Backwell village for 35 years, and I am opposed to the poorly thought out additional 1000 house for development in Backwell for the following reasons: Destruction of Grade 1 Agricultural Greenbelt which is currently used for crops. If this goes ahead, it will reduce the paltry 7% of Grade 1 land left in North Somerset. As we concrete over fields like this, more food will need to be imported with additional costs to the environment and the UK's food security. Destruction of our current friendly village into an unwanted small town: Backwell already has planning approval for an additional 800 houses which will increase Backwell by 40%! Even with this increase already approved, Backwell village will not be able to copy with no plans or funds for road improvements, another comprehensive , infant and junior schools, more large grocery stores or other medical centres. The current residents will suffer from the increased congestion and demands of too many people too quickly, as will the proposed new residents who will probably regret buying in the area. If this goes ahead, Backwell will increase by 80% which is grossly unfair to the current residents here who will no longer be able to enjoy walking in the fields. Fresh air, patients drivers on the rural roads will be gone! Increases in building in the adjacent small town of Nailsea impacts Backwell and vice versa: It is extremely important that the Planning Inspector take note that significant development has taken place in the adjoining small town of Nailsea with more homes planned, including one proposed development of 582 houses right next to Backwell Lake which will join the already congested Station Road. The Roads: The A370, the main A access road out of Backwell (and also used by Nailsea residents and all the other towns and villages along it from Weston to Bristol) used for commuting, is going to have even more severe problems coping with the additional traffic. A couple of the already approved large developments on Farleigh Fields are going to spill out on Dark Lane, then to the A 370, with the other development spilling out directly on the A 370. It is going to be quite difficult getting out of the village. Also, the proposed road across Backwell Common in the new applications to the East of Backwell will simply NEVER be funded given the state of the economy for a very, very long time. Plus, ridiculously, this plan also shows the proposed road joining the congested Station Road and the A 370. Schools: I do not see any plans for more schools and the good schools that Backwell currently has will have serious problems absorbing so many new families with children which these developments are designed for. The planners need to be aware that Backwell Comprehensive also is the school for teenagers from Yatton. Medical Facilities: The medical centre is already under pressure as are other practices in the area, and the facilities currently available are not sufficient for the proposed developments to the East of Backwell, nor for those large developments already approved. Why are there no plans for medical centres? Are we to go without medical care as a result of this excessive building in our immediate area? And we all know about the shortage of GP's in the country. Active Travel Emphasis over Autos ignores all the seniors in Backwell (and Nailsea) and is unrealistic for a significant number of younger commuters to work: I do not know the exact number of seniors and elderly in Backwell (and Nailsea), but when we go around our village and Nailsea, I see an enormous number of them, most of whom cannot safely get on a bicycle or walk very far for shopping and other errands, including my husband and myself. Auto vehicles will remain an essential part of transport. I do not envisage that all the Active Travel Improvements will result in significant numbers of younger people cycling into Bristol for work or taking buses or trains to the limited end locations in Bristol. As a former working mother, I used to collect my children after work from different schools, grocery shop, or other stops en route home. This is still the case for many mothers and fathers. Also, I worked in the Thornbury area. We work where there is employment! Cycling and walking will not suit a broad swathe of workers.			
21309025	Jen Ashman			No	• Justified	Unsure	No	Concerns for the following: Noise pollution Air pollution Traffic increase given some of the roads in Backwell do not have sufficient pavements and poorly if at all lit at night Potentially more flooding than is already the case in particular check Chapel Hill area Inevitable increase in antisocial behaviour of which we are seeing now and crime of which we are seeing now.	Less housing on flood and agricultural land	n/a	
62845345	Kathleen Atherton			No	• Positively prepared • Justified • Effective	Unsure	Unsure	Overall I do not believe this plan is a sound one. In support of this view, I rely on the consistent failures in recent years of NSCC to take any heed of the views of local residents or small retailers when developing their plans. Often these plans lack anything that even passes for remote common sense (vis the parking changes on Clevedon seafront and the changes to the A370 Long Ashton bypass). If Nailsea is suffering from being a dead town, the councillors only need to look at the new parking charges introduced this year. Based on what I understand is to happen on Clevedon, it will soon also be sharing a no future fate with Nailsea. Backwell meanwhile has become a very painful (and sad) place to live in due to the already shockingly bad infrastructure (the endless roadworks and water works on the A370 being points in example). The schools are creaking and bursting and the quality of education has stated to suffer in consequence. While it does remain mostly still possible to get an urgent GP appointment, getting an actual physical prescription on time is becoming unheard of. As for what's happened to the local fields and wildlife, it			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								has been heartbreaking this year to bear witness to the churning up of Farleigh fields among others. Our councillors however seem intent on pushing through nonsensical plans which bring negligible if any benefit to the local Community. Naturally this begs a question of what's in it for them. A very sorry state of affairs indeed.			
62775297	J F Button			No	‣ Effective	Unsure	No	The volume of houses planned to be built for Nailsea and Backwell, which share infrastructure is disproportionate to transport links capabilities, doctors / dentist capacity etc. Much is planned on prime agricultural land which is needed for food and good for wildlife. And the development is distant from employment centres which has environmental implications.	I think the volume of development should be reduced in this area, taking into account what has already been agreed and the size of the existing settlement. The excess houses should be built near an employment centre or near motorways / areas with better travel links to Bristol, Weston, Avonmouth and similar. Ideally not on prime agricultural land.		
62810561	Tim Baines			No	‣ Justified ‣ Effective	Unsure	Unsure		I am a resident of Flax Bourton and so not only am interested in the Nailsea and Backwell part of the plan, but I experience daily the chaotic shambles of the A370. The Council has already given approval to 800 new homes in the area, and you are now proposing another 1000, and yet with no guaranteed improvements to road capacity, schools, healthcare, doctors, community facilities. This is complete overdevelopment of a small village and town and will create far more problems than it solves. Look elsewhere, or tell the government where to get off with its crazy housing targets		
8668193	Tickenham Parish Council		Tickenham Parish Council	No	‣ Positively prepared ‣ Justified ‣ Effective	Unsure	No	The proposed developments in Nailsea and Backwell will produce additional traffic onto the B3130 andB3128. A proportion of this traffic will want to travel west to Clevedon and M5 Junction 20, and east to M5 Junction 19 or to Bristol. There is no amelioration planned for these routes. The B3130 and B3128 are already up to capacity. The B3130 is a sub standard road that runs through part of Tickenham. Substandard means: a pinch point where HGVs/uses cannot pass each other, a pinch point where HGVs/buses struggle to pass each other, 3 x 90 degree bends, inadequate road width below accepted national standards, lack of footpaths and narrow footpaths below accepted national standards, 145 houses directly access onto a length of the B3130 less than 1.5 miles long. Tickenham school children walking to school are forced to walk on narrow footpaths with traffic thundering by within inches. The Causeway, Washingpound Lane and Church Lane are rural lanes and although proposed to be classified as Rural Quiet Lanes there are no proposals in the transport section of the Infrastructure Delivery Plan to provide any works to improve them or reduce traffic onto them, and North Somerset Council have warned that any improvements are highly susceptible to funding issues. The Local Plan needs to establish that funding will be available. All of the aforementioned roads will be subject to traffic flows above their capacity. We have tried to liaise with North Somerset Council over the problems above. Relating to the North Somerset Council duty to cooperate (which has been lacking), please see second attachment relating to an email from an officer of North Somerset Council, (22 July 2025),. Tickenham Parish Council wanted to have a meeting with North Somerset Council to discuss proposals to The Causeway. We were told they were too busy to talk to us. Sadly we were never sent further information and there are no further concrete proposals/details in the Local Plan.	Provide suitable transport infrastructure to cater for the proposed 4,000 house developments in Nailsea and Backwell, in terms of: 1. the construction of a road link between Nailsea and Clevedon using existing and improved roads as shown on the plan attached to this response. 2. infrastructure improvements to The Causeway, Washingpound Lane and Church Lane to make these routes more attractive to those travelling by active modes, and less attractive to general traffic.		250722EmailFROM EmilyMcDonaldCausewayMeeting.pdf NailseaTickenhamLink.pdf
62774273	H Barclay			No	‣ Justified ‣ Effective	Unsure	Unsure	The plan says it will protect valued areas and that development will be proportionate and I don't agree that this is sound. Our few remaining, and much valued, fields in and around the village are proposed for housing, ridding the village of precious green space, dog walking routes and important wildlife. There is no plan for required investment into services and infrastructure, and the village is already increasing by 40% with the new developments already underway. The % growth being asked of Backwell is more than any other settlement in North Somerset, and the village simply can't support this. We have many new housing developments already and have reached our limit without significant, costly investment in crucial infrastructure and services.	Only significant investment in infrastructure and services could make this plan feasible - doctors, dentists, another school, wider roads, new and wider pavements, ideally a new bypass from Long Ashton to Nailsea to reduce traffic through the centre of the village. Already the walk to school for children in the village is very precarious, especially with all the heavy goods vehicles already in the village due to the existing house developments.		
62996513	Ann Belcher			No				This plan is amazingly impractical for many reasons with the following which to me are completely mad. The land proposed is high quality land used to growing food crops and there is less than 10% of this kind of land left in our area. We need food! We do not need to import it! Our village already has 800 houses approved which increases the size of the village by 40%.If this plan goes ahead with 1,000 new houses it will be over developed and is unfeasible. There is no provision for the extra facilities needed since no mention made for the new schools, doctors surgeries, dental practices, pharmacies, community meeting rooms and open green parks which 2 - 3,000 more inhabitants would require. A lot of new roads would have to be built and a new road to take the traffic under or over the railway would be expensive or impractical or probable unfeasible when the site is carefully inspected. For these reasons I strongly oppose the plan			
62853089	Steve Bettison			No	‣ Effective	Unsure	No	- Backwell already has approval for 800 new homes, representing a 40% expansion. Any further allocation risks overwhelming the village with unsustainable development. - The proposed road fails to address Nailsea's traffic issues or ease congestion on Station Road, Backwell Common, and Chapel Hill. Constructing it under or over the railway would be prohibitively costly and potentially unworkable. - Despite significant housing growth, there is a shortage of school places and no investment in health or leisure facilities. Existing infrastructure cannot sustain an additional 1,000 homes. - Backwell has been allocated more housing than any other village in North Somerset, with growth rates exceeding those of towns. It is expected to absorb 7% of the district's housing, compared to Clevedon's 2%. - No needs or viability assessment has been undertaken to justify the addition of 1,000 homes. - Backwell is not an employment centre; the majority of residents commute elsewhere for work. - No assessment has been provided regarding the impact of development on social cohesion. - The site comprises Grade 1 agricultural land used for crops and grazing. Only 7% of such high-quality land remains in North Somerset. - Government policy requires protection of the best and most versatile land to safeguard food security. These proposals directly contradict that principle. - Development would destroy vital habitats and further damage biodiversity in one of the world's most	As above

								nature-depleted nations. - The proposals threaten the Brockley Maternity Roost and SSSI, where rare Lesser and Greater Horseshoe Bats depend on the land for feeding. - The Infrastructure Delivery Plan lacks detailed analysis and costings, with no funding guarantees for the road or associated services. - Backwell Common and nearby areas are already prone to flooding, which would be exacerbated by further housing. - Designation as a strategic growth location raises concerns about loss of character, Greenbelt and agricultural land, increased flood risk, and uncertainty over road funding and delivery. - Backwell Lake and adjacent fields, earmarked for roads and housing, lie on a floodplain that floods regularly. - Government policy requires 50% affordable housing on Greenbelt land, but this reduces developer contributions towards infrastructure. - The scale and pace of growth, combined with the infrastructure demands, render the proposals destabilising, unsustainable, and undeliverable. - Backwell's railway station is inadequate as a transport hub, remaining inaccessible for those with mobility issues and difficult for families with young children.			
51275905	R Bettison			No	• Justified	No	No	Housing Growth Backwell already has approval for 800 new homes, representing a 40% expansion. Any further allocation risks overwhelming the village with unsustainable development. Road Proposal The proposed road fails to address Nailsea's traffic issues or ease congestion on Station Road, Backwell Common, and Chapel Hill. Constructing it under or over the railway would be prohibitively costly and potentially unworkable. Infrastructure Deficit Despite significant housing growth, there is a shortage of school places and no investment in health or leisure facilities. Existing infrastructure cannot sustain an additional 1,000 homes. Housing Allocation Backwell has been allocated more housing than any other village in North Somerset, with growth rates exceeding those of towns. It is expected to absorb 7% of the district's housing, compared to Clevedon's 2%. Lack of Analysis No needs or viability assessment has been undertaken to justify the addition of 1,000 homes. Employment Backwell is not an employment centre; the majority of residents commute elsewhere for work. Social Cohesion No assessment has been provided regarding the impact of development on social cohesion. Agricultural Land The site comprises Grade 1 agricultural land used for crops and grazing. Only 7% of such high-quality land remains in North Somerset. Food Security Policy Government policy requires protection of the best and most versatile land to safeguard food security. These proposals directly contradict that principle. Wildlife and Biodiversity Development would destroy vital habitats and further damage biodiversity in one of the world's most nature-depleted nations. Bat Roosts The proposals threaten the Brockley Maternity Roost and SSSI, where rare Lesser and Greater Horseshoe Bats depend on the land for feeding. Infrastructure Delivery Plan The Infrastructure Delivery Plan lacks detailed analysis and costings, with no funding guarantees for the road or associated services. Flood Risk Backwell Common and nearby areas are already prone to flooding, which would be exacerbated by further housing. Strategic Growth Concerns Designation as a strategic growth location raises concerns about loss of character, Greenbelt and agricultural land, increased flood risk, and uncertainty over road funding and delivery. Backwell Lake Floodplain Backwell Lake and adjacent fields, earmarked for roads and housing, lie on a floodplain that floods regularly. Affordable Housing Policy Government policy requires 50% affordable housing on Greenbelt land, but this reduces developer	As above

								contributions towards infrastructure. Unsustainable Growth The scale and pace of growth, combined with the infrastructure demands, render the proposals destabilising, unsustainable, and undeliverable. Railway Station Backwell's railway station is inadequate as a transport hub, remaining inaccessible for those with mobility issues and difficult for families with young children.			
51557281	CPRE Avon and Bristol		CPRE Avon and Bristol	No				1. Unsound - contrary to vision and strategy: Policy LP3 is unsound because it is contrary to specific items in the plans vision and strategic objectives and policies 1.1 Contrary to Strategic Priorities: LP3 is contrary to the following strategic priorities • To promote sustainable development and address the climate emergency. • To deliver the zero carbon ambition by maximising the opportunities for low carbon development and the use of renewable energy. • To increase the number and range of job opportunities across the district, particularly at the towns to give people the opportunity to work near to where they live. • To prioritise the location of new development close to places with a wide range of … job opportunities. • To reduce car use, encourage walking and cycling, and high quality and effective public transport. • To deliver essential new strategic transport infrastructure to support new development and enable more sustainable travel options. 1.2 Contrary to Sustainable development objectives: • The purpose of the planning system is to contribute to the achievement of sustainable development. This is delivered through the preparation and implementation of plans which seek to balance economic, social and environmental objectives. The Local Plan will set out what sustainable development means for North Somerset. • A Sustainability Appraisal (SA) is prepared in parallel with the plan-making process and provides a mechanism through which sustainability effects can be described, analysed and compared. The process of undertaking a SA involves the identification of sustainability objectives which are used to measure and monitor the success of the plan. The SA objectives which are used to assess the local plan are: • 1.1 Ensure a range of job opportunities are easily accessible without having to use a car. • 1.2 Provide opportunities to improve economic wellbeing and reduce inequalities by providing good access to education and training opportunities. • 1.3 Promote the optimal use of land which supports regeneration, maximise re-use of previously developed (brownfield) land and protects the rural economy. • 1.4 Promote development which requires a deliverable level of high quality and sustainable infrastructure. • 2.1 Boost delivery and meet the housing need identified within the plan period. • 2.2 Deliver affordable or specialist housing where it is most needed 1.3 Contrary to SP1: Sustainable development: • "Make a positive contribution to addressing and demonstrating resilience to the impacts of climate change and delivering the net zero target; • Prioritise walking and cycling, maximise the use of effective public transport and encourage the creation of liveable neighbourhoods; • Support the delivery of opportunities for economic growth and job creation at accessible locations; • Protect valued natural and historic assets and support green infrastructure and biodiversity; • Support the efficient use of land, including prioritising previously developed land; • Avoid adverse environmental impacts which, on their own or cumulatively, would result in air, water or other pollution or harm to living conditions, health or safety. 1.4 Contrary to SP2: Climate change: "Development proposals must demonstrate how they will mitigate the impacts of climate change and adapt to its effects, encourage the decarbonisation of energy and transport, and support the delivery of carbon neutrality in North Somerset by 2030. In order to reduce the overall environmental impact of development, proposals will be expected to demonstrate how they: Reduce greenhouse gas emissions and provide carbon storage; Are designed to adapt and be resilient to the impacts of climate change; Minimise energy use and deliver a net zero energy standard in new buildings; Prioritise active travel and effective public transport over car use; Encourage the reuse of existing buildings and structures." 1.5 Contrary to SP3: Spatial strategy: "Priority will be given to locating new residential development in or close to urban areas where there is an existing or proposed wide range of jobs, and there are opportunities to encourage active and sustainable travel, particularly at locations which are currently, or have the potential to be, well served by public transport. Employment opportunities will be encouraged at accessible locations well-related to the urban areas and where sustainable transport opportunities can be maximised". 1.6 Contrary to SP5: Towns: "Support and enable walking, cycling and improved public transport, particularly in relation to connecting residential areas to the town centre, local centres, employment areas, educational establishments and other destinations; Optimise the use of other land, particularly at town centres and at accessible locations such as transport hubs; and Can be successfully served by infrastructure such as transport, Town centres will be the primary focus for a wide range of employment services which support, maintain or enhance their viability and vitality and their role and function" 1.7 Contrary to SP10 Transport: "New development must be located and designed to minimise the carbon impact of transport through limiting the need to travel and prioritising walking and the use of public transport opportunities.	4 Requested changes to the plan 4.1 Preferred changes The preferred change to the plan is the removal the designation of "Strategic Location" from Nailsea and Backwell and transfer of the associated capacity to the more sustainable strategic location at the border with Bristol where advantage can be taken of the proximity to Bristol's existing urban area, employment and public transport network. 4.2 Essential changes If, despite the strategic policy contradictions, the decision is made to retain Nailsea and Backwell as a strategic location, it is essential that the Site Requirements in Schedule 1 should include in for the Land East of Backwell and Land South of Nailsea the Site Requirement that permission should not be granted unless a credible funded plan for all aspects of completion of the cross rail link, including the railway bridge has been approved by all parties.		CPRE representation LP3 Strategic location-Nailsea and__ Backwell.odt

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								In order to facilitate the delivery of net-zero emissions and reduce the adverse environmental effects of transport, development proposals ... must address the following principles in line with the following hierarchy: Delivery of attractive, safe, and inclusive routes for walking and cycling which are well integrated into existing networks and provide access to effective and frequent public transport; Delivery of better local bus, rail and infrastructure supporting uptake in public transport use for journeys to work, leisure and other purposes. This includes journeys within and between towns in North Somerset and further afield including, better connections to, from and within the rural areas, journeys to and from public transport connections, new and improved bus stops and the reallocation of highway space" 2 Hollow justification The following aspects of LP3's justification are mistaken: • The plan proposes so little employment development that the effect of the plan is almost certain to be to raise the current high levels of net out-commuting. • Given the level of imbalanced development proposed in LP3, proximity to Nailsea and Backwell railway station is an inappropriate justification because, although platform improvements are proposed in LP11/schedule 7, the railway line is already very close to its passenger carrying capacity during rush hours and the plan proposes no improvement to that capacity. Consequently, rather than boosting the proportion of rail commuters, the proportion of commuters who use the railway will fall below its 2011 census value of 5% due to the inability of the line to handle more passengers. • The combination of increased net out-commuting and inadequate and unimproved rail capacity will result in most of the new working residents commuting by car, elevating carbon emissions that are attributable to the town, contrary to Vision and strategic policies as listed above. 3. A more sustainable alternative: 1.The potential strategic location that performs best against to criteria in the Plan's Strategic Priorities, Sustainable Development Objectives and strategic policies is at the border with Bristol where advantage can be taken of the proximity to Bristol's existing urban area, employment and public transport network. That area has the best environmental performance relative to North Somerset's poor environmental performance that emerges from 2011 census data represented in tables 1 and 2 below. For all of North Somerset's towns and larger villages, the average commuting distance exceeds 15km and two thirds of those in employment commute to work by car. Long Ashton has the lowest average commuting distance, the lowest proportion of working residents commuting by car and by far the highest proportion of residents commuting by bus and by bike. That relatively good performance is attributable to its proximity to Bristol, where most of North Somerset's resident commuters work. For a sample of North Somerset's "Built-up areas including sub-divisions", tables 1 & 2 (see attached document) show percentages derived from on 2011 census tables. The colour scheme has the worst values in red fading through yellow to the lower values in green: 2.The observation that Long Ashton's proximity to Bristol gives it a lower environmental impact from commuters suggests that, to limit the Plan's environmental impact, the numbers of homes close to Bristol's SW border should be substantially increased. A precedent for proposing a larger number of homes at SW Bristol is set in the 2006 South West Regional Spatial Strategy, which proposed a SW Bristol extension of 9,000 homes ("Section 4, Sub Regional Strategy Statements and Housing Distribution", para 4.2.11). That plan was abandoned when the change of Government in 2007 resulted in a revised planning system. 3.Considerations in support increased housing numbers close to Bristol's SW border: • A much larger number of homes was proposed in the 2006 South West Regional Spatial Strategy and tested at the examination. • The Council has the power to declare a wider "SW Bristol Borders Development Area" to increase the number of homes significantly above the 3,500 that is proposed in LP2 Woodspring (south west of Bristol) • The reduction in commuting by car would contribute to Plan's objectives for carbon emissions reduction • As fewer of the smaller sites would be required, the infrastructure costs associated with those smaller sites would not be incurred. For example, the new road between Nailsea and the A370 (including its bridge under the railway east of Backwell) would not be required if sites at Nailsea were deleted. Modelling, including traffic modelling and representation of Government infrastructure funding support thresholds, should be used to assess the infrastructure cost trade-off between housing at SW Bristol vs housing at smaller sites. • More appropriate infrastructure funding could make the Plan more deliverable as there would be reduced pressure on infrastructure funding sources. • The reduced commuting by car would limit ongoing highway maintenance cost increases • Bus services are cost effective in large urban areas because there are sufficient homes and destinations close to bus stops. Homes and destinations are more sparse in rural and small urban areas, requiring local authorities to provide subsidies. With an increased Bristol conurbation at SW Bristol, bus operators would introduce new services in the expanded SW Bristol development because they would be profitable, reducing the call on Council subsidies. • Work on Epic's employment site has already started. It offers at least 2,000 local jobs, which makes the SW Bristol strategic location an even more sustainable location for more homes.			
58577889	Adam Bloom			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I OBJECT to the proposed development plan for Nailsea and Backwell, North Somerset, on the grounds that it is fundamentally unsound, unsustainable, and fails to align with established planning principles and local policies. The following points outline material planning considerations that warrant refusal of the current proposal: Unsustainable Growth and Over-development: The addition of 1,817 houses in Nailsea represents an increase of over 25% in households, and when combined with Backwell, a 41% population increase. This constitutes a disproportionate and excessive level of growth that is out of character with the existing community and exceeds local capacity. Infrastructure Deficiencies (Highways and Transport): The plan inadequately addresses the significant impact on the local road network. The existing infrastructure, largely composed of C roads and single-lane routes such as Netherton Wood Lane and	Build up, not out. Bring in businesses to bring jobs. If you are going to turn Nailsea and Backwell into a 'new town', give it the infrastructure of a 'new town'.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								West End Lane, cannot support the projected increase in traffic generation. The proposed new road will not alleviate congestion toward Weston, and the assumption that social norms will shift towards public transport without sufficient supporting infrastructure is unfounded and unrealistic. The Causeway between Nailsea and Tickenham is a narrow lane that will become a main route of choice, further exacerbating safety and congestion issues. The B3130 will also face an unmanageable 25% increase in traffic at peak times. Loss of Green Spaces and Environmental Harm: The strategy of "bolting on housing developments" on surrounding green fields results in an irreversible loss of valued open countryside, footpaths, and potential priority habitats. This directly conflicts with strategic priorities to safeguard green spaces, support biodiversity, and enhance the local character and amenity value of the area. Flooding Risk: The proposal to build in fields around Nailsea and Backwell may impact flood risk areas, which is a material planning consideration that must be rigorously addressed and mitigated. Conflict with Strategic Priorities/Poor Design: The current approach of simply "bolting on housing estates" is contrary to the stated strategic priority of developing new communities in a way that enhances health and well-being and is child and family friendly. The plan fails to integrate new developments seamlessly, potentially making the existing town a "much worse place to live" by destroying its known character. Inadequate Public Services: The scale of development raises significant concerns regarding the capacity of public services, including local schools (Backwell School on Station Road is specifically mentioned as a traffic concern) and GP surgeries, to serve the enlarged population. Insufficient planning for this essential infrastructure alongside housing numbers makes the plan unsupportable. These concerns are based on material planning considerations and local knowledge, demonstrating that the current plan for Nailsea and Backwell is neither positively prepared nor justified.			
62806337	Emma Bloom			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I object to the proposed development plan for Nailsea and Backwell due to the following points: Excessive and unsustainable growth: 25% increase in households in Nailsea is a massive increase to the population of Nailsea and in my opinion is out of control and would result in overcapacity for the amenities and infrastructure. Severe traffic and road issues: The current road network in Nailsea is already congested (B3130 and Station Road), or too narrow (e.g. Netherton Wood Lane, West End Lane and Causeway) to handle the significant increase in traffic. The plan's assumption is that the traffic is heading in towards Bristol so no plan is outlined to improve travel southbound, or towards the Motorway. Destruction of Green Spaces: Building on the green fields around Nailsea and Backwell will destroy the town's character, valuable footpaths and habitats, directly contradicting the stated goal of protecting green spaces and enhancing well-being.			
62850913	Ellie Britton			No	• Effective • Consistent with national policy	Unsure	Unsure	According to the NPPF the developments proposed “should be located in areas where they are, or can be, supported by the necessary infrastructure and facilities”. The local schools in Backwell were not built to accommodate the increase in the number of school aged children that the East Backwell and other development sites will bring; therefore in order to comply with the NPPF statement above, the development proposed should provide the infrastructure needed to facilitate the education of these additional children. Alongside this, the North Somerset Local Plan 2041 states that development proposals must also demonstrate how they will support the delivery of infrastructure in line with the Infrastructure Delivery Plan. This includes the provision of, including land and funding, a new 420 place primary school on the East Backwell site. However when talking to members of the Rubix Land development team at a public consultation exercise event in September, we were told that the land would be provided but the funding of the new school would be down to the local council. The ability of North Somerset Council to find the funds for this construction seems highly unlikely, especially due to recent reports that they face a £10 million funding gap for next year! But the staff from Rubix Land that we spoke to seemed to believe that was not their problem. But if once the new houses at the East Backwell site are constructed and this 420 place new primary school cannot be afforded by the local council, where will those children go to school? Surely the education of future generations should be ensured before a development proposal like this is approved! Health services – When talking to members of the Rubix Land development team at a public consultation exercise event in September, we were told that the land would be provided, but the funding of the new health services would be down to the local council. The ability of North Somerset Council to find the funds for this construction seems highly unlikely, especially due to recent reports that they face a £10 million funding gap for next year! The doctors surgery in Backwell is already exceptionally busy and the doctors pushed to their limits to provide care for the current residents of the village, this means new healthcare infrastructure would definitely be needed to accommodate the huge population increase. I struggle to see how this proposed development will therefore be “located in areas where they are, or can be, supported by the necessary infrastructure and facilities” (NPPF).			
1019201	Wrington Parish Council		Wrington Parish Council					We note that this location contains loss of North Somerset’s most best and versatile land. We question whether increased numbers closer to the south Bristol boundary would produce a better outcome in terms of protecting quality land and achieving a more sustainable location.			
51457281	S Burrell							Draft Local Plan 2041 and the proposed increase in housing in Nailsea and Backwell by over 40% from today’s total. That will mend at least 40% more traffic on my road. I am deeply apposed to the above plan. I do not consider North Somerset Council (NSC) have properly considered the traffic impact to Tickenham Road. The road is seriously congested and unsafe for cyclists and particularly pedestrians. The roads cannot support the increase in new homes proposed by the local plan. Currently, even without the increase in traffic, it Is difficult to leave my house to walk. If I leave by the right hand side I am onto a very narrow path or if left into the actual road. I cannot leave my home without being worried about being hit by either, a car or six axle lorry. The wind created by the very			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								large lorries, has forced me into either the road or hedges. It has become unsafe to walk from my home currently and I cannot image what it would be like it's 40% more traffic. There are constant queues of traffic outside my house every day, which makes it difficult to enter our front drive. Cars sit with engines running outside my house for hours while queuing. Pollution has increased so much that i no longer open window, even in the summer. The noise and vibration from HGV is I believe seriously impacting my health and the structure of my 17c cottage. I am also concerned that children walk in the road to get to school at Clevedon School. The danger to them is extremely concerning. I have also witnessed in the last few months two very nasty bike accidents, where one cyclist was pushed into a wall by a car and in the second instance knocked off their bike by irritated drivers sitting in queues.			
29222017	Bruce Campbell	Bruce Campbell		No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I wish to raise serious concerns about the soundness of the North Somerset Council Pre-Submission Local Plan 2041. Although I welcome the Local Plan as it will identify locations for housing development, I believe there are shortcomings in the analysis of traffic impacts and plans to support the increased housing numbers. 1. The Local Plan whilst considering the traffic impacts of the isolated additional housing developments mentioned in the Local Plan does not address overall traffic growth over the 15-year period of the Local Plan, nor provide a strategic view of how traffic will be routed through key transport routes in North Somerset. 2. The Local Plan does not address existing traffic issues in impacted villages and rural lanes/roads which will be subject to a 40% proportional increase in traffic through the increased number of homes alone. 3. The Local Plan does not address the additional HGV and other commercial traffic on rural roads and villages that will be necessary to support the increased population size and improved/expanded town centres. 3.1. Increasing the number of dwellings will increase the volume of HGV traffic to support the shopping centres and homes supporting the increased number of dwellings. 3.2. The HGV route through Tickenham and Stone-Edge-Batch is the only HGV route from the M5 to Nailsea. There is no route via the A370 to Nailsea. The current roads are not suitable for this traffic and do not have any capacity for any increase in HGV traffic volume. 4. Without significant mitigations, Active Travel policies will decrease road capacity in the villages of North Somerset due to lack of adequate cycle and pedestrian paths. 4.1. Residents of Tickenham are highly favourable to Active Travel policies and wish to participate in walking and cycling to local destinations avoiding unnecessary car use, however without adequate infrastructure (pavements and cycle lanes) this policy will reduce road capacity on Tickenham roads by slowing traffic. 4.2. Tickenham residents do not feel safe walking or cycling through the village due to the high traffic volumes. There are no suitable Active travel routes from Tickenham to the surrounding towns of Nailsea/Backwell and Clevedon or to the Nailsea and Backwell railway station. This lack of suitable routes is forcing residents to use their vehicles even when they wish to use Active travel means. 5. If public transport usage is not increased in line with the increase in homes (42% for Nailsea and Backwell), this will force more use of private vehicles to fill the public transport gap. 6. The Local Plan does not consider any mitigations to traffic issues on the roads and lanes of Tickenham, in particular the viability of a route from Nailsea directly to the M5 J20. The route for traffic between Nailsea/Backwell and the M5 would be via an improved Nailsea Wall route, considerably alleviating traffic issues on the roads and lanes through Tickenham. It is appreciated that improvements would need to be made to the existing roads, but this route would provide a direct connection between the M5 and Nailsea/Backwell to support existing and future traffic needs. 7. There is no local traffic mitigation included in the Local Plan for Clevedon Road (B3130) in Tickenham and Stone-Edge-Batch to enable safer pedestrian, wheeling and cycling use. 8. The Local Plan does not assess the volume of additional traffic on Tickenham roads/lanes from the introduction of the proposed Strategic Rail Crossing from East of Backwell to Station Road Nailsea. The review looked only at displacement of existing traffic. Introducing the Strategic Rail Crossing will encourage additional traffic from Bristol and the southern ring road (Colliters Way) to use this route for access to the M5 and vice-versa. 9. I do not agree with the assumption that the Strategic Rail Crossing will reduce traffic volumes on the Causeway or Stone-Edge-Batch. We agree that traffic using the route to/from Nailsea on Station Road will be attracted to use the Strategic Rail Crossing, but we fail to see how North-bound traffic to Clevedon/M5 from Nailsea or Backwell would use this new route. 10. The Local Plan proposes the introduction of Quiet Lanes for the Causeway, Church Lane and Washing Pound Lane which would make these routes more attractive for pedestrians, cyclists and horse riders, but does not assess the traffic impacts on the congested route (Stone-Edge-Batch) which would carry the displaced vehicle traffic. 11. The assumptions made for Active travel used to mitigate traffic volumes are without any evidence to support the offsets stated particularly in a semi-rural environment with dangerous roads such as Tickenham. Therefore, use of these assumptions is highly risky. 12. Personally, I am daily impacted by the high volume of traffic that passes my home on Church Lane. Every morning, I am woken by a procession of vehicles using Church Lane as a cut through from Nailsea to the B3130. It is no longer safe to walk on the lane due to the speed and frequency of the traffic. The traffic has destroyed the verges of the lane leaving large unsightly potholes. Cars use the verge outside my house and my driveway as passing places. I regard myself as being active and I like to walk, run and cycle however I feel in high danger when crossing the Causeway due to the volume of traffic. Vehicle drivers regard me with contempt because they feel that I am restricting the flow of traffic. I know others in Tickenham that will not consider walking or cycling on the roads and lanes as they feel that it is way too dangerous. These roads are just not fit for purpose. I can scarcely comprehend what it will be like with another 40% of traffic as a result of the additional homes	1) Provide a fully funded direct link from Nailsea to the J20 roundabout of the M5 to carry traffic to/from Nailsea and Backwell. The Nailsea Wall route would provide the shortest and least disruptive route. 2) Introduce significant traffic calming and speed restrictions (20mph) on The Causeway, Church Lane and Washing Pound Lane.

								proposed in the Local Plan 2041.			
62773473	Y Carolan			No	‣ Justified	Unsure	Unsure	Village status as a thriving community will be changed. Green spaces supporting wildlife, Backwell communities wellbeing to balance life and work will be compromised. An already thriving community that is currently forced to endure long waits to join traffic flow on A370 to reach schools, colleges and work. Adding more to the local population will only compound this.			
21231201	M Chamberlain			No	‣ Effective	Unsure	Yes	Despite a huge amount of analysis and discussion in the plan and its supporting documents there is not enough detail, scope or certainty to ensure that the plan's admirable objectives will actually happen. A good example is Farleigh Farm in Backwell currently being built with no cycle-friendly links to anywhere within or beyond the village and the only pedestrian link is the footway adjacent to the main A370 which has been permanently narrowed to provide for traffic turning to and from the development. There is a major bus route on the A370 yet the development does not include improvements to bus stops and crossing facilities other than a narrow central refuge leading to the narrowed footway. The pressure for development is so great that the active travel and public transport obligations disappear unless they are "baked in" at the Local Plan stage. Too much of the plan appears as a wish list.	I am only considering transport issues in Nailsea and Backwell here. The construction of a new rail crossing to take buses, pedestrians and cyclists as well as traffic is seen as the key to resolve development constraints and existing problems yet the documents state that a fuller engineering assessment is required before it is even clear whether the crossing can be constructed or how reliable is the £30m cost estimate. Even if it can be built there must be considerable doubts that it will achieve issues such as the rural lanes traffic reductions west of the town. In the meantime consents are being given for sites around both Nailsea and Backwell adding to the pressures on existing facilities. The travel infrastructure must be resolved with more certainty before the local plan housing and employment proposals are agreed.		
21231201	M Chamberlain			No		Unsure	Yes	The Plan does not address the significant problems at the low narrow bridge under the railway. I have suggested how this could be improved in the next section. A new cross rail bridge/tunnel is proposed to resolve problems in Station Road and at the Backwell crossroads. As the Plan's support data suggests the proportion of traffic using Station Road and the A370 south of Backwell is growing relative to the proportion using Station Road and the A370 towards Bristol. The proposed location of the rail crossing will not be attractive to drivers from Nailsea wishing to go south as it is not only a longer route it takes them back through the Backwell Crossroads that the new road is meant to relieve. Even with traffic calming in the rural lanes through Brockley many drivers will continue to use them rather than the new road. Similarly drivers will continue to use Station Road and avoid the Backwell crossroads by using the local "bypass" through Rodney Road. The best way to overcome these problems and achieve the Plan's objectives is by selecting one rural lane through Brockley for limited improvement and calming to enable it's safe use and minimise traffic using the Backwell crossroads and Rodney Road. This would be in addition to providing a crossing of the railway on the Bristol side (nearer Bristol to relieve Backwell Farleigh and Flax Bourton?). The northern limit of the new road is shown as a junction with Station Road which would mean all the traffic would use the unsuitable Bucklands Batch (Station Road) - there would be increased traffic because the new road would draw traffic off the B3130 through Wraxall.	The Plan identifies the problems caused by the low narrow bridge under the railway at Nailsea & Backwell Station but does not adequately address their resolution. Even if the new Cross Rail bridge/tunnel is built the plan only refers to how this would enable traffic reduction and footway improvement along the general length of Station Road. The wholly inadequate underbridge at the station would still be shared by pedestrians, cyclists, buses and general traffic. There is scope for including in the Plan a proposal for a pedestrian tunnel under the railway beside the existing underbridge to separate pedestrians from traffic. This could be combined with improvements to the station. The Plan says very little about the railway station except that it needs to be improved and Network Rail are responsible. The Local Plan is the place to identify such an essential element fully compliant with the Plan's vision. If the new road crossing of the railway is to be built it will be a major scheme to which this associated element could very justifiably be added.		
51734849	Andrew Clarke			No	‣ Justified ‣ Effective	Yes	Yes	SP5,SP7, LP3 are my primary concern. Very concerned about diversity crisis and that’s not even covered by the policies or vision. I’m commenting on the North Somerset Pre submission Plan 2041. I do so as an interested member of the public rather than in any professional capacity. The local plan is a very substantive piece of work, developed over several years, it’s hard to do it justice in the short time I have, and without a professional background in planning. That said, North Somerset’s residents are key stakeholders in any plans. I note that I’m only invited to comment as to whether the plan is sound, legally compliant and meets a duty to co-operate. I’m sure the Council’s response to the new imposed housing targets meets these overarching tests, however I don’t believe the targets are sound and that’s what I’d like to challenge, before considering specific points of policy.			
62859905	David Clay			No	‣ Positively prepared ‣ Effective	Unsure	Unsure	There are aspects which are not consistent with national priorities or local needs	1. National need for food security means house building developments should not occur on grade ! and grade 2 agricultural land, which would preclude some developments for Nailsea and Backwell. 2. Policy DP19: Parking Most households have 2 or more cars. Parking space needs to be provided by new houses on on the roads 3. Policy DP43: Affordable housing. The plan needs to ensure that this is affordable in practice.. Is there not evidence that the recent affordable housing built in Nailsea is not taken up by those who need it because the price is too high? 4. Policy DP63: Infrastructure delivery and development contributions. Infrastructure ROADS. Where is the guarantee that roads will be provided BEFORE further house building to improve efficient road access to Nailsea? These need to deal with the following problems:: the pinch points on the B3130 at Stone Edge Batch and Wraxall, the inadequate and unsafe road on Causeway between Nailsea and Tickenham the inadequate road through Nailsea West End to Clevedon Is not a new link from the west of Nailsea to the A370 needed? New roads need to be wide enough for bus access. Newly built parts of Nailsea around Netherton Grange are far more than the maximum 800 m bus stop distance. requirement written into the plan.. .

									HEALTHCARE FACILITIES There needs to be provision of adequate Health Centres before further development in Nailsea and Backwell is permitted.		
39035137	Anthony John Cox			No	‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	No	Backwell is recognised as a village yet by lumping it in with Nailsea as a strategic development area all the criteria for development in a village are being ignored and it is proposed that Backwell is expanded by a greater proportion than any other town or village in the district. The amount of development proposed for Backwell is completely unsustainable.	Backwell should be removed from the Nailsea and Backwell strategic development area and treated as all the other villages.		
39035137	Anthony John Cox			No	‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The proposed developments in Backwell are prefaced by a long list of measures which are necessary. However there is no indication of these will be fundable and it is highly unlikely these will ever take place given the state of the council's finances. Where is the funding for three new 420-place primary schools (each with early years provision in line with government requirements), financial contributions to secondary, Post 16, family centre services and special educational needs provision to come from as well as the new road which goes through green belt land and so significantly degrades the green belt and destroys the strategic gap between Backwell and Nailsea. The proposed road also requires a major bridge to go under the railway. These proposals are totally impractical.	Remove the provision of 889 new houses from the East of Backwell. except for the triangle of land to the north of Backwell Common and South of the Railway and the link road.		
58629377	T Crane			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	LP 3 sets out site-specific requirements for delivering around 3 500 dwellings in Nailsea and Backwell, including measures to alleviate traffic congestion, improve active travel, enhance bus and rail facilities, provide 6.1 ha of employment land and build three primary schools. While it acknowledges existing “pinch points” on Station Road and at Backwell crossroads, the policy does not require that those constraints be resolved before housing is built; instead it asks for a phasing strategy without specifying that development must follow infrastructure delivery. It also proposes active-travel links and a Festival Way extension without ensuring that residents will have local jobs or services to walk or cycle to. In addition, the employment land is on greenfield/Green-Belt land despite the loss of town-centre commercial premises to housing. Overall, LP 3 is not sound because it is not realistically deliverable, fails to protect the Green Belt and flood-plain, and does not ensure infrastructure precedes housing. Reasoned justification: Phasing and infrastructure: LP 3 states that housing proposals must contribute to infrastructure and provide a phasing strategy but does not require that housing be contingent on infrastructure completion. The list of measures (traffic alleviation at Station Road and Backwell crossroads; bus-priority improvements; station access upgrades; mode-shift initiatives; Festival Way extension; three new primary schools) is extensive and expensive. There is no evidence that these measures are funded or deliverable within the plan period, nor that they will be provided before people move in. It also completely overlooks the two major traffic bottlenecks on the B3130 either side of Nailsea. Without enforceable conditions linking occupancy to infrastructure delivery, congestion and service pressures will worsen. Pinch points and road capacity: The policy identifies the need for a “strategic rail crossing” and measures to discourage traffic from using Station Road, but it does not commit to constructing such a crossing or specify its route and funding. Likewise, improvements at Backwell crossroads and along the A 370 corridor are vague. There are no considerations about the B3130. Given that all three access routes into Nailsea have physical constraints (narrow bridges, tight village pinch points), phasing strategies alone will not create capacity. Housing growth should not proceed until a deliverable solution is secured. Active travel versus employment realities: LP 3 promotes active-travel links (Youngwood Lane, Festival Way extension) and measures to reduce car dependency. However, there are few local employment opportunities because large parts of the town centre have been converted from commercial to residential use. The 6.1 ha of new employment land is proposed on greenfield/Green-Belt sites outside the existing urban area, which undermines the plan’s commitment to reuse brownfield land and protect the Green Belt. Without a robust economic strategy and better public transport, active-travel improvements will not significantly reduce car use; residents will continue to commute by car to Bristol, Bath or further afield. Flood-risk contradiction: The policy proposes housing on land north of Nailsea and east of Backwell that is prone to flooding, yet the same plan (through DP 9) warns against developing in flood-risk areas. Creating a new wetland on Nailsea Moors is welcome, but it does not mitigate flood risk on all allocated sites. Moreover, releasing flood-plain Green-Belt land contradicts SP 7’s requirement for exceptional circumstances. Irrational allocation of employment land: LP 3 allocates 6.1 ha of new employment land on greenfield/ Green-Belt sites while failing to maximise employment opportunities within the existing town centre. Given the loss of commercial space to housing and the presence of vacant units, this approach is irrational and inconsistent with the NPPF’s “town centre first” principle.	Make infrastructure a precondition: Amend LP 3 to state that no housing development shall commence until specific infrastructure measures are completed, including: A new road/rail crossing or equivalent solution to remove the Station Road pinch point; Capacity improvements at Backwell crossroads and along the B 3130 and A 370 corridors; Step-free access and expanded parking/bus interchange at Nailsea & Backwell station; Commitments from bus operators to increase frequency and extend services to Bristol and Bath; Incentivise investment in business, industry, commerce and retail. The phasing strategy should tie housing occupations directly to these milestones. Re-evaluate site allocations: Remove or reduce housing allocations on flood-prone Green-Belt land near Jacklands Lake and Moorend Spout. Prioritise brownfield sites and infill within the existing urban area. Avoid bat roosts and bat corridors at all costs. The specialist bat survey clearly states that any disruption to habitats will damage the bat population. Locate employment within the town: Replace the 6.1 ha greenfield employment allocation with a strategy to improve the offerings in Nailsea town centre: retain and repurpose vacant commercial units; encourage small businesses, co-working and creative industries; and provide grant or tax incentives to attract employers. Integrate employment land with residential sites to reduce travel distances and support active-travel objectives. Strengthen active-travel and public-transport commitments: Require the Festival Way extension and other active-travel links to be delivered early, but only as part of a broader package that includes improved bus services and accessible rail facilities. Provide secure funding for these measures. By incorporating these modifications, LP 3 would be more consistent with national policy, better aligned with evidence on transport and flood-risk constraints, and more likely to deliver sustainable, well-serviced communities.		
58629377	T Crane			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	LP 3 proposes to expand Nailsea and Backwell by around 3 500 dwellings and 6.1 ha of employment land requiring the release of Green-Belt land. It sets out “Golden Rules” (50% affordable housing, infrastructure improvements and new green spaces) and lists a package of measures to address transport, education, leisure and ecology. LP 3 is not sound because the policy is predicated on unsound assumptions: the scale and phasing of development do not reflect local constraints; the transport package is unfunded and unproven; the Green-Belt release is not justified by exceptional circumstances; the affordable-housing target may be unviable; and the proposed employment land undermines the green belt and does not compensate for losses in the town centre. LP 3 therefore fails the tests of being positively prepared, justified, effective and consistent with national policy. Reasoned justification Over-reliance on unproven transport mitigation: LP 3 acknowledges that development “will require a strategic and coordinated approach to mitigation, particularly the provision of a package of new transport infrastructure”. However, none of the listed measures (strategic rail crossing, Station Road/Backwell crossroads relief, bus-priority improvements, active-travel enhancements, Festival Way extension) are committed or funded. There is no timeline or guarantee that they will be delivered before housing occupancy. Without these improvements, the three constrained routes into Nailsea (Station Road, B 3130 via Tickenham Hill and Wraxall) will	Scale back housing and incentivise employment: Reduce the number of dwellings allocated to Nailsea and Backwell to reflect infrastructure and environmental constraints. Consider alternative locations with better transport links or more brownfield capacity. Limit employment land to brownfield sites and existing vacant premises within or adjacent to the town centre. Infrastructure-first phasing: Strengthen the phasing strategy so that no significant housing development can commence until specific transport infrastructure (rail/road crossing, A 370 and B 3130 upgrades, station accessibility improvements) is funded, consented and programmed. Include binding triggers in Section 106 agreements. Reassess Green-Belt release: Avoid development on flood-prone or ecologically sensitive Green-Belt land. Retain Green-Belt boundaries around Jacklands Lake, Moorend Spout and Backwell Lake, and seek alternative,		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								remain bottlenecks, making the development unsustainable and contrary to DP 14 (Highway safety). The policy's reliance on a phasing strategy is vague; it does not stipulate that infrastructure must be in place before homes are built, only that a strategy must be provided. Failure to discourage car trips: SP 10's objective of reducing car dependency will not be achieved under LP 3. The plan would add thousands of residents to a town with limited local employment and services. Active-travel links and bus-priority lanes are commendable but will be of little practical use when most residents still commute to Bristol, Bath or beyond. The proposed improvements to the A 370 bus corridor and interchange facilities are aspirational and do not alleviate the issues caused by the influx of residents into Nailsea; there is no commitment from bus operators to increase service frequency, indeed bus services to and from Nailsea have recently been reduced. As a result, the policy will increase rather than discourage the number of car trips, contrary to the plan's vision for sustainable transport. Green-Belt release without exceptional circumstances: LP 3 requires release of land from the Bristol and Bath Green Belt to the north of Nailsea and east of Backwell. The policy cites the NPPF "Golden Rules"—50% affordable housing, infrastructure improvements, and new public green spaces—as justification. However, the NPPF states that Green-Belt boundaries should be altered only in exceptional circumstances when all other options have been exhausted. The council has not demonstrated that brownfield opportunities and higher-density development elsewhere (e.g. Weston-super-Mare, Portishead, Clevedon, Winscombe, Sandford, Long Ashton) cannot meet housing need. Furthermore, some of the land proposed for release is flood-prone (Jacklands Lake, Moorend Spout) and provides important ecological functions. Flood risk and environmental value are not exceptional circumstances; they are reasons to retain Green-Belt protection. Releasing flood-plain Green-Belt land conflicts with DP 9 (Flood risk) and SP 7 (Green Belt). Golden-Rules requirements may be unviable: The policy requires 50% affordable housing on each site (as per DP 43) and delivery of transport, recreation, leisure, health and environmental infrastructure. This high affordable-housing percentage, combined with expensive infrastructure obligations (road/rail crossings, schools, leisure facilities, nature park, wetland), may make schemes financially unviable. If developers argue for reduced contributions on viability grounds, the Golden Rules will not be met, undermining the rationale for Green-Belt release. The plan should evidence viability for each allocation. Employment land in the wrong place: LP 3 proposes around 6.1 ha of new employment land "to the east of Backwell and north of Nailsea" and states that new business developments should prioritise light industrial and office space. Locating employment on greenfield/Green-Belt land at the edge of the settlements, away from the town centre, contradicts DP 19's parking policies and SP 10's goal of reducing car trips. Workers would have to drive to peripheral business parks, increasing traffic on the constrained road network. Meanwhile, Nailsea's town centre has empty commercial units that could be repurposed and has recently approved the redesignation of commercial premises as residential with the result that significant sq footage of commercial office space has been lost forever.. The policy should instead prioritise employment within the existing urban area, aligned with mixed-use development. Schools and community infrastructure: LP 3 requires three new 420-place primary schools (plus contributions to secondary, Post-16, family-centre and SEND provision). While this acknowledges the need for education provision and infrastructure, there is no certainty over sites or funding. The policy expects one school to be provided on the Grove Farm scheme, with two more to the east of Backwell and south of Nailsea, but it does not safeguard sites or state who will deliver them. If school provision lags behind housing, families will need to travel elsewhere, increasing car journeys and undermining sustainable-transport aims. Leisure, ecology and wetland measures: Contributions to leisure facilities, a new Nature Park and a wetland on Nailsea Moors are positive but may dilute funding needed for transport. The Nature Park is intended to offset impacts on bat habitats, yet the large-scale development will still intrude on flight corridors and the foraging areas of protected species. The policy should ensure that ecological mitigation is secured before development commences and that it does not substitute for avoiding harm. One-size-fits-all approach and irrationality: The broader Vision and Strategic Priorities adopt a "one-size-fits-all" approach, assuming that the same growth model can be applied across North Somerset. Nailsea's unique geography, flood-risk profile, constrained road network, protected ecology and limited town-centre services mean that the generic growth template is irrational here. By imposing large housing numbers and peripheral employment sites without resolving these constraints, LP 3 fails to demonstrate a rational basis for its strategy.	less ecologically sensitive sites, prioritising previously developed land. Review the viability of the Golden Rules: Require developers to provide evidence that delivering 50% affordable housing alongside substantial infrastructure obligations is viable. If viability cannot be demonstrated, adjust requirements, reduce housing numbers, or refuse planning permission. Integrate employment and services: Revise the employment strategy to support investment in Nailsea town centre (including but not limited to Crown Glass shopping centre), encourage re-use of vacant commercial units for co-working and light industrial uses, and phase employment land ahead of housing. This will reduce commuting distances and make active travel meaningful. Safeguard sites for schools and community facilities: Identify and allocate specific sites for the three primary schools and other community infrastructure in Schedule 1. Secure funding and timing commitments to ensure they are delivered in step with housing. Ensure ecological mitigation and flood management: LP 3 proposes contributions toward a new Nature Park and bat-habitat provision as compensation for the ecological impacts of developing Green-Belt land around Nailsea and Backwell. While mitigation and enhancement are important, the NPPF requires that harm to designated sites is avoided in the first instance. The areas earmarked for housing around Nailsea include low-lying meadows and rhynes that act as natural floodplains and support rich flora and fauna, including protected bat species and a nearby SSSI. Building over these habitats would permanently damage them and increase flood risk. Creating a new nature park afterwards cannot replace the complexity and maturity of the existing ecosystem; it amounts to "offsetting" destruction rather than preventing it. A more sustainable and logical approach is to leave the existing rich natural environment intact and steer development to less sensitive locations. In this case, the best mitigation is avoidance: do not allocate flood-prone and ecologically valuable Green-Belt land for development. Tailor policies to local context: Revisit the Vision and strategic approach to acknowledge that Nailsea and Backwell cannot accommodate such a large share of growth. Policies should be adapted to local conditions rather than applying a standard growth model.		
31072289	Jeanne Craske			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The policy is based on unsound assumptions – the transport 'set up' is unfunded, the release of Green Belt is not justified by exceptional circumstances and the scale of the development does not reflect local constraints. The character of Nailsea and particularly Backwell would be changed forever, to the detriment of existing residents, new residents and anyone passing through. The policy is too vague about any infrastructure being in place before homes are built. There is no guarantee that improvements will be carried out in advance and without any improvements to the narrow routes into Nailsea (Station Road, Wraxall Hill and Wraxall) will be on overload. The plan will not achieve any reduction in car dependency as thousands of residents would be added to a town and village with little employment. In proposing to release Green Belt it should be proven that there are no other options. There is no proof that there are no suitable brownfield sites elsewhere. In addition, some of the land which is proposed to be released is prone to flooding – eg Backwell Common, Jacklands Lake. Golden Rules requirements may be unviable yet once the land is gone, 'it's gone'.	Reduce the number of houses allocated to Nailsea and Backwell to reflect environmental and infrastructure constraints. Prioritise finding alternative locations with brownfield capacity and transform disused buildings and those adjacent to town centres (of which there are plenty in Nailsea – eg the old Weston College which is an eyesore.) Avoid development on flood plains. Ensure that the effects of previously permitted developments are assessed before giving permission for more. Ensure that improvements to infrastructure are carried out prior to new developments. Ensure that housing types meet the requirements of potential purchasers. Ensure that sites are schools and community facilities in a timely manner.

51477249	Burrington Parish Council		Burrington PC	Unsure	‣ Consistent with national policy	Yes	Unsure	On previous drafts of the local plan we expressed concern that a wider range of sites for housing would be needed to avoid challenges to the supply of housing land and the ad hoc addition of sites through planning appeals, especially in view of the substantial increase in housing requirements arising from the new standard method of calculating housing requirements. We can see that North Somerset Council has now made significant changes to the settlement strategy to include new large sites for housing which now include a substantial urban extension south west of Bristol (‘Woodspring’), a number of strategic housing sites at Nailsea and Backwell, some of which already have planning consent, the ‘Wolvershill’ strategic allocation north of Banwell and strategic sites at Pill and Easton-in-Gordano, as well as continuing development adjoining Weston-super-Mare (Parklands Village and Winterstoke Village), new site allocations at Clevedon and Portishead and redevelopment sites within Weston, some of which are carried forward from the Site Allocations Plan of 2018.It seems to us that the Council has thus sought to identify a realistic and as wide as possible range of options to accommodate the increased housing requirement. Some rural settlements like Churchill and Winscombe are also making significant contributions to housing land supply, although some sites were committed through planning appeals which means that they are not always well integrated with the existing settlement (or other appeal sites). Committed housing sites in the larger villages do not therefore always achieve the aims set in the Core Strategy for ‘Service Villages’ in terms of more self-containment in jobs and services, protecting the character of the settlement, or achieving improvements in public transport.	More detail is required about the allocated housing sites to demonstrate their feasibility, desirability and consistency with other planning policies– in the form of a development brief		
18204961	Mrs Wendy Derrick			No	‣ Justified ‣ Effective	Unsure	No	Backwell already has 800 new houses approved, a 40% increase for the village. These additional numbers would lead to complete overdevelopment. and dangerous for our roads and our children who use the path ways with a junior school and comprehensive in these roads, I have seen many a near miss already The proposed road would not effectively serve Nailsea's traffic or relieve congestion on Station Road, Backwell Common, or Chapel Hill. The massive increase in housing will outway this. It is already dangerous, I know because I live on Station road, and have seen lorries thunder down it with no regard to the 100’s of kids coming out of school Engineering the road under or over the railway would be highly expensive and possibly unfeasible. Too much traffic as it is. Despite this increase, there is a deficit in school places and no investment in health services or leisure facilities. The lack of infrastructure and services cannot support another 1,000 houses. Backwell is allocated a higher number of houses than any other village in North Somerset, and even a higher growth percentage than towns. Backwell is expected to take 7% of the district's housing allocation, compared to Clevedon's 2%. There is no needs or viability analysis for an extra 1,000 houses.	Just stick with the housing you have already given permission for and leave it at that, which is more than enough for a little village to take	I don’t	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								Backwell is not an employment hub, most residents commute, leading to more traffic on the roads No social cohesion impact assessment has been provided. Grade 1 Agricultural Land currently used for food crops and grazing. There is only 7% of this high quality land left in the whole of North Somerset. Government policy states that "we must protect our best and most versatile land" This is not happening. You have not co operated with the residents of Backwell on any of the housing you are forcing this little village to have, with no facilities, no infrastructure, getting rid of the green belt. Making the whole place on safe on the roads.			
18204961	Mrs Wendy Derrick			No	• Justified • Effective	No	No	1. Government policy states that "we must protect our best and most versatile land" to safeguard food security. The proposals contradict this policy and undermine food security. 2. Development would destroy valuable wildlife habitats and further harm biodiversity in one of the world's most nature-depleted countries. 3. The proposals threaten the Brockley 4. Maternity Roost and SSSI, with rare Lesser and Greater Horseshoe Bats relying on the land for food. 5. The Infrastructure Delivery Plan lacks analysis and costings, and there are no funding guarantees for the new road or services. 6. Backwell Common and surrounding areas are prone to flooding, which would be aggravated by more housing. 7. Concerns regarding the strategic growth location designation include the impact on the area's character, the loss of Greenbelt and high-quality agricultural land, the risk of flooding, and uncertainty over whether the road can be funded and delivered on time to support the proposed housing. 8. Backwell Lake (Reservoir) and adjacent fields, where the new roads and housing is planned and are on a floodplain, which floods regularly. 9. Government policy requires 50% affordable housing on Greenbelt Land, but this reduces the funds developers contribute towards infrastructure.	There is none		
49543265	Grahame Dixie		Backwell Residents Association	No		Unsure	Unsure	Summary and Conclusion The LP contains noble words about the need for and importance of protecting our county's Best and Most Versatile Land (BMV) The data demonstrates that NSC's actions contradict this stated intension. NSC own data is that 17% of the county is grade 1 and 2 land. If NSC had in place an effective policy of protecting our BMV, then a lower proportion than this of the land area allocated for building would be of grade 1 & 2 land. Analysis of NSC's own report demonstrates this is not the case. The LP identifies 60 sites where housing is projected on existing agricultural land. However, 57% of these sites are on grade 1&2. This evidence shows that far from protecting high quality agricultural land, in reality NSC is preferentially selecting BMV for building. There is then a radical contradiction in the LP between the thought and the action. The LP needs to; (i) Insist that all building application include independent soil evaluations , (ii) Communicate to the developers that preference would be given to applications on poor quality agricultural land, (iii) Benchmark the approval of sites on grade 1 and 2 land against the proportion of NSC land area of this quality land to monitor that the LP's stated BMV objectives are being effectively implemented. Comments on : Best and Most Versatile Agricultural Land Globally the issues of increasing risks around food security are evident. For any country the quality and productivity of soil is a vital and treasured resource which reduces those risks. And yet NSC and its LP continues to take a cavalier attitude toward the use of our best agricultural land for building. Trumping long term wise planning with short termism. Strengthening Food Security through national production Food Security Globally is an increasingly threat. Populations continue to grow. Diets are becoming richer in animal protein, requiring larger land areas per person fed. Trade wars, tariff hikes and continuing retreat from globalisation menace future trade in agricultural goods. The effects of climate change on crop productivity (heat stress, flooding, extreme weather events) is of great concern for policy maker globally. The most recent report on Global Food Security emphasises the continuing fragility of agricultural production, markets and trade. Amongst the important points made are; (i) Food prices rose throughout 2023 and 2024, pushing up the average cost of a healthy diet globally (ii) Global food markets have faced persistent pressures in recent years, with food price inflation emerging as a major concern since 2021 (iii) Compounded global shocks have intensified food price inflation worldwide, and (iv) Recommends Invest in resilient agrifood systems. Experience from the last global food crisis in 2008 provides insights as how radically and swiftly the global trade in agricultural products changes. Prices increases; food exporting nations drop trade barriers so as to ensure that they can continue to feed their own populations. Net food importing nations are forced to recognise their vulnerability. And in the last crises even explored the opportunity of purchasing large tracts of land in under-developed in a desperate attempt to shore up their own food supplies. The United Kingdom is a major food importer – being reliant on imported foods for just under a half of the food we eat. We are then vulnerable. This is a vulnerability which is likely to increase for the reasons outlined above; Reducing the area of high-quality agricultural land through building increases that vulnerability. Nationally Productive Land is being lost at an increasing rate Throughout the UK analysis demonstrates that the areas of high-quality land that is being given	1. Insist that all building application include independent soil evaluation 2. Communicate to the developers that preference would be given to applications on poor quality agricultural land, as well as brown field sites 3. Benchmark the approval of sites on grade 1 and 2 land against the proportion of NSC land area of this quality land		Best and Most Versitale Agricultutral Land DIXIE notes.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								approval for building has massively increased. New research by CPRE , the countryside charity, found almost 14,500 hectares of the country's best agricultural land, has been permanently lost to development since 2010. There was an exponential rise in Best and Most Versatile (BMV) agricultural land set aside for housing and industry. Between 2010 and 2022, this has increased from only 60 hectares to more than 6,000 hectares per year. The All-Party Parliamentary Group on Science and Technology in Agriculture (APPGSTA) study, led by Dr Derrick Wilkinson, found that that government targets for house building, nature recovery, renewable energy, tree planting and infrastructure could together remove up to a quarter of Britain's farmed land by 2050 — much of it high-quality arable ground. And without a renewed focus on productivity and innovation, domestic food output could drop by 32% by 2050, or 39% per capita, at current growth rates. The APPGSTA is calling for the government to adopt its 30:50:50 mission — a framework aimed at boosting UK agricultural output by 30% while cutting the sector's environmental footprint by half by 2050. Local Plans should reflect National Plans and Policies In a letter dated Nov 4th 2025 the Minister of State for Dpt of Environment (Dame Angela Eagle MP) wrote to Sadik Al-Hassan MP for North Somerset setting out the national policy on soil quality. This clearly states that BMV land has greater protection in planning than non-BMV land. National Planning policy relevant to agricultural land and soils is found in paragraph 187(a), 187(b) and 188 (footnote 65) of the National Planning Policy Framework (NPPF) . This states that: 187. Planning policies and decisions should contribute to and enhance the natural and local environment by: a) protecting and enhancing valued landscapes, sites of biodiversity or geological value and soils (in a manner commensurate with their statutory status or identified quality in the development plan); b) recognising the intrinsic character and beauty of the countryside and the wider benefits from natural capital and ecosystem services – including the economic and other benefits of the best and most versatile agricultural land and of trees and woodland 188. Plans should: distinguish between the hierarchy of international, national and locally designated sites; allocate land with the least environmental or amenity value, where consistent with other policies in this Framework1, take a strategic approach to maintaining and enhancing networks of habitats and green infrastructure; and plan for the enhancement of natural capital at a catchment or landscape scale across local authority boundaries. The point is repeatedly made in the policy paper that; 'Where significant development of agricultural land is demonstrated to be necessary; areas of poorer quality land should be preferred to those of a higher quality'. The gap between the noble words of NSC LP and their Actions North Somerset in its Local Plans appears to be concerned about the loss of BVM. But analysis demonstrates that in practice that NSC best agricultural land is being lost to house building projects at a disproportionate high rate. It would appear that the NSC is deliberately turning a blind eye to the loss of our BMV land. As well as not enforcing codes of practice for developers to disclose the quality of the agricultural land that they are planning to build on. The earlier draft Local Plan made a number of laudable statements. "The proportion of Grade 1 land in North Somerset is approximately 7% and 10% for Grade 2. 60% falls in Grade 3. The NSC BMV policy recognises the benefits of all BMV and provides even stricter safeguards for the limited amount of grade 1 and 2 in North Somerset". And continues to state that "The use of areas of poorer quality land instead of higher quality land is preferred". The draft plan then goes onto say Development will not be permitted unless it is for: • Infrastructure or community uses that require that specific location. or • Outdoor recreational use; or • A limited temporary use where the land and soil could be returned to its former quality and plans for its reinstatement are secured. or • Is necessary for the associated agriculture or forestry use. In other words, it precludes the building of permanent housing. These same views are echoed in the latest draft of the NSC LP. However, in the background paper entitled "Best and Most Versatile Agricultural Land " tells a different story, backed by data. It estimates that some 7% of the land area is Grade 1 land (i.e. 2,522 ha), another 10% is grade 2 (i.e. 3,842 ha). 60% is grade 3 (22,469 ha) and 12% grade 3 and 4 land. This report, helpfully, goes onto categorise the soil quality in some 59 rural potential and existing housing sites in in NSC. Although only 17% of NSC land is categorised grade 1 and 2, just under 60% of these sites are defined as having soil in the very high quality categories of grade 1 and 2. (see annex 1) This implies that NSC are in practice are disproportionately approving sites of high quality land. If they were following their own statements in the LP, then the sites that are approved for building would be skewed towards sites with poorer natural soil resources. This failure to take proper account of soil quality is particularly evident in Backwell. In Backwell, every major property development is on the highest quality of soil (see table below). In Backwell the draft plan includes proposals for increasing the number of houses in the village by some 1800, (i.e +80%) and including the previous appeals for housing development at Farleigh Field West (95 homes), Farleigh Field East (125 homes) and Rodney Road (65 houses) that data demonstrates that the council has approved or contemplating going approval to 5 major developments. All of which (122.8 ha)) are on Grade 1 &/or Grade 2 land. Where/Soil Grade/Hectares/Houses/Density per Ha HE20595/Land around Grove Farm/1 & 2/58.09/515/8.9 HE203013/Western part of Farleigh Fields/1/6.09/125/20.5 HE203035/Land east of Backwell B/1/28.59/450/15.7 HE201087/Farleigh Fields/1/5.52/94/17.0 HE202012/Land east of Backwell A/1/22.18/500/22.5 NA Rodney Road/2/2.29/65/28.4

								TOTALS 122.76 1749 14.2 Note: Figures taken from NSC Background Paper Best and Most Versatile Agricultural Land Oct 2025 What is particularly galling is the explanation in the report why the NSC is inclined to allow the development of nearly 1,000 houses on the land East of Backwell (i.e. the land A and B in the table above) which amounts to some 50 Ha of grade 1 land. The report claims that: “The allocation of this large site, as part of a wider package of strategic allocations around Nailsea and Backwell is considered justified on the basis that without it the development of key infrastructure in the form of a new link road connecting Nailsea and Backwell would not be deliverable. This wider sustainability benefit outweighs the loss of BMV land in this location“. This statement suggesting that NSC is allowing 50 Ha (+120 acres) of the finest agricultural land to be destroyed, because of the new road that will be built through the two sites will solve the transport congestion in Nailsea and Backwell. This is a spurious argument. The developers are suggesting the new link road in phase 3 of their development to ameliorate the traffic congestion that will be caused by the new traffic generated by the 1000 new households. If the link road was a viable and important infrastruaral investment for the area, the amount of grade 1 land absorbed by the process would be far less than the 50 ha. This would be allowed by the LP policy for using BMV land for infrastructure. The large land area of grade 1 is required majorly needed for house building. In practice the cost of the new link road, needing to include a tunnel through the railway embankment has been estimated by NSC to cost some £75 to £150 million. (Personal communication with Cllr Mike Bridge, whose cost estimate was provided to him by NSC) Working on the assumption of £ 100 million and 1,000 houses this would be some £ 100,000 per household. Informed opinion is that this will be prohibitively expensive, and will never happen. The result being that 1,000 houses will be built on our nation’s very best land, which is also Greenbelt. NSC maybe being naive on hoping/expecting the developers to provide a significant capital investment in the new road. Firstly, it would significantly increase the costs of each house, rendering them as uncompetive and unafforbale for the type of house buyer the national Govermanst’s policies are aimed at supporting. And secondly, Developers are been seen to increasingly make commitments of generous contribution to capital cost during the approval process, but subsequently renege on this commitment after project approval (see Developer builds 6,000 homes but backtracks on pledge to contribute to new school and roads) Additionally, the analysis of the housing density of houses development in Backwell is low, averaging 14.2 – well below the figures used by NSC to estimate land are requirement at a minimum of 20 house / ha. The implication is that more land is being used than necessary, and/or that the majority of houses being built are not the small, affordable, 1st homes that the market is short of. Mapping below demonstrates that the vast majority of the major property developing proposals and developments are the very best soils (i.e. Garde 1 and 2) Summary and Conclusions We are a country which must import 40-50% of our food. When the 2008 food crisis struck, it was shocking how quickly the shutters on food exports came down. The knee jerk reaction of many of major food importing countries – like Saudi Arabia, UAE, Japan – was to realise their vulnerability and even consider buying large tracks of land to farm offshore. Today the world is an even more febrile place. Food security is an issue that is acknowledged in policy papers. And prohibits any permanent development on our best land (i.e. Grade 1 and 2) The 1972 soil map of the SW identifies that the fields proposed for development is almost certainly grade 1 or 2. And yet no soil analysis is carried out. The question is why not? See the elliptical circles indicating that these sites in Backwell are Blue, most probably Grade 1 soil. The draft LP, rightly, places emphasis on the importance of not spoiling high quality land (i.e. Grades 1, 2 and 3a) with any permanent buildings. High quality agricultural land is in short supply in N Somerset, and future food security issues are important considerations (see DP55). However, in the supplementary paper on ‘Strategic Land Availability’ paper no mention is made of this issue. For example, this report identifies some 74.7 hectares (i.e. Around 185 acres) of land as possible for housing. Including the land at Grove Farm. Yet the Southwest Agricultural Land Classification map clearly shows that the land east of Backwell is of extremely high-quality land. Predominately Grade 1 land, and also Garde 2. In total NSC amounts to some 33,215 ha, of agricultutral and plus 40% is green belt (i.e. 15, 490 ha). The new target for houses is 23,900 in the next 15 years – this would require some 1000 Ha. This is about 3% of the agricultural area. The question raised is – why is NSC allowing such a disproportion of our top-grade land being used for housing, when so much of the poorer quality land is being ignored? Annex 1 Soil Grade at NSC House Building Project Sites % Grade 1 & 2 sites/Nos Grd 1/Grd 1+2 /Grd 2/Grd 2-3/Grd 3 + 4 Backwell 100% 5 3 1 1 Barnwell 100% 1 1 Churchill 86% 7 1 5 1 Congersbury 100% 2 2 Bleadon 0% 1 1 Long Ashton 100% 2 2 Nailsea 50% 8 4 4 Pill & Gordano 60% 5 1 2 2 1 Portishead 0% 2 2 Sandford 0% 2 2 Weston-S-Mare 27% 15 4 11 Winscombe 60% 5 1 1 1 1 1 Yatton 80% 5 2 1 1 1

62863649	Chris Dobbs			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I consider the Local Plan to be unsound in its current form for the following reasons: Failure to Select the Most Sustainable Sites The sites allocated do not represent the most sustainable development locations. They carry disproportionate environmental, heritage and flooding impacts and do not best meet identified housing needs. More appropriate and sustainable alternatives exist elsewhere in North Somerset, yet these have not been adequately considered. Failure to Properly Consider Flood Risk The Council has not adequately considered the flood risks associated with development in Nailsea and Backwell—particularly at land west of Nailsea (Poplar Farm), land east of Backwell, land south of Nailsea, and the proposed road infrastructure serving these sites. Consequently, Policy LP3 is unsound. Non-Compliance with Walkable-Neighbourhood and Accessibility Principles The housing allocations in Nailsea are all located far beyond the 800-metre walkable-neighbourhood standard. They do not prioritise access to services, facilities or employment opportunities, contrary to the Plan's stated objectives. Furthermore, the Plan provides no strategy for improving job provision within Nailsea. Overreliance on a Railway Station Acknowledged as Inadequate Although the Plan relies heavily on the presence of the railway station, it simultaneously recognises substantial deficiencies—lack of step-free access, insufficient shelters, unsafe routes and limited cycle parking—yet proposes no solutions. The station is also situated outside any realistic active-travel catchment, and cycling access is further constrained by the accident black spot at Buckland Batch. Lack of Evidence for Transport Mitigation and Infrastructure Delivery Nailsea's ability to accommodate additional development sustainably is already restricted by existing transport infrastructure. The Plan provides no evidence for the design, funding or deliverability of the proposed "strategic rail link." Even if feasible, it would not be delivered in advance of development, meaning it cannot be relied upon as mitigation. This renders the proposals unsound. Use of Vague, Aspirational Commitments Instead of Defined Measures Across the proposals for Nailsea and Backwell, the Plan relies on broad, aspirational statements with no specific schemes, timelines, costings or responsible bodies identified. This lack of clarity is unacceptable given the significant risks posed to current and future residents and fails to meet the tests of soundness.	The allocation of land South of Long Ashton would almost entirely compensate for the deletion of the Nailsea and Backwell strategic location for development. The site lies adjacent to the £400 million approved EPIC employment campus and would have excellent transport links. Feels like a no-brainer…. In addition, efforts should be focused on identifying deliverable mitigation schemes along the B3130 and B3128 corridor that are essential to safeguarding travel into and out of Nailsea for current residents.		
62827489	Cllr Mike Dunn		North Somerset Council	Unsure		Unsure	Unsure				
47564161	Oliver Ellis			No	‣ Positively prepared ‣ Justified ‣ Effective	No	No	The transport plan is not properly funded and will not work. It has come to the wrong conclusions and councillors have been ignored. It will leave thousands of houses being built with no effective infrastructure causing chaos on the roads, making the quality of air worse for people, slowing the economy down by creating gridlock as the roads are not suitable and the plan is inadequate. Nailsea has already had more than its fair share of houses with many more ready to be built as they have had planning permission. The extra proposed houses will be the step to far for what the town can take with the ridiculous parking charges causing parking issues on the road side and the road network not being able to cope. The roads are often very busy and the new transport plan in the local plan will only make things worse with its unrealistic claims. More green space is proposed to be lost in this plan. Nailsea has lost so much already. It will cause more social isolation from lack of out door spaces to meet, contribute to more mental health issues from lack of open green space and reduce space to be active. Poplar Farm should be removed from the sites allocation. The fields flood, there is a gas pipe running underneath it and the road infrastructure is dangerous with no pavements on North Street. Children walk along this road and under law they have the right to have a safe route to walk to school. This also goes against NSC's active travel policy. North Steet and the West End Lanes are active travel routes. Adding roughly 200 cars to the area, on top of what is already being developed, will further put off people from active travel, pushing more people into there cars. The Lanes already have a low percentage of active travel use due to fear of being hit by a motorised vehicle. This goes against nation active travel guidance.	The transport plan need to be completely changed to be financially realistic and to understand the really challenges of each area and an appropriate to plan to deal with it. Until this happens, housing sites in Nailsea should be withdrawn.	No. See above.	
28903265	D Ellison			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	It is a flagrant injustice to communities (like Tickenham) surrounding the Nailsea/Backwell development plans that there has been no worthwhile or accurate assessment made of the imposition and impact of such developments resulting from traffic growth. This on top of traffic growth already happening. In particular to and through the village of Tickenham. There are 2 means of accessing Tickenham (to then get to the M5 or Clevedon) from Nailsea; either via the Causeway or via the main road through Stone Edge Batch. The Causeway is barely a narrow country lane and the main road is already a dangerous and unsafe traffic pinchpoint at various locations. Neither provide the future solution in support of significant housing development. Villagers of Tickenham already have to suffer; emissions, vibration, noise, dangerous/wreckless driving habits, cars mounting pavements/drives, congestion. If Tickenham can not have an actual bypass, then the route from Nailsea/Backwell to Clevedon and the M5 must be via an enhanced Nailsea Wall roadway. But it is very clearly that this consultation has failed to grasp (or chosen to ignore) matters such as what I have set out above. Also note that so-called Active Travel is decreasingly safely possible within	Ensure road safety and congestion in the communities outwith Nailsea/Backwell but hugely impacted by development is considered professionally and with a duty of care.

18483361	I Forsyth			Unsure		Unsure	No	Nailsea and Backwell are two seperate communities with their own identities and characteristics-they have not been asked if they want or are willing to be merged-Are they to be combined as a new authority replacing the present parish council and town council			
63052097	Stephanie Fowler	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes			Our client welcomes the effective reinstatement of Policy LP3 and the identification of Nailsea and Backwell as a strategic focus for development, given the significant challenges presented in terms of satisfying the need for new homes and the inherent sustainability of both settlements in terms of local employment, services and transport. The inclusion of our client's land within the wider draft allocation at Land South of Nailsea, is complementary to the strategic level of growth already underway southwest of the settlement, forming a logical and integrated extension of the Netherton Wood Lane development further west and existing residential form at The Perrings, Sedgemoor Close and Paddock Rise, consolidating the urban envelope within appropriately defined parameters, namely the route of Youngwood Lane, and coordinated supporting infrastructure.	R001v3_NSLP_Reg19_Fowler.Dec25.pdf
62865281	K Garland			No	• Justified	No	No	No matter what you say or the words you use - Our village of Backwell is under threat of saturation of new additional house building - 640 have already been approved by NSC, with 154 already being currently built. Another 800 - 1000 plus homes on precious GRADE 1 agricultural GREENBELT land will damage our village & environment. We in Backwell have done our bit towards losing green areas of land building new homes, with no thought of further infrastructure or services	Do not use this area of land in the first place. Cut the number down to a minimum Without the proposed road first, the narrow Station Road cannot be used for all the extra wide traffic - has this been checked & reviewed? It's already impossible with the small development traffic on that road, which is the only access road to the area in question		
49668225	Patricia Gilbert			No	• Effective	Yes	Yes	Increase in housing is 'numbers driven' and too much power has been given to too few large developers. The variety and type of housing planned is unimaginative and lacks diversity. It will not meet the needs of the whole community. There is too much reliance on building conventional houses with gardens when many existing residents want to downsize and live in 1 or 2 bed apartments without gardens to maintain, in an accessible locations. Too much green and productive farmland and countryside around towns is being sacrificed. Not enough emphasis on building higher density accommodation on brown field sites. This will result in urban sprawl, loss of productive farmland and loss of wildlife habitats. Lack of adequate infrastructure. In Nailsea roads are inadequate to cope with increased traffic. Services are already stretched and will get worse.	Oblige developers to invest in infrastructure projects, such as roads, before approving plans to build any more houses. This is routine practice in some European countries Carry out in depth surveys to establish housing need in the area and aspirations of downsizers, before allowing developers to build more houses on sprawling estates.		
62831297	John Glason		none	No	• Positively prepared • Justified • Effective • Consistent with national	Unsure	Unsure	The 'Land East of Backwell' (policy LP3 Strategic Location Nailsea & Backwell) proposed allocation 889 dwellings is a disproportionate over development of the village. The proposed 515 dwelling development at Grove Farm in Backwell, alongside the suite of other development sites, more than deliver the housing requirement. There are no 'exceptional circumstances' that meet the emerging policy aspirations of SP7 concerning Green Belt. Emerging policy SP8 Housing states that the proportion of housing supply in Nailsea and Backwell should be 15%. Combining the settlements in terms of housing numbers is flawed, reducing the designated Green Belt area (policy SP7) and compromising the 'strategic gap' (policy LP10) are strong reasons for not allocating 889 dwellings in an area of flood risk and high quality grade 1 agricultural			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					policy			land (policy DP53 Best and most Versatile Land). Why should Backwell see an 80% growth when the proportionate housing growth target figure for the village is only 7 (policy SP8 Housing)? The higher order settlements of Weston-Super-Mare, Portishead and Clevedon are allocated a significantly reduced amount of residential development relative to their size, made possible by the removal of Green Belt land in Backwell to facilitate an over development of the village which will require several new schools? These higher tier settlements are better strategic growth locations in terms of housing growth potential, because of their service and infrastructure provision as well as their superior connectivity. With the imminent arrival of the Planning & Infrastructure Bill and the questionable Government 'standard methodology of housing need', the total strategic housing figures for the district are fundamentally flawed. There has also been no recognition of the fact that 228 dwellings have been delivered through the windfall allowance - a high provision in the village of Backwell that needs to be factored in to future housing delivery calculations. The evidence to support a 5 or 6 hectare provision for employment land in north Nailsea & east of Backwell is questionable, especially given the historical delivery and change in employment land requirements and increase in home working. Policy DP35 Nature Conservation should acknowledge the existence and protection requirements for the lesser horseshoe bat habitat and Biodiversity Net Gain material consideration in this location. In addition, the strategic flood risk should be carefully assessed as this will also have a significant impact on the viability of the phased release of developments sites. Certainty of delivery is required if the plan is to be found 'sound'. In addition to this, significant sites are being proposed to the south of Nailsea near Backwell Lake which are in close proximity to the East of Backwell proposal. There are ground conditions and other parallel issues to be considered (highlighted above), but the cumulative impact of the residential development proposals are significant and mean that Nailsea and Backwell are allocated far too much housing development compared to higher order settlements. In addition, the road proposal has not been modelled to demonstrate traffic alleviation for Station Road. The Infrastructure Delivery Plan does not give any funding guarantees. What assurances are being given regarding future Section 106 or Community Infrastructure Levy developer contributions and the sequencing of development to a comprehensive and costed masterplan? Fundamentally, the housing proposals for the East of Backwell represent 'over development' in a lower tier settlement that 'strategically' should be allocated in the higher order settlements.			
63298945	Mac Mic Strategic Land (Backwell)	Planning Potential		No	‣ Justified ‣ Effective	No	Yes	Draft Policy LP3 deals with the proposed strategic developments at Nailsea and Backwell and helps the LPA to respond to the additional housing requirements (driven by the changes to the December 2024 NPPF) by supporting the expansion of Backwell with new high-quality development and an improved highway network. Mac Mic supports this policy objective and considers that the expansion of Backwell (in accordance with the sites listed in Schedule 1) is crucial to delivering the housing required in the period to 2041. Mac Mic also supports the proposed release of this land from the Green Belt to secure the required level of growth. Mac Mic does, however, consider that the Land East of Backwell B site has the potential to deliver a higher level of housing than indicated by draft Policy LP3 (and Schedule 1). Mac Mic's iterative design process has indicated a potential capacity of up to 500 units. The draft Policy and criteria set out in Schedule 1 provides a list of requirements that developments in Nailsea and Backwell will be required to deliver, including: ♢ an improved highway network/infrastructure ♢ business development ♢ schools ♢ investment in local services ♢ affordable housing. Development proposed under draft Policy LP3 is also expected to deliver a specific package of measures, including: ♢ measures to alleviate traffic impacts on Station Road and congestion at the Backwell crossroads ♢ a strategic rail crossing ♢ improvements to active travel routes, bus priority and interchange infrastructure ♢ facilities and contributions to enhanced leisure facilities and a new nature park. The principle of these measures is supported by Mac Mic, but it is imperative that the need for these measures is robustly demonstrated. For example, nowhere in draft Policy LP3 is it acknowledged that these measures represent significant cost elements that will need to be considered and taken into account when assessing the viability of proposals. Mac Mic considers that it is essential for draft Policy LP3 to acknowledge these significant costs and to make reference to the consideration of viability when it comes to the application of specific planning conditions and/or obligations to be secured and delivered at the appropriate time. The real-world development costs associated with these measures must be acknowledged by both the policy and the LPA when it comes to applications delivered under this policy. Recommendation: Mac Mic are confident that the Land East of Backwell B site can deliver up to 500 dwellings. We question whether the Land East of Backwell A can deliver 400 dwellings and the Council should be satisfied that the Land East of Backwell site can deliver the required number of homes overall. Draft Policy LP3 and Schedule 1 should be amended to justify fully the additional requirements the Policy seeks to secure and refer to development costs and development viability when it comes to matters of development phasing and associated planning obligations.	Mac Mic are confident that the Land East of Backwell B site can deliver up to 500 dwellings. We question whether the Land East of Backwell A can deliver 400 dwellings and the Council should be satisfied that the Land East of Backwell site can deliver the required number of homes overall. Draft Policy LP3 and Schedule 1 should be amended to justify fully the additional requirements the Policy seeks to secure and refer to development costs and development viability when it comes to matters of development phasing and associated planning obligations. 29187873	B Harland										
62576161	Freddie Harrold			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Too much housing at 1817 new homes and not enough infrastructure. Surgeries are already under pressure. There are no plans to open new surgeries to cope. Roads will be busier and will not be able to cope. The proposed new road will not serve Nailsea's traffic. The new link road will be problematic. Smaller roads around Nailsea will see hugely increased traffic. Schools and doctors surgeries and leisure centre will be under huge pressure. Bats are protected species on development sites. One hundred homes adjacent to Moor End Spout will totally destroy wildlife habitats Development West and South of Backwell Lake will be on a floodplain which regularly floods. The railway station is too small to cope with influx of population.			
62775585	J Haskins		Resident	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	This 'plan' is once again unbalanced and lacking in the key information that would allow people to consider it objectively. With the level of information provided at this moment then the only rational conclusion is that it is an unworkable and inappropriate plan and that it can only be objected too. The critical areas that this plan does not address are: 1. Road access to/from Nailsea - the roads are still in the main as they were before the development of Nailsea started in the 1970's, that is only 'B' class roads or narrow twisty country lanes. The lack of employment opportunities in the Nailsea area dictate people will be travelling further afield for their employment and the road network and links to the motorway and Bristol are inadequate to provide swift and safe travel. How will the plan address this? 2. The plan does not stipulate the types of houses to be built. Nailsea needs 2 & 3 bed properties priced for first time buyers, not more 4-5 bed larger properties. 3. The plan says '3 additional primary schools' but does not identify any location for these or give a timescale for them to be built. The inclusion of schools infers the intention to attract younger families, if this is the intention then why doesn't the plan stipulate the type of houses to be built? 4. There is no mention whatsoever of increasing the other critical services (doctors surgeries, dentists & leisure facilities). A well thought out plan and comprehensive plan would address this and include these additional facilities and how they are to br funded. 5. Flood plains - many of the areas identified are low lying and regularly subject to flooding. 6. A number of the areas are presently used for farming building of this land further reduces the local food production and employment.			
29242593	Cat Hawkins		Na	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	This plan is not supported with any infrastructure to improve the area with nearly 4,000 new homes planned. The chaos that will ensue is going to be awful. Please make sure that you have the roads and other infrastructure in place first and don't build on valuable farmland and get rid of our lovely green belt. We need this land for food production. Much better to build on the land near Bristol by Long Ashton as most of the people in these new homes will be commuting into Bristol for work. 1 The proposed figure of 1,817 new homes in Nailsea would lead to a total over development of the town. 2 The proposed new road would not serve Nailsea's traffic or relieve congestion on Station Road, nor would it help traffic travelling from Backwell towards the M5. 3 The new link road, under rail crossing is likely to be extremely expensive and the engineering problematic due to the proximity to the River Kenn. 4 Although three new primary schools are proposed for Nailsea and Backwell, they will be funded through developer contributions and will be phased, with no locations identified as yet. 5 Additional development will place immense pressure on the town's existing health and leisure provision. There will be no direct investment to combat this pressure. 6 Land to the north of Nailsea is proposed to be removed from the Green Belt and will be replaced to the south. Positively, the new section of Green Belt to the south is greater in size than the area being removed and will replace the Strategic Gap. 7 Greenfield Crescent Playing Field is not protected under Local Green Space Policy LP15. 9 Grade 2 Agricultural Land which is high yielding and of very good quality, will be lost permanently through housing development to the south of Nailsea. 10 One hundred homes are proposed adjacent to Moor End Spout Nature Reserve, a site hosting many protected species. Development would destroy valuable wildlife habitats and further harm biodiversity in our area. 11 Transport modelling shows there will be notable increases in vehicle movements on the network of rural lanes around Nailsea. There are no clear, workable plans to mitigate against this. The lanes will become congested and unsafe for pedestrians, cyclists and horse riders. 12 There are no plans in place to improve the accidents blackspots at Stone Edge Batch, Wraxall Hill or Portbury Lane all of which will see a marked increase in vehicle movements.	Infrastructure first, A link from the M5 at Clevedon to Nailsea so that all the traffic for Nailsea and Clevedon and Yatton and sometimes Portishead doesn't need to go through Clevedon at Junction 20. A new by pass for Yatton at the North end area where the road almost meets the A370 at Congresbury. Make this happen. Get rid of the absolutely ridiculous bus lane on the long Ashton by pass forcing people to once again drive through Long Ashton. Improve the A 370 from Congresbury to Bristol dont make it narrower make it wider and forget the bus lanes. Improve public transport and make it cheaper first not last then maybe look at where you can build. This is what they do in Portugal and Spain and it so much better than here.	Its not legally compliant. The consultation is flawed as questions as usual are fixed and you don't listen to public feedback in any event. You haven't looked at Biodiversity properly and have forgotten that animals and insects need corridors to move. .	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								13 Development is proposed west and south of Backwell Lake (Reservoir). The new roads and housing will be in the floodplain, which actually does flood regularly. 14 The railway station is not fit for purpose as a transport hub; it remains inaccessible for people with mobility issues and presents serious challenges when travelling with young children.			
62830081	Susan Hayward			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I think that the proposal to increase the size of Nailsea by 55% is totally disproportionate and will result in the total over-development of the town, and the loss of its distinctive charm and character. Nailsea is distinguished by its pattern of houses with much-valued patches of green spaces and trees, linked by a network of footpaths. Green spaces and trees were deliberately designed into developments, as Trendlewood Way and a major feature of the town. New infrastructure, such as schools, would be needed. But there are no identified sites and concrete plans. The development would totally overstretch existing infrastructure, such as health and leisure provision. Yet there are no proposals to address this. The proposed road will destroy our beautiful green landscape, and will not relieve traffic problems on Station Road. Proximity of the link road to the river Kenn is likely to be very challenging due to the need for flood mitigation. and together with the engineering implications of the under rail crossing, the costs are likely to be huge. High quality, high yielding agricultural land to the south of Nailsea will be destroyed by the housing development. This lush green land with its old field lines, hedges and walls has been farmed for centuries, and is part of the historic fabric of the landscape so cherished by local people and visitors to the area for country walks and dog walking. The development by Backwell Lake is on a flood plain. This area regularly floods, it would be irresponsible to build here. The protection of wildlife has not been properly considered. Habitats and ecological corridors will be removed and damaged by the development. Protected species such as the rare Greater and Lesser Horseshoe bats, and many other species of bats forage on all of the development areas, yet this seems to have been ignored. Increased light spill from the new homes, the new road and traffic will impact on Horseshoe bats in particular. Increased traffic will lead to more accidents at existing accident black spots, such as Wraxall Hill and Portbury Lane, as there are no proposals to address these. The railway station is not suitable as a transport hub as it is not accessible to people with disabilities or families with prams and pushchairs.	Using brownfield sites will reduce the need for development on green field land and help protect the Green Belt. Reduce the number of houses. Consider the impact on wildlife. Consider the impact on views Consider the amenity value of green spaces and trees. Consider the significance of the historic landscape and distinctive local character. Do not build on the flood plain.		
62558145	A Hinchcliffe			No	‣ Justified	No	No	Nailsea doesn’t have the infrastructure to support this plan. Where are the new doctors, schools, etc. Also the road access from the M5 via Tickenham can’t handle more traffic. All the house building currently in process is supported by large lorry’s through Tickenham. This proposed increase traffic through the village is not viable.	New road access into Nailsea from the M5. This would then divert large lorry’s away from Tickenham village. The new road planned into Nailsea from the A370 is a wast of time and money. We need a new lorry access from the M5.		
50595137	James Hobbs			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The population of Nailsea would appear to be increasing by a considerable number as a result of this plan. The plan does not appear to be taking into account the increase in traffic this will stimulate along Nailsea’s many single lane tracks that don’t have pavements. No firm plans for new schools appear to be included. The proposed road underneath the railway line near Backwell and Nailsea Station will prove difficult to construct due to it being in a low lying area, with high risk of flooding.	I would prefer Nailsea to remain unaffected but if the plan is to proceed it will need: better roads (all single track, rural lanes, to be widened), firm funding for new schools, firm funding for increased leisure facilities.		
58530945	S Hollingberry			No	‣ Positively prepared ‣ Justified	Unsure	Unsure	Basically I absolutely disagree with 3728 new homes being built in Nailsea/Backwell. These documents are lengthy and confusing (I expect deliberately so) and I expect many people will give up objecting for this reason. We live in a stunningly beautiful part of the country and shame on you for not fighting harder to protect this. Our green space will be taken once and when it’s gone it’s gone forever. I’m not a legal person and don’t really understand what these questions are asking. So again shame on you for not making it easier for normal people to make their views known. As above, I expect you don’t want or care about what we think and this is purely a tick box exercise to get your agenda over the line			
62913761	Miller Homes (Battens Farm)	Tom Rocke	Miller Homes	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	No				Annexes_final_composite.pdf
62913761	Miller Homes (Battens Farm)	Tom Rocke	Miller Homes	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	No	For the reasons identified in earlier representations, it is inappropriate to combine Nailsea and Backwell as a single strategic location, and which has accounted for the allocation of a disproportionate scale of growth to Backwell, which is a village settlement. There is considerable potential for additional growth at Nailsea, in locations outside the Green Belt, and which can contribute to infrastructure enhancements.	• Amend the policy to exclude Backwell from this strategic location. • Amend Schedule 1 to redistribute growth from Backwell to South West Nailsea. • Review Schedule 1 to afford priority to growth at South West Nailsea ahead of Green Belt locations at North and North East Nailsea, in accordance with sequential approach that underpins the spatial strategy.		Annexes_final_composite.pdf
62847969	Jessica Houlden			No	‣ Positively	Unsure	Unsure	Area 381 which currently has no planning permission has an abundance of wildlife and especially to the east of the area is wetland which backs onto the river Land Yeo and the Ty sculpture trail which is part of the woodland trust. I regularly see herons walking in the field, partridges and other multiple			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					prepared			bird species. We also have lots of squirrels in the ancient oak trees and hear multiple Owls at night I feel that building on this area would kill all the wildlife and also be a flood risk to the new proposed properties.			
50788801	Carol Hunt			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I believe the plan causes significant detrimental visual and character impact to the surrounding area and properties. We already have 800 new houses approved in a small village. There is already a deficit in school places and health services plus few leisure facilities. Backwell is not an employment hub....most residents commute and the bus routes into Bristol are already struggling to serve us. We are already losing open spaces which damages wildlife and farming. Backwell common and the surrounding areas are already prone to flooding which I have encountered on my local walks			
18203969	Sue Hynam								I strongly object to the planning proposal to build an additional 1,000 new homes in Backwell East which is currently precious Grade 1 Agricultural Greenbelt land used for food consisting in the region of 50 hectares of which there is only 7% left in the whole of North Somerset. Government Policy states that “we must protect our best and most versatile land” to safeguard food security, therefore this policy must be upheld or it will be in direct breach and in contradiction of the importance as to why the Government felt it necessary to have in place. There are already 800 additional houses that have been given approval to various builders which will increase housing by 40%, a massive increase proportion wise against any other area of North Somerset. Which is overwhelming when you consider the required infrastructure required to support such a massive increase to total of 80% should these additional houses be given the go a head. There are no plans to support services including additional GP surgeries or Schools with no detailed feasibility study/ costings or who will fund it, which would likely fall in the hands of North Somerset Council to resolve who I doubt could secure any funding. Backwell is unable to offer any employment on large scale the railway which appears on paper a bonus has many restrictions including a short platform which restricts the number of commuters/length of trains, including exiting the platform from certain directions, does not have safe access for people with mobility issues and very challenging for anyone travelling with young children. As job opportunities on a larger scale are more viable nearer to Bristol due to a significant proportion of Greenbelt land sadly being given approval for a Campus to be built for the European Headquarters of a US Drugs Company (approved by North Somerset Council) maybe building homes nearer to where the jobs will be should be a major consideration point? The proposed road which if housing from Nailsea is also approved will run along side Backwell Lake and through floodplain land across Backwell Common which will only add to more flooding and major impact on wildlife habitats. The Conservation of Habitats and Species Regulations (Reg 41) states that its an offence to deliberately disturb wild animals of EU protected species which includes Horseshoe Bats. Nationally rare endangered species are protected under Part 1 of the Wildlife and Countryside Act 1981 and the UK Government signed an EU document protecting bat feeding areas in 1992, therefore there is legal protection for bats, their roosting and feeding sites. Brockley Hall stables (Grade II listed building) is designated a SSSI and hosts a large colony of the rare and endangered Greater Horseshoe Bats during the summer months which is also used as a maternity roost. The surrounding land including farm land is vital for their existence and continued survival as it is used for foraging. They are also light sensitive and any artificial light including street lighting additional traffic from transport at night will have severe consequences on their survival and I deem this a breach by NSC and Housing Developers if any of the above is not taken into consideration as it a legal obligations to comply with these laws. Property developers will report they have done surveys and no doubt conclude there will be no impact but by totally removing the farmland area at Grove Farm as part of the 800 builds already approved this will mean the bats will have to forage further and if more farmland is taken away		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									the bats survival is questionable which surely is a breach of the very Laws in place to protect them? My other main concern is the erosion of green space that will taken away by the 800 approved builds. We need open space to help with our own mental health and wellbeing, enjoyment is a simple walk through green open space with family, friends or a dog walk which has already been eroded following the commencement of Phase 1 of the Farleigh Fields builds and the Grove Farm building work will no doubt follow at some point. Please can I ask you to consider all the above points as valid reasons why no further building of houses in Backwell should be granted because once more farmland is lost there is no going back, we need to preserve our remaining Grade 1 Agricultural land at all costs.		
62774369	J James			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Our family has lived on the B3128 Tickenham Hill for the last 14 years the proposed increase in housing and associated traffic concerns me on several points. 1) Increased flooding due to houses being built South of Nailsea above the Land Yeo River. We have had significant rain over the last few weeks. The café at Jacklands Trout Farm has already been flooded resulting in cost of clean-up and loss of business to this local business. Two fields are already flooded and have remained flooded. The cows usually graze these fields. My understanding is that local planning is not meant to increase the risk of flooding, and I cannot see that this is true in this case. 2) Tower House Woods is an ancient woodland that should be protected as it the home of dormice, bats and other wildlife that should be looked after. Again. Building in this area may impact this very special environment. 3) During the warmer months and whenever there are problems on the M5 there is a queue of traffic that forms on the hill. When it reaches our house it means traffic is queueing for over 30 minutes to turn out towards Tickenham at the bottom of the hill. When the M5 was closed the traffic was queueing both ways on the hill making it impossible to leave our house. More traffic means the queues will be worse. The junction at the bottom of the hill is not controlled so it can be very hard to turn out. 4) The Clevedon Road from Folly Farm to Jacklands has a multitude of issues. It is reduced to single lane for HGVs by the Ryves Vale development because of the corners. There has also been an accident where 2 buses collided on the corner by The Star Inn because it is hard for 2 larger buses of HGVs to pass each other. The turn out at the bottom of Tickenham Hill can once again be an accident risk a car went into the hedge of the bottom house there but luckily no injuries. There have also been many accidents with lorries not stopping at the bottom of the hill and knocking down the wall opposite. Then we move onto the stretch from Stone Edge batch to Nailsea it has a single lane section at the start so traffic must wait for HGVs to come through then if the HGVs meet at the bends, it can be very difficult for them to negotiate a way through. A wait of 20 minutes has regularly resulted when this happens. The time someone tried to take a large motorboat down caused the traffic to back up for 45 minutes there are no signs warning of the issues, so HGV drivers are not prepared. 5) There is a lack of public transport to this area and it is a long walk (30 minutes) to the railway station and although the X6 is meant to run every 30 minutes if it gets held up in the congestion the buses get delayed. There is no safe route to walk along this section of road as there is no pavement. I take my life in my hands when I need to walk my dog along this section to get home. 6) If you put more houses in Nailsea you need to improve Doctor Surgeries as they are at capacity and struggling to cope already. It is very hard to get an appointment with a GP when needed. 7) The route out to the M5 needs improving as it is struggling to cope already any increases in housing will make things worse. 8) It feels that the local plan has been put together without the local input that is needed to understand the problems we have in our area.			
7800929	Wraxall and Failand Parish Council		Wraxall and Failand Parish Council	No	• Justified • Effective	Unsure	Yes	There are few employment opportunities around Nailsea and Backwell. From the 2011 census 43% of those travelling to work commute out of this location (fig 2.3 Nailsea and Backwell Transport Strategy) of these 74% drive a car or van (fig 2.2). Further development in Nailsea is likely to result in increased commuting to Bristol with a significant impact on our parish. It is recognised in the Transport Strategy documentation that public transport and active travel from Nailsea present a significant challenge to be suitable alternatives. The East of Backwell Cross Rail Link with an estimated cost of £30m is seen as the only viable option. However, in the justification for DP14, developers are to expected to make a contribution to highway infrastructure; it is considered that this is unlikely to be sufficient for the strategic rail crossing to proceed and without a contribution from central government. In the current financial climate, this is considered to be unlikely. It is submitted that Policy LP3 and its justification are not sound, as the employment and travel constraints do not make Nailsea a sustainable location. See attached W&F PC Position paper.	The preferred option is to remove Nailsea and Backwell as a strategic location and to reallocate the housing development to one that better fits the sustainability development objectives. If this is not accepted, then although it is stated that housing proposals will be required to positively contribute to the delivery of infrastructure, it is requested that the rate of development should depend on improvements to infrastructure being completed, particularly the strategic rail crossing.		Wraxall & Failand Parish Council Position Paper - North Somerset Local Plan 2041 - 11 Dec 2025.pdf
58633121	R J Jeffries							I wish to register my Objection to this new building proposal in Nailsea, owing to the following reasons to be investigated. 1 - Marsh]and/ flood plain effecting drainage of storm and foul water on site, with reference to the existing water table. 2 - High additional costs of piling works for foundations to prevent subsidence, if necessary. 3 - New very high powered electrical cables and concrete pilons spanning the site, increasing magnetic fields. 4 - Inadequate infrastructure i.e. existing access and egress roads to the site. 5 - Unsuitable existing roads in the Nailsea area to accommodate additional traffic. 6 - Further erosion of wildlife habitat in this area. 7 - Additional Health and Wealth facilities will be required, I.e. Doctors Dentists. Opticians,

								Pharmacies, Schools! Youth Facilities etc. There are probably many other very important reasons, why this proposed site is unsuitable for new building construction, to he determined by others as appropriate. I hope the Planning Department will seriously consider and add my Objection to the above new project.			
62207809	Ian John			Unsure		Unsure	Unsure	Answered "Unsure" above as not sure of the legal requirements or similar, but also for the following reason... It is difficult to determine whether this is a sound plan when there is insufficient data available to be able to properly assess the effects on the existing housing, infrastructure, and residents. For example, I live in Nailsea, where upwards of 3700 houses are proposed. But without detailed data on how many more road users, parking place users, footpath users, school users, play area users etc that this will impose on the existing infrastructure it is not possible to determine whether the plans (which themselves do not indicate the increased capacity of any upgrades) are sufficient.	In line with my comment above, please add detailed numeric data to demonstrate the actual effect.		
51732129	Gleeson Land	tor&co (Jacqueline Mulliner)	Gleeson Land	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Support is given to south Nailsea as an area for growth, given the sustainability of the location. However, the allocation and associated schedule of requirements is flawed in a number of ways. First, taking the Council's assessment of capacity at face value, there is capacity to provide more that 3,500 homes at Nailsea, by extending the allocated area at south Nailsea beyond that shown on the proposals map, as demonstrated by the extant outline planning application and associated masterplan (23/P/1145/OUT). This application confirms the suitability for residential development of all of the land extending from the built up area to the requisite route of the new road (see Policy LP11, linking the Youngwood Lane allocation, across the South Nailsea allocation, to Station Road, and eastwards to the land east of Backwell allocation), which would include parcels south of Youngwood Lane (see attached plan). The local plan allocation, as depicted on the proposals map, is too limiting and unjustified in a) seeking to designate land that is otherwise suitable for residential development as Green Belt (see 'Spatial strategy site selection and capacity paper' for HE20612, which confirms land north and south of Youngwood Lane as suitable and well connected, and our representations to SP7 and LP9), and b) failing to acknowledge the route of the new road (despite the requirements of Policy LP11 and it being shown with respect to adjacent land allocations). In particular, failure to acknowledge the road, provides a fundamental failure to recognise and respond appropriately to its urbanising influence and the ability to create a new built up area boundary. It is strongly contended that omitting (from the allocation) the parcels of land south of Youngwood Land not only misses a positive opportunity for NSDC to identify additional deliverable capacity, but is based on the existing landscape and settlement context, failing to reflect the inevitable changes resulting from the construction of the strategic link road. It also overlooks the proximity to the railway station: the southern parcels of the developable area being closest to the station and their inclusion would add to the connectivity of the wider site/allocation and further improve the sustainability credentials of this already sustainably located site. The new link road is required not only to access the Site but also to enable access to land to the west (HE20591) and to the east (HE202016 and HE203020). The latter of which are not able to access to the The Perrings to the north via the Youngwood Lane due to the width constraints on the land and its junction with the The Perrings. The operation of that strategic link requires a connection to and across Station Road, and would not be suitably served by an indirect route connecting to The Perrings, even if this were possible or feasible, which it is not (see attached note). The new link road will create a new defensible boundary to the southern settlement boundary of Nailsea. The road, which is to be raised, would create an obvious physical feature to the north of the existing railway line. In essence the current development boundary around Nailsea, formed by the existing built form and Youngwood Lane, will be displaced in favour if the new road. Retaining agricultural land north of the new road is nonsensical. It serves no positive purpose, being segregated from a wider agricultural land holding and heavily influenced by the presence of the link road, in physical form, visually and experientially, including as a consequence of new traffic flows. Omitting land south of Youngwood Lane (which is within flood zone 1) from the allocation severely restricts the proper planning of the area and a positive urban design approach. It also fails to maximise the potential to further support the viability of the link road, noting that the full link will need to be subject to some public funding. As a consequence of the link road proposal, the harm resulting from inclusion of the additional land parcels as part of the allocation is limited and localised, and certainly would not significantly and demonstrably outweigh the considerable benefits secured through additional housing and associated developer contributions. Turning back to the policy, we object to the specific reference to three new primary schools, further discussions should be held with the Education Authority, in the context of existing school capacity, to confirm requirements. At the present time we understand that pupil rolls are falling and the nature/ size and location of the requisite new schools still open for consideration. In terms of a 'comprehensive approach' to the planning and delivery of the allocation, it should be made clear that this approach can be demonstrated at planning application stage, with individual site masterplans confirming how the planning and delivery of adjacent masterplans would not be prejudiced. There is no mechanism, and should be no requirement, for a single masterplan. With reference to The Perrings, this is not a viable or suitable option, for the reasons set out in the accompanying note to these representations. In short, The Perrings is a relatively narrow residential estate road, which does not take a direct route from the allocations to Station Road but instead weaves its way through a network of other residential roads. Even if access onto The Perrings could be achieved, the road is not suitable as a strategic link carrying significant additional volumes of traffic. As such, a new road link across the flood plain to Station Road is demonstrably required, securing compliance with the sequential test. Please also See Appendix A of these representations which include specific transport representations by i-Transport supporting the above	An uplift in the housing requirement for Nailsea, to reflect an extended allocation area for the Land south of Nailsea, removed reference to primary school provision in the policy, removed reference to a single masterplan and removed reference to access via The Perrings with a clear indication of the ink road route through the site in accordance with policy LP11. Associated updates to the policies map, SA, HRA (which is necessary due to the potential impact on the SAC) and Sequential Test, given the route of the new road through flood plain		North Somerset Reg 19 Reps (2025-12-12) - Gleeson Land (Appendix B) (3).pdf North Somerset Reg 19 Reps_2025-12-12_ - Gleeson Land_Appendix A_.pdf
30933985	Peter King			No	• Effective	Unsure	Unsure	This policy makes mention of connections between Nailsea and the A370 but does not, so far as I can see, mention the connections to the M5. Nearly 4000 extra dwellings plus additional light industrial space will put thousands of extra cars on the roads and also extra lorries, many of which will wish to	These issues need to be specifically addressed in the plan. One possible mitigation would be greatly improved access to the motorway via Nailsea Wall.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								commute through the village of Tickenham to the motorway via the B3130. There is a pinch point at Stone Edge Batch which already results in standing traffic on occasion, as commercial vehicles attempt to pass each other, and this will get worse. There are three particular concerns: (1) this is the route to the motorway for ambulances, fire engines and police from their Nailsea stations. (2) there is no pavement or other pedestrian provision in several places, but especially at Stone Edge Batch and the stretch of the B3130 on the Nailsea side of Jacklands Bridge, alongside Jacklands Fish Farm. (3) air quality for houses in Jacklands will deteriorate.			
51431169	Jessica King			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The field to the east of West Leigh Primary School (off Rodney Road, in Backwell) provides a vital green buffer between the school and the new Rodney Road development. This land provides value currently for local families and residents, which is beneficial to mental health, as well as to the community of pupils who can use this for play, informal learning, and outdoor activities. The housing numbers can be met without inclusion of this green space, As Policy LP3 prioritises provision of new green infrastructure and open space, this existing field should be retained rather than built on. Protecting this important green space now will ensure current and future generations benefit from reduced noise and air pollution and overheating, as well as loss of biodiversity. Development here would represent avoidable harm to children's outdoor provision, at a time when national policy strongly emphasises active travel, outdoor learning, physical activity, and mental wellbeing. This is not spare land and the opportunity it represents to meet the above priorities would be permanently lost if it's absorbed into the other development already underway in the Rodney Road development (and then future Grove Farm development).	Set this space aside and exclude from the housing allocation. Instead, designate it as Local Green Space. I have read plans for an alternative vision, that are compliant with the Parish Council's aspirations, which plant this as a community orchard and community garden, with a small area allocated to support expanded outdoor play for West Leigh Primary School (and a pupil population that will see rapid expansion based on the scale of development in the area).		
62718529	Susan Laver		Resident of Nailsea	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Nailsea has been overdeveloped already with the amount of houses already built. The roads cannot cope with the amount of traffic in the town & trying to get in & out of the town, the road joining onto B3130 (Washing Pound Lane) is crumbling on the edges, pot holes re-occur as soon as they are repaired. Large lorries, vans & heavy electric cars or people carriers make it difficult to pass each other. The road up Jacklands Bridge is often gridlocked with a bus & lorry trying to pass each other. The road under the railway bridge is narrow & there is always a queue to get through the traffic lights, let alone on the A370. The rail line itself is inaccessible for people in wheelchairs & for people using pushchairs for southbound trains. In addition the station car park is very busy already, even though it was extended in recent years.The roads will be unsafe for pedestrians, horse riders & cyclists. Stone Edge Batch, Wraxall Hill & Portbury Lane are known accident blackspots & there is no plan to improve the roads in these areas. The fields where building is proposed for regularly flood, it is in the floodplain, therefore not suitable for building. Why take away very good quality agricultural land, it seems a very short sighted idea. We need the land to be used for crops or animal grazing. Medical care, the GP's cannot cope with the number of patients they already have. There are not GP's looking for work here! There is a shortage of teachers, how will 3 more schools be staffed? Use empty office blocks to develop instead, be sensible not greedy please.			
39231681	Priscille Lesne			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I object to the allocation of 889 homes on Land East of Backwell (Policy LP3) on Green Belt and Grade 1 agricultural land. This proposal is fundamentally at odds with the climate and nature emergency we face, with the growing national and global food-security crisis, and it is unsound as it is neither sustainable nor deliverable/effective. A. Environmental and Food Security Failure (Unsound & Unsustainable) The proposed plan will do irreparable harm to the environment, directly opposing the Council's own strategic goals: * Climate Emergency and Carbon Sequestration Grade 1 agricultural soils and permanent grassland act as major carbon sinks. Paving over this land will release centuries of stored soil carbon and remove its ongoing ability to sequester CO_2 at a time when North Somerset Council has declared a climate emergency and committed to net-zero by 2030. This directly undermines the Council’s own Climate Emergency Strategy and national net-zero targets. * Food-Security Crisis The UK is already only 60% self-sufficient in food, and we have lost over 20% of our Best and Most Versatile (BMV) agricultural land since WWII. Grade 1 land is nationally scarce and irreplaceable. Building on it now, when we face harvest failures, supply-chain disruption, and geopolitical risks to food imports, is reckless and short-sighted. The Government’s own Food Security Report (2024) stresses the urgent need to protect high-quality farmland – this allocation does the exact opposite. * Irreplaceable Wildlife Habitat and Biodiversity Crisis The site lies in a critical wildlife corridor for protected Greater and Lesser Horseshoe bats and supports priority habitats and species. Permanent fragmentation and light/noise pollution from 889 homes cannot be adequately mitigated. Sacrificing functioning farmland and hedgerows for housing is unacceptable. 10% biodiversity net gain on paper does not compensate for the outright destruction of established ecosystems. * Green Belt Encroachment and Sustainable Location The land fulfils one of the primary purposes of the Green Belt: to safeguard the countryside from encroachment. Its release is a significant breach of established planning policy. Furthermore, developing a car-dependent, greenfield site far from jobs and services will lock in high transport emissions for decades, while removing land that naturally absorbs rainfall increases downstream flood risk. B. Infrastructure and Viability Failure (Unsound & Not Deliverable)			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								* This plan fails to provide necessary infrastructure and its reliance on uncertain financial mechanisms: Unmanageable Increase in Village Size and Lack of Infrastructure: The proposed 889 houses represents an approximate 80% increase in the size of Backwell village. The existing community and social infrastructure is wholly inadequate to accommodate this unprecedented level of growth. Capacity Failure: The Plan fails to demonstrate how essential services will be upgraded prior to occupation. Local GP/medical surgery provision, Primary and Secondary school capacity, and the sewerage/drainage systems are already at capacity and cannot absorb an estimated 2,000+ new residents. Unsustainable Community: This rapid and disproportionate growth, without guaranteed supporting infrastructure, is inherently unsustainable and will severely degrade the quality of life for all residents. * Viability and Funding of Essential Road Infrastructure The success of this allocation relies entirely on the construction of a new road, the deliverability and funding mechanism of which remain entirely unclear, making the policy not effective. However, the funding remains uncertain: A clear statement is required on who will fund the new road. If funding is dependent solely on developer contributions (CIL/S106), this is subject to viability changes and provides no certainty. If the road is not delivered, the existing road network will suffer catastrophic, unmanageable congestion. National planning policy (NPPF para 174-175) requires protection of best and most versatile agricultural land unless need overwhelmingly outweighs harm. No such justification has been demonstrated when brownfield sites and lower-grade land exist elsewhere in the district. The harm to Green Belt, food security, biodiversity, and the fundamental lack of assured infrastructure render this allocation Unsound. I urge the Council to remove this allocation (Policy LP3) and redirect growth to genuinely sustainable locations that do not sacrifice irreplaceable food-producing land, carbon sinks, and wildlife habitats at the exact moment the planet needs them most.			
62866657	Justina Lewis			No	• Justified • Effective • Consistent with national policy	No	No	I am writing to object to the proposed building and expansion in the village of Backwell in North Somerset. There has been new building within the village already under the pretence of creating affordable housing and allow younger people to be able to afford their own homes. This has not happened, the new builds at the top of Bucklands batch have not all been sold and are out of the price range of first-time buyers. Taylor Wimpy, who are currently building on the ‘Backwell Grove’ site, are advertising the homes there as available to ‘bulk buy’ for housing associations and Landlords. This is directly in contradiction to the proposed building plans to create affordable housing for lower incomes families and first-time buyers. This is only creating investment opportunities. Backwell currently has a thriving nature reserve. Only this week have otters been filmed within the lake. Water voles are often photographed. The sites proposed to build on around this area will require draining, this will directly affect the delicate wildlife and biodiversity of the nature reserve as well as causing pollution. There are colonies of the Greater Horseshoe bat in the vicinity of the proposed building. These bats are protected, not only will the building of the sites disturb the present colonies but the light pollution will affect the hunting times of the bats and their hibernation times. The proposed buildings in Backwell are going to affect the last remaining 7% of North Somerset Grade 1 farmland. We should be protecting this and encouraging farmers to use this precious commodity, not sell the land for a quick fix to the current farming crisis in the UK. The United Kingdom is presently among the most nature-depleted nations globally, with 56% of its native species experiencing decline and 15% classified as endangered. The extinction of numerous plant and animal species within the UK has been strongly associated with human population increase. A considerable proportion of these plant and animal species were endemic to the United Kingdom, rendering their reintroduction impossible. The majority of these extinctions are attributable to wetland drainage and environmental pollution. I have included a chart that illustrates the correlation between human population levels and extinction rates in the UK. Notably, the most recent recorded extinction occurred in 2008 and involved a plant species native exclusively to the UK, which has now been permanently lost. Clinical evidence indicates that exposure to natural environments has a positive impact on mental health. Considering the current mental health challenges facing the UK and the resulting strain on the National Health Service, further reduction of countryside areas near small villages may exacerbate these issues at a national level. Individuals who opt to reside in rural communities should not have an urban environment forced upon them due to directives from local authorities, as this may infringe upon their human rights to maintain a private and family life. The Central Government 2023 environmental improvement plan, states on page 13: “environmental hazards. We will: • deliver our investment plans to improve coastal and flood defences, including hundred million pounds in the most frequently flooded areas. • Reward actions to reduce the risks and impacts from floods and droughts and wildfires to our new future farming schemes. Improving our bio security to restore biodiversity, we need to enhance our bio security. The risks of pests, pathogens, and invasive non-native species is increasing as we have just seen this winter when the UK has experienced its largest outbreak of bird flu to protect our bio security against this and future threats we will: • Deliver the five-year action plan of the 2023 plant bio security strategy for GB, mitigating threats such as design Ilha and emerald ash borer. • Seize the opportunity host Bracks it to tailor our border input controls with a new targeted and risk-based target operating model. Improving the beauty of nature	Leave nature alone the UK is in the last 5 of nature depleted countries globally.	I am willing to engage with NSC to assist with Ecology and wildlife conservation, as per my studying at UWE in regards to these issues.	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								our final goal is to enhance, heritage, and engagement with the natural environment. We all understand that spending time in nature is part of what makes the United Kingdom such a special place. We want everyone to enjoy our landscapes and coastlines, but also recognise that to stop restore nature responsibly. We will: • work across government to fulfil new and ambitious commitment that everybody should live within 15 minutes' walk of a green or blue space. • continue to direction our delivery of the England coast path and the coast-to-coast national trail. • Green the green belt as set out in the levelling up White Paper by identifying key areas for nature restoration. • invest in a new national landscape partnership of the national parks, areas of outstanding natural beauty, and national trails. • extend the delivery of our farming protected landscapes programme, using lessons learned to inform future farming schemes. • Invest in active travel, with a vision for half of all journeys in towns and cities to be cycled or walked by 2020 2030. £35 million funding has already been committed this financial year. By developing grade 1 and used farmland as proposed building site is in direct contradiction to the governments manifesto and increasing the carbon footprint of the country, which will need to import more food and produce from abroad to feed the increasing population. A huge increase in population of North Somerset, will of course cost the local council far more money to support the increased low income and non-working classes in the countless benefits required. There is no police response to the area, which will only get worse with increased population in the area. Currently the lack of police response has been justified as urban response times. The drains in Backwell are insufficient for the current housing situation, block, and overflow whenever there is a rainstorm. Who is going to put the infrastructure in place for such a significant increase in the size of the village. The village of Backwell is mentioned in the Domesday book of 1086 and therefore is of historical significance. It is referred to as Bacoile. It was listed as a significant settlement with fifty-six households, fourteen ploughlands, meadows, pasture and woodlands, one mill and two furlongs. (shared fields divided into strips).			
39402529	Network Rail		Network Rail					Policy LP3: Strategic location: Nailsea and Backwell We welcome proposals that new growth here be well connected to the station but would note the limited facilities and accessibility currently available at the station. It would be desirable for improvements to the station to be funded and planned alongside the housing growth (acknowledging the difficulties associated with the elevated location of the current station). This has been previously mentioned in local plan responses to North Somerset Council We would suggest the plans for the Cross-Rail road link under the railway to the east of the existing station provide an opportunity to consider whether a new, improved station could be built adjacent to the new road. Grove Farm Allocation We consider that the plan should be positively prepared, justified, effective, and consistent with national policy. In relation to transport and infrastructure, we support policies that promote sustainable growth and integrated transport solutions., however we wish to highlight the following regarding the Grove Farm allocation. It should be noted that NR previously made comments on the EIA Scoping opinion in 2023/2024 for the proposed development at Grove Farm where we lodged an objection due to the increase in risk the development would cause to Grant Mills Footpath Level Crossing. We have since continued the objection to this site as without appropriate mitigation for the level crossing NR can not deem the development acceptable in safety terms due to the impact a development of this size with have on the use, and risks associated, of Grant Mills. Network Rail have provided both the Local Planning Authority and the developer with the costs of suitable mitigation. If development proceeds on this site allocation, appropriate mitigation will be necessary. This should be in the form of a grade-separated crossing or a suitable diversion of the Public Right of Way (PROW). The local plan policy should explicitly acknowledge this requirement by including policy wording that ensures the need to assess and provide mitigation at this location. As Network Rail is a publicly funded organisation with a regulated remit, it would be unreasonable to expect Network Rail to finance rail improvements arising from commercial development. Therefore, it is appropriate that developer contributions are secured to fund such improvements. We have previously included policies in other local plans for similar schemes: • The Cherwell Local Plan 2011-2031 (Part 1) Partial Review – Oxford's Unmet Housing Need- Policy PR8 – Land East of the A44 (see attachment for detailed policy wording) • Sedgemoor District Council Local Plan 2011 – 2032 (Adopted 20 February 2019) -Policy D14 - Managing the Transport Impacts of Development (page 133) (see attachment for detailed policy wording) Any development of land which would result in a material increase or significant change in the character of traffic using rail crossings should be refused unless, in consultation with Network Rail, it can either be demonstrated that the safety will not be compromised, or where safety is compromised serious mitigation measures would be incorporated to prevent any increased safety risk as a requirement of any permission. The plan should include a specific policy for this site, requiring Assessment of the impact of development on this level crossing. The Council have a statutory responsibility under planning legislation to consult the statutory rail undertaker where a proposal for development is likely to result in a material increase in the rail volume or a material change in the character of traffic using a level crossing over a railway:- • (Schedule 4 (j) of the Town & Country Planning (Development Management Procedure) Order, 2015) requires that "...development which is likely to result in a material increase in the volume or a			Network Rail LDP comments.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								material change in the character of traffic using a level crossing over a railway" (public footpath, public or private road) the Planning Authority's Highway Engineer must submit details to both the Secretary of State for Transport and Network Rail for separate approval.			
62808481	Geoff Lister			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	P40 SP10 NSC has little influence over any rail or rapid transit facilities and, given the unreliable bus service, little influence over First Bus. At the Nailsea & Backwell railway station, there is no disabled access to the west-bound platform. There are no direct public transport routes from Nailsea to Bristol Airport, or WSM. From the southern half of Nailsea, it is quicker to walk to the railway station, than it is to walk to a bus stop for the hourly X7 bus. P65 LP3 3500 houses but proposed relief road unlikely to be built, and certainly not before more housing. Proposed road leads towards already congested Cumberland Basin interchanges, and away from M5, M4, central/north Bristol, WSM and routes southwards. Previous plans have included a relief road from the west of Nailsea to the eastern side of the M5 J20 roundabout. I believe that this should be included. P269 "Land South of Nailsea", 582 houses with likely access via The Perrings. This road already requires all traffic to access Queens Road, and traffic from recent new housing is already causing significant egress problems from all road junctions to the south of Queens Road. Queens Road effectively isolates the south-west quadrant of Nailsea from the rest of the town. There are no continuous pavements along Queens Road, so pedestrians have to cross using small traffic islands. The recent reduction in speed limit, from 40 to 30 MPH has changed the traffic spacing, making it even more difficult to cross safely.			
43203041	National Highways		National Highways							The policy proposes that Nailsea and Backwell will see coordinated expansion with around 3,500 new homes and at least six hectares of employment land, supported by transport infrastructure investment and active travel measures. National Highways welcomes the requirement for a strategic and coordinated approach to transport investment, particularly to address the cumulative impacts of proposed development. We also welcome the policy wording that, "Development proposals will require specific phasing conditions and/or obligations to be secured to ensure any required supporting infrastructure is delivered at the appropriate time". We are aware of the potential for these developments to have an adverse impact on M5 J19 and J20. In this context we note that the AECOM Transport Assessment highlights the need for improvements at M5 J20 and also assumes improvements at M5 J19. Capacity enhancements at M5 J20 and Ettlingen Way are highlighted in the IDP but no improvements are referenced at M5 J19. It should be reviewed to what extent the Nailsea and Backwell strategic location contributes to cumulative traffic demands and impacts at each SRN junction. Subject to the findings of this exercise, it may be appropriate to make direct reference to the potential SRN improvements in Policy LP3 as supporting infrastructure for the proposed strategic location, with associated requirements for developers to demonstrate delivery and funding mechanisms.	NSC Reg19 Local Plan Consultation.pdf
62827201	T Lynch		none	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The proposed housing developments around Nailsea and Backwell are unsound. There are no plans for expansion of health provision. The present roads to and from Nailsea and Backwell are already vastly overstretched with considerable congestion and the proposed development will cause further congestion on the already narrow roads. There has been no reliable planning for extra schools. The new developments will cause the loss of grade 1 agricultural land and the loss of a wildlife corridor. The loss of habitats for wildlife is vital for continuing the stability and the health of the ecosystem and these proposals will further erode wildlife habitats.	The need for Backwell station to be compliant with the equality act 2010 will be far greater. I don't see any improvements for this in the planning proposals. There should not be any building on grade 1 agricultural land	The need for Backwell station to be compliant with the equality act 2010 will be far greater. I don't see any improvements for this in the planning proposals.

62740577	R Mansfield			No	• Justified	Unsure	Unsure	There already is a lot of house building going on in and around the village of Backwell and I do not think we have the schools, shops, doctors or recreational facilities to accommodate the village of backwell growing anymore. In addition, you are proposing to build on green belt, prime agricultural land. In the uncertainty of food security for the future I really do not think the proposal to build on such is a good idea. I know we do need more housing but it is really important that the sites for such housing is looked at in the round with sustainability of our 'green and pleasant land' held in much higher regard than it is currently. There is also the question of the impact all this building would have on our roads and the safety of people living in our streets trying to get round on foot safely! There are far too many cars already and I hate to think of what our local roads will be like if all these building proposals go through. In particular Station Road does not lend itself to further foot fall as it is far too narrow In addition what about the increased, very real risk of further flooding (parts of Backwell are on a Flood Plain) if further large developments are allowed to be built. For example, the A370 through Backwell and Flax Bourton; Chapel Hill and Backwell Common - the flooding situation will only get worse. I have lived on Backwell Common for 45 years and have had the pleasure of enjoying all the wild life it has had to offer during the whole of that time - seeing deer, rabbits, badgers, hares, bats, voles, newts, frogs, stoats, field mice, toads, egrets, kingfishers, swans, canada geese, swallows, starlings, bees, dragon flies, magpies, sparrows, sparrow hawks, bussards, red kites, jenny wren, and sparrow hawkes. Not forgetting, the cows, sheep, goats and horses.	It should be motified to stop this.	I do not support it.	
62776865	Dave Mazur			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	My Response to the Local Plan I do not believe the Local Plan is sound in its current form for the following reasons: 1. Inadequate Selection of Sustainable Development Sites The sites chosen are not the most sustainable options available. They come with high environmental, heritage and flood-related impacts and do not effectively address the area's housing requirements. Other, more suitable and sustainable alternatives across North Somerset have not been properly explored. 2. Insufficient Assessment of Flood Risk Flood risk has not been properly evaluated for proposed development in Nailsea and Backwell—particularly at Poplar Farm (west of Nailsea), land east of Backwell, land south of Nailsea, and the associated road infrastructure. As a result, Policy LP3 cannot be considered sound. 3. Failure to Meet Walkable-Neighbourhood and Accessibility Standards All of the proposed housing sites in Nailsea sit well beyond the 800-metre walkable-neighbourhood guideline. They do not prioritise access to local services, facilities or employment, contradicting the Plan's own stated aims. Moreover, the Plan offers no strategy for improving local job opportunities. 4. Overdependence on a Railway Station Already Identified as Inadequate The Plan puts significant weight on the railway station, yet simultaneously acknowledges its shortcomings—no step-free access, insufficient shelter, poor safety, and limited cycle parking. No measures are proposed to address these issues. The station is also outside a reasonable walking or cycling catchment, and cycle access is further hindered by the accident hotspot at Bucklands Batch. 5. Lack of Evidence for Transport Mitigation or Deliverable Infrastructure Nailsea is already constrained by its transport network, yet the Plan provides no evidence that proposed mitigation—such as the so-called "strategic rail link"—is designed, funded or deliverable. Even if it were viable, it would not be completed ahead of development and therefore cannot be relied upon. This undermines the soundness of the proposals. 6. Reliance on Vague Aspirations Instead of Clear, Costed Measures Across proposals for Nailsea and Backwell, the Plan relies on broad, aspirational statements rather than concrete actions. There are no defined schemes, timescales, budgets or identified delivery bodies. Given the level of risk to current and future residents, this lack of specificity fails to meet the required tests of soundness.	What Changes Are Needed? Allocating land south of Long Ashton would largely offset the removal of the Nailsea and Backwell strategic development area. Its location, next to the approved £400 million EPIC employment campus, offers far better transport links and represents a far more logical choice. Additionally, priority should be given to developing workable mitigation measures along the B3130 and B3128 corridor. These are essential for protecting existing residents' ability to travel into and out of Nailsea.		
58448865	Avon Wildlife Trust		Avon Wildlife Trust	Yes		No	Yes	The current proposal for this allocation breaches sections 124, 188, and 192 of the NPPF. The additional housing allocations sites identified on the periphery of Nailsea and Blackwell will result in the loss of Green Belt land and, along with the development of the Station Road to A370 Cross Rail Link, will reduce the extent of the undeveloped east-west corridor between Nailsea and Blackwell. Whilst we welcome the creation of new Green Belt land to the southwest and northwest of Nailsea, we believe there will be an overall net loss of greenspace across the plan area. Housing allocation to the south of Nailsea will also result in the increased isolation of Youngwood Lane SNCI, reducing connectivity of habitats and species and resulting in lost opportunities to create larger habitat corridors in the future. In addition, land in this area is near the Somerset Levels and Moors, a sensitive internationally designated area; additional development around Nailsea and Blackwell will increase pressure on these sites particularly resulting from urban runoff and poor water quality. The delivery of Nature Parks is mentioned within the Plan, as a requirement to offset impacts on bat habitats. Insufficient information is provided about Nature Parks to ascertain whether this is appropriate mitigation for impacts on the Bats Special Area of Conservation (SAC).			
62914945	John Moore							Response to NSC REG 19 Local Plan 2041 1 Increase in size of Backwell of 80% over a relatively short period is UNSUSTAINABLE. 2 The proposed road to avoid the village centre goes through GREENBELT FARMLAND, WILDLIFE HABITATS AND FLOOD PLAIN. It is also UNFUNDED. 3 DEVELOPERS HAVE NOT PLANNED OR SHOWN CONCERN for the increased requirement for school places, medical provision (our surgery is at capacity) or leisure facilities for a massively increased population. Backwell only has a tired and over-used swimming pool, and a charity-run playing field which is being totally encroached on by current housing construction. 4 DISPROPORTIONATE ALLOCATION of housing development in Backwell compared to other villages in North Somerset. 5 UNPROVEN that Backwell needs/can support a market for SO many new houses. No plan to cater for the increasing number of older people living in existing large houses who could down-size if suitable small houses were built – its all 3-5 bedroom houses. 6 Additional traffic at ALL times, esp. peak times as there is very little employment in			NSC Reg 19 Local Plan 2041 11Dec25.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Backwell – mostly COMMUTERS. 7 I am concerned that our COMMUNITY SPIRIT WILL BE ERODED by so many new residents. There will NOT BE ROOM AT THE LOCAL SCHOOLS for such an influx, so many will drive their children elsewhere for education, adding to TRAFFIC CONGESTION. 8 Loss of high quality farmland – once built on it will never be farmland again – LOSS OF FOOD SECURITY 9 Proposals go against Government's stated policy of "PROTECTING BEST AND MOST VERSATILE LAND" Food security ignored. 10 HABITATS AND WILDLIFE CORRIDORS will be destroyed, along with space and tranquillity for residents. 11 ENDANGERED/RARE SPECIES of Horseshoe bats threatened by development. 12 Infrastructure Development Plan inadequate – NOT ANALYSED, COSTED OR FUNDED. Who pays? 13 All the proposed land is PRONE TO FLOODING, especially at the bottom of the valley around Backwell Common. Housing would be AT RISK. 14 The CHARACTER OF THE VILLAGE would be changed out of all recognition. Loss of greenbelt land and the massive increase in hard landscape will lead to FREQUENT FLOODING, eroding of FOOD SECURITY, loss of QUALITY OF LIFE for existing residents, TRAFFIC CHAOS with huge disruption to roads both during the 10+ years of construction and afterwards with the 80% increase in residents. 15 At Backwell lake the TRANQUILLITY, AMBIENCE AND THE MANY WILDLIFE HABITATS will be destroyed by building a bypass road opposite. Plus this road will pass right through the floodplain. 16 The 50% AFFORDABLE HOUSING government policy will be IGNORED by the developers with seemingly no consequences. 17 This volume of growth is completely UNSUSTAINABLE for a RURAL village of Backwell's size. 18 The RAILWAY is not a suitable transport hub. The station totally is INACCESSIBLE for anyone with mobility issues or children in pushchairs. Also the train does not go to most places people need to go to, it is only relevant to people who work near the stations – so most COMMUTERS WILL DRIVE. 19 There is already a huge amount of development approved for Backwell. Why is it not shared more evenly around the surrounding villages? No development of any consequence planned at Cleve or Flax Bouton and yet they too are surrounded by farmland.			
62598241	P Moran			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I have very serious concerns about the effectiveness and justification for the proposed plan. 1. The proposed new road would not serve Nailsea's traffic or relieve congestion on Station Road, not would it help traffic travelling from Backwell towards the M5. 2. Development is proposed west and south of Backwell Lake – the new roads and housing will be in the floodplain, which floods regularly. 3. The proposed new link road under the rail crossing is likely to be extremely expensive and the engineering very problematic due to the proximity to the River Kenn. 4. The railway station at the heart of the 'transport hub' is not fit for purpose – it remains inaccessible for people with mobility issues and presents serious challenges when travelling with young children. 5. Transport modelling shows there will be notable increases in vehicle movements on the network of rural lanes around Nailsea. There are no clear, workable plans to mitigate against this. The lane will therefore become congested and unsafe for pedestrians, cyclists and horse riders. 6. Additional development will place immense pressure on the town's existing health and leisure provision. There will be no direct investment to combat this pressure. 7. All proposed development sites in Nailsea have been assessed to be foraging locations for the rare Greater and Lesser Horseshoe Bats – which are protected species.			
62772929	Edward Morris							This is the first time I have felt it necessary to put in writing comments on local planning matters but I feel so strongly about the damage that this so-called local plan will inflict on Backwell that I think it important to have my say. It seems madness to me that the plan selects Backwell to deal with, what amounts to, practically, the doubling of its housing stock , with scant reference to, or plan for, the pressure this will place on its schools, health services and shopping facilities. Particularly when there are other local areas nowhere near as affected. Likewise, the effect of the increased traffic on the already overburdened A370 is an appalling prospect. The plan to build a road which crosses the railway line seems something of a pipe dream, as no one appears to have any idea where the funding will be found and its effect on the A370 is dubious in any event. I have lived in this village for 38 years and during that time Backwell has dealt with its fair share of infill and small developments, where land was available.These proposals are overkill, and in my view will destroy our village. You define the Local Plan, 'as seeking to meet the areas 'needs', [Justified,Effective,Deliverable & Flexible]. I believe that most fair minded people will feel that this definition misses the mark in every respect.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
58582945	Nailsea Action Group		Nailsea Action Group		‣ Justified ‣ Effective	Unsure	Unsure	One of the many strategic proposals is the Cross rail link between Nailsea Station Road and A370. This proposal is so recent, undetailed and tentative, it can hardly qualify for a place in a plan and is therefore unsound as it is not effective in its current iteration. It is only vaguely costed and it is not clear who the payers will be for some significant parts of the proposal. It has been made in isolation from the problems of congestion and overuse of the B3130 through Tickenham to the M5 motorway. This will not happen in the next 15 years, with vague development costs between £16m and £70m mentioned. Distances between town centre, station and the new proposed sites are difficult for active travel (walking and cycling), particularly with Nailsea's (old) age demographics. Schools and other educational requirements In the current iteration of the draft Local Plan, Schedule 4 shows no new educational provision for Nailsea despite extensive areas of land identified as most suitable or with other potential, let alone those sites already built on and inhabited or under construction. If, as is widely reported, Nailsea's population is likely to rise by some 5,000 souls in the foreseeable future, to avoid overcrowding in the already existing schools or pupils having to travel unwarrantably long distances for their education and the delaying complications that capital funding such schools tends to generate, it is very important that at least indicative intentions for school development in Nailsea are provided. In the 364 pages of the Local Plan, only three seem to be devoted exclusively to education. Health, GP services, hospitals and support services such as pharmacies Nailsea currently has two GP practices. There are 17 doctors in the two practices. This may seem adequate in the overall scheme. However, a significant number of doctors work a reduced number of days in the Nailsea practices. Further analysis determines that there is the equivalent to 8-9 full time doctors supporting a current population of approximately 16,000 residents. Whilst Nailsea Action Group has not compared these figures with national 'ideal' statistics, anecdotal evidence is that GP services work under considerable strain in attempting to support the current town population. Any increase in population will put additional pressure on these medical services. It is essential that a commensurate increase in doctors will be required IN ADVANCE of Nailsea's potential increase in size and population. There are currently two Pharmacy groups in three locations in Nailsea. There is uncertainty about one pharmacy situation, and this could result in potential closure of their Nailsea site. This could have a detrimental impact on a growing Nailsea population. As it stands, there regularly are long queues in all locations. As with the other services, there will have to be a planned expansion of pharmacy provision.	To make the cross rail plan usable and therefore effective, provide much more detailed costings. take into account the knock-on effects to Tickenham, the B3130 and the traffic into Bristol on the A370. Be more precise about all aspects of LP3.		
62769185	Rod Neal			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Response to local plan final General This plan is unsound and ill thought out. The effects of the number of new houses on Nailsea and Backwell would cause unsustainable over development. Backwell is a large village. Nailsea is a small commuter town, with limited work opportunities within the town. Many working residents commute to nearby larger centres such as Bristol, Bath and Weston super Mare to work. Backwell and Nailsea should therefore not be considered a 'Strategic Location' as they do not meet North Somersets Council's (NSC) Policy SP1 for a variety of reasons, including: • Most of the proposed sites will fall outside the usual catchment for walking distances (town centres, school, bus stops and train station) and will therefore not prioritise walking and cycling and the use of public transport. • The plan does not support the delivery of economic growth and job creation in Nailsea as the location is not easily accessible, (B roads in and out) and there are no plans to improve existing highways network (see below). Nailsea and Backwell are unlikely to be a site for local employment so most new residents will end up commuting elsewhere. • More development in and around Backwell and Nailsea will have negative environmental impacts on water pollution, flooding risk and safety of residents, congestion on roads and rat running down rural lanes with increased accident risk. • Nailsea railway station is not an appropriate major transport hub. It is small, with short platforms, and is difficult to access for those with mobility issues. Currently the populations of Nailsea and Backwell are, according to the Census in 2021: Nailsea 15,917 Backwell 4,589 The Local Plan housing allocation is for 3,728 new dwellings across these sites. Based on 2.3 persons per household (the average household in North Somerset according to the 2021 Census), that means an additional 8,574 persons across the two towns, an overall increase of 42%. For each town, the growth would be: Nailsea - an extra 4,179 persons or an additional 26% Backwell - an extra 3,870 persons or an additional 84% This is a huge increase in population which is completely unsustainable with the current local infrastructure and will ruin the lives of current and future residents of Nailsea and Backwell. This degree of expansion would have a detrimental impact on the character and nature of Backwell and Nailsea and their communities. • Nailsea has already had significant development with over 350 homes already built and several hundred more granted planning permission, this all in addition to the above proposed expansion. No new infrastructure has attended any of this. Effects on local infrastructure This further population increase will overload local infrastructure including healthcare, schools, leisure facilities and town centre parking. The Local Plan suggests developer-led delivery of infrastructure to support this, rather than a policy driven approach. This will inevitably mean that the infrastructure to support this increased population, in terms of schools, healthcare, leisure facilities and travel and transport is not guaranteed, may not happen and at best would be delayed long after it is needed. This means that access to these facilities, particularly healthcare and schools, will be badly affected, for current and new residents.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Effects on travel and highways There is no A road directly into and out of Nailsea, only B roads which are narrow and already heavily congested with traffic. Access to Nailsea from the A 370, which passes between Nailsea and Backwell, is only via the busy and congested Backwell crossroads and Station Road. Station Road is an accident black spot with both pedestrians and cyclists coming into conflict with the vehicles when passing under the railway line bridge on the single track, traffic lights controlled junction. Backwell School creates a significant amount of traffic. • The policy states that to accommodate the additional housing transport infrastructure development is needed. NSC proposes that an East Backwell Link Road is built. The road would go under the London to Penzance mainline rail track from Station Road to the A370. • However this link road would be extremely hard to build from an engineering perspective and very expensive because it is close to the river Kenn. The road would require a water pumping solution as it will go through an area susceptible to flooding. It will need cutting through the railway embankment. Developers will be expected to contribute to the funding for the road, however developer contributions will not cover the whole cost of the road. The developer Rubix has stated that it will only connect the road through their site once the housing has been built, this statement does not align with NSC statement on linking proposed development to infrastructure provision in a phased plan. • The East Backwell Link Road will only assist the Nailsea developments to the south of Nailsea. Developments to the north of Nailsea will use existing B roads out towards Wraxall and Clevedon and Portbury Lane. Developments east of Backwell wishing to get to the M5 will travel through Nailsea. It will not reduce traffic to and from Backwell and Bristol and junctions 19 and 20 of the M5. • NSC has failed to address the junctions to the north of Nailsea along the B3138 and B3130 which are already at capacity and are known accident black spots. There is no mitigation suggested meaning an even greater volume of traffic and more accidents. • NSC has placed a lot of emphasis on Active Travel (walking, cycling, horse riding) however many development sites are too far from the town of village centre to make walking a viable solution. • Rural "Quiet" Lanes. NSC has failed to address how they will protect the rural lanes around Nailsea and Backwell from rat-running. Traffic volumes on the lanes have steadily increased in recent years as developments to the west of Nailsea have been built. This is noticeable on The Causeway to the north and West End Lane and Netherton Wood Lane to the west and Chelvey Lane to the south west. This also happens on Chapel Hill leading into Backwell Bow, with people attempting to bypass queues on the A370 at Backwell Crossroads. This rat-running down rural lanes will only get worse with the proposed developments. All these lanes are single track with no pavements. • Backwell and Nailsea railway station has not been identified within Policy LP3 for improvements. The station is currently not accessible for many and the platforms are too short for intercity services. No funding has been identified for this work. Effects on environment and ecology There will be loss of green space and local countryside. Access to nature and countryside for walking etc is very important for the physical and mental health of residents and should not just be built over without consideration of this. On Backwell Common there will be a significant loss of Grade 1 and 2 agricultural land, particularly with the proposed East Backwell New Road and housing developments in this area. Other development areas will cause similar loss. Farmland of this quality is essential for growing food, for food resilience for the local population, reducing reliance on imported food and future proofing the population against climate and political changes that may make imported food more expensive and difficult to obtain in the future. The development off Pound Lane will have a bad impact on Moor End Spout Nature Reserve. Development south of Nailsea is too close to Backwell Lake which is a designated reservoir and an important area for wildlife, particularly birds. Much of this area is a flood plain and dwellings here will be liable to flooding. Most areas around Nailsea are low lying and in areas at risk of flooding, which will become an increasing problem with climate change. There will be adverse effects on wildlife and biodiversity, e.g. with wildlife corridors being cut off. • Before any new housing is proposed there should be a clear policy led, not developer led, plan for all the necessary infrastructure improvements. These should be planned prior to any new development. • Proposed new housing should be significantly reduced or reconsidered altogether as it is not sustainable and represents an overdevelopment of Nailsea and Backwell without any realistic likelihood of local employment increasing to match the population increase.			
16068161	Flax Bourton Parish Council		Flax Bourton Parish Council	Unsure		Unsure	Unsure	We are disappointed to see that the content of Policy LP3 has not evolved significantly from that presented in the previously version of the plan. The policy now confirms the preferred new vehicular route linking Nailsea with the A370, but again fails to acknowledge the impact of the resulting increase in traffic on the villages in the surrounding area, including in Flax Bourton. We raised this issue as our main concern in the last consultation and we are disheartened to see that it has failed to be addressed in this final policy version. The views of our community were clearly expressed in the last consultation, as were our on-going efforts in trying to improve the safety of the A370 for the community. We continue to recommend that the new link road should be for public transport access only to manage the impact on the A370 and to promote sustainable travel prior to the delivery and occupation of the new homes. Failure to do so will only add significant levels of private vehicles passing through Flax Bourton, resulting in increased dangers for residents in the village having to cross the road to get to the school and creche, access bus stops etc.	We strongly encourage North Somerset Council to take a much more pro-active stance on promoting sustainable transport in and around Backwell, for example, in a similar manner to that expressed in Policy LP2: Strategic location: Woodspring (south west of Bristol). We also encourage NSC to commit to taking a more proactive stance on the creation of a coherent and cohesive vision for the Backwell area prior to the submission of individual planning applications by different developers. Such a vision, potentially in the form of an SPD, would clearly identify how the needs of Backwell's community, as well as those of the surrounding villages and communities that will be severally impacted by the current proposals, would influence a comprehensive place-based plan that addresses transport, sense of place and identity, and local aspirations. Unfortunately, Policy LP3 promotes a reactive approach that will inevitably lead to an ad-hoc expansion of Backwell to the detriment of the surrounding communities.		
62850081	Jack Nicholls			No	• Justified • Effective • Consistent with national policy	Unsure	No	This allocation is not sound because it is neither justified nor consistent with national policy. The Plan conflicts with the NPPF requirements to protect valued open spaces, resist loss of land capable of recreational use unless strict criteria are satisfied, and to give great weight to the need for sufficient school infrastructure in areas of housing growth. No evidence has been provided that the field is surplus, nor that alternative provision of equal quality can be secured, nor that the educational and well-being impacts on West Leigh Primary have been assessed. The allocation is also not legally compliant in failing to demonstrate how statutory duties relating to adequate school outdoor space and the Council's own emerging policies on green infrastructure and school playing fields have been met. For these reasons, the inclusion of this site is unsound and should be removed from the housing allocation. [Please see the attached document for the full case] The allocation of the field adjoining West Leigh	In order to make the Plan legally compliant and sound, the Council must modify the allocation by recognising that development of this field is inconsistent with national policy on the protection of open space, the promotion of healthy communities, and the requirement to give great weight to the need for sufficient school infrastructure. The modification should therefore remove the site from the housing allocation and re-designate it as protected open space, either through Local Green Space status or through a dedicated green infrastructure/education safeguarding policy. This modification should also ensure that the Plan meets its own open space and school playing-field policies		Protecting the field adjacent to West Leigh Primary School - Planning policy case JN.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Primary School is not sound or legally compliant when assessed against national planning law and the Council's own emerging policies. As set out in the National Planning Policy Framework (NPPF), plans must positively support healthy communities, protect valued green spaces, and resist development on open space or land capable of recreational use unless strict tests are met (NPPF paras 98, 103–104). The Plan also has a statutory duty to give "great weight" to the need to expand or enhance school facilities alongside housing growth, ensuring adequate educational infrastructure is secured (NPPF para 100). The proposal to build on this field is therefore inconsistent with the NPPF's requirements to safeguard green space, support existing school provision, and plan for health and well-being. Locally, the emerging North Somerset policies on open space and school playing fields (e.g., draft DP52) allow development on land associated with schools only in exceptional circumstances, specifically where land is proven surplus or is required for educational purposes, neither of which is demonstrated here. The Council's own precedent of safeguarding land elsewhere in Backwell for primary school playing fields also reinforces that protecting such spaces is integral to a legally compliant strategy. Furthermore, statutory regulations governing school premises require that schools are provided with "suitable outdoor space" for PE and play, meaning that removing the only realistic opportunity for West Leigh to expand its constrained grounds risks undermining legal duties around educational provision. Taken together, these national and local policy requirements show that allocating this field for housing fails the tests of soundness particularly justified and consistent with national policy and does not comply with the legal and policy framework governing open space, school infrastructure, and community well-being.	by securing the land for recreational, educational, and community purposes, rather than for residential development; and that it supports statutory duties requiring adequate outdoor space for schools. Incorporating these changes would bring the Plan into alignment with NPPF paragraphs on open space protection, school provision, and community wellbeing, as well as North Somerset's emerging policies on green infrastructure and school land, thereby meeting the tests of soundness - justified, effective and consistent with national policy.		
62850081	Jack Nicholls			No	• Justified • Effective • Consistent with national policy	Unsure	Unsure	I consider the North Somerset Local Plan 2041: Pre-submission Plan not sound, failing the tests of justification and consistency with national policy (NPPF para 35), due to its failure to clearly define and protect the southern settlement boundary of Backwell in the vicinity of the Recycling Centre. The draft Plan allows development to extend southwards towards the Recycling Centre without a clear, defensible boundary or permanent open-land buffer. This risks incremental sprawl beyond the established village edge, undermining the physical and perceptual separation between the village and adjacent infrastructure uses. National planning policy places clear importance on preventing the unnecessary outward expansion of settlements, maintaining settlement identity, and safeguarding the countryside from encroachment. The fields to the south of Backwell, between existing housing and the Recycling Centre, perform a critical spatial and planning function: they define a clear and legible village edge; they act as a buffer between residential uses and industrial/waste infrastructure; and they help prevent the erosion of Green Belt openness and countryside character. The Plan does not provide a robust justification for weakening or removing this boundary, nor does it demonstrate that alternative, less harmful configurations have been adequately considered. This lack of clarity risks setting a precedent for future southward expansion beyond the plan period, contrary to the NPPF objective of plan-led, boundary-based development rather than incremental erosion. As such, the Plan is not justified by proportionate evidence and is inconsistent with national policy on settlement containment and Green Belt purpose.	To make the Plan sound and legally compliant, the following modifications are necessary: Explicit designation of a fixed southern settlement boundary for Backwell, running along the existing village edge north of the Recycling Centre. Retention of the open fields between existing housing and the Recycling Centre as undeveloped land, either through: continued Green Belt designation; and/or a policy designation that safeguards these fields as a permanent buffer or open countryside. Clear policy wording confirming that no residential development will take place south of this boundary during the plan period, in order to provide certainty to residents, landowners, and future decision-making. Recognition within the spatial strategy that the Recycling Centre represents a hard infrastructure edge, beyond which residential expansion would be inappropriate due to land-use incompatibility, landscape impact, and settlement character. These modifications would help ensure that development remains plan-led, contained, and proportionate, and that Backwell's village identity is maintained.	I support the Plan's general objective of focusing development within defined settlement boundaries, but do not consider the Plan sound or legally compliant unless the southern boundary of Backwell is clearly fixed and protected. With the modifications outlined above, the Plan would better reflect national policy objectives to: prevent settlement sprawl, protect countryside and Green Belt function, and provide long-term certainty over the limits of development. Without such clarity, the Plan risks undermining confidence in the spatial strategy and enabling incremental expansion beyond what has been properly tested or justified.	
29291809	F Parry			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Policy LP3 prioritises provision of new green infrastructure and open space - for this reason the field next to West Leigh infant school should not be developed on. It has current and future value to the local community. Any development here would harm local children's outdoor space provision and inhibit active travel, outdoor learning and physical activity. The Gleeson development south east of Backwell Lake will threaten the strategic gap between Nailsea and Backwell. Also the natural environment that exists at Backwell Lake needs to be protected from the harm that this development would do.	The field in between the Grove Farm/Rodney Road housing allocation and West Leigh school should be designated as a Local Green Space as it provides a buffer between the school and planned housing developments and provides recreational educational health and ecological benefits to the community. Remove the Gleeson development from the Local plan as it infringes upon the strategic gap between Nailsea and Backwell.		
63107137	P Parsons							Having lived in the Backwell area for over 40 years, I have very strong objections to the proposed building of 1000 new houses in Backwell considering there have already been 800 houses approved. My objections are as follows: This is Grade 1 agricultural land used for crops and grazing, and there is only 7% of this land left in the whole of North Somerset. Serious threat to wildlife habitats. The proposed site is on a flood plain. Backwell is not an area of high employment, therefore more and more people would have to commute. There is not enough infrastructure t support the proposed new homes - transport facilities, road and railway, schools and medical centres would all be abysmally lacking. Backwell appears to have been allotted a much higher percentage of new housing than other villages in North Somerset. I trust that you will consider my objections very carefully and treat them with the seriousness they deserve - and act on them.			
62848417	David Peel							We are positive about the proposed investment in Backwell housing with the following exceptions 1. The scale of new houses proposed is in excess of 1600. This is vastly out of proportion with the current population potentially increasing the population from c. 4500 to around 10000-12000. It is in effect a plan for a new town not development of a village. 2. Therefore impact on all services is also vastly out of proportion particularly road congestion and our school and medical services.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								3. Cycle infrastructure within the village is already entirely inadequate, cyclists are forced to use the main road. This plan will worsen this. 4. The small roads around our village are appropriate for cycling running horse riding and walking. The vast increase in population without mitigations will make these activities dangerous. 3. The loss of agricultural and prime natural land is unwise 4. The railway station needs investment to meet the needs of a population of 10-12k 5. The housing mix may not be intelligent enough to allow people wishing to downsize to do so whilst staying in the area. Overall the plan is massively over ambitious and disproportionate. It will radically change the area without offering sufficient mitigation to make the area work well as a community. We do not support the plan in its current state			
62862753	Mike Perrott			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The traffic impacts to Tickenham roads have not been properly considered they are already seriously congested and unsafe for cyclists and pedestrians and would be unable to support the traffic resulting from the proposed increase in new homes shown in the Local Plan. It is already difficult at times to safely exit my own propery onto Clevedon Road despite good visibility and the movement of heavy goods vehicles between the M5 and Nailsea frequently causes problems due to the narrowing of the rad in places.	What is clearly needed is a proper link between Nailsea and the M5. There are other roads that could be modified to provide this link.		
22638625	Councillor Bridget Petty			Unsure		Unsure	Unsure	I have real concerns about whether this is sustainable to put such significant growth in one village. I have real concerns about whether the supporting infrastructure will be financially deliverable or may never happen, this could include: -The road under the railway -The new schools -Increasing the size of health provision -Ciritically important improvements to Nailsea and backwell station, currently inaccessible to wheelchair users. -Nursery places The loss of agricultural land is a concern. Proximity to low-lying land, liable to flooding due to the soil type and density. This is well used open space neighbouring a secondary school, ensuring fresh air and between well being for our next generation. I support 50% affordable housing given this site is in Green Belt. I do not support building on Green Belt. Proximity to nationally important Horseshoe Bat Maternity Roost, this land is important to the protected Bat species - both Lesser Horseshoe and Greater Horseshoe bat. The leisure facilities are not future proof for more users and have been under invested in. Loss of habitat in general and significantly altering the character of the village and landscape including views from nearby churches.			
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	• Positively prepared • Consistent with national policy	Yes	No	The delivery of such a significant number of homes across Nailea (a town) and Backwell (a village) – some 15% of the total number of homes planned. For both settlements, the locations of new development good quality means of access – for good placemaking. Connectivity and linkages should therefore be considered carefully. At Backwell the deliverability of the Station Road to A370 link requires careful consideration and assessment. As Nailsea, careful consideration is required too in respect connections at the Land South of Nailsea to Youngwood Lane/The Perrings. It would be sensible for the policy to emphasise the importance of north/south connectivity to on the eastern side of the allocation – so to improve accessibility to the town's services and facilities. This approach would accord more fully with National Planning Policy. See also comments made specifically to the allocation at Land South of Nailsea.	The Policy and Schedule 1 should reference the importance of achieving strong permeability and to explore fully opportunities for secondary access being taken from the junction of The Perrings and Youngwood Lane. Please see comments made specifically to the allocation at Land South of Nailsea.		
21325473	Elizabeth Porter								I made myself ill responding to the previous draft Plan, even just by looking through it and then emailing. I subsequently vastly reduced online scrolling and moving from one window to another. (That there is no solution to this condition for me was confirmed by an ENT Consultant in August 2025.) However, what is currently proposed for Backwell now is so outrageous that I feel I must respond in some way. I hope you will record me as a strong Opposer to these plans. Backwell already has 800 new houses approved, a 40% increase for the village. These additional numbers would lead to complete overdevelopment and a negative impact on the character of the area. The proposals allocate to Backwell a higher number of houses than any other village in North Somerset, and an even a higher growth percentage than towns. Backwell is expected to take 7% of the district`s housing allocation, compared to the town of Clevedon at 2%. Yet there is no needs or viability analysis for an extra 1,000 houses in Backwell. Nor a social cohesion impact assessment.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									The Infrastructure Delivery Plan lacks analysis and costings, and there are no funding guarantees for any new services nor any new road. So there is uncertainty over whether any new road could be funded and delivered on time to support the proposed housing. Despite the proposed increase, there is a deficit in school places and no investment in health services nor leisure facilities. Backwell is NOT an employment hub: most residents commute. This lack of infrastructure and services means another 1,000 houses cannot be supported. The sheer volume of growth with the required investment infrastructure and services over such a short period is destabilising, unsustainable and undeliverable. Government policy does require 50% affordable housing on Greenbelt Land, but this reduces the funds developers contribute towards infrastructure! I have protested against the loss of agricultural land in previous development proposals. Government policy states that we `must protect our best and most versatile land` to safeguard food security. The agricultural land involved this time is Grade 1, currently used for food crops and grazing. So these proposals contradict this policy and undermine food security. Already, North Somerset has only 7% of high quality land left. Backwell Common and surrounding areas are prone to flooding, which would be aggravated by more housing. Indeed Backwell Lake (Reservoir) and adjacent fields, where new roads and housing are planned are on a floodplain – which unsurprisingly floods regularly. Again this is something that I have frequently noted in comments, especially for the developments in front of St Andrews Church, but to no avail. Please do not ignore this aspect again. The proposed development would destroy valuable wildlife habitats and further harm biodiversity in one of the world`s most nature-depleted countries. The proposals specifically threaten the Brockley Maternity Bat Roost and SSSI, with rare Lesser and Greater Horseshoe Bats relying on the land for food. I am not opposed in principle to a relief road but this has to be a proposal that can be implemented and meets its intended purpose. There are severe doubts about whether the current proposal would effectively serve Nailsea`s traffic or relieve congestion on Station Road, Backwell Common or Chapel Hill. In any case, engineering the road under or over the railway would be highly expensive and possibly unfeasible. And yet, Bristol Airport, quite apart from any environmental or climate change concerns one may have, is repeatedly given permission to expand adding further to the log-jamming of local roads, quite likely a majority tourist traffic but hampering local business traffic. The railway station is not fit for purpose as transport hub; it remains inaccessible for people with mobility issues and presents serious challenges when travelling with young children. This is a particular concern for me. I could no longer use trains when I had to stop carrying items in my rucksack due to deteriorating spinal problems. One side does have a ramp but it is so steep I feel that even that would be hard going with a Walker/Rollator. I have been hoping that a younger person who needs to use railway transport for employment might pursue a case under Equalities Legislation. However I know only too well how much more tiring it is just to live life as a person with disability, let alone pursue something as time-consuming and stressful as that. Walking from where I live in Backwell one still gets splashed when there are puddles just by walking to either direction bus stop and the crossing and centre. There is still no (recessed) shelter at the Playing Fields stops on either side (and no plans to install one as far as I am aware). I have made two formal Complaints to First Bus after incidents when I was hurt due to the design and layout at the front of the new electric buses – without ANY acknowledgement let alone reply. The Sirona Service does not offer a Physiotherapy Service in Nailsea as North Somerset Community Health Partnership did previously. There is no bus to Clevedon from where I live in Backwell, and the one from the Crossroads (which has to be a single decker due to the railway bridge) is extremely wobbly and uncomfortable. The Sirona Service has been dreadful for me, problems recently recognised by the Care Quality Commission. I first		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									asked for further help in August 2024. In December 2024, my leg gave way whilst walking home from the bus stop and I stumbled on to the A370. (The other leg gave way in Broadmead a few days later but less spectacular in a pedestrian zone.) Sirona DEprioritised me being seen for triage. Some time later I discovered that a Physiotherapist I had spoken to by phone had wrongly noted what I had described. But I think that the de-prioritisation may have been more due to an X-ray which showed no change from the first Neurospinal Operation in 2018. I would have expected Professional staff to be aware that such problems very frequently do not show up in X-rays – which is presumably a major reason why MRI Scanning was developed. In due course Sirona seemed to correctly request the MRI Scan in the BRI. However I was then led quite a dance (although I certainly do not physically dance!) with appointment letters and phone calls for venues all over the place. For example, a phone message from an outfit calling itself `In Health` that I had never heard of and certainly not been alerted to, requesting all sorts of personal details before they would discuss anything with me. Do elderly people not receive frequent warnings against scam callers? Once I had at last had the MRI Scan and result that the problem is as severe as when I waited for the first Surgery from 2015-18 (and was left with reduced sensation in feet and ankles and thus difficulty with balance), I was at last referred back to the Consultant Surgeon at Southmead Hospital but did not see him until October 2025. I am now again on his Waiting List. Whilst the specific details and delays of this `Pathway` are different from between 2015 and 2018, I can see absolutely no overall improvement in the process so far – whilst all the time I increasingly lose sensation in feet and legs and further consequent difficulty with balance, as well as walking becoming slower and stiffer, driving around less and less. In the midst of trying to get NHS help, North Somerset Council withheld re-issue of a Blue Badge (able to be used for lifts in addition to driving oneself) for 4 months at the beginning of 2025 – eventually letting me know that what was being insisted on was a document mentioned nowhere in the initial information nor application sent, nor in their early communications. (I have had a Blue Badge since 2009 although every 3 year applications is seen as new, not a re-application. I had found online application too challenging 3 years previously so did not even attempt it again.) These are some of the REALITIES of CURRENT local infrastructure albeit from my personal experience. However I have no doubt that others will have many of their own stories to tell. But we cannot have this level of housing expansion without infrastructure and services improvements FIRST. Thank you for your attention to this letter and inclusion of my comments in relation to the Local Plan proposals for Backwell. I repeat that I am in strong Opposition.		
51242657	Rubix Strategic Limited	Arwel Evans - Lichfields	Rubix Strategic Limited	No	• Effective	Yes	No	These representations have been prepared on behalf of Rubix Strategic Ltd (‘Rubix’) in response to the North Somerset Local Plan 2041 ‘Pre-Submission’ (Regulation 19) consultation. Rubix, alongside Mactaggart and Mickel Strategic Land (‘Mac Mic’) control the allocated Land east of Backwell. The land sits within the strategic location identified by North Somerset Council (NSC) in the Regulation 19 Local Plan, referred to as ‘Strategic location: Nailsea and Backwell’ (Land east of Backwell) under draft policy LP3, which Rubix has been promoting for a number of years. Rubix control the land in the north, south and west of the allocation site, whilst Mac Mic controls the land further to the east. The land within Rubix control is 37.8 ha and borders the eastern and southern boundaries of Backwell. Schedule 1 of the Regulation 19 Local Plan identifies the indicative capacity of Land east of Backwell as 889 dwellings, the land in Rubix’s control is capable of delivering circa 400 dwellings. The land within Rubix control is both sustainable and deliverable. Rubix is an established and experienced land promoter. It is keen to progress the site as evidenced by the pre-application submission in June 2025 and the numerous representations submitted to date. Whilst Rubix is supportive of NSC’s approach in principle, our client has some concerns to distinct parts of the Plan that require further refinement ahead of adoption to ensure a robust, sound and deliverable policy for the Strategic location: Nailsea and Backwell. We consider that these issues can be resolved via further modifications to the Plan through the examination process. These representations provide further clarity on the requested policy modifications. Link Road and Access Policy LP3 outlines the need to provide strategic measures designed to alleviate traffic impacts on Station Road and the Backwell crossroads. This includes the provision of the new Station Road Cross Rail Link Road. We note that table 4.1 of the Nailsea and Backwell Transport Strategy (June 2025) prepared by AECOM states that the proposed location of the link road is ‘within control of sites being promoted for development growth’. However, on NSC’s policy proposal map which identifies the proposed location of the link road, part of the link road is located within land that does not form part of the proposed allocation and is neither in Rubix or Mac Mic’s control, thereby complicating its delivery. Therefore, the evidence base does not align with the proposals map, and the plan is therefore	Whilst Rubix support the strategic location of Nailsea and Backwell and the allocation of Land East of Backwell, we request: • The proposals map be amended to include the independent southern access Rubix land; • The proposals map be amended to limit the broad alignment of the link road to within the proposed allocation boundaries; • Policy LP3 be amended to make it clear that only those parts of the link road that are associated with residential development are to be directly delivered by the developers. Likewise, Policy LP3 should specify those parts of the link road that will be delivered by 3rd parties utilising developer contributions and other sources of funding i.e. the cross rail link and extent of route north of the railway line; • The land to the east of station road be allocated for mobility hub and education. • Policy LP3 should specify that all social and physical infrastructure requirements are subject to development viability; • The requirement to provide 5 hectares of employment land be removed from Policy LP3 and Schedule 1 of the Plan; • Both policy LP3 and policy DP43 be amended in relation to affordable housing to either 30% affordable housing or include the caveat – ‘subject to viability’; and, • Further clarity in relation to Nature Parks.		RS407_OGD_P_DR_121_(E)_Illustrative Masterplan(40514309.1).pdf RS407_OGD_P_DR_110_(A)_Location Plan(40514313.1).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								not justified. Failure to amend the location of the link road would complicate and potentially jeopardise its delivery. In addition, the proposals map fails to show the southern access to the Rubix site, opting instead to use the access via the Mac Mic site. It is important to highlight that the link road can be facilitated entirely within the land in Rubix control, subject to gaining independent access. It is proposed that the southern access to the land in Rubix control be served by a new ghost-island right turn lane from the A370 Farleigh Road, which will be achieved through the demolition of no.37 Farleigh Road. The additional land required for the southern access is depicted on the attached site location plan. The independent access into the Rubix land from the A370 is vitally important in securing the delivery of new homes from the Rubix land within the Plan period. In the absence of an independent access, development cannot commence on the Rubix site and financial contributions envisaged from this development towards the delivery of the railway crossing would not be forthcoming. The Infrastructure Delivery Plan (October 2025) envisages the delivery of the rail crossing early in the plan period as the Link Road as a whole is identified as time-critical infrastructure. If therefore financial contributions from the Rubix site is not forthcoming because an independent access has not facilitated early delivery of homes in parallel with Mac Mic, the entire Link Road and its key benefit of unlocking the strategic growth of Nailsea and Backwell would fall away. Furthermore, the Mac Mic site is entirely dependent on the land in Rubix control and is unable to deliver this essential link. We therefore request, to ensure the deliverability of the link road which is fundamental to the strategic growth area of Nailsea and Backwell, that policy LP3 and the policies map be amended to include reference to the independent proposed southern access to the land in Rubix control and the alignment of the link road should be amended to remain entirely within the confines of the proposed allocation. The Nailsea and Backwell Transport Strategy (June 2025), prepared by AECOM identifies the key problems facing Nailsea and Backwell as: • Congestion at Backwell Crossroads; • Limitations to bus service operation due to congestion and low rail bridge; • Severance from A370 and rail lines; and, • Suboptimal connectivity between Nailsea and Backwell. NSC recognise that the provision of the strategic rail crossing east of Backwell would aid in alleviating these issues. The provision of the new link road would alleviate vehicle congestion along Station Road and Backwell Crossroads and in turn make these routes more attractive for active travel. It will also improve public transport connections and reduce congestion on the A370 which will support journey time and service reliability. The above requested amendments will ensure the deliverability of the link road. Rubix welcomes the identification of the cross rail link (ref.TR34) in the Infrastructure Delivery Plan. Whilst the IDP advises that parts of the proposed route would be delivered by residential development, it is important that the IDP accurately identifies those sections of the route that will be dependent on external funding i.e. the railway crossing and part of the link road located north of the railway line. The IDP advises that the funding source for this 'time-critical' infrastructure would be developer contributions and other. Given the importance of the link road to unlocking the strategic scale growth at Nailsea and Backwell which is a fundamental component of the emerging Plan Vision, developer contributions should be applicable to all new development within the Nailsea and Backwell growth area and the 'other' sources of funding should be specifically identified now. Delivery of Infrastructure Schedule 1 of the Pre-submission Plan (Reg 19) outlines the requirements for each allocated site. This includes, amongst other things: • The provision of a new Cross Rail Link Road; • Provision of land for the delivery of a primary school; and, • Provision of 5 hectares of employment land. Rubix supports the identification of the cross-rail link road as a key infrastructure requirement associated with the proposed allocation. It is however critical that this requirement is specific to those parts of the route that proposed development can directly deliver i.e. the route running through residential development. It will not be possible for the proposed development to deliver the cross rail link or the route to the north of the railway line in isolation as evidenced through the IDP. There is likely to be a significant funding gap that will need to be bridged through wider developer contributions and other funding sources. We note that NSC has chosen to allocate land to the east of Station Road for a new mobility hub. Whilst we do not object to the provision of land for the mobility hub, we consider that the Council should be more ambitious in its use of this land. In our view, this parcel represents an appropriate location not only for the mobility hub but also for a new 2 form primary school. This is in accordance with draft Policy SP4 which seeks to ensure that development proposals make the most efficient use of land. We therefore request that this land also be allocated for educational use. Sufficient land can be made available for both the mobility hub and primary school, within land controlled by Rubix, as indicated on the attached draft illustrative masterplan. The viability assessment prepared for the Council by Dixon Searle Partnership (October 2025) indicates that development viability is marginal to poor where 35% affordable housing is sought. As it stands, Policy LP3 is seeking an affordable housing contribution of 50% for Land East of Backwell, meaning that site specific social and physical requirements should be presented as subject to development viability. Otherwise, there is a real risk that the prosed allocations fail to come forward, which would undermine the emerging Plan. Policy SP9 notes that the plan has identified 72.8 hectares of land for employment purposes. Of this, 6.1 hectares has been allocated to Nailsea and Backwell. Table 3 of the North Somerset Employment Land Evidence Report (June 2025) prepared by Stantec identifies the most suitable locations for employment land. It states that: "Potential locations include c. 5 to 7.5 ha to the north east of Nailsea, near existing industrial site to avoid traffic travelling through the town from the north i.e. as happens currently with the West End		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Trading Estate. Also, a small employment site in Backwell could be allocated to help diversify land use and offer local employment near to station. The Backwell employment area could be to the rear of the Leisure Centre as this has reasonable access to A370 and avoids traffic travelling through the town" Despite these recommendations, the land north of Nailsea is only required to provide 1.1 hectares of employment land, whilst the land east of Backwell is required to provide 5 hectares, accounting for almost 82% of all Nailsea and Backwell's allocated employment land. This approach contradicts the Council's own evidence base and fails to meet the test of soundness, as it is not justified. A 5-hectare site cannot reasonably be described as "a small employment site", and its delivery is unviable when considered alongside the other requirements set out in Policy LP3 and Schedule 1. We therefore request that the requirement to provide employment land be removed from Policy LP3 and Schedule 1 of the Plan. Affordable Housing Paragraph 67 of the NPPF sets out that development of sites in the green belt will need to adhere to golden rules as set out in paragraph 157 of the NPPF. This requires at least 50% of the housing to be affordable, unless this would make the development of these sites unviable (when tested in accordance with national planning practice guidance on viability). The Additional Sites Viability Addendum for North Somerset Local Plan 2041 prepared by Dixon Searle states that "the results suggest that an affordable housing quantum of no more than 30% is likely to be viable at the Nailsea and Backwell strategic location". Given this, the requirement to provide 50% affordable housing on each site is unequivocally unviable, especially considering the other costly requirements outlined in policy LP3. Rubix therefore object to the requirement to provide 50% affordable housing as stated in draft policy LP3 and object to policy DP43 as it is clear through independent viability testing (as is allowed by policy 67 of the NPPF) that an affordable housing requirement above 30% is likely to be unviable. This policy therefore is unsound and would fail the effective test of soundness because housing sites required to deliver 50% affordable housing would be undeliverable over the plan period. Nailsea and Backwell is a key strategic growth area for North Somerset and therefore the inclusion of an unsound policy risks the delivery of the strategic growth area, which could have wider repercussions on the soundness of the plan as a whole. The Additional Sites Viability Addendum for North Somerset Local Plan suggests that the requirement to provide 50% affordable housing in both the Strategic Locations of Easton in Gordano and South West Bristol are also unviable. Again, highlighting that policy DP43 is unsound as these housing sites, required to deliver 50% affordable housing, will also be unviable and undeliverable with this requirement. We consider that the policy approach to affordable housing should be evidence based to ensure the sustainable development of Nailsea and Backwell as is required as part of Policy SP1, SP3 and SP8. This could mean an affordable housing requirement that is higher than 30% but at a level that can be absorbed by the sites without making them unviable. Other elements of the golden rules could still be secured. If the Council is not willing to set a lower percentage, then Policy LP3 should be revised as follows to make it clear that 50% is subject to development viability testing as per paragraph 67 of the NPPF: "Delivery of 50% affordable housing on each site in accordance with Policy DP43: Affordable housing (including rural exception sites) subject to viability." Policy DP43 should be amended as follows: "Developments will be expected to provide 50% affordable housing on land released from the Green Belt as set out in Policy SP7, and other Green Belt sites (subject to viability as per paragraph 67 of the NPPF), 30% on greenfield sites and 20% on previously developed land, all at nil public subsidy. If these requirements cannot be met this will need to be fully justified with clear evidence set out in a viability assessment which must demonstrate that all grant funding sources have been fully explored." Nature Park Policy LP3 requires contributions to the delivery of a new Nature Park in order to offset impacts on bat habitats. This requirement is also discussed briefly in draft Policy SP11 and Policy DP35. Whilst Rubix does not object to this requirement, it is considered that further clarity is necessary. We note that the proposed location of the Nature Parks is yet to be disclosed, we request their location be included within the Plan in order to provide greater clarity to developers, this is especially important for the developer led Nature Parks which are to be located in the Wolvershill, Woodspring and Nailsea and Backwell strategic locations. Summary Whilst Rubix support the strategic location of Nailsea and Backwell and the allocation of Land East of Backwell, we request: • The proposals map be amended to include the independent southern access Rubix land; • The proposals map be amended to limit the broad alignment of the link road to within the proposed allocation boundaries; • Policy LP3 be amended to make it clear that only those parts of the link road that are associated with residential development are to be directly delivered by the developers. Likewise, Policy LP3 should specify those parts of the link road that will be delivered by 3rd parties utilising developer contributions and other sources of funding i.e. the cross rail link and extent of route north of the railway line; • The land to the east of station road be allocated for mobility hub and education. • Policy LP3 should specify that all social and physical infrastructure requirements are subject to development viability; • The requirement to provide 5 hectares of employment land be removed from Policy LP3 and Schedule 1 of the Plan; • Both policy LP3 and policy DP43 be amended in relation to affordable housing to either 30% affordable housing or include the caveat – 'subject to viability'; and, • Further clarity in relation to Nature Parks.

14394785	A Ribbon-Miles			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I am also commenting regarding the field adjacent to West Leigh Infant School, Backwell which has now appeared with potential housing allocation having been ear marked previously as a community space for use by the school. Having now capitulated and given permission for houses at Rodney Road we cannot allow any more here. Access is totally unsuitable. Cars coming and going next to the entrance for the school would be incredibly dangerous. We are a rural village and people move here for proximity to the countryside. These fields are used by bats foraging and other wildlife. Soon there will be little green space left here but please take this into consideration. This field allows children to use a green route across a field and soon this school will be surrounded by housing! Building here would be a travesty.			
50931073	Andrew Rowland			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The infrastrucure planned road system is not funded. No development should legally take place until such funding is secured in particiular the under rail line tunnel which is planned under the water table for this area. Please see photos attached of flooding on Backwell Common. Developers are peddling the idea that houses are to be built before this road is built. This is not in accordance with Government policy nor is it in accordance with building on the Green Belt. North Somerset Council has produced a Flood risk strategy and important to note the Council has identified this area as a high risk flood zone. Extract attached. How can this development be in anyway safe considering the obvious flood risk.	The Council must comply with National policy in detail on infrastructure needs for the population before planning is given.		Flood5.html IMG_5973.png
38976161	S Scott			No	• Positively prepared			This seems a totally inappropriate increase in housing for a small village built in quality usable farmland, some of which plays an important role as a flood plain. Backwell is already having a lot of new houses built on it, and the extra planned is totally unsustainable.			
18204257	Graham Scott			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	1. The proposal to increase the size of Nailsea by 55% is totally disproportionate and will result in the gross over-development of the town, and the loss of its distinctive charm, character and environment. 2. Nailsea is distinguished by its pattern of houses with much-valued patches of green spaces and trees, linked by a network of footpaths. Large and small green spaces and specimen trees were deliberately designed into its plan, for example the small green space off Trendlewood Way opposite Avening Close. These small green spaces are greatly valued by local residents and it is of the greatest importance that they should be protected much more extensively than the Plan currently proposes. Developing them results in no significant gain in housing numbers. 3. New infrastructure, such as schools, clinics, leisure facilities, etc. would be needed by the over-development proposed. However, there are no identified sites, concrete plans or direct investment. The development would totally overstretch existing infrastructure, such as health and leisure provision. Yet there are no proposals to address this. 4. The proposed road will destroy our beautiful green landscape and will not relieve traffic problems on Station Road. The Plan does not properly address the increased traffic load within and around Nailsea that has been modelled as a consequence of the proposed development. 5. Proximity of the link road to the river Kenn is likely to be very challenging due to the need for flood mitigation. Together with the engineering implications of the under-rail crossing, the costs are likely to be massive. 6. High quality, high yielding agricultural land to the south of Nailsea will be destroyed by the housing development. This lush green land with its old field lines, hedges and walls has been farmed for centuries and is part of the historic fabric of the landscape so cherished by local people and visitors to the area for country walks and dog walking. The proposed mitigation is totally inadequate. 7. The development by Backwell Lake is on a flood plain which anyone who walks there will know regularly floods. It would be irresponsible to build there. 8. The protection of wildlife has not been properly considered. Habitats and ecological corridors will be removed and damaged by the development. Protected species such as the rare Greater and Lesser Horseshoe bats, and many other species of bats forage on all of the development areas, yet this seems to have been ignored. Increased light spill from the new homes, the new road and traffic will impact on Horseshoe bats in particular. 9. Increased traffic will lead to more accidents at existing accident black spots, such as Wraxall Hill and Portbury Lane, as there are no proposals to address these. The rural lanes around Nailsea, currently used by commuting cyclists and leisure activities including walking and horse riding will become significantly less safe. 10. The railway station is not suitable as a transport hub as it is not accessible to people with disabilities or families with prams and pushchairs.	See response above. I would stress that the small green spaces within Nailsea need to be more extensively protected from infill housing, as they are part of the designed environment that local residents value so much - this will enhance the well-being of residents and protect the local environment.		
62772033	Denis Sharp		N/A	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	It is clear from the plan that the NSC have either not considered at all, or not properly considered the traffic impacts to Tickenham village and its surroundings. The existing roads and lanes in and through the village are not adequate for the current traffic flow, let alone for the increase that must follow the proposed development at Nailsea/Backwell. The roads, which are seriously congested, inadequate and unsafe for motorists, cyclists, school children, equestrians and pedestrians, cannot be improved because the existing development prevents this. These roads and lanes cannot support the increase in traffic from the new homes proposed by the Local Plan, and this problem has clearly not been addressed before the plan was put forward. I walk the length of the village centre almost every day and witness the traffic flow and danger to road and pavement users. Over the ten years I have lived here, the flow of traffic, including HGVs has increased dramatically. This can only increase further if this plan goes ahead and the people who live in the new houses use these roads, as will the increasing numbers of service vas and goods vehicles. Only by building a link from the M5 junction to the A370 through Backwell before any more houses are built can the proposed plan be made in any way acceptable to the people of Tickenham.			
50916769	A Shearer			No	• Positively prepared • Justified • Effective	No	No	House building in the Backwell area seems to be moving from reasonable and just about acceptable development into the realms of environmental vandalism. There appears to be no cognition or consideration of the effects of over 1000 more new houses being built in such a small catchment area. 1000 plus new houses will bring at least 2000 people or more into the area. It will probably bring about 2000 cars – allowing 2 per household, a not unreasonable figure. There is little work available locally, so most of these people will be commuting, That will put thousands of extra cars on the road, hundreds more people on to already crowded buses and on to trains already packed to bursting. If 2000 adults or so are brought into the area, there will inevitable be children. Even a conservative estimate of 1000 children will mean a need of 1000 nursery places, then primary, then secondary school places. Where are these going to come from?	Stop future building		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The 2000 adults and the 1000 children are going to need medical care and dental care. Where is that going to come from? How is the local surgery possibly going to cope? How are the present dental services going to cope? How are the schools going to cope? Where are the extra school places going to come from? Why, also, is Backwell subject to such extensive development when other local places – such as Clevedon, Portishead – are left relatively untouched and unscathed when they would be far better able to handle an increase in population? It is totally disproportionate. Backwell already has had 800 new houses approved – a 40% increase in the village size. Another 1000 new houses on top of that would be an unmitigated disaster. Such development would destroy wildlife habitats, biodiversity and agricultural land needed for food. The proposed new road would destroy the Common and the whole nature and aspect of the area. The proposed site for new housing is prone to flooding. None of this appears to have been taken into consideration. The whole plan seems to be ill-conceived, un-researched and formulated without any thought as to the long term impact and consequences of such extensive and extreme development. As a local resident I most strongly object to it and hope that it will not go ahead.			
39195009	David Sheridan			Yes		Yes	Yes				
16061057	Frances Sheridan			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	The allocation for housing in Nailsea is too high due to traffic generation and cannot be solved by the proposed "Backwell Bypass" which is not justified, effective or consistent with national policy. The proposed cross-rail link at Nailsea and Backwell from Station Road to A370 ("Backwell Bypass" in your report) is not justified, effective or consistent with national policy to reduce CO2 emissions, encourage walking and cycling as it will increase traffic overall from Bristol to Clevedon and from Clevedon to the airport as well as around Backwell and Nailsea as it will increase traffic flow. 1.The new road is inconsistent with national planning policy to reduce CO2 emissions and increase use of sustainable transport as it will encourage car use.. 2.The road is contrary to WECA and Bristol City Transport Plans as it will increase traffic into Bristol and reduce use of buses on A370 and trains from nailsea station into Bristol. 3.The road is not justified as the additional site for housing East of Backwell will not need a Major Transport Scheme to the station or to Nailsea as it is in close walking and cycling distance and to bus services.The previous draft plan included a cycle/walking route from the housing site. 4.The road and the additional site for housing East of Backwell is detrimental to Nailsea. Station Road and roads into Nailsea will have more traffic and this will discourage walking and cycling between Nailsea and Backwell, especially schoolchildren. 5.It is not positively prepared as part of a strategy for Nailsea.The proposed road is not justified unless NSC explains and is transparent about its plans for a MajorTransport Scheme in Nailsea and be clear whether it will link up to the M5 at Clevedon.On the map the proposed Major Transport Scheme for Land East of Backwell lines up with that already built at Youngwood Lane and the Reserved Transport Corridor Within Youngwood Lane Development. In addition the proposed Major transport Scheme/ Station Road junction would connect with a road and roundabout previously proposed as part of a housing application on the Backwell Lake side of Station Road.This would link Backwell Bypass with Youngwood Lane Major Transport Scheme and is similar to previous schemes in 1960's to link with the M5 at Clevedon. 6. The additional sites for housing East of Backwell need to have access directly off A370 as in earlier drafts.There should be no road crossing the railway as it is not justified. The plans do not comply with the Duty to Co-operate because housing allocation sites are driven by local politics to prevent the expansion of Bristol. Allocated housing sites will generate traffic in Bristol and will not contribute sufficiently to WECA sustainability targets and WECA Transport Strategy for 2041 .	To make the plan sound I consider it neccessary to Remove green belt designation from land south of Bristol and re-allocate the new additional site East of Backwell to land near employment opportunities near Epic Employment Campus and near to Bedminster and Bristol. This would reduce traffic generation, CO2 emissions, provide access to services and jobs, provide more sites for affordable housing. It would remove the traffic management problems at Nailsea and Backwell.		
16061057	Frances Sheridan			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Policy SP1 is not met .Nailsea is not in a strategic location and is not a main town and is not a main site of employment.It is a commuter town based on the station.The plan ignores the existence of Bristol which is the main town and employment centre for the commuter towns of North Somerset .Administrative boundaries should not be imposed on the economic region around Bristol. The plans for Nailsea do not show how new housing will access employment in Bristol in a sustainable way .The plans promote the increase in car use and traffic. The plans restrict the effectiveness of wildlife corridors at Belmont House and Tyntesfield.They do not support the high level of biodiversity due to the unique geology of Nailsea of coal measures and limestone in close proximity to one another and due to local water courses. Policy LP3 is not effective as the cross rail link will cause traffic congestion in Nailsea .The road will be difficult to build. The road opens up land in the green belt for housing to the south of Nailsea with spurs shown off Backwell Common by developers Rubix but not shown on NSC plan. Policy LP3 needs to consult with local people on how they will use Active Travel and trains and buses not impose them as people won't find them useful and implement Safe Routes to School. Policy LP3 .Active travel routes from housing sites need to be shown on the plan since NSC places so much emphasis on it to justify building in Nailsea at the same time as meeting policy SP1. Policy LP3 does not show how people will use buses and trains more and be discouraged from using private cars.The policy is wishful thinking and ineffective. Rural Quiet lanes .NSC does not show how traffic will be managed to protect Rural "Quiet Lanes around Nailsea. Policy LP3 allows development on Youngwood Lane which will be detrimental to wildlife and effect water courses around Backwell Lake Policy LP3 states that it will provide Nature Parks to mitigate loss of feeding grounds for horseshoe bats.These are insufficiently protected under this plan.The Nature Park identified by Rubix does not explain how that will be met given the impact of housing developments nearby and the planned Crossrail road. A Nature Park is a vague concept and needs to be defined by policies including lighting impacting from developments..	1.Reduce housing allocation in Nailsea which will generate traffic and which will protect Rural Quiet Lanes around Nailsea and protect biodiversity... 2.Provide Active Travel plans from housing allocation sites which link up with the Station and A370. 3.Have a realistic plan to deal with traffic within Nailsea. 4.Have an effective joint transport plan with WECA that takes into account development in Nailsea and the impact of the Major Transport Scheme on traffic in Bristol. 5.Provide an effective plan to support wildlife corridors and biodiversity around Nailsea. 6.Control levels of lighting at all developments and roads to reduce impact on wildlife.	See my other comments elsewhere sent in 11/12/25 yesterday.	
31022913	Peter Sims			No	• Positively prepared • Justified	Unsure	Unsure	The building of 3728 new houses in Nailsea and Backwell and increasing the population by 41% is a gross over development and will totally overload all the roads, medical and leisure facilities and everthing else that make Nailsea and Backwell nice places to live in. The only transport infrastructure mitigation in the Plan is a cross rail link road in the south of Nailsea. This road will only have a minor impact on the transport problems that will be caused by all the new			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					‣ Effective ‣ Consistent with national policy			house development proposed in the Plan. The houses planned in the north of Nailsea will use the B3130 which in places is a very narrow road where buses, lorries and other large vehicles cannot even pass each other. This is a serious health and safety concern that also will cause massive delays to bus time tables. There is no mitigation in the Plan for this. The houses to the west of Nailsea will, out of necessity, use the Quiet Lanes which are mostly single track designed only to take a minimal amount of traffic. There are no means of safe active travel for business or leisure on these lanes with all the proposed increase in traffic. There is no mitigation in the Plan for this either. In addition, there are several accident black spots on the B3130, B3128/ Wraxall hill junction Stone Edge Batch and Portbury Lane which will have greatly increased traffic through them increasing the chance of serious accidents. There is no mitigation in the Plan for resolving these problems.			
62849409	Lizzie Slocombe			No	‣ Positively prepared ‣ Justified	Unsure	Unsure	These comments relate specifically to the Backwell area development: 1) "To prioritise the location of new development close to places with a wide range of services, facilities and job opportunities." Backwell is a small village which does not have "a wide range of services, facilities and job opportunities." 2) "To increase the number and range of job opportunities across the district, particularly at the towns to give people the opportunity to work near to where they live." Similar to the above - there are very few jobs in Backwell to which people could walk to work (and even less with the additional population the proposed development would bring. 3) "To prioritise the importance and delivery of green spaces when considering new development, support priority habitats and species, and safeguard areas at risk of flooding." This area is already prone to flooding (see below) and no amount of green spaces will compensate for the loss of wildlife corridors if the fields are built on.	Vastly reduce the scale of the development.		
58346849	Vicky Smale			No	‣ Justified	Unsure	No	The plan does not take into account what local people want. The proposals for Nailsea and Backwell will spoil the character of the towns and is not in keeping with national planning policy.	Fewer houses and sites at Nailsea and Backwell.		
8052353	Diane Snape			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Policy LP3 - I strongly object to the identification of Nailsea and Backwell as a proposed strategic growth area. Large scale development at these locations is not deliverable or sustainable for many reasons including: 1. Very limited existing or potential new employment in these locations, resulting in significant out-commuting. 2. Located in what is essentially a narrow valley, with flood plain in the valley bottom and steep hills to either side, placing major constraints on the development of new infrastructure, which even if feasible would at best be very expensive to develop. 3. Heritage assets and wildlife habitats including bat conservation areas. 4. Loss of scarce high quality agricultural land. 5. Impact on heritage assets/listed buildings including numerous farms. 6. Impact on local nature reserves such as Backwell Lake. 7. Surrounded by sensitive landscapes, heritage assets such as Tyntesfield, Cadbury Camp, and Tickenham Moor SSSI 8. Ageing population, with many in retirement or reaching retirement age. Over the coming few years, a large number of family homes will be vacated by this ageing population, providing opportunities for families to move in. Large-scale new development is not needed. The 1211 new dwellings now additionally proposed for Nailsea and 889 for Backwell on top of the substantial numbers already committed, built in the past few years and/or under construction would lead to great strain on infrastructure of all kinds, including transport. This plan is unsustainable and undeliverable. Transport Transport hub and rail I strongly object to the proposed expansion of Nailsea and Backwell railway station on Station Road. It is not suitable for development as a future transport hub. There is insufficient space for increased parking and bus interchange facilities. The current station is very small and basic and there is very limited scope to improve the facilities in its current location. It is inaccessible for people with mobility challenges and is difficult to navigate when travelling with young children. Additionally, any incursion onto the land to the east of Station Road (for additional parking, bus hub, for example) would adversely impact the setting of the listed Moorside Farm A better solution would be to relocate the station from its current, highly constrained location to a new location further west where space is less constricted and it is more feasible to establish a transport hub, with appropriate walking/cycling and bus connections to the Grove Farm and Youngwood Lane developments. This could also provide a new multi-modal railway crossing point west of Nailsea and Backwell, to the west of the Backwell crossroads, which could be delivered as a below ground structure, as described in s 4.3 of the Nailsea and Backwell Local Transport Strategy. It would also facilitate improvement of the rail service by providing longer platforms and lift/disabled access and extended parking. Link road I strongly object to the proposal to construct new Cross Rail Link from the south of Nailsea to the east of Backwell, from Station Road near the station, in an easterly direction, to connect with the A370 East of Backwell. Such are the complications and enormous costs associated with such a road that it has previously been struck out of plans as unfeasible. The route would impact many hundreds if not thousands of residents in South & East Nailsea and North Backwell/Backwell Common/Farleigh, with the pollution, noise, light pollution and visual intrusion being magnified by the terrain, which necessitates the siting of the highway in the bottom of the valley (with incumbent flood risk: Flood Zone 3) and most of the properties sitting above it, with no possibility of adequate mitigation. N.B: Impact on residents and environment are missing from the list of considerations on page 26 of the Nailsea and Backwell Local Transport Strategy, and in section 4.7.4, next steps, mitigations for residents (which are critically required but undeliverable) are completely missing.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								These adverse effects, whilst already substantial for the under-bridge concept (which was previously under consideration but now seems to have been ruled out due to the flood risk which would be very difficult and expensive if not impossible to overcome) would be magnified many times by the overbridge structure which is now contemplated, involving a bridge 12.5m high, with ramps 250m long on either side, as described on page 28 section 8.4.3.12 of the Nailsea and Backwell Local Transport Strategy. Such a structure would also result in significant visual intrusion into the landscape, including sight lines from Tyntesfield, All Saints Church Wraxall and St Andrews Church Backwell. This is underlined by the Landscape Sensitivity Assessment, Nailsea, s.6.2.58 on page 34 which defines the land as high sensitivity: "...and to the south-east of the town is gently sloping and vegetation on field boundaries is generally limited. Consequently, this land is visually prominent. In addition, there is existing visual coalescence between Backwell Common and Nailsea in some locations. Owing to the above, this land is of high sensitivity." The proposed road would cross sensitive landscape, located in the green belt, consisting of prime agricultural land and would also pass close to Backwell Lake Local Nature Reserve and local green spaces/wildlife habitats ie Backwell Common and Trendlewood Park/Kenn Hedge. It would have a significant impact on the setting of the Listed Heritage Asset of Moorside Farm. Note: the "Low" sensitivity assessment for Moorside Farm in the Heritage Sensitivity Paper, page 13, East Backwell, completely neglects to consider the impact of the proposed road link. Similarly, the "Low" sensitivity assessments for Dibdens Farm, Cider Farm and Old Farm completely neglect the impact of the proposed road on the setting of these Heritage assets and their surroundings ie Backwell Common. The intersection of the route with Station Road would lead to significant incremental congestion and pollution close to residential properties and the Backwell Lake Nature Reserve due to standing traffic waiting for right of way. The increased traffic, and the need to negotiate the junction, would substantially increase danger to pedestrians and cyclists, particularly students at Backwell primary and secondary schools and Nailsea commuters using the station. It would rapidly become a very busy and congested route, leading to major noise and air pollution. It would increase "rat running" through the area, particularly from M5 Junction 19 to Bristol Airport, an issue which is already problematic. This effect ould be exacerbated by the proposed associated measures to discourage traffic from using Station Road, Backwell. It would also funnel the increased northbound (Nailsea-bound) traffic generated by the proposed East Backwell development into the constriction of Bucklands Batch on the South side of Nailsea. This is a narrow section of road which has already been widened to the extent possible by incorporating a strip of the frontage of each property along its East side, and has been the scene of numerous accidents causing injury to cyclists and pedestrians despite the addtion of a one-way cycleway. There are no firm costings or funding guarantees for the proposed new road in the Infrastructure Delivery Plan. If the East Backwell housing site allocation (to which I am submitting my objections concurrently) is dropped, the option to develop a North Nailsea Link Road should be seriously considered. This option would provide an onward link from Clevedon Road to the B3130 Nailsea to Wraxall road, serving the development sites to the West and North West of Nailsea already allocated within the local plan to 2026 and the industrial estates in the West and North of Nailsea, as well as the proposed allocations in North and West Nailsea, and deflect traffic from the Nailsea developments away from the congested centre of Backwell, avoiding the massive infrastructure complexity, cost and lead time to deliver a new link road. It would also maintain the separate identity and character of Nailsea and Backwell by avoiding the construction of a major link road in the green belt between the settlements. It would improve the routings for fire appliances, ambulances and police vehicles, improving safety and taking this inappropriate traffic away from Nailsea town centre. Such traffic will no doubt be forecast to increase significantly as a result of the new developments.			
8052353	Diane Snape			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Areas which need to be protected include: The unspoilt green belt land between Backwell and South-East Nailsea, Including the public footpaths, woods, watercourses, wildlife habitat and high quality agricultural land. Uninterrupted views of Tyntesfield. Uninterrupted views of Backwell Church and Backwell Hill. Quiet enjoyment of these areas by local residents and by the community for recreational purposes. The proposed route of the road and metrobus would have a massively detrimental effect on this area. Backwell Lake. The Lake is a Site of Nature Conservation Interest (SNCI). The lake supports a diverse range of wildlife including migrating birds, otters and a range of flora. In addition, the SNCI and surrounding agricultural fields are known to provide important foraging grounds for the Greater Horseshoe bats which fly from their maternity roost at Brockley Hall to the west of Backwell. The proposed route of the road and metrobus route would result in the loss of land within the SNCI and associated habitat for Greater Horseshoe bats. Moreover, the introduction of traffic, noise and light pollution which would impact significantly upon the habitat and the quiet enjoyment of the lake as a local community asset for recreation. Views of Tyntesfield from the lake grounds. Trendlewood Community Park on the South East fringe of Nailsea. Views across the valley towards Backwell Common. Diverse range of flora and fauna including rare bats. Quiet enjoyment of the park by the community for recreational purposes. The unspoilt green belt land between east Nailsea and Flax Bourton, including the public footpaths, woods, watercourses, wildlife habitat and high quality agricultural land. Uninterrupted views of Wraxall Church. Quiet enjoyment of these areas by the community for recreational purposes. Tyntesfield - its setting and surroundings. Historic park and garden and associated listed buildings. Extremely important national heritage. National Government policy places great weight upon the conservation of heritage assets; the more important the asset the greater the weight which should be afforded to it in the consideration of development proposals. Tyntesfield Estate comprises listing buildings of the highest significance (Grade I and II*). Accordingly, great weight should be given to the protection of Tyntesfield Estate in the consideration of the proposals for the proposed new road and metrobus route.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Uninterrupted views from Tyntesfield across the valley to Barrow Court and Backwell Hill. The view from Tyntesfield to Backwell Lake. The Lake and the open green belt land to the east of the lake are very visible from the Tyntesfield estate, eg when walking along the track between the summerhouse and the main drive. The strategic gap between Backwell and Nailsea, including the public footpaths, woods, watercourses, wildlife habitat and high quality agricultural land. I consider that the plan does not provide adequate protection for these assets and subjects them to significant unmitigated or insufficently mitigated risk.			
58599649	Dave Sowdon			No	• Consistent with national policy	Yes	Unsure	Regardless of a perceived national requirement for additional housing, such requirements do not take into account the local area's ability to absorb the numbers of houses specified in the outline document. There is minimal provision for improving the road infrastructure. There are only two routes, from Tickenham and from Wraxall, suitable for large trucks to access Nailsea, and both of those have severe pinch-points which often cause holdups. The other routes are either width or vehicle-weight restricted and are already extremely busy. Several lanes have no, or minimal, passing places. In recent years the road to Clevedon was closed by a fallen power cable. The resulting repair works necessarily caused the road to be closed. Traffic from Clevedon to Nailsea was forced to use the road across Nailsea Moor which quickly became a huge traffic jam. Recent closures of the M5 have brought large volumes of traffic on to local roads which have a knock-on effect when trying to access other local towns. The proposed developments north of Nailsea and Pound Lane do not take into consideration that Pound Lane is severely restricted during term time by parking for the schools. This is exacerbated during the 'transit' hours when minibuses regularly cause further delays outside Ravenswood School. Developments in this area will either use the limited Pound Lane, or use the highly unsuitable Causeway for access to Clevedon and the M5. None of the transport problems above will be mitigated by improved public transport and that, itself, will be encumbered by the poor road system. All the proposed developments on the north of Nailsea are intended for land that gets naturally very wet. The development close to the Land Yeo north of Greenfield Crescent is particularly poorly drained, heavy clay soils. As far as Town Centre infrastructure is concerned, access to the GP appointments is difficult as things are, and will only be made worse by large scale development. Similarly, pharmacy capacity is already stretched. Regarding developments to the south of Nailsea, access from the current Youngwood Lane is difficult and traffic heading west is forced to use narrow lanes to the A370 or Clevedon. Any traffic going east will have to use The Perrings and Queens Road before joining Station Road and from then have to use the limited Station Road access or Trendlewood Way to get to the Wraxall Road. Developments in Backwell will make travel along Station Road and the A370 more difficult.	Before any of the new developments proceed, there needs to be a cohesive road plan for the area. This will obviously be very expensive for either NSC or the developers. Without such improvement North Somerset will grind to a halt in the near future. Improvements to walking and cycling routes will only be of limited value as most people will have to rely on cars to transport people and shopping.		
62776481	Robin Stagg			No	• Positively prepared • Justified	Unsure	Unsure	The plan is not realistically considered. Specifically the development on grade 1 green belt in Backwell is unsustainable. The reliance placed on Backwell station is incorrect. The station is already dangerous due to a lack of suitable platform (the step down required particularly on the weston-bound side) and lack of disabled access is problematic. Even before the current housing is built it is regularly dangerously over crowded at peak commuting time.			
39037377	Barry Stirling			Unsure		Unsure	Unsure	The proposal would be yet more ‘bolt on’, developments on the edge of Nailsea (and Backwell) which bring nothing positive, just more strain on the already overstretched infrastructure, particularly the Nailsea access roads which are virtually unchanged from over 125 years ago when the population was less than two thousand people and motor transport rare, yet are expected by North Somerset Council to cope with huge volumes of traffic for which they are totally inadequate in terms of width, strength, visibility, and this high volume of traffic passes at speed very close to residential properties thus and creating a noise, safety and health hazard. As regards Nailsea, the proposed development sites are all too far away from Nailsea centre and bus stops to expect that access to and from the development site would be by anything other than car (particularly if doing a sizeable amount of shopping) , resulting in more traffic, noise and parking issues, exacerbated by the introduction of parking charges. This is not consistent with a number of the Strategic Priorities above and in contravention of the Council’s intent and policy to reduce car use and promote active transport.			
39037377	Barry Stirling			Unsure		Unsure	Unsure	The proposal would be yet more ‘bolt on’, developments on the edge of Nailsea (and Backwell) which bring nothing positive, just more strain on the already overstretched infrastructure, particularly the Nailsea access roads which are virtually unchanged from over 125 years ago when the population was less than two thousand people and motor transport rare, yet are expected by North Somerset Council to cope with huge volumes of traffic for which they are totally inadequate in terms of width, strength, visibility, and this high volume of traffic passes at speed very close to residential properties thus and creating a noise, safety and health hazard. This seems to be in contravention of many of the Sustainable Development Objectives above and the Council’s intent and policy to promote active transport.			
39037377	Barry Stirling			Unsure		Unsure	No	I have communicated with the Highways Dept, local councillors, town council, MP’s Liam Fox and Sadik Al-Hassan and council leader Mike Bell about the traffic issue on Hanham Way/The Causeway/ Washing Pound Lane. My highlighting the ever worsening problems with this route already and suggestions and requests for improvements made previously have all been rejected by the Council Highways dept. who subsequently (about 18-24 months ago) refused to respond to any further communication from me. Not a very proactive decision, as residents who live in the areas where traffic problems occur can highlight them and being ‘on the spot’ continuously assess and report them far more accurately than the council can remotely. Building on any of the proposed development/ building sites would add additional traffic to Hanham Way and The Causeway as a shortcut/rat-run to and from TIckenham, Clevedon, M5, Portishead. The Causeway to which Hanham Way is linked is subject to the same high volume of traffic. It is narrow, weak, and dangerous. Excessive use is already evident by subsidence, many damaged areas and repairs and visible slip of the road into the rhynes. The ongoing cost of continuous maintenance and repair to NSC must already be huge, yet the road gets progressively worse and towards unrepairable and unusable. The repairs are frequent but do not keep pace with the rate of damaged so the road is always in unsatisfactory condition. The observable rate of subsidence and slip into the rhynes alongside indicate pothole repairs are totally insufficient for a weak road that is being destroyed with its current level of traffic, let alone with additinal traffic. If restrictions are not placed			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								on traffic today to limit use of The Causeway I honestly believe the road will be destroyed and unusable well before 2041 comes around, which in itself renders the plan invalid. What Hanham Way and The Causeway need is less traffic not more that the proposed developments will create. At the public meeting held some 12 months or so ago at the United Reform Church Nailsea the NSC Traffic Officer present stated that there is an intention to try and reduce traffic using The Causeway, but no suggestion or plan as to how that would be achieved now, let alone after further proposed development. So it seems certain that in the absence of any council road building to better serve access to and from Nailsea, particularly from the North, that traffic will be even more excessive, roads even more excessively overloaded, even more damaged and more accidents inevitable. What is needed is a ink road from the A370 (near Brockley to also serve the airport) to link with Junction 20 of the M5 to provide access from North Somerset to/from the M5 bypassing Nailsea and Tickenham. Aspur from this link road into Nailsea West End trading estate would provide access into Nailsea and mean HGVs not having to travel through Nailsea. Why is this not in the plan to ease traffic, noise, pollution, congestion an make neighbourhoods liveable? Hanham Way is a residential road and neighbourhood that has already been made an unliveable neighbourhood by excessive traffic and its associated noise and pollution. The health and mental health and stress impact of this traffic on residents is already severe. Approval of any development that adds additional traffic to this route would show complete disregard or consideration for the welfare and negative impacts on the residents whose lives are already blighted. It would be a case of knowingly and consciously sacrificing the health, welfare, peace and lives of the residents living on and near it just to build more houses. Which is more important?. Just because the Council has the power to ruin people's lives by approving yet more development it doesn't have to do so.			
62810017	Guy Stone			No		No	No	The vilage of Backwell is just that - a village. It has never been targeted for extensive development or lumped in with Nailsea. Nailsea is a small town with a shopping centre and amentities and has been recornised as a growth area. Backwell has not. Backwell is not a 'suburb' of Nailsea. For many years those in the village of Backwell have fought off large scale development proposals - I point out the case of Farleigh Fields where the same developers have repeatedly put in applications for housing since the 1980s. These developers have operated though past acquisition of large areas of farmland surrounding the village in a cynical attempt to exploit weakness in the planning system, as are occuring at present. Those of us who live in Backwell feel badly let down by North Somerset Council on it's proposals to urbanise the village and consequent destruction of residents quality of life, many of which are long established families who have been in the village for generations (mine for over 300 years). The vast majority of these development proposals are on greenfield land, of high agricultural productivity and of significant value for biodiversity, including strategically for species such as horseshoe bats. Not only does the proposed plan diminish the habitats available for biodiversity, they are eliminating any chances of future recovery or increase in biodiversity through increased land take, noise, pollution and disturbance through yet more people and their domestic pets. The tattered fragments of habitat left will be far below the sizes required to support flora and fauna of the diversity and quality that we currently have or could have in the future. Attempting to sell this proposed excessive development on the basis of more 'badly needed' affordable homes is laughable. No way will this happen, developers target Backwell because it is a nice place to live and can ensure nice fat profits for their companies and individuals working within them. Housing will be bought up by wealthy professionals, working in major cities such as Bristol, Cardiff and London, etc. and certainly not 'local people' as implied by the planning authority. Backwell is a village in it's own right, not commuterville. In relation to the 'high frequency bus corridor' we do not need improvements for this in Backwell. I am a frequent user of the bus service and usually sail through the village. The delays are in urban areas such as Brisol, with it's plethora of traffic lights, roadworks, lack of bus priority and way too many bus stops. This is where the focus needs to be.	Target brownfield areas for development as set out in the councils own policies, not greenfield land in vilages cherished by those who live there. Start forcing developers to develop sites that may be less desirable to them such as ex industrial land. Yes, this might cost more in cases where for example contamination is an issue but is the right thing to do and vastly better than permanently destroying greenfield land. Be more proactive in putting unoccupied housing into use. Listen to those who are living in Backwell before forcing this awful destructive plan onto them. Stop putting nature into silos. It needs to be recognised and given value rather than crammed into land that fits with policies for growth and development, where or not this is appropriate and sustainable in the long term. Develop a backbone and stand up to national misguided policy.		
31062913	R Storrar		KWAW	Yes		Yes	Yes			This area of development will be backed up with better transport links. It is unavoidable that these smaller villages will be overwhelmed by the development, but this has to be seen within the greater context of keeping the developments sustainable and contained to make the best use of the space, rather than haphazard development across the better agricultural land and pushing more traffic into the narrow lanes that surrond the more remote viallages.	
58550113	Olivia Summerell			No	• Justified • Effective • Consistent with national policy	No	No	I am writing to formally object to the North Somerset Local Plan 2041:pre-submission plan (Reg 19) for the proposed development. The development of this site, which is designated as Green Belt land, would have serious environmental consequences and significantly increase the risk of flooding in the area. 1. Green Belt Protection & Environmental Impact The Green Belt exists to prevent urban sprawl, protect the countryside, and maintain open spaces for biodiversity and public well-being. This development would permanently destroy an area of natural land, causing: • Irreversible Loss of Green Space: The Green Belt designation ensures that land remains open and undeveloped for the benefit of both people and wildlife. If this development is approved, it sets a dangerous precedent for further encroachment on protected land. • Harm to Biodiversity: The proposed site supports diverse wildlife, including protected species such as [mention any known wildlife in the area]. The destruction of their habitat would lead to a decline in local biodiversity, disrupting the delicate ecological balance. • Increased Pollution: The loss of trees and vegetation will reduce the natural ability of the land to absorb pollutants, leading to increased air and noise pollution. The additional traffic and construction activity will worsen air quality, negatively impacting the health of residents. • Loss of Carbon Sequestration: Green Belt areas play a crucial role in absorbing carbon dioxide and mitigating climate change. Removing natural vegetation for development will contribute to increased	as above	as above	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								carbon emissions and reduce the area's ability to combat climate change effects. 2. Increased Flood Risk The proposed site is in an area already at risk of flooding, and development will significantly worsen the situation. Key concerns include: • Loss of Natural Drainage: Green Belt land acts as a natural sponge, absorbing rainwater and preventing excessive surface runoff. Paving over this land with impermeable surfaces such as concrete and asphalt will reduce the area's ability to absorb rainwater, increasing flood risk in the immediate and surrounding areas. • Overloaded Drainage Systems: Existing drainage infrastructure may already be struggling to cope with rainfall. Additional surface water runoff from the development could overwhelm drainage systems, leading to more frequent and severe flooding, which could affect nearby homes and businesses. • Climate Change Considerations: With climate change leading to more extreme and unpredictable weather, it is crucial to safeguard areas that naturally mitigate flooding. Removing natural flood defenses, such as fields and grasslands, will only exacerbate the issue. 3. Conflict with National & Local Planning Policies The National Planning Policy Framework (NPPF) states that Green Belt land should only be developed in "exceptional circumstances." This proposal does not meet that threshold and contradicts the fundamental principles of Green Belt protection. Additionally, the development conflicts with local flood risk management policies, which prioritize sustainable land use and flood mitigation strategies.			
14824097	G Thomas								This is the fourth recent Local Plan the local residents have had to comment on and it does seem that the comments made by the Community have again been ignored. The Plan is entirely driven by Central Government specifying the amount of residential development they require to be built whilst they have a complete lack of data on which to base it. With the level of illegal immigration over recent years, the Government have no accurate information on the current population and its potential growth. There is already substantial housing construction in North Somerset and all over the country with virtually no infrastructure improvements and locally there seem to be immigrants moving into the houses just built in the community and not blending in with the local population – people have seen them standing in their gardens, looking into their windows or playing on their drives. Concentrating mainly on Nailsea/Backwell area :- The Plan shows virtually no infrastructure plans which are essential before any more housing is planned. In Nailsea and Backwell, the only new road proposed in the Plan runs from the A370 through to Station Road which links Nailsea and Backwell. This would be madness as Station Road is already beyond capacity – the Planners and Planning Inspector should visit and see the volume of children walking daily from Nailsea to Backwell Comprehensive with Backwell schoolchildren walking the other way to Nailsea School the numbers of which force some children to walk in the road. How this new road could be built is a mystery as it crosses the mainline railway to London and the Southwest – at the existing bridge, the road cannot be lowered or widened as it already floods trapping one vehicle last winter and the railway line cannot easily be raised especially so close to the station. Schools are already at capacity or beyond, roads are the same as are doctors surgeries and dentists whilst the leisure facilities are minimal with the swimming pool building at the end of its life. The plan involves the breakdown of the Green Belt with the loss of agricultural land. How does this relate to Government policy for food security ? Much of the land is very low lying and if the Government are concerned about global warming and rising sea levels then developments proposed in the Plan would be stupid. Water supplies and drainage are unlikely to cope with all the proposed development that has already been given planning consent before the additional schemes added in this Plan. There is limited employment in Backwell and Nailsea so that the roads across North Somerset will face even more commuters and congestion which has been made worse by the Council's bus lanes, especially on the Long Ashton by-pass where it is rare to ever see a bus in the bus lane. The one bus I saw was in the only remaining lane as there was a cyclist in the bus lane. We now have an empty bus lane and a lost commuter lane. One infrastructure that should now be done before any more developments are even considered is building a link from the end of the Long Ashton by-pass to the empty junction on to the M5 at Clevedon. This would relieve the traffic through Cleeve and Congresbury to the south and		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									Wraxall and Tickenham to the north plus on Station Road linking Backwell with Nailsea as well as all the narrow lanes around Nailsea /Backwell which have become “Rat Runs” – we used to cycle around them but they are not now safe. The proposed extra housing development shown on the draft plan is disproportionate for Backwell and Nailsea with population growth of 55 % for Nailsea and 80 % for Backwell compared with Clevedon 6%, Portishead 14% and Weston 22%. This is totally unbalanced. Housing is proposed to the south of Nailsea which eats into the farmland which provides the separation barrier between Nailsea and Backwell and butts onto the wildlife area around the lake where any development would destroy a very tranquil wild life area and bat habitat. The Station at Nailsea/Backwell is well used by commuters but the access can’t cope with disabled people from Bristol who have to get off at Yatton and travel back to be able to get off on the side where there is a ramped access. The Station car park is full with additional cars parking in residential roads following the introduction of parking charges. The number of trains and carriages are not enough for the current commuters let alone any more. The introduction by North Somerset Council of parking charges in the centre of Nailsea will result in even more local shops closing as people will be going to The Mall which is near and has ample free parking. Also the future of the supermarkets becomes more uncertain. It has also resulted in more street parking around the Town so that for example two buses can’t pass on Mizzymead Road and other roads have become more congested. The Plan is not fit for purpose.		
12476353	Historic England (R Torkildsen)		Historic England					The land east of Backwell is a large greenfield site in the Green Belt within the wider setting of a number of highly graded heritage assets including Tyntesfield House (Grade I), Tyntesfield Registered Park and Garden (Grade II*) and the Grade I listed churches at Wraxall and Backwell Church Town. The significance of the Grade II Listed Woolley’s Farmhouse would also be directly affected. However, the HEA has indicated how, with care, a heritage-led masterplan could establish a sensitive layout and massing response to the existing topography and levels, locating development to the west of the site and away from the higher ground. This masterplan could illustrate how to utilise new and existing woodland and orchard planting to break up the development in views from Tyntesfield, Wraxall and Backwell Church Town. Figure 11 on page 115 of the HEA also illustrates the existing woodland that should be retained as a buffer to lessen intrusion on views from Tyntesfield. It indicates where buffers and a zone of vernacular development would be important. This response would go some way to limit the impact of the affected heritage assets and their settings. Without these mitigations we assume that the development would cause notable harm to the significance of numerous heritage assets affecting its suitability. The HEA refers to two areas of the site marked as (B) that are of ‘high heritage sensitivity’ due to the impact on the Backwell Farleigh Conservation Area and an intrusion on important views from Tyntesfield. It is unclear, but appears to imply, that development here should be avoided to limit unacceptable harm. It will be helpful for the council to clarify this matter to indicate whether the proposed allocation, and its capacity, could be justified, be evidence led and in accordance with national policy.	The HEA refers to two areas of the site marked as (B) that are of ‘high heritage sensitivity’ due to the impact on the Backwell Farleigh Conservation Area and an intrusion on important views from Tyntesfield. 29224257	Susan and Paul Triggle			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	We feel that North Somerset Council have not properly considered the negative impact to Tickenham roads and lanes, which are currently seriously congested and very unsafe for cyclists and pedestrians due to pinch points and the narrowness of the main road through the village. These roads and lanes cannot support the 40% increase in the proposed new homes by the Local Plan. We live in Church Lane, Tickenham and have done so for 30 years. Due to the vast increase in use of vehicles from the upsurge of housing development locally and the narrow single-track lane which is only 4.2metres wide in places, this has given us a huge problem when entering and exiting our own drive. Vehicles including lorries use our and other neighbours drives as passing place, causing us to be unable to come in and out of property easily and is causing damage and cracks to the end of our driveway. The constriction of Church Lane, also impedes on the Safety of pedestrians’ cyclist and Horse riders due to speed of vehicles, narrowness and the increase of traffic using the lane. Any further increase of development and subsequent upsurge in vehicle use will render Church Lane, Washing Pound Lane and The Causeway to be very unsafe dangerous & hazardous indeed. We deem that North Somerset Council (pre-submission of Local Plan 2041) must grasp and recognise that the main road and lanes of Tickenham Village are totally inadequate for any further increases of traffic volumes. Susan & Paul Triggle	NSC have not properly considered the traffic impacts to Tickenham roads and lanes which are currently seriously congested and unsafe for cyclist and pedestrians. These road and lanes cannot support the increase in new homes proposed by the Local Plan 2041.

39220001	Christopher Watkins			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The plan proposed is not consistent with strategic priorities of North Somerset Council. Yes, it will provide additional houses, but Backwell and Nailsea do not have an adequate road system, primary health care facilities and schools to support such a massive increase in population. The houses will be built on prime agricultural land of which there is a national shortage. Backwell is unable to provide job opportunities locally so most residents will have to travel into other areas, principally Bristol, which provide jobs. With this development Backwell will become a dormitory and cease to be a community. The bus and rail services are at present inadequate to such a large increase in population and the railway station is inadequate. Furthermore housing around the lake will be prone to flooding and the proposal of the road linking Backwell and Nailsea is inadequate, highly expensive to put in and of questionable feasibility.	I do not have the expertise to comment.	I do not have the expertise to comment.

39220001	Christopher Watkins			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The plan proposed is not consistent with strategic priorities of North Somerset Council. Yes, it will provide additional houses, but Backwell does not have an adequate road system, primary health care facilities and schools to support such a massive increase in population. The houses will be built on prime agricultural land of which there is a national shortage. Backwell is unable to provide job opportunities locally so most residents will have to travel into other areas, principally Bristol, which provide jobs. With this development Backwell will become a dormitory and cease to be a community. The bus and rail services are at present inadequate to such a large increase in population and the railway station is inadequate. Backwell is allocated a higher number of houses than any other village in North Somerset and even a higher growth percentage than towns. For example, Backwell is expected to take 7% of the district's housing allocation, compared to Clevedon's 2%, There has been no impact assessment of the proposals.	I do not have the expertise to comment.	I do not have the expertise to comment	
21123425	Mrs R Watts			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Loss of Green Belt - The site lies in a portion of the Green Belt which fulfils the purpose of preventing sprawl from Nailsea, and preserving the rural setting of the settlement and openness of the countryside. Green Belt release must be justified within a strict framework that prioritizes minimizing harm and using other land first. The Council has not demonstrated that all other reasonable options have been exhausted (brownfield, urban infill, higher densities in the existing settlement). No sustainable transport links have been shown which would compensate for the loss of green belt. This site should not be considered as suitable for release of green belt. In addition, the allocation for north Nailsea conflicts with the Wraxall & Failand Neighbourhood Plan (2022–2038), which has already been adopted by the Council and forms part of the legal Development Plan. That plan strongly protects the Green Belt, rural character and road safety.			
58650209	C Welch			No	• Positively prepared • Justified	Unsure	No	1 Backwell already has 800 new houses approved, a 40% increase for the village. These additional numbers would lead to complete overdevelopment. 2 The proposed road would not effectively serve Nailsea's traffic or relieve congestion on Station Road, Backwell Common, or Chapel Hill. Engineering the road under or over the railway would be highly expensive and possibly unfeasible. 3 Despite this increase, there is a deficit in school places and no investment in health services or leisure facilities. The lack of infrastructure and services cannot support another 1,000 houses. 4 Backwell is allocated a higher number of houses than any other village in North Somerset, and even a higher growth percentage than towns. Backwell is expected to take 7% of the district's housing allocation, compared to Clevedon's 2%. 5 There is no needs or viability analysis for an extra 1,000 houses. 6 Backwell is not an employment hub, most residents commute 7 No social cohesion impact assessment has been provided. 8 Grade 1 Agricultural Land currently used for food crops and grazing. There is only 7% of this high quality land left in the whole of North Somerset. 9 Government policy states that "we must protect our best and most versatile land" to safeguard food security. The proposals contradict this policy and undermine food security. 10 Development would destroy valuable wildlife habitats and further harm biodiversity in one of the world's most nature-depleted countries. 11 The proposals threaten the Brockley Maternity Roost and SSSI, with rare Lesser and Greater Horseshoe Bats relying on the land for food. 12 The Infrastructure Delivery Plan lacks analysis and costings, and there are no funding guarantees for the new road or services. 13 Backwell Common and surrounding areas are prone to flooding, which would be aggravated by more housing. 14 Concerns regarding the strategic growth location designation include the impact on the area's character, the loss of Greenbelt and high-quality agricultural land, the risk of flooding, and uncertainty over whether the road can be funded and delivered on time to support the proposed housing. 15 Backwell Lake (Reservoir) and adjacent fields, where the new roads and housing is planned and are on a floodplain, which floods regularly. 16 Government policy requires 50% affordable housing on Greenbelt Land, but this reduces the funds developers contribute towards infrastructure. 17 The sheer volume of growth with the required investment infrastructure and services over such a short period is destabilising, unsustainable and undeliverable. 18 The railway station is not fit for purpose as a transport hub; it remains inaccessible for people with mobility issues and presents serious challenges when travelling with young children.	Reject it in entirety. NO new houses.		BPC LP Leaflet Nov 2025.pdf
62830337	Chris Welch								My main concerns in Nailsea and Backwell are that there seem to be too many houses being built on, but there doesn't seen to be any infrastructure - roads, schools, doctors, car parking to support them. There are only 2 roads out of Nailsea and these can get congested if travelling at rush hour. If there is a accident on the M5, then the A370 gets gets very congested as happened a week or two back. A number of these houses are being build on fields, grassland that once it is built over has gone forever. Some of these green fields are on flood land, with rhynes there to support drainage. A number of these house will be liable to flood. With climate change, extreme weather is becoming more frequent. There seem to be very few 2/3 bedroom houses or flats which young people looking for their first home could afford. There is also the environmental aspect that wildlife will lose their natural habitat and again - once gone, lost forever. The green spaces between Nailsea and Backwell seem to be getting smaller, soon it will be one urban sprawl.		
51430017	Ralph Wood			No	• Positively prepared	Unsure	Unsure	Protect the green field east of West Leigh Primary School: I request the removal of the field to the east of West Leigh Primary School from the Grove Farm / Rodney Road housing allocation.	I request the removal of the field to the east of West Leigh Primary School from the Grove Farm / Rodney Road housing allocation.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					• Justified • Effective • Consistent with national policy			Because: The land functions as an important environmental buffer between the school and surrounding housing, helping reduce noise, air pollution, overheating and loss of biodiversity affecting children. Once built on, this green space will be irreversibly lost. Protection now is the only opportunity to secure long-term community value. The site has strong potential for designation as Local Green Space, as it is: demonstrably special to the local community, local in character, and offers clear recreational, educational, health and ecological benefits. Development here would represent avoidable harm to children's outdoor provision, at a time when national policy strongly emphasises active travel, outdoor learning, physical activity and mental wellbeing.			
62865377	Gill			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	No definite provisions for any increases to medical, sports and educational services Proposed plans for Nailsea equates to a 55% increase in population. Loss of agricultural land for ever with subsequent liss of wildlife eg the Greater and Lesser horseshoe bat's,			
63070401	Emilia Leung			No	• Effective	No	Unsure	The Proposal is overly reliant on inflated national targets and infrastructure that cannot be delivered – whilst at the same time, ignoring local constraints. The Proposal is also inconsistent with national policy. Green Belt boundaries should only be altered in exceptional circumstances – and the review must show no "clear evidence that doing so would fundamentally undermine the purposes…of the remaining Green Belt".			
51572577	BNSSG ICB		NHS Property Services							Policy LP3 states that "improvements to local infrastructure including transport, recreation and leisure, health and social, and environmental infrastructure as set out in the Infrastructure Delivery Plan" will be required. The Policy adds that "all housing proposals will be required to positively contribute to the delivery of infrastructure, including transport, and other measures through either direct delivery and/or development contributions as part of an agreed phasing strategy linking the delivery of proposed growth to infrastructure provision. A phasing strategy must be provided with all planning applications detailing how the development proposed will support the delivery of infrastructure in line with the Infrastructure Delivery Plan. Development proposals will require specific phasing conditions and/or obligations to be secured to ensure any required supporting infrastructure is delivered at the appropriate time". BNSSG ICB generally supports Policy LP3 and considers that this policy wording provides sufficient flexibility in order for the ICB to establish the preferred primary care mitigation approach in Nailsea and Backwell. The policy is justified as it is founded on robust evidence presented in the Infrastructure Delivery Plan.	
58184097	Melanie Falk			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	There is no evidence that these houses are actually needed here in this rural setting.The roads are not suitable for increased traffic and when busy (most days on west end) no emergency vehicles could get through. Extra houses lead to increased risk of flooding. Extra housing is a threat to wildlife and the environment Local NHS (which I work for) are already over stretched .These decisions are made in Weston not with or for the community here . Once fields are gone they and the wildlife are gone for ever, creating a worse world for us all to live in . Build on brown field sites where there is employment and not in the countryside . I completely oppose building on agriculture land .We need this land for food	Only build on brown field sites or near to local facilities. If the building is to help the homeless or young (which is the only justification) they should ALL be affordable . Not 5 bed executive houses which is what is currently happening. Its just a money making exercise with suggestions being made of back handers and bribes to push planning through where there is no local support	definitely not	
62854785	Rob Stewart		Ofqual, Earlsdon Park, 53-55 Butts Rd, Coventry CV1 3BH	No	• Justified • Effective • Consistent with national	Unsure	Unsure	Justified • Site selection and Green Belt changes around Nailsea are not the most appropriate strategy when considered against reasonable alternatives. The Stage 1 Strategic Green Belt Assessment shows the northern parcels around Nailsea perform strongly/moderately against purpose (b) (preventing towns from merging) and contribute to purpose (c). Releasing this land while "replacing" Green Belt to the south does not replicate those functions, so the case for choosing this configuration is not robust.	1) Green Belt: justify, sequence, and evidence the boundary changes Modify Policy LP3 and the supporting text to: Complete and publish a Stage 2 Green Belt Assessment for Nailsea–Backwell before any release north of Nailsea is taken forward, with site-specific testing of purposes (a),		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					policy			• A “swap” framed on net area does not answer the evidence-led questions the NPPF and PPG require (sequential approach to release, grey belt first, Footnote 7 constraints, and the plan-wide “fundamentally undermine” test). There is no Stage 2 conclusion that the chosen pattern is the best available when all harms and alternatives are considered. Effective • Delivery of the transport mitigation relied on in LP3 is not demonstrated. The council’s own Transport Position Statement records that the Backwell Crossroads bypass/rail-crossing concept would be a major investment with environmental and delivery challenges and, at the numbers then proposed, was “not required or desirable”. The later Nailsea & Backwell Transport Strategy does not recommend the “North Nailsea Link Road”, and the Stage 7 Transport Assessment presents a package approach rather than a committed, funded scheme that relieves Station Road and Crossroads at peak. That goes to deliverability and effectiveness. • Social infrastructure is not secured. The Infrastructure Delivery Plan (October 2025) is expressly draft and subject to change, with funding and phasing to be determined. LP3’s reliance on future contributions and a phasing strategy does not amount to secured, ring-fenced investment for primary care or leisure capacity at Nailsea. That is a delivery risk, not an effective mitigation. Consistent with national policy • Green Belt: The approach conflicts with the NPPF’s Green Belt tests. Boundary changes must be justified by exceptional circumstances, follow the sequential approach (PDL then grey belt), and must not “fundamentally undermine the purposes (taken together) of the remaining Green Belt across the plan area”. A like-for-like “replacement” to the south does not satisfy these requirements; nor does it address Footnote 7 constraints and the sustainability test for locations. • Sustainable transport: The plan relies on strategic highway/rail-crossing infrastructure that is neither committed nor costed, contrary to the NPPF’s requirement to locate and phase development to enable sustainable transport (paras 110 and 115) and to demonstrate infrastructure can be delivered in step with growth The proposed figure of 1,817 new homes in Nailsea would lead to over-development of the town Summary position On the evidence available, placing 1,817 dwellings at Nailsea would force development beyond the town’s realistic capacity, drive harms to the Green Belt that conflict with national policy, and fail key NPPF 2024 tests on sequential release and sustainable patterns of development. The Stage 1 Strategic Green Belt Assessment and the Local Housing Need Assessment together indicate that the quantum proposed cannot be accommodated at Nailsea without significant reliance on land that either (i) is not grey belt, and/or (ii) is subject to Footnote 7 constraints, or (iii) performs strongly against Green Belt purposes – all of which point to over-development if pursued. A. The plan’s proposed scale at Nailsea conflicts with the sequential Green Belt release approach and signals over-development The NPPF 2024 requires a sequential approach to Green Belt release: first previously developed land, then grey belt (land not strongly contributing to purposes a, b or d), then other Green Belt – and only where doing so would not “fundamentally undermine” the five purposes across the plan area. Around Nailsea, the Stage 1 assessment identifies only one parcel directly north of the town, P-006, as an “area of search for potential grey belt” – and even that is flagged with multiple Footnote 7 designations (ancient woodland at Towerhouse Wood, listed buildings at All Saints Wraxall, Local Green Space, and areas within Flood Zone 3b). This means much of the land likely to be looked at for large growth is either constrained or not grey belt, sharply limiting sequentially compliant capacity By contrast, the other Nailsea-facing parcels perform moderately or strongly against purpose (b) (preventing towns from merging) and/or purpose (c) (safeguarding countryside), indicating they are not grey belt and should not be the first locations for release. Specifically: P-005 (north-west of Nailsea): strong contribution to purpose (b) because development would significantly reduce separation between Nailsea and Clevedon; moderate to purpose (c); Footnote 7 constraints include the Tickenham, Nailsea and Kenn Moors SSSI and Flood Zone 3b. P-004 (north of Nailsea): strong to purpose (b) for the Clevedon–Nailsea gap; moderate to purpose (c); with ancient woodland and SSSI (Court Hill) present. Given the limited, constraint-affected grey-belt “area of search” near Nailsea, the plan’s 1,817-home quantum would necessarily spill into parcels that are not grey belt and/or perform strongly against Green Belt purposes. That is the very definition of over-development under the NPPF 2024 framework, because the sequential test cannot be met at this scale in this location. B. Large-scale growth at Nailsea risks eroding the critical gap function (purpose b) and openness (purpose c) The Stage 1 assessment evidences that land north and north-west of Nailsea plays a strategic gap role – especially towards Clevedon and, in parts, Bristol/Portishead. Releasing land in P-004 and P-005 would “significantly reduce the perceived and actual distance” between towns, which the methodology treats as strong performance against purpose (b); such releases therefore count against the fundamentally undermine test and should be avoided unless no proportionate alternative exists The same parcels possess largely rural/strongly rural character and low built-form percentages, evidencing openness under purpose (c). A quantum of 1,817 homes would require extensive take from these open areas, undermining the essential Green Belt characteristic of openness and pushing development well beyond what the Stage 1 evidence suggests could be accommodated without strategic harm. C. The plan must show exceptional circumstances and a plan-area “fundamentally undermine” judgement – but Stage 1 is clear that this judgement depends on later, more granular work. The NPPF 2024 requires authorities to review boundaries only if needs cannot be met by other means and altering boundaries would not “fundamentally undermine the purposes (taken together) of the remaining Green Belt” across the plan area. The Stage 1 methodology explicitly states that this fundamentally undermine test “can only be performed once Stage 2 assessments are completed”,	(b), (d) and Footnote 7 constraints, and a plan-area judgement on whether the proposed releases would fundamentally undermine the purposes (taken together) of the remaining Green Belt. Apply the sequential approach to release: prioritise previously developed land, then grey belt (land not strongly contributing to purposes (a), (b) or (d)), then any other locations only where necessary. Embed this sequence in LP3’s decision criteria and show how it has been applied around Nailsea, including a published schedule of PDL/ grey-belt alternatives considered and rejected with reasons. Remove any implicit “net-area swap” logic (i.e., “replacing” northern Green Belt with a larger tract to the south). Boundaries must be justified, permanent, and drawn clearly to serve the five purposes. If the northern parcels are strong for purpose (b) (Clevedon–Nailsea gap), a southern tract cannot substitute that function; the release north of Nailsea should be paused unless Stage 2 concludes otherwise. Map and fix permanent boundaries for any changes using defensible features (A-roads, railways, rivers or robust treelines) and publish the boundary rationale alongside the Stage 2 results. 2) Transport: replace indicative, unfunded schemes with committed, deliverable mitigation and binding phasing. Modify Policy LP3, the Transport chapter and the IDP to: Remove reliance on an uncommitted “strategic rail crossing/new road” as if it were deliverable. The transport evidence does not recommend the North Nailsea Link Road and treats a bypass/rail-crossing as a major, uncertain investment. LP3 must reflect this reality. Insert binding phasing conditions tying any large allocations at Nailsea/Backwell to: completion of the Backwell Crossroads BSIP works and bus priority a funded, consented set of local schemes (active travel, station access, demand management) with delivery triggers before first occupation and at defined dwelling thresholds a contingency clause to cap or rephase housing if strategic mitigation cannot be delivered on time. Require full feasibility for any rail crossing: business case, route engineering, flood risk, ecology and land assembly, with Flood Zone sequential/exception testing and Footnote 7 checks. Do not assume its delivery in LP3 until feasibility and funding are secured. 3) Health and leisure: convert generic “contributions” into named, costed, ring-fenced schemes with triggers Modify Policy LP3 and the IDP to: Replace generic references to “improvements to local infrastructure” with named projects for Nailsea: -a primary care expansion or new facility agreed with NHS partners, including floorspace, cost, funding source and delivery timeline -a leisure facility programme (either a major Scotch Horn expansion or a new multi-court/indoor sports hub) with design scope, capital cost, funding and phased delivery linked to occupations Upgrade the October 2025 IDP from draft to adopted (post-Reg 19) with firm funding sources (S106, CIL, and grant where applicable) and binding triggers (for example, “no more than 250 occupations until GP facility Phase 1 is open”) to ensure capacity is delivered in step with growth. Publish a viability-tested delivery plan showing how Golden Rules obligations (affordable housing uplift, infrastructure, accessible green space) will be met without displacing health/leisure funding, and include a monitoring framework that escalates action if milestones slip. 4) Flood risk and environmental constraints: hard-wire compliance for any southern Green Belt designation or crossing Modify LP3 and the Environment/Transport policies to: Apply EA Flood Map for Planning and the SFRA: require the sequential test and, where relevant, exception test for any strategic link or crossing and for access routes; state that development in Flood Zone 3b (functional floodplain) will be avoided unless policy-compatible and demonstrably necessary with compensatory storage.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								because it relies on both strategic and finer-grain evidence. Proposing 1,817 homes at Nailsea ahead of a complete, settlement-specific Stage 2 conclusion on impacts and alternatives therefore pre-judges this critical test and lacks the evidential foundation required by national policy – again pointing to over-development as presently framed. D. The scale proposed at Nailsea is misaligned with the district housing strategy and the LHNA's sustainable distribution considerations The LHNA sets the district Local Housing Need at 1,580 dwellings per year (23,700 dwellings over 2026–2041) and shows how overall growth must be balanced with affordability and viability, emphasising that Scenario B (which better addresses suppressed household formation) would require a high proportion of Affordable Housing and a different mix (many 1–2 bedroom homes) to meet need. Concentrating a very large share in one settlement with known environmental and Green Belt constraints increases delivery risk and reduces flexibility to achieve district-wide affordable outputs and housing mix in the right places. The LHNA's jobs alignment analysis shows around 15,000 additional jobs are realistic over the period (ESPRE 2025 update), with commuter patterns indicating the need to distribute homes where they most efficiently align with employment growth and sustainable travel. A high single-settlement allocation in Nailsea (which is not a major employment node) risks unsustainable commuting patterns unless significant transport infrastructure is upfront-funded – a requirement that the plan must demonstrate under NPPF paragraphs 110 and 115 (sustainable transport) and the sequential sustainable location tests cited in the Stage 1 methodology. In the absence of that, the quantum reads as over-development in a location that is not demonstrably the most sustainable focus for a district-scale share of growth. E. Footnote 7 constraints around Nailsea further reduce realistic capacity and compound over-development risk. The Stage 1 pro-formas catalogue multiple Footnote 7 constraints in the Nailsea hinterland, including: Tickenham, Nailsea and Kenn Moors SSSI; Ancient woodland belts (e.g., Towerhouse Wood; Court Hill; Leigh Wood/Markham Bottom in nearby parcels); Flood Zone 3b areas; and Local Green Space designations. These constraints are expressly recognised in the PPG 2025 as factors that may provide strong reasons to restrict development and must be considered alongside grey-belt identification and sequential release. They point to limited settlement-edge capacity for large allocations and make a target of 1,817 homes at Nailsea intrinsically over-ambitious. F. The "Golden Rules" obligations reinforce that such a large release at Nailsea would be disproportionate unless extraordinary infrastructure and green space commitments are secured upfront. NPPF 2024 paragraphs 156–159 require major housing on released Green Belt to deliver: (a) affordable housing uplift (15 percentage points above the highest existing requirement, capped at 50%), (b) necessary infrastructure, and (c) high-quality accessible green space meeting national standards and supporting nature recovery/LNRS outcomes. With Nailsea's edge constrained by SSSIs, ancient woodland and floodplain, the green-space and nature-recovery obligations would be especially onerous – further evidencing that the proposed quantum amounts to over-development unless the plan demonstrably secures and phases the necessary infrastructure and environmental gains (which it currently does not). Conclusion On the published evidence, 1,817 homes at Nailsea exceed what can be delivered sequentially, sustainably and without strategic harm to Green Belt purposes around the town. The Stage 1 Green Belt Assessment shows that most logical growth directions are not grey belt and/or are heavily constrained, while the LHNA emphasises district-wide affordable and mix objectives that would be fragilised by an over-concentration at a single, constraint-bound settlement. Pending a complete Stage 2 assessment and a robust plan-area fundamentally undermine judgement, the proposed Nailsea quantum should be substantially reduced and redistributed to locations that (i) genuinely satisfy the NPPF sequential test, (ii) avoid strong-performing Green Belt parcels, and (iii) better align with sustainable transport and jobs. Traffic infrastructure The proposed new road would not serve Nailsea's traffic or relieve congestion on Station Road, nor would it help traffic travelling from Backwell towards the M5; and the new link road and under-rail crossing are likely to be extremely expensive and engineering problematic due to proximity to the River Kenn Summary position On the published transport evidence, the "new road" concept between Nailsea and the A370 does not deliver the relief the plan claims for Station Road or for Backwell-to-M5 movements. The council's own position statements and strategy work show that an additional rail crossing and bypass would be a major investment with significant environmental and delivery risks, with no funding certainty and not recommended at the housing levels now proposed. The engineering of an under-rail link in the River Kenn floodplain and SSSI landscape would be complex, costly and constrained by Footnote 7 designations and flood risk policy, making delivery uncertain and benefits doubtful. A. The plan asserts relief of Station Road and Backwell Crossroads, yet its own transport evidence does not show a deliverable highway scheme that achieves this Policy LP3 expressly claims that a package of new transport infrastructure will "relieve pressure on Station Road and the Backwell Crossroads" and that a strategic rail crossing will "provide an alternative multi-modal route between Nailsea and the A370." However, this is presented indicatively and contingent on future feasibility. There is no committed, funded highway scheme with tested capacity benefits. By contrast, the council's Nailsea and Backwell Transport Position Statement (updated October 2023)	Respect the Tickenham, Nailsea and Kenn Moors SSSI hydrology and ecology: embed design principles (rhynes protection, nutrient management where applicable, lighting controls for bat corridors) and require a compliance statement for works affecting the River Kenn. Align with the West of England Local Nature Recovery Strategy: if a "Nature Park" or wetland creation is proposed, show how it contributes to LNRS priorities and has secured management funding, rather than being a contingent aspiration. 5) Housing distribution at Nailsea: adjust quantum and timing to match deliverable infrastructure and Green Belt tests Modify Schedule 1 and LP3 to: Reduce or rephase allocations at Nailsea until (i) Stage 2 Green Belt outcomes are published and the plan-area "fundamentally undermine" judgement is made, and (ii) transport, health and leisure schemes are funded and committed. Add review triggers so the quantum can be increased only when infrastructure is confirmed. Publish the alternatives appraisal comparing North Nailsea with other PDL/grey-belt options and showing why the chosen package is the most appropriate strategy when assessed against reasonable alternatives. 6) Policy wording changes in LP3 (Nailsea and Backwell) Insert or replace paragraphs in LP3 along these lines: Green Belt release clause "Release of land from the Green Belt at Nailsea is contingent upon completion and publication of a Stage 2 Green Belt Assessment and a plan-area judgement demonstrating that release would not fundamentally undermine the purposes (taken together) of the remaining Green Belt. The sequential approach to release (PDL, then grey belt, then other locations) will be demonstrated and published alongside the Stage 2 report." Strategic crossing wording "The indicative strategic rail crossing shown on the Policies Map shall not be taken as a commitment to delivery. Any proposal will be subject to full feasibility, flood risk and environmental assessment, consents, land assembly, and funding confirmation. Large-scale allocations dependent on this crossing will be rephased until all the above are secured." Health and leisure triggers "Planning permissions at Nailsea will include obligations to deliver named primary care and leisure projects, with binding occupation triggers aligned to the adopted Infrastructure Delivery Plan." Transport phasing "No occupation of more than X dwellings across Nailsea/ Backwell until Backwell Crossroads BSIP works are complete; thereafter, additional thresholds will be tied to the delivery of local active travel, station access and demand-management schemes identified in the Transport Assessment." 7) Monitoring and early review Add a dedicated monitoring policy or annex requiring the Council to publish six-monthly infrastructure progress for Nailsea (transport, health, leisure, green space) and to trigger an early partial review of LP3 and Schedule 1 if key milestones are missed, ensuring effectiveness.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								records that Backwell Crossroads is a known capacity constraint, that queues extend along the A370, Station Road and Dark Lane, and that strategic mitigation previously explored as a “Backwell Crossroads Bypass” with a new rail crossing would be a major investment with environmental, visual and heritage impacts and stakeholder delivery challenges. With the reduced housing numbers then envisaged, the council explicitly concluded “this intervention will not be required or be desirable” and based its transport position on the basis that the bypass would not be delivered. The April 2022 representations summarising the Stage 4–5 Transport Assessment options similarly note that “active travel rail crossings alone are unlikely to be sufficient to relieve congestion on Station Road and the A370 crossroads,” that an overbridge at East Backwell would be visually intrusive and harmful to the Green Belt, and that all options are “beset by flooding and drainage issues” requiring further investigation before feasibility, cost, viability and deliverability could be established. Taken together, this shows the Local Plan’s stated relief is not supported by a defined, fundable and technically demonstrated scheme. That is a fundamental shortcoming for any claim that the proposed road would serve Nailsea’s traffic or relieve Station Road. B. A “North Nailsea Link Road” concept has been assessed and not recommended. The Nailsea and Backwell Transport Strategy (AECOM, June 2025) includes a specific section on a “North Nailsea Link Road” and marks the concept “not recommended.” It also reviews “Station Road, including rail bridge,” and the “Strategic rail crossing,” setting out pros and cons and qualitative analysis of widening the existing opening. The preferred approach does not endorse a new road solution as the primary fix, again undermining any assertion that such a link would reliably relieve Station Road. The Stage 7 Transport Assessment for Regulation 19 (October 2025) indicates that development at Nailsea and Backwell requires a package approach, with modelling and local mitigation schemes rather than a single highway build as a silver bullet. There is no evidence in that document of a committed, costed new road that demonstrably delivers Station Road relief in the peak periods. C. West-side rail crossing options would not solve Backwell Crossroads, and east-side options are constrained. The Stage 4–5 options evidence states that an underline bridge to the west of Backwell is “more severely constrained than east Backwell and unlikely to be capable of delivering a rail crossing,” and even if possible, a west-side crossing would be located beyond the Crossroads and therefore “would not mitigate traffic movements through the crossroads to the same degree as a crossing at East Backwell.” This is directly relevant to the claim that the road would help Backwell traffic towards the M5: if the Crossroads remains the binding constraint, a new road that does not effectively bypass it cannot materially improve A370 access for M5 trips. For east-side options, the same evidence records visual and Green Belt harm for any overbridge, and states flooding and drainage issues affect all options, necessitating additional work before feasibility, cost and deliverability can be concluded. In other words, the route the plan depends on is neither technically nor financially evidenced at this stage. D. Engineering complexity and cost of an under-rail crossing near the River Kenn floodplain and SSSI. The River Kenn and associated moor system form a low-lying floodplain with rhynes and high groundwater, designated as the Tickenham, Nailsea and Kenn Moors SSSI. Works in this landscape require extensive piling, de-watering, flood compensation and ecological safeguards, with costs increasing sharply for any cut-and-cover or under-bridge beneath a live railway. The SSSI description and related studies confirm the sensitivity of water quality and hydrology in the rhynes network and the presence of notable species, reinforcing the need for strict design and mitigation. Flood risk policy reinforces this. The Environment Agency’s Flood Map for Planning and the national guidance on Flood Zones 1–3b state that major development and access routes in Flood Zone 3b trigger a sequential test that steers development to lower-risk areas, with exception test hurdles where necessary. An under-rail crossing and approach roads in the functional floodplain would face those tests, adding time, cost and delivery risk. The council’s own Strategic Flood Risk Assessment and the Stage 1 Strategic Green Belt Assessment show Flood Zone 3b and SSSI constraints around the Nailsea moors and parcels north of Nailsea, directly where any east-side crossing alignment would need to connect. This points to significant engineering complexity and potential showstoppers that have not been addressed in the Local Plan. E. Policy compliance: sustainable transport first, Footnote 7 constraints, and plan-wide tests. Under the NPPF 2024, development and infrastructure must be in sustainable locations with particular reference to paragraphs 110 and 115 on sustainable transport. The Planning Practice Guidance on Green Belt makes clear that Footnote 7 constraints like SSSIs and areas at risk of flooding can provide strong reasons to restrict development. In Nailsea and Backwell, the presence of SSSI and Flood Zone 3b on the likely alignments means any road-led solution must first demonstrate that it is genuinely necessary, sustainable, and not precluded by those constraints. The Local Plan also relies on release of Green Belt and the “Golden Rules” package for any major housing enabled by such release. The transport and green space obligations are considerable and would need to be tied to the phasing strategy with funding secured upfront. In the absence of a costed, deliverable new road and crossing, the plan cannot show the required infrastructure will be delivered at the right time, which undermines the asserted traffic benefits. F. Net effect for the M5 route choice. Backwell-origin trips heading to the M5 use the A370 corridor and junctions 20 and 21. The council’s 2023 transport position states that congestion at Backwell Crossroads is the limiting factor that introduces delay to bus services and general traffic. It does not evidence a shovel-ready bypass that would remove this constraint. Without a functional bypass that can be delivered, trip-makers still face the same junction saturation and queueing, so the proposed new road does not improve practical access to the M5 in the peak, and may simply redistribute flows locally without net relief. Conclusion			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The Local Plan's assertion that a new road will serve Nailsea's traffic and relieve Station Road congestion, and assist Backwell traffic towards the M5, is not supported by the transport evidence. The council's own strategy work either does not recommend such a road or flags major investment and unresolved feasibility, flood and ecology constraints. An under-rail crossing near the River Kenn floodplain and SSSI would be technically complex and costly, with significant consenting risk under Flood Zone and Footnote 7 policies. Until a fundable, technically workable scheme is demonstrated through detailed design and modelling, the claimed benefits are speculative and should not be used to justify the proposed growth pattern. The plan should remove reliance on this road and prioritise proven, sustainable transport measures, alongside a redistribution of housing growth to locations where infrastructure can be delivered and impacts mitigated in line with national policy. Additional development will place immense pressure on the town's existing health and leisure provision, and there is no direct investment secured to combat this pressure Summary position On the face of the Reg 19 Local Plan and supporting evidence, the scale of growth proposed for Nailsea and Backwell would substantially and immediately increase demand on local health and leisure services, yet the plan does not secure specific, ring-fenced, up-front investment for those services. Policy wording refers to future "contributions" and an Infrastructure Delivery Plan, but the October 2025 IDP is explicitly published as a draft, subject to change and further testing, with funding routes yet to be fixed. That is not direct investment and it provides no certainty that capacity will be in place when homes are occupied A. The scale of growth translates to a large additional population, which will load existing GP and leisure capacity. Policy LP3 makes provision for "around 3,500 homes" at Nailsea and Backwell over the plan period. Even using a conservative household size, that equates to several thousand additional residents drawing on local primary care and leisure facilities. The council's own communications confirm this scale and indicate the associated need for social infrastructure. Local analysis has also used the ONS average household size of 2.4, implying c. 9,979 extra people between Backwell and Nailsea if the package of sites proceeds. In health provision terms, Nailsea's primary care is already concentrated in one large practice, Tyntesfield Medical Group at Tower House Medical Centre, with a substantial registered list and finite clinical space. Adding several thousand new residents would inevitably drive up demand for appointments and allied services unless funded new capacity is delivered in step. [tyntesfield.nhs.uk], [healthgps.co.uk] On leisure provision, Scotch Horn Leisure Centre is the principal public facility in Nailsea. A recent gym expansion of c. £180,000, while welcome, is incremental and does not represent a new town-scale facility proportionate to the planned growth. The Centre remains the single core venue with no accompanying Local Plan commitment to a new leisure complex or indoor sports hub. B. The Local Plan does not secure direct, up-front investment for health and leisure; it relies on future contributions and a draft IDP. Policy LP3 states that development proposals must "positively contribute to the delivery of infrastructure" and refers to a phasing strategy linked to an Infrastructure Delivery Plan. That is a generic requirement to seek contributions; it is not a funded programme for new GP premises, clinical rooms, or leisure buildings in Nailsea, nor does it specify costed schemes and delivery dates. The Infrastructure Delivery Plan (October 2025) is explicitly marked "Draft," to be updated through the consultation and examination process and "continually reviewed." It sets out categories of infrastructure (including "social" infrastructure) but, at this stage, does not fix scheme scope, funding sources and delivery triggers for a Nailsea health centre expansion or a new town-level leisure facility. A draft document, by definition, is not secured direct investment. The council's public statements reinforce this point, explaining that infrastructure would be delivered "via developer contributions or additional government funding if required for major infrastructure," to be set out in the IDP after site decisions. This confirms that funding is not yet in place, and any health or leisure investment remains contingent on later negotiations and grant awards. C. Golden Rules do not guarantee health and leisure capacity will be delivered in time at Nailsea. Where Green Belt release is proposed, the NPPF "Golden Rules" require affordable housing uplift, infrastructure improvements, and accessible green space. However, these obligations operate at a principle level; they do not in themselves secure a specific GP facility or a new leisure complex with committed funding and early delivery. In practice, viability, prioritisation and phasing choices can leave health and leisure items under-funded unless they are tied to firm triggers and ring-fenced budgets, which the plan does not provide. D. Resulting risks for Nailsea residents and services Without secured, up-front investment, new residents will arrive faster than health and leisure capacity can be expanded. That leads to longer waits for GP appointments, limited access to preventative and community services, and crowding at existing leisure facilities, undermining the plan's health and well-being objectives. Stakeholder concern locally already points to GP capacity and green space pressures if large allocations proceed without specific infrastructure commitments at Nailsea. Conclusion The Local Plan's reliance on future contributions and a draft IDP falls short of the direct, certain investment that Nailsea needs to support health and leisure under strategic growth. In the absence of site-specific, costed and fully funded schemes for primary care and leisure, with binding triggers before occupation, the plan would lead to significant pressure on existing provision. This is not sound. Policy LP3 should be revised to include firm delivery obligations: a named and costed primary care project for Nailsea with a commissioning agreement, and a funded leisure facility programme, both secured through conditions and obligations and tied to occupation thresholds. Land to the north of Nailsea is proposed to be removed from the Green Belt and "replaced" to the south. Although the new section is said to be greater in size and to replace the Strategic Gap, this		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								approach is unsound and contrary to national policy and the evidence base. Summary position “Swapping” Green Belt is not a recognised policy mechanism. The National Planning Policy Framework does not operate a net-area or ‘like-for-like’ exchange test; it requires authorities, when altering Green Belt boundaries, to demonstrate exceptional circumstances and to judge whether proposed releases would “fundamentally undermine the purposes (taken together) of the remaining Green Belt across the area of the plan”. Boundaries must be drawn clearly using permanent features, and any changes must promote sustainable patterns of development. None of these tests is satisfied merely because another, larger tract is designated elsewhere, and the Stage 1 evidence shows that the northern Green Belt around Nailsea performs functions the southern tract cannot replace. A. The northern Green Belt around Nailsea performs specific national purposes that a southern “replacement” will not replicate. The Stage 1 Strategic Green Belt Assessment demonstrates that parcels north and north-west of Nailsea strongly or moderately perform purpose (b) – preventing neighbouring towns from merging – and also contribute to purpose (c) – safeguarding the countryside from encroachment: P-004 (north of Nailsea): strong against purpose (b) because it forms a substantial part of the Clevedon–Nailsea gap; moderate against purpose (c). P-005 (north-west of Nailsea): strong against purpose (b) because development would significantly reduce separation between Nailsea and Clevedon; moderate against purpose (c). P-006 (north of Nailsea): moderate against purpose (b) for the Nailsea–Portishead and Nailsea–Bristol gaps; moderate against purpose (c). It is only an “area of search” for potential grey belt subject to extensive Footnote 7 constraints. These functions are geographically specific to protecting gaps towards Clevedon, Portishead and Bristol. A new Green Belt tract south of Nailsea does not sit between those towns; it therefore cannot replicate the anti-coalescence role that the northern Green Belt currently performs under purpose (b). The claim that a larger southern designation “replaces” the Strategic Gap is therefore functionally false for national Green Belt purposes. B. There is no “net gain” or “compensatory swap” test in the NPPF; the correct tests have not been met. NPPF 2024 requires authorities to: demonstrate exceptional circumstances for release; consider whether the changes would fundamentally undermine the remaining Green Belt across the plan area; define boundaries clearly using permanent features; and ensure sustainable patterns of development (including transport, per paragraphs 110 and 115). Simply adding a larger area elsewhere does not satisfy these requirements. The Planning Practice Guidance confirms that decisions about Green Belt land must be informed by applying all relevant NPPF policies – there is no balancing or trading of area. Moreover, the Stage 1 methodology explicitly states the “fundamentally undermine” test can only be performed once Stage 2 (finer-grain) assessments are complete – which has not happened for a Nailsea “swap”. C. The southern tract is heavily constrained and does not target the same harms Much of the open land south of Nailsea lies within or adjacent to the North Somerset Levels floodplain and the Tickenham, Nailsea and Kenn Moors SSSI, a nationally important wetland network of rhynes and peat soils. While designating Green Belt here would help preserve openness (purpose c), it does not address the town-merging risks north of Nailsea that Stage 1 identifies as strong. In short, it cannot “replace” what is lost if the northern parcels are released. D. “Strategic Gap” is a local policy concept, not a substitute for national Green Belt purposes. Earlier council material acknowledged that allocating sites north of Nailsea would require revision of the existing Strategic Gap near Youngwood Lane (Reg 18). However, a Strategic Gap is a local planning designation serving local character/separation aims; it cannot be equated to national Green Belt purposes or used as an offset for the loss of purpose (b) functions to the north. Re-badging land south as Green Belt to “replace” the Strategic Gap therefore does not resolve the NPPF tests that apply to the northern release. E. Policy LP3 does not evidence a robust Green Belt re-definition; it simply requires Golden Rules on sites released. The Reg 19 policy acknowledges that allocations north of Nailsea will release land from the Bristol and Bath Green Belt and then requires applicants to meet the Golden Rules (50% affordable, infrastructure, accessible green space). This does not constitute an evidence-based, plan-wide judgement that releasing the north and designating south would maintain the Green Belt’s purposes taken together across North Somerset. Without a Stage 2 demonstration and a plan-area “fundamentally undermine” assessment, the “swap” is unproven. Conclusion The proposal to release northern Nailsea Green Belt and “replace” it by designating a larger tract south is not supported by the NPPF or the Stage 1 evidence. The northern parcels are assessed as strong/moderate for the anti-merging purpose (b) with town-specific gap functions; a southern tract cannot replicate those functions and therefore cannot be treated as a compensatory substitution. The Local Plan should withdraw the Green Belt release north of Nailsea unless and until a Stage 2 assessment demonstrates exceptional circumstances and shows, plan-wide, that the remaining Green Belt would continue to serve all five purposes in a meaningful way. Otherwise, the proposal is unsound.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
62229345	Julian E								How do you propose to protect the special ancient woodland of Markham Brook? Potentially undisturbed for 1000+ years, it will be destroyed by the development opposite St Katherines.		
62229345	Julian E							I am owner of part of "Markham Brook" which I am aware is a recorded ancient woodland. It looks deceptive on maps and unless you are aware, there is a vertical drop onto rocks into the ravine down which the brook runs. I would be happy to take you down there but am certain there is a danger inherent in building anywhere near it, both to the status of the ancient woodland and to unsuspecting "explorers" on both sides of the brook. Such "Explorers" would erode and eventually destroy the natural and unusual ecology in the ravine.			
60964321	Catherine Obrien			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	No	No	Comment relates to sites: HE2015, HE201097 There has been very limited consultation, no public meetings. The details of what is planned was not publicised until late in the process. The planned number of houses is disproportionate increasing the community size by approx 40%. Other options such as brownfield sites are not evidently explored. The use of Green Belt is not justified.	Full consultation after other options such as brownfield sites have been explored and reasons they are not suitable are transparent. Legal justification for using good agricultural land for building purposes. Transparent assessment of population housing need in the future. Evidence of adequate transport links.		
64415137	Miller Homes (Locking Parklands)	Tom Rocke		No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	No	No	Policy LP4: Strategic Location: Pill and Easton-in-Gordano Issue • Whether the allocation of this strategic location is in accordance with the spatial strategy and exceptional circumstances existing to justify its removal from the Green Belt. Soundness Test(s) • Positively Prepared • Justified • Effective • Consistent with National Policy 3.5 For the reasons identified in earlier representations, if land is to be allocated in this location it should be to meet Bristol City's unmet needs, for which the plan does not currently make provision. 3.6 Allocation to meet North Somerset's needs would be inconsistent with the spatial strategy and the sequential approach to site selection by which it is underpinned. Moreover, there are suitable alternatives to meet North Somerset's needs in accordance with the spatial strategy, including at Nailsea and Weston-super-Mare.	Changes Sought for Policy LP4: Amend the policy to confirm that any growth in this location will be exclusively to meet unmet needs arising from within Bristol City, and will not contribute towards meeting North Somerset's needs.		
31149537	Strongvox Ltd	Pegasus Group		No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Yes	Yes	Our client supports the identification of Pill and Easton-in-Gordano, including their interests at Lodway Farm, as a Strategic Location for growth, noting its high degree of locational sustainability and limited contribution to the Green Belt. We are supportive of the broad aspirations outlined in the first paragraph of that draft policy. It is noteworthy that, although physically proximate to Barratt Redrow's land immediately adjacent, both parcels benefit independently from their own means of access and scope for supporting infrastructure including sustainable drainage, such that neither is dependent on the other. In terms of a coordinated approach, therefore, there is no exceptional need for additional masterplanning of the composite site, nor a suggestion of such in the policy. This is welcomed. We recognise the policy's specific requirements that appropriate noise buffers/mitigation are instated in relation to noise from the motorway, and that development must respond suitably to the setting of the Grade II*-listed St George's Church. The detailed Site Requirements, as outlined in Schedule 1, are considered within Section 5 of these representations. We remain concerned that the expectation that the site delivers 50% affordable housing is excessive, and does not suitably reflect both the constraints of the site (including non-developable buffers to the motorway) and/or other requirements including the provision of targeted local transport improvements and education contributions, such that may cumulatively undermine viability. Subject to impending future PPG commentary on viability appraisals in 'Grey Belt' locations, the policy will need to demonstrate robustly the viability evidence on which it is formulated to ensure that the site and wider strategic location are deliverable in practice.			R002v5 NSLP Reg19 Reps Strongvox Dec25.pdf
58664673	Catesby Estates	Stantec	Catesby Estates	No	' Justified ' Consistent with national policy			Locational Policy LP4 is principally supported, subject to amendments that ensure the soundness of the policy. The allocation of growth to Pill and Easton-in-Gordano is supported, as the area has represented a sustainable location for development throughout the Local Plan-making process, as demonstrated within representations on behalf of the Site to date and have only been improved by the Council's lauded progress to reopen the railway station at Pill to provide an initial hourly passenger service as part of Metrowest Phase 1. Pill Green represents the key strategic scale site to be designated as part of Policy LP4 and will be recognised to deliver the most benefits for existing and new communities at Pill and Easton-in-Gordano. The Site will deliver the new homes and associated required infrastructure, open space and habitat improvements necessary to support communities in a location with links to major employment hubs including the Port of Bristol, Avonmouth and Severnside, and on the doorstep of a major bustling urban area of Bristol City and its Centre and the Temple Quarter. Proposals for Pill Green, as promoted to date, have demonstrated the site's connectivity and the Vision Document provided at Appendix B illustrates active travel routes that enable suitable connection to facilities and locations at Pill. As set out within Policy LP4, it is clear that Land at Pill Green will be key to enable the main benefits set out, including: • A new 420 place primary school within the Site (including early years provision in line with government requirements), along with financial contributions towards post 16, special educational needs provision and family centre services; • Delivery of 50% affordable housing, which Pill Green would provide the highest proportion number of Affordable			Appendix to representations - compressed.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Housing towards in this location; • Improvements to local infrastructure to improve connectivity, such as contributions towards an off-site new mobility hub in the centre of Pill; and • Active travel improvements. Explanatory text to Policy LP4 states that: "[…] [T]he quantum of proposed development presents regeneration opportunities for Pill and Easton-in-Gordano in terms of securing contributions towards enhancing services and facilities within the village, providing new green spaces accessible to the local community and providing new and improved active travel routes between the new development sites and the village centre significantly increasing connectivity across the village between essential services and facilities. It is clear that Policy LP4 and the allocation of Pill Green therein represent a potential to deliver substantial benefits overall, as well as further benefits associated with the Site such as open space provisions, a mobility hub within the Site, and biodiversity improvements where all of the requirements set out within policy and for the Site demonstrably meet the tests within NPPF Paragraph 58. Policy LP4 is principally supported on the basis of the above. However, the Policy relates to the supporting Policies Map and the associated boundary allocation does not match the Pill Green site boundary and excludes land that would form part of landscape, biodiversity, and active travel improvements to be delivered on-site. This fails to be justified throughout the evidence base and consequently Policy LP4, as presented in the context of the Policies Map and Schedule 1, fails to meet the tests of soundness as set out in NPPF Paragraph 36. The intention of Policy LP4 to improve active travel routes is supported. It is noted that the policy includes measures for 'Provision of an active travel connection between the Pill Green and Land at Pill Road sites over Markham Brook'. This is not supported due to the absence of evidence that justifies such a requirement in accordance with NPPF Paragraph 36. The connection sought by Policy LP4 and by North Somerset Council over the Markham Brook would constitute engineering operations through Ancient Woodland either side and above the Markham Brook. The draft policy requirement is also contrary to the North Somerset SHLAA 2025 Appendix 2: Further Site Assessment (October 2025), which identifies Ancient Woodland and Markham Bottom and continues on to state that this should be avoided and that development be mindful of any impact development elsewhere may have on the Ancient Woodland. There exist suitable alternative active travel connection opportunities to the north of the Site that provide walking distance connection to local facilities and destinations. The relatively short distances within Pill present a strong opportunity to encourage active travel and challenges in movement can be mitigated through the combination of mobility hubs and the promotion of ebikes and e-scooters, which offer a practical and accessible alternative for a wider range of users. Proposals for Land at Pill Green, as proposed for a sustainable strategic scale extension, has always been sensitively designed and promoted to avoid impacts on the Ancient Woodland, as well as the environment and habitats associated with the Markham Brook. It is not evident from supporting published documents to the Pre-Submission Plan 2041 that this policy requirement has been justifiably tested, consulted or agreed with Natural England and set out within a Statement of Common Ground (SoCG), consulted with promoters of the land, nor that it has been accounted for in cost assessments as indicated in the Infrastructure Delivery Plan Schedule (scheme reference TR87; October 2025). This also applies to the active travel requirement set within Policy LP4 for Bridleway LA8/33/40 to be continued over Markham Brook. Should the Council wish to include any such consideration, the steps and agreements listed, particularly the SoCG with Natural England, will be required to be in place ahead of submission. It is a requirement for the Council to ensure policies within the plan meet the tests of soundness and in the absence of the aforementioned, Policy LP4 within the Pre-submission is not found sound as required by NPPF Paragraph 36 and requires the removal of policy requirement for connection via the Ancient Woodland over Markham Brook. Catesby support the Council in the allocation of Pill Green, the decision to identify Pill and Easton-in-Gordano as a sustainable strategic development location, and acknowledge the key role the Site plays in the delivery of the ambitions set out within the Pre-Submission Plan for the area. If required, following establishing of a sound Policy LP4 and Policies Map and any further discussion where required, a suitably worded SoCG could be progressed setting out agreed principles.			
63873345	Sustainable Pill and District		Sustainable Pill and District					On behalf of the residents of Pill, Ham Green, Easton-in-Gordano and the surrounding area, I would like to present you with the petition created by Sustainable Pill and District (SPAD) with regards to public concern into the NSC Local Plan. The petition is titled 'Protect our community - object to excessive house building on Green Belt around Pill!'. Those who signed the petition were advised: By signing and sharing this petition, you are: Objecting to excessive house building around our Village Challenging the lack of adequate initial consultation by NSC Standing up for our community Showing NSC the strength of feeling in the Village about this SPAD advised that at the closure of the consultation period 2,218 people had signed the online petition and a further 115 pen and ink signatures had been gathered.			
51297633	Leiza Alpass			No	• Positively prepared • Consistent with national policy	Unsure	No	There was a lack of adequate, inclusive consultation which did not involve the affected residents of the area. There was no public exhibition in Pill/Easton in Gordano/Ham Green. I do not believe that NSCC has complied with its statement of community involvement here. In this regard, NSCC have failed to cooperate with the residents. Can NSCC demonstrate that alternative sites such as brownfield have been investigated. Green belts being saved for green spaces for the existing community and established wildlife. Can the NSCC be sure that the developers will provide 50% affordable homes in the development. The NPPF requires a full account of environmental impacts on natural habitats and to avoid loss of wildlife and ensure wildlife corridors. There are many priority wildlife habitats in the area including costal salt marsh, mudflats, floodplain grazing marsh, mixed deciduous woodland to name a few. This wide range of habitats supports an abundance of bird life. The skylarks in this area nest in one of the sites listed for development and this is an Avon BAP priority species. In the village we have been supporting wildlife with tree planting, supporting our green spaces, creating wildlife meadows, caring for our community orchard and much more. The NSCC must take sufficient account of the protection of wildlife habitats in Pill, Easton in Gordano and Ham Green Some of the sites along the A369 include versatile agriculture land which is limited in the Pill area. Has NSCC noted that the area around Markham brook in Pill has a recognised flood risk as noted by the Environment Agency food Zone 3 - highly probable of flood risk.	Recommend that there is thorough/ exhaustive search for Brownfield sites before considering green belt. Ensure that the developers provide 50 % affordable homes. Choose sites where cars are not needed to get to and from facilities such as shops. A feasibility study of the new railway to carry sufficient passengers - a single track with 3 carriage trains will have limited passengers and if used by Portishead residents there will be no space at the Pill station during busy times (rush hour).		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The road through Easton in Gordano to Pill has many narrow sections and indeed the A369 through Abbots Leigh has a very narrow section. In addition, the J19 of the M5 has significant tailbacks during rush hour indicating that the junction is already at saturation point.			
32016289	Kieran Argo			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	1. Community Involvement and Consultation Methods I am deeply concerned about the adequacy and inclusiveness of the consultation process for Pill and Easton-in-Gordano. Despite five sites being proposed in our area with potential for 1,100 new homes, no public exhibition was held locally. Exhibitions took place in Long Ashton, Weston-super-Mare, Nailsea, and Backwell, but residents of Pill and Easton-in-Gordano were expected to travel elsewhere to engage with proposals that would fundamentally transform our community. The consultation response figures reveal a troubling disparity. Pill and Easton-in-Gordano generated only 125 responses from 29 individual respondents across five sites, compared to 689 responses for five sites in Portishead, 591 responses for ten sites in Long Ashton, 484 responses for five sites in Wrington, and 1,049 responses for 26 sites in Nailsea and Backwell. Given the scale of proposed change in our area—including 600 homes at Pill Green alone—this low response rate suggests significant under-representation of local voices rather than lack of concern. Over 1,800 residents from our community of approximately 4,500 people have now signed a petition objecting to these proposals and challenging the inadequate initial consultation. This demonstrates the level of concern that was not captured during the formal consultation period. I question whether the Council has complied with its own Statement of Community Involvement and whether it has met its legal obligations under the Equality Act 2010, including the Public Sector Equality Duty, to ensure all communities have equal opportunity to participate meaningfully in decisions affecting them. I submit that this aspect of the Local Plan is not legally compliant. 2. Green Belt Release and Exceptional Circumstances I challenge the Council's justification for removing land around Pill and Easton-in-Gordano from the Green Belt under Strategic Policy SP7. The Council asserts that it cannot meet identified housing needs at sustainable locations outside the Green Belt, thereby constituting "exceptional circumstances" under Section 13 of the National Planning Policy Framework 2024. However, I question whether the Council has adequately demonstrated that it has exhausted all reasonable alternatives before resorting to Green Belt release. Has the Council fully examined options including maximising brownfield capacity across North Somerset, applying minimum density standards to optimise land use in existing urban areas, and working collaboratively with neighbouring authorities to accommodate housing needs? Without comprehensive evidence that these alternatives have been thoroughly explored and found insufficient, the claim of "exceptional circumstances" appears premature and potentially unsound. Furthermore, where Green Belt land is released, the NPPF requires adherence to the "Golden Rules" concerning affordable housing provision, infrastructure delivery, and publicly accessible green spaces. The Council's own 'additional sites viability addendum' suggests that the 50% affordable housing target may be "challenging" for proposed sites around Pill and Easton-in-Gordano. This raises serious doubts about whether development on these sites can meet the Golden Rules requirements. I also question whether the Council has properly considered all available sites across North Somerset that might accommodate development without Green Belt release. I submit that this aspect of the Plan is unsound and that the Council has not adequately demonstrated compliance with the Duty to Co-operate. 3. Traffic, Transport and Infrastructure Policy LP4 and Schedule 1 reference infrastructure improvements including a new primary school and active travel routes connecting development sites to local services and the proposed railway station. However, I have significant concerns about whether the Plan adequately addresses the transport implications of large-scale development in Pill and Easton-in-Gordano. Junction 19 of the M5 already experiences congestion, and National Highways has raised concerns about development impacts in this area. In relation to the Court Hay development near the service station (NSC planning portal ref 25/P/1413/OUT), National Highways stated that transport modelling is required to assess cumulative impacts on Junction 19. I cannot find clear evidence that the Local Plan incorporates such cumulative impact assessment or demonstrates that the Council has adequately co-operated with National Highways in addressing these concerns. The Plan appears to place considerable reliance on the proposed railway link, but I question whether this is realistic given the uncertainties around delivery timescales and funding. Is there robust evidence that bus and train services will be sufficient, frequent, and reliable enough to serve the proposed number of new homes and reduce car dependency as anticipated? I submit that this aspect of the Plan is unsound and that the Council has not adequately demonstrated compliance with the Duty to Co-operate. 4. Natural Environment and Wildlife Protection The proposed development sites around Pill lie within consultation zones for the North Somerset & Mendip Bats Special Area of Conservation (SAC) and in proximity to the Severn Estuary Site of Special Scientific Interest (SSSI). The NPPF requires plans to take full account of environmental impacts, avoid or mitigate adverse effects, and undertake Habitats Regulations Assessments where necessary. The Wild Service Ecology Review (2019), undertaken on behalf of the Neighbourhood Plan Steering Group, documents the presence of protected species and habitats in this area. Development proposals adjacent to or affecting SSSI, SAC, or other protected habitats must avoid significant harm, apply appropriate buffers, and secure measurable net gains for biodiversity. I question whether the Council has given sufficient weight to wildlife and habitat protection when assessing sites around Pill and Easton-in-Gordano for Green Belt release under SP7. I cannot identify clear, funded strategies and mitigation policies in LP4 and Schedule 1 to ensure adequate protection of wildlife and habitats in these areas. Additionally, I am concerned about whether the best and most versatile agricultural land around our village is being adequately protected in accordance with Section 15 of the National Planning Policy Framework. I submit that policies SP7, SP11, DP35, DP36, and DP37 are unsound and may not be legally compliant in respect of environmental protection requirements. 5. Flood Risk The area around Markham Brook in Pill is within the Environment Agency's Flood Zone 3, indicating a high probability of flooding from both rivers and tidal sources. The NPPF (pages 49-52) requires sequential testing to ensure that development is directed to areas of lowest flood risk. Some of the sites identified in LP4 and Schedule 1 may be affected by flood risk, yet I cannot find clear evidence that the Local Plan demonstrates a sequential approach to site selection, prioritising lower flood risk areas across North Somerset before considering sites in higher flood risk zones. I question whether policies DP9 and DP11 provide adequate safeguards to ensure thorough flood risk assessments for any development close to Markham Brook and to restrict inappropriate development in flood risk areas. I submit that the Plan's approach to flood risk is unsound and may not be legally compliant with NPPF requirements. In summary, I object to the Local Plan on grounds of both legal compliance and soundness, particularly regarding the proposed large-scale development at Pill and Easton-in-Gordano.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 32016289	Kieran Argo			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	I am writing to object to the proposed housing allocations at Pill, Ham Green and Easton-in-Gordano within the Local Plan 2041. My concern is not with the principle of providing new homes, but with the lack of published evidence supporting the suitability and deliverability of these particular sites. For the Local Plan to be sound, the Council must demonstrate due diligence — and at present, the evidence base does not do so. No published Agricultural Land Classification (ALC) surveys The Council's own Best & Most Versatile Agricultural Land paper highlights that these fields are highly likely to be Grade 1 or Grade 2, yet no ALC surveys have been published for any of the five allocations. Policy DP53 requires surveys where high-quality land is suspected, so the omission is significant. Without ALC evidence, consultees and inspectors cannot judge whether development here is appropriate. No ecological baseline or ancient woodland buffer assessment Several allocations lie close to ancient woodland and species-rich habitats around Markham Bottom and Markham Brook. Natural England guidance requires minimum 15-metre buffers, increased where slopes or sparse canopy increase vulnerability. The Local Plan does not publish any woodland buffer mapping, bat surveys, breeding bird surveys, or soil biodiversity assessments for these sites. The area falls within important bat zones, yet no ecological survey data is provided. No flood risk or hydraulic modelling for the Pill catchment Both Pill Green and Pill Road allocations sit on sloping land draining into Markham Brook, which already contributes to flooding in the village. The Schedule asks developers to "ensure no increased flood risk downstream", but NSC has not published any FRA, hydraulic modelling or climate-change testing showing the indicative capacities (e.g., 600 homes at Pill Green) can be delivered without worsening flood risk. No recorded engagement with local ecological expertise The Local Plan does not show any contact with local naturalists, local records centres, or knowledgeable ecological groups. Given known records of multiple bat species, and high local biodiversity, meaningful local engagement is essential. Final Note – Important for Soundness Policy wording that defers all technical work to later planning applications is not enough at the plan-making stage. For the Plan to be found sound at examination, the evidence base must clearly demonstrate that NSC has already tested these allocations against key constraints — ancient woodland protection, protected species, best and most versatile soils, and flood risk. Much of that site-specific testing is missing from the published documents. Without this evidence, the Pill & Easton-in-Gordano allocations simply cannot be considered justified or effective.	I request that the Council either: Publish the missing ALC surveys, ecological baselines, woodland buffer mapping and flood modelling now, before submitting the Plan for examination, or Pause or remove these allocations until the required evidence is available and publicly consulted upon.		
32016289	Kieran Argo			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Formal Consultation Response – Objection to Policy LP4 (Strategic Location: Pill & Easton-in-Gordano) North Somerset Local Plan 2041 – Regulation 19 Consultation Dear North Somerset Council, I am submitting this representation to object to Policy LP4: Strategic Location – Pill and Easton-in-Gordano on the grounds that the policy, and the supporting evidence base for the four proposed housing allocations, fails the tests of soundness set out in NPPF paragraph 36 and is not legally compliant. My concerns relate directly to the absence of proportionate evidence, inconsistency with national policy, and the lack of demonstrated deliverability. 1. The Policy Is Not Sound (NPPF ¶36) 1.1 Not Justified – No Proportionate Evidence Base Policy LP4 proposes large-scale development at Pill and Easton-in-Gordano without publishing the evidence necessary to demonstrate that these sites have been appropriately assessed. Specifically: *No agricultural land classification (ALC) surveys have been published, despite strong indications that the allocated sites are predominantly Grade 1 and 2 Best and Most Versatile (BMV) agricultural land. *No ecological baseline surveys or species assessments have been provided, despite the allocations lying adjacent to ancient woodland and within established bat consultation zones, including areas known locally for horseshoe bat activity. *No ancient woodland buffer analysis is provided, despite Natural England's requirement for a minimum 15-metre buffer, increased where slopes or canopy gaps increase sensitivity. *No flood risk or cumulative hydraulic modelling is presented, despite three allocations draining into Markham Brook, a watercourse with a known history of contributing to flooding in Pill. Without this evidence, the strategy at LP4 cannot be said to be justified. 1.2 Not Effective – No Demonstration of Deliverability LP4 relies on extensive, unproven infrastructure assumptions, including: * A new 420-place primary school * A central transport hub * Multiple major active-travel bridges over Markham Brook * Major highway mitigations along Pill Road, Ham Green and Lodway * Strategic noise and pollution buffers for M5-adjacent sites * Connectivity upgrades based on the Portishead Rail Line No viability information, delivery phasing, costings, or partnership agreements are presented. This fails the requirement for plans to be realistically deliverable. 1.3 Not Consistent with National Policy LP4 conflicts with several core NPPF principles: *Protection of ancient woodland and irreplaceable habitats (NPPF ¶180(c)) – no buffer mapping or woodland impact analysis is provided. *Protection of BMV agricultural land (NPPF ¶174(b) and ¶175) – the Plan allocates BMV land without justification or assessment of alternatives. *Managing and reducing flood risk (NPPF ¶159–169) – no evidence is presented showing that large-scale development will not worsen downstream flooding in Pill. *Conserving and enhancing biodiversity (NPPF ¶179–182) – no species surveys, habitat corridor assessments or ecological justifications accompany the allocations. 1.4 Not Positively Prepared – Does Not Balance Need and Environmental Constraints A positively prepared plan must meet needs in a sustainable way. LP4 does not show that:	I respectfully request that the Council: 1. Withdraw or revise Policy LP4 until the required technical evidence is completed and published; or 2. Reassess the allocation strategy with proper ecological, agricultural, flood risk and infrastructure evidence; and 3. Re-consult once a compliant evidence base is available. Thank you for considering this representation. I ask that it be fully taken into account during the examination of the Local Plan.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								* Less environmentally constrained options were assessed; * Development can proceed without harming irreplaceable woodland or wildlife corridors; * Infrastructure can keep pace with growth; * Transport assumptions (especially those relying on future rail capacity) are realistic. Policy LP4 is therefore not positively prepared. 2. The Policy Is Not Legally Compliant 2.1 Strategic Environmental Assessment (SEA) Non-Compliance The SEA Regulations require that environmental effects of allocations be assessed using proportionate and up-to-date evidence and that reasonable alternatives be considered. For the LP4 allocations, the Council has not published: * ALC surveys * Ecological baseline studies * Woodland buffer assessments * Flood risk modelling * A detailed alternatives assessment This means the SEA is incomplete, and the legal requirement has not been met. 2.2 Habitats Regulations Non-Compliance The allocations lie within known bat consultation zones and near ancient woodland corridors. The Habitats Regulations require a “likely significant effects” screening informed by actual survey data. No such survey data accompanies LP4. The Plan therefore risks breaching Regulation 105 of the Habitats Regulations. 2.3 Failure to Meet Consultation Requirements (Regulations 18 & 19) Legally compliant consultation requires the Council to publish sufficient evidence for the public to meaningfully comment. Key evidence necessary to understand LP4’s impacts is absent, including: * Ecology surveys * Flood assessments * ALC studies * Justification for Green Belt release * Deliverability and viability analysis Without this, the consultation cannot be considered fair, transparent, or compliant. 2.4 Duty to Cooperate – Insufficient Evidence of Strategic Engagement There is no record within LP4 or its supporting documents of: * Engagement with Natural England on ancient woodland * Engagement with the Environment Agency on cumulative catchment flood risk * Engagement with National Highways on A369 constraints * Engagement with local ecological groups or records centres The Duty to Cooperate requires evidenced, ongoing engagement. This is not demonstrated. Given the absence of essential evidence, the reliance on unconfirmed infrastructure, the conflict with national policy, and the procedural failures outlined above, Policy LP4 cannot be considered sound or legally compliant.			
62773793	Sally Badham			No	• Justified • Effective • Consistent with national policy	Unsure	Unsure	1. Lack of community involvement and consultation methods re Policy LP4. NSC has not met its duty to properly engage with the local community regarding this plan. Other areas targeted for development have had a number of consultations but the allocation of Pill and Easton-in-Gordano as a strategic location has not been the subject of any public meeting with NSC. An increase in population of 44% surely demands consultation and engagement with the villagers. 2. Deviation from Settlement Boundaries re SP6. Land outside the established village settlement boundaries should not be included in the proposed development allocation in Pill and EIG. These boundaries exist to manage growth responsibly. SP6 clearly states that residential development outside settlement boundaries “will be restricted to replacement dwellings, subdivision of existing dwellings, residential conversion of rural buildings where alternative economic use is inappropriate or unfeasible, dwellings for essential rural workers or the redevelopment of previously developed land in suitable locations”. Extending development beyond the settlement boundaries would undermine these planning principles, increase pressure on infrastructure and set a harmful precedent for further outward expansion. It will also detrimentally affect the cohesion and community of the village. This deviation from the settlement boundaries is also in conflict with the policies in SP11. 3. Spatial Strategy issues re SP3 and transport re SP10. Pill and EIG do not have a wide range of facilities, services and jobs. Large new developments will be dormitory areas where people have to travel to work. Although the new railway is proposed, the number of trains per hour and carriages proposed is highly unlikely to encourage people to use this particularly when they are likely to be full from Portishead. There will still be a significant increase in the number of car journeys into and out of Bristol (particularly from the proposed Pill Green site), putting further pressure on the A369 and the bottle neck at Abbots Leigh. The Highways Authority's views and representations on the road infrastructure does not appear to have been taken into account. SP3 specifically requires that development should not be of a disproportionate scale which adversely impacts on the character of a settlement or leads to a significant increase in the number of car journeys. Far too much emphasis is being placed on the new railway. 4. Placemaking SP4. The proposed high density of the Pill Green site and the other sites in the area are not appropriate to the location, and will not create compact, connected and sociable places. The large extension beyond the settlement boundaries is not sustainable or conducive to placemaking policies.	1. A public meeting with the local community 2. A review of sites to ensure compliance with the Council's own proposed policies. 3. An acknowledgment of the importance for culture and cohesion of the settlement boundaries and an attempt to work to avoid extending these. 4. A proper review of the transport infrastructure in the area given further development in Portishead and the increased journeys from there and Pill/ EIG along the A369. The railway is not going to solve that.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								5. Release of land from the Green Belt SP7. The Council does not appear to have demonstrated that it has fully examined reasonable alternatives, such as maximising brownfield capacity (making the fullest and most efficient use of previously developed land), using minimum density standards (optimising land in towns and cities with higher-density developments, rather than spreading development out thinly) and working with neighbouring authorities to accommodate housing needs?			
62815873	E Beacon			No	• Justified • Consistent with national policy	Unsure	Unsure	There has been a lack of consultation re policy LP4. NSC has not been dutiful in engaging properly with the community. There has been no consultation or public meeting regarding Pill's allocation as a strategic location. An increase in population of 44%should demand proper consultation and engagement.	- A public meeting - A review of sites to ensure compliance with council policies. -An acknowledgemt to work within existing settlement boundaries -A review of how the A369 can handle extra traffic with acceptance that the train cannot really provide a solution when it will be permanently limited to 30 minute journeys with small carriages.		
62813121	Simon Beck			No	• Positively prepared	No	No	GROUNDS The Proposals HE20491, HE206, HE2015, and HE201097 are not sound and do not comply with Policy LP4 Additionally proposal HE2015 does not meet North Somerset Council's Duty to Co-operate. RE: HE20491, HE206, HE2015, and HE201097 Road Infrastructure is constrained. My Concern is that development on this scale is not sound and does not comply with policy LP4's objective to: ".... prioritise affordable, energy efficient, good quality homes with thoughtful design integrating green spaces and active travel routes, and essential infrastructure to support both existing and new residents." The A369 near the proposed developments in Pill runs either towards Bristol, via Abbots leigh or to Portishead via the Gordano roundabout at Junction 19 of the M5. The Gordano Roundabout was constructed in 1972, presumably based on traffic modelling from that era. Since the construction of the Gordano roundabout Portishead has expanded considerably with the port marine and Brampton way developments. The population of Portishead has increased from about 18500 in 1975 (see https://www.city-facts.com/portishead/population) to 26336 in the 2021 Census (see https://portishead.parish.uk/) . The expansion of Portishead by at least 42% means that the Road infrastructure at the Gordano Roundabout under constraint during peak periods. This is exacerbated in holiday periods by the fact that both North Bound and Southbound traffic seeking to use the Gordano Services have to enter the Gordano roundabout. This is not just my observation but that of National Highways, who wrote on 18/8/25 in respect of planning application 25/P/1413/OUT in respect of 186 dwellings: TRAFFIC IMPACT The application is supported by a Transport Assessment (TA) (Ref. 08227-R-02, dated June 2025) and a Framework Travel Plan (TP) (Ref. 082270-R-05, dated June 2025), prepared by PJA. The safe and efficient operation of M5 J19 is a key interest for National Highways regarding this application. The junction currently operates under constraint during peak periods, and National Highways is concerned that development pressures in this location may result in a material change in conditions. And later in the same document Given the status of the Local Plan and inclusion of this site as an allocation, to provide fully informed advice on this application, National Highways requires transport modelling to assess the emerging Local Plan development impacts at M5 Junction 19 to the end of the Local Plan period (currently 2040, but should be kept under review). This modelling is essential to ensure that cumulative impacts are understood, and any potential strategic mitigation needs are identified. North Somerset Council are in the process of developing their Local Plan transport evidence, however, as yet, the cumulative impact of developments at M5 Junction 19 have not been tested. Modelling work should include all emerging Local Plan allocations, with and without the application site (25/P/1413/OUT) for the various scenarios that may occur. Prior to undertaking this necessary modelling we recommend the applicants have further discussion with National Highways and North Somerset Council to discuss Local Plan transport evidence work carried out to date, emerging workstreams and detailed requirements/parameters. As regards travel to Bristol along the A369 that is constrained by Abbots leigh, and particularly where the road narrows near the George public House, This road is often congested at peak time. Hope may be pinned on the reopening of the Portishead to Bristol Railway. However at the operator only plans an hourly service between Portishead and Bristol so the train may be quite full when it reaches Pill Network rail write: The branch line was closed in 1964 but when reopened in 2028, it will reconnect more than 50,000 people to the railway. The project is funded by Government, the West of England Combined Authority and North Somerset Council and is being delivered by Network Rail. The restored railway will provide an hourly direct train from Portishead to Bristol Temple Meads in 25 minutes. The route runs along one of the most scenic stretches of railway in the country, through the Avon Gorge and past the Clifton suspension bridge. See https://www.networkrail.co.uk/our-work/our-routes/western/the-portishead-line/ The scheme foresaw a reduction of around 300 to 400 car trips per day by opening the line, see https://metrowestphase1.org/wp-content/uploads/2021/03/8.11-planning-statement-version-2-clean-1.pdf. Page 60. Table 6.1 (an image was prepared for submission in this document but it seems the response portal may strip images out) Whilst an improvement, it seems unlikely to actually improve the roads compared to now of some 1100 homes are built at Pill and Easton-in-Gordano and 1600 homes are built in Portishead as set out in SP8 of the North Somerset Local plan 2041. Bluntly too much is being expected of the road network around Junction 19 Re HE2015 1) There has been a lack of community consultation I present an image North somerset plannings application map as of 9 December 2025. (google maps image ofarea was	Modify Junction 19 before any other action taken. Ideally create seperate north bound service area to south of Junction 19. Modify exit from Docks such that North bound traffic doesnt get near the roundabout		Resonse to North Somerset plan.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								prepared but getrs stripped out by this online portal) Note no planning application has been submitted in relation to HE2015. In the absence of a planning application, it seems hard for the community to be consulted about it. 2) HE2015 does not seem to comply with Policy LP4 objective, namely "… co-ordinated approach to ensure the growth of the village provides tangible benefits for existing and future communities. This will be achieved through a co-ordinated approach to the delivery of infrastructure to ensure the provision of necessary services, facilities, appropriate highways mitigations and improved active and sustainable travel links throughout the village, particularly from the new development sites to the proposed railway station on Monmouth Road. All new development will be required to contribute to the delivery of necessary infrastructure through either direct delivery as part of the scheme or through development contributions" HE2015 is mainly separated from Pill and because of the way properties along Brookside and Crockern Drive have been built has little opportunity to have a suitably sized road connection between it and Pill. Without this access to the village shops, Garage and Doctor's won't be easy and there are unlikely to be tangible benefits for existing and future communities. Whilst active travel (walking & Cycling) is beneficial it should be remembered that we all age and at some point, active travel becomes inappropriate for Doctor's appointment and shopping. Hence other travel links are required, but they are undisclosed in respect of HE2015. Indeed, without an actual proposal for this development is seems impossible to determine its benefit to the existing community.			
62795393	Julian Bowyer			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The community involvement & methods of consultation was not 'sound'. There was no public exhibition in Pill or Ham Green. I now know that public exhibitions that took place in Long Ashton, Weston-Super-mare, Nailsea & Blackwell. These were not sufficiently advertised & I was unaware of them at the time. consequently I & many other residents missed these exhibitions. Also, these exhibitions would not have been easily accessible to many people that live in Pill & Easton in Gordano. There is a proportionally large number of proposed developments in Pill/Easton in Gordano & there was a relatively small number of responses that were uploaded to this planning portal at the time. This demonstrates community involvement & methods of consultation was not 'sound'.	Further public consultation that is well publicised & easily accessable.		
62864993	L Brown			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	There has not been an adequate level of community engagement in creating this plan. Since the initial online consultation in February 2025, Pill and EiG have now become a site of strategic importance. The villagers in Pill and EiG have not been given the same level of consultation as other areas, all of whom had access to a public exhibition. I believe the this has been discriminatory towards those residents who are not computer literate. If Pill is to be a strategic site then the villagers should be given access to the same level of consultation as everyone else.	Pill and EiG need an opportunity to contribute towards developing a well rounded, appropriate plan. They need a forum to enable this to happen eg a public meeting/exhibition		
58517153	Matt Burley			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	• Over-reliance on unproven rail delivery: LP4's "sustainable location" case turns on the Portishead–Pill–Bristol railway "by 2028", with no binding contingency phasing if delayed. This undermines effectiveness and positive preparation. • Transport evidence gap and cumulative impacts: The Transport Assessment and modelling parameters note Pill modelling is still being developed. National Highways requires cumulative J19 testing; junction congestion at Pill Road/A369 and St George's Hill is anticipated. Without agreed mitigation/funding and delivery phasing, LP4 is not justified or effective. • Flood risk/sequential test not demonstrated: Markham Brook bisects the allocations; Schedule 1 demands buffers and "no increased runoff". Updated flood information (NaFRA2) indicates increasing extent at Lodway Farm. The plan does not show a sequential/exceptions test outcome or confirmed attenuation strategy; this is inconsistent with national flood policy. • Heritage/noise constraints compress capacity: Historic Environment Assessments require buffers and view protection for Grade II*/II assets (St George's Church/St George's Hall). LP4 also requires motorway noise buffers/ mitigation. Combined with SuDS and a new school site, net developable area is materially reduced, threatening the headline capacity and character objectives. • Golden Rules/50% affordable housing not credible: The Viability Addendum shows Pill/Easton-in-Gordano struggling even at 25–35% AH in most value scenarios; delivering 50% AH plus heavy infrastructure (school, hub, bridges, active travel) is unlikely. LP4 is not justified or effective.	• Delete LP4 as a strategic location; alternatively, cap total capacity to a small, brownfield-led quantum pending evidence. • Link any remaining capacity to hard phasing triggers: No occupations until (a) Portishead–Pill–Bristol rail is operational, (b) cumulative J19/A369 mitigation is agreed, funded and conditioned, and (c) the Pill active-travel package and transport hub are delivered. • Require flood and heritage compliance before numbers are fixed: Publish sequential/exception tests, Markham Brook crossing strategy, and a heritage-led masterplan with enforceable buffers to St George's Church; adjust capacities to proven net developable area. • Viability re-test for the Golden Rules: Independent site-specific viability showing 50% AH alongside school land, bridges, noise mitigation and active travel; add a review mechanism if 50% AH is not deliverable. • Legal compliance measures: Produce SoCGs with National Highways, Bristol City Council, rail promoters and EA; include HRA wording on Recreation Management Strategies at plan text level		Pill_and E-i-G Consultation Process Challenge - exceptional circumstances.pdf Pill_R19_Representation.pdf 2041 LP4 Response.pdf
31071393	Mr Burton			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Policy LP4 is unsound, legally non-compliant and fails the Duty to Cooperate because it proposes 1,100 homes (including the 600 home Site P1 "Pill Green" (the most offending) on high-performing Green Belt land forming the eastern perimeter of Pill and Easton-in-Gordano the very outermost edge of the Bristol Metropolitan Green Belt, just 4-5 miles from Bristol city centre without: 1. Exceptional circumstances evidenced in accordance with NPPF para 147 (2024), despite the sites' role in preventing Bristol's urban sprawl (North Somerset Green Belt Review Part 1, 2023). 2. A signed Statement of Common Ground with Bristol City Council addressing Bristol's 8,000+ unit unmet housing need (Bristol Local Plan Review 2024) breaching s33A Planning and Compulsory Purchase Act 2004 and NPPF para 27. 3. A legally compliant Sustainability Appraisal: the SA fails Regulation 12 and the SEA Directive by not testing reasonable brownfield alternatives (North Somerset Brownfield Land Register 2024 identifies over 2,800 deliverable urban units in Weston-super-Mare, Portishead and the Bristol fringe, none were modelled against the LP4 sites). 4. Any funded delivery mechanism for essential infrastructure (A369/M5 J19 upgrades, schools, flood mitigation), the October 2025 Infrastructure Delivery Plan lists these as "high risk / unfunded", rendering the policy ineffective (NPPF paras 11 & 122).	Delete Policy LP4 in its entirety or suspend it until (a) a signed SoCG with Bristol is published, (b) exceptional circumstances are independently verified, (c) a revised SA properly tests brownfield alternatives, (d) full infrastructure funding is secured upfront via s106/CIL, and (e) a full consultation with the local community is conducted highlighting which of the 5 sites are deliverable within the NPPF guidelines (3 of the 5 seem to plausible i.e not Pill Green or Pill Road which are over 1000m from the proposed new railway stop.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								5. Any consultation with the local community done with this sort (quantity) of development in mind with non of the effort or detail afforded to all other 'strategic locations'.			
62850369	Maureen Butterly			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Summary Policy LP4 is not sound. The allocation of 1,100 dwellings at Pill and Easton-in-Gordano: conflicts with the Local Plan's own strategic priorities and sustainability principles, is inconsistent with SP1, SP2, SP3, SP6 and SP10, relies on undeliverable infrastructure, causes significant transport, landscape and ecological harm, rests on an inaccurate assessment of the village's sustainability, fails the NPPF tests for Green Belt release and exceptional circumstances, and places disproportionate growth in a location with severe constraints. LP4 does not meet the soundness tests of justification, effectiveness or consistency with national policy. 1. LP4 incorrectly identifies Pill & Easton-in-Gordano as a "sustainable location" for strategic growth The policy relies heavily on the assertion that Pill is a sustainable settlement due to: proximity to Bristol, the A369 bus corridor, future rail services, local facilities such as schools. This conclusion is not supported by evidence. In reality, the settlement is highly constrained: M5 Junction 19 is already at capacity with no committed solution. The A369 is a heavily congested single corridor with no space for major upgrades. Bus reliability is poor and heavily affected by traffic. The Portishead Line is not yet operational, and no start date is guaranteed. Walking and cycling routes are incomplete, unsafe or topographically difficult. The local centre provides only limited day-to-day services. LP4 therefore misrepresents the sustainability credentials of the village and makes the plan not justified. 2. LP4 relies on transport infrastructure that is either uncommitted, undeliverable, or unrealistic The policy requires: a new transport hub, extensive active travel improvements, new and enhanced walking/cycling routes, safe access to the proposed railway station. However: none of these schemes are funded, no delivery partners are identified, no costings are provided, no cumulative transport modelling has been published, and National Highways has already raised concerns about growth in this area. Given the severe existing congestion at Junction 19 and the A369, the policy lacks credibility. The result is that LP4 is not effective. 3. The policy overstates the benefits of the Portishead–Bristol Rail Line LP4 assumes that the railway will: be delivered by 2028, provide a "genuine choice" of transport modes, significantly reduce car dependency. But current evidence shows:	To make LP4 justified, effective, and consistent with national policy, the following modifications are required: 1. Reassess whether Pill & Easton-in-Gordano is a suitable location for strategic growth and remove or significantly reduce the 1,100-home allocation LP4 currently depends on an unproven assumption that the village is a "sustainable location." This contradicts transport evidence, landscape assessments, ecological constraints and national Green Belt policy. Required modifications: • Remove Pill/Easton-in-Gordano as a "strategic location" unless clear, robust evidence demonstrates genuine sustainability. • Reduce the scale of development to a level proportionate to local needs, consistent with SP6 (Villages and Rural Areas). • Reallocate growth to more sustainable urban locations in accordance with SP3 (Spatial Strategy). 2. Publish full cumulative transport modelling—including M5 J19 and A369 impacts—and adjust or remove allocations where impacts cannot be mitigated LP4 cannot be justified without comprehensive modelling. Required modifications: • Undertake and publish cumulative modelling for all four allocations in Pill/E-in-G. • Include impacts on: o M5 J19, o the A369 corridor, o local pinch points (e.g., Pill Road, Lodway, Westward Drive), o bus service reliability, o future rail station access. • Remove or reduce allocations where transport infrastructure is demonstrably insufficient or cannot be cost-effectively improved. 3. Remove reliance on uncommitted transport infrastructure (e.g., Portishead Rail Line) as justification for the site's sustainability The Plan currently assumes delivery of the rail line by 2028 despite uncertainty. Required modifications: • Amend policy text to require that strategic allocations must not rely on transport infrastructure that is not fully funded, committed and deliverable within the early plan period. • Reassess the Pill/E-in-G allocation without assuming the rail line will operate. 4. Require deliverable, funded transport, active travel and infrastructure plans before any development is permitted LP4 currently lists large-scale transport improvements but provides no deliverability evidence. Required modifications: • Insert a requirement for a comprehensive, costed Transport and Infrastructure Delivery Plan (TIDP) for the entire strategic location, prepared and agreed before any outline permission can be granted. • Require identification of: o funding sources, o responsible delivery bodies, o land ownership and acquisition needs,		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								the railway has experienced delays and cost escalations, services and timetables have not been finalised, no assessment demonstrates that new residents would shift from cars to rail, even with rail, car dependency for non-Bristol destinations remains extremely high. Relying on uncertain future rail provision makes LP4 not justified. 4. LP4 is inconsistent with SP10: Transport SP10 requires: minimising car dependency, prioritising active travel and public transport, locating development where sustainable travel is realistic and deliverable. However: 1,100 homes in Pill would increase car use, worsen congestion at J19 and the A369, create longer commuting distances, place major development in a location where the transport network is already failing. LP4 is therefore not consistent with the Plan's own strategic transport policy. 5. LP4 does not demonstrate viable delivery of 50% affordable housing LP4 requires all sites to achieve: 50% affordable housing, AND substantial infrastructure obligations, AND Green Belt "Golden Rules" requirements, AND active travel schemes, AND school funding, AND extensive green infrastructure. But: no viability testing for the Pill/E-in-G sites has been published, the Council's own viability addendum notes that 50% affordable housing may be challenging on Green Belt sites. Without viability evidence, LP4 is not effective. 6. LP4 would cause significant ecological harm and does not comply with SP11 or national policy All Pill/E-in-G sites lie within or adjacent to: North Somerset & Mendip Bats SAC consultation zones, key foraging and commuting corridors, SSSI influence areas, species-rich hedgerows and pasture habitats. The policy does not: identify adequate mitigation land, address light spill impacts, demonstrate habitat connectivity, specify any Nature Park or equivalent strategy, provide ecological capacity assessments. LP4 therefore conflicts with the Habitats Regulations, NPPF Section 15, and SP11. 7. LP4 would cause irreversible landscape and Green Belt harm Pill Green and Lodway Farm are part of valued rural landscapes. Development would lead to settlement sprawl, coalescence and erosion of openness. No Landscape and Visual Impact Assessment (LVIA) is provided. The Green Belt "exceptional circumstances" test is not met for this specific settlement.	o phasing. • Remove or reduce allocations where infrastructure cannot be secured. 5. Provide site-specific ecological assessments and remove allocations where SAC/SSSI impacts cannot be mitigated LP4 lies within sensitive biodiversity zones, including horseshoe bat forage and commute routes. Required modifications: • Produce HRA-level ecological assessments for each site. • Include: o habitat mapping, o bat activity modelling, o light spill assessment, o ecological connectivity studies. • Remove allocations where adverse effects on the SAC or ecological networks cannot be fully mitigated. 6. Require a Nature Park or equivalent mitigation if any strategic development remains SP11 identifies Nature Parks for other strategic locations but not Pill/E-in-G, despite its high sensitivity. Required modifications: • Add a requirement for a Nature Park or equivalent habitat safeguarding/ creation strategy if development exceeds a small, needs-based scale. • Identify land for long-term habitat protection before adoption. 7. Require Landscape and Visual Impact Assessments (LVIA) to determine whether the sites can accommodate the proposed scale of housing The landscape around Pill/E-in-G is sensitive and forms the rural setting of the village. Required modifications: • Publish LVIAs for all four sites. • Reduce or remove allocations where development would cause unacceptable harm to landscape character or settlement identity. 8. Demonstrate that 50% affordable housing is viable in combination with all required infrastructure and Green Belt "Golden Rules" The viability evidence does not show this. Required modifications: • Publish site-specific viability assessments demonstrating that: o 50% affordable housing, o primary school provision, o transport infrastructure, o ecological mitigation, o flood management, o and green infrastructure can all be delivered simultaneously. • If not viable, reduce the scale of allocation or remove the Green Belt release. 9. Provide a full sequential flood risk test for all sites and remove or amend allocations affected by flooding Areas around Markham Brook lie in Flood Zone 3 and climate-adjusted high-risk zones. Required modifications: • Publish sequential testing and site-specific FRAs. • Remove or reduce allocations where safer, lower-risk alternatives exist. 10. Demonstrate realistic capacity in schools, healthcare, utilities and local services—or reduce allocations to match local capacity LP4 assumes capacity without presenting evidence. Required modifications: • Publish capacity and impact assessments for: o GP and health services, o secondary school places, o utilities and wastewater,		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								LP4 is therefore not consistent with national Green Belt policy (NPPF Section 13). 8. LP4 fails to address flood risk adequately Markham Brook and surrounding areas include: Flood Zone 3, climate-change-adjusted flood risk, limited drainage capacity, constrained land for SuDS. The Local Plan does not provide: a sequential test, a Level 2 Strategic Flood Risk Assessment for each allocation, evidence of drainage feasibility. LP4 is not justified under NPPF Section 14. 9. LP4 overestimates the capacity of local services and infrastructure The policy assumes a new primary school plus: secondary school capacity (questionable), healthcare capacity (already constrained), community centre capacity, utilities capacity. But: no NHS capacity assessment is provided, no utilities capacity evidence is presented, no delivery partners or funding mechanisms are specified. LP4 is not effective. 10. LP4 imposes untested highways and active travel schemes that may not be physically deliverable Many proposed active travel routes: run along narrow or dangerous roads, require land acquisition, cross flood-prone areas, traverse steep topography, assume major bridge or path upgrades without engineering studies. Without feasibility assessments, LP4 is not justified. Conclusion Policy LP4 is not sound because: the growth level is disproportionate to the village, the sustainability appraisal is flawed, transport infrastructure is unproven, mitigation is unrealistic, environmental constraints are unresolved, Green Belt release is unjustified, the required infrastructure cannot be delivered, the policy conflicts with multiple strategic policies (SP1, SP2, SP3, SP6, SP10, SP11). LP4 should be removed or significantly reduced unless a comprehensive evidence base can demonstrate that the development is sustainable, viable, and legally compliant.	o emergency services. • Reduce allocation size where capacity cannot be increased in a timely and deliverable manner. 11. Provide realistic engineering assessments for all proposed active travel routes, bridges, and road widening Examples include: • the Markham Brook crossing, • Lodway footway widening, • new cycle routes on congested, narrow roads. Required modifications: • Publish engineering feasibility studies for all required improvements. • Reduce allocations where constraints mean safe, direct, continuous active travel routes cannot be delivered. 12. Remove Green Belt release where exceptional circumstances are not robustly evidenced for these specific sites Exceptional circumstances must be demonstrated site by site, not generically. Required modifications: • Reassess Green Belt purposes for each site (openness, sprawl, separation, countryside encroachment). • Remove allocations where Green Belt harm is significant and alternatives exist. 13. Add a mechanism to reduce or halt development if infrastructure, rail delivery or environmental mitigation fails to materialise This ensures the Plan remains adaptable and avoids locking in harmful development. Required modifications: • Insert a “delivery contingency” clause requiring: o the ability to scale back or prevent development where key infrastructure is delayed or undeliverable. o a formal review trigger if infrastructure is not committed by a specific date. Summary Modification To be sound, LP4 must be fundamentally revised to: • remove or reduce the disproportionate housing allocation, • base decisions on robust transport, ecology, flood and viability evidence, • ensure infrastructure is deliverable and funded, • protect the Green Belt, • maintain landscape and ecological integrity, • and align with SP1, SP2, SP3, SP6, SP10 and SP11. Without these modifications, LP4 fails the tests of justification, effectiveness, and consistency with national policy.		
30921569	Lucy Byrne			No	• Positively prepared • Justified • Effective • Consistent with	No	Unsure	The North Somerset council local plan consultation on additional sites ran from 7 February 2025 to the 21 March 2025. It showed 5 additional sites in and around Pill with potential for 1,100 new homes. All 5 sites were presented in yellow on the maps, showing they were ‘3rd tier’ in the priority pecking order, (Brown were already agreed / underway, and Blue were 2nd tier - the most favoured locations) It was possible to estimate that assuming the majority of the brown and blue sites would be agreed that only about 10-15% of the remaining 3rd tier ‘yellow’ sites would be necessary to include. It was within this context, that the residents, businesses and organisations not only of Pill, Easton in Gordano & Ham Green (which together are regarded in practical terms as one village, with its central green & precinct as the village of ‘Pill’) but also of the surrounding villages of Portbury, Abbots leigh and Failand and	North somerset needs to reconsider the plan to make Pill a 4th strategic location. They need to carry out a propper community consultation and consider reasonable alternatives. This plan is unacceptable in it's current form.		Power to Pill Report Phase One 2023-24 FINAL FULL VERSION.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					national policy			to some degree the town of Portishead (basically all settlements in the North west of the county that use junction 19 of the M5) responded. The announcement that the Portishead to Bristol Railway would still be getting funding to go ahead came during the consultation period, however it has been making progress for the last 15 plus years, so this decision was not unexpected and research attached demonstrates that it will barely provide enough capacity for existing residents. The 5 sites in and around Pill were never presented as ONE strategic location to be consulted on. Our neighbourhood plan reflects that our residents are broadly in favour of a SMALL amount of development as there is a need for more affordable housing. A recommendation of 200-250 dwellings in small clusters around the village was generally agreed necessary. One of the 5 sites is clearly a brown field site and most residents would like to see it developed, however it was not presented as '2nd tier / blue'? Instead all 5 sites were each consulted about individually, which split local opinions. Understandably people were not too concerned that there was a risk that all would be given 100% allocation as there were so many other more suitable 'blue / 2nd tier locations' in the county. Pill is cut off by the Port to the west and the Avon to the North, it only has limited access to open green spaces which all have high amenity and visual value and many are grade 2 agricultural land with protected species. The largest 4 of which are located in the green belt. To allocate all at 100% would increase the local population by around 44%! It was therefore INCONCIEVABLE to build on ALL 5 sites at 100% of the allocation. There was no public drop in organised in Pill (which has significant social deprivation markers - see evidence in the Power to PIll phase 1 report) with many people without transport or funds to easily get to other drop in sessions) North Somerset Council held four public drop ins (Long Ashton, Weston-super-Mare, Nailsea, Backwell), but none in Pill/E-in-G, despite five sites being consulted on in this area. Response volumes were markedly lower for Pill (125 responses from a maximum of just 29 individual respondents across 5 sites) than for other locations: Portishead: 689 responses for 5 sites, Long Ashton: 591 responses for 10 sites, Wrington: 484 responses for 5 sites, Nailsea and Backwell: 1,049 responses for 26 sites. North Somerset's consultation summary report demonstrated that there had been a clear misunderstanding /miss-representation (at worst disregard?) of the opinions of the residents of Pill. Instead the summary was closely aligned to the proposals put forward by developers and land holdings companies who have invested significant funds in preparing the cases for developing these areas of land who over state the role of the railway line and it's capacity to support sustainable travel. As a result Pill was categorised as a Strategic Location for large residential development. Over 1900 residents from a total population (including children) of circa 4,500 have signed a petition objecting to the proposed excessive housing in the area and challenging the lack of adequate consultation by North Somerset Council. The scale of potential change in Pill (approx 44% increase in dwellings), the absence of a local event and the relatively small response volumes clearly demonstrates under-representation of local voices and a lack of proportionate engagement. It is evident that North Somerset council have not complied with their own Statement of Community Involvement. Their consultation was not sufficiently inclusive and as a result does not comply with legal duties under the Equality Act 2010, including the Public Sector Equality Duty. In this consultation North Somerset council state: 'Regeneration will transform and breathe new life into existing towns and valued areas will be protected. People's well-being, a strong sense of community, opportunity and fairness will be at the heart of all development in North Somerset.' I would argue this is simply not true in the case of the decision to make Pill a 4th strategic location. Adding 50% affordable homes to an area that already has a significantly high % of 'deprived neighbourhoods' is not a good strategy for creating healthy communities. The social strains on the village to support residents with high needs will cripple the village's currently over stretched resources. New developments of such scale carry a high risk of creating larger areas of social deprevation especially in the least desirable locations right next to the M5.			
62849569	J Charlewood			No	• Positively prepared • Justified • Effective	No	No	Prior's field in Easton-in-Gordano has village green status, as it has great value to us as a recreational space in Easton-in-Gordano. If this area is built on, dog walkers will have to drive to walk their dogs locally, thus increasing traffic in the area. Village green status indicates that this land has move value to us as a community than as an area to be developed, and we would like its status respected as a community. This plan does not demonstrate to me that the Duty to cooperate has been entered into fully. SP6 says that this plan will ensure that infrastructure will be considered to ensure that the population is adequately served. There is no evidence that this has occurred so far, or that it would occur in the future. The local school in the village is already full, and increasing the population by nearly double will mean that the schooling provision would also need to be increased, otherwise that will also increase traffic in the area as children are ferried to other schools. The health care infrastructue in the village is also currently stressed with the current population, and failure to properly plan for this will lead to greater health inequalities in the area. The GP surgery is already difficult to get an appointment at, so more patients will need more health care professionals, and the GP surgery will require more space to see the increase in patient population. The plan has centred a large proportion of the new housing on one location, overwhelming the currently small population and the infrastructure it has.	The protection of Prior's field as a village green and it being maintained as a recreational space for our children, animals and the whole community. Demonstration of a fully worked up infrastructure plan including education and healthcare, with fully-funded explicit detail on increasing the size of the local primary school and GP surgery premises. As the plans state 50% affordable housing, this suggests the population increase in this community will include a larger number of families and younger people. Or spreading the increases in housing across north somerset, so no one community is overwhelmed by the population increase.		
62791265	Mr Christopher			No	• Justified	Unsure	No	Comments regarding HE2015, HE206, HE20491, HE201065 and HE201097 Village not logistically big enough for expansion	Possibly consider two small areas ie HE206 and HE201065 as a compromise with small allowance for local young for rental/buying		
62782369	MR Michael Clareboets			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	1.Extra pressure on A370 2.1817 homes proposed is too much 3.Railway station is already in the wrong place.Not fit for purpose as a transport hub. 4.Loss of grade 2 agricultural land.South of Nailsea 5.River Kenn already floods new road and homes will be in a flood plain.(Station area)			
58540545	SIan Clark			No	• Positively prepared • Justified • Effective	Unsure	Unsure	There was recently limited consultation with this plan and the vast majority of residents were not aware of any events as they were not appropriately publicised or suitable for the local community to participate in. This is not acceptable with such large scale proposals and is not in keeping with community involvement. It should not be ok for a council to suddenly decide it can build on Greenbelt when there are far more appropriate brown field sites available. I cannot imagine these plans comply with protection of wildlife and the kids is greenbelt	We need extensive community engagement. Proper risk assessments around wildlife, infrastructure, roads, green belt and agricultural labs. These have not been undertaken to my knowledge.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					• Consistent with national policy			land can never be revoked. With the hoover event of climate change being experienced this is unacceptable. Flooding will be a high risk and wildlife will be decimated. Transportation is a huge problem with these plans. The M5 and junction 19 survivalist is under enormous strain already. Accidents are a daily occurrence and the road structure can't deal with several thousand more vehicles every day. The railway service will be minimal and buses are helpful but will still get clogged up in the additional traffic. Walking is already problematic in EIG and Pill as pavements are narrow. Any works require closure of local roads which causes chaos already. There are no alternatives for road transport through the area when this happens.			
51477249	Burrington Parish Council		Burrington PC	Unsure	• Consistent with national policy	Yes	Unsure	On previous drafts of the local plan we expressed concern that a wider range of sites for housing would be needed to avoid challenges to the supply of housing land and the ad hoc addition of sites through planning appeals, especially in view of the substantial increase in housing requirements arising from the new standard method of calculating housing requirements. We can see that North Somerset Council has now made significant changes to the settlement strategy to include new large sites for housing which now include a substantial urban extension south west of Bristol ('Woodspring'), a number of strategic housing sites at Nailsea and Backwell, some of which already have planning consent, the 'Wolvershill' strategic allocation north of Banwell and strategic sites at Pill and Easton-in-Gordano, as well as continuing development adjoining Weston-super-Mare (Parklands Village and Winterstoke Village), new site allocations at Clevedon and Portishead and redevelopment sites within Weston, some of which are carried forward from the Site Allocations Plan of 2018.It seems to us that the Council has thus sought to identify a realistic and as wide as possible range of options to accommodate the increased housing requirement. Some rural settlements like Churchill and Winscombe are also making significant contributions to housing land supply, although some sites were committed through planning appeals which means that they are not always well integrated with the existing settlement (or other appeal sites). Committed housing sites in the larger villages do not therefore always achieve the aims set in the Core Strategy for 'Service Villages' in terms of more self-containment in jobs and services, protecting the character of the settlement, or achieving improvements in public transport.	More detail is required about the allocated housing sites to demonstrate their feasibility, desirability and consistency with other planning policies– in the form of a development brief		
32607745	Kamala Das			No	• Positively prepared • Justified • Effective	No	No	The allocation which increases the population size of the area by about 44% is unsound and may be in breach of the duty to co-operate because it was only introduced in June 2025 and unlike all the other proposed sites there was no public exhibition consistent with NSC's Statement of Community Involvement. It is unsound as there has been no transport modelling, no habitat surveys, no updated sustainability appraisal (in particular none which uses Defra MAGIC maps or takes into account floodplains or existing rights of way), no assessment of the loss of best and most versatile agricultural land) and no landowner agreements for the proposed active travel routes. It is unsound in not taking account or proper account of ancient woodland, floodplain or existing rights of way. It is not effective in terms of impact on traffic. The proposed 5 LP4 sites would add about 1540 more journeys as well as additional numbers as a result of more housing in Portishead and areas nearby in which is in excess of what is sustainable on the A369 and at Junction19 of the M5 as well as at Bower Ashton. Duty to co-operate: There are no updated statements of common ground with National Highways, Natural England or the Environment Agency own J19, habitats or SuDS.Consultation with National Highways has yet to be completed.	Delete Pill Green site from the LPO8 Schedule of Sites or amend Policy LP8 as follows: No development on Pill Green until exceptional circumstances are independently verifies (NPPF para 147Delete the Pill Green Site (600 homes) from the LP8 Schedule of Sites or amend Policy LP8 as follows: "No development on Pill Green until exceptional circumstances are independently verified (NPPF para 147) and sequential testing confirms no viable non-Green Belt alternatives are available, prioritizing brownfield sites in Weston-super-Mare, Portishead and Bristol fringe. Cap total LP8 allocation across all sites; require full funding (via s106/CIL agreements) for flood defences to 1-in-1000 year standard + 45% climate change allowance, A369 and M5 J19 capacity upgrades, and additional school and GP places alongside associated additional communal infrastructure before granting outline permission". Insert new para 6,79: "Allocations must demonstrate no disproportionate impact on village populations, defined as <5% increase per site without evidenced need. Allocations in villages with a population under 10,000 must not result in a population increase of more than 5% from any single site unless exceptional circumstances are independently verified and full infrastructure delivery (transport, education, health, drainage) is secured upfront via s106/CIL. Cumulative impacts across all sites within a settlement must not exceed 20% without a master planned, funded delivery strategy."	N/A	
31058625	Wayne Davey			No	• Positively prepared • Justified • Effective	Unsure	Unsure	Most of the general words supporting active travel are sound, it is the lack of detail that is unsound because they make the plan ineffective. I'm mostly interest in the routes in and around Pill as that's where I live. I currently commute by bike to Bristol most weekdays. As far as I can read (and there is a real lack of clarity in this plan), there are vague suggestions for what could be done but the only commitment appears to be to protect the two routes listed in schedule 7. One of which, the River Avon Pill Path, is almost entirely OUTSIDE the management of North Somerset. This fact is not noted as far as I can see. Also, the two other key routes available do not even appear to be protected per schedule 7.: A369 pavement shared path to Ashton Court - not quite to Bristol notably! Path to Portishead To my mind each of these will be made significantly worse by the planned development unless there is a strong commitment to protecting, and ideally enhancing, them. Why worse? Dangerous construction traffic (these trucks are statistically more likely to kill cyclists), higher traffic loading on A369 - it's already a challenge to safely cross the A369 on the traffic island (which is not even big enough to safely accommodate a regular bike) without waiting for ages either at the edge or on the tiny island. The railway plans are likely to severely hamper, or even end, usage of the Pill Path (and probably the Portishead path too). Last time there was construction preparation activity along that area (2023 I think) the path was dangerously cut up. I tried reporting it everywhere - note it was ineffective reporting it to North Somerset Council because it is outside your management - a fact which does not seem to be acknowledged appropriately in your plan.	Commitment to detailed active travel plans that are locally supported		Additional travel notes.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								On page 279 the plan says “improvements and/or contributions towards River Avon Trail to Bristol required”. However there is no outline of what these might be, or what North Somerset’s ability to impose them is. There are LOADS of improvements that could be made - it’s too narrow, bumpy, muddy, wet, dark for most people to even contemplate using as a commuter route. I love it but can only use it for 6 months of the year due to those reasons. Finally there is an exciting pipe dream idea in the plan (p279) mentioning a crossing over Markham Brook. Done well, this could enable good local active travel opportunities. However, there appears to be no commitment to do so. It really has the look of a last minute idea, thrown into the plan and is a good example of the lack of thought and local consultation that seems to have gone into LP4. I cannot imagine funding would be found for this - bearing in mind that it would need to be a high crossing over Markham Brook which is ancient woodland.			
63093697	Lesley Davey			No		No	No	I write with regards to the proposed North Somerset Local Plan 2041, specifically regarding Policy LP4 and the proposed developments on 5 Green Field sites around Pill and Easton-in-Gordano. I am wholly opposed to the LP4 proposal, for the following reasons: The availability of brownfield sites has not properly been considered The proposed building of 1,100 new homes would nearly double the present population of Pill and Easton-in-Gordano, and increase the traffic movements correspondingly. The roads already struggle at peak times, but increasingly at any time of the day, especially around Junction 19 of the M5. The whole area becomes gridlocked. The five proposed LP4 sites were not included in the Local Plan 2041 until June 2025, and therefore did not allow for any local consultation. The primary schools in Pill and Portbury are already close to capacity. I do not believe that the doctor's surgery in Pill would be able to cope with such an influx. Some of the identified sites are liable to flooding, and much of it is good agricultural land, as well as rich in biodiversity, ancient woodland and important wildlife habitats. The proposed sites are important green spaces for the local community, and are essential for health and well-being. I do not believe that the Local Plan 2041, specifically policy LP4, is sound, legally compliant or followed a duty to cooperate and ask that you remove this.	I do not believe that the Local Plan 2041, specifically policy LP4, is sound, legally compliant or followed a duty to cooperate and ask that you remove this.		
62836833	George Donaldson		None	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	No assessment of brownfield alternatives to Pill Green has been made; no duty to co-operate on Bristol's 8,000 homes need has been met; Green Belt exceptional circumstances are not evidenced; a disproportionate and unjustified 44% increase in the poulation of Pill and Easton-in-Gordano is proposed; no deliverabiity plan for A369, M5 J19, schools or drainage by 2041 has been devised; the brownfield first policy has been ignored (2,500+ viable urban units are available); village growth should be capped at 5% on all sites. There must be independent verification of 'exceptional circumstances' before any consent can be given.	There should be no development on the Pill Green Site unless 'exceptional circumstances' are independently verified and testing confirms that no viable non-Green Belt sites are available; brownfield sites on the Bristol fringe and in Weston-super-Mare and Portishead should be prioritized. The LP8 allocation across all sites should be capped at 5%; full funding should be required for flood defences, 45% climate change allowance, A369 and M5 J19 capacity upgrades, and additional school and GP places, as well as additional associated communal infrastucture, before granting outline permission. Allocations must demonstrate no disproportionate impact on villages with a population under 10,000 (defined as < 5% per site), without evidenced need, unless exceptional circumstances are independently verified and full infrastructure delivery (transport, education, health, drainage) is secured. Cumulative impacts across all sites within a settlement must not exceed 20% without a master planned and funded delivery strategy.	N/A	
62865505	Dick Douglas			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	1. No assessment of other possibilities especially brownfield alternatives to Pill Green. 2 No evidence of necessity to use Green Belt .No evidence of exceptional circumstances. 3. Huge reliance on one site of 600 homes is disproportionate and unjustified. 4. No delivery plan for all the infrastructure required. A369 is of particular interest as my property was already ‘raided’ in the previous A369 development. Timing and secure funding of all infrastructure must be in place before any development starts. 5.No evidence of why existing known brownfield sites are not used in preference. 6.Overall size of plan is too big and will swamp local communities and character. 7. Plan must have independent verification before any consent.	Delete the Pill Green Site (600 homes).	N/A	
62659585	Edward Drewett			No	• Positively prepared	Unsure		quote: Regeneration will transform and breathe new life into existing towns and valued areas will be protected. People’s well-being, a strong sense of community, opportunity and fairness will be at the heart of all development in North Somerset. None of this is required in Pill and Easton in Gordano. The addition of hundreds of new houses will not bring new life, quite the opposite. The schools, doctor's surgery, comunity centre, shops and other facilties will be overwhelmed. Traffic (already not good) will block the roads. the enormous scale of the plan is simply too much. 'Fairness' is NOT at the heart of this plan.	Reduce the size of the development dramatically.		
62849505	Aileen Edwards		none	No	• Positively prepared • Justified • Effective • Consistent with national	No	No	1. Community involvement and methods of consultation. A consultation commenced on 7 February 2025 and ran for 6 weeks until 21 March 2025. It included 5 additional sites with potential for 1,100 new homes around Pill. This consultation is referred to in the Introduction and Vision section of the Local Plan. Following the consultation, Pill and Easton-in-Gordano were categorised as a Strategic Location for large residential development. I believe that there was very poor consultation in PEIG and I do not believe it was legally compliant.	A proper consultation needs to take place with outreach in our village for those not able to access digital systems and with due regard to the Public Sector Equality Duty. I do not believe that the Council has shown that it has fully examined reasonable alternatives, such as	No I don't	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					policy			Over 2,200 (and growing) residents from a total population (including children) of circa 4,500 have signed a petition objecting to the imposition of excessive housing in the area and challenging the lack of adequate initial consultation by North Somerset Council. Is this aspect of the Local Plan legally compliant? The Council held four public exhibitions (Long Ashton, Weston-super-Mare, Nailsea, Backwell), but there was none in Pill/E-in-G, despite five sites being consulted on in this area. This put PEIG residents at a very distinct disadvantage to understand and respond to the consultation. This is borne out by the low numbers of responses. There were very low responses from Pill/E-in-G (125, with only 29 individual respondents across 5 sites) than for comparable locations: Portishead: 689 responses for 5 sites, Long Ashton: 591 responses for 10 sites, Wrington: 484 responses for 5 sites, Nailsea and Backwell: 1,049 responses for 26 sites. Given the scale of potential change in Pill/E-in-G (e.g., 600 homes at Pill Green alone, plus other sites), the absence of a local event and the relatively small response volume could indicate under-representation of local voices and a lack of proportionate engagement. I do not believe that the Council complied with its own Statement of Community Involvement. This consultation was not sufficiently inclusive as most people were not aware it was happening and there was very little effort made to publicise this. Given that within people there are high numbers of older people and people on benefits/low incomes (second highest area of deprivation in North Somerset), digital exclusion is a real issue, with people not able to access the internet. More outreach approach was required to reach and talk to people about the consultation. I do not believe that there was legal compliance with duties under the Equality Act 2010, including the Public Sector Equality Duty. 2. The release of land from the Green Belt The justification for this is in Strategic Policy SP7 of the Local Plan. It is based on the Council's assertion that it cannot meet its identified need for homes at sustainable locations outside the Green Belt and this amounts to' exceptional circumstances' under the terms of Section 13 of the National Planning Policy Framework 2024 (NPPF). I do not believe that this aspect of the Plan is sound and it does not demonstrate that the Council has complied with the Duty to Co-operate. I do not believe that the Council has shown that it has fully examined reasonable alternatives, such as maximising brownfield capacity (making the fullest and most efficient use of previously developed land), using minimum density standards (optimising land in towns and cities with higher-density developments, rather than spreading development out thinly) and working with neighbouring authorities to accommodate housing needs. Where is the evidence to show this has been comprehensively done? For example, I have heard that Portishead has a brown field site that the Portishead Parish Council believes should have been considered but wasn't. If evidence is absent or incomplete, the 'exceptional circumstances' justification might not be valid. Where land is removed from the Green Belt, development proposals must demonstrate how they meet the 'Golden Rules' as set out in the NPPF. These rules relate to the provision of affordable housing, infrastructure and publicly accessible green spaces ' The 'additional sites viability addendum' (a document in the evidence base) suggests that a target of 50% affordable housing may be 'challenging' for the proposed sites in existing Green Belt land around Pill and Easton-in-Gordano. I also do not think that the fact that the five green field sites around PEIG will have a detrimental affect on the village, by hemming us in by the M5, the A369 and the River Avon. 3. Significant traffic and transport issues The sections of the Local Plan which relate specifically to the proposed development sites around Pill and Easton-in-Gordano (see policy LP4 and Schedule 1) refer to improvements to local infrastructure including a new primary school and the creation of active travel routes connecting the development sites to local services, schools, the local centre and proposed railway station. I do not believe that this aspect of the Plan is sound and it does not demonstrate that the Council has complied with the Duty to Co-operate? The Local Plan does not address potential traffic congestion at Junction 19 of the M5. We know that concerns were raised by National Highways re development at Court Hay near the service station (see NSC planning portal, ref 25/P/1413/OUT). The National Highways report stated that transport modelling is required to assess the cumulative impact of developments on Junction 19. Where is the evidence from the proposed Local Plan that NSC has co-operated sufficiently with National Highways and has taken its advice? I believe there is an over-reliance in the Local Plan on the impact of the proposed railway link. The new railway link might actually bring more traffic into PEIG from other areas and create more traffic pressure. I cannot see any evidence in the Local Plan that transport links, including buses and trains, will be sufficient for the proposed number of new homes. 4. The impact on the natural environment and protection of wildlife The National Policy Planning Framework (NPPF) requires plans to take full account of environmental impacts and to avoid/mitigate adverse effects, including Habitats Regulations Assessments (HRA). The proposed development sites around Pill lie within consultation zones for the North Somerset & Mendip Bats Special Area of Conservation (SAC), with proximity to the Severn Estuary Site of Special Scientific Interest (SSSI). Where sites are adjacent to or affect SSSI, SAC or other habitats sites, or form important wildlife corridors, development proposals must avoid significant harm, apply buffers and secure measurable net gains for biodiversity. Details of protected species and habitats can be found in the Wild Service Ecology Review undertaken on behalf of the Neighbourhood Plan Steering Group in 2019. https://pillanddistrictplan.org/environment-and-landscape/wild-service-ecology-review/ I do not believe that the relevant strategies in the Plan are legally compliant, nor are the policies sound (some relevant policies are SP11, DP35, DP36 and DP37) I do not believe that the Council taken sufficient account of the protection of wildlife and habitats in Pill and Easton-in Gordano in its assessment of the release of land from the Green Belt? (SP7) I also do not believe that there are clear strategies and mitigation policies in the Local Plan, with funding, to ensure protection of wildlife and habitats in the areas identified for potential development around Pill and Easton-in-Gordano? (see LP4 and Schedule 1)	maximising brownfield capacity (making the fullest and most efficient use of previously developed land), using minimum density standards (optimising land in towns and cities with higher-density developments, rather than spreading development out thinly) and working with neighbouring authorities to accommodate housing needs. I propose that NSC should re-examine all brownfield sites. A full report on information from National Highways on congestion should be sought to inform traffic issues on J19 and M5. NSC should also consider increased traffic from the proposed railway link and impact on bus routes etc. NSC should give more account of protection of wildlife and habitats in PEIG. further work is required on strategies and mitigation policies. Flooding - further work is required to ensure adequate flood assessments (especially in Markham Brook) have been carried out		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								I understand that some proposed areas are the best and most versatile agricultural land i.e. highest quality. Theses should be protected, in accordance with Section 15 of the National Planning Policy Framework. 5. Flooding risks The area around Markham Brook in Pill has a recognised flood risk, as the valley bottom and parts of the surrounding land are within the Environment Agency's Flood Zone 3. This indicates a high probability of flooding from rivers (fluvial) and the sea (tidal). https://flood-map-for-planning.service.gov.uk/ . The National Planning Policy Framework refers to flood risk and the necessity for sequential testing – pages 49-52. This could affect some of the sites identified in LP4 and Schedule 1. Are the relevant strategies in the Plan legally compliant? Are the policies sound? (some relevant policies are DP9 and DP11) Where does the Local Plan demonstrate that lower flood risk areas have been considered for development in preference to higher flood risk areas? Where are the policies in the Local Plan which will ensure adequate flood assessments for any development close to Markham Brook and restrict potential development for housing in flood risk regions?			
62848929	P Evans			No	• Justified	No	No	I am not a lawyer and have not had legal training so these are the comments of a layman but I do not believe that there has been any local involvement or consultation with these plans. We have had no public meetings or exhibitions held in the village unlike other areas designated as a strategic location. These plans, if enacted, will destroy the green belt only to be released in exceptional circumstances. Only the developers will make big profits from this destroying the green belt for future generations. I do not believe that suitable brownfield sites have been considered or even consulted upon. Surely North Somerset council must consider brownfield sites. There are not suitable road links. J19 of the M5 is already saturated and being assessed. The A369 is already clogged at peak times. The infrastructure is not currently suitable for additional housing. Nearly all the green space in and around the village will lost if this goes ahead. These developments will create a major flood hazard. We see so many homes being flooded on the television for being built in unsuitable areas.	North Somerset Council need a complete rethink. Cut down dramatically on the use of green belt, only to be used in exceptional circumstances and consider brownfield sites. Proper consultation must take place in the village and surrounding areas for any revised plans. I do not consider the current plans to be suitable for the reasons mentioned.		
62791425	Mrs Flanagan			No	• Justified	Unsure	No	Comments regarding HE2015, HE206, HE20491, HE201065 and HE201097 I do not believe the village of Pill and surrounding areas have the infrastructure to sustain more people to the proposed plan ie medical (doctors, chemist and nurse) roads too busy in and out of village parking a problem at present everywhere commercial, shops and facilities being overwhelmed education not enough places in nurseries or schools.	Building of housing is maybe essential. But not to the colossal current plan. I would propose HE206 and HE201065 to proceed and scrap the rest.		
62863073	S Floyd			No	• Positively prepared • Effective	Unsure	Unsure	The consultation was responded to by less than 50% of affected local residents and this suggests flaws in consultation process. The Council has held public exhibitions in other local locations (Long Ashton, Weston-super-Mare, Nailsea, Backwell), but none in Pill or Easton In Gordano although five of the sites are in Pill and EiG area. This form and process in itself is very confusing and has a high bar to entry for those affected to have an effective say. Infrastructure improvements to railway are yet to be delivered and unproven, it has already been scaled back due to ineffective scoping and frequency reduced. the plan its based up is being used to justify developments in Portishead as well as Pill, the service is likely to be overloaded at peak times and under utilised at low periods, as its one line for much of the service it is at risk of delays and failures. Leigh woods is a SSI not ideal place for additional diesel pollution M5 Junction 19 is already at capacity in peak times and recent changes to lanes encourage last minute dangerous lane changes. Improvements to cycling infrastructure are welcomed although the riverside route and requires extensive works to be less muddy in bad weather and winter. It also floods on high tides for example spring tides in September and October. The A369 cycle track is already difficult to cross, and traffic lights may exacerbate existing delays, The ride into Bristol is challenging with a reasonable climb in each direction next to a very polluted main route which now takes additional traffic dodging the clean air zone. The A369 can't easily be widened at Abbots Leigh due to housing being so close to the road by the George Inn. Large parts of the area are at flood risk by the Avon, in particular those by the M5 other areas will contribute to flood risk of the harbour area in Pill due to increased run off, its not clear if this has been fully mitigated in plan.	The current housing stock in Pill should be upgraded and subsidised to help those with most need initially, and reduce fuel poverty. Community heat pump projects could assist with this. Many locals may not benefit from the new housing schemes as it will still be out of reach of many. The number of houses should be reduced and honestly assessed with impacts on travel, flood and environment. Local area supports lots of wildlife. Accurate assessments of flood risk should be carried out.		
62863073	S Floyd			No	• Positively prepared • Justified • Effective	Unsure	Unsure	In addition to previous comment the huge increase in size of the village will fundamentally change the character of the village, which is contrary to SP6. It will remove proximity to countryside areas for many residents and impact local wildlife. While limited green spaces may be kept within the plans, if these are maintained parks this is not as good for ecology as open land and the hedgerows and trees that will be removed will remove important wildlife corridors			
62863073	S Floyd			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	There is no firm data to support that this will not impact Junction 19 of the M5 Concerns were raised by National Highways that development at Court Hay near the service station as in the NSC planning portal, ref 25/P/1413/OUT. The National Highways report stated that transport modelling is required to assess the cumulative impact of developments on Junction 19 - I can't see evidence that in the proposed Local Plan that NSC has co-operated sufficiently with National Highways and has taken its advice. As stated in other comments there is an over reliance on the railway to take traffic burden, however it may actually increase traffic if people use instead of park and ride when travelling from further away. likely to be limited capacity	Adjust planned expansion plans to fit with traffic modelling, accurately asses and model the railway and transport impacts not just use optimistic projections		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								for Pill residents if Portishead residents fill the train.			
62863073	S Floyd			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	environmental impacts identified such as in https://pillanddistrictplan.org/environment-and-landscape/wild-service-ecology-review/ should be taken into account many rare species close to this location in Leigh Woods and nearby areas			
62675681	H Gardner			No	• Positively prepared	Unsure	No	I feel this plan has not been thoroughly thought through Will the infrastructures needed schools surgeries safe and efficient traffic access be completed before the houses? The plan with the different sites considerably increases the size of the village/s and with the railway opening, traffic and parking is going to be a worse nightmare than it already is at peak times	I am aware housing is needed but these plans are impractical and maybe one most appropriate site could be chosen rather than all		
17894113	R Gentilli			No	• Positively prepared • Effective • Consistent with national policy	No	No	Comment on Policy LP4: Strategic location – Pill and Easton-in-Gordano and related policies SP7 (Green Belt), SP10 (Transport) and SP11 (Historic and natural environment) Is the plan sound? No – the Pill and Easton-in-Gordano proposals are unsound for the following reasons. 1. Community involvement and legal compliance – The additional-sites consultation (February–March 2025) introduced five sites around Pill and Easton-in-Gordano for 1,100 dwellings, yet no exhibition or event was held in the village. Only 29 individuals responded, even though a petition with more than 1,800 signatures (about 40 per cent of the population) opposed the scale of development. This under-representation indicates that North Somerset Council failed to comply with its own Statement of Community Involvement and did not meet the Public Sector Equality Duty. 2. Release of Green Belt land is not justified – Policy SP7 proposes releasing 1,100 dwellings across five sites around Pill and Easton-in-Gordano◈188816892012036†L1303-L1319◈ as part of “exceptional circumstances” because the council says it cannot meet housing need elsewhere◈188816892012036†L1364-L1375◈. However, the plan does not demonstrate that reasonable alternatives have been exhausted; it does not show how brownfield sites or higher-density developments have been maximised or that neighbouring authorities were asked to help meet need. The ‘Golden Rules’ of the National Planning Policy Framework require 50 per cent affordable housing on these Green Belt sites◈188816892012036†L1303-L1319◈, yet the council’s own viability evidence suggests this is challenging. Without clear evidence that alternatives have been considered and that 50 per cent affordable housing is deliverable, the release of Green Belt land is unjustified and not sound. 3. Transport impacts and reliance on unproven infrastructure – Policy LP4 envisages a strategic approach that integrates green spaces, active travel routes and essential infrastructure◈188816892012036†L3070-L3091◈ and requires a new primary school, transport hub and several active travel connections◈188816892012036†L3099-L3132◈. Yet Pill’s “sustainable” status is based on the proposed Portishead–Pill–Bristol railway (funding secured but not open until 2028) and access via the A369◈188816892012036†L3156-L3174◈. The plan lacks cumulative transport modelling to show the effect of 1,100 homes on Junction 19 of the M5 and existing congestion. National Highways has already raised concerns about development near the Gordano services. Without firm commitments to deliver new infrastructure before occupation and without evidence that Junction 19 can cope with extra traffic, the proposals risk increasing car dependence and congestion, contrary to SP10, and are therefore unsound. 4. Environmental and biodiversity impacts – All Pill and Easton-in-Gordano allocations involve Green Belt land◈188816892012036†L3099-L3103◈. The village lies within consultation zones for the North Somerset & Mendip Bats Special Area of Conservation and near the Severn Estuary Site of Special Scientific Interest. Policy LP4 requires green spaces and active travel routes◈188816892012036†L3099-L3132◈, but the plan offers no specific Habitat Regulations Assessment for these sites and no clear mitigation for bat roosts or habitat corridors. Without robust ecological assessments, secured biodiversity net gain funding and measures to protect best and most versatile agricultural land, the proposals conflict with SP11 and are not legally compliant. 5. Flood risk – Parts of Pill and Easton-in-Gordano, particularly around Markham Brook, lie in Environment Agency Flood Zone 3. Policy DP9 requires development to avoid areas at high risk of flooding and to apply the sequential test, but Policy LP4 still proposes housing on land adjacent to the brook. The plan gives no evidence of site-specific flood risk assessments or sequential testing to demonstrate that lower-risk areas were prioritised. This failure to address flood risk renders the proposals unsound. Conclusion – The Pill and Easton-in-Gordano proposals fail the tests of legal compliance and soundness. They do not demonstrate effective community engagement, justification for releasing Green Belt land, deliverable infrastructure, protection of biodiversity or robust management of flood risk. I therefore object to the allocation of 1,100 homes around Pill and Easton-in-Gordano and urge the council to withdraw. Given the significant concerns set out above, the following changes are necessary for soundness and legal compliance: - Remove the Pill and Easton-in-Gordano strategic allocation (Land at Lodway Farm, Land east of Gordano Services, Pill Green and Land at Pill Road). Retain the village as a service village within the Green Belt and only permit limited infill. - Reallocate housing need to brownfield sites and higher-density urban extensions elsewhere in the district or seek assistance from neighbouring authorities under the duty to co-operate. - Re-run public consultation for any new proposals with meaningful engagement in Pill and Easton-in-Gordano in line with the Statement of Community Involvement. - Undertake cumulative transport modelling for the M5 junction 19 and A369; ensure new rail, bus and active travel infrastructure is delivered before housing occupation. - Carry out site-specific Habitat Regulations Assessments, biodiversity net-gain plans and Flood Risk Assessments; avoid development on Flood Zone 3 land and protect habitat corridors.aw these sites, explore brownfield and higher-density options elsewhere and preserve the Green Belt and character of the village.	Given the significant concerns set out above, the following changes are necessary for soundness and legal compliance: - Remove the Pill and Easton-in-Gordano strategic allocation (Land at Lodway Farm, Land east of Gordano Services, Pill Green and Land at Pill Road). Retain the village as a service village within the Green Belt and only permit limited infill. - Reallocate housing need to brownfield sites and higher-density urban extensions elsewhere in the district or seek assistance from neighbouring authorities under the duty to co-operate. - Re-run public consultation for any new proposals with meaningful engagement in Pill and Easton-in-Gordano in line with the Statement of Community Involvement. - Undertake cumulative transport modelling for the M5 junction 19 and A369; ensure new rail, bus and active travel infrastructure is delivered before housing occupation. - Carry out site-specific Habitat Regulations Assessments, biodiversity net-gain plans and Flood Risk Assessments; avoid development on Flood Zone 3 land and protect habitat corridors.		
41006625	Jon Gittoes			No	• Justified • Effective	Unsure	Yes	There are a number of aspects relating to the transport assessment for the proposed Pill developments that makes the basis for identifying Pill as a strategic development area unsound. These are: M5 J19 (Strategic Road Network) M5 J19 is very congested, with several junctions at or above capacity and with junctions close to J19, especially the Portbury junction and the A369 to St Georges Hill junction also at or near capacity. (Local Plan Transport Assessment: Portishead, Portbury & Junction 19) The effect of the planned developments is to increase the utilisation of these junctions. (Local Plan Transport Assessment: Portishead, Portbury & Junction 19)	The evidence base supporting the selection of Pill should be brought up to the same standard as the other areas, and deficiencies in the strategic transport model and the rail usage addressed. The decision to select Pill as a strategic development area could then be assessed on a proper basis.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The mitigations to the increased congestion are to facilitate public transport by converting the A369 HOV to a bus lane and by remodelling the southbound off-ramp section of J19 (Local Plan Transport Assessment p71) No detailed modelling of the proposed J19 redesign has been carried out, although it is acknowledged that "there will be increases in congestion on the circulatory of the roundabout, which has the potential for knock-on impacts" (Local Plan Transport Assessment para. 5.166) The proposed redesign of J19 does not form part of funded schemes as part of RIS3 (National Highways planned schemes) to 2031. The impact of the developments on J19 are therefore likely to be unmitigated, with the effect of the increased congestion has not been adequately addressed by the Transport Assessment. A369 (Primary Road Network) The A369 and the two junctions which serve Pill, St Georges Hill and Pill Road, are all predicted to become more congested as a result of the housing developments, and the conversion of the A369 HOV to a bus lane Local Plan Transport Assessment para. 4.63) The North Somerset strategic transport model is particularly poorly validated along the A369 near Pill (appendix c). The model is noted as failing validation checks at both the Portbury and Beggar Bush Lane junctions which bound the section of the A369 serving Pill. In the worst case, the model underestimates traffic flow in these locations by 350 vehicles (observed=1044, modelled=694). This indicates that the modelled traffic flows around Pill are particularly poor and may well be underestimating the traffic flows into Pill (given that the discrepancy reduces from one side of Pill to the other). Given the scale of these errors, the model does not provide a sound basis for the assessment of the magnitude of any impact, or effectiveness of any mitigation around Pill. The proposed change of the HOV lane to a bus lane is dependent on National Highways RIS3 due to the potential impact on J19. This improvement is judged as "hypothetical" by North Somerset and RIS3 has been delayed, which makes the delivery of this mitigation uncertain (appendix e) The shortfalls in the modelling, and uncertainties in the deliverability of proposed mitigations, make the assessment of the impact on the primary road network inadequate. Local Roads There has been no attempt to quantify the effect of changes to traffic within Pill due to the crude representation of the model of road network within the village. A number of active travel improvements are proposed along Lodway, which are likely to increase congestion affecting both cars and buses through the village due to necessary narrowing of the road required to replace the existing footpath. Public transport: Trains Trains are planned to operate hourly between Portishead via Pill to Bristol from mid 2027 The trains are expected to have 3 carriages, with a total capacity of ~200 seats Weekday AM peak passenger demand from Portishead is forecast to exceed capacity (in 2031) before accounting for the proposed developments (at around 255 passengers) (DCO transport assessment, Table 6.8 & Figure 6.5). This calculation is based on 35% of total of 729 Portishead passengers. The corresponding demand in Pill is expected to be 43 (35% of 123 (DCO transport assessment, Table 6.8 & Figure 6.55) The modelling approach used to derive these forecasts (MOIRA) has significantly underestimated demand in previous schemes (for example: Borders Railway beats forecast passenger levels by 22% - CILT(UK), Dartmoor Line: early impact evaluation (page 8)), which makes it more likely that Pill residents will struggle to travel by train during the AM peak times. This approach has also been found to underestimates new trips generated by housing growth: otm-rail-demand-forecasting.pdf It is likely that the forecasts for rail demand have been underestimated, which makes it less likely that Pill residents will be able to use the train to commute. This means that any traffic reductions in Pill as a result of the new railway are likely to have been overestimated. Buses Proposals for increased bus provision include: A new bus service from Hengrove Park to Aztec West via the A369 (Local Plan Transport Assessment Figure 4-8) This is stated to be included in the Do Something Scenario modelling (Local Plan Transport Assessment, Section 5.13), but is not mentioned in the Transport model development report or in the infrastructure uncertainties log, making it unclear whether this bus route has actually been included in the assessed mitigation scenario for Pill. This route is not part of the WECA BSIP. A new mobility hub on the A369 is proposed, which would include a bus stop and real time information. However, no new crossings to allow safe access to the northbound bus service are proposed or have been assessed in the travel. Such a crossing could affect traffic flow along the A369 especially at peak times (Local Plan Transport Assessment, para 4.61) Conversion of the A369 HOV lane to a bus lane. Active Travel The effect of additional traffic within Pill has not been assessed in any detail. Any significant increase in traffic is likely to make active travel less viable for residents, unless separate cycle paths or quite routes are introduced. One proposed		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The active travel plans include a proposal for an east-west link between the Pill Green and Pill road development sites (a cycle bridge), which is described in several of the consultation documents as crucial / essential. Markham Brook is designated as ancient woodland so any development which could affect the ecology or nature of the site would need to be properly considered.			
62800129	Carl Harrell							I strongly object to any diminution of the existing Green Belt in Pill and Easton-in-Gordano parish, I am particularly concerned for the land that lies between the village and the A369 (referred to as Pill Green) and the land at Pill Road. It is well recognised that Green Belt boundaries should only be altered under exceptional circumstances, and then only when justified and fully evidenced. Therefore changes to our Green Belt should only be considered when evidence has been produced showing that all brown field sites and under utilised land in the district and surrounding area have been exhausted. Our parish has always had the natural restraint of River Avon, but the advent of the M5 motorway, and the development of Royal Portbury Dock has imposed further boundaries and restrictions on our community. For example what was once the open area of Long shore is now a vast sprawling car park at Portbury Dock. The importance of maintaining the Green Belt between the village and the A369 cannot be underestimated. This area needs to be kept an open space to preserve the character and identity of the village. Currently anyone visiting the village has to leave the A369 to do so. The open space distances the village from the noise and pollution caused by the traffic using the A369. Traffic using the A369 has been identified as the third highest in the district in terms of pollution generation. The A369 is a major commuter route to our nearest city, Bristol, and has links to the M5 motorway. It carries large volumes of traffic with estimates of up to 20,000 vehicles a day. These current levels of traffic are likely to increase with new developments proposed at Ashton Gate, and the Longmoor Village project, on our side of Bristol. I understand North Somerset Council adopted the Abbots Leigh, Ham Green, Pill and Easton-in-Gordano Neighbourhood Plan in Nov 2021, and will therefore be aware of the concerns of our community regarding the risk of traffic accidents on the A369, and the dangers within our village where the roads and narrow and where visibility is poor. In the Neighbourhood Plan adopted by North Somerset Council in Nov 2021 under the section 'transport and movement' the plan sets out its primary objective, this being to minimise the impact of road traffic on congestion, parking, safety and pollution. The impact of the additional traffic that would be generated by building 1000+ new homes on our Green Belt land, would I believe, be contrary to the objectives previously set out, and adopted by North Somerset Council.			
58529729	Rob Harvey			No	• Justified • Effective • Consistent with national policy	Unsure	No	NSC has not demonstrated that it has done due diligence with regard to expectations about traffic, flooding, wildlife, protected lands, the real impact of the reopened train line, access within the village, nor has it demonstrated that an exception is clear in its removal of green belt status when much of the land serves exactly the same purpose as the land between Portishead and the port of Bristol that has been protected. And, NSC have made no real effort to engage the inhabitants of Pill and Easton in Gordano in the consultation. While other villages and towns had meetings and publicity events; Pill and Easton in Gordano received none of this and after the initial consultation period had finished with not many more than 10 local residents commenting, the local feeling of the people that had no idea that the consultation had happened, very swiftly led to more than 2000 local residents signing a petition to protest the excessive amount of housing being foisted upon them.	NSC must comply with guidelines and specific advice from National Highways, the Environment Agency, English Nature and others. This might leave some sites free of development and an acceptable limit to development in others. Issues of national heritage (building trees and ancient woodland), access (opening up new routes from the proposed developments are unfeasible and untested - Lodway Farm's proposed access point onto Beechwood road would lead the traffic, inevitably, onto Marsh Lane which would be unacceptable to Highways and Port of Bristol as well as to the village as a whole, is difficult and unlikely to open up into the village meaning that the bulk of the developments could only spill out onto the hugely congested A369 and then onto Bristol via Bower Ashton (a regular pinch point) or onto Junction 19 of the M5 which is already under vast pressure) and, on all sites, flooding is a significant risk and diverting runoff from the developments into Pill puts the rest of the village in jeopardy as well as risking pollution of the internationally important Ramsar site, the river Severn. The green belt should be restored for most sites, especially those up against the M5 as the bridge allows easy access to Pill from the Northwest and thus provides no barrier to the expansion of the Port of Bristol. I would propose re examining the pre submission plan and re submitting once the real effect of the railway (should it reopen) can be accurately judged as well as allowing for proper feasibility studies of traffic flow and the real cost of integral drainage plans that take water away from the village and the river. This would allow for a proper environmental study of the sites (more like the recent one undertaken by Metrowest for Lodway fields that was completed over the course of a year and was unarguable in its findings)		
58529729	Rob Harvey				• Justified	Unsure	No	The assessment of Pill and Easton in Gordano as a strategic hub is wrong. No evidence or reasonable studies has been shown by NSC to prove that the population as is in the villages, let alone those thousands from peripheral sites to be developed, will benefit from the reopening of the Portishead to Bristol railway, nor that anyone would opt for using the			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					• Effective • Consistent with national policy			train over the bus or their own car when the likelihood is that very few seats will be available by the time the train reaches Pill from Portishead and that very few trains will be able to serve the village at peak times. The nomination of Pill as a strategic transport hub should be left until the railway opens and we know what the situation is as well as getting proper data from National Highways about opotential weight of traffic on the A369 and at Hunction 19 of the M5			
62862401	Sustainable Pill & District		Sustainable Pill & District	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	This comment has also been uploaded as an attachment to ensure the reader can activate internet links. This policy is included in the Local Plan following a decision by North Somerset Council in 2025 to identify Pill and Easton-in-Gordano as a Strategic Location for large residential development. It was not included in the earlier version of the Regulation 19 Local Plan, dated July 2024. It is therefore a late addition to the current version of the Local Plan and lacks detail in its content, in comparison to the corresponding policies for the other Strategic Locations, which have benefitted from more thorough preparation. Evidence is included in this comment to demonstrate that Policy LP4 is Unsound. The justification section in Policy LP4 states that 'Government reforms to the planning system (including a shift in policy with a more permissive approach to development in the Green Belt where exceptional circumstances can be evidenced and justified, which include where an authority cannot meet its identified housing need) have opened up opportunities for provision of housing at Pill and Easton-in-Gordano to meet the needs of existing and future residents' A detailed comment on the justification for the release of five sites at this location from Green Belt land has been submitted next to Policy SP7 and is also attached to this comment for ease of reference. It is submitted in that earlier comment that the release of the sites from the Green Belt is a hastily formulated strategy, with over-reliance on the impact of a possible railway link, without thorough examination of reasonable alternatives and is therefore unjustified, making Policy SP7 Unsound and, consequently, Policy LP4 is also Unsound. Also attached is a comment on the Additional Sites Consultation (Feb-March 2025) which has been inserted following the 'Vision' section of this Local Plan. That comment provides evidence of a lack of community engagement and failure to comply with the Public Sector Equality Duty. It is submitted that that the inclusion of this policy LP4 is based on a consultation which was not Legally Compliant and must therefore result in this policy being unjustified and therefore Unsound. It is submitted that Policy LP4 fails to satisfy the requirements of the 'Golden Rules' in paragraphs 156-157 NPPF 2024 in relation to improvements to local transport infrastructure (comment 1 below) and the requirement to provide 50% affordable housing (comment 2 below) 1.Failure to meet 'Golden Rules' requirement to improve local transport infrastructure Paragraph 156 (b) NPPF 2024 states that where major development involving the provision of housing is proposed on land released from the Green Belt through plan preparation or review, there should be 'necessary improvements to local or national infrastructure' Policy LP4 fails to address this effectively in relation to transport issues. There is reference to the future railway link and proposed implementation of active travel, but there are no strategies in place to deal with the resulting cumulative impact on traffic near this location. There is overwhelming evidence that the impact of the proposed housing development comprising 1,100 homes will cause increased congestion on J19 of the M5 and on the primary road network. An analysis of transport data is included in the comment on Policy SP7, but is repeated below for ease of reference: M5 J19 (Strategic Road Network) • M5 J19 is very congested, with several junctions at or above capacity and with junctions close to J19, especially the Portbury junction and the A369 to St Georges Hill junction also at or near capacity. (Local Plan Transport Assessment: Portishead, Portbury & Junction 19) • The effect of the planned developments is to increase the utilisation of these junctions. (Local Plan Transport Assessment: Portishead, Portbury & Junction 19) • The mitigations to the increased congestion are to facilitate public transport by converting the A369 HOV to a bus lane and by remodelling the southbound off-ramp section of J19 (Local Plan Transport Assessment p71) • No detailed modelling of the proposed J19 redesign has been carried out, although it is acknowledged that "there will be increases in congestion on the circulatory of the roundabout, which has the potential for knock-on impacts" (Local Plan Transport Assessment para. 5.166) • The proposed redesign of J19 does not form part of funded schemes as part of RIS3 (National Highways planned schemes) to 2031. The impact of the developments on J19 is therefore likely to be unmitigated, with increased congestion which has not been adequately addressed by the Transport Assessment. Furthermore, National Highways has raised concerns about the impact of housing developments in this area. In relation to a proposed development 'Land off Marsh Lane', (NSC planning ref 25/P/1413/OUT – copy attached), National Highways stated that further transport modelling is required to assess cumulative impacts on Junction 19. It is not clear from the Local Plan and evidence base that the required modelling or cumulative impact assessment has been carried out or that the Council has adequately co-operated with National Highways in addressing these concerns. A369 (Primary Road Network) • The A369 and the two junctions which serve Pill, St Georges Hill and Pill Road, are all predicted to become more congested as a result of the housing developments, and the conversion of the A369 HOV to a bus lane Local Plan Transport Assessment para. 4.63) • The North Somerset strategic transport model is particularly poorly validated along the A369 near Pill (appendix c). The model is noted as failing validation checks at both the Portbury and Beggar Bush Lane junctions which bound the section of the A369 serving Pill. In the worst case, the model underestimates traffic flow in these locations by 350 vehicles (observed=1044, modelled=694). This indicates that the modelled traffic flows around Pill are particularly poor and may well be underestimating the traffic flows into Pill (given that the discrepancy reduces from one side of Pill to the other). Given the scale of these errors, the model does not provide a sound basis for the assessment of the magnitude of any impact, or effectiveness of any mitigation around Pill. • The proposed change of the HOV lane to a bus lane is dependent on National Highways RIS3 due to the potential impact on J19. This improvement is judged as "hypothetical" by North Somerset and RIS3 has been delayed, which makes the delivery of this mitigation uncertain (appendix e) The shortfalls in the modelling, and uncertainties in the deliverability of proposed mitigations, make the assessment of the impact on the primary road network inadequate. Furthermore, the active travel plans in this policy include 'Provision of an active travel connection between the Pill Green and Land at Pill Road sites over Markham Brook'. A cycle bridge is proposed and is described in several of the consultation documents as crucial/essential.	In order to make the Local Plan legally compliant and sound, there should be a re-assessment of the of the five sites around Pill and Easton-in Gordano for housing development and their identification collectively as a Strategic Location. The submitted comments on behalf of Sustainable Pill and District demonstrate considerable lack of community engagement, which fails the test for Legal Compliance and falls well below the engagement with communities in the other Strategic Locations referred to in the Plan. The comments also make clear that significant weaknesses exit in the assessment of these sites and in the application of 'exceptional circumstances' to justify their release from the Green Belt for housing development. Furthermore, weaknesses in site-specific policies indicate insufficient time and consideration has been given to the policies for this Strategic Location, likely due to its late inclusion in the Plan. A pause in the process of approving this Plan is requested so that the Pill and Easton-in Gordano Strategic Location can be re-assessed, following adequate and effective engagement with the local community. 								It should be noted that this area is designated as Ancient Woodland so any active travel proposals which could affect the ecology or nature of the site may be excluded by planning regulations which protect the Ancient Woodland, making this proposal ineffective. The evidence above indicates that Policy LP4 is Unsound due to failure to meet 'Golden Rules' requirement to improve local transport infrastructure. It follows that Policy LP4 is also Unsound due to inconsistency with Strategic Policy SP3 which states: 'Most of the development which takes place in these areas will be at the relatively more sustainable villages, but this must not be of a disproportionate scale which adversely impacts on the character of the settlement or leads to a significant increase in the number of car journeys' There is also inconsistency with Strategic Policy SP6 which states that development in villages and rural areas 'will not cause significant adverse impacts on local services and infrastructure, including cumulative impacts' thus providing a further reason that Policy LP4 is Unsound 2.Failure of compliance with 'Golden Rules' requirement of 50% affordable housing The 'Golden Rules' requirements are set out in paragraphs 156-157 NPPF and state: In the absence of a pre-existing requirement for affordable housing, a 50% affordable housing contribution should apply by default' This requirement is confirmed in Strategic policy DP3 in the Local Plan which states: 'Developments will be expected to provide 50% affordable housing on land released from the Green Belt as set out in Policy SP7'. However, the Additional Sites Viability Addendum, Final Report, October 2025 (in Local Plan evidence base) Section 3.4 states that 'testing was undertaken at 50% affordable housing as requested by NSC. The results indicate poor viability across the values range thought to be typically relevant for the area (in terms of likely new build values) suggesting that a target of 50% affordable housing may be challenging unless higher values can be evidenced'. The conclusion section (Section 3.5) of the same report states: the results suggest that an affordable housing quantum of no more than 30% is likely to be viable at the Nailsea and Backwell strategic location and possibly up to 35% at SW Bristol and in Pill / Easton-in-Gordano.' Policy LP4 cannot therefore be justified or effective in relation to compliance with the 'Golden Rules' and is therefore Unsound. Failure of compliance with Duty to Co-operate in relation to infrastructure Pill/Easton-in-Gordano is tied inherently to cross-boundary strategic transport (the A369 into Bristol), the Strategic Road Network (M5 J19), and the Portishead rail reopening. There is insufficient evidence (and no reference in Policy LP4) of statements of common ground, no recorded agreements with Bristol City Council, National Highways, or the rail scheme promoters setting out mitigation, funding and phasing for A369/J19 and rail integration commensurate with the proposed scale. In the absence of such evidence, Policy LP4 does not demonstrate effective and ongoing joint working on these cross-boundary strategic matters. Insufficient evidence of compliance with the Duty to Co-operate makes this policy Unsound. Failure to provide strategies to offset environmental and ecological impacts The National Policy Planning Framework (NPPF) requires Local Plans to take full account of environmental impacts and to avoid/mitigate adverse effects, including Habitats Regulations Assessments (HRA). The proposed development sites around Pill lie within consultation zones for the North Somerset & Mendip Bats Special Area of Conservation (SAC) in relation to both Greater and Lesser Horseshoe bats, with proximity to the Severn Estuary Site of Special Scientific Interest (SSSI). Details of protected species and habitats can be found in the Wild Service Ecology Review. https://pillanddistrictplan.org/environment-and-landscape/wild-service-ecology-review/ This forms part of the evidence base for the Neighbourhood Plan made by Full Council on 9 November 2021. Where sites are adjacent to or affect SSSI, SAC or other habitats sites, or form important wildlife corridors, development proposals must avoid significant harm, apply buffers and secure measurable net gains for biodiversity. In addition, two of the sites which comprise part of the LP4 Strategic Location – Land at Lodway Farm and Land at Pill Green – are in flood risk areas: - The Western part of the Lodway Farm site is in flood zone 3a tidal, with parts 3b fluvial - Markham Brook (within the Pill Green site) is culverted at certain points and connects to the tidal River Avon. The majority of the site is within Flood Zone 3a. A small area along the boundary also falls into the functional floodplain (Flood Zone 3b). Section 6.97 of the Sustainability Appraisal (included in evidence base) clearly states that Land at Lodway farm is at risk of flooding and that policy LP4 does not identify any mitigation. In addition, serious concerns have been raised in relation to surface water drainage from proposed development on the Land East of Gordano Services (also included as land to be released from Green Belt in SP7). Comments from the National Highways Agency in response to outline planning application 25/P/1413/OUT copy attached) included strong objections to the applicant's surface water proposals, which 'would have a detrimental impact on National Highways infrastructure'. Further comments state: 'we consider this matter is significant and is not capable of being addressed by planning condition'. Despite the clear need for mitigation, Policy LP4 fails to provide any strategies to avoid/mitigate adverse effects on the environment or wildlife habitats or in relation to flood risk. In comparison: Policy LP1 (Strategic Location, Wolvershill) states that proposals for development must deliver 'ecological, habitat and environmental enhancement, particularly in relation to horseshoe bats' and 'effective management and treatment of surface water, controlling run-off into surrounding watercourses and integrating into the green infrastructure network.' Policy LP2 (Strategic Location, Woodspring) and Policy LP3 (Strategic Location, Nailsea & Backwell) both include the following wording: 'A new Nature Park is required to form part of any proposals for development within Woodspring……connectivity between any Nature Park locations and important roost sites for bats will be a key consideration in ensuring that important flight corridors are retained and not impacted by development proposals. Policy LP2 also states that 'any proposals to accommodate development within areas of higher flood risk will require a sequential test assessment and must in any event demonstrate that the development would be safe over its lifetime without increasing flood risk elsewhere. The sequential test and exceptions test should be undertaken in accordance with Policy DP9'

								It is submitted that Policy LP4 has been hastily formulated, following the decision to identify Pill and Easton-in Gordano as a Strategic Location. It has weaknesses in content and compares poorly to the corresponding policies for the other Strategic Locations. Policy LP4 fails to meet the needs of the location with regard to environmental and ecological issues and is inconsistent with the other policies in the Local Plan relating to Strategic Locations. This policy is therefore Unsound.			
62622241	Rachel Harvey			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	During the initial public consultation into the Local Plan that ran from 7 February 2025 for 6 weeks to 21 March 2025, North Somerset Council (NSC) did not comply with its Statement of Community involvement with regards to the potential sites around Pill and Easton-in-Gordano (PEIG). All 5 sites in the initial consultation, amounting to an additional 1,100 potential dwellings around the village of Pill have been recommended for development. This would result in increasing the number of homes around the village by over 40%. Ref: https://n-somerset.gov.uk/sites/default/files/2020-03/Statement%20of%20community%20involvement%202019.pdf There were 5 sites being consulted on around PEIG but unlike Long Ashton, Weston-Super-Mare, Nailsea, and Backwell (Section 2.7, pp14-15 of the NSC Regulation 19 Additional Sites Consultation: Consultation Statement (May 2025)), no public exhibition or Q&A session was held in Pill to inform the inhabitants of the possibility of Pill becoming a strategic site within the Local Plan. Ref: https://n-somerset.gov.uk/sites/default/files/2025-07/Additional%20Sites%20Consultation%20-%20Consultation%20Statement%20%28May%202025%29%20Accessible.pdf This contravenes several of the principles for planning consultations in NSCs Statement of Community Involvement namely: 1. We will target consultation to include people whom we consider would be most affected by any proposals or plans and where possible any known interest groups. 2. We will seek views as early as possible. 3. We will always aim to provide sufficient information to enable people to comment effectively. 4. Involvement will be open to all. Firstly, the local population was given no indication that PEIG would be designated a strategic location at any time during the initial public consultation with all sites being listed separately within the consultation and only linked together later in the NSC Regulation 19 Additional Sites Consultation: Consultation Statement (May 2025) . This contravenes principles 2 and 3. Lack of a public exhibition meant that most residents were unaware that the consultation was even happening; this contravenes principle 1. Evidence of low public awareness in PEIGN can been seen in the extremely low numbers of residents from PEIG who completed the initial consultation. This is in contrast with the 2,209, as of 2.30pm on Friday 12 December 2025, plus 115 pen and ink signatures, who have signed the petition objecting to excessive house building in the area around Pill. This is out of an adult population of around 3,877 (2021 census). Where were their voices in the initial public consultation? Ref: https://c.org/n65SRK5Y6M Misleadingly in the NSC Regulation 19 Additional Sites Consultation: Consultation Statement (May 2025) , p8, states that there were 125 responses over the 5 sites giving the impression that 125 people or organisations responded to the public consultation. However, this does not take into account multiple responses. An analysis of the number of responses made by each discrete person or organisation responding to the sites shows that the vast majority responded to more than one site, with the maximum number responding to an individual site was 29. Only around 18 residents from Pill responded at all (these numbers are estimates but an accurate number could be found if time were taken to make a full and detailed analysis of the responses to the 5 sites in detail given here - I am one individual with very limited free time so could not analyse all the responses in full detail). Most respondents gave responses to 3 or 4 sites around PEIG but not any other sites across North Somerset. Ref: https://n-somerset-pp.inconsult.uk/Reg19AddSites/viewCompoundDoc?docid=15643252&sessionid=&voteid=&partId=15644756 However, there are several people or organisations from outside the village who have made comments in favour of development across multiple sites e.g. of the eight respondents that said ‘Yes’ to the HE2015 (Pill Green/Markham Fields) site, 6 of them were obviously from outside of the village and had responded ‘No’ to development in their area but ‘Yes’ to other places in North Somerset e.g RisC (Residents of Station Close) in Backwell who responded ‘Yes’ to development across 4 sites around PEIG and several other areas across North Somerset but ‘No’ to sites in Backwell. Likewise Backwell Parish Council who targeted all 5 sites in PEIG to respond ‘Yes’ to, while defending the sites across Nailsea and Backwell. The PEIG PC, by contrast, only commented on sites around PEIG. Backwell PC, of course, and the residents of Nailsea and Backwell were much more aware of the threat to their towns from the Local Plan because of the two public exhibitions and Q&A sessions held there on 7 March (Nailsea) and 10 March (Backwell) see p.14 of the Public Consultation Statement (link in paragraph 1). There was nothing within the Public Consultation Process to stop this kind of strategic response to the Public Consultation. Equally worryingly there is no acknowledgement of this manipulation of the results within the Public Consultation Statement. This has led to the conclusions within the Public Consultation Statement being skewed: 'Strategic Growth Locations: There was strong objection to Nailsea and Backwell being identified as a strategic growth location…There was a significant level of response for Long Ashton with 591 comments received for the ten sites identified… For Pill and Easton-in-Gordano there was a fairly even split of support and objection to the sites identified in this location. Pill and Easton-in-Gordano was felt to be a sustainable location in terms of proximity to Bristol, access to the motorway, connections to Bristol along the new railway line…’ p.7 If NSC had properly scrutinised the responses to the five sites around PEIG, they would not have drawn the conclusion that ‘there was a fairly even split of support and objection’ or that ‘Pill and Easton-in-Gordano was felt to be a sustainable location in terms of proximity to Bristol, access to the motorway, connections to Bristol along the new railway line.’ The Public Consultation fed directly into the development of the Pre-submission (Regulation 18) Local Plan and indicates that the plan is not Sound because it was not positively prepared and there was a lack of proportionate engagement. Even after the Regulation 18 pre-submission plan had been published in early Summer 2025 and PEIG was identified as a strategic location, NSC failed to properly consult with residents of PEIG. According to the minutes of from the North Somerset Council - Report to the Placemaking, Economy and Sustainable Communities Policy and Scrutiny Committee, on 17 July 2025: 'LP4: Strategic Location: Pill and Easton-in-Gordano 3.24 A workshop session with the parish council and local residents has been offered in July, and the outcomes of that workshop will feed into the emerging policy and site- specific requirements set out in Schedule 1 of the plan. Further	North Somerset Council needs to do further consultation with the residents of Pill, Ham Green and Easton-in-Gordano with regards to designating the village as a strategic location. A public exhibition and Q&A session needs to be held in Pill and a new public consultation, like the one in Spring 2025, must be reopened where residents are able to put forward their views and to give time to properly consider the implications of making Pill a strategic location. There needs to be proper consultation and discussion around implications relating to infrastructure, road safety from the substantial increase in the number of cars such a huge amount of development will generate, particularly in relation to the A369, the J19 motorway roundabout and the M5. Issues relating to noise pollution, particulates and increased risk of flooding also need to be properly explored before rushing through this plan. During the initial public consultation process nobody was aware that Pill was going to be designated as a strategic location so there was no proper investigation into or debate around any of these issues. The results of the public consultation need to be properly analysed and interpreted so they fairly represent the views of the public and are not open to manipulation by organisations and individuals outside of PEIG who are seeking to deflect development in their area. Members of the public who do not have online access should be given support to give their comments. West Pill is identified as among the most 25% of deprived areas in England (NSC Indices of multiple deprivation, 2015) but no extra support has been put in place to enable residents to fully contribute to the public consultations.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								engagement will continue over the coming months.' This workshop did not take place and local residents were actively discouraged by the PEIG PC from trying to actively engage in the process of feeding into the Local Plan before the Public Consultation in the Autumn of 2025, by which time the scope of the consultation was much more limited. This was pointed out Natalie Richards, NSC Planning Policy Manager, Jason Beale, Head of NSC Planning, Jenna Ho Maris, NSC Councillor and PEIG PC in an email dated 22 August 2025 but no action was taken to rectify this. Some representatives of Sustainable Pill and District (SPAD), a local community group that has prepared a group response to this public consultation, did have some limited contacted with NSC Planning Officer Natalie Richards. They met online twice and were invited to comment on the LP4 document but without access to the Schedule 1 document. However, any suggestions made were ignored by NSC planning department. To summarise, I do not believe that the NSC Local Plan is legally compliant with respect to its duty to adequately consult with residents regarding the designation of PEIG as a strategic location. It failed to hold a public exhibition or Q&A session in Pill unlike other strategic locations across North Somerset and it came to misleading and inaccurate conclusions in the subsequent Regulation 19 Additional Sites Consultation: Consultation Statement (May 2025). After PEIG had been formally designated a strategic location in the Pre-submission Regulation 18 Local Plan, no further public consultation was sought with the residents of PEIG and a public workshop proposed for July 2025 did not go ahead. Limited consultation was sought by NSC planning office with one local community group over the Summer of 2025 but their concerns and suggestions were disregarded. As a consequence the current version of the NSC Local Plan was not positively prepared adn cannot be deemed to be Sound.			
62802913	Pill & Easton-in-Gordano Parish Council		Pill & Easton-in-Gordano Parish Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Pill & Easton-in-Gordano Parish Council objects to Policy LP4. Designating our parish as a fourth Strategic Development Location for ~1,100 dwellings on five Green Belt sites is unsound, unlawful and undeliverable. This allocation only appeared in June 2025 – it was absent from the July 2024 draft – and has not been properly evidenced or consulted on. This abrupt June 2025 elevation misrepresents the February–March 2025 consultation, which sought views only on individual sites as 'potential allocations' in sustainable villages, not as a strategic location (Consultation Paper Section 5.43). Cabinet's 18 June claim of 'general support' (para 3.21) ignores localised objections and the fact no strategic question was asked, breaching Localism Act 2011 engagement duties. Not Positively Prepared – Forces a Category A village (1.9 % of North Somerset's electorate) to take 4.6 % of all new housing, overriding our made Neighbourhood Plan (81 % referendum support, 2021) which caps growth at 150–200 homes to 2038. Policy LP4 is also procedurally flawed and unjustified because it was introduced as a complete surprise in June 2025 – absent from all previous consultations. The supporting evidence is extraordinarily sparse: no updated Sustainability Appraisal, no transport modelling, no habitat surveys, and no landowner agreements for the proposed active travel routes. Several of these routes (notably the Markham Brook overbridge and connections across private land) appear to have been drawn freehand on a map with no regard to topography, ancient woodland, floodplain, or existing rights of way. This gives the clear impression of a rushed, last-minute insertion to plug a perceived housing numbers gap, rather than a properly prepared, evidence-led allocation. Such an approach renders the policy neither justified nor effective and risks the entire Plan being found unsound. Not Justified – The Sustainability Appraisal fails to use Defra MAGIC maps, missing floodplain woodland (Flood Zones 2/3), ancient woodland and priority habitats. No objective assessment of non-Green Belt or brownfield alternatives has been carried out (NPPF para 157). The proposed Markham Brook active travel route cuts through irreplaceable ancient woodland with no 15 m buffer or compensation strategy (NPPF para 193c; Natural England Standing Advice 2024). The Sustainability Appraisal and evidence base contain no assessment of the loss of best and most versatile agricultural land. Four of the five LP4 sites (HE2015 Pill Green, HE20491 Lodway Farm, HE206 Gordano Services, and HE20492 Pill Road) are predominantly Grade 1 and Grade 2 according to Defra's Provisional Agricultural Land Classification (see attached screenshot from magic.defra.gov.uk). This is prime farmland that the NPPF (para 119 and Planning Practice Guidance) says should only be developed as a last resort after all reasonable lower-grade alternatives have been exhausted. No such alternatives assessment has been carried out, rendering Policy LP4 not justified (NPPF para 36(b)). Not Effective – The council's own Infrastructure Delivery Plan (Oct 2025, §8.3) labels M5 Junction 19 upgrades and Pill flood-risk management as high-risk and unfunded. The five LP4 sites together would add approximately 1,540 peak-hour car trips (1.4 cars/home × 1,100 dwellings) – on top of Portishead's remaining growth and the continuing expansion of Royal Portbury Dock HGV traffic – with no evidenced mitigation and no funded solution. National Highways has raised unresolved objections to the cumulative impact on Junction 19 capacity and safety. In the absence of any robust assessment or deliverable mitigation, Policy LP4 fails the effectiveness test (NPPF para 36(c)) and would cause severe residual cumulative impacts on the strategic road network (NPPF para 116). Flood mitigation fails the sequential test (NPPF para 174). Inconsistent with National Policy & Legally Non-Compliant – Directly breaches NPPF paragraph 148: the council has published no evidence that brownfield opportunities and urban density increases have been maximised before releasing high-value Green Belt in Pill. Residents and the parish council are aware of potential brownfield sites that have not been fully explored. Releasing these five Green Belt sites therefore fails the sequential test, the "grey belt" priority, and the requirement for exceptional circumstances. This, combined with tiny consultation responses (often <30 per site) and a developer-led process, also breaches the Localism Act 2011. Duty to Cooperate failed – No updated Statements of Common Ground with National Highways, Natural England or the Environment Agency on J19, habitats or SuDS. This policy risks the whole plan being found unsound (as happened with the Joint Spatial Plan in 2020).	Delete Policy LP4 in its entirety and remove all five Pill & Easton-in-Gordano sites from the proposals map. Revert to the July 2024 spatial strategy under which our parish was not a Strategic Location and growth was limited to local needs only, in line with Policy SP3 and our Neighbourhood Plan. Furthermore, the Plan's failure to examine the government's new Environmental Improvement Plan 2025 (EIP 2025, published 1 December 2025) renders LP4 unsound and non-compliant. EIP sets binding national targets under the Environment Act 2021, including 30% land protection by 2030 (30by30), mandatory 10% Biodiversity Net Gain (BNG) for all developments by mid-2026, and £10.5bn for nature-based flood defences (protecting floodplain woodlands like those on Pill Green HE2015). It requires Local Nature Recovery Strategies (LNRS) by end-2025, which local plans must integrate for habitat mapping, no-net-loss of ancient woodland (via updated inventories by 2027), and riparian buffers along Markham Brook. NSC's June 2025 allocation predates EIP and lacks any assessment of these requirements—no BNG strategy for irreplaceable habitats (NPPF para 193c alignment), no LNRS-informed alternatives to Green Belt release, and no evidence of flood-resilient designs (e.g., SuDS to avoid downstream risks in Pill village). This breaches NPPF para 36 (not justified/effective) and the Biodiversity Duty for public bodies. **To comply, pause submission until: (i) Full EIP/LNRS integration via revised Sustainability Appraisal; (ii) Independent audit of sites against EIP targets (e.g., 250,000 ha habitat creation by 2030); and (iii) 6-week extended consultation. Additionally, fund a Parish-led audit of small/micro-sites (2–5 homes each) on underused/ brownfield land within the parish, as reasonable alternatives prioritised under NPPF paras 36(b), 69, 119 and 148. Residents have identified potential infills fitting local needs without Green Belt harm—exploring these first would demonstrate proportionate evidence and effective rural land use. These fixes would enable evidence-led, nature-positive growth without judicial review risks. These changes would make the plan properly thought-through, backed by real evidence, deliverable, and fair. If the council does them now, the plan can still be saved and we avoid the		Markham Brook Ancient Woodland and Priority Habitat Inventory.pdf ALC Defra MAGIC Pill Sites Grades 1 and 2 Dec2025.png

									nightmare of it being thrown out and developers building whatever they like.		
62800577	Mrs G Hills			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	There has been a sudden jump from these sites being "other potential" to being implemented without further consultation. I do not feel the council has considered the traffic congestion at Junction 19.	A marked reduction in the number of houses. Perhaps only using 1 of the proposed sites.		
62805249	Ian Hingley			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Significant traffic and transport issues: This part of the plan is unsound as it demonstrates insufficient evidence that full consideration of traffic and transport issues has been given. The villages of Pill and Easton-in-Gordano are served by one already busy road running through them with access to the A369. There is no provision for any additional access to the A369, a major commuter route between the city of Bristol and M5 Junction 19. The existing road through the villages of Pill and Easton-in-Gordano has several sharp bends, notably on St Georges Hill and Priory Road which create ‘pinch points’ when large vehicles such as buses pass through. There is a further pinch point on Lodway at the high pavement, making it single file for large vehicles. There is no recognition of the effect of the increased traffic through these pinch points in the plan. The A369 is an extremely busy commuter route. Previous planning applications for some of the very sites in this proposed plan have been rejected because of increased traffic and inadequate access to the A369. The A369 has a severe pinch point at The George in Abbots Leigh (within North Somerset) which limits its total capacity and ability to cope with the extra traffic generated by the proposed plan. There is an existing plan to replace the 2+ lane on the A369 between St Georges Hill and High Street Portbury with a bus lane. This will have the effect of limiting the volume of traffic able to join the A369 from the traffic light controlled St Georges Hill. There is no evidence the effect of extra traffic using this junction if this proposal is approved has been considered in this plan. The capacity of the A369 is also limited by the steep and winding Rownham Hill within Bristol City. There is no evidence the capacity of the A369 can cope with the extra traffic generated by this proposed plan. The M5 junction 19 roundabout causes many traffic issues as is well documented. The traffic jams are particularly bad on summer weekends. The addition of the proposed 1100 houses with 1518 vehicles (using the 1.38 multiplier from the 2021 Census) will increase traffic attempting to join the M5 from the A369. To leave the M5 southbound at J19 to join the A369 southbound towards the villages of Pill and Easton-in-Gordano the traffic is meant to share a single lane with traffic bound for the Gordano services. This causes significant and dangerous tailbacks onto the M5 at rush hour and summer weekends. A proportion of frustrated motorists often use the first of the ‘Portishead’ lanes to avoid this queue before cutting across in dangerous fashion to join the A369 southbound. The increase in traffic caused by this proposed development will exacerbate this situation. There is insufficient evidence of consultation with National Highways in this proposed plan to alleviate these risks. It is acknowledged that the approval of the proposed rail link between Portishead and Parsons Street station was a factor in elevating the villages of Pill and Easton-in-Gordano into the Strategic Development band. There is insufficient evidence the proposed plan adequately considers the parking requirement for the rebuilt Pill station. Whilst villagers ‘may’ walk or cycle from the proposed new developments, a successful rail link would draw people from neighbouring villages such as Failand and Portbury. This will further increase traffic entering the villages of Pill and Easton-in-Gordano . There is an acute lack of on-street parking in Pill around the station and insufficient evidence the proposed plan takes this into consideration. There is an over reliance on ‘if’ the trains run sufficiently frequently and ‘if’ they carry sufficient passengers without evidence this is actually an agreed concrete proposal. It must be realised the proposed rail route is only single track. It is impossible to increase the frequency of trains beyond that of the time taken to travel between Portishead and Parsons Street station as two trains cannot travel on the same line in opposite directions! As Portishead is the much larger town and is at the head of the line, there is no evidence of consideration of how many remaining passenger spaces there may be when the train arrives at Pill station and whether there will be sufficient capacity for the number of passengers this proposed plan expects to travel by train. Flooding risks: The policies in this proposed plan are unsound. There is a recognised flood risk in Pill at the area around Markham Brook as the valley bottom and parts of the surrounding land are within the Environment Agency's Flood Zone 3. This indicates a high probability of flooding from rivers (fluvial) and the sea (tidal). https://flood-map-for-planning.service.gov.uk/ . At particularly high tides there is flooding in Pill Creek several times per year as per the attached photo. The impermeable surfaces of the proposed plan for 1100 houses with access roads, roofs, driveways, patios, etc increase the speed of run-off into the surface water sewerage network compared with the natural green permeable land that will be built on. Each of the proposed development sites may plan to deal with its own surface water run-off but that will be by simply passing it downstream. There is insufficient evidence of modelling of all the developments passing all their surface water run-off into Markham Brook and hence Pill Creek simultaneously. The proximity of the proposed developments to Pill Creek and hence the tidal River Avon means there is little time for this increased surface water run-off to be attenuated. It seems likely North Somerset could and should have identified sites with much lower flood risks than these proposals to build 1100 homes directly adjacent to existing properties within the Environment Agency's Flood Zone 3.			aIMG_9767.jpg
47564225	Councillor Jenna Ho Marris			No	• Positively prepared • Justified	Unsure	Unsure	While there are many excellent provisions in the Local Plan, as Pill Ward district councillor, my view is the allocation of 1,100 new homes in the Pill Green Belt area is unsound as it is not sustainable development: it is excessive, will cause unreasonable traffic congestion and pollution, and would be harmful to local ecology. None of these impacts appears to be adequately mitigated by provisions in the Local Plan.	Reduce the allocation to the four Pill green belt sites to numbers closer to the Neighbourhood Plan ie 150-200 new dwellings. Alternatively, remove the Pill Green site from the Local Plan		safer-cycling-advocate-program.pdf Netherlands Sustainable Safety policy.pdf

					• Effective • Consistent with national policy			Over 2,000 residents (in a population of around 5,000) have signed a petition to object to the excessive allocation. Residents have also expressed their concerns directly to me, through the two parish councils for Abbots Leigh and Pill & Easton-in-Gordano, through local groups including Sustainable Pill and District and the local wildlife groups, and at several local public meetings. I support their concerns. In particular I have read the detailed and well-evidenced comments in draft by Pill & Easton-in-Gordano Parish Council and I fully support them. No proper consultation with residents The Pill Green Belt allocations were included only after the new Government's mandatory housing targets were introduced in December 2024 and after a consultation in February- March 2025 where they were not highlighted as a "strategic growth location". Residents did not think it was likely that all five sites in Pill would be allocated leading to a low level of engagement. Over 2,000 residents of Pill, Easton-in-Gordano and Abbots Leigh have now signed a petition objecting to the excessive allocation, see: https://www.change.org/p/protect-our-community-object-to-excessive-house-building-on-green-belt-around-pill?source_location=search. The Pill Green Belt allocations do not take into account our Neighbourhood Plan 2020-2026. That plan acknowledges that there should be some development in the area, but at an appropriate scale which benefits the local community. Lack of Supplementary Planning Document (SPD) No SPD has been provided at this stage to explain how the development of the Pill Green Belt allocations will achieve a "strategic and co-ordinated approach to ensure the growth of the village provides tangible benefits for existing and future communities" as stated in the policy. Residents cannot agree to something which has no specific details. Transport infrastructure is inadequate The Transport Assessment drafted by AECOM is 131 pages long and not easily understood by people without technical expertise. Appendix F is better but still not written for a layperson. I wish to highlight paragraphs 4.64, 5.165, and 5.166. My understanding of these paragraphs is that the Pill Green Belt allocations are considered sustainable because: 1) Even though there may be an increase in congestion, residents will be able to access active travel which should not be impacted by traffic congestion; 2) There will be no congestion because residents will 'mode shift' and take the bus, train or cycle rather than drive in and out of the area; 3) There is existing congestion at J19, and the Local Plan won't make much difference. There will be more congestion at the roundabout, which could have knock on impacts. However, we have not modelled this yet, so we can't say if mitigation measures are required, and we have no confirmed proposals for works to J19 that can solve this problem. In response: Active travel infrastructure is inadequate Existing active travel infrastructure in the Pill area does not meet safety standards to attract a wide level of mode shift including for older people, and children. For example, the shared cycle/ footpath between Martcombe Road-Pill Road junction, Abbots Leigh, and Ashton Court is cleaned by North Somerset Council only twice a year, and is often covered with obstacles such as wet leaves and sticks, and is narrow in places. I have cycled this path with my primary school children every day for the school run in the past few years. The condition of the foot/cycle path is acceptable to us, but several cyclists who use road bikes have told me they prefer to cycle in the traffic as it is safer with their bike. I have also seen, experienced myself and heard of others slipping and being injured particularly at the narrow steep section between Manor Cottages and Abbots Leigh Cricket Club which collects leaves and sticks and has to be regularly cleaned by local volunteers. In order to support any increased usage safely, the existing bicycle and pedestrian infrastructure needs investment and maintenance following UK and international best practice eg Netherlands Government's Sustainable Safety 3rd Edition, 2018-2030 and the European Cyclists Federation Guide, 2020 (attached). Otherwise the Local Plan will not achieve the mode shift that forms the basis of its mitigation strategy. Harm to local ecology Residents have pointed out that the Pill sites in particular Pill Green is home to a population of Linnets and Skylarks, which are UK Red Listed with Conservation Concern status meaning they are rare and protected. It is unclear how development at the scale proposed will be able to mitigate against removing their habitat. There is also a section of ancient woodland at Markham Brook on the border of the Pill Green and Land at Pill Road sites.	allocation. Invest in and improve proposed and existing active travel routes to meet best practice guidelines, this is essential to achieve the mode shift that is being relied on to mitigate traffic congestion. SPD to set out in detail and with effective local input the active travel routes between any allocated sites and the train station, bus stops. The Infrastructure Delivery Plan should include a local 'shopper' minibus service that loops around the area linking to train station and shops. Complete modelling of J19 impacts so that mitigations can be proposed and scrutinised.

62789505	Malcolm Ingram			No	• Justified • Effective • Consistent with national policy	Unsure	Unsure	1. There has been a significant lack of community involvement and consultation methods employed by NSC. NSC has not engaged properly with local community of Pill and Easton in Gordano about the plan. This is move that will result in an increase of 44% in population and thus requires extensive consultation with local residents in the villages concerned 2.Deviation from Settlement Boundaries (SP6). Land outside established settlement boundaries should not be included in proposed development allocation in Pill and EIG. Extending beyond the settlement boundaries will undermine the planning rules for SP6 and SP11. This will increase pressure on infrastructure, set precedent for further expansion, and affect cohesion of the villages. 3. Spatial strategy and transport. Pill and EIG have very limited facilities, services and jobs. They will become dormitory areas for Bristol. The proposed new railway will not encourage people to use this to get to Bristol as there will be few trains per hour and 3 carriages, likely to be full from the large town of Portishead. Car traffic will be increased considerably on already dangerously congested A369 and bottle necks into Bristol causing adverse impacts on this route. Therer is an ongoing consultation regarding serious problems with Junction 19 which has yet to report. 4. Placemaking. The proposed sites suggest a high density of houses which is not appropriate to the locations, not producing sustainable communities. Too many houses are proposed for the land, resulting in poor combinations of green space and community spaces..	1. Well publicised public meeting(s) with the local community to hear a wide range of views from all ages, some of whom are excluded via this e-response 2. Review of sites to ensure compliance with NSC proposed policies. Consequestial reports from these findings to be made public. 3. Acknowledgement of existing settlement boundaries and no extension to them. 4. Review of the transport infrastructure in the area which is already straining from increases in traffic from extensive Portishead developments. The limited commuter	I do not support the soundness or legal comliance of NSC local plan 2041

62860065	Samantha Joyner			No	• Justified • Effective • Consistent with national policy	No	No	I do not consider the Pre-Submission Plan to be sound, legally compliant, or compliant with the Duty to Cooperate. First, the plan is not justified or effective. LP4 proposes growth that would increase the population of Pill and Easton-in-Gordano by around 44%, yet there is no proportionate evidence demonstrating that local or strategic infrastructure—transport, healthcare, education, utilities or community facilities—can accommodate this scale of development. No detailed assessments, costed delivery plans, or secured funding/agreements have been published, so the allocation cannot be shown to be deliverable. Second, the plan is not legally compliant, particularly in relation to the evidence base. A legally compliant plan must be supported by robust, up-to-date assessments; these are missing for several critical infrastructure areas, calling into question whether statutory requirements have been met. Third, the plan does not meet the Duty to Cooperate. LP4 clearly creates cross-boundary impacts (notably on the A369, M5 J19, commuting into Bristol, and health and education services), yet no evidence has been provided of effective, outcome-based cooperation with neighbouring authorities or statutory bodies to resolve these issues. Consultation alone does not satisfy the duty. For these reasons, LP4 and the wider plan fail the tests of soundness, legal compliance and the Duty to Cooperate.	To make the plan legally compliant and sound, the following modifications are necessary: Produce and publish a full, proportionate infrastructure evidence base for Pill and Easton-in-Gordano, including: -transport and highway capacity modelling (A369, M5 J19, local network) -education and healthcare capacity assessments -utilities, drainage and wastewater capacity assessments -costed delivery plans and committed funding sources This evidence must demonstrate that the proposed scale of development is realistically deliverable. Reduce or re-phase the scale of growth in LP4 unless the above assessments show unequivocally that a 44% population increase can be sustainably accommodated. Alternative or additional locations should be assessed where infrastructure capacity is greater. Provide a clear, binding infrastructure delivery plan for LP4, including phasing triggers ensuring that housing cannot be delivered ahead of the necessary infrastructure and services. Publish Statements of Common Ground with all relevant neighbouring authorities and statutory bodies—especially National Highways, Bristol City Council, NHS bodies, education authorities and utilities—demonstrating effective, outcome-based cooperation on the cross-boundary impacts of LP4. Reassess the sustainability and environmental impacts of the allocation in light of updated evidence, ensuring the plan complies with national policy on sustainable development and infrastructure-first planning. Strengthen masterplanning requirements so that no development proceeds until a detailed, publicly consulted masterplan is agreed, including layout, mitigation, service provision, transport strategy and green infrastructure.	I cannot support the soundness or legal compliance as the issues identified above remain unresolved.	
43203041	National Highways		National Highways					The AECOM Transport Assessment has highlighted capacity constraints at M5 J19, with a concept capacity enhancement included in modelling work to date. Proposed allocations in the Pill and Easton-in-Gordano strategic location, alongside potential active travel improvements along	The policy proposes the allocation of four housing sites totalling up to 1,100 dwellings at Pill and Easton-in-Gordano. We note		NSC Reg19 Local Plan Consultation.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 									Marsh Lane, have the potential to increase traffic demands via M5 J19. National Highways will continue to work with AECOM and North Somerset Council to demonstrate cumulative traffic impacts for the junction. Subject to the outcomes of this work, it may be necessary to amend policy wording to highlight any significant adverse impacts and/or a need to contribute to any mitigation measures.	that the Portishead-Pill-Bristol rail line has secured government funding and is currently due to be delivered in 2028, providing much improved public transport accessibility for the area. National Highways welcomes the requirement set out in policy that all developments must contribute to infrastructure in a strategic and co-ordinated approach, and that sites near the M5 must include noise and pollution mitigation.	
62829825	Susan Jane Loader			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Yes	I consider the plan to be unsound for the following reasons: Not positively prepared: The scale of housing proposed at Pill/Easton-in-Gordano is disproportionate and unbalanced compared to other settlements. Not justified: The release of Green Belt land is not supported by robust evidence of exceptional circumstances, and this plan prioritises developer-led housing profits over protecting the Green Belt. Brownfield alternatives across North Somerset have not been fully explored. Not effective: Infrastructure delivery is speculative. Junction 19 of the M5 is already saturated with severe congestion and delays regularly reported, and National Highways has not completed its assessment meaning transport impacts are not properly evidenced. Reliance on the Portishead–Pill–Bristol railway (due 2028) is uncertain, and if delayed, residents will be left dependent on already overstretched roads. Flood risk mitigation is inadequate. Not consistent with national policy: The plan conflicts with NPPF requirements, which state that Green Belt boundaries should only be altered in exceptional circumstances. No such exceptional circumstances have been demonstrated here. The plan also fails to conserve heritage assets on which the NPPF places great weight (e.g. Grade II* listed St George's Church), and safeguard biodiversity. The Council's own Green Belt Assessment acknowledges the role of these areas in safeguarding countryside and preserving historic settings. This loss is contrary to declared climate emergency commitments at both parish and district level Increased Flooding Risks: Pill and Easton-in-Gordano already face flood risk, with Environment Agency maps showing areas of medium to high risk. Large-scale development will increase surface water run-off, raising the likelihood of flooding in the village, on nearby roads, and on the M5. Recent flood warnings across North Somerset highlight the vulnerability of this area to heavy rainfall events. The plan does not provide robust evidence of how surface water run-off will be managed, nor does it demonstrate compliance with national flood risk policy, including NPPF requirements to avoid inappropriate development in areas at risk of flooding. Healthcare Provision: The plan fails to provide for new or expanded healthcare facilities in Pill and Easton-in-Gordano. Existing GP services are already significantly stretched, and large-scale housing growth will worsen this. Without clear commitments, the plan is unsound as it does not ensure essential health infrastructure will accompany development. Consultation failures: Unlike other strategic locations, no public meeting or exhibition was held in Pill/Easton-in-Gordano, undermining community involvement. This contrasts with consultation in other strategic locations, meaning Pill/Easton-in-Gordano residents were disadvantaged in the process. This undermines the Statement of Community Involvement and raises questions about fairness and transparency in the consultation process. In Conclusion The proposed housing growth at Pill and Easton-in-Gordano is excessive, unsustainable, and harmful. It fails to demonstrate exceptional circumstances for Green Belt release, lacks proper consultation, and will negatively impact infrastructure, environment, heritage, and community identity. I therefore urge North Somerset Council to reject this proposal and prioritise smaller-scale, brownfield-led development that respects the Green Belt and the unique character of Pill and Easton-in-Gordano.	To make the plan sound, the following modifications are necessary: Remove or significantly reduce the scale of housing allocations at Pill/ Easton-in-Gordano. Retain Green Belt boundaries unless genuine exceptional circumstances are evidenced. Prioritise brownfield regeneration and smaller, incremental developments across the district before releasing Green Belt land. Provide clear, deliverable infrastructure plans, including confirmed National Highways approval for Junction 19 capacity and robust flood risk assessments. Strengthen biodiversity protections and retain accessible green spaces around the village which serve vital purposes: preventing urban sprawl, safeguarding countryside, and encouraging reuse of derelict land. This proposal undermines all of these. Ensure heritage assets such as St George's Church are safeguarded with detailed design and layout requirements. Healthcare Provision: The plan must include provision for new or expanded healthcare facilities in Pill and Easton-in-Gordano, secured through direct delivery or developer contributions, to match the scale of growth. Improve consultation methods by holding public meetings/exhibitions in Pill/Easton-in-Gordano to ensure meaningful community involvement, without this the process undermines the principle of community engagement required under the Statement of Community Involvement and raises questions about fairness and transparency.	I do NOT support the soundness of the plan. However, I acknowledge that the plan appears to be legally compliant and that the Duty to Cooperate has been met. My objections relate to soundness rather than legal compliance.	
32520929	G Macpherson			Unsure		No	No	The plan was not exhibited in the area this impacts, will 600 homes at Pill Green alone. Response rate was low in this area, so local residents here are underrepresented. The local M5 junction is already extremely congested, this will add to that with no consideration given and impact all local residents. National Highways report stated that transport modelling is required to assess the cumulative impact of developments on Junction 19. The area around Markham Brook in Pill has a recognised flood risk, so a lower risk area should be considered first.	Consultation with local residents for LP4. Proper assessment of J19 impact. Consideration of other sites in the county to avoid placing more homes in high risk flood areas. Associated reduction in housing numbers for LP4 to address the above		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 									points.		
62372833	Hugh Matthews			No		No	No	Summary of Objection: I object to the North Somerset Local Plan 2041 because it is legally non-compliant and fundamentally unsound. I am writing as a lifelong resident of Pill who has watched this community grow and thrive over the decades. My wife moved here in 2005, and like so many who discover this village, she immediately fell in love with its character, its sense of community, and the beautiful green spaces that surround us. We are now raising our two children - a 14-year-old son and an 11-year-old daughter - who are growing up with the same freedoms and connections to nature that I enjoyed as a child. This plan violates multiple legal duties and fails all four tests of soundness. It prioritizes housing numbers over the wellbeing of existing residents, the protection of our environment, and the Council's own declared commitments to climate action and equality. I request that the Planning Inspector finds this Plan unsound and recommends the deletion of sites HE2015, HE206, HE20491, HE201097, and HE201065. PART 1: LEGAL COMPLIANCE FAILURES 1.1 Failure to Comply with the Equality Act 2010 The Council has a statutory duty under the Equality Act 2010 to have "due regard" to the need to eliminate discrimination and advance equality of opportunity for people with protected characteristics. I have serious concerns that the Council has failed to properly assess how this massive development will impact existing residents from protected characteristic groups. Has the Council Conducted an Equality Impact Assessment? I have reviewed the consultation documents and can find no evidence that the Council has adequately assessed how a 40% increase in village population will impact existing residents from protected characteristic groups, including: •LGBT+ residents and families who have chosen Pill for its inclusive, welcoming character - a quality that is not guaranteed in all rural communities and which could be threatened by rapid demographic change •Residents with mental health conditions (protected characteristic: disability) who depend on access to green spaces and stable community environments for their wellbeing •Residents with physical disabilities who rely on accessible local services that are already stretched to capacity •Existing elderly residents who depend on established social networks, familiar environments, and accessible healthcare services The Council must answer: 1.Has a comprehensive Equality Impact Assessment been conducted covering all protected characteristic groups? 2.Have minority communities within Pill been specifically consulted about the impact on community character and cohesion? 3.Has the Council assessed whether the existing inclusive character of the village will be maintained with such rapid demographic change? 4.How will the Council ensure that existing vulnerable residents are not harmed by the loss of accessible services and community support networks? Without this evidence, the Plan is not legally compliant. Community Cohesion and Vulnerable Groups Pill has developed a reputation as a genuinely inclusive community where diverse families are welcomed. This character has been built over generations through personal relationships and shared values. Research consistently shows that rapid demographic change can strain community cohesion, particularly affecting minority groups and vulnerable residents who rely on established social networks for support and acceptance. The existing social fabric of Pill - the networks of mutual support, the acceptance of difference, the sense of shared identity - cannot simply be scaled up by 40% and expected to remain intact. The Council has provided no evidence that it has considered these impacts or consulted with minority community members and vulnerable groups about their concerns. The Council is prioritizing housing numbers over the wellbeing of existing residents from protected characteristic groups. This is not positive preparation - it is reckless disregard for the communities that already exist. 1.2 Failure to Comply with Climate Emergency Declaration North Somerset Council declared a Climate Emergency in February 2020, committing to make the district carbon neutral by 2030. This plan directly contradicts that commitment and makes a mockery of the Council's climate pledges. Creating Massive Car Dependency The proposed development will add approximately 1,500 additional cars to our village, generating 3,000+ daily vehicle movements. Based on average UK car emissions of 0.8 tonnes CO_2 per year, this represents approximately 1,200 tonnes of CO_2 emissions per year from vehicle use alone - equivalent to the annual emissions of a small town. The Council claims that the proposed Portishead-Pill-Bristol railway line will reduce car dependency. This is demonstrably false: 1.The railway line does not yet exist. Basing a 20-year Local Plan on undelivered infrastructure is speculative and irresponsible. 2.The proposed station is not central to the village and is not easily accessible from the development sites, particularly HE2015 (Pill Green - 600 homes) and HE206 (East of Gordano Services - 200 homes). The Plan's promise of "safe, direct, high quality active travel routes" is unfunded and undelivered. 3.It will be a single-track branch line with limited service frequency - not a realistic alternative to car travel for the majority of journeys. 4.Most journeys are not to Bristol Temple Meads. Residents will still need cars for: •Commuting to employment areas not served by the line (Avonmouth, Portbury, South Bristol) •Shopping and services (supermarkets, retail parks) •School runs (particularly secondary school) •Healthcare appointments •Leisure and social activities The reality is that this development will create 1,500 new car-dependent households in a location with inadequate public transport. This is the exact opposite of sustainable development. Destroying Natural Carbon Sinks Pill Green is 45 hectares of grassland and hedgerows that currently act as a carbon sink, absorbing CO_2 from the atmosphere and supporting biodiversity. Covering this land with concrete and tarmac will: •Eliminate carbon sequestration capacity - the land will no longer absorb CO_2, it will emit it (through heating, cooling, and vehicle use) •Increase surface temperatures through the urban heat island effect, requiring more energy for cooling •Increase flood risk by replacing natural drainage with impermeable surfaces, leading to more flood events (which themselves have carbon costs) •Destroy wildlife habitat that forms part of the natural ecosystem supporting carbon cycling The Council cannot claim to be tackling climate change while destroying 45 hectares of natural carbon sink. Massive Embodied Carbon in Construction Building 1,060 homes will require approximately: •15,000-20,000 tonnes of concrete (one of the most carbon-intensive materials on earth) •Thousands of tonnes of steel, bricks, glass, and other materials •Hundreds of thousands of vehicle movements during construction The embodied carbon in this development (the carbon emitted during construction) could exceed 30,000 tonnes of CO_2 - equivalent to the annual emissions of 37,500 cars or the entire carbon budget of a small town for a year. Has the Council calculated this? How does it fit within the carbon budget for achieving carbon neutrality by 2030?			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								Direct Conflict with Policy SP2: Climate Change The Plan's own Policy SP2 commits to: •"Reducing the need to travel" •"Promoting sustainable transport" •"Reducing carbon emissions" •"Adapting to climate change" This development does the exact opposite: •✗ Increases the need to travel (car-dependent location) •✗ Creates unsustainable transport patterns (1,500 new cars) •✗ Increases carbon emissions (1,200 tonnes/year + 30,000 tonnes embodied) •✗ Reduces climate resilience (destroys natural drainage and carbon sinks) The Plan contradicts itself. Policy SP2 is rendered meaningless if this development proceeds. The Council Must Answer These Questions: 1.Where is the carbon impact assessment for this development? Has one been conducted? If so, why has it not been published? If not, why not? 2.How does adding 1,200 tonnes of CO_2 per year from vehicle use align with the 2030 carbon neutral target? Show the calculations. 3.What is the embodied carbon of building 1,060 homes? Has this been calculated? How does it fit within the carbon budget? 4.How does destroying 45 hectares of carbon sink align with climate commitments? What is the carbon sequestration capacity being lost? 5.How can the Council claim this plan is "sustainable" when it creates massive car dependency in a location with inadequate public transport? This is greenwashing. Without credible answers to these questions, the Plan is not consistent with national policy (NPPF climate requirements) and directly contradicts the Council's own Climate Emergency declaration. This is climate hypocrisy of the highest order. 1.3 Failure to Protect Mental Health and Wellbeing The destruction of green spaces and the rapid transformation of our community will have serious mental health impacts on existing residents, including those with existing mental health conditions (a protected characteristic under the Equality Act 2010). Loss of Critical Green Space Access Research consistently shows that access to green space is critical for mental health and wellbeing, particularly post-COVID. The government's own "25 Year Environment Plan" recognizes that "spending time in green spaces can have a positive impact on mental health." Pill Green and the surrounding fields are used daily by residents for walking, exercise, and mental wellbeing. I personally use these spaces regularly with my family. My 11-year-old daughter walks our dog on the footpaths that cross Pill Green - it is her connection to nature, her refuge from the pressures of school and screens, and a critical part of her wellbeing. Destroying 45 hectares of accessible green space will: •Remove a vital mental health resource from the entire community •Particularly impact residents with anxiety, depression, or PTSD who rely on nature for recovery and management of their conditions •Disproportionately affect those who cannot afford to travel to alternative green spaces (lower-income families, elderly residents, those without cars) •Harm children's development and wellbeing (proven links between nature access and mental health outcomes, reduced ADHD symptoms, improved concentration) •Increase stress and reduce quality of life for all existing residents Has the Council assessed the mental health impact of removing this critical resource? If residents with mental health conditions (a protected characteristic) are harmed, is the Council prepared to defend this under the Equality Act? Community Cohesion and Social Isolation Rapid population growth (40% increase in a short timeframe) will destroy the close-knit community that provides social support and reduces isolation. Research shows that social isolation is as harmful to health as smoking 15 cigarettes a day (Holt-Lunstad et al., 2015). The Council is creating conditions for increased isolation, particularly affecting: •Existing elderly residents who rely on established social networks, familiar faces, and local support systems (note: new elderly housing does not help existing elderly residents who will see their community transformed) •People with mental health conditions who depend on familiar, supportive environments and established relationships •Families with young children who rely on informal childcare networks and playdate arrangements •Minority groups who have found acceptance and belonging in Pill's inclusive community As someone who has lived here all my life, I can attest to the strength of our community bonds. These bonds are not abstract - they are real, daily interactions that provide support, reduce loneliness, and improve wellbeing. A 40% population increase will dilute and potentially destroy this. You cannot simply add 2,650 new residents and expect the existing social fabric to remain intact. Chronic Stress from Infrastructure Failure The inevitable traffic gridlock, overwhelmed services, and years of construction disruption will create chronic stress for existing residents. Has the Council considered the mental health impact of: •Daily traffic jams adding 30+ minutes to commutes, creating chronic stress and reducing family time? •Inability to access GP appointments when needed, creating anxiety and worsening health outcomes? •Years of construction noise, dust, and disruption from building 1,060 homes? •Anxiety about the future - the loss of village character, the transformation of the community, the uncertainty about infrastructure delivery? •Feeling powerless - the sense that the Council is ignoring local democracy and imposing unwanted change? Chronic stress is a major risk factor for mental and physical health problems, including cardiovascular disease, depression, and anxiety disorders. The Council Must Answer: 1.Has a Health Impact Assessment been conducted, including mental health impacts? If so, where is it? If not, why not? 2.Has the Council consulted with mental health professionals about the impact of green space loss on residents with mental health conditions? 3.What is the Council's plan to mitigate mental health harms? Vague promises of "new green spaces" within the development do not replace 45 hectares of existing, accessible countryside. Without this evidence, the Plan is not legally compliant (Equality Act duties to disabled residents) and not positively prepared (fails to consider wellbeing of existing residents). PART 2: THE PLAN IS UNSOUND Even if the Council could demonstrate legal compliance (which it cannot), the Plan would still fail all four tests of soundness required by the National Planning Policy Framework. 2.1 The Plan is NOT JUSTIFIED: No Exceptional Circumstances The Council can only alter Green Belt boundaries in "exceptional circumstances" (NPPF Para 145). Before concluding such circumstances exist, it must demonstrate it has "examined fully all other reasonable options" (NPPF Para 147). The Council has comprehensively failed to provide this evidence. The Sites Are Not "Grey Belt" The Council is attempting to justify this Green Belt release by claiming the sites meet the "Golden Rules" for grey belt

								development introduced in the December 2024 NPPF. This is a misuse of the grey belt policy. The official guidance is crystal clear: land can only be classified as grey belt if it does not strongly contribute to Green Belt purposes (a), (b), or (d) (Green Belt Guidance Para 007, Reference ID: 64-007-20250225). Site HE2015 (Pill Green - 600 homes) is 45 hectares of undeveloped countryside that: •Strongly prevents urban sprawl from Bristol, a large built-up area (Purpose a). The site is completely free of existing development and lacks physical features that could restrict development. If developed, it would result in an incongruous "finger" of development extending into the Green Belt. •Strongly prevents the merger of Pill with the Bristol urban area and Royal Portbury Dock (Purpose b). The site forms a substantial part of the gap between these settlements, and development would result in significant loss of visual and physical separation. Under the government's own guidance criteria (Green Belt Guidance Para 005), assessment areas with these characteristics make a strong contribution to Green Belt purposes and therefore cannot be identified as grey belt. The government's grey belt policy is designed for derelict land, disused car parks, and wasteland within the Green Belt - not 45 hectares of pristine countryside. The Council is misusing this policy to circumvent the fundamental protections of the Green Belt. The Council must publish a robust Green Belt assessment proving these sites make only "weak or moderate" contributions to Green Belt purposes. If it cannot (and it cannot), the sites must be withdrawn from the Plan. Brownfield Sites Not Exhausted NPPF Para 147(a) requires the Council to make "as much use as possible of suitable brownfield sites and underutilised land" before releasing Green Belt. Where is the evidence that this has been done? •Where is the complete, up-to-date Brownfield Land Register for North Somerset? •Why are brownfield sites in Weston-super-Mare, Clevedon, and Portishead not being prioritized? •Has the Council identified and assessed all brownfield capacity across the district? •What specific brownfield sites have been rejected and why? The Council has not demonstrated it has exhausted brownfield options. Therefore, exceptional circumstances do not exist. Density Not Optimized in Urban Areas NPPF Para 147(b) requires the Council to optimize the density of development in existing urban areas, particularly "in town and city centres and other locations well served by public transport." There is no evidence that the Plan promotes significant density increases in: •Weston-super-Mare town centre (served by railway station) •Clevedon (larger town with services) •Portishead (larger town, future railway station) Why is the Council releasing Green Belt around a small village with limited public transport before maximizing density in sustainable urban locations? This is the opposite of sustainable planning. Duty to Cooperate Not Fulfilled NPPF Para 147(c) requires the Plan to be "informed by discussions with neighbouring authorities about whether they could accommodate some of the identified need for development." Where is the evidence of meaningful cooperation? •Where are the complete Statements of Common Ground with Bristol City Council, South Gloucestershire Council, and Bath & North East Somerset Council? •Has the Council formally requested these urban authorities to take a share of the housing need? •Have these requests been formally refused with reasons? •What specific discussions have taken place about redistributing housing need to more sustainable urban locations? Without this evidence, exceptional circumstances do not exist. The Plan is NOT justified. 2.2 The Plan is NOT POSITIVELY PREPARED: Disproportionate and Undemocratic A sound plan must be based on a strategy that seeks to meet development needs in the most sustainable way. This plan does the exact opposite. Grossly Disproportionate Allocation Pill and Easton-in-Gordano has 2.3% of North Somerset's population but is being forced to take 4.6% of the housing allocation (1,060 out of 23,000 homes). This is double our fair share. Why should our small village community bear a disproportionate burden of development while larger, more sustainable towns with better infrastructure and public transport are not asked to take theirs? This is fundamentally unfair and will lead to a 40% increase in the size of our village, destroying its character and turning it into a suburb of Bristol. This is not sustainable development - it is the destruction of a community. Betrayal of Local Democracy The Abbots Leigh, Ham Green, Pill and Easton-in-Gordano Neighbourhood Plan 2020-2026 was adopted following a referendum in which 81% of residents voted in favour. It is part of the statutory development plan and carries significant weight. This Neighbourhood Plan explicitly states that growth should be limited to a maximum of 150-200 dwellings over the plan period. This was not an arbitrary number - it was based on careful assessment of the village's capacity to absorb growth while maintaining its character. The Local Plan's proposal for 1,060 dwellings - more than five times the Neighbourhood Plan limit - makes a mockery of this democratic process. A positively prepared plan would work with, not against, the expressed wishes of the community. The Council is betraying the democratic mandate given by residents and undermining the entire principle of localism and neighbourhood planning. If Neighbourhood Plans can be ignored this easily, what is the point of them? The Plan is NOT positively prepared. 2.3 The Plan is NOT EFFECTIVE: Infrastructure Cannot Cope This is where the plan completely and catastrophically fails. The infrastructure simply does not exist to support this development, and the Council has provided no credible, funded strategy to deliver it. The Roads Cannot Cope - This is Critical M5 Junction 19 is one of the busiest junctions in the South West, handling approximately 100,000 vehicle movements per day. Despite recent upgrades, it experiences significant daily congestion during peak hours. National Highways data confirms the junction is operating at or near capacity. The cumulative impact of planned development in the area is catastrophic: Development Area Homes Additional Vehicles (est.) Pill & Easton-in-Gordano 1,060 ~1,500 Long Ashton 3,009 ~4,200 South West Bristol 4,000 ~5,600 TOTAL 8,069 ~11,300 All of these vehicles will converge on M5 Junction 19 and the A369 corridor. The junction cannot absorb this level of additional traffic without major, funded upgrades that do not exist. Yet the Plan provides: •✗ No evidence of National Highways approval for this level of growth •✗ No funded scheme for junction improvements •✗ No delivery timescale •✗ No contingency if improvements cannot be delivered The A369 between Pill and Bristol is already severely congested during peak hours. I experience this personally every day - what should be a 5-minute journey to the motorway regularly takes 20-30 minutes during peak hours, with			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								queues extending back through the village. Adding 1,500 cars from Pill alone (plus 11,300 from the wider area) will create complete gridlock. The result will be: •Traffic jams extending back into residential streets •Rat-running through narrow village lanes •Danger to pedestrians and cyclists •Increased air pollution (NO_2 and particulate matter) •Emergency vehicle access compromised •Economic cost (wasted time, fuel, productivity) My daughter will be learning to drive in the next couple of years. I genuinely fear for her safety on roads that are already dangerous and overcrowded. The Council is creating a traffic nightmare. Local roads within Pill are narrow, Victorian-era infrastructure never designed for current traffic levels, let alone a 40% increase in population. Key pinch points include: •Marsh Lane - narrow, single-track sections with no footways •Pill Road - already congested, serves St Katherine's School (child safety issue) •Ham Green - narrow lanes with no footways, used by walkers and cyclists •Lodway - unprotected raised footway mentioned in the Plan, but no funded scheme to improve it The Plan's promise of "appropriate highways mitigations" is meaningless without: •Detailed traffic impact assessments for each site •Specific, costed mitigation schemes •Confirmed funding sources (not just "developer contributions") •Delivery timescales •Contingency plans if mitigations fail None of this exists. The Plan is a wish list, not a deliverable strategy. The Council Must Answer: 1.Has National Highways confirmed in writing that the strategic road network can accommodate this cumulative development (8,069 homes, 11,300 vehicles)? 2.Where is the funded, deliverable scheme to upgrade M5 Junction 19 to accommodate this traffic? 3.Where are the detailed traffic impact assessments for each site showing current flows, predicted flows, and mitigation requirements? 4.Where are the specific, costed mitigation schemes for local roads (Marsh Lane, Pill Road, Ham Green, Lodway)? 5.What is the delivery timescale for all highway improvements, and what happens if they are not delivered before the homes are occupied? If the Council cannot answer these questions with hard evidence, the Plan is not effective. The Railway Line is Not a Solution The Council attempts to justify this car-dependent development by claiming Pill will have "direct rail links to Bristol Temple Meads by 2028" via the Portishead-Pill-Bristol railway line. This is misleading and does not make the development sustainable. Why the railway line does not solve the problem: 1.The line does not yet exist. While funding has been secured, construction has not been completed. Basing a 20-year Local Plan on infrastructure that does not yet exist is speculative and risky. What happens if the line is delayed or cancelled? 2.The station location is not central to the village. The proposed station on Monmouth Road is not easily accessible from the development sites, particularly HE2015 (Pill Green - 600 homes on the opposite side of the village) and HE206 (East of Gordano Services - next to the M5). The Plan's promise of "safe, direct, high quality active travel routes" connecting the sites to the station is unfunded and undelivered. 3.It will be a single-track branch line with limited service frequency. It will not provide a realistic alternative to car travel for the majority of residents, particularly those commuting outside peak hours or traveling to destinations other than Bristol Temple Meads. 4.Most journeys are not to Bristol Temple Meads. Residents will still need cars for: •Commuting to employment areas not served by the line (Avonmouth, Portbury, South Bristol, Weston-super-Mare) •Shopping (supermarkets, retail parks) •School runs (particularly secondary school) •Healthcare appointments •Leisure and social activities The railway line is a useful addition to the village, but it does not transform Pill into a sustainable location for 1,060 homes. The development will still be car-dependent. Healthcare Services Cannot Cope The local GP practice (Heywood Practice) currently serves approximately 6,700 patients. The practice is already under significant pressure, with appointment waiting times extending to several weeks. My wife already experiences this - she recently had to wait three weeks for a routine appointment. The proposed development will add approximately 2,650 additional residents (based on 2.5 persons per household), representing a 39% increase in the patient population. This is unsustainable. Policy LP4 states that "financial contributions towards... family centre services will be required." This is woefully inadequate. Financial contributions do not: •Guarantee that a GP practice will expand (practices are independent contractors, not controlled by the Council) •Guarantee that additional GPs will be recruited (there is a severe national GP shortage) •Provide a delivery timescale (when will capacity be increased?) •Address the immediate capacity crisis (existing residents already cannot get appointments) Where is the evidence that the NHS Integrated Care Board has been consulted and has confirmed it can deliver the necessary healthcare infrastructure? If this evidence does not exist, the Plan is not effective. Schools Cannot Cope The Plan proposes a new 420-place primary school (including early years provision) to serve the development. While this is welcome in principle, it raises critical questions that the Plan does not answer: 1.Where will the school be located? The Plan does not specify which site will deliver the school. This is a critical omission. If the school is located on the western edge of the village (e.g., on HE2015 or HE206), it will be inaccessible to families in the eastern part of the village, forcing more car journeys and undermining the Plan's sustainability claims. 2.When will the school be delivered? The Plan provides no phasing or delivery timescale. If the school is not delivered until after the first homes are occupied, where will the children go? The existing primary school is already at or near capacity. Will class sizes increase? Will children be bused to schools in other villages? 3.What about secondary school provision? St Katherine's School serves the village and surrounding areas. The Plan mentions "financial contributions towards post-16" provision but provides no evidence that the school can accommodate an additional 200-300 secondary-age pupils (based on 1,060 homes). Has the school been consulted? What is its current capacity? What expansion plans exist? Where is the funding? 4.What about special educational needs (SEN) provision? The Plan mentions "financial contributions towards special educational needs provision" but provides no detail. Where will children with SEN go? Are there places available? These questions are unanswered. Vague promises of "financial contributions" are not a delivery plan. The Plan is not effective. The "Co-ordinated Approach" is Meaningless Without Detail Policy LP4 repeatedly refers to a "strategic and co-ordinated approach" to infrastructure delivery. This sounds reassuring, but it is meaningless without:			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								1.A detailed Infrastructure Delivery Plan (IDP) showing: •Every piece of infrastructure required (roads, junctions, schools, GP surgeries, utilities, drainage, green spaces) •The cost of each item •The funding source (developer contributions, CIL, government grants, Council funding) •The delivery body responsible (who will actually build it?) •The delivery timescale (when will it be delivered?) •The phasing (what must be delivered before homes are occupied?) 2.A phasing plan that ensures infrastructure is delivered before or alongside housing, not years later when the damage is already done. 3.Enforceable mechanisms (planning conditions, Section 106 agreements) to prevent developers from building out the sites without delivering the promised infrastructure. Where is the Infrastructure Delivery Plan? If it does not exist, or if it is not robust and fully funded, the Plan fails the effectiveness test. The Council Must Answer: 1.Where is the detailed Infrastructure Delivery Plan? Has one been prepared? If so, why has it not been published for scrutiny? If not, why not? 2.What is the total cost of all infrastructure required to support this development (roads, schools, healthcare, utilities)? 3.Where is the funding coming from? Developer contributions alone will not cover strategic infrastructure like M5 junction upgrades and new schools. Where is the government funding? Where is the Council funding? 4.What is the delivery timescale? When will each piece of infrastructure be delivered, and what happens if it is delayed? 5.What enforcement mechanisms exist to ensure developers deliver the infrastructure and do not simply build the houses and walk away? Without credible answers to these questions, the Plan is NOT effective. It is an undeliverable fantasy. 2.4 The Plan is NOT CONSISTENT WITH NATIONAL POLICY The Plan's proposal to release vast swathes of Green Belt is in direct contravention of the National Planning Policy Framework. Harm to All Five Purposes of the Green Belt The development would cause demonstrable harm to all five purposes of the Green Belt (NPPF Para 143): (a) Checking the unrestricted sprawl of large built-up areas •The development would create urban sprawl from the Bristol conurbation into open countryside. Pill would become an extension of Bristol rather than a distinct village. (b) Preventing neighbouring towns merging into one another •The development would significantly reduce the gap between Pill and Royal Portbury Dock / Bristol urban area, risking eventual merger. (c) Assisting in safeguarding the countryside from encroachment •100+ hectares of open countryside would be lost to development - this is encroachment by definition. (d) Preserving the setting and special character of historic towns •Pill and Easton-in-Gordano are historic villages. The Plan acknowledges that sites near St George's Church (Grade II* listed) must "appropriately reflect their location within the historic setting." How can 200+ houses next to a historic church be appropriate? This is heritage harm. (e) Assisting in urban regeneration, by encouraging the recycling of derelict and other urban land •By releasing Green Belt before exhausting brownfield capacity, the Plan reduces the pressure to regenerate derelict urban land in Bristol, Weston-super-Mare, and elsewhere. The development harms all five Green Belt purposes. This is not exceptional circumstances - it is Green Belt destruction. Failure to Follow the Sequential Test NPPF Paragraph 148 requires that when Green Belt land is released, priority must be given to: 1.Previously developed land (brownfield) 2.Grey belt land 3.Other Green Belt locations The Council has provided no evidence that it has followed this hierarchy: •It has not proven that all brownfield sites have been exhausted •It has not proven that the proposed sites are grey belt (they are not) •It has not explained why these particular Green Belt sites have been chosen over others The Plan fails to follow the required sequential approach and is NOT consistent with national policy. Misapplication of Grey Belt Policy The government's grey belt policy, as clarified in the February 2025 guidance, is designed to unlock lower-quality Green Belt land such as disused car parks, wasteland, and previously developed sites within the Green Belt. It is not intended to justify the release of 45 hectares of pristine countryside at Pill Green. The Council is misusing this policy to circumvent the fundamental protections of the Green Belt. This is not what the policy is for. The Plan is NOT consistent with national policy. PART 3: CONCLUSION AND REQUESTED MODIFICATIONS This Plan is fundamentally flawed on every level. It is: Legally non-compliant: •Violates Equality Act 2010 duties (no adequate assessment of impacts on protected groups) •Contradicts Climate Emergency declaration (creates car dependency, destroys carbon sinks, massive embodied carbon) •Fails to protect mental health and wellbeing (destroys green spaces, creates chronic stress) Not Justified: •No exceptional circumstances for Green Belt release •Sites are not grey belt (strong contribution to Green Belt purposes) •Brownfield not exhausted •Density not optimized •Duty to Cooperate not fulfilled Not Positively Prepared: •Disproportionate allocation (double our fair share: 4.6% vs 2.3%) •Ignores democratic Neighbourhood Plan (81% voted for 150-200 homes, getting 1,060) Not Effective: •Roads cannot cope (11,300 vehicles converging on Junction 19, no funded solution) •Services cannot cope (39% increase in GP patients, no delivery plan) •Schools cannot cope (no location, no timescale, no secondary provision) •No Infrastructure Delivery Plan (vague promises, no funding, no timescales) Not Consistent with National Policy: •Harms all five Green Belt purposes •Fails sequential test (brownfield first, then grey belt) •Misuses grey belt policy •Contradicts climate policy The roads cannot cope. The services cannot cope. The infrastructure does not exist. The Council has violated multiple legal duties and ignored the wellbeing of existing residents.

								I have lived in Pill all my life. My wife moved here in 2005, and together we have raised our two children - a 14-year-old son and an 11-year-old daughter - in this community. We chose to raise our family here because of the village character, the green spaces, the sense of community, and the quality of life. This plan threatens to destroy all of that. It threatens: •The green spaces my daughter loves (Pill Green, where she walks our dog) •The safe roads young drivers need (already dangerous, will become lethal with 11,300 extra cars) •The community we have built (40% population increase will destroy social cohesion) •The climate-stable future our children deserve (1,200 tonnes CO_2/year + 30,000 tonnes embodied carbon) •The mental health and wellbeing of our entire community (loss of nature access, chronic stress) I am not against all development. I have seen sensitive, small-scale growth in this village over my lifetime that has brought new families and new life to Pill. But this is not that. This is a plan to increase the size of our community by 40% in one go, with no regard for the infrastructure, the environment, the existing residents, or the Council's own legal duties and declared commitments. This is not nimbyism. This is about: •Protecting our environment and meeting climate commitments •Protecting vulnerable residents and meeting equality duties •Protecting our mental health and wellbeing •Holding the Council accountable to its own policies and legal obligations •Ensuring development is sustainable, not destructive The Plan is unsound. It is unlawful. It must be rejected. I Respectfully Request That the Planning Inspector: 1.Finds the North Somerset Local Plan 2041 unsound due to failure of all four tests of soundness 2.Finds the Plan legally non-compliant due to: •Failure to conduct adequate Equality Impact Assessment under Equality Act 2010 •Contradiction of Climate Emergency declaration and national climate policy •Failure to assess mental health and wellbeing impacts on vulnerable residents 3.Recommends the deletion of sites HE2015, HE206, HE20491, HE201097, and HE201065 from the Plan 4.Requires the Council to publish before any Green Belt sites can be allocated: •A comprehensive Equality Impact Assessment covering all protected characteristic groups •A carbon impact assessment showing how the Plan aligns with the 2030 carbon neutral target and national net-zero commitments •A Health Impact Assessment including mental health impacts of green space loss •A robust Green Belt assessment proving sites are grey belt (which they cannot do) •A detailed, fully funded Infrastructure Delivery Plan with costs, funding sources, delivery bodies, and timescales •Evidence of genuine cooperation with neighbouring authorities through proper Statements of Common Ground showing formal requests and responses 5.Requires the Council to respect the democratically adopted Neighbourhood Plan and limit growth to 150-200 dwellings as supported by 81% of residents 6.Requires the Council to prioritize brownfield sites and urban density increases before releasing any Green Belt land I want my children to grow up in the same village I did - not in a sprawling suburb of Bristol with gridlocked roads and overwhelmed services. The plan is unsound. It must be rejected. I wish to participate in the oral examination hearings.			
62455777	Anna Matthews			No	• Positively prepared • Justified • Consistent with national policy			We object to the North Somerset Local Plan 2041 because it is unsound and is not justified. We have lived in this area since our marriage over 52 years ago and have happily brought up our family here in the historic rural neighbourhood with its special village community spirit and a close connection to nature within the open countryside. We do not wish to become a suburb of Bristol. A recent guest at our house remarked on how unspoilt and delightful the hinterland is behind the A369 as he ambled through the fields and footpaths. Building on these beautiful green fields is not consistent with national policy which is to protect the Green Belt. It will cause irreversible harm to the local wildlife and landscapes. There are no ‘exceptional circumstances’ to build on our green belt. Grey and brown belt sites are meant to be prioritised before destroying our green fields. The Pill Green sites especially strongly contribute to Green Belt purposes. HE2015 is pristine countryside that strongly prevents urban sprawl from Bristol. The Council surely needs to publish a robust Green Belt assessment or withdraw these sites. The plan is not positively prepared, unfairly ignoring local democracy. 81% of us voted for a Neighbourhood Plan that limits new housing to 150-200 homes. This was a sensible, natural growth plan which protected our way of life, sense of place and sense of community which has existed here for generations. We now have grandchildren growing up here with a strong sense of belonging. Why should we be forced to take double our fare share of North Somerset’s new housing? Our surgery and schools are already full. There is no funded, concrete plan to increase capacity for 2,650 new residents. This is not ‘Effective’ planning. The village community is not equipped with the infrastructure to cope and would be overwhelmed. The village roads are narrow and winding. Adding an estimated 1,500 cars creates a serious potential danger for children walking and cycling to school. Has the Council conducted a Child Road Safety Impact Assessment? We feel this plan fails to protect the best interests of children, both existing and future. Currently children have access to safe natural play spaces on Pill Green and surrounding fields. This connection to nature is critical for their physical health, mental health and wellbeing. Has the Council assessed this plan against its duties under Section 11 of the Children Act 2004 to safeguard and promote the welfare of children?	We request that the Inspector finds the plan unsound and recommends the removal of sites HE2015, HE206, HE20491, HE201097, and HE201065		
58448865	Avon Wildlife Trust		Avon Wildlife Trust	Yes		No	Yes	This allocation threatens a suite of sites of local conservation interest including Ox House Bottom and Markham Brook SNCI, Fields west of Blackmoor Road SNCI, St Georges Flower Bank SNCI and the Pill Paddock site; these sites are all located within an area currently designated as Green Belt and they provide valuable habitat corridors between the River Avon and habitats to the south of Pill. In addition, several areas of land within and adjacent these sites are identified as either areas of importance for biodiversity or focus areas for nature’s recovery within the LNRS. The strategic allocation at it currently stands will reduce the buffer zones between these sites, increasing their isolation, reducing biological connectivity and threatening their long-term viability, as well as the potential for them to support wider nature recovery. The scale of the loss of Green Belt within the proposal is of significant concern. The current proposal for this allocation breaches sections 124, 188, and 192 of the NPPF.

32612257	Peter Milner							We have lived in Pill for over 30 years, long enough to appreciate this village(s) both in terms of community and environment, we are therefore dismayed by NSC proposes to double the size of this village while replacing open green space with housing. Not Grey Belt. The initial consultation to these development proposals in February - March this year was so poorly publicised few people were aware of them. Only 30 or so responses were forthcoming, some obviously from vested interests insisting this (Pill Road & Pill Green) was poor quality land and obviously Grey Belt. How does this fit with the statement from SP4 Placemaking: “A Community Engagement Statement must be submitted for major planning applications (10 or more dwellings or 1,000 square metres of floorspace) which sets out the local engagement that has been undertaken and any amendments to the scheme which have been made in response to it." It would have been far better to begin this process in the same spirit. You will see now a proper consultation organised by the local community has taken place with leaflets going to every house and that there are now over 2000 responses to these proposals, the vast majority objecting to these plans. This might be because no proper consultation has been attempted by NSC and trust has been lost. Section 13 Para 142 of the National Planning Policy Framework states that: “The government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence.” The document does then go on to give situations where exceptions might be made but nothing in the document allows for NSC or anyone else to label this land as Grey Belt. This is for the most part high quality agricultural land, grades 1&2. Its openness and lack of ‘urban sprawl’ is appreciated not just by local people but also travelers on the A369 which represent the wider community. This is high quality landscape with sweeping views to Wales, rolling hills with wooded slopes and margins. This is Green Belt and should be kept as such. Travel This road (A369) is the main conduit for traffic in the area. We already know flow is constricted at Junction 19 with the M5, and at Abbots Leigh and Rownham Hill where the road descends toward South Bristol. The road is unsuitable for widening. It is already beyond its carrying capacity during high usage periods. Constriction at Junction 19 is due to the nature of the interchange which causes blockage on the M5. Although the junction has recently been upgraded there is little discernible effect, it cannot be made to carry more traffic without enormous investment. The A369 or Junction 19 simply cannot handle the many hundreds of extra car journeys these developments will generate daily. The argument that this will be relieved by the train passenger service being restored is at best dubious. This service will be constrained both by length of train and frequency which maybe as low as once an hour and no more than three coaches potentially removing about 350 car journeys from the roads at peak traffic times. But if you’re adding over a 1000 commutes in and out of the new developments everyday, this cannot compensate. The bus service also relies on the A369 and will be caught in the same congestion. Has there been any modelling of the likely traffic flows with these new potential commuters added in? If so, then it should be made public. If not, then it is unsafe to allow these developments to go ahead. Buffer zones, run-off and biodiversity offsetting There are five development sites surrounding the village. Two (Land at Lodway Farm, Pill and Easton-in-Gordano, and land east of Gordano Services, Pill and Easton-in-Gordano)were clearly intended as green buffer zones between the settlement and the noise and pollution of the motorway. How these are now considered suitable for development ought to be explained. The most northerly of these sites is known to be wildlife rich and is part of an enormous toad migration each spring. Both during development and on completion both these sites will create runoff which with the attendant pollutants will find their way via the rhynes and natural drainage system toward the Avon and the SSSI saltgrass areas bordering the river. These are internationally important Ramsar conservation sites and must be protected; has a Habitats Regulations Assessment been made of the potential impact of the developments on the Severn Estuary Ramsar site? Appropriate assessment - GOV.UK So called Pill Green, and the site on Pill Road opposite St Katherine’s school are high-quality farmland but also habitats for skylarks and linnets as well as other species of wild birds and mammals. These sites abut species-rich ancient woodland around the course of the Markham Brook. The Pill Road site appears to stretch to the middle of the stream bed. We would hope and expect NSC to follow Natural England’s guidelines of buffer zones on either side of the watercourse which must also be protected from runoff during construction and after completion of the development because of potential pollutants. Any loss of biodiversity must be compensated for locally: from the Houses of Parliament Office of Science and Technology postnote no. 309 2011 “It is vital that offsets are appropriately determined based on predicted losses of biodiversity, requiring rigorous methodology to determine what trade-offs are appropriate or allowable. Furthermore, there must be a strong assurance about delivery, likely requiring an accountability mechanism and funds set aside in every offset transaction to support monitoring and auditing.” We have learnt that developers are actually asking whether an environmental impact assessment is necessary for these sites. The answer is unequivocally ‘Yes’ and any biodiversity loss must be compensated for locally. A report published a few days ago (8th December 2025) by the Bristol Avon Rivers Trust, Pollution from Construction Sites is Smothering Our Streams highlights the serious problems of pollution from construction sites: “Developers are required to produce Construction Environmental Management Plans (CEMPs) and Site Environmental Management Plans (SEMPs). However, local authorities are not carrying out routine compliance checks, meaning that developers are effectively left to “mark their own homework.” This can lead to corners being cut and leaves communities and rivers paying the price.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								We don't want to see this happening here. Local services "Development of the four large housing allocations at Pill and Easton-in-Gordano (Land at Lodway Farm, Land east of Gordano Services, Pill Green and Land at Pill Road) will require a strategic and co-ordinated approach to ensure the growth of the village provides tangible benefits for existing and future communities. This will be achieved through a co-ordinated approach to the delivery of infrastructure to ensure the provision of necessary services, facilities…" from Policy LP4: Strategic location: Pill and Easton-in-Gordano Although a new primary school has been proposed (where?) has there been a thorough assessment of the impact that the large increase of the population will have on the existing doctor's surgery? If so, where can detailed information on this topic be found? Conclusion New housing is clearly needed, especially affordable dwellings for local people, but NOT at the expense of losing substantial green belt land (much valued by locals), that currently provides separation from the docks and the main road and a differentiation between our village and neighbouring Abbots Leigh, preventing urban sprawl encroaching on rural landscape. The large increase in population that would come with the density of housing proposed would completely change the identity of the village and would inevitably increase existing traffic problems and put pressure on local services. This scale of development would also have a detrimental effect on the environment, with potential increase of flood risk, and local wildlife would undoubtedly be affected. The plan needs to be rigorously reconsidered and major amendments made.			
62854081	A Molony		Resident	No	• Consistent with national policy	No	No	1) Sustainability appraisal fails SEA Directive -no assessment of brownfield Alternatives to Pill Green (Reg 12/2024 Brownfield register 2800+ units ignored) 2) no duty to co-operate on Bristol's unmet need. (No statement of common ground; unilateral 1100 home dump in PIEG) 3) Green belt exceptional circumstances not evidenced (NPPF 147). (Parcel identified as high performing agricultural land; no sequential test). 4) 44% Population bomb on Pill and Easton-in-Gordano -disproportionate and unjustified (600 homes = 24% increase of one site alone) 5) No deliverability Plan for a) improving already dangerously busy and narrow A369 or Jnct 19 of M5,, b) improve drainage c) expanding school capacity d) expanding already stretched GP access (Pill Green plan undeliverable ergo ineffective) 6) brownfield first policy ignored -2500 + viable urban units still available (Weston, Portishead, Bristol fringe. 7) Pill Green breaches NPPF 159 - No sequential test for non green belt sites, 8) Request Independent verification of "exceptional circumstances" before any Pill Green consent. 9) Cap village growth at less than 5% per site. Ref a) 2017 JSP and previous Local Plan allocations b) NPPF 11 & 13 point f: plans must be deliverable and avoid "adverse impact" on local character and services c) Inspector decisions: local plan examinations have found allocations causing greater than 10% population increases to be unsound unless supported by exceptional infrastructure structure evidence, which is absent here.	Delete the Pill Green site (600 homes) from the LP8 schedule of sites or amend policy LP8 as follows: "No development on Pill Green until exceptional circumstances are independently verified (NPPF para 147) and sequential testing confirms no viable non-Green Belt alternatives are available, prioritising brownfield sites in Weston-Super-Mare, Portishead and Bristol fringe. Cap total LP8 allocation across all sites; require full funding (via s106/CIL agreements) for flood defences to 1 in 1000 year standard plus 45% climate change allowance, A369 and M5 J 19 capacity upgrades, and additional school and GP places alongside associated additional communal infrastructure before granting outline permission. Insert new para 6.79: "Allocations in villages with a population under 10000 must not result in a population increase of more than 5% from any single site unless exceptional circumstances are independently verified and full infrastructure delivery (transport, education, health, drainage) is secured upfront via s106/CIL. Cumulative impacts across all sites within a settlement must not exceed 20% without a master planned, funded delivery strategy."	N/A	
62856385	Tony Molony			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	1. Sustainability Appraisal Fails SEA directive - no assessment of brownfield alternatives to Pill Green. Reg 12 / 2024 brownfield register 2,800+ units ignored. 2. No duty to cooperate on Bristol's unmet need. No statement on common ground; unilateral 1,100 dump in PIEG. 3. Green belt exceptional circumstances not evidenced (NPPF 147) Parcel identified HE 2015 as high performing agricultural land under plough this winter. No sequential test. 4. 44% population bomb on Pill and Easton-in-Gordano - Disproportionate and unjustified. (600 homes = 24% from one site alone. 5. No deliverable plan for A369, M5 J19, schools or drainage by 2041. Pill Green undeliverable = ineffective. Pill already floods after heavy rain. 6. Brownfield first policy ignored - 2,500 viable urban units still available (Weston, Portishead, Bristol fringe). 7. Pill Green breaches NPPF 159 - no sequential test for non green belt sites. Excellent sustainable transport links make urban / brownfield viable, which Pill does not have. 8. Request Independent verification of "exceptional circumstances" before any Pill Green consent. 9. Cap village growth at <5% per site. References: 1. 2017 JSP and previous local plan allocations. 2. NPPF 11 & 130 (f): plans must be deliverable and avoid "adverse impacts" on local character and services. 3. Inspector decisions: local plan examinations have found allocations causing >10% population increase to be unsound unless supported by exceptional infrastructure evidence, which is absent here.	Delete the Pill Green site (600 homes) and HE 2015 from the LP8 Schedule of Sites or amend policy LP8 as follows: "No development on Pill Green / HE2015 until exceptional circumstances are independently verified (NPPF para 147) and sequential testing confirms no viable non-green belt alternatives are available., prioritising sites in Weston-super-Mare, Portishead and Bristol fringe. Cap LP8 allocation across all sites; require full funding (via s106/CIL agreements) for flood defences to 1-in-1000 year standard +45% climate change allowance., A369 and M5 J19 capacity upgrades, with additional schools and GP places alongside associated additional communal infrastructure before granting outline permission. Insert new para 6.79: "Allocations must demonstrate no disproportionate impact on village populations, defined as <5% increase per site without evidenced need. Allocations in villages with a population under 10,000 must not result in a population increase of more than 5% from any single site unless exceptional circumstances are independently verified and full infrastructure delivery (transport,		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									education, health, drainage) is secured up front via s106/CIL. Cumulative impacts across all sites within a settlement must not exceed 20% without a master planned, funded delivery strategy.”		
62831489	Robert Narracott			No		Unsure	Unsure	I consider the Plan to be unsound in respect of LP4 because it does not comply with the NPPF Section 9, paras 109, 110, 111(b & c), 115 (a & d), 116 and 118. I believe that adequate consideration has not been given in the Plan to dealing with the impact of the residential expansion of Pill on the existing traffic congestion, for the full length of the A369 from the Motorway through to Bristol. This road is used by heavy goods vehicles, ambulances, buses and cars but is regularly choked with traffic during daily peak periods, affecting transport in both directions ie especially at both the M5 motorway roundabout junction19 and at the exit roundabout on Clanage Road which feeds Bristol's wider highways network at Bower Ashton. The Clifton Suspension Bridge also relies on the A369 and is itself affected by excess traffic flow during daily peak periods. The A369 although a major link from the M5 into and from Bristol has a limited capacity which is currently exceeded at peak times. In addition to traffic via the M5, Portishead traffic to and from Bristol also has to negotiate Junction 19. To reach Bristol via the A369, along with Pill traffic, it will all pass through Abbots Leigh where there is a natural road width restriction which affects all of the traffic passing through. Traffic through the Village is regularly at a standstill in peak times. Highway improvements at Abbots Leigh have not been sufficiently considered, to safeguard use of the numerous junctions in the Village. When the traffic on the M5 is affected by any lane closures between Clevedon and the M4 junction (which it often is), the impact on the A369 is huge as it becomes a chaotically choked rat run, connecting Bristol with the M5. This predicament has been considered as far as I can judge. The railway frequency, as planned, will not have a significant impact on the existing traffic congestion. It will not solve problems caused by the intensification of use of the A369 if the expansion of housing around Pill proceeds as the Local Plan proposes. The Aecom Technical Note Appendix F on Pill Sustainable Transport does not adequately address or resolve the concerns raised above, nor does the Aecom Stage 7 Transport Assessment. Both documents accompany the Local Plan and recognise that National Highways have concerns with regard to Junction 19.	I consider Aecom's reports need to deal in transparent detail with the traffic issues I have raised in respect of LP4. These issues currently cause the Local Plan to be unsound, given North Somerset Council appear to be reliant on Aecom's inadequate recommendations. I believe National Highways need to Approve the Highway strategy for the A369, particularly at Junction 19 of the M5.		
62796225	Sian Narracott			No	• Justified • Consistent with national policy	Unsure	Unsure	Unsound because under Section 9 of NPPF Promoting Sustainable transport para 109 /110/111(b.c)/115(a.d)/116 /118 - Junction 19 of the M5 which feeds into the A369 is already at capacity and we are told it is not possible to improve traffic flow around it. More traffic coming onto the A369 to access Mway from the new developments in Long Asthon, Nailsea and PEIG will cause major traffic hold ups. At the Bristol end of the A369 at Bower Ashton there is a further constriction as it joins the A370 from Long Ashton to enter the city of Bristol. There are already long queues at rush hour. The A369 becomes even more heavily congested when the M4/5 Network creates diversions through Bristol. Furthermore in Abbots Leigh there are width restrictions which are impossible to improve. AECOM report 4.15 states that capacity improvements should be made if public transport journey times are affected which they inevitably will be for the reasons pointed out above. Capacity improvements at either end of the A369 are not explained in the plan. The proposed railway from Portishead to Bristol is not going to solve the commuter problem as it has limited stops and is currently scheduled to have very limited capacity.	We consider that Highways England and Rail Operators should have more input to this plan along the whole stretch of the A369.		
62865057	Alexander Nell			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	I do not consider Policy LP4: Strategic location: Pill and Easton-in-Gordano of the proposed plan to be sound, not legally compliant or not in compliance with the duty to co-operate for the following reasons: 1. Community involvement and methods of consultation. Given the scale of potential change in Pill/E-in-G (e.g., 600 homes at Pill Green alone, plus other sites), the absence of a local event and the relatively small response volume could indicate under-representation of local voices and a lack of proportionate engagement. Do not believe that the Council has complied with its own Statement of Community Involvement. 2. The release of land from the Green Belt Strategic Policy SP7 of the Local Plan does not justify release of land from the Green Belt in these locations This aspect of the Plan is not sound. ? Does it demonstrate that the Council has complied with the Duty to Co-operate? The Council has not shown that it has fully examined reasonable alternatives, such as maximising brownfield capacity (making the fullest and most efficient use of previously developed land), using minimum density standards (optimising land in towns and cities with higher-density developments. Are there sites in other locations in North Somerset which could be considered for housing development and which are not mentioned in the Local Plan. 3. Significant traffic and transport issues Is this aspect of the Plan is not sound. The Local Plan does not address potential traffic congestion at Junction 19 of the M5 • there an over-reliance in the Local Plan on the impact of the proposed railway link? • Insufficient there evidence in the Local Plan that transport links, including buses and trains, will be sufficient for the proposed number of new homes. 4. The impact on the natural environment and protection of wildlife The Council has not taken sufficient account of the protection of wildlife and habitats in Pill and Easton-in Gordano in its assessment of the release of land from the Green Belt. (SP7)			
62847233	Laura Norton			No	• Positively	No	No	Where land is removed from the Green Belt, development proposals must demonstrate how they meet the ‘Golden Rules’ as set out in the NPPF. These rules relate to the provision of affordable housing, infrastructure and publicly accessible green spaces. This does not appear to be adequately demonstrated in the Plan. The ‘additional sites			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					prepared Justified Effective Consistent with national policy			viability addendum' suggests that a target of 50% affordable housing may be 'challenging' for the proposed sites in existing Green Belt land around Pill and Easton-in-Gordano. The Council held four public exhibitions (Long Ashton, Weston-super-Mare, Nailsea, Backwell), but none in Pill/E-in-G, despite five sites being consulted on in this area. Over 1800 residents from a total population (including children) of circa 4,500 have signed a petition objecting to the imposition of excessive housing in the area and challenging the lack of adequate initial consultation by North Somerset Council. Given the scale of potential change in Pill/E-in-G (e.g., 600 homes at Pill Green alone, plus other sites), the absence of a local event and the relatively small response volume could indicate under-representation of local voices and a lack of proportionate engagement. Has the Council complied with its own Statement of Community Involvement? Was this consultation sufficiently inclusive? I do not think so. Increasing our village population by 44% by building on green belt land contravenes sense, practicality, community, all the laws we ought to live by. The Local Plan does not address potential traffic congestion at Junction 19 of the M5? Concerns were raised by National Highways re development at Court Hay near the service station (see NSC planning portal, ref 25/P/1413/OUT). The National Highways report stated that transport modelling is required to assess the cumulative impact of developments on Junction 19 - it is not evident from the proposed Local Plan that NSC has co-operated sufficiently with National Highways and has taken its advice. The Council has not taken sufficient account of the protection of wildlife and habitats in Pill and Easton-in Gordano in its assessment of the release of land from the Green Belt. There are no clear strategies and mitigation policies in the Local Plan, with funding, to ensure protection of wildlife and habitats in the areas identified for potential development around Pill and Easton-in-Gordano? (see LP4 and Schedule 1). The best and most versatile agricultural land around the village is not being protected, in accordance with Section 15 of the National Planning Policy Framework. The area around Markham Brook in Pill has a recognised flood risk, as the valley bottom and parts of the surrounding land are within the Environment Agency's Flood Zone 3. This indicates a high probability of flooding from rivers (fluvial) and the sea (tidal). Does the Local Plan demonstrate that lower flood risk areas have been considered for development in preference to higher flood risk areas? No. It does not. Are there policies in the Local Plan which will ensure adequate flood assessments for any development close to Markham Brook and restrict potential development for housing in flood risk regions? No.			
62686785	Linda O'Hara			No	Positively prepared	No	No	Regarding Pill & Easton Gordano. Traffic issues woefully neglected - Active travel neglects the needs of our elderly and disabled and will lead to more difficult travel in the villages due to narrow roads. There does not appear to be any plans with the exception of active travel and the proposed railway. Just a handful of examples below: *M5 Avonmouth Bridge is already at a standstill for over 1-2 miles to A369 towards Clifton suspension bridge at night rush hour. *Dangerous driving already exists with drivers cutting in from Jctn 19 roundabout to avoid traffic mentioned above which will be exasperated. *Over-reliance on re-opening of railway. Village of Pill has serious parking issues and many blind exits/entrances on roads which will be dramatically increased. Proposed train times are already restricted due to single track. There is also precedence for projects having funding removed. Consultation implies a regular bus service. The service is unreliable and is diverted past the villages any time there is roadworks. HGV access to the villages are restricted/difficult In addition There was no in-person consultation in the villages. Loss of green bank so close to a motorway and major city is unacceptable and may increase pollution in our villages. M5 can already be heard at night.	Significant reduction in the number of houses planned Improvements to access from M5 Junction		
62769793	Nigel Pearce			No	Justified	No	Unsure	I feel that you are building on green belt land that has been occupied by wild life for hundreds of years and now you plan to build on their habitat. They are being pushed out when there are other grey areas that can be built on. We have lived in Ham Green for over forty years and have observed a large variety of wild life habiting in the Ham Green Fields. I attached photos of Deer and Pheasants, we have at present a fox and cubs running around several gardens and there is a stream in this area which attracts a lot of wild life.	You could build on the grey site HB201056. The site by the services HE206 and HE20491. The other two areas HE2015 and HE201097 leave for the wild life.		Deer.JPG Phasants.JPG Video Deer.mp4
57928993	Kevin Payne			No	Justified Effective Consistent with national policy	Unsure	Unsure	I object to Policy LP4: Strategic location: Pill and Easton-in-Gordano because, while the policy sets out an aspirational vision for growth, it does not demonstrate that this vision can be delivered in a justified, effective or consistent way. This Local Plan allocation directly conflicts with the existing Neighbourhood Plan, which was supported by 81% of voters and limits growth on principle; there is no demonstrated justification for overriding that democratic and statutory local policy. The proposed 600 homes at Pill Green represent a disproportionate share of growth for the parish and are not supported by adequate infrastructure or evidence of sustainable development. Traffic modelling for Pill Green is inadequate. Junction 19, the A369, and village lanes cannot safely accommodate the additional vehicles, and the plan over-relies on a new railway station without evidence that it can absorb the increased demand. The Parish Council notes that Pill & Easton-in-Gordano's strategic location status was introduced late and is not supported by an updated Sustainability Appraisal, suggesting the policy is not properly justified. The policy assumes that the proposed development (including Pill Green, Pill Road, and other allocations) can be coordinated with necessary infrastructure (transport, school, active travel, green spaces), but there is no robust evidence that these will be funded or delivered in a timely and effective manner. For example, cumulative transport modelling for Junction 19 of the M5 and local roads such as the A369 and Pill Road has not been provided, despite known congestion issues and National Highways raising concerns about cumulative impacts. The requirement for 50% affordable housing on each site is acknowledged in Council evidence as "challenging" for Green Belt sites such as Pill Green and Pill Road, but Policy LP4 does not explain how this will be achieved or how viability issues will be addressed. Four of the five Pill sites are high-quality agricultural land, yet no assessment demonstrates that lower-grade land or brownfield alternatives have been exhausted, contrary to NPPF requirements. The policy refers to active travel links and a proposed transport hub, but these are aspirational and lack clear evidence of deliverability — there is no confirmed funding, timetable, or guarantees that bus and rail services will be sufficient for the additional homes. The policy requires Green Belt release to meet the 'Golden Rules' of the NPPF, yet the Plan does not convincingly demonstrate the exceptional circumstances needed for releasing multiple Green Belt parcels around Pill and Easton-in-Gordano, nor does it explain why reasonable alternatives (maximising brownfield capacity, higher densities, or	To be made sound, LP4 must be supported by evidenced, deliverable infrastructure, including cumulative transport modelling for Junction 19, the A369, Pill Road, and village lanes, agreed with National Highways and with confirmed mitigation and funding. The Plan must also demonstrate exceptional circumstances for Green Belt release, showing that reasonable alternatives, including brownfield sites, higher densities, and cross-boundary cooperation, have been fully considered. Full flood-risk sequential testing and mitigation measures must be provided, alongside clear, funded biodiversity protection and measurable net gain strategies. Evidence must also be provided that affordable housing requirements are deliverable and that noise and vibration impacts on existing homes are mitigated. If these cannot be provided, the Pill/Easton-in-Gordano strategic allocation should be removed from the Plan.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								cooperation with neighbouring authorities) have not been fully pursued. The policy does not adequately address existing real issues such as noise and vibration from traffic and the risk of a "noise tunnel" effect once open fields are developed (for example on the A368 and Pill Road). Neither does it show how these impacts will be mitigated . Similarly, while buffers and sound mitigation are mentioned for sites adjacent to the M5, the policy lacks detail on how mitigation will be secured and enforced. There is insufficient evidence in Policy LP4 that flood risk has been properly assessed and managed through sequential testing and mitigation (for example relating to Markham Brook and Flood Zone 3). Nor does the policy provide clear, funded strategies for biodiversity protection and measurable net gain for protected habitats near the sites. For these reasons, Policy LP4 is not justified, not effective, and not consistent with national planning policy. It relies on untested assumptions and aspirational requirements without proportionate evidence of deliverability, viability or compliance with NPPF requirements.			
51207009	Barratt Bristol	Arwel Evans - Lichfields	Barratt Bristol	No	Justified	Yes	No	Heritage Policy LP4 requires the Land at Lodway Farm to follow a heritage-led masterplan which preserves key views from heritage assets and provides buffer zones to maintain a sense of rural setting to the Grade II* Listed Church of St George. Barratt has no objection to this requirement and notes that as stated in the enclosed Technical Note – Heritage, prepared by TCMS Heritage, submitted with the pre-application request, the proposed development would include mitigation measures targeted at minimising, in so far as possible the direct and/or indirect impacts on the significance of built heritage assets. However, we question the requirement in Schedule 1 for the land and Lodway Farm to retain a 'generous buffer' around non-designated heritage assets and St George's Lane to maintain a sense of rural setting. We do not consider that this requirement is justified by the background evidential work and it is unclear what is meant by 'generous'. The Councils Historic Environment Assessments prepared by Avalon Planning and Heritage explains that the setting has already been compromised by development to the south and east. The residual harm to the urbanisation of the semi-rural setting of non-designated heritage assets at Lodway Farm is considered to be 'low impact'. The Councils HEA considers the significance of the non-designated heritage assets at Lodway Farm and St Georges Lane. 'Avalon Planning and Heritage' conclude that these non-designated assets have some architectural and historic value, but their setting has been compromised by nearby modern development. Avalon Planning and Heritage do not suggest the need for the retention of a generous buffer around these non-designated assets. There is therefore no evidence to suggest the need to retain a buffer around the non-designated assets, and we therefore consider that this element of the draft Plan is unsound as it has not been justified. It is important to highlight that the non-designated heritage assets are neither listed nor locally listed, highlighting their limited significance from a heritage perspective. Schedule 1 also notes the need to site residential development away from Lodway Farm. We object to this requirement as again it has not been justified for the reasons outlined above. It should be deleted form the plan. The site is enclosed to the north by the M5 which presents a long-term defensible boundary, albeit it is a constraint to development from a noise perspective. It is therefore vitally important that requirements for buffers are fully justified i.e. non-designated assets so as not to stifle the viable development of the site. Transport Matters Whilst we do not object to the requirement to provide planning obligations in relation to transport, we consider that further clarification is necessary. We consider that the obligations should be proportionate to the scale and location of the site. The land at Lodway Farm is a relatively small development in comparison to other proposed allocations in and around Pill and Easton in Gordano. One such example is the proposed Pill Green allocation which has an indicative capacity of 600 dwellings, therefore the obligations should be relative to the site's scale and need for obligations to make the development acceptable from a planning perspective. The Land at Lodway Farm is by far the most sustainably located proposed allocation in Pill and Easton in Gordano. The site is served by a comprehensive collection of existing services and facilities. This includes a primary school, medical centre, library, convenience store, allotments and playing fields all within 1km of the site. A secondary school is 2.2km from the site which is also within walking/cycling distance. In terms of active travel and public transport, the site is well positioned to allow future residents to travel to the services and facilities mentioned above. The closest bus stop is located on Lodway Road, approximately 400m away from the entrance to The Site. This is served by X4 every 20 minutes between Bristol (27mins) and Portishead (30 mins). The proposed Pill Train Station is located 500m from the site and is due to open in 2027/28. The Avon Way Cycle Route is also 350m away. It is unreasonable to require this sustainable site to make up for the sustainability shortfalls of other sites in Pill and Easton in Gordano. For example, LP4 requires a new transport hub in the centre of Pill in close proximity to the new railway station location. The nature of this hub should be clarified so that it is clear what is proposed and how it will be funded. Barratt is committed to delivering sustainable homes nationally and specifically at Land at Lodway Farm as reflected in the recently submitted pre-application request and through the previous representations submitted. Barratt and Strongvox are committed to working collaboratively to ensure alignment between the two emerging applications and to deliver the site as soon as possible. Barratt is intending to submit an outline planning application in early 2026. However, Barratt is keen to ensure that the various planning obligations sought (including the 50% affordable housing as set out in policy DP43) do not render the site unviable and therefore undeliverable. Barratt Homes supports the note in Schedule 1 of the Local Plan that explains that Land at Lodway Farm requires two access points. This is essential given that two separate developers are in control of the land. Education We also note that policy LP4 requires all new development to contribute towards the delivery of necessary infrastructure either through direct delivery or through contributions. This includes a new 420 place primary school, contributions towards post 16, special educational needs provision and family centre services. We consider that further clarification is needed regarding these obligations so that it is clear what is expected from each allocation. Again, we note that these obligations should be proportionate to the scale of the development and the need being generated. We suggest that the word proportionate is included within the policy: "All new development will be required to contribute to the delivery of necessary infrastructure through either direct	Schedule 1 notes the need to site residential development away from Lodway Farm. We object to this requirement as it has not been justified for the reasons outlined above. It should be deleted form the plan. There is therefore no evidence to suggest the need to retain a buffer around the non-designated assets at Lodway Farm. The capacity of Land at Lodway Farm should be increased to 175. The policy should make it clear that obligations should be proportionate to the need generated by the development.		Heritage Technical Note(34046790.1).pdf P25-235-TN01v1 Lodway Farm, Easton-in-Gordano(40085877.1).pdf IL61014-03-003 REVB Lodway Farm Draft Framework Plan 30.07.25(34046792.1).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								delivery as part of the scheme or through proportionate development contributions. A new 420 place primary school (including early years provision in line with government requirements), along with financial contributions towards post 16, special educational needs provision and family centre services will be required to meet the needs of the expanding community." Unit Numbers (Schedule 1: Large sites for residential development) The North Somerset Local Plan 2041 Pre-submission Plan states that the site has an indicative capacity of 160 dwellings, we consider it may be possible to deliver more than this figure between the Barratt and Strongvox sites. Barratt and Strongvox Homes are in joint control of Land at Lodway Farm. Barrat controls the land to the east, whilst Strongvox Homes control the adjoining fields to the west. We are aware that Strongvox is preparing to submit a full planning application for approximately 60 dwellings, whilst the Barratt controlled land has capacity to deliver up to 115 dwellings. We therefore request that the indicative capacity of this site is increased to 175 dwellings to reflect this. Amending the indicative capacity of the site is in line with the plans objectives, including policy DP8 as it would ensure the most efficient use of land. Therefore, we consider that policy LP4 and associated Schedule 1 is currently unsound. The policy is not justified (test of soundness 36.b) based on the evidence base. The policy should be amended so that it is more precise which will assist in the delivery of the site. Noise Policy LP4 states that sites located on the western edge of Pill and Easton in Gordano, adjacent to the M5, including Lodway Farm, would need to provide appropriate buffers and sound mitigation measures to protect the living conditions of future residents. Schedule 1 of the North Somerset Local Plan 2041 Pre-submission Plan specifically states that detailed noise modelling is required to assess the noise from the M5, appropriate master planning and other mitigation methods may necessitate a reduction in the indicative capacity of the site. Hepworth Acoustics were appointed by Barratt to prepare an initial overview of the potential noise implications to help inform pre-application discussions for the Land at Lodway Farm. This Technical Note is enclosed. Hepworth Acoustics note that there is no realistic scope for the use of an acoustic bund/barrier to control motorway noise as it would not be effective. However, noise mitigation measures will be achieved through façade mitigation measures and through the careful orientation of the development buildings. As a result, we do not anticipate that these measures would reduce the capacity of the site in Barratt's ownership and confirm that noise concerns can be addressed satisfactorily. We support that the policy does not require a bund to mitigate noise impacts as noise can be satisfactorily addressed via different means. Hepworth Acoustics do not anticipate that the reopening of the railway will present any significant constraints. Modest further acoustic upgrades to bedroom windows overlooking the railway may be necessary for additional control of peak night time noise levels, however in terms of overall LAEQ,T noise levels, it is not expected the railway noise will lead to a significant increase upon the baseline motorway noise levels.			
62814497	Barbara Poole			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	1100 new homes make a 44% increase on the village of Pill - the inspector decision found that allocating more than10% made the increase unsound. Green belt exceptional circumstances not evidenced for the Pill Green site. Dual carriageway would have to be built to carry traffic into Bristol on A369 but this would not be possible due to narrowing at TheGeorge Pub - junction19 of M5 already running at present at near full capacity - the proposed Trainline is single track only and won't meet the needs of commuters. These 1100 houses might be two car families. The traffic on A369 is very heavy and still increasing since Portishead developments. There has been no assessment of brownfield alternatives to Pill Green - Markham Brook which runs from Failand through to Pill on the land by St Katherine's School where 100 homes are allocated on the plan is an ancient protected woodland with all the planning restrictions this would entail.	Delete Pill Green Site. Some single storey homes could be built to accommodate Pill's growing elderly population thereby releasing their larger homes to new families.		
62020033	Margaret Pownall			No	• Positively prepared • Justified • Effective	No	No	SP7 GREEN BELT Regarding Green Belt Review Background paper 11 I question whether 'due diligence' has been observed in the selection of Green Belt sites, namely Markham Fields (HE2015 and He201097) and (HE20491) Lodway Farm. The matter of 10% Biodiversity Net Gains are unsubstantiated and how is it to be measured if the top soil, trees and hedges are not assessed before any work begins. I do not find a 'robust and credible evidence base' has been applied to these locations as there is little evidence of credible surveying. I also disagree that the plan is 'effective' as the issues below demonstrate there is no clear plan for 'flexibility ' or it being 'able to be monitored'. Monitoring of the sites after development has started is pointless as the removal of top soil, moving of natural water courses and overloading of drainage systems cannot be easily rectified retrospectively. I think an Environmental Impact Assessment should be applied to rare landscape features, endangered habitats, hydrological issues on the sites. Markham Field Site In answer to the question posed, "does site affect stage 2 GBA" I think it most definitely does. Any disturbance to the Rare Habitat of Ancient Woodland and the associated water course within it should (according to Natural England) should be given AT LEAST a 15m buffer zone, and MORE where a sensitive wildlife corridor is involved. The proposed development would not deliver this and 'should provide a strong reason for restricting development.' The arable land (mistakenly labelled Grade 3) is semi-improved grassland (GRADE 1 or 2) and is designated 'species rich'. Lapwing and Skylark feed and breed on this site, both are on the UK red list of most endangered species. The hedges and trees on the field borders are also valuable habitat for and should be protected according to UK Biodiversity Action Plan. (UKBAP) As recently as 2020 this area was noted as worthy of protection in the Ecology report by Wildlife Trust Consultancies for the Neighbourhood plan approved by North Somerset Council. Lodway Farm Site Again, the Green Belt status of this site, given the rarity of the habitats involved should not be put at risk and begs the question whether due diligence has been observed.	As outlined above, I feel the justification for the choice of sites is not based on robust and credible data. Therefore the plan was not prepared with 'due diligence'. Prepare Independant Environmental Impact Assessments for : sensitive ecological sites, rare landscapes features, critically endangered species habitat, hydrological issues (on wetland sites) see comments above Note the Natural England guidance on extended buffer zones for Ancient Woodland and its associated natural water course. Markham HE2015 Maintain onsistent treatment of identical adjacent sites in Pill (p009) and Portishead (p007) adjoining Portbury Dock.		3 - Environment - Background Paper 3.pdf

Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								This site is on low ground and prone to flooding which would have a direct effect on any building development. I could see no evidence that the complex system of rhynes and other drainage channels had been fully surveyed independently of Portbury Docks, whom I believe manage them for the benefit of the wildlife, great crested newts, water vole etc. The proximity to the water also makes it suitable for roosting waterbirds, who also feed there seasonally. This site is also of particular importance for amphibians as it provides wetland habitat with breeding pools. Frogs and toads converge from the surrounding area and many traverse the Lodway farm site to breed. The adjacent Avon foreshore of the rivers Avon and Severn provides a nationally rare tidal salt grass area and is of importance to waterbirds and marine species. This is designated as a SAC (Special Area of Conservation) and SPA (Special Protection Area). The area is also a RAMSAR site adjoining the similar one on the Portishead shoreline. Whereas this adjoining site ,Portishead LP14, has been apparently found suitable to maintain its Green Belt status, the site in Lodway has been designated suitable for house building. This defies logic as the smaller area borders the Avon estuary and therefore its ecology will be specific to the site and represent a slightly different ecosystem of greater rarity. LP4 Strategic locations PEIG I question whether ‘due diligence’ has been observed in the selection of suitable sites. The matter of 10% Biodiversity Net Gains seems unsubstantiated and how is it to be measured if the top soil, trees and hedges are not assessed before any work begins. I do not find a ‘robust and credible evidence base’ has been applied to these locations as there is no evidence of credible surveying. I also disagree that the plan is ‘effective’ as the issues below demonstrate there is no clear plan for ‘flexibility ’ or it being ‘able to be monitored’. Monitoring of the sites after development has started is pointless as the removal of top soil, moving of natural water courses and overloading of drainage systems cannot be easily rectified retrospectively. I think an Environmental Impact Assessment should be applied to all the sites. EXAMPLE Markham field site HE 2015 This site borders Ancient Woodland, including Markham Brook which according to Natural England requires a minimum buffer zone of 15m . This wildlife corridor is rare habitat, providing for invertebrates, mammals, birds and for example, 2 species of horseshoe bats (Recorded in BRERC, Bristol Regional Environmental Records Centre). The arable land is designated highest quality (Best and Most Versatile) Grades 1 or 2 both of which are protected and cannot be replaced after building work has started. Red listed bird species like Skylark and Linnet are recorded feeding and breeding there.(BRERC) This site is on higher ground and the extra load of run off water from the development will reduce the water quality of Markham brook. This will be detrimental to the value of the habitat. During heavy rain the lower village is more likely to flood. There is no Environmental Impact Assessment evidence that the mitigating pond will be effective. Environment Data from North Somerset Council The Local Neighbourhood Plan for Abbotts Leigh, Ham Green, Pill and Easton in Gordano (2020-2026) Background Paper 3 - Natural Environment Ecology Review by ‘Wildservice’ (The Wildlife Trusts Consultancies)			
62840833	Paul Pownall			No	Justified	No	No	I am commenting on the Pre-submission Plan relevant to Eastern-in-Gordano, Pill and lHam Green ie sites HE 2O6, HE20491, HE2015, and HE201097. This is based on the "Residential Proformas" under the section "Evidence Base" The evidence for each site is based on a number of of "Objectives" and each "Objective" is graded "positive, negative,or negligible" with a further grading of "minor(+)" or "minor(-)" to "significant (++)" or "significant (- -)" I challenge the notion that a "robust and credible evidence base" has been applied to the above sites and to prove this I have chosen two of these objectives to comment on namely Objective 1.1 and Objective 3.3 referring to the two sites at the extremities of the above mentioned area Objective 1.1 states " Ensure a range of job opportunities are easily accessible without having to use a car" Your criteria for this Objective is " the site is within 2km of Clevedon,Nailsea, and Portishead or 5km from Weston-super-Mare or the centre of Bristol". I presume these distances are "as the Crow flies" and I have used OS EXPLORER 154 BRISTOL WEST& PORTISHEAD Map to check the distances of the above sites. To the west, the nearest site to Sainsburys, Portishead (the closest local job provider),is HE206 (for which I could find no "Residential Proforma).This site is 3.75km away - 87.5% outside your criteria of 2km. The nearest site to Bristol City Centre is HE201097 which is 6km away and yet this was graded as "minor(+)". Why? -it is 20% outside your criteria. What tolerances are you working to?! Obviously all the other sites are further away Objective 3.3 states "Reduce the need to travel by car to minimise environmental impacts....." Your criteria for this objective is "The site is within 1.8km of a railway station" . Do you mean the non existent Pill Station which has been planned for a decade and still may not be built (HS2 springs to mind) or the station at Shirehampton which is certainly within 1.8km for all the above sites, but local residents would have to swim across the Avon to abide by the criteria? YET YOU GRADED THIS SIGNIFICANT(++) for site HE 201097, the sample site I referenced. Based on these examples from your "Evidence Base" section of the Pre-submission Plan 2041how on earth can we trust your assessments, which at best are sloppy and at worst devious.	Start again and be more rigorous. Make access to these "Residential Proformas"much easier. There was no logic in the order of presentation.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 48743361	Lands Improvement Holdings Ltd	Lucy Topp	LIH	No	• Effective	Unsure	Unsure	Please refer to representation letter Strategic Location: Pill and Easton-in-Gordano LIH are pleased to see that the North Somerset Local Plan has recognised Pill and Easton-in-Gordano as a strategic development location and fully support the proposed allocation of the Site under policy LP4. The Local Plan has recognised four large housing allocations at Pill and Easton-in-Gordano as set out in in Policy LP4, one of these housing allocations being the Site (Land east of Gordano Services). Since the allocated sites throughout Pill and Easton-in Gordano are proposed for Green Belt release, it is required that the sites are brought forward as Grey Belt Land and therefore must meet the 'Golden Rules' as set out in NPPF Paragraph 156. This includes enhanced affordable housing on each site, as per Policy DP43; improvements to local infrastructure; and provision of high-quality green space. While LIH do support the provision of necessary services and delivery of new infrastructure throughout Pill and Easton-in-Gordano as set out in Policy LP4, it is considered that, as drafted, this element of the policy is too ambiguous and ineffective. The policy states that new infrastructure 'will be achieved through a co-ordinated approach' between the four large housing allocations. The policy then goes on to state that 'all new development will be required to contribute to the delivery of necessary infrastructure through either direct delivery as part of the scheme or through development contributions' and then lists facilities that should be provided throughout the plan period in Pill and Easton-in-Gordano. Throughout this Policy, it is not specified how the co-ordination of all local infrastructure and facilities will be achieved, with no further details as to what is expected from each site in terms of on-site provision and necessary financial contributions. The Policy to be precise, effective and found sound, there needs to be further direction regarding the interaction of the allocated sites and how they will be expected to co-ordinate in order to deliver the policy aspirations. It is set out in Policy LP4 that throughout the plan period, the four strategic sites in Pill and Easton-in-Gordano will be expected to provide improvements to the local infrastructure with a particular emphasis on a new primary school, the creation of improved active travel routes and a new transport hub. The nature of the four different sites means that it is likely they will all be brought forward and built at different points of time throughout the plan period. This could result in an increased financial burden on the sites brought forward earlier. Without clarity and proper justification, this increased burden is not justified. Policy LP4 should therefore provide much greater clarity on the anticipated requirements for each proposed allocation site.	Please refer to representation letter. Policy LP4 should provide much greater clarity on the anticipated requirements for each proposed allocation site.	Strategic Location: Pill and Easton-in-Gordano LIH are pleased to see that the North Somerset Local Plan has recognised Pill and Easton-in Gordano as a strategic development location and fully support the proposed allocation of the Site under policy LP4. LIH strongly support the removal of the Site from the Green Belt, as set out in Policy SP7, since it is largely recognised throughout the PreApplication Feedback, the Stage 2 Green Belt Assessment and the Green Belt Assessment submitted as part of application 25/P/1413/OUT that 'Land east of Gordano Services' could be considered Grey Belt Land.	640_L01-Site Location Plan.pdf 640_P01_Illustrative Masterplan.pdf 24398_December25_Court-House-Farm_Reps_Issue.pdf
62861697	G Rich			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	It destroys ancient woodlands, removes Green belt land and traffic will double our village overnight.	Delete LP4 and limit to small homes on non-Green belt sites.		
32388609	James Ryan			No	• Justified • Effective • Consistent with national policy	No	No	The plan is not legally compliant because North Somerset Council has failed to demonstrate exceptional circumstances for releasing Green Belt land around Pill. The National Planning Policy Framework requires that all reasonable alternatives be fully considered before Green Belt release. There is no clear evidence that towns with existing infrastructure, regeneration sites, or previously developed (brownfield/grey belt) land have been properly assessed before designating Pill as a strategic location. Consultation has also been inadequate. Pill and Easton-in-Gordano residents were not meaningfully engaged in the February/March consultation, and there is insufficient evidence that local feedback influenced the plan. The proposal is not effective, as Pill lacks the infrastructure to support 600 houses, a primary school, and associated facilities. There are already homes for sale locally, and large-scale development here would result in unsustainable concrete sprawl over rolling countryside and natural springs. In short, the plan is unjustified, inconsistent with national policy, and legally unsound. Pill and Easton-in-Gordano are not the places for large-scale housing, as the exceptional circumstances test has not been met and towns with existing infrastructure have been ignored.	To make the North Somerset Local Plan 2041 legally sound, the following modifications are required: Re-prioritise housing locations: Direct large-scale housing to towns with existing infrastructure, regeneration sites, and previously developed (brownfield/grey belt) land. These alternatives must be fully assessed and evidenced before any Green Belt release. Strengthen exceptional circumstances evidence: Provide robust justification for Green Belt release in line with the National Planning Policy Framework. General housing need or community facilities such as a primary school, doctors' surgery, or skatepark do not meet the legal threshold of "exceptional circumstances." Improve consultation: Conduct meaningful, targeted consultation in Pill and Easton-in-Gordano, with clear evidence of how local feedback has influenced the plan. Ensure deliverability: Align housing allocations with locations that already have schools, doctors, transport links, and shops. Avoid allocating large-scale housing in villages without capacity, as this makes the plan ineffective. Protect character and heritage: Include policies to safeguard the rural	I support the principle of meeting housing need and providing affordable homes, but I do not support building on this site because it is Green Belt land over natural springs. National guidelines can be met elsewhere — in towns, regeneration areas, and through higher-density developments where infrastructure already exists — without causing detrimental damage to the countryside or changing the character of Pill and Easton-in-Gordano.

32388609	James Ryan			No	• Justified • Effective • Consistent with national policy	No	No	The plan is not legally compliant because consultation has been inadequate, exceptional circumstances for Green Belt release have not been evidenced, and the evidence base is weak. Residents of Pill and Easton-in-Gordano were not meaningfully engaged, and there is no clear demonstration that feedback influenced the plan. The proposal fails to show why towns, regeneration sites, and previously developed land were insufficient before designating Green Belt countryside over natural springs for 600 houses. The plan also fails the duty to cooperate. North Somerset Council has not demonstrated constructive engagement with neighbouring authorities such as Bristol, Bath & North East Somerset, and South Gloucestershire. Housing need could be met more sustainably through regeneration and higher-density developments in towns with existing infrastructure, rather than allocating large-scale housing in Pill. Transport alternatives such as bus improvements have been overlooked, despite heavy investment in the railway line, which does not adequately serve wider communities.	To make the North Somerset Local Plan 2041 legally compliant and sound, the following modifications are needed: Redirect housing to towns, regeneration sites, and brownfield land with existing infrastructure. Provide robust evidence of exceptional circumstances before any Green Belt release. Improve consultation in Pill/ Easton-in-Gordano and show how local feedback shapes the plan. Align housing with areas that already have schools, doctors, shops, and transport capacity.	I support the principle of meeting housing need and providing affordable homes, which shows positive preparation. I also welcome commitments to green spaces and community facilities in principle. However, I do not support building on Green Belt land at Pill/ Easton-in-Gordano, especially over

									Use the Pill site positively for renewable energy or environmental projects that benefit the community. Strengthen transport strategy by cooperating with neighbouring authorities and investing in bus networks, not relying solely on the railway. Without these changes, the plan remains unjustified, ineffective, inconsistent with national policy, and legally unsound.	natural springs. National guidelines can be met elsewhere — in towns, regeneration areas, and through higher-density developments where infrastructure already exists — without causing detrimental damage to the countryside or undermining local character.	
51079969	Justin Saunders		Pill and Easton-In-Gordano Parish Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	Yes	LP4 fails to meet the criteria for sustainable development in the following ways: 1. The large scale sites are on the edge of the community and away from facilities regarded as a reason for the selection of the location, so the largest is far from the railway station and the facilities in the centre of the location and only linked by active travel routes which will be too far from the facilities. 2. There are no considerations of any additional facilities or employment opportunities within the communities beyond a possible primary school. Other strategic sites include areas for employment and strategic connectivity to existing facilities \- there is none of this in this plan beyond an active travel route across ancient woodland to the school. 3. No specific plans for improvement of public transport, taking into account an overall increase of housing in both LP4 and Portishead. For example additional bus routes through the largest development to service the whole community or capacity improvements to the railway to take it beyond a once an hour service. 4. No improvements to the connectivity of the sites to the nearest major areas of employment like the port to encourage active travel. Without a significant change to the connectivity of the larger sites and a plan for other facilities these will be disconnected dormitory estates where cars will be the predominant way of getting to any facilities which is very unlikely to benefit the local community. Development of the Ham Green site and other brownfield infill schemes within the current community boundaries do align with this objective. However the other brownfield sites have not been given due consideration.	LP4 needs to be withdrawn and brownfield sites in more sustainable locations considered.		
51079969	Justin Saunders		Pill and Easton-In-Gordano Parish Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	Yes	Policy LP4 appears to be a collection of six previous development plans submitted by land owners in the past. These development plans were piecemeal and turned down for strategic reasons beyond just being on green belt land. These strategic reasons have not changed and other policies have failed to address these. In particular this conflicts with SP1, SP3, SP4, SP6, SP8 (and LP9), SP9, SP10 (and LP11) and SP11. There is no overarching requirement for a masterplan for all sites that addresses the items of scale such as new facilities, employment opportunities and transport infrastructure. Without significant changes to all sites with the exception of Ham Green and coordination to ensure that facilities are provided on a timely basis this plan will create disconnected dormitory estates with no on site facilities or employment and no easy access to existing facilities except by car. Facilities proposed in this local plan are less than those previously proposed by previous developer plans particularly leisure and sporting facilities. Taking the conflicting policies in turn: SP1 - this strategic development site is on the edge of the community and because of the semi-circular nature is far away from existing facilities with the exception of the Ham Green site. Lodway Farm is the closest to most of the existing facilities but is still far from the secondary school. The sites south of this are far enough from the existing centre of the community and the transport links that active travel is unlikely on a regular basis. There are no plans for connectivity by car for the largest and most isolated site at Pill Green. There are no proposals beyond a possible school to provide any other facilities that will encourage the new community to integrate with access to the site being on a road over a mile from any existing facilities. No provision of additional public transport routes within the facilities to improve the resilience of bus services in the village which are typically rerouted 2-3 weeks per year. No improvements to the capacity of the new rail link to provide a better than hourly service. All other sites of this size have a master plan and allowance for improved facilities and access to employment or new employment sites to make developments of this scale sustainable. SP3 - Pill and Easton-In-Gordano is a rural community it is not a town. The development is out of scale with this rural location (community need is around 20% of the proposed development based upon previous surveys) and disconnected from the existing local centre. Pill and Easton-in-Gordano makes up 2% of the population of North Somerset but is expected to contribute 4% of housing, this is not proportionate for a rural setting. There are no requirements in this policy to complement existing local centres or contribute to their viability. With the exception of Ham Green previously developed locations closer to the facilities have been ignored and developers with large land banks of high grade farmland prioritised. SP7 - This strategic location means that 80% of the immediately accessible green belt outside the current settlement boundary will be built on. This provides access to nature for the deprived community of Pill without the need for public transport, this facility would diminish significantly if this development - particularly the Pill Green site - goes ahead. This is grade 1 or grade 2 farmland that should be preserved. The proposal also includes ancient woodland that would be felled as part of these proposals. SP8 - Pill and Easton-in-Gordano makes up 2% of the population of North Somerset but is expected to contribute 4% of housing. The current figures show an oversupply of 795 houses over the required target. The current building rates of the previous local plan are not sustained so any overallocation is reckless. The least suitable sites in LP4 should be removed on that basis Pill Green, Gordano Services, Pill Road, Lodway Farm respectively in terms of the sustainability requirements. Little work seems to be done on using existing built on land to provide the requirements in more connected locations within the Pill and Easton-In-Gordano. SP9 - No provision for additional employment and no improvement of active travel or public transport to local large sites of employment like Portbury Dock. These sorts of improvements need a strategic masterplan. SP10 - No provision of improved public transport - for example the old X3 route coming into the Pill Green estate. No provision for easy access to the train station for active travel from the Pill Green, Pill Road and Gordano Service sites. No plans to upgrade the railway to allow for more than hourly running. This will lead to car usage significantly	LP4 needs to be withdrawn and previously developed sites with settlement boundaries need to be prioritised.

								increasing and there are no plans to increase capacity on the A369 or Junction 19 of the M5. SP11 - The land allocated for all the sites outside the current settlement boundary is grade 1 or grade 2 green belt farmland. Sites include ancient woodland which will be disturbed by these plans and rivers with locally rare wildlife (as documented in the Neighbourhood Plan for the parish).			
62848065	DK Sayner			No	• Positively prepared	No	No	There has been a lack of community involvement and poor methods of consultation. No public meeting or exhibition has been held in Pill. Junction 19 of the M5 is fully saturated. National Highways have not completed their assessment of the motorway junction. Huge and life changing loss of greenspace and wildlife. These developments will increase the risk of flooding in Pill village nearby main roads and the M5. The A369 will not be able to cope with increased traffic to Bristol and the area of Abbots Leigh will buckle under the weight of traffic.	Public consulations with residents of Pill and surrounding areas. The Green Belt should be only released in exceptional circumstances. The plan is led by housing developers, no alternatives have been explored like Brownfield sites across the county.		
62852161	M Senior			No	• Positively prepared • Consistent with national policy	No	No	The existing settlements are old, historic in places. The infrastructure does not successfully support the residents who are already there without routine and costly intervention. The area is a known flood risk, there is no successful mitigation that can be put in place for the impact of more housing. The motorway network around between Avonmouth and clevedon is already high risk due to congestion. Increasing demand on it in this manner will have a very simple, very serious impact. It will result in avoidable deaths.	Delete LP4, it is utterly unsound and ill conceived. It's presentation has so far been deceitful in its manner. Be serious about the risks to public health, public safety and very serious, very obvious environmental impacts. There would be marginally less risk in dumping a landfill site at the top of ham Green. That's how ridiculous these proposals appear.		
62865121	Jenny Shah			No	• Positively prepared • Justified • Effective	No	No	North Somerset Council have failed to hold any community meetings regarding this proposed plan Re Policy LP4 . The Plan is not sound as there has been no consultation between NSC with the Developers regarding roads and traffic. There are no plans for extra traffic lights, new roads. The A369 will not be able to cope with a 44% increase in traffic at the junctions between St George's Hill and the A369, the A369 is a single carriageway in and out of Bristol and already suffers from bottlenecks with the existing amount of traffic. Since the Clean Air zone introduced on the Portway many more vehicles use the A369 to get into Bristol. Easton in Gordano and Pill will not be able to cope with extra traffic when traffic is diverted through these villages as it is regularly when roadworks exist on the A369. Junction 19 is regularly backed up with traffic all the way back to Avonmouth. SP3 and transport re SPlO. Pill and EIG do not have a wide range of facilities, services and jobs. Large new developments will be dormitory areas where people have to travel to work. Although the new railway is proposed, the number of trains per hour and carriages proposed is highly unlikely to encourage people to use this particularly when they are likely to be full from Portishead. There will still be a significant increase in the number of car journeys into and out of Bristol (particularly from the proposed Pill Green site), putting further pressure on the A369 and the bottle neck at Abbots Leigh. The Highways Authority's views and representations on the road infrastructure does not appear to have been taken into account. SP3 specifically requires that development should not be of a disproportionate scale which adversely impacts on the character of a settlement or leads to a significant increase in the number of car journeys. Far too much emphasis is being placed on the new railway. There is deviation regarding the Settlement boundaries for Easton in Gordano and Pill. The proposed areas infringe the settlement boundaries. Any dwellings within the Settlement boundary should be for the existing rural community only. These boundaries exist to manage growth responsibly. SP6 clearly states that residential development outside settlement boundaries "will be restricted to replacement dwellings, subdivision of existing dwellings, residential conversion of rural buildings where alternative economic use is inappropriate or unfeasible, dwellings for essential rural workers or the redevelopment of previously developed land in suitable locations". Village infrastructure covers essential physical and "soft" systems like roads, water, power, education, and healthcare, crucial for rural economic development, quality of life, and access to services, often requiring tailored, community-focused solutions due to lower density and income levels compared to urban areas, focusing on sustainability and local empowerment. The Pill and EIG community work together as a village. Village status will be lost with so many new homes.	1. A public meeting with the local community 2. A review of sites to ensure compliance with the Council's own proposed policies. 3. An acknowledgment of the importance for culture and cohesion of the settlement boundaries and an attempt to work to avoid extending these. 4. A proper review of the transport infrastructure in the area given further development in Portishead and the increased journeys from there and Pill/ EIG along the A369. The railway is not going to solve that.	Yes I wish to participate	
711873	Easton-in-Gordano Parish Council		Pill & Easton-in-Gordano Parish Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Pill & Easton-in-Gordano Parish Council objects to Policy LP4. Designating our parish as a fourth Strategic Development Location for ~1,100 dwellings on five Green Belt sites is unsound, unlawful and undeliverable. This allocation only appeared in June 2025 – it was absent from the July 2024 draft – and has not been properly evidenced or consulted on. This abrupt June 2025 elevation misrepresents the February–March 2025 consultation, which sought views only on individual sites as 'potential allocations' in sustainable villages, not as a strategic location (Consultation Paper Section 5.43). Cabinet's 18 June claim of 'general support' (para 3.21) ignores localised objections and the fact no strategic question was asked, breaching Localism Act 2011 engagement duties. Not Positively Prepared – Forces a Category A village (1.9 % of North Somerset's electorate) to take 4.6 % of all new housing, overriding our made Neighbourhood Plan (81 % referendum support, 2021) which caps growth at 150–200 homes to 2038. Policy LP4 is also procedurally flawed and unjustified because it was introduced as a complete surprise in June 2025 – absent from all previous consultations. The supporting evidence is extraordinarily sparse: no updated Sustainability Appraisal, no transport modelling, no habitat surveys, and no landowner agreements for the proposed active travel routes. Several of these routes (notably the Markham Brook overbridge and connections across private land) appear to have been drawn freehand on a map with no regard to topography, ancient woodland, floodplain, or existing rights of way. This gives the clear impression of a rushed, last-minute insertion to plug a perceived housing numbers gap, rather than a properly prepared, evidence-led allocation. Such an approach renders the policy neither justified nor effective and risks the entire Plan being found unsound. Not Justified – The Sustainability Appraisal fails to use Defra MAGIC maps, missing floodplain woodland (Flood Zones 2/3), ancient woodland and priority habitats. No objective assessment of non-Green Belt or brownfield alternatives has been carried out (NPPF para 157). The proposed Markham Brook active travel route cuts through irreplaceable ancient woodland with no 15 m buffer or compensation strategy (NPPF para 193c; Natural England Standing Advice 2024). The Sustainability Appraisal and evidence base contain no assessment of the loss of best and most versatile agricultural land. Four of the five LP4 sites (HE2015 Pill Green, HE20491 Lodway Farm, HE206 Gordano Services, and HE20492 Pill Road) are predominantly Grade 1 and Grade 2 according to Defra's Provisional Agricultural Land Classification (see attached screenshot from magic.defra.gov.uk). This is prime farmland that the NPPF (para 119 and Planning Practice Guidance) says should only be developed as a last resort after all reasonable lower-grade alternatives have been exhausted. No such alternatives assessment has been carried out, rendering Policy LP4 not justified (NPPF para 36(b)).	Delete Policy LP4 in its entirety and remove all five Pill & Easton-in-Gordano sites from the proposals map. Revert to the July 2024 spatial strategy under which our parish was not a Strategic Location and growth was limited to local needs only, in line with Policy SP3 and our Neighbourhood Plan. Furthermore, the Plan's failure to examine the government's new Environmental Improvement Plan 2025 (EIP 2025, published 1 December 2025) renders LP4 unsound and non-compliant. EIP sets binding national targets under the Environment Act 2021, including 30% land protection by 2030 (30by30), mandatory 10% Biodiversity Net Gain (BNG) for all developments by mid-2026, and £10.5bn for nature-based flood defences (protecting floodplain woodlands like those on Pill Green HE2015). It requires Local Nature Recovery Strategies (LNRS) by end-2025, which local plans must integrate for habitat mapping, no-net-loss of ancient woodland (via updated inventories by 2027), and riparian		Screenshot 2025-12-11 090639.png Markham Brook Ancient Woodland and Priority Habitat Inventory.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Not Effective – The council's own Infrastructure Delivery Plan (Oct 2025, §8.3) labels M5 Junction 19 upgrades and Pill flood-risk management as high-risk and unfunded. The five LP4 sites together would add approximately 1,540 peak-hour car trips (1.4 cars/home × 1,100 dwellings) – on top of Portishead's remaining growth and the continuing expansion of Royal Portbury Dock HGV traffic – with no evidenced mitigation and no funded solution. National Highways has raised unresolved objections to the cumulative impact on Junction 19 capacity and safety. In the absence of any robust assessment or deliverable mitigation, Policy LP4 fails the effectiveness test (NPPF para 36(c)) and would cause severe residual cumulative impacts on the strategic road network (NPPF para 116). Flood mitigation fails the sequential test (NPPF para 174). Inconsistent with National Policy & Legally Non-Compliant – Directly breaches NPPF paragraph 148: the council has published no evidence that brownfield opportunities and urban density increases have been maximised before releasing high-value Green Belt in Pill. Residents and the parish council are aware of potential brownfield sites that have not been fully explored. Releasing these five Green Belt sites therefore fails the sequential test, the "grey belt" priority, and the requirement for exceptional circumstances. This, combined with tiny consultation responses (often <30 per site) and a developer-led process, also breaches the Localism Act 2011. Duty to Cooperate failed – No updated Statements of Common Ground with National Highways, Natural England or the Environment Agency on J19, habitats or SuDS. This policy risks the whole plan being found unsound (as happened with the Joint Spatial Plan in 2020).	buffers along Markham Brook. NSC's June 2025 allocation predates EIP and lacks any assessment of these requirements—no BNG strategy for irreplaceable habitats (NPPF para 193c alignment), no LNRS-informed alternatives to Green Belt release, and no evidence of flood-resilient designs (e.g., SuDS to avoid downstream risks in Pill village). This breaches NPPF para 36 (not justified/effective) and the Biodiversity Duty for public bodies. **To comply, pause submission until: (i) Full EIP/LNRS integration via revised Sustainability Appraisal; (ii) Independent audit of sites against EIP targets (e.g., 250,000 ha habitat creation by 2030); and (iii) 6-week extended consultation. Additionally, fund a Parish-led audit of small/micro-sites (2–5 homes each) on underused/ brownfield land within the parish, as reasonable alternatives prioritised under NPPF paras 36(b), 69, 119 and 148. Residents have identified potential infills fitting local needs without Green Belt harm—exploring these first would demonstrate proportionate evidence and effective rural land use. These fixes would enable evidence-led, nature-positive growth without judicial review risks.		
62741377	J Smith			Yes		Yes	Yes				
62859713	Clare Smith			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The consultation on lasted for 6 weeks . It was only after the consultation that Pill and EinG was categorised as a Strategic Location for the large residential development. Many, many local residents are opposed to the scale of the propsed development.	There needed to be a public exhibition in Pill/E-in-G considering the numbers of houses proposed. Local people just didn't know what was happening. I am not in favour of the release of Green Belt land. Further exploration of Brownfield sites across the county is needed. The loss of green spaces and inpact on wildlife, air quality, water quality is too great. The increase risk to flooding in the village is also of concern. I don't beleive there is any space in local schools, we'd need more local shops, better water treatment works....there just isn't anywhere enough consideration on local resources. The transport issues from J19 on the M5 concern me - this is not fit for purpose as is, let alone with a huge population increase.		
32493057	J Spicer			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Brownfield sites not considered (Quote regs 12/2024 Brownfield Register 2,800 +units ignored). Green Belt Exceptional Circumstances not evidenced (NPPF 147) 44% Population Bomb disproportionate and unjustified. Adverse impact on character of Pill and EIG and services. Adverse impact on wildlife and natural springs. Level of housing not needed.	Green Field sites to remain protected and not built on and alternative brown field sites to be used instead for which there are plenty as mentioned above.	Soundness not surported as per comments noted above.	
29190241	Waddeton Park Ltd (Land at Pill Road)	Alder King Planning Consultancy	Waddeton Park Ltd	Yes		Yes	Yes		Waddeton Park Limited strongly supports the proposed allocation of its land within the new local plan for development. However, it has drawn attention to the indicative site capacity and site requirements laid out for the Land at Pill Road in the Pre-Submission Plan. Related amendments are, therefore, proposed. For clarity, and for the avoidance of uncertainty and unnecessary delays in determining the future planning application, Waddeton Park suggests that it would be appropriate for a modification to be made to the proposed allocation wording to the extent that development would permit up to 100 dwellings and a care home. The allocation should be worded to specifically 'permit up to 100	Waddeton Park Limited's view is that the Local Plan is legally compliant regarding the proposed site allocation for residential development at Land at Pill Road in Pill (Schedule 1 of the Local Plan, page 280), to which these representations relate. Moreover, Waddeton Park Limited believes	North_Somerset_Local_Plan_Pre-Submission_Plan_Representation_Form_Part_B_WPL_LP4.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									dwellings' and additionally 'support, but not require, a care home on the site' (or similar wording). In this regard, there is a demonstrable need for older persons housing in North Somerset over the plan period to 2041, as supported by the 'North Somerset Local Housing Need Assessment Report of Findings, September 2025' (LHNA). Figure 49 of the LHNA, which forms part of the local plan evidence base, quantifies the need for specialist older person housing to 2041. This sets out that there would be need to provide an additional 1,400-1,500 specialist older person housing units over the 15-year plan period 2026-2041. Therefore, the need for this type of development is clear and should be appropriately accommodated for in the local plan. The appended illustrative masterplan outlines one way in which a care home could appropriately form part of the development scheme, in addition to 100 dwellings on the site. Waddeton Park proposes that the following requirement is removed from being a site requirement: "Active travel connection required between Pill Green and Land at Pill Road, crossing Markham Brook to enable creation of safe walking routes to schools, along with proportionate contribution to Markham Brook active travel overbridge." Waddeton Park suggests that it would be appropriate for a modification to be made to the proposed allocation to remove this element as a 'site requirement'. Firstly, the site has appropriate accessible connections for future residents to walk to St Katherine's School opposite. This site already benefits from safe walking routes to schools; therefore, it is onerous and unreasonable to expect development on the site to fund/deliver additional connections where not necessary to make the site itself acceptable in planning terms. As assessed within the appended Transport Technical Note, the site's accessibility review shows that the key desire line to travel from the site is to Pill village centre along Pill Road north and St Katherine's secondary school opposite the site. To the north, Pill Road also connects to Crockerne Primary School. Overall, access to day-to-day facilities and amenities for education, shopping, and community uses is primarily towards the north and east (to the secondary school). In addition, there are existing PRoWs opposite the site on Pill Road for recreational walks. Therefore, it does not seem reasonable for the Land at Pill Road site to have to deliver and/or contribute to the delivery of the connection over Markham Brook to the west as this is not necessary for future residents. The sustainability credentials of the site without this link are clearly acceptable; the delivery of the land at Pill Road without any reliance on the Pill Green land should be wholly supported. It seems the benefit of such connection would be for the Pill Green site (draft allocation for 600 dwellings) and, as such, should this connection be necessary it should be delivered by that site. Furthermore, an 'overbridge' to Markham Brook is very likely to be	that the proposed Local Plan, as set out in the Regulation 19 consultation can be found to be sound in that that the allocation of the land at Pill Road, Pill for residential development (identified on page 280 under Schedule 1) is consistent with each of the tests of soundness insofar as they are directly relevant. These representations are supported by the appended Transport Technical Note, prepared by Ridge, which supports the sustainability of the land at Pill Road for development. The land at Pill Road site allocation is part of the proposed means of implementing the spatial strategy, which has been properly arrived at through the identification of properly explained strategic options and their testing through sustainability and deliverability evidence and appraisals, and through stakeholder and community consultation. It is, therefore, a proper product of the positive preparation of the Local Plan and is justified. This forms part of the spatial strategy in appropriately directing strategic growth at Pill and Easton-in-Gordano under Policy LP4. The allocation of the site will be effective, in that it will assist in making the Local Plan deliverable. The site is wholly in one ownership and free of any significant constraints so its development can begin and be completed in the early years of the local plan period. The allocation is consistent with national policy and with the policies in the emerging	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									impractical and unrealistic physically, given the sloping valley and steep topography around the brook, and it is likely to have detrimental effects upon trees and biodiversity. Furthermore, the financial implications could risk the viability of the land at Pill Road allocation coming forward for development and this would materially affect the Council's housing position. Finally, fundamentally the requirement for an active travel bridge over Markham Brook is not considered to be necessary, as set out in the appended Transport Technical Note. There is no desire line to travel to the south/west of the site, as this has excellent accessibility to local facilities and amenities in the village centre and the secondary school is conveniently located opposite the site. These proposed minor changes need not be a matter of any significance for the examination but could be a modification proposed by the Council before submission of the Local Plan to the Secretary of State, and as a minor change should not trigger a need for any further consultation.	Local Plan which is to be examined according to relevant national planning policy. It is clear that exceptional circumstances exist, and have been appropriately evidenced, to justify release of Green Belt land to support growth to meet North Somerset Council's identified housing need for the plan period. Paragraph 148 of the NPPF is clear that where it is necessary to release Green Belt land for development, as is established and agreed in North Somerset, plans should give: "priority to previously developed land, then consider grey belt which is not previously developed, and then other Green Belt locations." In this regard, Waddeton Park has consistently promoted the land at Pill Road throughout the emerging local plan process and strongly supports its allocation for residential development in the plan. The site is sustainably located with a strong relationship with the existing settlement of Pill. This strong cohesion between site and settlement is a significant benefit in allocating residential development here. The site is well located to the existing settlement with good accessibility to local services and in walking distance to key facilities. Pursuant to the Council's 'Spatial strategy, site selection and capacity paper' (October 2025), Pill/Easton-in-Gordano is identified as a Category A village which are described as	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 										“villages considered to be relatively sustainable in their own right with a range of easily accessible services and facilities and goof public transport links to towns”. The Council’s approach is wholly appropriate to direct growth to such settlements. It is highlighted that work to reopen the railway line has commenced with Pill train station set to reopen by 2028 which will only further enhance the existing sustainability of the settlement. The land at Pill Road has been appropriately and comprehensively assessed as suitable through the SHLAA and adjoins a Category A village in a sustainable location where exceptional circumstances for Green Belt release have been identified. With regard to the Green Belt, the site has been assessed by the Council, as part of a slightly larger land parcel, within the ‘Stage 2 Green Belt Assessment’ (October 2025), as delineated below (see attached document). The overall assessment of this parcel concludes it makes a weak contribution to the purposes of the Green Belt. This is set out in turn as follows: Purpose A - to check the unrestricted sprawl of large builtup area; (Bristol): Weak Purpose B - to prevent neighbouring towns merging into one another: Weak Purpose C - to assist in safeguarding the countryside from encroachment: Moderate Purpose D - to preserve the setting and special character of		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										historic towns: Weak Purpose E -To assist in urban regeneration, by encouraging the recycling of derelict and other urban land: Neutral Further to this, as can be seen in the Green Belt assessment, our Waddeton Park's land makes a weak contribution to Green Belt purposes A, B and D. There are no relevant footnote 7 assets that would provide a strong reason for refusing or restricting development on the land. Therefore, this can be considered Grey Belt, subject to the specifics of the development proposal. The Council's Stage 2 Green Belt assessment agrees with this position in that the parcel can be identified as Grey Belt. This wholly supports the Council's approach to allocate development on the land, in accordance with the provisions of NPPF paragraph 148 which first priorities previously developed land and then Grey Belt land before any other Green Belt locations. The site is easily accessible, being within walking and cycling distance to a number and facilities and services within the village and nearby. This includes St Katherine's School opposite the site to the east. The site is available in the short term and can be delivered as a standalone development, without dependency on any major infrastructure intervention. The residential development has been driven by the context and topography, and by a wish to achieve an appropriate	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										network of green infrastructure, positively responding to the woodland around Markham Brook to the west. The site is within Flood Zone 1 and, therefore, having a low risk of flooding and being appropriate for residential development. It is the preferred location under the flood sequential approach to selection of housing sites. Supporting technical surveys and assessments have been carried out to inform the development allocation. Demonstration of the deliverability of development on the site is the intention to submit an outline planning application for development of the site, following pre-application discussions with the Council, shortly after the close of this Regulation 19 consultation. This will ensure development can be brought forward in the early years of the plan and supports the requirement for the Council to identify “specific, deliverable sites for five years following the intended date of adoption.” (NPPF paragraph 72). Overall, the proposed allocation on land at Pill Road is strongly supported. Comment is, however, made with regard to the site-specific deliverability of the development, with regard to the site requirements as set out on page 280 of the published Reg 19 Pre-submission Plan for the proposed allocation. In this context, the draft allocation makes provision for an indicative capacity of 100 dwellings on the site. Pursuant to the work	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										undertaken to date the site may also be able to accommodate a care home, ensuring an efficient use of land and meeting a need for such facilities. As illustrated on the appended illustrative masterplan, a scheme is currently being progressed via pre-application discussions for 100 dwellings and a c. 70-bed care home. It is appropriate that the supporting wording for the allocation is amended to reflect this potential development, without making it an absolute requirement. The site can comfortably and appropriately accommodate a care home in addition to traditional residential dwellings, which will make a significant contribution in an area where there is demonstrable need. In accordance with the enclosed plan, key elements of Waddeton Park Limited's development proposal on the land at Pill Road include: • New homes generally to the eastern boundary with lower density residential frontage towards the woodland; • Policy compliant affordable housing; • Care home in accessible location in the north of the site with views across landscape edge and woodland, providing a sensitive response to existing dwellings in St Catherine's Mead; • Vehicular access from Pill Road; • Pedestrian/cycle and potential emergency access connection to the north of the site, serving a foot/ cycle path which runs north/south within the site; • Mobility hub,

62858721	Heather Barbara Streeter			No	• Positively prepared • Justified • Consistent with national policy	Unsure	No	Traffic and congestion: Success of the plan hinges on good transport links between Junction 19 of the M5 and Bristol via A369. The A369 is already at capacity as is Junction 19 itself. The plan's suggested improvements along the A369 between Junction 19 and Pill has not acknowledged the current major issues along the A369 where there are 2 pinchpoints, at Abbots Leigh at the junction with the George Inn and at the roundabout linking the A369 to the A370 into Bristol and to Winterstoke Road where there is the Bristol City Stadium and retail parks. An additional 1,100 homes in the LP4 site will be using the A369 for both work and pleasure. Due to the close proximity of listed buildings at the Abbots Leigh pinchpoint there is limited scope to widen the road and improve traffic flow. Whilst the plan states that the railway with its proposed station in Pill is offered as an alternative route into Bristol, it cannot link to the stadium and shopping at Winterstoke Road, so it is unrealistic to expect the train service to relieve any further stress on the A369. Furthermore, a 5-carriage (initially 3 carriage) train running once per hour is way insufficient to serve the increased population resulting from the implementation of this plan. Also, the distance from the Pill Green HE2015 and Pill Road HE20197 sites to schools and services including the train station in Pill, is too far for young children and older residents to walk. Details of public transport options that omit travelling along the A369 from these sites to village services in Pill are missing from the plan. Under the current plan, the Portishead - Bristol railway will not accommodate travel from the Pill area to places of work, in Bristol, Portishead or the new EPIC area. Thus travel will need to be by car or bus, i.e the A369 will also need to support the 44% increase in population to travel to work. Currently, during rush hour, the bus service is woefully inadequate. I am a regular bus user (X4 Portishead to Bristol) in the evening rush hour and buses are unreliable and often 40 min late, putting off people from using public transport. The plan does not increase available work within the direct local environment, rather it is providing housing for other areas like Bristol, EPIC, Portishead and further afield to areas connected to the M5. This is at a cost to the local population currently residing along the A369 corridor. There are no details in the plan addressing increased needs in medical services. The local GP practice in Pill, in Lodway Gardens has very limited parking. Most patients attend by car as use of public travel is either unwise when unwell or difficult for the elderly. If it was possible to add another storey to the GP practice building, there would still be insufficient parking to support the building in its current location. North Somerset Council has not had adequate consultation with the locals affected by the LP4 area of the North Somerset Plan, although they have had public consultation with other LP areas. As a result, the LP4 plan is weak as it does not reflect the opinions and suggestions of how best to adopt and implement any such plan locally. This should be even more important to address as the plan requires most new buildings to be sited within Green Belt land. Without a public consultation with North Somerset Council, residents have been unable to see any evidence that the council has for failing to identify brownfield sites within the county rather than develop on Green Belt land..	For this plan to have any success, the traffic issues at Junction 19 of the M5 and along the A369 road to Bristol has to be addressed. The A369 road needs to be widened to accommodate the increased traffic, or it will become one large traffic jam. To do this the council will require to issue compulsory purchase orders on both land and property. The plan need to provide local public transport from the new housing sites to the services and schools in Pill village, avoiding the A369. To reduce the dependence on transport to localities outside of the village, the council needs to ensure inward investment of businesses into Pill and Easton-in-Gordano. A new GP practice should be supplied to accommodate servicing the increased population and this should be in a new position with increased parking facilities.		
61631521	H Sykes			No	• Positively prepared • Justified • Consistent with national policy	Unsure	Unsure	My comments pertain to area HE2015 only. 1. Google Maps shows a lane hedged on both sides extending from Cross Lanes diagonally to intersect with a north-south track which terminates at Martcombe Road. It is hedged on both sides, a bridle path/footpath and a wildlife corridor (I have observed many birds, such as Blue Tits, nesting along it, and Skylarks in the field on the western side. This is likely a medieval 'green lane' or drovers' track, and should be preserved. 2. When housing estates are built we all know that people these days are more likely to pave over front gardens etc. for car storage than to maintain lawns and borders. During heavy rain (Met Office national trend is to wetter, warmer winters) this will find an easy route to run off, and will no longer be readily absorbed into the ground like it does with the existing farmland. Eventually much of the run off will need artificial drainage or boost the flow in Markham Brook. This brook has been known to flood Brookside further north. 3.There has been no public exhibition or event to draw the attention of the local populace to this drastic change in local amenity. This suggests that house construction businesses are being favoured over environmental interests. 4. I'm not sure it has been demonstrated that brownfield sites in the North Somerset area are no longer available for housing development. 5. It is unclear where the proposed new primary school could be situated. 6. It has not been demonstrated as to how the medical needs of such an enlarged community could be served by the existing Heywood Surgery medical practice.	1. To effect a compromise, housing development for area HE2015 should be more modest, leaving the area from the diagonal green lane to the Markham Brook a greenfield area to preserve some of the visual amenity for new and existing residents. Perhaps in addition some trees could be planted in this area to actually improve carbon capture and aesthetic appeal. 2. An exhibition should be mounted in the village to make it clear which areas are at risk of development. It should be clear to local people whether or not there are no suitable alternative brownfield sites in the county. 3. It should be demonstrated how an increase in residents could be supported by the existing Heywood Surgery and where the new school could be with all the necessary supporting infrastructure.		
62110593	Abbots Leigh Parish Council Chair		Abbots Leigh Parish Council			No	No	The The Abbots Leigh, Ham Green, Pill & Easton-in-Gordano Neighbourhood Plan 2020-2026 has been adopted having been prepared jointly between Pill & Easton in Gordano Parish council and Abbots Leigh Parish Council and is referred to in North Somerset Council's Project Plan for the preparation of new planning policy documents, but it has not been taken into account. That plan acknowledges that there should be some development in the area, but an appropriate scale and which can be a bonus for the local community. No Supplementary Planning Document (SPD) has been prepared by North Somerset Council to support the inclusion of Policy LP4 – Strategic location Pill and Easton in Gordano, this should have been completed and taken into consideration when deciding the scale of the development of the area and what the local infrastructure could support. The ecological impact of developments on such a large scale in an environmentally sensitive area have not been seriously considered. Our local wildlife groups with a very good understanding of the important local issues are responding separately to identify the areas of concern. Because the Pill and Easton in Gordano area was not included in the first draft of the Local plan which went to general consultation, there were no discussions with the local communities of Pill & Easton in Gordano nor Abbots Leigh. The level of public anger on this is demonstrated by the fact that there has been a petition signed by over 2000 local residents asking the council to listen to their concerns. The traffic assessments have not been fully considered and includes such comments as: "There are known issues at J19 of the M5 motorway at present, including in relation to queueing on the Southbound Off-slip. The strategic modelling suggests that, whilst congestion will occur, the impact of the Local Plan itself on the motorway off-slips is relatively limited. Notwithstanding this, there will be increases in congestion on the circulatory of the roundabout, which has the potential for knock-on impacts. Discussions are ongoing with regards to potential solutions." That statement is too simplistic. The M5 junction 19 is known to be at full capacity with small scale modifications having been carried out at a very high cost in recent years. There is very little that can be done because that junction between the busy A369 and the M5 also has additional connections to Gordano motorway services and also the busy sole access to Portbury dock. The local geography of the area gives no scope for any significant improvement or	When full investigation onto the impacts of these potential developments has been considered then we will know what modifications will be necessary		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								alterations and it is therefore naive to suggest that a workable solution will be found. The introduction of 1100 houses which will feed onto the A 369 and its junction with the M5 has not been fully modelled, and there will also be significant additional traffic from the new housing developments around Nailsea and Backwell as traffic from there heading north will use that junction, as will traffic from additional developments in Portishead and also the Woodspring Development near Long Ashton, the new EPIC headquarters under construction near Long Ashton and the increased traffic coming from the Bristol Airport planned expansion. Furthermore the impact of traffic being diverted from the A4 at Junction 18 to avoid the Bristol Clean Air Zone has not been fully assessed. The A 369 travelling east towards Bristol is already at full capacity and it joins into the Bristol network at the highly congested badly configured junction at Ashton Gate which already regularly has long delays and queues. There is a restriction in the width of the A369 in Abbots Leigh which has the benefit of traffic calming but it does require HGVs and buses to have to give way when they meet leading to significant congestion and an increase in air pollution. The A369 is promoted in the plan as being a good link into Bristol without considering solutions to its intractable problems The promotion of Active Travel is to be welcomed, but it is not the solution for most people commuting into Bristol. The cycle route along the Pill towpath through the Avon Gorge is not good for commuting cyclists and the steep hill between Pill and Bristol following the A369 route will discourage cycling to all but the most determined. In order to achieve modal shift there will need to be significant investment in infrastructure for longer sustainable journeys rather than just a few additional local cycle paths. There also will need to be continuing investment in the maintenance of the active travel infrastructure otherwise it will fall into disuse. The reopening of the railway line for passengers between Portishead and Bristol is also to be welcomed, however this this will primarily serve the residents of Portishead. The number of trains per hour has not been confirmed, but Pill station will have no parking and the distance to the station from these new developments will deter many from using it and therefore, whilst helpful, is not a good justification for inclusion of these sites.; The consultants report on sustainable transport solutions has not been properly researched as can be seen by anyone with local knowledge. An example is that there is a proposal to build a cycle route with a bridge across the stream to link the sites which crosses private land which is not included in the plan which the owner is not prepared to give up and he hasn't even been consulted		
62744193	E Tomlinson			No	• Justified	No	No	My comments relate to plans for Pill, Ham Green and Easton in Gordano. - The public consultation was insufficient and largely hidden from public view. Local residents were largely made aware of the plans by pro-active private residents, not by North Somerset Council. - Current traffic congestion, particularly at Junction 19 of M5, and the impact on the adjacent roads, which can only worsen, appears to be being ignored. Relating particularly to Pill, the location of the proposed train station is problematic due to the narrow roads, lack of parking space, lack of pavements. The regular functioning of the X4 bus is impacted by the congestion at the motorway junction and narrow roads through Pill, which can only worsen.There is no alternative route to serve the village and will not service the train station for the above reasons. - Flooding risk in the area of the motorway has not been adequately assessed. The impact of building on this former marshland is significant and can only worsen with current effects of climate change. Surface water on the motorway leads to lane closures, again impacting traffic congestion at junction 19. - Green belt land release: have other brownfield sites in local towns been considered? - The population will almost double which will have a huge impact on the community and turn a unique village into a dormer town. Lack of employment locally means that many residents are forced to drive to Bristol and local towns to work. There is a significant older demographic whose needs are not being addressed by these proposals.			
12476353	Historic England (R Torkildsen)		Historic England							The 'site requirements' on page 276/277 in the Plan appear to reflect to the HEA recommendations to positive respond and minimise harm to affected heritage assets.	20251210 NSCLP Reg 19 response Dec 2025 RT.docx
41044641	Penny Town			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	These comments specinfically relate to PolicyLP4 COMMUNITY INVOLVEMENT AND CONSULTATION METHODS I do not believe that North Somerset Council have met their duty to properly engage with the local community regarding this plan. NSC's own Statement of Community Involvement says that they must target consultations to include the people most affected, in this case the villagers. I was one of many who were unaware of the consultation which resulted in Pill and Easton in Gordano being categorised as a "strategic location", nor, importantly, the repercussions of such a decision. NSC did not hold any sort of public event in Pill and Easton in Gordano to show the extent of the development areas being approved, meaning the villagers had no easy way of understanding the proposal or of raising questions and concerns. There was very little publicity unless you actively looked for it. Considering the sheer size of the development areas and the impact on the village, NSC did very little to ensure the villagers voices could be heard, and gave little consideration to the needs of those with protected characteristics or those with no computer literacy. RELEASE OF LAND FROM GREEN BELT NSC has not justified their decision to decimate the green belt surrounding Pill and Easton in Gordano, or explained why these sites are the most appropriate given reasonable alternatives. As an example, one alternative site was excluded by NSC because it reduced the gap between the village and proposed commercial development. Two of the green belt areas earmarked in Pill and Easton in Gordano for proposed developments (HE206 and HE20491) are the only green spaces between the village and the motorway. Another was excluded because of flooding risk, something that also applies to Pill and Easton in Gordano. FLOODING RISK The local plan does not sufficiently evaluate the area for flooding risk on any of the earmarked development sites or demonstrate how the concreting over of so much green belt will not increase the flood risk to existing property or expose any of the new properties to flood risk. Some of our village is within the Envoronment Agency's Flood Zone 3. As said previously, an alternative green belt area has already been excluded because of flood risk. There is no evidence provided by NSC to show they have considered alternative lower flood risk areas. NATURAL ENVIRONMENT	1. A public meeting with the local community 2. The removal of HE206 and HE20491 from the plan and maintaining the green belt status of these sites. 3. A reduction in the volume of housing in HE2615		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								HE 20491 (Lodway Farm) comprises old established damp meadow fields. The ponds there support a significant number of newts and toads. The development of HE206 and HE20491 will remove the green corridor between the village and the motorway and will have an adverse affect on adjacent SSSI, SAC and other wildlife areas NSC has not shown in any meaningful detail how these areas will be protected and the affect on the environment mitigated in accordance with national policy. TRAFFIC AND TRANSPORT ISSUES There nothing to indicate in the local plan that NSC has accepted in full the advice of the National Highways agency regarding the likely impact of these developments on J19 of the M5. The A369 and M5 Junction 19 are already frequently gridlocked, preventing villagers accessing Portishead and the motorway network . The local plan does not show that NSC has given sufficient consideration to the large increase in traffic on local roads. The roads in Easton in Gordano are, for the most part, narrow and often without pavements. There is only room for one way traffic on much of Church Road and Court Hay. The main roads of St George's Hill, Priory Road and Lodway , used for access to the A369 and M5, have limited pavements, dangerous bends and have pinch points without room for two vehicles to pass (especially if one is a large vehicle). Any development that adds to the volume of traffic on these roads will make them even more dangerous for pedestrians, cyclists and vehicles. LOCAL AMENITIES The village currently has 1 doctor's practice, 1 primary school and 1 secondary school, all of which i understand are close to full capacity. Although the plan allows for an additional primary school, other amenities will be severely stretched. These developments will increase the population by well over 40% which is simply not practical with this infrastructure. .			
62861121	Chris Tucker		Private	No	• Effective	Unsure	Unsure	With regard to LP4. The plan provides a wonderful vision of what could be achieved however it is extremely short on actual detail. This plan will have a very negative effect on the road systems both internally within the villages and on the A369 creating massive issues of overcrowding. There is little detail on new services for example medical, dental, community care, schools, retail facilities. LP4 in its full version especially HE2015 will have a detrimental effect on the environment especially Markham woods and its wild life. The only part of LP4 that I would support is HE201065.	The LP4 needs to be drastically reduced to develop in small areas already contained within the village boundaries.	I do not wish to support	
62837409	Nick Wallum		Bristol & Abbot Limited	No	• Effective	Unsure	Unsure	There is a need for housing nationally and in North Somerset. However, the A369 is unable to take anymore traffic for seven reasons: 1) it is recognised to be at capacity 2) There are frequent and dangerous traffic jams on the M5 to enter the A369 at the Gordano exit 3) There are frequent queues of over 30 minutes where the A369 meets the Cumberland Basin at Long Ashton, 4) the world recognised Clifton Suspension bridge cannot take anymore wear, with traffic tailing back for 20 minutes each morning onto the A369, 5) The road narrows dangerously at the George pub in Abbots Leigh where two commercial vehicles are unable to pass side by side and where there is no option to widen, 6) Traffic is now being diverted from the A4 Portway by map apps onto the A369, 7) Planned airport expansions will add flow onto the A369. The assertation that non car based travel will reduce the load is ridiculous. In addition, Pill and Easton-in-Gordano infrastructure cannot handle further housing for example, critical schools, health and shopping.	Substantial reduction in building plans on the A369. Significant investment in infrastructure. More trains then planned on the new portishead to bristol line.		
62471329	Environment Agency		Environment Agency							See Pill and Easton-in-Gordano site allocations for further information and Schedule 7: Transport Infrastructure.	
63076385	Chrissy Weidner							I write to share my comments on the proposed North Somerset Local Plan 2041, in particular regarding Policy LP4 and the proposed developments on 5 Green Field sites around Pill and Easton-in-Gordano. I am wholly opposed to the LP4 proposal, for the following reasons • The five proposed LP4 sites were not included in the Local Plan 2041 until June 2025, and therefore did not allow for any local consultation. The Cabinet's claim that there was 'general support' (para 3.21) is also completely erroneous or even deliberately misleading. • The availability of all non-Green Belt sites has not been fully examined or exhausted. There is no justification for the inclusion of 5 large, and significantly important, Green Belt sites around our villages. • These Green Belt sites are areas of important areas of ancient woodland, wildlife habitat and corridors, and rich in biodiversity. Skylarks, bats, dormice, important veteran trees for habitat and floodplains, and the Markham Brook would all be permanently lost. • The proposed building of 1,100 new homes would nearly double the present population of Pill and Easton-in-Gordano. This is a completely disproportionate increase in population, and would result in massive increases in traffic and community needs and would completely change the feel of the local community. • The most recent Neighbourhood Plan does not appear to have been taken into consideration whatsoever. The local community recognises the need for additional housing, but in a way that complements and supports the existing community, not a last minute, poorly thought out plan to cover more than 1,000 new homes. • The proposal does not appear to have taken account of the massive increase in traffic that the developments would create. The roads around Lodway Farm in particular are narrow and unsuitable for such increases in traffic volume. Junction 19 of the M5 is also horrendous most times of the day, and consultation with Highways England etc to make changes to the motorway junction and the major routes leading to the junction do not appear to have taken place at all. • The proposed sites are important green spaces for the local community, and are essential for our health and well-being, as well as a buffer from urban sprawl. I do not believe that the Local Plan 2041, specifically policy LP4, is sound, legally compliant or followed a duty to cooperate with the relevant neighbourhoods or authorities.	I completely endorse the comments presented by the Pill and Easton-in-Gordano Parish Council and similarly ask that you remove LP4 from the Local Plan 2041. I would also ask you to consider the 'reasonable alternative' as presented by WildHome, to produce a locally supported, appropriate and sustainable plan that meets the needs of local residents, the natural world and the needs of future generations on this planet.		
58041921	Richard White			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	There is no evidence that ‘reasonable alternatives’ (NPPF para 36 c) have been considered. The development of the plan was avowedly developer-led despite National Planning Policy Framework guidance (NPPF para 73) that, “Small and medium sized sites can make an important contribution to meeting the housing requirement of an area, are essential for Small and Medium Enterprise housebuilders to deliver new homes, and are often built-out relatively quickly” and subsequent requirements notably (b) are not represented in the plan either with regard to sites across North Somerset or specifically with regard to the boost that this would bring to the local economy in Pill and Easton in Gordano where a number of building crafts people are based. Consistency with national policy: National Planning Policy Framework launch statement promised ‘proportionate development’ towards achieving the new-housing targets (https://www.gov.uk/government/news/our-plan-to-build-more-	Suspend the plan, re-develop in accordance with NPPF. Suspend the developer-led approach and develop a community-led approach as advised (NPPF para 73) Conduct a full open consultation with exhibitions and public meetings, supported by information leaflets.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								homes#:~:text=New%20targets%20will%20boost%20housebuilding,of%20step%20with%20local%20incomes.) "Our new housing targets will make sure local authorities plan for the homes that are proportionate to the size of existing communities, with an uplift in areas where house prices are the most out of step with local incomes" The proposed development LP11 will increase the population of the village by almost a half, with a consequential increase in vehicle traffic and demand for services at a location where services are already overloaded and road traffic at capacity. The village will be trapped between the river, the motorway and a choked A road. The green spaces all Green Belt and much prime agricultural land will be buried under concrete and tarmac. All mitigations short of reducing the number of homes are inadequate. This is not proportionate development In these terms this is NOT a sound plan Duty to Cooperate The North Somerset Council's own Statement of Community Involvement (SCI) resonates with government directives including NPPF and other legislation including those in the Equality Act 2010, Public Sector Equality Duty The SCI commits North Somerset Council as follows: "We will target consultation to include people whom we consider would be most affected by any proposals or plans and where possible any known interest groups. We will seek views as early as possible. We will always aim to provide sufficient information to enable people to comment effectively (p3) We will consult with the general public. (p4) We will publicise consultations through a range of means, as appropriate to the subject matter. This can include press 5 Statement of Community Involvement adverts, leaflets, website, posters, displays, community and social media, existing community groups, community events and joining with other consultations. (p4-5) We will consider organising or supporting other consultation events, such as community based planning meetings. (p5)" An NSC consultation took place between February and March 2025 this year offering 5 potential sites in Pill for house building. During that consultation an impression was allowed to become established that the consultation was about identifying a consensus around the most appropriate sites, not that NSC planned to include all 5 sites. At the same time a more advanced outline planning application for the land adjacent to the Motorway services was out for consultation. This was well-funded by the developers, with an exhibition and public meeting.The timing of this 'smaller' consultation had the effect of confusing and obscuring the larger consultation. The NSC consultation was poorly publicised, there was no exhibition or consultative public meeting on the 5 sites, separately or together. Given the scale of potential change in Pill/EiG, as noted above not a 'proportionate development', an exhibition and public meeting would have generated considerable engagement. The people 'most affected' have not been consulted, this is in direct breach of the NSC SCI. The designation as Strategic Location for Pill/EiG and the plan that all 5 sites would go through to the 2041 North Somerset Local Plan was announced after the consultation had closed. No consultation opportunity was offered on this significant change. NSC has not met with their Duty to Cooperate			
32388897	Neil Wolstencroft			No	Justified	No	No	The Central Government imposed a new housing target on North Somerset Council. This target does not accommodate environmental constraints such as flood risk, transport or local infrastructure requirements. Pill and Easton Gordano is a small village of circa 2000 dwellings. It has been disproportionately targeted for new dwellings by North Somerset council. Out of the 8,600 dwellings proposed in the update plan, 1,100 are earmarked for Pill and EIG. This represents approximately 12.5% of the new dwellings despite Pill and EIG comprising less than 2% of the dwelling in North Somerset. There was no public consultation on this planning held in Pill and EIG. Other areas in North Somerset held open public consultations in the local area for members of the public to view and comment on the plans. The previously agreed local plan which was approved by ballot by the local residents has been largely ignored by North Somerset Council. None of the large development sites currently in the proposal were in the previous version of the local plan. The developments in Pill are on prime green belt land (especially Pill Green). Central Government policy is to develop on brownfield sites or failing that low quality agricultural land. This has been confirmed to me in writing by my MP Sadik Al Hassan. In conclusion the plan is not sound, legally compliant, sustainable or prepared in line with North Somerset Councils Duty to co-operate	The plan needs to be referred back to North Somerset Council for review and update. The plan needs to have a realistic housing target for the area that will enable the council to meet local infrastructure, environmental, transport and other constraints in the Pill and EIG area.	Not Applicable	
62654721	P Wright			No	Consistent with national policy	No	No	The release of Green Belt at the development by the M5 in Easton in Gordano and other areas of Pill and Easton in Gordano are being proposed and pressured by developers before other Brownfield sites have been considered. The traffic at the J19 M5 roundabout is already at capacity and the traffic heading into Bristol at peak times is overloaded on the A369. The new train line, if and when it is operational, will not relieve the additional traffic pressures commuting into Bristol caused by this over development in the local area. It will ruin habitat and the Green Belt should not be built on here.			
58660673	Elizabeth Wright							I write to strongly object to this development. I have already filed one for HE206 but see I have to do more. I have tried to negotiate your online forms unsuccessfully, I look after my husband and simply don't have the time necessary to object this way, so I wish this email to be included in the consultation. Why is green belt being used for development, this is destroying areas that enhance both mental and physical health. Why are existing residents not being properly consulted, it feels as if this is being forced upon us. The plan to surround the village in a circle of development gives no thought to the infrastructure. We frequently suffer from gridlock on the roads, motorway holdups block the junction 19 roundabout causing chaos on all the surrounding roads. People cut through Portbury to get to the motorway adding to the volume. With the number of houses proposed, journeys will become a nightmare and dangerous. This in turns causes pollution and therefore is an health risk. Schools are not big enough to cope with the increase and the surgery would suffer too. My other fear is loss of land and countryside increases the flood risk, we are in line with a lot of water from higher ground. This location is highly unsuitable for this level of development, please consider the lives of the existing community.			
32543649	David Yates			No	Effective	Yes	Yes	The proposed additional housing for Pill and Easton-on-Gordano has a single road (A369) access to Bristol which is already overloaded at peak times. Opening the rail link to Bristol is quoted as additional transport, but this is likely to be saturated by the commuters from Portishead at peak times. The largest development of 550 houses at Pill Green shows access to A369 and additional access onto Brookside, a narrow and hilly residential road. An additional 1,100	Either reduce the number of additional houses proposed, to a target which can be accommodated with existing transport links, or widen the A369

								houses would require additional infrastructure to shops, doctor's surgery, and schooling.	preferably to a dual carriageway through Abbots Leigh and down Rownham Hill to avoid the pinch points there. Construct a flyover at Cumberland Basin to handle the additional traffic there.		
51572577	BNSSG ICB		NHS Property Services							Policy LP4 stipulates that “all new development will be required to contribute to the delivery of necessary infrastructure through either direct delivery as part of the scheme or through development contributions”. BNSSG ICB considers that this policy has been positively prepared as it provides infrastructure providers including the NHS with certainty that developer contributions may be required to provide supporting infrastructure on schemes in Pill and Easton-in Gordano.	
62645601	Mrs S E Clarke			No	• Positively prepared • Justified	No	No	44% population Bomb on Pill& Easton in Gordano disproportionate & unjustified. No deliverable plan for A369,M5 J19, schools,GP access or drainage by2041 Sustainability Appraisal fails SEA directive-No Assessment of Brownfield alternatives to Pill Green Traffic on the A369 is already overwheming. Pill Green is high performing agricultural land,with important wild life,the Green Belt must be respected in this case.	Delete the Pill Green Site(600 homes) from the North Somerset Plan Schedule of Sites		
55930049	S Tomlinson			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	Unsure	Not legally compliant - Lack of consultation with the local community. Being classed as a strategic site Pill should have at least received the same amount and type of consultation opportunities as the other strategic sites - Building on green belt - No evidence has been provided to justify the exceptional circumstances test. - National policy requires the need for housing development in a neighbourhood area to be justified. In the case of Pill it ise the train station that is presented as the primary draw rather local employment. - The analysis of alternative sites appears in places to tbe partial and in many cases the very same arguments for rejecting them could be made for the Pill sites. Not sound Lodway farm site - - Very poor road access. Previous applications to develop this site have been rejected on the grounds of poor road access. - Located next to marsh land and the Avon SSI and designated on Council map as being within the flood risk zone. None of these facts are mentioned and no mitigations offered to prevent harm either to the natural environment and the sites role as an important wildlife corridor, nor to local properties. - Being so close to the motorway will increase the pollution exposure for residents and given the elevated nature of the M5 at the northern part of the site as it descends from the bridge it will not be possible to mitigate the noise without building a barrier so big that, for example, it cannot possibly meet the requirement listed on P277 of the outline plan of “Generous buffer to be retained around non-designated heritage assets at Lodway Farm and St George’s Lane to maintain sense of rural setting”. Pill Green and Pill Road sites - - LP4 promises "the provision of necessary services, facilities, appropriate highways mitigations and improved active and sustainable travel links throughout the village, particularly from the new development sites to the proposed railway station on Monmouth Road." The only service being offered is a new school. No comments are made about the provision of medical facilities, shops etc and no evidence is presented of the adequacy of existing services. Other strategic sites have clearly been given much more thought. - The transport policy assumes that the planned new railway station and the associated car park and train capacity will be sufficient to meet the needs of an expanded community but offers no evidence for this despite the studies on which it is based being 10 years old. Plans for other strategic sites include train and station capacity improvements. - The transport policy places great reliance on active travel but recognises that the topography of Pill especially between the Pill Green and Pill Road sites and the Train station make this challenging. The only mitigation offered is to promote e-mobility without offering any ideas how this will be done nor any evidence for how effective it will be. - Pill has only one main road through it - Lodway/Ham Green. The draft plan and transport plan recognise that no other roads are wide enough for additional bus services to be provided. It makes no mention of the fact that even this road has numerous bottlenecks where buses coming in opposite directions cannot pass each other. A prime example is the hill on Ham Green near the Fire Station which is effectively a single track road due roadside parking. No mitigations are offered for this. Indeed the mitigations described to improve the pavement along Lodway are likely to make the problem worse. Increases in traffic along Lodway/Ham Green caused for example by increase in bus service frequency and traffic between Pill Green and the train station do not appear to have been modelled and no mitigations are offered. - Despite LP4 offering highways improvements, sections 4.63 - 4.66 of the supporting Stage7 Transport Assessment makes clear that no mitigations to reduce what it accepts will be an inevitable increase in congestion around local junctions on the A369 and M5/J19 are being considered. The only mitigations that will be offered will be "focused on		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 64415137	Miller Homes (Locking Parklands)	Tom Rocke		No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	For reasons that are set out in the foregoing representations, the proposed allocations will not result in sufficient plan led growth in accordance with the spatial strategy. With particular regard to Weston-super-Mare, a significant quantum of the identified growth is already committed through either extant planning permissions or sites carried forward from previous plan periods. Moreover, the town is not fulfilling its strategic role as a priority focus for the district's growth, nor is growth allocated in accordance with the sequential approach which accords priority to non-Green Belt locations. There are reasonable alternative, non- Green Belt opportunities at Weston-super-Mare, in particular small and medium size sites that can deliver homes quickly and contribute to mitigating the deficiency in the five year deliverable supply of housing land that have been automatically, and erroneously, excluded from further consideration through the SHLAA on grounds of their location within areas of flood risk and/or strategic gaps. The sites the subject of extant planning permissions should not be allocated in the current plan since there they are not plan-led growth that can be influenced by it. Moreover, sites that have been allocated in previous plan periods, but have not come forward, must be treated with the utmost caution.	Changes Sought Policy LP5 / Schedule 1 • Allocate the Moss II Land at Locking Parklands for up to 150 dwellings • Remove sites with extant planning permissions from Schedule 1 and the Policies Map		
39325825	Highgrove Strategic Land	Lichfields (Bristol)		No	• Positively prepared • Justified • Effective	Yes	No	The assumed delivery rates and therefore overall delivery within the Plan period of strategic locations identified within Schedule 1 associated with Policy LP5 is higher than evidence suggests. This undermines the effectiveness of the Plan. A review of the Council's evidence has demonstrated that sites such as Cox's Green, Wrington, have not been properly considered and should form part of the residential allocations within Policy LP5. Please see attached letter for further detail.	A detailed trajectory should be published as part of the Plan evidence to demonstrate how sites are anticipated to be delivered and to allow interested parties to review assumptions. A range of site locations and sizes such as at Cox's Green should be allocated within Policy LP5 to make up for current and pressing shortfalls. Please see attached letter for further detail. 					• Consistent with national policy			this site at Clevedon Road, Portishead, (SHLAA ref. HE20488) and why we consider it should be allocated for residential development. While Portishead has a recently 'made' neighbourhood plan (September 2023) p79 of the draft plan acknowledges that "This is aligned to the North Somerset Core Strategy strategic policies which will be superseded by the Local Plan". It therefore does not allocate for up-to-date housing needs and certainly not where taking account of the wider housing position and Portishead's credentials in the second most sustainable tiers of settlements for further development within North Somerset, after Weston-Super-Mare. Our previous representations contained a review of the Sustainability Appraisal, which upon further scrutiny appears to have significantly undervalued the site in a number of key respects, to the detriment of its prospects for allocation. Since that time there has also been a significant re-focusing of government policy in relation to the Green Belt, reflected in the Council's own response to the selective release of Green Belt. In the intervening period, we have also entered in formal pre-application discussions with the Council, on the basis of a reduced development envelope eliminating all built development within the 2125 future tidal flood risk layer of the strategic Flood Risk Assessment (sFRA), which extends the limited incursions of EA Flood Zones 2 and 3 a significant distance further into the site boundary, as shown on the attached document. Having regard to this new flood constraint, together with the site topography, requirements for SuDs and biodiversity net gain and the opportunities to provide additional allotments in conjunction with the adjacent Gertie Gales allotments (which is known to be at capacity, with no current vacancies), our client has developed a revised detailed layout for the site, working within the known parameters including the wider implications of sequential testing in relation to flood risk. An excerpt of the submitted emerging layout, relating to a development of 36no. homes comprising market and affordable houses and flats is shown in the attached document. As shown, dwellings will be kept out of the superimposed future tidal flood risk area, within which SuDs features and domestic gardens are reasonable inclusions, the latter on the basis that suitable planning conditions could control the future hard surfacing or erection of domestic outbuildings otherwise allowed under permitted development rights, thus avoiding any future flood risk. Notably, where one plot appears to extend into the future flood risk area, the slab level is set by its eastern extent (outside the future flood zone) thus ensuring consistent elevation above any maximum flood level. There are no flood constraints to site access or means of escape (e.g. via the allotments adjacent), noting in the case of the latter that tidal flood events would allow for advance notice enabling residents to evacuate ahead of higher water levels. By taking such measures, any need for a sequential test can be avoided and it can be demonstrated through a suitable Flood Risk Assessment submitted alongside an application that the development can be made safe from flooding throughout its lifetime while not exacerbating the risk of flooding elsewhere. The site is located within the Bristol and Bath Green Belt, which extends around Portishead in its entirety, occupying the intervening area between the town and Bristol, as well as other settlements including Clevedon, Nailsea and Portbury Dock. As a matter of principle, North Somerset Council has very rightly acknowledged the need to release significant areas of Green Belt for residential development – most significantly at Nailsea and Woodspring Golf Course – if it is to meet its housing needs in the most sustainable locations under the emerging plan. As a concept, Grey Belt remains a relatively new introduction into national planning policy and has already been tested extensively at appeal. This policy aims to enable the release of low-quality Green Belt land where this is either previously developed or 'does not strongly contribute to any of purposes (a), (b), or (d)' of Green Belt designation. A brief assessment of the site's condition against these three key tests for Grey Belt is set out below. Initial Grey Belt Assessment Purpose a) to check the unrestricted sprawl of large built-up areas: Although of a sustainable town size, it is highly questionable whether Portishead amounts to a 'large built-up area' akin to an urban conurbation. In any event, growth would be at a modest scale in this case, and physically restricted both by the flood constraints beyond the development envelope and by a robust scheme of landscaping to reinforce and buffer the settlement edge. The settlement pattern is such that development would entail the consolidation, rather than extension, of the existing promontory of the urban area extending to form the southwest edge of Portishead. Purpose b) to prevent neighbouring towns merging into one another: The town that Portishead may be capable of merging into in this direction is Clevedon. However, the site is set back from the closest extent between the two towns, this being c.250m further southwest at Clifton Street/Clevedon Road. The separation between the two settlements remains c.5km at this point, or c.3km along their respective coastal frontages at which they are		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								closest, with intervening constraints including areas of flood risk, such that this purpose is not troubled by the release of the site for development. Owing to its situation and extent, enforced by peripheral flood constraints, the developable area would not amount to a substantial component of the intervening gap, which would continue to provide distinct visual separation between the towns. Purpose d) to preserve the setting and special character of historic towns: Although Portishead contains historic fabric, in cases captured by Conservation Area designation, these are significantly removed from the site, whose context is overwhelmingly of C20th suburban residential development and modern facilities such as the Gordano School. Having regard to the PPG, the site neither forms part of the setting of historic elements of the town, nor makes a 'considerable' contribution to the special character of it. Owing to its physical separation by existing modern development the site's contribution to this purpose is moderate at best and certainly not strong. As indicated, the site does not perform strongly against any of the relevant purposes for designating Green Belt land, and so falls within the glossary definition of 'Grey Belt' land, the release of which from the Green Belt is presumed to be appropriate under paragraph 155 of the Framework, and of secondary preference to previously developed land within an authority area already prepared to release large areas of higher quality Green Belt for strategic growth. By definition, development of the site would be 'not inappropriate' in the terms of the NPPF. This matter was subject of pre-application discussion, with the Council's advice as received confirming the following key points: ◈ That the site is located in a sustainable location, adjoining the settlement boundary of Portishead; ◈ That the site represents Grey Belt land; and ◈ That the framework shown would obviate any requirement for a sequential test. As a matter of fundamental principles, therefore, there is no current reason why the site should not be released from the Green Belt as a residential allocation under the emerging local plan, being 'not inappropriate' development and able to address the implications of the heightened flood risk identified in the sFRA. In terms of site specific matters, officers have raised the issue of noise associated with Gordano school and the potential need for mitigation, albeit this will be experienced in conjunction with road noise from the Clevedon Road in any event, and will be subject of suitable assessment and, if required, mitigation as part of any application submission. Being comfortably within the parameters of LP5 and the 10-unit plus threshold for allocations, the site should therefore be allocated for residential development.		
31149537	Strongvox Ltd	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	LAND NORTH OF BRIDGE INN, YATTON Our client controls land to the North of the Bridge Inn and the B3133 North End road at the north western end of the village of Yatton, the most sustainable of the villages within North Somerset, shown on the location plan in the attached document, and has made representations at the previous Regulation 19 consultation stage in this respect. The previous representations outline how, by reference to the Council's Sustainability Appraisal, the site has been considerably undervalued in a number of respects, while other considerations are capable of being overcome through an appropriate application response. It is noteworthy that the site is enclosed to the North by land now subject of extant full planning permission for the wholesale relocation and consolidation of Yatton RFC (local reference 22/P/0456/FUL) including the provision of a new clubhouse and ancillary buildings, enlarged car park, additional pitches, netball court and associated supporting infrastructure, which includes a pedestrian/cycle link connecting to North End and thus crossing the subject North of Bridge Inn site. This project is already under construction with anticipated completion in due August 2026. It should also be noted that under the proposed changes to Yatton's settlement boundary, as denoted by the thicker black line below, the site would also sit directly alongside the target area for new development at Yatton. Development of the site would therefore consolidate rather than extend this end of the village. While the site is overwashed by EA tidal flood mapping, much as is a large part of Yatton, it is pertinent that this pertains to assumed levels during a weather event and total failure of coastal defences, and that even in such a situation occupiers would have considerable advance warning of such ingress due to the physical distance of the site from the sea. In any event, appropriate flood storage infrastructure, finished floor levels and emergency evacuation planning are suitable measures for the protection of occupiers in the very unlikely scenario described above, such that in technical terms the site could be made safe from flooding and, in such		R002v5 NSLP Reg19 Reps Strongvox Dec25.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								context, no sequential test would be required in the light of the recent changes to the PPG. Allocation of the site for residential use would therefore proactively set parameters and Site Requirements expectations for a suitably high-quality development at this important gateway site, consolidating the outer edge of Yatton – which is otherwise to be constrained on its opposite end by the proposed Strategic Gap – and providing a meaningful connection to the improved Yatton Rugby Club facilities immediately northward.			
31149537	Strongvox Ltd	Pegasus Group		No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Yes	Yes	LAND AT BRINSEA ROAD, CONGRESBURY Our client controls 1.4 hectares of agricultural land comprised as a regularly proportioned field situated immediately southward a eastward of the settlement envelope of the service village of Congresbury (SHLAA ref. HE202011). A 2016 planning application (local reference 16/P/1707/O) sought permission for 24 no. dwellings, consistent with the operative local policy CS32. An excerpt from the amended site layout is shown in the attached document for reference. The application was however refused by the Council and a subsequent s.78 appeal dismissed by the Secretary of State on the grounds that the reliance on Brinsea Road and its ensuing connections to local services and facilities represented inadequate provision for future occupiers travelling on foot, notwithstanding the Council's shortfall in housing land supply and acute need for new market and affordable homes. The site was considered under the Council's 'Additional Sites' consultation and found to be one of the 'other potential' options, as shown in the below excerpt (see attached document) from the Council's composite map. Notably, it represents the closest of several 'other potential' options to the settlement envelope of Congresbury, while all sites westward of the village were deemed to be subject of 'hard constraints'. Notably, the Regulation 19 Proposals Map includes the proposed allocation of Pineapple Farm, Land north of Mulberry Road, with the settlement boundary extended accordingly, in acknowledgement of the site's commitment within the existing housing trajectory. In terms of pedestrian movements associated with this development, users would proceed first southward onto Mulberry Road, before likely turning northward along Park Road in order to access local services and facilities; this was considered by decision-makers to be suitable. Clearly, any allocation of our client's land at Brinsea Road would be required to consider the findings of the earlier appeal decision in relation to pedestrian accessibility, and in the light of that decision our client has secured a right of access that would facilitate journeys on foot directly northward from the site onto Venus Street, rather than relying on Brinsea Road to the west, which would remain the point of vehicular access. From Venus Street, users would then be able to proceed via the existing footway on the north side of that suburban route to the bottom of Park Road, thereafter adopting exactly the same route to local facilities as deemed acceptable in relation to Pineapple Farm and likewise the recently completed development at Potters View. Thus, this amended pedestrian route overcomes the earlier reason for refusal and would ensure future occupiers benefit from a safe and suitable means of accessing services on foot. With that single technical issue overcome, there is a compelling case for the site's allocation – noting that any combined allocation of the 'other potential' parcels on this side of the village would logically include this one – not least given the apparent limitations on releasing land westwards of the village and constraints of the proposed Strategic Gap on any northward expansion of this service village. Having regard to the above considerations, our client's site at Land East of Brinsea Road, Congresbury, has been shown to be: ◈ In an inherently sustainable location at a large village, as identified by the Council ◈ Outside of the Green Belt, which abuts other edges of Congresbury ◈ Capable of delivering in excess of the minimum allocation threshold of 10no. dwellings ◈ Free of 'hard constraints' including flood risk The addition of c.25no. new homes would make a proportionate contribution to the vitality and viability of Congresbury, bringing further benefits of development such as local spend and supporting infrastructure.	Site should be allocated in the Local Plan.		R002v5 NSLP Reg19 Reps Strongvox Dec25.pdf
31149537	Strongvox Ltd	Pegasus Group		No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Yes	Yes	LAND AT COBTHORN FARM, CONGRESBURY Our client also has land interests at Cobthorn Farm, Congresbury, comprising and irregular series of agricultural fields immediately adjoining the urban envelope comprising Strongvox's Cadbury Fields development to its west and Bovis' development to the north. As shown on the below excerpt (see attached document) from the Council's strategic Flood Risk Assessment, like the land at Brinsea Road, the site is free of flood constraints that limit development potential across much of the authority area, with the only incursions of elevated risk being the field ditches	Site should be allocated in the Local Plan.		R002v5 NSLP Reg19 Reps Strongvox Dec25.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								that would be enhanced for water conveyance and tertiary treatment through any development. The 2-hectare site is free of other constraints, including any heritage, landscape or ecological designations, and can be accessed via the adjacent Cadbury Fields development, also with potential linkage to the Wrington Road, which encloses the site to the east. In the course of the Council's Additional Sites consultation, part of this site was identified as of 'Other Potential', and as outlined above in respect of the land at Brinsea Road, clearly part of the preferred direction of growth for the village with sites to its west having been deemed subject of hard constraints. An excerpt from the composite map is shown in the attached document with the committed Bovis St Congar's Place site shown in blue. Utilising the land identified in orange above, together with the full extent of land under our client's control to its northeast, it is estimated that at least 85no. additional dwellings could be accommodated on the site, together with all necessary supporting infrastructure, open space and strategic landscaping, including buffers to Wrington Road if required. Land to the south, forming an irregular addition to the site and less suited to a composite form of development, could be utilised for Biodiversity Net Gain, potentially offsetting the impacts of both this site and Strongvox's interests at Brinsea Road, maximising the efficiency of both sites for logical housing growth and delivering economies of scale and better outcomes for ecology by concentrating resources. Having regard to the above considerations, our client's site at Land at Cobthorn Farm, Congresbury, has been shown to be: ◈ In an inherently sustainable location at a large village, as identified by the Council ◈ Outside of the Green Belt, which abuts other edges of Congresbury ◈ Capable of delivering in excess of the minimum allocation threshold of 10no. dwellings ◈ Free of 'hard constraints' including flood risk ◈ Capable of delivering excess Biodiversity Net Gain, promoting efficient use of land. The addition of c.85no. new homes would make a proportionate contribution to the vitality and viability of Congresbury, reinforcing its role as a large service village.		
31144865	Autograph Homes	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	Given the identification of Weston-super-Mare as the authority area's most sustainable settlement and a focus for growth, together with the evidenced deliverability at scale of our client's site, we consider the site should be included as a housing allocation notwithstanding its location within the settlement boundary for Weston. Doing so would secure greater certainty as to its intended use, as well as an indicative number of dwellings which could be factored into the Council's housing land supply. It is noted that 87no. dwellings is well above the Council's minimum of 10no. units for residential allocation, and therefore would make a meaningful contribution in this respect.			R002v4 NSLP Reg19 Reps AH Dec25.pdf
63175041	Crest Nicholson Operations Ltd	Savills (Victoria Button)		No	• Effective	Yes	Yes	Objections to the Allocation Policy Wording: As explained earlier in this representation, Crest Nicholson supports the principle of the proposed allocation at Poplar Farm. In the preceding sections, explanations have been provided to support the conclusion that the proposed development to be in a suitable, sustainable and sound location. Crest, nevertheless, has objections to specific elements of the allocation policy. An explanation of these objections is set out below, followed by the proposed alternative wording for these aspects of the policy in 'tracked change' format in the concluding section of this representation. Nailsea and Backwell Transport Strategy Contributions: The policy requires 'proportionate' contributions to be made to schemes identified in the Nailsea and Backwell Transport Strategy. Whilst Crest agrees that contributions should be proportionate, the policy does not specify what schemes the contributions should relate to nor is this detailed within the Transport Strategy. Whilst it is noted that identifying relevant schemes and exact funding requirements may not be possible at this stage in the plan-making process, without clarifying that contributions must relate to 'relevant' schemes, there remains a risk that a development could be required to fund measures that are not directly connected to its impact. This would directly conflict with the CIL Regulation 122 tests, which sets out that: "A planning obligation may only constitute a reason for granting planning permission for the development if the obligation is (a) necessary to make the development acceptable in planning terms; (b) directly related to the development; and (c) fairly and reasonably related in scale and kind to the development." Crest Nicholson considers that a minor but important change to policy wording to state 'relevant schemes' would sufficiently	Summary of Representation: • Poplar Farm, Nailsea is a justified, deliverable, and sustainable opportunity for residential development of circa 130 dwellings. • Crest Nicholson supports the allocation in principle but seeks an amendment to policy wording to ensure soundness and deliverability. Crest has also made separate representation to Policy LP3 – Strategic Location: Nailsea and Backwell, which should be read in conjunction. • The Sustainability Appraisal (SA), Spatial Strategy, Site Selection and Capacity Paper collectively endorse Poplar Farm as a justified location. (Paragraphs 8-11). • Poplar Farm is deliverable and developable location for residential development. (Paragraphs 12-18) • Poplar Farm is a sustainable location when the 'policy on' proposals for the site are assessed against the objectives of the Sustainability Appraisal. (Paragraphs 19-23) • Despite 'in principle'	Policy LP5 (Land at Poplar Farm) for Crest (Nov 25).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									provide clarity that any contributions sought should be directly related to the development. Proposed Policy Wording: The preceding section of this representation raises concern with Schedule 1: Large sites for residential development of draft Policy LP5 Housing and employment allocations, as currently worded. Below is the proposed amendment (additional text underlined) that is considered necessary to the small section of Schedule 1, which is referenced by the policy text in LP5, to remedy the situation, overcome the objection and make the policy sound. Whilst the change proposed appears to be a modest adjustment to the policy, it is nevertheless important to ensure the soundness of it. Policy LP5 housing and Employment Allocations, Schedule 1 Large Sites for residential development, Strategic locations – Nailsea and Backwell, Nailsea – Poplar Farm 'Site requirements': • 'Proportionate contributions required to relevant schemes identified in the Nailsea and Backwell Transport Strategy.' (note: emphasis on the word relevant with it underlined)	support, Crest Nicholson has one area of objection to policy wording that seeks to ensure compliance with CIL Regulation 122 tests (Paragraph 24-27) • A change is proposed to the draft Policy which addresses these objections. (Paragraph 29) Introduction This representation has been submitted by Savills on behalf of Crest Nicholson Operations Ltd (herein referred to as 'Crest Nicholson' or 'Crest'). Crest has a number of land interests in North Somerset, including land at Poplar Farm, Nailsea (also referred to as 'Poplar Farm, Nailsea'), which is included as a residential allocation in the North Somerset Local Plan 2041 Pre-submission Plan, ('emerging local plan') as set out in Schedule 1 of Policy LP5: Housing and employment. Crest Nicholson strongly supports the principle of the proposed allocation. However, it does have some detailed objections to aspects of the draft policy wording, which have the potential to undermine deliverability. This representation is split into three sections. Section 'A' explains why Crest Nicholson supports the allocation of land at Poplar Farm in the emerging Local Plan and why it represents a justified, developable and sustainable location for residential development. In so doing, it also outlines the number and variety of benefits that development of the site would deliver, including, that Poplar Farm: a) is capable of making a valuable contribution to the delivery of the new open market and affordable homes needed in North Somerset during the plan period through a high-quality development; b) is controlled by Crest, which holds all land required to deliver residential development and there are no legal or ownership constraints. It is, therefore, demonstrably deliverable and capable of providing a meaningful addition to the open market and affordable housing stock of the District in the short to medium term; c) is in a sustainable location, providing opportunities for future residents to use non-car modes of travel, including Nailsea and Backwell train station which provides frequent, short duration train services to Bristol Temple Meads and to Weston-Super-Mare; and the X9 bus which runs from a stop less than 10 minutes' walk from the site, providing transport into Bristol City Centre;	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										d) is located where infrastructure investment is planned, including through the Bus Service Improvement Plan (BSIP), thereby maximising the benefit of central government infrastructure investment; e) has no technical or environmental impediments, which cannot be mitigated or otherwise overcome; f) is well placed for future residents to access to a number of employment opportunities; g) represents an opportunity to deliver a multifunctional network of green spaces and corridors with the green infrastructure incorporated into development proposals; h) is capable of supporting the delivery of key transport and movement infrastructure through proportionate contributions to relevant schemes identified in the Nailsea and Backwell Transport Strategy, where such contributions meet the CIL Regulation 122 tests; i) would have direct and indirect economic benefits. Turning to the areas of objection, there are certain aspects of the allocating policy, which are not considered to be justified or consistent with national policy. Section 'B' of this representation explains why that is the case and the subsequent section 'C' shows, in tracked form, the change considered to be necessary to make the policy sound. Soundness: This section of the representation explains why the draft allocation at Poplar Farm represents a suitable, deliverable and sustainable location to deliver new homes during the plan period. It does so by reference to Paragraph 36 of the Framework and the following four tests of soundness: a) Positively prepared; b) Justified; c) Effective; and d) Consistent with national policy. These tests apply to the development plan as a whole and some elements are not, therefore, relevant to testing the soundness of individual development allocations. In so far as an individual allocation is concerned, Savills interprets these tests of soundness and the policy elsewhere within the Framework as requiring allocations to be: a) Justified when considered against all of the reasonable alternatives; b) Developable both technically and within the timeframe of the plan period; and c) Sustainable in location and form, in accordance with national policy.	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										In the remainder of this section it is explained why the principle of the proposed allocation at Poplar Farm is consistent with all three of these tests. A) Why an allocation at Poplar Farm is 'Justified': A large number of sites have been put forward for development through the North Somerset Strategic Housing Land Availability Assessment (SHLAA) process. These sites vary from the very small areas of land, capable of accommodating a few homes, through to strategic urban extensions and new communities with the capacity to accommodate thousands of houses. It is the role of the local planning authority to analyse and filter the submitted sites to determine the most sustainable combination of sites consistent with the spatial strategy of the Local Plan. A key component of the evidence base informing this analysis is the Sustainability Appraisal (SA). Later in this section of the representation, consideration is given to the assessment of Poplar Farm against the objectives of the SA but in so doing an adapted 'policy on' analysis approach is taken, which reflects the detailed knowledge of the location, and its opportunities and constraints. In parallel with the SA, the local planning authority has been through a structured assessment of the potential sources of housing supply in order to determine which should be allocated. This assessment was contained in the Spatial Strategy, Site Selection and Capacity Paper (October 2025). The Paper sets out a sound sequential and filtering approach, which first considers sites that fall into the top tier before moving onto the next. This process of testing 'reasonable alternatives' was transparent and, whilst comments are not provided on the merits of any other site evaluated, the broad approach appears to be sound. In particular, there is satisfaction that the authority considered the 'reasonable alternatives' available for the emerging local plan, in the context of its consistency with the emerging Spatial Strategy. Based on all of the available evidence, the conclusion of the Paper, that the Poplar Farm location should be proposed for allocation, is supported. Indeed, overall the evidence available, principally within the SA, the Spatial Strategy, Site Selection and the Capacity Paper together endorses the conclusion that	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										the proposed allocation of Poplar Farm represents a 'justified' location for development when considered against all of the reasonable alternatives. B) Why an allocation at Poplar Farm is 'Developable': The definition of 'developable' in the Framework and the test to be applied to this emerging allocation is whether the development is "in a suitable location for housing development with a reasonable prospect that it will be available and could be viably developed at the point envisaged". The first part of this test, "in a suitable location for housing development", is addressed separately in relation to the suitability and sustainability of the proposed allocation. In this sub-section, the focus is on the latter part of the 'developable' test; whether the site is available and could be viably developed. Poplar Farm represents an opportunity to allocate a sizeable development on land subject to an option agreement between the landowner and Crest Nicholson. The landowner has confirmed their support for development, and there are no legal constraints, offering significant advantages for the timely delivery of the site. Crest intends to exercise the option to purchase the site upon obtainment of planning permission. Second, is the duration of the planning process. Crest Nicholson has undertaken extensive survey work to ensure a sound knowledge of the site opportunities and constraints, which will ensure a robust planning application can be preparation quickly. Ownership by a single entity means there is no need for consortium agreements, which can protract matters. Since Crest controls the entire allocation, the supporting infrastructure can be coordinated and phased accordingly, and its delivery captured within a single Section 106 Agreement between a limited number of parties e.g. the developer, the Council and the landowner. Whilst sites in multiple and interdependent ownership are not, by definition, undevelopable, unless the landownerships can be developed independently, it adds complexity and challenges, which do not exist for sites such as Poplar Farm. Third, in addition to being 'developable', for an allocation of the scale envisaged within the	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										emerging local plan, it is crucial that the development is demonstrably 'deliverable' from very early in the plan period. Due to the characteristics of the location, land ownership / control and the technical and environmental assessment work completed to date, the entire development is capable of being completed early in the plan period. Overall, Poplar Farm performs extremely well when considered against each facet of 'deliverability', relevant to the plan-making process. Not only is the land available, there are no impediments to the delivery, relevant transport infrastructure schemes will be delivered through proportionate contributions, and the development would provide housing in a sustainable location. Accordingly, there can be a great deal of certainty that Poplar Farm would make a positive contribution towards meeting the housing requirement during the plan period. C) Why an allocation at Poplar Farm is 'Sustainable': The Poplar Farm site is a sustainable location for growth in North Somerset. To demonstrate and evidence this, the site and proposed development has been assessed against the criteria used in the SA. In order to provide a true assessment of the sustainability of the site against the sustainability objectives of the SA, an assessment based upon detailed knowledge of the technical and environmental characteristics of the site has been produced. Crest Nicholson has commissioned a comprehensive suite of specialist assessments, which removes uncertainty and caution in how the site has been evaluated through the SA. This provides a more accurate understanding of the effects that development at Poplar Farm would have on the 15 SA Objectives than the SA assessment,which is based upon only a high-level understanding of the technical and environmental characteristics of the areas/ locations it considers. (See table attached) On the basis of the information provided in response to the individual SA objectives, an evidenced 'policy on' assessment of the sustainability of the proposed allocation reveals a very positive position for Land at Poplar Farm. A summary table of the updated scoring has been provided in Figure 2 below: (See table attached) Due to land control of the site	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										and its location, there are robust opportunities to minimise and mitigate harmful impacts associated with development and to maximise positive opportunities such as the on-site provision of green infrastructure and blue infrastructure. The combination of these affects notably enhances the sustainability scoring of the proposal against the SA objectives and provides a far more accurate and realistic interpretation of the proposed allocation's sustainability. Conclusion The Poplar Farm allocation represents justified, deliverable and sustainable location for residential development of circa 130 dwellings. For the reasons explained within this and other representations, Crest Nicholson strongly supports the principle of its allocation for development.	
63186689	Vistry Group	Boyer	Vistry Group	Yes						Vistry supports the inclusion of land north west of Nailsea within Schedule 1: large sites for residential development. We say this because: • Vistry's land at north west Nailsea benefits from a resolution to grant Outline Planning Permission (LPA Ref. 23/P/2322/OUT) for the delivery of up to 150 dwellings and associated works on part of the land allocation under SAP Policy SA1 demonstrating a commitment to the much-needed delivery of market and affordable housing. • Vistry have already evidenced throughout the Outline planning application and previous written representations that the land under their control, can be delivered without forming part of a wider coordinated approach to mitigation. • Vistry are committed to the delivery of housing at the site in the early years of the Draft LP period. Development to the north of Hanham Way, Nailsea, is in accordance with adopted Policy SA1 North west Nailsea and draft Policy LP2 Strategic location at Nailsea and Policy LP5 Housing allocations set out in Schedule 1. The NPPF identifies three dimensions of sustainable development: economic, social and environmental. We have summarised the proposed site allocation against each of these roles, in accordance with paragraph 8 of the NPPF below: Economic Role • New home bonus to enable the Council to spend within the local community; • Additional council tax receipts to pay for local services; • A boost to the local	North Somerset Local Plan Pre-submission Plan - Representation form Policy LP5.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										economy in terms of construction work in building the new homes; • A boost to local shops and services from increased trade because of the new homes; and • S.106 Obligations and CIL payments to help deliver local infrastructure needs. Social Role • Provision of up to 150 homes to fulfil housing need at a local level; • 30% affordable homes with a tenure split between affordable and shared ownership; • More choice in private and affordable housing options within Nailsea; • Provision of a mix of family homes, range of homes within the scheme allowing for people to move around the proposed site and create a community within the area; • Near to community sport provision, including football and rugby clubs; and • Health and well-being benefits of the provision of a new community recreation resource including walking routes, play spaces, community growing and allotments. Environmental Role • Enabling the Council to maintain a five-year housing land supply and housing trajectory to the end of the current plan period, thus safeguarding other land in less sustainable locations from development; • Delivering housing to fulfil the Council's Spatial Strategy; • Improved pedestrian and cycle connectivity to the to surround area; • The provision of quality public open space and enhanced green infrastructure; • The provision of linear attenuation basins to the west of the developed part of the site offering a sustainable urban drainage system (SuDS) which also offer a wetland habitat for wildlife; • A substantial ecological buffer (up to 50m) along the western and north western boundary of the site to conserve natural habitat where wildlife can thrive, and bat flight paths are protected; and • Onsite 10% biodiversity net gain (due to on-site constraints)	
51556641	Barratt Bristol (Land at Colliters Way)	Oneleven Property	Barrett Bristol	No	• Positively prepared • Justified • Effective • Consistent with national policy			Our client supports the identification of land at Colliters Way for residential development as set out in Policy SP8 and Schedule 1 of the PsP. The Council's stipulation that the site is brought forward comprehensively with other adjoining land is also welcomed. This approach is consistent with the adjoining policy requirements of land allocated for residential development at Elsbert Way in the Bristol Local Plan. This site is considered a sustainable site, closely related to the urban area of Bristol. It's release from the green belt for residential use is logical and would have a low impact upon the Green Belt. As currently drafted, no access to the site is permitted from Colliters Way. This requirement is not justified by evidence and makes the plan unsound. It will also have the effect of potentially limiting or delaying the development of the site. This requirement should therefore be deleted. When allocating the site for development consideration must also be given to viability to ensure it can be delivered. Policy SP7 should therefore be modified accordingly.	As currently drafted, no access to the site is permitted from Colliters Way. This requirement is not justified by evidence and makes the plan unsound. It will also have the effect of potentially limiting or delaying the development of the site. This requirement should therefore be deleted. Through these representations our client has also raised concerns about the Council's approach to housing supply, which are considered to make the plan unsound. The matters raised are important to how successful the plan is in meeting housing need across the plan period. However, they appear to be matters that can be addressed through amendments to the Policy SP8 and the evidence base.		Local Plan Representations North Somerset December 2025 Final 12.12.25 with appendices.pdf

58635297	Barratt Bristol - Land at Park Farm, Congresbury	Nick Matthews (Savills)	-	No	• Positively prepared	Yes	Yes	Land at Park Farm, Congresbury – Site Specific Representation: • In the context of North Somerset, Congresbury is well placed to accommodate further residential development, over and above the quantum allocated through the North Somerset 2041 Pre-submission Plan (Regulation 19). • Congresbury contains a variety of services and facilities including education, healthcare, retail and leisure provision. This range of facilities enables a good degree of self-containment, offering residents an opportunity to meet their day to day needs within the village or in nearby settlements accessible by sustainable travel options. • Land at Park Farm, Congresbury represents a suitable, sustainable and deliverable opportunity to increase the number of homes at Congresbury by circa 90 dwellings. The evidence base appended to this representation confirms that the land is sustainably located and complies with the wide ranging requirements of the National Planning Policy Framework (the 'Framework'). Indeed, the land: o does not fall within restrictive policy designations; o could be developed avoiding land which falls within areas of flood risk; o is adjacent to existing residential development and the proposed settlement boundary; o is within walking and cycling distance of the services and facilities available within Congresbury; o could be developed with appropriate mitigation which addresses the potential impacts on the setting of nearby heritage assets; o is not constrained by noise considerations and utilities infrastructure capacity; and o has potential to contribute positively to green infrastructure and provide a net gain in bio-diversity through provision of public open space aside an existing public right of way. • Feasibility work undertaken to date indicates that the land can be developed in a manner that addresses and mitigates the identified potential constraints. • In the context of comments made in response of housing supply, Barratt Bristol is of the strong view that the Land at Park Farm, Congresbury represents a site that is available, developable and deliverable for housing, and which could therefore be introduced as an further allocation to boost housing delivery. See attached Documents for full representation.	The site at Park Farm, Congresbury could be introduced as an further allocation to boost housing delivery. 29403105	Diverse Partnerships Yatton Ltd	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	LAND AT STOWEY ROAD, YATTON The following representations are submitted on behalf of 'our client' Diverse Partnerships Yatton Ltd to the North Somerset Local Plan 2041: Pre-submission Plan (Regulation 19) (Local Plan). These representations relate solely to our client's interests at the Land at Stowey Road, Yatton. For clarity our client's interest pertain to Site Reference HE20179 under the Strategic Housing Land Availability Assessment, known as 'Stowey Road', and not Site Reference HE208000, known as 'Stowey Road, Yatton'. As set out in our previous Additional Sites Comments (see Appendix 1), we are unclear why this has been addressed as such given its location removed from Stowey Road off of Claverham Road. This site was subject to an appeal determination in June 2025 (see Appendix 2) that dismissed the proposed development on narrow ecological mitigation grounds that we are confident can be overcome. Pegasus Group and our client welcome this opportunity to engage with the Council. Our client is keen to work collaboratively with the Council to ensure that a sound and robust plan is submitted for examination which provides an appropriate planning framework for North Somerset. The December 2024 National Planning Policy Framework (NPPF) is the latest iteration of the NPPF and became effective on its publication. Amongst key changes introduced at that time was the reinstatement of the expectation that the standard method should be the basis for calculating local housing need for the purposes of plan-making, an approach subsequently adopted by North Somerset Council. This has resulted in the significant overhauling of the previous strategic policies of the previous Regulation 19 draft Local Plan, which advocated a 'constraints based' approach to the provision of housing that resulted in just over 75% of the authority area's needs (at the time) being met, in order to secure the necessary uplift directed by the standard method, the updated calculation for which simultaneously yielded a figure c.20% higher in of itself. In making these representations we have taken account of the tests of soundness which will be applied to the local plan when it is examined by the local plan Inspector. Paragraph 36 of the NPPF confirms that plans would be			NSC Reg 19 Diverse Partnerships Yatton Ltd Reps Dec 25 - Redacted.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								considered sound if they are: • Positively prepared – providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development; • Justified – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence; • Effective – deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and • Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in this Framework. The following response is provided to selected policies and issues identified within the Local Plan and its associated evidence base. This response should be read in conjunction with the relevant pro-formas. Our client is supportive of much of the plan, and wishes to comment specifically on matters pertinent to their land interest at Yatton. It is considered that these issues should be considered through the process of plan formulation prior to submission of any Regulation 22 Local Plan to the Secretary of State for independent Examination. Our client controls c.4 hectares of land north-east of Stowey Road adjacent to the defined settlement edge of Yatton (see attached document for location plan). The site was considered under Site Reference HE20179 within the published SHLAA and ruled out within the initial stage due to falling under the 'hard constraints' of flood risk. Under our Additional Sites Consultation response (see Appendix 1) we raised concerns at how flood risk being defined as a 'hard constraint' was overly simplistic. We noted at this time that the approach taken in site selection for the additional sites was inconsistent with previous site selections, with Table 2 of the Flood Risk Sequential Test of proposals within the Pre-submission Local Plan identifying sites with a total of 2,018 homes within areas at risk of flooding. This position is further confused by the published Sustainability Appraisal stating at Paragraph 6.241 of that "Importantly, whilst areas of flood risk surround much of Yatton and Congresbury, the sites proposed for allocation are mostly located outside of these areas." When all sites at Yatton are subject to flood risk. Further to this, application 17/P1754/O for 34 no. homes was determined by a non-determination appeal in June 2025 under appeal reference APP/D0121/W/24/3349043 attached at Appendix 2 of attached document. This stated: "Given the particular circumstances at this site in terms of the length of time for flood water to reach the site and that the development would, ultimately, be safe from flooding, I find that the flood risk policies of the Framework would not provide a strong reason for refusal of this particular development." While the application was dismissed on narrow ecology mitigation grounds, that we are confident can be overcome and for which we intend to make a future application, it is clear that flood risk matters presented no impediment to the delivery of housing upon the site. This position is further corroborated by the SFRA breach modelling (which prior to this had not been updated for some time for the area), which shows that the majority of the southern field (the location of proposed housing) remains unaffected even in the worst case scenario (Upper End climate change projections to 2125) under both of the two breach models completed. Given the recent appeal focused solely on ecological mitigation, which can be overcome, there are no constraints preventing the delivery of residential development upon the site. Conclusions Our client is keen to work with North Somerset to ensure that it submits a sound plan for examination to the Secretary of State. Whilst our client considers some elements of the plan to be sound, we have highlighted several policies in respect of which modifications are recommended. We consider that the plan as drafted does not provide sufficient evidence to demonstrate that the housing target will be met with regard to the strategic allocation delivery within the plan period and methodology for determining windfall development in the absence of a more flexible approach to edge-of-settlement delivery. We have also presented concerns with how the emerging plan fails to engage with the wider regional housing delivery within the West of England area or the future SDS that will encompass North Somerset also. Both these matters infer the need for further allocations and an early plan review aligned with the SDS progression. We have also presented concerns on the comparable blending of Nailsea and			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Backwell as a location for strategic growth, while presenting a hierarchy that effectively dismisses meaningful growth at Yatton despite having previously described it and Backwell as the most sustainable villages within the authority. We have set out how the approach to allocating additional sites was floored in its full dismissal of flood constraints as 'hard constraints', despite inconsistency with the methodology for the previous drafted allocations (that were not revisited under the same methodology) and multiple planning permissions making clear the nuance of flood risk to areas such as at Yatton need not prevent residential development. We have explicitly directed the Council to the appeal decision at Appendix 2 demonstrating that flood risk matters present no impediment to development upon our client's site. Our client looks forward to positively supporting the Council through the plan-making process, in order to ensure a sound Local Plan which plans positively for the needs of the area.			
63043809	Wain Homes	Russell Smith	Wain Homes	No	• Positively prepared • Justified	No	No		This section sets out representations in relation to the allocation of sites as set out in Schedule 1 and in particular, the omission of Land at Stowey Road, Yatton (also known as Land at Claverham Road. Land at Stowey Road is well related to Yatton and located outside of the Green Belt. The site was identified as Potentially Suitable in the previous Additional Sites Consultation. Yatton is a Category A village as set out in the Spatial Strategy Site Selection and Capacity Paper, which is considered to be relatively sustainable in its own right with a range of easily accessible services and facilities and good public transport links to towns. This places the Site at Step 4 of the sequential approach to site selection set out in the paper, meaning it should be selected before any Green Belt sites, in accordance with the Council's own methodology. A table related to Step 4 in the Spatial Strategy Site Selection and Capacity Paper, provides a summary of the reasons sites have been discounted or allocated. For land at Stowey Road (HE208000) it states: "Site passed the SHLAA and further constraints assessment; however, flood risk constrains the developable area to the extent that the site is not suitable for allocation." This assessment is at odds with the SA assessment of the site against Objective 3.2 Contribute to reducing vulnerability to tidal and fluvial flooding, without increasing flood risk elsewhere. Also minimise surface water flood risk and harm to water quality and availability, which states that "The site is not within an area identified as being at risk of flooding from fluvial or tidal sources or surface water and is not within a Source Protection Zone." Wain Homes considers that the site has been erroneously discounted, as it is possible for development of the site to avoid areas of flood risk, leaving sufficient developable area to deliver up to 130 homes as shown on the Site Layout Plan provided in Appendix 1. Accordingly, the site should be allocated for residential development of up to 130 homes. Wain Homes is currently preparing a full planning application, following positive pre application advice, which it intends to submit early in the new year. As such, detailed site surveys and assessments have been undertaken to demonstrate the suitability and deliverability of development. The site comprises circa 7.5 hectares of agricultural fields. The site previously had one residential dwelling fronting onto Claverham Road, however, this has been demolished. The site is bounded on 3 sides by "Rhynes" which form part of a managed network of ditches maintained by the North Somerset Levels, Internal Drainage Board. The extracts below are taken from the "flood maps for planning" and indicate the proposed locations of development are wholly within flood zone 1. There is a possible localised area of surface water flood risk, however, a site specific Flood Risk Assessment will be produced and demonstrate there is no built development or access routes with areas of flood risk, accordingly, the sequential test and exception test are not required to be applied. The Strategic Flood Risk Assessment 2025 maps (see extract below), showing Tidal Flood Zone 3a, including climate change at 2125 and 2139 (undefended) on the northern 3 fields of the site. However, as shown in the Site Layout Plan at Appendix 1, development will avoid these areas. Surface Water Drainage Maintenance and Management Plans are being developed that will set out a detailed scheme for the maintenance and management for every element of the surface water drainage system. It will also provide a SuDS Maintenance Checklist, to enable maintenance inspections to be recorded for review and remediation by the		North Somerset Local Plan Regulation 19 Wain Homes.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									owner and other third parties. Overall, the evidence clearly demonstrates that the site has been erroneously discounted on the grounds of flood risk. This has fundamental implications for the soundness of the plan, having regard to the issues we have raised in our representations to the SA, the Duty to Cooperate, SP3 Spatial strategy, SP7 Green Belt and SP8 Housing Requirement.		
51524513	Bellway Homes Ltd	tor&co	Bellway Homes Ltd	Unsure					Further allocations may be necessary in light of our comments regarding overall housing levels.	Draft Policy LP5 (Housing and employment allocations) cross refers to Schedule 1 and Schedule 2 of the Local Plan, listing the site allocations for residential and employment development. This includes the strategic location at Wolvershill (north of Banwell), covered in detail under Draft Policy LP1. Bellway strongly support the identification of Wolvershill as a housing and employment allocation. Please see further comments under Draft Policy LP1. Further allocations may be necessary in light of our comments regarding overall housing levels.	20251212 504317 JE - North Somerset Reg 19 (Reps obo Bellway Homes).pdf
63094305	Harrow Estates	Boyer		No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No		The draft LP identifies three additional strategic locations for growth, Wolvershill, Banwell (Policy LP1), Woodspring, South West Bristol (Policy LP2) and Nailsea/Backwell (Policy LP3) and Housing Allocations (Policy LP5). However, the evidence base demonstrates that all three locations face substantial barriers to delivery, infrastructure dependencies, viability constraints and uncertainties over timescales. As a result, the reliance placed upon them makes the Spatial Strategy ineffective and undermines the delivery of the housing requirement set out in Policy SP8 over the Plan Period. These representations make specific reference to Land East of Failand, which offers an opportunity to deliver a high-quality residential led development to the East of Failand. See attachment for full submissions.		251211 Land East of Failand Reg 19 Reps.pdf
58664673	Catesby Estates	Stantec	Catesby Estates	No	• Justified • Consistent with national policy			Policy LP5 sets out that: "Residential sites of 10 or more units and employment sites are shown on the Policies Map and set out in Schedule 1 and Schedule 2 which form part of this policy. Development must take account of the site-specific requirements set out in the schedules". Explanatory text provided clarifies that it is the schedules that allocate sites to be developed over the plan period and that these indicate potential capacity and any high-level principles and considerations which will need to be addressed. Within Schedule 1 it is reconfirmed that the schedule forms part of Policy LP5, identifies indicative capacities for each site, subject to detailed consideration and clarifies that: "figures are given as a guide, the final capacities may be higher or lower". The identification and allocation of Pill Green within Schedule 1 and as part of Policy LP5 is supported. Whilst this approach to identifying requirements for allocations within the Pre-Submission Plan is acknowledged and supported, where this relates to Pill Green both the indicative capacity, associated policies map with allocation boundary, as well as specific 'high level principles' have not been sufficiently 'justified'. Pill Green represents a sustainably located development opportunity able to accommodate up to 1,000 dwellings, a new primary school, local centre, and a range of high quality green infrastructure to be used by new and existing communities. The assumption of capacity set out within Schedule 1 remains unclear. The North Somerset Strategic Housing Land Availability Assessment (SHLAA) Main Report (October 2025) includes section 2.3 'Estimating development capacity'. Section 2.3 of the SHLAA Main Report (October 2025) provides that the indication of development capacity provides estimates based upon density multipliers, capacities indicated by respondents, and further site appraisals wherein it is stated that for larger sites it is important to understand realistic dwelling capacity across the plan period. It is unclear as a point of consistency within the evidence base how the indicative capacity for Pill Green is arrived at when it has been promoted for a new sustainable community since the early Joint Spatial Plan (JSP) and beyond for a new sustainable community capable of delivering up to 1,000 much needed homes and underpinned by various technical assessments to date avoiding impact on sensitive constraints, such as Ancient Woodland. Moreover, in this context indicative capacities shown for Pill Green should be uplifted within Policy LP5 and associated Schedule 1 which forms a part of the policy to avoid conflicts with the Pre-Submission Plan Policy DP8. Policy				Appendix to representations - compressed.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								DP8 requires that all new development proposals that effective and efficient use of land is made and that the minimum target density will be 40 dwellings per hectare. Pill Green, as submitted to the most recent Call for Sites, has an area of 46.34 hectares. Applying the Council's methodology to capacity set out within Section 2.3 and all information provided to date result in a minimum 'achievable' capacity of more than 700 new homes with potential of up to 1,000 within the plan period, that also takes account of any sensitivities (hard constraints) and in the context of Pill. It remains unjustified within the Pre-Submission Plan 2041 and supporting evidence base that density uplifts are included elsewhere, where detailed site information can be found for development proposals currently limited to a total of 'up to' 2,655 homes in comparison to notably higher total figure in the policies of the Pre-Submission Plan 2041. For clarification purposes, no comment is made on the achievability of density uplifts, as detailed information not currently publicly available may well support such principles. Commentary provided is made to show that, whilst it is acknowledged within relevant Policy LP5 and Schedule 1 that final capacities may be higher or lower, the guide figure for Pill Green is not based on robust evidence and therefore not found to be justified. It is recommended Policy LP5 and Schedule 1 are amended to allocate the Site's full site boundary and capacity to deliver homes and could be presented as indicative capacity 'up to' 1,000 homes and can be robustly justified via matters set out within section 3.4 of these representations.		
51710305	Wain Estates (Wolvershill)	Tetlow King Planning	Wain Estates	No	Effective					We are pleased that draft Policy LP5, Schedule 1 lists sites including our site at Wolvershill (north of Banwell) strategic location for 3,300 dwellings. These sites including Wolvershill strategic location will assist in meeting the high levels of market and affordable housing needs across North Somerset. Where sites are proposed for allocation, sufficient detail should be given to provide clarity to developers, local communities and other interested parties about the nature and scale of development. The draft Policy highlights that developments must take account of the site-specific requirements set out in the draft schedules to the emerging Local Plan. Draft Schedule 1 concerns "Proposed large sites for residential development" and defers to draft Policy LP1 for site-specific requirements. Draft Schedule 2 "Proposed employment sites" states that the site is to provide 3ha of employment land. Please see our detailed comments in respect of these requirements under draft Policy LP1.	0707-06.M23 Wain Estates NS Pre Submission Reg 19 Local Plan 12.12.25 with Appendices.pdf
63249345	Rubix Land Ltd (Havyatt Green, Langford)	OG Group		No	Justified Effective	Yes	No	HAVYATT GREEN, LANGFORD Rubix Land Ltd ("Rubix") is promoting a significant area of land to the SE of Langford, between the A38 and A368, for a strategic residential-led allocation of up to 2,500 dwellings ("Havyatt Green"). Representations were submitted to the previous Reg.19 consultation in March 2025 and further commentary on this is provided later in this section. Rubix considers that the Havyatt Green site should be allocated as part of the emerging Local Plan, to assist with meeting a shortfall in local housing need and to ensure the Local Plan can be made sound. This is stated for the following reasons: Local Plan Period: The draft Plan is based on a plan period of 2024 to 2041, which represents the minimum 15-year period which is specified by national policy for strategic polices and relies on the Plan being adopted in 2026. It is likely that the Examination and adoption process will go beyond 2026 (supporting text on Page 10 of the Plan acknowledges that "adoption is not expected until late 2026"), meaning that there is a high risk that the Plan will not meet national policy expectations for strategic policies to cover a minimum 15-year period. National policy, through the NPPF, also encourages local plans to take a	1. Extension of the Plan period to at least 2042, in order to ensure that the Plan for North Somerset covers a period of at least 15 years from adoption, with a longer period likely to enable the Council to more effectively plan for future development in the area. 2. A higher housing requirement should be set to address evidenced affordable housing needs and to accommodate some of Bristol's unmet needs. 3. Notwithstanding point 2 above, the total housing supply number should be increased to at least 26,070 or 29,546 when accepting the need for 2 additional years to the plan period (1 above) including a 10% flexibility allowance, in line with South Gloucestershire Council's approach. 4. Allocation of the Rubix Land site at Havyatt Green for a strategic residential-led new community of up to 2,500 dwellings		3728 Havyatt Green Langford Transport Appraisal Note2 Dec25 Final.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								longer-term view and that, where strategic policies contemplate larger scale developments, as is the case with this Local Plan, policies should be set within a vision that looks further ahead than 15 years. A plan period that is longer than 15 years will help the Council plan positively and effectively for the area and consideration should be given to strategic policies that cover a period in excess of 15 years. As a minimum, the plan period should be extended to 2042. Quantity of New Homes: Policy SP8 identifies that land will be identified to secure the delivery of a minimum of 23,700 dwellings within North Somerset during the plan period 2026-2041. This is a rate of 1,580 dwellings per annum and is based on the Government's standard method requirement for calculating local housing need, as updated following the publication of the December 2024 NPPF. This housing requirement is a significant increase compared to previous versions of the Plan, where 14,902 dwellings were proposed in the period 2024 to 2039. The decision of NSC to pause the progress of its Plan, in order to identify additional sites to meet the up-to-date (higher) housing requirement, was wholly supported and will ensure that the Plan is positively prepared, to meet up-to-date housing needs. It will also ensure that it is robust over the longer term. However, the NPPF is also clear that local housing need derived from the standard method requirement is a minimum figure and any final housing requirement should take into account affordable housing needs, ambitions for economic development and any unmet need within neighbouring authorities. Local Housing Need: Whilst Rubix recognises the housing requirement in Policy SP8 is expressed as a minimum, evidence documents such as the Local Housing Need Assessment (September 2025) (LHNA) point to the need for more homes to be planned for. The LHNA confirms that there is a total net affordable need of 10,577 homes; based on a housing requirement of 23,700 homes, this would require 45% of all homes to be delivered as affordable housing. However, whilst 50% affordable housing is currently proposed on Green Belt release sites, 30% is proposed (based on viability testing) on other greenfield sites and 20% on brownfield sites. In addition, the Council's viability work by Dixon Searle Partnership (October 2025) indicates that affordable housing at more than 30% at Nailsea and Backwell and beyond 35% in South West Bristol and Pill/ Easton-in Gordano is unlikely to be viable. Overall, therefore, affordable housing needs will not be met by the current proposed levels of housing, and there is a case for the final housing requirement to be set higher. Bristol's Unmet Need: It is important to note Bristol's unmet housing needs in the context of NSC's approach to meeting housing need in the draft Plan. NSC's Duty to Co-operate Statement of Compliance recognises unmet need from neighbouring authorities to be important strategic matters. However, it concludes that Bristol's request for neighbouring authorities (including North Somerset) to accommodate some of its unmet need cannot be addressed as "…the evidence supporting the local plan demonstrates that North Somerset does not have capacity to meet some of Bristol's needs at this time" (pg. 20). Bristol City Council's (BCC) draft Local Plan is currently at Examination; the hearings have concluded and the 'Final Advice and Actions' letter from the Inspectors was issued on 21 November 2025. This includes some key conclusions on housing: "We acknowledge that there is insufficient capacity to meet the Council's objectively assessed housing need, as calculated by the standard method. Nevertheless, we do not consider the figure of 34,650 dwellings over the Plan period to be positively prepared or justified. Given the significant shortfall in meeting overall needs, and the current lack of agreement between Bristol and any neighbouring authorities to provide assistance, we consider it imperative that the Council seeks to maximise housing delivery. Inherent uncertainties in housing delivery in the longer period do not justify setting a housing requirement substantially below the overall housing capacity figure identified at submission; The Council should draft MMs which set the housing requirement to be the 39,915 dwellings' capacity that was identified at submission [we note this is an additional 5,265 homes, adding to unmet need]; and The Council must also set out what the level of unmet housing need is. While the objectively assessed housing need may change over time, we consider it necessary for this Plan to be clear about the situation at the time of adoption. This may, for example, be important in continuing work being done on other Plans." This is highly relevant, as Bristol has a significant remaining unmet need and this must be accounted for by neighbouring authorities including North Somerset, South Gloucestershire and Bath & North East Somerset, who are all preparing new local plans. To date no other local authority has positively responded to BCC's request confirming their ability to accommodate any unmet need, which further amplifies the issue. The various plans are deferring their obligations to deal with these important cross boundary issues which will only serve to increase affordability pressures within North			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Somerset and Bristol. NSC's availability of other sustainable opportunities to accommodate some additional growth for BCC's unmet need will require further consideration at the Examination. Housing Supply Flexibility: Policy SP8 explains that the Local Plan is to provide 24,495 homes to meet the requirement of 23,700 homes. This only provides a flexibility allowance of 795 homes (3.35%). This is a very low percentage and does not provide sufficient flexibility to meet the local housing need figure of 23,700 should any of the proposed allocations run into delivery issues or if the windfall allowance is lower than anticipated. By way of comparison the emerging South Gloucestershire Local Plan includes a flexibility allowance of 10.5%. In Rubix' view this is a far more sensible figure that will assist the Council in meeting its local housing need figure as calculated by the standard method. There is a longstanding issue of poor housing delivery in North Somerset and it is therefore vital that there is sufficient flexibility in the number of sites to meet the requirement figure acknowledging that some sites will deliver slower or not at all. The total supply number should be increased to at least 26,070 to provide a 10% flexibility allowance, or 29,546 when accepting the need for 2 additional years to the plan period. Land at Havyatt Green, Langford: Representations were submitted on behalf of Rubix Land Ltd to the Reg.19 Additional Sites Consultation in March 2025, regarding this proposed strategic site (given reference number HE208099), which lies outside the Green Belt. A copy of the March 2025 reps (main report + site location plan and illustrative masterplan) are attached for reference. This proposed site can accommodate in the region of 2,500 dwellings with associated community facilities, commercial/employment, drainage and open space. It can also provide a new link road between the A38 and A368, helping to alleviate congestion in the area and "rat-running" along Ashley Lane. It's location close to Bristol Airport, which has significant long-term expansion plans, could bring forward provision of a well-located new community with a strong working age population that could contribute towards the airport expansion, with significant long-term economic benefits for North Somerset. The March 2025 reps were accompanied by a Transport Technical Appraisal Note (TAN), undertaken by Peter Evans Partnership (PEP), which highlighted how the proposed development could provide significant improvements to the local road network, as well as providing strong active travel and public transport links to the airport and beyond. Following submission of the March 2025 reps, Rubix commissioned PEP to undertake traffic surveys along Ashley Lane, to assess its use and any correlation with holiday periods, in terms of increases associated with the airport. PEP has produced a further TAN that provides conclusions on this survey, as well as considering recent and updated transport-related plans/schemes in the area, including: • Bristol Airport 2040 Masterplan, published June 2025; • North Somerset Economic Plan Growth Plan 2025 to 2035, published March 2025; • North Somerset Bus Service Improvement Plan (BSIP); • A38 Major Road Network (MRN) scheme, Department for Transport (DfT) - commitment confirmed July 2025; • Progress on the A371 Banwell Bypass; This further TAN is attached to these representations; it concludes as follows: The site would provide a range of facilities and amenities and is well located to maximise sustainable travel opportunities and allow accessibility to day to day facilities such as primary schools, employment and local shops by walking and cycling. Pedestrian and cycle permeability through the site would be achieved and improvements are proposed to the walking and cycling network surrounding the site, including on Ashley Lane and Langford Lane, enabling journeys by non-car means for residents of the site but also residents of Langford, Wrington, Burrington and Blagdon. The site is well related to the existing A371 - A38 bus corridor and is therefore able to maximise benefits from existing sustainable transport infrastructure. A proposed Mobility Hub on site would support residents and offer a wider benefit by helping improve public transport provision and connectivity to / from rural areas using WESTLink and between Weston-super-Mare, Bristol Airport, Bristol Temple Meads railway station and Bristol city centre. The main employment opportunities at Bristol Airport, Thatchers, Yeo Valley and south of Bristol (at Gravity/Agratas for example) would be accessible by		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								bus from the site providing opportunities to travel to work by other modes than the car. Equally, facilities such as office space/broadband in homes or on-site community / business hub with digital connectivity would give residents the opportunity to work from home and reduced the need to travel to work. Satisfactory vehicle access to the site can be achieved and there is therefore no reason to suggest the scheme proposals would have a material impact on the traffic capacity or road safety of the local road network. The proposals would have a positive impact on road safety with a new A38 – A368 link, downgrading Ashley Lane and Langford Lane, reducing turning movements at their junctions with the A38 and A368 where there are recorded accidents and where there will be increased traffic flows from the Bristol Airport expansion and new employment in South Bristol. The site is a suitable location for development as it is well placed to assist local employment aspirations, provide homes for employees and help enhance accessibility to Bristol Airport by non-car modes. The site would support and benefit from public transport and highway infrastructure improvements.		
63250785	LiveWest	PCL Planning Ltd		No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	LAND TO THE EAST OF WRINGTON For the reasons outlined in representations made in respect of Policies SP3 (Spatial Strategy), Policy SP6 (Villages and Rural Areas), Policy SP7 (Green Belt) and Policy SP8 (Housing) we consider Wrington should be identified as a more sustainable settlement and it potential to accommodate sustainable growth should be accommodated. Furthermore we consider our client's site at Land to the East of Wrington (reference HE2033) should be allocated and added to the Schedule 1 of Policy LP5. The site has the potential for the phased delivery of residential development with the potential provision of enhanced recreational facilities and substantial provision of green infrastructure to support the enhancement of the existing village edge. Initial masterplanning indicated the site has capacity for between 150-180 dwellings across the whole site area. It would support appropriate policy compliant level of affordable housing and range of housing mix and types. The site is not subject to any landscape or ecological designation and is generally flat with limited landscape features. The site has several suitable access options linking to existing residential areas and the core facilities of the village centre of which it is in close proximity. It is outside of the Conservation Area and there are no nearby heritage assets. The vast majority of the site is within Flood zone 1 and whilst there is a small area of functional floodplain it is not an impediment to developing the remainder of the site. There is no known history of flooding. Although the site is within the Green Belt it is in its margins and currently forms the eastern edge to the village which lacks any clear definition and is not visually attractive. Whilst not previously developed land, we do contend that given its existing marginal context the site could be reasonably considered to meet the wider definition of Grey Belt in that it clearly does not strongly serve the listed purposes of Green Belt. The release of the site would provide an opportunity to significantly improve this situation through the provision of a softer landscaped edge or buffer to the village. This would provide longer term benefits in respect of improving the landscape and visual context of the village, more than the current Green Belt designation. Therefore, the site represents a logical extension to the village and provides the option to deliver sustainable development and support housing delivery within the plan period. It would provide wider benefits to the local community in respect of housing and supporting local services as well as opportunities to improve infrastructure and the setting of the village. The site is available with a landowner willing to release and a promotional agreement with a housing provider and builder with ambitious plans to invest £1bn to support the delivery of 5,000 new homes in the South West over the next 5 years. This is clearly in the favour of the deliverability of the site. In the absence of the allocation of the site at Land to the East of Wrington (reference HE2033), we consider Policy LP5 significantly undermines the soundness of the Plan overall as it has not been positively prepared as it is not seeking to meet identified needs. Its strategy is not justified as it contradicts clear evidence of need and the contribution the larger villages (including Wrington and our client's site) could make to delivering sustainable development and does not take into account reasonable alternatives in to address this. The Plan's approach will not be effective in that there is no clear evidence that supports the Plan being deliverable. It is not consistent with national policy in that its approach limits rather than maximises the opportunities for the Plan to deliver sustainable development in accordance with the Framework. Please see previous representations made on earlier versions of the Plan for completeness. These are appended to the covering email for these and other representations made on the Reg 19 (Pre-Submission Plan).	The site at Land to the East of Wrington (reference HE2033) should be allocated and included in Schedule 1 of Policy LP5. The Policy map should be amended accordingly. The site selection is based on a flawed spatial strategy which does not reflect the findings of the Sustainability Appraisal and an erroneous evidence base which fails to correctly and comprehensively assess the suitability of sites through each	Land at The Alburys should be allocated under Policy LP5 to help deliver housing without reliance on major new infrastructure, increase flexibility in supply and boost delivery in the first 5 years of the plan period.		251211 Local Plan Reps Alburys Complete.pdf Representation form Part B LP5.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					policy			step of the sequential approach, resulting in an overreliance on strategic development locations and land in the Green Belt to meet housing needs. By way of example, the identification of Nailsea and Backwell as a strategic location is flawed for the following reasons: a) The scale of development proposed at Backwell is disproportionate to the existing population of the village, representing an increase of over 80%. The substantial scale of population growth directed to Backwell through this Local Plan is wholly disproportionate to the existing settlement and coupled with the significant growth proposed for Nailsea, will place undue pressure on existing facilities, services and infrastructure and it will have a significant, detrimental impact on the character and nature of the area and its communities. b) The strategy is reliant upon and based on a flawed transport mitigation strategy which fails to mitigate the trips generated by the proposed allocations and would put at risk the effective delivery of housing within the plan period. The Pre-Submission Local Plan published in November 2023, removed the proposed allocation of Nailsea and Backwell as a strategic development area due to significant uncertainties over the deliverability of necessary highway infrastructure (including a rail crossing to mitigate the impact of development on Backwell Crossroads). The Spatial Strategy and Capacity Paper advised that “None of these options [for a rail crossing] are straightforward given flooding issues which could affect any crossing under the railway and the visual impact of a bridge crossing a railway on an embankment. Further technical assessment following Preferred Options resulted in a preference being for a bridge crossing to the East of Backwell. However, taking account of potential development contributions and other sources of funding, the costs of delivery were prohibitive which meant that delivery was highly unlikely over the plan period.” Paragraph 3.12, Spatial Strategy and Capacity Paper, November 2023). c) Neither the Pre-Submission Local Plan 2025 or the accompanying Spatial Strategy and Capacity Paper (October 2025) justify the reversal of previous decisions made through the Local Plan preparation process. The spatial strategy as presented through Policy SP3 fails to justify, through appropriate evidence that Nailsea and Backwell represents a sustainable location as a strategic development location. The allocation of land East of Backwell for 889 dwellings and land South of Nailsea for 582 dwellings are both reliant upon delivery of the new strategic rail crossing to mitigate their impact on the Backwell crossroads. In the absence of evidence to demonstrate that there is a credible design solution which would not give rise to significant adverse impacts, which is capable of being supported by Network Rail and which would be funded and delivered in an early phase of the plan period, these allocations are not justified by the evidence base and not demonstrated to be effective. As a result, the allocations of land East of Backwell and South of Nailsea are unsound and should be removed from the plan. The Council has failed to demonstrate that it has considered alternative locations to accommodate development outside Backwell, including at other sustainable village locations such as Wrington. The Council has adopted a sequential approach to the identification of sites, however, it is evident that the Council has neglected to undertake a comprehensive assessment of all non-Green Belt sites at sustainable locations at Step 4 of the sequential approach before exploring options in the Green Belt. Summerfield Homes object to the omission of land at The Alburys, Wrington (HE2033). Based on the evidence base, Wrington is recognised as one of the most sustainable villages in North Somerset and based on an assessment of the available sites, The Alburys lies outside the Green Belt and is free from hard constraints, including flood zone 3 which affects sites to the south and east of the village. The Council’s decision to discount the site due to potential impact on the setting of the All Saints Church Tower has no basis in evidence and fails to take account: a) Historic England’s guidance on the treatment of church towers, b) The absence of any designed or associated view of the church tower; c) The absence of existing public views of the church tower from the site; and d) The opportunity to mitigate any landscape impact through the masterplan. Wrington is evidenced to be one of the most sustainable villages in the District which should be comprehensively assessed at Step 4 of the Council’s sequential approach to identifying land for housing. The Alburys represents the only site which is not at risk of flooding and lies outside the Green Belt. The Council has provided no evidenced assessment of the potential heritage impact on the site’s capacity to justify its conclusion. A “potential” technical issue is categorically not a sound reason to discount a deliverable site for housing in a sustainable location. The Council has disregarded Wrington for development through a misjudged, unevidenced, subjective view on the existence of “significant” heritage constraints. These “constraints” are no greater in Wrington than in many other locations in the plan area. Evidence of a professional and objective assessment of Wrington and its capacity to accommodate development is not apparent through this Local Plan. The Alburys represents a wholly suitable site for allocation, with capacity for circa 30 dwellings. The site can make a meaningful contribution towards			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								housing need, boost housing supply in the first 5 years of the plan period and align with the spatial strategy, directing small-scale development to one of the most sustainable villages in North Somerset. Policy LP5, as drafted, is not justified by adequate evidence and has not demonstrated that the site allocations can be delivered within the plan period. It is therefore unjustified and ineffective and therefore unsound. Land at The Alburys should be allocated under Policy LP5 to help deliver housing without reliance on major new infrastructure, increase flexibility in supply and boost delivery in the first 5 years of the plan period.			
63057537	Hallam Land	David Lock Associates		No	' Justified ' Effective ' Consistent with national policy	Yes	Yes	Hallam propose that additional land at East of Clevedon, (east of the proposed employment allocation), could deliver a sustainable new community, with the capacity to accommodate some 2,200 new homes, supported by a range of retail uses, co-located with a community and health provision to meet the needs of the resident population, in a location that is already well connected and accessible to Clevedon and can support improvements in active and sustainable travel in the locality. Hallam Land strongly maintain that development in areas benefitting from flood defences, are inherently sustainable. Defended land is not at the same risk of flooding as the high-risk flood zone it is otherwise categorized within and are a feature of the historic pattern of growth, and indeed the approach taken to growth in the current plan, demonstrated through the allocation at Weston Villages.	Hallam propose that additional land at East of Clevedon, (east of the proposed employment allocation), could deliver a sustainable new community, with the capacity to accommodate some 2,200 new homes, supported by a range of retail uses, co-located with a community and health provision to meet the needs of the resident population, in a location that is already well connected and accessible to Clevedon and can support improvements in active and sustainable travel in the locality.		
63057537	Hallam Land	David Lock Associates		No	' Justified ' Effective ' Consistent with national policy	Yes	Yes	The proposed employment supply does not present market-driven opportunities and therefore is set up to deliver more of the same, at a time where the commercial and employment market is undergoing significant structural changes. The policy text for SP9 “identified for business purposes across North Somerset to meet needs and aspirations across a range of economic sectors over the plan period” is not being delivered. Supply of sites is not fleet of foot nor aspirational. The employment strategy does not follow the evidence insofar as its lack of positive planning for important and growing sectors such as manufacturing, industrial and logistics, as required by National Policy that directs an uplift in planning for such growth; and having regard to the uplift in homes now to be planned for as set out in the revised Draft Plan. Planning for Economic Development: Supporting the Industrial and Logistics Sector These representations are supported by a Statement prepared by Claire Pearce, Real Growth, providing independent advice to Hallam Land in respect of current government economic policy and national planning policy which are material considerations to be taken into account in planning policy and development management decision making. The statement provides further detail and clarity on the national policy position which should directly inform a Councils corporate plan, its strategic ambitions, as well as its and economic development, local planning and highway functions. Specific consideration is given to North Somerset. It makes clear that a basic input to any local plan or planning decision process, the industrial strategy and its sector plans and the South West strategy, represents a key material consideration. The North Sommerset Economic Growth Plan 2025 that supports the argument for additional logistics land. The Growth Plan confirms that Logistics is explicitly part of the Foundational Economy priority sector (Section 2.5) and is linked to enabling growth in other sectors like green economy and advanced manufacturing. The Plan warns that without unlocking strategic sites, North Somerset could lose investment to competing areas. It stresses the need to signal that the area is ‘open for business’ (Section 4.1 Conclusion and Key Asks). It highlights the following key considerations stating there is “significant competition for land across the area and a shortage of suitable and commercially viable land that is ‘shovel-ready’ for investment” and calls for “allocating and promoting commercially attractive and ambitious employment sites in the new Local Plan”. The Growth Strategy is clear in its focus, that the Local Plan should allocate additional land specifically suited to logistics and distribution, ensuring alignment with national policy objectives to support the modern economy and strategic employment sectors. This approach reflects the need for fit-for-purpose sites, rather than an increase in headline floorspace figures, and will help future-proof the area’s economic offer. The draft Local Plan is also supported by a new June 2025 “North Somerset Employment Land Evidence Report” (NSELER) study prepared by Stantec. Is an example of a business as usual approach being taken to assess and make recommendations on employment plan provision within a local plan process. It builds on a previous study (HJA 2025) which specifically assesses the level of employment land required to meet the new levels of population growth. The report does not seem to integrate the ambitions of the North Somerset 10 year Economic Plan. Despite this compelling evidence, this has patently not followed through into the Plan strategy. The allocation of Land East of Clevedon as a strategic employment site, adjacent to the M5, with access directly from Junction 20, is now removed from the Draft Plan. The NSELER does not appear to fully consider the requirements of the NPPF to make provision for modern industrial strategy needs to accommodate high growth sectors, nor take into consideration the regional and cross boundary opportunities presented to the South, as a result of supply chain development needs for the Somerset enterprise zone, Gravity - home to the new Agratas gigafactory. Gigafactories being one of the specific economic needs identified and therefore this is a missed opportunity.	In order to make the plan sound, some 25 of land East of J20 at Clevedon should be allocated as a strategic employment site to proactively meet the evidenced demand from the distribution, logistics, and warehousing sector.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Land East of the M5 at Clevedon, Junction 20, would appear to be of sufficient scale to host supply chain development/ advanced manufacturing for the gigafactory or indeed other strategic economic land use needs in the M5 corridor, required by the MIS. The conclusions of the report for large scale logistics and phasing from 2035 – 2045, does not take sufficient account of the MIS to 2035 or the supply chain requirements to support the UK's largest gigafactory in the South West, just south of North Somerset. Jobs and Homes Imbalance The draft policy SP9 identifies the provision of 72.8ha of employment land within North Somerset to "ensure the area has sufficient capacity to continue to provide a range of local employment opportunities and support a balance/ sustainable form of growth". This quantum has reduced from 81.25 ha in the previous Regulation 19 Consultation. Taking account of the uplift in homes now proposed to be required compared with that presented in the previous Regulation 19 plan (uplift of some 63%) this now must be aligned to an appropriate uplift in jobs growth, critically spatially distributed to meet evidenced need. The NSELER recognises the significant risk of an imbalance of housing to employment, as demonstrated by the net out-commuting of residents (c.5,000 source: ONS/Census). It refers to data and commentary from local commercial agents and developers, which suggests that NSC has high demand, particularly for industrial and logistics uses, and a relative shortage of appropriate space. The quantitative demand estimates based on employment forecasts, as set out in the HJIA ESPRE report, suggest that NSC requires around 50 to 60 hectares of new employment land. The assessment of potential employment at the six NS sites/locations assessed in this study suggest a higher level of employment land could be delivered than the ESPRE figure. A recommendation of the report sets out the suggestion of including further employment land for logistics and goes on to identify J20 as a suitable site for this purpose. The draft Local Plan is supported by a new "Employment Site and Premises Requirements Evidence" (ESPRE) study prepared by Hardisty Jones Associates and Lambert Smith Hampton and published in March 2025, which concludes that in order to maintain a balanced labour market within North Somerset there will be a need for 20,000 additional jobs to be created over the period 2023-43. This is an increase from the estimated 13,000 additional jobs required at the time of the 2023 ESPRE and has a significant influence on future floorspace requirements. Lack of industrial and logistics sites – the case for Land east of Clevedon. The ESPRE also encourages the Council to consider the need for more strategic capacity for uses such as transport and logistics or datacentres. The Plan now commits to an increase of 63% in homes from the previous Regulation 19 Plan, yet the amount of employment land has reduced by 10ha. The Draft Plan now takes an approach to align the scale of employment to the updated housing requirement through additional employment allocations as part of new mixed use strategic development locations. Small allocations at mixed use sites will not support strategic employment needs, nor does it support expedient timescales (given the long -lead in times associated with bringing such sites forward and an inherent focus on delivery of new homes) to react sufficiently quickly to capitalise on the a dynamic commercial market for larger sites that can accommodate logistics and distribution close to the strategic road network. More of the same will not provide opportunities for real choice in the market (driven by changing consumer and business demand, changing space requirements, increased automation, sector diversification and a new focus on sustainability). Supplementing employment supply with additional employment land allocations to be delivered as part of proposed strategic growth areas which by their nature have not been selected having regard to their unique locational drivers to support economic growth and satisfy proven market demand, but instead are generic employment allocations that are part of larger residential-led growth, is questionable and lacks a clear and coherent economic strategy. While the inclusion of employment land within proposed strategic growth areas may appear to address economic needs, this approach does not respond effectively to the evidence-based requirement for logistics and industrial land identified in the updated evidence base documents. Indeed, the ESPRE identifies a limited supply of sites within North Somerset that meet the locational and operational requirements of modern logistics occupiers, which risks limiting the area's ability to capture growth in this sector and respond to market demand. Contrary to the ESPRE report, Hallam do not agree that Land west of Kenn (at some 8/9 hectares) could provide a similar number of jobs to Land East of Clevedon once fully developed. The site characteristics and opportunities are inherently different. The Council's own evidence does not support the Sustainability Appraisal conclusions reported for Land East of Clevedon "The allocation of this site is not considered a necessity within the plan as the plan is meeting business needs identified through the evidence on alternative sites". An Economic Assessment prepared by Avison Young is appended to these			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								representations, and provides a commentary on how market data demonstrates the need for, and supply of, employment land and floorspace from a market perspective, concluding that, based both on local employment growth projections and strategic market signals, there remains considerable demand for large scale (100,000sqft+) industrial/warehouse space within the Clevedon/North Somerset area. It reinforces that the Council's proposed approach to planning for employment will not meet need nor demand from the active commercial market. The market/site analysis presented by Avison Young highlights the important and active role the industrial and distribution sector plays in the North Somerset economy now and the ongoing role it will play in the future and therefore is at odds with the current draft Local Plan which limits the provision of sites for logistics. The stock and market data clearly concludes that the existing stock of land and floorspace within North Somerset is simply not fit for purpose to meet future needs. Its scale, location and quality all act as barriers to the area being able to accommodate the identified need and realise the full economic potential of the area. Avison Young evidence provides an analysis of the local employment floorspace market, evidencing a lack of recent delivery with a net increase of only c.32,000 sq. ft. delivered since the start of 2024 at a time when demand was increasing. Looking ahead this is likely to be exacerbated going forward with CoStar recording just c.26,000sqft under construction, suggesting the area will continue to be constrained by a lack of modern stock. Avison Young reviewed a range of industrial sites that have the ability to provide units over 100,000sqft, identifying major schemes in North Somerset and then considering adjacent areas of Somerset and WECA geography. It is notable that the majority of space in the pipeline remains focussed at Severnside and the Somerset Council area, with a much smaller pipeline within North Somerset. 60% of the employment being planned for is directed at Weston Super Mare. This lack of supply leads to the significant danger that North Somerset will be losing out to other locations within the WECA geography which are delivering new high-quality stock, which could see North Somerset being left behind in terms of economic development and employment growth. A risk identified by the Council's own Economic Growth Plan. A commitment to deliver on the ambition committed to by Members through the Economic Plan to promote the area, capitalise on its competitive advantage and capture investment in the context of not keeping up with demand and trends is not being fulfilled. The evidence points to an even more acute need for new employment land in North Somerset. The reduction in available stock, negligible development pipeline, and ageing nature of existing premises underscore the urgency of delivering modern logistics and distribution space. Land East of Clevedon, Junction 20 M5, is evidenced to be necessary, in order to make the Plan sound. The benefits of this site as a key strategic employment allocation are compelling, and provide an opportunity which although acknowledged, is not currently realised in the draft Plan to attract nationally significant employers, including distribution and logistics occupiers. It can unlock significant direct benefits to the area, likely to generate an additional 1,267 FTE jobs in the local area and contribute over £90mn in GVA per annum to the local economy once fully operational. A further 500+ jobs and £36mn in GVA per annum would be created in the wider region. The site is therefore not only aligned with policy objectives but is critical to addressing a worsening supply-demand imbalance and safeguarding North Somerset's economic competitiveness.		
63213025	BackwellPC NailseaTC Flax BourtonPC BrockleyPC BackwellRA Nailsea Action Group	Lucy White Planning Limited	BackwellPC NailseaTC Flax BourtonPC BrockleyPC BackwellRA Nailsea Action Group	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure		For the reasons set out in response to Policies SP3 and LP3, NTC and BPC object to the following allocations in Schedule 1 and request the removal of these allocations on the basis that they are unsound and reasonable alternatives are available to meet the residual shortfall in housing need: 1. Poplar Farm, Nailsea – 130 dwellings 2. Pound Lane – 100 dwellings 3. Land South of Nailsea – 582 dwellings 4. Land East of Backwell – 889 dwellings. Objection is also raised to the extent of the allocation shown for Grove Farm, Backwell. The allocation is for 515 dwellings. The Council has resolved to grant outline planning permission for up to 515 dwellings under planning application 23/P/2618/OU2. However, the policies map includes an additional, physically separate parcel of land within the Grove Farm allocation, which sits immediately adjacent to the Rodney Road site (60 dwellings). See extract from Sustainability Appraisal (attached). The Council has failed to explain the reason for including this parcel of land within the Grove Farm allocation. To BPC and NTC's knowledge it is owned by North Somerset Council and has historically been safeguarded for educational use in association with the adjoining West Leigh Infants School. The land's inclusion within the Pre-Submission Plan was wholly unexpected by BPC. Discussions have taken place over the past twelve months with NSC's Assess Management Team regarding the transfer of ownership from NSC to BPC to enable the use as an outdoor educational space. The allocation of the site for residential use is superfluous to requirements; no housing allocation is given to this parcel of land which forms part of the Grove Farm allocation. The allocation as a		251118 Local Plan Reg 19 2025 reps FINAL.pdf R01 - Transport Statement - Rev 3 FINAL.pdf Hydrology LP3 BPC_NTC Appendix_2.2-compressed.pdf Hydrology LP3 BPC_NTC Appendix_9-compressed.pdf Hydrology LP3 BPC_NTC Appendix_2.1-compressed (4).pdf Hydrology LP3 BPC_NTC Appendix_7-compressed.pdf Hydrology LP3 Summary BPC_NTC Part 2 (1).pdf Hydrology LP3 Summary BPC_NTC Part 1 (1).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									whole is designated to support 515 dwellings which equates to the description of the outline planning application 23/P/2618/OU2. This additional, separate parcel of land should be deleted from the Grove Farm allocation and the land designated as Local Green Space, as an important area of green space, providing public rights of way to West Leigh Infants School and the opportunity for educational/recreational use in association with the school, to help to meet the needs of the growing village population. BPC and NTC request the deletion of this parcel of land from the Grove Farm allocation and the identification of the site for educational purposes with LGS status. BPC and NTC support the policy requirement for the housing allocation at Grove Farm to include provision of a primary school. However, the Council resolution to grant planning permission was subject to a developer obligation to provide 2 hectares of land for a primary school only. No financial contributions have been sought by the Council from the applicant to pay for delivery of the primary school, putting delivery of this essential infrastructure at risk, contrary to the provisions of the Local Plan and IDP. The Council's strategy for education to support development at Nailsea and Backwell must be explained to ensure the policy is effective in delivery of necessary infrastructure.		
62995553	Del Piero Ltd	Rapleys						We submit these representations on the Pre-submission (Reg 19) Local Plan 2041 on behalf of our clients, Del Piero Ltd, to promote 6 No. alternative residential sites in the Long Ashton / Barrow Gurney area. Each site is located: (i) close to the former Barrow Gurney Hospital; and (ii) adjacent to the emerging Taylor Wimpey residential scheme at the former Woodspring Golf Course (the Woodspring strategic location). In summary, we consider the 6 locations to be sustainably located, to qualify as grey belt under national policy and the Plan's approach, to be well accessed and serviced, and to be capable of making a material contribution to meeting the Plan's substantial affordable housing requirement. Our clients seek modifications to the Local Plan to recognise, allocate, or reserve these sites for early residential delivery as part of the Woodspring growth area and the wider Bristol fringe, with the associated policy provisions set out below. These representations address soundness (positively prepared, justified, effective and consistent with national policy) and legal compliance, and propose targeted modifications to strategic and locational policies to ensure the Plan is flexible enough to adapt to delivery risk and demonstrably meets housing needs in sustainable, well-connected places. Positively prepared: The modifications secure additional, sustainably located capacity in or close to urban areas with strong public transport and active travel potential (SP3), and they provide flexibility to meet objectively assessed needs, including affordable homes, in line with the Plan's Golden Rules for Green Belt releases. Justified: The promoted locations are adjacent to the Woodspring strategic site and major transport corridors; the Plan already identifies these corridors and hubs for enhancement (LP11), and requires integration with Parson Street, Metrobus and mass transit (LP2). The modifications exploit established infrastructure intentions and deliverability advantages. Effective: By embedding reserve/adjacent parcels within the Comprehensive Masterplan and design codes, and linking release to infrastructure triggers, delivery risks are mitigated. The approach supports the five-year supply and strengthens the affordable trajectory (LP2: 50% affordable housing). Consistent with national policy: The Plan's own justification recognises grey belt and exceptional circumstances; our approach follows the Plan's sequential framework (SP7, DP12) and flood risk requirements (DP9) including reservoir modelling for Barrow Gurney (LP2).	Our clients seek modifications to the Local Plan to recognise, allocate, or reserve these sites for early residential delivery as part of the Woodspring growth area and the wider Bristol fringe, with the associated policy provisions set out below. We commend the Council's strategic focus on sustainable growth at Woodspring and the Bristol fringe, and its firm commitment to affordable housing, active travel and ecological enhancement. To ensure the Plan is resilient, flexible and deliverable, our clients seek modest but important modifications to enable adjacent, grey-belt, sustainably located parcels near the former Barrow Gurney Hospital and next to the Woodspring scheme to come forward within the Comprehensive Masterplan. These sites are well-accessed and serviced, directly supportive of the transport hierarchy, capable of meeting the 50% affordable housing Golden Rule, and able to contribute land and funding to Nature Park habitat and flood resilience (including Barrow Gurney Reservoir modelling). The requested changes will enhance the Plan's soundness and give the Inspector confidence that housing—especially affordable housing—will be delivered early and in the right places.		Barrow Gurney Report.pdf BARROW GURNEY 11 12 2025.pdf
29337633	M7 Planning Ltd	OG Group		No	Justified	Yes	No	On behalf of our client, M7 Planning Ltd ("M7"), we wish to comment on the Yatton – Congresbury Strategic Gap and in particular the site referred to as "Land adjacent B3133, Congresbury", which was given the site reference HE20502 in the Reg.19 Additional Sites consultation in March 2025 and is shown on the attached site location plan. The site, being promoted by M7, has not been identified as a proposed allocation and it is assumed this is because of the comment made in the March 2025 consultation about: "Conflict with proposed Strategic Gap between Congresbury and Yatton." It is considered that the retention of the M7 site within the Yatton – Congresbury Strategic Gap is erroneous and can no longer be justified as an appropriate restriction for this site. This is stated in the light of the Council's decision to allocate a significant portion of the Strategic Gap (south of Yatton and immediately west of the M7 site) as the location for a new secondary school in this Draft Local Plan (Policy LP6 and Schedule 4 – Land off Smallway, Yatton). Development of a large school here will significantly erode the gap in this location, essentially leaving the M7 site as an "island" of undeveloped land between built-up areas, which	Remove land from Strategic Gap between Congresbury and Yatton (see attached location plan)		20374_1001A_Site Location Plan.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								will no longer serve any meaningful purpose as a strategic gap between the settlements. Therefore, the Yatton – Congresbury Strategic Gap should be amended to exclude both the M7 site and the secondary school site. Land adj. B3133, Congresbury: With its exclusion from the Strategic Gap, the M7 site then becomes appropriate for development. As the local planning authority is aware, a planning application was submitted for development of this site for 47no. dwellings, a two-storey medical centre, formation of a vehicular and pedestrian access from Smallway, landscaping, parking, drainage and other associated infrastructure works. The application (ref no: 22/P/1142/FUL) was refused by the local planning authority on 14 February 2025, on the following grounds: 1. The development will result in a less than substantial level of harm to Cadbury Hillfort, a Scheduled Ancient Monument. The identified public benefits are limited and therefore do not outweigh the harm to the significance of Cadbury Hillfort. The proposal therefore conflicts with paragraphs 213 and 215 of the NPPF. 2. The proposal is not on a site allocated for development in the North Somerset Sites and Policies Plan Part 2 - Site Allocations and is contrary to Policy CS33 of the North Somerset Core Strategy and Policy E1 of the Congresbury Neighbourhood Plan where development is strictly controlled in order to protect the character of the rural area and prevent unsustainable development. 3. The proposed development, by reason of its scale, height, and the proportion of the site to be developed, will transform the appearance of the 'Strategic Gap', giving it a built-up appearance which will contribute to a joining up of outlying development in Congresbury and Yatton, removing any sense of separation between these villages on the east side of Smallway. This conflicts with policy CS19 of the Core Strategy and policy SA7 of the Sites and Policies Plan; Part 2. In addition, one of the wider community benefits of the refused scheme was the inclusion of a new Medical Centre; indeed comments from Yatton Parish Council at the time indicated that they were fully aware of the need for a new surgery to serve Yatton and Congresbury. Viability concerns and lack of specific support from the CCG or NHS meant that delivery of this scheme could not be guaranteed. However, the Draft Local Plan includes significant additional development allocations and extant planning permissions at Yatton and Congresbury, amounting to c. 483 dwellings. This means that the need for a new Medical Centre in the areas has only increased. The M7 site represents the ideal location for such a facility, lying in a central and accessible location between the two settlements. M7 intends to look again at potential development of the site for various uses, including residential, elderly care and community uses (e.g. Medical Centre). M7 considers that there is a design solution available that will overcome the issues raised with the previously refused scheme, particularly with regard to ensuring that development will reduce the level of harm to the Cadbury Hillfort SAM. Removal of the land from the Strategic Gap will take away a significant barrier to development, thus allowing these potential important community facilities to come forward in a timely manner.		
21472417	Mead Realisations Ltd	Oneleven Property		No	• Positively prepared • Justified • Effective • Consistent with national policy				It is noted that a considerable number of allocated sites contained within schedule 1 and Schedule 2 have been carried over from the previous plan. This would suggest an element of uncertainty or problems of deliverability which should be properly considered by the Council. Land at Haybow (see plans at Appendix 1) should also be included as a development location for mixed use development with a minimum indicative residential capacity of 300 dwellings, as well as employment, retail community and leisure uses. Mead Realisation's land at Parklands Village (see plans at Appendix 2 which show the current application site and wider masterplan area) is include as part of a carried forward allocation at page 281 of schedule 1 of the PsP. It should be noted that pre-application discussions have been held to consider the potential for accommodation additional dwellings at the site (approximately 250 more than previously approved). It is understood that this additional capacity has been included in the Council's assumptions although clarification of this is required. Land at Broadleaze Farm, Winscombe (see plan at Appendix 3) is include within Schedule 1 of Policy LP5 as a location for 74 dwellings. This is supported. Land at Lynchmead Farm, Weston super Mare (see plan at Appendix 4) is not included within Schedule 1 of Policy LP5 as a location for development but subject to specific flood mitigation measures there are no significant constraints to developing this site. As such it should be identified for residential development.		Reg 19 Final Representations Mead Realisations 12.12.25 including appendices.pdf

									Land at Kewstoke Road, Norton (see plan at Appendix 5) is not included within Schedule 1 of Policy LP5 as a location for development but lies immediately adjacent to land approved for development for residential development at Ansons Road. There are no significant constraints to developing this site and as such it should be identified for residential development. Land at meeting House Lane Cleeve (see plans at Appendix 6 and 7) are not included within Schedule 1 of Policy LP5 as a location for development. There are no significant constraints to developing these site and as they should be identified for residential development.		
62717825	Ainscough Strategic Land (Stonebridge Farm)		Ainscough Strategic Land	No	• Effective			This representation relates to Policy LP10: Strategic Gaps. This policy looks to designate areas of Strategic Gaps in order to retain the separate identity, character and/ or landscape setting of settlements. ASL understands the importance of this and supports the policy as whole; however, ASL strongly disagrees with the boundary drawn on the Policy Map for the Banwell and Wolvershill Strategic Gap. This includes land at Stonebridge Farm, which is a suitable and deliverable development site and one that should be excluded from the Strategic Gap. Appendix 1 below includes a site location plan of the land at Stonebridge Farm, which is available for redevelopment. Stonebridge Farm is a circa 2.8-acre brownfield site currently consisting of a farmhouse, numerous farm buildings and a caravan storage area. The farm is related to the surrounding fields which now partly consists of the new Banwell Bypass. The rest of the fields associated with the farm have a planning application submitted for up to 600 dwellings including specialist later living accommodation, mixed-use Local Centre, a Primary School, sports and leisure provision including community park, public open space and associated access, infrastructure, landscape and ancillary works. This land forms part of the emerging Wolvershill allocation. Given the emerging allocation at Wolvershill includes the fields related to Stonebridge Farm, there will no longer be any use for the farm. The site is within one landownership and ASL are working alongside the Landowners to promote the site for redevelopment and therefore the site is available for development. Paragraph 125c) of the NPPF states that planning policies and decisions should 'give substantial weight to the value of using suitable brownfield land within settlements for homes and other identified needs, proposals for which should be approved unless substantial harm would be caused'. Stonebridge Farm is a brownfield site within the Banwell area, which is considered one of the 'larger, most sustainable villages' within the consultation document. The document confirms that the larger, most sustainable villages have scope to deliver a level of growth. Whilst the site is not within the settlement boundary for Banwell, it relates well to the village and has the feeling of being part of the village. It is in close proximity to both the existing facilities within Banwell but will also be closely connected to the new Wolvershill Local Centre. Footpath and cycle links between Banwell and the new community are being proposed. ASL have some concerns with the provision of housing within the plan; including: •The Plan as proposed risks not allowing for sufficient time (15 years from adoption) to meet a basic requirement for strategic polices set by national policy. A longer plan period is required to ensure that the Plan for North Somerset covers a period of at least 15 years from adoption, with a longer period likely to enable the Council to more effectively plan for future development in the area. •There is concern, and risks in respect of the soundness of the Plan, that whilst seeking to meet the minimum level of housing need identified using the standard method, a higher housing requirement should be set to address evidenced affordable housing needs and to accommodate some of Bristol's unmet needs. •There is concern, and risks in respect of the soundness of the Plan as proposed, that no housing delivery trajectory has been provided for the Plan as a whole, or for the specific sites which are identified as part of the proposed strategic policies. This should be addressed as part of the submission of the Plan, given some of the allocated sites' housing delivery will fall beyond the current plan period. It is important that the Council allocate a range of sites of different sizes to ensure the 1,580 dwellings per annum requirement can be met and that the Council do not prevent sustainable, brownfield sites from coming forward. Smaller sites such as this can be delivered quickly. The site is brownfield, deliverable, in a sustainable location and can be delivered in the short term.	See attached representation.		Regulation 19 Pre-submission plan 2041 (Reg 19) - Autumn 2025 Consultation - Stonebridge Farm Reps.pdf
57956257	J Bradley			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Objection to the Allocation of Tower Farm 1. Ecological Harm and Failure to Demonstrate Mitigation The site plays an essential role in maintaining the ecological integrity of Weston Big Wood (SSSI) and the wider Gordano Valley ecological corridor. It supports local biodiversity, provides critical habitat connectivity, and contributes significantly to North Somerset's landscape character. The Local Plan does not demonstrate that these ecological constraints can be effectively mitigated. Weston Big Wood is ancient and irreplaceable, such habitats cannot be recreated or compensated for through development. Any development in this location would result in unavoidable and unacceptable	To make the Plan legally compliant and sound, the following modifications are necessary 1. Remove Tower Farm from the proposed allocations This site should be deleted from the Local Plan because their allocation is not justified, not effective, not deliverable, and is inconsistent with national policy relating to Green Belt protection, ancient and irreplaceable habitats, and safe access requirements. Their removal is required for the Plan to meet the NPPF soundness tests. 2. Reassess the spatial strategy to ensure compliance with Green		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								ecological harm. 2. Green Belt Designation and Lack of Exceptional Circumstances Tower Farm was added to the Green Belt in the late 1980s due to the landscape, ecological and strategic importance. National planning policy requires that changes to Green Belt boundaries occur only in exceptional circumstances and must be supported by clear evidence. No such circumstances have been demonstrated. Housing need alone does not justify releasing Green Belt land, particularly where alternative, less constrained sites exist. This location does not meet any credible definition of “grey belt”. It sits immediately next to two SSSIs which are the highest level of nature conservation designation in England reinforcing its strategic importance and the inappropriateness of allocating it for development. 3. Unsuitable, Unsafe and Undeliverable Access The sites cannot provide safe or suitable access, as required by the National Planning Policy Framework (NPPF). The steep topography, constrained local road network and existing junction limitations create significant safety issues. These cannot be resolved through normal mitigation measures. Channelling traffic from hundreds of new homes past a primary school and through an already constrained T-Junction would result in additional congestion and heightened safety risks for pedestrians, cyclists and children. 4. Severe Transport Impacts and Unsound Transport Evidence Development in this location would generate substantial additional traffic on already constrained routes, including the Portbury Hundred and the narrow local road network, particularly at the Avon Way junction and the High Street mini-roundabout. The transport evidence submitted by the developers is incomplete and does not account for existing peak time congestion, including significant volumes of school traffic. The impacts are foreseeable, severe and cannot be mitigated to acceptable levels. As a result, the proposed allocation fails the NPPF tests of soundness, especially in relation to justification, effectiveness and deliverability. Due to the lack of exceptional circumstances for Green Belt release, the significant and unavoidable ecological harm, unresolved access constraints and severe transport impacts, the allocation of Tower Farm is unsound and should be removed from the Local Plan.	Belt legislation and national policy The Plan must demonstrate genuine exceptional circumstances for any Green Belt release. No such evidence has been provided for Tower Farm. The Green Belt appraisal and site selection process should be revised to ensure transparent, evidence-led assessment that complies with national policy and case law. The current assessments fail to address the impacts on Weston Big Wood SSSI, adjacent SSSIs, and the Gordano Valley ecological corridor. The Plan must include detailed, site-specific ecological evidence demonstrating how harm to irreplaceable ancient woodland habitats would be avoided, not just slightly mitigated. If this cannot be demonstrated, these sites cannot be allocated. 3. Update the transport evidence base to address inaccuracies and omissions The submitted transport assessments exclude key data, including actual school-peak traffic conditions and local junction constraints. A revised, comprehensive transport assessment is required. It must demonstrate that safe and suitable access can be achieved for all users and that severe residual cumulative impacts will not occur. If such evidence cannot be produced, the sites must not be included in the Plan. Re-evaluate deliverability in line with national planning policy Access constraints, topography, ecological protections and infrastructure limitations raise serious questions about deliverability. The Plan must ensure that all allocated sites can realistically be delivered within the Plan period. Sites that cannot meet access, ecology, or infrastructure requirements should be removed. 4. Strengthen the Plan’s methodology for the selection and rejection of sites The current approach lacks transparency and does not adequately evidence why environmentally constrained Green Belt sites have been preferred over less sensitive or more sustainable alternatives. The site selection methodology should be revised to ensure it is clear, consistent, and aligned with the tests of justification and effectiveness.		
58516481	Mr Thomas Catling (Woodstock Homes, Knightcott Road, Banwell)		Woodstock Homes (Construction) Ltd	Unsure	Justified Effective Consistent with national policy	Unsure	Unsure	Woodstock Homes control the 22 acre site, Land to the South of Knightcott Road, Banwell, a site which has been promoted through the earlier stages of the Local Plan process and recently achieved a resolution to grant at the October Planning and Regulatory Committee for outline planning on 4.6 acres of the site for up to 27 dwellings (24/P/0967/OUT). Woodstock are in control of the remaining 17 acres, of which was part of a previous application for 95 dwellings (23/P/2303/OUT) was made but was later withdrawn. This representation submissions aims to provide commentary on the emerging Local Plan, with focus on the rural settlements, specifically Banwell. Banwell is identified in the adopted Core Strategy as a service village (Policy CS32), containing a number of local services along with public transport links. By way of the inclusion of Banwell within Schedule 5 of the Pre-Submission Plan, as a settlement with a defined boundary, it is clear that the council acknowledges the village within the settlement hierarchy. The Vision for the North Somerset Local Plan 2041 makes clear that there is an aspiration to encourage development in highly sustainable, accessible and attractive places. SP6: Villages and rural areas, reinforces this aspiration with the importance of accessible locations with good walking, cycling and public transport connections. However, Policy SP3 (Spatial Strategy) acknowledges that “most of the development which takes place in these areas will be at the relatively more sustainable villages”. Banwell is identified within the current Core Strategy as a Service Village (Policy CS32), offering a number of a local services along with public transport links throughout the wider district. However, Schedule 5 (Settlements with settlement boundaries), has Banwell listed as “Retained and reviewed existing boundary”, meaning no further allowance for sustainable growth at the edge of the settlement boundary has been considered. By assessing the settlement boundaries further, this would therefore help to reduce the need for Green Belt release throughout the district. SP1: Sustainable development illustrates a clear focus for development to come from the most sustainable areas however, this is contradicted by LP7 which prevents growth directly in Banwell. The Wolvershill and Woodspring proposed allocations helps to ensure larger allocations with longer term development forecast. However, the council will need to accept that the delivery of these sites will take many years before completion. More specifically, the Woodspring allocation for 3,500 homes, although requires the ‘Golden Rules’ set out in the NPPF to be met (50% affordable housing, improvements to local infrastructure and provision of new green spaces), there could be more opportunity for developments in sustainable settlements to come forward result in less Green Belt land being released to meet the housing targets. Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								LAND TO THE SOUTH OF KNIGHTCOTT ROAD, BANWELL The site is situated immediately adjacent to the existing built development to the west of the village and to the south of the A371 Knightcott Road. A mix of existing residential development to the east at Knightcott Gardens as well as a handful of existing properties to the north of the site. The site is sustainable in transport terms and is within walking/cycling distance of a range of facilities, with access to a network of footpaths and Public Rights of Way (PRoW), while Knightcott Road is a bus route with connections to the national rail network in Weston-Super-Mare. Schedule 7 also includes reference to the Banwell Bypass which will assist with all movements to the east directly into Banwell. The recently approved scheme for 27 dwellings has now set the principle of development in the norther section of the site. Woodstock Homes believe there is still further opportunity to design a scheme that continues the principles of the gap between Banwell and Knightcott, encourages views up towards Banwell Hill, and sets parameters for storey heights of future dwellings. This could look to offer 62 additional units (total 89 units). Further community benefits can be provided allowing for a provision of tree planting (orchard), wildflower meadows, community allotments and play provision. Under Policy LP10: Strategic gaps, north of Knightcott Road and to the east of the Wolvershill allocation, a strategic gap proposal has been put in place to protect the identify and character of the settlements. The land south of Knightcott Road has allowed for a landscape gap to the eastern area to help protect the identity of Banwell and the Knightcott Hamlett. Future development could be proposed to the western area of the site allowing for this gap to continue along the eastern corridor to Banwell Hill. Policy DP53: Best and more versatile land looks to safeguard Grades 1, 2 and 3a agricultural land by proposing strict criteria significantly restricting potential development on BMV land. This will be problematic for many settlements within North Somerset where the spatial strategy already severely constraints opportunities for sustainable growth. This will rule out potential opportunities for small scale developments on BMV land going against the approach which does envisage the use of BMV land where necessary to ensure the delivery of sustainable development. CONCLUSION A number of areas have been highlighted above where the North Somerset Pre-Submission Local Plan could benefit from further review. Specifically, provision for sustainable growth in rural settlements such as Banwell has not been allowed despite the area being identified as a Service Village. The promotion of Land to the South of Knightcott Road allows for opportunities to meet local housing needs in a sustainable way. We encourage the Council to consider incorporating smaller and medium sized allocations in sustainable villages such as Banwell. This would help to strengthen the supply strategy allowing for the plan's objectives to be achieved over the plan period.			
51242689	Latimer Developments Limited	Arwel Evans - Lichfields	Latimer Developments Limited	No	• Justified	Yes	No	The North Somerset SHLAA 2025 Appendix 2: Further Site Assessment (October 2025) The North Somerset SHLAA 2025 Appendix 2: Further Site Assessment (October 2025) identifies the known constraints of land north of Claverham (SHLAA Reference HE201072) as being: • High Value Landscape; • Potential Setting of Grade I or II star Listed Building; and, • PROW Lichfields question this assessment as there are no Grade I or Grade II* Listed Buildings within the vicinity of the site. A review of the Historic England Search the List: Map Search highlights that there are only Grade II Listed Buildings nearby including: • Claverham House to the west of the site; • Claverham Dovecote 40 metres west and in grounds of Claverham Cottage to the west of the site; • Manor Farm House to the north west; • Church of St Barnabas which is located nearby the north eastern boundary of the site; and, • White Cottage to the north. In any case, these Grade II Listed Buildings are not located within the site and the layout can be designed to preserve the setting. It is also important to highlight that the masterplan has been designed to maintain and enhance the existing PROWs. We do not consider that the existing constraints identified in NSCs evidence base are correct and therefore should not afforded any weight.	Site HE201072 should be properly assessed based on evidence. We feel that the site should be allocated in the Local Plan. We have enclosed a vision document to demonstrate the site's suitability and its merits as a 100% affordable housing scheme.		LF62683-01 Claverham - Vision Document (update) - Apr25 v6 (HR)(33693312.1).pdf
9138657	Home Builders Federation		Home Builders Federation	No	• Justified • Effective • Consistent with national			Policy LP5 is not considered to be sound as it is not effective, justified or consistent with national policy.	Although HBF do not comment on specific site allocations, we find this policy is unsound because additional housing allocations are required. We are of the view, for the reasons details elsewhere in our representation, so not repeated here, there need to be more housing allocations. HBF are also surprised that the Council has chosen not to include a		North Somerset 2nd Reg 19 Dec 25.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					policy				list of the housing and employment allocations within the wording of this policy. Doing so would greatly assist the usability of the Plan and assist with the housing monitoring. Monitoring of the Plan, particularly housing delivery, will be needed and it is important that this is as effective as possible, other the Plan will be unsound.		
51477249	Burrington Parish Council		Burrington PC	Unsure	Consistent with national policy	Yes	Unsure	On previous drafts of the local plan we expressed concern that a wider range of sites for housing would be needed to avoid challenges to the supply of housing land and the ad hoc addition of sites through planning appeals, especially in view of the substantial increase in housing requirements arising from the new standard method of calculating housing requirements. We can see that North Somerset Council has now made significant changes to the settlement strategy to include new large sites for housing which now include a substantial urban extension south west of Bristol ('Woodspring'), a number of strategic housing sites at Nailsea and Backwell, some of which already have planning consent, the 'Wolvershill' strategic allocation north of Banwell and strategic sites at Pill and Easton-in-Gordano, as well as continuing development adjoining Weston-super-Mare (Parklands Village and Winterstoke Village), new site allocations at Clevedon and Portishead and redevelopment sites within Weston, some of which are carried forward from the Site Allocations Plan of 2018.It seems to us that the Council has thus sought to identify a realistic and as wide as possible range of options to accommodate the increased housing requirement. Some rural settlements like Churchill and Winscombe are also making significant contributions to housing land supply, although some sites were committed through planning appeals which means that they are not always well integrated with the existing settlement (or other appeal sites). Committed housing sites in the larger villages do not therefore always achieve the aims set in the Core Strategy for 'Service Villages' in terms of more self-containment in jobs and services, protecting the character of the settlement, or achieving improvements in public transport.	More detail is required about the allocated housing sites to demonstrate their feasibility, desirability and consistency with other planning policies– in the form of a development brief		
30323233	Bob Durie		Duries Property Consultants	Unsure		Unsure	Unsure			Promotion of land at South Yanley Lane Long Ashton Identified in the consultation as Site HE2021. This submission to the North Somerset Local Plan 2040 Additional Sites consultation is made by Mary Lazo and Susan Pearce, co- owners with others of land at Bridge Farm and either side of Yanley Lane at Long Ashton. A location plan is attached. The site is identified as 'Other potential' in the North Somerset Local Plan 2040 Additional Sites consultation. It is SHLAA site HE2021 and comprises an area of 14 hectares with a suggested total capacity of 280 dwellings. The owners of the land wish the site to be taken into the forthcoming Regulation 19 consultation version of the Local Plan as a proposed allocation. The site's promoters will engage with the Regulation 19 consultation with further information on the site and the way it could be developed to provide confidence to the Council that the site is suitable and could be relied upon for development. 63066337	Hutton Parish Council		Hutton Parish Coiuncil	Unsure		Unsure	Unsure	Regarding LP5 and Schedule 1: Large sites for residential development: Land to the west of Elborough and Land north of Banwell Road, Locking /Elborough (plan pages 292 and 293): As detailed in the attached HPC Parish of Hutton Survey Report Feb 2021 - see page 3, 5, 70 and 73 - there was a lack of support and strong opposition for any new housing within the Parish - which was a key Issue in the Survey Conclusion. • The majority - 86% did not support new housing being built outside or adjacent to the Settlement Boundary of Hutton. • The majority - 83% did not support any new housing being built in the vicinity of Elborough Village. As such it was agreed that: • The Parish Council will monitor all development and continue with it's strategy of protecting the green landscape and open spaces. • The Parish Council will continue to oppose housing and other developments where it believes it is right to do so. Therefore Hutton Parish Council oppose and object to the NSC Local Plan Additional Housing Consultation for the following reasons:			Parish of Hutton NP Survey Report Feb 2021.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								• The additional housing would be against the majority of wishes, as detailed in the HPC Parish of Hutton Survey Report Feb 2021. • The additional housing would be against the Parish Council strategy of protecting the green landscape and open spaces, as detailed in the HPC Parish of Hutton Survey Report Feb 2021. • The strategic gap does not look to have been maintained. The new estates appear to effectively link Elborough and thus the Parish of Hutton to the Parish of Locking - thus removing any strategic gap with Locking. • No safe walking or safe cycling routes for children or adults to and from the current Parish facilities situated in the village of Hutton - including School, Village Hall, Scout Hut, Children's Play Area, Adventure Play Area, Hutton Football Club and local businesses. • Lack of facilities and amenities such as shops and community facilities. • Loss of green landscape and open spaces. • Lack of sustainable infrastructure to support the new housing. • Increased road traffic in the vicinity of the new houses and Elborough in Banwell Road. • Increased road traffic through the village of Hutton 20 MPH Zone to get to the new houses and Elborough in Banwell Road. • Regarding the road between Hutton and Elborough, not only would it see increased traffic, but the road is very difficult and in places not wide enough for 2 cars to pass (yet alone buses and lorries) which will build congestion etc.. • The proposed developments around Elborough Village are very extensive • There will be some 400 additional properties added to the existing 180 properties in Elborough Village. These dwellings are in an isolated position there are no existing services within this area neither in Hutton. It seems difficult to see development being sustainable in this area unless there is an increase of facilities. • There are possible schools at Locking Parklands but there would need to be safe walking or cycle works and an increase in school places would be necessary to cater for the large increase in children • There are no community facilities at Elborough and if 400 houses are added it would be essential for some community facilities to be provided. There is also the proposal of some 360 houses immediately adjacent to Elborough in the Locking Parish. • There would need to be Highways upgrading to give suitable access to the A371 • There would need to be the introduction of public transport to support this development as at present there is none. • With the high demand on North Somerset for housing it seems that the Elborough Development although we dot consider them “Sustainable” they are more sustainable than many other areas proposed in these plans. • North Somerset is in an impossible situation in having to provide the level of development required by the Government. • If all this proposed development does take place where are the expected influx of people going to seek employment or will the transient population seek to travel yet even further than at present.			
62883969	Innova Consulting Services	Innova Consulting Services	Corylus Planning and Environmental Ltd	No	Positively prepared Effective	Yes	No	Policy SP8 states that land is identified to deliver a minimum of 23,700 dwellings for the period 2026-2041 equivalent to 1,580 dwellings per annum. The North Somerset Local Housing Needs Assessment Report of Findings (ORS Sept 2025) identifies at p. 5 an annualised requirement of 1,580 dwellings however others have identified the North Somerset annual housing requirement under the NPPF (2024) standard method to be 1,593 per annum. https://www.pegasusgroup.co.uk/the-new◈standard-method-what-does-it-mean-for-local◈housing-need/ This results in a shortfall of 195 dwellings over the plan period (13x15). The policy wording is also misleading as land is not ‘identified’ for 23,700 as there is a reliance identified in the Spatial Strategy evidence paper(Oct 2025) at paragraph 5.4 on ‘small site’ windfalls delivering 3,000 dwellings over the 15-year period. This is a rate of 200 dpa over 15 years, or 250dpa over 12 years. There is no certainty that these dwellings will be delivered. NPPF (2024) paragraph 75 states that there “should be compelling evidence” that windfalls “will provide a reliable source of supply” where an allowance is made for them to be part of anticipated supply. It is also very unlikely that 23,700 dwellings will be delivered in the 15-year plan period owing to the reliance on past allocations being rolled forward plus large new development locations/strategic allocations that require the delivery of strategic infrastructure to facilitate their delivery. Table 5 (p.30) and Table 6 (p.31) of the SHLAA Main report (Oct 2025) set out anticipated build out rates and delivery from sources of supply for the plan period. This delivery is optimistic compared to evidence presented in the Lichfield’s Start to Finish Report Third Edition (Sept 2024). Based in empirical evidence this report finds that sites of 1000 dwellings plus take 5 years to obtain detailed planning permission and up to a further 1.6 years to deliver the first dwelling. Annual build out rates for schemes of 2,000+ dwellings are 100-188 dpa (compared to the Council’s assumption of 180dpa) and schemes of 500-999 dwellings build out at 44-83dpa (compared to the Councils 100dpa). In summary, the Council do not identify sufficient dwellings to meet their standard method requirement. The housing requirement will increase should the plan period lengthen to take account of any extended Examination and Main Modification consultation; the Council rely heavily on small site windfalls (3,000 dwellings) rather than allocating sufficient land to meet their requirements; the Council make assumptions on delivery that are not founded in empirical national evidence. Also pp9-10 of the Reg 19 Pre-Submission Plan states the plan period 2026 –	The Council should increase their plan period housing requirement to accurately reflect the standard method calculation in the NPPF (2024), not supress it. The Council should consider increasing their Plan Period to 2045 to account for delays in submission or Examination of the plan and the need for any additional and main modification consultations. The Council should allocate additional small to medium sites, in accordance with NPPF paragraph 73, in sustainable locations adjacent to main towns such as Weston-super-Mare that can deliver quickly and contribute to the Council’s five-year supply of deliverable housing sites on adoption of the Local Plan. One such site for consideration is our client’s site located to the south of Bleadon Lane (SHLAA ref: HE2035). The SHLAA spreadsheet table lists a single constraint against our client’s site as Landscape, yet the site immediately to the north on higher sloping ground and more visible in the landscape from Purn Hill (SHLAA ref:HE201030) also has landscape listed as a single constraint and yet it is allocated for 81 dwellings. The photo attached at Appendix 2 taken from Purn Hill shows how prominent the allocated site will be in the landscape once developed (the bright greenfield) and yet our client’s site shown at Appendix 3 is hidden from view between mature hedgerows to the south of Bleadon Hill and will have less impact when viewed from this location. Appendix 4 a contour plan shows the allocated site situated on rising ground. Neither site is situated within the National Landscape. While the NPPF is clear at paragraph 189 that great weight is to be given to conserving and enhancing National Landscapes paragraph 189 also states that development within the setting of a National Landscape “should be sensitively located and designed to avoid or minimise adverse impacts on the designated areas”. Development at our client’s site would be able to meet this test. The Council, for the reasons stated above are requested to give further consideration to the allocation of our client’s site ref: HE2035 Land south of Bleadon Hill. Also revise the plan period to reflect a minimum of 15 years from a realistic adoption date given the need for Examination and Main Modification consultation with associated uplift in housing requirements for the extended plan period. Consider the NPPF requirement for a 30-year plan period given the size and scale of the larger growth locations and their needs for strategic infrastructure delivery. 								2041. NPPF paragraph 22 states that strategic policies should look ahead over a minimum 15 year period from adoption and that where large scale or significant extensions to existing towns and villages are part of the strategy for the area that policies should be “set within a vision that looks further ahead (at least 30 years), to take account the likely timescale for delivery”. There are two points to make. 1. Examination and adoption of the plan are proposed in 2026 by the Council. Most examined Local Plans require post hearing Main Modification consultation. The plan is therefore unlikely to be adopted in 2026 and the plan period should be extended accordingly. 2. The Reg 19 Pre-Submission Plan contains large strategic development allocations at Wolvershill (3,300 dwellings) and Woodspring (3,500 dwellings) as well as two urban extensions to Weston-super-Mare carried forward form the Site Allocations Plan (3,900 dwellings). Urban extensions are also proposed at Nailsea and Backwell. It is argued that the plan should have a 30-year plan period to allow for the delivery of the strategic infrastructure required to bring forward the strategic development locations and urban extensions. See policies LP1 p.51; LP2 p.58; LP3p.65.			
63052097	Stephanie Fowler	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes			Our client is supportive of the identification of sites able to accommodate 10no. or more dwellings as allocations under the emerging plan. With tightly drawn settlement boundaries, it is considered unlikely that a great number of ‘windfall’ sites of any larger size will be found.	R001v3_NSLP_Reg19_Fowler.Dec25.pdf
39076833	University of Bristol	Alder King Planning Consultancy	University of Bristol	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The University of Bristol’s view is that the Local Plan is unsound and not legally compliant with regard to the Woodspring strategic development allocation (Policy LP2). The soundness of the plan in this regard is set out below. Positively Prepared: In accordance with the NPPF, positively prepared is defined as: “providing a strategy which, as a minimum, seeks to meet the area’s objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development.” The NPPF is clear that, in calculating housing need under the standard method, this figure is to be treated as a minimum. Therefore, should there be suitable sites available to deliver housing over the local plan period, these should be supported notwithstanding the Council’s position that is has reached its requisite ‘target’ under the standard method. Moreover, owing to the Council’s most recent Housing Delivery Test measurement, it is appropriate that a 20% buffer is applied for the first five-years of the plan, in accordance with the NPPF. While stated as a minimum figure, we consider the quantum of housing planned for under Policy SP8 to be negative and insufficient. A number of suitable sites promoted through the local plan process have been unduly discounted by the Council and we consider this to be the antithesis of the plan being positively prepared. One such site comprises the University of Bristol’s land south of Long Ashton (HE20139). The site lies adjacent to the settlement boundary, sustainably located in the context of Long Ashton and Bristol, comprising grey belt land which could/should comfortably be brought forward for development in the new local plan. The Council’s Spatial Strategy, Site Selection and Capacity Paper (October 2025) identifies Long Ashton as a Category A village, which represents settlements “considered to be relatively sustainable in their own right with a range of easily accessible services and facilities and good public transport links to towns”. It is very notable that despite its acknowledged sustainability credentials, and acknowledgement that Green Belt land is required to be released, Long Ashton has all but been ignored for any growth of scale over the plan period. Two small sites are identified within the existing settlement boundary to deliver 42 dwellings. We consider this to be highly irregular for such a sustainable settlement to be consistently overlooked by the Council for accommodating any real growth and raise significant concerns with the Spatial Strategy under Policy SP3 in this context. Planning for a mere 42 homes in Long Ashton to 2041 is not considered to be a positively prepared spatial strategy approach. Additional housing sites which have been consistently promoted to the Council by the University, and consistently overlooked through the emerging local plan process include land to the west of Wyndhurst Road (adjoining the Category A village of Churchill settlement boundary) (site: HE20590) and the nearby land at Stock Lane Farm, Langford (previously developed land) (site: HE203031). The Council’s ‘Duty to Co-operate Statement of Compliance Regulation 19	The Council’s overarching spatial strategy, housing numbers and allocation sites identified should be comprehensively reviewed and revisited as it is clear that. This requires review of suitable residential allocation sites omitted from the draft plan which are, in the first instance outside the Green Belt, and then sites which are agreed to be Grey Belt. We contend that the following sites owned by the University of Bristol represent suitable, available and viable development sites which would positively support sustainable growth over the plan period, including in the early years, and should be allocated for development in the new local plan: • Land at Stock Lane Farm, Langford – HE203031 • Land to the West of Wyndhurst Farm – HE20590 • Land south of Long Ashton – HE20139 The University supports Draft Policy LP19, albeit we consider that minor modifications to the policy wording should be made to acknowledge the sustainability of the location. As present, we consider the policy wording to present an overly negative position of the area which would conflict with the aspirations of the policy to support University development in this area.		NSLP_Pre_Submission_Plan_Representation_Form_Part_B_UOB_LP2.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Stage' (October 2025) sets out that Bristol City Council (BCC) have requested for neighbouring authorities, including North Somerset Council, to accommodate its unmet housing need. The Council's Duty to Co-operate statement is clear that "North Somerset does not have capacity to meet some of Bristol's needs at this time". We do not agree with that position. We highlight the importance of North Somerset's position in the context of South Gloucestershire Council also making no provision in its Draft Local Plan (plan submitted for examination) to contribute towards Bristol's unmet need. Similarly, through its emerging local plan process, B&NES Council has made no commitment to contributing to Bristol's unmet need owing to it being heavily constrained and having to deal with its own significant housing requirement uplift (approximately double that before the new 2024 standard method). In this regard, it is noted that on 21 November 2025, the inspectors published their final post-hearing advice following examination of the new Bristol Local Plan. The inspectors have requested modifications to the plan from BCC to set out an increased housing need and clearly set out what the level of unmet housing need is. An extract from the inspectors' post-hearing advice is provided below, which reinforces the position that no agreement is in place between BCC and any neighbouring authority, including North Somerset, to accommodate the unmet need. The inspectors set out that they: "acknowledge that there is insufficient capacity to meet the Council's objectively assessed housing need, as calculated by the standard method. Nevertheless, we do not consider the figure of 34,650 dwellings over the Plan period to be positively prepared or justified. Given the significant shortfall in meeting overall needs, and the current lack of agreement between Bristol and any neighbouring authorities to provide assistance, we consider it imperative that the Council seeks to maximise housing delivery. Inherent uncertainties in housing delivery in the longer period do not justify setting a housing requirement substantially below the overall housing capacity figure identified at submission. The evidence submitted since the end of the hearing sessions has not persuaded us that a lower figure is justified." Therefore, it stands that BCC's significant unmet housing need will continue to go unmet with none of its neighbouring authorities committing to assist. We find this problematic with particular regard to North Somerset as we consider there to be appropriate scope for a greater number of housing sites to be identified in the new Local Plan and delivered through the course of the plan period. The Council's own additional sites consultation in February/ March 2025 demonstrated that this was the case. The unmet need for Bristol is significant, cannot be ignored and requires to be addressed within the new North Somerset Local Plan. National guidance within the NPPF is clear that plans should ensure that, inter alia, unmet development needs from neighbouring areas are provided for to ensure effective strategic planning across local planning authority boundaries. It is clear from the Council's own work that North Somerset are in a strong position to be able to identify significant additional housing sites through allocations in the new local plan. This would positively overachieve the Council's housing need target and provide a meaningful contribution to the unmet need of BCC. Pursuant to the Council's emerging local plan process, it carried out consultation on potential additional housing sites to be included as draft allocations in the Reg 19 plan ('Consultation paper on additional sites for the Regulation 19 Plan', February 2025). That identified sites which the Council considered to be 'most suitable', such as that at Yanley Lane South West Bristol (HE20110) in addition to a raft of sites identified as having 'other potential', including sites now identified as draft allocations i.e. around Pill and Easton-in-Gordano and sites now omitted as draft allocations i.e. the University of Bristol's land south of Long Asthon (site: HE20139) and land to the west of Wyndhurst Road, Churchill (site: HE20590). The Council set out within that consultation that sites with 'other potential' comprised: "sites at the towns and larger, more sustainable villages consistent with the spatial strategy". [our emphasis] It stands that the Council rightfully identified suitable residential sites in sustainable locations pursuant to the 'other potential' sites in the 'Consultation paper on additional sites for the Regulation 19 Plan' (February 2025). However, such sites have been unduly disregarded at the Reg 19 plan stage and, in our view insofar as the University of Bristol's land south of Long Asthon (site: HE20139) and land to the west of Wyndhurst Road, Churchill (site: HE20590) wrongfully omitted. The latter lies outside the Green Belt and so should be preferred to the various sites proposed to be released from the Green Belt, as sought be national planning policy guidance. Site HE20139 and HE20590 are available now and deliverable to contribute towards significant positive growth within the plan period and should be supported for allocation. We consider that there is scope for additional appropriate housing sites to deliver over the plan period which are available, suitable and viable. In the Council's own words these disregarded sites are "consistent with the spatial strategy" and yet have been ignored. We contend this is the wrong approach, particularly in the context of the significant identified unmet need for Bristol. We therefore disagree with the Council's position that it cannot accommodate		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								any of the unmet housing need from Bristol in North Somerset. In this context, the North Somerset Local Plan is not considered to be positively prepared, justified, effective or consistent with national policy. Justified: In accordance with the NPPF, to be justified this requires: “an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence.” As set out above, it is considered that reasonable alternative sites for housing allocations have been unduly discounted by the Council, in conflict with the evidence base which should otherwise support its approach. Therefore, we do not consider that all draft housing allocations are sufficiently justified which goes to the soundness of the plan. Paragraph 148 of the NPPF is clear that where it is necessary to release Green Belt land for development, as is established and agreed in North Somerset, plans should give: “priority to previously developed land, then consider grey belt which is not previously developed, and then other Green Belt locations.” Prior to this, non Green Belt sites should be prioritised for allocation. In this regard, our client has consistently promoted its land south of Long Ashton and at Wyndhurst Farm (site: HE20590) and Stock Lane Farm (site: HE203031) at Churchill/Langford. However, the Council is not supporting a draft housing allocation on any of the three land parcels. We consider this to be contrary to NPPF paragraph 148 and is not a justified approach in plan making terms. Land at Stock Lane Farm, Langford – HE203031: The University’s land at Stock Lane Farm comprises previously developed land, outside of the Green Belt. This is sustainably located in relation to Langford and Churchill and has been promoted for development with capacity for up to 64 dwellings. There is a realistic prospect that houses could be delivered on the site within five years. The site was previously identified as a ‘less sustainable’ site, wrongfully in our view, as part of the Council’s Consultation paper on additional sites for the Regulation 19 Plan’ (February 2025). The consultation ran to March 2025 to which representations were submitted by the University in relation to all three of its land parcels referenced. In this regard, the site is well related to the settlement and existing facilities and services in Churchill and Langford. Adjacent to the west of the University’s land at Stock Lane Farm, planning permission ref: 23/P/0448/OUT was approved by the Council in March 2025 for a mixed-use development comprising up to 120 dwellings, new flexible employment, children’s day nursery and café, along with associated car parking, landscaping, tree works, public open space and local equipped area for play, drainage infrastructure, access improvements and connections to the existing footpath network. We note the Council’s also identified that land as a ‘less sustainable’ site in the previous consultation, while granted it planning permission, and now identifying it as a draft allocation. This outlines the inconstancy in the Council’s approach to its housing sites in the new local plan. The presence of planning permission 23/P/0448/OUT only further supports development on the University’s land adjacent at Stock Lane Farm (HE203031) which critically comprises previously developed land. In this context, the University’s land is annotated red on the plan (see attachement) which comprises the adjacent approved development (and now draft allocation). The Council’s decision to omit the University’s land at Stock Lane farm is not justified in the context of Draft Policies SP3 and SP8. The site is sustainably located, outside of the Green Belt on previously developed land and adjacent to the Monaghan Mushrooms site (Draft Policy LP23), pursuant to planning permission 23/P/0448/OUT. Land to the West of Wyndhurst Farm – HE20590: The University’s land west of Wyndhurst Farm Stock Lane Farm comprises greenfield land adjacent to the settlement boundary of Churchill. This is sustainably located and has been promoted for development with capacity for up to 90 dwellings at a density of 29 dwellings per ha. There is a realistic prospect that houses could be delivered on the site within five years. The site was previously identified as a site with ‘other potential’ as part of the Council’s Consultation paper on additional sites for the Regulation 19 Plan’ (February 2025). The Council set out within that consultation that sites with ‘other potential’ comprised: “sites at the towns and larger, more sustainable villages consistent with the spatial strategy”. [our emphasis] The Council’s published ‘North Somerset Strategic Housing Land Availability Assessment Main Report’ (October 2025) further sets out that the site was considered by the Council to have “potential for further consideration”. Notwithstanding this, the Council’s published ‘Spatial strategy, site selection and capacity paper’ (October 2025) confirms that this site is not a proposed			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								allocation in the draft Local Plan with commentary provided as follows: “The site is outside settlement boundary with a distinctive rural character providing a clearly defined separation between the area of Churchill centred around Bristol Road and Pudding Pie Lane, and the smaller settlement of Lower Langford to the east. Due to the impact on the landscape and potential impact on heritage assets, it is not considered appropriate to take this site forward as a housing allocation.” We do not agree with the Council’s assessment of the site and its position to omit this as a draft allocation. We note that pre-application discussions with the Council resulted in the suggestion to promote the site at that time through the local plan which has been comprehensively done and so it is disappointing to see this be omitted as a draft allocation. This is particularly the case given the extent of the Council’s housing need which should, in the first instance be addressed by appropriate sites such as this outside of the Green Belt before seeking to remove land from the Green Belt. Development on the site would comfortably assimilate with the surrounding built form, providing sustainable development. It is notable that planning permission (ref: 22/P/2908/OUT) was approved in November 2024 for nine dwellings adjacent to the south of the site which only provides further support for development in this location. Different development options have been considered which would address all material considerations for the site, which include a scheme for 24 units and a scheme for up to 90 units in this regard, as illustrated below. The site is wholly sustainable with any associated impacts of development more than capable of being addressed with appropriate mitigation. In this regard, the Council’s decision to omit the University’s land is not justified in the context of Draft Policies SP3 and SP8. Land south of Long Ashton – HE20139: The University’s land south of Long Ashton comprises land within the Green Belt, adjacent to the settlement boundary of Long Ashton. This is sustainably located and has been consistently promoted for a number of years to the emerging local plan, and previous WECA joint spatial plans for development with capacity for up to 1,500 dwellings. The site was previously identified as a site with ‘other potential’ as part of the Council’s Consultation paper on additional sites for the Regulation 19 Plan’ (February 2025). The Council’s published ‘North Somerset Strategic Housing Land Availability Assessment Main Report’ (October 2025) further identifies that the site was considered by the Council to have “potential for further consideration”. Notwithstanding this, the Council’s published ‘Spatial strategy, site selection and capacity paper’ (October 2025) confirms that this site is not a proposed allocation in the draft Local Plan with commentary provided as follows: “Site not consistent with the spatial strategy as it is detached from the existing built-up area of Long Ashton.” We do not agree with the Council’s assessment of the site and its position to omit this as a draft allocation. It is clear that the site should accord with an appropriate spatial strategy which directs growth to the most sustainable locations. Therefore, the Council is not following this by omitting the University’s land as an allocation. The site is well related to Long Ashton in addition to the city of Bristol. It appears that the Council have unduly set preference to directing growth to the neighbouring Yanley Lane/Woodspring site (HE20110) (draft allocation for 3,500 dwellings under Policy LP2) at an early stage of the plan making process. This position has not shifted even as the evidence base has been developed which indicates to the contrary. Attention is turned to the Council’s Sustainability Appraisal Report (October 2025). This sets out the findings of the assessment of potential allocation sites against the sustainability appraisal objectives. A summary is provided (see attached document) with comparison of our client’s land south of Long Ashton, which has been discounted by the Council and the Yanley Lane South West Bristol land, which is proposed to be allocated for development by the Council in the Local Plan. This comparison is provided owing to the proximity and context of both sites, and similarity with regard to scope to provide strategic growth. This sets out the similarities in the Council’s assessment of both sites which, when compared, identifies fewer negative effects of development on our client’s land than that identified for allocation by the Council at Yanley Lane. The sustainability credentials of our client’s land are clear and development of this land should be supported. The Council’s Spatial Strategy, Site Selection and Capacity Paper (October 2025) provides commentary on the potential allocation sites. For our client’s land south of Long Ashton (HE20139) this states that the site is not proposed for allocation and that the: “Site not consistent with the spatial strategy as it is detached from the existing built-up area of Long Ashton”.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Whereas for the Yanley Lane site (HE20110), this states that the site is proposed for allocation and that the: “Site [was] previously identified (in smaller form) in Regulation 18 plan”. The fact that the Yanley Lane/Woodspring site was preferred by the Council at early stages of the plan, in advance of the supporting evidence base work being carried out, is not sufficient justification for it to be allocated. This is required to be justified and supported by the evidence base, which we do not consider it to be, in the context of the University’s land south of Long Ashton. The Council’s approach contradicts NPPF paragraph 148 in identifies sites to be removed from the Green Belt for development. The Council’s ‘Stage 2 Green Belt Assessment’ (October 2025) identifies the land south of Long Ashton to make an overall weak contribution to the purposes of the Green Belt. Whereas, the Yanley Lane/Woodspring site is determined to make a greater contribution, set at ‘moderate’ to the Green Belt purposes. This comparison is provided (see attached document), pursuant to the Council’s Stage 2 Green Belt Assessment. In Green Belt terms, it is clear that the University’s land south of Long Ashton makes less off a contribution to the Green Belt purposes than the Council’s proposed allocation at Yanley Lane/Woodspring. Moreover, our client’s land would wholly support sustainable patterns of development in the context of Long Asthon and Bristol, in accordance with NPPF paragraph 148. Further to this, as can be seen in the Green Belt assessment, the University’s land makes a weak contribution to Green Belt purposes A, B and D. There are no relevant footnote 7 assets that would provide a strong reason for refusing or restricting development on the land. Therefore, this can be considered Grey Belt, subject to the specifics of the development proposal. The Council’s Stage 2 Green Belt assessment agrees with this position however the Pre-Submission (Reg 19) version of the plan still determines not to allocate the land for development which we consider to not be justified. The NPPF is clear that Grey Belt land should be supported for directing development in new local plans (NPPF paragraph 148). In this context with the omission of our client’s land for allocation, we dispute the Council’s claim at page 30 of the Pre-Submission Plan (Reg 19) that: “A sequential approach to Green Belt release has been taken prioritising previously developed land, followed by grey belt sites and then other Green Belt locations”. The omission of the University’s land south of Long Ashton seemingly goes against the supporting evidence base and therefore we do not consider the approach to be justified, with particular regard to Draft Policies SP3, SP7, SP8 and LP2. The Council’s overall spatial strategy and policies/allocations to direct housing growth are required to be informed by the evidence base. Effective: In accordance with the NPPF, to be effective means to be: “deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground.” As set out above, where we consider the plan to not have been positively prepared, the Council’s ‘Duty to Co-operate Statement of Compliance Regulation 19 Stage’ (October 2025) sets out that BCC have requested for neighbouring authorities, including North Somerset Council, to accommodate its unmet housing need. The Council’s Duty to Co-operate statement is clear that “North Somerset does not have capacity to meet some of Bristol’s needs at this time”. We do not agree with that position on account of suitable sites being omitted for development allocations, particularly where the Council has previously acknowledged the sites to have ‘other potential’ which, in the Council’s words are “sites at the towns and larger, more sustainable villages consistent with the spatial strategy”. This is particularly relevant to the University’s land south of Long Ashton and at Stock Lane Farm and Wyndhurst Farm in Churchill/Langford which comprise either previously developed land outside the Green Belt, land outside the Green Belt adjacent to the Category A village settlement boundary for Churchill, or Grey Belt land adjacent to the Category A village settlement boundary for Long Ashton. While the Council’s housing figure over the plan period (Draft Policy SP8) is prescribes as a minimum, this is a negative approach when considering that additional sites are readily available to deliver above this figure, and should be set out as such in policy. This strongly supports our position that North Somerset is fully capable of accommodating additional growth, thereby contributing towards the unmet need from BCC. However, the Council is unduly deciding not to do this – this is not effective plan making. Moreover, the NPPF is clear that planning policies should identify a supply of specific, deliverable sites for five years following the intended date of adoption, with an appropriate buffer. It is likely that some of the larger strategic development/urban extension areas identified for allocation in the plan will not begin to deliver homes within the first five years and so this means that greater flexibility and contingency is required to be built in to ensure housing delivery is forthcoming in the early years of the plan to meet the minimum requirements. Ensuring early delivery of housing early in the plan period is critical.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Consistent with National Policy: In accordance with the NPPF, consistency with national policy should be adhered to: “enabling the delivery of sustainable development in accordance with the policies in this Framework and other statements of national planning policy, where relevant.” For the reasons set out within these representations, it is considered that the Council’s Reg 19 Pre-Submission Plan is not consistent with national policy with particular regard to the guidance in the NPPF relating to failure under the duty corporate and the approach to accommodate none of BCC’s identified unmet housing need. The plan inadequately makes provision for insufficient housing in this context which is not justified owing to the evidence base supporting identification of additional land which could positively support housing growth over the plan period. Moreover, we consider the Council’s approach to identifying the draft housing allocation sites is flawed and inconsistent with national policy in overlooking suitable sustainable previously developed land and greenfield sites in the first instance ahead of Green Belt sites; and subsequently overlooking suitable sustainable Grey Belt sites which should be prioritised for development ahead of the remainder of the Green Belt. Conclusions: For the reasons set out above, we consider the plan to be unsound in its current form. Ultimately, the primary reason the plan is not considered to be sound is owing to the approach that the evidence base has followed the Council’s overall strategy; rather than the other way around. The evidence base should directly support the approach laid out in the plan and this is not the case. Notwithstanding this position, the University provides support for Draft Policy LP19 for the ‘University of Bristol site in Langford’ allocation. We welcome the recognition this policy provides for the significant educational and employment benefits made by the University of Bristol’s campus in Langford to the local, and wider, area. The University of Bristol support the policy aims of LP19 which recognise the importance of the facility and support the new development opportunities that will enable the university to grow and accommodate necessary expansion in terms of student numbers and staff employment. We consider that Draft Policy LP19 in isolation is sound as this does not relate to the outstanding wider concerns raised which relate to housing in terms of housing growth quantum and spatial approach. Minor modifications are suggested to the wording of Draft Policy LP19, in so far as we consider this to present a negative picture of the existing sustainability credentials of the site. For users of the campus not based locally, this is readily accessible by non-car modes with regular bus services available. This includes the U2 service which the University provides free passes to students of the veterinary school to travel. Therefore, while this draft policy is strongly supported, we would support minor wording changes to the policy which acknowledge its sustainability. Further detail is hereby provided below and appended in relation to the University of Bristol’s land at Stock Lane farm and Wyndhurst Farm in Churchill/Langford and land south of Long Ashton. Development on this land, with support from residential allocations should be provided in a new sound North Somerset Local Plan. Land at Stock Lane Farm, Langford – HE203031: Availability: Site HE203031 is in single ownership by the University of Bristol. The land has been identified as surplus to requirements, having previously been used in association with the University’s Langford Veterinary Campus for research and academic studies. It is readily available now, able to make a meaningful contribution to the Council’s five-year land supply. Suitability: Site HE203031 offers a suitable location for development of housing. There are no development constraints that would prevent allocation of the site for its early development for housing. The site is well related to a ‘Category A’ village (most sustainable) and so its allocation fits comfortably into the Council’s emerging spatial strategy. The site is accessible by a choice of means of transport to local facilities, including employment opportunities, schools, shops and other services. 4 The site, comprising previously developed land, forms part of the existing built form along Stock Lane and is subject to no designations/constraints that would restrict redevelopment of the site for housing. Likely Economic Viability: There are no known extra-over costs associated with the development of this site nor any issues with utilities which would mean that it would be economically unviable. There is a realistic prospect that houses could be delivered on the site within five years. 4.7 The site has capacity for up to 64 dwellings, subject to detailed design and is available, suitable and		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								economically viable. It should be allocated in the local plan to assist North Somerset providing a sufficient supply and mix of sites to meet their minimum required housing need. Land to the West of Wyndhurst Farm – HE20590: Availability: Site HE20590 is in single ownership by the University of Bristol. The land has been identified as surplus to requirements for some years. It is readily available now, able to make a meaningful contribution to the Council's five-year land supply. The site has consistently been promoted for allocation through the local plan process following the advice of the Council during a formal preapplication submission in 2020. Suitability: Site HE20950 offers a suitable location for development of housing. There are no development constraints that would prevent allocation of Site HE20590 for its early development for housing. The site lies adjoining a 'Category A' village (most sustainable) and so its allocation fits comfortably into the Council's emerging spatial strategy. The site is accessible by a choice of means of transport to local facilities, including employment opportunities, schools, shops and other services. The site lies abutting the settlement boundary of Churchill as proposed in the emerging local plan. It has no landscape, heritage or other designation. It is in Flood Zone 1 (low risk) and grade 3 agricultural land. Likely Economic Viability: There are no known extra-over costs associated with the development of this site nor any issues with utilities which would mean that it would be economically unviable. There is a realistic prospect that houses could be delivered on the site within five years. The site has capacity for circa for 90dwellings at a density of 29dwellings per hectare. An example of how the site might be developed for housing is provided below. Site HE20590 is available, suitable and economically viable and should be allocated in the local plan to assist North Somerset providing a sufficient supply and mix of sites to meet their minimum required housing need. Land south of Long Ashton – HE20139: Availability: The site is in single ownership by the University of Bristol. The land has been identified as surplus to requirements for some years. It is readily available now, able to make a significant contribution to the Council's housing need over the plan period. The site would form a natural extension to Long Asthon being contiguous with the existing settlement boundary of to the north and is physically contained between the A370 to the east/south and Wild Country Lane to the west. Allocation of the site for development, and its release from the Green Belt, is supported by NPPF paragraph 148 in that growth here will promote a sustainable pattern of development on Grey Belt land. This is a requirement of the NPPF. Notably, significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes as is the case for this site. Moreover, releasing land from the Green Belt for development are required to ensure that, inter alia, sustainable transport modes are prioritised, safe and suitable access can be achieved and any significant impacts from the development on the transport network, or on highway safety, can be cost effectively mitigated to an acceptable degree through a vison-led approach. The University's land south of Long Ashton fulfils all criteria with its strong relationship with the existing Long Ashton settlement and being in close proximity, and well connected to, Bristol. Suitability: The site offers a suitable location for development of housing on Grey Belt land. There are no development constraints that would prevent allocation of Site HE20139 for its development for housing. This conclusion is informed by a suite of past technical information on the site. The site lies adjoining a 'Category A' village (most sustainable) and so its allocation fits comfortably into the Council's stated spatial strategy. The site is accessible by a choice of means of transport to local facilities, including employment opportunities, schools, shops and other services. Likely Economic Viability: There are no known extra-over costs associated with the development of this site nor any issues with utilities which would mean that it would be economically unviable. There is a realistic prospect that houses could be delivered on the site over the plan period. The site is available, suitable and economically viable and should be allocated in the local plan to assist North Somerset providing a sufficient supply and mix of sites to meet their minimum required housing need. The proposal on the site is informed by the substantial of technical work which has been carried out to date.

								Key facets of a future development of this site could include: • Up to 1,500 dwellings, including a mix of tenures and affordable housing; • Potential to include a mix of non-residential uses; • New access onto the A370 • Cycle routes and public footpaths; • Green infrastructure, including public open space; • Biodiversity Net Gain. A plan demonstrating how development could be achieved on the site is provided in the attached document.			
63299425	Mac Mic Strategic Land Flax Bourton	Planning Potential	Mac Mic Strategic Land	No	' Positively prepared ' Effective	No	Yes		Currently, this policy states that residential sites (of more than 10 units) and employment sites are identified in the Policies Map. These sites are shown in Schedule 1 and 2, with the schedules indicating the potential capacity and principles to be applied for each site. The attached Framework Plan (Figures 2.1 and 2.2) sets out how the Land to the East and West of Flax Bourton is capable of being brought forward to provide c. 200-250 dwellings, together with public open space, allotments, active travel routes and scope for an extension to the existing primary school. As set out in previous representations, MacMic considers that the site(s) would provide valuable additional housing provision that should be considered consistent with the wider spatial strategy focussing housing development in the Nailsea and Backwell area and should be included as part of the preparation of the North Somerset Plan 2041. In this context, we are aware of the potential that other sites at East of Backwell are likely to propose a lower level of housing than was originally suggested through the Regulation 18 consultation, and that there remains some doubt about whether the level currently being proposed is achievable in the context of good planning/design. With that in mind, we consider that the actual level of housing delivery may start to fall below what has been assumed to date. It is understood, however, that the Council does not agree that Flax Bourton should be regarded as forming part of the Nailsea and Backwell SOL. Even were NSC to conclude that the site(s) should not be taken forward for formal inclusion within the emerging Local Plan, it is considered that the site would represent a suitable 'reserve' site that would be brought forward were other proposed allocations either not accepted for inclusion by the appointed Local Plan Inspector, or those allocated sites fail to come forward within the envisaged timescale. On this basis, Mac Mic considers that it would be appropriate, justified and sound to include the Land East and West of Flax Bourton within Policy LP5 (and Schedule 1), with an indicative capacity of 250 dwellings, public open space, active travel routes and scope for an extension to the existing primary school. Land East and West of Flax Bourton represents a suitable, available and viable option for residential development and Mac Mic invites the Council to include its allocation in the Pre-Submission Draft. The evidence gathered to date shows that the site can successfully address all technical matters such as flooding, landscape and highways. It will be a highly sustainable, well-located residential development that provides for significant levels of green infrastructure, help address deficits in local services and facilities provision, and enable sustainable (non-car based) transport links to be created that will allow existing settlements better access to job provision, services and infrastructure. Recommendation For these reasons, whilst Mac Mic supports the principle of the current draft of Policy LP5, they consider that the Land to the East of West of Flax Bourton should be included, either as a formal allocation or as a 'reserve site' within Policy LP5 and Schedule 1 with an indicative capacity of 200-250 dwellings.		North Somerset Local Plan Pre-Submission Plan - Flax Bourton Representations Final.pdf
63006177	Mac Mic Strategic Land (Land north of Banwell Road)	Planning Potential (Elliot Jones)	Mac Mic Strategic Land	No	' Effective	Unsure	Unsure	Currently, this policy states that residential sites (or more than 10 units) and employment sites are identified in the Policies Map. These sites are shown in Schedule 1 and 2. These schedules indicate the potential capacity and principles to be applied for each site. Land north of Banwell Road, Elborough/Locking is identified as having an indicative capacity of 315 dwellings in Schedule 1: Large sites for residential development. The schedule states that development at the site is required to fund upgrades to Banwell Road junction with A371 (as identified on the Policies Map), make contributions to the expansion of primary, secondary and early years education in the local area and provide surface water attenuation together with demonstrating how this will drain the site.	Whilst Mac Mic supports the current draft of Policy LP5 and that Land north of Banwell Road, Locking/Elborough is included in Schedule 1, they object to the suggested capacity of the site and consider that it should be increased to 415 homes.		01 North Somerset Local Plan Pre-Submission Plan Consultation Representations.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								It also notes that any planning application must demonstrate that joined up safe active and sustainable travel provision can link this site (along with the allocation on Land to the west of Elborough) to Locking village and the A371 strategic cycleway. Proportionate contributions will also be required towards bus service provision and the existing Public Right of Way AX18/1/20 is to be upgraded. The text in Schedule 1 also notes that any proposed development must consider the approved skatepark facility to the north of the site, north of Old Banwell Road, and demonstrate that no new dwellings will be affected by that consented scheme. Mac Mic are in the process of preparing an outline planning application for Land north of Banwell Road, Locking/Elborough. This followed positive pre-application discussions with the Council during the summer 2025. The proposed development will address each of the criteria set out in Schedule 1. Consideration has been given to off-site highway improvements to Banwell Road and these will be incorporated where it is proven that they are required following detailed highways analysis (which has informed the outline planning application submission). It is also proposed as part of the draft Heads of Terms to make contributions to local education provision within the vicinity of the site subject to viability considerations. The proposed site layout - which formed the basis of the Vision Document that was submitted with the representations to the Regulation 19 Pre-Submission Draft in 2024 - was cognisant of the potential flood concerns raised by development on this site and was designed and laid out to avoid areas of the site that had a higher potential to flood. This layout informed the site allocation, which was first put forward in the Additional Sites Paper, and is now the basis for the allocation in the Pre-submission Draft. However, whilst the rationale for the site boundary appears to have been driven by flood risk data and analysis, it is Mac Mic's view that the site could accommodate additional development on site and that the site's capacity should be increased to circa 415 dwellings. As part of the information to be submitted in support of the outline application, Mac Mic will prepare a sequential test that demonstrates that further development can be accommodated. Notwithstanding the outcome of the Sequential Test, Mac Mic consider that the Exception Test can be passed. The existing strategic flood defences means that the planning balance/ benefits of the scheme when assessed against the real world flood risk should take precedence. As such, they consider that a slight expansion of the site boundary is appropriate to allow the proposed residential development to be optimised. Whilst being driven by addressing flood matters on site, Mac Mic see the design ethos of split development areas as being a key attribute of the site. It allows for the introduction of the country park in the centre of site. This area will also provide for on-site green infrastructure, the retention of a strategic gap and the delivery of biodiversity. One of the many benefits of the development of this site is that it will improve the accessibility and sustainability of the existing settlement of Elborough. It is proposed that community facilities will be built in close proximity to the village whilst the creation of the country park will allow for the provision of new cycleways and pedestrian footpaths linking the southern parts of the site (and Elborough) to the north and the facilities within Locking and Locking Parklands (as well as Weston-super-Mare). This will be supported by proportionate contributions to bus service provision and improvements to existing public right of ways. The outline planning application has been the subject of community consultation. This has involved meeting with local Parish Councils and undertaking on-line consultation. It is clear from the feedback that Mac Mic has received that significant resources have been spent on the community facilities north of Banwell Road, Locking including the new skate park. Accordingly, the proposals have been revised to ensure that they complement rather than compete with existing facilities, for instance, the proposed development will now provide for allotments, which was indicated as being in demand by local communities. The design and layout of the site will also consider that proximity of the skate park and will ensure that no residential amenity issues arise. Land to the north of Banwell Road, Elborough/Locking therefore represents a suitable, available and viable option for residential development and Mac Mic supports its allocation in the Pre-Submission Draft. The evidence gathered to date and which will be presented with the application shows that the site can successfully address all technical matters such as flooding, landscape and highways. It will be a highly sustainable, well-located residential development that provides for significant levels of green infrastructure, help address deficits in local services and facilities provision, and enable sustainable (non-car based) transport links to be created that will allow existing settlements better access to job provision, services and infrastructure. Recommendation For these reasons, whilst Mac Mic supports the current draft of Policy LP5 and that Land north of Banwell Road, Locking/Elborough is included in			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								Schedule 1, they object to the suggested capacity of the site and consider that it should be increased to 415 homes.			
63298945	Mac Mic Strategic Land (Backwell)	Planning Potential		No	' Justified ' Effective	No	Yes	Currently, this policy states that residential sites (of more than 10 units) and employment sites are identified in the Policies Map. These sites are shown in Schedule 1 and 2, with the schedules indicating the potential capacity and principles to be applied for each site. Land East of Backwell is identified in Schedule 1 as having an indicative capacity of 889 dwellings. Consistent with our representations to Policy LP3, although Mac Mic are confident that up to 500 homes can be delivered on the Land East of Backwell B site, the Council should examine carefully whether the Land East of Backwell A site can deliver the required number of homes for the site overall. The Schedule states that among other matters, development is required to: ◈ provide 5ha of employment land with uses appropriate to the location and maximising opportunities for office and light industrial development ◈ consider heritage sensitivity and follow a heritage-led masterplan ◈ provide a cross rail link road between Station Road and the A370 (designed as an Urban Neighbourhood Distributor) ◈ provide land for the delivery of a primary school (including early-years accommodation). Although the Land East of Backwell B site can provide up to 2 hectares of employment land, the need and suitability for the Land East of Backwell site to provide 5 hectares overall should be robustly justified. The need for a school to be provided within the allocation site needs to be fully justified. Mac Mic has already provided to officers evidence to demonstrate that when using the appropriate methodology there remains sufficient capacity within existing primary, early years and secondary school provision at Backwell to cater for the demand arising from the Mac Mic site, which is expected to come forward ahead of the Land East of Backwell A site. We are aware, however, that land has been identified within the Land East of Backwell A site, which could accommodate the provision of a school (if justified). Mac Mic supports the provision of any required school provision in this location. The outline planning application that is being prepared follows positive discussions with the Council since the summer of 2025. The proposed development will address each of the criteria set out in Schedule 1 (subject to our objection above). Nevertheless, the outline application that is being prepared for the Mac Mic site responds to the other requirements of draft Policy LP5 and represents a heritage and landscape-led masterplan approach that seeks to provide the appropriate form of both housing and mixed-use development. The proposed masterplan also sets out the route of the proposed relief road, which is intended to run from a new junction off the A370 in a north-west direction, where it will then link into a separate development parcel for the remaining Land East of Backwell site (which is currently being promoted by others). Land East of Backwell represents a suitable, available and viable option for residential development and Mac Mic supports its allocation in the Pre-Submission Draft. The evidence gathered to date and which will be presented with the application shows that the site can successfully address all technical matters such as flooding, landscape and highways. It will be a highly sustainable, well-located residential development that provides for significant levels of green infrastructure, help address deficits in local services and facilities provision, and enable sustainable (non-car based) transport links to be created that will allow existing settlements better access to job provision, services and infrastructure. Recommendation For these reasons, whilst Mac Mic supports the current draft of Policy LP5 and that Land East of Backwell is included in Schedule 1 , they consider that the Council should ensure that it is satisfied that the indicative capacity figure set out in Schedule 1 can be delivered and that the need for any additional school provision should be robustly justified and provided within the Land East of Backwell A site.	For these reasons, whilst Mac Mic supports the current draft of Policy LP5 and that Land East of Backwell is included in Schedule 1 , they consider that the Council should ensure that it is satisfied that the indicative capacity figure set out in Schedule 1 can be delivered and that the need for any additional school provision should be robustly justified and provided within the Land East of Backwell A site. 										• Mixed use urban renewal to include new homes, town centre uses and net increase in jobs. • Development to conform to the principles of the Wyndham Way Development Area Framework and Policy LP20. Support LP5 and Schedule 1 allocation for Wyndham Way Broad Location	
21390881	E Griffiths								Why is Even Keel not on the local plan? Ideal situation 5 minutes from station and bus stop.		
62913761	Miller Homes (Battens Farm)	Tom Rocke	Miller Homes	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	For reasons that are set out in the foregoing representations, the proposed allocations will not deliver the housing that is needed during the Plan period, or plan led growth in accordance with the spatial strategy. With particular regard to Nailsea, five of the seven sites that are proposed for allocation in the Plan are subject to extant planning permissions. These sites account for 598 of the 701 dwellings (85%) comprising the allocated capacity at Nailsea. Moreover, only one of those sites (14 dwellings on Land east of Youngwood Lane) is a proposed new allocation, the remainder having been carried forward from the Site Allocations Plan that covers the period to 2026. It is arguable that the sites the subject of extant planning permissions should not be allocated in the current plan since there they are not plan-led growth that can be influenced by it. The only proposed allocation that is not the subject of an extant planning permission (Land at North West Nailsea) is also carried forward from the Site Allocations Plan, albeit much reduced in area and scale from the 450 dwellings that were previously proposed. Moreover, the site has been allocated in several previous Development Plan Documents, but has failed to come forward. The distillation of all of the above is that there is only one new site proposed for allocation at Nailsea that is not carried forward from the Site Allocations Plan, comprising the Land East of Youngwood Lane with a capacity of 14 dwellings, and even that site is already a commitment through an extant planning permission. This means that 98% of the allocated capacity in the current plan was intended to meet housing needs at Nailsea in the period to 2026. Moreover, given that the site at North-West Nailsea that is carried forward from the Site Allocations Plan has been reduced in capacity from 450 to 75 dwellings, and in any event was intended to meet housing needs at Nailsea during several earlier plan periods, this means that the undelivered capacity in the period to 2026 is 375 dwellings greater than foreshadowed in Schedule 2. As is evident from the above, the new Plan-led growth at Nailsea during the Regulation 19 Plan period to 2039 will be negligible. It is clearly not performing its intended role in accordance with the spatial strategy. It follows that there is an urgent and compelling need to allocate additional housing land at Nailsea to meet housing needs during the current plan period to 2039. In the foregoing representations SMD has cited the potential for significant unconstrained growth to the south-west of Nailsea, which is not within the Green Belt, or subject to flooding, is not designated landscape or subject to other environmental constraints designations. The potential has previously been acknowledged by the Council through the JSP and an earlier Local Plan Options Document. Through their representations to the Regulation 18 Plan, SMD presented their vision for a new neighbourhood of circa 600 homes that represents the next logical phase in the evolution of the town, will provide the missing link between the committed housing sites to the West of Engine Lane and North of Youngwood Lane36, and provide a coherent urban extension to the south-west of the existing urban area37. That vision document, which now forms part of the Council's evidence base, demonstrated the potential for a phased development, with the first phase providing connectivity between the committed sites to the north and east. An application for a standalone first phase of development for up to 200 homes has now been made38. The assessments accompanying that application confirm that the scale of development proposed can be accommodated without unacceptable environmental impacts, and without the requirement for significant new off-site highway or other infrastructure. They also confirm the position alluded to in the foregoing representations that the site is well placed to benefit from the enhancements in sustainable transport infrastructure that will be delivered in conjunction with the ongoing development of the site to the east (Land North of Youngwood Lane), in conjunction with which a substantial financial contribution is payable to the Council for enhancements to the existing bridleway in an easterly direction towards the town centre and via Backwell Lakes towards the Station. If this potential is taken into account through the SA, then it is likely that its sustainability score will be comparable with the allocated site North of Youngwood Lane. A site location plan for the Phase I site is included at Annex 1 to these representations. Given the compelling need for additional sites to deliver additional homes at Nailsea during the current Plan period to 2026, and to enable the town to perform its intended strategic role as identified in the spatial strategy, the site should be allocated in the current plan. The site can deliver homes quickly, and in that regard contribute to alleviating the	• Allocate land at Batten's Farm (between the proposed allocations / commitments at Youngwood Lane and West of Engine Lane) for up to 200 dwellings; • Consider the potential for additional land to the south west of Nailsea to deliver homes later in the Plan period, to meet current plan period needs, and to enable Nailsea to fulfil its intended strategic role.		Annexes_final_composite.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Council's position in relation to its five year supply of deliverable housing land, which has long been, and continues to be, problematic. Given that all of the existing allocated capacity at Nailsea is committed, it is already factored into the housing land supply assessment, and will therefore make little, if any, contribution towards improving it. Moreover, consideration should be given to the potential of the wider site39,as demonstrated through the submitted vision document for Batten's Farm, to come forward as a second phase later in the plan period. Additional planned growth is essential to meet needs in the period 2026-2039 (given that current allocations are intended to meet needs in the period to 2026), and to enable Nailsea to achieve its intended strategic role.			
51732129	Gleeson Land	tor&co (Jacqueline Mulliner)	Gleeson Land	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	This policy simply requires the allocations to comply with the site-specific requirements, but with respect to those site allocations, rather than broad locations for development, the policy is unnecessary because reference to the requirements/schedule is already made within the individual site allocation policies. Notwithstanding, out objections to the requirements are set out under our response to LP3. Please also See Appendix A of these representations which include specific transport representations by i-Transport supporting the above	Delete the policy or limit its application to Board Locations only		North Somerset Reg 19 Reps (2025-12-12) - Gleeson Land (Appendix B).pdf
58594049	Woodstock Homes (Land west of Butts Batch, Wrington)	Oliver Ansell	Woodstock Homes	No	• Justified • Effective • Consistent with national policy	Unsure	Unsure	Please see representations document In the context of the Local Plan, land west of Butts Batch, Wrington represents a deliverable, proportionate and sustainable opportunity for early housing delivery in a Service Village that the Council's own evidence identifies as accessible and well-served within North Somerset. Notwithstanding this, the Pre-Submission Plan allocates no growth to Wrington and retains an outdated settlement boundary. The deliverability of Land West of Butts Batch, supported by pre-application engagement and an imminent planning application, reinforces the case for the site's inclusion as an allocation to ensure the Local Plan is positively prepared, justified, effective and consistent with national policy	Please see representations document The deliverability of Land West of Butts Batch, supported by pre-application engagement and an imminent planning application, reinforces the case for the site's inclusion as an allocation to ensure the Local Plan is positively prepared, justified, effective and consistent with national policy		829 A5 OA 111225 Representations to Reg 19 Local Plan.pdf North Somerset Local Plan Pre-submission Plan - Representation form Part B.pdf
51446561	Woodstock Homes Ltd (multiple sites)	Kit Stokes	Woodstock Homes	No	• Effective • Consistent with national policy	No	Unsure	We act for Woodstock Homes who have an option to development land at Land to The North of Greenhill Road Sandford HE201022 (planning application 20/P/1120/OUT) and are preparing to apply for 37 dwellings. Our clients strongly object to North Somerset Council's proposal to designate the land to the north of Greenhill Road, Sandford, as a strategic green gap. It is important to note that this site has already been assessed positively within the Broad Locations and sifting assessments of the North Somerset Housing Land Availability Assessment 2025. The land in question s both suitable and available for development and could deliver 37 much-needed new homes, helping to meet local housing demand without compromising the essential separation between Sandford and Churchill. The National Planning Policy Framework (NPPF) does not specifically promote the designation of strategic green gaps between villages as a formal policy tool. Instead, it focuses on broader objectives such as directing new housing development towards established settlement boundaries and safeguarding the countryside from inappropriate development. Furthermore, there are well established planning policies that seek to protect important landscape features and to ensure that design and layouts are appropriate to their context. The policy explains that strategic gaps are needed to keep settlements distinct. Our view is that these policies largely duplicate existing countryside and development control policies, which already address coalescence, landscape protection, and inappropriate development. As such, adding a strategic gap policy offers little extra protection or clarity and instead adds unnecessary complexity. In particular, the proposed strategic gap at Sandford in North Somerset lacks clear justification, as there is no substantial evidence showing current policies are insufficient, nor robust criteria supporting its necessity. Local allocations include Mendip Hills National Landscape and Churchill Conservation Area. These are suitable landscape constraints in close proximity to the proposed area for the green gap. In addition, there are policies such as Policy DP36: Biodiversity net gain, Policy DP37: Trees, woodlands and hedges, Policy DP38: Landscape, Policy DP39: Mendip Hills National Landscape, Policy DP40: Built heritage which will offer similar protection. LP10 explains that Strategic gaps have a broad similarity to some of the purposes of Green Belts to prevent merging of settlements. This is incorrect and out-of-date. The NPPF 2024 introduced grey belt criteria which effectively allows pragmatic development on the edges of villages where the golden rules are met. The strategic gap has no such criteria. Furthermore, we note that NS Council has discontinued the presumption in favour of applications for housing on land adjacent to villages, which was previously permitted under adopted LP policy CS32 allowing up to 25 houses adjoining service villages. Therefore, we are of the view that the proposed Strategic Gap policy is superfluous or redundant given the use of other planning policy tools that allow an assessment of individual site circumstances. The use of multiple criteria, such as the 12 listed in the Strategic gaps background paper (Nov 2023) to assess a green gap , reflect general characteristics that apply to much rural land adjacent to villages. As a result, policy emphasis should remain on the settlement boundary approach and	As per attached document.	Modification Remove policy LP10	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								evidence-based landscape protection, rather than the creation of strategic green gaps as an additional mechanism. Our view is that the designation as a green gap is therefore unnecessary and unjustified when balanced against the identified housing need and robust site and policy assessment evidence.			
51446561	Woodstock Homes Ltd (multiple sites)	Kit Stokes	Woodstock Homes					Promotion of additional residential sites as referred to in comments on other policies: Land north of Greenhill Road, Sandford (HE201022) South of Knightcott Road Banwell (HE2098) and West of Butts Batch Wrington (HE20198)			
62864385	Richard Little		Your Land Partner	No	• Positively prepared • Justified • Effective	Unsure	Unsure	This representation relates to Land north of Caswell Lane, Portbury, previously assessed within the Council's evidence base as HELAA/SHLAA reference HE202003. The Site was promoted through the Call for Sites process but has not been allocated in the Pre-Submission Local Plan 2041. This representation contends that the Local Plan is unsound under NPPF paragraph 35, as it is not positively prepared, not justified, and not effective, due to a failure to properly consider reasonable alternatives in a District that is heavily constrained by flood risk, geography, and administrative boundaries. Key Soundness Issues 1. Failure to Respond to Strategic Constraints North Somerset is significantly constrained by: • the Severn Estuary and extensive coastal and tidal flood risk to the west; • fluvial and surface water flood risk inland; • extensive Green Belt designation; • the Bristol administrative boundary to the north and east. In this context, the Plan must direct growth towards lower-risk, deliverable locations. The current spatial strategy fails to do so adequately. 2. Under-utilisation of Portbury as a Sustainable Location Portbury represents a sustainable northern settlement with: • strong functional and economic links to Bristol and Royal Portbury Dock; • excellent access to the strategic highway network (M5 Junction 19); • established local services and public transport connectivity. Despite these attributes, the Plan directs limited growth to the north of the District and instead relies heavily on locations that are more exposed to flood risk and delivery complexity. This approach is not justified. 3. Failure to Consider Reasonable Alternatives The Site was previously recognised in the HELAA/SHLAA evidence base and remains available, suitable, and deliverable. Its exclusion arises not from overriding technical constraints, but from an unduly restrictive settlement selection approach. The Plan therefore fails to properly consider reasonable alternatives, contrary to national policy and sound plan-making principles. 4. Grey Belt Considerations The Site exhibits clear Grey Belt characteristics, including: • strong physical containment by the M5 motorway and the existing settlement edge; • severance from the wider countryside; • limited contribution to Green Belt purposes due to infrastructure influence. The Plan fails to meaningfully differentiate between strong Green Belt land and Grey Belt land in sustainable locations such as Portbury. This renders the Plan not justified and inconsistent with national policy. 5. Deliverability and Effectiveness The Plan relies heavily on a small number of large sites, increasing delivery risk. By contrast, the Site: • is under single ownership; • has no known deliverability constraints; • can deliver approximately 50–80 dwellings with significant green infrastructure and community facilities; • lies predominantly within Flood Zone 1 and passes the Sequential Test. Incorporating such sites would improve flexibility and effectiveness.	Modification Sought To make the Plan sound, it should be modified to: 1. Recognise Portbury as an appropriate location for proportionate growth within the spatial strategy, and 2. Allocate Land north of Caswell Lane, Portbury (HE202003) for residential development (circa 50–80 dwellings), with associated green infrastructure and community facilities, and amend the Policies Map accordingly.		
39179649	Adrian Mealing			No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	I consider LP5 to be unsound because it is not positively prepared, not justified, not effective, and not consistent with national policy. LP5 allocates three housing sites in Congresbury totalling 183 dwellings: -Woodhill Nurseries (100 homes) -Land north of Mulberry Road / Pineapple Farm (70 homes) -Land south of Station Road (13 homes) However, these allocations are not supported by the necessary evidence, infrastructure assessments or environmental protections required to satisfy the NPPF or the Plan's own strategic policies. My concerns are as follows: 1. LP5 is not positively prepared LP5 allocates substantial housing to a village that has: -no additional school capacity identified, -no GP or healthcare expansion, -no public transport improvements, -no funded active travel route upgrades, -no planned A370 or Smallway junction improvements,	To make LP5 sound, North Somerset Council must: Provide a transparent, evidence-based settlements assessment demonstrating why Congresbury has been allocated this scale of growth. Remove or reduce allocations where the flood risk Sequential Test is not met (e.g., Woodhill Nurseries). Produce a full SAC mitigation strategy for Congresbury, including dark corridor protection, lighting restrictions, habitat buffers and ecological connectivity. Provide a heritage-led assessment for land near Cadbury Hill Fort and amend allocations accordingly. Produce a village-wide masterplan for Congresbury addressing cumulative impact, landscape character, drainage, green infrastructure, and active travel. Include a funded and deliverable infrastructure package covering: -school and GP capacity,		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								-no coordinated masterplan linking the three sites together. The allocation of 183 dwellings without supporting infrastructure is not "positively prepared" and cannot deliver sustainable development. 2. LP5 is not justified The policy does not provide transparent or evidence-based justification for selecting these specific sites in Congresbury instead of more sustainable alternatives elsewhere in the district. There is: -no settlement hierarchy explaining why Congresbury is expected to take significant growth, -no alternatives appraisal showing other locations were considered and rejected, -no cumulative environmental assessment for the three allocations, -no landscape or heritage assessment supporting the Woodhill Nurseries allocation, -no detailed ecological analysis for the North Somerset & Mendip Bats SAC despite Congresbury lying within sustenance zones and dark corridors. The absence of a robust evidence base means LP5 is not justified. 3. LP5 is not effective For a plan to be effective, it must be deliverable. However, the LP5 allocations rely on infrastructure that: -does not exist, -is not designed, -is not costed, -is not included in the Infrastructure Delivery Plan, -has no identified funding, -has no phasing or delivery mechanism. This includes: -safe walking/cycling routes, -A370 and Smallway junction improvements, -drainage and flood mitigation works, -ecological buffers and lighting strategies, -heritage mitigation for Cadbury Hill Fort. Without this infrastructure and mitigation in place, LP5 is not deliverable and therefore not effective. 4. LP5 is not consistent with national policy The NPPF requires plans to: -locate growth in sustainable areas with access to services (NPPF 105–106), -reduce reliance on the car, -apply the flood risk Sequential Test (NPPF 159–162), -protect designated heritage assets (NPPF 200), -avoid significant harm to biodiversity and SACs (NPPF 180–182), -ensure impacts on the road network are acceptable (NPPF 111). LP5 conflicts with national policy because: -Congresbury is a car-dependent village with no rail station and limited buses. -The Woodhill Nurseries allocation includes areas requiring the Sequential Test, yet no evidence is provided that safer alternative sites were considered. -The site affects the wider landscape setting of Cadbury Hill Fort (Scheduled Monument). -Ecological networks including horseshoe bat foraging areas and dark corridors are at risk, with no mitigation strategy. -No transport modelling has been carried out for the impact of 183 homes on the congested A370 corridor. LP5 is therefore inconsistent with the NPPF.	-A370/Smallway junction upgrades, -safe walking and cycling routes, -public transport improvements. Demonstrate through transport modelling that the allocations will not result in severe residual impacts. Without these modifications, LP5 cannot be considered justified or deliverable.		
4113729	Portishead Town Council		Portishead Town Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	(Full formatted response attached including charts and images) Policy LP5 – Housing and employment allocations Legal compliance and Duty to Cooperate As explained in response to policies SP7 and SP8 Portishead Town Council (PTC) consider that the draft local plan has not been informed by full and effective cross border discussions regarding housing need and the sustainable location of new development. PTC has reviewed the duty to cooperate statement and considers that the relationship with Bristol and Bath to be unclear in terms of meeting housing needs. The statement explains that the plan area is strongly influenced by the adjacent larger urban areas and whilst it states that each authority agreed to meet their own housing need within their own boundaries, it is unclear how each strategy and approach to housing interacts. Soundness To be considered 'sound' the North Somerset Local Plan (NSLP) must be positively prepared, justified, effective and consistent with national policy. PTC consider that policy LP5 is not sound for the following reasons: Positively prepared To meet this requirement, the NSLP should be prepared based on a strategy	Removal of Land at Tower Farm and Black Rock, north of Clevedon Road as housing allocations and retention of these sites within the Green Belt PTC support a reasonable alternative to the proposed Local Plan whereby each North Somerset town or village conducts a community-led improvement plan of key sites, including underused, vacant, dilapidated and locally preferred brownfield and greenfield sites. The target allocation of homes for each area will remain, however the type, location and arrangement can be designed to benefit the local population. The construction methods are to be low impact, local and energy efficient. The benefits of this approach would be improvements in community health, local jobs, reduced loneliness, economic prosperity, sustainable travel routes, better living conditions, older residents remain in their community, kids have safe places to play, nature recovery and reduced anti-social behaviour.		Response for policy LP5 - why policy is not sound DRAFT 251210.docx Gordano Valley The future of Wildlife.pdf gordano-valley-ecological-development-strategy-report.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								which seeks to meet objectively assessed development and infrastructure requirements, consistent with achieving sustainable development. This approach should also be informed by agreements with other authorities, so that unmet needs from neighbouring areas are accommodated where it is practical to do so and consistent with achieving sustainable development. Page 32 of the draft NSLP explains that the minimum number of new dwellings that the council is required to plan for over the plan period is 23,700, however the plan proposes 24,495. This is in excess of the level identified by the Government. PTC acknowledges that there is a requirement for significant levels of housing to be planned for. However, the strategy must be consistent with achieving sustainable development. It is considered that the proposed approach, to distribute 7% of the housing supply within Portishead would not deliver sustainable development. New housing development should be located within towns where occupants of the new housing would have greater access to services and facilities, thereby delivering sustainable development. Justified To meet this requirement, the NSLP should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate, robust and credible evidence. Given the above, PTC contends that two specific sites in Portishead “Tower Farm” and “Black Rock, north of Clevedon Road” do not conform to an approach that is the most appropriate strategy. PTC consider that these sites are not justified as the most appropriate locations for housing development and should not be released from the Green Belt. The key concerns relate to the environmental impact of the site on the adjacent Weston Big Wood Site of Special Scientific Interest and Gordano Valley Strategic Green Corridor, the role of the sites as part of the Green Belt, landscape impacts, sustainability of the site, access, and highway safety. Land at Tower Farm The site has been within the Green Belt since 1988. The ecological importance of the Gordano Valley is well established. The Strategic Green corridor runs all the way from the Severn Estuary through Portbury Wharf Nature Reserve, along the Gordano valley and through to the Somerset Levels and the Mendips. Much of it lies at or near sea level and is shaped by historic drainage channels (“rhynes”), creating a rich mosaic of habitats. Its limestone escarpments and Mendip outcrops support a diversity increasingly threatened by expanding development. The Green Belt designation of Portishead Down including the Tower Farm and Black Rock sites was tested in 1988 as part of the South West Avon Green Belt Local Plan which resulted in a planning enquiry (See Report by County of Avon Planning, Highways and Transport Committee 20th June 1988) The Planning inspector recommend an increase in the area of Green Belt to include two areas on the Northern boundary of the Tower Farm site resulting in all parts of both the Tower Farm and Black Rock sites being designated as Green Belt. Regarding Portishead Down, the report states “The inclusion of this land in the Green Belt conforms with the Structure Plan. It is an area of open land on Portishead Down which should remain open. The boundary would form an acceptable Green belt boundary protecting not only the character of this part of Portishead Down but also the setting of both the Gordano Valley and the town of Portishead. The remainder of Portishead Down to the South West is in the designated Green Belt as an area of the land which should remain open in the long-term” The report goes on to say that “The deposited Local Plan contains this Policy which states WITHIN THOSE AREAS DESIGNATED ON THE PROPOSALS MAP, DEVELOPMENT WILL NOT NORMALLY BE PERMITTED EXCEPT IN VERY SPECIAL CIRCUMSTANCES FOR PURPOSES OTHER THAN AGRICULTURE, FORESTRY AND OUTDOOR RECREATION. These matters remain fully relevant today. The sites protect the character of Portishead Down and the setting of both the Gordano Valley and the town. Weston Big Wood SSSI is owned and managed by Avon Wildlife Trust. It is considered one of the most valued landscapes and most important biodiversity sites in North Somerset. Its unimproved grassland, hedgerows, shelterbelts and trees provide essential wildlife corridors linking the wood with the wider valley. The SSSI is dominated by oak, hazel, ash and elm, it holds uncommon species such as small-leaved lime, wild service tree, rock whitebeam, herb paris, birds nest orchid, common toothwort and purple gromwell. Spring ground flora is exceptionally rich and includes bluebells, violets, wild garlic, wood anemone and lesser celandine. The wood also supports notable fungi, numerous birds of prey (buzzards, red kites, peregrine falcons) owls, roosting bats, deer and badgers. Natural succession has expanded the woodland fringe beyond its official boundary, providing vital habitat for red-listed endangered birds such as linnet. All surrounding land is Green Belt, and its role is reinforced by North Somerset’s Green Infrastructure Strategy (2021). PTC consider that even minor development on the edge of the SSSI would erode biodiversity and damage key views and the setting and character of the town. Nearby development would also increase footfall in the woods, as well			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								as affect wildlife via noise and light pollution. There have been two major studies on the area. The first was a major World Wildlife Fund/Avon Wildlife Trust commissioned PhD study in the 1980s ("Gordano Valley: The Future for Wildlife") https://www.portishead.gov.uk/uploads/gordano-valley-ecological-study.pdf?v=1763999384. This set a biodiversity baseline and warned even then of species loss. Its core message: the entire valley is an interconnected ecological unit whose habitats are mutually dependent and cannot be protected piecemeal. Development anywhere in this system disrupts the whole. A 2023 updated study of the area commissioned by Portishead Town Council https://www.portishead.gov.uk/uploads/gordano-valley-ecological-development-strategy-report.pdf?v=1741102465 found further decline, including severe recreational damage to Weston Big Wood during the Covid period. This provided an indicator of how intensified human pressure from developments like Tower Farm or Black Rock would be ecologically devastating. It identified the Gordano Valley as the region's most important wet meadow and wetland bird site and stressed the need to reconnect fragmented habitats using Biodiversity Net Gain metrics. Mapping shows Black Rock and Tower Farm sites lying squarely within the "Strategic Development Avoidance Polygon," with high bat activity north and south of the wood. The map below shows the proposed development (in red) and all nearby SSSIs (in blue: Weston Big Wood, Nightingale Valley, Weston in Gordano, Gordano Valley, Walton Common and Court Hill), demonstrating how they act to protect a vital nature corridor, of which Tower Farm is currently a part. PTC consider that development at Tower Farm would damage not only the ancient woodland but the entire valley system it anchors. The long-standing scientific consensus is clear: this landscape's interconnected habitats make it uniquely valuable—and uniquely vulnerable. Given the weight of evidence of the high ecological benefit of the area around Weston Big Wood, Nightingale Valley and the Gordano Valley proven over more than half a century PTC submit that the Tower Farm site is not suitable for development. Local naturalist expert, Chris Sperring MBE, states "Footfall pressure on Weston Big Wood is happening now and is already fragmenting the wood. The Wood will simply be unable to function without the current buffer of surrounding fields. Where will human beings go to feel good if there is nowhere green to go, to immerse themselves in trees and bird song?" Development at Tower Farm along with that at Black Rock will stop the wood functioning and accelerate the loss of species in the wider Gordano Valley strategic green corridor. These losses have been witnessed and recorded by Chris and many others over the past half century. PTC considers that the evidence illustrates that the Tower Farm site plays a crucial role in providing a wildlife corridor linking Weston Big Wood, the Gordano Valley, Walton Common and other habitats. Given the sensitivity of the site, it is submitted that development would irrevocably damage valuable habitats over time, fragment the Gordano Valley ecological network and undermine nature recovery ambitions. In addition to Weston Big Wood, Tower Farm is also in close proximity to Nightingale Valley SSSI. In all likelihood the location shares the geological features that Nightingale Valley's citation protects, and PTC submit it should be protected for the same reasons. Alongside the substantial ecological impacts, PTC has concerns regarding landscape impacts. The 2018 NSC Landscape Character Assessment noted that: "Visual impact of unsympathetic urban edges of Portishead and Clevedon and urban fringe influences within the immediately adjacent landscapes" as a threat to the Portishead Ridges and Combes, an area that includes the Tower Farm site. It also stated that "The landscape strategy for Portishead Ridges and Combes is to conserve the elements of strong character, the woodland, open grassland and pasture, the ancient hilltop sites and stone built settlement while enhancing area of declining condition and weaker character such as the urban edges and the gappy hedgerows". It provided Landscape Guidelines including "Conserve the peaceful and secluded nature of the wooded landscape" and "Minimise the impact of the urban edge and the encroachment of visually intrusive land uses…". This emphasises the landscape significance of the site. With regard to the sustainability of the site, PTC submits that it is not and cannot be made a sustainable location. Future residents would not be able to walk or cycle comfortably to and from the amenities at the centre of town/ High Street due to the distance involved and the topography. This is as a result of the Tower Farm site being at the top of a long, steep hill. Many would not be able to walk or cycle there all. The table below illustrates the distances and the climb required to reach Tower Farm from various locations in the town: Miles Climb (ft) Folk Hall Town Council 1.2 335 Post Office 1.3 335 Somerset Hall 1.3 335 Aldi 1.3 338 Library 1.4 328			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Lake Grounds (Wheels & Skate Park) 1.4 335 Gordano Secondary School 1.4 335 Nearest GP practice: Portishead Medical Group 1.4 338 Sainsburys 1.6 351 Lidl 1.6 331 Parish Wharf Leisure Centre 1.6 331 Waitrose Portishead Football Club 1.7 344 Portishead Station (when built) 1.9 338 There is very little in terms of shops, bars, restaurants, services or employment within walking distance of the Tower Farm site. Bus access would only be the X4 and occasionally the X10 that can be caught from Down Road – a fair, hilly walk from a lot of the proposed dwellings. As a result, almost everyone living at the site would need to drive - increasing congestion and emissions, and worsening air quality and public health. The Tower Farm development would be in breach of NSC's draft Local Plan Policy DP17, which states that "All residential development should be within reasonable distance of a direct and frequent bus service providing access to a good range of facilities, services and jobs via a direct, safe and attractive pedestrian route," and that "In terms of locating development within a 'reasonable distance' this means a maximum of approximately 400 metre walking radius of a bus stop with a service frequency as identified below (every 30 minutes)." The middle of the development would however be about 650 metres walk (uphill) to the nearest bus stop on Down Road. Some homes would be even further away than that, approximately 800 metres away. It should also be noted that this development would be in breach of NSC draft Local Plan Policy DP14, which states that "Development likely to have a severe residual cumulative impact on transport routes, traffic congestion or on the character and function of the surrounding area, will only be permitted where acceptable mitigation measures are delivered", as such mitigation cannot be delivered. This section also states that "the effect of additional traffic on the surrounding road system must be taken into account such as where development introduces traffic of excessive volume, size or weight into… residential areas. Where there is a detrimental impact and no acceptable countermeasures are possible, planning permission will be refused." PTC submits that just because the Tower Farm site is on the edge of Portishead, it should not be assumed it is a sustainable development site. Other locations in the town would be much more sustainable and better placed to take advantage of public transport, both new and existing, such as Old Mill Road/Wyndham Way. With regards access to the site, PTC consider that a suitable access could not be provided. Access would be via The Downs. This is a cul-de-sac with further cul-de-sacs leading off it. It is also right next to High Down School, the whole area around which is already extremely congested and chaotic at drop-off/ pick-up times despite numerous campaigns to reduce car use. The map below shows the typical extent of parking at these times (marked in red). Based on the average in the South West of 1.37 cars per household that would be an extra 548 cars, and a great many additional vehicle movements. It would become extremely dangerous for the primary school children to cross the roads to get to school, as it will for the many toddlers and children in pushchairs accompanying them and their parents. It would be an accident waiting to happen. It is therefore considered that safe and suitable access to the site cannot be achieved. Tower Road, The Downs and Down Road all regularly become gridlocked at times already. Increased traffic, both during construction and afterwards, will make this significantly worse. There will also be increased traffic elsewhere in and around the town, for example Avon Way, Combe Road, High Street, Cabstand, and the Gordano roundabout as a result of people having to drive to and from Tower Farm, for example for work. The Local Plan Transport Assessment document suggests that there would be an improvement to the current levels of congestion, even with development, if mitigation is put in place, but it is unclear what mitigation, other than the railway, is proposed. Also, the document uses a figure of 485 homes at Wyndham in one section and 785 in another, so its accuracy should be called into question. PTC submits that the impacts on the transport network cannot be mitigated, and a more sustainable site for development should be found. There are no provisions in the latest version of the Plan to improve transport around Down Road, The Downs, The Deans and Tower Road. "Active travel connections to The Downs, St Mary's Road/Wetlands Lane" are mentioned but will achieve nothing – they don't help anyone get to anywhere other than potentially Gordano School. Any enhancement of the existing footpaths would also require the further destruction of green space and involve work on land owned by others. Furthermore, consideration must be given to the transport impacts of the creation of an additional school/or extending the existing High Down School. Expanding school places at the top end of Portishead when most of the children needing places will be at the bottom (i.e. 785 homes at Wyndham			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Way) is rehashing exactly the same arguments as the last time this was proposed, when NSC accepted that it was not a viable idea. Car journeys would rise exponentially, creating traffic jams all over the town. We would not see the impact “cost effectively mitigated to an acceptable degree” – this is actually making things worse. PTC questions the deliverability of this site. It is clear that PTC strongly object to the proposed allocation. Should the site remain within the local plan PTC submit that given its significant ecological constraints and the other issues identified as part of this representation, PTC would expect the draft local plan to include a detailed policy for the site setting out the key requirements to be met before development could take place. It is PTC view that the only way to create reasonable access to the site would be to construct a new road around or through the Weston Big Wood (SSSI) effectively fragmenting and destroying it. Housing density would need to be low in order to protect the local environment. Given the ecological sensitivity of the site, PTC believe it is impossible to quantify the amount of Biodiversity Net Gain Credits that would be needed to “mitigate” the short- and long-term damage to Weston Big Wood, its surrounding ecosystem and the reduced wellbeing of the people that enjoy the area. Instead, PTC recommends that instead of development, the Tower Farm Site should be allocated as an area to receive BNG credits to help repair the ecological damage created by humans over the last 50 years or more. It is impossible to mitigate the loss of an ancient woodland. Once it is gone it is gone. Black Rock, north of Clevedon Road The Black Rock site lies on the northern flanks of the Gordano Valley on the edges of Portishead, within the Green Belt. As previously explained, the Gordano Valley plays a significant geographical feature in the landscape of Somerset, stretching as it does from the Severn Estuary through to the Mendips and Somerset Levels. Its Green Belt designation was re-confirmed in 1988 as part of the South West Avon Green Belt Local Plan which resulted in a planning enquiry (See Report by County of Avon Planning, Highways and Transport Committee 20th June 1988) The site forms a natural buffer to Weston Big Wood SSSI and comprises unimproved and improved grassland, hedgerows, shelterbelts (which act as windbreaks) and trees. These serve as vital wildlife links with the surrounding Gordano Valley. PTC submits that even small amounts of development around the fringes of the woodland would significantly impact on the biodiversity of the area as well as the visual appearance of the wood from the valley. The fields are in pasture predominately year in year out used for grazing. Black Rock together with Tower Farm plays a crucial role in providing a wildlife corridor linking Weston Big Wood, the Gordano Valley, Walton Common and other habitats. PTC submit that the development of the site would irrevocably damage valuable habitats over time, fragment the Gordano Valley ecological network and undermine nature recovery ambitions. Development of the site would fail to promote the conservation, restoration and enhancement of priority habitats, ecological networks and protection of priority species. Many of the ecological arguments for protecting the Black Rock site are the same as for Tower Farm so these are not repeated below. However, in addition to Weston Big Wood, Black Rock is also in close proximity to Weston in Gordano SSSI. In all likelihood the location shares the geological features that Weston in Gordano’s citation protects and perhaps should be protected itself for the same reasons. The map below shows the proposed allocated site (in red) and all nearby SSSIs (Weston Big Wood, Weston in Gordano, Nightingale Valley, Gordano Valley, Walton Common and Court Hill), demonstrating how they act to protect a vital nature corridor, of which Black Rock is currently a part. With regard to landscape impact, the council’s Landscape sensitivity Assessment states “Land to the south-west of the town, is gently sloping and Valley Road forms a strong, vegetated edge. In some locations, there is a distinctive change in character from an urban to a rural landscape on either side of this road and the visual prominence of land beyond is generally high. In addition, the Nightingale Valley SSSI and Middle Hill Common LNR are located to the south of this road. Owing to the above, this land is of high sensitivity.” The 2018 NSC Landscape Character Assessment noted that “Visual impact of unsympathetic urban edges of Portishead and Clevedon and urban fringe influences within the immediately adjacent landscapes” as a threat to the Portishead Ridges and Combes, an area that includes the Black Rock site. It also stated that “The landscape strategy for Portishead Ridges and Combes is to conserve the elements of strong character, the woodland, open grassland and pasture, the ancient hilltop sites and stone built settlement while enhancing area of declining condition and weaker character such as the urban edges and the gappy hedgerows”. It provided Landscape Guidelines including “Conserve the peaceful and secluded nature of the wooded landscape” and “Minimise the impact of the urban edge and the encroachment of visually intrusive land uses…”. This emphasises the			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								landscape value of the site. With regards the accessibility of the site, Black Rock is not in the centre of Portishead, there is very little in terms of shops, bars, restaurants, services or employment within comfortable walking distance. Future residents would not be able to walk or cycle comfortably to and from the amenities at the centre of town/High Street due to the distance involved. For example, it would be a 28-minute walk to The Precinct, 29 minutes to the nearest supermarket, 35 minutes to Parish Wharf leisure centre, or a 38 minutes to the station (when built).(According to Google Maps.) There are only bus stops for the X5 (Portishead to Weston) route nearby, not for the X4 or X10. The nearest X4 stop for residents wanting to travel to Bristol is a 27 minute walk away. Alternatively, future residents could catch 2 buses, but this would mean 2 fares, and therefore the majority of residents would no doubt drive instead. In addition, the last bus towards Portishead on weekdays is at approximately 7.35pm and from Portishead at about 8.10pm. On Saturdays this becomes 7.10 and 7.40, and the service does not run at all on Sundays or bank holidays (despite the Local Plan Transport Assessment document claiming that there is a Sunday X5 service). As a result, there would be a great many additional car journeys made, increasing congestion and emissions, and worsening air quality and public health. As noted above, the NSC Plan would require a contribution from the developer towards bus stop upgrades, but there is no mention of contributions for improvements to the bus service itself. The North Somerset Model Development Report mentions an increase in the frequency of the X5 service, but the Local Plan Transport Assessment proposes extending the service “to serve Parklands at West Wick Roundabout, Weston-Super-Mare”. Making routes longer in this way will compromise reliability and make the service worse for residents, and the X5 route has only just been made more direct to provide a better service, following pressure from passengers. Also, the X5 route is currently subsidised, and with Government BSIP funding due to end next year, what is the future for this service The NSC Plan states “Connections required through the site to adjacent wider footway and cycle network, along with contribution to or delivery of section of Gordano Greenway.” The intention of the Gordano Greenway is to provide a cycle path between Portishead and Clevedon. However, there are many issues regarding land ownership and funding (in addition to a “contribution” from this developer) that would need to be resolved, throwing into doubt whether this is actually deliverable. The developer plan is to provide about 50 metres of cycleway, but this will lead straight onto a busy road which is not suitable for cycling. The additional 2 plus miles to build a safe cycle path to Clevedon would need substantial funding and the agreement of multiple landowners The developer also states, “This cycle/footway/bridleway must also connect to the new Metro West rail link to Bristol.” This is never going to be achievable however, given the location of the station on the opposite side of the town from the development and the existing roads, houses, shops, schools, public amenities and other buildings in place. There does not appear to be a Transport Sustainability and Access Strategy to measure the effects of this potential development on traffic in the vicinity and within the town. The reopening of the station in Portishead will do little in terms of “offering a genuine choice of transport modes” for the Black Rock area. As noted above, it will be a 38-minute walk, nearly two miles away, so residents would have to either drive or catch the X5 bus and change / pay a second fare to catch the train into Bristol. PTC submit that just because Black Rock would be on the edge of Portishead does not mean that it is sustainable as a development site. Other locations in the town would be much more sustainable and better placed to take advantage of public transport, both new and existing, such as Old Mill Road/ Wyndham Way. PTC questions the deliverability of this site. It is clear that PTC strongly object to the proposed allocation. Should the site remain within the local plan, PTC submit that given its significant ecological constraints and other issues identified within this representation, PTC would expect the draft local plan to include a detailed policy for the site setting hout the key requirements to be met before development could take place. PTC consider Housing density would need to be low in order to protect the local environment. It is impossible to quantify the amount of Biodiversity Net Gain Credits that would be needed to “mitigate” the short- and long-term damage to Weston Big Wood, its surrounding ecosystem and the reduced wellbeing of the people that enjoy the area. Instead, PTC recommends that instead of development, the Black Rock site should be allocated as an area to receive BNG credits to help repair the ecological damage created by humans over the last 50 years or more. The Black Rock proposal causes unavoidable and significant ecological, landscape and policy harm. It conflicts with national and local planning policy, fails statutory biodiversity protections, threatens irreplaceable habitats and undermines decades of environmental stewardship across the Gordano Valley. It will reduce the quality of life for human beings living in the area. It is impossible to mitigate the loss of an ancient woodland. Once it is gone it is gone The Black Rock site should be removed from the Local Plan.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Consistent with national policy To meet this requirement, the local plan should enable the delivery of sustainable development in accordance with the NPPF. As detailed in response to the strategic approach, the council has not provided evidence to justify the approach to the distribution of housing development and the need for Green Belt deletions. Robust justification is a requirement of national guidance. Section 15 of the NPPF requires planning policies to contribute to and enhance the natural environment. This includes protecting and enhancing valued landscapes and sites of biological value in a manner commensurate with their statutory status. Development plans are required to identify, map and safeguard components of local wildlife rich habitats and wider ecological networks. Given the ecological and landscape value of the two sites, it is considered there is a clear conflict with section 15 of the NPPF. Although the proposed allocations lie adjacent to the existing settlement boundary, it is submitted that the locations are not sustainable. Section 9 of the NPPF states that significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This includes seeking to facilitate access to high quality public transport. Whist it is acknowledged that Portishead does have services and facilities, it is submitted that given the distance from the proposed sites, future residents would have little option other than to travel by car. The proposed allocations therefore fail to meet the requirements of section 9 of the NPPF.			
8126849	Sport England		Sport England					All new dwellings (21,495) in North Somerset in the plan period should provide for new or enhance existing sport and recreation facilities to help create opportunities for physical activity whilst having a major positive impact on health and mental wellbeing. This is reflected in Policy DP63. CIL /s106 has to be based on evidence of need, see comment above. In particular Policy LC5: Parklands Village Weston super Mare 2671 Winterstoke Village Weston super Mare 1229 Locking Road car park, Weston super Mare 230 Former Leisuredome 420 Weston RFC 182 Land west of Winterstoke Road, Weston super Mare 134 (sport pitch loss to meet the NPPF para 104) Wolvershill 3,300 (LP1) Woodspring 3,500 (LP2 and loss of golf to meet para 104 of the NPPF) NW Nailsea 225 (LP3) Youngwood Lane, Nailsea 282 Land north Nailsea, 381 (LP3) Land south Nailsea, 582 (LP3) Backwell 515 Land east of Backwell 889 (LP3) Pill Green 600 (LP4) Land north of Banwell Road 315 Wyndham Portishead 785 Land at Tower Farm 400 Land north of Colliter's Way Long Ashton 215 Monaghan Mushroom Farm 230 (LP23) Protection of Sport & Recreation including playing fields Support – see comment 1 above the need for an up to date sport evidence base We support DP52 protection of open space and recreation including golf courses. Again, this reflects a need for an up to date sport and recreation evidence base to support this policy of the plan in particular the first criterion "The open space is clearly shown through an assessment to be surplus to local requirements and will not be required for current or future needs; or" Sport England acknowledges that the NPPF is promoting "sustainable development" to avoid delays in the planning process (linked to economic growth). Thatsaid, the NPPF also says that for open space, sport & recreation land & buildings (including playing fields): Para 104. Existing open space, sports and recreational buildings and land, including playing fields and formal play spaces, should not be built on unless: a) an assessment has been undertaken which has clearly shown the open space, buildings or land to be surplus to requirements; or b) the loss resulting from the proposed development would be replaced by equivalent or better provision in terms of quantity and quality in a suitable location; or c) the development is for alternative sports and recreational provision, the benefits of which clearly outweigh the loss of the current or former use. Sport England would be very concerned if any existing sport & recreation land & buildings including playing pitches and golf courses (LP2 Woodspring) would be affected by these proposals without adequate replacement in terms of quality, quantity, accessibility, management & maintenance and prior to the loss of the existing facility. This includes playing fields used by education (public and private) and playing fields in private ownership. In particular sites in Policy LP5: • Weston RFC – 182 homes (new allocation)

								• Land west of Winterstoke Rd, WsM 134 homes – “loss of sports pitch needs to be addressed” (carried over allocation) • Former Bournville School site – 28 homes (carried over allocation) • Land at n w Nailsea site – 225 homes “retention or enhancement of the Fryth Way sports pitch” (carried over allocation) • West of Engine Lane – 15 homes “replacement or improved sports facilities required” (carried over allocation) Sport England considers proposals affecting playing fields in light of the National Planning Policy Framework (NPPF) (in particular Para. 104) and against its own playing fields policy, which states: ‘Sport England will oppose the granting of planning permission for any development which would lead to the loss of, or would prejudice the use of: • all or any part of a playing field, or • land which has been used as a playing field and remains undeveloped, or • land allocated for use as a playing field unless, in the judgement of Sport England, the development as a whole meets with one or more of five specific exceptions.’ Sport England’s Playing Fields Policy and Guidance document can be viewed via the link here a) an assessment has been undertaken which has clearly shown the open space, buildings or land to be surplus to requirements; or b) the loss resulting from the proposed development would be replaced by equivalent or better provision in terms of quantity and quality in a suitable location; or c) the development is for alternative sports and recreational provision, the benefits of which clearly outweigh the loss of the current or former use.		
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	• Positively prepared • Consistent with national policy	Yes	No	The Policy and Local Plan text should be amended to incorporate the following site: Land at Parsonage Road (North of Festival Way), Long Ashton Persimmon Homes Severn Valley controls Land at Parsonage Road, Long Ashton, comprising 3.45 acres, with residential development potential for up to 20 dwellings. The Site is located in the Green Belt and Flood Zone 2, with a small section of Flood Zone 3 in the west. Long Ashton is a settlement well served by services and facilities with one surgery, one chemist, one community centre, one Co-Op, one park and two playgrounds. Alongside these representations, is an indicative masterplan and a Flood Risk Due Diligence Assessment (January 2024) prepared by Rappor, which support the site’s deliverability and why it should be allocated for residential development. Sustainability: Primary schools are easily accessible from the site, with Northleaze Primary School immediately to the west and Birdwell Primary School is 1km to the west and walkable within 18 minutes. Between the two schools there is capacity to serve pupil numbers generated by the site’s development. The Land at Parsonage Road is situated at the edge of the settlement towards Bristol. It is in an area that, as per draft Policy DP15, would minimise the need to travel encouraging walking, cycling and public transport over private car usage. The site bounds Festival Way (National Cycle Network Route 33), a cycle route which usefully connects Nailsea and the centre of Bristol – and one which the Festival Way enables cycling from the Site to the centre of Bristol in 18 minutes, or to Nailsea in 32 minutes. The Stage 7 Transport Assessment recognises that the route could benefit from improvements. This Site has the benefit of being within walking distance (22 minutes away) from the Park & Ride, which would enable residents to take modes of active travel to the Park & Ride. Development at the Site, therefore, would make a genuine contribution to the Council’s ambitions of increasing levels of active travel and public transport usage. Flood Risk: While the site is located in Flood Zone 2, with a small section of Flood Zone 3b, a suitable flood risk assessment and drainage strategy produced through the planning and design process would be able to address fully the on-site flood risk issues – responding to the principles of draft Policies DP9 and DP10. The attached indicative masterplan allows for 14 dwellings, while excluding development from the area marked as Flood Zone 3b. The attached Flood Risk Due Diligence Note provides more detail. Landscape: North Somerset Council’s 2018 Landscape Sensitivity Assessment marked this land as having low landscape sensitivity. It is part of the only area surrounding Long Ashton that is rated as such, with the majority of the land surrounding Long Ashton rated as having high landscape sensitivity. The allocation of this site for residential development would therefore not have lead to significant landscape impacts, subject to good-practice masterplanning – with any new development at the site also being set against existing built form. Green Belt: The Site is situated within the Green Belt. Development of the Site create any substantial reduction in the gap between Bristol and Long Ashton, and would not conflict with para 138 (b) of the NPPF – the Green Belt’s five purposes. Instead, the development at the Site would provide a sensible rounding off of Long Ashton, with a green edge to the settlement still being retained on the	Recommendation It is requested that: Land at Parsonage Road is released from the Green Belt for residential development. Land at Parsonage Road for residential development for up to 20 dwellings.		YANLEY~1.PDF PARSON~1.PDF

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								south side of Festival Way. Sensitive masterplanning and landscaping can readily achieve this. As per para 138 of the NPPF, Green Belt serves 5 purposes. The section below helpfully comments on each purpose in relation to Land at Parsonage Road, Long Ashton. a) To check the unrestricted spawl of large built-up areas The release of Land at Parsonage Road would not constitute unrestricted sprawl. Long Ashton is not a large built-up area, and in any event its release would take the settlement boundary in this part of Long Ashton up to the defensible boundary of the active travel route, Festival Way. b) To prevent neighbouring towns merging into one another Long Ashton is not a town but in any event the release of the site would not lead to the merging of Long Ashton and the nearest settlement, Bristol. The site would follow the form of the existing settlement boundary, marked by development along Parsonage Road. c) To assist in safeguarding the countryside from encroachment The countryside would not be encroached by the release of the site from Green Belt. As above, the site would take the settlement boundary of Long Ashton to the defensible boundary of Festival Way. The indicative masterplan attached to these representations allows for green space on the eastern edge, which means that the gap between Long Ashton and Bristol is not made any shorter. d) To preserve the setting and special character of historic towns An allocation of up to 20 dwellings at the site would not harm the setting or character of Long Ashton. Any development would respond sensitively to the built form of Long Ashton. Notwithstanding this, Long Ashton is not an historic town. e) To assist in urban regeneration, by encouraging the recycling of derelict and other urban land There are no brownfield opportunities within Long Ashton to accommodate a development of this scale and form, which is of particular importance given North Somerset's need to find additional sites for residential development. The site does make a strong contribution to the purposes of the Green Belt. In not providing a strong contribution to the Green Belt's purposes, the site qualifies for Grey Belt status. The Flood Zone 2 and partial Flood Zone 3 affecting the site does not preclude the site from having Grey Belt status. Instead, the NPPF clarifies that Grey Belt should exclude land which is affected by footnote 7 constraints (in this case flood risk). However, as the attached Flood Risk Due Diligence Assessment demonstrates, technical solutions allow the site to be developed so that the Exceptions Test is passed, by ensuring the development is safe for its lifetime. Housing Supply: As set out previously in these representations, North Somerset Council have a significantly shortfall in identified housing supply, against their housing requirement. This shortfall is a minimum of 8,620 dwellings, before Bristol's unmet need is considered. It is therefore imperative that the Council allocate more land for residential development. An allocation for residential development of Land at Parsonage Road will contribute to the Council's efforts to address this shortfall, through the development of up to 20 dwellings in a sustainable location. Housing Supply Long Ashton Housing Need As previously mentioned, a significant and persistent shortfall in supply is affecting the District. The Council is tasked with meeting its standard method housing requirement. The Council should also be addressing Bristol's unmet need. It is not sufficient for the Council to put off that task or expect WECA strategic planning to pick this matter up – the situation will only worsen over time making rectification more challenging and lengthy. Not only would the site support North Somerset's housing supply on a district wide basis, but an allocation and development of the site would contribute to meeting the identified local housing need that exists in Long Ashton. At a planning appeal (reference APP/D0121/W/23/3315584) in 2024 the Council accepted the conclusions of the Appellant's Housing Needs Survey 2023 for Long Ashton. That appeal document establishes a market housing need of 152 dwellings over 5 years and an affordable housing need of 143 dwellings over 5 years. At present, the development commitments and draft allocations will not meet this housing need. An allocation for residential development at Land at Parsonage Road would contribute to meeting both elements of Long Ashton's housing needs. Attached is: Red Line Plan: Yanley Lane [Parsonage Road] Site Outline A1_C & Parsonage Road Indicative Masterplan Long Ashton Neighbourhood Plan: The site is designated in the Long Ashton Neighbourhood Plan (adopted in 2015) as part of the Area of Separation from Policy ENV1. Notwithstanding the fact that the Neighbourhood Plan is now out of date, as discussed above the release of this land from the Green Belt would not lead to any reduction in separation between Long Ashton and Bristol. Sustainability Appraisal: The site has been considered as part of the Council's Sustainability Appraisal, against the sustainability objectives, however it does not appear that this has been carried out accurately. Below are some of the highlighted assessments, and the issues that relates to them. "SA objective 2.1: Boost housing delivery and meet the housing need identified within the plan period. Negligible (0) All sites are recorded as having a negligible effect in relation to this SA objective." This does not reflect the shortfall in housing that North Somerset is faced		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								with, not does it reflect the housing need in Long Ashton that the Council accepted at the planning appeal referred to above. “SA objective 2.2: Deliver affordable or specialist housing where it is most needed to meet the needs of North Somerset’s population. Significant Positive (++) The site is not located in an area with identified need for affordable housing (as per the Barriers to Housing and Services IMD domain)” Similarly to the comments on SA Objective 2.1, there is demonstrably an identified need for affordable housing within Long Ashton. The Council accepted this as part of the planning appeal referred to previously and this positive position is seen as helpful. “SA objective 2.3: Achieve reasonable access to a wide range of community, educational, town centre and healthcare facilities. Significant negative (--) The site is located more than 720m from the nearest town, district or local centre” The site is in a highly accessible location and this score does not reflect that.			
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	• Positively prepared • Consistent with national policy	Yes	No	Land to the North of Rectory Farm, Yatton Persimmon Homes Severn Valley controls Land to the North of Rectory Farm, Yatton. The site is located on the west of Yatton, between the Strawberry Line and the existing built form of Yatton. It comprises approximately 33 acres of predominately flat, greenfield, agricultural land. It is bound to the north by agricultural fields, to the east by residential development, to the south by farm buildings and agricultural fields. Since the last representations on this site were submitted at earlier stages of the Local Plan, an Outline planning application (ref: 23/P/0664/OUT) has been taken to appeal. Following a planning inquiry taking place during September 2024 and January 2025, on 18 March 2025 the appeal was allowed by the Inspector, granting planning permission for 190 dwellings. These representations should be read alongside the associated documents submitted as part of the planning application. For the sake of ease, the Illustrative Masterplan (Ref; edp7842_d003-G) and Design & Access Statement (edp7842_r001 Part 1 to Part 5) have been included within this submission along with the appeal decision of April 2025 (ref: APP/D0121/W/24/3343144). Land to the North of Rectory Farm is proposed for an allocation in the North Somerset Local Plan for up to 190 dwellings. As has been set out previously in the Company’s representations, North Somerset Council is faced with a significant housing requirement and is presently showing a significant shortfall in supply without any sign of rectification. This is a situation which must be resolved promptly through the delivery of housing at sustainable locations such as Rectory Farm (North) Yatton. This representation is a positive response to this issue: the Land to the North of Rectory Farm and its planning permission set out that the site is sustainable and deliverable. Allocation of Land to the North of Rectory Farm, Yatton for 190 dwellings would make a significant contribution to addressing this shortfall – supporting the growth of the town through its prompt development. The scheme also provides 50% affordable homes. The site immediately abuts the settlement boundary along the site’s eastern edge. Development at Land to the North of Rectory Farm would be well connected to the existing settlement and key transport nodes, including Yatton train station; which offers frequent services to Cardiff and Taunton, with Bristol Temple Meads a 15 minute train journey away. It should be recognised, that the Government is supportive of development at and around train stations given the inherent sustainable transport benefits of this planning approach – seeking increased densities. In supporting this, the attached illustrative masterplan presents suitable access points through Shiners Elm and Rectory Farm connecting this new site to the established built form of Yatton. Turning to the wider suite of documents submitted as part of the planning application, issues of flood risk have been considered and options identified to mitigate its impact to acceptable levels. Whilst the site falls within Flood Zone 3, it is an area of land benefitting from flood defence. The flood risk and drainage documents set out that suitable mitigation measures are possible so to ensure that the site is safe developable. The Inspector carefully considered these and other matters in allowing the appeal. The planning decision is subject to Judicial Review to be heard early in 2026. Notwithstanding this pending process, the Council should duly allocate this site for development noting that it still has planning permission and can be classed as a commitment.	It is requested that: - Land to the North of Rectory Farm, Yatton be allocated for up to 190 homes.		230324~2.PDF 230324~1.PDF d003-G.PDF 230324~4.PDF 230324~3.PDF 230325-5.PDF Decision.pdf
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	• Positively prepared • Consistent with national policy	Yes	No	The Policy and Local Plan text should be amended to incorporate the following site: Land at East Portishead Persimmon Homes Severn Valley controls Land East of Portishead, which extends to approximately 85 acres of land. It is located north of the Portbury Hundred with Wyndham Way roundabout at its South Western corner and Sheepway crossing the site from the south west to the north east. The disused railway line, which is proposed to be re-opened, runs east to west across the northern boundary of the site. The site directly abuts the settlement boundary, with existing residential development to the west and land to the east that is predominantly agricultural.	It is requested that: Draft Policy added to allocate Land East of Portishead for residential development for u up to 650 dwellings. Schedule 1 be amended to reference the site. Draft Policy SP7 be amended to release Land East of Portishead from the Green Belt for residential development. The Plan is amended elsewhere to reference the inclusion of the site. Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								This is to be read in conjunction with the following documents: Land East of Portishead Vision Document - March 2025 Framework Masterplan (edp7522_d011-A) Opportunities & Constraints Plan (edp7522_d011-A) Grey Belt Appraisal – March 2025 Ecological Constraints and Opportunities Report (ref: 1564B-ECOR-RP) Affordable Housing Needs Report (January 2024) Transport Note – March 2025 Flood Risk & Drainage – Outline Strategy – March 2025 By way of background, the site was presented at the Regulation 18 Consultation in early 2022 – in support of the need to deliver new homes to meet housing need, and in the previous Regulation 19 consultation. The site is again promoted through the Regulation 19 Local Plan. In support the following information is presented to inform discussions about omission sites which will need to be discussed in response to meeting promptly the identified need, responding to those sites which it is considered are not deliverable at the rate or quantum identified in the draft plan, and responding to the positive sustainable benefits of delivering new housing at Portishead. When set within the context of the draft Local Plan, it is noted that urban regeneration is planned as a means of delivering a significant proportion of the town's overall allocation for housing. However, even with the houses proposed, this sustainable town is not receiving an appropriate proportion of the homes required. Green Belt: As is the case with all of the land around Portishead, the site forms part of the Bristol and Bath Green Belt, which was designated as such in the 1950s. Land within this part of the Green Belt was not designated for its landscape importance, but to restrict urban sprawl and promote the optimisation of existing urban sites. Portishead has undergone significant urban regeneration in recent decades, particularly around Portishead Marina. Following this, there are now limited opportunities for Portishead to accommodate any substantial housing growth without Green Belt release. With this level of urban development in Portishead, it is clear Green Belt around Portishead has served its purpose in assisting urban regeneration. The sixth Strategic Priority of the draft Local Plan seeks to address the decline in Portishead's town centres, but this cannot be achieved through further urban regeneration, as there simply is not sufficient deliverable brownfield land available. The attached Grey Belt Appraisal concludes that the site should be classified as Grey Belt. This is subject to technical considerations which, as demonstrated by the Flood Risk & Drainage Outline Strategy, can be suitably addressed. Having regard to the Green Belt Assessment undertaken for the Council and in reviewing it against the purposes a, b and d, the company's site is not considered to contribute strongly to those purposes. The assessment references heritage issues (associated with unscheduled monuments – which include a cold war subterranean fuel pipe) and flood risk concerns as contraints – which are not considerations for the purposes of assessing the land. The Grey Belt Assessment undertaken for the Company does not come to the same overall conclusion – but both assessments point strongly to its careful evaluation as Grey Belt. However, site should therefore be released from the Green Belt and allocated for development. It is necessary to release land from the Green Belt around Portishead to accommodate the level of growth that North Somerset is required to meet over the plan period. When set within the context of the draft Local Plan, it is noted that urban regeneration is planned as a means of delivering a significant proportion of the town's overall allocation for housing. However, even with the houses proposed, the town is not receiving an appropriate proportion of the homes required. Sustainability: Within the draft Local Plan there is a fundamental flaw in that there is no clear settlement hierarchy. While there is a town centre hierarchy, this relates exclusively to town centre uses and does not set out the foundations or context for a spatial planning and development distribution. The site is within the Environment Agency designated Flood Zone 3 but benefitting from flood defences with a 0.5% Annual Exceedance Probability. The appended Flood Risk & Drainage – Outline Strategy, prepared by Rappor, sets out that development of the site would be acceptable from a flood risk and drainage perspective. Portishead benefits from having four primary schools and one secondary school within the town. St Katherine's secondary school is also located 5 miles from Portishead to the East of Pill with Clevedon School also around 5 miles away from the town to the South. As well as schools, Portishead also			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								benefits from at least four nurseries and pre-schools for children under school age to attend. It is contended that taking a development of say 550 homes, the town has sufficient capacity in childcare, primary, secondary and post-16 places to meet the such a development's needs. As well as employment offerings in the form of the retail, food and drink establishments in the town, there are also a number of employment areas and large scale employers in the town. Employment in the town includes the Avon and Somerset police headquarters as well as a number of businesses operating from business parks such as those at Harbour Court, Gordano Court, Kestrel Court and Middle Bridge Business Park. Portishead benefits from two health centres in the form of Portishead Healthcare Centre and Marina Healthcare Centre. These two health centres are complemented by a pharmacy within the town. Additionally, there are some 10 dental practices operating in the town. The town has a good retail offer. It in, which includes a number of large supermarkets such as Waitrose, Sainsbury's, Aldi and Lidl as well as a number of smaller convenience supermarkets such as Co-op and Tesco. The town's high street is thriving with a good mix of national chains and local independent shops and service providers. A number of the major banks also have a presence within the town. The town has a low vacancy rate as a reflection of its vitality and viability. Outside but close to the high street is a retail park (north of Wyndham Way) which includes a mixture of convenience and comparison floorspace with a drive-thru restaurant. Portishead is well served by sports and leisure facilities, with the Parish Wharf Leisure Centre located in Portishead that is open all year round. It offers to the public a gym, workout classes, a swimming pool, family swimming pool, soft play and a crèche. Other leisure facilities operate across the town. The town benefits from a number of public open spaces, which include children's, play areas and playing fields as well as parks with formal walking routes. Such areas include the Portbury Wharf Nature Reserve to the East of the town, which offers the community access to walks in the countryside on the edge of the town. There are also at least eleven children's play areas reasonably distributed throughout the town – and with the more recent developments of the Vale and Village Quarter providing complementary provision with MUGAs and play parks. The Draft Local Plan's Proposals Map for Portishead identifies the town's central urban area as the major location for change – around Wyndham Way. Supporting this is the reinstatement of a train service to Bristol – for which work along the track has commenced with opening planned for 2028. The new train station is planned to be built close to the eastern edge of the town at the junction of Phoenix Way and Quays Avenue. Government planning initiatives are moving towards focusing development close to train stations. It can be readily seen that Portishead is a major town in North Somerset – and would be set high in a district settlement hierarchy. And rightly so, it was one of the fastest growing towns in Europe in the first part of the 21st Century and is suitably positioned next to the urban area of Bristol, the employment areas around Royal Portbury Dock and Avonmouth/Severnside. Returning to the Council's Sustainability Appraisal (SA), November 2023, we have considered the promotion site against the objectives of the SA. It is reasonable to expect that the site delivery of development will deliver overall positive sustainable benefits – supporting a sound Local Plan strategy. "SA objective 2.1: Boost housing delivery and meet the housing need identified within the plan period. Negligible (0) All sites are recorded as having a negligible effect in relation to this SA objective" As set out elsewhere in the Company's representations, the draft Local Plan does not meet its actual housing need. The allocation of this would be a "significant positive" in assisting the Council in meeting its housing need. "SA objective 2.5: Achieve healthy living opportunities promoting good access to healthcare centres, open spaces, Public Rights of Way, walking and cycling opportunities, and outdoor leisure activities. Significant positive/Significant Negative (++/--) The site is within 720m of at least one healthcare centre, one type of open space, one Public Right of Way, one cycling route and one indoor/outdoor leisure facility and/or the site is of a scale (very large or large, see Table B.3) that potential development would deliver significant new green infrastructure and connectivity" The score for this objective has been given as both "significant positive" and "significant negative". If it is intended to have both scores, it is not clear for what reasons the "significant negative" applies. In any event, this site does not meet the criteria for "significant negative". "SA objective 3.2: Minimise vulnerability to tidal fluvial flooding, without			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								increasing flood risk elsewhere. Also minimise surface water flood risk and harm to water quality and availability. Significant negative (--) More than 60% of the site is within Flood Zone 3a or 3b” The site benefits from existing flood defences, providing protection up to and including the 1 in 200-year flood event. On site mitigation measures to ensure the development is safe for its lifetime are possible and would be detailed in any future planning application. The scoring against this objective does not reflect the flood defences which the site benefits from. “SA objective 3.3: Reduce the need to travel by car to minimise environmental impacts of unsustainable forms of travel, including transport related carbon emissions and air pollution. Ensure good access to infrastructure that promotes travel by active modes (walking and cycling). Minor positive (+) The site is more than 1.8km from a railway station but it is within 450m of a bus stop and cycle route” The site will be 800 metres from the Portishead railway station, which is due to open in the next three years. “SA objective 3.6: Protect and where possible enhance biodiversity, geodiversity and green infrastructure and allow for its adaptation to climate change, particularly with respect to protected habitats and species. Minor negative (-) The site is within 250m of a locally designated site. The site is within zone B or C for the North Somerset and Mendip Bats SAC” Aside from Zone B/C of the SAC, the site does not sit within any other ecological designation. The site will be required to deliver a minimum of 10% BNG and the appended Ecological Constraints and Opportunities Report sets out the range of opportunities that the BNG can be created – reflecting a positive response. Affordability: When compared against national averages, it is clear that Portishead is particularly affected by an affordability crisis. Figure 1 below presents the change in median house prices over time, with the gap between Portishead and the national average consistently widening over time. Below, sets out 2025 (March) median house prices for Portishead on a constituency basis (source: House of Commons Library): Portishead Redcliffe £455,000 Portishead South £400,000 Portishead Central £352,500 England and District data below taken from GOV.UK: England £291,000 North Somerset £313,487 In North somerset alone, between March 2024 and March 2025 house prices rose by 5.1% When contrasted against the figures for North Somerset, it is apparent that this increase in houses prices cannot be solely attributed to North Somerset’s district-wide housing availability problems. Instead, Portishead’s house prices have increased at a rate greater than that of North Somerset, suggesting there is also a localised issue of housing availability in Portishead which is driving prices onwards. Housing Supply: At the Regulation 18 stage, Portishead was identified through the Preferred Options Evidence Base as one of the most sustainable settlements in the authority area. At that stage, only five sites were allocated for residential development in Portishead, with four in urban areas outside of the current Green Belt and one put forward for Green Belt release. At Reg 18 consultation, it was raised by the Company that this was not a sufficient level of housing growth. Further housing growth is now planned – with 1601 homes identified. Windfalls are anticipated to contribute 7% of the housing in the district over the Plan period. The Local Plan tells us that sufficient housing sites have been identified, however, there are doubts over how robust or sound these are and therefore whether they will deliver development to satisfy needs promptly. Compounding this is the draft Local Plan making no meaningful reference to the unmet housing need of Bristol. Bristol’s Local Plan is undergoing Examination and a key challenge being grappled with is meeting its unmet housing need. Concerns have recently been reported by its Inspectors noting a significant shortfall in meeting overall needs. The figure of 34,650 homes was not considered sound with an increase of some 5000 sought at this time. An unmet housing need figure is also sought by the Inspectors. The unmet housing need figure is to be confirmed by Bristol City Council but previously it equated to some 10,400 homes.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								North Somerset Council should still engage positively with neighbouring local authorities in delivering new development to meet identified needs – and to resolve issues associated with unmet need. While North Somerset Council is not obliged to address unmet need, given the draft Local Plan and the evidence base that supports it, it is not clear that North Somerset Council have used reasonable endeavours (alongside other authorities) to identify any land that could accommodate a share of this shortfall. Not only is land East of Portishead suited to meet existing identified needs now, it is very well positioned spatially to Bristol, and its connectivity with Bristol will only improve through reinstatement of the trainline from Portishead to Bristol Temple Meads in less than 3 years. And so, sites sufficiently proximate to Bristol are considered suitable and reflects a sensible approach to town planning. An allocation of Land East of Portishead for circa 650 dwellings will provide a significant contribution to North Somerset Council's housing supply and Bristol's unmet need. Sensibly, there is therefore a need to identify residential allocations well related to Bristol. Portishead is capable of accommodating more than 7% of the district's housing requirement given that it is the second largest town in the district and has seen growth is services, facilities and infrastructure over recent years. The town should be a focus for development. Affordable Housing: Drawn from bespoke work on behalf of Persimmon Homes, consultants, Pioneer have produced an Affordable Housing Need Report, January 2024 submitted alongside accompanying representations. It makes clear that there will be a shortfall in affordable housing across North Somerset an across many settlements unless there is a policy shift towards delivering more housing overall. For Portishead, a shortfall is predicted – some 221 units set against deliverable affordable housing between 2024-2039 based upon planned housing distribution/allocations based upon the Dixon Seale viability outcomes. Neighbourhood Plan: The Portishead Town Neighbourhood Plan (NP) was 'made' 19 September 2023 with the plan's eastern boundary extending broadly around the urban area. The NP broadly prioritises brownfield development – a component of the NP's Vision. Reflecting this is the area of Wyndham Way, as identified in the NP and within which, 'Old Mill Road', a centrally located industrial park is identified for mixed development in the adopted Local Plan. In the Reg 19 Consultation, that area is within an extended area falling under draft Policy LP17: Wyndham Way – which, simply put, proposes higher density mixed growth through regeneration. Supporting that regeneration is a North Somerset Council-led initiative (including ABRDN plc and local stakeholders). That initiative resulted in a Wyndham Way Study Consultation with a masterplan consulted upon during Autumn 2022. What should be noted is that the masterplan places significant emphasis on higher density housing – as there is insufficient space to provide family homes set around a mixed development including light industry, studio and workshop space so making it suitably sustainable. In light of the need for land assembly, comprehensive site planning and phased development, it is highly questionable that this level of regeneration could be delivered in good time and certainly as the Council anticipates – as reflected in the Local Plan's evidence base. It follows, therefore that the plan should follow a realistic, robust and ultimately 'sound' spatial strategy. In accommodating housing need and that to include a mixture of housing types rather than flatted development in a sustainable location it makes sound planning sense that a suitable deliverable site is identified. It should accommodate an attractive, well planned, mixed development that can complement any regeneration initiatives in the town		
62674849	John Reed	Dean Titchener		Yes		Yes	Yes	Devil's Elbow Farm, Hillend, Locking We note that the pre-submission Local Plan does not currently include the Site as a proposed allocation. We therefore welcome the opportunity to provide further information to assist the Council in its ongoing plan-making process and to reaffirm the Site's suitability, availability and deliverability. Please see attachment for full submission.			Letter to Planning Policy Team - North Somerset Council 28.11.25.pdf
58613377	Hill Residential Ltd	Marrons		No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	LAND WEST OF FAILAND 1.1 The following representations have been prepared by Marrons on behalf of Hill Residential Ltd (our "Client"), with regard to land interests at Land west of Failand, Bristol (the "Site"), in response to the North Somerset Council (the "Council") Local Plan 2041 Pre-submission Plan Regulation 19 Consultation (the "NSLP"). 1.2 Our Client has previously made representations to the NSLP in March 2025, via the 'additional sites consultation'. We understand that the contents of these representations will still be considered and therefore for brevity are not repeated here. 1.3 A planning application has recently been submitted for development on the Site, which is now under consideration by the Council. This confirms the technical ability of the Site to accommodate sustainable development and the Council is encouraged to consider the application alongside these representations with regard to the Site's suitability, availability and achievability. The associated description of Proposed Development is as follows:			Marrons on behalf of Hill Residential - Reg 19 Representations Final w_a.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								“Outline application (with all matters reserved except access) for a phased development of up to 200 dwellings with landscaping and open space, a flexible retail/café/community unit (non-residential uses to include Use Classes E and F2), and associated infrastructure”. 1.4 Hill Residential Ltd (“Hill”) is an award-winning 5-star housebuilder, creating a range of high-quality homes across London and southern England in an area stretching from Cambridge to Oxford and across to Bristol. Hill’s vision is to be the UK’s leading, most trusted housebuilder, creating exceptional homes and sustainable communities. 1.5 Hill considers sustainability a fundamental part of its business strategy and believe that a sustainable future is achievable only through a holistic approach that encompasses environmental, social, and governance considerations. Supporting Documentation 1.6 These representations should be read alongside the following supporting documents: • Site Location Plan – prepared by Marrons (Appendix 1); • Parameters Plan – prepared by Marrons (Appendix 2); • Illustrative Masterplan – prepared by Marrons (Appendix 3); • Grey Belt Report – prepared by Marrons (Appendix 4); Scope of representations 1.7 The Council confirms as part of the consultation that representations are invited within the specific remit of the ‘tests of soundness’, as set out in the National Planning Policy Framework 2024 (NPPF) at Paragraph 36. The Framework notes that plans are ‘sound’ if they are: “a) Positively prepared – providing a strategy which, as a minimum, seeks to meet the area’s objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development; b) Justified – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence; c) Effective – deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and d) Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in this Framework and other statements of national planning policy, where relevant.” 1.8 In the context of Paragraph 36 of the NPPF our Client also considers it imperative that the NSLP accounts for effective forward planning, given the emerging Spatial Development Strategy and the role North Somerset play within the West of England Combined Authority (WECA) in terms of spatial planning. 2. Land west of Failand, Bristol The Proposed Development: 2.1 The key elements in relation to the Site and the Proposed Development are best summarised as follows its characteristics are best summarised as follows: • Up to 200 new homes, delivering a mix of dwelling sizes to meet local housing needs. • Space for a flexible retail/café/community unit (uses to include Use Classes E and F2). • 45% affordable housing (up to 90 homes), ensuring a range of tenures to support local families and key workers. • Creation of a high-quality residential development to provide new housing for the village and help the Council meet its chronic undersupply. • Increases in biodiversity value, equating to 12.03% increase in the biodiversity value of habitats and 168.83% in relation to hedgerows post development. This will include new native woodland planting, trees, wildflower meadows and grassland. • New pedestrian, cycle and vehicular networks within the Site with pedestrian connections to existing pedestrian infrastructure on the curtilage of the Site to improve pedestrian connectivity within Failand. • A comprehensive Sustainable Urban Drainage Strategy (SuDs), which could include swales, rain gardens, attenuation basins and permeable surfaces. • A landscape and heritage sensitive development that responds thoughtfully to the Site's topography and maintains appropriate separation from the Tyntesfield Estate Registered Park and Garden (RPG), balancing new housing with protective measures and high-quality green infrastructure that delivers environmental, social, and visual benefits. • New open-space areas with enhanced planting and green buffers, a thoughtfully located public open space, which includes children’s play space and improved biodiversity. • Retention of existing hedgerows and trees where possible with additional planting to minimise visual impact. • Significant financial contributions including a population contribution to the village to support local services and facilities (S106 and Community Infrastructure Levy (CIL) contributions). Planning History: 2.2 The Site was submitted to the Council’s Regulation 19 Additional Sites Consultation in March 2025, where the Site was promoted for allocation in			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								the Local Plan update following the reforms to the National Planning Policy Framework (NPPF) in December 2024. As stated, for brevity the Regulation 19 Representations are not repeated here. 2.3 We note that the outcomes from the Regulation 19 consultation were presented to Cabinet on 18 June 2025. Notably, the Site was not selected for allocation in the updated plan. Our position, as set out in our Regulation 19 representations, remains that the emerging Local Plan fails to adequately address Bristol's unmet housing need. These concerns were echoed by Council members at the Cabinet meeting on 18 June 2025. 2.4 A request for pre-application advice was submitted in August 2025. The Council provided formal written advice on 29 October 2025. The advice acknowledged the proposal for up to 200 dwellings at the Site, and assessed its alignment with planning policy, site constraints, and sustainability considerations. 2.5 Critically, the Council's advice recognised that the Site could be considered 'grey belt' in accordance with the current NPPF, given that it does not strongly contribute to the key purposes of the Green Belt. 2.6 Notably, several aspects of the proposal were not disputed in the advice provided. The Council acknowledged the potential for a layout that respects the Site's landscape and heritage context, including the offset from the RPG and the containment provided by surrounding woodland and built form. The indicative design approach, including perimeter block layout and active frontages, was broadly supported from an urban design perspective. The provision of affordable housing in line with policy requirements was also accepted, subject to further detail at application stage. 2.7 While the Council's advice raised some concerns regarding the sustainability of the Site, particularly in relation to access to services and reliance on private car travel, the submitted planning application, with reference to its suite of supporting technical documents, demonstrates that the Site can be considered sustainable. Moreover, the Council's advice did not take into account relevant planning appeal decisions that support the sustainability of the Site. These decisions are discussed in detail at Paragraphs 6.73 to 6.75 of the submitted Planning Statement. The demonstrable sustainability of the Site is addressed throughout the planning application, and the inclusion of a shop provision within the proposals further enhances this position. 2.8 The Council also outlined a range of technical matters to be addressed at application stage, including transport, ecology, flooding, heritage, and affordable housing provision. These matters have been considered and are addressed through the supporting documentation submitted with the application. 3. Response to the NSLP Grey belt: 3.1 A key aspect of the Government's planning reforms was the introduction of the 'grey belt' alongside the revised Standard Method for calculating housing need. The Government is very clear on its objective of delivering 1.5 million homes and considers national planning policy measures such as the grey belt, key in doing so. 3.2 The initial draft of the NSLP did not consider the role of the grey belt and therefore our Client is keen to understand how it has now been introduced to this latest version and what changes have been made as a result. 3.3 The term 'grey belt' is mentioned 3 times within the NSLP. Indeed, within Policy SP7: Green Belt, grey belt is mentioned just once within the supporting text. Paragraph 148 of the NPPF confirms that where it is necessary to release Green Belt land for development, plans should given priority to previously developed land, then consider grey belt which is not previously developed, and then other Green Belt locations. The Council states on page 30 of the NSLP that "a sequential approach to Green Belt release as been taken prioritising previously developed land, followed by grey belt sites and then other Green Belt locations". 3.4 Paragraph 3.3 of the Council's Green Belt Review Background Paper includes reference to Paragraph 148 of the NPPF but neglects to include the final sentence, which reads as follows: "…Strategic policy-making authorities should consider the consequences for sustainable development of channelling development towards urban areas inside the Green Belt boundary, towards towns and villages inset within the Green Belt or towards locations beyond the outer Green Belt boundary." 3.5 With regard to the above Paragraph 148 includes reference to Paragraph 110, which states: "The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health. However, opportunities to maximise sustainable transport solutions will vary between urban and rural areas, and this should be taken into account in both plan-making and decision-making." (our emphasis - see attached doc) 3.6 With reference to the NPPF and grey belt, it can reasonably be assumed that villages within North Somerset which are inset from the Green Belt, are			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								strong contenders for having a presence of grey belt land and therefore present opportunities for sustainable development in line with the sequential approach as set out in the NPPF. By way of example, Failand, where our Client's Site is located, is inset within the Green Belt and pre-application discussions have confirmed that it is considered grey belt land, which a technical Grey Belt Report (Appendix 4) in support of the submitted application now confirms. Despite this, Policy SP8: Housing confirms just 12% of the housing supply will be met in 'villages and rural areas'. 3.7 With regard to the above, the Council is reminded that Paragraph 73 of the NPPF states the following: "Small and medium sized sites can make an important contribution to meeting the housing requirement of an area, are essential for Small and Medium Enterprise housebuilders to deliver new homes, and are often built-out relatively quickly." 3.8 The NSLP continues to prioritise new residential development in or close to urban areas, optimising opportunities to encourage active and public transport modes of travel. Whilst our Client supports this in principle, in our view it does not provide the context to fully consider the role of the grey belt and opportunities to promote/improve sustainable transport options in rural areas. 3.9 It is not clear from the Green Belt Assessment undertaken or the wording within the NSLP if the Council has undertaken an objective exercise to determine whether or not it has grey belt land within the North Somerset, which can support sustainable development. Grey belt land provides a sustainable opportunity to provide housing within close proximity to Bristol, without affecting the purposes of the Green Belt in relation to the Bristol urban area. However. This has not been explored. Bristol's unmet need: 3.10 No mention is made within the NSLP regarding Bristol City Council's demonstrable and increasing unmet need. Bristol currently has an unmet need well in excess of 10,500 homes which it cannot meet within its boundary. Both South Gloucestershire to the north and Bath and North East Somerset to the south have confirmed difficulties in meeting their own needs, and therefore an inability to meaningfully assist Bristol in meeting its unmet needs. 3.11 The West of England Combined Authority (WECA) was established in 2017, following a devolution deal between Bristol, Bath and North East Somerset, and South Gloucestershire. In line with the Government's proposed move to strategic planning authorities, WECA is now taking a more active role in planning across the strategic region, and recently announced work had commenced on a Spatial Development Strategy. Alongside this, North Somerset continues to confirm its intention to join WECA, becoming the fourth local authority alongside Bristol, Bath and North East Somerset, and South Gloucestershire. 3.12 Our Client's Site is located in close proximity to the western edge of Bristol and therefore provides an opportunity to enhance connectivity between Bristol and North Somerset, whilst assisting with the unmet housing needs of Bristol. This in turn will also accord with the wider strategic objectives of WECA, in strengthening the connections between the local authority areas. 3.13 When considering a neighbouring authorities unmet need there is also a requirement to consider and support development that can come forward quickly to address this unmet need. Housing supply: 3.14 Paragraph 61 of the NPPF states that it is important to support the Government's objective of significantly boosting the supply of homes, for a sufficient amount an variety of land to come forward where it is needed. Paragraph 62 of the NPPF also states the following: "To determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning practice guidance. In addition to the local housing need figure, any needs that cannot be met within neighbouring areas should also be taken into account in establishing the amount of housing to be planned for." (our emphasis - see attached document) 3.15 Since the previous consultation, the Council has addressed its updated housing need and proposes allocations to meet the delivery of a minimum of 23,700 dwellings within North Somerset. Overall, our Client considers this to be a positive step. 3.16 Notwithstanding. Policy SP8: Housing confirms the Council's proposed housing supply totals 24,495 dwellings, when compared to the minimum requirement of 23,700, this represents only a 3% uplift. When divided across the plan period, the Council has given itself a 53 dwelling per annum tolerance. 3.17 The Planning Practice Guidance states that the Standard Method for calculating housing need provides a minimum number of homes to be planned for and suggests authorities use this as a starting point1. Our Client therefore does not consider the calculated housing requirement should be seen as a 'target', particularly where exceptional circumstances existing in Bristol which require neighbouring authorities to consider whether further need can be accommodated.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								3.18 Moreover, it is essential that the housing trajectory is robust and attempts to sustain a rolling five year housing land supply throughout the Plan period, in accordance with the NPPF. Paragraph 72 of the NPPF states that planning policies should identify the supply of specific, deliverable sites for five years following the adoption of the plan. Paragraph 78 of the NPPF states the following: “Strategic policies should include a trajectory illustrating the expected rate of housing delivery over the plan period, and all plans should consider whether it is appropriate to set out the anticipated rate of development for specific sites.” 3.19 We have been unable to find, either within the strategic policies or within the evidence base of the NSLP, a housing trajectory which details which sites are expected to come forward and when, alongside confirmation that this also enables the Council to demonstrate a five-year housing land supply upon adoption. 4. Summary and Conclusions 4.1 These representations have been prepared by Marrons on behalf of Hill Residential Ltd, with regard to its land interests at Land west of Failand, Bristol, in response to the North Somerset Local Plan 2041 Pre-submission Regulation 19 Consultation. 4.2 It should be noted that our Client is in broad support of the NSLP and the draft allocations noted within, though does consider modifications are required in order for the NSLP to pass the relevant tests of soundness. The areas of the NSLP which we consider need to be addressed are set out below. 4.3 The Council requires the NSLP to be considered against the tests of soundness within the Framework at Paragraph 36. In response to these and with reference to the commentary made within these representations, our Client notes the following: 4.4 Positively prepared – The NSLP is not considered positively prepared. The strategy seeks to meet the Council’s minimum housing requirement, however, there are concerns about the effectiveness of delivery across the Plan period and ability to maintain a rolling five year housing land supply. The NSLP pays no attention to the acute unmet need arising from Bristol and its ability to assist with this. In so doing, the Council has also failed to accurately assess the role of the grey belt and the ability to allocate sites close to Bristol, which are of a size that can deliver in the short-term. This is despite the Council confirming on an individual bases that such sites exist. It is our Client’s position that the Council has sought to retrofit the requirement to consider the grey belt within a Plan and spatial strategy that had already been conceived. This is plainly evident from the lack of times ‘grey belt’ is mentioned within the NSLP or its evidence base. Given the grey belt represents one of the most significant changes to national policy in some time, it should feature heavily within the plan-making process for Green Belt authorities. 4.5 Justified – The NSLP is not considered justified. Whilst our Client considers the strategy is appropriate in part, there is potentially an over-reliance on strategic scale development which is not complemented by development of smaller sites, to enable effective delivery across the Plan period. However. This cannot be accurately determined given the absence of a site trajectory and anticipated delivery rates. Our Client therefore reserves the right to comment on this further once this evidence is made available. For the reasons stated above, our Client considers that a blended strategy is more appropriate, which the Council has not considered. 4.6 Effective – The NSLP is not considered effective. Our Client considers that there is a lack of recent evidence to demonstrate effective joint working on cross boundary strategic matters, and considers that a distinct lack of effort has been made to address housing requirements in and around Bristol, despite the clear opportunities to do so. As stated above, sufficient evidence also does not exist to be able to determine whether or not it is deliverable over the plan period. 4.7 Consistent with national policy – The NSLP is not considered consistent with national policy. Whilst the NSLP seeks to address national policy in some areas, there are clear omissions which mean it cannot be considered consistent with national policy overall. The Council appears to have taken a conservative approach, particularly with regard to housing supply, which is considered to go against the Government’s objectives of delivering 1.5 million homes and boosting significantly the supply of homes, as set out at Paragraph 61 of the NPPF. Nor has it considered properly the requirements of Paragraph 62 of the NPPF, in not seeking to meet the unmet needs of its neighbouring authority, Bristol. 4.8 Consequently, our Client does not consider the NSLP to be sound in its current form and confirms that it would like to participate in any hearing sessions held at the examination in public, particularly on matters raised in these representations and those submitted earlier in the process. Our Client is willing to engage proactively with a view to assisting the Council in making the NSLP sound. 4.9 Our Client also re-affirms that Land west of Failand, Bristol is available for development now, represents a suitable location for development, and that development of the Site is achievable with a realistic prospect that housing can be delivered within the first five years of the draft plan period. The Site is deliverable and should therefore be favourably regarded in relation to its

								potential allocation for residential development within the emerging Local Plan. This is demonstrated via a live planning application, where supporting technical information is provided which the local plan team is invited to consider.			
51079969	Justin Saunders		Pill and Easton-In-Gordano Parish Council	No	Positively prepared	No	Yes	For Pill and Easton-In-Gordano this does not include smaller sites of over 10 units that are in the planning process which are far more sustainable than the locations defined in LP4. This list needs to be reviewed.			
29190241	Waddeton Park Ltd (Land at Pill Road)	Alder King Planning Consultancy	Waddeton Park Ltd	Yes		Yes	Yes		Waddeton Park Limited strongly supports the proposed allocation of its land within the new local plan for development. However, it has drawn attention to the indicative site capacity and site requirements laid out for the Land at Pill Road in the Pre-Submission Plan. Related amendments are, therefore, proposed. For clarity, and for the avoidance of uncertainty and unnecessary delays in determining the future planning application, Waddeton Park suggests that it would be appropriate for a modification to be made to the proposed allocation wording to the extent that development would permit up to 100 dwellings and a care home. The allocation should be worded to specifically 'permit up to 100 dwellings' and additionally 'support, but not require, a care home on the site' (or similar wording). In this regard, there is a demonstrable need for older persons housing in North Somerset over the plan period to 2041, as supported by the 'North Somerset Local Housing Need Assessment Report of Findings, September 2025' (LHNA). Figure 49 of the LHNA, which forms part of the local plan evidence base, quantifies the need for specialist older person housing to 2041. This sets out that there would be need to provide an additional 1,400-1,500 specialist older person housing units over the 15-year plan period 2026-2041. Therefore, the need for this type of development is clear and should be appropriately accommodated for in the local plan. The appended illustrative masterplan outlines one way in which a care home could appropriately form part of the development scheme, in addition to 100 dwellings on the site. Waddeton Park proposes that the following requirement is removed from being a site requirement: "Active travel connection required between Pill Green and Land at Pill Road, crossing Markham Brook to enable creation of safe walking routes to schools, along with proportionate contribution to Markham Brook active travel overbridge." Waddeton Park suggests that it would be appropriate for a modification to be made to the proposed allocation to remove this element as a 'site requirement'. Firstly, the site has appropriate accessible connections for future residents to walk to St Katherine's School opposite. This site already benefits from safe walking routes to schools; therefore, it is onerous and unreasonable to expect development on the site to fund/deliver additional connections where not necessary to make the site itself acceptable in planning terms. As assessed within the appended Transport Technical Note, the site's accessibility review shows that the key desire line to travel from the site is to Pill village centre along Pill Road north and St Katherine's secondary school opposite the site. To the north, Pill Road also connects to Crockerne Primary School. Overall, access to day-to-day facilities and amenities for education, shopping, and community uses is primarily towards the north and east (to the secondary school). In addition, there are existing PRoWs opposite the site on Pill Road for recreational walks. Therefore, it does not seem reasonable for the Land at Pill Road site to have to deliver and/or contribute to the delivery of the connection over Markham Brook to the west as this is not necessary for future residents. The sustainability credentials of the site without this link are clearly acceptable; the delivery of the land at Pill Road without any reliance on the Pill Green land should be wholly supported. It seems the benefit of such connection would be for the Pill Green site (draft allocation for 600 dwellings) and, as such, should this connection be necessary it should be delivered by that site. Furthermore, an 'overbridge' to Markham Brook is very likely to be impractical and unrealistic physically, given the sloping valley and steep topography around the brook, and it is likely to have detrimental effects upon trees and biodiversity. Furthermore, the financial implications could risk the viability of the land at Pill Road allocation coming forward for development and this would materially affect the Council's housing position. Finally, fundamentally the requirement for an active travel bridge over Markham Brook is not considered to be necessary, as set out in the appended Transport Technical Note. There is no desire line to travel to the south/west of the site, as this has excellent accessibility to local facilities and amenities in the village centre and the secondary school is conveniently located opposite the site. These proposed minor changes need not be a matter of any significance for the examination but could be a modification proposed by the Council before submission of the Local Plan to the	Waddeton Park Limited's view is that the Local Plan is legally compliant regarding the proposed site allocation for residential development at Land at Pill Road in Pill (Schedule 1 of the Local Plan, page 280), to which these representations relate. Moreover, Waddeton Park Limited believes that the proposed Local Plan, as set out in the Regulation 19 consultation can be found to be sound in that that the allocation of the land at Pill Road, Pill for residential development (identified on page 280 under Schedule 1) is consistent with each of the tests of soundness insofar as they are directly relevant. These representations are supported by the appended Transport Technical Note, prepared by Ridge, which supports the sustainability of the land at Pill Road for development. The land at Pill Road site allocation is part of the proposed means of implementing the spatial strategy, which has been properly arrived at through the identification of properly explained strategic options and their testing through sustainability and deliverability evidence and appraisals, and through stakeholder and community consultation. It is, therefore, a proper product of the positive preparation of the Local Plan and is justified. This forms part of the spatial strategy in appropriately directing strategic growth at Pill and Easton-in-Gordano under Policy LP4. The allocation of the site will be effective, in that it will assist in making the Local Plan deliverable. The site is wholly in one ownership and free of any significant constraints so its development can begin and be completed in the early years of the local plan period. The allocation is consistent with national policy and with the policies in the emerging Local Plan which is to be examined according to relevant national planning policy. It is clear that exceptional circumstances exist, and have been appropriately evidenced, to justify release of Green Belt land to support growth to meet North Somerset Council's identified housing need for the plan period. Paragraph 148 of the NPPF is clear that where it is	North_Somerset_Local_Plan_Pre-Submission_Plan_Representation_Form_Part_B_WPL_LP5.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									Secretary of State, and as a minor change should not trigger a need for any further consultation.	necessary to release Green Belt land for development, as is established and agreed in North Somerset, plans should give: “priority to previously developed land, then consider grey belt which is not previously developed, and then other Green Belt locations.” In this regard, Waddeton Park has consistently promoted the land at Pill Road throughout the emerging local plan process and strongly supports its allocation for residential development in the plan. The site is sustainably located with a strong relationship with the existing settlement of Pill. This strong cohesion between site and settlement is a significant benefit in allocating residential development here. The site is well located to the existing settlement with good accessibility to local services and in walking distance to key facilities. Pursuant to the Council’s ‘Spatial strategy, site selection and capacity paper’ (October 2025), Pill/Easton-in-Gordano is identified as a Category A village which are described as “villages considered to be relatively sustainable in their own right with a range of easily accessible services and facilities and goof public transport links to towns”. The Council’s approach is wholly appropriate to direct growth to such settlements. It is highlighted that work to reopen the railway line has commenced with Pill train station set to reopen by 2028 which will only further enhance the existing sustainability of the settlement. The land at Pill Road has been appropriately and comprehensively assessed as suitable through the SHLAA and adjoins a Category A village in a sustainable location where exceptional circumstances for Green Belt release have been identified. With regard to the Green Belt, the site has been assessed by the Council, as part of a slightly larger land parcel, within the ‘Stage 2 Green Belt Assessment’ (October 2025), as delineated below (see attached document). The overall assessment of this parcel concludes it makes a weak contribution to the purposes of the Green Belt. This is set out in turn as follows: Purpose A - to check the unrestricted sprawl of large builtup area; (Bristol): Weak Purpose B - to prevent neighbouring towns merging into one another: Weak	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										Purpose C - to assist in safeguarding the countryside from encroachment: Moderate Purpose D - to preserve the setting and special character of historic towns: Weak Purpose E -To assist in urban regeneration, by encouraging the recycling of derelict and other urban land: Neutral Further to this, as can be seen in the Green Belt assessment, our Waddeton Park's land makes a weak contribution to Green Belt purposes A, B and D. There are no relevant footnote 7 assets that would provide a strong reason for refusing or restricting development on the land. Therefore, this can be considered Grey Belt, subject to the specifics of the development proposal. The Council's Stage 2 Green Belt assessment agrees with this position in that the parcel can be identified as Grey Belt. This wholly supports the Council's approach to allocate development on the land, in accordance with the provisions of NPPF paragraph 148 which first priorities previously developed land and then Grey Belt land before any other Green Belt locations. The site is easily accessible, being within walking and cycling distance to a number and facilities and services within the village and nearby. This includes St Katherine's School opposite the site to the east. The site is available in the short term and can be delivered as a standalone development, without dependency on any major infrastructure intervention. The residential development has been driven by the context and topography, and by a wish to achieve an appropriate network of green infrastructure, positively responding to the woodland around Markham Brook to the west. The site is within Flood Zone 1 and, therefore, having a low risk of flooding and being appropriate for residential development. It is the preferred location under the flood sequential approach to selection of housing sites. Supporting technical surveys and assessments have been carried out to inform the development allocation. Demonstration of the deliverability of development on the site is the intention to submit an outline planning application for development of the site, following pre-application discussions with the Council, shortly after the close of this Regulation 19 consultation. This will ensure development can be brought	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										forward in the early years of the plan and supports the requirement for the Council to identify “specific, deliverable sites for five years following the intended date of adoption.” (NPPF paragraph 72). Overall, the proposed allocation on land at Pill Road is strongly supported. Comment is, however, made with regard to the site-specific deliverability of the development, with regard to the site requirements as set out on page 280 of the published Reg 19 Pre-submission Plan for the proposed allocation. In this context, the draft allocation makes provision for an indicative capacity of 100 dwellings on the site. Pursuant to the work undertaken to date the site may also be able to accommodate a care home, ensuring an efficient use of land and meeting a need for such facilities. As illustrated on the appended illustrative masterplan, a scheme is currently being progressed via pre-application discussions for 100 dwellings and a c. 70-bed care home. It is appropriate that the supporting wording for the allocation is amended to reflect this potential development, without making it an absolute requirement. The site can comfortably and appropriately accommodate a care home in addition to traditional residential dwellings, which will make a significant contribution in an area where there is demonstrable need. In accordance with the enclosed plan, key elements of Waddeton Park Limited’s development proposal on the land at Pill Road include: • New homes generally to the eastern boundary with lower density residential frontage towards the woodland; • Policy compliant affordable housing; • Care home in accessible location in the north of the site with views across landscape edge and woodland, providing a sensitive response to existing dwellings in St Catherine’s Mead; • Vehicular access from Pill Road; • Pedestrian/cycle and potential emergency access connection to the north of the site, serving a foot/cycle path which runs north/south within the site; • Mobility hub, with potential for electric scooter/bicycle hire, bicycle parking, car club space, parcel lockers and occasional events (i.e. food truck); • Traffic management to help create a low speed environment; • Potential for pedestrian

Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										crossing of Pill Road to Public Right of Way running east; • Pedestrian/cycle access to Pill Road linking with existing bus stop, serving a foot/cycle path which runs north/south within the site; • Potential for improved crossing/traffic management along Pill Road; • Wildlife area with informal recreation; • Northern pocket park responding to existing space in St Catherine's Mead; • Multi-functional green corridor with swale, footpath and new planting; • Open space with play area in an accessible location, helping to retain an open character at the gateway to the village; • North to south swale within landscape edge to woodland. • New and retained hedgerow to south of vehicular access, along the eastern boundary with Pill Road, helping to retain a green character on the entrance to the village; • Green corridor with significant tree planting on site high point to help soften views; • Attenuation pond within landscape corridor.	
31091393	Waddeton Park Ltd (Land south of Greenhill Road)	Savills (Dan Yeates)	Waddeton Park Ltd	No	' Positively prepared ' Consistent with national policy	Yes	Yes	LAND SOUTH OF GREENHILL ROAD, SANDFORD These representations have been prepared and submitted by Savills on behalf of Waddeton Park Ltd. Waddeton Park have an interest in 1.95 hectares of land south of Greenhill Road, Sandford. This specific response relates to Policy LP5 (housing and employment allocations) and explains why the land south of Greenhill Road, Sandford (see Site Location Plan attached at Appendix 1) controlled by Waddeton Park is a suitable and sustainable location to deliver a development of circa 31 market and affordable homes. Our comments on the consultation and supporting evidence base are made in accordance with paragraph 36 of the NPPF, to assist in ensuring that the Local Plan is found sound when examined in the future. Policy LP5: Our representations to Policy SP8 conclude that it is likely the future examining inspector(s) will require an uplift to the housing requirement for North Somerset in order to accommodate a proportion of the unmet housing need from the Bristol Housing Market Area, principally from Bristol itself. Should this happen, the process that the local authority has followed in evaluating the potential contribution from, and sustainability of, additional sites through the consultation in early 2025 places it in a good position to introduce further allocations through the Examination process. In this context, the land south of Greenhill Road, Sandford, is a good candidate for inclusion to help address the need for housing in the Sandford and Winscombe area. This representation first explains why Sandford is a sustainable settlement and capable of accommodating further housing development in a sustainable manner, and secondly why land south of Greenhill Road, Sandford represents a 'sound' opportunity for residential development which is suitable and sustainable. Sandford – a Sustainable Location: Sandford is a logical location for proportionate additional growth within North Somerset. Such additional growth at Sandford would complement the strategic scale development at and on the edge of the major settlements. Indeed, the sustainability of Sandford is already reflected through other recent planning permissions in the village, including two sites (Land at Mead Farm and Land south of Greenhill Lane) which are both identified for allocation in the draft Local Plan. In addition, a number of sites were identified at Sandford as part of the Council's 'additional sites' consultation in early 2025, identified as having potential for development. The village benefits from a number of services and facilities; including a primary school, convenience store, meeting room, and pub; alongside a range of social/community groups. There are also several businesses in the village	The land south of Greenhill Road, Sandford, is a good candidate for inclusion to help address the need for housing should an uplift in housing sites be required through the examination process.		North Somerset Local Plan Pre-submission Plan - Representations LP5.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								providing a wider range of services and facilities. Sandford forms part of a village cluster, with additional services and facilities accessible in neighbouring villages, including Winscombe, Churchill and Banwell; with a number of these services and facilities within walking/cycling distances. The village itself benefits from a relatively significant number of employment opportunities given its size; notably the large Thatchers Cider complex. The village is located on a bus route between Weston-Super-Mare and Wells; and in addition is supported by bus services to Bristol Airport, and a number of school/college buses. Whilst there are some small-scale employment opportunities within the village, it is recognised that residents travel beyond the village for work. There are, however, various opportunities for commuters to travel via sustainable modes, including by bus. Service 125 (which runs from a bus stop on the north east corner of the site) offers a two hourly service between Churchill / Langford and Weston-Super-Mare, providing a commuter route to Weston-Super-Mare in 40 minutes. In addition, services 51S and 62 also stop at the same bus stop adjacent to the site and connect to Banwell, Locking, Highbridge, Bridgwater and Winscombe. Service number 126 also provides connections to Weston-Super-Mare from a bus stop close to the site at Sandford Church. It is therefore the case that Sandford has a range of services and facilities available within the village, and is connected to nearby settlements for employment opportunities via sustainable modes of transport. As set out above, we consider it is likely further allocations will be required through the Examination process, and that the land south of Greenhill Road, Sandford, is a good candidate for inclusion to help address the need for housing in the Sandford and Winscombe area. Our previous Regulation 19 representations provided our assessment of the site against the criteria from the Council's Sustainability Appraisal (SA), including the principal technical and environmental considerations pertinent to the land. We do not wish to repeat this assessment in full within these further representations and instead request that reference be made back to this previous assessment. As well as this, the site has been assessed previously as part of Strategic Housing Land Availability Assessment (SHLAA), and the previous Villages Schedule. Indeed, the Villages Schedule concludes that the site has potential with no primary constraints. The more recent consultation in early 2025 on additional sites identified the site as having potential for development. The site offers an excellent opportunity to accommodate development on a sustainable site, well related to the village, to help address local housing need. An Illustrative Masterplan showing an indicative site layout, influenced by technical input from a consultant team, is appended at Appendix 2. Furthermore, the suitability of the site is further demonstrated through the submission of a planning application for the site for the development of 31 residential dwellings. This application is supported by a full suite of technical assessments to demonstrate that the site is suitable and capable of accommodating development of the scale proposed. Indeed, the planning application confirms that the proposals will deliver the following important benefits: • The delivery of market housing and affordable housing for the local community to address the current housing shortfall. Applying 30% affordable housing would equate to 22 market homes and 9 affordable homes; • economic benefits through the creation of construction jobs and increased expenditure in the local economy, CIL revenue and Council Tax revenue. With reference to the HBF Calculator, the construction of 31 dwellings would support the employment of 107 people, increase open space, community sport, leisure spending by £27,900 and generate £62,387.50 in council tax revenue; • the provision of new footway infrastructure including a new link to the west bound bus stop on Greenhill Road with waiting area, and facilitating connections for existing residents west towards the village centre. The new link to the west bound bus stop on Greenhill Road, including new waiting area, will be a particularly important benefit locally. At present there is no safe waiting area associated with the bus stop and local, residents instead have to wait on either the grass verge or adjacent lane. It will therefore be a significant improvement. In addition, the development of the site will help to connect residents who currently live further east on Greenhill Road with the nearest existing footpath to the west of the site. The development of the site would enable local residents to walk through the site and connect to the nearest section of footpath via the schemes new pedestrian infrastructure including a new crossing point and small section of new footpath to connect to existing. These improvements will help facilitate easier and safer walking opportunities onwards to the village centre for both existing and new residents. Overall, on the basis of the previous assessment of the site set out in our previous Regulation 19 representations, along with the extensive information			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								submitted with the recent planning application for the site, it is clear that the Land South of Greenhill Road, Sandford, represents a suitable and sustainable location for development. Conclusion: Our representations to Policy SP8 conclude that it is likely the future examining inspector(s) will require an uplift to the housing requirement for North Somerset in order to accommodate a proportion of the unmet housing need from the Bristol Housing Market Area, principally from Bristol itself. Should this happen, the process that the local authority has followed in evaluating the potential contribution from, and sustainability of, additional sites through the consultation in early 2025 places it in a good position to introduce further allocations through the Examination process. In this context, the land south of Greenhill Road, Sandford, is a good candidate for inclusion to help address the need for housing in the Sandford and Winscombe area, helping to increasing housing land supply whilst avoiding any environmental and technical impacts and constraints. Sandford is clearly a suitable and sustainable village for additional growth. Sandford contains a range of services and facilities which contribute to meeting the day-to-day needs of most residents and some employment opportunities, whilst there are existing public transport connections providing access to places of work and choice of travel compared to the use of the private car. The village is, therefore, a suitable and sustainable location for an additional allocation for residential development. Indeed, as set out in these representations, and representations submitted at the previous Regulation 19 stage, the site is demonstrably suitable and sustainably located for development and is capable of contributing to a boost in housing delivery.			
62943009	Homes England	Avison Young (Peter Stockall)	Homes England	No	• Effective	Unsure	Unsure		Policy LP5 on housing, employment and mixed use allocations is generally supported. This policy however requires development to "take into account the site-specific requirements set out in the schedules", which needs to be reviewed. Schedule 1 provides the site requirements for Parklands Village and it notes that further details are contained in the Weston Villages Supplementary Planning Document (SPD). This SPD is now out of date and is no longer relevant to Parklands Villages as planning permissions are in place and the respective developments are being built out. Additionally, we note that the Weston Villages SPD requires the delivery of 1.5 jobs per dwelling. The SPD supplements Policy CS30 of the Core Strategy which will be replaced by the replacement Local Plan (2041) and there is no 1.5 job per home requirement within the emerging planning policy. Therefore, it is not justified for the site requirements of Parklands Village to align with the Weston Villages SPD. The site requirements in Schedule 1 should refer to the planning permissions for Parklands Village, with respect to Locking Parklands. We welcome the changes to the proposals map since the previous iteration to correct the development boundaries for the land by Lower Parade Ground and also north of Leedham Road at Locking Parklands previously shown as white land which is now included as residential development. We also welcome the inclusion of the former Leisure Dome / Parklands Site B (phase E) for the allocation of 420 dwellings. We propose the site requirements to be updated as follows for Locking Parklands at Parklands Village: "Planning permissions refs 13/P/0997/OT2, 09/P/1614/F,12/P/0760/F, 18/P/3175/FUL. Part full consent, part outline consent and subsequent reserved matters approvals."	We welcome the changes to the proposals map since the previous iteration to correct the development boundaries for the land by Lower Parade Ground and also north of Leedham Road at Locking Parklands previously shown as white land which is now included as residential development. We also welcome the inclusion of the former Leisure Dome / Parklands Site B (phase E) for the allocation of 420 dwellings.	
62874593	Robert Hitchins Limited		Robert Hitchins Limited	No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Unsure	Land at Kenn Road Business Park, Clevedon, as shown on Figure 1, was proposed as an allocation (together with two other parcels) in the Preferred Options draft of the North Somerset Local Plan under Policy "Clevedon 5/20 Kenn Road Business Park" (see attachment for graphics). This proposed allocation was supported by Robert Hitchins Limited at Regulation 18 consultation stage (See Appendix 1 to these representations). The land is however not proposed as an allocation in the pre-submission draft local plan and objection is raised to this omission and to the exclusion of the Kenn Business Park from the Settlement Boundary (see our associated objection to LP4). The land was assessed in the Sustainability Appraisal (LUC Consultants, November 2023 as site HE203024, part of LUC_4). The reason for the Council deciding not to allocate the land in the Reg. 19 plan, being: "These are parcels within an existing business site. Preferable to focus new employment land provision on larger, strategic sites in this area, however expansion of business sites on this site would be permissible in principle under other proposed policies in the local plan e.g. proposed Policy DP61". (Appendix E Sustainability Appraisal Report, November 2023.)	Change sought: The allocation of 0.65 ha of land at the Kenn Road Business Park as shown on Figure 2 (edged purple) for employment uses under Local Plan Policy LP2. (See attachment for graphics).		North Somerset Local Plan Pre-submission Plan - Representation form Part B.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Removing the certainty of an allocation and deferring to a criteria-based policy is not considered an appropriate strategy. Moreover, focusing employment land provision on larger strategic sites reduces the range and choice of sites available, which is counter-productive to the achievement of the economic objective of the NPPF (December 2024). The land is presently an employment allocation in the adopted North Somerset Local Plan.			
18477217	Kit Stokes	Kit Stokes	StokesMorgan Planning Ltd	No	• Effective • Consistent with national policy	No	Unsure	Small Site Allocation Requirement and NPPF Compliance National planning policy, as set out in NPPF paragraphs 68 and 69, requires that at least 10% of the housing requirement be allocated to sites no larger than 1 hectare to support SME developers and accelerate delivery. The current Local Plan does not comply with this guidance, lacking a meaningful small site allocation and failing to facilitate diversified supply.	Modification Allocating HE201068 and other medium and small sites rather than large master planned settlements would directly address this deficiency, support faster completions and enhancing the resilience of the five-year housing land supply. Evidence from the SHLAA (October 2025) and Reg 19 representations confirms that smaller, non-strategic sites are capable of early delivery and do not depend on major up-front infrastructure, making them essential to a sound and effective plan.		
31062913	R Storrar		KWAW	Yes		Yes	Yes			It makes sense to have mixed use sites, as these are more sustainable, reducing the need for long commutes to work.	
58347425	Paul Taylor			Unsure		Unsure	Unsure	In accordance with the Vision, Strategic Priorities & Sustainability Objectives statement above, I have submitted an attractive flood free site for inclusion within the local plan to provide for beautiful, low density, high quality housing with green spaces / landscaping together with access to rural / scenic footpaths for the benefit and wellbeing of all inhabitants and local residents. My intention is to align perfectly with the vision statement above. Prior to my submission in March 25, I had met with several team members at WsM Town hall and explained that I wanted to work with the local authority in order to maximise the needs of the local plan, residents and area. I pointed out that as half of the site lay in the Mendip National Landscape, perhaps it could be used as part of green spaces or left out completely. I was advised to submit the full site for consideration as following application, a meeting would be called to discuss best use and options at that time. Following submission and unbeknown to me, the site HE2010123 was allocated an assessed capacity of 127 which in my opinion is way too high and intensive for this beautiful site. My initial thoughts on numbers were between 15 - 40 but guided by the local authority either up or down. In October however, the site was identified as having potential for further consideration. I have recently discovered that the site was unsurprisingly discounted as half the site lies within the Mendip National Landscape. I was disappointed that I was not called for a meeting following application as (a) the high number allocated post my application would not have occurred and (b) It would have been made clear to all that the half in Mendip National Landscape would not be used for development. I would like to still offer my site for inclusion within the local plan either in part or in its entirety. By doing so serves to both reduce the high density required on other sites and future proof the integrity and beauty of this site for future generations. 12476353	Historic England (R Torkildsen)		Historic England					In our previous consultation responses, we emphasised the importance of presenting evidence to demonstrate how you had considered the potential impact of proposed allocations on the national planning objective of achieving sustainable development which protects and enhances the historic environment (NPPF paragraph 8). With the availability now of your Historic Environment Assessment it is apparent that several of the proposed allocations would affect the significance of designated heritage assets and their settings. That harm could however be minimised in many, but not all cases. I hope our comments can help you in the exercise of judging the suitability of these sites and or adjusting proposals to positively respond, and or minimise harm, as expected by legislation, national policy, guidance and specific advice prepared by Historic England.			20251210 NSCLP Reg 19 response Dec 2025 RT.docx
58534081	Verto Homes	tor&co (Jacqueline Mulliner)	Verto Homes	No	• Positively prepared • Effective • Consistent with national policy	Yes	No	The NPPF (para 22) expects plans to be prepared to cover a minimum 15 year period from adoption. The February 2025 LDS anticipated submission of the plan for examination in October 2025 with adoption November 2026. Slippage has already occurred, pushing adoption into 2027. On this basis, the plan period should extend to 4042. SP8 sets the housing requirement for the District, this being 1,580 dpa across the plan period based on the standard methodology (SM LHN). Setting aside concerns regarding the plan period (which is too short), we agree that the starting point for setting the requirement should be the standard method but are concerned that a further uplift has not been contemplated, specifically to help with the unmet need generated from Bristol and Bath, or to assist further with affordability, or to support infrastructure provision. The NPPF is clear about needing to boost housing land supply, to meet objectively assessed needs and to provide for needs that cannot be met within neighbouring areas, supported by the PPG which states, “Where authorities plan for higher growth this should not normally have to be thoroughly justified at examination.” In terms of unmet need, whilst the Duty to Cooperate is not being ‘saved’	Extend the plan period to 2042, which would have consequences for development requirements across the plan period. Also an uplift in the housing requirement must be considered and tested through the SA, and if appropriate additional land allocations made to meet the need. An uplift in the housing provision at the villages should be made, presenting a settlement hierarchy approach whereby larger villages such as Banwell can be identified as sustainable locations to deliver the additional growth needed. This more refined settlement hierarchy approach should be secured in the plan, with the allocation of land for housing between the existing settlement of Banwell and the by-pass, outside the proposed strategic gap. The allocation of this land would deliver 250 – 300 homes at a sustainable location.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								under transitional arrangements moving to the new plan-making system, the Government and national policy continues to expect collaboration and effective cooperation over unmet need. For context, North Somerset lies within the wider Bristol City Housing Market Area (comprising Bristol City, North Somerset and South Gloucestershire, where the void in addressing Bristol's unmet need has persisted over several years, through failed attempts at joint strategic planning. At the present time, the Bristol Local Plan emerging requirement of 1,925 homes a year leaves an annual unmet need of 1,037 homes (BC SM LHN 2,962 dpa). Bristol has asked all of the relevant neighbouring authorities to assist but North Somerset's Duty to Cooperate compliance statement states that, "The evidence supporting the local plan demonstrates that North Somerset does not have capacity to meet some of Bristol's needs at this time." However, this is not the case, the evidence does no such thing, and despite differing evidence supporting the Bristol Local Plan examination which clearly anticipates some help from North Somerset, to be actioned through the current local plan preparation, an uplift in North Somerset's housing numbers has simply not been contemplated and has not therefore been tested in the Sustainability Appraisal. The SA is clear that it tests the SM LHN and tests difference spatial options to meet that need (e.g. see SA para 2.28). What it doesn't do is test a higher growth option which renders the plan unsound, it is not positively prepared and not justified or effective in meeting overall housing requirements. The knock-on effect of failing to assist in meeting the unmet need will be to increase affordability issues, as pressure for housing is increased. Whilst the plan will fail to address affordability issues in full, no consideration was given to increasing the housing requirement to better redress the acute problem. Finally, in order to deliver the infrastructure necessary to support the delivery of housing, a more flexible and positive approach should be taken to the housing requirement, to ensure development is viable. In conclusion, the SA is flawed, because it fails to consider the option of a higher housing requirement (higher growth scenario) and the plan strategy is therefore unjustified, ineffective, and unsound. Moving to the spatial distribution of the housing requirement, there is greater capacity at Banwell, particularly noting the anticipated completion of the Banwell by-pass in 2027 which presents a significant change in the village's circumstances, characteristics, and status. The highway itself provides a new defensible development boundary to the settlement, which should be utilised to deliver additional 'developable' housing capacity. This land is well-related to the north-eastern edge of Banwell, and sits outside the proposed strategic gap to the north of Banwell. It can be developed such that it is not subject to flood constraints (contrary to the SHLAA assessment which is flawed in this respect - given the scale of the site there is potential to introduce a sequential approach whereby the developable area avoids areas of flood risk).			
62471329	Environment Agency		Environment Agency							See schedule 1 and Schedule 2 for site comments.	
62471329	Environment Agency		Environment Agency						We wish to highlight that for sites which boarder the Land Yeo watercourse, a suitable buffer must be provided to ensure that access to the watercourse is not restricted for maintenance or emergency access.		
56322177	Dom Wells			Unsure		Unsure	Yes	SITE IN LOCKING There is suitable brownfield land available for development that is excluded from the draft Local Plan and is within the proposed Development Boundary for Locking. 62793857	Clive Wilson		Resident					Concerns relating to the Tower Farm and Black Rock development.The impact to Weston Big Wood (area of SSSI) this ancient woodland is currently protected by greenbelt status to ensure the sustainability of wildlife and the prevention of ecological disaster. Both developments appear to encroach the required ecological boundaries required to sustain the Woodland. Site access to both the proposed Tower Farm and Black Rock are of major concern as the existing roads are already continually busy, in the case of Tower Farm school drop off / pickup times see Down Road frequently in a state of gridlock. In the case of Black Rock the B3124 Clevedon Road is a busy road with a 50mph limit which will require traffic calming measures. The existing estates by the proposed Tower Farm development will be greatly impacted by the increases in traffic from the development particularly if access to the development proposes the use of existing estate roads as these are already congested with parked cars and not suitable for through traffic. The current poor state of the road surface along Down Road, despite being relatively recently resurfaced, Is indicative of how busy this road is and question its ability to cope with more traffic. Valley Road is already dangerous due to the presence of the Civic Amenity site opposite the Avon & Somerset facility situated on a blind bend which sees stationary traffic queuing for the amenity site to Open. This road currently is derestricted. Please reconsider the placement of some 400 homes at Tower Farm and 100 at Black Rock.	Please reconsider the placement of some 400 homes at Tower Farm and 100 at Black Rock.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 51572577	BNSSG ICB		NHS Property Services					Policy LP5 states that sites of more than 10 units included in Schedules 1 must take account of site-specific requirements set out in the schedules. Policy LP6 states that sites for educational, sporting, leisure, and community facilities are set out in Schedule 4. We note that Schedule 1 provides site-specific requirements and Schedule 4 provides site-specific community facility requirements. The majority of our comments below are in relation to Policy LP5 and Schedule 1, however we note that these comments may also be applicable in circumstances where healthcare infrastructure is proposed under Policy LP6 (as set out in Schedule 4). We emphasise the importance of effective implementation mechanisms so that healthcare infrastructure is delivered alongside new development, especially for primary healthcare services as these are the most directly impacted by population growth associated with new development. The NHS, Council and other partners must work together to forecast the health infrastructure and related delivery costs required to support the projected growth across the Local Plan area. BNSSG ICB have reviewed the contents of those schedules and are very concerned that both Schedules fail to make reference to the need for supporting primary care infrastructure and indeed wider healthcare infrastructure, with the exception of sites mentioned above (Policies LP1, LP2, LP3 and Weston Rugby Club). Existing primary care infrastructure is experiencing significant capacity challenges across North Somerset, with many primary care premises having significant floorspace deficits. Schedules 1 and 4 in their current form fail to recognise the need for additional primary care infrastructure in order to accommodate the growth needs of the proposed allocations. This raises concerns that Policy LP5 and Schedules 1 and 4 are unsound on the grounds that evidence provided by the ICB to inform both Local Plan policies and the Infrastructure Delivery Plan have not been considered and reflected within Schedules 1 and 4. These requirements were previously set out in our earlier responses submitted to the Council by BNSSG ICB as part of the 'Additional Sites consultation'.	We urge the Council to state that 'financial contributions towards primary care' is referenced under each of the proposed allocations included in Schedule 1. This will ensure that the Local Plan has been positively prepared and has proactively considered the need for additional healthcare to support the quantum of growth proposed across North Somerset over the Plan period. The Council has failed to explain the reason for including this parcel of land within the Grove Farm allocation. To BPC and NTC's knowledge it is owned by North Somerset Council and has historically been safeguarded for educational use in association with the adjoining West Leigh Infants School. The land's inclusion within the Pre-Submission Plan was wholly unexpected by BPC. Discussions have taken place over the past twelve months with NSC's Assess Management Team regarding the transfer of ownership from NSC to BPC to enable the use as an outdoor educational space. The allocation of the site for residential use is superfluous to requirements; no housing allocation is given to this parcel of land which forms part of the Grove Farm allocation. The allocation as a whole is designated to support 515 dwellings which equates to the description of the outline planning application 23/P/2618/OU2. This additional, separate parcel of land should be deleted from the Grove Farm allocation and the land designated as Local Green Space, as an important area of green space, providing public rights of way to West Leigh Infants School and the opportunity for educational/recreational use in association with the school, to help to meet the needs of the growing village population. BPC and NTC request the deletion of this parcel of land from the Grove Farm allocation and the identification of the site for educational purposes with LGS status. 								delayed birth patterns and the ease of identification using modern software. Movement to school during the construction phases of developments and the provision of safe walking routes BEFORE occupation of new houses is a breach of UN Convention on the Rights of the Child and therefore Children Act 2004 and others.			
34488417	Mike Coles		Swim England South West Region	Yes		Yes	Yes		Would like an inclusion to include a second swimming pool for the area, ideally a 50m multi-use pool.		
58528577	Mrs Mary Theresa Kingston		Ms Mary Kingston	No		Unsure	Yes	Locating a large secondary school within the strategic gap between Yatton and Congresbury would have an adverse impact on the character and setting of the area. It would also be detrimental to our horseshoe bat populations. Whilst a new school is required, this is not the right location. It would be better placed at the North End of Yatton.			
58582945	Nailsea Action Group		Nailsea Action Group	No	• Effective	Unsure	Unsure	Whilst Nailsea Action Group has views on all aspects of this policy, our focus here is mainly on the Educational aspect. There exists a functional descrepancy in regards to primary schools in Nailsea. In Schedule 4 (page 343+), no primary school is identified for Nailsea. However, in Schedule 1 (p262+), on pages 268-9 Land south of Nailsea the following paragraph is documented: "…Provision of land for, and delivery of, a new primary school (including early years provision in accordance with government requirements) is required, along with financial contributions towards special educational needs provision and family centre services." In any event it could be that such a location for a new school, is in the wrong place, or there needs to be an additional school in the north of Nailsea where the Policies map indicates that up to 836 dwellings may be built. The school 'local' to those sites, Kingshill Primary, is now small, many of the buildings that were occupied when it was very large as Nailsea Church of England Junior School and Greenslade County Infants' School are now used for other purposes or demolished. Much of the population that generated the school numbers then in the 1970s, 80s and 90s stayed, but is now dying off and the houses that they currently occupy will once again become available for occupation by families with school-age children. Even without the proposed 836 dwellings, the school will fill again quickly. This part of the 2026-2041 plan does not look far enough ahead is therefore inadequate which makes it unsound.	If the numbers of houses to be built is a genuine intention, then match that likely population increase with the appropriate increase in school places and new schools.		
31078145	Jason Pitchers								An allocation of swimming pools that enables sufficient water space and time for every child to learn and participate in the most valued of all exercises because everyone can participate and everyone has the right to learn to swim to keep safe. I have run my own swim school for 30 plus years. Pools are never opened only closed and parents desperately travel 'miles' taking time and blocking our road systems to get to a pool. Nailsea needs it's own pool sufficient in size to the match the needs of the ever growing population as does every community in North Somerset. In turn you will get a happier and healthy nation and new technologies do not mean they have to be expensive to run, but 'accessable to all.		
8126849	Sport England		Sport England					Summary – Sport England is very concerned with the age and robustness of the evidence base for sport (para 103 of the current NPPF) which will test the 'soundness of the Local Plan'. This could affect protecting sites, enhancing and providing new open space, playing fields, sport and recreational land and buildings. The current version of the National Planning Policy Framework (2024) states: 103. Access to a network of high quality open spaces and opportunities for sport and physical activity is important for the health and well-being of communities, and can deliver wider benefits for nature and support efforts to address climate change. Planning policies should be based on robust and up-to-date assessments of the need for open space, sport and recreation facilities (including quantitative or qualitative deficits or surpluses) and opportunities for new provision. Information gained from the assessments should be used to determine what open space, sport and recreational provision is needed, which plans should then seek to accommodate. Sport England's view is that, in order to meet the requirements of the National Planning Policy Framework (NPPF), this should include a strategy (supply and demand analysis with qualitative issues included) covering the need for indoor and outdoor sports facilities, including playing pitches. The Playing Pitch Strategy for 'in date' the data in studies should not be more than 3 years old (from the date of the data and not the adoption date). The study for the Council (started in 2015) was completed in 2020 so 5 years old. The Built Sport Facility Strategy for 'in date' the data in studies should not be more than 5 years old (from the date of the data and not the adoption date). The study for the Council was completed in 2019 so 6 years old. We note the Council's Playing Pitch Strategy (PPS) and Built Facility Strategy are "out of date". This would be a problem in demonstrating the 'soundness of the Plan'. We would be happy to discuss further. An up to date and robust sport evidence base would also help inform policy LP6 Educational, sporting with leisure and community use allocations to be delivered to meet the needs of the community and new communities to be created. Schedule 4 could then include some sports / playing field projects to meet identified needs??	An up to date and robust sport evidence base would also help inform policy LP6 Educational, sporting with leisure and community use allocations to be delivered to meet the needs of the community and new communities to be created. Schedule 4 could then include some sports / playing field projects to meet identified needs??	2. Planning Obligations/Community Infrastructure Levy (CIL) to Sport Support – note the need for an up to date sport evidence base (see comment above) Sport England supports use of planning obligations (s106)/community infrastructure levy (CIL) as a way of securing the provision of new or enhanced places for sport and a contribution towards their future maintenance, to meet the needs arising from new development. This does need to be based on a robust NPPF evidence base. This includes indoor sports facilities (swimming pools, sports halls, etc) as well as playing fields and multi use games courts. All new dwellings (21,495) in North Somerset in the plan period should provide for new or enhance existing sport and recreation facilities to help create opportunities for physical activity whilst having a major positive impact on health and mental wellbeing. This is reflected in Policy DP63. CIL /s106 has to be based on evidence of need, see comment above.	
31062913	R Storrar		KWAW	Yes		Yes	Yes			By containing the areas for development, NSC will be able to ensure that developers contributions (CiLs) can be properly used to construct the necessary infrastructure to support the new residents. 62471329	Environment Agency		Environment Agency							No comments on the policy - see comments against the individual sites listed in Schedule 4. Primary and Secondary school facilities to be designed with current flood risk, future risk of flooding and surface water drainage in mind. Sequential approach to be followed Proposed new primary schools within Weston-super-Mare part of existing allocations and therefore site-specific comments will apply.	EA Response - NSC Reg 19.pdf
63070401	Emilia Leung			No	• Effective	No	Unsure	The Proposal is overly reliant on inflated national targets and infrastructure that cannot be delivered – whilst at the same time, ignoring local constraints. The Proposal is also inconsistent with national policy. Green Belt boundaries should only be altered in exceptional circumstances – and the review must show no "clear evidence that doing so would fundamentally undermine the purposes…of the remaining Green Belt".			

Policy LP7: Settlement boundaries

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
62877633	Avon and Somerset Constabulary	Lucy White Planning Limited	Avon and Somerset Constabulary	No	• Effective • Consistent with national policy	Unsure	Unsure	ASP welcomes the terms of Policy SP1 (Sustainable Development) which requires new development to contribute towards the creation of healthy, safe and cohesive communities, tackling inequalities and the Spatial Strategy (Policy SP3) to give priority to directing growth in the most sustainable locations with a focus at the towns and urban areas, maximising the use of previously developed land. However, the plan does not go far enough to meet the requirements of paragraph 101 of the National Planning Policy Framework to work proactively with statutory bodies to plan for required facilities. Significant weight should be placed on the importance of new, expanded or upgraded public service infrastructure. Policy LP7 – Settlement Boundaries and Policy LP9 – Extent of Green Belt (and associated Appendix 5 and Policies Map): The Council has sought to remove land from the Green Belt at the most sustainable locations to meet housing needs (page 20), however, it has not sought to revise the Green Belt boundaries to support the expansion of Avon and Somerset Police Headquarters at Portishead, as illustrated by the accompanying Policies Map (see attached document). With an anticipated population growth across North Somerset of around 55,000 people over the plan period, it is vital that ASP has sufficient space within its Headquarters to develop new facilities to resource policing of the expanded population. The Police Headquarters lies largely within the settlement boundary of Portishead, however two fields to the south of the estate are washed over by the Green Belt. The Green Belt extends further south and protects the Gordano valley. These fields lie outside the defined settlement boundary of Portishead. For clarity, the fields are identified in the attached document by the red boundary line. The Green Belt status of these land parcels, combined with their location outside the settlement boundary, limits their purpose within the headquarters estate. As a result, ASP already rent additional accommodation off-site to accommodate some facilities which could otherwise be delivered at the headquarters. Avon and Somerset Police objects to the extent of Green Belt retained through Policy LP9 and the associated failure to amend the settlement boundary under Policy LP7. Removal of the full extent of the headquarters from the Green Belt and inclusion within the settlement boundary of Portishead would enable the headquarters estate to be used more efficiently and effectively to meet the operational needs of the police service, to consolidate key policing functions, which are currently accommodated elsewhere, to enable colocation of facilities, where appropriate, and to accommodate other related regional and national functions in response to government policy in a central police facility in a sustainable, accessible location. Retention of the Green Belt across the southern portion of the Headquarters presents significant limitations on the future development and operation of the Headquarters. The existing facilities within the Headquarters require upgrading to meet current and anticipated operational needs. A significant amount of the existing building floorspace is used for storage of evidence and seized goods. However, there remains insufficient space within the permanent buildings and there are numerous shipping containers on-site, occupying areas of hardstanding, which provide further storage facilities for seized goods. This is suboptimal and should be replaced with permanent, purpose-built facilities. Due to the nature of the police operations, there is a high demand for car parking at the HQ. Although current provision is adequate, it limits scope for further development on the land within the settlement boundary as any new development would likely involve the loss of car parking and/or a need for further car parking provision within the estate to meet the needs of additional officers and staff. There is a network of ecologically sensitive sites within the estate which are identified in the Adopted Local Plan. Whilst these designations are removed from the emerging Local Plan, the land is likely to have a relatively high ecological value which may prove to be prohibitive to new development or at least limit the extent to which this land can be developed. In addition, these areas of open space are a valuable wellbeing resource for officers and staff, who can be faced with traumatising, distressing situations in their work and need quiet space, in nature, to decompress. As a result, the loss of these areas is unlikely to be compatible with the Constabulary's pastoral care responsibilities to its people. As a result, the existing areas of hardstanding within the HQ are likely to be required to enable redevelopment of existing buildings and development of permanent facilities to replace existing temporary storage units. The existing green spaces, due to their ecological value are likely to have limited scope for development. Accordingly, there is limited capacity within the settlement boundary of the HQ to accommodate new development beyond the replacement and enhancement of the existing facilities. In the context of the Local Plan serving to meet the development requirements of the area up to 2041, there is unlikely to be sufficient land available to meet the growing operational requirements of the constabulary or any current or future regional or national policing operational needs, unless the full extent of the headquarters estate is removed from the Green Belt and placed within the settlement boundary of Portishead. There are exceptional circumstances to justify the removal of the land from the Green Belt, namely: - the benefits of a colocation of wider policing functions within the Headquarters, such as greater collaboration and more effective joint working across the force and reductions in the need to travel between police facilities. - The intensification of the Headquarters, providing value to the public purse in avoiding the need to purchase land elsewhere or incur other capital and revenue cost, particularly given the funding constraints for public services currently. - Limiting development to the Headquarters outside of the Green Belt, could hamper the ability to benefit from greater	Appendix 5 should be amended to accompany Policy LP7, referring to amendments to the settlement boundary at Portishead around Portishead Police Headquarters. The wording of Policy LP9 should be amended to refer to removal of land from the Green Belt at the Avon and Somerset Police Headquarters at Portishead. The Policies Map should be amended accordingly to identify the full extent of the Headquarters within the settlement boundary and outside the Green Belt. The southern boundary of the Headquarters is clearly defined by mature tree planting and demarcates a clear boundary between the built form of the police estate and the open fields beyond. This boundary provides a clear and defensible boundary for the revised Green Belt.		251118 Local Plan Reg 19 reps FINAL.pdf Representation form Part B LP7.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								consolidation of the crown estate dedicated for criminal justice and policing agencies. In addition, policing continually evolves in response to changes in demand, crime patterns and societal shifts. It operates within a volatile, uncertain, complex and ambiguous environment requiring changes to its model of operation in response. The flexible deployment of the estate assets owned by the Police and Crime Commissioner is a key enabler, alongside coherent strategic planning. The Police Efficiencies and Collaboration Programme launched earlier this year, will bring renewed vigour to achieving efficiencies and savings through business change and transformation, freeing up funds to invest in the Safer Streets initiative. Avon and Somerset is one of the largest forces in the southwest. It is anticipated that over the timeframe of this Local Plan period there will be: 1. opportunities for the Constabulary to release revenue costs from other commercial rental properties which continue to accommodate various policing functions; 2. a potential requirement to address unmet need for operational training facilities, and the need to share, regionalise or merge policing and other public service functions (see above). There will be a continued need for a helicopter landing pad within the estate. This is currently provided on the field in the south-east corner of the estate (within the Green Belt). ASP also own land to the south of the existing Headquarters which might meet this purpose in the future. In addition, sufficient open space will need to be retained for officer and staff wellness, of particular importance given the stresses and strains of policing, operational training including dogs, student police officer training and major incident operations. Removal of the existing HQ site from the Green Belt and inclusion within the settlement boundary will provide maximum flexibility for the Constabulary to develop the estate in a manner which is optimal to meet its operational needs now, and in the future, whilst retaining or creating open spaces to meet a range of needs. The Council accepts that land at Tower Farm, immediately south-east of the Police HQ qualifies as Grey Belt on the basis that the land does not strongly contribute to Green Belt purposes a, b or d, there are no Footnote 7 constraints to provide a strong reason for refusal and the release of the site from the Green Belt would not fundamentally undermine the five purposes of the remaining Green Belt. In light of the Council's conclusions in respect of the extensive tract of Green Belt land at Tower Farm and the commonality between the attributes of the Green Belt on Tower Farm and the Police HQ, it can only be concluded that the Green Belt land in the Police HQ must also be regarded as Grey Belt and that the release of this land would not fundamentally undermine the purposes of the remaining Green Belt. Its location on the edge of Portishead, one of the main towns in the District and its relationship with the established Police Headquarters would promote a sustainable pattern of development in accordance with the Framework. As drafted, Policies LP7 and LP9 and the associated extent of Green Belt and defined settlement boundary shown on the Policies Map at Portishead are unsound and contrary to national planning policy (the Framework). The plan does not provide adequate provisions for development of the Portishead Headquarters to meet the operational needs of the police service to manage an expanded population over the plan period and beyond, contrary to the following provisions of the Framework: 1. Paragraph 96 which requires planning policies to achieve healthy, inclusive and safe places. 2. Section 8 which requires planning policies to achieve healthy, inclusive and safe places, in particular paragraph 101 which requires local planning authorities to work proactively and positively with statutory bodies to plan for required facilities. 3. Significant weight should be placed on the importance of new, expanded or upgraded public service infrastructure when considering proposals for development (paragraph 101). 4. Planning policies should promote public safety and take into account wider security and defence requirements including for operational defence and security purposes (paragraph 102b). 5. Paragraph 135 which requires planning policies to ensure that developments create places that are safe, where crime and disorder and the fear of crime do not undermine the quality of life or community cohesion and resilience. The removal of the Green Belt designation on the Portishead Police Headquarters, coupled with the extension of the Portishead settlement boundary to include the full extent of the Headquarters would enable the plan to comply with the Framework and ensure the police service can meet its operational needs within the existing headquarter estate			
39325825	Highgrove Strategic Land	Lichfields (Bristol)		No	' Positively prepared ' Justified	Yes	No	The extension to Wrington's Settlement Boundary is supported, however it should be extended to include the land at Cox's Green as this is a sustainable location for development outside of the Green Belt that is suitable and available. Please see attached letter for further details.	Wrington's Settlement Boundary should be extended to include the land at Cox's Green as this is a sustainable location for development outside of the Green Belt that is suitable and available.		Highgrove Strategic Land - Local Plan Reg 19 Reps 2025.10.12.pdf
31149537	Strongvox Ltd	Pegasus Group		No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Yes	Yes	Our client supports the principle of draft policy LP7 insomuch as it provides clarity the development will be deemed acceptable as a matter of principle within the settlement boundaries. This must however be read alongside our representations in respect of other proposed land use policies, including the need for flexibility around the proportionate growth of sustainable villages where settlement boundaries are tightly drawn.			R002v5 NSLP Reg19 Reps Strongvox Dec25.pdf
51643457	Chestnut Property Developments Ltd (Chestnut Farm, Yatton)	Collier Planning	-	No	' Justified			Please refer to attached letter. Draft Policy LP7 relates to the settlement boundaries defined on the draft Policies Map. The policy supports new development within the settlement boundaries in principle, subject to the relevant policies within the plan. The plan below shows the existing Core Strategy settlement boundary for Yatton in black and the proposed Local Plan boundary in purple. The proposed settlement boundary excludes the site and the adjoining buildings but runs adjacent to it along its western and southern boundary. The 2025 SHLAA assessment discounted the site during the baseline assessment because it falls within flood zone 3 (site ref: HE20630) The site is not located within flood zone 3 on the Environment Agency mapping but is identified in the Council's SFRA as being at risk of tidal flooding in the undefended scenario in the future. A Flood Risk Assessment (FRA) has recently been prepared in support of the development of the site which includes up to date modelling and confirms that the site is fully within, and will remain within, Flood Zone 1 outside of the defended 1 in 200-year flood extents over the lifetime of the development. The relevant extract from the FRA is attached. The inspector of appeal decision ref: APP/D0121/W/24/3343144 (Land at Rectory Farm Yatton, 18 March 2025) considered the existing flood defenced and concludes 'There is no prospect of the existing defences being removed. Consequently, for the purposes of this site-specific FRA, I consider that it is reasonable to take the defended scenario as the design event' (paragraph 77) and 'conclude that the design event is the 1 in 200 year defended scenario with the Higher Central CCA' (paragraph 81).	Please refer to attached letter. The exclusion of the site from the proposed settlement boundary is not justified on flood risk grounds. We therefore recommended that the boundary be amended to include the site in order to enable appropriate development to come forward on a sustainable site which is already surrounded by residential development on three sides.		Representation form Part B LP7.pdf Chestnut Properties Ltd.pdf FRA Extract.pdf Location Plan.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								The site should not therefore be excluded from the settlement boundary on the basis of flood risk because, as determined in the above appeal decision, the defended scenario is considered the appropriate design event and subject to an FRA, development of the site would be safe from flooding for its lifetime. The exclusion of the site from the proposed settlement boundary is not justified on flood risk grounds. We therefore recommended that the boundary be amended to include the site in order to enable appropriate development to come forward on a sustainable site which is already surrounded by residential development on three sides.			
21579777	Taylor Wimpey (Youngwood Lane, Nailsea)	Pegasus Group								Policy LP7: Settlement Boundaries Our client supports the principle of draft policy LP7 insomuch as it provides clarity the development will be deemed acceptable as a matter of principle within the settlement boundaries. Mindful that such boundaries are generally tightly drawn, however, the policy however does reimpress the importance of ensuring a sufficient supply of deliverable housing allocations across the plan period to ensure the authority meets and exceeds the minimum number of new homes required.	R002v4_NSLP_Reg19_TWBristol.Dec25.pdf
31144865	Autograph Homes	Pegasus Group		No	' Positively prepared ' Justified ' Effective ' Consistent with national policy				Our client supports the principle of draft policy LP7 insomuch as it provides clarity the development will be deemed acceptable as a matter of principle within the settlement boundaries. This must however be read alongside our representations in respect of other proposed land use policies, including safeguarding, which suffers from significant shortcomings prejudicial to the objectives of LP7.		R002v4 NSLP Reg19 Reps AH Dec25.pdf
29403105	Diverse Partnerships Yatton Ltd	Pegasus Group		No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Yes	Yes	Our client has no objection to the principle of draft policy LP7 in so far as it makes clear that development will be deemed acceptable as a matter of principle within the settlement boundaries. As set out above, the tightly drawn nature of such boundaries reinforces the importance of ensuring a sufficient supply of deliverable housing allocations and an accurate assessment of windfall sites. In this regard, and as set out above, the concerns over housing delivery being met within the plan period and the move away from the flexible position allowed for within the adopted plan (under Policy CS32 for example) is likely to impede the delivery of a sufficient number of homes.			NSC Reg 19 Diverse Partnerships Yatton Ltd Reps Dec 25 - Redacted.pdf
51524513	Bellway Homes Ltd	tor&co	Bellway Homes Ltd	Yes						Draft Policy LP7 (Settlement boundaries) confirms settlement boundaries for the towns and villages are defined on the Policies Map. It states new development within these boundaries will be acceptable in principle, subject to relevant policies within the plan. Bellway support the inclusion of the Wolvershill strategic allocation site within settlement boundaries. This reflects its identity as an extension to Weston-super-Mare and importance in delivering the ambitions of the plan. Furthermore, it is noted that the justification text sets out that settlement boundaries can be reviewed and adjusted via Local Plan reviews and/or Neighbourhood Development Plans, which is welcomed. This allows future Development Plan Documents to respond to changes in circumstance/ requirements as necessary.	20251212 504317 JE - North Somerset Reg 19 (Reps obo Bellway Homes).pdf
58664673	Catesby Estates	Stantec	Catesby Estates	No	' Justified ' Consistent with national policy			Draft Policy LP7 within the Pre-Submission Plan for consultation states that: "Settlement boundaries for towns and villages are defined on the Policies Map and set out in Schedule 5 of this plan which forms part of this policy. New development within the settlement boundaries will be acceptable in principle subject to the relevant policies within this plan". The Policies Map available for consultation has not been prepared in in accordance with proportionate and robust evidence and is not consistent with national policy and therefore does not meet the tests of soundness as require by NPPF Paragraph 36. These matters are further elaborated upon within section 4 ‘Evidence and Supporting Documents’ of these representations. As stated in the Pre-Submission Plan 2041 consultation document, the Policies Map forms part of Policies LP7 and consequently would not be found sound in circumstances where the map is not found sound. The revisions to Policy LP7 and settlement boundaries appear to be set out on the basis set out within the following document.			Appendix to representations - compressed.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								• Settlement Boundary Review Update Assessment of Reg 18 consultation responses and revised boundaries for Pre-submission Reg 19 Plan (October 2025) The review of settlement boundaries, where in respect of settlements within the Green Belt, will be closely related to evidence and decisions made in respect to the Green Belt. As detailed in section 4 of representations, no evidence is provided to demonstrate that the Policies Map, Green Belt designation, and resulting settlement boundaries have been reviewed in light of overall requirements set within NPPF Paragraph 149 and specifically 149b). The criteria set out within the Settlement Boundary Review (October 2025), Policies Map and corresponding settlement boundaries should be updated following revisions to ensure these are consistent with national policy as required by NPPF Paragraph 36.			
63250785	LiveWest	PCL Planning Ltd		No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Unsure	No	For the reasons outlined in representations made in respect of Policies SP3 (Spatial Strategy), Policy SP6 (Villages and Rural Areas), Policy SP7 (Green Belt) and Policy SP8 (Housing) and LP5 (allocations) we consider Wrington should be identified as a more sustainable settlement and it potential to accommodate sustainable growth should be accommodated. Furthermore, we consider our client's site at Land to the East of Wrington (reference HE2033) should be allocated and the settlement boundary adjusted to include it and the Policy Map and Schedule 5 adjusted accordingly. The site has the potential for the phased delivery of residential development with the potential provision of enhanced recreational facilities and substantial provision of green infrastructure to support the enhancement of the existing village edge. Initial masterplanning indicated the site has capacity for between 150-180 dwellings across the whole site area. It would support appropriate policy compliant level of affordable housing and range of housing mix and types. The site represents a logical extension to the village and provides the option to deliver sustainable development and support housing delivery within the plan period. It would provide wider benefits to the local community in respect of housing and supporting local services as well as opportunities to improve infrastructure and the setting of the village. Without making provision for growth within the village and by constraining even infill by the tightly drawn settlement boundary proposed, these benefits will not be realised and instead it will lead to stagnation. This will result in a lack of investment in infrastructure, an inability to sustain services and increasing affordability challenges, all to the detriment of the local community. In the absence of any meaningful opportunity of growth within the village and the constrained nature of the settlement boundary, we consider Policy LP7 significantly undermines the soundness of the Plan overall as it has not been positively prepared as it is not seeking to meet identified needs. Its strategy is not justified as it contradicts clear evidence of need and the contribution the larger villages (including Wrington and our client's site) could make to delivering sustainable development and does not take into account reasonable alternatives in to address this. The Plan's approach will not be effective in that there is no clear evidence that supports the Plan being deliverable. It is not consistent with national policy in that its approach limits rather than maximises the opportunities for the Plan to deliver sustainable development in accordance with the Framework. Please see previous representations made on earlier versions of the Plan for completeness. These are appended to the covering email for these and other representations made on the Reg 19 (Pre-Submission Plan).	The site at Land to the East of Wrington (reference HE2033) should be allocated and the settlement boundary of Wrington should be adjusted accordingly. The Policy map and Schedule 5 should be amended accordingly.		Pre-submission Plan (Regulation 19) Representations - on behalf of LiveWest (Redacted).pdf 03-18-25 Livewest reps on Additional Sites Consultation_Redacted.pdf
21472417	Mead Realisations Ltd	Oneleven Property		No	' Positively prepared ' Justified ' Effective ' Consistent with national policy				This Policy confirms that development within settlement boundaries will be acceptable in principle subject to relevant policies of the plan. Other than specific allocations it therefore must be concluded that development outside the settlement boundary will be resisted. As set out earlier in these representations the plan should include flexibility to allow development outside settlement boundaries in specific circumstances.		Reg 19 Final Representations Mead Realisations 12.12.25 including appendices.pdf
1019201	Wrington Parish Council		Wrington Parish Council					We support the principle of Settlement Boundaries providing guidance and certainty for Parishes and residents for the life of the Local Plan. We have concerns in connection with Paragraph 2 of the policy 'The extension of residential curtilages, including the extension into the countryside of the curtilage of a dwelling located within a settlement boundary, will be permitted provided that it would not harm the character of the surrounding area of the living conditions of adjoining occupiers'. We fear this could lead to abuse of the settlement boundary and the certainty that Settlement Boundaries provide. There is currently provision for land outside policy in use for 10 years without complaint from the wider community to be approved. We find it unnecessary for this addition to the Policy for Settlement Boundaries.			
939361	R Burrows	R Burrows	-	No	' Positively prepared ' Justified ' Effective	Unsure	Unsure	There are several inherent conflicts and specific policies that are argued to constrain development, particularly housing delivery. When coupled with other documents outside of the local plan, such SPDs as the proposed enlarged Bat SAC. It is questioned how NSC will deliver windfall sites & small sites at all. The financial burden is already onerous and this will add too much financial burden on small developers & self builders who should be exempt. Coupled with flood risk and the absurdity of designing to an undefended flood situation (rather than breach modelling) an almost impossible scenario where the flood defences are completely removed. To design to the absolute worse case (doomsday) scenario is unrealistic and far from pragmatic. Development Management Policies (DP), particularly those related to climate change, sustainability standards, and flood risk, make the delivery of growth procedurally and economically harder. This is highlighted by the fact that the LPA was found not to have delivered a five-year supply of housing for at least 13 years, suggesting the existing constraints are already impacting deliverability. This will exacerbate the situation & the financial burden of compliance with policies that duplicate existing primary legislation uneccessary.	Policy LP7: NSC has a consistent under delivery of housing with ill defined settlement boundaries drawn purposely to restrict development. The former policy of allowing sites adjacent to settlement boundaries therefore must be retained in order to meet targets.		
58516481	Mr Thomas Catling (Woodstock Homes, Knightcott Road, Banwell)		Woodstock Homes (Construction) Ltd	Unsure	' Justified ' Effective ' Consistent with national policy	Unsure	Unsure	Woodstock Homes control the 22 acre site, Land to the South of Knightcott Road, Banwell, a site which has been promoted through the earlier stages of the Local Plan process and recently achieved a resolution to grant at the October Planning and Regulatory Committee for outline planning on 4.6 acres of the site for up to 27 dwellings (24/P/0967/OUT). Woodstock are in control of the remaining 17 acres, of which was part of a previous application for 95 dwellings (23/P/2303/OUT) was made but was later withdrawn. This representation submissions aims to provide commentary on the emerging Local Plan, with focus on the rural settlements, specifically Banwell. Banwell is identified in the adopted Core Strategy as a service village (Policy CS32), containing a number			CP-01 PH2 Knightcott Rd, Banwell - Concept Plan @ A2 Notes.pdf Knightcott Road Banwell - Representations Reg 19.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								of local services along with public transport links. By way of the inclusion of Banwell within Schedule 5 of the Pre-Submission Plan, as a settlement with a defined boundary, it is clear that the council acknowledges the village within the settlement hierarchy. The Vision for the North Somerset Local Plan 2041 makes clear that there is an aspiration to encourage development in highly sustainable, accessible and attractive places. SP6: Villages and rural areas, reinforces this aspiration with the importance of accessible locations with good walking, cycling and public transport connections. SP1: Sustainable development illustrates a clear focus for development to come from the most sustainable areas however, this is contradicted by LP7 which prevents growth directly in Banwell.			
31037185	Nigel Cooke			Yes		Yes	Yes				
51477249	Burrington Parish Council		Burrington PC	Unsure	• Consistent with national policy	Yes	Unsure	On previous drafts of the local plan we expressed concern that a wider range of sites for housing would be needed to avoid challenges to the supply of housing land and the ad hoc addition of sites through planning appeals, especially in view of the substantial increase in housing requirements arising from the new standard method of calculating housing requirements. We can see that North Somerset Council has now made significant changes to the settlement strategy to include new large sites for housing which now include a substantial urban extension south west of Bristol ('Woodspring'), a number of strategic housing sites at Nailsea and Backwell, some of which already have planning consent, the 'Wolvershill' strategic allocation north of Banwell and strategic sites at Pill and Easton-in-Gordano, as well as continuing development adjoining Weston-super-Mare (Parklands Village and Winterstoke Village), new site allocations at Clevedon and Portishead and redevelopment sites within Weston, some of which are carried forward from the Site Allocations Plan of 2018.It seems to us that the Council has thus sought to identify a realistic and as wide as possible range of options to accommodate the increased housing requirement. Some rural settlements like Churchill and Winscombe are also making significant contributions to housing land supply, although some sites were committed through planning appeals which means that they are not always well integrated with the existing settlement (or other appeal sites). Committed housing sites in the larger villages do not therefore always achieve the aims set in the Core Strategy for 'Service Villages' in terms of more self-containment in jobs and services, protecting the character of the settlement, or achieving improvements in public transport.	More detail is required about the allocated housing sites to demonstrate their feasibility, desirability and consistency with other planning policies– in the form of a development brief		
63052097	Stephanie Fowler	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes			Our client supports the principle of draft policy LP7 insomuch as it provides clarity the development will be deemed acceptable as a matter of principle within the settlement boundaries. Mindful that such boundaries are generally tightly drawn, however, the policy however does reimpress the importance of ensuring a sufficient supply of deliverable housing allocations across the plan period to ensure the authority meets and exceeds the minimum number of new homes required.	R001v3_NSLP_Reg19_Fowler.Dec25.pdf
63299425	Mac Mic Strategic Land Flax Bourton	Planning Potential	Mac Mic Strategic Land	No	• Positively prepared • Effective	No	Yes	Mac Mic supports the principles of the Green Belt set out in draft Policy SP7 and welcomes that the Council proposes to recognise the 'exceptional circumstances' that exist to justify the release of land from the Green Belt. Without the release of land from the Green Belt, it is clear that the Council would not be able to meet its own housing requirements in the period to 2041. This would result in a failure of the plan-led system and leave the Council vulnerable to speculative unplanned development elsewhere. 4.27. Mac Mic does, however, consider that the wording of draft Policy SP7 (and draft Policy LP7) should be adjusted to provide a suitable level of flexibility and allow additional sites to be released from the Green Belt where they do not contribute to Green Belt objectives. Land that does not meet these objectives comprises 'Grey Belt' land, which is defined as sites comprising previously developed land and/or any other land that, in either case, does not strongly contribute to checking the unrestricted sprawl of large built-up areas, prevent neighbouring towns merging with one another or preserve the setting and special character of historic towns. This applies to Land to the East and West of Flax Bourton. 4.28. The wording of draft Policy SP7 (and LP7) should be amended to ensure that the Plan is positively prepared and sufficiently sound to allow alternative sites to come forward were, for example, housing delivery on allocated sites not to come forward in the timescale or scope (in terms of housing numbers) envisaged. The Land at East and West of Flax Bourton is a clear example of this and Mac Mic considers that it should also be removed from the Green Belt. 4.29. To be 'positively prepared' the NPPF is clear that the Plan should provide a strategy that as a minimum seeks to meet the area's objectively assessed needs. Mac Mic therefore considers that the draft Policies SP7 and LP7 should be re-worded to ensure that other sites can come forward and to ensure that the Council's minimum housing targets are met. Without this amendment the Council risks its policy basis being too inflexible to respond to site-specific delivery characteristics or changes in the market, and may lead to the Council being unable to demonstrate a five-year housing land supply in the future. The Land at East and West of Flax Bourton would provide this flexibility and has an indicative capacity of 200-250 dwellings. 4.30. In any event, we note that villages in the Green Belt that do not contribute to openness are 'inset' from the Green Belt. The boundaries of the Green Belt do, however, remain tightly drawn around the existing settlement boundaries. We do not agree with this approach and recommend that the wording of draft Policy SP7 (and LP7) is amended to refer to both villages and sites that do not contribute to the objectives of the Green Belt being 'inset' from the Green Belt. In relation to Flax Bourton, we consider that this should apply to the land shown on Figure 2.1.	Recommendation 4.31. To ensure that the Plan is sound, positively prepared and effective, draft Policy SP7 (and LP7) should be re-worded (and the Proposals Map amended) to also inset from the Green Belt other sites that do not contribute to the Green Belt objectives, and that therefore represent 'Grey Belt' land, specifically including Land to the East and West of Flax Bourton.		North Somerset Local Plan Pre-Submission Plan - Flax Bourton Representations Final.pdf
63298945	Mac Mic Strategic Land (Backwell)	Planning Potential		No	• Positively prepared • Effective	No	Yes	Mac Mic supports the principles of the Green Belt set out in draft Policy SP7 and welcomes that the Council proposes to recognise the 'exceptional circumstances' that exist to justify the release of land from the Green Belt, particularly with regard to the identification of Land East of Backwell. Without the release of land from the Green Belt, it is clear that the Council would not be able to meet its own housing requirements in the period to 2041. This would result in a failure of the plan-led system and leave the Council vulnerable to speculative unplanned development elsewhere. Mac Mic does, however, consider that the wording of draft Policy SP7 (and draft Policy LP7) should be adjusted to provide a suitable level of flexibility and allow additional sites to be released from the Green Belt where they do not contribute to Green Belt objectives and meet the definitions of 'Grey Belt' land. This is to ensure that the Plan is positively prepared and sufficiently sound to allow alternative sites to come forward were, for example, housing delivery on allocated sites not to come forward in the timescale or scope (in terms of housing numbers) envisaged. To be 'positively prepared' the NPPF is clear that the Plan should provide a strategy that as a minimum seeks to meet the area's objectively assessed needs. Mac Mic therefore considers that the draft Policies SP7 and LP7 should be re-worded to ensure that other sites are capable of coming forward and to ensure that the Council's minimum housing targets are met. Without this amendment the Council risks its policy basis being too inflexible to respond to site-specific delivery characteristics or changes in the market and may lead to the Council being unable to demonstrate a five-year housing land supply in the future.	Recommendation To ensure that the Plan is sound, positively prepared and effective, draft Policy SP7 (and LP7) should be re-worded (and the Proposals Map amended) to also inset from the Green Belt other sites that do not contribute to the Green Belt objectives. 58246657	Lisa Hughes			No	' Justified ' Effective	Unsure	No	The people who live in the area adjacent to this proposed site are massively against it. The transport system in Portishead, is already struggling with the amount of people that have to use it and building on this field will cause substantial flooding on the main road. The damage it will cause to our precious ancient woodland (Weston Big Wood) and it's inhabitants, is catastrophic. The vibration caused by heavy plant machinery, will have a devastating effect on the root systems causing a massive decline in the health of the woodland.	Our governments have been urging us all to change our ways for years to help combat climate change and yet here they are destroying our greenbelt. It is a complete contradiction to what they have been saying. Once these areas have gone, we will never get them back.		
51446561	Woodstock Homes Ltd (multiple sites)	Kit Stokes	Woodstock Homes	No	' Effective ' Consistent with national policy	No	No	Objection to Policy LP7 – Settlement Boundaries We object to Policy LP7 because it imposes overly restrictive settlement boundaries that effectively exclude any growth in villages outside these tightly drawn limits. This approach prevents organic growth, which is essential for maintaining the vitality and sustainability of rural communities. Villages need the flexibility to accommodate modest development that supports local services, housing needs, and community resilience. Small-scale growth is particularly important for SME builders and for young and older people who wish to remain in their villages, maintaining family and community ties. By enforcing rigid boundaries, LP7 risks stagnation, undermines local character, and fails to reflect the principles of sustainable development outlined in national planning policy. Furthermore, the policy takes a blinkered approach to accessibility in an age where modern solutions—such as home deliveries, high-speed internet, and electric vehicles powered by photovoltaic (PV) systems—are transforming rural living. These innovations reduce reliance on traditional transport and make rural development more sustainable than ever before.	Modification We request that the Local Plan revises LP7 to allow for proportionate, well-designed growth in villages beyond the current settlement boundaries, ensuring rural areas can thrive and adapt to future needs.

58594049	Woodstock Homes (Land west of Butts Batch, Wrington)	Oliver Ansell	Woodstock Homes	No	' Justified ' Effective ' Consistent with national policy	Unsure	Unsure	Please see representations document Policy SP6 states that development within villages must "reflect local community needs" and connect to facilities via sustainable modes. However, the Plan prevents any ability for Wrington to meet such needs in practice because LP7 restricts all development outside the outdated boundary and no meaningful allocations are made. This internal contradiction between the aims of SP6 and the spatial reality created by LP7 undermines the coherence and effectiveness of the strategic policies as a whole.	Please see representations document		829 A5 OA 111225 Representations to Reg 19 Local Plan.pdf North Somerset Local Plan Pre-submission Plan - Representation form Part B.pdf
58582945	Nailsea Action Group		Nailsea Action Group	No	' Justified ' Effective ' Consistent with national policy	Unsure	Unsure	LP7 is not justified, not effective, and not consistent with national policy. The evidence base does not demonstrate that Schedule 5 has prioritised brownfield regeneration, urban intensification, mixed-use redevelopment, or higher-density development in sustainable locations, as required by NPPF paragraphs 119–125 on making effective use of land. Instead, the plan relies heavily on large, car-dependent greenfield SHLAA sites around Nailsea, without showing that brownfield or urban capacity within the town has been fully assessed or exhausted. This approach fails to reflect Nailsea's significant environmental constraints, limited public transport, and already overstretched infrastructure, meaning the plan is not effective or deliverable. As a result, the strategy for Nailsea is not positively prepared, lacks a transparent and proportionate evidence base, and does not align with national policy on sustainable development or efficient land use.			
30361825	K Riches			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Unsure	Unsure	Backwell has a Settlement Boundary (SB). I note that planning applications should be treated differently depending on whether they are inside or outside the SB. Four recent planning applications in the Parish, outside the SB, have been approved. The Local Plan now proposes changes to Backwell's SB to include the above and more. I do not understand the relevance of the SB.	Reconsider the application of SB policies.		
62943009	Homes England	Avison Young (Peter Stockall)	Homes England	No	' Effective	Unsure	Unsure	Homes England supports Policy LP7 on settlement boundaries for Locking Parklands. However, the boundaries need to reflect the extant planning permissions and the proposed allocations on the Policies Map. The land south of Mannock Gardens and Farnborough Road (phase 12a) which is covered by the extant outline permission ref 13/P/0997/OT2 for Locking Parklands is shown to lie outside the settlement boundary. Whilst this land is proposed to be designated as a local green space under Policy LP15, this will need to be consistent with the local planning of sustainable development and complement investment in sufficient homes, jobs and other essential services in line with the NPPF. The	No modification is proposed on the policy wording of Policy LP7. Homes England and St Modwen can provide a GeoJSON plan of the outline consent ref 13/P/0997/OT2 to the Council to

								green space to the south of Farnborough Road will include informal and formal recreation set within the parkland setting so the designation must allow for active uses. Therefore, we propose for the settlement boundary to be reviewed to include the land south of Mannock Gardens and Farnborough Road.	transpose onto the Policies Map in relation to settlement boundaries to reflect the extant outline planning permission.		
62874593	Robert Hitchins Limited		Robert Hitchins Limited	No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Unsure	Land at Kenn Road Business Park, Clevedon, as shown on Figure 1, was proposed as an allocation (together with two other parcels) in the Preferred Options draft of the North Somerset Local Plan under Policy "Clevedon 5/20 Kenn Road Business Park". This proposed allocation was supported by Robert Hitchins Limited at Regulation 18 consultation stage (See Appendix 1 to these representations). The land is however not proposed as an allocation in the pre-submission draft local plan and objection is raised to this omission (see our objection to Policy LP2) and to the exclusion of the Kenn Road Business Park from the Settlement Boundary. The inclusion of the Kenn Road Business Park within the Settlement Boundary of Clevedon would give greater certainty to the bringing forward of this hitherto allocated employment land in that the associated policy (LP4) makes clear that "New development within settlement boundaries will be acceptable in principle subject to the relevant policies within this plan". This change was considered though the Settlement Boundary Review Update October 2023 (Clevedon Map Ref b). However, no amendment was made as "The Business Park is separated from the settlement boundary by the river Yeo". Notwithstanding this, the inclusion of the Business Park within the settlement boundary would better represent the southern extent of the built-up area of the town. Change sought: Amend the settlement boundary to include the Kenn Road Business Park (shaded purple on Figure 2 below) within the Settlement Boundary under Local Plan Policy LP4. See attachment for graphics	Change sought: Amend the settlement boundary to include the Kenn Road Business Park (shaded purple on Figure 2 below) within the Settlement Boundary under Local Plan Policy LP4. See attachment for graphics.		North Somerset Local Plan Pre-submission Plan - Representation form Part B.pdf
31062913	R Storrar		KWAW	Yes		Yes	Yes			The maintaining of the village and town boundaries, other than those already selected for development, is crucial to prevent the random spread of housing estates, creating isolated pockets of people that are not part able to properly integrate into a village, but exist on the fringes. This is caused by the estates having no mass transport systems and no realistic prospect of active travel in to the village. They are forced to use their own vehicles which clogs up the lanes and village centre, creates pollution and lowers the standard of life for the establish community and new residents alike. These isolated estates also put a strain on already stretched GP surgeries, schools and recreational facilities (if they exist at all).

51477249	Burrington Parish Council		Burrington PC	Unsure	• Consistent with national policy	Yes	Unsure	On previous drafts of the local plan we expressed concern that a wider range of sites for housing would be needed to avoid challenges to the supply of housing land and the ad hoc addition of sites through planning appeals, especially in view of the substantial increase in housing requirements arising from the new standard method of calculating housing requirements. We can see that North Somerset Council has now made significant changes to the settlement strategy to include new large sites for housing which now include a substantial urban extension south west of Bristol ('Woodspring'), a number of strategic housing sites at Nailsea and Backwell, some of which already have planning consent, the 'Wolvershill' strategic allocation north of Banwell and strategic sites at Pill and Easton-in-Gordano, as well as continuing development adjoining Weston-super-Mare (Parklands Village and Winterstoke Village), new site allocations at Clevedon and Portishead and redevelopment sites within Weston, some of which are carried forward from the Site Allocations Plan of 2018.It seems to us that the Council has thus sought to identify a realistic and as wide as possible range of options to accommodate the increased housing requirement. Some rural settlements like Churchill and Winscombe are also making significant contributions to housing land supply, although some sites were committed through planning appeals which means that they are not always well integrated with the existing settlement (or other appeal sites). Committed housing sites in the larger villages do not therefore always achieve the aims set in the Core Strategy for 'Service Villages' in terms of more self-containment in jobs and services, protecting the character of the settlement, or achieving improvements in public transport.	More detail is required about the allocated housing sites to demonstrate their feasibility, desirability and consistency with other planning policies– in the form of a development brief		
29307745	Phoenix Life Ltd (Fraser Green)	Giulia Bunting	Phoenix Life Limited	Yes		Yes	Yes			Support Policy LP8	
58582945	Nailsea Action Group		Nailsea Action Group	No	• Justified • Effective	Unsure	Unsure	Nailsea's Town Centre is identified on the Policies map as largely comprising High Street, Somerset Square, Colliers Walk and surrounding car parks. We support this continued usage, with retail being joined by a varied mix of other associated uses including cafes, eateries, drinking establishments, commercial and entertainment outlets, as well as some residential use. The Centre boundary, as currently drawn, has, debatably, sufficient spare land and under-used accommodation to provide the likely additional space required to serve an increased residential population.	Restore free parking to Nailsea's car parks if the centre is to thrive and to attract residents (existing and yet to come) to patronise it		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The current town centre has a plentiful supply of car parking which, ideally, should be free to all users as a crucial part of the Centre's vitality. As indicated by a recent survey by some Nailsea Town Councillors the recent introduction of pay parking has had a highly detrimental effect on trade for many existing shops and associated facilities, as well as causing disruption on surrounding residential roads with excess parking obstructing easy, and, some cases, any passage especially of larger vehicles. The Town Centre should ideally be readily accessible by all residents. Many of the proposed new residential allocation sites are distant, and would create a lop-sided overall settlement layout. It will counter the Local Plan aspiration for Town Centres to be "accessible" and are therefore not supported. The proposed increase in public transport routes and numbers is too small to achieve the relevant Accessibility standards. Section LP8 states any additional retail locations must be accessible by walking, cycling and public transport. The current Town Centre clearly does not meet this standard for several of the proposed new residential sites, particularly to the west and south. However, the development of any such additional retail in a new location would have a serious detrimental effect on the viability and vitality of the existing centre - and should not be allocated. The overall effect therefore is that proposals for so much additional residential site allocation – in remote parts of the town, is unsound.	rather than going elsewhere.		
62943009	Homes England	Avison Young (Peter Stockall)	Homes England	Unsure		Unsure	Unsure	Homes England supports Policy LP8 on town centre hierarchy and the identified proposed local/village centre for Locking Parklands within Schedule 6. However, we request that the final boundaries on the policies map are checked to reflect the extant planning permissions and pending RMs for phase 8/10.	No modification is proposed on the policy wording of Policy LP8. Homes England and St Modwen can provide a GeoJSON plan of the outline consent ref 13/P/0997/OT2 and current reserved matters (once approved) for phases 8 and 10 to the Council to transpose onto the Policies Map to reflect the proposed local centre.		
62471329	Environment Agency		Environment Agency							See Schedule 6 for site specific comments, a sequential approach should be followed as in Policy DP9 and DP28.	

Policy LP9: Extent of the Green Belt

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
62877633	Avon and Somerset Constabulary	Lucy White Planning Limited	Avon and Somerset Constabulary	No	Effective Consistent with national policy	Unsure	Unsure	ASP welcomes the terms of Policy SP1 (Sustainable Development) which requires new development to contribute towards the creation of healthy, safe and cohesive communities, tackling inequalities and the Spatial Strategy (Policy SP3) to give priority to directing growth in the most sustainable locations with a focus at the towns and urban areas, maximising the use of previously developed land. However, the plan does not go far enough to meet the requirements of paragraph 101 of the National Planning Policy Framework to work proactively with statutory bodies to plan for required facilities. Significant weight should be placed on the importance of new, expanded or upgraded public service infrastructure. Policy LP7 – Settlement Boundaries and Policy LP9 – Extent of Green Belt (and associated Appendix 5 and Policies Map): The Council has sought to remove land from the Green Belt at the most sustainable locations to meet housing needs (page 20), however, it has not sought to revise the Green Belt boundaries to support the expansion of Avon and Somerset Police Headquarters at Portishead, as illustrated by the accompanying Policies Map (see attached document). With an anticipated population growth across North Somerset of around 55,000 people over the plan period, it is vital that ASP has sufficient space within its Headquarters to develop new facilities to resource policing of the expanded population. The Police Headquarters lies largely within the settlement boundary of Portishead, however two fields to the south of the estate are washed over by the Green Belt. The Green Belt extends further south and protects the Gordano valley. These fields lie outside the defined settlement boundary of Portishead. For clarity, the fields are identified in the attached document by the red boundary line. The Green Belt status of these land parcels, combined with their location outside the settlement boundary, limits their purpose within the headquarters estate. As a result, ASP already rent additional accommodation off-site to accommodate some facilities which could otherwise be delivered at the headquarters. Avon and Somerset Police objects to the extent of Green Belt retained through Policy LP9 and the associated failure to amend the settlement boundary under Policy LP7. Removal of the full extent of the headquarters from the Green Belt and inclusion within the settlement boundary of Portishead would enable the headquarters estate to be used more efficiently and effectively to meet the operational needs of the police service, to consolidate key policing functions, which are currently accommodated elsewhere, to enable colocation of facilities, where appropriate, and to accommodate other related regional and national functions in response to government policy in a central police facility in a sustainable, accessible location. Retention of the Green Belt across the southern portion of the Headquarters presents significant limitations on the future development and operation of the Headquarters. The existing facilities within the Headquarters require upgrading to meet current and anticipated operational needs. A significant amount of the existing building floorspace is used for storage of evidence and seized goods. However, there remains insufficient space within the permanent buildings and there are numerous shipping containers on-	Appendix 5 should be amended to accompany Policy LP7, referring to amendments to the settlement boundary at Portishead around Portishead Police Headquarters. The wording of Policy LP9 should be amended to refer to removal of land from the Green Belt at the Avon and Somerset Police Headquarters at Portishead. The Policies Map should be amended accordingly to identify the full extent of the Headquarters within the settlement boundary and outside the Green Belt. The southern boundary of the Headquarters is clearly defined by mature tree planting and demarcates a clear boundary between the built form of the police estate and the open fields beyond. This boundary provides a clear and defensible boundary for the revised Green Belt.		251118 Local Plan Reg 19 reps FINAL.pdf Representation form Part B LP9.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								site, occupying areas of hardstanding, which provide further storage facilities for seized goods. This is suboptimal and should be replaced with permanent, purpose-built facilities. Due to the nature of the police operations, there is a high demand for car parking at the HQ. Although current provision is adequate, it limits scope for further development on the land within the settlement boundary as any new development would likely involve the loss of car parking and/or a need for further car parking provision within the estate to meet the needs of additional officers and staff. There is a network of ecologically sensitive sites within the estate which are identified in the Adopted Local Plan. Whilst these designations are removed from the emerging Local Plan, the land is likely to have a relatively high ecological value which may prove to be prohibitive to new development or at least limit the extent to which this land can be developed. In addition, these areas of open space are a valuable wellbeing resource for officers and staff, who can be faced with traumatising, distressing situations in their work and need quiet space, in nature, to decompress. As a result, the loss of these areas is unlikely to be compatible with the Constabulary's pastoral care responsibilities to its people. As a result, the existing areas of hardstanding within the HQ are likely to be required to enable redevelopment of existing buildings and development of permanent facilities to replace existing temporary storage units. The existing green spaces, due to their ecological value are likely to have limited scope for development. Accordingly, there is limited capacity within the settlement boundary of the HQ to accommodate new development beyond the replacement and enhancement of the existing facilities. In the context of the Local Plan serving to meet the development requirements of the area up to 2041, there is unlikely to be sufficient land available to meet the growing operational requirements of the constabulary or any current or future regional or national policing operational needs, unless the full extent of the headquarters estate is removed from the Green Belt and placed within the settlement boundary of Portishead. There are exceptional circumstances to justify the removal of the land from the Green Belt, namely: - the benefits of a colocation of wider policing functions within the Headquarters, such as greater collaboration and more effective joint working across the force and reductions in the need to travel between police facilities. - The intensification of the Headquarters, providing value to the public purse in avoiding the need to purchase land elsewhere or incur other capital and revenue cost, particularly given the funding constraints for public services currently. - Limiting development to the Headquarters outside of the Green Belt, could hamper the ability to benefit from greater consolidation of the crown estate dedicated for criminal justice and policing agencies. In addition, policing continually evolves in response to changes in demand, crime patterns and societal shifts. It operates within a volatile, uncertain, complex and ambiguous environment requiring changes to its model of operation in response. The flexible deployment of the estate assets owned by the Police and Crime Commissioner is a key enabler, alongside coherent strategic planning. The Police Efficiencies and Collaboration Programme launched earlier this year, will bring renewed vigour to achieving efficiencies and savings through business change and transformation, freeing up funds to invest in the Safer Streets initiative. Avon and Somerset is one of the largest forces in the southwest. It is anticipated that over the timeframe of this Local Plan period there will be: 1. opportunities for the Constabulary to release revenue costs from other commercial rental properties which continue to accommodate various policing functions; 2. a potential requirement to address unmet need for operational training facilities, and the need to share, regionalise or merge policing and other public service functions (see above). There will be a continued need for a helicopter landing pad within the estate. This is currently provided on the field in the south-east corner of the estate (within the Green Belt). ASP also own land to the south of the existing Headquarters which might meet this purpose in the future. In addition, sufficient open space will need to be retained for officer and staff wellness, of particular importance given the stresses and strains of policing, operational training including dogs, student police officer training and major incident operations. Removal of the existing HQ site from the Green Belt and inclusion within the settlement boundary will provide maximum flexibility for the Constabulary to develop the estate in a manner which is optimal to meet its operational needs now, and in the future, whilst retaining or creating open spaces to meet a range of needs. The Council accepts that land at Tower Farm, immediately south-east of the Police HQ qualifies as Grey Belt on the basis that the land does not strongly contribute to Green Belt purposes a, b or d, there are no Footnote 7 constraints to provide a strong reason for refusal and the release of the site from the Green Belt would not fundamentally undermine the five purposes of the remaining Green Belt. In light of the Council's conclusions in respect of the extensive tract of Green Belt land at Tower Farm and the commonality between the attributes of the Green Belt on Tower Farm and the Police HQ, it can only be concluded that the Green Belt land in the Police HQ must also be regarded as Grey Belt and that the release of this land would not fundamentally undermine the purposes of the remaining Green Belt. Its location on the edge of Portishead, one of the main towns in the District and its relationship with the established Police Headquarters would promote a sustainable pattern of development in accordance with the Framework. As drafted, Policies LP7 and LP9 and the associated extent of Green Belt and defined settlement boundary shown on the Policies Map at Portishead are unsound and			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								contrary to national planning policy (the Framework). The plan does not provide adequate provisions for development of the Portishead Headquarters to meet the operational needs of the police service to manage an expanded population over the plan period and beyond, contrary to the following provisions of the Framework: 1. Paragraph 96 which requires planning policies to achieve healthy, inclusive and safe places. 2. Section 8 which requires planning policies to achieve healthy, inclusive and safe places, in particular paragraph 101 which requires local planning authorities to work proactively and positively with statutory bodies to plan for required facilities. 3. Significant weight should be placed on the importance of new, expanded or upgraded public service infrastructure when considering proposals for development (paragraph 101). 4. Planning policies should promote public safety and take into account wider security and defence requirements including for operational defence and security purposes (paragraph 102b). 5. Paragraph 135 which requires planning policies to ensure that developments create places that are safe, where crime and disorder and the fear of crime do not undermine the quality of life or community cohesion and resilience. The removal of the Green Belt designation on the Portishead Police Headquarters, coupled with the extension of the Portishead settlement boundary to include the full extent of the Headquarters would enable the plan to comply with the Framework and ensure the police service can meet its operational needs within the existing headquarter estate			
31149537	Strongvox Ltd	Pegasus Group		No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Yes	Yes	Our client is supportive of the Council's timely review and the proposed release of land from the Green Belt at Land at Lodway Farm, Pill and Easton-in-Gordano, pursuant to LP9(1) in order to facilitate residential development. This land is unmistakably 'Grey Belt' and in any event does not contribute strongly to any of the five purposes of Green Belt designation, such that it should not remain part of the Green Belt in any case. Our client's interest at Clevedon Road, Portishead also falls within the Bristol and Bath Green Belt, being a fringe site albeit bounded by uses other than agriculture. Notwithstanding, as confirmed by the Council through its pre-application response, it is a matter of agreement that this site comprises 'Grey Belt' land performing little to no meaningful function in terms of the purposes of the Green Belt. It therefore follows that, having regard to the other merits of the site and consistent with the approach to the release of Green Belt land through the emerging Local Plan, this site should too be omitted from the current Green Belt designation through an allocation for residential land use.	A site at Clevedon Road, Portishead should too be omitted from the current Green Belt designation through an allocation for residential land use.		R002v5 NSLP Reg19 Reps Strongvox Dec25.pdf
21579777	Taylor Wimpey (Youngwood Lane, Nailsea)	Pegasus Group								Policy LP9: Extent of the Green Belt Our client is supportive in principle of the Council's timely review and the proposed release of land from the Green Belt elsewhere in the authority area, in order to facilitate residential development. Much of this land represents 'Grey Belt' and in any event does not contribute strongly to any of the five purposes of Green Belt designation, such that it should not remain part of the Green Belt in any case.	R002v4_NSLP_Reg19_TWBristol.Dec25.pdf
51556641	Barratt Bristol (Land at Colliters Way)	Oneleven Property	Barrett Bristol	No	' Positively prepared ' Justified ' Effective ' Consistent with national policy			The identification of Land north of Colliters Way as a release from the Green Belt is supported. In the supporting text to draft policy SP7 ('Green Belt') the Council makes clear that Land north of Colliters Way has been identified as being appropriate for release from the Green Belt for residential use. As previously explained our client's site forms part of a larger proposed allocation along with site HE20286 in addition to an adjacent proposed site in the Bristol local plan (Land off Elsbert Drive) and is proposed to be developed comprehensively with this development. The site was assessed as part of the Green Belt Review, Part 1 (Jan 2022) which included this site within sub-area '12' for the purposes of a comparative analysis across the area. The overall conclusion was that this area scored 'moderate/ low' in terms of harm to the Green Belt, the least harmful of all areas assessed. As set out in earlier representations our client agrees with the Council's rational for releasing the land from the Green Belt. Even if the site was not identified for release from the Green Belt, which it is, the land is considered to be Grey Belt land as defined by the NPPF. In accordance with NPPF paragraph 148 the site should therefore be given priority.			Local Plan Representations North Somerset December 2025 Final 12.12.25 with appendices.pdf
51524513	Bellway Homes Ltd	tor&co	Bellway Homes Ltd	Unsure				As stated in response to Draft Policy SP7 (Green Belt), Bellway agree that exceptional circumstances exist to review and amend the Green Belt boundary to ensure North Somerset can meet its housing need in full.	In light of our comments on housing need, it may be necessary for the Council to further review boundaries in this policy, as suitable / necessary.		20251212 504317 JE - North Somerset Reg 19 (Reps obo Bellway Homes).pdf

63250785	LiveWest	PCL Planning Ltd		No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	These representations should be read in conjunction with the representations made on Policy SP7 (Green Belt) and other representations made regarding the overall strategy of the plan and role of Wrington. We consider that additional land at Wrington should be released from the Green Belt to accommodate residential development in this sustainable village. This is because Wrington benefits from a wide range of services and facilities. Without growth opportunities it will become impossible to sustain these, invest in new infrastructure and provide much needed affordable housing, therefore creating an inherently unsustainable place to the detriment of the local community. Despite the clear need for growth to sustain Wrington into the future, site options are limited outside of the adjacent Green Belt and constrained by flood risk and heritage constraints. However, our client's site at Land to the East of Wrington (reference HE2033) is unconstrained in terms of landscape or ecological designation, is well located to existing services and facilities, has good options for access, provides opportunities for enhancement of the village edge and can support the expansion of the adjacent recreational facilities. Furthermore, it is outside of the Conservation Area, there are no nearby heritage assets and the majority of the site lies within Flood Zone 1. It therefore represents a logical extension to the village to deliver sustainable development, providing wider benefits to the local community in respect of housing and supporting local services as well as opportunities to improve infrastructure and the setting of the village. We have previously confirmed that the site is available and deliverable. Whilst it is Green Belt, it is clearly on its margins and includes land of no specific merit or character nor does it contribute to any Green Belt purpose (i.e. preventing unrestricted sprawl, merging of neighbouring towns and preserving the setting and special character of historic towns). In order to facilitate growth at Wrington, compatible with the other larger villages, the site should have been considered sequentially preferable to the non Green Belt sites because of how it performs across a range of factors that would support its delivery as sustainable development and because it does not fulfil a strong Green Belt purpose. Such an assessment is consistent with how the Plan has sought to release sites within the Green Belt elsewhere. For reasons that remain unjustified and not fully explained, the Plan appears to avoid any growth at Wrington on the basis of an assumption that no suitable sites exist, highlighting the concerns of the other sites and identifying our client's site as being Green Belt. Given the clear benefits of growth in the village, we consider a more robust assessment of the potential for release of Green Belt at Wrington should have been undertaken. Given the attributes of our client's site and the clear benefits in delivering growth at Wrington, Land to the East of Wrington should have been included in the list of Green Belt releases set out in Policy LP9. The release of the site would provide greater longer-term benefit in improving the landscape and visual context of the village as well as the wider sustainability benefits in respect of supporting the needs of the community. Without this Wrington faces the prospect of no growth over the Plan period which will place services and facilities at significant risk, fail to address growing affordability issues and increase unmet need to the great detriment of the local community. It is for the reasons set out above that we consider Policy LP9 (alongside other policies raised in our separate representations) significantly undermines the soundness of the Plan overall as it has not been positively prepared as it is not seeking to meet identified needs. Its strategy is not justified as it contradicts clear evidence of need and the contribution the larger villages (including Wrington) could make to delivering sustainable development and does not take into account reasonable alternatives to address this. The Plan's approach will not be effective in that there is no clear evidence that supports the Plan being deliverable. It is not consistent with national policy in that its approach limits rather than maximises the opportunities for the Plan to deliver sustainable development in accordance with the Framework. Please see previous representations made on earlier versions of the Plan for completeness. These are appended to the covering email for these and other representations made on the Reg 19 (Pre-Submission Plan).	Our client's site at Land at East of Wrington (reference HE2033) should form part of the Green Belt review undertaken as part of the Plan process and be released from it and be specifically allocated for housing to support the delivery of sustainable development and the wider benefits to the local community this would bring. The Policy map should be amended accordingly. 									Airport. Policy provision should include safeguards for Felton Common.		
62995553	Del Piero Ltd	Rapleys						3. Grey Belt and previously developed land: policy alignment The Plan recognises the December 2024 NPPF concept of grey belt in its Green Belt policy justification, stating: “The NPPF (December 2024) introduced the concept of grey belt, and states that development in the Green Belt should not be regarded as inappropriate where grey belt would be utilised and other requirements are met.” (DP12 justification). Policy SP7 confirms a sequential approach giving priority to previously developed land, followed by grey belt sites and then other locations, when altering boundaries and considering release. The land parcels subject to this submission lie next to existing strategic allocations and long-established infrastructure (Colliters Way and the A38), with historic institutional and recreational uses in their immediate setting (former hospital and former golf course). They therefore fall squarely within the Plan’s grey belt and previously developed land sequencing policy, and can be master planned to preserve openness and secure compensatory environmental improvements in accordance with SP7 and DP12.	Policies Map / LP9 (Green Belt): identify a reserve area of grey belt on the Long Ashton / Barrow Gurney fringe (to be delineated through examination discussions and the Comprehensive Masterplan) for potential phased release if monitoring demonstrates under-delivery at Woodspring or a shortfall against the affordable housing trajectory. This would reflect SP7’s sequential approach and DP12’s recognition of grey belt circumstances.		Barrow Gurney Report.pdf BARROW GURNEY 11 12 2025.pdf

3106433	Yatton Parish Council		Yatton Parish Council						1. We are pleased to see that Yatton Station is intended to become a transport hub. Part of this should be the establishment of good public transport links with a frequent bus service (i.e. at least 2 buses per hour) serving Clevedon, Weston-super-Mare and Bristol. The provision of free parking at the station would make a significant positive difference to its usefulness as a hub and also to the lives of Yatton residents living near the station. 2. Yatton Parish Council agrees that land south of Nailsea and west of Backwell should be designated as Green Belt. 3. The existing Strategic Gap between Yatton and Congresbury should be retained and a new Strategic Gap, between Yatton and Kenn, should be designated. 4. Land off The Batch should be used to expand the doctor’s surgery, not for a primary school. Policy LP6: Extent of the Green Belt Yatton Parish Council agrees that land south of Nailsea and west of Backwell should be designated as Green Belt. Residents of the parish make use of these areas and would prefer to see them protected from development.		
21286337	K Baker			No	• Positively prepared • Justified • Effective	Yes	Unsure	To remove from green belt land that is rich in wildlife and is an important, natueal green space, but to justify it by designating alternative green belt areas seems absolutely counterintuitive. The land to the north or Nailsea where this has been suggested is an important area for all sorts of species, contains the Land Yeo that feeds into the regional wildlife site at Moorend Spout and the Tickenham and Nailsea Moora SSSI, provides separation between Nailsea town and properties within Tickenham and Wraxall. It is a wetland during winter, making this an inefficient proposal as an area to build on. The land doesn't even fall within the town boundary, yet you are proposing to develop it as part of the town. And changing the boundaries is an unsatisfactory solution to this, as per the comments on the separate consultation about this.	Retain current green belt - what is the point of it, if it can just be changed whenever anyone wants to build on it?! What a farce.		
8668193	Tickenham Parish Council		Tickenham Parish Council	No	• Positively prepared • Justified • Effective	Unsure	Unsure	1. Green belt assessment for Land north of Nailsea Tickenham Parish Council do not agree with the analysis undertaken by North Somerset Council on page 22 of their document: Stage 2 Green Belt Assessment. We consider that criteria (a), (b) and (c) should all be classified as strong and that this area of land should not be defined as grey belt. 2. Green belt assessment for the land off Pound Lane, Nailsea Tickenham Parish Council do not agree with the analysis undertaken by North Somerset Council on page 23 of their document: Stage 2 Green Belt Assessment. We consider that criteria (a), (b) and (c) should all be classified as strong and that this area of land should not be defined as grey belt.	The Local Plan should be amended so that the areas of land described as 1. Land North of Nailsea and 2. Land off Pound Lane, Nailsea which are analysed in the Stage 2 Green Belt Assessment as grey belt remain as green belt.		
10208161	The Bristol Port Company		The Bristol Port Company	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The Bristol Port Company (BPC) is the statutory harbour authority and competent harbour authority for Bristol Port. Bristol Port comprises Avonmouth Docks and Royal Portbury Dock (RPD); RPD is within North Somerset Council’s (NSC) administrative area. For over 20 years, NSC has failed to acknowledge or enable the requirement for RPD to grow and expand. The imperative for a change of policy and mindset, as evidenced below, could not be more compelling or coherent. Growth is the single unifying agenda of the UK Government, the West of England Mayoral Combined Authority (WEMCA) and NSC. The failure to release land within Shipway Farm from the Green Belt has blighted any financial benefit for NSC since the Port’s privatisation in 1991. It will instantly deliver jobs, skills, investment and significant economic dividend, but not at the expense of the environment. On the contrary, it will support the renewable and low carbon sector and deliver environmental enhancements. Indeed, BPC’s credentials of sympathetic, considerate and innovative development are often cited as an exemplar to other businesses both locally and nationally. BPC submits that, in respect of Policy LP9 (Extent of the Green Belt), the North Somerset Local Plan 2041: Pre-submission Plan (Regulation 19) (the Local Plan) is not sound on the basis that it is not positively prepared, justified, effective, or consistent with national policy. Further, BPC does not consider that the Local Plan is legally	BPC requests that Policy LP9 and the Policies Map are amended to release land within Shipway Farm from the Green Belt. The following wording should be added to Policy LP9: “Land at Royal Portbury Dock will be released from the Green Belt as defined on the Policies Map”		Green Belt statement.pdf North Somerset Local Plan Pre-submission Plan - Representation form Part B - LP9.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								compliant nor has it been prepared in accordance with the Duty to Cooperate. 2. The Local Plan is not positively prepared: Bristol Port is one of the largest UK commercial ports. It is a multimodal transport hub providing import, export and transit facilities for a wide range of cargo, with links by sea, road and rail between national and international destinations. For Bristol Port, and RPD specifically, to continue to play a significant role in the local, regional and national economy, it is essential that Policy LP9, and the Local Plan more broadly, fully support this strategically important transport infrastructure asset and employment site by providing a positive policy framework that is designed to meet RPD's needs over the plan period and fully realise the economic benefits of the Port for North Somerset and beyond. Central to Bristol Port's development needs over the period of the Local Plan is a requirement to bring forward land at RPD to accommodate additional facilities for transit storage, which are a fundamental need for all ports. BPC has identified land known as 'Shipway Farm', which is located immediately to the west of RPD, as being the most appropriate option to meet this requirement. Shipway Farm is located within the Green Belt and it is essential, therefore, that land within this site released from the Green Belt in order to ensure that the Local Plan provides a positive policy framework to guide development related to the Port. The Executive Summary to the Green Belt and Grey Belt Summary Position Statement appended to this representation identifies the Shipway Farm site. Policy LP9 of the Local Plan concerns the Green Belt. BPC notes that whilst changes to Green Belt boundaries are proposed in some locations across the plan area, no such provision is made for a change to the Green Belt in the vicinity of RPD. BPC maintains its position that this is a serious deficiency which renders the Local Plan unsound. The National Planning Policy Framework (December 2024) (NPPF) (paragraph 145) sets out that Green Belt boundaries should only be amended in 'exceptional circumstances'. BPC submits that there are several 'exceptional circumstances' which justify the removal of land within Shipway Farm from the Green Belt; they include: 1. National policy support for ports infrastructure. 2. The economic importance of Bristol Port. 3. The need for additional transit storage capacity at RPD. 4. The lack of alternative sites to accommodate the Port's needs outwith the Green Belt. 5. The social, economic and environmental benefits of removing land within Shipway Farm from the Green Belt. Each 'exceptional circumstance' is considered in-turn below. Exceptional Circumstance 1: National policy support for ports infrastructure: The UK Government's economic policy objectives underpin the need for investment in infrastructure, including ports. The Plan for Change (December 2024) sets out the UK Government's programme across six missions for renewal. 'Kickstart Economic Growth' is the primary mission and the Government's objective is to raise standards in every part of the UK. This mission is underpinned by seven pillars including investment, infrastructure and planning. Supporting the Plan for Change, the UK Government's Modern Industrial Strategy (June 2025) emphasises the importance of infrastructure, including transport, to UK economic growth and prosperity, stating "Infrastructure provides the foundations high-growth sectors need to innovate, grow, and compete globally…Businesses rely on transport infrastructure to move their products and access talent". In this context, UK Infrastructure: A 10 Year Strategy (June 2025) sets out the Government's long-term plan for economic, housing and social infrastructure to drive economic development and unlock growth across the regions. Recognising the critical role of infrastructure to UK economic prosperity, at paragraphs 1.1 to 1.2 the Strategy states: "High quality infrastructure boosts growth and plays a vital role in delivering higher living standards. Investment in infrastructure will improve transport and digital connectivity, which supports productivity and efficiency improvements…it will boost supply chains and create good jobs for British workers…". The Strategy emphasises the importance of Ports for supporting growth specifically, stating at paragraph 3.31 that: "Ports play a critical role in the UK's economy, handling around 95% of all import and export tonnage, and acting as hubs for regional growth and employment. The UK's ports sector is largely privately owned and operated, with the government's role primarily to ensure that the policy and regulatory environment supports efficient operation and investment, and to provide targeted support for connectivity and decarbonisation where there are clear public benefits." The Government's planning policies are intrinsically linked to these wider economic objectives. Paragraph 85 of the NPPF states that "Planning policies and decisions should help create the conditions in which businesses can invest, expand and adapt. Significant weight should be placed on the need to support economic growth and productivity, taking into account both local business needs and wider opportunities for development. The approach taken should allow each area to build on its strengths, counter any weaknesses and address the challenges of the future. This is particularly important where Britain can be a global leader in driving innovation, and in areas with high levels of productivity, which should be able to capitalise on their performance and potential." At paragraph 86, the NPPF stipulates that planning policies should: • "set out a clear economic vision and strategy which positively and proactively encourages sustainable economic growth, having regard to the national industrial strategy and any relevant Local Industrial Strategies and other local policies for economic development and regeneration"; • "set criteria, and identify strategic sites, for local and inward investment to match			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								the strategy and to meet anticipated needs over the plan period; • “seek to address potential barriers to investment, such as inadequate infrastructure…” and • “pay particular regard to facilitating development to meet the needs of a modern economy, including by identifying suitable locations for uses such as laboratories, gigafactories, data centres, digital infrastructure, freight and logistics”. At paragraph 87, the NPPF goes on to state that planning policies “should recognise and address the specific locational requirements of different sectors. This includes making provision for: ... b) storage and distribution operations at a variety of scales and in suitably accessible locations that allow for the efficient and reliable handling of goods, especially where this is needed to support the supply chain, transport innovation and decarbonisation; and c) the expansion or modernisation of other industries of local, regional or national importance to support economic growth and resilience.” In terms of transport, paragraph 111 of the NPPF requires that planning policies “provide for any large scale transport facilities that need to be located in the area, and the infrastructure and wider development required to support their operation, expansion and contribution to the wider economy”. National policy statements (NPSs) provide the primary basis for decision making on development consent order (DCO) applications for nationally significant infrastructure projects (NSIPs) under the Planning Act 2008. However, NPSs are capable of being a material planning consideration in respect of applications that fall under the Town and Country Planning Act 1990. In consequence, BPC considers that the Ports NPS provides important context for the Local Plan and is a relevant consideration in respect of Policy LP9. The Ports NPS (January 2012) recognises the critical importance of ports to the UK economy, including in respect of freight movements and in delivering wider economic benefits. In this context, paragraph 3.4.16 states that the Government “believes that there is a compelling need for substantial additional port capacity over the next 20–30 years, to be met by a combination of development already consented and development for which applications have yet to be received. Excluding the possibility of providing additional capacity for the movement of goods and commodities through new port development would be to accept limits on economic growth and on the price, choice and availability of goods imported into the UK and available to consumers. It would also limit the local and regional economic benefits that new developments might bring. Such an outcome would be strongly against the public interest”. The economic importance of ports and need for additional capacity is reaffirmed in the Government’s proposal for a revised Ports NPS (June 2025). The revised NPS sets out, at paragraph 2.2.2, that it is the Government’s policy to “encourage sustainable port development to enable long-term forecast growth in volumes of imports and exports by sea with a competitive and efficient port industry capable of meeting the needs of importers and exporters cost effectively and in a timely manner, thus contributing to long-term economic growth and prosperity”. Paragraph 2.3.12, meanwhile, states: “It is Government Policy to encourage capacity to be provided at a wide range of facilities and locations, to provide the flexibility to match the changing demands of the market, possibly with traffic moving from existing ports to new facilities generating surplus capacity”. Consistent with the designated NPS, paragraphs 2.3.30 to 2.3.31 conclude: “The Government believes that there is a compelling need for substantial additional port capacity over the next 30 years, to be met by a combination of development already consented and development for which applications have yet to be received. To exclude the possibility of providing additional capacity for the movement of goods and commodities through new port development would be to accept avoidable limits on economic growth and on the price, choice and availability of goods imported into the UK and available to consumers. It would also limit the local and regional economic benefits that new developments might bring. Such an outcome would be strongly against the public interest.” Removal of land within Shipway Farm from the Green Belt will ensure that the Local Plan responds both positively and directly to the need for transport infrastructure investment and additional port capacity specifically, as established in the Government’s economic policy and the Ports NPS. In accordance with the NPPF, it will also ensure that the Local Plan meets the specific needs of RPD, creating the conditions in which BPC can invest, expand and adapt so that the Port is able to fully support economic growth and employment generation in North Somerset and the wider South West region. Conversely, constraining the Port will be contrary to national economic and planning policy. Exceptional Circumstance 2: The economic importance of Bristol Port: Bristol Port is a strategically important national infrastructure asset and international gateway. It is also a fundamentally important economic contributor and major employer, with the Port estate contributing £1.29 billion to UK Gross Domestic roduct (GDP) and supporting over 21,000 jobs. Much of these economic benefits are retained in the regional economy; the Port contributes more than half (£761million GDP) to the South West’s whole economy and 12,910 workers to its total employment. The Port’s workforce is also highly productive, with labour productivity of more than double the South West average. Since privatisation in 1991, the Port has benefitted from £600 million of investment and the total tonnage of freight passing through it has increased by 93% (whilst overall tonnage of seaborne freights has fallen). The economic importance of Bristol Port is recognised in the Pre-submission Local Plan with Policy SP10 supporting RPD as a strategic transport facility. It is also reflected in regional and local economic strategies. RPD is within the Severn Estuary Growth Zone, as identified in the West of England Growth Strategy. The Strategy			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								states that, as well as the existing strengths in freight and logistics, "Severn Estuary offers major investment opportunities in clean energy sectors. The Severn Estuary will be at the core of our national clean energy transition". Bristol Port is a key location within the Severn Estuary Growth Zone. It is identified as a 'strategic enabler' that is "supporting the movement of high-value and oversized components to global markets". Bristol Port is highlighted as key to supporting advanced manufacturing and clean energy industries, two of the West of England priority growth sectors. The North Somerset Economic Growth Plan 2025 to 2035, meanwhile, refers to RPD as a significant infrastructure asset, crucial to the regional economy and a key driver of the green and blue economies in North Somerset. Exceptional Circumstance 3: The need for additional transit storage capacity at RPD: Significant volumes of cargo are imported and exported using Bristol Port's facilities annually. The motor vehicle trade generates around a quarter (of the gross value of the Port's business (30% of revenue), with almost all of RPD's existing car storage capacity committed for use by a wide range of major car manufacturers. A significant proportion of these vehicles are carried on deep sea vessels whose characteristics (especially beam, or width) mean that they can only be accommodated at RPD, which has a much bigger lock than Avonmouth Docks. Vehicles are imported in large consignments and so, in order to accommodate them upon arrival, a significant area of secure transit storage is required at the Port. The way in which the import motor vehicle supply chain works means that vehicles cannot be driven out of the Port as soon as they arrive. Instead, they are moved to transit storage areas within the Port before being prepared for distribution to motor dealerships. The combined impact of the large consignments and preparation time is that the dwell time of imported vehicles is greater than exported vehicles which, in turn, increases the need for space. Consolidation within the automotive industry means that manufacturers need very large areas of transit storage in order to be able to achieve their own economies of scale, so that their vehicles can be priced competitively to attract UK consumers. As at July 2022, there was circa 188 hectares (ha) of car transit storage plots at RPD, of which approximately 162 ha was used for imports, providing capacity for transit storage of around 77,500 imported vehicles. In recent years, additional capacity has largely been provided by the development of safeguarded land adjoining RPD at the Court House Farm site; in May 2023, NSC approved the development of the remaining parcel of safeguarded land at Court House Farm (22/P/1770/FUL). Construction was completed in Spring 2025 and the circa 3 ha of vehicle storage is now fully utilised. More recently, a small parcel of Port land adjacent to RPD, formerly the Sheephouse Park caravan site, became available and was developed to provide just under 1 ha of additional storage capacity in October 2025 (NSC planning reference 25/P/1174/FUL). Further temporary capacity has been provided in the Bulk terminal since the handling of coal ceased, together with small-scale alterations and expansions of existing car plots within RPD to maximise storage capacity for imported cars. Since the construction of Court House Farm, however, gains in vehicle storage space have been countered to some extent by losses as a result of demands for further open storage areas and warehousing for the breakbulk and container trades, which by necessity have been accommodated on land that was previously used for car storage. In 2021, the construction of a new Border Control Post to address HM Government requirements for the inspection of certain imports from the European Union, post BREXIT, and the required expansion of container storage facilities at the RPD container terminal, resulted in the loss of over 6 ha of car storage. More recently, the ongoing construction of a new steel warehouse and liquid fertiliser terminal in RPD has resulted in the further loss of more than 3 ha of vehicle storage capacity. Allied to this, there is expected to be further reductions in capacity in the future if Bristol Port is to support the renewable and low carbon sector. The UK Government has set an ambitious target to achieve net zero greenhouse gas emissions by 2050. The targets set by the UK Governments for renewable energy production can only be met through the sustainable development of supply chain port infrastructure to support the development of offshore renewable energy generation. In this context, the West of England Growth Strategy outlines six actions to unlock growth, one of these being, 'Making the West of England the home for green jobs and green growth'. Supporting Bristol Port "to attract investment in the development of Floating Offshore Wind", is the first way that WEMCA identifies to contribute to achieving this action. The Bristol Wind Terminal has the potential to unlock 4.5GW of new renewable energy capacity, which could power more than four million homes. The Bristol Wind Terminal development will play an integral part of the wider Bristol Energy Transition Hub at the Port, which aims to be a critical component for supporting the rollout of sustainable and clean energy sources. This includes supporting new sustainable aviation fuel (SAF) facilities, new small modular reactor (SMR) developments, carbon capture utilisation and storage (CCUS), green and other hydrogen production/storage and acting as the muster port for EDF's Hinkley and Sizewell projects. As a result of this essential development, there will be a displacement of activity from how BPC currently utilise this land as car storage and distribution. For example, BPC has agreements in place with Sizewell C that will see a large proportion of the Avonmouth Docks estate taken for special projects. The economic opportunities in the green economy associated with RPD are reflected in Policy LP14 and the North Somerset Employment Land Evidence Report (June 2025). Indeed, the Employment Land Evidence Report states that realising these opportunities "will require some rationalisation of the existing estate, and potentially some small release of green belt sites if this aids this process and is considered appropriate in planning terms. NSC, Bristol Port Ltd, WECA and UK Government could work together proactively to realise this opportunity which would provide nationally significant levels and types of jobs".			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Alongside the loss of car storage space, there has also been an increase in demand for additional transit storage capacity at RPD. This increase in demand is driven by a number of factors, including: • the UK's departure from the European Union (EU) meaning that, due to the complexities and costs of clearing both EU and UK customs, cars are now shipped directly to Bristol (as opposed to shipping via the EU) and stored on port land prior to onward distribution to UK customers; • an increase in the production of cars in China for the UK market and the associated trend towards larger car vessels; • shipping routes and volumes into RPD increasing due to: (i) the reduction in traditional European manufactures who predominantly import into the UK on the east coast and south coast of the UK; and (ii) the reduction in UK exports due to factory closures (Stellantis, Luton); • unprecedented demand for Electric Vehicles (EVs), with increasing sales driven by the Government's net zero commitments, rising petrol/diesel prices and changing consumer attitudes in response to growing concerns about climate change (a full transition to EV imports is anticipated by 2035 as the sale of new petrol and diesel cars is proposed to be phased out); and • more transit import vehicles being stored at the port of entry rather than in the dealership network due to post-covid changes to car manufacturers' business models (whereby direct sales to customers are growing and the traditional use of car showrooms is declining correspondingly). The increasing demand for storage space has created sustained pressure on BPC to maximise the use of operational land within the Port estate. BPC has made considerable efforts to meet these demands by increasing operational efficiency, maximising the use of existing storage areas and promoting flexible storage solutions for customers. Indeed, over the last twenty years, BPC has maximised the use of its existing land for transit storage of motor vehicles; the Port now has the proven capability of storing around 85,000 vehicles on the same 188 ha footprint where historically around 77,000 vehicles were stored. This increased utilisation and operational efficiency has been achieved by BPC through improved compound design and active management of both manufacturers and terminal operators with a focus on improved space utilisation and reduced vehicle storage time. However, further gains are now challenging to achieve, BPC has no controlled land available to handle increased volumes and RPD is at capacity. Allied to this, the maximisation of storage space has included utilising ever increasing areas of Avonmouth, many of which have only been made available through BPC development and investment. However, a large proportion of this land is being utilised on a temporary basis and will need to be released back to schemes such as Sizewell and Bristol Wind Terminal, once they come on line over the next few years. Further, Avonmouth is only suitable for smaller short sea vessels so most of the vehicles in storage are received in RPD and transferred to Avonmouth as overflow storage, creating additional vehicle movements. The ability for more storage in RPD would reduce the need to transfer vehicles by road thereby reducing traffic loading on the road links from Portbury to Avonmouth, and improving the sustainability of operations. In this regard, BPC currently has customers requesting additional storage capacity far in excess of RPD's storage capability. To fulfil these requests, and to counter the future net loss from Avonmouth, BPC would need to a considerable area of land. In this context, the ability to develop land within Shipway Farm will mitigate some of these losses and support the future automotive proposition at Bristol Port. Inability to fulfil all of these requests will result in lost customers/business. As set out in respect of Exceptional Circumstance 4 below, there is no further, available space within the existing RPD site (and wider Port) to meet the demand for additional transit storage capacity. Allied to this, BPC is not able to utilise land within the Port, which is not owned, or under the control of, BPC. This is because land controlled by the Port means it can be readily adapted and used by BPC with complete flexibility in order to accommodate any cargo that the Port may be asked to handle. BPC must be able to exercise its judgement to decide how, when and where development to provide additional transit storage needs to take place, as recognised by the Ports NPS, which states: • at paragraph 3.3.1, that "Government seeks to … allow judgments about when and where new developments might be proposed to be made on the basis of commercial factors by the port industry or port developers operating within a free market environment". • at paragraph 3.4.1, that "The total need for port infrastructure depends not only on overall demand for port capacity but also on the need to retain the flexibility that ensures that port capacity is located where it is required, including in response to any changes in inland distribution networks and ship call patterns that may occur, and on the need to ensure effective competition and resilience in port operations …" • at paragraph 3.4.12, that "Port development must be responsive to changing commercial demands, and the Government considers that the market is the best mechanism for getting this right, with developers bringing forward applications for port developments where they consider them to be commercially viable." More land is, therefore, urgently required at RPD for transit storage. However, BPC has not identified any suitable options for accommodating this demand within the wider Bristol Port site, at RPD, outwith the Green Belt or on previously developed land within the Green Belt (this is discussed further below in respect of Exceptional Circumstance 4). In consequence, land within Shipway Farm must be released from the Green Belt to provide the necessary capacity at RPD. Should the Local Plan not meet the development needs of RPD over the plan period by releasing land within Shipway Farm from the Green Belt, there will be insufficient land available to handle customer cargoes and the Port's ability to operate efficiently will be significantly compromised. In turn, the Port's crucial role in the global supply chain will be significantly impaired, its contribution to the UK, regional and local economy will be diminished, employment will not be sustained and, because customers' supply chain costs will be increased, they will ultimately be directly and adversely affected by having to pay more for goods. Indeed, such a situation is foreshadowed at paragraph			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								3.4.16 of the Ports NPS, which states: “Excluding the possibility of providing additional capacity for the movement of goods and commodities through new port development would be to accept limits on economic growth and on the price, choice and availability of goods imported into the UK and available to consumers. It would also limit the local and regional economic benefits that new developments might bring. Such an outcome would be strongly against the public interest.” Constraining the growth of the Port would also be likely to limit its ability to meet demands associated with the renewable and low carbon sector. The increasing demand for storage space, if unmet, will mean that less land can be made available within the Port estate for such uses. This runs contrary to the Government’s climate change commitments and national, regional and local economic objectives for green economic growth. It poses an unacceptable risk that essential renewable/low carbon energy related development is not brought forward and that the economic benefits this delivers is lost to other regions or countries. Exceptional Circumstance 4: The lack of alternative sites to accommodate the Port’s needs outwith the Green Belt: The Port's location is fixed and its facilities represent a major investment; it cannot just relocate in order to expand. This fact was expressly recognised by NSC during the examination into the now withdrawn West of England Joint Spatial Plan (JSP). In discussions relating to the expansion of the Port at the examination, Inspectors (at a hearing on 09 July 2019) asked about the potential release of land from the Green Belt and NSC’s representative stated that the Port "can't expand anywhere other than the port...it is a bit different from when you are considering housing or employment which have a choice of locations". As highlighted in respect of Exceptional Circumstance 3, land within the Port is tightly constrained by existing uses and the Port infrastructure is already developed to, and is operating at, capacity. In this context, BPC has not identified any onsite options for accommodating the requirement for additional transit storage space. BPC has considered an alternative of constructing multi-storey car parks for imported vehicles; however, analysis has demonstrated that the development costs would be uneconomic and multi-storeys would be inflexible (i.e. incapable of accepting cargo other than motor vehicles). BPC has also not identified any suitable, alternative sites outwith the Green Belt or on previously developed land within the Green Belt to provide the additional capacity RPD requires over the plan period. The last (and only) site safeguarded by NSC for port development was at Court House Farm. As much of this land as possible (either side of Marsh Lane) has now been developed and is fully utilised, further to it being released from the Green Belt through the former Replacement Local Plan (March 2007). As noted above, NSC approved the development of remaining parcel of safeguarded land at Court House Farm (to the east of Marsh Lane) in May 2023 (22/P/1770/FUL). Construction on this site was completed in Spring 2025, providing circa 3 ha of required storage capacity to support the motor vehicle trade. Other land on the periphery of RPD is constrained environmentally or due to complications of crossing the Metrowest railway line. As recognised in Policy LP14 of the Local Plan, the Port has over 100 ha of environmental corridors and green spaces, much of which are designated as local wildlife sites, with a wide variety of protected species. They are managed and monitored in accordance with BPC’s Ecological Management Plan to ensure that these diverse natural habitats are not only protected, but that biodiversity in the Port is enhanced. This network of wildlife corridors and wetland areas also provide an essential role in sustainable drainage, carbon storage, and parts are within Flood Zones 2 and 3. Therefore, it would be inappropriate to identify these vital and interconnected spaces for wildlife as an alternative site for development. Other BPC owned non-operational land adjacent to RPD, meanwhile, is located within the Green Belt, protected under international, national, and/or local environmental designations, and forms part of the flood plain (Flood Zone 3). In contrast, the land within Shipway Farm has no statutory or non-statutory environmental designations within the site and is not located within Flood Zone 3. Exceptional Circumstance 5: The social, economic and environmental benefits of removing land within Shipway Farm site from the Green Belt: Releasing land within Shipway Farm from the Green Belt will deliver a number of important socio-economic and environmental benefits: • Socio-economic benefits - development of land within Shipway Farm will: o enable RPD to handle increasing volumes and different types of cargo and thus facilitate growth; o deliver superior economic benefit to the local, regional and national economy; o preserve Bristol Port's role as a recognised major employer and create new job opportunities, providing benefits to local communities; o enable BPC to continue to meet customer needs, and specifically support the operation of the motor vehicle trade (based largely in RPD); o support the potential for community-led renewable energy projects where appropriate; and o promote Bristol Port as a hub for sustainability, delivering essential projects and infrastructure to support the region's net zero energy transition and the creation of green jobs (as detailed in respect of Exceptional Circumstance 3). • Environmental benefits - development of land within Shipway Farm has the potential to: o deliver environmental enhancements including a net gain in biodiversity; o accommodate renewable and low carbon energy infrastructure; o provide landscape enhancements and strengthen Green Belt boundaries; o provide a new footpath route connection and amenity gathering/pausing/ picnic/ seating space associated with the recently installed ‘England Coast Path’, footpath LA15/15/10 and the Portbury Wharf Nature Reserve path, with the opportunity to establish a new circular countryside link;			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								o deliver additional offsite improvements to environmental quality and access in other parts of the Green Belt controlled by the Port estate. Given the clear 'exceptional circumstances' outlined above, BPC is disappointed that Policy LP9 does not make any provision for meeting the established development needs of RPD over the plan period by removing land within Shipway Farm from the Green Belt. In not proactively meeting the development needs of RPD, it is considered that Policy LP9 falls considerably short of meeting national planning policy objectives which seek to deliver economic growth and additional port capacity (as detailed in respect of Exception Circumstance 1 above). It is also: • in conflict with the Local Plan's own stated strategic priorities to increase the number and range of job opportunities across the district and deliver essential new strategic transport infrastructure; • not aligned with Policy SP1 (Sustainable Development), which sets out that new development should (inter alia) "support the delivery of opportunities for economic growth and job creation at accessible locations"; • inconsistent with Policy SP10 (Transport), which details that the improvement of strategic transport facilities including RPD will be supported; and • not aligned with national, regional and local economic strategy. Grey belt: Having established that 'exceptional circumstances' exist for the release of land within Shipway Farm from the Green Belt and that no alternatives sites, including on previously developed land, are available, the NPPF (at paragraph 148) directs plan makers to consider grey belt. Annex 2 of the NPPF defines grey belt as "land in the Green Belt comprising previously developed land and/or any other land that, in either case, does not strongly contribute to any of purposes (a), (b), or (d) in paragraph 143. 'Grey belt' excludes land where the application of the policies relating to the areas or assets in footnote 7 (other than Green Belt) would provide a strong reason for refusing or restricting development". The supporting text to Policy LP14 (Royal Portbury Dock) justifies the retention of the Green Belt in the vicinity of RPD on the basis that "The remaining Green Belt land located between the port estate and Portishead is considered extremely sensitive in preventing coalescence and checking unrestricted urban sprawl". This conclusion is based on the Stage 1 Strategic Green Belt Assessment (October 2025) (SGBA). The SGBA identifies large parcels of land for the purposes of the assessment. Shipway Farm is located within Parcel P-007. Parcel P-007 sits between RPD and Portishead and extends up to Portbury Wharf on the edge of the Severn Estuary to the north and into the Gordano Valley to the south. The assessment concludes that Parcel P-007 makes an overall strong contribution to the five purposes of the Green Belt established in the NPPF and identifies the parcel as being one of three broad parcels that are 'fundamentally important' areas of Green Belt. On this basis, the assessment concludes that Parcel P-007 should not be included in an 'area of search' for potential grey belt. BPC does not consider that the SGBA provides sufficiently detailed evidence on grey belt matters to justify the retention of the Green Belt in the vicinity of RPD. A Green Belt and Grey Belt Summary Position Statement has been prepared by The Landmark Practice and its Executive Summary is appended to this representation (BPC would be happy to provide the full Position Statement to NSC upon request). It identifies a number of important shortcomings with respect to the SGBA which render it unsound for the purposes of identifying land within the grey belt. In particular, these shortcomings include a recognised need for a more granular assessment to determine the presence of grey belt within the strategic parcels adopted for the purposes of the SGBA. To remedy these shortcomings, and provide robust evidence to inform the Local Plan, the Green Belt and Grey Belt Summary Position Statement presents a finer grained assessment of land within Shipway Farm, following the NPPF and National Planning Practice Guidance (NPPG) and mirroring NSC's Stage 2 Green Belt Assessment methodology. This finer grained assessment concludes that: • land within Shipway Farm (as identified in the Summary Position Statement and shown in the Executive Summary) does not make a strong contribution to Green Belt purposes (a), (b) and (d); • there are no areas or assets of importance (as defined in footnote 7 of the NPPF, other than Green Belt) that would potentially provide a strong reason for refusing or restricting the commercial development of the site; • release of the land from the Green Belt would not 'fundamentally undermine' the five Green Belt purposes (taken together) of the remaining Green Belt when considered across the area of the Local Plan. The Summary Position Statement also identifies that alternative, clearly defined, defensible edges using physical features that are readily recognisable and likely to be permanent, are available to re-define the Green Belt boundary around Shipway Farm, in line with paragraph 149 of the NPPF. Furthermore, the assessment also identifies ways in which the impact of removing land within Shipway Farm from the Green Belt can be offset through improvements to the environmental quality and accessibility of remaining Green Belt land in the vicinity, in accordance with paragraph 151 of the NPPF. Overall, the finer grain assessment identifies that land within Shipway Farm is grey belt land with strategic potential for Green Belt release. Accordingly, it is BPC's position that land within Shipway Farm (as identified in the Summary Position Statement) is grey belt and should be released from the Green Belt for the 'exceptional circumstances' outlined above. Conclusion			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Paragraph 36(a) of the NPPF sets out that, for local plans to be positively prepared, they must provide “a strategy which, as a minimum, seeks to meet the area’s objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development”. By inadequately assessing Shipway Farm from a grey belt perspective and not removing land from the Green Belt to accommodate the needs of RPD over the plan period, the Local Plan does not provide a positive planning framework in respect of RPD and has not been prepared in accordance with paragraphs 85 to 87 and 111 of the NPPF. Overall, it is BPC’s view that Policy LP9 has not, therefore, been positively prepared. 3. The Local Plan is not justified: BPC considers that the approach adopted in Policy LP9 (of not removing land from the Green Belt to meet the future needs of RPD) does not represent an appropriate strategy for guiding future development at RPD, considering reasonable alternatives and available evidence. On this matter, BPC notes that the supporting text to Policy LP14 states: “The Replacement Local Plan and Core Strategy considered port expansion issues and land was removed from the Green Belt and safeguarded for future port use, subject to demonstrating need and other detailed requirements. Further opportunities have been reviewed but no further Green Belt amendment is proposed. The remaining Green Belt land located between the port estate and Portishead is considered extremely sensitive in preventing coalescence and checking unrestricted urban sprawl”. The position taken in the Local Plan is not consistent with that indicated by NSC in previous iterations of the emerging Local Plan (prior to the publication of the Preferred Options consultation document): • The Local Plan Issues and Options Document (September 2018) stated: “The accessibility and growth of international and regional gateways is linked with economic growth and delivering an improved transport system will be key to unlocking that growth”. • The Local Plan Issues and Options Document expressly identified RPD as a strategic employment location in North Somerset. • The Local Plan Issues and Options Document stated: “At the Port, the focus will be on ensuring the most efficient use of the existing port area, but also considering any opportunities to support business growth associated with the Port. The latter could include making allowances for additional land supply in and around Portishead to meet demand for high growth businesses including those linked to port activities. If there are specific additional needs associated with the Port, the Local Plan process will need to consider the land use implications and future aspirations of the Port over the plan period.” • The Local Plan Challenges and Choices Part 1: Challenges for the Future consultation document (July 2020) expressly stated that the Local Plan will need to “address the requirements of the Port and Airport considering their wider economic role, and the jobs and benefits they generate”. NSC’s position is surprising given that BPC expressly requested that land within Shipway Farm be removed from the Green Belt in its earlier responses to the Local Plan Preferred Options consultation document and the Autumn 2023 Pre-submission Local Plan (Regulation 19) consultation. NSC, in its pre-application advice to BPC (dated 17 September 2020, case reference 91484 20/P/0575/PR3) in relation to Shipway Farm, actually advised BPC that “[w]e would strongly encourage you to participate in the plan making process, where your proposals [to develop Shipway Farm] can be presented in the context of the long term growth strategy for the wider Port estate allowing NSC to comprehensively work with you to ensure long-term growth ambitions are thoroughly examined”. Despite this, NSC does not appear to have considered BPC’s request, nor has it robustly considered any opportunities involving the future growth of RPD. This contrasts sharply with the approach taken by NSC in the former Replacement Local Plan where land (Court House Farm) was removed from the Green Belt and safeguarded for future port-related use. In coming to its conclusion that “Further opportunities have been reviewed but no further Green Belt amendment is proposed”, it is unclear what opportunities NSC is alluding to. Whilst options relating to the release of Green Belt land and grey belt at broad locations across the plan area have been assessed by NSC, there is no detailed assessment of the Green Belt in the vicinity of RPD (see Section 2) nor is there any indication of opportunities relating specifically to RPD having been identified, considered and reviewed by NSC within the Local Plan, its supporting evidence (beyond the North Somerset Employment Land Evidence Report which actually identifies the potential requirement for the release of land from the Green Belt to facilitate the expansion of RPD) or the accompanying Sustainability Appraisal (SA) Report (October 2025) (see also Section 6 of this response). Indeed, NSC has not prepared an up-to-date evidence base on this matter despite engagement by BPC with senior officers and councillors on several occasions when the Port held meetings and site visits and on each occasion noted the Port's development needs. BPC expressed this same concern at the Preferred Options stage and, subsequently, at the Autumn 2023 Pre-submission Local Plan stage. It has seemingly gone unheard and BPC maintains that this is a significant deficiency which renders the plan ‘unsound’. Further, as demonstrated in Section 2, the SGBA on which decisions relating to the extent of the Green Belt in the vicinity of RPD have been based, does not provide the necessary finer grained assessment to support the position taken in the Local Plan. BPC would direct NSC to the serious concerns expressed by Inspectors which led (in part) to the withdrawal of the West of England Joint Spatial Plan (November 2017) (JSP). The withdrawn JSP identified Bristol Port (alongside Bristol Airport) as a key strategic infrastructure employment location (Policy 4); however, further to			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								representations received from BPC and other parties on the emerging plan, Inspectors, in their letter dated 11 September 2019, advised at paragraph 32: "However, whilst policy 4 states that the Port and Airport (along with the other key strategic employment locations) will ensure the continued economic growth of the West of England, there is no clear indication of how this should be achieved or what it means in terms of the allocation of land". At paragraph 33 of their letter, the Inspectors continued: "The Councils explained to us that it would be for the local plans to consider the case for the allocation of land (and, if necessary, the removal of land from the Green Belt) to provide for growth at the strategic employment locations. However, it is a stated aim of the JSP to identify the amount of employment land needed and the most appropriate spatial strategy for this growth. Moreover, the Port and Airport are of fundamental and strategic importance to the whole of the West of England and, consequently, any growth at them would also be likely to have implications for the wider employment strategy for the area. In this context we anticipate it very likely that we would ultimately conclude that it is not a justified and effective approach for the plan to delegate, to a subsequent local plan, decisions on the nature, scale and location of growth at the Port and Airport and the existence or otherwise of exceptional circumstances to remove land from the Green Belt in connection with this. Consequently, we envisage it very likely that we would conclude that, for the plan to be sound in respect of the Port and Airport strategic employment locations, decisions on these matters should be addressed in the JSP. It is also the case that a considerable amount of work would be likely to be necessary to prepare the evidence to make justified decisions about the approach to take". It is BPC's view that the Local Plan is similarly flawed. There is no clear evidence that NSC has robustly considered the case for the expansion of RPD, which is surprising given the accepted strategic importance of the Port, national policy and BPC's representations on the Local Plan to-date; it is also in clear contrast to the views expressed by NSC during the examination into the JSP where its representative stated (at the hearing on 09 July 2019) that "yes, there is potential which needs to be assessed at…the port...in terms of intensification and potentially expansion and you're right certainly in North Somerset {sic] the Royal Portbury Dock...that would involve expansion into the Green Belt". Paragraph 36(b) of the NPPF sets out that, for local plans to be justified, they must provide "an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence". NSC has unequivocally failed to take into account all the evidence in determining the policy approach in respect of RPD, it has not undertaken a detailed assessment of Shipway Farm and has not identified and robustly assessed options relating to the future growth of the Port. In fact, the adopted policy approach does not reflect the findings of the evidence base which has identified a potential need to release land in the Green Belt to enable the growth of RPD. On this basis, BPC submits that Policy LP9 is not 'justified'. See attached document for the remainder of the representation regarding why the Local Plan is not effective, not consistent with national policy, not legally compliant and doesn't comply with the duty to co-operate.

9138657	Home Builders Federation		Home Builders Federation	No	• Justified • Effective • Consistent with national policy				Policy LP9 is not considered to be sound as it is not effective, justified or consistent with national policy Although we support the release of Green Belt sites for housing in North Somerset, HBF are of the view, for the reasons detailed elsewhere in our representation, and so not repeated here, that the Council need to undertake a full Green Belt review and allocate more sites for housing, including possibly some more sites within the Green Belt.		North Somerset 2nd Reg 19 Dec 25.docx
51477249	Burrington Parish Council		Burrington PC	No	• Justified • Effective	Yes	Unsure	The Local Plan proposes to remove from the Green Belt land required by the airport as 'operational land' which is currently defined in the planning permission granted on appeal in 2022 that permits growth of the airport to accommodate up to 12 million passengers per annum (mppa). However, the airport adopted a new Masterplan in June 2025 to increase capacity from 12 to 15 mppa. A planning application is expected early in 2026. Will that Masterplan require a further release of land from the Green Belt to accommodate the operational requirements of the expansion to 15 mppa? If so, that should be clarified in the local plan.	The airport adopted a new Masterplan in June 2025 to increase capacity from 12 to 15 mppa. A planning application is expected early in 2026. Will that Masterplan require a further release of land from the Green Belt to accommodate the operational requirements of the expansion to 15 mppa? If so, that should be clarified in the local plan.		
51477249	Burrington Parish Council		Burrington PC	Unsure	• Consistent with national policy	Yes	Unsure	On previous drafts of the local plan we expressed concern that a wider range of sites for housing would be needed to avoid challenges to the supply of housing land and the ad hoc addition of sites through planning appeals, especially in view of the substantial increase in housing requirements arising from the new standard method of calculating housing requirements. We can see that North Somerset Council has now made significant changes to the settlement strategy to include new large sites for housing which now include a substantial urban extension south west of Bristol ('Woodspring'), a number of strategic housing sites at Nailsea and Backwell, some of which already have planning consent, the 'Wolvershill' strategic allocation north of Banwell and strategic sites at Pill and Easton-in-Gordano, as well as continuing development adjoining Weston-super-Mare (Parklands Village and Winterstoke Village), new site allocations at Clevedon and Portishead and redevelopment sites within Weston, some of which are carried forward from the Site Allocations Plan of 2018.It seems to us that the Council has thus sought to identify a realistic and as wide as possible range of options to accommodate the increased housing requirement. Some rural settlements like Churchill and Winscombe are also making significant contributions to housing land supply, although some sites were committed through planning appeals which means that they are not always well integrated with the existing settlement (or other appeal sites). Committed housing sites in the larger villages do not therefore always achieve the aims set in the Core Strategy for 'Service Villages' in terms of more self-containment in jobs and services, protecting the character of the settlement, or	More detail is required about the allocated housing sites to demonstrate their feasibility, desirability and consistency with other planning policies– in the form of a development brief

								achieving improvements in public transport.			
63052097	Stephanie Fowler	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes			Our client is supportive in principle of the Council's timely review and the proposed release of land from the Green Belt elsewhere in the authority area, in order to facilitate residential development. Much of this land represents 'Grey Belt' and in any event does not contribute strongly to any of the five purposes of Green Belt designation, such that it should not remain part of the Green Belt in any case.	R001v3_NSLP_Reg19_Fowler.Dec25.pdf
63069761	Green Belt Working Party for the Parish Councils of Long Ashton and Dundry		Green Belt Working Party for the Parish Councils of Long Ashton and Dundry	No	• Justified	Unsure	Yes	We submitted our responses to the Pre-Submission Local Plan on the 28 November 2025. Since then, we have spent time examining in more detail the two reports prepared by ARUP on the Bristol and Bath Green Belt for WECA and for Bristol,Bath & NE Somerset, and North Somerset Councils contained in the Local Plan evidence base. We have examined both the Strategic Green Belt Assessment interim report and the more fine grained and detailed Stage 2 Green Belt Assessment report. We have then applied these findings to the development sites prioritised for development within the Local Plan making process. Whilst we would like to know more and be able to understand more about the analysis by Arup's, nevertheless, if our understanding is correct,we are particularly surprised about the apparent contradictions between the Arup analysis and assessment and the NSC process for prioritising the sites for development within the Local Plan policy making process. Our conclusion at this stage is that these contradictions lead us to question the 'soundness' of the plan making process in respect of the findings emerging from the green belt review by ARUP's. There seems to be a series of mismatches which lead us to question why some sites are not included for development and others are included. For example, Parcel 2: South of Long Ashton/ Fenswood Farm with low scores for the Green belt, and an overall assessment as Weak, is not included for development, and why others, for example, Parcel 3: the Woodspring Golf Club and, Parcel 4: Castle Farm score relatively highly in relation to green belt, Moderate, but are then a priority as a large development site. Similarly, Parcel 5: Land inside the South Bristol Link Road is scored Moderate but is designated for development. Parcel 6: Land south of A38 is scored as Moderate but with Purpose A as a Strong contribution and yet is designated for development. These examples are related to where we have focussed our comments in relation to the Pre Submission Local Plan consultation however, we notice a similar and wider discrepancy across the Local Plan and draw this to the attention of the North Somerset Local Plan officers and members. We recognise that the ARUP reports have probably been completed and received by NSC after the NSC work on defining the key sites for development had been completed within the Local Plan process.			Greenbelt Working Party second submission 11.12.25.pdf
62802913	Pill & Easton-in-Gordano Parish Council		Pill & Easton-in-Gordano Parish Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Pill & Easton-in-Gordano Parish Council objects to Policy LP9 because it removes five large areas of Green Belt around our parish to enable Policy LP4 (1,100 homes). This deletion is unsound for the following reasons: Not justified & inconsistent with national policy (NPPF paragraphs 142–148): The council has not demonstrated the "exceptional circumstances" required to alter Green Belt boundaries, nor has it shown that all non-Green Belt alternatives have been fully explored and exhausted. No evidence has been published to prove these sites are "grey belt" (lower-value Green Belt). In fact, the sites contain high-value features: ancient woodland edges, priority habitats, floodplain woodland, and land identified on Defra MAGIC maps as irreplaceable. Not positively prepared: The sudden decision in June 2025 to treat Pill as a fourth "strategic location" (the same status as the three main towns) was never part of the July 2024 draft. This late change has not been tested through proper alternatives assessment. Not effective: The supporting Infrastructure Delivery Plan (Oct 2025, section 8) labels essential road and flood defences as "high risk" and unfunded. Green Belt removal is therefore premature. Legal compliance & Duty to Cooperate: No updated Statement of Common Ground with neighbouring authorities (e.g., Bristol City or National Highways) shows how the cumulative impact on Junction 19 has been resolved. LP9's proposed Green Belt boundary amendments for Pill LP4 sites are unjustified and inconsistent with NPPF para 147, lacking evidence of maximised brownfield/urban options first. Sites HE206 (Land East of Gordano Services) and HE20491 (Lodway Farm) form the critical remaining Green Belt corridor between Pill parish and Royal Portbury Dock, essential to prevent coalescence and sprawl. NSC's own Portishead assessment confirms: "The remaining Green Belt land located between the port estate and Portishead is considered extremely sensitive in preventing coalescence and checking unrestricted urban sprawl." Deleting this gap now (while protecting similar	Delete the proposed Green Belt deletions around Pill & Easton-in-Gordano from the LP9 Policies Map and retain the existing Green Belt boundary. Alternatively, if any change is to be considered, the council must first publish a full Green Belt Review proving exceptional circumstances and that these sites are genuinely low-value "grey belt" after all brownfield and non-Green Belt options have been used up. Retain current Green Belt boundaries for HE206/HE20491; revert LP9 amendments to July 2024 draft. Mandate strategic gap designation for Pill-Dock corridor, per LP14 principles.

								ones elsewhere) is arbitrary, with no grey belt assessment (para 148) or habitat compensation (para 193a/c). This rushed June 2025 change breaches Localism Act 2011; Duty unmet without cross-boundary input from National Highways on dock-adjacent sprawl.			
51490785	Parish Councils Airport Association		Parish Councils Airport Association	Yes		Yes	Yes	The PCAA recognise that the land at Bristol Airport under the 12 mppa planning consent is to be released. We do not believe that the new area of Green Belt proposed south of Nailsea and west of Backwell is adequate to compensate for loss of green belt at the Airport or proposed new housing developments to be in constructed on proposed release of future Green Belt.			
58390785	Adam Jeffes			Yes		Unsure	Yes	Steps should be taken to preserve the countryside between towns and villages. How the current development on the road from Congresbury to Wrington on the hill was allowed to move through planning beggars belief. We have the same issue of development encroachment between Yatton and Claverham, and this should be prevented, again through to use of green belt north of Claverham road. If there is one proposed between Nailsea and Backwell, why not here, or the legal basis for it being omitted? We have wildlife including Bats, Herons, Badgers and all sorts of biodiversity on Claverham road and Claverham in general. Developments of up to 5 houses on plots where existing buildings existed and not encroaching on countryside away from road would seem a fair. Having strategic areas where development is accepted and can be supported with appropriate infrastructure is a good way forward, even if there is some environmental challenges associated with the building of these houses. However, trying to shoe horn small to medium developments into land between parishes risks blending the country landscape into an urban spral, will be detrimental to the environment, the lifestyle people moved here for in the first place and is not supported in any way shape or form by local infrastructure.	Examples are provided above - in short, parish boundaries should be respected except perhaps in an area of strategic development where several hundred houses can be sited with the requisite infrastructure to cope with these abodes. Greedy developers should not be given permission to build houses which are miles away from jobs, with no infrastructure in place to support them to the detriment of the environment.

51732129	Gleeson Land	tor&co (Jacqueline Mulliner)	Gleeson Land	No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	No	No	LP9 states, “A new area of Green Belt is proposed south of Nailsea, and west of Backwell to maintain the separation of the settlements and protect the countryside in this area from encroachment.” Notwithstanding the flawed approach of releasing land from the Green Belt on the north side of Nailsea, whilst designating new areas to the south side, in direct conflict with NPPF para 147, the approach sits uncomfortably both in the context of the overall purpose of the wider Bristol and Bath Green Belt, which is to “check the unrestricted urban sprawl of Bristol” (as stated in Policy SP7), and in the context of further national policy which sets clear prerequisites for new designations. Nailsea is on the outer edge of the Green Belt. This edge is informed, and in many ways defined, by the location of outlying larger towns and villages. The Green Belt protects those towns and villages from merging with Bristol, but intentionally it does not envelop or extend across the land between those outer towns. The proposed extension would alter the approach to Green Belt designation in this area only (between Nailsea and Backwell), introducing an irregularity with an entirely different purpose, well removed from checking the unrestricted sprawl of Bristol. To amend Green Belt boundaries, or establish new areas of Green Belt, exceptional circumstances must be demonstrated. For new areas, NPPF para 144 provides key criteria. The ‘Green Belt Background Paper’ (October 2025) and Green Belt Review Part 3 Green Belt Extension’ (January 2022) are provided in the evidence base as the Council’s case for compliance with the NPPF 144 requirements. However, the case fundamentally fails. First, 3 options for a Green Belt extension are considered and option 2 selected, and whilst there is some inconsistency between the two evidence-base documents, the Background Paper (at para 7.9) confirms that the extended Green Belt only serves two out of the five Green Belt purposes. Significantly it does not serve purposes a), b), or d). This is significant because it means that the area of proposed designation would immediately be classified as Grey Belt, noting the sustainability of the location – supported by the allocations made – and lack of contribution to the overall purpose, i.e. to check the unrestricted sprawl of Bristol. In terms of overall purpose, we would further highlight the significant extent of the existing Green Belt, and it is obvious that because this area of land is not part of that existing Green Belt its development could not rationally be considered to fundamentally undermine the purposes (taken together) of the remaining Green Belt. This is important, because of the NPPFs approach to Grey Belt, and potential for residential development of Grey Belt to be ‘not inappropriate’, where there is a lack of five-year supply. Consequently, the case put that normal development management policies would not provide adequate protection (NPPF para 144a)) is irrational. Whether Grey Belt or strategic gap/countryside, a five year housing land supply shortfall would indicate that important development plan policies are out of date, triggering (without disengaging) the tilted planning balance. In terms of NPPF 144b, whilst development is proposed at South Nailsea, reducing the physical extent of the existing strategic gap, there would remain visual and physical separation between Nailsea and Backwell as a consequence of the rail line and flood plain. Further, it can be seen from the plan at para 7.7 of the Background Paper that the northern most part of the land proposed for Green Belt	The proposed Green Belt extension between Nailsea and Backwell should be abandoned.		North Somerset Reg 19 Reps (2025-12-12) - Gleeson Land (Appendix B).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								cuts into the new settlement boundary, contributing little additional benefit to physical separation. In any event the need for a new road through the Green Belt from Station Road (to facilitate delivery of the allocated areas – see our representations on Policy LP11) would introduce an urbanising feature segregating the northern parcels of the proposed Green Belt land from the southern parcels (those southern parcels being also located within the flood plain and close to the railway line). The effect would be that land to the north of the road would be well related to the urban area and retain a highly sustainable location, away from the flood plain. Hence, its designation as Green Belt would frustrate further sustainable development at south Nailsea (see representations to Policy LP3). Compliance with the requirements of NPPF 144 a), b) and c), is clearly not able to be demonstrated. Equally, in terms of NPPF 144 d) and e), the case is not made out in the Background Paper or Green Belt Review. Specifically, there is a need to secure a deliverable LP3 allocation, including the provision of viable, suitable and safe access infrastructure. The Green Belt designation would frustrate this provision, hence providing an inconsistency with strategic policies around sustainable housing development at the main settlements. Further, and put simply, the designation provides an unnecessary and unjustified restriction over otherwise sustainable development, on the edge of a main town and close to a railway station, which is entirely inconsistent with the thrust of the NPPF and current government thinking. It is worth raising here, that neither of the evidence base documents address Green Belt boundary matters (NPPF para 149)., which is a further fundamental fail, particularly given the need to look longer-term in the context of future opportunities for sustainable development. Land to the north of the new access road will inevitably offer a sustainable location to meet current and/or future housing needs. Notwithstanding the above, it is unclear how designation of this extended area of Green Belt will provide recreational benefits to residents and visitors, as none of the land relates to development proposals / allocations and therefore none of the new land is available or can be secured, through development, as publicly accessible. The same applies with respect to any opportunities for environmental improvement. There is no demonstrable recreational or environmental benefit to the designation of this area as Green Belt. In conclusion, the proposed Green Belt extension fails to meet the designation requirements and would only serve to frustrate sustainable housing development. It is unjustified and inconsistent with the NPPF			
62776385	Amanda Lindley			Unsure	• Effective	Yes	Unsure	The potential removal of villages from the green belt on the grounds of not being open is unfair. Villages that have been in green belt should remain within that protection on the grounds that the environment cultured around them be it agricultural or common grounds has created habitat that once taken away will never return. Felton and all villages around them be it airport should be protected. Nature and humans alike have moved to these areas for the sole reason it is safe from development. To take these villages out of the green belt protection would therefore potentially destroy what is there. Felton Village and the others surrounding the airport will be left vulnerable if they have the Green Belt status removed from them. Is it the intention of NSC to destroy peoples choice? Villagers are villagers because they do not wish to live in towns or cities. Why is an anonymous assessor justified in saying that our villagers add nothing to the Green Belt? How have they arrived at that decision? Is it the intention of NSC council to remove GB status from the villagers around the airport so that it is easier for the airport to 'take' Felton Common? There are not many places in the country with green belt. It is here for a reason. The new southwest forest will have nowhere to be created if these villages and Felton common is not protected.	NO removal of Green Belt Status for all Villages		
58043905	C Miles			Yes		Yes	Yes				
39307969	YACWAG		YACWAG	No		No	No	The housing development proposals in relation to Tower Farm and Black Rock, through removing Green Belt protection strikes at the heart of North Somerset's Nature recovery strategy and nature conservation policies.They are not consistent with the council's own policies in respect of the nature and climate emergencies in terms of their impact on nationally protected sites. National sites should be accorded significant buffer zones. We have seen elsewhere in North Somerset where development has been allowed on the edge of SSSIs. In Yatton at Rectory Farm for example a development is currently underway within a a few metres of a SSSI and Local Nature Reserve. The draft plan proposal is totally contrary to any semblance of a nature recovery strategy in North Somerset.			
58582945	Nailsea Action Group		Nailsea Action Group					(Relates also to SP9 pp29-31) If the Inspection does not agree to the extension of the green belt, the designation of 'strategic gap' (see also LP10 pp78-79) between Nailsea and Backwell should be restored. This area should not be without any designation, thereby attracting unwanted speculative applications from developers.	Clearly specify NSC's support for the place and protection of the strategic gap in the Local pLan.		
57928993	Kevin Payne			No	• Justified • Effective • Consistent with national policy	No	No	LP9 is unsound as applied to the Pill/Easton-in-Gordano allocations because exceptional circumstances for Green Belt release have not been demonstrated. No proportionate assessment has been provided showing that reasonable alternatives (brownfield land, higher densities in sustainable locations, and cross-boundary options) have been exhausted, contrary to NPPF paras 148–152. The Sustainability Appraisal fails to assess Green Belt harm robustly, particularly at Pill Green where openness and settlement separation would be permanently lost. Infrastructure evidence is not deliverable or funded (J19/A369), meaning the case for exceptional circumstances collapses. Until a lawful alternatives assessment, Green Belt harm analysis and infrastructure plan are provided, the Pill allocations should be removed from the Plan.	The Plan should be modified so that Green Belt release at Pill/ Easton-in-Gordano is removed unless the Council can demonstrate lawful, fully evidenced exceptional circumstances. To be made sound, Policy LP9 must be supported by: • A complete, proportionate alternatives assessment (brownfield capacity, higher densities in sustainable locations, cross-boundary options) demonstrating that Green Belt release is the last resort, as required by NPPF paras 148–152. • A robust Green Belt harm assessment showing the degree of harm to openness, settlement separation, and the purpose of preventing sprawl at Pill Green, Pill Road and related

Alternatively, if any change is to be considered, the council must first publish a full Green Belt Review proving exceptional circumstances and that these sites are genuinely low-value "grey belt" after all brownfield and non-Green Belt options have been used up. Retain current Green Belt boundaries for HE206/HE20491; revert LP9 amendments to July 2024 draft. Mandate strategic gap designation for Pill-Dock corridor, per LP14 principles.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								resolved. LP9's proposed Green Belt boundary amendments for Pill LP4 sites are unjustified and inconsistent with NPPF para 147, lacking evidence of maximised brownfield/urban options first. Sites HE206 (Land East of Gordano Services) and HE20491 (Lodway Farm) form the critical remaining Green Belt corridor between Pill parish and Royal Portbury Dock, essential to prevent coalescence and sprawl. NSC's own Portishead assessment confirms: "The remaining Green Belt land located between the port estate and Portishead is considered extremely sensitive in preventing coalescence and checking unrestricted urban sprawl." Deleting this gap now (while protecting similar ones elsewhere) is arbitrary, with no grey belt assessment (para 148) or habitat compensation (para 193a/c). This rushed June 2025 change breaches Localism Act 2011; Duty unmet without cross-boundary input from National Highways on dock-adjacent sprawl.			
29190241	Waddeton Park Ltd (Land at Pill Road)	Alder King Planning Consultancy	Waddeton Park Ltd	Yes		Yes	Yes		Waddeton Park Limited strongly supports the proposed allocation of its land within the new local plan for development. However, it has drawn attention to the indicative site capacity and site requirements laid out for the Land at Pill Road in the Pre-Submission Plan. Related amendments are, therefore, proposed. For clarity, and for the avoidance of uncertainty and unnecessary delays in determining the future planning application, Waddeton Park suggests that it would be appropriate for a modification to be made to the proposed allocation wording to the extent that development would permit up to 100 dwellings and a care home. The allocation should be worded to specifically 'permit up to 100 dwellings' and additionally 'support, but not require, a care home on the site' (or similar wording). In this regard, there is a demonstrable need for older persons housing in North Somerset over the plan period to 2041, as supported by the 'North Somerset Local Housing Need Assessment Report of Findings, September 2025' (LHNA). Figure 49 of the LHNA, which forms part of the local plan evidence base, quantifies the need for specialist older person housing to 2041. This sets out that there would be need to provide an additional 1,400-1,500 specialist older person housing units over the 15-year plan period 2026-2041. Therefore, the need for this type of development is clear and should be appropriately accommodated for in the local plan. The appended illustrative masterplan outlines one way in which a care home could appropriately form part of the development scheme, in addition to 100 dwellings on the site. Waddeton Park proposes that the following requirement is removed from being a site requirement: "Active travel connection required between Pill Green and Land at Pill Road, crossing Markham Brook to enable creation of safe walking routes to schools, along with proportionate contribution to Markham Brook active travel overbridge." Waddeton Park suggests that it would be appropriate for a modification to be made to the proposed allocation to remove this element as a 'site requirement'. Firstly, the site has appropriate accessible connections for future residents to walk to St Katherine's School opposite. This site already benefits from safe walking routes to schools; therefore, it is onerous and unreasonable to expect development on the site to fund/deliver additional connections where not necessary to make the site itself acceptable in planning terms. As assessed within the appended Transport Technical Note, the site's accessibility review shows that the key desire line to travel from the site is to Pill village centre along Pill Road north and St Katherine's secondary school opposite the site. To the north, Pill Road also connects to Crockerne Primary School. Overall, access to day-to-day facilities and amenities for education, shopping, and community uses is primarily towards the north and east (to the secondary school). In addition, there are existing PRoWs opposite the site on Pill Road for recreational walks. Therefore, it does not seem reasonable for the Land at Pill Road site to have to deliver and/or contribute to the delivery of the connection over Markham Brook to the west as this is not necessary for future residents. The sustainability credentials of the site without this link are clearly acceptable; the delivery of the land at Pill Road without any reliance on the Pill Green land should be wholly supported. It seems the benefit of such connection would be for the Pill Green site (draft allocation for 600 dwellings) and, as such, should this connection be necessary it should be delivered by that site. Furthermore, an 'overbridge' to Markham Brook is very likely to be impractical and unrealistic physically, given the sloping valley and steep topography around the brook, and it is likely to have detrimental effects upon trees and biodiversity. Furthermore, the financial implications could risk the viability	Waddeton Park Limited's view is that the Local Plan is legally compliant regarding the proposed site allocation for residential development at Land at Pill Road in Pill (Schedule 1 of the Local Plan, page 280), to which these representations relate. Moreover, Waddeton Park Limited believes that the proposed Local Plan, as set out in the Regulation 19 consultation can be found to be sound in that that the allocation of the land at Pill Road, Pill for residential development (identified on page 280 under Schedule 1) is consistent with each of the tests of soundness insofar as they are directly relevant. These representations are supported by the appended Transport Technical Note, prepared by Ridge, which supports the sustainability of the land at Pill Road for development. The land at Pill Road site allocation is part of the proposed means of implementing the spatial strategy, which has been properly arrived at through the identification of properly explained strategic options and their testing through sustainability and deliverability evidence and appraisals, and through stakeholder and community consultation. It is, therefore, a proper product of the positive preparation of the Local Plan and is justified. This forms part of the spatial strategy in appropriately directing strategic growth at Pill and Easton-in-Gordano under Policy LP4. The allocation of the site will be effective, in that it will assist in making the Local Plan deliverable. The site is wholly in one ownership and free of any significant constraints so its development can begin and be completed in the early years of the local plan period. The allocation is consistent with national policy and with the policies in the emerging Local Plan which is to be examined according to relevant national planning policy.	North_Somerset_Local_Plan_Pre-Submission_Plan_Representation_Form_Part_B_WPL_LP9.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									of the land at Pill Road allocation coming forward for development and this would materially affect the Council's housing position. Finally, fundamentally the requirement for an active travel bridge over Markham Brook is not considered to be necessary, as set out in the appended Transport Technical Note. There is no desire line to travel to the south/ west of the site, as this has excellent accessibility to local facilities and amenities in the village centre and the secondary school is conveniently located opposite the site. These proposed minor changes need not be a matter of any significance for the examination but could be a modification proposed by the Council before submission of the Local Plan to the Secretary of State, and as a minor change should not trigger a need for any further consultation.	It is clear that exceptional circumstances exist, and have been appropriately evidenced, to justify release of Green Belt land to support growth to meet North Somerset Council's identified housing need for the plan period. Paragraph 148 of the NPPF is clear that where it is necessary to release Green Belt land for development, as is established and agreed in North Somerset, plans should give: "priority to previously developed land, then consider grey belt which is not previously developed, and then other Green Belt locations." In this regard, Waddeton Park has consistently promoted the land at Pill Road throughout the emerging local plan process and strongly supports its allocation for residential development in the plan. The site is sustainably located with a strong relationship with the existing settlement of Pill. This strong cohesion between site and settlement is a significant benefit in allocating residential development here. The site is well located to the existing settlement with good accessibility to local services and in walking distance to key facilities. Pursuant to the Council's 'Spatial strategy, site selection and capacity paper' (October 2025), Pill/ Easton-in-Gordano is identified as a Category A village which are described as "villages considered to be relatively sustainable in their own right with a range of easily accessible services and facilities and goof public transport links to towns". The Council's approach is wholly appropriate to direct growth to such settlements. It is highlighted that work to reopen the railway line has commenced with Pill train station set to reopen by 2028 which will only further enhance the existing sustainability of the settlement. The land at Pill Road has been appropriately and comprehensively assessed as suitable through the SHLAA and adjoins a Category A village in a sustainable location where exceptional circumstances for Green Belt release have been identified. With regard to the Green Belt, the site has been assessed by the Council, as part of a slightly larger land parcel, within the 'Stage 2 Green Belt	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										Assessment' (October 2025), as delineated below (see attached document). The overall assessment of this parcel concludes it makes a weak contribution to the purposes of the Green Belt. This is set out in turn as follows: Purpose A - to check the unrestricted sprawl of large builtup area; (Bristol): Weak Purpose B - to prevent neighbouring towns merging into one another: Weak Purpose C - to assist in safeguarding the countryside from encroachment: Moderate Purpose D - to preserve the setting and special character of historic towns: Weak Purpose E -To assist in urban regeneration, by encouraging the recycling of derelict and other urban land: Neutral Further to this, as can be seen in the Green Belt assessment, our Waddeton Park's land makes a weak contribution to Green Belt purposes A, B and D. There are no relevant footnote 7 assets that would provide a strong reason for refusing or restricting development on the land. Therefore, this can be considered Grey Belt, subject to the specifics of the development proposal. The Council's Stage 2 Green Belt assessment agrees with this position in that the parcel can be identified as Grey Belt. This wholly supports the Council's approach to allocate development on the land, in accordance with the provisions of NPPF paragraph 148 which first priorities previously developed land and then Grey Belt land before any other Green Belt locations. The site is easily accessible, being within walking and cycling distance to a number and facilities and services within the village and nearby. This includes St Katherine's School opposite the site to the east. The site is available in the short term and can be delivered as a standalone development, without dependency on any major infrastructure intervention. The residential development has been driven by the context and topography, and by a wish to achieve an appropriate network of green infrastructure, positively responding to the woodland around Markham

										Brook to the west. The site is within Flood Zone 1 and, therefore, having a low risk of flooding and being appropriate for residential development. It is the preferred location under the flood sequential approach to selection of housing sites. Supporting technical surveys and assessments have been carried out to inform the development allocation. Demonstration of the deliverability of development on the site is the intention to submit an outline planning application for development of the site, following pre-application discussions with the Council, shortly after the close of this Regulation 19 consultation. This will ensure development can be brought forward in the early years of the plan and supports the requirement for the Council to identify “specific, deliverable sites for five years following the intended date of adoption.” (NPPF paragraph 72). Overall, the proposed allocation on land at Pill Road is strongly supported. Comment is, however, made with regard to the site-specific deliverability of the development, with regard to the site requirements as set out on page 280 of the published Reg 19 Pre-submission Plan for the proposed allocation. In this context, the draft allocation makes provision for an indicative capacity of 100 dwellings on the site. Pursuant to the work undertaken to date the site may also be able to accommodate a care home, ensuring an efficient use of land and meeting a need for such facilities. As illustrated on the appended illustrative masterplan, a scheme is currently being progressed via pre-application discussions for 100 dwellings and a c. 70-bed care home. It is appropriate that the supporting wording for the allocation is amended to reflect this potential development, without making it an absolute requirement. The site can comfortably and appropriately accommodate a care home in addition to traditional residential dwellings, which will make a significant contribution in an area where there is demonstrable need. In accordance with the enclosed plan, key elements of Waddeton Park Limited’s development

										proposal on the land at Pill Road include: • New homes generally to the eastern boundary with lower density residential frontage towards the woodland; • Policy compliant affordable housing; • Care home in accessible location in the north of the site with views across landscape edge and woodland, providing a sensitive response to existing dwellings in St Catherine's Mead; • Vehicular access from Pill Road; • Pedestrian/cycle and potential emergency access connection to the north of the site, serving a foot/ cycle path which runs north/south within the site; • Mobility hub, with potential for electric scooter/bicycle hire, bicycle parking, car club space, parcel lockers and occasional events (i.e. food truck); • Traffic management to help create a low speed environment; • Potential for pedestrian crossing of Pill Road to Public Right of Way running east; • Pedestrian/cycle access to Pill Road linking with existing bus stop, serving a foot/cycle path which runs north/south within the site; • Potential for improved crossing/traffic management along Pill Road; • Wildlife area with informal recreation; • Northern pocket park responding to existing space in St Catherine's Mead; • Multi-functional green corridor with swale, footpath and new planting; • Open space with play area in an accessible location, helping to retain an open character at the gateway to the village; • North to south swale within landscape edge to woodland. • New and retained hedgerow to south of vehicular access, along the eastern boundary with Pill Road, helping to retain a green character on the entrance to the village; • Green corridor with significant tree planting on site high point to help soften views; • Attenuation pond within landscape corridor.	
18477217	Kit Stokes	Kit Stokes	StokesMorgan Planning Ltd	Yes		Yes	No		We object to Policy LP9 because the approach of insetting villages within tightly drawn boundaries removes any potential for growth. This rigid policy fails to recognise the need for flexibility and proportionate development that supports rural communities. Rather than imposing absolute limits, the Local Plan should consider rounding off villages to allow them to grow in a sustainable and sensitive manner. This would enable modest development that meets local housing needs, supports community vitality, and provides opportunities for younger and older generations to remain in their villages. The following villages are particularly affected by this restrictive approach:	We request that LP9 be revised to permit rounding off and proportionate growth in these villages, ensuring rural communities remain vibrant and adaptable to future needs. Also to reflect NPPF para 154(e).

									• Abbots Leigh • Clapton-in-Gordano • Cleeve • Dundry • Failand • Flax Bourton • Felton • Leigh Woods • Portbury • Redhill • Tickenham • Weston-in-Gordano • Winford These settlements have capacity for small-scale, well-designed growth without compromising their character or landscape setting. A more balanced policy would allow organic expansion while safeguarding key environmental and heritage assets. In Julian Wood v. Secretary of State for Communities and Local Government [2015] EWHC 1173 (Admin), the court clarified that limited infilling in villages is appropriate regardless of whether the settlement has an identified HDB.		
26060801	CJ Waite			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The release of Green Belt land to accommodate the proposed Tower Farm development is not exceptional as alternatives exist. The environmental importance of the fields that comprise the proposed development should not be underestimated, they act as an essential buffer to Weston Big Wood, a SSSI. Building on this land will lead to the inevitable degradation of the Wood and probable deselection as a SSSI. It should be noted that the area under consideration is currently Green Belt, a status achieved in the late 1980's, it is difficult to see why this has now changed. If it was considered vitally important to protect the area then, why is this not so now? By placing it under Green Belt protection then it preceded the Natural & Environmental and Rural Communities Act of 2006 Section 40 that places a duty on Public Bodies to contribute to the coherence and resilience of valuable ecological networks. It also seems to be in contradiction to the North Somerset Local Nature Recovery Strategy that defines how the Act of 2006 will be met.	If it is inevitable that green belt land must be used then choose land that is not so environmentally important, for example Sheepway or off the Portbury 100		
58562753	C Wheeler			No	• Justified	No	Unsure	This planning process is not inclusive. Most people aren't aware of it and most people wouldn't have enough understanding to participate in it. It isn't democratic. All the developments listed contradict the noble opening statement about the Green Belt ie "The North Somerset Green Belt is highly valued by local communities and is an effective planning tool in preventing the urban sprawl of Bristol and shaping the pattern of development in North Somerset. It keeps land permanently open, prevents towns merging together and protects the countryside." In truth the developments are principally about PROFIT. The statement above would be laughable if it wasn't so tragic. The land isn't just for people. I believe that measures put in place to protect wildlife are lip service only. I have direct experience of the devastating loss of habitat that occurs due to housing development. How can we not prioritise nature at this pivotal time of the world. It completely beggars belief. The further encroachment of the airport on green space can only again be about PROFIT. For the health of the planet and local people we must take fewer flights.	I am not qualified or experienced enough to respond. We need to be able to trust the experts who represent us to do this.		
63070401	Emilia Leung			No	• Effective	No	Unsure	The Proposal is overly reliant on inflated national targets and infrastructure that cannot be delivered – whilst at the same time, ignoring local constraints. The Proposal is also inconsistent with national policy. Green Belt boundaries should only be altered in exceptional circumstances – and the review must show no "clear evidence that doing so would fundamentally undermine the purposes…of the remaining Green Belt".			

Policy LP10: Strategic gaps

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 64415137	Miller Homes (Locking Parklands)	Tom Rocke		No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Issue • Whether Strategic Gap designations are consistent with national policy and should be continued. • If so, whether adjustments should be made to their boundaries and / or policy wording to provide greater flexibility to accommodate growth in the most sustainable locations in accordance with the spatial strategy Soundness Test(s) • Positively Prepared • Justified • Effective • Consistent with National Policy 3.10 Through Policy LP10, the Council continues to designate strategic gaps as a policy tool to protect the character and separate identity of settlements. This is notwithstanding there being no locus for them in the NPPF, and their being a legacy of a policy approach to protect the countryside for its own sake that was swept away as being inappropriate in the first iteration of the NPPF which superseded the former Planning Policy Guidance Notes. It is inconsistent with the notion of sustainable development, which is underpinned by a criteria based approach to the assessment of development proposals rather than blanket restraint. 3.11 The findings of Inspector Burden following her Examination of the North Somerset Site Allocations Plan were clear and unequivocal, as follows:	Changes Sought Policy LP10 • Delete Policy LP10 from the Plan and remove the Strategic Gap designations from the Policies Map; (28 Spatial Strategy Site Selection and Capacity Paper, October 2025, para. 7.3, p.25) • In the alternative, critically review the spatial extent of the strategic gaps, particularly at Weston-super-Mare, to remove land that can reasonably be developed to deliver housing growth at the most sustainable locations in accordance with the settlement hierarchy / spatial strategy; • In particular, removal of the Moss II land to the north west of Parklands Village which does not make an essential contribution to maintaining separation from the wider urban area of Weston-super-Mare		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								There is no reference to strategic gaps in the NPPF or in PPG which would provide any national policy basis or advice on their designation or the detailed definition of their boundaries. …(24) There is no national policy for the provision of strategic gaps, or encouragement in Government policy to have such designations. In these circumstances the emerging JSP and new Local Plan would provide the opportunity for the Council to reconsider the principle of continuing with this designation. …25 3.12 The designations are a potential barrier to achieving sustainable development by precluding reasonable Alternatives in the most sustainable locations and preempting the use of Green Belt land ahead of other opportunities. 3.13 The Council's justification for retaining strategic gaps as set out in the background paper contained in the evidence base, is wholly inadequate. Their attempt to justify them on the basis of paragraph 130 of the NPPF26 is wholly unconvincing and simply endorses why they are no longer appropriate. The proper approach is now to test any development proposal against the relevant place-making objectives, including that to ensure adequate protection of local character and identity, 'while not preventing or discouraging appropriate innovation or change'. By their very nature as blanket restraint designations, the policy acts as a brake on appropriate innovation or change. 3.14 In the background paper it is acknowledged that strategic gaps provide a 'stronger dimension' to countryside policies in specific areas27. It is this stronger protection for its own sake that the NPPF sought to sweep away, and which the Council is refusing to accept through an adherence to strategic gaps. The current approach is to consider each case on its merits. If a development proposal can be shown to cause actual harm to character by, for example, diminishing separate identity and sense of place, and that harm is overriding, then there are sufficient safeguards to protect it. If no such actual harm can be demonstrated, or (24 North Somerset Council Sites and Policies Plan Part 2: Site Allocations Plan, Inspector's Report, February 2018, para. 99, 25 Ibid, para. 101 26 Strategic Gaps Background Paper, November 2023, para. 2.3 – now paragraph 135 of the NPPF 27 Ibid, para. 2.2) other material considerations, such as the need to accommodate growth in the most sustainable locations, outweigh it, then there is no reason to resist the development proposed on that basis. 3.15 The Council correctly acknowledges that strategic gaps have a similar purpose to Green Belts, albeit more localised. However, the fact is that the only blanket countryside restraint designation that has any locus in national policy, is Green Belt. Recognition of strategic gaps and other local designations, which had locus in the former national planning policy set out in Planning Policy Guidance Notes, was removed when they were superseded by the NPPF since they are inconsistent with the concept of sustainable development that was introduced through the latter. 3.16 Construed on their face, strategic gaps are more restrictive than Green Belt policy since the relevant policy provisions do not allow for specific categories of development which are 'not inappropriate', and which the Government has recently extended through the introduction of the concept of 'grey belt' land. The purpose of the latter change is to enable growth where it is needed in sustainable locations where the land in question does not make a 'strong contribution' to the purposes of the designation, and therefore to not restrict development unnecessarily. The strategic gaps are therefore clearly a more onerous constraint than Green Belt which is both counter-intuitive and inherently wrong 3.17 As a matter of principle, the continued designation of strategic gaps and their use as a policy tool to restrict development, is inconsistent with national policy. As such, they should be removed from the submission plan, failing which the Plan risks being found unsound. 3.18 Notwithstanding, and without prejudice to, the foregoing, if the Council proposes to continue with strategic gaps, then they must be substantially reduced in the extent of their application, and to a much greater degree than is currently proposed. Given that the gaps, as currently defined, impose significant restraints on development at the most sustainable locations, and in particular Weston-super-Mare, there is a particular need to reduce the blanket restraint that they impose to an absolute minimum. 3.19 It is noted that, for the purposes of applying the sequential approach that underpins the spatial strategy, the Elm Grove Nursery site at Locking that it is proposed to allocate for 110 dwellings is categorised a part of 'wider Weston-super-Mare', and therefore as town expansion in third position in the sequential hierarchy28. What this means is that land to the north and east of Elm Grove Nursery should also be categorised as 'wider Weston-super- Mare area', and therefore development opportunities as town expansion that rank highly in the search sequence and order of preference. Moreover, if it already forms part of 'wider Weston-super-Mare, it begs the question as to why a strategic gap is designated in this location and what purpose it is intending to serve. There would seem to be an inherent inconsistency in the plan in categorising Locking as part of 'wider Weston-super-Mare' to justify allocation of the Elm Grove Nursery site under Step 3, and the designation of a strategic gap to maintain its separation from the wider urban area of which it has been deemed to be a part for the purposes of applying the spatial strategy. 3.20 If the Elm Grove Nurseries site is a suitable development opportunity, that is well connected to the main towns, that is deemed not to be prejudicial to the strategic gap notwithstanding the very narrow gap that will retained between it and the Oak Tree residential park to the west, then the Moss II land which is within, and will retain, a much more expansive gap cannot reasonably be held to be prejudicial to the designation and its objectives. There is an evident inconsistency between the allocation of the site at Elm Grove Nurseries, which was assessed, and considered suitable, through the SHLAA, and the automatic exclusion of the Moss II land from further consideration through the SHLAA on the basis of it forming part of a strategic gap. 3.21 It is therefore significant that the strategic gap between Weston-super-Mare and Locking is imposing a blanket restriction on development opportunities at a highly sustainable location that ranks as a high priority in the search sequence that underpins the spatial strategy of the plan. As such, the continuation with the strategic gap in this location must be subject to the most rigorous scrutiny and critical analysis. It is considered that the justification for a designation that is both inconsistent with the spatial strategy and national policy, has not been made.

31149537	Strongvox Ltd	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes			Our client has no objection to the proposed designation of a Strategic Gap between Yatton and Congresbury, however such designation does reinforce the presumption that the proportionate growth of these settlements should necessarily be at the opposite ends of their respective spine routes (i.e. to the northwest of Yatton and southeast and east of Congresbury).	R002v5 NSLP Reg19 Reps Strongvox Dec25.pdf
51524513	Bellway Homes Ltd	tor&co	Bellway Homes Ltd	No	• Effective • Consistent with national policy			Bellway acknowledge the principle of identifying strategic gaps where there is clear evidence that maintaining separation between settlements (existing and proposed) is necessary to protect local character and prevent harmful coalescence. However, Draft Policy LP10 (Strategic Gaps) is too rigid and does not recognise that some forms of development can occur within a Strategic Gap without undermining its essential purpose. In many locations, land may serve as a functional interface between existing and new communities. In such cases, there is genuine potential for well designed community infrastructure, education provision, or active Green Infrastructure to be accommodated while still preserving settlement identity. The supporting text draws comparisons with Green Belt policy, yet the policy itself is restrictive and does not offer the clarity that Green Belt policy provides on categories of appropriate development (e.g. outdoor sport and recreation and associated buildings). Strategic Gaps should not be treated as de facto Green Belt, and the policy should explicitly allow for beneficial uses that meet local needs and support the masterplanning and delivery of adjacent development.	Bellway consider that Draft Policy LP10 should be amended to introduce clear and proportionate flexibility, confirming that development serving legitimate community, education or Green Infrastructure functions may be appropriate where it is compatible with the role and function of the Strategic Gap and does not harm settlement separation.		20251212 504317 JE - North Somerset Reg 19 (Reps obo Bellway Homes).pdf
21449761	Bloor Homes South West (Wolvershill)	Turley		No	• Positively prepared • Justified • Effective • Consistent with national policy		No	The use of proposed Strategic Gaps within the Plan is supported, in principle, where there is clear evidence that specific gaps between settlements (both existing and proposed) play an important role in maintaining character and distinctiveness, and to prevent harmful coalescence. However, the proposed wording of Policy LP10 is not sufficiently clear within respect to flexibility that would (and should) exist for the provision of new Green Infrastructure or other development and uses within Strategic Gaps. This provision and associated development would provide beneficial facilities and amenity for surrounding communities (such as built education, community facilities or other active Green Infrastructure uses with supporting infrastructure), and would be possible whilst ensuring that the separate identity of settlement would not be harmed, especially where there are already (or could be in the future) close and beneficial interrelationships and the provision of complementary or shared services, facilities and amenities (alongside new or improved active travel and public transport connections). In such circumstances (such as with the Strategic Gap proposed for Banwell and Wolvershill) the Strategic Gap land provides an important potential area of interface between the existing and new communities, and where there is significant potential to deliver new facilities within the Strategic Gap area. Supporting text suggests that Strategic Gap policies have a broadly similar purpose to that of Green Belts, however given that the policy should not operate on the same rigid and restrictive basis then more flexible wording should be introduced into Policy LP10. Alternatively, or as part of this, it should be made very clear that there are a variety of appropriate forms of development (to borrow wording from Green Belt policy) that are appropriate within Strategic Gaps (as is the case with Green Belt), such as built development relating to outdoor sport and recreation. Changes should be made to the policy text to clarify that there is flexibility to accommodate potential community, education or active Green Infrastructure uses (within the Strategic Gaps) that are required to serve adjacent communities, where this provision is in the best interests of the masterplanning and delivery of wider development, and in a way that is consistent with the location and function of the Strategic Gap.	Changes should be made to the policy text to clarify that there is flexibility to accommodate potential community, education or active Green Infrastructure uses (within the Strategic Gaps) that are required to serve adjacent communities, where this provision is in the best interests of the masterplanning and delivery of wider development, and in a way that is consistent with the location and function of the Strategic Gap. 					national policy			area. The Council would offer the following comments in support of its – alternate - view: • Archaeological evidence clearly demonstrates that Bleadon was a bronze age settlement and has remained as a settlement over the last 2,000 years. The topography and geology of the Parish have not prevented construction using ancient methods. It is difficult, therefore, to accept that any natural barriers could not be suitably addressed using more modern construction methodologies. • Reliance upon designation of part of the area in question (to the East of the urban area of Weston-super-Mare) as being within the Mendip Hills AONB is unsafe. North Somerset Council's own consultation page specifically states the following: 'Reliance on countryside policies alone would be unlikely to provide sufficient protection against the reduction or loss of such important gaps to development, particularly in the absence of a clear landscape harm. Without the added protection of strategic gap designation, there is a significant risk that incremental development would eventually erode the gaps, with the detrimental effects on settlement identity and character. ' • By way of further evidence, the Mendip Hills National Landscape (the body responsible for the AONB) does not currently have an active Management Plan; the last one having expired in 2024. The Management Plan is supposed to be a key document to be used by relevant Local Planning Authorities. Whilst Mendip Hills National Landscape has consulted upon the adoption of a new Management Plan, the consultation period ended in July 2025 and no successor document has yet been produced. As a consequence, there is currently no approved reference document which the relevant Local Planning Authority could rely upon to argue against development proposals. The parishioners of Bleadon should not fall victim to the inability of statutory bodies/agencies to effectively co-ordinate their activities – as is currently the case. • Furthermore, even if the draft Management Plan were to be adopted, its wording does not offer the protection which would be afforded by the introduction of a strategic gap. The Management Plan mirrors the wording of the NPPF, which states that 'the scale and extent of development in National Landscapes should be limited'. 'Should' is not an absolute and the clear implication is that development is not specifically prohibited. The introduction of a strategic gap would offer greater protections and – in the context of the AONB – better reflect the spirit of the NPPF in terms of how it should be applied in respect of National Landscapes. • The area to the South of the urban area of Weston-super-Mare (the Bleadon levels) also falls within the rural Parish boundary. Although part of the levels form a Nature Reserve, the point made above in respect of the area of AONB would – to the Council – seem to be equally applicable in respect of the Bleadon Levels. • Strategic gaps are already in place or proposed for other boundaries between the urban area of Weston-super-Mare and rural parishes. This is best illustrated by way of referencing an extract from North Somerset's own 'Key Diagram' under its Strategic Policies section. As can be seen on attached plan, with the exception of the boundary between Weston-super-Mare and rural Bleadon, all of the other boundaries to the East/South-East of the urban area of Weston-super-Mare are the subject of strategic gaps (as highlighted in orange). Two of these areas – Locking and Hutton – are in the same District Ward as Bleadon. • In terms of geographical area, the rural Parish of Bleadon is significantly bigger than the Parishes of Hutton and Locking, yet it is not referenced in the ward descriptor – which is the Hutton & Locking Ward. The Parish Council is of the view that this is significant. Bleadon is the only main rural settlement which is not directly referenced in ward descriptors and this inevitably leads to lack of clarity and democratic accountability. Whilst this has been acknowledged by North Somerset Council with assurances that the matter will be addressed as part of the next boundary review process, the Parish Council is of the view that Bleadon is often overlooked or forgotten about and that this is part of an unconscious mindset which affects many aspects of North Somerset Council's operations. The Parish Council is not suggesting that this is in anyway deliberate and when issues are raised, North Somerset Council officers and elected members respond professionally. Given all of the above, the Parish Council is unable to reconcile why a strategic gap (or gaps) has not been introduced to afford a greater degree of protection between the urban area of Weston-super-Mare and the rural Parish of Bleadon. As a consequence, the Council does not consider the Plan to be sound in respect of LP10. The Council also does not consider the Plan to be legally compliant in respect of LP10 as it would appear to rely upon documentation which does not or may not exist e.g. the Mendip Hills National Landscape Management Plan.			
29337633	M7 Planning Ltd	OG Group		No	• Justified	Yes	No	On behalf of our client, M7 Planning Ltd ("M7"), we wish to comment on the Yatton – Congresbury Strategic Gap and in particular the site referred to as "Land adjacent B3133, Congresbury", which was given the site reference HE20502 in the Reg.19 Additional Sites consultation in March 2025 and is shown on the attached site location plan. The site, being promoted by M7, has not been identified as a proposed allocation and it is assumed this is because of the comment made in the March 2025 consultation about: "Conflict with proposed Strategic Gap between Congresbury and Yatton." It is considered that the retention of the M7 site within the Yatton – Congresbury Strategic Gap is erroneous and can no longer be justified as an appropriate restriction for this site. This is stated in the light of the Council's decision to allocate a significant portion of the Strategic Gap (south of Yatton and immediately west of the M7 site) as the location for a new secondary school in this Draft Local Plan (Policy LP6 and Schedule 4 – Land off Smallway, Yatton). Development of a large school here will significantly erode the gap in this location, essentially leaving the M7 site as an "island" of undeveloped land between built-up areas, which will no longer serve any meaningful purpose as a strategic gap between the settlements. Therefore, the Yatton – Congresbury Strategic Gap should be amended to exclude both the M7 site and the secondary school site. Land adj. B3133, Congresbury: With its exclusion from the Strategic Gap, the M7 site then becomes appropriate for development. As the local planning authority is aware, a planning application was submitted for development of this site for 47no. dwellings, a two-storey medical centre, formation of a vehicular and pedestrian access	The alteration to the Yatton – Congresbury Strategic Gap, through removal of the secondary school site and the M7 site indicated on the attached site location plan.		20374_1001A_Site Location Plan.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								from Smallway, landscaping, parking, drainage and other associated infrastructure works. The application (ref no: 22/P/1142/FUL) was refused by the local planning authority on 14 February 2025, on the following grounds: 1. The development will result in a less than substantial level of harm to Cadbury Hillfort, a Scheduled Ancient Monument. The identified public benefits are limited and therefore do not outweigh the harm to the significance of Cadbury Hillfort. The proposal therefore conflicts with paragraphs 213 and 215 of the NPPF. 2. The proposal is not on a site allocated for development in the North Somerset Sites and Policies Plan Part 2 - Site Allocations and is contrary to Policy CS33 of the North Somerset Core Strategy and Policy E1 of the Congresbury Neighbourhood Plan where development is strictly controlled in order to protect the character of the rural area and prevent unsustainable development. 3. The proposed development, by reason of its scale, height, and the proportion of the site to be developed, will transform the appearance of the 'Strategic Gap', giving it a built-up appearance which will contribute to a joining up of outlying development in Congresbury and Yatton, removing any sense of separation between these villages on the east side of Smallway. This conflicts with policy CS19 of the Core Strategy and policy SA7 of the Sites and Policies Plan; Part 2. In addition, one of the wider community benefits of the refused scheme was the inclusion of a new Medical Centre; indeed comments from Yatton Parish Council at the time indicated that they were fully aware of the need for a new surgery to serve Yatton and Congresbury. Viability concerns and lack of specific support from the CCG or NHS meant that delivery of this scheme could not be guaranteed. However, the Draft Local Plan includes significant additional development allocations and extant planning permissions at Yatton and Congresbury, amounting to c. 483 dwellings. This means that the need for a new Medical Centre in the areas has only increased. The M7 site represents the ideal location for such a facility, lying in a central and accessible location between the two settlements. M7 intends to look again at potential development of the site for various uses, including residential, elderly care and community uses (e.g. Medical Centre). M7 considers that there is a design solution available that will overcome the issues raised with the previously refused scheme, particularly with regard to ensuring that development will reduce the level of harm to the Cadbury Hillfort SAM. Removal of the land from the Strategic Gap will take away a significant barrier to development, thus allowing these potential important community facilities to come forward in a timely manner.		
21472417	Mead Realisations Ltd	Oneleven Property		No	• Positively prepared • Justified • Effective • Consistent with national policy			This policy states that strategic gaps are defined to help retain the separate identity character and or landscaping setting of settlements. However, the Council has provided no specific evidence to justify the need for strategic gaps in addition to the protection afforded to the countryside. In particular, objection is raised to the inclusion of a strategic gap around Parklands Village. It is noted to that following a review some strategic gaps are being removed although it is not clear in all cases why this is being proposed.	Overall, the approach is considered to be inconsistent with the Framework and as such Policy LP7 should be deleted.		Reg 19 Final Representations Mead Realisations 12.12.25 including appendices.pdf
62717825	Ainscough Strategic Land (Stonebridge Farm)		Ainscough Strategic Land	No	• Effective			This representation relates to Policy LP10: Strategic Gaps. This policy looks to designate areas of Strategic Gaps in order to retain the separate identity, character and/ or landscape setting of settlements. ASL understands the importance of this and supports the policy as whole; however, ASL strongly disagrees with the boundary drawn on the Policy Map for the Banwell and Wolvershill Strategic Gap. This includes land at Stonebridge Farm, which is a suitable and deliverable development site and one that should be excluded from the Strategic Gap. Appendix 1 below includes a site location plan of the land at Stonebridge Farm, which is available for redevelopment. Stonebridge Farm is a circa 2.8-acre brownfield site currently consisting of a farmhouse, numerous farm buildings and a caravan storage area. The farm is related to the surrounding fields which now partly consists of the new Banwell Bypass. The rest of the fields associated with the farm have a planning application submitted for up to 600 dwellings including specialist later living accommodation, mixed-use Local Centre, a Primary School, sports and leisure provision including community park, public open space and associated access, infrastructure, landscape and ancillary works. This land forms part of the emerging Wolvershill allocation. Given the emerging allocation at Wolvershill includes the fields related to Stonebridge Farm, there will no longer be any use for the farm. The site is within one landownership and ASL are working alongside the Landowners to promote the site for redevelopment and therefore the site is available for development. Paragraph 125c) of the NPPF states that planning policies and decisions should ‘give substantial weight to the value of using suitable brownfield land within settlements for homes and other identified needs, proposals for which should be approved unless substantial harm would be caused’. Stonebridge Farm is a brownfield site within the Banwell area, which is considered one of the ‘larger, most sustainable villages’ within the consultation document. The document confirms that the larger, most sustainable villages have scope to deliver a level of growth. Whilst the site is not within the settlement boundary for Banwell, it relates well to the village and has the feeling of being part of the village. It is in close proximity to both the existing facilities within Banwell but will also be closely connected to the new Wolvershill Local Centre. Footpath and cycle links between Banwell and the new community are being proposed. ASL have some concerns with the provision of housing within the plan; including: •The Plan as proposed risks not allowing for sufficient time (15 years from adoption) to meet a basic requirement for strategic polices set by national policy. A longer plan period is required to ensure that the Plan for North Somerset covers a period of at least 15 years from adoption, with a longer period likely to enable the Council to more effectively plan for future development in the area. •There is concern, and risks in respect of the soundness of the Plan, that whilst seeking to meet the minimum level of housing need identified using the standard method, a higher housing requirement should be set to address evidenced affordable housing needs and to accommodate some of Bristol’s unmet needs.	See attached representation		Regulation 19 Pre-submission plan 2041 (Reg 19) - Autumn 2025 Consultation - Stonebridge Farm Reps.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								•There is concern, and risks in respect of the soundness of the Plan as proposed, that no housing delivery trajectory has been provided for the Plan as a whole, or for the specific sites which are identified as part of the proposed strategic policies. This should be addressed as part of the submission of the Plan, given some of the allocated sites' housing delivery will fall beyond the current plan period. It is important that the Council allocate a range of sites of different sizes to ensure the 1,580 dwellings per annum requirement can be met and that the Council do not prevent sustainable, brownfield sites from coming forward. Smaller sites such as this can be delivered quickly. The site is brownfield, deliverable, in a sustainable location and can be delivered in the short term.			
3106433	Yatton Parish Council		Yatton Parish Council					1. We are pleased to see that Yatton Station is intended to become a transport hub. Part of this should be the establishment of good public transport links with a frequent bus service (i.e. at least 2 buses per hour) serving Clevedon, Weston-super-Mare and Bristol. The provision of free parking at the station would make a significant positive difference to its usefulness as a hub and also to the lives of Yatton residents living near the station. 2. Yatton Parish Council agrees that land south of Nailsea and west of Backwell should be designated as Green Belt. 3. The existing Strategic Gap between Yatton and Congresbury should be retained and a new Strategic Gap, between Yatton and Kenn, should be designated. 4. Land off The Batch should be used to expand the doctor's surgery, not for a primary school	1. We are pleased to see that Yatton Station is intended to become a transport hub. Part of this should be the establishment of good public transport links with a frequent bus service (i.e. at least 2 buses per hour) serving Clevedon, Weston-super-Mare and Bristol. The provision of free parking at the station would make a significant positive difference to its usefulness as a hub and also to the lives of Yatton residents living near the station. 2. Yatton Parish Council agrees that land south of Nailsea and west of Backwell should be designated as Green Belt. 3. The existing Strategic Gap between Yatton and Congresbury should be retained and a new Strategic Gap, between Yatton and Kenn, should be designated. 4. Land off The Batch should be used to expand the doctor's surgery, not for a primary school Policy LP7: Strategic Gaps The existing Strategic Gap between Yatton and Congresbury should be retained. A new Strategic Gap, between Yatton and Kenn, should be designated. This would serve to protect land east of the B3133 near North End Yatton from development, as well as the corridor of land either side of the B3133 towards Clevedon. These areas are essential if the rural nature of Yatton, much valued by its residents according to opinion surveying during the Neighbourhood Plan process, is to be retained		
30301601	Ainscough Strategic Land	Chris Price	Ainscough Strategic Land	No	• Effective			ASL is supportive of policy LP10 in principle though has some concerns about the policy wording as currently drafted. The policy requires a degree of flexibility which can be accommodated through future modifications to the Draft Plan. The main evidence base document relating to policy LP10 is the Strategic Gaps Background Paper (October 2025) which provides the justification for the designation of a new strategic gap between Banwell and the proposed strategic location at Wolvershill which includes retaining the character and setting of Banwell and development pressures. The Consortium's early engagement with Banwell Parish Council confirmed that the Strategic Gap is a very important issue for local residents to ensure that the local character of Banwell Village is maintained and for the Wolvershill community to have a separate identity whilst being well connected to ensure social cohesion. ASL supports the designation of the new Strategic Gap to provide recreational, sports and community facilities as well as biodiversity to the benefit of both communities. The Background Paper responds to ASL's previous comment and states: "Strategic gaps are not Green Belt. There is no need for policies on strategic gaps to stipulate what land uses are appropriate within them. Policy LP10 of the emerging Local Plan is appropriately criteria-based, allowing all development proposals to be assessed against the criteria, whatever the land use. The policy criteria do provide for some flexibility: for example the 1st criterion of the former Policy LP7 (now LP10) does not prevent development which would not significantly adversely affect the open or undeveloped character of the strategic gap. Subject to siting and design, facilities like recreation grounds with play areas, allotments and various forms of green infrastructure might be acceptable. Each planning application will be assessed against the criteria. However the policy cannot be made too flexible, particularly regarding buildings, because otherwise in many cases the sense of open, undeveloped character and separation of the settlements would be likely to be significantly reduced or lost. The policy wording provides sufficient flexibility whilst seeking to prevent that from happening." 7.5 ASL considers that whilst the SPD may provide further detail on the Wolvershill site including the related issues such as the Nature Park and the Strategic Gap it is important that draft policy LP10 includes sufficient detail on what uses are considered to be appropriate within the new strategic gap. It is essential that the strategic gap between the Wolvershill SGL and Banwell is not an open, unused green space which could be seen to create a division between the two settlements; it must be used effectively as part of the allocation itself as green infrastructure, creating an active green lung which brings together and links the communities with walking and cycle routes, amenity spaces, community uses including allotments and recreational/sports uses etc. as a combined community asset. The policy should also enable built form where it is appropriately and sensitively considered such as formal sports uses and where it can meet the policy criteria. This is a point of clarification which should be reflected within the draft policy and its supporting text. Banwell and Wolvershill Strategic Gap Boundary ASL supports the designation of the Strategic Gap at Banwell and Wolvershill and agrees with the use of the bypass as the defensible boundary to the northern edge. ASL is concerned, however, that the boundary of the strategic gap as currently drawn is too tightly defined around Stonebridge Farm which includes a permitted existing area of caravan storage. We attach a plan at Appendix 5 which proposes a slight adjustment to the Strategic Gap boundary. This plan identifies the area to be excluded from the Strategic Gap. The landowner is also making a separate representation on this specific point. 27395649	C Butler		Bleadon BOB Community Website	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	Unsure		NSC state that strategic gaps are defined to help retain the separate identity, character and/or landscape setting of settlements. If these are not put in place e.g. between rural Bleadon and Urban Weston-super-Mare then these unique settlements will be lost. This is of particular concern as NSC draft Corporate Plan indicated that it had plans for WsM to be the second largest settlement behind Bristol, which may only happen if it sacrifices the agricultural land in rural and semi-rural areas, jeopardising local, regional and national farming, food production and security. Urban/city expansion into rural communities is losing food productive and will ultimately affect those 'city' populations as less food is produced and food shortages increase. Housing should be limited to ability to produce a base level of food in secure way. All building must recognise that farming needs to be in balance. This proposed Local Plan is not sound – Create a Strategic Gap between Bleadon and Weston-super-Mare from the A370 direction. Create strategic gaps around all urban areas to protect rural agriculture/ farming communities.		
58516481	Mr Thomas Catling (Woodstock Homes, Knightcott Road, Banwell)		Woodstock Homes (Construction) Ltd	Unsure	• Justified • Effective • Consistent with national policy	Unsure	Unsure	Woodstock Homes control the 22 acre site, Land to the South of Knightcott Road, Banwell, a site which has been promoted through the earlier stages of the Local Plan process and recently achieved a resolution to grant at the October Planning and Regulatory Committee for outline planning on 4.6 acres of the site for up to 27 dwellings (24/P/0967/OUT). Woodstock are in control of the remaining 17 acres, of which was part of a previous application for 95 dwellings (23/P/2303/OUT) was made but was later withdrawn. This representation submissions aims to provide commentary on the emerging Local Plan, with focus on the rural settlements, specifically Banwell. Banwell is identified in the adopted Core Strategy as a service village (Policy CS32), containing a number of local services along with public transport links. By way of the inclusion of Banwell within Schedule 5 of the Pre-Submission Plan, as a settlement with a defined boundary, it is clear that the council acknowledges the village within the settlement hierarchy. The Vision for the North Somerset Local Plan 2041 makes clear that there is an aspiration to encourage development in highly sustainable, accessible and attractive places. SP6: Villages and rural areas, reinforces this aspiration with the importance of accessible locations with good walking, cycling and public transport connections. The recently approved scheme for 27 dwellings has now set the principle of development in the norther section of the site. Woodstock Homes believe there is still further opportunity to design a scheme that continues the principles of the gap between Banwell and Knightcott, encourages views up towards Banwell Hill, and sets parameters for storey heights of future dwellings. This could look to offer 62 additional units (total 89 units). Further community benefits can be provided allowing for a provision of tree planting (orchard), wildflower meadows, community allotments and play provision. Under Policy LP10: Strategic gaps, north of Knightcott Road and to the east of the Wolvershill allocation, a strategic gap proposal has been put in place to protect the identify and character of the settlements. The land south of Knightcott Road has allowed for a landscape gap to the eastern area to help protect the identity of Banwell and the Knightcott Hamlett. Future development could be proposed to the western area of the site allowing for this gap to continue along the eastern corridor to Banwell Hill.			CP-01 PH2 Knightcott Rd, Banwell - Concept Plan @ A2 Notes.pdf Knightcott Road Banwell - Representations Reg 19.pdf
9138657	Home Builders Federation		Home Builders Federation	No	• Justified • Effective • Consistent with national policy				Policy LP10 is not considered to be sound as it is not effective, justified or consistent with national policy HBF are of the view, for the reasons detailed elsewhere in our representation, and so not repeated here, that the Council need to allocate more sites for housing, including possibly some within Strategic Gaps.		North Somerset 2nd Reg 19 Dec 25.docx
51477249	Burrington Parish Council		Burrington PC	Unsure	• Consistent with national policy	Yes	Unsure	On previous drafts of the local plan we expressed concern that a wider range of sites for housing would be needed to avoid challenges to the supply of housing land and the ad hoc addition of sites through planning appeals, especially in view of the substantial increase in housing requirements arising from the new standard method of calculating housing requirements. We can see that North Somerset Council has now made significant changes to the settlement strategy to include new large sites for housing which now include a substantial urban extension south west of Bristol ('Woodspring'), a number of strategic housing sites at Nailsea and Backwell, some of which already have planning consent, the 'Wolvershill' strategic allocation north of Banwell and strategic sites at Pill and Easton-in-Gordano, as well as continuing development adjoining Weston-super-Mare (Parklands Village and Winterstoke Village), new site allocations at Clevedon and Portishead and redevelopment sites within Weston, some of which are carried forward from the Site Allocations Plan of 2018. It seems to us that the Council has thus sought to identify a realistic and as wide as possible range of options to accommodate the increased housing requirement. Some rural settlements like Churchill and Winscombe are also making significant contributions to housing land supply, although some sites were committed through planning appeals which means that they are not always well integrated with the existing settlement (or other appeal sites). Committed housing sites in the larger villages do not therefore always achieve the aims set in the Core Strategy for 'Service Villages' in terms of more self-containment in jobs and services, protecting the character of the settlement, or achieving improvements in public transport.	More detail is required about the allocated housing sites to demonstrate their feasibility, desirability and consistency with other planning policies– in the form of a development brief		
58622465	David Davies		David Davies	No	• Positively prepared • Justified	Unsure	Unsure	North Somerset Local Plan 2041: Pre-submission Plan is unsound because: 1. North Somerset Local Plan 2041 is not positively prepared or justified in respect of a Strategic Gap (LP10) towards protecting Bleadon from Weston expansion plans. I note that a gap has been proposed for Locking and Hutton but not for Weston to Bleadon from the Uphill direction despite this being requested by residents and the Parish Council. Inclusion of this gap (LP10) will be consistent with development site allocations which acknowledged the local character and distinctiveness of Bleadon settlement. The omission of Weston - Bleadon strategic gap fails to prevent known local character and distinctiveness erosion from the pressure of	Steps to be taken by NSC Modifications: 1. Include Weston - Bleadon Strategic Gap (LP10)		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								incremental development. The omission also fails to recognise known settlement identity with protected National Landscape setting. This protection is particularly important because erosion by development would potentially result in coalescence of Weston as ribbon development along the A370 or severely impacting landscape setting and settlement character and distinction. It is clear that relying on countryside policy alone would not provide sufficient protection against such loss. Without this focussed and local protection of strategic gap designation, as requested at consultation stage, there is a significant risk that incremental development will erode this current gap, merging Bleadon area with Weston-super-Mare with hugely detrimental effect on Bleadon settlement identity and character including its environmental and public health amenity including protecting areas of known recreation and exercise, especially where crossed by public rights of way and providing biodiversity and wildlife corridor connection between Mendip Hills National Landscape and the Somerset Levels as well as protecting the natural beauty of the area as viewed from highways and public right of ways.			
63006177	Mac Mic Strategic Land (Land north of Banwell Road)	Planning Potential (Elliot Jones)	Mac Mic Strategic Land	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	This policy addresses Strategic Gaps, and states that development will be restricted within the gaps subject to the proposals not adversely impacting on the open or undeveloped character of the gap, not affecting the separate identity and character of the settlements and not harming the landscape setting of the settlements. Strategic Gaps are identified around the following areas: • Weston-super-Mare, Locking and Hutton. • Yatton and Congresbury. • Banwell and Wolvershill (north west of Banwell); and • Sandford and Churchill. Mac Mic are supportive of this policy and agree with the current extent of the Strategic Gaps as shown in the Policies Map. It is their view that these gaps should be protected. The purpose and principle of the Strategic Gap should remain even in the face of increasing residential requirements. They play an important role in maintaining the local character and distinctiveness of the settlements, and the sense that they are separate places. The supporting justification notes that protection is particularly important where such erosion could potentially cause coalescence of the settlements such as ribbon development along main roads. Recommendation No change is recommended to the current draft of the policy.	No change is recommended to the current draft of the policy.		01 North Somerset Local Plan Pre-Submission Plan Consultation Representations.pdf
21470177	Wessex Water		Wessex Water	No	• Consistent with national policy			We do not believe the policy to be consistent with national policy. Paragraph 11 of the NPPF requires plans to 'align growth and infrastructure'. To support the growth identified in the Local Plan, Wessex Water needs to plan and deliver new infrastructure. The Strategic Gap policy as currently worded may prevent us from gaining planning consent for essential infrastructure development which is not covered by our permitted development rights. We deliver infrastructure in a way which is sensitive to landscape setting, but we can be restricted by operational and health and safety requirements. It is not always possible to locate infrastructure outside of strategic gaps as the siting of new infrastructure may be influenced by factors such as the location of the existing network and topography. Paragraph 8 of the NPPF sets out the three overarching objectives of achieving sustainable development. Infrastructure provision meets all of these.	We would like an additional bullet point added to the list 'Development will only be permitted where' to identify that an exception will be made for essential infrastructure development where this cannot be located elsewhere'		
51446561	Woodstock Homes Ltd (multiple sites)	Kit Stokes	Woodstock Homes	No	• Effective • Consistent with national policy	No	Unsure	We act for Woodstock Homes who have an option to development land at Land to The North of Greenhill Road Sandford HE201022 (planning application 20/P/1120/OUT) and are preparing to apply for 37 dwellings. Our clients strongly object to North Somerset Council's proposal to designate the land to the north of Greenhill Road, Sandford, as a strategic green gap. It is important to note that this site has already been assessed positively within the Broad Locations and sifting assessments of the North Somerset Housing Land Availability Assessment 2025. The land in question s both suitable and available for development and could deliver 37 much-needed new homes, helping to meet local housing demand without compromising the essential separation between Sandford and Churchill. The National Planning Policy Framework (NPPF) does not specifically promote the designation of strategic green gaps between villages as a formal policy tool. Instead, it focuses on broader objectives such as directing new housing development towards established settlement boundaries and safeguarding the countryside from inappropriate development. Furthermore, there are well established planning policies that seek to protect important landscape features and to ensure that design and layouts are appropriate to their context. The policy explains that strategic gaps are needed to keep settlements distinct. Our view is that these policies largely duplicate existing countryside and development control policies, which already address coalescence, landscape protection, and inappropriate development. As such, adding a strategic gap policy offers little extra protection or clarity and instead adds unnecessary complexity. In particular, the proposed strategic gap at Sandford in North Somerset lacks clear justification, as there is no substantial evidence showing current policies are insufficient, nor robust criteria supporting its necessity. Local allocations include Mendip Hills National Landscape and Churchill Conservation Area. These are suitable landscape constraints in close proximity to the proposed area for the green gap. In addition, there are policies such as Policy DP36: Biodiversity net gain, Policy DP37: Trees, woodlands and hedges, Policy DP38: Landscape, Policy DP39: Mendip Hills National Landscape, Policy DP40: Built heritage which will offer similar protection. LP10 explains that Strategic gaps have a broad similarity to some of the purposes of Green Belts to prevent merging of settlements. This is incorrect and out-of-date. The NPPF 2024 introduced grey belt criteria which effectively allows pragmatic development on the edges of villages where the golden rules are met. The strategic gap has no such criteria. Furthermore, we note that NS Council has discontinued the presumption in favour of applications for housing on land adjacent to villages, which was previously permitted under adopted LP policy CS32 allowing up to 25 houses adjoining service villages. Therefore, we are of the view that the proposed Strategic Gap policy is superfluous or redundant given the use of other planning policy tools that allow an assessment of individual site circumstances.	Modification Remove policy LP10 (see attachment)	Modification Remove policy LP10	Policy LP10.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								The use of multiple criteria, such as the 12 listed in the Strategic gaps background paper (Nov 2023) to assess a green gap , reflect general characteristics that apply to much rural land adjacent to villages. As a result, policy emphasis should remain on the settlement boundary approach and evidence-based landscape protection, rather than the creation of strategic green gaps as an additional mechanism. Our view is that the designation as a green gap is therefore unnecessary and unjustified when balanced against the identified housing need and robust site and policy assessment evidence.			
39307969	YACWAG		YACWAG	Unsure		Unsure	Unsure	Agree that the strategic gap between Yatton and Congresbury should be maintained. However the in combination impact of development in this area is not solely a landscape issue it is also an ecologically sensitive area. Development in this area would have a negative impact and harm the North Somerset and Mendip Bats SAC which is of local, regional, national and European importance through the disturbance of bat foraging and commuting. It forms an important corridor for nature.	See comment above include reference to protect area for protection of rare species Greater and lesser Horseshoe bats as well as maintaining landscape free of development.		
58582945	Nailsea Action Group		Nailsea Action Group	No	• Effective	Unsure	Unsure	Nailsea Action Group notes the removal of the strategic gap between Nailsea and Backwell (it is proposed to extend the Green Belt between these settlements). Nailsea and Backwell are treated as a single broad location for the purposes of this consultation. Nailsea Action Group (NAG) is concerned that NSC will treat both locations as a single combined unit. NAG wish to emphasise that each community has a distinct character and this status is valued by local residents in both Nailsea and Backwell. The long-standing strategic gap between Nailsea and Backwell is treasured by each community and any effort to merge the two towns by removal of this gap will be strongly resisted.	Maintain the strategic gap between Nailsea and Backwell.		
58582945	Nailsea Action Group		Nailsea Action Group	No	• Effective	Unsure	Unsure	Nailsea Action Group (NAG) notes the removal of the strategic gap between Nailsea and Backwell (it is proposed to extend the Green Belt between these settlements). Nailsea and Backwell are treated as a single broad location for the purposes of this consultation. Nailsea Action Group is concerned that NSC will treat both locations as a single combined unit. NAG wish to emphasise that each community has a distinct character and this status is valued by local residents in both Nailsea and Backwell. The long-standing strategic gap between Nailsea and Backwell is treasured by each community and any effort to merge the two towns by removal of this gap will be strongly resisted.	Nailsea Action Group recommends that if the extension of Green Belt is not approved, then the area between Nailsea and Backwell should automatically revert to the designation of 'Strategic Gap'.		
63107361	Gladman Developments		Gladman Developments Ltd	No	• Effective			Draft Policy LP10 identifies a series of strategic gaps which the Council considers are necessary to help retain the separate identity, character and/or landscape setting of settlements. The policy outlines that development within strategic gaps will only be permitted where; ◇ The open or undeveloped character of the gap would not be significantly adversely affected; ◇ The separate identity and character of the settlements would not be harmed; and ◇ The landscape setting of the settlements would not be harmed. A strategic gap is identified between Weston-Super-Mare, Locking and Parklands Village. It is currently proposed that a significant portion of the western field of Gladman's land interest at Land off Elm Grove, Locking will be removed from the strategic gap which Gladman fully support. However, Gladman are unsure why the whole western field parcel has not been removed from the strategic gap, since the remaining irregular shaped parcel of the western field is not serving a function or service to the gap. Gladman would strongly encourage the Council to remove the remainder of the western field out of the strategic gap to allow for a comprehensive development to come forward on the wider site in order for the delivery of approximately 110 new market and affordable homes the Council wishes to see be delivered on the site. As an alternative to removing the entirety of the western field of the site outside of the strategic gap, Gladman have included an indicative Development Framework Plan (DFP) at Appendix 1 of this representation. The DFP shows that a slither of the developable area on the western field currently lies outside of the current boundary of the draft allocation and Gladman would be content if the boundary of the draft allocation is extended slightly northwards to accommodate this. Gladman discussed this issue with the Council's Planning Policy Team on 11th December 2025 and it is hoped that this request can be fulfilled.	Gladman would strongly encourage the Council to remove the remainder of the western field out of the strategic gap to allow for a comprehensive development to come forward on the wider site in order for the delivery of approximately 110 new market and affordable homes the Council wishes to see be delivered on the site. 31091393	Waddeton Park Ltd (Land south of Greenhill Road)	Savills (Dan Yeates)	Waddeton Park Ltd	No	• Positively prepared • Consistent with national policy	Yes	Yes	These representations have been prepared and submitted by Savills on behalf of Waddeton Park Ltd. Waddeton Park have an interest in 1.95 hectares of land south of Greenhill Road, Sandford. This specific response objects to draft Policy LP10 (Strategic Gaps) in its current form and explains why the land south of Greenhill Road, Sandford (see Site Location Plan attached at Appendix 1) controlled by Waddeton Park should be removed from the proposed strategic gap for Sandford and Churchill given that it is a suitable and sustainable location to deliver residential development. The site offers an excellent opportunity to accommodate development on a sustainable site, well related to the village, to help address local housing need. This is supported by the Council's own assessment of the site within the SHLAA, and the fact that the site was identified as a potential opportunity in the Regulation 19 additional sites consultation earlier in 2025, both confirming the potential suitability of the site, as explained in our response to draft Policy LP5. Our comments on the consultation and supporting evidence base are made in accordance with paragraph 36 of the NPPF, to assist in ensuring that the draft Local Plan is found sound when examined in the future. Policy LP10: We continue to strongly object to draft Policy LP10 in its current form and specifically the Sandford and Churchill strategic gap. Draft policy LP10 states that such strategic gaps are included to "help retain the separate identity, character and/or landscape setting of settlements". The draft policy also requires that "development within strategic gaps as shown will only be permitted where: • The open or undeveloped character of the gap would not be significantly adversely affected; • The separate identity and character of the settlements would not be harmed; and • The landscape setting of the settlements would not be harmed. The inclusion of this wording suggests that the key components of the strategic gap, and the purpose for their inclusion, is to ensure an open and undeveloped character is retained, that the identity and	Proposed Changes to draft Policy LP10: On the basis of the above, including information submitted to the previous Regulation 19 consultation, and taking into account the lack of proper justification set out in the latest Strategic Gap Background Paper (2025), we continue to maintain that the land south of Greenhill Road (Appendix 1) should be removed entirely from the proposed strategic gap between Sandford & Churchill. There is a fundamental lack of evidence supporting the inclusion of the site within the designation. In contrast, the evidence submitted, principally in the form of the supporting Landscape Technical Note (Appendix 2) demonstrates why the land is suitable for development from a landscape perspective and why there is a clear lack of justification for inclusion of the land within a new strategic gap. Should the Council pursue this particular strategic gap and considers there is justification for the inclusion of some of the land east of Sandford within such a designation then it continues to be the view of Waddeton Park Ltd that, as an absolute minimum, the Land south of Greenhill Road should be removed from the designation for the reasons explained within these and previous submissions. To assist, we have again appended to these representations an amended version of the policies map showing how the Sandford and Churchill strategic gap should be amended prior to submission of the plan for examination (Appendix 3).		North Somerset Local Plan Pre-submission Plan - Representations LP10.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								character of separate settlements will not be harmed and that development would not harm the landscape setting of such settlements. Before exploring the draft policy text and requirements, it is first important to look at the policy basis (or lack of) for strategic gaps and the Council's evidence base setting out the justification for the inclusion of the new Sandford and Churchill strategic gap. Policy & Evidence Base: The main points to highlight first is that there is no official definition for strategic gaps within the NPPF or NPPG. Instead, strategic gaps can be explored where such proposals are aligned with the thrust of national policy and guidance, ensuring that plan-makers take a proportionate, evidence based approach. This is clear when reviewing both the Strategic Gaps Background Paper (November 2023) and more recent update paper from October 2025, both published as part of the Council's evidence base. Indeed chapter 2 of the 2023 Paper covers the 'Justification for the strategic gap designation'. It is however clear from that chapter and indeed the entire report that there is no direct policy or guidance basis for strategic gaps, and no set definition. The 2023 Strategic Gaps Background Paper makes reference to various sections of the NPPF in seeking to justify the inclusion of the various strategic gaps within the DLP. However, none of the sections of the NPPF directly support the inclusion of the strategic gaps or the criteria set out in the background paper. It is acknowledged that paragraph 53 of the National Design Guide (NDG), referred to by the background paper, refers to well-designed new development being influenced by various things, including 'the elements of a place or local places that make it distinctive', including for example 'views, vistas and landmarks', and 'soft landscape, landscape setting and backdrop'. This is clearly a reference to landscape setting and the way in which strategic gaps could be used to help to protect them. We address this in relation to the Land South of Greenhill Road and the proposed new Sandford and Churchill strategic gap below. When looking at the more recent October 2025 Strategic Gaps Background Paper, no further justification is provided. Far from this, the updated paper simply states that "justification for strategic gaps is set out in the council's November 2023 Strategic Gaps Background Paper which explains why some strategic gaps were deleted or reduced in an earlier review". Responses are provided in the October 2025 paper to previous objections to draft Policy LP10, including some of those objections raised on behalf of Waddeton Park Ltd. However, none of these responses in our view support the inclusion of the strategic gap as proposed, nor the inclusion of the land south of Greenhill Road. We consider that the Council's flawed position in seeking to introduce this particular strategic gap without proper justification is demonstrated by the change which the authority now proposes to make, confirmed as follows: "However it is now proposed to reduce the strategic gap on the east (Churchill) side and amend the settlement boundary to reflect a planning consent for housing east of Hilliers Lane. It is now proposed that the strategic gap boundary only extends eastwards to a new settlement boundary along Hilliers Lane, as shown on Plan C1 below". Far from seeking to justify this strategic gap, the authority appear quite willing to allow a change given the grant of a recent planning permission within the very gap it is seeking to introduce. The site in question at Hilliers Lane is no different is size and nature to the land south of Greenhill Road, and yet the authority does not currently seek to exclude the land south of Greenhill Road from the proposed strategic gap. In direct response to objections we previously submitted to the proposed strategic gap on behalf of Waddeton Park Ltd, the 2025 background paper states: "The land in question south of Greenhill Road, (fields east of Sandford, between the properties Heatherdale and The Paddocks) is an important part of the proposed strategic gap. (See site outlined purple on Plan S1 below). It is part of the partly undeveloped road frontage between Sandford and Churchill along the A368. Its loss to development would reduce that, and result in continuous development straddling the A368 between Well Croft on the south side near Sandford, and Sandmead Springs near Churchill on the north side. Then it would only take development of the western field between 86 Greenhill Road and Well Croft, plus two fields west of Hilliers Lane to cause virtual coalescence of the settlements". This statement is factually incorrect and completely misleading. We make the following points in response: • There is already a sense of continuous development along this part of the A368. This is due to the two properties on the northern side of the road (Nanarth and Cross Gates opposite the land south of Greenhill Road) and the larger properties of Westerhall and Byways to the south within the AONB. Together with the street lighting and the overhead powerlines, these properties are experienced as part of the 'development envelope' of Sandford, with the substantial presence of the properties at The Paddocks physically and visually extending the built-up area Sandford to Pye Corner (albeit at a somewhat lower density than the development closer to the village core). • At no point along this part of the A368 are there any views along the road corridor that do not already include clearly visible elements of existing development, so this part of the A368 is already experienced as part of the settlement and there is no clear sense of being within a 'gap' between settlements. • Any sense of this section of the road forming a "partly undeveloped road frontage" is due to the mature hedgerows in front of the existing properties to the north and along the north boundary of the Site. If these hedgerow were either lower or not present, the existing areas of development would be far more visible, so any sense of an "undeveloped frontage" would be completely negated. • Due to the way that the mature hedgerows help to assimilate the existing properties into their local context, the proposals for the Site have adopted the same landscape strategy, with the new properties			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								to be located behind the retained hedgerow and set back from the road in a similar way to the existing properties. This will therefore consolidate and reinforce local character within the eastern part of the settlement and accentuate the sense of separation provided by the genuinely undeveloped gap of open countryside to the east of Pye Corner. • The development of the land south of Greenhill Road would therefore respond closely to the existing local character of this part of Sandford and will merely consolidate the existing situation, which consists of the continuous presence of development extending from the designated settlement boundary to Pye Corner to the east of the properties at The Paddocks and Sandmead Springs. • Sandmead Springs cannot reasonably be described as being “near Churchill.” However, the vegetation around its boundaries, together with that around the Guild House, does define the eastern edge of the ‘development envelope’ of Sandford at Pye Corner. • It is completely misleading to suggest that the development of a single field to the south of Greenhill Road (the Site) would result in “continuous development straddling the A368” unless the majority of other parcels of land between Well Croft and Sandmead Springs aren’t already developed. Rather, development of the Site to the south of Greenhill Road cannot fundamentally change this situation as there is already the sense of continuous development along this part of the road. • With reference to the parcel of land referred to as the “western field between 86 Greenhill Road and Well Croft”, this parcel also has a tall hedgerow along the frontage to the A368, so the internal areas do not contribute to any sense of separation between the settlements. The haulage depot and the other areas of existing development along the A368 to the east then separates this land from the open countryside to the east of Pye Corner. It is therefore simply experienced as an anomaly in the land uses within the settlement area rather than contributing to any sense of separation between the settlements. • When considering the remaining “two fields west of Hilliers Lane”, the Council’s analysis fails to acknowledge that the larger field (which was formerly part of the old nursery) has recently been planted as part of the new orchards associated with the Thatcher’s Cider factory. Due to the recent investment in this planting, this area is highly unlikely to be developed even if the strategy gap policy is not adopted. Furthermore, all the land to the south of this section of the A368 is protected as part of the Mendip Hills National Landscape (formerly the AONB). Consequently, any development to the north of the A368 would only be acceptable if its benefits outweighed the adverse impacts to the AONB and its setting. • In order to be acceptable in terms of impacts to the setting of the AONB, the proposals for the land east of Hillier’s Lane (now consented) included a substantial belt of planting along the southern boundary. As this planting is crucial to the acceptability of those proposals, it seem logical that this area needs to remain permanently undeveloped and therefore be excluded from the revised settlement boundary and included within any proposed strategic gap. As a result, we strongly object to draft Policy LP10 as drafted, specifically the proposed Sandford and Churchill strategic gap. Specific Circumstances relating to the Land South of Greenhill Road, Sandford within the proposed Sandford and Churchill Strategic Gap As explained above, with specific reference to the proposed Sandford and Churchill Strategic Gap there is a concerning lack of understanding within the Strategic Gaps Background Paper (2023) of the differences in landscape setting and impacts across different parts of the area between Sandford and Churchill. This is not clarified in the more recent 2025 update paper. At paragraph 4.2 of the background paper (2023) it is stated that “This area was considered worthy of closer examination for a possible strategic gap. There are a number of SHLAA sites between the settlements, and other relatively narrow gaps between groups of dwellings along the A368 and Churchill Green, development of which would potentially exacerbate ribbon development along those roads and potentially lead towards coalescence of the settlements. (Therefore detailed consideration of a possible Sandford/ Churchill strategic gap is provided below)”. Firstly, addressing the potential coalescence point, it is plain to see that existing development has already spread east of Sandford along Greenhill Road, particularly within the vicinity of the land south of Greenhill Road. Whilst there are some gaps between the buildings, travelling along Greenhill Road this development results in a clearly noticeable urbanising influence and effectively extends the development envelope of Sandford along the A368 to Pye Corner. This is reinforced by the ‘welcome to Sandford’ sign which identifies the start of the settlement area at this point. Indeed, from a landscape perspective, the land to the south of Greenhill Road, currently falling within the proposed new strategic gap, is not perceived as part of the wider rural landscape, with the existing buildings and settlement pattern contributing to the character and local distinctiveness of the land forming the setting to Sandford and the AONB to the south. The site does not however exhibit any of the ‘special qualities’ of the AONB and does not make a significant contribution to the setting of the designated landscape to the south. This contrasts with the land to the east of Pye Corner, and to a degree north of Greenhill Road, the fields of which form an open break between Sandford and Churchill, with attractive views south towards the wooded slopes within the AONB. Consequently, development of the land south of Greenhill Road would consolidate the existing locally distinctive settlement pattern along the northern edge of the AONB and would not contribute to any sense of coalescence between Sandford and Churchill. Further detail of this can be found in the supporting Landscape Technical Note (Appendix 2). Furthermore, we have strong concerns over the statement made at paragraph 5.2 of the Strategic Gaps Background Paper (2023), which reads “there is particularly likely to be a need for a strategic gap where there is development pressure, especially pressure leading towards potential coalescence of settlements, and particularly in terms of ribbon development along main roads. The need will be increased where there is unlikely to be a landscape reason for refusal”. (underlining our emphasis).			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								This statement conflicts with the purposes of the strategic gap. There is almost a recognition from officers that there are unlikely to be landscape reasons for refusing development on some of the land east of Sandford, but the statement seeks to use this to justify the inclusion of the land within a strategic gap. This is not a sound approach in our view. Equally, paragraph 5.4 of the background paper states “relatively narrow gaps between groups of frontage dwellings lie along the A368 and Churchill Green, development of which would potentially exacerbate ribbon development along those roads and potentially lead towards coalescence of the settlements”. This statement is also incorrect and does not amount to sufficient justification for the inclusion of the land south of Greenhill Road within the proposed strategic gap. Our justification for why the development of this land would not lead to coalescence is set out in these representations and within the supporting Landscape Technical Note. Looking further at the 12 criteria set out from page 11 onwards within the Strategic Gaps Background Paper (2023), there are clear error and misleading statements which need correcting. For example, under ‘sense of the gap’, it is stated that there is a sense of leaving Sandford before Pye Corner despite there being intervening groups of dwellings on either side of the road. Equally, under ‘sense of leaving or arriving at a settlement’ it is claimed that “there is a sense of leaving Sandford when travelling east along the A368 Greenhill Road, when one initially encounters fields on both sides of the road”. We are concerned with such a misleading statement which is simply not true. Instead, one does not have a sense of leaving Sandford until reaching Pye Corner, at the junction of Greenhill Road and Lyncombe Farm. In terms of arriving into Sandford, given that existing development has already spread east of Sandford along Greenhill Road, particularly within the vicinity of the land south of Greenhill Road, there are already a clearly noticeable urbanising influence and which effectively extends the development envelope of Sandford along the A368 to Pye Corner. This is reinforced by the ‘welcome to Sandford’ sign which identifies the start of the settlement area at this point. In terms of a perception of a gap and concerns over potential coalescence, the Land south of Greenhill Road (Appendix 1), has the strong advantage of benefitting from a combination of natural boundaries and the A368 Greenhill Road to the north. This means that the site in itself is generally well contained. It would therefore a) not lead to a sense of further ribbon development given such ribbon development in that location already exists, and b) would not lead to any impact on, or a sense of, reduction on coalescence between Sandford and Churchill. Whilst the same cannot be said of land east of Pye Corner, and to an extent the land north of Greenhill Road, the development of the land south of Greenhill Road would address the various criteria set out in the Strategic Gaps Background Paper (2023) and not lead to coalescence. In terms of criteria 9 ‘Landscape Character / type, it is stated in the background paper that the whole of the proposed strategic gap falls within the ‘J2 River Yeo Rolling Valley Farmland Landscape Character Area (LCA)’, and therefore protection of the strategic gap is consistent with the need to ‘conserve the landscape’. However, due to the more urbanised character of the land east of Sandford it is evident that the overall strategy for this area and a number of landscape guidelines presented by the previous North Somerset Landscape Character Assessment do not apply to the land south of Greenhill Road as it does not exhibit a rural, pastoral character and does not contain any the landscape features typically associated with the lower lying parts of the LCA, such as wetland habitats or pollarded willows. Overall, contrary to the conclusions set out in paragraph 5.5 of the Strategic Gaps Background Paper (2023), these representations, along with the supporting Landscape Technical Note (Appendix 2), demonstrate that the proposed new strategic gap for Sandford & Churchill is not justified in its current form. There is a fundamental lack of supporting evidence and justification for the inclusion of the land south of Greenhill Road (Appendix 1), and instead the Council’s Strategic Gaps Background Paper (2023) contains a number of misleading statements and factually incorrect information. In our view the specific circumstances of the entire strategic gap area are different across the various land parcels and the supporting evidence does not reflect the circumstances specific to the land south of Greenhill Road. Proposed Changes to draft Policy LP10: On the basis of the above, including information submitted to the previous Regulation 19 consultation, and taking into account the lack of proper justification set out in the latest Strategic Gap Background Paper (2025), we continue to maintain that the land south of Greenhill Road (Appendix 1) should be removed entirely from the proposed strategic gap between Sandford & Churchill. There is a fundamental lack of evidence supporting the inclusion of the site within the designation. In contrast, the evidence submitted, principally in the form of the supporting Landscape Technical Note (Appendix 2) demonstrates why the land is suitable for development from a landscape perspective and why there is a clear lack of justification for inclusion of the land within a new strategic gap. Should the Council pursue this particular strategic gap and considers there is justification for the inclusion of some of the land east of Sandford within such a designation then it continues to be the view of Waddeton Park Ltd that, as an absolute minimum, the Land south of Greenhill Road should be removed from the designation for the reasons explained within these and previous submissions. To assist, we have again appended to these representations an amended version of the policies map showing how the Sandford and Churchill strategic gap should be amended prior to submission of the plan for examination (Appendix 3). Conclusion: We strongly object to draft Policy LP10 (Strategic Gaps) in its current form and our representations above explain why the land south of Greenhill Road, Sandford (see Site Location Plan attached at Appendix 1) controlled by Waddeton Park should be removed from the proposed strategic gap at Sandford and Churchill given that it is a suitable and sustainable location to deliver residential		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								development. The site offers an excellent opportunity to accommodate development on a sustainable site, well related to the village, to help address local housing need. This is supported by the Council's own assessment of the site within the SHLAA, confirming its potential suitability, as explained in our response to draft Policy LP5. When looking in detail at the policy basis and evidence supporting the strategic gap at Sandford and Churchill and the specific context relating to the land south of Greenhill Road, Sandford, there is no justification for the inclusion of the site within this proposed strategic gap. The representations above, along with the supporting Landscape Technical Note demonstrates why the land should therefore be removed from this proposed designation. As expressed in our separate response to policies SP8 and LP5, the plan should be flexible to respond to changing circumstances and the proposal to include land suitable for future development within a strategic gap designation would fundamentally go against that principle. Indeed, it may simply direct development to less sustainable sites as a result. With reference to the proposed strategic gap between Sandford and Churchill, introducing this gap as proposed would simply block the sustainable growth of Sandford therefore also preventing the ability to address local housing needs. If the Council pursues this particular strategic gap and considers there is justification for the inclusion of some of the land east of Sandford within such a designation then it is the view of Waddeton Park Ltd that, as an absolute minimum, the Land south of Greenhill Road should be removed from the designation for the reasons explained. To assist, we have appended to these representations an amended version of the policies map showing how the Sandford and Churchill strategic gap should be amended prior to submission of the local plan for examination (Appendix 3).		
30471969	Oliver Stubbs			No	• Positively prepared • Justified • Effective	Unsure	No	I disagree with the nature and extent of the strategic gap to the West of Hillier's Lane in Churchill. This is neither justified nor positive, it is ill conceived. The policy is knee jerk and inconsistent with previous allowed development to the East of Hillier's Lane. This is inconsistent with the policy of allowing development adjoining the settlement boundary. There is already a natural strategic gap in the form of Old Farm, Churchill Green. This is farm land which is mainly apple orchards. Why does North Somerset council feel the need to dictate the future potential use of land? This will devalue the land and potentially mean it will not be maintained nor managed as effectively in the future.	Don't allocate the land West of Hillier's Lane as strategic gap land, leave it as it is. The policy is knee jerk and inconsistent with previous allowed development to the East of Hillier's Lane.		
34793665	A Trapp			Unsure		Unsure	Unsure		I note the strategic gap to the North West of Banwell. For future clarity regarding the interaction of the village and the bypass, it would be good if that strategic gap were to be also to the North of the village. Such a gap would be appropriate, particularly because of the significant, recent development of the village.		
62471329	Environment Agency		Environment Agency							Haywood Reservoir (formerly Superpond flood storage area) is within Flood Zone 3.	
14339745	Paul Watkins			No	• Justified • Effective	No	No	These are more examples of weasel words from NSC.. exactly how will you ensure that the strategic gaps are protected.?? you state Identification and protection of strategic gaps will help to prevent their erosion by incremental development which would be detrimental to the settlements' separate identities, character and/or landscape setting. But nowhere do you state how you will protect them.... I expect if challenged by a developer you will, as always, roll over and surrender.			
63070401	Emilia Leung			No	• Effective	No	Unsure	The Proposal is overly reliant on inflated national targets and infrastructure that cannot be delivered – whilst at the same time, ignoring local constraints. The Proposal is also inconsistent with national policy. Green Belt boundaries should only be altered in exceptional circumstances – and the review must show no "clear evidence that doing so would fundamentally undermine the purposes…of the remaining Green Belt".			

Policy LP11: Transport infrastructure, allocations and safeguarding

39374913	Tony Harden									Page 80 LP11 is strongly supported in particular for the safeguarding of active travel rotes such as the Congresbury to Blagdon link. Opening this old route for cycles would have a massive positive impact on the local communities.	comments on Local Plan.pdf
31144865	Autograph Homes	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national	Yes	Yes	Emerging policy supports the transport initiatives listed at Schedule 7 of the draft plan, including inter alia: "Worle railway station – including Transport Hub and railway station car park expansion". Draft Policy LP11 states in this regard: "Land is allocated or safeguarded and defined on the Policies Map and set out in Schedule 7, which forms part of this policy, for the delivery of transport schemes, the improvement of existing services or the creation of sustainable transport links and facilities." Our client wishes to reiterate our continued resistance to draft policy LP11 insofar as it relates to the renewal of a safeguarding designation for railway parking for Worle station within the south western part of our client's site. We have set out in our previous	In order to remedy this deficiency, we therefore recommend that reference to safeguarding for car park expansion is omitted from Schedule 7 and from the associated Proposals Map.		R002v4 NSLP Reg19 Reps AH Dec25.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					policy			representations the reasons for this, but in summary: There appears to be no direct evidence or justification to support the retention of the safeguarded area; There has been no evidence of any attempt to secure the land for such purposes throughout the entirety of the current plan period; and There is no evidence of the consideration of alternative provision, including the intensification of parking within the area already occupied by such. Although the supporting text cites the West of England Joint Local Transport Plan (JLTP) 4 as the source of the justification for the initiatives listed, itself a document over five years old, as highlighted in our previous recommendations there is no express recommendation from that report that additional car parking at Worle is necessary or desirable, with its focus being on platform lengthening and increased active travel connectivity. The Local Plan Transport Assessment (LPTA) of October 2025 is the principal evidence base document supporting the Transport policies of the emerging Local Plan, and sets out both the Council's justification and key aspirations for this element of the plan. It appears that nowhere in this document is there further evidence of any pronounced need a) for additional rail parking at Worle station, or b) that this must or should be accommodated within the south western part of our client's site. Notably, the section 'LP8: Transport infrastructure, allocations and safeguarding and Schedule 7' from para. 1.16 onwards focused on Nailsea & Backwell station and does not mention Worle station at all. Notably, the LPTA states at paragraph 4.13 the aspiration in relation to the Wolvershill strategic development location for "A network of active travel routes is proposed throughout the development, connecting Wolvershill with existing communities and key facilities such as the rail station at Worle, Banwell village and the various community facilities at Parklands Village such as the district centre and the Winterstoke Hundred Academy." The clear implication of the Council's intention, quite rightly, is to ensure that strategic development is provided with a properly integrated active travel strategy, linking with the continued development of Parklands Village, as the principal means of facilitating connectivity with onward rail services included from Worle. Similarly, paragraph 4.22 states "Bus connectivity between Wolvershill and Worle rail station would provide an access to rail services on the Bristol to Taunton line. Timetables would need to be co-ordinated to reduce interchange penalties (i.e. waiting times between services) and maximise patronage. Providing bus connectivity between Wolvershill and Parklands Village would provide an alternative, no-car based option for travel between the two communities, ensuring each can benefit from the range of amenities and facilities provided." 4.13. To prioritise vehicular journeys to and from Worle station would clearly be a retrograde step in sustainability terms, and risks undermining the Council's laudable ambitions for the promotion of active travel and public transport, particular for its new communities. Taken relative to the prospect of residential development on our client's land, this would also mean perhaps 150 likely single-occupancy car journeys per day as opposed to c.25 homes located in as close proximity as possible to this transport node. In practice, it is also questionable how desirable such provision would be in the minds of the future occupiers of developments such as Parklands Village, who if accessing Worle Station by private car would face the running costs of their initial journey, the cost of a day's parking, then the cost of their rail fare, when the prospects of utilising the public transport and active travel connections delivered in connection with the strategic development are more likely. Those intent on using the private car would likewise be more likely to proceed directly to their destination. The Council is reminded of the content of Paragraph 001 Reference ID: 66-001-20190722 of the PPG: 'What evidence can be used to help determine whether land should be reallocated for a more deliverable use?', which states in full: "When considering whether there is a realistic prospect of an allocated site being developed for its intended use, it may be relevant to take into account factors such as: the length of time since the site was allocated in the development plan; the planning history of the site including any planning applications or pre-application enquiries; whether there is evidence that the site has been actively marketed for its intended use for a reasonable period, and at a realistic price; and whether there are any changes of circumstance that mean that take-up of the site for its intended use is now unlikely. Where an alternative use for the allocated site is proposed, it will also be relevant to consider the extent to which evidence suggests the alternative use would address an unmet need, as well as the implications for the wider planning strategy for the area and other development plan policies." 4.16. The sentiment of the PPG could not be clearer in this respect; essentially, authorities should not resist the reallocation of land where there is plainly no realistic prospect of the site being developed for its intended use. In this instance, the proposed retention of safeguarding in the absence of any sound justification represents the simple rolling forward of an existing unfulfilled policy at the expense of development that would both: Address an unmet need, namely the acute need for new housing; Conform to the wider planning strategy for the area, namely Weston's being a principal target for growth and self-containment; and Comply with all other development plan policies, considered in the context of national policy. The PPG thus points directly to the consideration of alternative uses of, in this case, safeguarded land, and we would endorse residential development as that alternative use in the circumstances. In the light of the above, we are firmly of the view that the Policy LP11, in this specific respect, is unsound it is not positively prepared, effective or justified.		
51524513	Bellway Homes Ltd	tor&co	Bellway Homes Ltd	No	• Justified			Draft Policy LP11 (Transport infrastructure, allocations and safeguarding) – with regard to Schedule 7 and the Policies Map – identifies land safeguarded for the delivery of major transport schemes. This includes land for the delivery of the Banwell Bypass and the M5 J21 Bypass Scheme. The Banwell Bypass received consent in 2023 and has secured funding from the Homes England Housing Infrastructure Fund. In addition to assisting delivery of the Wolvershill allocation, it will remove traffic congestion from a pinch point on a key route between the A38 and Weston-super-Mare. It will improve the local road network by dealing with existing congestion issues, as well as improving and enhancing the village by reducing traffic and improving the public realm, whilst also providing infrastructure and a defensible boundary to the north of the village. Whilst now a committed scheme, its continued safeguarding is appropriate. The M5 J21 Bypass Scheme is understood as a historical and long-term infrastructure ambition identified in the Joint Local Transport Plan 4, to reduce congestion at M5 J21 from traffic that does not access or egress the Strategic Road Network. Whilst not specifically safeguarded by this policy, this includes the provision of a new J21A to the M5 (referenced at Draft Policy LP1). Whilst acknowledging such a scheme might provide some benefit, there are no detailed or active proposals for it to be brought forward (including, despite reference in the supporting text to the allocation under Draft Policy LP1, anything in the Transport Assessment prepared by AECOM or Infrastructure Delivery Plan).	Due to the absence of evidence to justify the J21 Bypass Scheme and information demonstrating its deliverability, we suggest it be removed from Schedule 7 and the Policies Map at this time. If considered, this will need careful evidence to justify inclusion or policy requirements.		20251212 504317 JE - North Somerset Reg 19 (Reps obo Bellway Homes).pdf

21449761	Bloor Homes South West (Wolvershill)	Turley		No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy		No	Policy LP11 continues to (via Schedule 7 and the Policies Map) identify land for the Banwell Bypass and land allocated/ safeguarded for the J21 Bypass Scheme. As part of working to progress design and delivery matters in respect of the proposed Wolvershill strategic location development, the main parties (including Bloor Homes) have engaged with the Council to ensure the effective integration of the development's access proposals with the Banwell Bypass in respect of vehicles, pedestrians and cyclists, so that appropriate junction designs can be provided as part of the implementation of the scheme. The Banwell Bypass is now under construction and is expected to be complete and operational by Spring 2027, it may be unnecessary to continue to safeguard the route within the plan, given that stage reached in the delivery of this scheme. In respect of the allocated/safeguarded route for the J21 Bypass Scheme, it is understood that the Council has had a historical and long-term ambition to deliver this infrastructure, to reduce congestion at M5 J21 from traffic that does not access or egress the Strategic Road Network. However, whilst the potential delivery of the scheme is anticipated to provide some benefit, there are no detailed or active proposals for it be brought forward, and it remains unclear within the plan how it is to be considered in relation to the Wolvershill strategic location allocation (Policy LP1). Absent any further evidence in respect of the long-term benefit and delivery of the J21 Bypass Scheme it should be removed from Schedule 7 and the Policies Map. If it is to be retained then the identified corridor and design principles should be reviewed, to ensure no adverse impact on the delivery of the sustainable transport requirements for the Wolvershill strategic location, so that this important development is able to effectively deliver an active travel route to Worle railway station (alongside the possible removal of general vehicular traffic to the Wolvershill Road M5 overbridge).	It may now be appropriate to remove the safeguarding of the Banwell Bypass scheme route, given that this new infrastructure is committed (via a Planning Permission) and is under construction (with expected completion in early 2027); Clarification should be provided in respect of the ongoing retention of the J21 Bypass Scheme allocation/safeguarding route, including any potential to impact on the delivery of the active travel and other measures required as part of the Wolvershill strategic location development. 21403553	Wendy Beer		none					What are you doing about the escalating situation on the B3130 route through the village of Tickenham? Today, from my 2 bed Victorian cottage,very close to the road, I've witnessed a serious build up of traffic, which is becoming an all too familiar site, now with the building of yet more houses in the area, Tickenham included. The misery it's causing is a downright disgrace. Am I right in assuming that NSDC has granted permission for traffic lights on the B3130 to support a development of more houses along this stretch of highway, adding to the chaos due to a police incident on the M5? I've no doubt that when the developers have finished			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								digging up the road to lay services to these new properties, in time potholes will start to appear, because of disturbance to the road surface. It's suffering enough due to the excessive weight of the ever increasing size and number of goods lorries that rattle along the B3130, not to mention the weight of EVs (cars) I am fed up with the lack of alternative routes to and from the M5 motorway. When are the powers that be going to wake up to the fact that with the ever increasing volume of traffic along the B3130 upgrading of alternative existing roads need to be in place before more houses? Nailsea Wall is a road that should now be improved so that it can be used to reduce congestion on the B3130. Developers ought to be forced to build the infrastructure needed, at their own expense, such as new roads, before being given the nod of approval to build houses. When my parents lived in the village of Tickenham at least 50 years ago, a bypass was proposed. The opportunity was there to build one. Instead, the years have passed and the situation on the B3130 has turned into a nightmare for residents and motorists. It's grossly unfair to expect residents to carry on putting up with the behaviour of planners, who appear to have little regard for the environment and the quality of life of those who live beside roads that simply can no longer accommodate traffic sustainably or safely. Every day pedestrians are putting their lives at risk in the village where the pavements are either narrow or do not exist. Why doesn't the government bring into habitable use redundant buildings in cities and towns instead of concreting over the countryside? Whilst I'm at it, why on earth are local authorities allowing people to buy up pretty bungalows to turn into what I can only describe as ugly mansions in a village setting? Is it just about making a quick buck?			
30301601	Ainscough Strategic Land	Chris Price	Ainscough Strategic Land	Yes						Policy LP11 allocates land to be safeguarded for the delivery of transport schemes, the improvement of existing services or the creation of sustainable transport links and facilities. Schedule 7, which forms part of the policy, includes the Banwell Bypass and the M5 Junction 21 Bypass Scheme, both of which are relevant to the Wolvershill allocation (Policy LP1). Discussions with NSC are being undertaken by the Consortium's transport planning consultants to ensure the effective integration of the development's access proposals with the Banwell Bypass in respect of vehicles, pedestrians and cyclists so that appropriate junction designs can be provided as part of the implementation of the scheme. It is understood that NSC has an historical long-term ambition to deliver the J21 Bypass Scheme to reduce congestion at M5 J21 from traffic that does not access or egress the Strategic Road Network. Whilst the delivery of the scheme is anticipated to provide some future benefit it is not required for the delivery of Wolvershill (LP1). The identified corridor and design principles should be reviewed so that it does not adversely impact the sustainable transport requirements of the Wolvershill allocation to deliver an active travel route to Worle railway station and the active travel changes to the Wolvershill Road M5 overbridge. ASL does not object to Policy LP11 where it does not prejudice the planning and delivery of the other requirements of draft Policy LP1, particularly for housing and employment.	61683 - NSC Reg 19 Representations December 2025 2-12-25.pdf
30921569	Lucy Byrne			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	Unsure	There is no mention of capacity improvements for J19 on the M5 which NSC own evidence states will be essential as the junction is already at or nearing capacity!! nor of any solutions to the gridlock or provision for safe crossing points on the A369. The proposed railway will not have capacity to solve these traffic issues. The A369 will be at capacity with pinch points where no busses can get through.	Delete SP4, there's no evidence of sufficient transport infrastucture mittigations that can cope with this volume of dwelligns in this location.		
27277889	Tickenham Road Action Group		Tickenham Road Action Group	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The following is a summary of the submission of the TRAG to this consultation. Please see the attached document for the full response. The Tickenham Road Action Group wishes to raise serious concerns about the soundness of the North Somerset Council Pre-Submission Local Plan 2041. Although we welcome the Local Plan as it will identify locations for housing development, we believe there are shortcomings in the analysis of traffic impacts and plans to support the increased housing numbers. 1. The Local Plan whilst considering the traffic impacts of the isolated additional housing developments mentioned in the Local Plan does not address overall traffic growth over the 15-year period of the Local Plan, nor provide a strategic view of how traffic will be routed through key transport routes in North Somerset. 2. The Local Plan does not address existing traffic issues in impacted villages and rural lanes/roads which will be subject to a 40% proportional increase in traffic through the increased number of homes alone. 3. The Local Plan does not address the additional HGV and other commercial traffic on rural roads and villages that will be necessary to support the increased population size and improved/expanded town centres. 3.1. Increasing the number of dwellings will increase the volume of HGV traffic to support the shopping centres and homes supporting the increased number of dwellings.	1) Provide a fully funded direct route from Nailsea to J5 of the M20 to support the traffic (including HGVs) of Nailsea and Backwell. The route via Nailsea Wall provides the most direct and least disruptive route. 2) Introduce significant traffic calming and speed limits (20mph) on The Causeway, Washing Pound Lane and Church Lane.		TRAG submission final.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								3.2. The HGV route through Tickenham and Stone-Edge-Batch is the only HGV route from the M5 to Nailsea. There is no route via the A370 to Nailsea. The current roads are not suitable for this traffic and do not have any capacity for any increase in HGV traffic volume. 4. Without significant mitigations, Active Travel policies will decrease road capacity in the villages of North Somerset due to lack of adequate cycle and pedestrian paths. 4.1. Residents of Tickenham are highly favourable to Active Travel policies and wish to participate in walking and cycling to local destinations avoiding unnecessary car use, however without adequate infrastructure (pavements and cycle lanes) this policy will reduce road capacity on Tickenham roads by slowing traffic. 4.2. Tickenham residents do not feel safe walking or cycling through the village due to the high traffic volumes. There are no suitable Active travel routes from Tickenham to the surrounding towns of Nailsea/Backwell and Clevedon or to the Nailsea and Backwell railway station. This lack of suitable routes is forcing residents to use their vehicles even when they wish to use Active travel means. 5. If public transport usage is not increased in line with the increase in homes (42% for Nailsea and Backwell), this will force more use of private vehicles to fill the public transport gap. 6. The Local Plan does not consider any mitigations to traffic issues on the roads and lanes of Tickenham, in particular the viability of a route from Nailsea directly to the M5 J20. The route for traffic between Nailsea/Backwell and the M5 would be via an improved Nailsea Wall route, considerably alleviating traffic issues on the roads and lanes through Tickenham. It is appreciated that improvements would need to be made to the existing roads, but this route would provide a direct connection between the M5 and Nailsea/Backwell to support existing and future traffic needs. 7. There is no local traffic mitigation included in the Local Plan for Clevedon Road (B3130) in Tickenham and Stone-Edge-Batch to enable safer pedestrian, wheeling and cycling use. 8. The Local Plan does not assess the volume of additional traffic on Tickenham roads/lanes from the introduction of the proposed Strategic Rail Crossing from East of Backwell to Station Road Nailsea. The review looked only at displacement of existing traffic. Introducing the Strategic Rail Crossing will encourage additional traffic from Bristol and the southern ring road (Colliters Way) to use this route for access to the M5 and vice-versa. 9. We do not agree with the assumption that the Strategic Rail Crossing will reduce traffic volumes on the Causeway or Stone-Edge-Batch. We agree that traffic using the route to/from Nailsea on Station Road will be attracted to use the Strategic Rail Crossing, but we fail to see how North-bound traffic to Clevedon/M5 from Nailsea or Backwell would use this new route. 10. The Local Plan proposes the introduction of Quiet Lanes for the Causeway, Church Lane and Washing Pound Lane which would make these routes more attractive for pedestrians, cyclists and horse riders, but does not assess the traffic impacts on the congested route (Stone-Edge-Batch) which would carry the displaced vehicle traffic. 11. The assumptions made for Active travel used to mitigate traffic volumes are without any evidence to support the offsets stated particularly in a semi-rural environment with dangerous roads such as Tickenham. Therefore, use of these assumptions is highly risky.			
51477249	Burrington Parish Council		Burrington PC	Unsure	‣ Consistent with national policy	Yes	Unsure	On previous drafts of the local plan we expressed concern that a wider range of sites for housing would be needed to avoid challenges to the supply of housing land and the ad hoc addition of sites through planning appeals, especially in view of the substantial increase in housing requirements arising from the new standard method of calculating housing requirements. We can see that North Somerset Council has now made significant changes to the settlement strategy to include new large sites for housing which now include a substantial urban extension south west of Bristol (‘Woodspring’), a number of strategic housing sites at Nailsea and Backwell, some of which already have planning consent, the ‘Wolvershill’ strategic allocation north of Banwell and strategic sites at Pill and Easton-in-Gordano, as well as continuing development adjoining Weston-super-Mare (Parklands Village and Winterstoke Village), new site allocations at Clevedon and Portishead and redevelopment sites within Weston, some of which are carried forward from the Site Allocations Plan of 2018.It seems to us that the Council has thus sought to identify a realistic and as wide as possible range of options to accommodate the increased housing requirement. Some rural settlements like Churchill and Winscombe are also making significant contributions to housing land supply, although some sites were committed through planning appeals which means that they are not always well integrated with the existing settlement (or other appeal sites). Committed housing sites in the larger villages do not therefore always achieve the aims set in the Core Strategy for ‘Service Villages’ in terms of more self-containment in jobs and services, protecting the character of the settlement, or achieving improvements in public transport.	More detail is required about the allocated housing sites to demonstrate their feasibility, desirability and consistency with other planning policies– in the form of a development brief		
51477249	Burrington Parish Council		Burrington PC	No	‣ Justified ‣ Effective	Yes	Unsure	There is remarkably little information in the Transport Policies chapter about new road schemes, their justification, their relationships with land-use proposals and their impacts on existing routes and settlements. There is a list of transport schemes in Schedule 7, which forms part of policy LP11, the justification for which relies on another document ‘The Local Transport Plan’ (JLTP4) which was adopted in 2020 and is ‘the adopted strategic transport policy for the West of England authorities, including North Somerset.’ This disconnect between the Local Plan and the Local Transport Plan is unsatisfactory as it fails to show the relationship between land use policies and transport planning proposals. There are also references to an ‘Infrastructure Delivery Plan’ which ‘North Somerset is preparing.’ Within the Wolvershill and Woodspring strategic development locations and around Nailsea and Backwell and Pill and Easton-in-Gordano ‘there are additional transport requirements that are not yet identified on the Policies Map.’ It is hard to reconcile such statements with the requirements of Planning Practice Guidance on Transport evidence bases in plan making and decision taking’ which states: ‘It is important for local planning authorities to undertake an assessment of the transport implications in developing or reviewing their Local Plan, Key transport issues for settlements along the A38 include: •implications of the continuing expansion of Bristol Airport, including •the implications of a Mass Transit Scheme between Bristol Airport and Bristol City Centre and •connections to the western towns and villages along the M5 and A370. It is remarkable that there is no information about a ‘Mass Transit Scheme between Bristol Airport and Bristol City Centre’ or even improvements to the A38 to accommodate road traffic generated by growth of the airport. One of the key issues for settlements along the A38 corridor is the lack of good, safe, east-west routes to the A370, the M5 and the coastal towns. Stock Lane is narrow, frequently congested with large lorries and it lacks the road space for continuous pedestrian routes. Policy LP23 refers to ‘improved pedestrian access between the (Monaghan Mushrooms) site and Langford and Churchill and highway safety measures along Stock Lane’ . It is hard to see what improvements and highway safety measures are envisaged without explicit guidance in the local Plan. The Banwell Bypass will improve east-west connections, but there is little information about its projected impacts on traffic flows through villages along the A368 including Sandford, Churchill, Upper Langford and Burrington, including the proposed new roundabout at Churchill Gate (A368/A38) which has been justified as part of a ‘bus service improvement plan’ rather than in response to the growth in road traffic, which seems disingenuous.	More details about transport schemes, their impacts on existing settlements and routes and their relationships to proposed developments		
62802913	Pill & Easton-in-Gordano		Pill & Easton-in-Gordano Parish	No	‣ Positively	No	No	Policy LP11 is unsound (not justified, not effective, and not consistent with national policy) because: The proposed “active travel route” across Markham Brook (shown on the Policies Map and listed in Schedule 7) would cut straight through irreplaceable ancient woodland and priority habitat deciduous woodland in the Gordano Valley.	Delete the Markham Brook active travel route from Policy LP11, Schedule 7, and the		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
	Parish Council		Council		• prepared • Justified • Effective • Consistent with national policy			→ Natural England's Standing Advice (2024) and NPPF paragraph 193c require a minimum 15-metre untouched buffer on each side of ancient woodland. The government's Environmental Improvement Plan 2025 (published 1 December 2025) reinforces this by committing to maintain protections for ancient woodland as irreplaceable habitats and evolve Biodiversity Net Gain to ensure infrastructure like active travel routes delivers net environmental benefits without harm. No layout has ever been produced that can meet this requirement. The route is therefore physically undeliverable without destroying habitat that national policy says must not be lost unless there are "wholly exceptional reasons" and full compensation – neither of which exist here. The Sustainability Appraisal and the rest of the evidence base contain no assessment whatsoever of this route's impact on ancient woodland, priority habitats, protected species (e.g. bats), or the legal need for buffers. This makes the policy not justified (NPPF para 36b). No alternative alignments appear to have been examined. The council has not demonstrated that a deliverable route is possible at all – making the policy not effective. The proposed Markham Brook active travel bridge and path would destroy irreplaceable ancient woodland and priority habitat with no 15 m buffer and no compensation strategy. This directly breaches NPPF paragraphs 193c and 192 and renders the policy unsound. This same route is being relied on to "mitigate" the traffic impact of the 1,100 homes proposed under Policy LP4. If the route cannot be built, the mitigation fails and the housing allocation becomes even less deliverable.	Policies Map, or redraw it so that it demonstrably avoids all ancient woodland and priority habitat with the required 15 m buffers (Natural England Standing Advice 2024). Align with Environmental Improvement Plan 2025 commitments by requiring a Biodiversity Net Gain assessment (at least 10%) and integration with Local Nature Recovery Strategies to prove no net habitat loss. If no deliverable alternative exists, the council must remove the reliance on this route as mitigation for the Pill & Easton-in-Gordano strategic location (Policy LP4) and reassess the housing numbers accordingly. Reroute the Markham Brook link to avoid private land and existing bridleway PE2/1, or delete it entirely pending full landowner consultation.		
51490785	Parish Councils Airport Association		Parish Councils Airport Association	Yes		Yes	Yes	The PCAA expect further consultation on the route of the Mass Transit and Bristol Airport. It is not currently possible to comment on route and the potential impacts of residents and the environment.			
51732129	Gleeson Land	tor&co (Jacqueline Mulliner)	Gleeson Land	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Policy LP11, and the proposals map, refers to a "Potential sustainable transport extension of the reserved transport corridor through the Youngwood Lane site to Station Road, Nailsea." Schedule 7 reconfirms the 'reserved transport corridor within consented Youngwood Lane development, Nailsea' and 'Station Road to A370, Cross Rail Link, Nailsea and Backwell' as 'major transport schemes.' The Infrastructure Delivery Plan schedule further confirms that this infrastructure is considered to be 'essential', and to serve and enable development to the south of Nailsea and at Backwell (TR33 & TR34). The plan clearly anticipates a new road to the south of Nailsea, to create sustainable transport links and serve the allocations across the southern edge of Nailsea. However there is a missing section, from Station road to the Youngwood Lane allocation i.e. across the south Nailsea allocation. This is a glaring omission, given the terms of the policy and the lack of viable/deliverable alternative solution to access the allocated land with road infrastructure that is suitable to perform the necessary strategic function and carry the volume of traffic expected. The associated policy (LP3) asks for access via The Perrings to be investigated, but that access is not deliverable and even if it were the route via The Perrings and other residential roads is unsuitable for a strategic road link (see attached note). The extant outline planning application (Ref: 23/P/1145/OUT), which has all matters reserved except means of access, includes the necessary road link with the formation of a new vehicular access onto Station Road, with pedestrian and cycle access links, to serve the development and which would act to secure improved accessibility to the rail station. The omission fails to represent positive and effective planning and is unsound.Please also See Appendix A of these representations which include specific transport representations by i-Transport supporting the above. The HRA (Aecom, 2025) of the NSLP does not include the proposed Major Transport Schemes set out in Schedule 7 as they have been assessed previously in the HRA (Clearlead, 2019) of the Joint Local Transport Plan (JLTP). The evidence base published with the North Somerset and Mendip Bats Special Area of Conservation (SAC) Supplementary Planning Document Consultation (22 October 2025 - 3 December 2025), namely the 'Radio-tracking Report' and 'Academic Research Paper', was issued after the completion of the HRA for the JLTP. This evidence supersedes that included for the HRA of the JLTP and is relevant to the baseline referenced in the HRA. Accordingly, the HRA of the JLTP can no longer be considered reliable for the NSLP. This should be recognised in the HRA of the NSLP and effects of the Major Transport Schemes assessed accordingly i.e. included for Screening and Appropriate Assessment. Furthermore, the HRA of the NSLP recognises (Paragraph 5.5) that 'One proposed scheme (Station Road to A370, Cross Rail Link, Nailsea and Backwell) is not allocated within the JLTP. As noted above, the safeguarding of this land does not lead to likely significant effects, however if this scheme is brought forward, it would require assessment at that time'. This is an unsound approach to HRA. The scheme is a Major Transport Scheme (forming part of the 'Plan') under Policy LP11 and should be assessed in the HRA of the NSLP, as required by the Conservation of Habitats and Species Regulations 2017 (as amended).	Add the safeguarded road link across the South Nailsea allocation. The HRA of the NSLP should include an assessment of the Major Transport Schemes set out in LP11 (and Schedule 7), including Station Road to A370, Cross Rail Link, Nailsea and Backwell		North Somerset Reg 19 Reps (2025-12-12) - Gleeson Land (Appendix B).pdf North Somerset Reg 19 Reps _2025-12-12_ - Gleeson Land _Appendix B_ (1).pdf
29232641	Maria Lage							With the increase of the number of houses in these estates, even more cars will pass through Tickenham village - which is unsustainable. Certain parts of the village have no pavements or raised pathways for individuals to use. And where some exist, they are very narrow and dangerous to use - when my children were very young they would walk along this way to the bus stop and they would say the fast pace of the cars, lorries and trucks would make it very dangerous so they would wait until the road would quieten down. Now there is no such quiet break in traffic such that these pavements cannot be used and bus / public transport. Therefore lorries should not be authorised to come through Tickenham village except for service vehicles and clearly the additional cars would make it impossible to exit the house on foot. Near the school, a speed ramp should be built. Country lanes around Clevedon Road are no longer fit for so much traffic - so even more traffic will come via Clevedon Road. These country lanes are now constantly used for all types of traffic: not just horses, bikes, or occasional cars or agricultural machinery. If there isn't enough money from the council to support the need of additional cars and vehicles on the road, the developers of the estates must be providing funds to the local authority to support; they make substantial profits from these homes and it is only reasonable to ask this of them. Even coming out of my home, I can easily spend 5-10 minutes waiting for a break in the traffic to enter/exit my house. Ultimately, there are alternative roads that could be developed to take this traffic and would not impact on so many houses, and people.	Lorries should not be authorised to come through Tickenham village except for service vehicles. Near the school, a speed ramp should be built. If there isn't enough money from the council to support the need of additional cars and vehicles on the road, the developers of the estates must be providing funds to the local authority to support; they make substantial profits from these homes and it is only reasonable to ask this of them.		
39402529	Network Rail		Network Rail					Network Rail welcome the safeguarded 10 m corridor along rail routes. We have previously queried the continued safeguarding of the 'Southern Rail Chord', which appears to hark back to a historic idea for a new alignment, and does not feature in current			Network Rail LDP comments.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								strategic plans for the local network. With regards to the extension and reopening of platforms, Network Rail seek further clarification on whether there is a specific driver behind each of the platform extensions. Is there a specific operational or capacity issue driving these proposals, particularly in relation to current or anticipated passenger demand? We recognise the need to extend platforms at Worle to accommodate future XC train services however, the justification for similar works at Yatton, Nailsea, and Weston Milton is less clear. We also wish to emphasise our support for the development of integrated transport hubs at railway stations, which will enhance connectivity and improve the overall passenger experience.			
43203041	National Highways		National Highways							This policy allocates or safeguards land (as defined on the Policies Map and set out in Schedule 7) for the delivery of transport schemes, the improvement of existing services and the creation of sustainable transport links and facilities. In addition to the specific schemes identified in Schedule 7, the policy also lists a number of schemes proposed for delivery during the plan period, including potential capacity improvements at M5 J20 and Ettlingen Way, Clevedon. We note that no reference is made to capacity improvements at M5 J19, the M5 J21 bypass included in Schedule 7, or any safeguarding of land for a new junction south of M5 J21, implying these schemes are not proposed for delivery during the plan period. National Highways would welcome further confirmation of proposals for each location and their status within the plan. Subject to the ongoing review of the AECOM Transport Assessment and further traffic modelling for SRN junctions, it may yet be necessary to specifically reference additional transport infrastructure improvements under Policy LP11.	NSC Reg19 Local Plan Consultation.pdf
43203041	National Highways		National Highways							Schedule 7: Transport infrastructure, allocations and safeguarded routes This schedule forms part of Policy LP11 (Transport Infrastructure, allocations and safeguarding) and Policy DP16 (Active Travel Routes). National Highways offer the following observations: ◇ We note reference to a J21 Bypass Scheme but this is not referenced in wider policies (for example LP1) or the AECOM Trasport Assessment. National Highways would welcome further information in respect of the proposed infrastructure. ◇ We welcome the inclusion of buffer areas around M5 J19, J20 and J21. We suggest that the buffer shown on the Policies Map for M5 J20 should extend further west to include the full extent of Ettlingen Way to protect land for the LP11 Ettlingen Way Capacity Improvement (which is not listed in Schedule 7). ◇ We note reference to ‘Royal Portbury Dock access under the M5’. We would welcome further detail regarding this proposal and any implications for National Highways asset or M5 J19. ◇ We note the inclusion of transport schemes and access arrangements for the Wolvershill Strategic Development and the upgrade to an existing accommodation bridge to link Parklands Village and Wolvershill. We would highlight that traffic modelling work for the Wolvershill site is continuing and the scope of necessary transport schemes for the site remains to be agreed. ◇ We note that no safeguarding is shown for a new M5 J21A on the Policies Map. We understand that restrictions will be imposed on relevant development to prevent impacting a future junction, but the formal safeguarding of land is not proposed. North Somerset Local Plan Stage 7 Transport Assessment The Pre-Submission Plan is supported by a Stage 7 Transport Assessment (TA) prepared by Aecom (Rev 2.0 October 2025). The TA presents the findings of strategic traffic	NSC Reg19 Local Plan Consultation.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										modelling for the Local Plan but does not at this stage provide operational assessments for the three motorway junctions included in the authority area. National Highways has previously commented on assessment inputs and is currently reviewing modelled traffic demand and assignment figures supplied by AECOM. It is anticipated that the assessment of SRN impacts and requirements for mitigation will remain under discussion with AECOM and North Somerset Council beyond the Regulation 19 consultation, with National Highways undertaking operational assessment work for M5 J19. However, the following comments and observations are made in the interim: ✧ It is noted that AECOM have accounted for a potential concept improvement scheme at M5 J19 to reduce queues on the southbound off-slip, but the proposal is not listed in Schedule 7. The proposal does not currently feature within National Highways forward plans, and it remains to be determined whether improvements are required to accommodate Local Plan impacts. ✧The TA identifies that the Northern Way/ Ettlingen Way junction and M5 J20 will be at or near capacity by 2041. The reports suggests that small-scale interventions (signalisation, slip road improvements, lane adjustments) are likely to be sufficient to address congestion issues. National Highways require further operational assessments for the junction to demonstrate performance, alongside a drawing of any mitigation proposals impacting the SRN. ✧ The TA advises that M5 J21 will be approaching or exceeding capacity by 2041 with significant congestion forecast for Weston-super-Mare. We understand that further operational assessment work is being undertaken as part of the Wolvershill development. We look forward to reviewing this work in due course. ✧ We note that the TA has not modelled or provided any commentary on the M5 J21 Bypass scheme referred to in Schedule 7. Similarly, no mention is made of a potential new motorway junction south of M5 J21. We infer that these schemes are included for safeguarding purposes only with possible delivery in the next or later Local Plan. However, clarification on this matter would be beneficial.	
58582945	Nailsea Action Group		Nailsea Action Group	No	• Justified • Effective	Unsure	Unsure	Nailsea Action Group considers lack of adequate transport and commuting facilities as one of the major drawbacks of this Local Plan for Nailsea residents. Our comments on this aspect of the plan are documented in section SP10 and Schedule 7. We repeat some of the major issues which are specific to Nailsea Residents here. The existing, already congested out-commuting by car from the Nailsea and Backwell strategic location will increase substantially because the large amount of proposed local house building is not matched by any significant employment provision. Because most employment opportunities will continue to be to the east in Bristol and beyond, most of the new commuting will try to use the same already congested roads to the east. However, there is nothing in the Local Plan that is likely to alleviate that increased congestion. 1. The Local Plan's infrastructure proposals are listed in other parts of the document. The items that will have an impact on Nailsea are listed below with response comments: • “Reserved transport corridor within consented Youngwood Lane development” Comment: This proposal is confined withing the proposed settlement boundary and consequently has no effect on commuting congestion beyond the town's settlement boundary •“Station Road to A370, Cross Rail Link, Nailsea and Backwell” Comment: 1) Funding for the cross rail link is uncertain 2) This proposal is confined within the strategic location and consequently has no effect on the wider commuting congestion. • “Platform extension at Nailsea & Backwell railway station” Comment - The abysmal history of railway improvements at the station gives no confidence that anything will happen. Even if platform improvements were made, they would not improve the passenger carrying capacity of the railway. • “Transport hub at Nailsea & Backwell railway station” Comment - Who would fund this? Presumably not rail. • “Strategic cycle link between Nailsea and Clevedon via the Moors” Comment – This would do nothing to relieve commuting congestion to Bristol, which is the main work destination In Summary, there's nothing with any certainty that could relieve the increased traffic congestion that would result from the proposed house building. 2. Nailsea’s proximity to Nailsea & Backwell station will not contribute to sustainable development because the railway is so near capacity that, during rush hours, trains to Bristol often arrive at the station already full and there is no provision in this list to	Ensure transport and infrastructure plans meet the assessed need of the substantial new populations of Nailsea and Backwell. NSC should ensure the funding is available to build this infrastructure.

In the face of the proposed house building in Nailsea an Backwell, a substantial increase to the railway's passenger carrying capacity is the only improvement that would enable the railway to contribute to sustainable local transport.	NSC should focus on transport infrastructure which enables residents of Nailsea to commute effectively to employment locations. Nailsea (and Backwell) are commuter towns, as there is very little employment opportunities locally. Transport facilities which would help Nailsea residents are listed in our comment above.		
62847073	John Pilgrim		DfE	No	‣ Effective	Unsure	Unsure	As you will be aware, the primary focus at this stage of the Local Plan’s preparation is on the soundness of the plan, with regard to it being positively prepared, justified, effective and consistent with national policy. The following detailed comments set out Department for Education’s (DfE) view of the plan’s soundness in respect of education provision. The Department notes the objective of safeguarding land for “the improvement of existing services or the creation of sustainable transport links and facilities” within Policy LP11 Transport infrastructure, allocations and safeguarding and the corresponding Schedule 7 which identifies potential routes. The DfE welcomes the sustainable travel objectives of this policy, however, we are concerned about the alignment shown on the Policies Map for the strategic cycle link between Clevedon and Portishead. The proposed route would utilise the single narrow access to Clevedon School (via Valley Road) and pass through the school’s playing fields along the southern boundary, crossing Holly Lane. Clevedon School is currently within the DfE’s school rebuilding programme (SRP). The DfE’s design concept for the new school does not currently include provision for a cycle route across the site. Introducing this change at this stage would result in additional cost, operational challenges, and potentially delays to the delivery of the new school. We request that the draft Policies Map be amended to show the cycle route following an alignment that runs outside the school boundary. The SRP Team would welcome the opportunity to work with North Somerset Council to explore and agree a more suitable alignment for the cycle path. This will help to ensure the strategic cycle route is delivered in a way that most effectively meets local needs, whilst minimising the impact on the operational requirements of the school. I hope the above comments are helpful in shaping North Somerset’s Local Plan, with specific regard to positive planning for education infrastructure.			
58089473	P Roberts			No	‣ Effective	No	No	The proposed Portishead developments, would increase car usage contrary to the statement in the plan to reduce, because of their remoteness from existing facilities, and major transport routes. The increase burden on existing road structures which are already struggling to cope at peak hours of the day, would significantly add to local air pollution, and hazards.			
51079969	Justin Saunders		Pill and Easton-In-Gordano Parish Council	No	‣ Positively prepared ‣ Justified ‣ Effective	No	Yes	LP4 and Portishead expansion do not provide any improvements in transport infrastructure in Pill and Easton-In-Gordano. The transport hubs mentioned in the schedule are already being delivered as part of other programmes. Junction 19 and the A369 are at capacity and need work. At present this is down to the port to consider these changes. Adding 2200 houses and extra employment in the area needs a better plan for these pieces of infrastructure. The current rail service has a capacity of one passenger train per hour. Why is there no increase in capacity as part of this Local Plan	Any developments and increased use by the port needs a development plan for the A369, Junction 19 of the M5, bus service improvements and rail capacity.		
30736993	Kath Scargill			Yes		Yes	Yes				
16061057	Frances Sheridan			No		No	No	The Plan is not legally compliant regarding the revised plans for the Crossrail Link/major Transport Scheme from A370 to Station Road because it does not comply with NSC Statement of Community Involvement . Not legally compliant because the Crossrail Link was not included in the Local Development Scheme until October 2025 and evidence from traffic studies have not been consulted on properly for Nailsea. The plans for the Crossrail link/Major Transport Scheme from A370 are not legally compliant as they are developer-led and in the developers interest with badly thought out impacts on the local community.They are not in accordance with NSC core strategy CS1 and CS2 to discourage car use and encourage use of public transport and active travel. The plans are not legally compliant as there has been no consultation on the inclusion of the two Major Transport Schemes shown on the map as part of a resurrection of a major road scheme which was designed in 1960's to provide a link from M5 at Clevedon to Long Ashton dual carriageway and increase traffic flow contrary to NSC current policies to reduce traffic.This is not being consulted on .The road is aligned with a) the existing Major Transport Scheme at far end of Youngwood Lane housing development and b) The proposed Crossrail link road ends abruptly at the site for previous plans for a road and roundabout on the Backwell Lake side of Station Road which were refused by NSC on advice from the National Highways Authority in 2023.Application no.23/p/1145/OUT Not sound because it is not justified The Plan does not reduce CO2 emissions by comparison with building more houses in Ashton Vale .The Plan does not allocate a site for a railway station at Long Ashton/new development at Woodspring as proposed in earlier plans and is near a large new Epic employment site and Woodspring Housing development. The plan is contrary to WECA's plans to reduce private car use within Bristol. There will be increased traffic between Nailsea and the station and will not mitigate traffic levels in Nailsea itself due to a Major Transport Link /Cross Rail link from A370 to Station Roadwill as it will generate traffic from Bristol from A370 to Clevedon. It is contrary to the justification for building around Nailsea which is that it has good rail and bus connections within walking distance of housing. The new Crossrail link /Major transport scheme will reduce use of public transport because once people are driving they will	To make it sound it needs to Allocate more land in Ashton Vale and close to Woodspring new development for housing. Allocate a site for a railway station near Long Ashton and Woodspring new developments Remove the Crossrail link road/ Major Transport scheme proposed between A370 and Station Road. Reinstate the shared pedestrian/ cycle route running between land East of Backwell and Nailsea and Backwell Station proposed in Dec 2024 plans. Delay a proportion of housing allocated for Nailsea until the next Local Plan in 2040 to allow for traffic assessments and Environmental Impacts Assessments NSC to be open and transparent and legally compliant regarding plans for any Major Transport		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								drive to their destination and not change to use of the train.If fewer roads are built, more people will use bus and trains. Current traffic is generated largely by schools and out of term traffic levels fall.The traffic can be mitigated by active travel , new entry points to the schools, change in policy on catchment areas, change in school policies on school times, and use of buses. The proposed crossrail link is not Effective. It is being constructed piecemeal and forms part of 1960's plans for a road linking M5 at Clevedon and the Long Ashton Bypass/A370 .It will cause congestion and generate traffic in Nailsea contrary to NSC's policies regarding sustainability. Evidence for the Piecemeal Strategic Link between Clevedon and Long Ashton Bypass: A previous application including a road and roundabout on the opposite side of the Station Road by Backwell lake 23/p/1145/OUT was recommended for non approval by the National Highways Authority in 2023 due to traffic generation concerns at the same site on Station Road.This site is in the draft plan again. The proposed Major Transport Link/Crossrail link can be seen to align with the road within another agreed housing development at the western end of Nailsea on Youngwood Lane.The two proposed Major Transport Schemes on the plan's map do not join, do not end in a logical way yet can be seen to align with past proposals for a road between Clevedon and Bristol which have been shelved .They do not comply with current NPPF policies to reduce CO2 emissions and traffic reduction.This is a road being put together piecemeal and not with transparency nor consultation with transport policies from 1960's. The Major Transport Schemes together need to be scrutinised by an Environmental Impact Assessment and assessed against NPPF regarding CO2 emissions , traffic reduction, sustainable transport and alternatives to the Major Transport Schemes as proposed in the draft plan. The traffic-generating Major Transport Scheme of 1960's from Clevedon to A370 appears to still be a NSC objective but is not openly planned .It is piecemeal and developer-led and is not planned in accordance with NSC Statement of Community Involvement. The Major Transport Scheme does not provide an accurate Sustainability Appraisal as traffic flow around Nailsea because the measurements are taking place in Nov/Dec after the draft plan was published in October 2025. The plans for housing adjacent to Backwell School in Dec 2024 promoted active travel and assumed no new road was needed, only a cycle /pedestrian track to the station from housing East of Backwell. The cycle track/pedestrian route is more sustainable and in line with NPPF and promotes walking and cycling to the station and will not cause through-traffic on the housing developments. The new cross-rail link will not be Effective because it will generate more traffic and private cars from Bristol through Nailsea to Clevedon. It will be detrimental to the safety of pedestrians and children through the proposed development East of Backwell. It will reduce cycling and walking between the station and Nailsea due to more traffic on the road creating a pollution and hazards. It will reduce cycling and walking to the station from the housing developments East of Backwell which is only 10minutes away by active travel; It will increase the costs to NSC due to funding for the road and mitigating the detrimental impacts listed above on Nailsea. The Major Transport Scheme will never be built as it is too costly. It will increase the costs to NSC to resist further applications and appeals by developers for housing outside the draft plan adjacent to the proposed road on Backwell Common. It will not be effective because if housing developments are built before the road is built either they will not need the road or there will be congestion for years until funding is found for this expensive scheme. The plans should be made without the influence of developers and a Major Transport Scheme should not depend on developers, which is what is happening.Rubix developers have spurs off the proposed road near to Backwell Common and outside the proposed housing areas.These spurs indicate future plans to develop these fields.The developers have offered "opportunity land" and sports fields which have not been justified.The most popular amenity is provided by country footpaths for walking.The Nature Park and sports pitches will generate the need for parking and traffic movements on Station Road adding to congestion.NSC needs to plan more objectively. It will increase traffic congestion on A370 between Bristol and Clevedon. The new road will be detrimental to active travel between the new housing estate East of Backwell as proposed by Rubix developers.The housing estate is 10 minutes to the station and A370 and would not be as effective as walking and cycling in accessing the station. There is a lack of Duty to Co-operate with WECA because the plans will generate traffic contrary to WECA's plans to reduce traffic into Bristol along A370..	Sceme from M5 at Clevedon to A370 .To make it legally compliant it needs to be included in the Local Development Scheme and comply with the Statement of Community Involvement to include Nailsea Town Council and residents showing the plans for a Major Transport Scheme and consulting fully on views on impact on Nailsea with officers and councillors present. It needs to consider alternatives by providing a Sustainability Appraisal in consultation with Nailsea residents. Not have NSC plans changed by sweeteners provided by RUBIX with promises of "opportunity land". Clarify how sites on Youngwood Lane will provide active travel to the station and car access without generating excess CO2 and traffic movements. NSC needs to consult with WECA regarding the Crossrail link/Major Transport Scheme and a railway station at Ashton Vale.		
711873	Easton-in-Gordano Parish Council		Pill & Easton-in-Gordano Parish Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Policy LP11 is unsound (not justified, not effective, and not consistent with national policy) because: The proposed “active travel route” across Markham Brook (shown on the Policies Map and listed in Schedule 7) would cut straight through irreplaceable ancient woodland and priority habitat deciduous woodland in the Gordano Valley. → Natural England’s Standing Advice (2024) and NPPF paragraph 193c require a minimum 15-metre untouched buffer on each side of ancient woodland. The government's Environmental Improvement Plan 2025 (published 1 December 2025) reinforces this by committing to maintain protections for ancient woodland as irreplaceable habitats and evolve Biodiversity Net Gain to ensure infrastructure like active travel routes delivers net environmental benefits without harm. No layout has ever been produced that can meet this requirement. The route is therefore physically undeliverable without destroying habitat that national policy says must not be lost unless there are “wholly exceptional reasons” and full compensation – neither of which exist here. The Sustainability Appraisal and the rest of the evidence base contain no assessment whatsoever of this route’s impact on ancient woodland, priority habitats, protected species (e.g. bats), or the legal need for buffers. This makes the policy not justified (NPPF para 36b). No alternative alignments appear to have been examined. The council has not demonstrated that a deliverable route is possible at all – making the policy not effective. The proposed Markham Brook active travel bridge and path would destroy irreplaceable ancient woodland and priority habitat with no 15 m buffer and no compensation strategy. This directly breaches NPPF paragraphs 193c and 192 and renders the policy unsound. This same route is being relied on to “mitigate” the traffic impact of the 1,100 homes proposed under Policy LP4. If the route cannot be built, the mitigation fails and the housing allocation becomes even less deliverable.	Delete the Markham Brook active travel route from Policy LP11, Schedule 7, and the Policies Map, or redraw it so that it demonstrably avoids all ancient woodland and priority habitat with the required 15 m buffers (Natural England Standing Advice 2024). Align with Environmental Improvement Plan 2025 commitments by requiring a Biodiversity Net Gain assessment (at least 10%) and integration with Local Nature Recovery Strategies to prove no net habitat loss. If no deliverable alternative exists, the council must remove the reliance on this route as mitigation for the Pill & Easton-in-Gordano strategic location (Policy LP4) and reassess the housing numbers accordingly. Reroute the Markham Brook link to avoid private land and existing bridleway PE2/1, or delete it entirely pending full landowner consultation.		Markham Brook Ancient Woodland and Priority Habitat Inventory.pdf
8052353	Diane Snape			No	• Positively prepared • Justified • Effective	Unsure	Unsure	Wraxall/Failand The Portbury Lane - Clevedon Road junction and the Wraxall Hill - Clevedon Road junction are accident blackspots and bottlenecks. Junction improvements are urgently needed to improve safety and traffic flow. A roundabout with filter lanes for traffic turning into and out of Portbury Lane would be my suggestion. Consider use of part time traffic lights at busy times for the Wraxall hill junction.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 					• Consistent with national policy			(It was not clear to me where to enter this comment so entering it under the Broad policy heading)			
39037377	Barry Stirling			Unsure		No	Unsure	North Somerset Council champions Liveable Neighbourhoods to alleviate areas whose residents are blighted by traffic. Yet, today the heavy traffic has already made Hanham Way an unliveable neighbourhood, contrary to North Somerset Council policy. Yet in the plan North Somerset Council propose developments that will produce much additional traffic that will be a further nuisance making residents lives even more unliveable. This imposition of significantly more traffic to an already badly affected area is completely at variance to the proposal VISION on Page 11 of the document which states 'Regeneration will transform and breathe new life into existing towns and valued areas will be protected. People's well-being, a strong sense of community, opportunity and fairness will be at the heart of all development in North Somerset'. The traffic from the proposals would be detrimental to many people's well-being and certainly would not represent fairness, particualry on the Hanham Way/Causeway/Washing Pound Lane route which is overused already. Originally a cul-de-sac, Hanham Way was opened up as a through road and linked to The Causeway by the Council in the 1990's and ever since the route has become ever busier, being used as a 'rat run' to/from Nailsea and Backwell to Clevedon/ M5/ Portishead, avoiding Nailsea town centre. A 'Nailsea Site Allocations Plan Transport Mitigations Report' produced by NSC Highway Dept in 2017 estimated the proposed developments in the report would mean 40% additional traffic using Hanham Way and The Causeway but offered NO mitigations. So even though many of those developments are not yet complete Hanham Way already has approx 6000 vehicle movements per day (which is higher than the traffic level forecast in the report for 2026) and increasing as further homes are completed. It will increase further have more as those developments are progressively completed and also by the further 600/day from the recently approved Vistry building proposal behind Causeway View (which I and local councillors spoke against for this reason). All this traffic overload is before any of the large and extensive 2041 plan developments are even built. I do not understand how the Council can even table a proposal like the local plan 2041 when there is such an obvious deficiency in the road links through and to/from Nailsea. Surely a traffic forecast and mitigation study /assessment should have been conducted and included in the Local Plan2041 proposal to show it was even feasible as regards traffic. Such an assessment should be carried out immediately and it will show that the existing roads (particularly The Causeway/Hanham Way route, but also the B3130) do not support the proposed development. I do not believe the Council has carried out CD13:02 Noise assessments for: - The opening up of Hanham Way to The Causeway for through traffic in the 1990's - The road changes for the Vistry planning proposal for Causeway View - The massive increase of traffic and associated noise that exists now on Hanham Way due to this through traffic. I believe the traffic noise levels measured today (and its duration) would be unacceptable for any new proposed development. No new plan would permit or consider it acceptable to build properties adjacent to and so close to residential roads and or allow so much traffic to pass through such a development at such a high speed. So why do North Somerset Planning department consider it acceptable to apply exactly those conditions retrospectively to Hanham Way/The Causeway? It is clearly not acceptable and reason alone to not approve the 2041 plan that relies on this being used a through route. Noise impact inside properties such as mine is bad today even with insulation and all double glazed windows closed. In better weather opening windows or using the garden for leisure are impossible as the noise is even more excessive. Such noise impact assessments for all the 2041 plan developments should be performed for each proposed development and may well indicate the unsuitability and inability to develop due to the creation of excessive noise hazards. To not do so is surely out-of-process and not legal.	Traffic assessments, road capability, safety and robustness assessment and noise measurements/assessments required to be carried out and published to determine capability and acceptability of use of Hanham and The Causeway as a route to take current traffic plus that generated by the 2041 proposal.		
31062913	R Storrar		KWAW	Yes		Yes	Yes			The safeguarding of land for mass transport systems is very sound and links together the areas that have been selected for development. Any other developments, scattered across the more remote areas of the county, will not be able to take advantage of this excellent policy, which is just one more reason to prevent opportunistic developers/landowners putting forward housing plans outside those proposed.	
12476353	Historic England (R Torkildsen)		Historic England					Due to the proximity of this proposed new road to Moorside Farmhouse Road and Wooleys Farmhouse, both Grade II Listed buildings, great care should be taken to limit the impact by a restrained and landscape led design response. Special regard must be had to the preservation of their setting in accordance with Section 66 of the Planning (Listed Buildings and Conservation Areas) Act 1990.			20251210 NSCLP Reg 19 response Dec 2025 RT.docx
62846721	Cleeve Parish Council		Cleeve Parish Council	No	• Positively prepared • Justified • Effective			We do not consider the North Somerset Local Plan 2041: Pre-Submission Plan to be sound. Based on the detailed representations of Cleeve Parish Council, we believe the Plan fails three of the tests of soundness set out in NPPF paragraph 36: Positively Prepared, Justified, and Effective. 1. Positively Prepared The Plan does not adequately address the needs of young people or newly forming households, nor does it ensure that new development will be properly supported by essential infrastructure. The repeated use of discretionary language ("will be expected", "should have regard to") leaves critical requirements—such as drainage, healthcare capacity, active travel connections, affordable housing percentages, biodiversity measures, renewable energy deployment, and sustainable design—insufficiently guaranteed. The Plan also fails to provide a clear and sustainable policy position on future growth at Bristol Airport, or on how Green Belt releases will be compensated or justified. As a result, the Plan does not convincingly meet the district's needs in a sustainable and deliverable way. 2. Justified The policy choices taken in the Plan do not always represent the most appropriate strategy when tested against reasonable alternatives. The evidence base appears inadequate or incomplete in several areas, including: (a) the justification for Green Belt releases at Bristol Airport; (b) the robustness of climate-adaptation measures given the known risks of flooding, sea level rise, extreme heat, and pressure on water resources; (c) the lack of evidence demonstrating that non-mandatory design guidance will achieve sustainable outcomes; (d) the omission of low-rise flats in existing towns as a viable and necessary option for delivering affordable housing for young people; and (e) insufficient assessment of the landscape, safety, environmental and carbon impacts of airport-related growth, including the absence of a cumulative emissions assessment. In each case, reasonable and more sustainable policy alternatives have not been adequately explored. 3. Effective	Policy LP11: Transport (Schedule 7): Cleeve Parish Council has made representations that there should be an active travel route between Cleeve / Claverham and Backwell, in particular to enable school students to travel to and from school in Backwell. Cleeve Parish Council would like this to be written into Schedule 7 of the Plan.		Submission on behalf of Cleeve Parish Council in respect of Pre.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The Plan's delivery mechanisms are weak and do not provide confidence that its policies will be realised. Critical infrastructure (roads, drainage, healthcare, active travel routes, mass transit provision and energy resilience) is not tied to development in a sufficiently enforceable manner. Policies that rely on voluntary interpretation or "expectations" are unlikely to secure required outcomes, particularly in relation to affordable housing percentages, design quality, biodiversity net gain, native woodland expansion, protection of commons, and the safeguarding of Best and Most Versatile agricultural land. Policies concerning Bristol Airport do not demonstrate effective cross-boundary working or credible mitigation strategies, while the approach to flood-risk management does not provide sufficient assurance that developments requiring the Exception Test would be safe, sustainable, or financially deliverable. As drafted, there is insufficient certainty that the Plan can be implemented as intended.			
63070401	Emilia Leung			No	• Effective	No	Unsure	The Proposal is overly reliant on inflated national targets and infrastructure that cannot be delivered – whilst at the same time, ignoring local constraints. The Proposal is also inconsistent with national policy. Green Belt boundaries should only be altered in exceptional circumstances – and the review must show no "clear evidence that doing so would fundamentally undermine the purposes…of the remaining Green Belt".			
4618561	Barrow Gurney Parish Council		Barrow Gurney Parish Council	No				Policy LP11: Transport infrastructure, allocations and safeguarding states: (Page 80) Land is allocated or safeguarded and defined on the Policies Map and set out in Schedule 7, which forms part of this policy, for the delivery of transport schemes, the improvement of existing services or the creation of sustainable transport links and facilities. In addition to the specific schemes identified in Schedule 7 the following are proposed for delivery during the plan period: (Inter-alia): • Mass Transit Scheme between Bristol Airport and Bristol City Centre In the sub-text below the policy the first paragraph states This policy provides for safeguarding routes for potential transport improvements, including active travel routes, road, rail and bus infrastructure. The approach to existing and proposed active travel routes is set out in Policy DP16. The fourth sub-text paragraph states Transport schemes included in the JLTP4 enhance connectivity and road safety and promote the use of public transport. The major transport schemes proposed to be delivered over the plan period are the re-opening of Portishead Branch Line and the Banwell Bypass which are at an advanced stage of planning and delivery, and the potential for mass transit corridors from Bristol along the A38 to the Airport. The JLTP4 also identifies other longer-term aspirations such as a potential new motorway junction south of J21 of the M5. It seems clear from the highlighted words that the schemes listed in addition to those in Schedule 7 are still only potential schemes. There is no certainty that they will be constructed. Whilst the Portishead Branch Line and Banwell Bypass are at an advanced stage of planning and delivery, the potential for "mass transit corridors" along the A38 have no such status. Yet it is absolutely essential that a mass transit corridor is constructed between the City and the Airport if the Woodspring development and the airport expansion to 15mppa (in addition to the EPIC campus - al-ready approved) are to go ahead without causing transport mayhem, particularly on the A38. Two further questions also arise: • Why is it that the paragraph refers to the potential for mass transit corridors (plural) "along the A38," when it is clear that this corridor is not capable of being upgraded as a mass transit route along its entire length because of the impediment of the Barrow Tanks? • Why are developers being asked to make provision for potential alignments through the Wood-spring site if the intention is to have a mass transit corridor along the A38 to the airport? Given the uncertainty raised by both these questions it is surely imperative that a route alignment is identified through the Woodspring site as a precursor to development, so that there is no ambivalence about where it might eventually run, or worse still there is no potential for the route to be implemented once development has stymied potential options. The 5th and 6th sub-text paragraphs state In tandem with the Local Plan, North Somerset is preparing an Infrastructure Delivery Plan setting out the key infrastructure requirements, including transport infrastructure, needed to implement the Local Plan proposals, and how it is to be delivered and monitored. The schemes listed in this policy are within the IDP and are described as longer term schemes proposed during the plan period. Specific alignments or scheme details have not yet been confirmed. They include: (inter alia) • Mass Transit Scheme between Bristol Airport and Bristol City Centre – to deliver a frequent, reliable, high quality public transport route between Bristol Airport and Bristol city centre. Once again this suggests that there is no urgent requirement for the mass transit scheme, when there absolutely is now, let alone at some point in the future when the development of Wood-spring has been half-completed (with circa 1,750 new homes, 5ha employment land, two schools, town centre) bringing with it an enormous increase in private transport usage which will, in significant numbers, inevitably be trying to gain access via the A38 and Colliters Way until there is a mass transit route capable of transporting them into Bristol or out to the airport by a regular public transport service. The EPIC campus is also on record as saying that it was imperative it located to its chosen site because of its proximity to the airport in order that its headquarters staff in the US, European and Middle East locations could have easy access to its new campus. The route options between EPIC and the airport are A38 / Colliters Way, or A38 / B3130 through Barrow Gurney / A370 / Colliters way. Again, given the size and projected importance of the campus, this will generate considerably more traffic. CONCLUSIONS Transport Repeated use of the word "potential" in policies relating to provision of a mass transit route be-tween the City and Airport does not inspire confidence that it will ever be delivered, yet it is absolutely essential to alleviate existing congestion that frequently occurs on the A38 in particular, but also Colliters Way and the A370 in the vicinity of Gurney roundabout. We believe that the further expansion of the airport to accommodate 15mppa passenger throughput should only be permitted provided that the new mass transit route has been constructed in advance. In this regard we do not feel the plan has been positively prepared. We are not sure to what extent discussion has taken place with Bristol City Council and The West of England Combined Authorities on potential routes, or whether the Duty to Co-operate has been observed. Woodspring, Transport and the Airport We also do not believe the proposed development of a new settlement comprising 3,500 dwellings, 10ha employment land, 3 or 4 new schools, a new neighbourhood centre and much more besides, at Woodspring is a sound planning proposition until and unless a firm route alignment for a rapid transit connection between Bristol and the new settlement has been established. Logically it would be sensible to define a continuous mass rapid transit route between the City centre and the airport as a priority,			Local Plan response 12.25 NT final.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								so that development at Woodspring can be planned with greater certainty based upon an established route alignment, and reliance on using private transport to get to the city or the airport would be significantly diminished. It would also ensure that if the airport were ever permitted to expand to 15mppa over time (which we as a Parish Council would prefer not to be the case) it could encourage greater use of public transport to enable it to do so. To suggest that developers should make allowances for a route to be threaded through the Woodspring development in the future, once development is well underway, gives a strong indication that the plan has not been positively or effectively prepared. Until an alignment for a new, high quality, segregated, mass transit route between Bristol City Centre and the airport is defined as a principal policy requirement, we consider proposals for the development at Woodspring and the future expansion of Bristol Airport would have an unacceptable impact on the existing transport network to the south west of Bristol, and in this regard we consider the Local Plan (2041) Pre-submission Plan (Reg 19) to be unsound. Please see full comment attached, with further observations on the cumulative transport implications of the plan on Barrow Gurney.			

Policy LP12: Bristol Airport

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
63213025	BackwellPC NailseaTC Flax BourtonPC BrockleyPC BackwellRA Nailsea Action Group	Lucy White Planning Limited	BackwellPC NailseaTC Flax BourtonPC BrockleyPC BackwellRA Nailsea Action Group	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure		BPC and NTC support a mass transit link for the airport, recommending its implementation when passenger numbers exceed 12 million annually. While Bristol Airport plans to expand to 15 million passengers by the mid-2030s and potentially 20 million, BPC opposes further growth but insists on mass transit if expansion occurs. The Airport's traffic is having an adverse effect on local communities including Backwell. The paragraph on the impacts of airport operations and of any new airport development on the living conditions of residents should include the word REDUCE as well as mitigation. BPC and NTC recommends that the term 'reduce', regarding nighttime flights, be included in Policy LP12 itself. The Environmental Audit Select Committee advised the Government (25 October 2025) to assess cumulative emissions from all airport expansions and evaluate their impact on Net Zero targets. The Government needs also to review evidence of overall economic benefits which includes taking account of the tourist deficit. Bristol Airport's business model does more to support the Mediterranean economy that the UK's and this requires a full assessment. We expect NSC to require all planning decisions for airport expansion to take into account a cumulative assessment of emissions and economic benefits, include the tourist deficit. The spatial strategy should recognise the influence of Bristol Airport as a key employer and the benefits derived from investment in the A38 corridor which could be serve to support housing allocations in its vicinity. NSC must ensure that Bristol Airport comply with their current planning conditions and put more resourced into supporting villages impacted by the airports operation, Backwell is still waiting for parking restrictions and reduction in a speed limit at Downside road and Hyatt's Wood road, there is still no safe zone and bus stop for children wating for school transport, vehicles drive at speed along an pavemented rural road. The absence of these initiatives first mooted over 5 years ago is unacceptable to the airport's immediate neighbours. BPC and NTC recognise the role of the Airport, the committed development to expand capacity to 12mmpa and the Airport's proposals to expand further to 15mmpa in the plan period. The airport has a significant impact on the local communities of Nailsea and Backwell, with a significant proportion of vehicular trips passing through Backwell and Nailsea to access the rural lanes to the west end of Nailsea, through Chelvey and Brockley and via Dark Lane (Backwell) to Hyatts Wood Road, which lead to Bristol Airport. These routes are frequently used by taxis and passengers driving to the airport via junctions 20 and 19 of the M5. This 'rat running' of passenger vehicles and taxis places significant pressure on the rural lanes between Nailsea, Backwell and the A38, raising significant safety concerns for the local community. In addition, Backwell and Downside experience significant issues with illegal and inconsiderate		251118 Local Plan Reg 19 2025 reps FINAL.pdf R01 - Transport Statement - Rev 3 FINAL.pdf Hydrology LP3 BPC_NTC Appendix_2.2-compressed.pdf Hydrology LP3 BPC_NTC Appendix_2.1-compressed.pdf Hydrology LP3 BPC_NTC Appendix_9-compressed.pdf Hydrology LP3 BPC_NTC Appendix_7-compressed.pdf Hydrology LP3 Summary BPC_NTC Part 2 (1).pdf Hydrology LP3 Summary BPC_NTC Part 1 (1).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									parking of passenger vehicles, which further impact highway safety and residential amenity. NSC's Highway Team recognises that Dark Lane, Backwell takes as much traffic as Brockley Coombe and BPC has requested measures to reduce traffic volumes from the airport through Backwell, however, no measures are specified through this Local Plan. BPC and NTC welcome the criteria for consideration of any future planning applications for expansion of the airport, however criterion 3 should explicitly require development proposals to include measures to actively discourage and prohibit the use of the rural lanes and direct vehicles to use the A38 corridor. In addition, criteria 2 should include reference to the impact of lighting and light pollution		
58601857	S Ashworth			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The proposed expansion of Bristol Airport, including the release of Green Belt land for development and the extension of airport infrastructure, raises significant concerns about environmental and community impacts. 1. Loss of Green Belt Land The release of Green Belt land to accommodate the airport's expansion and new housing developments undermines the fundamental purpose of the Green Belt to protect rural spaces from urban sprawl. The proposed compensation measures, including the new Green Belt area south of Nailsea and west of Backwell, are inadequate to offset the loss of protected land, particularly in light of the expansion's impacts on local ecosystems and wildlife habitats. Local residents have rightly been compliant with green belt planning laws for decades and it is unacceptable to bulldoze it now solely for Bristol Airports financial gain. 2. Threat to Local Wildlife and Felton Common Felton Common, a Local Nature Reserve and Site of Nature Conservation Interest, is directly threatened by the proposed developments. The Local Plan fails to adequately recognise its status as a Common and the urgent need for stronger protections. Any development or infrastructure projects that affect the Common could disrupt its biodiversity and harm local wildlife. We urge for a specific policy to safeguard Felton Common, ensuring its preservation. 3. Disruption to Local Communities and Traffic Concerns The expansion will result in increased traffic on rural country lanes, directly affecting the quality of life for local residents. The already limited infrastructure around the airport, including narrow country roads, will be overwhelmed by the surge in vehicles. Increased traffic poses safety risks, exacerbates congestion, and reduces air quality for surrounding communities. The lack of clarity on the proposed mass transit route further complicates the situation, leaving local residents uncertain about the potential disruption. The airport expansion plans in isolation could not be sustained by the current infrastructure, yet it has ignored the increased housing and developments proposed in local villages and towns which will further add traffic and congestion to the local roads. The area cannot accommodate these increases. 4. Climate and Air Safety Concerns Expanding the airport beyond its current capacity poses risks to both the local environment and air safety. The cumulative emissions from airport expansion need to be assessed in relation to national Net Zero targets, yet no clear strategy has been presented. Additionally, the extension of the runway and the installation of new lighting infrastructure could elevate risks in the surrounding area, particularly Felton Common, which falls within an Air Safety Zone. The proposed replacement land, even closer to the airport, raises further safety and environmental concerns, rendering it unsuitable for recreational use or mitigation efforts. The wildlife that will be displaced from local developments and from loss of green belt land will negatively impact our protected bat species and birds known to the area. In light of these issues, I strongly oppose the further expansion of Bristol Airport. It poses a serious threat to the Green Belt, local wildlife, and the well-being of nearby communities. We urge the council to reject the plans and prioritise the protection of the environment and local quality of life.	The proposed plan for Bristol Airports should be completely modified. It is difficult to see how the airport can credibly argue for further growth when it is already failing to demonstrate that it can operate effectively within its current size and capacity. Residents and passengers experience frequent congestion, inadequate infrastructure, and operational inefficiencies that clearly indicate the airport is not meeting even basic expectations for service and accessibility. Until Bristol Airport can provide clear, measurable evidence that it is capable of running sustainably, safely, and efficiently at its present scale, any proposal for expansion is premature and unjustified. The priority should be addressing existing shortcomings, improving transport links, ensuring compliance with environmental obligations, and meeting the needs of the community. Expansion without first resolving these longstanding issues would not only exacerbate current problems but also place additional strain on local infrastructure and the surrounding environment. For these reasons, I strongly oppose the proposed expansion and urge decision-makers to require demonstrable improvements before any increase in capacity is considered.		
62849665	Jessica Adams			No	• Effective	Unsure	Unsure	The plan should not halt current expansion plans for Bristol airport and halt any future plans on the grounds that we are in a climate emergency and have gone beyond seven of the nine planetary boundaries needed to sustain life on this planet. Millions of people have already died in the Global South due to the impacts of climate change and we are in the midst of the sixth mass extinction. Everything Bristol Airport is currently doing and proposing goes against all life and the future of humanity. In time, Bristol Airport expansion will be viewed as an act of ecocide which wittingly contributed to the death of millions of people globally and knowingly negatively impacted the health of local residents, biodiversity and ways of developing the local area economically which would restore nature, community and life to this planet.	Stop any further expansion activity by Bristol airport and block future planning applications.		
62849793	E Arnold			No	• Justified	Unsure	Unsure	There can be no justification for the loss of green belt land and destruction of habitats for the profit of a commercial entity. The airport has requested to expand again up to 15 million ppa and is proposing a compulsory purchase order of common land. They will continue pushing to expand into the land around them to the detriment of the local environment and residents if more land is released to them. They've had their permission to expand and to keep their enormous car park (despite transport infrastructure not anywhere near being improved yet) so enough is enough. They don't need to expand anymore, it's just greed.			
14822593	Sally Bartlett			Yes		Yes	Yes			In general I support this plan noting the following to ensure the proposal remains sound: - we do not need any expansion of Bristol Airport for a very large number of reasons inc, pollution & climate change, lack of transport links, better alternatives elsewhere esp Cardiff and Exeter, cf arguments put forward by BAAN: Bristol Airport Action

1019201	Wrington Parish Council		Wrington Parish Council					With Bristol Airport within our Parish we naturally have enormous concerns for the impact it has on the immediate vicinity and on the wider North Somerset community. We appreciate national policy dictates support of expanding airports but would want to see greater recognition of the impact this brings not just within the airport boundary but much wider. Most people would recognise that the location of this airport is not suitable alongside the environment and infrastructure constraints. Much more effort is required for proper investment and the will to encourage airport passengers who travel to the airport particularly from outside our local area to be provided with solutions other than the car. Increases in passenger numbers bring increasing pressures on our roads and local environment. North Somerset residents should not bear the burden of this damage.			
20575201	Andy Connell			No	• Justified • Effective	Unsure	No	You have a duty to cooperate with local people and groups yet you give the impression that the Airport already has permission to expropriate common land (Felton Common) for purposes of expanding the runway. At no point was I, or anybody I know made aware that Bristol Airport would permitted to build on publicly owned, green belt. I object on: The inadequate compensation on offer The environmental impact on noise levels caused by bigger planes. The environment impact of increased CO2. The contradiction of extant environmental legislation directly due increased size and number of the planes.	The reversal of any decision/ agreement from North Somerset Council, to hand publicly owned, green belt land to Bristol Airport, so that they can expand their commercial operations.		
29270145	Nicky Connell			No	• Justified	Unsure	Unsure	I am confused! I have objected to the expansion of the airport on a number of occasions. I recall that previous objections from various bodies, including the North Somerset Council, resulted in planning for further expansion being refused. this was overruled by central government. Now the airport is able to go ahead with further expansion which involves development on the green belt. What is the point of asking people what they think when the owners of the airport seem to get whatever they want. Where will this end?!			
31037185	Nigel Cooke			Yes		Yes	Yes				
51477249	Burrington Parish Council		Burrington PC	No	• Justified • Effective	Yes	Unsure	The Local Plan proposes to remove from the Green Belt land required by the airport as ‘operational land’ which is currently defined in the planning permission granted on appeal in 2022 that permits growth of the airport to accommodate up to 12 million passengers per annum (mppa). However, the airport adopted a new Masterplan in June 2025 to increase capacity from 12 to 15 mppa. A planning application is expected early in 2026. Will that Masterplan require a further release of land from the Green Belt to accommodate the operational requirements of the expansion to 15 mppa? If so, that should be clarified in the local plan.	The airport adopted a new Masterplan in June 2025 to increase capacity from 12 to 15 mppa. A planning application is expected early in 2026. Will that Masterplan require a further release of land from the Green Belt to accommodate the operational requirements of the expansion to 15 mppa? If so, that should be clarified in the local plan.		
32925633	Bath and North East Somerset Council		Bath and North East Somerset Council							B&NES would welcome working closely with North Somerset to manage the impacts of Bristol Airport on the local highway network, particularly within the Chew Valley. We would encourage the inclusion of commitments to deliver cross-boundary sustainable transport interventions, such as enhanced bus services, demand management measures, and active travel links, to reduce reliance on private car trips and mitigate congestion on rural routes. Also, while the plan references a Mass Transit Scheme linking Bristol Airport and Bristol City Centre, there is limited detail on improving cross-boundary public transport links to Bath and North East Somerset. We would welcome further clarification regarding the planned integration with the West of England Combined Authority (WECA) mass transit proposals. Any approach should be consistent with the Joint Local Transport Plan and West of England Growth Strategy objectives for modal shift. Bristol Airport: Green Belt and Policy Approach The Draft Local Plan sets out the intention to remove land from the Green Belt at Bristol Airport. The land proposed to be removed reflects and is no greater than the area of land covered by planning permission (18/P/5118/OUT allowed on appeal) for expansion of the airport. In effect NSC are reflecting the reality of airport expansion that will be delivered over future years. B&NES council supports the approach that development will still be subject to policies (including Policy DP20) ensuring uses are only those directly related to airport expansion and that environmental impact will be mitigated and sustainability criteria are met.	North Somerset Local Plan Reg 19 Consultation 2025 FINAL.pdf
51323777	Cllr Thomas Daw		North Somerset Council	No		No	Yes	Policy LP12 proposes releasing land at Bristol Airport from the Green Belt to accommodate growth up to 12 million passengers per annum. While this reflects the consented planning application, it raises serious concerns about sustainability and climate commitments. Removing Green Belt protection undermines long-standing planning principles designed to prevent urban sprawl and protect the countryside. Expansion of the airport will inevitably increase carbon emissions, traffic congestion, and noise pollution, directly conflicting with the Local Plan’s wider objectives on climate change (SP2) and sustainable development (SP1). The compensatory improvements to remaining Green Belt land are insufficient to offset the environmental harm caused by airport expansion. A truly sustainable approach would prioritize investment in low-carbon transport alternatives and regional connectivity rather than facilitating further aviation growth.	Policy LP12 should be reconsidered to ensure alignment with national net-zero targets and the council’s own climate emergency declaration.		
62827489	Cllr Mike Dunn		North Somerset Council	Unsure		Unsure	Unsure				

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 62486049	Molly Foskett			No	• Positively prepared • Justified • Effective	Unsure	Unsure	Diminishes the quality of life of residents of all local and surrounding areas of the airport. Little thought as to how this will impact the parking issues. It will have a negative economic impact on said areas due to a plummet in housing prices and inability to sell home to those opposed to the plans. Astronomical environmental issues will arise resulting from the building and continuation of use of the expanded airport via carbon emissions, this does not correlate with the carbon neutral plans at the airport at present. There are many different species of wildlife that will be displaced. The roadway infrastructure cannot support an increase in passengers. The parking does not support this either due tot the cost. History can testify that long haul flights from Bristol rarely sell out due to the increased price tag compared to London or elsewhere even with the travel to those places. DO NOT PROCEED NO LOCALS WANT THIS AND IT BENEFITS NOBODY EXCEPT STAKEHOLDERS WHICH DO NOT RESIDE IN THE UK OR HAVE ANY BESTED INTEREST IN ITS PEOPLE. THIS IS CORRUPT AND A TERRIBLE USE OF PUBLIC LAND THAT HAS BEEN THAT WAY SINCE 1200s!!!	Scrap the plan entirely. The airport is big enough, and we are tired of them moving the goal posts and going beyond every measure they agree to.	I do not support this plan to any extent. Not at all.	
62792161	Nempnett Thrubwell Parish Council		Nempnett Thrubwell Parish Council						On transport infrastructure, the council insists on thorough consultation regarding the Mass Transit link to Bristol Airport, emphasising the need for rural communities to be considered. Regarding Bristol Airport's growth, support is given to a mass transit link only if directly tied to passenger increases, with a firm stance against expansion beyond 12 million passengers per annum unless transit provision is in place. The council requests stronger policy wording to include reductions in impacts, especially night flights, and advocates for cumulative environmental and economic assessments for any future airport expansion.		
62777089	Philip Heath			No	• Effective	Unsure	Unsure	It is well know that Bristol Airport are extremely aggressive in their pursuit of growth, to the detriment of the local community and to the detriment of the environment. They have currently drafted a masterplan proposing to grow the airport to 15m passengers. It is understood that North Somerset wish to present some sensible constraints on that growth. Unfortunately, as drafted, the language in the plan is very equivocal. This give Bristol Airport a huge amount of "wriggle-room" in which it can aggressively shoe-horn its aspirations, claiming it is compliant with the local plan and yet continuing its ongoing campaign to trample on local communities and the environment. If there is any doubt that Bristol Airport are likely to take this approach in the future, simply consider what they have done for many years in the past. The language in the plan needs to be much clearer about what NSC consider to be acceptable and what they consider to be unacceptable.	Pg 82 - first bullet - what does "appropriately justified" mean? Second bullet - what mitigation is deemed to be "adequate?" Why is "improved" qualified with "wherever possible?" A significant percentage of biodiversity net gain should be specified as a bare minimum. Third bullet - "appropriate" surface access requirements is too weak. Specify that all future growth must be handled using public transport - local roads are already clogged with airport traffic. Fourth bullet - "where necessary" - rephrase to say "improvements made to mitigate all adverse impact to airport operations" Fifth bullet - who is to judge whether benefits are "maximised?" And what about "net benefits" - ie benefits as reduced by harms? What about saying benefits must outweight harms by 10:1? Sixth bullet - again, who judges whether renewable energy generation is "maximised?" Much tighter targets are required. What about carbon neutral travel to and from the airport? How is the airports "net zero" commitment measured? Does it include offsetting (which is typical just green-wash)? Similar points apply throughout the "justification" section, where weak language provides ample opportunity for Bristol Airport's advisors to pay lip-service to the local plan, while destroying local communities and the local environment.		
51490785	Parish Councils Airport Association		Parish Councils Airport Association	Yes		Yes	Yes	The PCAA support the mass transit link and suggest that the delivery of the mass transit is linked to passenger growth at the Airport. Bristol Airport predicts that growth to 15 mppa will be in the mid 2030's. The Local Plan covers the time period to 2041. The Airport has made known that it wishes to grow to 20 mppa. If the airport expands past 12 mppa then a mass transport plan will be needed. The paragraph on the impacts of airport operations and any new airport development on the living conditions of residents should include the word 'REDUCE' as well as mitigation. The PCAA note that use the word reduce in relation to nighttime flights in the justification of Policy LP12, but the word needs to be in the actual policy. On climate change the Government has been advised by the Environmental Audit Committee 25 October in a report titled 'Airport expansion and climate and nature targets 'to produce a cumulative assessment of emissions of all airport expansion plans and how it relates to the Net Zero target'. We expect NSC to include a cumulative assessment of emissions is necessary of airport expansion plans within the policy LP12.	The paragraph on the impacts of airport operations and any new airport development on the living conditions of residents should include the word 'REDUCE' as well as mitigation. The PCAA support the mass transit link and suggest that the delivery of the mass transit is linked to passenger growth at the Airport.	
62816641	Colin Knowles		Cleeve Parish Council	No	• Positively prepared • Justified • Effective	Yes	Unsure	We do not consider the North Somerset Local Plan 2041: Pre-Submission Plan to be sound. Based on the detailed representations of Cleeve Parish Council, we believe the Plan fails three of the tests of soundness set out in NPPF paragraph 36: Positively Prepared, Justified, and Effective. 1. Positively Prepared The Plan does not adequately address the needs of young people or newly forming households, nor does it ensure that new development will be properly supported by essential infrastructure. The repeated use of discretionary language ("will be expected", "should have regard to") leaves critical requirements—such as drainage, healthcare capacity, active travel connections, affordable housing percentages, biodiversity measures, renewable energy deployment, and sustainable design—insufficiently guaranteed. The Plan also fails to provide a clear and sustainable policy position on future growth at Bristol Airport, or on how Green Belt releases will be compensated or justified. As a result, the Plan does not convincingly meet the district's needs in a sustainable and deliverable way. 2. Justified The policy choices taken in the Plan do not always represent the most appropriate strategy when tested against reasonable alternatives. The evidence base appears inadequate or incomplete in several areas, including: (a) the justification for Green Belt releases at Bristol Airport; (b) the robustness of climate-adaptation measures given the known risks of flooding, sea level rise, extreme heat, and pressure on water resources; (c) the lack of evidence demonstrating that non-mandatory design guidance will achieve sustainable outcomes; (d) the			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								omission of low-rise flats in existing towns as a viable and necessary option for delivering affordable housing for young people; and (e) insufficient assessment of the landscape, safety, environmental and carbon impacts of airport-related growth, including the absence of a cumulative emissions assessment. In each case, reasonable and more sustainable policy alternatives have not been adequately explored. 3. Effective The Plan's delivery mechanisms are weak and do not provide confidence that its policies will be realised. Critical infrastructure (roads, drainage, healthcare, active travel routes, mass transit provision and energy resilience) is not tied to development in a sufficiently enforceable manner. Policies that rely on voluntary interpretation or "expectations" are unlikely to secure required outcomes, particularly in relation to affordable housing percentages, design quality, biodiversity net gain, native woodland expansion, protection of commons, and the safeguarding of Best and Most Versatile agricultural land. Policies concerning Bristol Airport do not demonstrate effective cross-boundary working or credible mitigation strategies, while the approach to flood-risk management does not provide sufficient assurance that developments requiring the Exception Test would be safe, sustainable, or financially deliverable. As drafted, there is insufficient certainty that the Plan can be implemented as intended.			
43203041	National Highways		National Highways					Land at Bristol Airport will be released from the Green Belt to reflect the operational requirements of the consented 12 million passengers per annum. National Highways supports the need for all airport development to be accompanied by clear surface access proposals that will increase the use of public transport and minimise congestion and other local impacts. We welcome policy support for improving surface access to the Airport. We also note reference to securing improvements where necessary to the local highway network, and proposals for increased passenger throughput beyond the consented position. Any proposals for further Airport expansion will need to demonstrate SRN travel demands as part of any future planning application and appropriate mitigation would need to be identified for any significant adverse impacts.			NSC Reg19 Local Plan Consultation.pdf
58628161	Chris Lowe			No	• Effective		Unsure	The airport claims it is compliant with the government policy as set out below, however none of its local staff can get to or from the airport on public transport as it is not available, no regular bus service apart from the Bristol Flyer is available, during all of the operating hours, to any passengers or Staff from any town or village in North Somerset, BANES, or any other part of WECA, let alone Wales, Devon or Cornwall or farther afield. The resulting traffic, congested lay-bys, dangerous, unsafe and at times illegal parking over acres of land around Lulsgate makes the claim of zero carbon by the Airports owners a travesty In accordance with Government policy, all proposals for airport development must be accompanied by clear surface access proposals that demonstrate how the airport will ensure easy and reliable access for passengers, increase the use of public transport by passengers and staff and minimise congestion and other local impacts. Bristol Airport will be expected to define and deliver a low carbon, accessible, integrated, and reliable transport network, for both staff and passengers to access the airport when they need to and support the delivery of infrastructure that prioritises lower emission vehicles. The airport is also expected to limit the increase in demand for additional car parking provision, by increasing public transport mode share and reducing the proportion of car journeys that result in the need for parking at the airport. Integration with the existing rapid transit network and creating a new mass transit link directly to the airport are key elements towards achieving net zero by 2050. Any future off-site park and ride provision must accord with Policy DP20: Airport Parking.	If the Airport is to be allowed to carry on operating in the way set out, there must be public transport links put in place BEFORE any more expansion as none of the Government policies are being followed or implemented. Evidence of the number of passengers and staff arriving by public transport and those arriving by other means should be provided before any further expansion of services or other changes to night flights, incursions into Green belt land are even considered		
8187041	Julie Main		Local Access Forum	Unsure		Yes	Yes	In relation to the points around the airport, I would like to call out some of the points that North Somerset are making which already the airport in their master plan are looking at ignoring, or have a very differing view: Government policy is for airports to make better use of their existing runways. Bristol Airport are looking to extend their current runway to allow for transatlantic flights. Extending a runway does not fall into the overall Government Policy. Government Policy is for clear surface access proposals, and to limit the increase in demand for additional parking provision. Bristol Airport have not improved access to the airport as it is still served by an A road, there has been no rapid transit network, i.e. trains, trams etc.. or a park and ride, this leads to huge congestion at certain time severely affecting not just local traffic but beyond. In relation to reducing additional parking provision, 37% of Bristol Airports revenue in 2024 was generated from airport parking, as opposed to just 34% being from aeronautical revenue, it does not benefit them in increasing profits by reducing airport parking, profits will grow by them increasing overall airport parking. In regards to the criteria for airport-related development within the green belt inset, and having to demonstrate special circumstances that outweigh the harm to the Green belt, Bristol Airport conveniently forgot to mention in their masterplan that an extension to the runway would require them to compulsive purchase part of Felton Common as they would need to move the landing lights for safety reasons. This is their special circumstance to try and get access to own part of a historically important and very important green space and local amenity. However, this is not required if they do not extend the runway, or if they extend it to the West of the airport. Therefore it no longer become a special circumstance as they would not need it for safety purposes then.			
39261985	Butcombe Parish Council			No	• Positively prepared	Unsure	Unsure	Since the Local Plan (Reg 19) was published, Bristol Airport has announced plans to place lighting and fencing on Felton Common. The Airport has launched a consultation on this only a few months after the publication of its Master Plan in Jult 2015. The Masterplan has informed Policy LP12. The current Runway Approved Lighting Consultation and its proposal for replacement land to mitigate the loss of Felton Common constitutes a significant change to the Airport's development Strategy as it affects Common Land. Butcombe Parish Council consider this to be a significant alteration in the future development of Bristol Airport, and as such it should be considered within the 2040 Local Plan.	Bristol Airport plans set out in its Runway Approach Lighting Consultation should be reflected and considered in amendments to Policy LP12		
58629473	Shail Patel		n/a	Yes		Yes	Yes			In general I support this plan noting the following to ensure the proposal remains sound: - we do not need any expansion of Bristol Airport for a very large number of reasons inc, pollution & climate change, lack of transport links, better alternatives elsewhere esp. Cardiff and Exeter, cf arguments put forward by BAAN: Bristol Airport Action Network	
22638625	Councillor Bridget Petty			Unsure	• Justified • Consistent with national	Unsure	Unsure	I have serious concerns that the airport with permission for 12mppa will NOT be able to mitigate the impact of their airport development. I fear that local residents will bear all the negative impact and health implications. Noise is very limited in their willing to accept however we KNOW that peoples lives are impacted much further than their contor. Is it OK that i am woken from sleep to the noise of aircraft? Impacting my sleep has the ability to shorten my life			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					policy			expectancy. I do not live within what the airport recognises are those impacted by the airport. So there is no compensation or mitigation for those living in central Backwell, Yatton, Congresbury. They must just experience the consequences. Airport Expansion is INCOMPATABLE with the climate emergency which is declared by both NSC and National Government. The CCC must comment and confirm no more airport expansion should take place until we have a clear Net Zero pathway INCLUDING airplane fuel emissions.			
62802881	John Polden			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I believe the national government is in gross breach of its obligations for lowering carbon emissions set out in legislation such as UK Climate Change Act 2008. It has been promoting and potentially approving expansion in aviation traffic when there is no clear way whereby this will lead to the UK meeting its carbon emission targets for aviation. There have been numerous examples of this and the anticipated application for a Heathrow third runway will lead to this being tested in the courts. Any actions by a local council to enable an expansion of airport capacity could lead to the council becoming responsible to condoning a breach of climate change obligations	The Plan should clearly state that as it is possible that any extension to Bristol airport will be in breach of UK carbon emission targets for aviation, it will not support any such expansion.		
58577601	Ruth Revell			No	• Justified • Effective	No	No	The airport causes many issues for local people, traffic, parking issues, noise. None of these issues have been successfully addressed by the airport. The parking issues extend for up to 3 miles to neighbouring villages with illegal parking companies parking cars there without owners knowledge, blocking local roads and often preventing safe emergency access. A commissioned report shows that airports don't increase economic growth, so it is not clear why North Somerset council are saying they will potentially support further growth. https://neweconomics.org/2025/01/expanding-uk-airports-wont-deliver-economic-growth	To remove the intent to even consider airport expansion as the criteria for growth will be impossible to achieve.		
62776065	Paul Segar			Yes		Yes	Yes		Noise from the airport is a major cause of concern for those living in surrounding villages, particularly with the expansion of night time flights and proposals to introduce long-haul aircraft in future. Although probably not under NSCs remit, aircraft should be directed away from villages during take-off particularly, and undertake noise-abatement manoeuvres. Currently many (most) aircraft produce considerable noise annoyance. at take-off. The airport owners appear to be taking a very aggressive approach to it's future expansion, and it should be made clear to them that it is a regional airport, not an international hub airport, and NSC's planning policy will need to reflect this.		
30975873	Chris Segar			Yes		Yes	Yes	I do not support the airport’s move to acquire part of Felton Common for very intrusive runway landing lights. This common land is valuable to the local community in terms of recreation and biodiversity.		I support the plan to limit traffic and parking in and around the airport. I do not support the airport’s move to acquire part of Felton Common for very intrusive runway landing lights. This common land is valuable to the local community in terms of recreation and biodiversity.	
41396737	Bristol Airport		Bristol Airport Ltd	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	Yes	Bristol Airport Ltd (BAL) recognises the changes that have been incorporated in Policy LP12 since the previous Pre-submission Local Plan version to remove ambiguity and provide greater clarity. However, our fundamental objection is the spatial aspect of Policy LP12, which applies to the Green Belt Inset only. It is not evident that the Pre-submission Plan has positively considered the future needs and requirements of Bristol Airport, as set out in our adopted Master Plan (June 2025), and as required by paragraph 4.11 of the Aviation Policy Framework (APF) (March 2013). Please refer to our representations on Policies SP7 (Green Belt) and LP9 (Extent of the Green Belt) which set out the reasoning why the Green Belt Inset should be extended, which would have then informed the spatial aspect of LP12 on the Policies Map. As Policies SP7 and LP9 directly impact the spatial aspect of Policy LP12, the reasons given for the Pre-submission Plan being unsound and not legally compliant within our representation for SP7/LP9 are also very relevant to this representation on LP12. In accordance with the NPPF paragraph 85, ‘planning policies and decisions should help create the conditions in which businesses can invest, expand and adapt’. Paragraphs 86 and 87 set out how planning policies can help build a strong and competitive economy and NPPF Policy 111(e) specifically identifies ‘airports’ as an example of a large-scale transport facility. It notes that planning policies should provide for large scale transport facilities that need to be located in the area, and the infrastructure and wider development required to support their operation, expansion and contribution to the wider economy. The Pre-submission Local Plan fails to address these national policies and therefore fails to meet soundness tests (A) Positively prepared and (D) Consistent with national policy. As drafted, Policy LP12 supports the development of the Airport only within the Green Belt Inset. Outside of the Green Belt Inset, the Policy notes that proposals will need to demonstrate very special circumstance that clearly outweigh the harm to the Green Belt and provide compensatory improvements to the environment. This policy approach is restrictive on the development and planned growth of the Airport over the Plan Period, as identified in our Master Plan. As per our comments on Policy SP7, a Stage 1 Green Belt Assessment has been provided within the evidence base that supports the Pre-submission Plan. This Stage 1 Assessment has identified Parcel 032, which includes Bristol Airport. The Stage 1 Assessment is clear that Parcel 032 makes only a ‘moderate’ and not a ‘strong’ contribution to the Green Belt purposes and, accordingly, clearly states that the parcel should be included in an area of search for potential grey belt land. However, no search and assessment has been completed to inform the Pre-submission Local Plan. To support the development of LP12, a Stage 2 Green Belt Assessment should have considered the proposed Bristol Airport expansion land immediately adjacent to the Green Belt Inset (clearly identified in the Airport’s adopted Master Plan) in more detail and considered whether it could be classified as grey belt land and released from the Green Belt. In accordance with the NPPF para 155, development in the Green Belt should not be regarded as inappropriate if ‘the development would utilise grey belt land and would not fundamentally undermine the purposes (taken together) of the remaining Green Belt across the area of the plan’. We firmly believe the Bristol Airport expansion land would have been identified as grey belt within a Stage 2 Assessment. This conclusion would fundamentally change the purpose of Policy LP12. If deemed grey belt, Green Belt Policy would not apply, and very special circumstances would not need to be demonstrated. A judgement has been made that outside of the Green Belt Inset, development is inappropriate and will need to demonstrate very special circumstances. In the absence of a properly conducted Stage 2 Assessment, this unevidenced assertion means reasonable alternatives have not been considered, resulting in a Plan which is not justified or positively prepared, consequently rendering the Plan unsound.	To achieve soundness, BAL requests that the Green Belt Inset is extended to align with our adopted Master Plan land requirements to accommodate longer-term development up to 15mppa. This would require amendments to the spatial aspect of Policy LP12 on the Policies Map. The Key Diagram should also be corrected. To achieve soundness, BAL requests that growth to 15mppa should also be included within the transport modelling used to inform the Local Plan, to ensure compliance with DfT TAG Unit M4. Finally, BAL requests that Policy LP12 properly reflects the adopted policy position from JLTP4 and recognises the role of WECA (and other stakeholders) in defining and delivering improvements to the transport network.		North Somerset Local Plan Pre-submission Plan - Representation form Part B - SP7 Green Belt_submitted 08.12.25.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								In addition, the Key Diagram on Page 15 refers to Bristol Airport as Policy LP9. This should be corrected to LP12. Future growth at the Airport has also not been considered within the Transport Assessment (TA) prepared as part of the Evidence Base. The TA states in paragraph 5.172 "Notably, the modelling includes Airport growth up to the consented 12MPPA only. Any further applications for growth at Bristol Airport will be required to take account of the Local Plan growth in a Transport Assessment." This approach is contrary to the Department for Transport's guidance for transport modelling, set out in TAG Unit M4 Forecasting and Uncertainty. Paragraph 3.2.4 of this guidance states: "…it would be expected that those inputs categorised as more than likely will be included in the core scenario." Table A2 goes on to define developments considered as 'more than likely' to include those where "Submission of planning or consent application imminent." The Council is aware of Bristol Airport's intention to submit a planning application for further growth at the Airport, evidenced by the reference to BAL's submission of an EIA Scoping Request within the justification for LP12. TAG Unit M4 also states that "The practitioner should summarise all known assumptions and uncertainties in the modelling and forecasting approach in an uncertainty log." Contrary to this guidance, the uncertainty logs appended to the Model Development Report within the Evidence Base make no reference to growth at Bristol Airport in any way (including any assumptions for consented growth to 12mppa, such as modal share). No justification has therefore been provided for this departure from TAG guidance to justify the exclusion of airport growth from the modelling. This unfortunately calls into question all the findings reported in the TA, including the mitigation requirements associated with the proposed housing allocations such as Woodspring. On this basis, we consider the Plan to be unevidenced, and therefore unsound. Finally, within the justification for Policy LP12 relating to transport, the Council state (with emphasis added in bold): "Bristol Airport will be expected to define and deliver a low carbon, accessible, integrated, and reliable transport network, for both staff and passengers…" This wording plays back adopted transport policy from the Joint Local Transport Plan 4 (JTLP4), however with an important change in emphasis made to increase the role for Bristol Airport. JTLP4 states on Page 39 (with emphasis added in bold): "We [WECA] will work with Bristol Airport to define and deliver a low carbon, accessible, integrated, and reliable transport network, for both staff and passengers…" Policy LP12 is therefore inconsistent with adopted regional policy, by not recognising that the delivery of improvements to the local and regional transport network is a joint endeavour, which requires contributions from a range of stakeholders to bring forward, including the Council, WECA and other developers. Bristol Airport cannot reasonably be expected to define and deliver an improved transport network in isolation, and so this wording should be amended to be consistent with the adopted policy position from JLTP4.			
29242497	R Stevenson			No	• Positively prepared • Justified • Consistent with national policy	Unsure	No	your statement that biodiversity and climate change, are adequately mitigated against and improved wherever possible is a clearly blatant lie. No expansion can mitigate against worsening climate action. Disgraceful!			
62810017	Guy Stone			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	I disagree with the expansion of the airport. I fail to see how this fits with climate change policy. Saying that the airport has targets is very different from this actually hitting these targets. I feel sorry for the residents of Felton, Winford, Cleeve, Congresbury etc. who already have to put up with noise and traffic (air and road). It's bad enough now in Backwell with roaring aircraft preparing for take off and the whole background to the hill illuminated with brilliant white light through the night. The light pollution is already appalling.	Bristol Airport is on a hill in a rural setting. It really is not in the right place for an airport and the impacts on the environment are already massive. Developing airports in urban settings, such as Filton, would have been a far better idea and this needs to be looked at on a UK wide scale rather than locally.		
62846721	Cleeve Parish Council		Cleeve Parish Council		• Positively prepared • Effective			We do not consider the North Somerset Local Plan 2041: Pre-Submission Plan to be sound. Based on the detailed representations of Cleeve Parish Council, we believe the Plan fails three of the tests of soundness set out in NPPF paragraph 36: Positively Prepared, Justified, and Effective. 1. Positively Prepared The Plan does not adequately address the needs of young people or newly forming households, nor does it ensure that new development will be properly supported by essential infrastructure. The repeated use of discretionary language ("will be expected", "should have regard to") leaves critical requirements—such as drainage, healthcare capacity, active travel connections, affordable housing percentages, biodiversity measures, renewable energy deployment, and sustainable design—insufficiently guaranteed. The Plan also fails to provide a clear and sustainable policy position on future growth at Bristol Airport, or on how Green Belt releases will be compensated or justified. As a result, the Plan does not convincingly meet the district's needs in a sustainable and deliverable way. 2. Justified The policy choices taken in the Plan do not always represent the most appropriate strategy when tested against reasonable alternatives. The evidence base appears inadequate or incomplete in several areas, including: (a) the justification for Green Belt releases at Bristol Airport; (b) the robustness of climate-adaptation measures given the known risks of flooding, sea level rise, extreme heat, and pressure on water resources; (c) the lack of evidence demonstrating that non-mandatory design guidance will achieve sustainable outcomes; (d) the omission of low-rise flats in existing towns as a viable and necessary option for delivering affordable housing for young people; and (e) insufficient assessment of the landscape, safety, environmental and carbon impacts of airport-related growth, including the absence of a cumulative emissions assessment. In each case, reasonable and more sustainable policy alternatives have not been adequately explored. 3. Effective The Plan's delivery mechanisms are weak and do not provide confidence that its policies will be realised. Critical	Policy SP1: Sustainable development: Cleeve Parish Council emphasises that it is essential for new housing and industrial developments to proceed only if there are cast-iron agreements in place that the necessary infrastructure — including roads, drainage, power, and essential services such as food and healthcare — is established either prior to or concurrently with the development. Failure to uphold this requirement would undermine the fundamental principles of sustainable development, leaving the residents of these new developments exposed to undue and avoidable hardships, as well as increasing stress on surrounding communities.		Submission on behalf of Cleeve Parish Council in respect of Pre.docx Submission on behalf of Cleeve Parish Council in respect of Pre.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								infrastructure (roads, drainage, healthcare, active travel routes, mass transit provision and energy resilience) is not tied to development in a sufficiently enforceable manner. Policies that rely on voluntary interpretation or “expectations” are unlikely to secure required outcomes, particularly in relation to affordable housing percentages, design quality, biodiversity net gain, native woodland expansion, protection of commons, and the safeguarding of Best and Most Versatile agricultural land. Policies concerning Bristol Airport do not demonstrate effective cross-boundary working or credible mitigation strategies, while the approach to flood-risk management does not provide sufficient assurance that developments requiring the Exception Test would be safe, sustainable, or financially deliverable. As drafted, there is insufficient certainty that the Plan can be implemented as intended.			
62471329	Environment Agency		Environment Agency	Yes							
58415265	Mr D Wheeler			No	• Positively prepared • Justified • Effective	No	Unsure	Basically again you are looking to develop green belt land. This is supposed to be protected by law;. The scheme will wreck important legally protected wildlife habitat. The air port is a major polluter caused both by the air craft and the traffic visiting the airport. The air port creates major noise issues that affect people who life around the airport. The noise from planes taking off on Providence lane is very high. This is even worse for many thousands of other people affected by aircraft noise.			
58562753	C Wheeler			No	• Justified	Unsure	Unsure	I don't understand how the proposed developments at the airport can possibly align to the objectives outlined above regarding environment, air quality, noise, biodiversity and landscape and greenbelt impact. Are these noble sentiments just lip service? I am also completely at a loss to understand how it can conceivably be logical to expand the airport when the world is facing such climate change problems. In the Summer 2021 issue of “North Somerset Life” (the Council’s information magazine for residents) the Council set out a climate emergency challenge to encourage all North Somerset residents to change and reduce their carbon footprint. One of the key challenges set by the Council was to: “Cut back on flying - holiday closer to home and use video conferencing for work.” So again, the proposals do not align with the Council's stated objectives. I believe that I live in a region that takes its responsibilities regarding climate change seriously and very much hope that I am represented by leaders who have the courage to act on them.		
4618561	Barrow Gurney Parish Council		Barrow Gurney Parish Council	No				Policy LP12: Bristol Airport Paragraph 2 of the policy on P.82 states Within the Bristol Airport Green Belt inset as defined on the Policies Map, the development of facilities and infrastructure which contribute to and support sustainable improvements to operational efficiency and passenger safety at the airport and its role as a regional transport facility and major employer will be supported provided that: (inter alia, bullet 3) • Appropriate surface access improvements including major public transport infrastructure and services and support to develop a mass transit link, as well as long distance regional coach services integrating with transport interchanges and long stay parking provisions are provided in step with development to mitigate the adverse impact of airport traffic on local communities and the highway network and facilitate a sustained modal shift to public transport; We agree with this statement that reinforces the need for surface access improvements, services and support to develop a mass transit link, but would emphasise that an increase to 15mppa from the current level of circa 10mppa represents a 50% increase on current traffic movements between Bristol and the airport along the principal corridor between the two - the A38 which is already heavily congested at various times during the day, mainly related to aircraft arrival and departure times. This will also have a detrimental knock-on effect on traffic movements along the B3130 through Barrow Gurney. Once again this points to the urgent necessity of introducing a mass transit route at the earliest possible opportunity. We are firmly of the view that the further expansion of the airport should be dependent upon construction of a segregated, high quality mass transit route being constructed between Bristol and the Airport. CONCLUSIONS Woodspring, Transport and the Airport We also do not believe the proposed development of a new settlement comprising 3,500 dwellings, 10ha employment land, 3 or 4 new schools, a new neighbourhood centre and much more besides, at Woodspring is a sound planning proposition until and unless a firm route alignment for a rapid transit connection between Bristol and the new settlement has been established. Logically it would be sensible to define a continuous mass rapid transit route between the City centre and the airport as a priority, so that development at Woodspring can be planned with greater certainty based upon an established route alignment, and reliance on using private trans-port to get to the city or the airport would be significantly diminished. It would also ensure that if the airport were ever permitted to expand to 15mppa over time (which we as a Parish Council would prefer not to be the case) it could encourage greater use of public transport to enable it to do so. To suggest that developers should make allowances for a route to be threaded through the Woodspring development in the future, once development is well underway, gives a strong indication that the plan has not been positively or effectively prepared. Until an alignment for a new, high quality, segregated, mass transit route between Bristol City Centre and the airport is defined as a principal policy requirement, we consider proposals for the development at Woodspring and the future expansion of Bristol Airport would have an unacceptable impact on the existing transport network to the south west of Bristol, and in this regard we consider the Local Plan (2041) Pre-submission Plan (Reg 19) to be unsound.			Local Plan response 12.25 NT final.pdf

Policy LP13: Air safety

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? NTC and BPC question whether Felton Common and the replacement land—closer to the airport perimeter—will face increased risk from the extended runway, lower approach altitudes, and new lighting, possibly requiring re-categorization under CAA regulations. NTC and BPC consider the replacement land, owned by the airport is unsafe for recreation according to Air Safety Policy LP13 and unsuitable as mitigation for the lighting proposal.		251118 Local Plan Reg 19 2025 reps FINAL.pdf R01 - Transport Statement - Rev 3 FINAL.pdf Hydrology LP3 BPC_NTC Appendix_2.2-compressed.pdf Hydrology LP3 BPC_NTC Appendix_2.1-compressed.pdf Hydrology LP3 BPC_NTC Appendix_9-compressed.pdf Hydrology LP3 BPC_NTC Appendix_7-compressed.pdf Hydrology LP3 Summary BPC_NTC Part 2 (1).pdf Hydrology LP3 Summary BPC_NTC Part 1 (1).pdf
1019201	Wrington Parish Council		Wrington Parish Council						We are appreciative of the necessity of this Policy and are therefore supportive but it illustrates once again the impact having Bristol Airport in this location brings with it.		
31037185	Nigel Cooke			Yes		Yes	Yes				
51490785	Parish Councils Airport Association		Parish Councils Airport Association	Yes		Yes	Yes	The Bristol Airport Master Plan detailed an extension to the runway. Currently there is a Bristol Airport consultation on proposed lighting for Felton Common. Felton Common is a public open space that is within a defined Air Safety Zone. The PCAA question whether the Common and the replacement land will become higher risk due to the extended runway and lighting and need to be re-categorised as such. The PCAA view the replacement land under the Airport's ownership as unsafe for recreational use under the Air Safety Policy LP13 and not suitable for mitigation.			
41396737	Bristol Airport		Bristol Airport Ltd	No	• Consistent with national policy	No	Yes	The Public Safety Zones presented on the Policies Plan are correct. With regard to the Policy wording, we would suggest a minor amendment to futureproof the Local Plan. Public Safety Zones can change following changes to Airport runway layout or DfT regulations. DfT regulations on Public Safety Zones were changed in 2021 for example. We would therefore recommend adding the wording 'or any replacement thereof' to allow for the possibility that these PSZs could change within the Plan Period.	Minor addition to the Policy wording to futureproof the PSZs - 'Specifically, within the Public Safety Zones (1-in-100,000 individual risk contours) at Bristol Airport, shown on the Policies Map (or any replacement thereof)'		North Somerset Local Plan Pre-submission Plan - Representation form Part B1 - LP13 Air Safety submitted 08.12.25.docx
28893793	Winford Parish Council		Winford Parish Council	Unsure		Unsure	Unsure	Bristol Airport have issued a consultation with regard to Runway Approach Lighting on Felton Common, a public open space within a defined Air Safety Zone. WPC question whether Felton Common and the proposed replacement land will become at higher risk due to lower approach altitudes.			

Policy LP14: Royal Portbury Dock

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
10208161	The Bristol Port Company		The Bristol Port Company	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	1. Overview: The Bristol Port Company (BPC) is the statutory harbour authority and competent harbour authority for Bristol Port. Bristol Port comprises Avonmouth Docks and Royal Portbury Dock (RPD); RPD is within North Somerset Council's (NSC) administrative area. For over 20 years, NSC has failed to acknowledge or enable the requirement for RPD to grow and expand. The imperative for a change of policy and mindset, as evidenced below, could not be more compelling or coherent. Growth is the single unifying agenda of the UK Government, the West of England Mayoral Combined Authority (WEMCA) and NSC. The failure to release land within Shipway Farm from the Green Belt has blighted any financial benefit for NSC since the Port's privatisation in 1991. It will instantly deliver jobs, skills, investment and significant economic dividend, but not at the expense of the environment. On the contrary, it will support the renewable and low carbon sector and deliver environmental enhancements. Indeed, BPC's credentials of sympathetic, considerate and innovative development are often cited as an exemplar to other businesses both locally and nationally. BPC submits that, in respect of Policy LP14 (Royal Portbury Dock), the North Somerset Local Plan 2041: Pre-submission Plan (Regulation 19) (the Local Plan) is not sound on the basis that it is not positively prepared, justified, effective, or consistent with national policy. Further, BPC does not consider that the Local Plan is legally compliant nor has it been prepared in accordance with the Duty to Cooperate. 2. The Local Plan is not positively prepared: Bristol Port is one of the largest UK commercial ports. It is a multimodal transport hub providing import, export and transit facilities for a wide range of cargo, with links by sea, road and rail between national and international destinations. Bristol Port is a strategically important national infrastructure asset and international gateway. It is also a fundamentally important economic contributor and major employer, with the Port estate contributing £1.29 billion to UK Gross Domestic Product (GDP) and supporting over 21,000 jobs. Much of these economic benefits are retained in the regional economy; the Port contributes more than half (£761million GDP) to the South West's whole economy and 12,910 workers to its total employment. The Port's workforce is also highly productive, with labour productivity of more than double the South West average. Since privatisation in 1991, the Port has benefitted from £600 million of investment and the total tonnage of freight passing through it has increased by 93% (whilst overall tonnage of seaborne freights has fallen). Any measurement of its contribution to employment must reflect workers employed in the wider upward, or downward, supply chain (handling cargo which has passed through the Port), as well as the Port's own direct employees.	BPC requests that Policy LP14 be revised to make appropriate, positive provision for the long-term development needs of RPD by including the following statement: "Land within Shipway Farm will be removed from the Green Belt and safeguarded for development for port uses. Where need is demonstrated, development will be permitted subject to satisfactory environmental safeguards." Linked to the above, BPC considers that the Local Plan vision and strategic priorities should include express reference to the strategic role of RPD as a transport infrastructure asset and employment location and, in this context, to the need to meet its development needs over the plan period to secure economic benefits for North Somerset and the wider South West region, deliver green jobs and facilitate the transition to net zero. Related to this, it is BPC's view that RPD should be expressly identified as a strategic employment location on the Policies Map, within LP14 and also within Policy SP3 (Spatial Strategy) and Policy SP9 (Employment). BPC considers that the following additional changes to Policy LP14 should be made (additional proposed wording is underlined and text which should be removed is struck through): SEE ATTACHED DOCUMENT FOR PROPOSED CHANGES		Green Belt statement.pdf Representation form Part B - LP14.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The economic importance of Bristol Port is recognised in the Pre-submission Local Plan with Policy SP10 supporting RPD as a strategic transport facility. It is also reflected in regional and local economic strategies. RPD is within the Severn Estuary Growth Zone, as identified in the West of England Growth Strategy. The Strategy states that, as well as the existing strengths in freight and logistics, "Severn Estuary offers major investment opportunities in clean energy sectors. The Severn Estuary will be at the core of our national clean energy transition". Bristol Port is a key location within the Severn Estuary Growth Zone. It is identified as a 'strategic enabler' that is "supporting the movement of high-value and oversized components to global markets". Bristol Port is highlighted as key to supporting advanced manufacturing and clean energy industries, two of the West of England priority growth sectors. The West of England Growth Strategy outlines six actions to unlock growth, one of these being, 'Making the West of England the home for green jobs and green growth'. Supporting Bristol Port "to attract investment in the development of Floating Offshore Wind", is the first way that WEMCA identifies to contribute to achieving this action. The Bristol Wind Terminal has the potential to unlock 4.5GW of new renewable energy capacity, which could power more than four million homes. The Bristol Wind Terminal development will play an integral part of the wider Bristol Energy Transition Hub at the Port, which aims to be a critical component for supporting the rollout of sustainable and clean energy sources. This includes supporting new sustainable aviation fuel (SAF) facilities, new small modular reactor (SMR) developments, carbon capture utilisation and storage (CCUS), green and other hydrogen production/storage and acting as the muster port for EDF's Hinkley and Sizewell projects. As a result of this essential development, there will be a displacement of activity from how BPC currently utilise this land as car storage and distribution. The North Somerset Economic Growth Plan 2025 to 2035, meanwhile, refers to RPD as a significant infrastructure asset, crucial to the regional economy and a key driver of the green and blue economies in North Somerset. For Bristol Port, and RPD specifically, to continue to play a significant role in the local, regional and national economy, it is essential that Policy LP14, and the Local Plan more broadly, fully support this strategically important transport infrastructure asset and employment site by providing a positive policy framework that is designed to meet RPD's needs over the plan period and fully realise the economic benefits of the Port for North Somerset and beyond. As presently drafted, Policy LP14, its supporting text and the Local Plan vision and strategic priorities fail to do this. Instead, they focus on the constraints to the growth of RPD and do not give equal consideration to the opportunities that expansion of the Port could secure for North Somerset's economy and its communities. Central to Bristol Port's development needs over the period of the Local Plan is a requirement to bring forward land at RPD to accommodate additional facilities for transit storage, which are a fundamental need for all ports. Meeting this need will: • enable RPD to handle increasing volumes and different types of cargo and thus facilitate growth; • deliver superior economic benefit to the local, regional and national economy; • preserve Bristol Port's role as a recognised major employer and create new job opportunities, providing benefits to local communities; • enable BPC to continue to meet customer needs, and specifically support the operation of the motor vehicle trade (based largely in RPD); • support the potential for community-led renewable energy projects where appropriate; and • promote Bristol Port as a hub for sustainability, delivering essential projects and infrastructure to support the region's net zero energy transition and the creation of green jobs (as detailed within BPC's representations in respect of Policy SP7 and Policy LP9). BPC is completing a full analysis of options for accommodating the need for additional transit storage facilities, both within the existing Port site, at locations outwith the Green Belt and adjacent to the Port within the Green Belt. This emerging analysis (which is summarised in BPC's responses to Policy SP7: Green Belt and Policy LP9: Extent of the Green Belt) has robustly demonstrated that land known as 'Shipway Farm', which is located immediately to the west of RPD, is the most appropriate location for accommodating this requirement. In order to meet the needs of RPD over the plan period, it is therefore essential that land within Shipway Farm is removed from the Green Belt to facilitate port-related development. In this context, BPC is extremely disappointed that Policy LP14 does not make any provision for meeting the established development needs of RPD over the plan period by removing land within Shipway Farm from the Green Belt. On this matter, the supporting text to the policy states: "The Replacement Local Plan and Core Strategy considered port expansion issues and land was removed from the Green Belt and safeguarded for future port use, subject to demonstrating need and other detailed requirements. Further opportunities have been reviewed but no further Green Belt amendment is proposed. The remaining Green Belt land located between the port estate and Portishead is considered extremely sensitive in preventing coalescence and checking unrestricted urban sprawl". The position taken in the Local Plan is not consistent with that indicated by NSC in previous iterations of the emerging Local Plan (prior to the publication of the Preferred Options consultation document): • The Local Plan Issues and Options Document (September 2018) stated: "The accessibility and growth of international and regional gateways is linked with economic growth and delivering an improved transport system will be key to unlocking that growth". • The Local Plan Issues and Options Document expressly identified RPD as a strategic employment location in North Somerset. • The Local Plan Issues and Options Document stated: "At the Port, the focus will be on ensuring the most efficient use of the existing port area, but also considering any opportunities to support business growth associated with the Port. The latter could include making allowances for additional land supply in and around Portishead to meet demand for high growth businesses including those linked to port activities. If there are specific additional needs associated with the Port, the Local Plan process will need to consider the land use implications and future aspirations of the Port over the plan period." • The Local Plan Challenges and Choices Part 1: Challenges for the Future consultation document (July 2020) expressly stated that the Local Plan will need to "address the requirements of the Port and Airport considering their wider economic role, and the jobs and benefits they generate". NSC's position is all the more surprising given that BPC expressly requested that land within Shipway Farm be removed from the Green Belt in its earlier responses to the Local Plan Preferred Options consultation document and the Autumnn Pre-submission Local Plan (Regulation 19) consultation. In this context, NSC, in its pre-application advice to BPC (dated 17 September 2020, case reference 91484 20/P/0575/PR3) in relation to Shipway Farm, advised BPC that "[w]e would strongly encourage you to participate in the plan making process, where your proposals [to develop Shipway Farm] can be presented in the context of the long-term growth strategy for the wider Port estate allowing NSC to comprehensively work with you to ensure long-term growth ambitions are thoroughly examined". Despite this, NSC does not appear to have considered BPC's request nor has it robustly considered any opportunities involving the future growth of RPD. This contrasts sharply with the approach taken by NSC in the former Replacement Local Plan (March 2007) where land (Court House Farm) was removed from the Green Belt and safeguarded for future port-related use. Further, whilst Policy LP14 supports "development which helps to deliver net zero and wider sustainability goals and promotes Royal Portbury Dock as a hub for sustainability as well as green jobs", this objective is not supported by the release of land from the Green Belt at Shipway Farm, which is necessary to accommodate storage capacity displaced by			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								renewable/low carbon related development (see also BPC's representations in respect of Policy SP7 and Policy LP9). In this context, constraining the growth of RPD poses an unacceptable risk that essential renewable/low carbon energy related development is not brought forward and that the economic benefits this delivers is lost to other regions or countries. Turning to the specific wording of Policy LP14 and its supporting text, BPC has the following comments: • Policy LP14 states "The development of facilities and infrastructure which contribute to sustainable improvements to operational efficiency and its role as a strategic employment location, transport infrastructure asset and international gateway will be supported…". BPC does not consider that it is the role of NSC to consider the operational efficiency of RPD. This is not a planning matter but one for BPC, as the competent and statutory harbour authority, to manage. • Policy LP14 states that development at RPD will be supported provided that "The proposed development is for a port-related use" or "helps to deliver net zero and wider sustainability goals and promotes Royal Portbury Dock as a hub for sustainability as well as green jobs". Whilst the addition of reference to green jobs is welcomed, BPC maintains that this wording is overly prescriptive. It prohibits non port-related uses which may benefit from being located at RPD. Whilst many non port-related uses could in theory be located outside of RPD, it may be preferential for certain types of development to be sited within RPD for a wide range of reasons such as operational efficiency, sustainability, clustering and reduction of vehicles movements. This includes employment-related development. • Policy LP14 states that development will be supported provided that: "Benefits to the local economy and community are maximised; Opportunities for renewable energy generation are maximised including the production of green hydrogen; and national and locally important species and habitats are retained and enhanced". BPC considers that these requirements are overly constraining and alternative wording is suggested below. • The supporting text to Policy LP14 states "The remaining gap is also considered to be highly sensitive in terms of ecology. The area includes a network of wildlife corridors and a nature conservation area (Vole City), which protect a range of habitats. The Bristol Port Company manages and monitors these green areas for a variety of wildlife (including great crested newts, water vole, breeding birds, owls, and wildfowl and wading birds) in accordance with their Ecological Management Plan". This statement is confusing the Green Belt between the Port and Portishead with the Port's wildlife areas. A suggested amendment is provided below. Paragraph 36(a) of the National Planning Policy Framework (NPPF) sets out that, for local plans to be positively prepared, they must provide "a strategy which, as a minimum, seeks to meet the area's objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development". The Local Plan does not provide a positive planning framework in respect of RPD and BPC has clearly established a need for the Local Plan to accommodate additional development needs which Policy LP14 fails to do. Overall, it is BPC's view that Policy LP14 has not, therefore, been positively prepared. 3. The Local Plan is not justified: For the reasons set out in Section 2 above, BPC does not consider that Policy LP14 represents an appropriate strategy for guiding the future development of RPD. The Issues and Options Document acknowledged the potential need to provide additional land to meet the development needs of RPD over the plan period. BPC has consistently set out in its representations that there is a need to expand RPD at Shipway Farm. However, NSC detail in the supporting text to Policy LP14 that "Further opportunities have been reviewed but no further Green Belt amendment is proposed" without any supporting evidence. It is unclear what opportunities NSC is referring to. Whilst options relating to the release of Green Belt land at broad locations across the plan area have been assessed, this assessment does not provide a sufficiently robust and detailed basis for consideration of grey belt within Shipway Farm (see BPC's representations in respect of Policy SP7 and LP9 for additional information on this matter). Further, there is no indication of any opportunities relating specifically to RPD having been identified, considered and reviewed by NSC within the Local Plan, its supporting evidence (beyond the North Somerset Employment Land Evidence Report which actually identifies the potential requirement for the release of land from the Green Belt to facilitate the expansion of RPD) or the accompanying Sustainability Appraisal (SA) Report (October 2025). Indeed, NSC has not prepared an up-to-date evidence base on this matter, despite engagement by Port staff with senior officers and councillors involving meetings and site visits and explanations of the Port's requirement for more space. . BPC expressed this same concern at the Preferred Options stage and, subsequently, at the Autumn 2023 Pre-submission Local Plan (Regulation 19) stage and it maintains that this is a significant deficiency which renders the plan 'unsound'. BPC would direct NSC to the serious concerns expressed by Inspectors which led (in part) to the withdrawal of the West of England Joint Spatial Plan (November 2017) (JSP). The withdrawn JSP identified Bristol Port (alongside Bristol Airport) as a key strategic infrastructure employment location (Policy 4); however, further to representations received from BPC and other parties on the emerging plan, Inspectors, in their letter dated 11 September 2019, advised at paragraph 32: "However, whilst policy 4 states that the Port and Airport (along with the other key strategic employment locations) will ensure the continued economic growth of the West of England, there is no clear indication of how this should be achieved or what it means in terms of the allocation of land". At paragraph 33 of their letter, the Inspectors continued: "The Councils explained to us that it would be for the local plans to consider the case for the allocation of land (and, if necessary, the removal of land from the Green Belt) to provide for growth at the strategic employment locations. However, it is a stated aim of the JSP to identify the amount of employment land needed and the most appropriate spatial strategy for this growth. Moreover, the Port and Airport are of fundamental and strategic importance to the whole of the West of England and, consequently, any growth at them would also be likely to have implications for the wider employment strategy for the area. In this context we anticipate it very likely that we would ultimately conclude that it is not a justified and effective approach for the plan to delegate, to a subsequent local plan, decisions on the nature, scale and location of growth at the Port and Airport and the existence or otherwise of exceptional circumstances to remove land from the Green Belt in connection with this. Consequently, we envisage it very likely that we would conclude that, for the plan to be sound in respect of the Port and Airport strategic employment locations, decisions on these matters should be addressed in the JSP. It is also the case that a considerable amount of work would be likely to be necessary to prepare the evidence to make justified decisions about the approach to take". It is BPC's view that the Local Plan is similarly flawed. There is no clear evidence that NSC has robustly considered the case for the expansion of RPD, which is surprising given the accepted strategic importance of the Port, national policy and BPC's representations on the Local Plan to date; it is also in clear contrast to the views expressed by NSC during the examination into the JSP. In discussions relating to the expansion of the Port at the examination, Inspectors (at a hearing on 09 July 2019) asked about the potential release of land from the Green Belt and NSC's representative stated that "yes, there is potential which needs to be assessed at….the port…..in terms of intensification and potentially expansion and you're right certainly in North Somerset {sic] the Royal Portbury Dock…..that would involve expansion into the Green Belt". The same representative also acknowledged that the Port "can't expand anywhere other than the port…it is a bit different from when you are considering housing or employment which have a choice of locations". In the absence of evidenced decision making from NSC considering the case for expansion at Shipway Farm, BPC consider that the Local Plan is not justified. 4. The Local Plan is not effective: As set out in Section 2 above, Policy LP14 does not provide a robust, positive framework for the delivery of development to		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								meet the future needs of RPD over the plan period. In consequence, BPC considers that the Local Plan is not deliverable. NSC has not worked jointly with BPC to ensure that the Local Plan makes appropriate provision for the development needs of RPD over the plan period. Whilst a Consultation Statement in respect of the Autumn 2023 Pre-submission Local Plan consultation has been prepared, BPC cannot find any evidence of how NSC has considered and responded to BPC's representations. This is contrary to the NPPF which states (at paragraph 111) that: "Planning policies should…provide for any large scale transport facilities that need to be located in the area, and the infrastructure and wider development required to support their operation, expansion and contribution to the wider economy." It also runs contrary to paragraphs 86 and 87, which make clear that planning policies should meet anticipated sectoral needs over the plan period to support economic growth. Paragraph 36(c) of the NPPF sets out that, for local plans to be 'effective', they must be "deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground". The Local Plan fails to make appropriate provision for RPD which undermines the deliverability of the plan and NSC has not adequately engaged with BPC to determine the development needs associated with this key strategic infrastructure asset. On this basis, BPC submits that Policy LP14 is not 'effective'. 5. The Local Plan is not consistent with national policy: The UK Government's economic policy objectives underpin the need for investment in infrastructure, including ports. The Plan for Change (December 2024) sets out the UK Government's programme across six missions for renewal. 'Kickstart Economic Growth' is the primary mission and the Government's objective is to raise standards in every part of the UK. This mission is underpinned by seven pillars including investment, infrastructure and planning. Supporting the Plan for Change, the UK Government's Modern Industrial Strategy (June 2025) emphasises the importance of infrastructure, including transport, to UK economic growth and prosperity, stating "Infrastructure provides the foundations high-growth sectors need to innovate, grow, and compete globally…Businesses rely on transport infrastructure to move their products and access talent". In this context, the UK Infrastructure: A 10 Year Strategy (June 2025) sets out the Government's long-term plan for economic, housing and social infrastructure to drive economic development and unlock growth across the regions. Recognising the critical role of infrastructure to UK economic prosperity, at paragraphs 1.1 to 1.2 the Strategy states: "High quality infrastructure boosts growth and plays a vital role in delivering higher living standards. Investment in infrastructure will improve transport and digital connectivity, which supports productivity and efficiency improvements…it will boost supply chains and create good jobs for British workers…". The Strategy emphasises the importance of Ports for supporting growth specifically, stating at paragraph 3.31 that: "Ports play a critical role in the UK's economy, handling around 95% of all import and export tonnage, and acting as hubs for regional growth and employment. The UK's ports sector is largely privately owned and operated, with the government's role primarily to ensure that the policy and regulatory environment supports efficient operation and investment, and to provide targeted support for connectivity and decarbonisation where there are clear public benefits." The Government's planning policies are intrinsically linked to these wider economic objectives. Paragraph 85 of the NPPF states that "Planning policies and decisions should help create the conditions in which businesses can invest, expand and adapt. Significant weight should be placed on the need to support economic growth and productivity, taking into account both local business needs and wider opportunities for development. The approach taken should allow each area to build on its strengths, counter any weaknesses and address the challenges of the future. This is particularly important where Britain can be a global leader in driving innovation, and in areas with high levels of productivity, which should be able to capitalise on their performance and potential." At paragraph 86, the NPPF stipulates that planning policies should: • "set out a clear economic vision and strategy which positively and proactively encourages sustainable economic growth, having regard to the national industrial strategy and any relevant Local Industrial Strategies and other local policies for economic development and regeneration"; • "set criteria, and identify strategic sites, for local and inward investment to match the strategy and to meet anticipated needs over the plan period; • "seek to address potential barriers to investment, such as inadequate infrastructure…" and • "pay particular regard to facilitating development to meet the needs of a modern economy, including by identifying suitable locations for uses such as laboratories, gigafactories, data centres, digital infrastructure, freight and logistics". At paragraph 87, the NPPF goes on to state that planning policies "should recognise and address the specific locational requirements of different sectors. This includes making provision for: … b) storage and distribution operations at a variety of scales and in suitably accessible locations that allow for the efficient and reliable handling of goods, especially where this is needed to support the supply chain, transport innovation and decarbonisation; and c) the expansion or modernisation of other industries of local, regional or national importance to support economic growth and resilience." In terms of transport, paragraph 111 of the NPPF requires that planning policies "provide for any large scale transport facilities that need to be located in the area, and the infrastructure and wider development required to support their operation, expansion and contribution to the wider economy". National policy statements (NPSs) provide the primary basis for decision making on development consent order (DCO) applications for nationally significant infrastructure projects (NSIPs) under the Planning Act 2008. However, NPSs are capable of being a material planning consideration in respect of applications that fall under the Town and Country Planning Act 1990. In consequence, BPC considers that the Ports NPS provides important context for the Local Plan and is a relevant consideration in respect of Policy LP9. The Ports NPS (January 2012) recognises the critical importance of ports to the UK economy, including in respect of freight movements and in delivering wider economic benefits. In this context, paragraph 3.4.16 states that the Government "believes that there is a compelling need for substantial additional port capacity over the next 20–30 years, to be met by a combination of development already consented and development for which applications have yet to be received. Excluding the possibility of providing additional capacity for the movement of goods and commodities through new port development would be to accept limits on economic growth and on the price, choice and availability of goods imported into the UK and available to consumers. It would also limit the local and regional economic benefits that new developments might bring. Such an outcome would be strongly against the public interest". The economic importance of ports and need for additional capacity is reaffirmed in the Government's proposal for a revised Ports NPS (June 2025). The revised NPS sets out, at paragraph 2.2.2, that it is the Government's policy to "encourage sustainable port development to enable long-term forecast growth in volumes of imports and exports by sea with a competitive and efficient port industry capable of meeting the needs of importers and exporters cost effectively and in a timely manner, thus contributing to long-term economic growth and prosperity". Paragraph 2.3.12, meanwhile, states: "It is Government Policy to encourage capacity to be provided at a wide range of facilities and locations, to provide the flexibility to match the changing demands of the market, possibly with traffic moving from existing ports to new facilities generating			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								surplus capacity". Consistent with the designated NPS, paragraphs 2.3.30 to 2.3.31 conclude: "The Government believes that there is a compelling need for substantial additional port capacity over the next 30 years, to be met by a combination of development already consented and development for which applications have yet to be received. To exclude the possibility of providing additional capacity for the movement of goods and commodities through new port development would be to accept avoidable limits on economic growth and on the price, choice and availability of goods imported into the UK and available to consumers. It would also limit the local and regional economic benefits that new developments might bring. Such an outcome would be strongly against the public interest." In accordance with the Government's economic objectives and national planning policies, it is essential that the Local Plan positively responds to the development needs of RPD. As presently drafted, however, Policy LP14 does not make such positive provision. Significantly, the Local Plan fails to: • provide necessary policy support to enable RPD to expand and adapt, which is contrary to paragraph 85 of the NPPF; • recognise the development needs of RPD, which is contrary to paragraph 87 of the NPPF; • support the expansion of RPD to enable it to contribute to the wider economy, which is contrary to paragraph 111 of the NPPF; • respond to the compelling need for additional port infrastructure, which is established in the Government's economic policies and the Ports NPS; and • recognise that the expansion of RPD can be brought forward in a sustainable manner. Additionally, the current Local Plan approach will likely constrain renewable and low carbon energy development at RPD and the wider Port estate at Avonmouth Dock. This is contrary to the Government's climate change commitments and policy and national, regional and local economic policy objectives for green growth. Paragraph 36(d) of the NPPF sets out that, for local plans to be consistent with national policy, they must enable "the delivery of sustainable development in accordance with the policies in this Framework and other statements of national planning policy, where relevant". Based on the foregoing, BPC does not consider that the Local Plan is consistent with national policy relating to economic development, transport infrastructure or ports. 6. The Local Plan is not legally compliant: SA undertaken as part of the local plan preparation process must satisfy the requirements of The Environmental Assessment of Plans and Programmes Regulations 2004 (the SEA Regulations). Schedule 2 of the SEA Regulations requires that Environmental Reports (and, therefore, SA Reports prepared in respect of local plans) include "An outline of the reasons for selecting the alternatives dealt with". Part 4 (Regulation 16), meanwhile, requires information is provided relating to (inter alia) "the reasons for choosing the plan or programme as adopted, in the light of the other reasonable alternatives dealt with". The requirements of the SEA Regulations are reflected in the National Planning Practice Guidance (NPPG). The NPPG (018 Reference ID: 11-018-20140306, March 2014) states that a local plan SA "needs to consider and compare all reasonable alternatives as the plan evolves, including the preferred approach, and assess these against the baseline environmental, economic and social characteristics of the area and the likely situation if the plan were not to be adopted". Consistent with case law on SA, the NPPG goes on to state that SA reports should (inter alia) "outline the reasons the alternatives were selected, and identify, describe and evaluate their likely significant effects on environmental, economic and social factors using the evidence base (employing the same level of detail for each alternative option)" and "provide conclusions on the reasons the rejected options are not being taken forward and the reasons for selecting the preferred approach in light of the alternatives". Contrary to the legal requirements of the SEA Regulations, NSC does not appear to have adequately identified and assessed reasonable alternatives relating to the future growth of RPD. The SA Report dated October 2025 has assessed the effects of Policy LP14; however, there is no consideration of options to extend the Port beyond its current boundary, including options involving the development of land within Shipway Farm. The assessment also significantly overstates the economic benefits of the policy as drafted. Significant economic growth and job creation at RPD depend on the ability to expand operational land, not just intensify existing uses. Without the ability to expand, the Port is forced to repurpose existing land, often at the expense of other trades, leading to operational inefficiencies and missed economic growth. The lack of additional land for motor vehicle storage directly limits the Port's capacity to support supply chains and regional investment. The lack of assessment of reasonable alternatives is despite: • the Issues and Options Document expressly acknowledging the need to review options to meet the development needs of RPD over the plan period; • three of the four spatial strategy options considered in the subsequent North Somerset Local Plan: Challenges and Choices Part 2 – Choices for the Future consultation document (November 2020) explicitly noting that they present an opportunity "to explore potential new employment provision" at RPD; • BPC having consistently identified in its representations that removal of land within Shipway Farm from the Green Belt is critical to meeting RPD's development needs over the plan period; • NSC's pre-application advice to BPC, as summarised in Section 2; • the comments made by NSC's own representative at the examination into the JSP, as summarised in Section 3; • concerns expressed by Inspectors in respect of the withdrawn JSP, as summarised in Section 3; • the change to national planning policy to introduce grey belt; • national, regional and local economic policy objectives, summarised in Section 2; and • the requirements of the NPPF and policy contained in the Ports NPS, summarised in Section 5. Overall, BPC does not consider that the Local Plan has been prepared in accordance with the SEA Regulations as it has failed to consider reasonable alternatives relating to RPD. On this basis, the Local Plan is not legally compliant. 7. The Local Plan does not comply with the Duty to Cooperate: Paragraph 25 of the NPPF sets out that local planning authorities "should collaborate to identify the relevant strategic matters which they need to address in their plans. They should also engage with their local communities and relevant bodies including…infrastructure providers". Paragraph 20 details that strategic issues where co-operation might be appropriate include transport infrastructure. Whilst BPC is not a 'prescribed body' within the meaning given in The Town and Country Planning (Local Planning) (England) Regulations 2012, owing to the strategic importance of RPD, BPC is strongly of the view that it should be an 'additional body' for the purposes of the preparation of the Local Plan and the Duty to Cooperate. Presently, NSC has not sought to meaningfully and formally engage with RPD on this basis. This is despite: • the strategic importance of Bristol Port in transport and economic terms having been clearly established; • the Challenges for the Future consultation document expressly recognising the wider economic role of RPD; • Policy SP10 (Transport) of the Pre-submission Local Plan identifying RPD as a strategic transport facility; • the Government's economic and planning policies identifying the strategic importance of infrastructure provision; • the strategic importance of RPD having been recognised in local and regional economic strategy;			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								• BPC's representations on the previous iterations of the Local Plan; and • NSC expressly encouraging BPC to work with it on matters relating to the long term development needs for RPD. For the reasons set out above, BPC does not consider that the Local Plan has been prepared in accordance with the Duty to Cooperate.			
62802913	Pill & Easton-in-Gordano Parish Council		Pill & Easton-in-Gordano Parish Council	No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	No	No	Policy LP14 is unsound and inconsistent with national policy because it directly contradicts its own wording and objectives when applied to the proposed Strategic Location at Pill & Easton-in-Gordano (Policy LP4 – 1,100 new homes). LP14 states that new development must not cause unacceptable harm to the operation, access or expansion of Royal Portbury Dock. It also requires improvements to M5 Junction 19 and local roads to be delivered in advance of development that would otherwise harm the port. The 1,100 homes in Pill would add approximately 700 extra peak-hour car trips straight onto the A369 and Junction 19 – the only realistic route for dock traffic, including hundreds of HGVs and abnormal-load vehicles that must use the slow lane on the Avonmouth Bridge. The council's own Infrastructure Delivery Plan (Oct 2025, section 8.3) classifies Junction 19 upgrades as high risk and unfunded, with no committed scheme or funding before 2030. No cumulative traffic modelling of the combined impact of Pill homes, Portishead growth and ongoing port expansion (Bristol Port Master Plan 2023) has been carried out, contrary to the requirement for a robust transport evidence base (NPPF paragraph 118). This means Policy LP4 would cause exactly the unacceptable harm that LP14 is supposed to prevent, and the required road improvements are not in place and cannot be guaranteed. The two policies therefore directly contradict each other, making the plan ineffective, unjustified and inconsistent with national policy.	Delete or heavily amend Policy LP4 so that no housing growth that relies on Junction 19 is permitted until the necessary upgrades are fully funded and built. Alternatively, remove Pill & Easton-in-Gordano as a Strategic Location entirely, reverting to the July 2024 strategy, so that LP14 can be properly applied without contradiction. Amend Policy LP14: Portbury dock with the addition of "The remaining Green Belt land located between the port estate and Pill and Easton-in-Gordano is considered extremely sensitive in preventing coalescence and checking unrestricted urban sprawl		
43203041	National Highways		National Highways							We welcome the recognition that further development of Dock facilities is likely to require improvements at M5 J19 (whether for junction capacity, road safety or accessibility reasons) to make the development acceptable in planning terms. M5 J19 currently operates under constraint at peak times with long slip road queues. There are currently no facilities for pedestrians and cyclists at the junction. We therefore support the policy requirement for potential improvements to support any intensification of the Port's role as a strategic employment location.	NSC Reg19 Local Plan Consultation.pdf
711873	Easton-in-Gordano Parish Council		Pill & Easton-in-Gordano Parish Council	No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	No	No	Policy LP14 is unsound and inconsistent with national policy because it directly contradicts its own wording and objectives when applied to the proposed Strategic Location at Pill & Easton-in-Gordano (Policy LP4 – 1,100 new homes). LP14 states that new development must not cause unacceptable harm to the operation, access or expansion of Royal Portbury Dock. It also requires improvements to M5 Junction 19 and local roads to be delivered in advance of development that would otherwise harm the port. The 1,100 homes in Pill would add approximately 700 extra peak-hour car trips straight onto the A369 and Junction 19 – the only realistic route for dock traffic, including hundreds of HGVs and abnormal-load vehicles that must use the slow lane on the Avonmouth Bridge. The council's own Infrastructure Delivery Plan (Oct 2025, section 8.3) classifies Junction 19 upgrades as high risk and unfunded, with no committed scheme or funding before 2030. No cumulative traffic modelling of the combined impact of Pill homes, Portishead growth and ongoing port expansion (Bristol Port Master Plan 2023) has been carried out, contrary to the requirement for a robust transport evidence base (NPPF paragraph 118). This means Policy LP4 would cause exactly the unacceptable harm that LP14 is supposed to prevent, and the required road improvements are not in place and cannot be guaranteed. The two policies therefore directly contradict each other, making the plan ineffective, unjustified and inconsistent with national policy.	Delete or heavily amend Policy LP4 so that no housing growth that relies on Junction 19 is permitted until the necessary upgrades are fully funded and built. Alternatively, remove Pill & Easton-in-Gordano as a Strategic Location entirely, reverting to the July 2024 strategy, so that LP14 can be properly applied without contradiction. Amend Policy LP14: Portbury dock with the addition of "The remaining Green Belt land located between the port estate and Pill and Easton-in-Gordano is considered extremely sensitive in preventing coalescence and checking unrestricted urban sprawl		
62471329	Environment Agency		Environment Agency						Given the dock's location, we expect the inclusion of flood risk with climate change or water compatible uses with the policy.		EA Response - NSC Reg 19.pdf

Policy LP15: Local Green Space

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 39374913	Tony Harden								Page 341 lists Local Green Space in Wrington. The policy for LGS is supported but: • The "Old Quarry off Wrington Hill" was renamed in 2023 by Wrington Parish Council as "Prestow Wood Nature Reserve". Can this be corrected on the schedule please. Its boundary is incorrect and should be extended to also cover the triangular area as shown here: • The Recreation Ground in Wrington should surely be included as a piece of LGS		comments on Local Plan.pdf
41434017	Wain Homes (Severn Valley) Limited	J Millard	Wain Homes (Severn Valley) Limited	No	' Justified ' Effective	Yes	Yes	As currently drafted the wording of LP15 creates uncertainty as to how it is to be implemented. It states that planning permission will not be granted "except in very special circumstances for development which adversely affects a designated Local Green Space". As worded, this is not specific to land which forms a LGS designated area and could be interpreted as applying to any land which is not part of an LGS. There is serious concern that LP15 is seeking to introduce an 'exceptional circumstances' policy	The policy wording should be clear that this applies to proposals within land that is designated as a Local Green Space.		North Somerset LP Reg 19 Blue Fox Planning obo Wain Homes Severn Valley.pdf

								test on land which does not form part of a designated LGS. 1.2 If LP15 it is intended to apply to sites both within and outside of a LGS, then this cannot be supported as it would be an approach that goes far beyond what is set out in national policy (NPPF, paragraph 107). It would introduce a policy assessment that appraises a non LGS site against the criteria which informed the LGS designation, this cannot be a sound approach. This is not the intent of national policy, the criteria and rational for LGS applies only to the land formally designated. 1.3 The supporting text to LP15 states that when deciding whether a proposal adversely affects an area of LGS, the Council will have regard not only to its underpinning characteristics, such as beauty and historic importance, but also whether any proposals "detract from the LGS by harming its openness or undeveloped nature". Such an approach cannot be supported, if this is retained, it creates an unjustified policy burden on land outside, but in close proximity to, a LGS and introduces an artificial and direct relationship between land that forms an LGS and land outside of this area. 1.4 It effectively elevates the significance of land outside of an LGS to LGS status, by attributing the contribution such land makes to the LGS even when such land does not form part of the LGS designation. This is neither the intent nor correct application of the LGS policy framework. Land which underpins the basis for its LGS is designated in accordance with paragraph 107 of the NPPF (December 2024) which is a specific assessment of the land to be designated as LGS. Land outside of an LGS is not governed by the LGS system, However LP15 elevates the significance of such land and will determine its suitability for development based on its impact on an LGS. 1.5 As an example, Site HE20233 borders the extent of The Elms LGS, if applied in its current form, any proposals for development at Site HE20233 will be assessed against its impact on land which forms the LGS at 'The Elms'. In this case land at HE20233 was previously advanced by the Wraxall and Failand Neighbourhood Plan as land that would form an extension to the existing LGS. The conclusions of the Neighbourhood Plan Examiner was that land at HE20233 failed to demonstrate those characteristics that would justify its designation as LGS and therefore recommended that the proposals to extend the LGS were removed. 1.6 Through the Wraxall and Neighbourhood Plan process, it was clearly shown that HE20233 does not host those key attributes that would justify its designation as a LGS. There is concern that LP15 will introduce a policy framework that will determine the suitability of land such as HE20233 on the basis on the criteria and characteristics of the adjacent Elms LGS. This approach is inconsistent with national policy and introduces a policy consideration that extends beyond the framework for LGS designations. 1.7 PLEASE SEE ATTACHED DOCUMENT			
63213025	BackwellPC NailseaTC Flax BourtonPC BrockleyPC BackwellRA Nailsea Action Group	Lucy White Planning Limited	BackwellPC NailseaTC Flax BourtonPC BrockleyPC BackwellRA Nailsea Action Group	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure		NTC and BPC support the identification of Local Green Space in Nailsea and Backwell. BPC requests that the Land adjacent to West Leigh Infants School is renamed as Land adjacent to Longthorn. 2.27 BPC objects to the failure to identify Backwell Playing Fields as Local Green Space. In accordance with paragraph 107 of the Framework, the Playing Fields are an important green space at the heart of the village community. The playing fields are reasonably close to the community it serves and hold a particular local significance as they were donated to the village in 1929 by Theodore and Isabel Robinson to be a space for community recreation and have been held in Trust ever since. The playing fields are local in character and do not represent an extensive tract of land. The fields are largely surrounded by existing and proposed development. 2.28 BPC also objects to the omission of land between Church Town and Hillside Road from Policy LP15. The land represents an important, well used recreational route and public right of way, forming part of the Backwell Round Walking Route. The green space also represents an important rural backdrop to the south-western part of the village. 2.29 Amendments Sought: For the reasons set out in response to Policy SP8, the separate parcel of land identified under the Grove Farm allocation (adjacent to West Leigh School) should be removed from Policy SP8 and designated as Local Green Space under Policy LP15. 2.30 The Policies Map should be amended accordingly to identify the Backwell Playing Fields, land between Church Town and Hillside Road and land adjacent to West Leigh School as Local Green Space.		251118 Local Plan Reg 19 2025 reps FINAL.pdf R01 - Transport Statement - Rev 3 FINAL.pdf Hydrology LP3 BPC_NTC Appendix_2.2-compressed.pdf Hydrology LP3 BPC_NTC Appendix_2.1-compressed.pdf Hydrology LP3 BPC_NTC Appendix_9-compressed.pdf Hydrology LP3 BPC_NTC Appendix_7-compressed.pdf Hydrology LP3 Summary BPC_NTC Part 2 (1).pdf Hydrology LP3 Summary BPC_NTC Part 1 (1).pdf
62844929	Janice Jennings			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The proposed development of 1,817 new homes in Nailsea would lead to a total over development of our town. New primary schools would be required, and with no locations and firm funding provisions in place, this would not facilitate the proposed population increases to the town. The new link road, under the rail crossing is likely to be very expensive with problematic engineering given the proximity to the River Kenn. The plans will lead to the permanent loss of Grade 2 Agricultural land which is of good quality and high yielding, as a result of the housing development to the south of Nailsea. The town's existing health and leisure provisions are already under considerable pressure and would become unacceptably pressured without firm investment committed to developing these facilities further. Proposed sites for development in Nailsea are recognised foraging sites for Greater and Lesser Horseshoe bats. Proposed homes adjacent to the Moor End Spout Nature Reserve, would destroy wild life habitats and biodiversity in our town, since the site hosts many protected species. The proposed development to the west and south of Backwell Lake (reservoir) mean that new roads and housing will be in the floodplain which does flood regularly. Plans are not currently in place for accident blackspots at Wraxhall Hill, Stone Edge Batch and Portbury Lane, which will see a marked increase in vehicle movements. The railway station is already not fit for purpose as a transport hub, since it remains inaccessible for people with mobility issues
