North Somerset Local Plan 2041
Regulation 20 Consultation Responses
Schedule of Responses by Policy

Vision, Strategic Priorities and Sustainability Objectives

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
63057537	Hallam Land	David Lock Associates		No	• Justified • Consistent with national policy	Yes	Yes	Neither the Vision nor the Local Plan Strategic Priorities as drafted, respond to the clear and evidenced need for the Council to Plan strategic employment needs into the future. The NPPF (December 2024) includes a renewed and targeted kickstart to economic growth through planning for key growth sectors – to include industrial and logistics. North Somerset has very recently made strides in capturing this spirit, planning positively for economic growth, with the recent (May 2025) approval of the new North Somerset Economic Growth Plan 2035 that commits to ambitious objectives to enhance the economy and prosperity of North Somerset. The policy objectives that govern SP1 Sustainable Development reference the need to "Support the delivery of opportunities for economic growth and job creation at accessible locations". To some degree this is echoed in the SO's "to increase the number and range of job opportunities across the district, particularly at the towns to give people the opportunity to work near to where they live", however this does not adequately drive a 'Pro- Business Strategy' as it is articulated in the Economic Growth Plan, which rightly conveys a critical delivery dimension that requires the Local Plan to "allocate and promote commercially attractive and ambitious employment sites" which should be "the right quality and quantity in the right location to support long term growth" (Page 11) whilst recognising there is "significant competition for land across the area and a shortage of suitable and commercially viable land that is 'shovel ready' for investment" (Page 12). The Council intended the Local Plan to play a role as the spatial and land use expression that will deliver the Economic Plan. This intention has not followed through the drafting of the Local Plan which has no reference to the strategic economic objectives recently endorsed. The consequence of this clear oversight is a Plan that fails to adequately plan for economic growth, ignores the strong locational competitive advantages of the area and the enduring strength of the logistics market, and simply allocates small quantums of employment land to strategic growth areas already identified to bring forward housing. An approach that will do very little to bring significant benefit by way of economic activity, inward investment and job creation.	The need to support the economic growth potential of the area, diversify employment land and encourage new job creation must form part of the Vision and be reflected as a Strategic Priority. Reference should be made to the Economic Plan as providing the recently agreed mandate for economic growth and investment for the Local Plan to deliver through suitable allocations that will help to realise the economic objectives for the area.		
21472417	Mead Realisations Ltd	Oneleven Property		No	• Positively prepared • Justified • Effective • Consistent with national policy				It is noted that the new local plan is being prepared to cover a 15-year period which is the minimum required by the National Planning Policy Framework (para 22). It is unclear why a longer plan period was not chosen. This should be explained in the introduction to the plan. This point is particularly relevant when looking at the large-scale development proposed under Policy LP1. Paragraph 22 of the Framework also confirms that policies should be '…set within a vision that looks further ahead (at least 30 years)'. The previous core strategy was originally adopted in 2012 and readopted in 2017. Based on the requirements of paragraph 33 of the Framework those policies should have been reviewed by 2022 at the latest. It is suggested that the Pre-submission Plan (PsP) includes specific text confirming that: 'The Council will review the plan no later than 5 years from the date of adoption' to ensure that these days do not occur in the future. The latest Local Development Scheme published by the Council was published in February 2025 and suggests that consultation on the Regulation 19 plan would occur in June 2025 with submission to the Secretary of State in October 2025. As a result, examination hearings were due to start in February 2026 with adoption by November 2026. These timescales are clearly unrealistic as consultation on the Regulation 19 plan was delayed by 5 months. Using the Council's anticipated timeline the plan will not be adopted until April 2027 at the earliest. The plan period and the consequential changes to housing supply should therefore be updated accordingly. At page 7, the PsP states that "The Local Plan will provide "…a positive vision for the future of North Somerset and a framework for addressing housing needs, employment requirements and other priorities…. It is further stated that the local plan provides the local expression of what sustainable development means for North Somerset. In this regard the plan appears to focus on environmental objectives to the detriment of other economic and social objectives. Meeting housing need and reducing affordability does not appear to have been positively addressed. It is of course important to ensure that the local plan remains consistent with the Framework's definition of sustainable development (NPPF paragraph 8). Page 8 of the PsP confirms that in April 2021 the Council approved the vision and strategic priorities for the plan and in September 2022 decided to recognise the 'constrained nature of North Somerset offering a great protection to green belt and other sensitive sites'. The Council's summary of engagement suggests that support for this approach from the local community has been prioritised whilst objections from the development industry have been played down. The overall vision for the PsP proposes 'transformation' in the way people live reflecting a more responsible attitude to climate change and the use of resources. Whilst the vision refers to new homes being provided more sustainably with increasing variety and choice to better meet the needs of all this will not be achieved by the PsP as it does not take a sufficiently positive approach to the supply of housing. Importantly, it does not recognise the serious affordability issues present in North Somerset or the reasons for these. The absence of any specific reference to addressing affordability issues within the Strategic Priorities at page 11 and 12 is telling in this regard. The eight bullet proposes a rather less ambition priority of delivering a diverse range of housing and meeting future needs of North Somerset residents. The historic housing context for North Somerset should be clearly and transparently referenced in the emerging plan and evidence base so that previous issues of delivery are not repeated. For instance: According to page 5 of the Council's Housing Strategy 2022-2027: Meeting housing need within North Somerset is made more difficult by spiralling housing and rent costs. This means that ownership is out of reach for many, and		Reg 19 Final Representations Mead Realisations 12.12.25 including appendices.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									private renting is also increasingly unaffordable, particularly for those on low incomes and those in receipt of housing benefit. Waiting times for social housing are long, excluding this tenure as an option for most residents. It is essential that there is an increased delivery of affordable and sustainable homes to tackle these issues, and that existing homes are of a high quality and put to the best use". Appendix 1 of the Council's Housing Strategy provides further evidence of the serious housing shortage in North Somerset: "House prices in North Somerset rose by 10% between March 2020 and March 2021, leaving the average house price (£291,790) at roughly 10x average annual earnings for local full-time workers (£29,477). This gap between house prices and income is higher than the national average, where house prices are 8.6x earnings.....As of February 2022, there were 2,561 applicants on the council's HomeChoice social housing register (with 83% of these applying for 1 and 2-bed properties). Yet only around 500-600 social houses are let out on average each year. This means that for every 4 people applying for social housing, only 1 property is available." The Council's latest AMR was published in December 2024. At page 40 the report confirms that a total of 15,019 homes have been delivered between 2006/07 and 2023/24. This represents a shortfall in the annualised Core Strategy requirement of 3,863 dwellings. Table 2 below provides further details: (see attached file). A residual of 5,961 dwellings need to be delivered over the remaining two years to fulfil the adopted housing requirement. The Council published its latest Five-Year Housing Land Supply position in April 2024 where it was claimed that a 3.88 year supply of housing existed. However, a new appeal derived figure of 2.79 years was confirmed in April 2025. The under delivery of housing is not a recent phenomenon. There have been a series of appeal decisions dating back to 2016 all of which have confirmed the absence of a five year supply of housing in North Somerset. Page 12 and 13 of the PsP provides a list of the objectives included in the Sustainability Appraisal and includes the housing objective of 'boost delivery'. This appears to downplay the Government's objective set out at paragraph 61 of the framework which states that the supply of homes should be "significantly" boosted. The Council's overall approach to planning for new development is heavily influenced by the approach to flood risk. However, the evidence base for this important issue is far from clear and only includes the SFRA Level 1 (dated 2025), Coastal Change Management Area Report (May 2023) and a flood risk sequential test of proposals in the PsP. An earlier has been removed. Earlier versions of the SFRA (2020), which informed previous stages of the local plan consultation process (including the Autumn 2023 PsP) and Level 2 SFRA's (dated 2009 and 2010) have been removed from the Council's website. This is misleading and suggests that local plan consultation documents prepared before 2025 were supported by a SFRA dated 2025. This clearly can't have been the case and undermines the ability for interested parties to respond to the Council's consultation process in an informed manner. Similar issues have been raised with the Council previously. In relation to the Autumn 2023 PsP consultation it was noted by Mead Realisations that "The Woodspring Bay Model has been available for some time now and is being referred to by the Council in consultee responses for planning applications (albeit it is being criticised for not using the most up to date sea level rise allowances). The SFRA's were not included as part of the emerging local plan evidence at the start of the Reg 19 consultation period but have subsequently been added. In light of the above serious concerns are raised in relation to the robustness of the evidence base." The Interactive proposals map also doesn't include details of flood mapping has to be accessed via a separate link and makes reviewing the Council's overall approach to flood risk and management very difficult. It is requested that the Council provides a single evidence base resource which provides all documents prepared by the Council since the start of the local plan preparation process in chronological order. Notably, the 2025 Level 1 SFRA confirms at p53 that: "For this SFRA, detailed hydraulic modelling has only been undertaken for the Woodspring Bay model area, in other areas a GIS exercise has been used to assess the impact of climate change on sea level rise, therefore, predicted flood extents shown in North Somerset Planning Map are intended as a guide for areas outside of the Woodspring Bay model extents." This was similarly the case of the 2020 SFRA which stated at p35 that: "For this SFRA, no detailed hydraulic modelling has been undertaken to assess the impact of climate change on sea level rise, therefore, predicted flood extents shown in Figure 045 are intended as a guide. Developers should undertake site-specific FRAs to demonstrate that the proposed development is appropriate."		
53971713	Gill Bennett			Yes		Unsure	No	It has not been widely advertised enough to ensure that all residents know about this consultation, there should be more publicity about this to ensure all residents within North Somerset can comment.			
51455297	St Philips	Richard Grant	St Philips	No	• Effective • Consistent with national policy	Yes	Yes	The Regulation 19 draft NSLP contains a vision setting out what the District will be like at the end of the plan period in 2041, along with a set of strategic priorities and strategic objectives supporting the vision and setting out how the Local Plan will deliver the vision. The vision set out on page 11 of the NSLP sets out a strong set of principles for the places to be created over the plan period. It is noted that the vision does not include a clear commitment to providing new homes to meet the needs of North Somerset's residents, and we would suggest that the vision would be strengthened by making such a statement.	It is noted that the vision does not include a clear commitment to providing new homes to meet the needs of North Somerset's residents, and we would suggest that the vision would be strengthened by making such a statement.		
31072737	Nick Bowler			Unsure	• Consistent with national policy	Unsure	Unsure	I am concerned about potential housing developments adjacent to Elborough Village, both in the fields across the Banwell Road, and in the field between Elborough Village and Elborough Farm. I feel that these developments would be in direct conflict with the following: Extracts from the "Vision" • To prioritise the location of new development close to places with a wide range of services, facilities and job opportunities. • To reduce car use, encourage walking and cycling, and high quality and effective public transport. • To address the decline in the town centres	Potential housing developments adjacent to Elborough Village, both in the fields across the Banwell Road, and in the field between Elborough Village and Elborough Farm should be excluded from the plan as they are on agricultural land. They include established hedges and trees which are home to a variety of wildlife including roosting bats, badgers, hedgehogs and deer. These fields are integral to the character of the village and developments would adversely affect the environment and residents.

								• To prioritise the importance and delivery of green spaces when considering new development, support priority habitats and species, and safeguard areas at risk of flooding.			
27395649	C Butler		Bleadon BOB Community Website	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	Unsure	NSC is unable to comply with any duty to cooperate in regards to the use of agricultural land as the land is already being used for food production. Loss of land will affect local, regional and national food security as debated in Westminster on 18 November 2025. As stated in the debate by Robbie Moore MP Shadow Minister (Environment, Food and Rural Affairs), "... WE ARE, QUITE SIMPLY, IN A FOOD AND FARMING EMERGENCY" Any cooperation should be restricted non-agriculture related brownfield use.	Create protective farming, food production and food security policies, related across all NSC policies. Ensure any NSC decision or policy has been considered in relation to farming, food production and food security. Create strategic gaps around all urban areas to protect rural agriculture/ farming communities.		Local Plan response 12DEC25.pdf
62850369	Maureen Butterly			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	While the Vision emphasises sustainability, protecting valued areas, and supporting community well-being, there is a disconnect between these stated aspirations and the practical implications of identifying Pill and Easton-in-Gordano as a Strategic Location for large-scale residential development, particularly where this depends heavily on the release of Green Belt land. Alignment between the Vision and Green Belt release (Soundness – Justification & Consistency with National Policy) The Vision states that "valued areas will be protected" and that new development will reflect a "more responsible attitude to climate change and the use of resources." However, the Plan proposes releasing significant areas of Green Belt around Pill/Easton-in-Gordano despite: • Insufficient evidence that all reasonable alternatives – such as maximising brownfield capacity, higher-density development in town centres, and cross-boundary co-operation – have been fully explored or exhausted. • Viability evidence indicating that the Golden Rules of affordable housing, green space provision, and infrastructure may not be deliverable on these sites, undermining the sustainability outcomes the Vision relies upon. Without clear evidence demonstrating exceptional circumstances for altering Green Belt boundaries, the Vision is not effectively translated into a justified, consistent strategy (NPPF 2024, Section 13). Community involvement and whether the Vision reflects local aspirations (Legal Compliance & Soundness – Positively Prepared) The Vision stresses community, well-being, and fairness, yet consultation processes to date have not ensured proportionate or inclusive engagement in Pill/E-in-G: • No public exhibition was held in the village during the key February–March 2025 consultation, despite five sites in this area being proposed. • Response volumes for Pill/E-in-G were strikingly lower than comparable locations, raising concern that local views were not adequately captured or reflected. • Over 2,100 residents (from a population of approx. 4,500) have subsequently signed a petition objecting to the scale of proposed development and the consultation approach. If the Vision is intended to represent community aspirations, the evidence suggests these aspirations have not been fully understood or incorporated, calling into question whether the Plan has been positively prepared. 3. Deliverability of sustainable communities (Soundness – Effectiveness) The Vision commits to creating "highly sustainable, accessible and attractive places," yet for Pill/E-in-G there is significant uncertainty regarding: • Transport infrastructure capacity, particularly the cumulative impact on M5 Junction 19. • The extent to which sustainable travel modes (including the proposed rail link) can realistically accommodate population growth of this scale. • Ecological constraints, including the proximity of several sites to the North Somerset & Mendip Bats SAC and Severn Estuary SSSI, which may limit the form, timing or viability of development. If necessary, infrastructure and mitigation cannot be delivered to the standard implied by the Vision, the Vision cannot be considered effective. 4. Duty to Co-operate Given cross-boundary transport impacts and ecological designations, it is unclear from the Vision and supporting text whether the Council has demonstrated sufficiently active engagement with National Highways, neighbouring authorities, and statutory environmental bodies. This uncertainty weakens the credibility of the Vision as an implementable framework. Summary The Vision is aspirational and well-intended, but key components of the Local Plan – particularly the scale of development proposed for Green Belt land around Pill and Easton-in-Gordano – are not convincingly aligned with the principles the Vision sets out. For these reasons, I do not consider the Plan sound in relation to this section.	To make the Local Plan legally compliant and sound in respect of the issues identified, the following modifications are required: 1. Reassess and evidence the justification for Green Belt release around Pill and Easton-in-Gordano • The Plan must provide clear and robust evidence that all reasonable alternatives have been examined before releasing Green Belt land, including: o Maximising brownfield capacity. o Applying minimum density standards in sustainable urban areas. o Working with neighbouring authorities on unmet need. • The Council must demonstrate that exceptional circumstances exist as defined in NPPF 2024 s.13 and that the policies meet the "Golden Rules" relating to affordable housing, infrastructure and accessible green space. • If adequate evidence cannot be produced, the extent of proposed Green Belt release in this location should be reduced or removed. 2. Strengthen and document community engagement to ensure legal compliance • The Council should amend the Plan to include evidence that consultation was proportionate and inclusive for Pill and Easton-in-Gordano, including explanation of why no local exhibition was held and whether this complies with the Statement of Community Involvement. • If the Council cannot demonstrate compliance, further targeted community consultation should be undertaken, and the results incorporated into a revised submission version. 3. Provide clearer evidence of co-operation with statutory bodies, particularly regarding transport and ecology • The Plan should include explicit documentation of engagement with National Highways on cumulative traffic impacts at M5 Junction 19 and demonstrate how their recommendations have informed site allocations. • Evidence of engagement with Natural England and other statutory bodies concerning ecological constraints (North Somerset & Mendip Bats SAC, Severn Estuary SSSI, wildlife corridors) should be incorporated. • Where co-operation is incomplete or unresolved, the allocation of sites should be reconsidered. 4. Ensure transport and infrastructure assumptions are realistic and deliverable • The Plan should be modified to include updated transport modelling assessing the combined impact of the proposed developments in Pill/E-in-G, including reliance on the proposed Portishead railway link. • Clear commitments must be included regarding the timing and funding of necessary infrastructure (school provision, active travel routes, public transport). If these cannot be secured, the scale of development should be revised. 5. Strengthen environmental safeguards and flood risk evidence • The Plan should be modified to include clear mitigation strategies, with funding mechanisms, to protect designated ecological sites and wildlife corridors as required by NPPF and Habitats Regulations. • For sites near Markham Brook and within Flood Zone 3, the Plan should provide evidence that sequential testing has been applied, and lower-risk alternatives assessed. • Policies should explicitly limit development in higher-risk areas unless rigorous site-specific flood risk assessments demonstrate suitability. Summary Modification The Plan requires additional evidence, revised site allocations, and stronger policy safeguards to ensure it meets the tests of soundness (justified, effective, consistent with national policy), legal compliance, and duty to co-operate. Without these modifications, the Plan cannot be considered sound.		
30921569	Lucy Byrne			No		Unsure	No	The North Somerset Local Plan 2041 pre-submission plan is not sound because it is not justified: The evidence in the supporting documents has multiple flaws in it that those with sound local knowledge who were NOT consulted with would have been able to help explain to those carrying out the reports. It is not effective because for example: the transport assessments are flawed with multiple inaccuracies and assumptions so the claims of making travel more sustainable are completely without justification. As one example: the predictions and mitigations for additional traffic flow on the A369 and subsequently the M5 are woefully inaccurate and hugely underplay the impacts of congestion and road safety. Neither is it consistent with national policy, as one example: land at Markham brook is in flood risk zone 3!. Some areas of the plan are therefore not legally compliant. Nor does it comply with the duty to co-operate, as one example: the village of Pill was not sufficiently consulted with about being a new strategic location (5 sites being split up and not treated as one area which increases the local population by approximately 44%) and there is little supporting evidence of co-operative work with the closely related city of Bristol in particular referring to transport modelling and economic growth plans.	To make the plan legally compliant and sound in respect of the issues I have identified North somerset council would need to carry out an extended period of consultation, evidence gathering and locally informed research that considers reasonable alternatives that; utilize more brownfield sites, do not build on so much greenbelt (which has environmental designations and high amenity and visual value), avoid further contributing to flood risks to build safe and cohesive communities. Consultation that complies with their own policies in North Somerset's own 'statement of community involvement'. Consultation that demonstrates well researched cross-county borders strategic planning in regard to transport and economic development plans that are sound. This would deliver a plan with more acceptable and fair compromises to benefit ALL in North Somerset not just developers whose profit driven proposals have evidently led the decision making process without consideration of alternative spacial, community led plans. This plan creates a high risk of residential discord it increases the risks of flooding, of loss of biodiversity of a breakdown in community cohession and increases road safety risks. As one example: There is a wealth of evidence of need in Pill's community development project 'Power to Pill's phase 1 report that was not considered.		Power to Pill Report Phase One 2023-24 FINAL FULL VERSION.pdf Photos-3-001.zip

58381761	M Clarke		None	No	• Justified	Unsure	Unsure	We have to protect green space and the ecology, we cannot destroy our space for badly built homes that are not needed. Just being lazy and not looking at brownfield sites because it is harder work is pathetic.	Stop building rubbish badly built houses that are not needed.		
62731329	Oliver.Carver		NA	No	• Justified	No	No	Sound - has this plan been positively prepared? It does not appear to be. It also does not appear to be justified, effective or consistent with National Policy. Legal - This does not appear to be legally compliant in any way Finally, from what I've read this doesn't not meet the duty to cooperate. The council has not properly engaged with neighbouring authorities and and statutory bodies	Scrap the plans.		
63121089	South Gloucestershire Council (Patrick Conroy)		South Gloucestershire Council							South Gloucestershire Council welcomes the production of, and opportunity to respond to the North Somerset Regulation 19 Local Plan document. The preparation of Local Plans that meet their housing requirement and address key challenges such as Climate Change and affordable housing need, are considered vital to the continued sustainable growth of the wider sub region its well-being and opportunities for all our it's communities and residents. We note that your Plan is being prepared under the December 2024 version of the National Planning Policy Framework, and the linked criteria to setting the plans housing requirements and wider policy framework. The council is pleased to see the Plan's strategy for the next 15 years meeting the housing requirement for North Somerset. It is noted that North Somerset's Local Plan is not seeking South Gloucestershire Council to meet any of its housing needs. The council also welcomes and supports the inclusion of policies which aim to mitigate and adapt to our changing climate. Although our two authorities do not share a physical boundary, effective cross boundary working is required by paragraphs 24 to 28 and 36, of the 2024 NPPF. The work documented in the South Gloucestershire Council's, Statement of Common Ground with North Somerset (October 2025) and through this statutory consultation, demonstrates the on-going work between the two authorities. I trust this consultation response is helpful and we look forward to continuing to work with you as your Plan progresses to submission and examination, including agreeing a statement of common ground as may be required. Please do not hesitate to contact us if any queries.	South Gloucestershire Response - North Somerset Local Plan Reg 19.docx
31037185	Nigel Cooke			Yes		Yes	Yes				
58629377	T Crane			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	NOT SOUND: The vision rightly recognises that sustainable development should balance economic, social and environmental objectives, and the sustainability objectives cover important themes such as access to jobs, re-use of brownfield land, affordable housing, community cohesion and environmental protection. However, the way the vision is expressed for North Somerset does not reflect the diversity of the district's communities or the realities on the ground. In its current form it risks setting a "one-size-fits-all" agenda that is inconsistent with real-life conditions. Lack of recognition of local distinctiveness: North Somerset is not homogeneous. One part of Weston-super-Mare ranks among the five most deprived areas in the country according to government statistics, while communities such as Backwell, Wraxall, Failand, Clevedon and Nailsea are comparatively affluent. The district includes vibrant coastal towns, historic market towns, commuter villages and rural hamlets. A single overarching vision that treats these very different places as if they face the same issues overlooks their unique needs and opportunities. "Breathing new life into existing towns" is mis-directed – The vision talks about revitalising existing towns. Many towns, including Portishead and Clevedon, are already successful, attractive and economically vibrant. They need support to sustain and enhance that success – for example, through targeted investment, infrastructure improvements and policies that encourage business growth – rather than wholesale residential expansion that could undermine their character, such as thos eplanned for Nailsea and Backwell. No clear link between vision and evidence : The Sustainability Appraisal objectives include ensuring a range of job	Suggested improvements Tailor the vision to recognise the distinct identities and challenges of North Somerset's settlements. It should set differentiated priorities for deprived urban areas, coastal towns, rural villages and commuter settlements. For example, regeneration and skills investment should be a priority in deprived parts of Weston-super-Mare, while transport improvements and protection of green spaces are critical for towns and villages like Nailsea, Backwell and Wraxall. Acknowledge existing success stories and set out how the plan will support them through incentives for business investment, town-centre enhancement and public realm improvements, rather than implying they need to be "re-invigorated" through large housing allocations. Explicitly link strategic priorities to the Sustainability Appraisal objectives: demonstrate how each objective (e.g. delivering accessible jobs, reducing car dependency, conserving heritage and biodiversity) will be met in different parts of the district, and ensure housing growth is balanced with economic strategy and infrastructure provision.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								opportunities, promoting the optimal use of land (especially brownfield), delivering affordable housing and protecting biodiversity. Yet the vision underpinning the plan seems to prioritise large-scale housing allocations in places like Nailsea and Backwell without a parallel strategy for economic development, regeneration of deprived areas or protection of environmentally sensitive land. This disconnect makes it difficult to see how the strategic priorities will achieve the stated sustainability objectives.			
9138657	Home Builders Federation		Home Builders Federation	No	• Justified • Effective • Consistent with national policy			The Plan does not include a Housing Trajectory as such is not considered to be sound as it is not justified or effective or in compliance with national policy. A Housing Trajectory needs to be provided which shows as a minimum the site-by-site breakdown of housing delivery over the plan period. This must also link into the Monitoring Framework.	The wider housing context Although we note the recent changes to national planning policy removes the Duty to Cooperate requirement, good planning still requires collaboration across boundaries for effective plan-making. HBF notes that the significant interaction between housing issues across the wider Bristol housing market remain and are still not being adequately addressed. The LPAs that make up the former county of Avon- Bristol City, South Gloucestershire, North Somerset and Bath and North-East Somerset (BANES) have a long and unfortunate history of unsuccessful collaboration around plan-making, which has led to the housing needs of the City Region being unmet for many years. We remain concerned that this Plan is not doing enough to overcome this history of under-delivery and demonstrates a lack of cooperation around planning for housing that results in a failure to properly plan for the both the North Somerset and wider area. HBF remain concerned that this plan will not deliver against the national, regional and local housing objectives, which are even more important as we are in the midst of a housing crisis. HBF note that the Plan for North Somerset is still being prepared against a complete absence of joined-up local plan making for the City-Region. Following the abandonment of the West of England Joint Spatial Plan it was hoped that the strategic planning context for the Bristol Local Plan would be set out in the West of England Combined Authority Spatial Development Strategy. However, this is now also not being progressed and therefore there is no established wider strategic planning context for the wider Bristol HMA, which includes parts of North Somerset. This is despite Bristol having a long established unmet housing need. HBF recognise the challenges facing Bristol City in being part of the wider Bristol HMA. We have seen in the past how the closely bounded nature of the City, the challenges of Green Belt release, and the ongoing, fractious and controversial debates around the level of housing need and unmet in the City have created difficult relationships with neighbouring authorities. These factors however must be reasons to work harder at collaboration and good plan-making and not excuses for a failure to meet housing need. We therefore agree there are exceptional circumstances that justify the release of Green Belt sites within North Somerset, and indeed would support Green Belt release. North Somerset Council should be aware that HBF has objected to the proposed approach that Bristol City is proposing to take in relation to its housing need because the policies are inconsistent with national policy, ineffective, unjustified, and therefore unsound. HBF are very frustrated by the neighbouring authorities' failures to recognise and address these needs through their own plans, and as such HBF continue to be concerned this issue is remaining not fully addressed including in this North Somerset Reg 19 Plan, on this basis, as set out in our representations. HBF are very concerned that there remains an unmet need generated from within Bristol which neighbouring authorities are not looking to meet through their Local Plans. This is evidence of a failure of joint-working and Cooperate and effective plan-making. In our previous Reg 19 response we noted that as part of the Bristol Local Plan Reg 19 consultation the City have prepared cross-boundary issues statement, Appendix 1 of which is the letter sent from Bristol City Council to Bath and North East Somerset Council, South Gloucestershire Council and North Somerset Council, dated 31 October 2023. HBF have been unable to locate any evidence that shows North Somerset Council's response to this letter, but the policies in the North Somerset Plan indicate no action is being taken by North Somerset to explore or address the issues raised by Bristol. For the North Somerset Plan to be completely silent on these issues means it is ineffective, unjustified and contrary to national policy. Legal compliance Missing evidence In our previous Reg 19 we raised concerned that Regulation 19 consultation version on the Plan was not been accompanied by all the necessary evidence. For example, one of the frustrations of the HBF's members is the lack of housing land data allowing transparency in the methodology underpinning the housing methodology. A Residential Land Survey Report to April 2023 has been long delayed and is, at the time of that consultation was still unavailable. Such established and normally expected evidence is key to the preparation of the Local Plan and the formulation of robust and sound policies which is necessary to ensure that the North Somerset Plan is founded on a justifiable strategy. The Council's Spatial Strategy and Capacity Report is simply no substitute. There was no clear reason why this information is not available and there is no clear justification as to how a Local Plan can progress to Regulation 19 consultation without it. HBF also had concerns about the timelines of some of the evidence that has been made available. Some of the reports and evidence which should have been informing the development of policy and strategy appear to have been being prepared at the same time as the previous Reg 19 Local Plan was progressing through the Council's governance processes. We still remain unclear if and how this As such HBF would question if and how the findings of such report can have fed into both the Plan-making process, and elected members consideration of the Plan. HBF would request		North Somerset 2nd Reg 19 Dec 25.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									further information is provided on this matter to show that due process has been followed. Need to reflect new Government Policy It will also be important for the Council to consider the provisions to the Biodiversity Net Gain (BNG) and Guidance which are expected imminently. HBF would suggest that revisions to the Plan may be needed before its submission to reflect this latest guidance and we would suggesting additional time for considering the implications of this new guidance would be useful. HBF would strongly welcome further consultation on this issue. We believe BNG should be a significant factor in emerging Local Plans and may require additional research, evidence work, policy and guidance of it to be made to work in practice. Plan-making is the appropriate stage for many BNG issues to be considered and we therefore suggest that the North Somerset Plan need to be reviewed and revisited to ensure that it is doing all it can to support the delivery of the national mandatory BNG policy through providing clear advice guidance and, wherever possible, certainty for developers and landowners and communities on what is expected. Need for a shared approach to unmet need Bristol City Council as part of their Reg 19 Local Plan consultation have published a paper entitled ‘planning for strategic cross boundary matters: progress report’, dated (Nov 23). This appears to be a statement from the Bristol Council acting individually, rather than an agreed joint approach to planning in the wider Bristol area with the benefit of express support for the neighbouring authorities, which would be expected under the Duty to Cooperate. A comprehensive and agreed statement would seem to be an essential requisite for plan-making in the Bristol City Region, especially as the Bristol Plan envisages much of the housing need for Bristol City being met outside of the City boundary in neighbouring authority areas. Despite the change to the Duty to Cooperate HBF would still have expected to see a clearly set out agreed approach, or at the very least a Statement of Common Ground setting out if there was an agreement on how the unmet housing need of Bristol are to be addressed. The failure of this Plan to even mention this issue is greatly concerning. North Somerset’s position in this regard needs to be clearly set out in evidence and should be explicitly referred to in the Plan. For the housing policy and justification to make no reference at all the formal request from Bristol to accommodate some of its unmet housing need and what the Council has done, and not done as a result, fails to comply with the requirements for both good plan-making and the Duty to Cooperate. HBF note that the consultations on neighbouring authorities Local Plans suggest there is no consensus or agreement on the approach that should be taken to address the constrained nature of Bristol City Council area and the challenges it facing bringing enough housing development forward. Instead of working together, Bristol’s neighbouring authorities seem to be actively seeking to minimise their own housing numbers, and certainty do not seem to be accepting of, or seeking to plan, for any additional housing to help met the wider needs of the Bristol City Region. This is an unsound approach to plan-making and does not reflect the Government ambitions to deliver 1.5 million new homes within this Parliament. HBF note that in other areas, such as Leicestershire, joint working on the issue of housing needs has resulted in agreed approaches, Statements of Common Ground and Memorandums of Understanding around the challenges Leicester City faces in seeking to meet its own need within its tightly drawn boundary. There is an agreement amongst the Leicestershire authorities that they should play their part in meeting this need, and discussions have been ongoing as to the re-distribution of this unmet need between the partners. Sizable efforts and a large amount of joint working has been undertaken by the Leicester and Leicestershire authorities to try and reach agreement. Efforts, which are sadly lacking from the Bristol city region authorities. HBF also notes, perhaps even more significantly that emerging Local Plans in Leicestershire are including an element of unmet housing need from Leicester within their housing requirement. HBF is disappointed that such joint working has proved impossible with the wider Bristol area, and this has served to undermine positive plan-making and meeting housing need. As well as creating unsound plan, the failure to address housing needs in the midst of a housing crisis is having, and will continue to have, social, economic and environmental consequences for the Bristol City region. Problems with the formatting of the policies and text HBF also offers a general observation around a problem that would affect the usability of the Plan. It its current format the Plan with create problems for plan users when seeking to refer to the policies and supporting text, particularly applicants and decision-takers. We note that all the policies are just written as a list of bullet points with no identifying numbering or lettering. The paragraphs of supporting text are also not numbered. This will make it very difficult for a developer, a planning officer, an elected member, or a member of the public to make specific reference to a particular part of the policy or text when preparing a planning application, writing a report, making a decision or making a representation on a planning application. The policies should be reformatted to improve the usability of the whole Plan. As currently written the Plan will be difficult to use and therefore ineffective, failing the tests of soundness. As we raised this issue at the previous Reg 19 stage it is disappointing to see it has not been addressed already. Plan Period		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									The Plan identifies a Plan period to 2041. The NPPF states strategic policies should look ahead over a minimum 15-year period from adoption and that where larger scale developments form part of the strategy for the area, policies should be set within a vision that looks further ahead (at least 30 years), to take into account the likely timescale for delivery. HBF considers that the Council may want to be looking to prepare a new Local Plan that will look forward to 2042 as minimum to ensure that it covers the 15-year period. Whatever plan period is chosen there is a need for evidence to cover the whole plan period, it would therefore be sensible to ensure the evidence covers a longer time frame as well.		
31058625	Wayne Davey			No	• Justified	Unsure	Unsure	The preamble says the following: "The Local Plan will provide a positive vision for the future of North Somerset, a framework for addressing housing needs, employment requirements and other priorities and a mechanism through which local communities can help shape their surroundings. The heart of the planning system is the delivery of sustainable development which comprises interdependent economic, social and environmental objectives. The local plan provides the local expression of what sustainable development means for North Somerset. It must be positively prepared (to address objectively assessed needs), justified (an appropriate strategy based on reasonable evidence), effective (deliverable over the plan period) and consistent with national policy.". To me this is not fully a positive vision and is not justified. The evidence is that new development (i.e new buildings) are less sustainable than using existing buildings. I don't believe it is 'postively prepared' as i don't believe the needs have been objectively assessed. It seems a national figure has been plucked out of the air, and distributed to different areas such as North Somerset on an opaque basis which does not designed to tie in with local need.			
62814305	Laurence Dixon			No	• Justified	Unsure	Unsure				
62883969	Innova Consulting Services	Innova Consulting Services	Corylus Planning and Environmental Ltd	No	• Positively prepared • Effective • Consistent with national policy	Yes	No	pp9-10 of the Reg 19 Pre-Submission Plan states the plan period 2026 – 2041. NPPF paragraph 22 states that strategic policies should look ahead over a minimum 15 year period from adoption and that where large scale or significant extensions to existing towns and villages are part of the strategy for the area that policies should be “set within a vision that looks further ahead (at least 30 years), to take account the likely timescale for delivery”. There are two points to make. 1. Examination and adoption of the plan are proposed in 2026 by the Council. Most examined Local Plans require post hearing Main Modification consultation. The plan is therefore unlikely to be adopted in 2026 and the plan period should be extended accordingly. 2. The Reg 19 Pre-Submission Plan contains large strategic development allocations at Wolvershill (3,300 dwellings) and Woodspring (3,500 dwellings) as well as two urban extensions to Weston-super-Mare carried forward form the Site Allocations Plan (3,900 dwellings). Urban extensions are also proposed at Nailsea and Backwell. It is argued that the plan should have a 30-year plan period to allow for the delivery of the strategic infrastructure required to bring forward the strategic development locations and urban extensions. See policies LP1 p.51; LP2 p.58; LP3 p.65.	Revise the plan period to reflect a minimum of 15 years from a realistic adoption date given the need for Examination and Main Modification consultation with associated uplift in housing requirements for the extended plan period. Consider the NPPF requirement for a 30-year plan period given the size and scale of the larger growth locations and their needs for strategic infrastructure delivery. 58602337	William Hall			No	• Consistent with national policy	No	No	I consider the Plan not sound, not legally compliant, and not fully compliant with the Duty to Cooperate with respect to the proposed allocations at Tower Farm and Black Rock. Soundness: The Plan is not positively prepared because it does not demonstrate that all reasonable alternatives have been considered. Higher-density development on brownfield sites or other lower-impact locations could meet housing needs without harming valuable natural areas or creating additional community safety risks. The Plan is not justified because the evidence base is insufficient. There is no clear demonstration that these sites can be developed without causing serious environmental, landscape, or ecological harm. The sites border Weston Big Wood, Nightingale Valley, and the Gordano Valley corridor — ecologically sensitive areas whose protection is not adequately addressed. The Plan is not effective because safe and suitable access to the sites is not demonstrated. Existing congestion from school traffic on The Downs already creates unsafe conditions, which would be worsened by additional development. Flood risk has not been fully assessed or mitigated. The Plan is not consistent with national policy. Allocating Green Belt land without exceptional circumstances, and failing to address ecological, transport, and flood risks, conflicts with the NPPF's principles for sustainable development. Legal Compliance: Exceptional circumstances for removing land from the Green Belt have not been demonstrated, contrary to national guidance. Environmental and flood risk assessments are incomplete, failing statutory obligations to protect Sites of Special Scientific Interest and manage flood risk. Evidence of safe and deliverable access is insufficient, meaning the Plan does not comply with legal obligations to ensure safe development. Duty to Cooperate: The Plan does not adequately demonstrate engagement with statutory bodies and neighbouring authorities on the specific environmental, transport, and flood risk impacts of these allocations. Impacts on local infrastructure, school safety, and nationally important ecological assets have not been jointly assessed, which is required under Section 33A of the Planning and Compulsory Purchase Act.	Remove Tower Farm and Black Rock from the Local Plan. Focus development on brownfield and lower-impact sites that do not threaten nationally important ecological assets, create severe transport issues, or increase flood risk. Provide full and robust environmental assessments for any sites proposed for allocation, including impacts on ancient woodland, SSSIs, ecological corridors, and landscape buffers. Demonstrate safe and suitable access for any proposed development and assess impacts on existing road safety, particularly at school pick-up zones. Engage statutory bodies and neighbouring authorities to address environmental, transport, and flood risk issues, in compliance with the Duty to Cooperate.	I support the overall vision and aims of the Plan, including its commitment to high-quality, sustainable development, regeneration of existing towns, and protection of valued areas. I also welcome the Plan's focus on creating accessible, sustainable communities that address climate change and promote well-being.	
58279457	L Harrisis			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	Unsure	North Somerset Council has failed to clearly demonstrate compliance with the Public Sector Equality Duty (Equality Act 2010, s.149) because no evidence that an Equality Impact Assessment has been undertaken on the consultation process itself. Without an EqIA, the Council cannot show that the consultation was designed or delivered in a way that ensured fair and accessible participation for all protected groups, including disabled residents, older people, those with limited mobility, digitally excluded households, and individuals with caring responsibilities. This omission undermines the inclusivity and proportionality required by the NPPF and the Council's own Statement of Community Involvement, and raises a clear risk that significant groups within the community were disadvantaged or unable to engage meaningfully. Furthermore, the EqIA undertaken on the plan is flawed as there are no guarantees that the developers will meet the affordable housing requirements as stated in the Local Plan. Allocated sites are poorly served by public transport and infrastructure plans are not funded or proven to be deliverable. Therefore creating inclusive communities and reducing inequality will not be achieved as per NSC's own policies. As a result, the Local Plan fails the tests of legal compliance and soundness, as the consultation process cannot be considered effective, justified, or consistent with national policy requirements for fair and accessible plan-making.	1) Modify NSC's 'evidence base' by providing more accessible documentation, supporting reports are lengthy and overly complex. 2) Provide evidence to state that screen readers and other accessible software could be used on the supporting documents. 3) Provide evidence that those consultees who do not have English as a first language have been given the same opportunities to engage with the consultation as native speakers. 4) Reduce the level of complexity for participation; remove reliance to digital access and competence. Provide other opportunities for engagement such recording verbal testimonies from residents who have limited or no digital access, may be older and unfamiliar with digital consultations or socially isolated and unable to respond by letter. 5) Ensure Active Travel plans are including disability groups, older residents and car dependent residents to ensure 'no development for us, without us' approaches. Provide realistic and deliverable active travel plans which definitively reduce car dependency and create inclusive communities, rather than 'possible' plans.		
62862401	Sustainable Pill & District		Sustainable Pill & District	No	• Positively prepared • Justified • Effective	No	Unsure	Please note this comment has been placed below the 'Vision' section of the Local Plan, since there is no comment box below the Introduction section. It has also been uploaded as an attachment to ensure the reader can activate internet links. The introduction section to this Local Plan states on page 9 that: 'a consultation on	In order to make the Local Plan legally compliant and sound, there should be a re-assessment of the of the five sites around Pill and Easton-in Gordano for housing development and their identification collectively as a Strategic Location. The submitted comments on behalf of Sustainable Pill and District demonstrate considerable lack of community engagement, which fails the test for Legal	Please see documents uploaded below.	Additional Sites Consultation - Consultation Statement (May 2025) Accessible.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 					• Consistent with national policy			additional sites (the Regulation 19 Additional Site Consultation) to meet the new housing requirement was undertaken in between 7 February and 21 March 2025 and as a result of this consultation a further package of housing sites has been incorporated into this Regulation 19 plan to meet the government's housing need figure for North Somerset'. The consultation included 5 additional sites with potential for 1,100 new homes around Pill. Following the consultation, Pill and Easton-in-Gordano was categorised as a 'Strategic Location' for large residential development. At time of submission of this comment, 2,302 residents from a total population of circa 4,900 (2021 census data) have signed a petition objecting to the imposition of excessive housing in the area and challenging the lack of adequate consultation with the community in Pill and Easton-in-Gordano in relation to the Additional Sites Consultation referred to above. The link to the online petition is here (please activate link from attached Word version of this comment). It was created by members of 'Sustainable Pill & District' (SPAD). All those who signed the petition have consented to comments on this Local Plan being made on their behalf by SPAD. Signatures have been obtained in-person, at local events such as the community market and at the Pill Resource Centre, as well as online. Lack of community engagement and failure to comply with Public Sector Equality Duty North Somerset Council's Statement of Community Involvement 2019 (in Local Plan evidence base) states in 'General Principles' section: • We will target consultation to include people whom we consider would be most affected by any proposals or plans and where possible any known interest groups. • Involvement will be open to all. • We will take into account our duties under the Equality Act 2010 including the Public Sector Equality Duty and ensure information is accessible in the most appropriate format for everyone's needs. It is submitted that North Somerset Council (NSC) failed to adhere to these General Principles in relation to the additional sites around Pill & Easton-in-Gordano. The Regulation 19 Additional Sites Consultation Statement May 2025 (attached) sets out on page 13 the consultation methods which were used and the number of responses. The consultation methods focussed on internet-based means of communication. The non-internet methods of communication comprised an article in the North Somerset Times newspaper, which is not delivered to residents' homes in Pill and Easton-in-Gordano, and four public events (publicised via internet methods) which did not include events in Pill and Easton-in-Gordano or in Portishead. Guidance on consultations https://www.gov.uk/government/publications/consultation-principles-guidance and https://www.local.gov.uk/our-support/communications-and-community-engagement/resident-communications/understanding-views-2) emphasise that a "digital first" approach should not mean "digital only". Local Authorities must consider the diverse needs of their communities and ensure people without internet access, digital skills, or who prefer traditional methods are not excluded. Furthermore, a planning consultation could breach the Public Sector Equality Duty if the consultation process itself is not accessible or does not effectively reach individuals with protected characteristics, meaning their specific needs and concerns are not heard. It is clear that response volumes for the Additional Sites Consultation were markedly lower for Pill and Easton-in-Gordano (125 responses for 5 sites) than for comparable locations: Portishead: 689 responses for 5 sites, Long Ashton: 591 responses for 10 sites, Wrington: 484 responses for 5 sites, Nailsea and Backwell: 1,049 responses for 26 sites. When the response volume to this consultation from residents in Pill and Easton-in-Gordano is compared to the 2,302 responses to the subsequent petition, it is clear that the consultation response is not an accurate reflection of the views of the local community. The data displaying details of respondents contained in the Additional Sites Consultation Statement May 2025 (attached) shows that only 41 separate respondents made comments about the sites around Pill and Easton-in-Gordano. These comments are given equal weight in the subsequent analysis by North Somerset Council, and yet 5 of those responses are clearly identified as being from, or submitted on behalf of, developers with an interest in developing the sites, namely Catesby Estates, Waddeton Park Ltd, Strongvox Homes, Barrett Homes and Lands Improvement. At least 4 other respondents are not local residents, namely Backwell Parish Council, a residents Group for Station Close Backwell, The National Trust and The Environment Agency, which leaves only 32 respondents who could be local residents – a very low number in comparison to the 2,302 who have signed the petition. Following the Additional Sites Consultation, a Report to the Placemaking, Economy and Sustainable Communities Policy and Scrutiny Committee on 17th July 2025 (copy attached) included the statement in paragraph 3.24 that 'A workshop session with the parish council and local residents has been offered in July, and the outcomes of that workshop will feed into the emerging policy and site-specific requirements set out in Schedule 1 of the plan. Further engagement will continue over the coming months.' There was no workshop open to local residents and only minimal engagement with a couple of members of the SPAD group, which did not result in any changes to site-specific requirements in the	Compliance and falls well below the engagement with communities in the other Strategic Locations referred to in the Plan. The comments also make clear that significant weaknesses exit in the assessment of these sites and in the application of 'exceptional circumstances' to justify their release from the Green Belt for housing development. Furthermore, weaknesses in site-specific policies indicate insufficient time and consideration has been given to the policies for this Strategic Location, likely due to its late inclusion in the Plan. A pause in the process of approving this Plan is requested so that the Pill and Easton-in-Gordano Strategic Location can be re-assessed, following adequate and effective engagement with the local community.		Comments on Additional Sites consultation.docx 17.07.25 Report to committee.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Local Plan. The scale of potential change in Pill and Easton-in-Gordano (e.g., 600 homes at Pill Green alone, plus other sites making a total of 1,100 additional homes), the absence of a local event and the relatively small response volume, strongly indicates under-representation of local voices and a lack of proportionate engagement by North Somerset Council. This indicates that Local Plan has not been positively prepared, cannot be effective and is therefore Unsound. Further weight is given to this argument by the clear evidence that the petition, mentioned above, gained support through more diverse methods of engagement than those used by the Council, including in-person methods of engagement which reached a much larger proportion of local residents. It is submitted that the process of consultation for the Additional Site Consultation is not in accord with the general principles of the NSC 2019 Statement of Community Involvement and fails to meet the standards of the Public Sector Equality Duty. The Local Plan is therefore not Legally Compliant in respect of the inclusion of the Pill and Easton-in-Gordano as a Strategic Location.			
62784897	Jenny Ingram			No	• Justified • Effective • Consistent with national policy	Unsure	Unsure	Lack of community involvement and consultation methods. NSC has not engaged properly with local community of Pill and Easton in Gordano about the plan. An increase of 44% in population requires extensive consultation with local residents in the villages. Deviation from Settlement Boundaries (SP6). Land outside established settlement boundaries should not be included in proposed development allocation in Pill and EIG. Extending beyond the settlement boundaries will undermine the planning rules for SP6 and SP11. This will increase pressure on infrastructure, set precedent for further expansion, and affect cohesion of the villages. Spatial strategy and transport. Pill and EIG have limited facilities, services and jobs.They will become dormitory areas for Bristol. The proposed new railway will not encourage people to use this to get to Bristol as there will be few trains per hour and 3 carriages, likely to be full from Portishead. Car traffic will be increased considerably on A369 and bottle necks into Bristol causing adverse impacts on this route. Placemaking. The proposed sites suggest a high density of houses not appropriate to the locations, not producing sustainable communities. Too many houses are proposed for the land. Green belt land. No reasonable alternatives to using Green Belt have been considered. These include maximising brownfield sites and optimising sites in the city with higher- density capacity.	1. A well publicised public meeting with the local community 2. Review of sites to ensure compliance with NSC proposed policies. 3. Acknowledgement of existing settlement boundaries and no extension to them. 4. Review of the transport infrastructure in the area which is already straining from increases in traffic from Portishead developments. The railway will not solve this.		
51732129	Gleeson Land	Tor&co	Gleeson Land	No	• Positively prepared • Effective • Consistent with national policy	Yes	No	The NPPF (para 22) expects plans to be prepared to cover a minimum 15 year period from adoption. The February LDS anticipated submission of the plan for examination in October 2025 with adoption November 2026. Slippage has already occurred, pushing adoption into 2027. On this basis, the plan period should extend to 2042.	Extend the plan period to 2042, which would have consequences for development requirements across the plan period. I support this vision statement, it is positive thinking, recognises the future will be different but plans the direction for our area. It recognises climate change and the landscape we live in and what we need to help our communities thrive. I think it is in line with North Somersets commitment to the climate emergency, to our corporate strategy and that of National Government to recognise the climate emergency.	
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	• Positively prepared • Consistent with national policy	Yes	No	Page 7 ‘Introduction’ The Plan Period of between 2026 and 2041 should be extended so to run for a 15 year period following the adoption of the Local Plan and so to align with NPPF (para 22). Notwithstanding the Company’s concerns relating to the soundness of the Plan – a plan period from 2027-2042 is more realistic set against the Council’s Local Delivery Scheme which now presents an inaccurate timeline. Whilst the Local Plan sets out the consultation approach adopted leading to the Regulation 19 Draft (and having regard to the evidence base – notably the Duty to Cooperate Statement of Compliance, Oct 2025) there has not been a consistent, logical approach to defining and understanding the spatial strategy and distribution of development. The Council has adopted an approach is one which seeks to avoid first land at risk of flooding, then the green belt and other designations of significance including National Landscapes (AONBs). They have taken an unduly cautious approach	The draft Local Plan should be amended to reflect a 15 year timescale from adoption in 2027 – and this will require careful review of evidence-base information in response. Bristol's unmet need must be addressed. The Vision should be reworded to include: “By 2042 [an extended plan timeline], North Somerset will be a thriving, sustainable district that meets its full housing requirement and supports inclusive growth. The Local Plan will deliver a mix of homes, employment opportunities, and infrastructure, ensuring development is well-connected and suitably sited, resilient to climate change, and which enhances the quality of life for all communities. These commitments as presented will be monitored and the plan reviewed to respond to address any shortcomings or shortfalls affecting the Plans effectiveness.”		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								without proper consideration of evidence that supports the plan. The settlement strategy has not taken a sensible, informed approach to spatial distribution noting that the housing requirement reflected in earlier Local Plan consultations were themselves not reflective of objectively assessed need set against an appropriate methodology. Further, it is does not respond positively to development in zones of flood risk where sites can be made safe through technical interventions. This means unsustainable sites have been identified ahead of others that require flood mitigation measures. The Plan does not demonstrate that those issues associated with unmet need arising from neighbouring authorities (notably Bristol City Council) have not been fully considered and positively responded too. Objection and Suggested Changes to the Vision (Page 11) The Vision as currently drafted is aspirational only and lacks measurable commitments. It does not explicitly state that the Council will meet its full housing requirement or address the need for timely and sustainable delivery of new homes. This omission undermines the effectiveness of the Local Plan and fails to provide benchmarks against which success can be tested and reviewed. There are no clear measurable goals. The Vision does not set out standards or indicators to assess whether its objectives are achieved. Without measurable outcomes it is weakened. It fails to commit explicitly to meeting housing need. The Vision should explicitly state that the Council will meet its objectively assessed housing requirement and work positively to address promptly any shortfall. The Local Plan should be drafted to achieve this. While strategic priorities are listed, they are not integrated into the Vision text. The Vision should reflect priorities such as housing delivery, economic development and growth, and sustainable development in a clear and actionable way. The NPPF para 36 requires that plans meet their needs – which are fully tested. It should therefore explicitly seek to meet the district's housing requirement in full, including any agreed contribution to unmet needs from neighbouring authority of Bristol.			
62488385	Somerset Council		Somerset Council	Yes		Yes	Yes	We have had ongoing discussions with North Somerset Council in the preparation of their Plan and look forward to formalising this in a Statement of Common Ground.			
14394881	Malcolm Reed			No	• Justified	Unsure	Yes	This plan has been developed in the absence of and contrary to the democratic wishes of the Backwell electorate.			
63107361	Gladman Developments		Gladman Developments Ltd	Yes						Gladman support the proposed vision for North Somerset which seeks to ensure the delivery of highly sustainable new homes, buildings, and communities to provide accessible and attractive places to live. In addition, Gladman support the strategic priorities identified by the Council which seek to promote the delivery of sustainable development, address the climate emergency, increase the number and range of job opportunities across the district, prioritise the location of new development close to places with a wide range of services, facilities and jobs growth, reducing reliance on car use as well as prioritising the importance and delivery of green spaces when considering new development. Further, Gladman support the strategic priority of delivering a diverse range of housing in a variety of tenures, sizes and forms, particularly genuine affordable housing, to meet future needs of North Somerset residents at locations where they are most needed.	
61028801	Judy Shore			No	• Effective	Yes	Yes				
62741377	J Smith			Yes		Yes	Yes				
58520865	Giacomo Squintani			No	• Positively prepared • Justified	Unsure	Unsure	You state: "By 2041 there will be a transformation in the way we live which reflects a more responsible attitude to climate change and the use of resources. New homes, buildings and communities will be highly sustainable, accessible and attractive places with higher quality standards. There will be more diversity in terms of the form and type of new development to increase variety and choice to better meet the needs of all, create jobs and to tackle inequality. Regeneration will transform and breathe new life into existing towns and valued areas will be protected. People's well-being, a strong sense of community, opportunity and fairness will be at the heart of all development in North Somerset." I am wholeheartedly in agreement. Which is why I strongly urge North Somerset Council to work with the local Portishead Council to identify sites that are better suited to deliver on this vision. In particular, at a time when a railway appears to be on its way, "highly sustainable" must surely mean affordable housing within walking distance of the new railway station? I have read comments about the site near Weston Big Wood being earmarked because it is within "cycling distance" of the new railway station. On medical grounds (epilepsy) I neither drive nor cycle, but have run to Bristol Temple Meads, Bristol Parkway, Bristol International Airport and Bristol Bus and Coach Station - so I have first-hand experience of runcommuting and indeed, from further back, cycle-commuting. It tends to require showering and changing facilities, and most people who might be willing to cycle to work will be put off, understandably, by	I believe it necessary to liaise with the Portishead Town Council to identify more suitable sites, prioritising the Old Mill Road area and spaces closer to the proposed railway station site. Anything beyond a ten-minute walk is going to result in unsatisfactory walking / cycling commuting rates.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								unclement weather, not least when carrying electronics. These are generic points: specifically to Weston Big Wood, the ease with which the gradient has been dismissed, with the focus placed solely on the distance treating a steep climb the same way one would treat a flat stretch, is naive at best and insulting at worst. I am a father of two teenagers. Teenagers who may ultimately find employment in Bristol and wish to commute there by train. Should they ever leave home, they will not be looking at the type of properties most new developments deliver. Should they wish to either get on the housing ladder or even just rent, they will be looking for flats. Affordable, sustainable housing is what is needed: and that means easy access not just to the train station but also bus routes and shops. It means proximity to the new railway station, for example in the area near Old Mill Road which I believe has not yet received the attention it deserves. On a final point: I live on top of the hill, opposite the Merlin Park field which features a ditch that tends to fill up at times of heavy rain. I have had visitors who have expressed surprise when it has not been full, as they believed "the lake" to be a permanent fixture. Whilst I appreciate draining would be considered, the notion of housing at the bottom of this field, but with significant sections covered in tarmac to enable access and allow for two football pitches, sounds utterly unappealing. I moved to Portishead in 1999 and recall houses near the High Street being hit by mild flooding in my first winter here: indeed, it is one of the reasons that made buying at the top of the hill appealing, not least as I was able to drive back then and a railway station was being mooted. Twenty-six years later, the lack of discussion around the risk of flooding in new areas or compounding the risk in areas which already feature housing is concerning.			
31062913	R Storrar		KWAW	Yes		Yes	Yes			I do support this Local Plan, it is well thought through, reflecting the need to make all development sustainable, within short (preferably active or mass transit) distances of Bristol or other town centres, where work and facilities can be centred. This enables residents to enjoy a better quality of life, makes the best use of the available land and will minimise the effects of population growth on Climate Change.	
62744353	Mrs H Taylor			No	• Positively prepared	No	No				
15430817	Mike Tremlett		Graham Moir Associates	No		Unsure	Unsure	On face value, the plan delivers what is required of North Somerset Council Local Planning Authority (LPA) as it provides the requisite number of dwellings to meet housing targets in future years. However, a deeper dive into the document reveals that the document is indeed counter-productive in relation to development and flawed in relation to proposed number of windfall houses. So, the plan gives in one hand yet takes away from the other. The issue of further compounding the counter-productive stance in relation to development is the potential impending adoption of the Mendip BAT SAC SPD and that is being address with via a separate consultation response.			North Somerset Council 2041 Local Plan consultation comments.docx
62849953	Trevor Watts			No	• Justified • Effective	Unsure	No	The vision is laudable but the proposals for meeting the vision are wholly inconsuistent with the vision. Building on Green belt green field highest quality agricultural land surrounding Backwell is directly counter to the vision in multiple ways. To talk of building sustainable communities whilst taking away the means of providing food for the country as a whole makes no sense. Government policy is "to protect our best and most versatile land". This plan does the opposite. The scale of development proposed would destroy the current sense of community of Backwell - removing any sense of wellbeing through totally altering the character of the area.	Concentrating development in areas where low quality land or brown field sites are used for housing would allow high quality agricultural land to be retained for food production. Placing large scale development within or close to concentrations of employment would also be consistent with the vision to be environmentally responsible.		
59945953	Rich Coleman			No	• Positively prepared • Justified • Effective	Yes	No	No proof that negative Climate Change actually exists. Plans to build housing on Grade 1 Agricultural Land (Nailsea) shows total disregard of essential food production. Plans to build on flood plains whilst claiming a climate crisis exists cannot be justified. House construction continuing with little or no regard to transport, infrastructure and facilities.	No building on prime agricultural land. Independant review of transport, infrastructure and with regards future housing developments.		
62685569	M Staines		retired	No	• Justified	Unsure	No	Does not address the concerns of safety fully nor the infrastructure surrounding it.	Green belt being used again for building purposes to enhance the income for the local authority with no regard to the present residents, turning the countryside into a concrete world.

											BPC_NTC Part 2 (1).pdf Hydrology LP3 Summary BPC_NTC Part 1 (1).pdf
51455297	St Philips	Richard Grant	St Philips	Yes		Yes	Yes			In terms of the strategic priorities set out on pages 11 and 12 of the NSLP: • bullet point 3 sets out a priority for the creation of new communities, • bullet point 4 sets out a commitment to increase the number and range of job opportunities available, • bullet point 5 supports the location of new development near to places with a wide range of facilities and job opportunities, • bullet point 6 emphasises Weston-Super-Mare as a location for new development to support regeneration of the town, and • bullet point 8 sets out a commitment to deliver a diverse range of housing. We support these priorities and consider that Policy LP1 Wolvershill will be an important part of the plan strategy to ensure that these priorities are met.	
62850369	Maureen Butterly			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The strategic priorities set out clear and commendable objectives, particularly regarding sustainability, regeneration, reduced car dependence, protection of valued landscapes, and prioritisation of brownfield and well-connected locations. However, there is a significant inconsistency between these priorities and the proposed allocation of large-scale development on Green Belt land around Pill and Easton-in-Gordano. For this reason, I do not consider this part of the Plan to be sound. Conflict with sustainable development and climate objectives (SP1 & SP2) The priorities emphasise sustainable patterns of growth, reduced emissions, and maximising opportunities for low-carbon development. Yet the Plan diverges from these aims by allocating major development in locations where: • Residents would remain heavily dependent on private car use due to limited local employment, incomplete public transport provision, and unresolved capacity issues at M5 Junction 19. • Essential infrastructure, including active travel routes and rail services, is either uncertain or not deliverable within the Plan period. • The loss of Green Belt land conflicts with strategic climate and biodiversity aims. This undermines both the justified and effective aspects of the soundness test. Inconsistency with the priority to focus growth near major service centres (SP5 & SP6) A key strategic priority is to direct development to locations with a “wide range of services, facilities and job opportunities,” and to support regeneration in established towns. However, Pill/Easton-in-Gordano is not a town, does not contain a broad service base, and lacks robust employment opportunities. Its designation as a Strategic Location contradicts this priority when compared with Weston-super-Mare, Clevedon, Nailsea, and Portishead, all of which are explicitly named as places where growth should be concentrated. If the strategy is to be consistent with national policy and internally coherent, development should be focused where the Plan’s own priorities say it belongs. Misalignment with priorities on reducing car use and improving transport (SP7 & SP10) The Plan’s priorities require a shift towards walking, cycling, and high-quality public transport. However, for this location: • National Highways has already expressed concerns about cumulative impacts on the Strategic Road Network, particularly at Junction 19. • Transport modelling has not yet been published to confirm that additional traffic can be accommodated. • Proposed improvements (e.g., active travel routes) do not compensate for the limited local employment base and likely commuter patterns. • Reliance on the proposed Portishead rail link is optimistic given its uncertain timescale. Where the transport evidence base is incomplete, the priorities cannot be delivered in practice, weakening the effectiveness of the strategy. Inconsistency with the priority to deliver higher densities and to prioritise brownfield land (SP11) One of the strongest strategic priorities is to boost densities at transport hubs and focus new development on brownfield land. The Plan does not demonstrate that these options have been fully utilised before proposing Green Belt release. If the brownfield-first principle has not been maximised, the spatial strategy is not justified. Conflict with priorities relating to green spaces, biodiversity, and flood risk (SP12) The proposed development sites around Pill and E-in-G lie within sensitive ecological zones associated with the North Somerset & Mendip Bats SAC and near the Severn Estuary SSSI. Some sites are also close to Markham Brook and areas identified as Flood Zone 3. Allocating high-impact development in these locations conflicts directly with the priority to safeguard habitats, provide green space, and avoid areas at flood risk unless justified by rigorous evidence – which is not yet provided. Duty to Co-operate considerations.	To make the Local Plan legally compliant and sound with respect to the Strategic Priorities, the following modifications are required: Re-align the spatial strategy with the stated Strategic Priorities The Plan must demonstrate a clear and evidence-based link between the priorities and the distribution of development. Required modifications: • Reassess the designation of Pill/Easton-in-Gordano as a Strategic Location, given that it conflicts with priorities relating to sustainable travel, access to services, car reduction, regeneration of towns, and protection of valued landscapes. • Redirect more growth towards the main towns (Weston-super-Mare, Clevedon, Nailsea, Portishead) and transport hubs, in accordance with the priorities identified. Demonstrate that brownfield land and higher-density opportunities have been fully maximised Before releasing Green Belt land, the Plan must show that the brownfield-first priority has been applied rigorously. Required modifications: • Provide transparent evidence that brownfield capacity and higher-density development in town centres have been fully optimised. • If this cannot be demonstrated, reduce or remove the scale of proposed Green Belt release around Pill/E-in-G. Strengthen the transport evidence base to support the priorities of reducing car use and enabling sustainable travel The strategic priorities depend on significant shifts in transport behaviour, yet transport evidence and modelling are incomplete. Required modifications: • Publish comprehensive cumulative transport modelling, including impacts on M5 Junction 19. • Show how the proposed allocations will realistically support reduced car dependency, with deliverable and funded public transport improvements, not reliant on assumptions about infrastructure yet to be secured. • Where these outcomes cannot be achieved, revise the scale or location of growth. Incorporate detailed ecological and flood risk evidence to support priorities for protecting habitats and safeguarding at-risk areas The priorities require biodiversity protection and avoidance of flood risk, but the evidence and mitigation strategies are insufficient. Required modifications: • Include detailed, site-specific ecological assessments for locations within SAC/SSSI consultation zones. • Provide clear, costed mitigation strategies and identify responsible bodies for delivery. • Demonstrate that sequential testing for flood risk has been applied to all affected sites and remove or amend allocations where lower-risk alternatives exist. Provide evidence of proportionate and inclusive community engagement to ensure legal compliance Given the importance of Strategic Priorities in shaping the spatial strategy, the consultation process must show that local communities were meaningfully engaged. Required modifications: • Demonstrate how the views of Pill/E-in-G residents were captured given the absence of a local exhibition event and unusually low response numbers. • Where this cannot be evidenced, undertake supplementary engagement and incorporate findings before submission. Strengthen documentation of the Duty to Co-operate Many Strategic Priorities rely on cooperation with statutory bodies and neighbouring authorities. Required modifications: • Update the Plan to include clear statements of engagement with National Highways, Natural England, the Environment Agency, and neighbouring councils, particularly regarding transport capacity, ecological constraints, and flood risk. • Where co-operation is not satisfactorily evidenced, revise the affected allocations or policies. Summary Modification To be sound, the Plan must: • Align its development strategy with its own Strategic Priorities, • Show that alternatives have been fully explored before Green Belt release,		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Because several strategic priorities depend on cross-boundary issues, including transport, ecology, and flood management, the Plan should clearly document how the Council has engaged with National Highways, Natural England, the Environment Agency, and neighbouring authorities. This is not evident in the material provided for this section. Summary Although the strategic priorities themselves are reasonable, the proposed development pattern, particularly the scale of growth directed to Pill and Easton-in-Gordano, does not align with these priorities and is neither justified nor effective. For this reason, I do not consider this part of the Plan to be sound.	• Provide the transport, environmental, and community engagement evidence that the priorities depend upon, and • Adjust or remove allocations that cannot realistically deliver these outcomes.		
31037185	Nigel Cooke			Yes		Yes	Yes				
58629377	T Crane			No	‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The list of strategic priorities is so broad and inclusive that it fails to function as a set of priorities. By attempting to cover every possible objective, it does not provide a clear sense of what will actually guide decisions during the plan period. In addition, the priorities assume a level of homogeneity across North Somerset that does not exist. Too many “priorities” dilute focus. The list reads like a comprehensive checklist of aspirations rather than a hierarchy of priorities. A strategy cannot prioritise everything; it must identify the most critical issues for the district during the plan period. Without a sharper focus, it will be difficult for decision-makers, developers and communities to understand which objectives take precedence when trade-offs are inevitable. Lack of place-specific nuance. As noted in my comments on the vision, North Somerset encompasses very different communities: deprived neighbourhoods in Weston-super-Mare, historic market towns like Clevedon, seaside resorts, rural villages and commuter settlements such as Backwell and Wraxall. A single list of generic priorities does not reflect these differences. For example, “breathing new life into existing towns” may be appropriate for parts of Weston but not for already vibrant towns like Portishead and Clevedon, which need support for continued investment rather than wholesale reinvention. Similarly, priorities around affordable housing and economic opportunity will vary between deprived and affluent areas. Conflicting aims: Some priorities pull in different directions (for instance, maximising housing delivery versus conserving sensitive landscapes and biodiversity). Without clear sequencing or spatial focus, it is unclear how conflicts will be resolved. The Sustainability Appraisal objectives include providing accessible jobs, re-using brownfield land and protecting the environment. The strategic priorities should explain how the council will balance these objectives in different locations.	Suggestions for improvement Reduce the list to a concise set of genuinely strategic priorities (e.g. regenerating deprived areas, meeting housing need where it can be sustainably accommodated, supporting a strong local economy, and protecting environmental assets) and clearly explain how these will be delivered. Distinguish priorities spatially. Set tailored priorities for Weston-super-Mare (regeneration and skills), for rural villages (protecting landscape and limiting unsustainable growth), for commuter settlements like Nailsea/Backwell (infrastructure-led development) and for successful towns like Portishead and Clevedon (supporting investment and services). Align each priority with measurable outcomes and identify which policies and allocations in the plan will deliver them. This will help to ensure that the plan is effective, justified and aligned with its own sustainability objectives. Overall, a shorter, more place-specific and outcome-focused set of strategic priorities would make the plan clearer, more coherent and more capable of addressing the diverse needs of North Somerset’s communities.		
32231105	Gerry Dawson			No		Unsure	No	I have looked into the general principles of Town Planning principles and good practice and, as you will see, have found the basic notion of the proposed expansion of a village constrained in access and facilities to be at significant variance with those guidelines and principles.	I have attached a document which relates to the four identified areas considered for housing as I think it relates to the issues arising from all four. The Development east of Gordano Services raises a particular health risk to this site which also may apply to the site by Beechwood road. Further analysis is required for both. The Gordano Services site also raises the wisdom of residential/family housing near a site of 24hr activity which will have easy pedestrian access through the site and children's play areas. I have also considered issues which may increase the effectiveness of the planned rail link. This rail link has readily identified problems with capacity/frequency/destinations. I believe there is a simple solution but have not gone into the extra details as this submission is principally concerned with housing.		Gerry Dawson redacted.pdf
63006177	Mac Mic Strategic Land (Land north of Banwell Road)	Planning Potential	Mac Mic Strategic Land	Yes		Yes	Yes		In terms of the strategic objectives, whilst Mac Mic Strategic Land does not wish to make comments on each of the objectives, they would wish to make representations on several that are most relevant to the proposed development to the East and West of Flax Bourton. One of the objectives states that the Local Plan seeks to prioritise the location of new development close to places with a wide range of services, facilities and job opportunities. The development of the Land to the East and West of Flax Bourton will enable these objectives to be met through the creation of sustainable transport links, the provision of a new country park, public open space and strategic bat mitigation, and will provide better links to job opportunities through greater accessibility to centres of employment. This also means that another strategic objective can be met through the reduction of car use, encouragement of walking and cycling, and through the provision of high quality and effective public transport. Additionally, the site at Land to the East and West of Flax Bourton will be able to deliver a diverse range of housing in a variety of tenures, sizes and forms, particularly genuine affordable housing, to meet future needs of North Somerset residents. The site will also provide for development at appropriate high densities at an accessible location. This is also true for the strategic objective that relates to the prioritisation of the importance and delivery of green spaces when considering new development. Such proposals should also support priority habitats and species, and safeguard areas at risk of flooding. This objective is supported by Mac Mic, and they note that the Land to the East and West of Flax Bourton would provide for significant levels		North Somerset Local Plan Pre-Submission Plan - Flax Bourton Representations Final.pdf

									of green space that will help meet an existing deficit in this part of the Council area and ensuring any new development is not located within areas of food risk. Recommendation Mac Mic supports the strategic objectives.		
63298945	Mac Mic Strategic Land (Backwell)	Planning Potential		Yes		Yes	Yes			In terms of the strategic objectives, whilst Mac Mic Strategic Land does not wish to make comments on each of the objectives, they do wish to make representations on several that are most relevant to the proposed development to the East of Backwell. One of the objectives states that the Local Plan seeks to prioritise the location of new development close to places with a wide range of services, facilities and job opportunities. The development of the Land to the East of Backwell will enable these objectives to be met through the creation of sustainable transport links (including the new relief road), the provision of new facilities where there is currently a deficit and will provide better links to job opportunities through greater accessibility to centres of employment. This also means that another strategic objective can be met through the reduction of car use, encouragement of walking and cycling, and through the provision of high quality and effective public transport. Additionally, the site at Land to the East of Backwell will be able to deliver a diverse range of housing in a variety of tenures, sizes and forms, particularly genuine affordable housing, to meet future needs of North Somerset residents. The site will also provide for development at appropriate high densities at an accessible location. This is also true for the strategic objective that relates to the prioritisation of the importance and delivery of green spaces when considering new development. Such proposals should also support priority habitats and species, and safeguard areas at risk of flooding. This objective is supported by Mac Mic, and they note that the Land to the East of Backwell will provide for significant levels of green space that will help meet an existing deficit in this part of the Council area and ensuring any new development is not located within areas of food risk.	North Somerset Local Plan Pre-Submission Plan - Backwell Representations Final.pdf
58602337	William Hall			No	• Positively prepared	No	No	Green Belt removal without exceptional circumstances Incomplete environmental and flood risk evidence Unsafe access and existing school traffic issues Lack of adequate consultation with statutory bodies and neighbouring authorities	Remove Tower Farm and Black Rock from the Local Plan. Focus housing development on brownfield and lower-impact sites that do not threaten nationally important ecological assets, create severe transport issues, or increase flood risk. Provide full and robust environmental assessments for any proposed allocations, including impacts on ancient woodland, SSSIs, ecological corridors, and landscape buffers. Demonstrate safe and suitable access, and assess the impact on existing road safety, particularly around school pick-up zones. Engage statutory bodies and neighbouring authorities to mitigate environmental, transport, and flood risk impacts.	I support the overall vision and aims of the Plan, including its focus on sustainable, high-quality development, regeneration of existing towns, and protection of valued areas. I also welcome the Plan's objective to create accessible, sustainable communities that address climate change and promote well-being.	
58594049	Woodstock Homes (Land west of Butts Batch, Wrington)	Oliver Ansell	Woodstock Homes	No	• Justified • Effective • Consistent with national policy	Unsure	Unsure	Please see representations document. Despite Wrington being a well-served settlement with a primary school, local shops, medical facilities, bus services, and connections via the A38, the Local Plan allocates no growth at all to the village, nor does it review the long-standing, restrictive settlement boundary where Wrington's boundary is simply listed as "Retained and reviewed existing boundary". The complete omission of growth in Wrington is inconsistent with the Council's own Strategic Priorities. For example, Strategic Priority SP1 aims to deliver sustainable development by directing growth to the "most sustainable locations," yet the Plan contradicts this by imposing a blanket prevention of growth in Wrington under LP7 and SP6, despite the village's clear sustainability credentials. In respect of the housing requirement that Policy SP8 sets out, while we welcome the change in approach that now utilises the SM to determine the minimum requirement, we still have some residual concerns that no allowance is made to address unmet needs arsing in Bristol City's administrative boundaries, the scale of windfall provision and the reliance on large strategic sites at Banwell and Woodspring.	Please see representations document.		829 A5 OA 111225 Representations to Reg 19 Local Plan.pdf North Somerset Local Plan Pre-submission Plan - Representation form Part B.pdf
39307969	YACWAG		YACWAG	No	• Positively prepared	Unsure	Unsure		Amend first sentence to state " nature and climate emergencies" They are related issues but the need for nature recovery is as important and also importantly something that we do have a lot more control of through appropriate land use.		
30660673	Kelly Packham				• Effective	Unsure	No		How can you state the intention to try and make the town centre more attractive and viable whilst introducing parking charges reducing footfall of patrons and making it less attractive as an employment opportunity.		
22638625	Councillor Bridget Petty			Yes	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure			I support this list and that a council that has a sound plan can deliver more for its residents and the landscape. This is a positive list of all that development can and must offer.	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 39195009	David Sheridan			Yes		Yes					
31022913	Peter Sims			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Sustainable development objectives Ensure a range of job opportunities are easily accessible without having to use a car. Promote development which requires a deliverable level of high quality and sustainable infrastructure. Boost delivery and meet the housing need identified within the plan period. Reduce the need to travel by car to minimise environmental impacts of unsustainable forms of travel, including transport related carbon emissions and air pollution. Protect and where possible enhance biodiversity, geodiversity and green infrastructure and allow its adaptation to climate change, particularly with respect to protected habitats Restricting comments to the above points for the Strategic Location of Nailsea and Backwell. The amount of jobs that can possibly be created locally for the proposed number of people in the new developments means either of the following;- Dramatically reducing the new developments to match the number of jobs which may be available on the new 6.1 hectare site and existing employment places in the local active travel area. Accepting that the new residents will have to seek employment outside the active travel boundaries, but due to the woeful public transport opportunities available to the residents most travel would be by car. Promoting sustainable infrastructure means attending to the road structure all around Nailsea, bearing in mind that Nailsea not serviced by a single A road. It does not appear that any specified housing needs have actually been identified in the Plan. Who would want to live in a location were houses were expensive and there is little local work? Reducing the need to travel by car can only happen by reducing the housing developments minimising the number of new residents. The emissions can be reduced by switching to electric cars but this means every new house in the developments must be fitted with a home charger and no flats can be built As the Plan does not even meeting the basic aims of the Plan for a Strategic Location, listed above, it is clear the Local Plan 2041 is unsound.			
62849409	Lizzie Slocombe										
62741377	J Smith			Yes		Yes	Yes				
14339745	Paul Watkins			No	• Justified	Unsure	Unsure	How can you believe that this plan 'promotes sustainable development and addresses the climate emergency' more hubris... NSC hides behind this so called climate emergency and yet merely panders to any developer and sanctions completely unsustainable development...what absolute hypocrisy.			
31063873	N Whiteley			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The Strategy is not the most appropriate one based on evidence Failure to Exhaust Brownfield/Urban Capacity First: The Strategic Priority to release Green Belt land (e.g., at Woodspring, Nailsea, and Backwell) is not justified because the Council has not fully demonstrated that all "grey belt," brownfield, and urban intensification options (particularly in Weston-super-Mare and Portishead) have been exhausted. Evidence: Local groups argue that density on brownfield sites could be increased (as seen in the Portishead Wyndham Way rebuttals) to reduce the need for Green Belt release. The strategy relies too heavily on easy-to-deliver greenfield sites rather than complex urban regeneration. Loss of Best and Most Versatile (BMV) Agricultural Land: The allocation of strategic sites (like those around Backwell) involves the permanent loss of Grade 1 and Grade 2 agricultural land. Policy Conflict: This contradicts the National Planning Policy Framework (NPPF) requirement to recognise the economic and other benefits of the best and most versatile agricultural land. The plan prioritises housing numbers over food security and natural capital without sufficient justification. Not "Consistent with National Policy" (Conflicts with the NPPF) Green Belt "Exceptional Circumstances" Not Met: The NPPF (Para 145 approx) states that Green Belt boundaries should only be altered in "exceptional circumstances." The Council relies on the "Standard Method" housing target as the primary justification. "Housing need" alone is often not considered an "exceptional circumstance" by Inspectors if it leads to severe harm to the Green Belt's purposes (preventing urban sprawl, preventing settlement merger). The proposed expansion at Long Ashton / Woodspring risks merging North Somerset settlements with Bristol, violating a core purpose of the Green Belt.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Sustainable Transport & Climate Change (NPPF Para 110/115): The Strategic Priority for Climate Action is undermined by the Spatial Strategy. Allocating large growth in villages like Backwell or edge-of-Bristol sites (Woodspring) without guaranteed mass transit infrastructure creates car-dependent dormitories. If the "Wolvershill" or "Woodspring" sites proceed without the delivery of the Banwell Bypass or mass transit links first, the plan fails the NPPF requirement to ensure "significant impacts from the development on the transport network... can be cost effectively mitigated." Not "Effective" (The Plan is not deliverable) Infrastructure Funding & Timing: The plan promises "infrastructure-led growth," but the funding for critical infrastructure (new schools, medical centres, and strategic road improvements) is often identified as coming from developer contributions (CIL/Section 106) which are not guaranteed. If the viability of the strategic sites (especially with the new requirement for 50% affordable housing on Green Belt release) is squeezed, infrastructure is usually the first thing to be cut. The plan lacks a robust "Plan B" if these strategic sites stall due to viability, making it ineffective. Viability of "Golden Rules" (Affordable Housing): The plan introduces high demands for affordable housing (50%) on Green Belt sites. While socially desirable, developers may argue this renders sites unviable, leading to future applications to reduce this number. If the plan relies on this 50% to meet its affordable housing priority, and it is not economically viable, the plan is not effective. Not "Positively Prepared" (Unmet Needs & Constraints) Disproportionate Growth: The strategy assigns "Strategic Growth Area" status to villages like Backwell and Nailsea, effectively doubling the size of some communities. This ignores the physical and environmental constraints (flood risk zones, narrow rural road networks) that prevent these locations from absorbing such growth sustainably. Standard Method Rigidity: The Council has accepted the government's standard housing methodology figure (~24,000 homes) without sufficiently arguing the case for "exceptional circumstances" to deliver less due to the district's severe constraints (Mendip Hills AONB, Flood Zone 3, and Green Belt). A "Positively Prepared" plan should objectively assess what can realistically be delivered, not just accept a top-down algorithm. Arguments on Legal Compliance Duty to Cooperate: Has North Somerset Council engaged constructively and actively with Bristol City Council to explore if Bristol's unmet housing need must be met in North Somerset's Green Belt? If Bristol can accommodate more density (building upwards), North Somerset's "duty" to accept this overflow is reduced. If this engagement trail is weak, the plan fails the legal duty. Sustainability Appraisal (SA) & Habitats Regulations Assessment (HRA): The Strategic Priorities must be supported by a robust SA. Opponents (e.g., in Long Ashton) argue that the SA fails to properly value the ecological impact on protected species (like Greater Horseshoe Bats associated with the nearby SACs). If the SA has not properly scored "reasonable alternatives" (i.e., not building on that specific Green Belt site), the plan is legally vulnerable.			
59945953	Rich Coleman			No	• Positively prepared • Justified • Effective			Climate Emergency is unproven and relies on unproven claims ! No mention is made of Food Security and the impact of building on grade 1 agricultural land.	Disregard Climate Emergency. Ensure that Food Security is included. Ensure Grade 1 agricultural land is not developed.

51524513	Bellway Homes Ltd	tor&co	Bellway Homes Ltd	No	• Positively prepared • Justified	Unsure	Unsure	Sustainability Appraisal In relation to Draft Policy LP1 (Wolvershill), the Sustainability Appraisal (SA) demonstrates that: • The allocation performs strongly positive against key economic and social objectives – including: access to employment; delivery of affordable housing; community infrastructure; and health and wellbeing;	Given the strategic significance of the housing uplift, and the requirements of the Regulations in respect of reasonable alternatives, Bellway considers that it will be important for the Council, in		20251212 504317 JE - North Somerset Reg 19 (Reps

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					‣ Effective ‣ Consistent with national policy			• Potential environmental sensitivities, including landscape setting and agricultural land quality, are transparently acknowledged rather than understated; and • The improvement in infrastructure and transport performance from neutral to significantly positive is directly attributable to the delivery of infrastructure already emerging as well as policy-secured mitigation, in particular the Banwell Bypass and associated active travel and community infrastructure. On this basis, Bellway consider that the SA provides a sound basis for the allocation of Wolvershill. Bellway support the clear distinction made within the SA between baseline 'policy-off' and mitigated 'policy on' outcomes. Given the scale of strategic infrastructure, it will be important at Examination for the Council to demonstrate that the key mitigation measures assumed within the policy-on appraisal are realistic, fully funded and capable of being secured within the relevant development phases. It is acknowledged that this is likely to be detailed in the forthcoming Wolvershill Masterplan Framework SPD. Therefore, Bellway would like to reserve the right to comment on its detail as soon as a draft version can be shared. Bellway understand the document is due to be considered by Cabinet in February 2026 and as a key stakeholder, would welcome any engagement with the Council prior to its publication. The housing requirement underpinning the submitted Local Plan is higher than that which informed earlier iterations of the Local Plan, reflecting the revised NPPF and updated Standard Methodology (SM). Bellway support the Council's approach in re-examining the spatial strategy and its supporting SA to reflect this uplift, with Wolvershill continuing to perform a central and coherent role within the overall spatial framework. However, given the strategic significance of this uplift, and the requirements of the Regulations in respect of reasonable alternatives, Bellway considers that it will be +important for the Council, in addition to the higher growth option point already mentioned, to clearly demonstrate that: • the reasonable spatial strategy alternatives at the uplifted level of housing growth have been proportionately and transparently tested through the SA; and • the reasons for selecting the submitted strategy over other reasonable alternatives are clearly articulated in comparative terms. In addition, whilst the SA is clear that it tests the SM LHN and tests difference spatial options to meet that need (e.g. see SA para 2.28), what it doesn't appear to do is test a higher growth option. Given the concerns already raised through this representation regarding meeting unmet need, affordability issues and extended plan period, this will need to be considered to ensure it is positively prepared and justified / effective in meeting overall housing requirements.	addition to the higher growth option point already mentioned, to clearly demonstrate that: • the reasonable spatial strategy alternatives at the uplifted level of housing growth have been proportionately and transparently tested through the SA; and • the reasons for selecting the submitted strategy over other reasonable alternatives are clearly articulated in comparative terms. The publication of the draft Wolvershill SPD.		obo Bellway Homes).pdf
51455297	St Philips	Richard Grant	St Philips	Yes		Yes	Yes			In terms of the strategic priorities set out on pages 11 and 12 of the NSLP: • bullet point 3 sets out a priority for the creation of new communities, • bullet point 4 sets out a commitment to increase the number and range of job opportunities available, • bullet point 5 supports the location of new development near to places with a wide range of facilities and job opportunities, • bullet point 6 emphasises Weston-Super-Mare as a location for new development to support regeneration of the town, and • bullet point 8 sets out a commitment to deliver a diverse range of housing. We support these priorities and consider that Policy LP1 Wolvershill will be an important part of the plan strategy to ensure that these priorities are met.	
31072737	Nick Bowler			Unsure		Unsure	Unsure	I am concerned about potential housing developments adjacent to Elborough Village, both in the fields across the Banwell Road, and in the field between Elborough Village and Elborough Farm. I feel that these developments would be in direct conflict with the following: Extract from "Sustainable development objectives" 2.5 Achieve healthy living opportunities – promoting good access to healthcare centres, open spaces, public rights of way, walking and cycling opportunities, and outdoor leisure activities. 3.2 Minimise vulnerability to all forms of flooding, now or in the future, without increasing flood risk elsewhere. 3.4 Minimise impact on, and where appropriate enhance, sensitive landscapes. 3.6 Protect and where possible enhance biodiversity, geodiversity and green infrastructure and allow its adaptation to climate change, particularly with respect to protected habitats and species.	Both of these potential housing developments adjacent to Elborough Village, both in the fields across the Banwell Road, and in the field between Elborough Village and Elborough Farm should be excluded from the plan. There are no pavements along the road into Hutton making walking and cycling difficult, if not dangerous. There are no local healthcare centres, shops or other facilities which could be accessed on foot or cycle. The area is very low lying (approximately 10 metres above sea level, and is already subject to flooding. More roads and driveways would add to this problem. These developments would adversely affect the natural environment and biodiversity.		
1019201	Wrington Parish Council		Wrington Parish Council							Sustainable Development Objectives The purpose of the planning system is to contribute to the achievement of sustainable development. This is delivered through the preparation and implementation of plans which seek to balance economic, social and environmental objectives. The Local Plan sets out what sustainable development means for North Somerset. A Sustainability Appraisal (SA) prepared in parallel with the plan making process provides a mechanism through which sustainability effects can be described, analysed and compared. The process of undertaking a SA involves the identification of sustainability objectives which are used to measure and monitor the success of the plan. We recognise Sustainable Appraisal objectives used to assess the local plan are: • Ensure a range of job opportunities are easily accessible without having to use a car. • Provide opportunities to improve economic wellbeing and reduce inequalities by providing good access to education and training	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										opportunities. • Promote the optimal use of land which supports regeneration, maximise re-use of previously developed (brownfield) land and protects the rural economy. • Promote development which requires a deliverable level of high quality and sustainable infrastructure. •Boost delivery and meet the housing need identified within the plan period. • Deliver affordable or specialist housing where it is most needed to meet the needs of North Somerset's population. • Achieve reasonable access to a wide range of community, educational, town centre and healthcare facilities. • Enhancing community cohesion and community facilities provision including cultural facilities. • Achieve healthy living opportunities, promoting good access to healthcare centres, open spaces, public rights of way, walking and cycling opportunities, and outdoor leisure activities. • Reduce carbon emissions by supporting appropriate decentralised renewable energy generation. • Minimise vulnerability to all forms of flooding, now or in the future, without increasing flood risk elsewhere. Also minimise harm to water quality and availability. • Reduce the need to travel by car to minimise environmental impacts of unsustainable forms of travel, including transport related carbon emissions and air pollution. • Ensure good access to infrastructure that promotes travel by active modes (walking and cycling). Minimise impact on, and where appropriate enhance, sensitive landscapes. • To conserve and enhance historic assets, heritage assets and their settings. • Protect and where possible enhance biodiversity, geodiversity and green infrastructure and allow its adaptation to climate change, particularly with respect to protected habitats and species. In particular we are supportive of the following: • To promote sustainable development and address the climate emergency. • To deliver the zero carbon ambition by maximising the opportunities for low carbon development and the use of renewable energy. • To develop new and existing communities in a way which enhances health and wellbeing, reduces inequalities and is child and family friendly. • To increase the number and range of job opportunities across the district, particularly at the towns to give people the opportunity to work near to where they live. • To prioritise the location of new development close to places with a wide range of services, facilities and job opportunities. • To address the decline in the town centres of Weston-super-Mare, Clevedon, Nailsea and Portishead through supporting regeneration and place-making initiatives which revitalise these places as the focus for retailing, community uses, housing and jobs • To reduce car use, encourage walking and cycling, and high quality and effective public transport. • To deliver a diverse range of housing in a variety of tenures, sizes and forms, particularly genuine affordable housing, to meet future needs of North Somerset residents at locations where they are most needed. • To deliver essential new strategic transport infrastructure to support new development and enable more sustainable travel options. • To deliver higher residential densities through good design, particularly at town centres, transport hubs and on brownfield sites. • To provide essential infrastructure in step with development, both transport infrastructure and community infrastructure such as schools, healthcare facilities and community centres. • To prioritise the importance and delivery of green spaces when considering new development, support priority habitats and species, and safeguard areas at risk of flooding.	
62850369	Maureen Butterly			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The Sustainable Development Objectives provide a comprehensive and appropriate framework for assessing the Plan. However, the allocation of large-scale development on Green Belt land around Pill and Easton-in-Gordano is inconsistent with several of these objectives, and the Plan does not demonstrate that these objectives have been effectively applied in the spatial strategy. For this reason, this part of the Plan is not sound. Economic and transport-related objectives (1.1, 1.2, 1.3) Objective 1.1 – Accessible jobs without car dependence Pill/E-in-Gordano does not provide a wide range of local employment opportunities. Most residents commute to Bristol or Portishead, meaning that major development here is likely to increase car dependency rather than reduce it. The Plan does not demonstrate that alternative locations – closer to key employment centres – have been satisfactorily evaluated. Objective 1.3 – Optimal use of land and brownfield-first development The allocation of extensive Green Belt land conflicts with the aim of maximising brownfield reuse and supporting regeneration. The Plan has not provided clear evidence that all reasonable brownfield capacity and higher-density options in sustainable towns have been exhausted before turning to Green Belt release. Housing, community and health objectives (2.1–2.5) Objective 2.3 – Reasonable access to services Pill/E-in-Gordano does not have the full range of community, healthcare, retail, or educational facilities needed to support 1,100 additional homes. The Plan depends on future provision (e.g., new school, improved transport links) but lacks clear evidence of deliverability or funding. This undermines the effectiveness of the strategy. Objective 2.5 – Healthy living and active travel The Plan's reliance on active travel measures is not supported by clear, deliverable infrastructure proposals. At present, walking and cycling connections to key destinations are limited, and there is no evidence that these can	To make the Local Plan legally compliant and sound in relation to the Sustainable Development Objectives, the following modifications are required: Reassess the distribution of development to align with objectives on reducing car dependency (1.1, 3.3) The Plan must demonstrate that large-scale development in Pill/Easton-in-Gordano will not increase reliance on private car travel. Required modifications: • Provide updated cumulative transport modelling for Junction 19 and local roads. • If modelling shows worsening car dependency, reallocate a proportion of growth to locations with demonstrably better access to employment, services, and sustainable transport (e.g., town centres, transport hubs, brownfield land). • Include firm commitments (with funding identified) for public transport improvements, rather than aspirational		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								be upgraded to meet the increased demand. Environmental and climate objectives (3.1–3.6) Objective 3.2 – Minimising vulnerability to flooding Certain proposed sites in Pill/E-in-G, including areas near Markham Brook, lie close to or within recognised flood risk zones. The Plan does not demonstrate that the sequential test has been fully applied or that lower-risk alternatives have been thoroughly assessed. Objective 3.3 – Reducing the need to travel by car The proposed development would significantly increase pressure on Junction 19 of the M5, where National Highways has already expressed concerns. Until cumulative transport modelling is complete and mitigation fully secured, the Plan cannot show that this objective is being delivered. Objective 3.4 & 3.6 – Sensitive landscapes and biodiversity The proposed development sites lie within consultation zones for the North Somerset & Mendip Bats SAC and near the Severn Estuary SSSI – two of the district's most significant ecological assets. The Plan does not provide detailed mitigation strategies or demonstrate that biodiversity net gain can realistically be achieved on these constrained sites. Large-scale Green Belt release in locations with known ecological value conflicts directly with these objectives. Summary Although the Sustainable Development Objectives themselves are appropriate, the Plan does not align its spatial strategy with them. Key inconsistencies include: • Increased car dependency rather than reduced travel emissions. • Insufficient access to services and facilities. • Unresolved flood risk issues. • Significant ecological constraints. • Use of Green Belt rather than prioritising brownfield. • Lack of evidence that infrastructure can be delivered in step with growth. For these reasons, this section of the Plan is not sound, particularly in failing the tests of justification, effectiveness, and consistency with national policy.	statements. Demonstrate that brownfield land and regeneration opportunities have been fully maximised (1.3) The Plan's sustainability objectives require the optimal use of brownfield land and prioritisation of regeneration. Required modifications: • Publish the full assessment of brownfield capacity, higher-density opportunities, and capacity in town centres. • Where this demonstrates additional capacity, reduce the scale of Green Belt release in Pill/E-in-G accordingly. • Amend the Plan to show how regeneration in Weston-super-Mare, Clevedon, Nailsea, and Portishead contributes significantly to meeting housing needs, consistent with the objectives. Strengthen evidence of deliverable community infrastructure to support objectives on health, access, and wellbeing (2.3, 2.5) Large-scale growth requires accessible services that exist in reality, not only in future aspiration. Required modifications: • Provide detailed evidence of deliverability and funding for new schools, healthcare capacity, active travel routes, and local centre enhancements. • If infrastructure cannot be guaranteed or delivered in step with development, reduce or redistribute proposed housing numbers in constrained settlements. Apply the sequential test rigorously and re-evaluate allocations in areas at flood risk (3.2) The Plan cannot be sound if it allocates sites in flood-prone areas without demonstrating that safer alternatives have been assessed first. Required modifications: • Include explicit sequential test results for all sites near Markham Brook and other local flood zones. • Reassess allocations where sequential testing indicates lower-risk options are available elsewhere in the district. • Strengthen policy wording to ensure that development is restricted where flood mitigation is uncertain or dependent on third-party infrastructure upgrades. Incorporate detailed ecological evidence and mitigation strategies for protected habitats (3.4, 3.6) The Plan must demonstrate how biodiversity and sensitive landscapes will be protected, not simply state intentions. Required modifications: • Provide site-specific ecological assessments for all proposed allocations within the North Somerset & Mendip Bats SAC consultation zone and near the Severn Estuary SSSI. • Identify clear, costed mitigation strategies, with implementation responsibilities and monitoring mechanisms. • Where mitigation is not feasible, reconsider or remove the affected site allocations. Re-evaluate growth in constrained rural settlements where sustainability objectives cannot realistically be achieved Pill/E-in-Gordano is heavily constrained by Green Belt, landscape value, ecological designations, limited service provision, and poor strategic transport capacity. Required modifications: • Reassess the scale of development proposed for settlements that do not meet the sustainability criteria, particularly those lacking direct access to employment, services, and low-carbon		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									transport options. • Reallocate growth in proportion to sustainable capacity rather than land availability alone. Improve transparency around how sustainability objectives have shaped the spatial strategy The Plan must show clearly how each SA objective influenced site selection and alternatives. Required modifications: • Publish a clearer narrative linking decisions on site allocations to the SA objectives, including reasons for rejecting more sustainable alternatives. • Update the Sustainability Appraisal where new evidence (transport, ecology, flooding, viability) requires re-evaluation. Summary Modification To be sound, the Plan must: • Realign the spatial strategy with sustainability objectives, • Reduce or remove allocations that increase car dependency, • Prioritise brownfield and well-serviced locations, • Secure infrastructure deliverability, • Ensure rigorous ecological and flood risk assessment, and • Provide transparent justification for how choices were made. Without these modifications, the Plan does not meet the soundness tests of justification, effectiveness, or consistency with national policy, and in some areas raises questions about legal compliance.		
58381761	M Clarke		None	No	• Justified	Unsure	Unsure	The the points above, the plan does not ahere to any of them. You try to hoodwink people into thinking that you are doing this for the best, you are not.			
31037185	Nigel Cooke			Yes		Yes	Yes				
58602337	William Hall			No	• Positively prepared	No	No	Housing and economic objectives could be met on brownfield or lower-impact land. Tower Farm and Black Rock unnecessarily threaten the Green Belt and ecological assets. Environmental objectives are not met: Weston Big Wood, Nightingale Valley, and the Gordano Valley corridor are inadequately protected, biodiversity and landscape impacts are insufficiently assessed, and flood risk is not mitigated. Social objectives are compromised: school traffic congestion on The Downs creates unsafe conditions, reducing access to community facilities, and impacting well-being. Transport and travel objectives are not met: safe access to the sites is not demonstrated, walking and cycling opportunities are restricted by steep gradients and congestion.	Remove Tower Farm and Black Rock from the Local Plan. Focus development on brownfield and lower-impact sites that meet sustainable development objectives without harming Green Belt, ecological, or landscape assets. Provide full environmental and flood risk assessments for any proposed allocations. Demonstrate safe and suitable access for all development, including mitigation of school traffic congestion. Ensure consultation with statutory bodies and neighbouring authorities to address environmental, transport, and flood risk issues.	I support the overall vision and objectives of the Plan to deliver sustainable, high-quality development that regenerates existing towns, protects valued areas, and promotes well-being. I also support objectives to enhance access to green spaces, community facilities, and promote sustainable travel where this does not conflict with environmental protection.	
62676097	Rob Hookham		Private	No	• Positively prepared • Consistent with national policy	No	No	The Tower hill farm and Black rock areas of portishead proposal for upto 400 homes does not comply with Minimise impact on, and where appropriate enhance, sensitive landscapes. To conserve and enhance historic assets, heritage assets and their settings. Protect and where possible enhance biodiversity, geodiversity and green infrastructure and allow its adaptation to climate change, particularly with respect to protected habitats and species. Weston Big wood is a listed (1971) woodland and the Gordano valley corridor while brown field sites are being ignored. Tower farm is on top of a 300 foot hill with the high street, doctors/dentist etc at the bottom. People will and do use cars to access the town services Ensure a range of job opportunities are easily accessible without having to use a car. Provide opportunities to improve economic well being and reduce inequalities by providing good access to education and training opportunities. Promote the optimal use of land which supports regeneration, maximise re-use of previously developed (brownfield) land and protects the rural economy.	Consider brown field sites such as Wyndham way which have flat access to services and shops For industry consider the land on the north side of the road from M5 J17 and Portishead (Portway). It hs the M5 motorway as one boundary and Portway as the other. Technically it is in Portbury but not used.		
51426593	Alistair Ireland		Swindon Borough Council	No	• Positively prepared • Effective	Unsure	Unsure	There are many admiral ideas put forward in for this Policy, however it could be improved and strengthened by in several areas. • New houses must be built to meet the highest environmental standards, including high levels of insulation, maximum use of solar panels, heat pumps, district heating systems and no gas boilers. Consideration should be given to installing communal ground source heat collectors feeding heat pumps in all new houses. Provision of communal microgrids with battery storage should also be considered, to optimise the use of solar energy and minimise the import of electricity from the grid. The feasibility of these features should be judged in terms of their contribution to reduction of greenhouse gas emissions and of household energy bills, and not solely in terms of their			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								effect on the developer's profits. • Developments must be designed to minimise the need for householders to use private cars. All developments within reach of railway stations must provide easy access to the railway station for pedestrians and cyclists, and for every large development, funding must be provided to operate frequent bus services, and to minimise the need for residents to drive further afield there must be adequate provision for local services, including a supermarket and school and medical facilities. Safe walking and cycling through-routes must be provided throughout. All roads must be cul-de-sacs for cars, with bus gates where needed, and should be designed to be suitable as play areas for children, with traffic reduced to walking pace and plenty of trees and shrubbery. Bigger gardens should be provided instead of garages. Residential parking areas should be communal, at the open end of the cul-de-sacs, covered with a roof of solar panels, and provided with EV charging points, while parking outside individual houses should be reserved for disabled residents only. • Adequate communal green space must be provided throughout any development, including children's pay areas, parks with wildlife areas, and allotments for residents to use. Existing mature trees and hedgerows must be preserved, and wildlife corridors must be maintained. • About 1% of the carbon emissions in the UK are from the water industry, and the emphasis at the building stage on water conservation could be increased, with all new houses having water buts fitted and water conservation taps and fittings installed as standard. • Regarding Policy DP7 There should be a greater emphasis on support for Local Renewable Enery Co-operatives and Community Groups that can fund, set up and run Solar Farms and installations on community buildings, and also the same for Wind Turbines and Battery Storage that is not run for profit by large organisations but for local good causes. By mandating measures such as these, any new development would not only reduce per capita greenhouse gas emissions in North Somerset, but would minimise adverse effects on the rest of the community caused by car traffic increases, over-stretching of services, and loss of green space. With sensitive planning, such a development could come to be seen by existing residents as a positive enhancement to the community, rather than a blight designed purely to max out profits for large developers.			
58582945	Nailsea Action Group		Nailsea Action Group					Nailsea Action Group's view is that the choice of Nailsea (and Backwell) as a strategic location is wrong. It is not sustainable in that most new residents will have to commute to other cities and towns to work, and the infrastructure provision will be completely inadequate. Locations closer to Bristol would be better able to provide the occupational, transport, educational, health infrastructure and leisure facilities needed by the new residents.			
58582945	Nailsea Action Group		Nailsea Action Group	No	• Effective	Unsure	Unsure	Nailsea Action Group's view is that the choice of Nailsea (and Backwell) as a strategic location is wrong. It is not sustainable in that most new residents will have to commute to other cities and town to work, and the infrastructure provision will be completely inadequate. Locations closer to Bristol would be better able to provide the occupational, transport, educational, health infrastructure and leisure facilities needed by the new residents.			
30660673	Kelly Packham			No	• Justified				The plan will have a negative impact on the protection of Weston Big Wood and the natural ecosystem it supports. The few natural green spaces provide mental health benefits to many adults and children. The importance of protecting this SSSI can not be underestimated. Exceptional circumstances have not been demonstrated to allow the destruction of this ancient ecosystem.		
22638625	Councillor Bridget Petty			Unsure		Unsure	Unsure			I support the above list as a sound and strtegic focus for a local plan.	
62776065	Paul Segar			Yes		Yes	Yes			I agree that planning for new housing should be sustainable and not require car use to access jobs, shops, schools or leisure facilities. Green field sites in villages which developers prefer should not be permitted without good walking, cycling or public transport to these facilities. Consequently, the use of agricultural land for development should be minimised in preference to use of brown field sites (in towns).	
39195009	David Sheridan			Yes		Yes	Yes				
62849409	Lizzie Slocombe			No	• Positively prepared • Justified	Unsure	Unsure	These comments are specific to the proposed development around Backwell: "1.3 Promote the optimal use of land which supports regeneration, maximise re-use of previously developed (brownfield) land and protects the rural economy." Building on Class 1 greenbelt is neither maximising the use of brownfield land or protecting the rural economy. "2.1 Boost delivery and meet the housing need identified within the plan period." How has this level of need (1000 houses) been decided upon? The additional traffic on the (already busy and over crowded) roads and impact on existing infrastructure do not appear to have been considered. "2.4 Enhancing community cohesion and community facilities provision including cultural facilities." Community cohesion already exists. Doubling the size of the village will destroy it. This is not something that can be 'fixed' by building a new community centre. "3.2 Minimise vulnerability to all forms of flooding, now or in the future, without increasing flood risk elsewhere. Also minimise harm to water quality and availability." The bottom of Chapel Hill is regularly flooded and the A370 suffers from excess water runoff from Backwell Hill when it rains, rendering driving difficult and dangerous. If the village is doubled in size, the water table is going to be negatively impacted even more. "3.6 Protect and where possible enhance biodiversity, geodiversity and green infrastructure and allow its adaptation to climate change, particularly with respect to protected habitats and species." Building on these fields will destroy existing valuable and vital wildlife corridors, at a time when our biodiversity is in serious decline (State of Nature Reports, 2025). Protect and where possible enhance biodiversity, geodiversity and green infrastructure and allow its adaptation to climate change, particularly with respect to protected habitats and species.	Vastly reduce the scale of the development.		
62810017	Guy Stone			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The vast amount of new housing and infrastructure proposed on green belt land or otherwise green field sites is unacceptable on many levels. 1. Not compliant with parish council policy or residents views. 2. A cumulative disaster for biodiversity, resulting in loss of habitats, disturbance to habitats and species, increased pollution and general degredation and edge effects on what fragmented tatters are left. This cannot be mitigated for on this scale with biodiversity net gain etc. The hierarchy of avoid, reduce and then as a final resort, mitigate. 3. Urbanisation of rural communities and degredation of way of life and quality of life. 4. Increased noise, pollution and too many people in too small a space. 5. An outright lie in justifying that the proposed development will consist of 'badly needed affordable homes for local people'. This most definately is not the case in many areas, such as Backwell, where developers recognise the area as a desirable place to live and will not be building houses for locals, but developing commuterville for high	1. Development must be restricted to brownfield land. 2. Run down areas should be redeveloped to afford more and higher quality housing. 3. The poor attitude to nature and biodiversity held by local and national government must change. Newts don't hold up development, people do, who have not planned their projects properly or sought advice on biodiersity at an		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 63213025	BackwellPC NailseaTC Flax BourtonPC BrockleyPC BackwellRA Nailsea Action Group	Lucy White Planning Limited	BackwellPC NailseaTC Flax BourtonPC BrockleyPC BackwellRA Nailsea Action Group	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	BPC and NTC support identification of Backwell as a village with a settlement boundary under Policy SP6. However, strong objection is raised to the proposed designation of Nailsea and Backwell as a strategic location for growth under Policy LP3. The SA provides no evidence that the spatial strategy, including the identification of the strategic growth locations represents a sustainable approach to meeting identified needs. Indeed, the SA findings direct development towards the main towns, the east of the District, closest to Bristol, where there is the greatest range of facilities and employment and the highest levels of housing need. For the reasons set out within our representations to Policy LP3, LP5 and Schedule 1, the concept of Nailsea and Backwell as a strategic location for growth is unsound. It is not justified as an appropriate strategy, having regard to the evidence base and the reasonable alternatives available; nor would it not be effective in terms of delivery of housing, employment and infrastructure over the plan period. The identification of Portishead, Nailsea, Clevedon and Weston-Super-Mare as the main towns and focus for sustainable development (Policy SP5) is endorsed as a sustainable approach to development, however the capacity at Nailsea to accommodate development sustainably is limited by existing transport infrastructure.			251118 Local Plan Reg 19 2025 reps FINAL.pdf R01 - Transport Statement - Rev 3 FINAL.pdf Hydrology LP3 BPC_NTC Appendix_2.2-compressed.pdf Hydrology LP3 BPC_NTC Appendix_2.1-compressed.pdf Hydrology LP3 BPC_NTC Appendix_9-compressed.pdf Hydrology LP3 BPC_NTC Appendix_7-compressed.pdf Hydrology LP3 Summary BPC_NTC Part 2 (1).pdf Hydrology LP3 Summary BPC_NTC Part 1 (1).pdf
62856353	Eric Arsenault		Eric Arsenault Architecture Ltd	Unsure		Unsure	Unsure	I would appreciate more communication between the local population and goverment officers, developers, and the local Member of Parliament to get a wider view and implications of the Local Plan .	It would be interesting to add more concrete supporting documents concerning local economic planning and transportation improvements as we simply see an increase in the number of housing units, without any concrete measures taking into account the economic development of the areas or the improvement of traffic flow on the currently congested roads and highways. The issue of the balance between nature, roads and dwellings needs to be addressed, particularly for Portishead: Tower Farm and Black Rock: these two areas are located in a very sensitive natural area (green belt) and the road network is insufficient, as the existing roads are already congested. Portishead planned dwellings need to get closer to main existing roads and public transport. It is necessary to provide more details on these two subjects: Economic mapping and planning for existing and planed areas: Where will the new residents go to work every day? In Bristol? Will they commute daily? How can we avoid the cities of the Local Plan become even more like dormitory towns? Economic areas must be planned and supported as well as we increase number of dwellings. What about local shops, schools, and amenities?		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									Transport planning To reverse the trend towards road congestion, it is essential to implement an ambitious and incentive-based public transport plan, including, for example, direct buses to Bristol every 15 minutes from each city and carpooling during peak hours.		
20338913	Aston & Co		Aston and Co UK							We support the final spatial strategy which was created following an iterative process, backed by evidence and with good public and wider interested party engagement.	
31072737	Nick Bowler			No	• Consistent with national policy		Unsure	I am concerned about potential housing developments adjacent to Elborough Village, both in the fields across the Banwell Road, and in the field between Elborough Village and Elborough Farm. I feel that these developments would be in direct conflict with the following: Policy SP1: Sustainable development • Prioritise walking and cycling, maximise the use of effective public transport and encourage the creation of liveable neighbourhoods; • Protect valued natural and historic assets and support green infrastructure and biodiversity; Policy SP2: Climate change • Reduce the risk of flooding both now and in the future, taking account of predicted sea level rises and the impact on areas vulnerable to coastal change; • Deliver green infrastructure and provide a net gain in biodiversity; Policy SP10: Transport • Delivery of attractive, safe, and inclusive routes for walking and cycling which are well integrated into existing networks and provide access to effective and frequent public transport; Policy SP11: Historic and natural environment • Conserve and enhance the landscape and scenic beauty of the Mendip Hills National Landscape and the wildlife and cultural heritage, including ensuring that development in its setting is sensitively located and designed to avoid or minimise adverse impacts; • Protect the best and most versatile agricultural land; • Conserve, restore and enhance priority habitats, ecological networks and the protection and recovery of priority species; • Ensure that the design and construction of spaces and buildings encourages wildlife and biodiversity; • Support the establishment and delivery of North Somerset Nature Parks to protect and enhance internationally important bat habitats, foraging opportunities and connectivity through the landscape, and mitigate the impacts of development; • Retain existing trees and support new planting, including street trees, and woodland creation to help increase district-wide canopy cover;	Both of these potential housing developments adjacent to Elborough Village, both in the fields across the Banwell Road, and in the field between Elborough Village and Elborough Farm should be excluded from the plan. They would not support the following policies; Policy SP1: Sustainable development • Prioritise walking and cycling, maximise the use of effective public transport and encourage the creation of liveable neighbourhoods; • Protect valued natural and historic assets and support green infrastructure and biodiversity; Policy SP2: Climate change • Reduce the risk of flooding both now and in the future, taking account of predicted sea level rises and the impact on areas vulnerable to coastal change; • Deliver green infrastructure and provide a net gain in biodiversity; Policy SP10: Transport • Delivery of attractive, safe, and inclusive routes for walking and cycling which are well integrated into existing networks and provide access to effective and frequent public transport; Policy SP11: Historic and natural environment • Conserve and enhance the landscape and scenic beauty of the Mendip Hills National Landscape and the wildlife and cultural heritage, including ensuring that development in its setting is sensitively located and designed to avoid or minimise adverse impacts; • Protect the best and most versatile agricultural land; • Conserve, restore and enhance priority habitats, ecological networks and the protection and recovery of priority species; • Ensure that the design and construction of spaces and buildings encourages wildlife and biodiversity; • Support the establishment and delivery of North Somerset Nature Parks to protect and enhance internationally important bat habitats, foraging opportunities and connectivity through the landscape, and mitigate the impacts of development; • Retain existing trees and support new planting, including street trees, and woodland creation to help increase district-wide canopy cover;		
62850369	Maureen Butterly			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The Strategic Policies form the backbone of the Local Plan and must demonstrate a coherent, evidence-led approach to the spatial distribution of development. While the stated intentions of Policies SP1–SP13 are appropriate in principle, the overall strategy – particularly as implemented through the spatial strategy (SP3), villages policy (SP6), Green Belt policy (SP7), housing strategy (SP8) and transport strategy (SP10) – does not align with the evidence base or with national policy tests of soundness. For this reason, I do not consider this section of the Plan to be sound. 1. SP1 & SP2 – Sustainable Development and Climate Change: inconsistencies with proposed site allocations The Plan commits to reducing carbon emissions, minimising car dependency, and directing development to sustainable locations. However, allocating large-scale development around Pill/Easton-in-Gordano – an area with limited local employment, constrained road capacity, and heavy reliance on car travel – directly contradicts these policies. • There is no clear evidence showing that the strategy will reduce carbon emissions or achieve a measurable shift away from car travel. • The reliance on future infrastructure solutions (e.g., Portishead rail link) is uncertain and therefore ineffective as a basis for the strategic strategy. This undermines SP1 and SP2, making the strategy neither justified nor effective.	To make the Strategic Policies (SP1–SP13) legally compliant and sound, the following modifications are required: 1. Modify the Spatial Strategy (SP3) to align with sustainable development and transport evidence The current strategy directs substantial growth to Pill/Easton-in-Gordano, a location that does not meet the Plan's own sustainability or transport objectives. Required modifications: • Reassess the spatial distribution of development to focus more growth in the towns (Weston-super-Mare, Clevedon, Nailsea, Portishead) and other areas with strong public transport and employment access. • Reduce or remove the Strategic Location		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								2. SP3 – Spatial Strategy: insufficient justification for the allocation of growth to Green Belt villages SP3 should direct growth to the most sustainable locations – primarily towns and areas with strong transport connections. Instead, the Plan allocates a disproportionate level of housing growth to Pill/E-in-Gordano, which: • is not a town. • lacks a broad range of services and employment. • relies on heavily congested road infrastructure. • contains Green Belt and significant ecological sensitivities. The Plan does not provide robust evidence that alternatives – such as town centre regeneration, increased densities, brownfield intensification, or cross-boundary distribution – have been fully considered. This fails the soundness test of justified development distribution. 3. SP4 – Placemaking: insufficient evidence of deliverability SP4 requires high-quality, well-served, sustainable places. However: • The infrastructure (schools, health provision, active travel networks) needed to support major development at Pill/E-in-Gordano is not yet funded or secured. • The sustainability appraisal identifies constraints – biodiversity, flood risk, landscape sensitivity – that undermine the ability to deliver placemaking principles. This makes the application of SP4 ineffective. 4. SP6 – Villages and Rural Areas: strategy not consistent with policy objectives SP6 intends to support rural communities without encouraging unsustainable growth. Yet Pill/E-in-Gordano is being treated as a Strategic Location for large-scale growth despite substantial constraints. This contradicts the intention of SP6 and national policy, which states that large-scale development should be directed to sustainable settlements unless exceptional evidence justifies alternatives. No such evidence is provided. 5. SP7 – Green Belt: exceptional circumstances not demonstrated The release of Green Belt around Pill/E-in-Gordano depends on clear demonstration of exceptional circumstances. This evidence is incomplete: • There is no transparent assessment showing that the full range of non-Green Belt options – brownfield, density uplift, regeneration – has been exhausted. • The viability evidence shows that achieving the Golden Rules (affordable housing, green space, infrastructure) may not be possible in these locations. If the key Green Belt tests cannot be met, SP7 cannot be considered consistent with national policy. 6. SP8 – Housing: strategy misaligned with housing objectives The housing strategy aims to deliver genuinely affordable, well-located homes. However: • High-cost Green Belt sites with infrastructure challenges are unlikely to deliver the affordable housing levels required. • Concentrating 1,100 homes around Pill/E-in-Gordano does not reflect objective sustainability considerations or proximity to jobs, services, and transport. This raises concerns about effectiveness. 7. SP10 – Transport: lack of evidence, unresolved strategic road concerns SP10 commits to reducing car dependency and promoting sustainable travel. However: • National Highways has identified the need for cumulative impact modelling at M5 Junction 19, which has not been published. • The Plan relies heavily on assumed modal shift that is not supported by evidence. • Existing congestion already undermines the objective of sustainable transport delivery. Without evidence that transport impacts can be mitigated, SP10 is not effective and raises Duty to Co-operate concerns. 8. SP11 – Historic and Natural Environment: insufficient mitigation for designated habitats Large parts of the Pill/E-in-Gordano area fall within consultation zones for the North Somerset & Mendip Bats SAC, are adjacent to SSSI, or include sensitive wildlife corridors. SP11 requires protection of these assets, but the Plan does not include: • Site-specific ecological assessments. • Clear funding and mechanisms for mitigation. • Evidence that biodiversity net gain is deliverable. This undermines the consistency with national policy. Summary While the strategic policies themselves are appropriate, the Plan does not apply them consistently to its spatial strategy. The cumulative result is that the Plan is not sound because: • It is not justified (inadequate evidence for spatial choices and Green Belt release). • It is not effective (infrastructure uncertainty, unresolved transport and environmental constraints). • It is not consistent with national policy (on Green Belt, sustainable development, ecology, flood risk, transport). For these reasons, this section of the Local Plan cannot currently be considered sound.	allocation for Pill/E-in-G unless robust evidence demonstrates that it performs favourably against sustainability, transport, ecological, and infrastructure criteria. • Update the Sustainability Appraisal to reflect alternative spatial options and their comparative performance. 2. Strengthen Green Belt justification in SP7 or revise Green Belt release where exceptional circumstances cannot be shown The Plan must clearly demonstrate that exceptional circumstances exist for Green Belt release, which it currently does not. Required modifications: • Publish a transparent Green Belt assessment showing that all reasonable non–Green Belt alternatives (brownfield capacity, density uplift, town centre regeneration) have been fully explored. • Provide evidence that the "Golden Rules" (affordable housing delivery, infrastructure provision, green space) are viable and deliverable on proposed Green Belt sites. • If this evidence cannot be provided, reduce or remove Green Belt releases in Pill/E-in-Gordano. 3. Ensure SP1 (Sustainable Development) and SP2 (Climate Change) are operationalised through the site selection process The policies cannot be sound unless the spatial strategy delivers them in practice. Required modifications: • Update the spatial strategy to prioritise locations with proven ability to support low-carbon transport. • Demonstrate that major allocations will not increase car dependency or carbon emissions, with full supporting transport modelling. • Amend policy wording to require firm, funded infrastructure delivery – not aspirational statements – before occupation of new homes. 4. Update SP4 (Placemaking) to ensure infrastructure delivery is secured, funded, and achievable Placemaking principles cannot be delivered without guaranteed infrastructure. Required modifications: • Provide detailed evidence of how new schools, healthcare capacity, active travel networks, and community facilities will be delivered for growth areas. • Include specific triggers, phasing requirements, and delivery mechanisms in the Plan. • Where infrastructure funding is uncertain, reduce or amend site allocations to match realistic capacity. 5. Amend SP6 (Villages and Rural Areas) to ensure rural settlements are not assigned unsustainable levels of growth SP6 states that rural areas should receive appropriately scaled development, yet Pill/E-in-Gordano is assigned a disproportionately large allocation. Required modifications: • Recalibrate rural growth levels to reflect genuine sustainability criteria, not simply land availability. • Remove or significantly reduce large strategic allocations in villages unless they meet objective sustainability thresholds. 6. Strengthen SP10 (Transport) by incorporating evidence-led capacity assessments and secured mitigation The transport strategy lacks the evidence to demonstrate deliverability. Required modifications: • Publish cumulative transport modelling, including impacts on M5 Junction 19, and		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									integrate its findings into SP10. • Demonstrate how sustainable transport modes (bus, rail, active travel) will achieve realistic modal shift and include funding and delivery mechanisms. • Revise allocations where transport impacts cannot be mitigated. 7. Amend SP11 (Historic and Natural Environment) to include site-specific ecological constraints and mitigation requirements Sensitive ecological locations cannot accommodate large-scale development without robust, costed mitigation. Required modifications: • Incorporate detailed ecological assessments for sites within SAC/SSSI consultation zones and identified wildlife corridors. • Add explicit mitigation requirements and monitoring responsibilities to SP11 and relevant site policies. • Reconsider allocations where impacts on protected habitats cannot be avoided or mitigated to an acceptable standard. 8. Improve Duty to Co-operate documentation across relevant strategic policies Several strategic policies (SP3, SP7, SP10, SP11) depend on cross-boundary cooperation. Required modifications: • Include evidence of active engagement with National Highways, Natural England, the Environment Agency, and neighbouring authorities. • Set out how their concerns have shaped policy decisions, particularly regarding transport, ecology, and flood risk. • Where issues remain unresolved, revise the affected policies or allocations. Summary Modification To be sound, the Strategic Policies must be revised so that: • The spatial strategy reflects objective sustainability evidence. • Green Belt release is justified by robust exceptional circumstances or removed. • Transport, environmental and infrastructure constraints are fully evidenced and mitigated. • Growth is directed to the most sustainable locations, not constrained rural settlements. • Ecological and flood risks are assessed and addressed. • Cross-boundary consultation is properly documented. Without these modifications, Policies SP1–SP13 do not fully meet the soundness tests of justification, effectiveness, or consistency with national policy.		
62850529	Andy Chappel			Yes	• Justified • Effective • Consistent with national policy	Yes	Yes	This comment is a WHOLE PLAN comment (In lieu of this option being available on the consultation site): The plan is broadly sound but requires modification to be: Justified – Needs stronger evidence for climate and nature recovery delivery. Effective – Delivery mechanisms, monitoring and enforcement are not clearly secured. Consistent with national policy – Stronger alignment needed with National Planning Policy Framework principles on climate, biodiversity and green-infrastructure.	Overall, the plan requires: Stronger Justification – Needs to deliver stronger evidence for climate and nature recovery delivery. More Effectiveness – Delivery mechanisms, monitoring and enforcement are not clearly secured enough. Higher Consistency with national policy – Stronger alignment needed with NPPF climate, biodiversity and green-infrastructure principles.		
31037185	Nigel Cooke			Yes		Yes	Yes				
9138657	Home Builders Federation		Home Builders Federation	No	• Justified • Effective • Consistent with national policy				HBF is concerned that the distinction that has been made between Strategic Policies and non-strategic policies is unclear. At the very least the term strategic policy, not the prefix SP should be used to identify each strategic policy. HBF is also concerned that the distinction between Strategic and non-strategic policies reflects a misunderstanding of the purpose	The Plan does not include a Housing Trajectory as such is not considered to be sound as it is not justified or effective or in compliance with national policy. A Housing Trajectory needs to be provided which shows as a minimum the site-by-site breakdown of housing delivery over the plan period. This must also link into the Monitoring Framework.	North Somerset 2nd Reg 19 Dec 25.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									of such a distinction and how this relates to planning applications and planning appeals. Some of the Strategic policies seem to be statements of intent or ambition and/or are merely foreshadowing detailed non-strategic policies later in the Plan. The wording of policy should set out what developers need to demonstrate in order should compliance with the policy. HBF request that Council revisits the wording of all the strategic policies. HBF suggest that any policy wording that does not assist a planning applicant or a decision-maker should be removed from policy and moved to the supporting text, or just deleted. The current approach to Strategic Policy identification is ineffective and therefore unsound. Vision, strategic priorities and sustainability objectives HBF suggest that the role of new housing in delivering sustainable development should be more explicitly recognised within the vision itself. HBF suggests that further consideration should be given to the role and benefits of new housing development within the Plan, and the Vision should be updated to reflect this. No reference is made within the Strategic Priorities to meeting the housing needs of the area in full. This should be a key objective of any Local Plan. There is a need for the Plan to better recognise the contribution is can and should be making to the ambitions to deliver 1.5 million new homes within this Parliament. The Plan should more explicitly recognise the role of open market housing in meeting the housing needs of the area.		
28928545	J Dyson			No Consistent with national policy		Unsure	Unsure	North Somerset council 2041 Local Plan has a responsibility from the UK government to deliver the strategic national recommendations of the UK Food Security 2024 report & the regional North Somerset Strategic Flood Risk Assessment Level 1 - 2025 report. I don't believe it delivers these mandatory objectives. Examples below are as follows: 1) UK Food Security report highlights: 'Extreme weather events continue to have a significant effect on domestic production'. By North Somerset Council (NSC) allowing agricultural land to the used for non-farming purposes in the 2041 plan (e.g. new housing, solar farms), this increases the risk of local flooding and hence reduces local food production. This is the complete opposite to the objective of the British food security measure, which has the Executive warning: 'The UK continues to be highly dependent on imports to meet consumer demand for fruit, vegetables and seafood'. As a country, the UK needs to produce more of its own food, something the 2041 plan does not deliver & contribute towards. Especially, when the growing UK & NSC population is taken into account; 2) UK Food Security report notes: 'The impacts of climate change, biodiversity loss and water insecurity both at home and abroad remain pressing risks to food security'. By NSC reducing the amount of agricultural land, this is the reverse of the required UK aims. The 2041 plan does not deliver the required national objective; 3) The current NSC Flood Risk analysis report, already highlights much of Weston-super-Mare, Clevedon & Banwell are all at flood level 3 (the highest flood risk category from a variety of sources e.g. rainfall, groundwater, river/rhyne flooding & most likely tidal overflow destruction). It states 'Much of North Somerset's land lies below existing spring high tide levels'. By NSC planning to reduce the agricultural land & dramatically increase the amount of regional housing on green fields, this will dramatically impact the flood risk to the existing local population, emergency services demand & reduced food production; 4) The current NSC Flood Risk Breach Model map, includes hundreds if not thousands of square miles of NS flooded land, particularly in Weston-super-Mare. Much of which is over the planned new housing developments. The 2041 plan mitigation measures are not of sufficient detail to ensure compliance.	The document must comply to the UK Food Security 2024 report & the regional North Somerset Strategic Flood Risk Assessment Level 1 - 2025 report.		
58602337	William Hall			No Positively prepared		No	No	The Plan fails to meet the tests of soundness and legal compliance for the following reasons: Housing and infrastructure: Alternatives on brownfield or lower-impact sites have not been fully considered. Environmental protection: Weston Big Wood, Nightingale Valley, and the Gordano Valley corridor are inadequately protected. Biodiversity, landscape, and flood risks are insufficiently assessed. Transport and safety: School traffic on The Downs is already unsafe, and the Plan does not provide evidence of safe, deliverable access to Tower Farm or Black Rock. Duty to Cooperate: Consultation with statutory bodies and neighbouring authorities regarding ecological, transport, and flood risk impacts is insufficient.	Remove Tower Farm and Black Rock from the Local Plan. Focus development on brownfield and lower-impact sites that meet housing, economic, and sustainability objectives without harming Green Belt or ecological assets. Provide full environmental and flood risk assessments for any proposed allocations. Demonstrate safe and suitable access for all development and assess the impact on existing school traffic and road safety. Ensure consultation with statutory bodies and neighbouring authorities to mitigate environmental, transport, and flood risk impacts.	I support the overall vision of the Local Plan to deliver sustainable, high-quality development, regenerate existing towns, protect valued areas, and promote well-being. I support strategic policies that aim to enhance access to green spaces, community facilities, and promote sustainable travel, provided they do not conflict with environmental and safety protections.	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
62442209	Ian Hunter			Unsure	• Justified	Yes	Yes	The proposal for more housing in Nailsea and Backwell adds more to an area that is already overdeveloped	Challenge central government edict that more housing is required in North Somerset and move plans away from Nailsea and Backwell to more brownfield sites		
58641441	Jenny Leavett							The current proposals for housing allocation in Backwell represent an unsustainable concentration of development that threatens the distinct identity and character of the village. Backwell, like many surrounding settlements, has already absorbed considerable planned growth, yet this continuous expansion often on Green Belt land risks eroding the amenity that makes the area desirable. As a resident who specifically chose Backwell for its immediate, uncompromised access to the countryside and associated quality of life, I object to the loss of this vital green infrastructure, which serves a crucial recreational role for the community, including dog walking and health benefits. A more justifiable, strategic approach to housing growth for North Somerset would be to resist the uncoordinated expansion of existing, constrained villages and instead prioritise the creation of new, self-sufficient towns or large-scale urban extensions on appropriate sites, where comprehensive infrastructure (schools, healthcare, transport) can be planned and delivered before development, ensuring genuine sustainability and preventing the irrevocable damage to established local communities.			
62691937	N Shelton			No	• Justified	Unsure	No	Section 40 of Natural Environment and Rural Communities Act 2006 places a duty on public bodies to contribute to the coherence and resilience of ecological networks. These plans dangerously encroach on SSIs (managed by Avon Wildlife Trust, eg the ancient woodlands at Weston Big Wood) and disregard the buffer zones and wildlife corridors put in place to protect these most fragile eco-systems in North Somerset (some of the most unique in the UK, in fact). The council must re-consider the scale of these developments and the land it impacts. Making some concessions on numbers of dwellings and boundaries would surely be reasonable?			
39195009	David Sheridan			Yes		Yes					
28639969	Jessica Storrar			Yes		Yes	Yes			The councils local plan supports sustainable development by identifying towns, brown field sites and transport hubs as suitable for development. This will help towards coping with the changes that will come with climate change. By contrast, Wrington is unable to provide sustainable development: there are very few accessible job opportunities so most people would need to travel by car. Healthcare and educational activities are restricted to a Primary School and a very busy surgery in a neighbouring village. Secondary schooling and further education would require travel, again by car. Further housing development in Wrington has recently been shown to be impratical for many reasons, including access, flooding, the need to preserve the view of Wrington's grade 2 listed church and to preserve habitat for foraging bats.	
31062913	R Storrar		KWAW	Yes		Yes	Yes			The Local Plan is correct in identifying where development should take place, keeping it within easy reach of established city/town centres. This ensures existing town areas are sustained by the extra trade the new residents will bring and prevent the fragmentation of disconnected housing estates, that have neither work nor facilities nearby. Examples of unsustainable isolated housing estates have been a feature across the country, where cheap green field sites have been built on, resulting in residents spending long hours travelling to work or facilities, overwhelming already scarce health facilities and removing precious agricultural land.	
58650337	G Yule		Private	Yes		Yes	Yes				
59945953	Rich Coleman			No	• Positively prepared • Justified • Effective			No mention of Food Security and the importance of protecting prime agricultural land.	Recognise and Include reference to Food Security and the importance of protecting valuable agricultural land.		

SP1: Sustainable Development

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 39374913	Tony Harden								Page 16 Policy SP1 is agreed with in principle but it should be clearer that lack of suitable and safe cycling facilities to rail stations and other key facilities like supermarkets, banks, dentists, GP surgeries and opticians should be required before development can be permitted. As a key example no further development in Wrington should be permitted until a safe and off road cycle route has been installed to the main shopping area/transport hub at Yatton.		comments on Local Plan.pdf
64415137	Miller Homes (Locking Parklands)	Tom Rocke		No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No		The provisions of the Plan do not comply with the definition of sustainable development that it has set for itself since it fails to contribute to meeting the substantial unmet housing needs arising from within the neighbouring urban area of Bristol. Furthermore, through failing to uphold the spatial strategy it will fail to prioritise sustainable modes of travel and therefore fail to respond to the imperatives of climate change, and result in the unnecessary and unjustified release of land from the Green Belt. For reasons that are set out in later representations, the provisions of the Plan do not comply with the definition of sustainable development that it has set for itself. In particular: • They fail to support the delivery of a sufficient variety and choice of housing, including specialist and affordable housing, to meet local needs. In particular, the Plan fails to contribute to meeting the substantial unmet housing needs arising from within the neighbouring urban area of Bristol. Housing needs transcend administrative boundaries, and the latter are no justification for not planning positively to ensure that they are met in full to ensure that everyone has the opportunity to secure a decent home.		Representations_final.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									• The provisions of the Plan also fail to comply with the spatial strategy that it has set for itself to guide the location of development, and in particular to prioritise growth at the most sustainable settlements and in locations outside the Green Belt. • Since the Plan will fail to uphold the spatial strategy through both the quantum and distribution of housing growth that it is proposing, it will fail to prioritise walking and cycling, maximise the use of effective public transport, encourage the creation of liveable neighbourhoods and avoid adverse environmental impacts. For this reason it will also fail to make a positive contribution to addressing and demonstrating resilience to the impact of climate change and delivering the net zero target. The justification for Policy SP1 states as follows: The presumption in favour of sustainable development is at the heart of the NPPF and relates to both plan making and decision-taking. The planning system must contribute to the achievement of sustainable development. This Local Plan acknowledges this important national policy requirement. … The policy reflects the plan's vision and strategic priorities and sets out the overall framework for the other policies in the plan, with the detailed requirements contained elsewhere. It sets out at a high level what sustainable development means in North Somerset. These principles are then articulated in more detail in the other strategic policies, with further guidance set out in the locational and detailed development policies.(1) Since, for the reasons set out in these representations, the Plan will fail to achieve the fundamental and overarching requirement to deliver sustainable development, and therefore to comply with the strategic policy that underpins all of its provisions, it is unsound when assessed against each and every soundness test. Changes Sought Policy SP1 • Incorporate in the Plan the changes sought to Policy SP		
62993313	Wall Holdings Ltd	Tom Rocke		No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Policy SP1 (Sustainable Development) The provisions of the Plan do not comply with the definition of sustainable development that it has set for itself since it fails to contribute to meeting the substantial unmet housing needs arising from within the neighbouring urban area of Bristol. Furthermore, through failing to uphold the spatial strategy it will fail to prioritise sustainable modes of travel and therefore fail to respond to the imperatives of climate change, and result in the unnecessary and unjustified release of land from the Green Belt	Incorporate in the Plan the changes sought to Policy SP8, as follows: Amend the Plan to meet the minimum housing need of 25,300 homes (1,600 per annum) for the period 2026-2042. • Add a minimum additional requirement of 1,600 homes to allow for the Plan to look ahead at least 15 years from the date of adoption. • Review the requirement to meet a proportion of Bristol City's unmet housing needs and include the requirement in the overall housing quantum to be delivered during the Plan period. • Remove Woodspring, Wolvershill and Pill / Easton-in-Gordano as separate locations in the schedule incorporated in the Policy, and which is inconsistent with other strategic policies, and apportion the growth to the 'Villages and Rural Areas' location. • Review the apportionment of growth to meet North Somerset's needs between the 'towns' and 'villages and rural areas' locations, and revise the distribution to a ratio of 80:20 to deliver the intentions of the spatial strategy. • Review the apportionment of growth to Green Belt locations. • Increase the distribution to the towns, and in particular the allocation of small to medium size sites at Weston-super-Mare (including the Weston Villages) that can deliver homes quickly and therefore contribute to the five year supply of deliverable housing land, to provide homes for needs arising during the current plan post-2027. • Delete sites with planning permission from the site allocations. • Incorporate a delivery trajectory to identify a supply of specific, deliverable sites for years one to five of the plan period.		Representations_final.pdf
63286689	McCarthy Stone & Churchill Living	The Planning Bureau Ltd						McCarthy Stone (MS) and Churchill Living (CL) are independent house builders specialising in specialist housing for older people. Together, they are responsible for delivering approximately 90% of England's specialist owner-occupied retirement housing. Both operators are therefore well placed to provide comment on the policy barriers that may have the potential to restrict supply within the sector. Please find below our comments on the draft local plan insofar as they impact the delivery of specialist accommodation for older persons. These comments are intended to assist the council in formulating approaches which are both workable in practice and avoid stymying the delivery of a housing typology which the PPG describes as 'critical' in terms of addressing housing need. Policy SP1: Sustainable development Policy SP1 amongst other things requires new development to 'Make a positive contribution to addressing and demonstrating resilience to the impacts of climate change and delivering the net zero target'. Policy SP2 confirms that the Council has a target of delivering carbon neutrality in North Somerset by 2030. Whilst the Council's commitment to meeting both its and the UK Government's target of net zero carbon emissions is commendable, it appears that the Council is going to achieve this through having mandatory carbon and climate standards from adoption of the plan that may go beyond government targets. However, it is our view that any requirement should be 'stepped' in line with Government targets and the proposed changes to the building regulations. This approach is confirmed within the Ministerial Statement (statement no : Statement UIN HCWS123 available from Written statements - Written questions, answers and statements - UK Parliament) released on 13th December 2023. The ministerial statement confirms, with respect to the net zero goal that:	The Council should re-consider the policy SP1 to ensure requirements are not going beyond government targets.		2025_MS and CL response to North Somerset submission Local Plan reg 19 - Redacted.pdf

								'The improvement in standards already in force, alongside the ones which are due in 2025, demonstrates the Government's commitment to ensuring new properties have a much lower impact on the environment in the future. In this context, the Government does not expect plan-makers to set local energy efficiency standards for buildings that go beyond current or planned buildings regulations. The proliferation of multiple, local standards by local authority area can add further costs to building new homes by adding complexity and undermining economies of scale. Any planning policies that propose local energy efficiency standards for buildings that go beyond current or planned buildings regulation should be rejected at examination if they do not have a well-reasoned and robustly costed rationale' and 'To be sound, local plans must be consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in the National Planning Policy Framework and other statements of national planning policy, including this one'.

63191617	Various Taylor Wimpey Crest Nicholson Barratt Redrow Vistry Group	Nick Matthews (Savills)		No	• Consistent with national policy	Yes	Yes		These representations have been prepared and submitted by Savills on behalf of various clients including Taylor Wimpey, Crest Nicholson, Barratt Redrow, and Vistry Group. 2. This draft policy requires development to demonstrate compliance with a list of ten bullet points in order to 'be sustainable'. 3. Whilst we support the intent of this policy and recognise the importance of, and indeed legal requirement to achieve, sustainable development, the policy wording is too high level to serve any meaningful purpose as a strategic policy in the determination of planning applications. Furthermore, a number of the individual bullet points are duplicated later within development management policies and in some cases are not entirely consistent. 4. Paragraph 21 of the Framework, explains that strategic policies 'should be limited to those necessary to address the strategic priorities of the area … to provide a clear starting point for any non-strategic policies that are needed. Strategic policies should not extend to detailed matters that are more appropriately dealt with through … other non-strategic policies'. Further, paragraph 16(f) of the Framework requires plans to 'serve a clear purpose, avoiding unnecessary duplication of policies that apply to a particular area'. 5. We understand why, for a local authority which has declared a climate emergency, there is a desire to put a sustainable development policy front and centre in the Local Plan. However, the policy does not sit comfortably in the strategic policies section of the plan. Much of what it is trying to achieve can and indeed is better covered by subsequent detailed development management policies. 6. Furthermore, there are areas of inconsistency with the Framework, for example, the draft policy wording seeks to 'Protect valued natural and historic assets and support green infrastructure and biodiversity;'		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 									(emphasis added), is in conflict with the adopted approach outlined in national policy. In relation to heritage for example, Chapter 16 of the Framework (Conserving and Enhancing the Historic Environment) instructs the decision-taker to balance the harm with public benefits in arriving at a planning judgement. A policy which requires 'protection' of heritage assets establishes a different test for planning applications which means that no harm is considered acceptable, irrespective of the public benefits arising from the development. 7. In light of the above, and for consistency with the Framework, we consider that this policy should be converted into supporting text and updated to ensure consistency with the broad approach of the Framework. As supporting text it would set the scene for the detailed development management policies which follow later in the draft Plan but without duplication		
29403105	Diverse Partnerships Yatton Ltd	Pegasus Group		No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Yes	Yes	Our client supports the range of criteria set out in policy SP1 as positive indicators of sustainability and aspirational considerations for a broad range of development types. We support framing the policy as 'should' in the opening wording. This allows discretion to the decision maker where in some cases it may not be feasible to satisfy every criterion. A balanced judgement will be required in each application determination. Without such an amendment the policy is not considered to be positively prepared or effective.			NSC Reg 19 Diverse Partnerships Yatton Ltd Reps Dec 25 - Redacted.pdf
51524513	Bellway Homes Ltd	tor&co	Bellway Homes Ltd	No	‣ Justified ‣ Effective ‣ Consistent with national policy			Draft Policy SP1 (Sustainable Development) details a list of requirements that development in North Somerset should demonstrate to be "sustainable". Whilst Bellway understand why the Council has included this policy to communicate the importance of achieving sustainable development at the forefront of the plan, a specific strategic policy addressing it is considered unnecessary. Paragraph 21 of the NPPF states strategic policies "should be limited to those necessary to address the strategic priorities of the area" and that they "should not extend to detailed matters that are more appropriately dealt with through neighbourhood plans or other nonstrategic policies". In addition, Paragraph 16(f) states plans should "serve a clear purpose, avoiding unnecessary duplication of policies that apply to a particular area (including policies in this Framework, where relevant)." Achieving sustainable development is already at the heart of national policy and its provisions to which Local Plans and their policies should already have regard. Accordingly, much of what Draft Policy SP1 is trying to achieve can be better (and indeed is already) covered by other policies – including other strategic policies and supporting text to the Local Plan (including Section 2). Its inclusion therefore does not serve a necessary and clear purpose, resulting in unnecessary duplication of policies. Indeed, many of the requirements are not specific to North Somerset.	In light of the above, Bellway suggest this policy is deleted.		20251212 504317 JE - North Somerset Reg 19 (Reps obo Bellway Homes).pdf
63094305	Harrow Estates	Boyer		No		No	No		Harrow Estates note there is no difference in the draft policy wording between the Pre-Submission consultation version dated July 2024 and the current October 2025 version. Whilst Harrow support the intention of Policy SP1 to embed sustainable development at the heart of the Local Plan, the policy is not effective and does not meet its legal requirement to be prepared with the objective of achieving sustainable development. We say this because: • The policy does not enable a positive contribution to address and demonstrate resilience to the impacts of climate change and delivering the net zero target due to 46% of planned growth being located within the western part of the district maintaining and increasing the high levels of long-distance commuting across the district. • To be found sound, SP1 must be supported by a spatial strategy that directs growth to the most sustainable locations; including eastern settlements such as Failand, rather than locations that exacerbate unsustainable commuting patterns. • Harrow consider that development should be located where services and facilities are accessible, reducing dependence on the private car and providing opportunities for activeand sustainable forms of travel. • The draft LP fails to align its spatial distribution of growth with the sustainable development principles set out in Policy SP1. This results in a fundamental disconnect between the Policy SP1 principles and the proposed growth locations at Policy SP3.Delivery of resilient to impacts of climate change and delivering net zero target. Policy SP1 requires development to "make a positive contribution to addressing and demonstrating resilience to the impacts of climate change and delivering the net-zero target". However, the draft Plan places a disproportionate amount of growth (46%) in western locations such as Weston-Super-Mare (WSM) and Banwell, which are remote from Bristol, as the primary economic centre of growth from other western settlements. Harrow reiterates that residents are commuting from Weston-Super-Mare to Bristol for work. This pattern is unsustainable and increases carbon emissions, in conflicts with the Council's Climate Emergency declaration. The level of out commuting is demonstrated by Calibro's Carbon Modelling report, Figure 2.1(below), which shows that commuting flows between WSM and Bristol dominate, highlighting the unsustainability of the proposed spatial strategy. Figure 2.1 Calibro carbon Modelling Report The study concludes that to reduce the distance and number of vehicular trips into Bristol, housing must be allocated closer to the city, particularly within the northwest of the district given its proximity to jobs, services and facilities in Bristol. Failing to do so directly undermines the Council's climate ambitions and contradicts the requirements of Policy SP1.		251211 Land East of Failand Reg 19 Reps.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									Paragraph 1.45 of the Local Plan Transport Assessment identifies concerns about the sustainability of several western settlements, such as Locking, Banwell, Wolvershill, Sandford and Winscombe, where the deliverability of public transport services and reliance on private car use present significant challenges. Conversely, Failand benefits from short journey distances, active travel routes and frequent existing bus connections into Bristol City Centre, meaning it is significantly better aligned with climate and sustainable travel objectives of SP1. As such, by failing to allocate sustainable, well-connected eastern settlements the emerging LP cannot demonstrate that Policy SP1's for Sustainable Development can meet the council's climate objectives for reduced need to travel and less dependent on the private vehicles have been meaningfully applied. Delivery of economic growth and job creation at accessible locations Policy SP1 seeks to "support the delivery of opportunities for economic growth and job creation at accessible locations". However, directing growth away from Bristol, the principal economic hub, contradicts this aim. The Plan fails to acknowledge that Bristol is the principal economic hub of the West of England and notably for a large proportion of North Somerset residents and therefore directing growth to Weston-Super-Mare is inconsistent with economic reality and exacerbates unstainable travel distances. In contrast, eastern settlements such as Failand already benefit from inherently more sustainable travel relationships with Bristol and public transport connections, yet these locations have been excluded solely on the basis of Green Belt status rather than of their sustainability credentials. As a result, this omission demonstrates that Policy SP1 is not supported by evidence-based, justified policy which does not deliver sustainable development objectivise. The Council has does not recognise its relationship with Bristol through delivering its stated objectives for economic growth, climate resilience, and reduced car dependence through allocating development to western area of district, we see this as not sound. Walking, Cycling and Public Transport Ambition Policy SP1 emphasises prioritising walking and cycling and maximising the use of public transport. However, the Sustainability Appraisal identifies the A370 and A38 transport corridors as already under stress, with limited potential for significant modal shift due to distance from strategic employment areas. In contrast, eastern locations such as Failand are positioned to genuinely support active travel and public transport use benefiting from direct bus links to Bristol and National Cycle Route connections. Yet these locations are excluded from the site selection framework. As a result, SP1's transport objectives remain aspirational rather than deliverable. Reallocating a proportion of growth to sustainable eastern settlements is needed to ensure SP1's transport and climate objectives can be met. Commitments to Healthy, Safe, and Cohesive Communities are undermined by Growth Distribution Policy SP1 states that development should contribute to "healthy, safe and cohesive communities and tackle inequality", yet the Plan's spatial strategy reinforces unsustainable long-distance commuting patterns from western settlements, which will not improve health conditions and will exacerbate dependence on private vehicles. The continued reliance on long-distance, car-based commuting from western settlements increases emissions and reduces local air quality and exposes communities to higher levels of congestion and pollution. Growth should instead be directed to settlements such as Failand, where shorter travel distances and viable sustainable transport alternatives align with public health and wellbeing objectives. As drafted, this policy neither widens access to housing across the district nor strengthens under-served communities, and, therefore, SP1's social aims are not achieved		
63114593	Bloor Homes (North of Pound Lane Nailsea site)	Turley		No	• Positively prepared • Justified • Effective • Consistent with national policy		No	Policy SP1: Sustainable Development The starting point for defining 'sustainable development' is Paragraph 8 of the NPPF. However, the draft Policy does not make reference to the NPPF, other than in the supportive text. For the clarity of interpretation, it is suggested that specific reference is made to the NPPF (and a caveat included that the latest NPPF/government definition of Sustainable Development should be used at the time of decision making). We suggest that this policy is shortened, to focus on the aspiration to achieve Sustainable Development within North Somerset, and what this means locally. Supporting text states, the draft policy sets an 'Overall Framework' for other policies in the plan, the principles are then articulated in more detail in the other strategic policies. As specific requirements are set out in other draft policies, it is unclear how this policy will be implemented & subsequently monitored. As such, it is not clear how this policy will be truly effective (in contradiction with Paragraph 36 of the NPPF). Further, many of the bullet points would not be applicable to some types of development. It would be more effective for the policy to contain a more limited number of criteria. Some of the points also have the potential to be overly onerous and restrictive if interpreted literally, it offers no caveats or flexibility to allow for good planning judgement to be applied. This is in contradiction with Paragraph 9 of the NPPF which states the objectives of Sustainable Development are not criteria against which every decision can or should be judged. Planning policies and decisions should play an active role in guiding development towards sustainable solutions, but in doing so should take local circumstances into account, to reflect the character, needs and opportunities of each area. Based on the above, it is recommended this Policy is amended.	It is suggested that specific reference is made to the NPPF (and a caveat included that the latest NPPF/government definition of Sustainable Development should be used at the time of decision making). 21449761	Bloor Homes South West (Wolvershill)	Turley		No	• Positively prepared • Justified • Effective • Consistent with national policy		No	Policy SP1 provides an overarching policy relating to Sustainable Development, and although it is intended to reflect requirements for North Somerset, the list of criteria is relatively generic and reflects general requirements set by national policy and the approach to sustainable development set out in national policy (the NPPF). Supporting text identifies that the policy is intended to provide principles that are articulated in more detail in other strategic policies. However, it is not clear that not all elements of the policy could (or should) apply to all developments – for example not all development proposals will be able to support the delivery of a variety of housing (where no housing is included). Care should be taken with the drafting of this policy to ensure that it is appropriately clear and focused and adds value to the definition of sustainable development within North Somerset. As drafted, there are ambiguities and there is not sufficient differentiation from the general sustainable development policies, which are already a feature of national planning policy.	Care should be taken with the drafting of this policy to ensure that it is appropriately clear and focused and adds value to the definition of sustainable development within North Somerset. 51710305	Wain Estates (Wolvershill)	Tetlow King Planning	Wain Estates	No	• Effective			It is encouraging that the core principle of draft Policy SP1 is that "The presumption in favour of sustainable development is at the heart the NPPF and relates to both plan making and decision-taking. The planning system must contribute to the achievement of sustainable development. This Local Plan acknowledges this important national policy requirement." The revised NPPF (December 2024) retains this principle at paragraphs 11 and 12. Paragraph 16(f) of the NPPF (December 2024) confirms that Local Plans should avoid unnecessary duplication, including repetition of policies within the NPPF itself. As such it is questionable whether draft Policy SP1 is needed given that it seeks to replicate provisions already within adopted national policy.			0707-06.M23 Wain Estates NS Pre Submission Reg 19 Local Plan 12.12.25 with Appendices.pdf

The policy's representation of the plan's vision and strategic priorities is supported as an overall framework for the other policies in the plan. However, there is a clear disconnect between this policy framework and the terms of other policies in the plan which lead BPC and NTC to find the plan unsound in its current form.		251118 Local Plan Reg 19 2025 reps FINAL.pdf R01 - Transport Statement - Rev 3 FINAL.pdf Hydrology LP3 BPC_NTC Appendix_2.2-compressed.pdf Hydrology LP3 BPC_NTC Appendix_2.1-compressed.pdf Hydrology LP3 BPC_NTC Appendix_9-compressed.pdf Hydrology LP3 BPC_NTC Appendix_7-compressed.pdf Hydrology LP3 Summary BPC_NTC Part 2 (1).pdf Hydrology LP3 Summary BPC_NTC Part 1 (1).pdf
21472417	Mead Realisations Ltd	Oneleven Property		No	• Positively prepared • Justified • Effective • Consistent with national policy				The wording of this policy has not changed from the version contained in the Autum 2023 PsP. It is still not clear how the Council will measure development proposals against the requirements set out within each of the bullet points of this policy. In particular, the Council does not explain what is meant by 'making a positive contribution to addressing and demonstrating resilience to the impacts of climate change and delivering the net zero target'. If the Council intends to measure proposals against other policies within the plan this should be stated clearly in policy SP1. Policy SP1 also states that new development in North Somerset should support the delivery of a variety and choice of housing to meet local needs although it does not make any reference to meeting wider housing needs in North Somerset which is a key aspect of the social element of sustainable development. Policy SP1 states that new development should protect valued natural and historic assets and support green infrastructure and biodiversity. However, this objective needs to be balanced against other sustainable development objectives. Linked to this the last bullet point of SP1 states that new development should avoid adverse environmental impacts. It is not considered realistic for development proposals to achieve this objective in all situations. Clearly, environmental impacts also need to be balanced against social and economic objectives. Overall policy SP1 is not considered to be clear in its intentions and results in ambiguity as to how proposals will be assessed. The following amendments to policy SP1 are suggested: To be sustainable, new development in North Somerset should aim, where possible to: • Make a positive contribution to addressing and demonstrating resilience to the impacts of climate change and delivering the net zero target; • Prioritise walking and cycling, maximise the use of effective public transport and encourage the creation of liveable neighbourhoods; • Support the delivery of a variety and choice of housing, including specialist and affordable housing to meet housing local needs; • Contribute to the creation of healthy, safe and cohesive communities and tackle inequality; • Support the delivery of opportunities for economic growth and job creation at accessible locations; • Create attractive and distinctive places and enable the delivery of supporting infrastructure; • Protect valued natural and historic assets and support green infrastructure and biodiversity; • Support the efficient use of land, including prioritising previously developed land; • Support regeneration particularly within town centres; and • Avoid, limit or mitigate adverse environmental impacts which, on their own or cumulatively, would result in air, water or other pollution or harm to living conditions, health or safety. The justification for Policy SP1 refers to the need for the plan to be sufficiently flexible to adapt to rapid change. However, as drafted the plan does not appear to contain any such flexibility. Notably the adopted Core Strategy contained specific policy text to ensure flexibility in maintaining a supply of housing and similar policies should be included in the new local plan. This is dealt with further in relation to comments on policy SP8 housing and		Reg 19 Final Representations Mead Realisations 12.12.25 including appendices.pdf

									SP9 employment later in these representations. Reference is made at page 17 to the objective of the liveable neighbourhood concept although it is not clear where else in the Council's evidence base or plan preparation this concept has been considered. This should be clarified.		
939361	R Burrows		-	No	‣ Positively prepared ‣ Justified ‣ Effective	Unsure	Unsure	There are several inherent conflicts and specific policies that are argued to constrain development, particularly housing delivery. When coupled with other documents outside of the local plan, such SPDs as the proposed enlarged Bat SAC. It is questioned how NSC will deliver windfall sites & small sites at all. The financial burden is already onerous and this will add too much financial burden on small developers & self builders who should be exempt. Coupled with flood risk and the absurdity of designing to an undefended flood situation (rather than breach modelling) an almost impossible scenario where the flood defences are completely removed. To design to the absolute worse case (doomsday) scenario is unrealistic and far from pragmatic. Development Management Policies (DP), particularly those related to climate change, sustainability standards, and flood risk, make the delivery of growth procedurally and economically harder. This is highlighted by the fact that the LPA was found not to have delivered a five-year supply of housing for at least 13 years, suggesting the existing constraints are already impacting deliverability. This will exacerbate the situation & the financial burden of compliance with policies that duplicate existing primary legislation uneccessary.	Policy SP1: Suggested Rewording (Limiting Applicability): "To be sustainable, new development for 10 or more dwellings in North Somerset should [… follow the policy's bullet points]"		
62850369	Maureen Butterly			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Policy SP1 sets out a strong and appropriate definition of sustainable development in North Somerset. However, the way the Plan applies SP1 – particularly through its spatial strategy and site allocations – does not demonstrate that these principles have been followed. As a result, I do not consider this policy to be sound, because the Plan as written cannot deliver the outcomes SP1 requires. The key inconsistencies are as follows: 1. SP1 requires reduced car dependency, but the Plan allocates large-scale development in locations that increase it SP1 states that sustainable development should: • Prioritise walking and cycling, • Maximise the use of public transport; and • Support liveable neighbourhoods with easy access to jobs and services. However, Pill/Easton-in-Gordano: • has limited local employment opportunities. • lacks the full range of services required for a 44% population increase. • suffers from existing congestion issues at M5 Junction 19. • is not supported by confirmed, deliverable public transport improvements. Allocating 1,100 homes here is therefore inconsistent with SP1's transport and accessibility objectives. Until the Plan can demonstrate evidence that modal shift is achievable and transport impacts can be mitigated, SP1 is not effective. 2. SP1 requires prioritising previously developed land before Green Belt, yet the Plan relies heavily on Green Belt release SP1 explicitly states that sustainable development should "support the efficient use of land, including prioritising previously developed land." However: • The Plan allocates substantial Green Belt land around Pill/E-in-Gordano without demonstrating that brownfield options and higher-density town centre opportunities have been exhausted. • The supporting evidence does not show that non–Green Belt alternatives were considered in sufficient detail. This is inconsistent with SP1 and national policy (NPPF 2024, Sections 11 and 13). If previously developed land has not been fully utilised, SP1 cannot be considered justified. 3. SP1 requires supporting regeneration in town centres – but the spatial strategy directs major growth away from them SP1 lists regeneration, particularly within town centres, as a core component of sustainable development. Yet the spatial strategy (SP3) directs large-scale growth to Pill/E-in-Gordano, bypassing regeneration opportunities in Weston-super-Mare, Clevedon, Nailsea, and Portishead – despite the Plan identifying town-centre decline as a priority issue. This is inconsistent with both SP1 and the Plan's strategic priorities, meaning the policy is not internally coherent. 4. SP1 requires protection of natural assets and biodiversity—yet proposed allocations conflict with sensitive ecological designations. The policy states that sustainable development must "protect valued natural	To make Policy SP1 and its application within the Local Plan legally compliant and sound, the following modifications are required: 1. Align SP1 with a revised spatial strategy that does not increase car dependency SP1 requires development to prioritise walking, cycling, and public transport. However, the current spatial strategy places major growth in locations – such as Pill/Easton-in-Gordano – where these outcomes cannot be delivered. Required modifications: • Amend the spatial strategy (SP3) to direct a greater proportion of growth to locations with proven public transport accessibility, local employment, and walkable services (primarily the towns and transport hubs). • Reduce or remove large allocations in Pill/E-in-Gordano unless evidence shows they can meet SP1's low-carbon, low-car-dependency requirements. • Integrate updated, published transport modelling into SP1 to demonstrate how the policy will be operationalised. 2. Demonstrate that the "brownfield-first" principle in SP1 has been fully applied before releasing Green Belt land SP1 requires the efficient use of land and prioritisation of previously developed land, yet the Plan allocates substantial Green Belt without proving alternatives have been exhausted. Required modifications: • Publish evidence showing that all reasonable brownfield and higher-density opportunities have been fully explored. • Update the Sustainability Appraisal to compare brownfield options with Green Belt releases. • Reduce or remove Green Belt allocations in Pill/E-in-Gordano unless exceptional circumstances can be demonstrated in accordance with SP1 and NPPF 2024. 3. Secure the infrastructure required to achieve liveable, accessible, healthy neighbourhoods SP1 requires new development to support health, wellbeing, and liveable neighbourhoods. However, infrastructure dependencies (schools, healthcare, active travel routes, community facilities) for major growth areas are not yet funded or guaranteed. Required modifications: • Amend SP1 or related policies to include clear commitments that essential transport, education, health and community infrastructure must be in place before occupation. • Add phasing and delivery mechanisms to ensure infrastructure keeps pace with development. • Reassess allocations where infrastructure delivery cannot be guaranteed. 4. Incorporate detailed ecological constraints and mitigation requirements into SP1. SP1 states that sustainable development must protect natural assets and biodiversity, but current allocations do not demonstrate deliverability of mitigation – especially on sites near the SAC and SSSI. Required modifications: • Add references in SP1 requiring site-specific ecological assessments and deliverable mitigation strategies for all allocations within environmentally sensitive zones. • Include a requirement for demonstrable biodiversity net gain with identified delivery mechanisms. • Reconsider allocations where ecological mitigation is not feasible. 5. Strengthen SP1 to ensure cumulative environmental, transport, and flood impacts are fully assessed SP1 requires avoidance of cumulative environmental harm, yet the Plan lacks full cumulative assessments. Required modifications: • Require cumulative impact assessments on transport (including M5 Junction 19), ecology, air quality, and flood risk to inform allocation decisions. • Modify or remove allocations where cumulative impacts cannot be satisfactorily mitigated. 6. Strengthen the linkage between SP1 and town centre regeneration SP1 states that sustainable development must support regeneration, but this is not reflected in the distribution of growth. Required modifications: • Update SP1 to emphasise that housing growth should support regeneration in Weston-super-Mare, Clevedon, Nailsea, and Portishead. • Reallocate a greater proportion of growth to town centres and brownfield regeneration areas in line with this objective.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								and historic assets and support green infrastructure and biodiversity." However, several of the development sites around Pill/E-in-Gordano fall within or adjacent to: • North Somerset & Mendip Bats SAC consultation zones; • Severn Estuary SSSI influence areas; • important wildlife corridors identified in the ecological evidence base. The Plan does not include the detailed mitigation strategies, funding mechanisms, or environmental assessments needed to show that these protections are deliverable. This makes SP1 ineffective and inconsistent with national policy. 5. SP1 requires avoidance of cumulative environmental harms – yet cumulative impacts are not fully assessed. SP1 states that development must avoid environmental impacts "on their own or cumulatively." However: • Cumulative transport impacts at M5 Junction 19 have not been fully modelled. • Cumulative ecological impacts across multiple adjacent sites are not addressed. • Cumulative flood risk (including interaction with surface water, Markham Brook and tidal flooding) is insufficiently assessed. Without this evidence, SP1 cannot be effectively implemented. Summary Although SP1 is sound in principle, the Plan is not sound because the spatial strategy does not apply the policy's requirements. Major inconsistencies exist in relation to transport sustainability, brownfield-first development, regeneration, biodiversity protection, and cumulative environmental impacts. Until the site allocations and supporting evidence are revised to align with SP1, this part of the Plan cannot be considered justified, effective, or consistent with national policy.	Summary Modification To be sound, SP1 must be applied consistently across the Plan. This requires: • Redirecting growth to sustainable locations. • Reducing reliance on Green Belt sites. • Ensuring infrastructure is secured before development proceeds. • Incorporating detailed ecological and cumulative impact assessments. • Strengthening regeneration-first principles. Without these modifications, SP1 cannot be considered justified, effective, or consistent with national policy.		
58516481	Mr Thomas Catling (Woodstock Homes, Knightcott Road, Banwell)		Woodstock Homes (Construction) Ltd	Unsure	• Justified • Effective • Consistent with national policy	Unsure	Unsure	Woodstock Homes control the 22 acre site, Land to the South of Knightcott Road, Banwell, a site which has been promoted through the earlier stages of the Local Plan process and recently achieved a resolution to grant at the October Planning and Regulatory Committee for outline planning on 4.6 acres of the site for up to 27 dwellings (24/P/0967/OUT). Woodstock are in control of the remaining 17 acres, of which was part of a previous application for 95 dwellings (23/P/2303/OUT) was made but was later withdrawn. This representation submissions aims to provide commentary on the emerging Local Plan, with focus on the rural settlements, specifically Banwell. Banwell is identified in the adopted Core Strategy as a service village (Policy CS32), containing a number of local services along with public transport links. By way of the inclusion of Banwell within Schedule 5 of the Pre-Submission Plan, as a settlement with a defined boundary, it is clear that the council acknowledges the village within the settlement hierarchy. The Vision for the North Somerset Local Plan 2041 makes clear that there is an aspiration to encourage development in highly sustainable, accessible and attractive places. SP6: Villages and rural areas, reinforces this aspiration with the importance of accessible locations with good walking, cycling and public transport connections. SP1: Sustainable development illustrates a clear focus for development to come from the most sustainable areas however, this is contradicted by LP7 which prevents growth directly in Banwell. 										just an overarching statement that merely outlines issues already dealt with by other more specific policies located elsewhere in the Plan. It would be more usual for this kind of overarching policy to include reference to how planning applications would be determined, including a reference to the policies in the Plan and other material considerations. As currently written this policy is not a policy and as such should be deleted, and it is unclear how a developer would show compliance with it. However, HBF recognise that an overarching policy on sustainable development could usefully set out that applications should accord with the policies in the plan, and that where applications do not comply with the plan applications could be refused unless other material considerations indicate otherwise. HBF would be supportive of such a policy.	
62865825	G Davies			Yes		Yes	Yes				
51323777	Cllr Thomas Daw		North Somerset Council	Yes		Yes	Yes		While Policy SP1 sets out a commitment to sustainable development, the current proposals in the Local Plan risk encouraging urban sprawl rather than genuinely sustainable growth. By allocating large areas of greenfield land at the edges of towns and villages, the plan undermines its own sustainability objectives. This approach disperses housing into peripheral locations, increasing car dependency, stretching infrastructure, and eroding the distinct character of rural communities. True sustainable development should prioritize compact growth, brownfield regeneration, and investment in existing urban centres where services, transport, and employment opportunities already exist. Without a stronger focus on these principles, Policy SP1 risks delivering unsustainable patterns of development that contradict the council's stated climate and placemaking priorities.		
31088129	Bloor Homes South West	Turley		No	• Positively prepared • Justified • Effective • Consistent with national policy		No	Policy SP1: Sustainable Development The starting point for defining 'sustainable development' is Paragraph 8 of the NPPF. However, the draft Policy does not make reference to the NPPF, other than in the supporting text. For the clarity of interpretation, it is suggested that specific reference is made to the NPPF (and a caveat included that the latest NPPF/government definition of Sustainable Development should be used at the time of decision making). We suggest that this policy is shortened, to focus on the aspiration to achieve Sustainable Development within North Somerset, and what this means locally. Supporting text states that, the draft policy sets an 'Overall Framework' for other policies in the plan, the principles are then articulated in more detail in the other strategic policies. As specific requirements are set out in other draft policies, it is unclear how this policy will be implemented and subsequently monitored. As such, it is not clear how this policy will be truly effective (in contradiction with Paragraph 36 of the NPPF). Further, many of the bullet points would not be applicable to some types of development. It would be more effective for the policy to contain a more limited number of criteria. Some of the points also have the potential to be overly onerous and restrictive if interpreted literally, it offers no caveats or flexibility to allow for good planning judgement to be applied. This contrasts with Paragraph 9 of the NPPF which states the objectives of Sustainable Development are not criteria against which every decision can or should be judged. Planning policies and decisions should play an active role in guiding development towards sustainable solutions, but in doing so should take local circumstances into account, to reflect the character, needs and opportunities of each area. Based on the above, it is recommended this Policy is amended.	The draft Policy does not make reference to the NPPF, other than in the supporting text. For the clarity of interpretation, it is suggested that specific reference is made to the NPPF (and a caveat included that the latest NPPF/government definition of Sustainable Development should be used at the time of decision making). We suggest that this policy is shortened, to focus on the aspiration to achieve Sustainable Development within North Somerset, and what this means locally. 	Farm)				• prepared • Justified • Effective • Consistent with national policy			particular: They fail to support the delivery of a variety and choice of housing, including specialist and affordable housing, to meet local needs. They do not plan to meet local needs that are identified through the standard method, let alone the need for affordable housing that even the Council's own assessment demonstrates to be acute and overwhelming. Most importantly, the Plan fails to demonstrate the necessary exceptional circumstances to justify taking an alternative approach. These failures mean that the Plan should be aiming to meet the local housing need as derived from the standard method, and given that it does not plan to do so, it is fundamentally unsound on this basis. Since the Plan will fail to uphold the spatial strategy through both the quantum and distribution of housing growth that it is proposing, it will fail to prioritise walking and cycling, maximise the use of effective public transport, and encourage the creation of liveable neighbourhoods. For this reason it will also fail to make a positive contribution to addressing and demonstrating resilience to the impact of climate change and delivering the net zero target. The justification for Policy SP1 states as follows: The presumption in favour of sustainable development is at the heart of the NPPF and relates to both plan making and decision-taking. The planning system must contribute to the achievement of sustainable development. This Local Plan acknowledges this important national policy requirement. … The policy reflects the plan's vision and strategic priorities and sets out the overall framework For the other policies in the plan, with the detailed requirements contained elsewhere. It sets out at a high level what sustainable development means in North Somerset. These principles are then articulated in more detail in the other strategic policies, with further guidance set out in the locational and detailed development policies.3 Since the Plan will fail to achieve the fundamental and overarching requirement to deliver sustainable development, and therefore to comply with the strategic policy that underpins all of its provisions, it is unsound when assessed against each and every soundness test.	homes (1,347 per annum) for the period 2024-2039; • Add a minimum additional requirement of 1,347 homes to allow for the Plan to look ahead at least 15 years from the date of adoption; • Remove Wolvershill as a separate location in the schedule incorporated in the Policy, and which is inconsistent with other strategic policies, and apportion its growth to the Villages. • Review the apportionment of growth between the towns and villages, and revise the distribution to a ratio of 80:20 to deliver the intentions of the spatial strategy. • Increase the distribution to Nailsea, as the least constrained town apart from Weston-super-Mare, to provide homes for needs arising during the current plan post-2026 (current allocations are largely carried forward from the Site Allocations Plan and therefore intended to meet needs in the period up to 2026). • Incorporate a delivery trajectory to identify a supply of specific, deliverable sites for years one to five of the plan period.		
57020033	Stuart Hunt			Yes		Yes	Yes				
32267297	Paul Kent			No	• Positively prepared	Unsure	Unsure	1 There has been a lack of communication with the many community groups. 2 There has been poor or rushed consultation allowing little time for face to face discussions. 3 There has been few tours/visits by North Somerset staff to listen to the experience of people who live here. 4 There has been little apparent learning from the recent Ham Green housing development which was controlled by property developers who showed little concern of residents and made no analysis of the impact housing has caused.	1 Involve community members/groups and listen to what people say they need - e.g. positioning of social housing, improved cycling and walkway routes, major traffic control measures and careful listening to local ecology, landscape, woodland and recreational/ sporting communities. 2 The recently completed Neighbourhood Plan chaired by Prof Murray Stewart with members of the Parish Councils of Pill, Easton in Gordano and Abbots Leigh contains a huge range of positive suggestions which need to be clearly shared. 3 Your short guide to the Local Plan (2041) is exceptionally helpful. Put alongside the Neighbourhood Plan there could be a very positive response to the North Somerset Local Plan but this can only be achieved by regular honest discussions between us all.		
58594049	Woodstock Homes (Land west of Butts Batch, Wrington)	Oliver Ansell	Woodstock Homes	No	• Justified • Effective • Consistent with national policy	Unsure	Unsure	Please see representations document The Vision for the North Somerset Local Plan 2041 outlines a broad ambition to deliver sustainable growth, direct development to appropriate locations, and meet the needs of existing and future communities. However, when read alongside the Strategic Policies (SP1 -SP10), the Sustainability Appraisal (SA) findings, and the settlement hierarchy implied through Schedule 5, it becomes clear that the approach taken in relation to sustainable rural settlements, particularly Wrington, does not reflect or support the stated vision. The Strategic Priorities reinforce this misalignment. Strategic Priority SP1 aims to deliver sustainable development by directing growth to the "most sustainable locations," yet the Plan contradicts this by imposing a blanket prevention of growth in Wrington under LP7 and SP6, despite the village's clear sustainability credentials. The complete omission of growth in Wrington is therefore inconsistent with the Council's own Strategic Priorities.	The complete omission of growth in Wrington is inconsistent with the Council's own Strategic Priorities.		829 A5 OA 111225 Representations to Reg 19 Local Plan.pdf North Somerset Local Plan Pre-submission Plan - Representation form Part B.pdf
43203041	National Highways		National Highways							We welcome the strategic policy objectives to maximise the use of effective public transport and encourage the creation of liveable neighbourhoods. DfT Circular 01/ 2022 (paragraph 12) advises that new development should facilitate a reduction in the need to travel by private car and should be focussed on locations that are or	NSC Reg19 Local Plan Consultation.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										can be made sustainable. It goes on to state that “Developments in the right place and served by the right sustainable infrastructure delivered alongside or ahead of occupancy must be a key consideration when planning for growth in all local authority areas”. We therefore welcome the policy objectives to support job creation at accessible locations and enable the delivery of supporting infrastructure.	
58398945	Jacinta Magee			Yes		Unsure	Unsure			I believe this plan is sound because it has removed Wrington sites from potential development. No sites in Wrington are appropriate for development as (per DP8) housing should be where it is needed i.e. close to public transport, services and jobs - not in a small village with no services and extremely limited public transport. In addition Wrington regularly floods and the flooding has got worse since additional houses were built on Coxs Green - Tumbling Weir, which is next to this development, flooded three times last winter, making the road impassable for days and damaging the road and bridge, when I have never known it to flood in the previous 10 years. Beam Bridge - slightly downstream from the development - also flooded more than 5 times and double the amount it is has flooded in previous years, making that route out of the village unusable for days at a time.	
18469953	Susie Marwood			Yes		Yes	Yes			Regarding my local area (Wrington), I agree that the area is not suitable for development based on the sustainability criteria set out, as there is no walking/ cycling/effective public transport in the neighbourhood. No ability to commute using public transport in working times to major centres without driving and clogging up trunk neighbourhoods such as Congresbury and Cleeve. It is already dangerous walking within the village boundary due to increased traffic - many roads in the village do not have pavements. Cars are parked everywhere across junctions etc. following recent over-development, resulting in congestion and reversing vehicles (endangering pedestrians further). Any proposals put forward for the plan originally from landowners are green fields outside the village boundary. These, and any new development proposals in the pipeworks, should be rejected/not included in the plan because locations are not "well related to existing settlements in order to maximise opportunities for workers and visitors to access the site by active travel or public transport." Any development around Wrington could only result in increased car use, increased pollution, reduced safety for pedestrians for the reasons set out above.	
39179649	Adrian Mealing			No	• Justified • Effective	Yes	Yes	I consider the Local Plan unsound in respect of Policy SP1 because it is not justified and not effective. SP1 sets the overarching requirement for sustainable development, but the allocations made for Congresbury (183 dwellings across three sites) cannot meet the principles set out in this policy. The Council provides no evidence that the village has the infrastructure capacity required to deliver sustainable development as defined by SP1, including: No assessment of primary school capacity or plans for expansion. No evidence of available GP capacity or proposals for new health provision. No funded or designed active travel connections, despite SP1’s emphasis on walking and cycling. No planned improvements to the A370 congestion corridor, which already suffers from severe peak-time delays and safety issues. No demonstration of how the plan will protect the environmental and heritage assets around Congresbury,	To make SP1 sound, the plan must be supported by a clear, evidence-based Infrastructure Delivery Plan identifying specific and funded infrastructure for Congresbury, including: primary school capacity expansion, GP/healthcare capacity improvements, deliverable active travel schemes, A370 corridor upgrades, ecological and dark-corridor protection measures. Without this, the development directed to Congresbury cannot be considered sustainable under SP1.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								including the North Somerset & Mendip Bats SAC and the landscape setting of Cadbury Hill Fort. Because the evidence base does not demonstrate that development in Congresbury can be delivered sustainably, the policy cannot be considered effective or justified, failing the NPPF soundness requirements.			
30909409	B Mill			Yes		Yes	Yes			The Council has had a very large housing target imposed upon it by the Government. This has led to it having to make some very difficult decisions about where to allow sustainable development in the limited land available which isn't impacted by flooding restraints or the Mendips (as an area of outstanding natural beauty). As a resident of Wrington I agree with, and support, the Council's rejection of each of the five sites in Wrington which were submitted for inclusion in the Local Plan. Each of them were rigorously assessed against multiple sustainability criteria and each were ultimately not judged to be sustainable/suitable to be taken forward in the Local Plan. This reflects the fact that Wrington is not a sustainable location for housing development, judged against each of the relevant criteria. I agree with the Council's analysis that housing development in Wrington is not sustainable, and there would likely be a significant negative effect on the village, due to the fact that (1) there is no access to jobs as the village is not within 5 of WSM, Centre of Bristol, Clevedon, Nailsea or Portishead; (2) in terms of economic wellbeing, the village lacks reasonable or good access to jobs, training and education; (3) two of the sites put forward in the Local Plan would have resulted in significant harm to heritage assets with little chance of mitigation (Butts Batch and the Alburys); (4) some of the sites put forward in the Local Plan would have resulted in significant harm to land classed as greenfield and with an agricultural value of Grade 1-2; (5) some of the sites would have resulted in significant harm to landscape and they were recorded as having medium to high or high landscape sensitivity. I particularly support the decision of the Council not to put forward the Alburys (HE208052), West of Butts Batch (HE20198) and Cox's Green (HE203004) due to the above factors and in addition, in the case of the Alburys, the significant negative impact on biodiversity that development of the site would have, in light of it being within the North Somerset and Mendip Bats SAC Greater Horseshoe Bat Juvenile Sustenance Zone / consultation zone A for the SAC.	
58582945	Nailsea Action Group		Nailsea Action Group	No	• Justified • Effective	Unsure	Unsure	Nailsea Action Group is concerned that not enough emphasis has been placed on matters that are of importance to the daily lives of residents of North Somerset. We note that issues like health provision, education, town structure and others are mentioned only very minimally, yet are presented as essential for sustainable development. Funding mechanisms for such infrastructure are mentioned in vague terms, or in some cases, not at all. No mention is made of specific plans, with achievable timescales. This is definitely not sound practice. Nailsea Action Group considers the Local Plan is not effective because it depends on major infrastructure projects that are uncertain, unfunded, and untested. For Nailsea and Backwell, the proposed "strategic rail crossing" and three new primary schools are presented as essential to make development acceptable, yet there is no binding commitment, timetable, or funding mechanism to ensure they are delivered. Inspectors have previously found plans unsound where critical infrastructure was not secured, as in the Tandridge Local Plan (Inspector's letter, 2023), where refusal of Housing Infrastructure Fund support rendered the plan undeliverable. Without secured infrastructure, the plan cannot be delivered as intended and therefore fails the	If the plans for Nailsea are to succeed, they need to be more exact, properly costed including realistic and achievable infrastructure proposals. It is all too vague and therefore likely not to come to fruition.

								effectiveness test.			
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	• Positively prepared • Justified • Consistent with national policy	Yes	No	For the purposes of sustainable development, a scheme should align with the Local Plan's Vision (which should be amended). In reviewing the Local Plan as whole, it is appropriate for bullet 2 of the policy to also reference the proximity of public transport facilities as a means of encouraging new development – including a mixture of higher density housing where readily reachable by foot and other sustainable modes. A new bullet should be provided stating that development should reasonably related to the built form of a village or town. This would support the consideration of suitably located new development that may be in or adjoining urban areas or rural locations. Inclusion would support the delivery of new development responding to the revised Vision and Objectives of the draft Local Plan.	The Policy should be amended to read: - Prioritise walking and cycling, maximise the use of effective public transport and encourage the creation of liveable neighbourhoods through the location of development within or close to urban or built up areas.		
63026465	South West Housing Association Planning Consortium		South West Housing Association Planning Consortium							The SWHAPC supports draft Policy SP1: Sustainable development set out on page 16 which specifies that new development should "support the delivery of a variety and choice of housing, including specialist and affordable housing to meet local needs".	1118-35.M5 Local Plan 2041 Pre-submission plan (Reg 19).pdf
62776065	Paul Segar			Yes		Yes	Yes			I support the sustainable development points above, particularly not permitting new developments where walking and cycling are not feasible, and car use is inevitable to access any facilities, such as Wrington where I live. Developers should not be permitted to develop agricultural land, and brownfield sites used instead, together with completion the sites for which developers already have permissions	
30975873	Chris Segar			Yes		Yes	Yes			I agree to the policy on sustainable development. Villages such as where I live in Wrington are totally unsuitable for housing estate development because there is little employment and almost no public transport to stations and bus stops for commuters to Weston or Bristol. Local lanes are narrow and prone to flooding, therefore unsuitable for the extra road traffic and, particularly HGVs that would be engendered. The village school is already at capacity and we have no doctors surgery, so travel by car to get further afield is essential. Walking and cycling are not an option.	
50493793	M Slade			No	• Justified	Unsure	No	Climate change is now being challenged in scientific circles as an exaggeration and alarmism completely over emphasised for political and financial gain. The climate always changes and goes through cycles depending on many complex factors that are not fully understood including the affect of the solar cycles amongst many. Yes there appears to be an element of anthropogenic carbon dioxide release in the atmosphere but this is not the major driver of climate change. It is important that we consider sustainable approaches to urban development and advancement of society but this needs to be recognised rather than blindly following crass headlines perpetrated by interested parties for gain. Net Zero is far too ambitious costing billions of pounds while councils and its residents go without with solutions that are just not sound. Wind energy is not net zero in the life time of the turbines and creates toxic waste that cannot be removed and solar in the UK is ineffective in the darker and short days of the year and also creates toxic waste that cannot me managed. NSC need to start to challenge these assumptions and make better more sound decisions in this regard.	If you must use solar for energy security and to replace oil and gas, put solar panels on building roofs and other abundant surfaces rather than prime agriculture and green belt land that threaten food security.		
31062913	R Storrar		KWAW	Yes		Yes	Yes			All ten reasons listed for making developments sustainable are completely accurate and should be the over-riding guide to all future developments. There is no excuse for any developers to try and challenge these principles. To do so would show a lack of moral judgement, both for the planet (by ignoring the effects of climate change) and for the mental wellbeing of future residents, who would be stuck in isolated and barren housing estates, miles from any employment and amenities, reliant on their cars to get to even a small shop or a doctor appointment. It is time to realise building estates around isolated villages (an example being Wrington) is unsustainable for all the

31144865	Autograph Homes	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes		Our client supports the general themes cited within policy SP2 but has significant concerns that certain expectations – such as the achieving of carbon net zero in all new buildings – are realistic or reasonable in the context of an electrical grid still in the process of decarbonisation. While the policy's objectives are laudable, the measures and standards set out must be introduced in a proportionate manner to ensure the pursuit of the highest standards does not unduly delay or disrupt the delivery of the housing and other growth the area requires. This policy should therefore be modified to reflect the reality and establish suitable parameters so that development can be assessed at a reasonable point in time to ensure the promotion of climate change resilience and minimising adverse environmental impacts of development.		R002v4 NSLP Reg19 Reps AH Dec25.pdf
63186689	Vistry Group	Boyer	Vistry Group	Yes					Whilst Vistry support the objectives outlined in draft Policy SP2, Vistry maintain that the distribution of development across the district does not reduce greenhouse gas emissions and amongst others and will not assist in delivering carbon neutrality to assist the delivery of this strategic policy. One of the criteria includes minimising energy use and a commitment to deliver a net zero energy standard in new buildings. However, NSC's evidence base refers to guidance from a study prepared to support planning policies specific to Cornwall Council. To find Policy SP2 sound, Vistry considers that the policy needs to be based on a proportionate evidence base that assesses the delivery of net zero operational energy use for residential development that is specific for North Somerset district.		North Somerset Local Plan Pre-submission Plan - Representation form Policy LP5.pdf
63191617	Various Taylor Wimpey Crest Nicholson Barratt Redrow Vistry Group	Nick Matthews (Savills)		No	• Effective • Consistent with national policy	Yes	Yes		These representations have been prepared and submitted by Savills on behalf of various clients including Taylor Wimpey, Crest Nicholson, Barratt Redrow, and Vistry Group. 2. This draft policy requires development proposals to demonstrate how they will address climate change mitigation and adaptation, encourage decarbonisation of energy and transport, and support the delivery of a carbon neutral North Somerset by 2030. Development proposals will be supported if they are in line with the ten bullet points listed. 3. Whilst we support the general intent of this policy and recognise the importance of considering climate change in the decision-making process, its content is not naturally covered in a strategic policy and much of it is later duplicated within the development management policies. 4. Paragraph 21 of the Framework, explains that strategic policies "should be limited to those necessary to address the strategic priorities of the area … to provide a clear starting point for any non-strategic policies that are needed. Strategic policies should not extend to detailed matters that are more appropriately dealt with through … other non-strategic policies". Further, paragraph 16(f) of the Framework requires plans to avoid "unnecessary duplication of policies that apply to a particular area". 5. As we have explained in our representation to Policy SP1, we understand why, for a local authority which has declared a climate emergency, there is a desire to put a climate change policy front and centre in the Local Plan. However, the policy does not sit comfortably in the strategic policies section of the plan. Much of what it is trying to achieve can and indeed is better covered by detailed development management policies. 6. The danger of having duplicate policies which cover the same matters is that they are inconsistent and set differing requirements. For example, Policy SP2 states development proposals will be supported where they deliver a net zero energy standard, while Policy DP6 requires all new buildings to achieve net zero operational energy for both regulated and unregulated energy immediately, progressing to full net zero embodied carbon by 2030. This inconsistency in approach creates ambiguity for both developers and decision makers. 7. In light of the above, and in order meet the requirements of the Framework we consider this policy would be better suited to supporting text, albeit with amendments to avoid any inconsistencies		
29403105	Diverse Partnerships Yatton Ltd	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	Our client supports the themes set out within policy SP2. It is however considered that some expectations, such as achieving carbon net zero in all new buildings, are not realistic or reasonable in the context of an electrical grid still in the process of decarbonization and the Government's move to 'zero carbon ready' homes under the Future Homes Standard. While the policy's objectives are laudable, the measures and standards set out must be introduced in a proportionate manner to ensure the pursuit of the highest standards does not unduly delay or disrupt the delivery of the housing and other growth the area requires. The Council's own viability assessment identifies this cost as a 4-9% build cost increase, that could otherwise help secure other infrastructure objectives under the broader viability allowance.	This policy should therefore be modified to reflect the reality and establish suitable parameters so that development can be assessed at a reasonable point in time to ensure the promotion of climate change resilience and minimising adverse environmental impacts of development. Without such changes the policy is not considered to be positively prepared, justified, effective, or consistent with national policy. 								This policy should therefore be modified to reflect the reality and establish suitable parameters so that development can be assessed at a reasonable point in time to ensure the promotion of climate change resilience and minimising adverse environmental impacts of development. Without such changes the policy is not considered to be positively prepared, justified, effective, or consistent with national policy.			
51524513	Bellway Homes Ltd	tor&co	Bellway Homes Ltd	No	• Justified • Effective • Consistent with national policy			Draft Policy SP2 (Climate Change) lists overarching principles that development should address regarding the issue of climate change – including those related to resource use, energy generation, transport and green infrastructure. Bellway recognise the importance of this issue and the intent of this policy to establish the importance of action on behalf of the Council – including its own adoption of a climate emergency. However, similar to our comments on Draft Policy SP1 (Sustainable Development), a specific strategic policy addressing it is considered unnecessary, in accordance with Paragraph 21 and 16(f) of the NPPF. Bellway consider policies related to climate change are better placed in detailed development management policies. Indeed, this is already the case in other policies – including Policy DP5 (Climate change adaptation and resilience) and Policy DP6 (Net zero construction). Please see our specific comments on these policies below. However, should the policy be retained, it is inappropriate to require every development proposal to meet every criterion, simply because some of the criteria just won't apply, and some will be superseded in time by other national policy and regulations. For example, it would be inappropriate for the development of a greenfield site (which meets the definition of sustainable development) to demonstrate how it can "encourage the reuse of existing buildings and structures". Hence the policy should be amended to acknowledge this.	We suggest the best course of action is to emphasise this in supporting text or the Vision section – deleting this policy. Should the policy be retained, modification is required to ensure the policy is effective. We suggest the following amendments: "In order to reduce the overall environmental impact of development, where relevant, proposals will be expected to demonstrate how they: […]" and then, "Minimise energy use and deliver a low carbon energy standard in new buildings." (See attached document for specific changes)		20251212 504317 JE - North Somerset Reg 19 (Reps obo Bellway Homes).pdf
63114593	Bloor Homes (North of Pound Lane Nailsea site)	Turley		No	• Positively prepared • Justified • Effective • Consistent with national policy		No	Policy SP2: Climate change Strategic Policy SP2 sets out the overarching principles for how development should address both climate change mitigation and adaptation, this includes a number of key requirements around resource use, net zero, energy generation, climate resilience, transport, and green infrastructure. The updated Regulation 19 consultation makes no substantial changes to this policy. While the objective of the policy is welcomed there are elements which need to be reviewed to ensure alignment with subsequent sustainability policies. The UK Climate Projections (UKCP18) set out the likely effects of climate change in the UK, these include increasing annual temperatures, increasing winter rainfall and decreasing summer rainfall as a result of increasing global temperatures, driven by GHG emissions. How development contributes to tackling climate change mitigation and adaptation is therefore a key consideration. We fully support the inclusion of the climate 15 change strategic policy and setting out the overarching aims for development in North Somerset. It is noted that elements of the development expectations include the phrases 'minimise' and 'maximise'. By stating 'minimising' or maximising' the policy sets an open-ended requirement which itself is not fully tested as part of the viability considerations for subsequent Policies including Policy DP5, and Policy DP6. We have recent examples of Local Authorities using the overarching text to maximise or minimise specific requirements for new development which are outside of the intent of the Plan policies and were not considered as part of the preparation of the Plan. There is therefore the potential for interpretation of policies leading to unintended consequences of this wording which could supersede requirements set out in the subsequent Development Management Policies. Given the accompanying evidence base and viability assessment considers a specific set of performance targets and requirements elements it is recommended that the wording is updated as below to be more reflective of the intent of the policy in setting out the overarching strategy of the policy. • (delete "Maximise") (add "Reduce") water (delete "re-")use and (add "prioritise") the protection of water resources; • (delete "Minimise") (add" Reduce") energy use and deliver (delete "a net zero energy standard in new buildings"); (add "Net Zero Ready buildings"); • (delete "Maximise") Incorporate the generation of energy from renewable and low carbon sources of energy;	Re Policy SP2: (delete "Maximise") (add "Reduce") water (delete "re-")use and (add "prioritise") the protection of water resources; • (delete "Minimise") (add" Reduce") energy use and deliver (delete "a net zero energy standard in new buildings"); (add "Net Zero Ready buildings"); • (delete "Maximise") Incorporate the generation of energy from renewable and low carbon sources of energy;		BLOA3068 - Nailsea - North Somerset Local Plan Regulation 19 Consultation - Dec 25.pdf

21472417	Mead Realisations Ltd	Oneleven Property		No	• Positively prepared • Justified • Effective • Consistent with national policy			Minor wording changes have been made to this policy when compared to the Autum 2023 PsP version. Through this policy the Council seeks to deliver carbon neutrality in North Somerset by 2030. However, this approach is not consistent with the Government’s national approach and is not considered to be realistic. It will have a detrimental effect on the delivery of new development in North Somerset and the consequences of this, and alternatives, have not been properly explored. The second paragraph of policy SP2 states that ‘In order to reduce the overall environmental impact of development, proposals will be expected to demonstrate…” It is not clear whether this policy is seeking to consider the overall environmental impact of development in North Somerset or the impact on a case-by-case basis or some other variable. This should be made clear within the policy to avoid ambiguity. The first bullet requires greenhouse gas emissions to be reduced but the baseline from which reductions should be achieved needs to be clearly explained. The 4th bullet and 5th bullet require water reuse to be maximised and energy used to be minimised, but it is not clear how this will be measured for development management purposes. This needs to be clearly set out in the Policy with an explanation of how this policy will be considered against other sustainable development objectives. The last bullet of policy SP2 seeks to encourage the reuse of existing buildings and structures. However, the practicalities of reuse of existing buildings and previously developed land needs to be properly considered so that realistic expectations and delivery rates can be included in the plan. This objective is consistent with the general approach included in the adopted Core Strategy although the Council's evidence does not provide any indication of whether these policies have been successful or; if they have failed, why that was. This issue needs to be carefully justified to ensure that the new plan does not over rely on this objective to meet housing and economic delivery rates.			Reg 19 Final Representations Mead Realisations 12.12.25 including appendices.pdf
3106433	Yatton Parish Council		Yatton Parish Council					1. We are pleased to see that Yatton Station is intended to become a transport hub. Part of this should be the establishment of good public transport links with a frequent bus service (i.e. at least 2 buses per hour) serving Clevedon, Weston-super-Mare and Bristol. The provision of free parking at the station would make a significant positive difference to its usefulness as a hub and also to the lives of Yatton residents living near the station. 2. Yatton Parish Council agrees that land south of Nailsea and west of Backwell should be designated as Green Belt. 3. The existing Strategic Gap between Yatton and Congresbury should be retained and a new Strategic Gap, between Yatton and			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 									Kenn, should be designated. 4. Land off The Batch should be used to expand the doctor's surgery, not for a primary school. Policy SP2: Climate Change Yatton Parish Council recommends a number of green measures when they respond to planning applications. It would be good to see a similar code embedded in North Somerset Council's planning process, but in the form of conditions that must be met.		
30301601	Ainscough Strategic Land	Chris Price	Ainscough Strategic Land	No	• Consistent with national policy			Policy SP2 sets out the overarching principles for how development should address both climate change mitigation and adaptation, including a number of key requirements around resource use, net zero, energy generation, climate resilience, transport and green infrastructure. ASL fully supports the inclusion of a strategic climate change policy and setting out the overarching aims for development in North Somerset. ASL notes, however, that elements of the development expectations in Policy SP2 include the phrases 'minimise' and 'maximise'. This sets an open-ended requirement which itself is not fully tested as part of the policy viability, and which could have unintended consequences and supersede requirements set out in subsequent development management policies. Specific requirements, which could include minimising or maximising design elements, can be included in development management policies where they have been appropriately tested. Turley's Sustainability Team have prepared a note assessing this Policy further, along with Policy DP6 (see Appendix 2) and on this basis ASL recommends that the wording of Policy SP2 is updated to ensure it aligns with national guidance on setting local energy efficiency standards and is reflective of the intent of the policy	Proposed amendments to the policy wording are as follows: • "Maximise Reduce water use and prioritise the protection of water resources; • Minimise Reduce energy use and deliver a net zero energy standard in new buildings Net Zero Ready buildings; • Maximise Incorporate the generation of energy from renewable and low carbon sources of energy" (see attached for marked up copy where strikethrough shows our deletion, bold text shows our addition).		61683 - NSC Reg 19 Representations December 2025 2-12-25.pdf
939361	R Burrows	R Burrows	-	No	• Positively prepared • Justified • Effective	Unsure	Unsure	There are several inherent conflicts and specific policies that are argued to constrain development, particularly housing delivery. When coupled with other documents outside of the local plan, such SPDs as the proposed enlarged Bat SAC. It is questioned how NSC will deliver windfall sites & small sites at all. The financial burden is already onerous and this will add too much financial burden on small developers & self builders who should be exempt. Coupled with flood risk and the absurdity of designing to an undefended flood situation (rather than breach modelling) an almost impossible scenario where the flood defences are completely removed. To design to the absolute worse case (doomsday) scenario is unrealistic and far from pragmatic. Development Management Policies (DP), particularly those related to climate change, sustainability standards, and flood risk, make the delivery of growth procedurally and economically harder. This is highlighted by the fact that the LPA was found not to have delivered a five-year supply of housing for at least 13 years, suggesting the existing constraints are already impacting deliverability. This will exacerbate the situation & the financial burden of compliance with policies that duplicate existing primary legislation uneccessary.	Policy SP2: Suggested Rewording (Simplifying/Deferring to Regulations): "Development proposals, once approved must be constructed to building regulation standards relevant at the time of commencement"		
62850369	Maureen Butterly			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Policy SP2 sets out rigorous and appropriate requirements for mitigating and adapting to climate change, reducing emissions, prioritising sustainable travel, and delivering biodiversity net gain. However, the Plan's spatial strategy and site allocations do not demonstrate that these principles can actually be achieved. As a result, while SP2 is soundly expressed in principle, the Plan is not sound in its implementation of the policy. 1. SP2 requires reduced greenhouse gas emissions, yet large allocations increase car dependency SP2 states that development must: • prioritise active travel and effective public transport over car use, and • support the decarbonisation of transport. However, the evidence base does not show that Pill/Easton-in-Gordano can: • deliver effective public transport at the scale required; • accommodate 1,100 additional homes without significantly increasing car trips; • overcome severe constraints at M5 Junction 19, where congestion is already significant and cumulative transport modelling is incomplete. Without credible evidence of achievable modal shift, the allocation of large-scale development in this location directly conflicts with SP2 and cannot be considered effective. 2. SP2 requires resilience to climate impacts, yet several allocated sites are constrained by flood risk SP2 states that development must: • "reduce the risk of flooding now and in the future", and • consider "predicted sea level rises" and "storm and flood risks." However, several sites around Pill/E-in-Gordano lie within or adjacent to areas of known fluvial and tidal flood risk (e.g., near Markham Brook). The Plan does not demonstrate: • that the sequential test has been fully applied; • that climate change–adjusted flood modelling has been incorporated; • that mitigation is feasible without increasing flood risk elsewhere. This makes the application of SP2 not justified and not consistent with national policy. 3. SP2 requires maximising water re-use and resource efficiency, but the Plan does not evidence delivery mechanisms While SP2 expects new development to maximise water re-use and minimise resource consumption, there is no accompanying evidence showing: • how these requirements will be enforced; • what infrastructure is needed to support them; • how viability constraints on Green Belt sites will affect delivery. Where policy requirements are not backed by realistic implementation mechanisms, SP2 becomes ineffective. 4. SP2 requires renewable and low-carbon energy generation, but large edge-of-village sites do not demonstrate capacity to deliver this The Plan does not provide: • feasibility assessments of renewable energy generation on the allocated sites; • modelling of energy demand vs. achievable on-site generation; • clear commitments to decentralised energy networks. SP2 is therefore not well integrated into the site selection process.	To make Policy SP2 and its application within the Local Plan sound and legally compliant, the following modifications are required: 1. Revise the spatial strategy so that SP2's climate principles are actually deliverable SP2 requires development to reduce greenhouse gas emissions, prioritise sustainable transport, and support carbon neutrality. The current spatial strategy does not achieve this. Required modifications: • Re-distribute growth away from locations where infrastructure and settlement patterns will increase car dependency (e.g. Pill/Easton-in-Gordano). • Redirect a greater proportion of growth toward towns and transport hubs where sustainable travel and low-carbon living can realistically be achieved. • Update the Sustainability Appraisal to demonstrate that revised allocations perform better against climate objectives. 2. Publish full cumulative transport modelling as evidence that SP2's transport decarbonisation objectives can be met The Plan currently lacks essential transport evidence. Required modifications: • Undertake and publish cumulative transport modelling for M5 Junction 19 and surrounding network impacts. • Demonstrate how sustainable modal shift will be achieved at proposed development sites, with realistic modal share assumptions. • Where evidence shows transport emissions cannot be reduced, modify or remove the affected allocations. 3. Apply the sequential test robustly and remove or amend allocations that conflict with SP2's flood resilience requirements SP2 requires development to reduce flood risk and adapt to climate change. Some allocated sites lie near Markham Brook and areas within or adjacent to Flood Zone 3. Required modifications: • Publish sequential test assessments for all allocated sites affected by fluvial or tidal flood risk. • Remove or amend allocations where sequential testing identifies lower-risk options elsewhere. • Require site-specific, climate-adjusted flood modelling and mitigation measures before allocation is confirmed. 4. Strengthen SP2 with enforceable mechanisms for achieving water efficiency, energy efficiency, and carbon-neutral buildings SP2 requires net-zero energy standards and water reuse but provides no enforceable delivery tools. Required modifications: • Add specific requirements for minimum energy performance standards, water efficiency standards, and low-carbon heating.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								5. SP2 requires net biodiversity gain, but several allocated sites lie within highly sensitive ecological zones SP2 requires development to: • “deliver green infrastructure”, and • “provide a net gain in biodiversity”. However, the Pill/E-in-Gordano sites: • fall within consultation zones for the North Somerset & Mendip Bats SAC; • contain key wildlife corridors; • are adjacent to the Severn Estuary SSSI. The Plan does not show how biodiversity net gain can realistically be achieved on these constrained sites, nor does it provide detailed mitigation strategies or secured funding. This failure undermines consistency with national policy and the effectiveness of SP2. 6. SP2 requires the efficient use of existing buildings and land, yet the Plan relies heavily on Green Belt release The policy encourages: • reuse of existing buildings, and • prioritisation of brownfield land. However, the Plan allocates large amounts of Green Belt land without demonstrating that lower-carbon, lower-impact brownfield opportunities have been fully utilised. This directly conflicts with SP2’s climate and land-use hierarchy. Summary SP2 sets ambitious and appropriate climate objectives, but the Plan does not demonstrate that its spatial strategy or allocations will actually deliver them. Key climate tests – reducing transport emissions, minimising flood risk, ensuring resilience, protecting sensitive habitats, and prioritising brownfield land – are not met. For these reasons, SP2 is not sound as implemented and fails the tests of: • Justification (evidence for spatial choices is insufficient), • Effectiveness (climate outcomes are not deliverable), and • Consistency with national policy (NPPF climate and flood risk tests).	• Clarify how these standards will be enforced through development management, viability, and infrastructure planning. • Include policy wording ensuring that these requirements cannot be weakened through viability arguments. 5. Require site-specific evidence of renewable or low-carbon energy generation for major allocations SP2 calls for maximising renewable energy generation. Required modifications: • Require feasibility assessments for decentralised energy generation for all major development sites. • Identify opportunities for local heat networks or solar/renewable installations and incorporate them into policy text. • Modify or reduce site allocations where low-carbon energy delivery is not feasible. 6. Strengthen ecological protection requirements to ensure SP2’s biodiversity and green infrastructure objectives are achievable SP2 requires net biodiversity gain and protection of natural assets. Required modifications: • Publish detailed ecological assessments for sites within the SAC and SSSI consultation zones and identified wildlife corridors. • Include specific mitigation requirements, delivery responsibilities, and secure funding mechanisms. • Reduce or remove allocations where net biodiversity gain cannot be delivered or where impacts on protected species cannot be mitigated. 7. Prioritise brownfield land and reuse of existing buildings in line with SP2 and national policy The Plan currently conflicts with SP2’s requirement for efficient land use. Required modifications: • Publish clear evidence demonstrating that brownfield and regeneration opportunities have been fully maximised before Green Belt release. • Reallocate housing numbers to brownfield sites and town centre regeneration areas where this supports climate and sustainability goals. • Reduce or remove Green Belt allocations that cannot meet SP2 requirements. 8. Strengthen documentation of the Duty to Co-operate on climate, transport, and flood risk matters SP2 cannot operate effectively without cross-boundary collaboration. Required modifications: • Provide evidence of engagement with National Highways, the Environment Agency, Natural England, and neighbouring local authorities specifically on climate resilience, transport decarbonisation, and ecological protection. • Where unresolved concerns exist, revise affected allocations. Summary Modification To be sound, SP2 must be supported by: • a spatial strategy that reduces rather than increases emissions; • full transport, flood, and ecological evidence; • enforceable mechanisms for net-zero buildings and water resource efficiency; • realistic and deliverable renewable energy strategies; • genuine prioritisation of brownfield land; • revisions to allocations where climate requirements cannot be achieved. Without these modifications, SP2 fails the tests of justification, effectiveness, and consistency with national policy.		
62850529	Andy Chappel			No	• Justified • Effective • Consistent with national policy	Yes	Yes	Justification – The mechanism for achieving carbon neutrality by 2030 is not fully evidenced. Effectiveness – Monitoring and enforcement of climate measures is unclear. Consistency with national policy – See the National Planning Policy Framework (paras 152–158) which require robust climate-mitigation and adaptation mechanisms.	The following is required: Add a requirement for monitoring and enforcement of climate mitigation and adaptation commitments. Require strategic developments to submit a Carbon Reduction Implementation Plan setting out how emissions will reduce in line with the 2030 net-zero target. Include explicit wording that climate policies cannot be reduced or removed on viability grounds. Strengthen integration with nature-based solutions and the Local Nature Recovery Strategy (LNRS). Requirement for strategic sites to quantify whole-development carbon impacts.		
31037185	Nigel Cooke			Yes		Yes	Yes				
31072289	Jeanne Craske			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	Active travel will never be achieved in Nailsea and Backwell if large housing allocations go ahead as they will result in more journeys to centres of employment, which will do nothing to counteract climate change.			
9138657	Home Builders Federation		Home Builders Federation		• Justified • Effective				Policy SP2 is not considered to be sound as it is not justified and not effective. This policy fails to provide any criteria against which a development proposal could be assessed. For example, the policy seeks a reduction in greenhouse gases but doesn’t specify by how much, it seeks maximum water re-use and minimal energy use but		North Somerset 2nd Reg 19 Dec 25.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									no reference is made to any targets. As it is unclear what the Council means in terms of these maximum and minimums, and the Plan provides no policy, advice or guidance on what evidence would be required to show compliance, the policy is both unjustified and ineffective and should be deleted. HBF believe the issues flagged within this policy are already adequately addressed in other policies within the Plan, our comments on those particular matters such as energy efficiency and net zero can be found in our response to those particular policies, and as such are not repeated here. Although HBF recognise the role that house builders have to play in helping to address climate change significant work has been undertaken nationally, including through the Future Homes Hub, to establish a realistic timetable for achieving net zero. In seeking to go further and faster through Local Policies, Local Plan would create a patchwork of 360+ different policies which in fact risk undermining the delivery of this wider national policy objectives.		
62865825	G Davies			Yes		Yes	Yes				
31088129	Bloor Homes South West	Turley		No	• Positively prepared • Justified • Effective • Consistent with national policy		No	Policy SP2: Climate change Strategic Policy SP2 sets out the overarching principles for how development should address both climate change mitigation and adaptation, this includes a number of key requirements around resource use, net zero, energy generation, climate resilience, transport, and green infrastructure. The updated Regulation 19 consultation makes no substantial changes to this policy. While the objective of the policy is welcomed there are elements which need to be reviewed to ensure alignment with subsequent sustainability policies. The UK Climate Projections (UKCP18) set out the likely effects of climate change in the UK, these include increasing annual temperatures, increasing winter rainfall and decreasing summer rainfall as a result of increasing global temperatures, driven by GHG emissions. How development contributes to tackling climate change mitigation and adaptation is therefore a key consideration. We fully support the inclusion of the climate change strategic policy and setting out the overarching aims for development in North Somerset. It is noted that elements of the development expectations include the phrases 'minimise' and 'maximise'. By stating 'minimising' or 'maximising' the policy sets an open-ended requirement which itself is not fully tested as part of the viability considerations for subsequent Policies including Policy DP5, and Policy DP6. We have recent of Local Authorities using the overarching text to maximise or minimise specific requirements for new development which are outside of the intent of the Plan policies and were not considered as part of the preparation of the Plan. There is therefore the potential for interpretation of policies leading to unintended consequences of this wording which could supersede requirements set out in the subsequent Development Management Policies. Given the accompanying evidence base and viability assessment considers a specific set of performance targets and requirements elements it is recommended that the wording is updated as below to be more reflective of the intent of the policy in setting out the overarching strategy of the policy • Maximise Reduce water re-use and prioritise the protection of water resources; • Minimise Reduce energy use and deliver a net zero energy standard in new buildings; Net Zero Ready buildings; • Maximise Incorporate the generation of energy from renewable and low carbon sources of energy.	It is recommended that the wording is updated as below to be more reflective of the intent of the policy in setting out the overarching strategy of the policy • Maximise Reduce water re-use and prioritise the protection of water resources; • Minimise Reduce energy use and deliver a net zero energy standard in new buildings; Net Zero Ready buildings; • Maximise Incorporate the generation of energy from renewable and low carbon sources of energy. 63052097	Stephanie Fowler	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes		Our client supports the general themes cited within policy SP2 but has significant concerns that certain expectations – such as the achieving of carbon net zero in all new buildings – are realistic or reasonable in the context of an electrical grid still in the process of decarbonisation. While the policy's objectives are laudable, the measures and standards set out must be introduced in a proportionate manner to ensure the pursuit of the highest standards does not unduly delay or disrupt the delivery of the housing and other growth the area requires. This policy should therefore be modified to reflect the reality and establish suitable parameters so that development can be assessed at a reasonable point in time to ensure the promotion of climate change resilience and minimising adverse environmental impacts of development.		R001v3_NSLP_Reg19_Fowler.Dec25.pdf
63006177	Mac Mic Strategic Land (Land north of Banwell Road)	Planning Potential	Mac Mic Strategic Land	No	• Effective • Consistent with national policy	No	Yes		The current wording of the policy states that development proposals must demonstrate how they will address the mitigation of climate change and adaptation to its effects, encourage the decarbonisation of energy and transport, and support the delivery of carbon neutrality in North Somerset by 2030. In order to reduce the overall environmental impact of development, proposals will be expected to demonstrate how they (inter alia) Reduce greenhouse gas emissions and provide carbon storage. Prevent and minimise waste, and encourage re-use, recycling, and resource recovery. Are designed to adapt and be resilient to the impacts of climate change as well as reduce the risk of flooding both now and in the future, taking account of predicted sea level rises and the impact on areas vulnerable to coastal change. Prioritise active travel and effective public transport over car use; and Deliver green infrastructure and provide a net gain in biodiversity. The criterion attached to Policy SP2 are supported. It is, however, important to ensure that suitable timeframes are in		North Somerset Local Plan Pre-Submission Plan - Flax Bourton Representations Final.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 									place for these targets as part of a transition to carbon neutrality by 2030. Whilst the development industry is moving at pace to become carbon neutral and meet net zero targets, significant advances in supply chains, build quality, and technologies are required to deliver climate change objectives. It is important that these challenges are recognised in Policy SP2, and the targets outlined are not introduced immediately on plan adoption but phased in over a suitable timeframe. Moreover, in terms of residential development, Government guidance notes any local requirements for the sustainability of buildings should reflect the Government's policy for national technical standards, which are set out in the PPG. They state that: 'The NPPF expects local planning authorities when setting any local requirement for a building's sustainability to do so in a way consistent with the government's zero carbon buildings policy and adopt nationally described standards. Local requirements should form part of a Local Plan following engagement with appropriate partners and will need to be based on robust and credible evidence and pay careful attention to viability. In this respect, planning authorities will need to take account of government decisions on the Housing Standards Review when considering a local requirement relating to new homes (Paragraph: 009 Reference ID: 6-009-20150327)." The PPG also confirms that locally set energy performance standards should not exceed the equivalent of Level 4 of the Code for Sustainable Homes and for policies to impose reasonable requirements for a proportion of energy used in development to be from renewable and/or low carbon energy sources (Paragraph: 0012 Reference ID: 6-012-20190315). There is also the Future Homes Standards, which establishes a clear road map for how residential development can address climate change. Given this, and whilst there is much to support in Policy SP2, it is critical that the criteria attached to the policy are consistent with national policy. Furthermore, national policy also expects any local requirements relating to such matters to be consulted upon, based on robust and credible evidence and be subject of viability testing. Recommendation Policy SP2 should be redrafted to include flexibility to allow for the proposed requirements to be phased in over a suitable timeframe, to make reference to the relevant government standards and to abide by the timescale set by this guidance as well as to make provision for viability testing to ensure wider Local Plan targets can be secured (such as identifying residential development in appropriate and sustainable locations).

39179649	Adrian Mealing			No	• Justified • Effective • Consistent with national policy	Yes	Yes	I consider Policy SP2 to be unsound because it is not justified, not effective, and not consistent with the National Planning Policy Framework. SP2 sets out strong requirements for reducing greenhouse gas emissions, prioritising active travel, enabling low-carbon transport, and ensuring development is located and designed to minimise carbon impact. However, the allocations in Congresbury (183 dwellings across three sites) cannot comply with these principles and therefore render the policy ineffective in practice. Specifically: No active travel network exists to connect the allocated sites with village services, and the improvements mentioned (e.g., Smallway junction crossing, A370 cycle links) are unfunded, undesigned, and absent from the Infrastructure Delivery Plan. Congresbury has no frequent public transport service, no strategic bus enhancements in the Local Plan, and no rail access, meaning new housing will generate car-dependent development contrary to SP2 and the NPPF. The A370 congestion corridor already performs poorly, with no strategic capacity upgrades planned, meaning the plan will increase carbon-intensive travel. The allocations require infrastructure to meet climate-change objectives, yet no delivery mechanism, funding, phasing, or timescales are provided. SP2 emphasises minimising flood-related risk, but the Woodhill Nurseries site includes areas requiring the Sequential Test and relies on future mitigation not evidenced at plan stage. For these reasons, Policy SP2 cannot be implemented effectively alongside the Congresbury allocations and is therefore unsound.	Proposed Modification to SP2: To make SP2 effective and justified, the plan must be supported by a detailed and funded infrastructure package for Congresbury showing how low-carbon travel will be achieved. This must include: deliverable active travel routes linking the three allocations to village facilities and the wider network, confirmed and funded junction upgrades on the A370 and Smallway, improvements to public transport frequency and coverage, flood-risk mitigation measures demonstrated at plan stage, clear phasing linking development occupation to the delivery of sustainable transport infrastructure. Without these modifications, the development allocated for Congresbury will be car-dependent and incompatible with SP2's climate-change objectives.		
39307969	YACWAG		YACWAG	Unsure	• Positively prepared	Unsure	Unsure		Re DP35 Best and most versatile land Grade 1 and 2 BMV land. Support this proposal but only if no risk of an in combination impact on landscape and nature recovery. It should not be used for development especially for solar panels.

22638625	Councillor Bridget Petty			Yes		Yes	Unsure		I support the climate change policy	I support the climate change policy	
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	• Positively prepared • Effective • Consistent with national policy	Yes	No	As worded this Policy is unsound as it lacks precision and so is not effective so not consistent with national policy. First, the Policy appears to apply to all development proposals which would be unreasonable and unworkable – and so requires refinement. Secondly, with this additional requirement, each relating to further reporting adds to the work required in supporting a planning application which ultimately means that the timescales for determining planning applications will be extended and adversely affected – most probably well beyond statutory determination periods. The application of the provisions of this policy should be made clearer so to ensure that it does not place unreasonable or excessive burdens on applicants reflecting in increased cost and time.	The policy should be reworded to clarify to which applications it is applicable. Further, there should be justification for this additional work – with evidence that it will not compromise in any way decision making.		
51242657	Rubix Strategic Limited	Arwel Evans - Lichfields	Rubix Strategic Limited	No	• Justified • Consistent with national policy	Yes	No	Policy SP2 sets out the overarching principles for how development should address both climate change mitigation and adaptation, including a number of key requirements around resource use, net zero, energy generation, climate resilience, transport and green infrastructure. Rubix fully supports the inclusion of a strategic climate change policy and setting out the overarching aims for development in North Somerset. Rubix does however have concerns around the use of phrases in draft Policy SP2 such as ‘minimise’ and ‘maximise’. Targets and requirements that are open-ended have not been fully tested as part of the policy viability, and which could have unintended consequences and supersede requirements set out in subsequent development management policies. Specific requirements, which could include minimising or maximising design elements, can be included in development management policies subject to having been appropriately tested.	We therefore propose amendments to the policy wording are as follows: • “Reduce water use and prioritise the protection of water resources; • Reduce energy use and deliver Net Zero Ready buildings; • Incorporate the generation of energy from renewable and low carbon sources of energy”		
62776065	Paul Segar			Yes		Yes	Yes			I agree with all the points above, particularly prioritising active modes of transport and public transport over car use. In Wrington, recent housing development on agricultural sites has already contributed to increased flooding and a loss of green infrastructure and biodiversity, and should be avoided in future if at all possible.	
51445569	Fran Slade			No	• Justified • Effective	Unsure	No	Climate change is already being challenged by scientist, Net Zero is not viable, All plants (Food products) require Carbon Dioxide to survive. It will be much too expensive to carry out, The Daily Express reported on the 12th December that Net Zero leaves the UK on a precipice of Industrial Collapse.	Please do not follow all these ridiculouse Net Zero Policies which are completely unaffordable.		
63107361	Gladman Developments		Gladman Developments Ltd	Yes						It is acknowledged that the planning system has an important role to play in tackling the effects of climate change. In this respect, the overarching environmental objective of sustainable development cited in paragraph 8 of the NPPF highlights how the planning system should help to mitigate and adapt to climate change and support the transition to a low carbon economy. This objective filters through to other	Gladman Developments - North Somerset Pre-Submission Plan (Reg 19).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										elements of the Framework, including Section 14 that deals specifically with Meeting the Challenge of Climate Change. In this regard, paragraph 157 of the Framework identifies how the planning system should: “support the transition to a low carbon future in a changing climate, taking full account of flood risk and coastal change. It should help to: shape places in ways that contribute to radical reductions in greenhouse gas emissions, minimise vulnerability and improve resilience; encourage the reuse of existing resources, including the conversion of existing buildings; and support renewable and low carbon energy and associated infrastructure.” In principle, Gladman support policies which seek to tackle climate change and reduce carbon emissions. Nonetheless, it is vital that any policy requirements are justified by robust evidence and drafted with reference and consideration to the relevant Building Regulations and emerging Future Homes Standard which offer the most appropriate mechanism to deliver low carbon and energy efficient developments. The Council should continue to take account of climate change in its plan-making, including any updates to guidance in relation to the Framework and PPG. It is important to recognise that mitigating and adapting to climate change must also be compatible with other important objectives for the planning system, including the requirement to boost housing delivery and build a strong, competitive economy. North Somerset Council declared a climate emergency in 2019 and has a target of being carbon neutral by 2030. Gladman is committed to contributing to solutions to address these concerns. Gladman’s land interest at land off Elm Grove, Locking can deliver several environmental commitments to assist the Council in meeting its climate change objectives. In line with the criteria identified within draft policy, the scheme will include multifunctional green infrastructure (h), reducing vulnerability to the impacts of climate change through tree shading and CO2 absorption (g). All our schemes deliver a comprehensive package of pedestrian and cycle infrastructure including a suite of measures to reduce traffic impact and the need to travel (f). Land off Elm Grove, Locking has the potential to deliver renewable and low carbon technologies (c) through new electric vehicle charging points and low carbon design approaches (a) and sustainable construction techniques (b) can be considered at the detailed design stage.	
30975873	Chris Segar			Yes		Yes	Yes			I fully support the reuse of existing buildings and structures. I support all measures to reduce flooding. The area around me floods often and the situation is only getting worse with the run off from large housing development in the area. We need to preserve our green field sites for agriculture and biodiversity.	
31022913	Peter Sims			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Policy SP2 Climate Change This policy states that the new houses should minimise energy use and deliver a net zero energy standard in new building. Planning permission on some of the developments covered by the Plan has already been granted and houses are being built. These houses do not appear to being built to the high standard required for net zero energy. The policy also states the need to reduce the risk of flooding both now and in the future, taking account of predicted sea level rises and the impact on areas vulnerable to coastal change. There are 6 sites allocated for development which have a possible flood risk Land at north west Nailsea, land north of Nailsea, land off Pound Lane, Nailsea,

								Poplar Farm, Nailsea, Land south of Nailsea and Grove Farm, Backwell. All the statements in the Plan are to avoid increasing the risk of flooding and not reducing the risk especially in the developments directly in the flood plain like the Nailsea end of the proposed new cross rail link road,			
50493793	M Slade			No	• Justified	Unsure	No	Climate change is now being challenged in scientific circles as an exaggeration and alarmism completely over emphasised for political and financial gain. The climate always changes and goes through cycles depending on many complex factors that are not fully understood including the affect of the solar cycles amongst many. Yes there appears to be an element of anthropogenic carbon dioxide release in the atmosphere but this is not the major driver of climate change. It is important that we consider sustainable approaches to urban development and advancement of society but this needs to be recognised rather than blindly following crass headlines perpetrated by interested parties for gain. Net Zero is far too ambitious costing billions of pounds while councils and its residents go without with solutions that are just not sound. Wind energy is not net zero in the life time of the turbines and creates toxic waste that cannot be removed and solar in the UK is ineffective in the darker and short days of the year and also creates toxic waste that cannot me managed. NSC need to start to challenge these assumptions and make better more sound decisions in this regard.	If you must use solar for energy security and to replace oil and gas, put solar panels on building roofs and other abundant surfaces rather than prime agriculture and green belt land that threaten food security.		
31062913	R Storrar		KWAW	Yes		Yes	Yes			This strategic policy is completely correct in identifying the measures we need to take to mitigate and, hopefully, roll back some of the damage already done to the planet. To continue without adopting this policy, and applying it to all the other listed policies, is simply unsustainable and would have a very negative effect on the lives of future residents. Unpredictable and extreme weather (whether very hot or very wet) is already happening. We cannot continue to ignore it and the Council are right to use the principles listed as their over-riding criteria for other policies.	
15430817	Mike Tremlett		Graham Moir Associates					An important policy but this is what building regulations does. Rather than focussing on this, the LPA should focus on delivering houses and let building regulations set the standards. All of the standards are set by building regulations and they are being continually improved. Is therefore the job of building regulations job to ensure that builds are completed to the required standard and planners to approve development. Therefore, the policy should be simplified to read: Development proposals, once approved must be constructed to building regulation standards relevant at the time of commencement. This then takes the onus of checking this to the remit of Building Regulations and lets the planners get on with delivering development			
59606017	John Turner			No	• Effective	Unsure	Unsure	Following points are not described or explained to sufficient detail to confirm Local plan 2041 is effective (i.e. will work for existing & new NS residents): 1) 'Carbon neutral by 2030' statement - How can this be delivered with the thousands of additional house & road building, which will both require huge amounts of concrete, a man-made substance that has a huge carbon footprint? 2) 'enable heathy lifestyles' - How can this be delivered when the local countryside is being moved away from the existing residents? A walk in the countryside is beneficial for the physical & mental heath of the existing population. By reducing countryside owing to large house building projects then population will have to travel further to get to countryside; 3) The Wovershill location - It is unclear how NS will mitigate the additional residents car/bus travel, negative impact to the existing residents car/bus travel & additional public demand on existing essential services? e.g. GPs, hospital, dentists, schools, water/sewerage, waste, 999 services; 4) No new M5 J21a is proposed. How will NS mitigate the additional Banwell bypass traffic impact to the A370 & Morrison's roundabout? 5) There is no explanation of how many of the couple of thousand extra affordable houses will be allocated to asylum seekers & refugees, with their added impact onto local key services and existing population? How will this impact be mitigated when Weston-super-Mare population has recently (in 2025) requested removal from the Council of Sanctuary scheme? 6) When were the local job growth figures modelled? If it was before the Labour government started (July 2024), which has reduced the UK economy and future prospects, what is the revised job growth figure? How does the current economic situation impact the local new business growth? How will it impact the predicted worker additional car/bus travel out of the large towns (e.g. Weston-super-Mare) to the larger job regions (e.g. Bristol, Swindon, Exeter)?			
58534081	Verto Homes	tor&co (Jacqueline Mulliner)	Verto Homes	No	• Justified • Consistent with national policy	Yes	No	Firstly, it is inappropriate to expect every development proposal to meet/demonstrate compliance with every criterion within SP2, simply some of the criteria just won't apply, and some will be superseded in time by other national policy and regulations. Hence the policy should be amended to acknowledge this. Further, the reference to 'minimise energy use and deliver a net zero energy standard in new building' is unachievable. Verto is fully committed to sustainability including in the ongoing zero-carbon operation of buildings, but all buildings will require energy from some source. The point is to contribute towards the national commitment to net zero future with reference to greenhouse gas emissions (carbon). In terms of building, the NPPF consistently refers to 'low carbon' measures, rather than zero carbon. Where net zero carbon is achieved then the NPPF directs this to be given significant weight in the planning balance. 62846721	Cleeve Parish Council		Cleeve Parish Council	No	• Positively prepared • Justified • Effective			We do not consider the North Somerset Local Plan 2041: Pre-Submission Plan to be sound. Based on the detailed representations of Cleeve Parish Council, we believe the Plan fails three of the tests of soundness set out in NPPF paragraph 36: Positively Prepared, Justified, and Effective. 1. Positively Prepared The Plan does not adequately address the needs of young people or newly forming	Policy SP2: Climate change: In our view there are a number of very strong factors that have to be reckoned with. Climate change will continue and the impacts will increase. It is almost certain to lead to major health impacts, particularly on the elderly and the very young. It will increase		Submission on behalf of Cleeve Parish Council in respect of Pre.docx Submission on behalf of Cleeve Parish Council in respect of Pre.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								households, nor does it ensure that new development will be properly supported by essential infrastructure. The repeated use of discretionary language ("will be expected", "should have regard to") leaves critical requirements—such as drainage, healthcare capacity, active travel connections, affordable housing percentages, biodiversity measures, renewable energy deployment, and sustainable design—insufficiently guaranteed. The Plan also fails to provide a clear and sustainable policy position on future growth at Bristol Airport, or on how Green Belt releases will be compensated or justified. As a result, the Plan does not convincingly meet the district's needs in a sustainable and deliverable way. 2. Justified The policy choices taken in the Plan do not always represent the most appropriate strategy when tested against reasonable alternatives. The evidence base appears inadequate or incomplete in several areas, including: (a) the justification for Green Belt releases at Bristol Airport; (b) the robustness of climate-adaptation measures given the known risks of flooding, sea level rise, extreme heat, and pressure on water resources; (c) the lack of evidence demonstrating that non-mandatory design guidance will achieve sustainable outcomes; (d) the omission of low-rise flats in existing towns as a viable and necessary option for delivering affordable housing for young people; and (e) insufficient assessment of the landscape, safety, environmental and carbon impacts of airport-related growth, including the absence of a cumulative emissions assessment. In each case, reasonable and more sustainable policy alternatives have not been adequately explored. 3. Effective The Plan's delivery mechanisms are weak and do not provide confidence that its policies will be realised. Critical infrastructure (roads, drainage, healthcare, active travel routes, mass transit provision and energy resilience) is not tied to development in a sufficiently enforceable manner. Policies that rely on voluntary interpretation or "expectations" are unlikely to secure required outcomes, particularly in relation to affordable housing percentages, design quality, biodiversity net gain, native woodland expansion, protection of commons, and the safeguarding of Best and Most Versatile agricultural land. Policies concerning Bristol Airport do not demonstrate effective cross-boundary working or credible mitigation strategies, while the approach to flood-risk management does not provide sufficient assurance that developments requiring the Exception Test would be safe, sustainable, or financially deliverable. As drafted, there is insufficient certainty that the Plan can be implemented as intended.	stress on food production, on water supply and on drainage. Flooding impacts may become increasingly large. Sea level rise is likely to threaten our coastal communities. Immigration pressure will impact on all areas of housing, health and welfare. All of these impact on the location and design of housing and industrial infrastructure. Consequently requirements for design consistent with SP1 & SP2 need to be made mandatory for developers. Residents and businesses should not pay the cost of corner-cutting by developers who are looking for short-term profit. It is not good enough to say (DP1) "Where relevant, development proposals should have regard to the design guidance set out in Supplementary Planning Documents and other documents." To be absolutely clear, Cleeve Parish Council believes that this statement should read "Where relevant, development proposals must have regard to the design guidance set out in Supplementary Planning Documents and other documents."		
62471329	Environment Agency		Environment Agency	Yes							EA Response - NSC Reg 19.pdf
62471329	Environment Agency		Environment Agency						We welcome the Local Authority's commitment in Policy SP2 that "in order to reduce the overall environmental impact of development, proposals will be expected to demonstrate how they: Maximise water re-use and the protection of water resources" We request that during the adoption of the Local Plan, the LPA must ensure that water efficiency, rainwater harvesting, and greywater reuse are key priorities. There are opportunities for Green and Blue Infrastructure (GBI), and the implementation of Nature-based Solutions should be encouraged and maximised to help enhance the water environment, reduce (NbS) pressures on water supply, and help mitigate risks of pollution from wastewater. The LPA should encourage GBI and NbS to be integrated into policies and design principles for new development, where relevant and appropriate. We also welcome the commitment in Policy DP5 to "Consider water and wastewater management, incorporating measures to improve water efficiency such as installing water butts, rain gardens and other water reuse features" and that "the adoption of measures within the RIBA 2030 Climate challenge will be supported. This applies to a range of standards, including those relating to water efficiency addressing the likelihood of water shortages associated with a changing climate". In terms of meeting supply and demand during the adoption of the Local Plan, the LPA needs to assess if existing water supply infrastructure is able to meet future demand, particularly in areas of known water stress. The LPA should consult with Bristol Water to ensure that the development is reflected in their Water Resources Management Plans (WRMPs) available here Water Resources. If necessary, the LPA should consider phasing development so that any new water infrastructure is in place prior to the occupation of development. The LPA must also target development to areas of water surplus, where possible and in areas of water stress, and adopt the tighter building regulation water efficiency standard of 110 litres l/p/p/p/d in the relevant local plan policy to help manage water demand locally. Catchment Coordination: The LPA should undertake integrated planning with water companies and catchment partnerships to ensure sustainable water resource management. It is strongly recommended to develop Water Cycle Studies (WCS) to assess how strategic plans and development proposals will affect the environment. LPAs should be encouraged to consider catchment scale and cross-boundary planning to deliver robust strategies for climate change adaptation and resource planning (note: many water companies cover multiple LPA administrative boundaries).		
14339745	Paul Watkins			No	• Justified	No	No	How can NSC write Reduce the risk of flooding both now and in the future, taking account of predicted sea level rises and the impact on areas vulnerable to coastal change; When it currently is unable to ensure that drains in highways, which it is responsible for, remain patent...and failure to do so by NSC contributes to local flooding...agian a further example of NSC hypocrisy

										the core strategy of the NSC to protect the environment as part of its Climate Emergency commitments. I agree that the risk of flooding should be minimised; unsustainable development would add to this risk as we are a village which already suffers annually from flooding. I also agree that we need better infrastructure for public transport or to ease congestion on the village roads, which are not built to accommodate more vehicles equated to development. This will also lead to a reduction in carbon emissions from single use vehicles.	
59945953	Rich Coleman			No	• Positively prepared • Justified • Effective	No		The so called "Climate Crisis" is unproven, Regarding recycling NSC has wasted £360K on Red Recycling bags that are deteriorating and CANNOT be recycled ? 63359201	Nailsea Holdings LVA LLP	Matthew Kendrick	Nailsea Holdings LVA LLP	Unsure	‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure		Currently we consider that the wording of this policy is quite vague and does not clearly set out what the spatial strategy for NSC is to be. Whilst further detail is given in the supporting text insomuch as clarifying that the main focus for development is Weston-super-Mare, with four additional strategic development location that includes Nailsea and Backwell we consider that this needs to be made clear in the text of policy SP3. This change would also dovetail with policy SP5 which specifically mentions the four main towns.		739 A3 MJK 101225 Reps to Pre-sub Draft LP V1-merged-compressed.pdf
31149537	Strongvox Ltd	Pegasus Group		No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Yes	Yes	Our client is supportive of the broad spatial strategy outlined at policy SP3, in particular the presumption that residential development should be focused on those areas that are the most sustainably located in relation to employment, services and transport, including taking account of likely future scenarios. This does not however presuppose that residential development in other locations may not be suitable, based on the facts of each case, noting in particular the need for smaller settlements to remain viable and vital places to live.			R002v5 NSLP Reg19 Reps Strongvox Dec25.pdf
62907617	Summerfield Homes Ltd	Lucy White Planning Limited		No	‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Policy SP3: Spatial Strategy Summerfield Homes object to the proposed spatial strategy. The policy notes that it gives priority to new residential and mixed-use development in or close to urban areas, limiting development at villages (beyond strategic development areas) to local community needs. To prioritise development at the urban areas suggests that these locations should be fully explored first, before consideration would be given to development at the villages. In addition, limiting villages to meeting local community needs fails to recognise the potential for the more sustainable villages1 to deliver small-scale growth which can make a meaningful contribution towards the overall housing requirement. The spatial strategy should recognise the greater role which the more sustainable villages (outside the strategic development locations) could play in meeting the objectively assessed housing needs, through appropriate scale of development, relative to the size, capacity and sustainability of the villages, with priority given to Category A and B villages. The proposed spatial strategy relies heavily on strategic development areas to meet the housing requirement; 4 strategic development locations are expected to delivery 47% of the total housing requirement and 85% of the residual housing requirement (excluding existing commitments). The strategic development locations involve large, complex sites with multiple ownerships and significant infrastructure requirements. The Local Plan's reliance on such a small number of locations to deliver such a substantial proportion of the housing requirement. Approach to Rural Settlements Paper (March 2022) 2 puts the Local Plan at significant risk of not meeting its objectively assessed housing needs requirement over the plan period. It is already evident that the spatial strategy would fail to deliver adequate housing within the plan period. The spatial strategy should be revisited and additional and alternative housing sites allocated through the plan to ensure an adequate, flexible supply, capable of meeting the objective housing needs within the plan period. Sites at the most sustainable villages should be revisited and allocated, as appropriate, to boost housing supply, in accordance with the Council's sequential approach to site identification (stage 4). Summerfield Homes object to the spatial strategy which fails to respond directly to the findings of the Pre-Submission Sustainability Appraisal (SA) which recommends a strategy based on urban focus . Spatial Strategy and Capacity Paper (October 2025) provides no justification for the selection of a spatial strategy which aligns most closely with Approach 3, when there is clear evidence that Approach 2 offers the most sustainable development strategy for the local plan area. In summary, the spatial strategy is unsustainably reliant upon the delivery of 85% of its unmet housing needs over four strategic development locations, with no evidence that these locations can deliver the required housing over the plan period, alongside the required infrastructure. The evidence necessary to justify the categorisation of the villages and inform the spatial strategy is absent and therefore the spatial strategy is unsound.	The Spatial Strategy should be revisited in line with the findings of the Sustainability Appraisal and the availability of land at the most sustainable villages, outside the Green 4 Adopted Core Strategy (Policy CS32, Service Villages) and Spatial Strategy, Site Selection and Capacity Paper (October 2025) 9 Belt, to deliver a sustainable spatial strategy which is capable of meeting housing needs over the plan period.		251211 Local Plan Reps Alburys Complete.pdf Representation form Part B SP3.docx

29403105	Diverse Partnerships Yatton Ltd	Pegasus Group		No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Yes	Yes	Our client is supportive of the broad sustainability objectives of the spatial strategy outlined at Policy SP3, with regard to those areas most sustainably located in relation to employment, services and transport, including taking account of likely future scenarios. However, as set out in our previous Additional Sites Consultation comments (attached at Appendix 1) we remain concerned about the approach undertaken in site selection as this pertains to flood risk given the extent of the authority area impacted by such risks. This is relevant with respect to the reference to “minimising residential development in areas at risk of flooding now or in the future outside of the towns” and is explored further below within these comments. We also consider that the direction of development at all villages to only local needs does not represent the most sustainable or effective strategy. It is particularly noteworthy that the Council have omitted its own Rural Settlements Paper 2022 that accompanied previous plan consultations as background evidence. This explicitly identified Backwell and Yatton as the most sustainable locations after the towns and reflects Yatton’s role in addressing the first portion of Policy SP3 regarding the sustainability objectives of the plan. This context is reflected throughout various referencing within the submitted Sustainability Appraisal and it is noted that a new secondary school is proposed to the south of Yatton under the emerging plan. In this regard it can be observed that 1,683 homes are proposed at Backwell under the emerging plan, but only c. 300 at Yatton/Claverham, pertaining mostly to existing consented development (beyond the Oxford Plasma site within Yatton). This is by and large a reflection of the ‘hard constraints’ placed on flood risk that is returned to below, but also indicates a lack of consistency in approach to the distribution of development amongst the more sustainable locations within the	The approach proposed essentially presupposes that further residential development in the villages beyond ‘local needs’ will not be suitable, rather than taking a more flexible approach based on the facts of each case (as under the current plan). This precludes the plan from delivering further sustainable forms of development at location such as Yatton. Without such changes the policy is not considered to be positively prepared, justified. Effective or consistent with national policy.		NSC Reg 19 Diverse Partnerships Yatton Ltd Reps Dec 25 - Redacted.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								authority. Further commentary on the effectiveness of this approach is set out under comments on Policy SP5 below. The approach proposed essentially presupposes that further residential development in the villages beyond 'local needs' will not be suitable, rather than taking a more flexible approach based on the facts of each case (as under the current plan). This precludes the plan from delivering further sustainable forms of development at location such as Yatton. Without such changes the policy is not considered to be positively prepared, justified. Effective or consistent with national policy.			
63043809	Wain Homes	Russell Smith	Wain Homes	No	‣ Positively prepared ‣ Justified ‣ Effective	No	No		Policy SP3 states that "Priority will be given to locating new residential and mixed-use development in or close to urban areas where there is an existing or proposed wide range of facilities, services and jobs, and there are opportunities to encourage active and sustainable travel, particularly at locations which are currently, or have the potential to be, well served by public transport....Beyond strategic development areas the amount of development at villages and in the countryside will relate to local community needs." Wain Homes considers that Policy SP3 does not define an effective and justified spatial strategy to guide the distribution of development and assess proposed allocations. The absence of a settlement hierarchy means that the spatial strategy does not clearly define the urban areas where development is to be prioritised. It leaves much open to interpretation and is not effective for selecting sites, and in the event that any future shortfall in housing land supply requires additional sites to be identified. The Spatial Strategy Site Selection and Capacity Paper published alongside the Pre submission Plan states that the following sequential approach was taken to site selection: • Step 1: Existing commitments and windfall • Step 2: Urban intensification and previously developed land • Step 3: Sites that are well related to towns and urban areas outside the Green Belt • Step 4: Sites that are well related to larger more sustainable villages outside of the Green Belt • Step 5: Sites in the Green Belt that are well related to towns and urban areas • Step 6: Sites in the Green Belt that are well related to larger more sustainable villages The spatial strategy expressed by Policy SP3, as drafted, does not correlate with these steps. It does not define the role of larger more sustainable villages, which appear to have been passed over. This is apparent in the distribution of growth shown in Policy SP8, which shows only 12% of growth overall in villages and the fact that suitable sites, including Wain Homes site (HE20800) have been discounted. This is fundamental to the soundness of the plan as it undermines the Council's contention that they cannot accommodate any of Bristol's unmet need. It also undermines the case that exceptional circumstances exist to release Green Belt sites for residential development. SP3 states that "Beyond strategic development areas the amount of development at villages and in the countryside will relate to local community needs". This does not reflect the evidence that some of the larger villages are amongst the most sustainable locations in North Somerset. Villages such as Yatton have direct train access in to the centre of Bristol and are sustainable locations to		North Somerset Local Plan Regulation 19 Wain Homes.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									accommodate housing needs beyond that of the local community, including some of the unmet needs of Bristol. Suitable sites outside of the Green Belt, including HE20800, should be allocated in line with Step 4 of the sequential approach. The Spatial Strategy Site Selection and Capacity Paper identifies a total of 42 villages. These are broken down into 4 categories based on their relative sustainability. The spatial strategy expressed in SP3 does not differentiate between these villages despite there being significant variation in sustainability. Again, as a result, the approach underutilises some of the most sustainable locations in North Somerset. Overall, Wain Homes considers SP3 to be unsound as it not effective, justified or positively prepared. To remedy this, SP3 should be re-drafted to refer to a settlement hierarchy that clearly identifies the locations where new development will be prioritised and this should include larger more sustainable villages.		
63057537	Hallam Land	David Lock Associates		No	• Justified • Effective • Consistent with national policy	Yes	Yes	The overarching spatial strategy to locate new residential and mixed-use development in or close to urban areas is supported. So too is the encouragement of employment opportunities at accessible locations well-related to urban areas. However, the draft allocations that are proposed in the document do not follow this strategy. The Draft Plan, having required amendment from the Local Plan 2039 (Regulation 19 document previously consulted upon in November 2023) due to the revisions arising from the new 2024 Framework and consequential uplift in standard method figure, has resulted in a plan strategy that has materially shifted in its focus, at a late stage, from its evolution (including the testing of spatial options) to now propose a stronger focus on strategic development areas, including those not within the main towns, and including areas within green belt, including, Wolvershill (north of Banwell), Woodspring (south-west of Bristol), at Nailsea and Backwell and at Pill and Easton-in-Gordano. Despite this shift in strategy, Policy SP3 text remains largely unchanged from the previous Regulation 19 version. The Council, within the previous North Somerset Choices for the Future (Autumn 2020), has acknowledged the contribution that Land East of Clevedon can make in shaping the future growth strategy for North Somerset, specifically its locational benefits that deliver a significant and strategic employment opportunity The site was a component presented as part of all four strategic growth options expressed within the Issues and Options Plan, and consequently an allocation which was then carried forward to Pre-Submission Draft Plan 2039. There is no sound basis for the Plan to now move forward, with itshigher housing requirement, without ‘inclusion of this important strategic employment site. Indeed, considering the balance of employment land and housing, the draft Plan now provides for some 63% more homes (at 23,700) compared with just 14,900 in the previous draft Plan, yet the amount of employment land to be planned for has reduced to just 72.8 ha, a reduction of some 10ha. It is interesting to note that in the 2023 Draft Regulation 19 Plan refer to a minimum amount of employment land of 50 ha in both cases, despite the current 2025 Draft Regulation Plan having a 63% uplift in homes. Hallam Land’s representations to SP9 Employment provide more information on the misalignment of evidence that demonstrates that the employment strategy as presented, that relies to a significant extent upon employment land being released as part of large scale housing, without due regard to the locational characteristics of employment demand, particularly from a strong industrial and logistics sector associated with the M5 corridor, is fundamentally unsound. The Plan as currently presented fails to provide for the employment needs of the district and evidenced market demand and will lead to the relocation of key local employers as already experienced, prevent the attraction of new jobs/ investment, limit business growth within the district, and result in the creation of an imbalance between housing and jobs in Clevedon. The updated strategy and site selection documents that support the revised Regulation 19 document are wholly focused on the SHLAA and choice of housing sites. There is limited if any robust assessment on employment sites, particularly in relation to those that have been omitted from the Plan such as Land East of Clevedon. The Sustainability Appraisal provides little justification for the removal of the site from the Plan, having performed comparatively strongly against other sites that have been assessed. Significant negative effects are reported in only two areas: Achieve reasonable access to a wide range of community, educational, town centre and healthcare facilities (SA objective 2.3) and Minimise vulnerability to tidal & fluvial flooding, without increasing flood risk elsewhere. Also minimise surface water flood risk and harm to water quality and availability (SA objective 3.2). There appear to remain questions around the potential impact of other objectives: Provides opportunities to improve economic wellbeing and reduce inequalities (SA objective 1.3); and Protect and enhance Biodiversity, Geodiversity and Green Infrastructure, particularly with respect to protected habitats and species (SA objective 3.6). Hallam Land and their consultant team have worked closely with the Council to consider how development could be brought forward, integrating the existing site features, considering the relationship between design of access road (both its indicative alignment and gradient) and existing residential properties and Clevedon Craft Centre. A draft framework plan is appended to these representations that indicates the spatial relationship of built form contained within the southern part of the site; access arrangements (vehicular and active travel opportunities including connections into Clevedon); and landscaping, including new areas of structural planting, green infrastructure corridors that include provision of surface water drainage features through enhancement of the rhyne network to provide both water quality and biodiversity betterment. The drainage strategy will seek to reduce flood risk to other areas such as Clevedon by improving on site rhyne network and offsite flood defences. Hallam strongly maintain that development in areas benefitting from flood defences, are inherently sustainable. Defended land is not at the same risk of flooding as the high-risk flood zone it is otherwise categorized within and are a feature of the historic pattern of growth, and indeed the approach taken to growth in the current plan, demonstrated through the allocation at Weston Villages.	In order to make the plan sound, Land East of J20 at Clevedon should be allocated as a strategic employment site (of some 25 ha) to proactively meet the evidenced demand from the distribution, logistics, and warehousing sector. Its inclusion can help remedy the failure of the Plan, meet strategic employment needs in North Somerset and help build resilience in terms of economic development and employment growth		NSC Pre-submission Plan - Part B SP3 Spatial Strategy on behalf of Hallam Land.pdf

Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								A Vision Prospectus is also provided which draws together the site opportunity and wider sustainability benefits for the local community and district as a whole, providing additional detail on the master planning approach taken to the site, the use of structural landscaping and natural rhyne network, and active travel and wider connectivity opportunities. The Prospectus reports the significant economic benefits that could be delivered in both the construction and operation phase of the development. The proposed site has the potential to deliver up to 1,000,000 sq. ft. of distribution and logistics space with the capacity to accommodate c.1,250 full time equivalent jobs with increasing focus on higher skills, and training and apprenticeship opportunities for its residents. The reported SA conclusion of this site is short and does not comment on any physical nor qualitative site characteristics, but is in fact limited to comments on delivery and expressing a policy choice for how employment needs will be planned for. “Business in this location was proposed as part of the Regulation 19 plan in 2023, however has since been removed due to concerns on its impact and deliverability of associated infrastructure. The allocation of this site is not considered a necessity within the plan as the plan is meeting business needs identified through the evidence on alternative sites”. In respect to the first part, Hallam Land submit that there is no evidence to support the claim that the site impacts nor presents delivery challenges for associated infrastructure (noting ‘associated infrastructure’ is not defined). Hallam Land has engaged with North Somerset Council as Local Highway Authority and National Highways, on potential access and improvements to the Junction 20, including opportunities to improve access travel links into Clevedon. Two technical notes (Site Access Design and Connectivity) are appended to these representations and demonstrate the breadth of work and engagement undertaken. The Draft Plan through Policy LP11 identifies improvements to J20 M5, which the Infrastructure Delivery Plan reports as being funded through developer contributions. There appear to be no grounds to support the assertion that the site cannot come forward due to infrastructure challenges, the Council have provided no evidence to support this position. In respect to the second point, the allocation of Land East of Clevedon is patently very much a necessity. It would enable the delivery of up to 1,000,000 sq. ft of flexible commercial floorspace for the enduring distribution and logistics market with the potential to deliver over 1,250 full time equivalent jobs. From a strategic spatial perspective, this site enables the provision of a key employment hub within the north of the district, providing a viable and alternative location to Avonmouth and Bristol, to counterbalance the potential leakage of investment to the wider Avonmouth and Bristol Area. Making a very significant contribution towards meeting the economic ambitions very recently endorsed by the Council through its Economic Growth Plan. Hallam Land make a strong objection to the Plan as drafted. The Council has not collated the evidence base necessary to demonstrate the site should not be selected. Opting not to select the site is a huge, missed opportunity and fundamentally threatens the ability for North Somerset to attract and benefit from economic investment from a dynamic commercial logistics market that is active, burgeoning and demonstrably seeking favourable locations such as this. There is no other site that offers the economic opportunity that Land East of Clevedon would bring to the area to accommodate an expanding demand associated with the strategic road network (M5 corridor) particularly with regard to logistics, distribution, and warehousing occupiers. It is an attractive and compelling location for a strategic employment site with the potential to deliver significant benefits: • up to 1,000,000 sq. ft. of distribution and logistics space; • over 1,250 full time equivalent jobs; • potential to generate an additional £90million GVA per annum within the local economy, with an additional £36m GVA per annum and over 500 additional jobs across the wider region (beyond those employed on site) through wider supply chains; and • new local employment opportunities with increasing focus on higher skills, and training and apprenticeship opportunities for residents. The case for the allocation of this site is overtly clear; there are no credible reasons to the contrary. Negative expressions for the site submitted to the previous regulation 19 stage related entirely to the perceived impact of the proposals. Hallam Land and its consultant team, have tested and evolved the proposals for a number of years, and have complete confidence that impacts referred to in relation to Clevedon Craft Centre, heritage setting and living conditions of local residents can addressed through appropriate masterplanning of the scheme, as presented in the enclosed Prospectus. Hallam Land has engaged with National Highways and North Somerset Council to evolve the access strategy and are confident that the access proposals are indeed viable and capable of delivery		
51524513	Bellway Homes Ltd	tor&co	Bellway Homes Ltd	No	‣ Effective ‣ Consistent with national policy			Draft Policy SP3 includes a written statement for the spatial strategy, as follows: “Priority will be given to locating new residential and mixed-use development in or close to urban areas where there is an existing or proposed wide range of facilities, services and jobs, and there are opportunities to encourage active and sustainable travel, particularly at locations which are currently, or have the potential to be, well served by public transport. Employment opportunities will be encouraged at accessible locations well-related to the urban areas and where sustainable transport opportunities can be maximised. Residential development in areas at risk of flooding now or in the future will be minimised outside the towns. Beyond strategic development areas the amount of development at villages and in the countryside will relate to local community needs.” Bellway is generally supportive of this statement and the strategy outlined. Indeed, the strategic allocation at Wolvershill represents a long promoted and suitable growth option that accords with the above strategy and will make a significant contribution to the needs of the principal settlement of Weston-super-Mare and the North Somerset district at large. Specific detail regarding this allocation is included at Draft Policy LP1 – upon which we have commented separately. Bellway would observe the spatial strategy is stated only in general terms, with no detail of any settlement hierarchy, or areas where new development will be encouraged (or conversely restricted). Draft Policy SP3 would benefit from revisions to add additional clarity and detail to help the overall readability and effectiveness of this policy and the plan as a whole. A significant proportion of which is contained within the key evidence base documents related to the spatial strategy (e.g. ‘Spatial Strategy and Capacity Paper’ (November 2023). Bellway would also note that more generally, whilst the policy intention to restrict development in the countryside is understood, this is not entirely consistent with the NPPF. Whilst it may be appropriate to limit development at a small village to that associated with meeting local community needs, development beyond the settlement boundaries of the main settlements and larger villages may be appropriate to meet district-wide needs, particularly in circumstances where there is a five-year housing land supply. In this respect,	Draft Policy SP3 would benefit from revisions to add additional clarity and detail to help the overall readability and effectiveness of this policy and the plan as a whole. This may include combination with Draft Policy SP5 (Towns) and Draft Policy SP6 (Villages and rural areas). Draft Policy SP3 should also be amended to read, “[…] "Beyond strategic development areas, the amount of development at villages and in the countryside will reflect the settlement hierarchy.” (see attached document for specific amendments)		20251212 504317 JE - North Somerset Reg 19 (Reps obo Bellway Homes).pdf

								the policy should reflect the settlement hierarchy.			
63094305	Harrow Estates	Boyer		No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No		Harrow Estates notes there is no difference in the draft policy wording between the Pre Submission consultation version dated July 2024 and the current October 2025 version. However, the unchanged wording fails to resolve the fundamental shortcomings previously raised and continues to result in a spatial strategy that is neither justified nor consistent with national policy. The draft Plan's Spatial Strategy remains heavily skewed towards western settlements, particularly Weston-Super-Mare, despite clear evidence that this distribution of development does not support sustainable patterns of development, does not align with the district'sprimary economic relationships, and does not optimise opportunities for active and sustainable travel. This results in a failure to align the Spatial Strategy with Sustainable Development Principles. SP3 must operate synergistically with SP1, yet the two policies currently conflict. As demonstrated in Section 2 (SP1), the draft LP reinforces long-distance commuting patterns, fails to direct growth to the most sustainable locations, and overlooks the strategic relationship with Bristol. Failand, a settlement with short journey times to Bristol; established public transport connections; potential for enhanced active travel routes; and proximity to major employment centres, has been excluded from the spatial strategy without a transparent or evidence◇based justification. The omission of eastern settlements, such as Failand, conflicts with the principle that Plans should promote sustainable patterns of development by focusing growth in locations that reduce reliance on private cars and shorten travel distances. Over concentration of Growth in the West SP3 directs 46% of all new housing to Weston-Super-Mare and nearby areas, despite the Council's own evidence highlighting: • entrenched commuting to Bristol from Weston, • significant environmental impacts associated with this pattern, • limited ability of the A370 and A38 corridors to support meaningful modal shift, and • concerns raised within the Transport Assessment about the sustainability of western settlements. This over concentration is not supported by the evidence base and appears to be based primarily on historic patterns of development and land availability, rather than sustainability or strategic need. For the Plan to be sound it must distribute growth more evenly across the district and, critically, allocate a greater proportion of development in the east where the relationship with Bristol is strongest. Failure to Consider Reasonable Alternatives The NPPF requires Local Plans to test reasonable alternatives. However, the draft LP does not provide transparent comparative assessment of alternative growth distributions, including scenarios that increase development in the east of the district. The Council has not demonstrated why sustainable eastern settlements, including Failand, were discounted at an early stage, despite: • SHLAA confirmation that the site is			251211 Land East of Failand Reg 19 Reps.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 									suitable for further assessment, • the Spatial Strategy and Capacity Paper acknowledging Failand as a settlement with development potential, • Sustainability Appraisal conclusions showing strong performance in terms of accessibility to jobs and services, and • the site's ability to directly address Bristol's unmet housing needs. Harrow consider that the spatial strategy has not, therefore, fully considered all viable, achievable and deliverable sites. The Plan's evidence base states that "the Stage 1 [WECA Green Belt] assessment is being undertaken in stages, with the final full assessment to be published in 2026." As this WECA⟡wide review provides the strategic baseline for understanding Green Belt performance, its incomplete status means North Somerset is advancing a local plan without sight of the full evidence needed to justify decisions on Green Belt release, retention, or boundary changes. North Somerset's Stage 2 Assessment considers only parcels adjacent to preferred settlements and does not provide a full, plan-wide parcel assessment. This contradicts guidance requiring sufficiently granular assessments across all Green Belt land and not just a small number of large areas. By narrowing the scope prematurely, the Council has not shown that all reasonable Green Belt options have been examined, as required by NPPF paragraph 147. Without the complete WECA Stage 1 assessment, the Council cannot justify why certain parcels are proposed for release while others are ruled out. The absence of this strategic baseline prevents a clear understanding of how chosen sites relate to the wider Bristol & Bath Green Belt or whether alternatives elsewhere may perform less strongly or offer more sustainable opportunities. This casts doubt on the consistency, comparability, and soundness of the Council's release decisions. This evidential gap means the spatial strategy does not meet the requirement to be "the most appropriate strategy when considered against reasonable alternatives." The Council acknowledges that Steps 1 - 4 of its site-selection process do not meet identified housing needs, yet potential Green Belt alternatives have not been fully assessed. Despite recognising the Stage 1 review is incomplete, the Council proceeded to identify 12 release sites based only on its partial Stage 2 assessment. This sequencing error undermines the reliability of the spatial strategy and the claim that all reasonable options have been properly tested. Although the Council argues that exceptional circumstances exist because need cannot be met outside the Green Belt, this conclusion is not robust without a complete evidence base. The partial Green Belt review, the absence of the final WECA Stage 1 assessment, and the narrowed scope of Stage 2 mean the Council has not provided proportionate or comprehensive evidence to justify its proposed boundary changes or to demonstrate that the selected Green Belt releases are necessary, sustainable, or optimal. The absence of a robust assessment of reasonable alternatives is not justified and draft Policy SP3 is therefore unsound. Inconsistency With Cross-Boundary		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									Relationships and Unmet Need As set out earlier in these representations, the West of England authorities form a single functional housing market area. Paragraph 24 of the NPPF states that: “Effective strategic planning across local planning authority boundaries will play a vital and increasing role in how sustainable growth is delivered, by addressing key spatial issues including meeting housing needs.” SP3 does not reflect this requirement. Specifically: • it fails to direct growth to the locations closest to Bristol, • it does not contribute meaningfully to addressing Bristol’s unmet need, and • it does not reflect the North Somerset Council’s role as a “growth gateway” to the West of England. A spatial strategy that does not respond to strategic housing needs across functional boundaries cannot be considered positively prepared. Excessive Reliance on Strategic Locations with Long Lead-In Times As detailed later in these representations, the Plan’s proposed Strategic Locations at Woodspring, Wolvershill, and Nailsea/Backwell face significant uncertainties regarding infrastructure delivery, phasing, and achievable build-out rates. For example, even assuming a build-out rate of 200 dwellings per annum, Woodspring would only deliver around 1,700 homes, falling substantially short of the 3,500 home trajectory set out in the draft Plan. The effectiveness of Policy SP3 therefore relies on unrealistic delivery assumptions, undermining the delivery of the Plan’s housing requirement. Allocating smaller, deliverable sites such as Land East of Failand would: • reduce reliance on long-lead strategic sites, • diversify the housing land supply, and • improve delivery rates early in the plan period. Need for Reassessment and for a More Balanced Strategic locations In light of the updated evidence base, Harrow Estates maintains that a reassessment of the Strategic Locations is essential. The Council should: • undertake a finer-grain Green Belt review around inset villages; • assess sustainable locations such as Failand on a consistent basis with western settlements; • incorporate eastern settlements into sustainability testing; and • reconsider distribution to reflect functional ties to Bristol. Such work would help ensure that the Plan is positively prepared, justified, effective, and consistent with national policy none of which can be demonstrated on the basis of the updated evidence in its current form. In conclusion, Policy SP3 is not sound because it is not: • Positively prepared. It does not meet identified needs or respond to Bristol’s unmet need. • Justified. It does not consider reasonable alternatives or align with sustainability evidence. • Effective. It relies heavily on strategic sites unlikely to deliver required housing within the plan period. • Consistent with national policy. It fails to promote sustainable patterns of development and does not address cross-boundary needs. A sound spatial strategy must:

									• Allocate growth in accessible eastern settlements such as Failand; • Reduce reliance on long-lead strategic allocations; • Reflect the functional relationship with Bristol; and • Align with the sustainability objectives of SP1		
63114593	Bloor Homes (North of Pound Lane Nailsea site)	Turley		No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy		No	The stated Spatial Strategy (SP3) is logical for North Somerset on the basis of the ability to locate new development within or close to existing urban areas where there is greatest potential to access a wide range of facilities, services and jobs, and there are opportunities to use existing or enhanced active travel and public transport routes. However, the Spatial Strategy is stated in general terms only with no detail in terms of any settlement hierarchy or the specific locations, or areas, where new development might be encouraged (or conversely might be restricted). It is considered that there is considerable scope to add additional clarity and detail to the proposed Spatial Strategy (Policy SP3) in the interests of the overall effectiveness of the plan. Distribution of Housing The draft policy states that priority will be given to locating new residential and mixed⟐use development in or close to urban areas where there is an existing or proposed wide range of facilities, services and jobs, and there are opportunities to encourage active travel. The approach taken in Draft Policy SP8 confirms that 15% of housing will be provided across Nailsea and Backwell. The proportion of housing delivery in villages and rural areas has reduced from 23% to 12% from the last Regulation 19 consultation. This amended approach is broadly supported, and better reflects the spatial strategy in Policy SP3. However, more can be done in our view in terms of prioritising development at the main towns in North Somerset in line with spatial strategy. Sequentially, existing towns must be preferred as locations for sustainable growth, ahead of the larger villages, consistent with the current settlement hierarchy and spatial strategy in the current adopted local plan, and also the spatial strategy in the emerging local plan. The Council, within its consultation paper on additional sites, and in a number of earlier reports to Executive and other committees, set out a clear hierarchy to follow when considering the allocation of additional sites, as follows: (a) Sites outside the Green Belt, but well related to the towns (b) Sites outside the Green Belt, but well related to the larger villages. (c) Sites in the Green Belt well related to the towns, including Bristol. (d) Sites in the Green Belt well related to the larger villages. (e) Elsewhere. The above hierarchy provides a logical approach to identifying sites for new development in the most sustainable locations, consistent with the emerging spatial strategy and in a manner that is also consistent with national policy (with consistency with the NPPF being a clear test of Soundness). As such, sequentially, where there is a need for the release of sites from the Green Belt (which we agree there is), suitable sites in the Green Belt adjoining existing towns (Portishead, Clevedon and Nailsea) must be identified/prioritised, before any sites in the Green Belt at larger villages (particularly where such sites would be on land classified as grey belt), including Backwell and Pill. The emerging plan now seeks to provide 15% of housing across Nailsea and Backwell. The previous version of the plan did not specifically list Backwell in the list of settlements (stating that 6% of housing would be provided in Nailsea). From reviewing the large site allocations listed within the emerging Local Plan, of the housing now proposed across the two settlements, circa 52% is to be provided in Nailsea and 48% is to be provided in Backwell. Backwell is defined as a village in the Local Plan, whereas Nailsea is a defined town within the emerging Plan. Nailsea is one of the largest settlements in the authority boundary; it has a vast range of services and facilities and is highly accessible. Our view remains that following the sequential approach set out above, suitable sites adjoining existing towns must be prioritised, before any sites in the Green Belt at larger villages. On this basis, the Draft Policy SP3 should be amended to recognise that the delivery of sustainable development should follow the sequential approach, where existing towns must be preferred as locations for sustainable growth, ahead of the larger villages. Delivery of housing within or adjoining existing settlement boundaries of existing towns (including Nailsea) should be considered acceptable.	The Draft Policy SP3 should be amended to recognise that the delivery of sustainable development should follow the sequential approach, where existing towns must be preferred as locations for sustainable growth, ahead of the larger villages. Delivery of housing within or adjoining existing settlement boundaries of existing towns (including Nailsea) should be considered acceptable		BLOA3068 - Nailsea - North Somerset Local Plan Regulation 19 Consultation - Dec 25.pdf
58664673	Catesby Estates	Stantec	Catesby Estates	Unsure				Policy SP3 sets out the proposed Spatial Strategy. The Spatial Strategy has been altered and new justification added. The Spatial Strategy includes that: "Priority will be given to locating new residential and mixed-use development in or close to urban areas where there is an existing or proposed wide range of facilities, services and jobs, and there are opportunities to encourage active and sustainable travel, particularly at locations which are currently, or have the potential to be, well served by public transport. Employment opportunities will be encouraged at accessible locations well-related to the urban areas and where sustainable transport opportunities can be maximised. Residential development in areas at risk of flooding now or in the future will be minimised outside the towns. Beyond strategic development areas the amount of development at villages and in the countryside will relate to local community needs". Policy SP3 continues to contain a sensible and rational approach to the location of new developments in sustainable locations that are close to facilities, services, jobs, and (most importantly) public transport. Previous representations identified conflicts within policy wording related to strategic development sites and their locations not having been appropriately taken represented as part of Policy SP3. It was previously proposed that to ensure Policy SP3: Spatial Strategy is found sound, that the policy reverts back to prior versions of this policy or acknowledge the growth and contribution that can be made at sustainable villages. Whilst Catesby supports the spatial strategy in principle, there may well be a need for greater growth in North Somerset over the Plan period in line with the spatial strategy, as per comments within Section 3.4 of these representations and related to joint-working requirements with other Local Planning Authorities in the region.			333102712 A3 AA SS 251212 FINAL North Somerset Publication Plan Consultations Reps-Appx_compressed.pdf

					national policy			are identified in the plan (on the Key Diagram and as part of later polices – SP5 and SP6) yet the Spatial Strategy makes no reference to these places. There is also no reference to other policy designations, such as the Green Belt (either existing or proposed as new), the Mendip Hills Area of Outstanding Natural Beauty (now Mendip Hills National Landscape), or various proposed Strategic Gaps (Policy LP7) all of which are referenced on the Key Diagram and have informed the Spatial Strategy proposed by the Plan. The Plan includes development in various locations including one significant new Strategic Location (Wolvershill, north of Banwell – Policy LP1) which is a significant feature of the plan and Key Diagram yet is not mentioned within the Spatial Strategy. It is considered that there is considerable scope to add additional clarity and detail to the proposed Spatial Strategy (Policy SP3) in the interests of the overall effectiveness of the plan. This detail could reflect the content of various later parts of the plan, and which is as set out more comprehensively within the "Spatial strategy, site selection and capacity" (October 2025) topic paper.	comprehensively within the "Spatial strategy, site selection and capacity" (October 2025) topic paper.		
51710305	Wain Estates (Wolvershill)	Tetlow King Planning	Wain Estates	No	• Effective					We welcome that the Local Plan spatial strategy makes provision for increased housing numbers in line with the standard method. The agree that exceptional circumstances exist that warrant the review of Green Belt boundaries in accordance with the NPPF and support the allocation of additional sites in the Green Belt. We support the aims of this policy.	0707-06.M23 Wain Estates NS Pre Submission Reg 19 Local Plan 12.12.25 with Appendices.pdf
63250785	LiveWest	PCL Planning Ltd		No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	As we have comprehensively set out in representations made on previous stages of the Emerging Local Plan, our clients have significant concerns regarding the overall strategy of the plan which appears to be aimed at providing the minimal amount of growth necessary, rather than consider matters of contingency or deliverability. Critically such an approach fails to recognise the historic and substantial undersupply of housing and its related affordability consequences both within North Somerset and Bristol, the latter being largely ignored by the Plan's approach. Despite the Revised NPPF (December 2024) providing LPAs with the tools to proactively maximise sustainable growth opportunities, including enabling a more pragmatic approach to Green Belt, the proposed spatial strategy (and the Plan's approach overall) significantly rule out the role of a number of settlements where sustainable growth can be achieved. Not only can such growth make an overall contribution to the Plan's housing challenge, it can provide critical resilience and capacity for existing services and facilities within those places in order to sustain their role and function to the benefit of their local communities. The alternative of not recognising growth opportunities in such places is stagnation and loss of services and facilities, increased affordability issues and over time the creation of inherent unsustainable settlements failing to meet the needs of their communities. Policy SP3 as proposed does not grapple with this issue at all, instead identifying only an urban focus with strategic growth at Weston Super Mare and four strategic development locations. Elsewhere development is either constrained by existing settlement boundaries or through specific allocations including in some larger villages but not in others. All other development opportunities at villages and rural areas are identified as 'relatively less sustainable' and development in such places will relate to "local community needs". We are concerned that Policy SP3 fails to clearly identify an appropriate settlement hierarchy below the town level with the role and function of the larger villages being less clear. Instead it should set out clearly which larger villages are considered more sustainable, instead of dealing with this only through where allocations have been identified or through infill. The policy as written lacks any distinction between a number of larger villages across the District, it is only the allocations set out in Schedule 1 which appear to define the preferred larger villages to accommodate growth, rather than Policy SP3. To this effect the additional sites consultation was much clearer in making a distinction between "most sustainable villages" and "less sustainable villages". Policy SP3 should similarly make this distinction. By identifying a clear hierarchy between Weston super Mare and the strategic growth locations followed by the towns and then the most sustainable villages and then less sustainable places, the policy provides greater clarity and support for the Plan's approach. In doing so the Policy will truly identify the most sustainable places for growth and can then clearly set out the expectations for growth and development at each level, which it currently does not. This will better ensure that the Plan seeks to accommodate growth in the most sustainable way, whilst maximising opportunities within all sustainable settlements. As identified in the Additional Sites Consultation and the adopted Core Strategy, Wrington must be identified as one such settlement. It continues to be a significant concern regarding the Plan's soundness as to how the continued omission of Wrington's role to deliver the sustainable development needed to sustain its role and function can be justified. Wrington has a wide range of services, including a primary school, nursery, post office, convenience store, independent shops and cafes, public houses, pharmacist, veterinary practice, memorial hall, sports and social club and places of worship. The village also includes opportunities for local employment within the existing Havyatt Road Business Park.There is a regular day time bus service from Wrington to Weston Super Mare which also provides links to national rail services to Bristol and elsewhere. It was because of this wide range of services that Wrington was identified in the previous Core Strategy as a Service Village but has been consistently downgraded throughout the Emerging Local Plan process, with the exception of the Additional Sites Consultation which clearly identified it as one of the more sustainable villages in the District. Yet seemingly on the basis of the level of objection to individual sites through that consultation, rather than any assessment of Wrington's actual sustainability credentials, it remains faced with minimal development opportunities solely focussed on infill within a constrained settlement boundary with little if any opportunity for development. As Policy SP3 acknowledges, Green Belt in itself should not be seen as a reason to not allocate sites or identified growth in more sustainable settlements. We would strongly contend that Wrington falls	Policy SP3 should be amended to set out a clear settlement hierarchy (including identifying the individual settlements) and the relevance of each in terms of delivering growth. It should make clearer distinction between the identified places below the towns (i.e, the villages) in terms of being identified as more sustainable or less sustainable, with growth opportunities identified to reflect this. Policy SP3 should set out circumstances and mechanisms for supporting growth in these locations ensuring it is flexible enough to respond to needs, sustainable development opportunities and changing circumstances (including non-delivery of other sites). Wrington should be identified as a more sustainable settlement within the settlement hierarchy, reflecting its wide range of services and facilities and opportunities for accommodating sustainable growth. The Policy map should be amended accordingly. 								within such places given its wide range of services and facilities and opportunity to deliver sustainable development. We further discuss Green Belt implications in our representations made under SP7. Without Policy SP3 clearly establishing a hierarchy of identified sustainable settlements (which should include Wrington) and further identifying clear mechanisms for supporting growth in those locations the policy will be ineffective and instead constrain these places to the detriment of their local communities. This approach does not explicitly consider the implications of the level of need for affordable housing within the larger villages (including Wrington) and the risks of effectively a no growth approach. As we have raised on our client's behalf previously the Core Strategy approach, in clearly identifying sustainable places and providing positive policy support for the release of sites for appropriate development, provided a much more flexible approach to delivering sustainable development and was critical in supporting high levels of windfall development as well as affordable housing delivery. Unfortunately, Policy SP3 falls far short of this flexibility, clarity and deliverability. Instead, it appears to seek to set all parameters for growth in the larger villages now, based on the availability of sites currently and their degree of contention, rather than ensure the Plan is flexible enough to respond to needs and circumstances of the future. It is for the reasons set out above that we consider Policy SP3 significantly undermines the soundness of the Plan overall as it has not been positively prepared as it is not seeking to meet identified needs. Its strategy is not justified as it contradicts clear evidence of need and the contribution the larger villages (including Wrington) could make to delivering sustainable development and does not take into account reasonable alternatives in to address this. The Plan's approach will not be effective in that there is no clear evidence that supports the Plan being deliverable. It is not consistent with national policy in that its approach limits rather than maximises the opportunities for the Plan to deliver sustainable development in accordance with the Framework. Please see previous representations made on earlier versions of the Plan for completeness. These are appended to the covering email for these and other representations made on the Regulation 19 (Pre-Submission Plan).		
41434017	Wain Homes (Severn Valley) Limited	J Millard	Wain Homes (Severn Valley) Limited	No	• Justified • Effective	Yes	Yes	The Spatial Strategy [SP3] provides the policy framework to meet the identified housing needs which is set out at Policy SP8 [Housing]. SP8 confirms that the Local Plan must provide for a minimum of 23,700 new homes (1,580 per annum) over the Plan period 2026-2041. This level of growth is derived from the Local Housing Needs assessment (LHN) as calculated through the Standard Method. This Reg 19 Local Plan seeks to respond positively to this housing challenge by ensuring that that the full LHNA is addressed. This is the correct approach and is supported. The scale of housing that needs to be delivered across the plan period to 2041 should be set in the context of historic delivery rates. Between 2006-2024 a total of 15,019 homes have been delivered, an average of c.835 dwellings per year. This rate of delivery is below that set out in the adopted Core Strategy (2006-2026) which requires an average annual delivery rate of 1,049 dwellings. This means that at 18yrs into the current plan period, housing delivery is c.3,836 dwellings below where it should be at this stage and requires completion rates to more than double annually if the Core Strategy housing requirement is going to be addressed in the current plan period to 2026. This demonstrates the challenges faced historically within North Somerset in terms of meeting the identified housing need. Further evidence of the failure to deliver sufficient housing in North Somerset can be found within the latest published data on housing delivery (Residential Land Survey and Housing Land Supply Position Report – April 2024). This shows that in the last monitoring year (2023/24), 753 dwellings were completed. It is only in the monitoring year 2007/08 that North Somerset has delivered an annual rate of delivery that is anywhere near the annualised rate that required through the LHNA, where the district achieved 1,474 dwellings in that year. Since 2020, housing delivery has averaged 916 dwellings each year, equal to 60% of the rate that is required to meet the full LHNA annualised requirement. The most up to date assessment of housing land supply for North Somerset (2024-2029) identifies a supply of just 3.88yrs(1), although the Annual Monitoring Report (2024) notes that through recent planning appeals, housing land supply for the district has been assessed as being 2.79yrs. It is therefore clear that there is an immediate and urgent need to support a step-change in housing delivery and for this to be maintained at levels significantly above historic completion rates. To achieve this the Spatial Strategy should provide a positive policy framework that maximises opportunities for sustainable development opportunities to come forward in the immediate and longer term. Policy SP3 (Spatial Strategy) confirms that 'priority' will be given to locating new residential and mixed-use development in or close to urban areas where there is an existing or proposed wide range of facilities, services and jobs and where there are opportunities to encourage active and sustainable travel, particularly at those locations well served by public transport. This is a logical and sound approach and will assist in achieving sustainable patterns of development and will support the role and function of existing settlements. The Spatial Strategy is derived through a 'sequential approach' where development is to be prioritised to the most sustainable locations, focusing development at the towns and urban areas, the starting point being those locations outside of the Green Belt. As part of the Spatial Strategy is it accepted within this Reg 19 consultation that due to the constraints across the North Somerset area, including areas at risk of flooding and the Mendip National Landscape designation, it is not possible to meet housing need outside of the Green Belt. As such, this Reg 19 accepts that 'exceptional circumstances' apply and that this requires the release of land from the Green Belt. This approach is supported. In this context it follows that where suitable Green Belt development locations are consistent with the overarching principles of the Spatial Strategy, to direct growth to the main settlements and where their contribution to the purposes of the Green Belt is not significant, then such opportunities should be brought forward through the allocation of sites within this Regulation 19 Local Plan. This is even more compelling for those Green Belt sites which have been assessed through the evidence prepared for this consultation, to be capable of being identified as 'grey belt' land. The principal location for new development is Weston-super-Mare which is proposed to accommodate 7,730 dwellings (32% of total housing). Alongside this, the Local Plan identifies four strategic development locations which includes Nailsea and Backwell which is identified within Policy SP8 as providing 3,728 dwellings (15% of total housing provision). (1 - Residential Land Survey and Housing Land Supply Position Report April 2024) The scale of housing to be accommodated at Nailsea and Backwell (3,728) is only marginally higher than that which is proposed to be delivered at the Woodspring (southwest	The principles and objectives of the Spatial Strategy are supported. However, there is concern that the spatial distribution of development is informed by a site selection process which is inconsistent and not justified. As a strategic location, opportunities to support sustainable development options at Nailsea should be maximised and based on a sound process through which sites are assessed. Our representations set out concerns regarding the site selection process in respect of Land Northeast Nailsea which we consider is based on an inconsistent approach and excludes this site, which if allocated, would be entirely consistent with the overarching approach set out in the Spatial Strategy. As such, the selection and assessment of site options at Nailsea should be revisited to ensure this is based on sound basis. 								Bristol) allocation. As one of the identified strategic development locations it is considered that the level of development directed to Nailsea/Backwell is artificially constrained and premised on a site selection process, in the context of HE20223, which is flawed and lacks any justification. In doing so, creating a policy context which limits development opportunities at Nailsea which is not supported by evidence. (PLEASE SEE ATTACHED DOCUMENT)			
63213025	BackwellPC NailseaTC Flax BourtonPC BrockleyPC BackwellRA Nailsea Action Group	Lucy White Planning Limited	BackwellPC NailseaTC Flax BourtonPC BrockleyPC BackwellRA Nailsea Action Group	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	BPC and NTC strongly object to the spatial strategy which fails to respond directly to the findings of the Pre-Submission Sustainability Appraisal (SA) which recommends a strategy based on urban focus (Approach 2). The SA is explicit in its findings that Approach 2, which directs development towards Weston, SW Bristol and other main towns and sustainable locations would perform best in meeting the economic, social and environmental objectives of sustainable development. It advises that a strategy based on urban focus would best meet housing needs, direct housing to major employment locations and therefore address the current imbalance of employment and housing and reduce commuting. The approach would also maximise the benefit of new infrastructure for the wider communities and minimise flood risk, loss of high value agricultural land and impacts on sensitive habitats. The spatial strategy is in fact closer to Approach 3 (Transport Corridors) which focussed development at locations including Weston-Super-Mare, Backwell, SW Bristol, as illustrated in the Choices for the Future consultation in 2020 (see extract in attached document): The Transport Corridors Approach (Approach 3) performs notably less well than Approach 2 (Urban Focus). For example: - Approach 3 performs less well than approach 2 where development is located in smaller settlements, which are not judged to have the demand for new employment; - Approach 2 performs best by concentrating development at Weston-Super-Mare and Bristol, exceeding Approach 3; - Approach 3 includes places with a high probability of Best and Most Versatile agricultural land quality and therefore performs less well than Approach 2; - Approach 2 performs best in terms of promoting development which requires deliverable levels of high quality and sustainable infrastructure; - Approach 2 performs best where development is concentrated at Weston-Super-Mare and SW Bristol for meeting housing need. - Approach 2 performs best in terms of delivery of renewable energy networks; - Approach 3 contains large-scale development at Nailsea which contains areas of Flood Zone 3. - Approach 2, concentrating development in existing towns and near Bristol has the lower potential to impact biodiversity, habitats and species. Approach 3 is identified as having greater potential for adverse impacts on bats and designated sites. (SA, October 2025 paragraphs 4.9 – 4.31). The Spatial Strategy and Capacity Paper (October 2025) provides no justification for the selection of a spatial strategy which aligns most closely with Approach 3, when there is clear evidence that Approach 2 offers the most sustainable development strategy for the local plan area. The Preferred Options to the Local Plan 2038 (published 2022) first mooted proposals for strategic scale development at Nailsea and Backwell (Policy LP3). The proposals were broadly the same as those proposed through this Pre-Submission version of the plan. The policy was justified by the Council on the basis of Backwell's relative proximity to Nailsea and the train station. "Nailsea is a main town within North Somerset and a focus for growth as part of the preferred spatial strategy for development. Given its proximity to Nailsea and the train station, growth opportunities at nearby Backwell have also been considered and form part of the draft proposals" (page 26, Preferred Options) The Preferred Options recognised that "very significant transport interventions would be required to support growth and avoid adverse impacts upon the existing transport network." (page 26, Preferred Options) Key transport issues were raised regarding connectivity across the railway between Nailsea and Backwell. The Preferred Options acknowledged that "Ongoing evidence around deliverability of this infrastructure will be important in setting the framework for growth." This consultation was supported by an earlier iteration of the Spatial Strategy and Capacity Paper (February 2022). At this point in the plan-making process NSC was exploring the potential to identify Yatton and Backwell separately from other villages, as larger villages with a "wider range of services, facilities and jobs" (paragraph 35, Spatial Strategy and Capacity Paper) and perceived opportunities to encourage active travel and access to public transport. Accordingly, these villages were considered capable of accommodating a higher level of development than other villages. The Paper sought to justify the separate identity of Backwell describing it as: "A large village with a smaller range of shops and facilities, but it does have a secondary school and leisure centre and is adjacent to Nailsea with its higher order facilities. It has a main line station and is on the A370 bus corridor. There is potential to improve bus access from Backwell to Bristol." (paragraph 36). However, following public consultation NSC took the decision to remove the separate identification of Yatton and Backwell within the settlement hierarchy and reinstate the settlements as villages within the rural areas. It is noteworthy that through this process the Council acknowledged that: 1. Backwell does not have a wide range of shops and facilities and is reliant on Nailsea for higher order facilities; 2. Backwell (in combination with Nailsea) is unsuitable as a strategic growth location due to the need for substantial new highway infrastructure which has proven to be unviable and undeliverable within the plan period. In support of the Pre-Submission Local Plan published in November 2023, the Spatial Strategy and Capacity Paper advised that "further technical work has concluded that the scale of growth at Nailsea/Backwell is constrained by the lack of deliverability of essential strategic transport mitigations." (paragraph 3.1). It elaborates further "The Preferred Options proposed Nailsea/Backwell as a strategic growth location subject to, in particular, deliverable strategic transport mitigations being identified. This related to a potential new road crossing of the railway to alleviate capacity issues at Backwell crossroads and Station Road. The transport evidence at the time indicated that the rail crossing could be either to the west or east of Backwell and could be a bridge or a tunnel. None of these options are straightforward given flooding issues which could affect any crossing under the railway and the visual impact of a bridge crossing a railway on an embankment. Further technical assessment following Preferred Options resulted in a preference being for a bridge crossing to the East of Backwell. However, taking account of potential development contributions and other sources of funding, the costs of delivery were prohibitive which meant that delivery was highly unlikely over the plan period." Paragraph 3.12, Spatial Strategy and Capacity Paper, November 2023). The conclusions drawn at the time of the 2023 Pre-Submission Local Plan were that the scale of development at Nailsea and Backwell were not sustainable and the settlements should no longer be proposed as a strategic growth location in the plan (paragraph 3.14). These factors remain entirely relevant. There has been no material change in circumstances since the	Amendment sought: Spatial strategy to be amended to align the findings of the SA, including Approach 2 and to reflect the evidence available which does not support Nailsea and Backwell as a strategic development location.		251118 Local Plan Reg 19 2025 reps FINAL.pdf R01 - Transport Statement - Rev 3 FINAL.pdf Hydrology LP3 BPC_NTC Appendix_2.2-compressed.pdf Hydrology LP3 BPC_NTC Appendix_2.1-compressed.pdf Hydrology LP3 BPC_NTC Appendix_9-compressed.pdf Hydrology LP3 BPC_NTC Appendix_7-compressed.pdf Hydrology LP3 Summary BPC_NTC Part 2 (1).pdf Hydrology LP3 Summary BPC_NTC Part 1 (1).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								2023 Local Plan and no significant change to the development proposals other than confirmation that a new rail crossing would be sited to the east of Backwell. 1.23 The Spatial Strategy and Capacity Paper (October 2025) offers no explanation for the selection of the strategic growth locations and very limited justification for the reversal of previous decisions to direct substantial development to the village of Backwell. Neither the Pre-Submission Local Plan 2025 or the accompanying Spatial Strategy and capacity Paper (October 2025) justify the reversal of previous decisions made through the Local Plan preparation process. The spatial strategy as presented through Policy SP3 is not supported by the evidence presented through the Sustainability Appraisal and fails to justify, through appropriate evidence that Nailsea and Backwell represents a sustainable location as a strategic development location. Accordingly, the policy is unjustified and therefore unsound.			
43217217	Parker Strategic Land	Guy Wakefield, Ridge and Partners LLP		Yes		Yes	Yes			In terms of the spatial strategy identified in the Pre-Submission Plan Document, PSL are in general support of the strategy identified. Policy SP3 (Spatial strategy) within the Pre-Submission Plan states that: “Priority will be given to locating new residential and mixed-use development in or close to urban areas where there is an existing or proposed wide range of facilities, services and jobs, and there are opportunities to encourage active and sustainable travel, particularly at locations which are currently, or have the potential to be, well served by public transport.” The supporting justification for Policy SP3 outlines that “where an authority cannot meet its identified need for homes at sustainable locations outside the Green Belt this amounts to exceptional circumstances and the authority should review Green Belt boundaries to meet these needs in full. Due to the constrained nature of North Somerset including large areas at risk of flooding and the Mendip Hills National Landscape it is not possible to meet the government’s standard methodology housing need figure for North Somerset outside of the Green Belt in a sustainable way.” It is considered that the above approach is in line with the requirements of the NPPF and is supported. The supporting justification goes onto outline that “Green Belt sites that have been identified are located in the most sustainable locations on the edges of urban areas.” The allocation of the site at Tower Farm is considered to align with the spatial strategy and allocating Green Belt sites in sustainable locations, being on the edge of the existing settlement, adjacent to an existing school and within a town expected to benefit from a new railway station by 2028. The above spatial strategy is supported by PSL as it ensures the delivery of suitable and sustainable sites, including Tower Farm.	North Somerset Reg 19 Pre-Submission Plan - Portishead final 9.12.25.pdf North Somerset Local Plan Pre-submission Plan - Representation form Part B Policy SP3 Spatial Strategy.docx
21472417	Mead Realisations Ltd	Oneleven Property		No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy				This policy suggests that priority will be given to locating residential and mixed-use development in or close to urban areas. In reality the strategy is more restricted due to the Council’s approach to flood risk. In reality the plan only seeks to allow development outside existing settlement boundaries in limited situations which is likely to hamper the Council’s ability to meet housing targets across the plan period, as was the case in relation to the Core Strategy. As set out earlier in these representations the plan should consider including policy's which would allow flexibility for new development to come forward in sustainable locations close to or adjacent to existing settlement boundaries to help meet identified housing need and to ease the impact of undersupply or delays in the delivery of allocated sites. 									Through this policy the definition of what the Council considers to be accessible locations should be clearly set out. The policy also states that development at villages and in the countryside will relate to community needs only. The Council's evidence does not explain why villages in accessible locations with good transport opportunities should be limited to meeting local housing and community needs only. In particular, development proposals adjacent to large towns or villages, which have a good range of services and facilities and good public transport links can provide opportunities to accommodate appropriate levels of housing growth. The following amendments are suggested to Policy SP3: "Priority will be given to locating new residential and mixed-use development in or close to urban areas where there is an existing or proposed wide range of facilities, services and jobs, and there are opportunities to encourage active and sustainable travel, particularly at locations which are currently, or have the potential to be, well served by public transport. Employment opportunities will be encouraged at accessible locations well-related to the urban areas and where sustainable transport opportunities can be maximised. Residential development in areas at risk of flooding now or in the future will be minimised outside the towns unless it can be demonstrated that it will be safe for its lifetime without increasing flood risk elsewhere. (To delete..Beyond strategic development areas the amount of development at villages and in the countryside will relate to local community needs.)		
20338913	Aston & Co		Aston and Co UK							We support SP3: Spatial Strategy which was developed in line with NPPF using an iterative process with good public and wider interested party engagement. The Reg19 plan is well balanced and evidence based.	
14822593	Sally Bartlett			Yes		Yes	Yes			In general I support this plan noting the following to ensure the proposal remains sound: Yes - we need more affordable housing - this must be sustainable and 'green' etc It is very important that brownfield sites are used and we must consider the future reprocussions of building on land that could or is being used for food production. No: - we do not need any expansion of Bristol Airport for a very large number of reasons inc, pollution & climate change, lack of transport links, better alternatives elsewhere esp Cardiff and Exeter, cf arguments put forward by BAAN: Bristol Airport Action Network - we do not need developer scale developments in Wrington for the reasons given by Keep Wrington as Wrington. we must be mindful of of the choices made by people who wish to live rurally and not ruin the integrity of villages in North Somerset by imposing suburbia on these communities.	
62815873	E Beacon			No	• Justified • Consistent with national policy	Unsure	Unsure	SP3 spatial strategy issues and SP10 transport issues.The village of Pill and EIG does not have a wide range of facilities services or jobs. Large new developments will be dormitary areas from where people have to travel to work. This is likely to see an increase in car use, The new train can only offer a half hour service and will probably be full after leaving portishead. The train doesn't offer travel to Clifton or the city centre so is unlikely to be used by the vast majority of commuters. There will likely be an increase in traffic on the A369 and further pressure on the Abbots Leigh bottleneck. It already takes 45 minutes at rush hour to travel from pill to Clifton on a journey which takes 15 minutes at quieter times.The Highways Authority's views have not been given appropriate consideration. SP3 states development should not be of a disproportionate scale which adversely affects the character of an area. This is a breach of that.	- A public meeting - A review of sites to ensure compliance with council policies. -An acknowledgemt to work within existing settlement boundaries -A review of how the A369 can handle extra traffic with acceptance that the train cannot really provide a solution when it will be permanently limited to 30 minute journeys with small carriages.

29290881	John Belton			No	• Positively prepared • Justified	Unsure	Unsure	Each North Somerset town or village conducts a community-led improvement plan of key sites, including underused, vacant, dilapidated and locally preferred brownfield and greenfield sites. The target allocation of homes for each area will remain, however the type, location and arrangement can be designed to benefit the local population. The construction methods are to be low impact, local and energy efficient. The benefits of this approach would be improvements in community health, local jobs, reduced loneliness, economic prosperity, sustainable travel routes, better living conditions, older residents remain in their community, kids have safe places to play, nature recovery and reduced anti-social behaviour.			
53971713	Gill Bennett			Unsure		Unsure	No	Not widely published and therefore not enough residents can have their say on this plan. Why is the principle location Weston-super-Mare? This town is now gridlocked as there needs to be a new motorway junction.			
57251201	Caroline Bennett			Yes		Yes	Yes			The plan has taken a pragmatic, reasonable and sensible approach to the planning process. It recognises the need to build houses for the benefit of current and future communities while recognising and managing their impact on local infrastructure. The focus on growth around existing locations which have access to existing transport, employment and social infrastructure is the most sustainable approach to take in local authority that has such mix of urban and rural areas.	
51455297	St Philips	Richard Grant	St Philips	Yes		Yes	Yes			Policy SP3 sets out a high level spatial strategy to guide where development in North Somerset should take place. It sets out that: “Priority will be given to locating new residential and mixed-use development in or close to urban areas where there is an existing or proposed wide range of facilities, services and jobs, and there are opportunities to encourage active travel, particularly at locations which are currently, or have the potential to be, well served by public transport.” We support this element of the strategy, and in particular the reference to priority being given to locations close to urban areas where a wide range of facilities are proposed and which have the potential to be well served by public transport. The strategic growth location at Wolvershill is located close to Weston-super-Mare, Worle and Banwell and will include a wide range of facilities and a comprehensive transport strategy including active travel opportunities and access to public transport. Development in this location is therefore fully supported by the Spatial Strategy set out in Policy SP3. It is welcomed that the text supporting Policy SP3 now contains a spatial element which was missing from the previous Regulation 19 draft Local Plan. The text now names locations where significant strategic growth will be delivered, and notes that housing need is of such a scale in North Somerset that Green Belt release is now being planned for. Consequently, strategic development sites are identified in the Green Belt close to or adjoining the built up area of Bristol. It is also welcomed that Wolvershill is named as a strategic location for growth – and it is noted that Wolvershill is the only strategic growth location in North Somerset which is not within the Green Belt, clearly showing the importance of the strategic location to ensuring North Somerset can meet its housing need.	
30301601	Ainscough Strategic Land	Chris Price	Ainscough Strategic Land	No	• Positively prepared • Justified • Effective	Yes	No	ASL is supportive of the Plan’s spatial strategy to prioritise locating strategic new residential and mixed-use development in or close to urban areas where there are existing or proposed facilities, services and jobs, as well as opportunities for active travel and public transport. The key evidence base document for Policy SP3, ‘Spatial Strategy, site selection and Capacity paper’ (October 2025), confirms that ‘Land North of Banwell (Wolvershill)’ is identified to meet the needs of the principal settlement of Weston-super-Mare. Wolvershill is noted as one of four strategic locations in the Local Plan together with Woodspring, Nailsea and Backwell and Pill and Easton-in-Gordano. Wolvershill is a logical location for town expansion, well related to the existing urban area of Weston-super-Mare. Wolvershill has been consistently proposed as a strategic location for growth in North Somerset, throughout both North Somerset’s Local Plan 2041 process, and prior to this the West of England Joint Spatial Plan process. This led to funding being awarded from Homes England’s Housing Infrastructure Fund (HIF) for the Banwell Bypass, to deliver the infrastructure required to enable			61683 - NSC Reg 19 Representations December 2025 2-12-25.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								future housing development and address congestion through Banwell village. The Bypass was granted planning permission in March 2023, and NSC voted in favour to progress to Stage 2 of the detailed design and construction of the Bypass in November 2023. Work has commenced on site and the bypass is due to open to traffic in Spring 2027, with the scheme completed in Summer 2027. Whilst ASL supports the spatial strategy in terms of strategic growth, as per our comments set out at Section 4.0 of these representations, there is likely to be a need for additional growth in North Somerset over the plan period in a range of locations and of various scales.			
62850369	Maureen Butterly			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	While Policy SP3 is correctly framed around prioritising sustainable locations for growth, its application in the Local Plan is not sound. The evidence does not demonstrate that the proposed strategic development at Pill and Easton-in-Gordano meets the requirements of this policy or national planning policy. As a result, the spatial strategy is not justified, not effective, and not consistent with national policy. 1. SP3 requires growth to be focused in urban areas with services and jobs — but Pill/E-in-G is neither The justification for SP3 describes a sequential approach that prioritises: • towns and urban areas, • locations with a wide range of facilities, • areas with strong public transport, • well-connected employment centres. However, Pill/Easton-in-Gordano: • is not an urban area nor a town; • does not offer a wide range of services or local employment opportunities; • is heavily dependent on car travel; • suffers from serious constraints at M5 Junction 19; • has limited public transport capacity, and improvements are not secured. Allocating 1,100 homes here contradicts SP3's own sustainability criteria and therefore fails the soundness test of justification. 2. The Plan asserts exceptional circumstances for Green Belt release, but the evidence is incomplete The justification for SP3 claims that exceptional circumstances exist because North Somerset cannot meet its housing need outside the Green Belt. However, the Plan does not demonstrate that all non–Green Belt alternatives have been fully explored, including: • maximising brownfield land; • applying higher densities in towns and around transport hubs; • increasing growth at Weston-super-Mare (the most sustainable location); • working with neighbouring authorities under Duty to Co-operate; • reallocating underutilised land in other settlements. Without a complete alternatives assessment, exceptional circumstances for allocating Green Belt land at Pill/E-in-Gordano are not robustly established, making SP3 inconsistent with the NPPF. 3. SP3 requires development to be located where infrastructure can support it — but infrastructure capacity is uncertain The NPPF states that large-scale development should be located where infrastructure can support it. Yet for Pill/E-in-Gordano: • Cumulative transport modelling (including M5 Junction 19) has not been published. • National Highways has already raised concerns about the cumulative impacts of proposed developments. • Local services (schools, healthcare, local centre, public transport) are not currently capable of supporting a 44% population increase. • Funding for major infrastructure improvements is not secured. SP3 is therefore not effective, because the strategy relies on infrastructure that may not be deliverable. 4. SP3 requires minimising development in flood-risk areas — yet some allocations lie near known flood zones The justification states that residential development in areas at risk of flooding will be minimised outside towns. However, Pill/E-in-G includes: • land adjacent to Markham Brook, • areas within or close to Flood Zone 3, • sites requiring sequential testing. The Plan does not demonstrate that lower-risk alternatives were considered first. This contradicts SP3 and national policy on flood risk, making the strategy not justified. 5. SP3 states that development in villages should reflect local need — but the Plan allocates 1,100 homes to a village of 4,500 people SP3 states clearly that rural development should relate to local community needs and avoid disproportionate growth. Yet Pill/Easton-in-Gordano is assigned: • 1,100 homes (approx. 44% population increase), • the same "Strategic Location" status as major settlements. This is not proportionate and is inconsistent with SP3, which recognises villages as less sustainable locations. This undermines both effectiveness and consistency with national policy. 6. The spatial strategy lacks clear evidence that it delivers the objectives in SP1 and SP2 SP3 is intended to implement SP1 (Sustainable Development) and SP2 (Climate Change). However: • the distribution of development increases car dependency, • fails to maximise brownfield land, • puts pressure on sensitive ecological areas, • places growth in constrained locations. This means SP3 does not support the Plan's own strategic framework, creating an internal inconsistency. Summary Although SP3 is appropriate in principle, the Local Plan does not apply the spatial strategy in a way that is: • Justified (reasonable alternatives have not been fully assessed), • Effective (infrastructure cannot support the proposed growth), • Consistent with national policy (on Green Belt, transport, flooding, sustainable development). Therefore, I do not consider SP3 or the spatial strategy it underpins to be sound.	To make Policy SP3 and the associated spatial strategy sound, the following modifications are required: 1. Reassess the strategic distribution of development to prioritise genuinely sustainable locations SP3 states that priority should be given to urban areas with a wide range of services, facilities, and jobs. The current strategy does not reflect this. Required modifications: • Reallocate a higher proportion of growth to Weston-super-Mare, Clevedon, Nailsea, and Portishead, where sustainable transport, employment, and services already exist. • Reduce or remove the Strategic Location designation for Pill/Easton-in-Gordano unless robust evidence shows it meets sustainability criteria equivalent to the identified towns. • Update the Sustainability Appraisal to evaluate revised spatial distribution options. 2. Provide full evidence that all reasonable alternatives to Green Belt release have been exhausted SP3 relies on the assertion that exceptional circumstances exist to release Green Belt land. This requires a rigorous alternatives assessment. Required modifications: • Publish a transparent assessment showing full utilisation of brownfield land, regeneration potential, and higher-density opportunities in towns and transport hubs. • Provide a clear alternatives analysis showing why these options cannot accommodate additional housing need. • Reduce or remove Green Belt releases in Pill/E-in-Gordano unless exceptional circumstances are robustly demonstrated with evidence. 3. Integrate complete, up-to-date cumulative transport modelling into the spatial strategy The spatial strategy must demonstrate that transport networks can accommodate proposed growth without unacceptable impacts. Required modifications: • Undertake and publish cumulative transport modelling, including impacts at M5 Junction 19 and surrounding routes. • Amend SP3 to require that major allocations proceed only where sustainable transport improvements are deliverable and funded. • Modify or remove allocations where car dependency will increase or where mitigation cannot be secured. 4. Demonstrate that necessary infrastructure can be delivered "in step" with development SP3 requires development to be located where infrastructure exists or can be provided. Required modifications: • Provide detailed evidence on the deliverability and funding of required infrastructure (schools, health services, active travel routes, public transport). • Introduce phasing requirements ensuring infrastructure is delivered before or alongside housing. • Reconsider allocations where infrastructure funding or delivery timing cannot be guaranteed. 5. Apply the sequential test rigorously and remove or amend allocations in areas at higher flood risk		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									SP3 requires minimising development in flood-risk areas outside towns. Required modifications: • Publish the sequential test for all sites affected by fluvial or tidal flood risk, including those near Markham Brook. • Remove or amend allocations where safer, lower-risk sites exist elsewhere. • Include policy wording requiring site-specific, climate-adjusted flood mitigation for any remaining sites. 6. Reassess growth levels in rural settlements to ensure they reflect local needs and do not create disproportionate impacts SP3 states that development in villages must be proportionate and linked to local needs. Required modifications: • Reduce the scale of development proposed for Pill/E-in-Gordano to reflect sustainability constraints and community need. • Amend the spatial strategy to prevent rural settlements from being assigned levels of growth equivalent to urban areas. • Update the SA and supporting evidence to justify amended rural growth levels. 7. Strengthen consistency with SP1 (Sustainable Development) and SP2 (Climate Change) The spatial strategy must operationalise these strategic policies. Required modifications: • Require that site allocations demonstrate how they will achieve net-zero transport objectives and reduce carbon emissions. • Limit strategic allocations to locations where active travel and public transport are realistically deliverable. • Remove or amend allocations that would increase car dependency or undermine climate objectives. 8. Improve Duty to Co-operate documentation for infrastructure, transport, and environmental constraints SP3 depends on cross-boundary issues, but supporting evidence is incomplete. Required modifications: • Publish clear evidence of engagement with National Highways, the Environment Agency, Natural England, and neighbouring authorities. • Explain how their advice has shaped the spatial strategy. • Where concerns remain unresolved (e.g., transport modelling), reconsider or remove the affected allocations. Summary Modification To be sound, SP3 must be revised so that: • development is genuinely directed to the most sustainable locations, • Green Belt release is justified by robust evidence, • infrastructure capacity is proven and funded, • flood risk and ecological impacts are fully assessed and mitigated, and • growth in rural settlements is proportionate and based on sustainability criteria. Without these modifications, the spatial strategy fails the soundness tests of justification, effectiveness, and consistency with national policy.		
58516481	Mr Thomas Catling (Woodstock Homes, Knightcott Road, Banwell)		Woodstock Homes (Construction) Ltd	Unsure	• Justified • Effective • Consistent with national policy	Unsure	Unsure	Woodstock Homes control the 22 acre site, Land to the South of Knightcott Road, Banwell, a site which has been promoted through the earlier stages of the Local Plan process and recently achieved a resolution to grant at the October Planning and Regulatory Committee for outline planning on 4.6 acres of the site for up to 27 dwellings (24/P/0967/OUT). Woodstock are in control of the remaining 17 acres, of which was part of a previous application for 95 dwellings (23/P/2303/OUT) was made but was later withdrawn. This representation submissions aims to provide commentary on the emerging Local Plan, with focus on the rural settlements, specifically Banwell. Banwell is identified in the adopted Core Strategy as a service village (Policy CS32), containing a number of local services along with public transport links.			CP-01 PH2 Knightcott Rd, Banwell - Concept Plan @ A2 Notes.pdf Knightcott Road Banwell - Representations Reg 19.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								By way of the inclusion of Banwell within Schedule 5 of the Pre-Submission Plan, as a settlement with a defined boundary, it is clear that the council acknowledges the village within the settlement hierarchy. The Vision for the North Somerset Local Plan 2041 makes clear that there is an aspiration to encourage development in highly sustainable, accessible and attractive places. SP6: Villages and rural areas, reinforces this aspiration with the importance of accessible locations with good walking, cycling and public transport connections. However, Policy SP3 (Spatial Strategy) acknowledges that "most of the development which takes place in these areas will be at the relatively more sustainable villages". Banwell is identified within the current Core Strategy as a Service Village (Policy CS32), offering a number of a local services along with public transport links throughout the wider district. However, Schedule 5 (Settlements with settlement boundaries), has Banwell listed as "Retained and reviewed existing boundary", meaning no further allowance for sustainable growth at the edge of the settlement boundary has been considered. By assessing the settlement boundaries further, this would therefore help to reduce the need for Green Belt release throughout the district.			
31037185	Nigel Cooke			Yes		Yes	Yes				
51242689	Latimer Developments Limited	Arwel Evans - Lichfields	Latimer Developments Limited	No	‣ Positively prepared ‣ Justified ‣ Effective	Yes	No	Draft Policy SP3 identifies Weston-super-Mare as the principal location for new development. New development will also be prioritised in the following four strategic locations: • Wolvershill (north of Banwell) – 3,300 homes; • Woodspring (south west of Bristol) – 3,500 homes; • Nailsea and Backwell – 3,728 homes; and, • Pill and Easton in Gordano – 1,100 homes. Draft Policy SP5 also states that development will be prioritised within the four town centres of North Somerset, those being Weston-super-Mare, Clevedon, Nailsea and Portishead owing to their sustainability credentials. Draft Policy SP6 seeks to limit new residential development outside of the settlement boundaries of villages and rural areas. The supporting text states that: 'development in the rural areas is relatively less sustainable given the absence of services, facilities and job opportunities'. This fails to acknowledge that the form, nature, size and sustainability credentials of Villages within the authority varies considerably, and is a step change from the adopted Core Strategy approach and the Council's own evidence base. It is incorrect to state that there is an absence of services, facilities and job opportunities in settlements outside the towns. This has essentially created a two-tier settlement strategy that does not reflect the nature and function of the settlements of North Somerset with all settlements apart from Weston -Super-Mare, Nailsea, Clevedon and Portishead (as well as the strategic development locations) considered in the 'Villages and rural areas' category. As set out in draft Policy SP8 the 'villages', account for 2,948 dwellings (12% of the housing supply) in the Regulation 19 plan with the remainder coming from the towns and the strategic allocations. We consider that the settlement strategy does not reflect the function and form of the settlements of North Somerset and as a result, the distribution of housing, set out in policy SP8 is not effective in ensuring delivery over the plan period. As it stands, we consider that draft Policy SP8 is not justified and is therefore unsound. The proposed settlement strategy does not reflect the existing settlement hierarchy as evidenced by the Council's own work. In order to be considered sound, a third tier should be added which should consist of the more sustainable villages, as evidenced by the Council's own work to assess the sustainability of villages. Policy SP6 (Villages and Rural Areas) is too restrictive to allow meaningful development to take place in villages that could suitably meet the needs of the area and to assist in supporting their viability. Policy SP6 as it stands appears to be drafted in order to protect rural areas from any development regardless of the characteristics of the rural settlements – some of which are large, sustainable and thriving communities. This appears to be an even stricter form of policy than that of the adopted Core Strategy that allowed sites of up to 25 dwellings outside of settlement boundaries for service villages subject to criteria. It appears that Yatton has been demoted from a Service Village in the new Local Plan to fall within the 'Villages and Rural Area' category even though it is a highly sustainable settlement that serves a wider catchment as evidenced through the recent residential permissions. As it stands, we consider that draft Policy SP6 is not justified and is therefore unsound. Policy SP6 should be amended to make it clear that sustainable housing developments adjacent to the settlement boundary of villages are acceptable subject to criteria. Whilst the Council has opted to allocate 1100 dwellings in the village of Pill and Easton in Gordano, we consider that other villages such as Yatton/Claverham also boast considerable sustainability credentials and would be suitable to accommodate further meaningful growth. The Council's own evidence recognises the sustainability credentials of Yatton/Claverham, with the 'Consultation paper on additional sites for the Regulation 19 plan' (February 2025) identifying Yatton/Claverham as a 'larger, most sustainable village'. From a functional perspective Claverham forms an important node along an arc of settlements in this quadrant of North Somerset that operate in unity. These comprise Yatton, Claverham, Cleeve and Congresbury. Claverham forms a natural extension to Yatton. Within the current adopted Core Strategy Yatton is designated as a 'Service Village' whilst Claverham is classified as an Infill Village. The Core Strategy supports development within or adjacent to existing settlement boundaries of Service Villages, subject to proposals enhancing the overall sustainability of the settlement. We consider that additional growth could be directed to other sustainable villages by either amending the settlement hierarchy under Policy SP3 to promote sustainable villages such as Yatton/Claverham (similar to the adopted Core Strategy where it is identified as a Service Village) or by re-drafting Policy SP6. The supporting text to Policy SP8 states that: "Across the villages and rural areas sites to accommodate 1,830 dwellings have been identified,	We consider that the settlement hierarchy should be amended to give status to the more sustainable settlements, as evidenced by the Council's own supporting documents. We also request that additional small sites are allocated within these sustainable settlement including Clarion's site at land north of High Street, Claverham (120 affordable homses) to ensure that the plan delivers over the plan period.		LF62683-01 Claverham - Vision Document (update) - Apr25 v6 (HR)(33693312.1).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								predominantly at the larger more sustainable villages that have a range of services and facilities to support an appropriate amount of new development over the plan period." However, we query why no new allocations are proposed in Yatton/Claverham given its positive classification as part of the Rural Settlements Paper (March 2022) and the Consultation Paper on additional sites for the Regulation 19 Plan (February 2025). Only 300 dwellings have been allocated within Yatton/ Claverham, with all but one allocation (Oxford Plasma – 58 units) having extant planning permission . It's worth noting that the Oxford Plasma allocation is not a new allocation as it has been rolled forward from the Site Allocations Plan (April 2018). Therefore, there are no new allocations proposed for Yatton/Claverham which is surprising and at odds with the Council's own evidence base. The combined area of Yatton/Claverham is therefore proposed to accommodate a very limited quantum of growth compared to its evidenced strong sustainability credentials. We support the Council's assertion that Yatton/Claverham is considered as a single settlement due to their interdependency. We consider that the conjoined settlement should be considered a higher order settlement in the settlement hierarchy. The plan therefore fails to meet the tests of soundness as it is not justified, with Policy SP8 conflicting with the council's own evidence base. Whilst future opportunities for growth in Yatton are more limited (due to constraints such as flood risk), there remains opportunities for sustainable development within Claverham which forms a natural extension to Yatton; as recognised by NSC in the 'Consultation paper on additional sites for the Regulation 19 plan' and the Pre-submission Plan. We consider that Claverham in itself is a suitable location for development as it includes a primary school (including preschool), a Village Hall, a Community Church, a Scouts HQ as well as areas of functional open space. However, there is an opportunity to boost the facilities and services in Claverham itself through well planned developments such as that proposed for land north of High Street, Claverham. Although we support NSC's sequential approach, which prioritises the most sustainable locations for growth, we question its application within the plan. The plan has overlooked deliverable sites in lower order settlements, including the land north of High Street, Claverham, which are suitable, sustainable and deliverable, in favour of very large strategic sites and sites located within the Green Belt. Whilst the NPPF (paragraphs 145 and 146) states that Green Belt boundaries can be altered where there are exceptional circumstances, including in instances where an authority cannot meet its identified need for homes, we do not believe that NSC has fully considered suitable and deliverable housing sites outside of the Green Belt that could also aid in meeting this need. Having the other smaller sites alongside the larger strategic sites provides North Somerset with the best opportunity to meet the housing target. The Plan is not sound because it is not positively prepared (test of soundness 36.a), justified (test of soundness 36.b) or effective (test of soundness 36.c). The strategy to meet the housing needs of the authority is not effective because of the reasons outlined above. We consider that the settlement hierarchy should be amended to give status to the more sustainable settlements, as evidenced by the Council's own supporting documents. We also request that additional small sites are allocated within these sustainable settlement including Clarion's site at land north of High Street, Claverham (120 affordable homses) to ensure that the plan delivers over the plan period.			
58629377	T Crane			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The spatial strategy is not sound because it concentrates a disproportionate share of the district's housing growth at Nailsea and Backwell without demonstrating that the area's transport network can cope. The plan has not assessed the cumulative impact of 3 500–3 707 new dwellings on the three constrained road routes serving the towns or provided firm proposals to address those constraints. Reasoned justification: Physical pinch points: Nailsea is served by only three access routes; Station Road under the low, single-file railway bridge; the B 3130 Clevedon Road at Tickenham Hill; and the B 3130 Bristol Road through Wraxall. All three have pinch points where opposing traffic cannot pass. These routes already experience severe queuing at peak times; adding thousands of homes will dramatically increase traffic on roads that cannot be widened. Lack of economic growth: Nailsea is becoming a dormitory town for Bristol, Bath and London because there are no significant commercial or industrial incentives for business in the plan. Without local jobs, residents will commute out, increasing car use. This undermines SP3's objective of locating growth where it can be sustainably accommodated and conflicts with national policy requiring plans to balance homes and jobs. Rail constraints: Nailsea and Backwell station lacks step-free access to the southbound platform and has limited parking and interchange facilities. There is no commitment in the plan to improve rail capacity or accessibility before the housing is delivered. The Portishead branch line re-opening will not directly relieve Nailsea's congestion.	Reduce the scale of housing allocated to Nailsea and Backwell within SP3 until specific, funded improvements to road and rail infrastructure are identified. Re-direct growth to locations with better transport links and greater capacity to absorb the proposed increase in resident population. Include an infrastructure phasing plan requiring upgrades to Station Road (railway bridge), the B 3130 pinch points and accessibility at Nailsea & Backwell station before substantial housing growth occur.		
58629377	T Crane			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The spatial strategy is not sound because it proposes significant housing growth at Nailsea and Backwell despite severe transport constraints and known flood risks in the area. SP 3 justifies Green-Belt release on the basis of "exceptional circumstances", yet the same plan acknowledges (through DP 9: Flood risk) that many of the green-belt sites around Nailsea/Backwell are subject to flooding. This contradiction undermines the plan's justification for allocating 3 500–3 707 dwellings to this strategic location. Reasoned justification: Transport infrastructure constraints: Nailsea has only three access routes (Station Road under the low railway bridge; B 3130 Clevedon Road via Tickenham Hill; and B 3130 Bristol Road through Wraxall). Each has pinch points where vehicles cannot pass simultaneously and is already congested at peak times. Adding thousands of new dwellings without committed highway improvements or enhanced public transport will exacerbate congestion, increase air pollution and reduce road safety. Nailsea & Backwell railway station lacks step-free access to the southbound platform and has limited capacity. There is no indication how these constraints will be addressed. Flood-risk contradiction: DP 9 (Flood risk) requires development to avoid flood-risk areas and incorporate sustainable drainage. Parts of Nailsea and Backwell have experienced flooding in the past five years. Areas north of Nailsea near Jacklands Lake and Moorend Spout and low-lying land around Backwell (close to the Land Yeo/rhyne system) are particularly prone to surface-water and fluvial flooding. Yet SP 3 proposes to release these Green-Belt areas for housing on the basis that there are "exceptional circumstances". The NPPF states that Green-Belt boundaries should be altered only where exceptional circumstances are fully evidenced and justified; flood risk does not constitute an	Reassess the spatial strategy: Reduce the housing allocation for Nailsea and Backwell and reconsider alternative locations that are less constrained by transport and flood risk. Apply a sequential test to avoid allocating land in Flood Zones 2 and 3 or areas with recent surface-water flooding. Retain flood-plain Green Belt: Do not release Green-Belt land that serves as functional floodplain (e.g. around Jacklands Lake and Moorend Spout). These areas should be protected for flood storage and biodiversity. Phase development with infrastructure: Require that any remaining housing growth at Nailsea/ Backwell be phased so that critical transport infrastructure (e.g. a new road crossing of the railway, junction improvements at Tickenham Hill and		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								exceptional circumstance for releasing sites that are themselves prone to flooding. Using green-belt land that functions as a natural floodplain risks exacerbating downstream flooding and undermines the plan's environmental objectives. Unsound justification: SP 3 favours large green-field allocations at Nailsea and Backwell, but it does not demonstrate that growth cannot be accommodated elsewhere on brownfield or less constrained land. Nor does it provide a sequential test to steer development away from flood-risk zones, as required by national policy. This makes the strategy unjustified and ineffective.	Wraxall, enhanced bus services, step-free access and parking at the station) is delivered before new dwellings. Contributions should be secured via S106 agreements or Community Infrastructure Levy. Strengthen flood-risk mitigation: Mandate comprehensive site-specific flood-risk assessments and sustainable drainage systems for all allocations. These should demonstrate no increase in flood risk on- or off-site and include measures such as attenuation ponds, green roofs, permeable paving and restoration of natural watercourses. Require long-term management of rhynes and water courses. By addressing transport and flood-risk issues head-on and avoiding the contradictory justification for Green-Belt release, the plan can better align with the NPPF's requirements for soundness and sustainable development.		
31072289	Jeanne Craske			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	It is illogical to group Nailsea & Backwell together into one location as they are completely different in character. Nailsea, a town with some facilities but no A roads in and out. Backwell, a village with a congested A road and few facilities. Your justification indicates that development 'must not be of a disproportionate scale which adversely impacts on the character of the settlement or leads to a significant increase in the number of car journeys', yet this objective is clearly not being met.	Reduce the allocation to Nailsea and especially Backwell and identify brownfield sites in more sustainable locations nearer to centres of employment.		
9138657	Home Builders Federation		Home Builders Federation	No	‣ Justified ‣ Effective ‣ Consistent with national policy					Policy SP3 is not considered to be sound as it is not effective, justified or consistent with national policy The wording of this policy is not a policy but rather a statement of intent, as such this policy is ineffective and unjustified. This policy fails to provide any criteria against which a development proposal would be assessed. This policy is just some high level wording about the factors that have informed the spatial strategy the Council has chosen, it is not a policy and should be moved into supporting text. The actual Spatial strategy of the Plan is set out in Policies SP5: Towns and SP6: Villages and rural areas, and the site allocations. In relation to the substantive matter of whether the spatial strategy chosen is the correct one, the fact the Plan as a whole, and the spatial strategy policies (when taken together) are silent on the issue of Bristol's unmet need, means the Plan is failing comply with national policy requirements for neighbouring authorities to consider requests from neighbours who cannot meet their own housing needs in full. In both failing to recognise this issue, and in failing plan to meet some of Bristol's unmet housing need, the housing policies and spatial strategy in this Plan are not effective, justified or consistent with national policy, and therefore unsound. HBF believe that the need for the North Somerset Plan to increase its housing requirement to include some of Bristol's unmet need both necessitates the need for a comprehensive Green Belt review and also provides the exceptional circumstances necessary to justify the release Green Belt land for housing allocations. HBF would wish to see the plan amended to reflect this reality.	North Somerset 2nd Reg 19 Dec 25.docx
51477249	Burrington Parish Council		Burrington PC	Unsure	‣ Consistent with national policy	Yes	Unsure	On previous drafts of the local plan we expressed concern that a wider range of sites for housing would be needed to avoid challenges to the supply of housing land and the ad hoc addition of sites through planning appeals, especially in view of the substantial increase in housing requirements arising from the new standard method of calculating housing requirements. We can see that North Somerset Council has now made significant changes to the settlement strategy to include new large sites for housing which now include a substantial urban extension south west of Bristol	More detail is required about the allocated housing sites to demonstrate their feasibility, desirability and consistency with other planning policies– in the form of a development brief

								('Woodspring'), a number of strategic housing sites at Nailsea and Backwell, some of which already have planning consent, the 'Wolvershill' strategic allocation north of Banwell and strategic sites at Pill and Easton-in-Gordano, as well as continuing development adjoining Weston-super-Mare (Parklands Village and Winterstoke Village), new site allocations at Clevedon and Portishead and redevelopment sites within Weston, some of which are carried forward from the Site Allocations Plan of 2018.It seems to us that the Council has thus sought to identify a realistic and as wide as possible range of options to accommodate the increased housing requirement. Some rural settlements like Churchill and Winscombe are also making significant contributions to housing land supply, although some sites were committed through planning appeals which means that they are not always well integrated with the existing settlement (or other appeal sites). Committed housing sites in the larger villages do not therefore always achieve the aims set in the Core Strategy for 'Service Villages' in terms of more self-containment in jobs and services, protecting the character of the settlement, or achieving improvements in public transport.			
62865825	G Davies			Yes		Yes	Yes				
31088129	Bloor Homes South West	Turley		No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy		No	Policy SP3: Spatial strategy The stated Spatial Strategy (SP3) is logical for North Somerset on the basis of the ability to locate new development within or close to existing urban areas where there is greatest potential to access a wide range of facilities, services and jobs, and there are opportunities to use existing or enhanced active travel and public transport routes. However, the Spatial Strategy is stated in general terms only with no detail in terms of any settlement hierarchy or the specific locations, or areas, where new development might be encouraged (or conversely might be restricted). It is considered that there is considerable scope to add additional clarity and detail to the proposed Spatial Strategy (Policy SP3) in the interests of the overall effectiveness of the plan. Distribution of Housing The draft policy states that priority will be given to locating new residential and mixed◈use development in or close to urban areas where there is an existing or proposed wide range of facilities, services and jobs, and there are opportunities to encourage active travel. The approach taken in Draft Policy SP8 confirms that 7% of housing will be delivered in Portishead (an increase from 5% in the previous Regulation 19 consultation). The proportion of housing delivery in villages and rural areas has reduced from 23% to 12% from the last Regulation 19 consultation. This amended approach is broadly supported, and better reflects the spatial strategy in Policy SP3. However, more can be done in terms of prioritising development at the main towns in North Somerset in line with spatial strategy. Sequentially, existing towns must be preferred as locations for sustainable growth, ahead of the larger villages, consistent with the current settlement hierarchy and spatial strategy in the current adopted local plan, and also the spatial strategy in the emerging local plan. The Council, within its consultation paper on additional sites, and in a number of earlier reports to Executive and other committees, set out a clear hierarchy to follow when considering the allocation of additional sites, as follows: (a) Sites outside the Green Belt, but well related to the towns (b) Sites outside the Green Belt, but well related to the larger villages. (c) Sites in the Green Belt well related to the towns, including Bristol. (d) Sites in the Green Belt well related to the larger villages. (e) Elsewhere. The above hierarchy provides a logical approach to identifying sites for new development in the most sustainable locations, consistent with the emerging spatial strategy and in a manner that is also consistent with national policy (with consistency with the NPPF being a clear test of Soundness). As such, sequentially, where there is a need for the release of sites from the Green Belt (which we agree there is), suitable sites in the Green Belt adjoining existing towns (Portishead, Clevedon and Nailsea) must be identified/prioritised, before any sites in the Green Belt at larger villages (particularly where such sites would be on land classified as grey belt), including Backwell and Pill. The emerging plan now seeks to provide 15% of housing across Nailsea and Backwell. The previous version of the plan did not specifically list Backwell in the list of settlements (stating that 6% of housing would be provided in Nailsea). From reviewing the large site allocations listed within the emerging Local Plan, of the housing now proposed across the two settlements, circa 52% is to be provided in Nailsea and 48% is to be provided in Backwell. Further, of the 1683 homes allocated at Backwell, 83% is to be provided from two strategic allocations. Grove Farm is proposed to deliver 515 dwellings. That site has a resolution to grant consent subject to legal agreement. Land east of Backwell is proposed to provide 889 dwellings. It is a new allocation and represents land that will be released from the green belt. Backwell is defined as a village in the Local Plan, whereas Portishead is a defined town within the emerging Plan. It is the second largest town after Weston so is clearly an appropriate location for more growth. The town has a vast range of services and facilities and is highly accessible. Our view remains that following the sequential approach set out above, suitable sites adjoining existing towns must be prioritised and maximised for development to their full ability, before any sites in the Green Belt at larger villages. Taking the above into consideration, we are therefore of the view that releasing all of the promoted land (HE20124) at Black Rock, Portishead represents an opportunity to both: • Follow the sequentially preferable approach to releasing land from the green belt, particularly given the land is considered to be grey belt. Further detailed comments on this are provided in relation to draft policy SP7. However, it is worth noting the Council's emerging evidence base, together with comprehensive favourable EIA scoping opinion (2018), site-specific landscape and ecological work supports the promoted land definition as 'grey belt'. The removal of the whole parcel would therefore be in accordance with national policy. • Assist with unlocking a medium sized site to support overall housing delivery, viability and affordable housing provision within the plan period. On this basis, the Draft Policy SP3 should be amended to recognise that the delivery of sustainable development should follow the sequential approach, where existing towns must be preferred as locations for sustainable growth, ahead of the larger villages. Delivery of housing within or adjoining existing settlement boundaries of existing towns (including Portishead) should be considered acceptable.	The Draft Policy SP3 should be amended to recognise that the delivery of sustainable development should follow the sequential approach, where existing towns must be preferred as locations for sustainable growth, ahead of the larger villages. Delivery of housing within or adjoining existing settlement boundaries of existing towns (including Portishead) should be considered acceptable.		BLOA3050 - Portishead Reps - NS Local Plan Regulation 19 - Turley Updated (V2).pdf
30898817	Ciara Donegan-Davies			Yes		Yes	Yes			I absolutely believe that this is the right approach to development - building in areas which can support it with the correct infrastructure, transport links and amenities. Not on flood plains or in small villages without the correct services and access.	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 63079649	Robert Faulkner		WildHome	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The plan has not considered reasonableb alternatives: Grounds for development of a reasonable alternative: The soundness of the North Somerset Local Plan is tested against the National Planning Policy Framework. Paragraph 36 states that the plan should be a) Positively Prepared “as a minimum, seeks to meet the area’s objectively assessed needs” and b) Justified “taking into account the reasonable alternatives”. There is an absence of evidence that either of these have been considered. The below is the first step to establish a reasonable Alternative for North Somerset. We are seeking expressions of support for this approach from organisations, community groups and policymakers across North Somerset and the surrounding area. A reasonable alternative to the proposed Local Plan: Each North Somerset town or village conducts a community-led improvement plan of key sites, including underused, vacant, dilapidated and locally preferred brownfield and greenfield sites. The target allocation of homes for each area will remain, however the type, location and arrangement can be designed to benefit the local population. The construction methods are to be low impact, local and energy efficient. The benefits of this approach would be improvements in community health, local jobs, reduced loneliness, economic prosperity, sustainable travel routes, better living conditions, older residents remain in their community, kids have safe places to play, nature recovery and reduced anti-social behaviour. Time and viability: The Planning Inspectorate’s examination is a statutory process that usually lasts 10–18 months. This provides a sustained opportunity for reasonable alternatives to be developed and considered as the examination progresses. Once each town or village has established a preferred, financially viable scheme in alignment with paragraph 36 of the National Planning Policy Framework, input from regulators and considering the needs of each community, it can be put forward as a reasonable alternative for consideration alongside the existing proposals.	As above		Reasonable Alternative.pdf Reasonable Alternative - Terralupa Support.pdf Reasonable Alternative Nailsea Climate emergency group.pdf
63052097	Stephanie Fowler	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes		Our client is supportive of the broad spatial strategy outlined at policy SP3, in particular the presumption that residential development should be focused on those areas such as Nailsea that are the most sustainably located in relation to employment, services and transport, including taking account of likely future scenarios. This does not, however, presuppose that residential development in other locations may not be suitable, based on the facts of each case, noting in particular the need for smaller settlements to remain viable and vital places to live.		R001v3_NSLP_Reg19_Fowler.Dec25.pdf
39076833	University of Bristol	Alder King Planning Consultancy	University of Bristol	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The University of Bristol’s view is that the Local Plan is unsound and not legally compliant with regard to the Woodspring strategic development allocation (Policy LP2). The soundness of the plan in this regard is set out below. Positively Prepared: In accordance with the NPPF, positively prepared is defined as: “providing a strategy which, as a minimum, seeks to meet the area’s objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development.” The NPPF is clear that, in calculating housing need under the standard method, this figure is to be treated as a minimum. Therefore, should there be suitable sites available to deliver housing over the local plan period, these should be supported notwithstanding the Council’s position that is has reached its requisite ‘target’ under the standard method. Moreover, owing to the Council’s most recent Housing Delivery Test measurement, it is appropriate that a 20% buffer is applied for the first five-years of the plan, in accordance with the NPPF. While stated as a minimum figure, we consider the quantum of housing planned for under Policy SP8 to be negative and insufficient. A number of suitable sites promoted through the local plan process have been unduly discounted by the Council and we consider this to be the antithesis of the plan being positively prepared. One such site comprises the University of Bristol’s land south of Long Ashton (HE20139). The site lies adjacent to the settlement boundary, sustainably located in the context of Long Ashton and Bristol, comprising grey belt land which could/should comfortably be brought forward for development in the new local plan. The Council’s Spatial Strategy, Site Selection and Capacity Paper (October 2025) identifies Long Ashton as a Category A village, which represents settlements “considered to be relatively sustainable in their own right with a range of easily accessible services and facilities and good public transport links to towns”. It is very notable that despite its acknowledged sustainability credentials, and acknowledgement that Green Belt land is required to be released, Long Ashton has all but been ignored for any growth of scale over the plan period. Two small sites are identified within the existing settlement boundary to deliver 42 dwellings. We consider this to be highly irregular for such a sustainable settlement to be consistently overlooked by the Council for accommodating any real growth and raise significant concerns with the Spatial Strategy under Policy SP3 in this context. Planning for a mere 42 homes in Long Ashton to 2041 is not considered to be a positively prepared spatial strategy approach. Additional housing sites which have been consistently promoted to the Council by the University, and consistently overlooked through the emerging local plan process include land to the west of Wyndhurst Road (adjoining the Category A village of Churchill settlement boundary) (site: HE20590) and the nearby land at Stock Lane Farm, Langford (previously developed land) (site: HE203031). The Council’s ‘Duty to Co-operate Statement of Compliance Regulation 19 Stage’ (October 2025) sets out that Bristol City Council (BCC) have requested for neighbouring authorities, including North Somerset Council, to accommodate its unmet housing need. The Council’s Duty to Co-operate statement is clear that “North Somerset does not have capacity to meet some of Bristol’s needs at	The Council’s overarching spatial strategy, housing numbers and allocation sites identified should be comprehensively reviewed and revisited as it is clear that. This requires review of suitable residential allocation sites omitted from the draft plan which are, in the first instance outside the Green Belt, and then sites which are agreed to be Grey Belt. We contend that the following sites owned by the University of Bristol represent suitable, available and viable development sites which would positively support sustainable growth over the plan period, including in the early years, and should be allocated for development in the new local plan: • Land at Stock Lane Farm, Langford – HE203031 • Land to the West of Wyndhurst Farm – HE20590 • Land south of Long Ashton – HE20139 The University supports Draft Policy LP19, albeit we consider that minor modifications to the policy wording should be made to acknowledge the sustainability of the location. As present, we consider the policy wording to present an overly negative position of the area which would conflict with the aspirations of the policy to support University development in this area.		NSLP_Pre_Submission_Plan_Representation_Form_Part_B_UOB_SP3.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								this time". We do not agree with that position. We highlight the importance of North Somerset's position in the context of South Gloucestershire Council also making no provision in its Draft Local Plan (plan submitted for examination) to contribute towards Bristol's unmet need. Similarly, through its emerging local plan process, B&NES Council has made no commitment to contributing to Bristol's unmet need owing to it being heavily constrained and having to deal with its own significant housing requirement uplift (approximately double that before the new 2024 standard method). In this regard, it is noted that on 21 November 2025, the inspectors published their final post-hearing advice following examination of the new Bristol Local Plan. The inspectors have requested modifications to the plan from BCC to set out an increased housing need and clearly set out what the level of unmet housing need is. An extract from the inspectors' post-hearing advice is provided below, which reinforces the position that no agreement is in place between BCC and any neighbouring authority, including North Somerset, to accommodate the unmet need. The inspectors set out that they: "acknowledge that there is insufficient capacity to meet the Council's objectively assessed housing need, as calculated by the standard method. Nevertheless, we do not consider the figure of 34,650 dwellings over the Plan period to be positively prepared or justified. Given the significant shortfall in meeting overall needs, and the current lack of agreement between Bristol and any neighbouring authorities to provide assistance, we consider it imperative that the Council seeks to maximise housing delivery. Inherent uncertainties in housing delivery in the longer period do not justify setting a housing requirement substantially below the overall housing capacity figure identified at submission. The evidence submitted since the end of the hearing sessions has not persuaded us that a lower figure is justified." Therefore, it stands that BCC's significant unmet housing need will continue to go unmet with none of its neighbouring authorities committing to assist. We find this problematic with particular regard to North Somerset as we consider there to be appropriate scope for a greater number of housing sites to be identified in the new Local Plan and delivered through the course of the plan period. The Council's own additional sites consultation in February/March 2025 demonstrated that this was the case. The unmet need for Bristol is significant, cannot be ignored and requires to be addressed within the new North Somerset Local Plan. National guidance within the NPPF is clear that plans should ensure that, inter alia, unmet development needs from neighbouring areas are provided for to ensure effective strategic planning across local planning authority boundaries. It is clear from the Council's own work that North Somerset are in a strong position to be able to identify significant additional housing sites through allocations in the new local plan. This would positively overachieve the Council's housing need target and provide a meaningful contribution to the unmet need of BCC. Pursuant to the Council's emerging local plan process, it carried out consultation on potential additional housing sites to be included as draft allocations in the Reg 19 plan ('Consultation paper on additional sites for the Regulation 19 Plan', February 2025). That identified sites which the Council considered to be 'most suitable', such as that at Yanley Lane South West Bristol (HE20110) in addition to a raft of sites identified as having 'other potential', including sites now identified as draft allocations i.e. around Pill and Easton-in-Gordano and sites now omitted as draft allocations i.e. the University of Bristol's land south of Long Asthon (site: HE20139) and land to the west of Wyndhurst Road, Churchill (site: HE20590). The Council set out within that consultation that sites with 'other potential' comprised: "sites at the towns and larger, more sustainable villages consistent with the spatial strategy". [our emphasis] It stands that the Council rightfully identified suitable residential sites in sustainable locations pursuant to the 'other potential' sites in the 'Consultation paper on additional sites for the Regulation 19 Plan' (February 2025). However, such sites have been unduly disregarded at the Reg 19 plan stage and, in our view insofar as the University of Bristol's land south of Long Asthon (site: HE20139) and land to the west of Wyndhurst Road, Churchill (site: HE20590) wrongfully omitted. The latter lies outside the Green Belt and so should be preferred to the various sites proposed to be released from the Green Belt, as sought be national planning policy guidance. Site HE20139 and HE20590 are available now and deliverable to contribute towards significant positive growth within the plan period and should be supported for allocation. We consider that there is scope for additional appropriate housing sites to deliver over the plan period which are available, suitable and viable. In the Council's own words these disregarded sites are "consistent with the spatial strategy" and yet have been ignored. We contend this is the wrong approach, particularly in the context of the significant identified unmet need for Bristol. We therefore disagree with the Council's position that it cannot accommodate any of the unmet housing need from Bristol in North Somerset. In this context, the North Somerset Local Plan is not considered to be positively prepared, justified, effective or consistent with national policy. Justified: In accordance with the NPPF, to be justified this requires: "an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence." As set out above, it is considered that reasonable alternative sites for housing allocations have been unduly discounted by the Council, in conflict with the evidence base which should otherwise support its approach. Therefore, we do not consider that all draft housing allocations are sufficiently justified which goes to the soundness of the plan. Paragraph 148 of the NPPF is clear that where it is necessary to release Green Belt land for development, as is established and agreed in North Somerset, plans should give: "priority to previously developed land, then consider grey belt which is not previously developed, and			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								then other Green Belt locations." Prior to this, non Green Belt sites should be prioritised for allocation. In this regard, our client has consistently promoted its land south of Long Ashton and at Wyndhurst Farm (site: HE20590) and Stock Lane Farm (site: HE203031) at Churchill/Langford. However, the Council is not supporting a draft housing allocation on any of the three land parcels. We consider this to be contrary to NPPF paragraph 148 and is not a justified approach in plan making terms. Land at Stock Lane Farm, Langford – HE203031: The University's land at Stock Lane Farm comprises previously developed land, outside of the Green Belt. This is sustainably located in relation to Langford and Churchill and has been promoted for development with capacity for up to 64 dwellings. There is a realistic prospect that houses could be delivered on the site within five years. The site was previously identified as a 'less sustainable' site, wrongfully in our view, as part of the Council's Consultation paper on additional sites for the Regulation 19 Plan' (February 2025). The consultation ran to March 2025 to which representations were submitted by the University in relation to all three of its land parcels referenced. In this regard, the site is well related to the settlement and existing facilities and services in Churchill and Langford. Adjacent to the west of the University's land at Stock Lane Farm, planning permission ref: 23/P/0448/OUT was approved by the Council in March 2025 for a mixed-use development comprising up to 120 dwellings, new flexible employment, children's day nursery and café, along with associated car parking, landscaping, tree works, public open space and local equipped area for play, drainage infrastructure, access improvements and connections to the existing footpath network. We note the Council's also identified that land as a 'less sustainable' site in the previous consultation, while granted it planning permission, and now identifying it as a draft allocation. This outlines the inconstancy in the Council's approach to its housing sites in the new local plan. The presence of planning permission 23/P/0448/OUT only further supports development on the University's land adjacent at Stock Lane Farm (HE203031) which critically comprises previously developed land. In this context, the University's land is annotated red on the plan (see attachement) which comprises the adjacent approved development (and now draft allocation). The Council's decision to omit the University's land at Stock Lane farm is not justified in the context of Draft Policies SP3 and SP8. The site is sustainably located, outside of the Green Belt on previously developed land and adjacent to the Monaghan Mushrooms site (Draft Policy LP23), pursuant to planning permission 23/P/0448/OUT. Land to the West of Wyndhurst Farm – HE20590: The University's land west of Wyndhurst Farm Stock Lane Farm comprises greenfield land adjacent to the settlement boundary of Churchill. This is sustainably located and has been promoted for development with capacity for up to 90 dwellings at a density of 29 dwellings per ha. There is a realistic prospect that houses could be delivered on the site within five years. The site was previously identified as a site with 'other potential' as part of the Council's Consultation paper on additional sites for the Regulation 19 Plan' (February 2025). The Council set out within that consultation that sites with 'other potential' comprised: "sites at the towns and larger, more sustainable villages consistent with the spatial strategy". [our emphasis] The Council's published 'North Somerset Strategic Housing Land Availability Assessment Main Report' (October 2025) further sets out that the site was considered by the Council to have "potential for further consideration". Notwithstanding this, the Council's published 'Spatial strategy, site selection and capacity paper' (October 2025) confirms that this site is not a proposed allocation in the draft Local Plan with commentary provided as follows: "The site is outside settlement boundary with a distinctive rural character providing a clearly defined separation between the area of Churchill centred around Bristol Road and Pudding Pie Lane, and the smaller settlement of Lower Langford to the east. Due to the impact on the landscape and potential impact on heritage assets, it is not considered appropriate to take this site forward as a housing allocation." We do not agree with the Council's assessment of the site and its position to omit this as a draft allocation. We note that pre-application discussions with the Council resulted in the suggestion to promote the site at that time through the local plan which has been comprehensively done and so it is disappointing to see this be omitted as a draft allocation. This is particularly the case given the extent of the Council's housing need which should, in the first instance be addressed by appropriate sites such as this outside of the Green Belt before seeking to remove land from the Green Belt. Development on the site would comfortably assimilate with the surrounding built form, providing sustainable development. It is notable that planning permission (ref: 22/P/2908/OUT) was approved in November 2024 for nine dwellings adjacent to the south of the site which only provides further support for development in this location. Different development options have been considered which would address all material considerations for the site, which include a scheme for 24 units and a scheme for up to 90 units in this regard, as illustrated below. The site is wholly sustainable with any associated impacts of development more than capable of being addressed with appropriate mitigation. In this regard, the Council's decision to omit the University's land is not justified in the context of Draft Policies SP3 and SP8. Land south of Long Ashton – HE20139: The University's land south of Long Ashton comprises land within the Green Belt, adjacent to the settlement boundary of Long Ashton. This is sustainably located and has been consistently promoted for a number of years to the emerging local plan, and previous WECA joint spatial plans for development with capacity for up to 1,500 dwellings.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The site was previously identified as a site with 'other potential' as part of the Council's Consultation paper on additional sites for the Regulation 19 Plan' (February 2025). The Council's published 'North Somerset Strategic Housing Land Availability Assessment Main Report' (October 2025) further identifies that the site was considered by the Council to have "potential for further consideration". Notwithstanding this, the Council's published 'Spatial strategy, site selection and capacity paper' (October 2025) confirms that this site is not a proposed allocation in the draft Local Plan with commentary provided as follows: "Site not consistent with the spatial strategy as it is detached from the existing built-up area of Long Ashton." We do not agree with the Council's assessment of the site and its position to omit this as a draft allocation. It is clear that the site should accord with an appropriate spatial strategy which directs growth to the most sustainable locations. Therefore, the Council is not following this by omitting the University's land as an allocation. The site is well related to Long Ashton in addition to the city of Bristol. It appears that the Council have unduly set preference to directing growth to the neighbouring Yanley Lane/Woodspring site (HE20110) (draft allocation for 3,500 dwellings under Policy LP2) at an early stage of the plan making process. This position has not shifted even as the evidence base has been developed which indicates to the contrary. Attention is turned to the Council's Sustainability Appraisal Report (October 2025). This sets out the findings of the assessment of potential allocation sites against the sustainability appraisal objectives. A summary is provided (see attached document) with comparison of our client's land south of Long Ashton, which has been discounted by the Council and the Yanley Lane South West Bristol land, which is proposed to be allocated for development by the Council in the Local Plan. This comparison is provided owing to the proximity and context of both sites, and similarity with regard to scope to provide strategic growth. This sets out the similarities in the Council's assessment of both sites which, when compared, identifies fewer negative effects of development on our client's land than that identified for allocation by the Council at Yanley Lane. The sustainability credentials of our client's land are clear and development of this land should be supported. The Council's Spatial Strategy, Site Selection and Capacity Paper (October 2025) provides commentary on the potential allocation sites. For our client's land south of Long Ashton (HE20139) this states that the site is not proposed for allocation and that the: "Site not consistent with the spatial strategy as it is detached from the existing built-up area of Long Ashton". Whereas for the Yanley Lane site (HE20110), this states that the site is proposed for allocation and that the: "Site [was] previously identified (in smaller form) in Regulation 18 plan". The fact that the Yanley Lane/Woodspring site was preferred by the Council at early stages of the plan, in advance of the supporting evidence base work being carried out, is not sufficient justification for it to be allocated. This is required to be justified and supported by the evidence base, which we do not consider it to be, in the context of the University's land south of Long Ashton. The Council's approach contradicts NPPF paragraph 148 in identifies sites to be removed from the Green Belt for development. The Council's 'Stage 2 Green Belt Assessment' (October 2025) identifies the land south of Long Ashton to make an overall weak contribution to the purposes of the Green Belt. Whereas, the Yanley Lane/Woodspring site is determined to make a greater contribution, set at 'moderate' to the Green Belt purposes. This comparison is provided (see attached document), pursuant to the Council's Stage 2 Green Belt Assessment. In Green Belt terms, it is clear that the University's land south of Long Ashton makes less off a contribution to the Green Belt purposes than the Council's proposed allocation at Yanley Lane/ Woodspring. Moreover, our client's land would wholly support sustainable patterns of development in the context of Long Asthon and Bristol, in accordance with NPPF paragraph 148. Further to this, as can be seen in the Green Belt assessment, the University's land makes a weak contribution to Green Belt purposes A, B and D. There are no relevant footnote 7 assets that would provide a strong reason for refusing or restricting development on the land. Therefore, this can be considered Grey Belt, subject to the specifics of the development proposal. The Council's Stage 2 Green Belt assessment agrees with this position however the Pre-Submission (Reg 19) version of the plan still determines not to allocate the land for development which we consider to not be justified. The NPPF is clear that Grey Belt land should be supported for directing development in new local plans (NPPF paragraph 148). In this context with the omission of our client's land for allocation, we dispute the Council's claim at page 30 of the Pre-Submission Plan (Reg 19) that: "A sequential approach to Green Belt release has been taken prioritising previously developed land, followed by grey belt sites and then other Green Belt locations". The omission of the University's land south of Long Ashton seemingly goes against the supporting evidence base and therefore we do not consider the approach to be justified, with particular regard to Draft Policies SP3, SP7, SP8 and LP2. The Council's overall spatial strategy and policies/allocations to direct housing growth are required to be informed by the evidence base. Effective: In accordance with the NPPF, to be effective means to be: "deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground." As set out above, where we consider the plan to not have been positively prepared, the Council's		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								'Duty to Co-operate Statement of Compliance Regulation 19 Stage' (October 2025) sets out that BCC have requested for neighbouring authorities, including North Somerset Council, to accommodate its unmet housing need. The Council's Duty to Co-operate statement is clear that "North Somerset does not have capacity to meet some of Bristol's needs at this time". We do not agree with that position on account of suitable sites being omitted for development allocations, particularly where the Council has previously acknowledged the sites to have 'other potential' which, in the Council's words are "sites at the towns and larger, more sustainable villages consistent with the spatial strategy". This is particularly relevant to the University's land south of Long Ashton and at Stock Lane Farm and Wyndhurst Farm in Churchill/Langford which comprise either previously developed land outside the Green Belt, land outside the Green Belt adjacent to the Category A village settlement boundary for Churchill, or Grey Belt land adjacent to the Category A village settlement boundary for Long Ashton. While the Council's housing figure over the plan period (Draft Policy SP8) is prescribes as a minimum, this is a negative approach when considering that additional sites are readily available to deliver above this figure, and should be set out as such in policy. This strongly supports our position that North Somerset is fully capable of accommodating additional growth, thereby contributing towards the unmet need from BCC. However, the Council is unduly deciding not to do this – this is not effective plan making. Moreover, the NPPF is clear that planning policies should identify a supply of specific, deliverable sites for five years following the intended date of adoption, with an appropriate buffer. It is likely that some of the larger strategic development/urban extension areas identified for allocation in the plan will not begin to deliver homes within the first five years and so this means that greater flexibility and contingency is required to be built in to ensure housing delivery is forthcoming in the early years of the plan to meet the minimum requirements. Ensuring early delivery of housing early in the plan period is critical. Consistent with National Policy: In accordance with the NPPF, consistency with national policy should be adhered to: "enabling the delivery of sustainable development in accordance with the policies in this Framework and other statements of national planning policy, where relevant." For the reasons set out within these representations, it is considered that the Council's Reg 19 Pre-Submission Plan is not consistent with national policy with particular regard to the guidance in the NPPF relating to failure under the duty corporate and the approach to accommodate none of BCC's identified unmet housing need. The plan inadequately makes provision for insufficient housing in this context which is not justified owing to the evidence base supporting identification of additional land which could positively support housing growth over the plan period. Moreover, we consider the Council's approach to identifying the draft housing allocation sites is flawed and inconsistent with national policy in overlooking suitable sustainable previously developed land and greenfield sites in the first instance ahead of Green Belt sites; and subsequently overlooking suitable sustainable Grey Belt sites which should be prioritised for development ahead of the remainder of the Green Belt. Conclusions: For the reasons set out above, we consider the plan to be unsound in its current form. Ultimately, the primary reason the plan is not considered to be sound is owing to the approach that the evidence base has followed the Council's overall strategy; rather than the other way around. The evidence base should directly support the approach laid out in the plan and this is not the case. Notwithstanding this position, the University provides support for Draft Policy LP19 for the 'University of Bristol site in Langford' allocation. We welcome the recognition this policy provides for the significant educational and employment benefits made by the University of Bristol's campus in Langford to the local, and wider, area. The University of Bristol support the policy aims of LP19 which recognise the importance of the facility and support the new development opportunities that will enable the university to grow and accommodate necessary expansion in terms of student numbers and staff employment. We consider that Draft Policy LP19 in isolation is sound as this does not relate to the outstanding wider concerns raised which relate to housing in terms of housing growth quantum and spatial approach. Minor modifications are suggested to the wording of Draft Policy LP19, in so far as we consider this to present a negative picture of the existing sustainability credentials of the site. For users of the campus not based locally, this is readily accessible by non-car modes with regular bus services available. This includes the U2 service which the University provides free passes to students of the veterinary school to travel. Therefore, while this draft policy is strongly supported, we would support minor wording changes to the policy which acknowledge its sustainability. Further detail is hereby provided below and appended in relation to the University of Bristol's land at Stock Lane farm and Wyndhurst Farm in Churchill/Langford and land south of Long Ashton. Development on this land, with support from residential allocations should be provided in a new sound North Somerset Local Plan. Land at Stock Lane Farm, Langford – HE203031: Availability: Site HE203031 is in single ownership by the University of Bristol. The land has been identified as surplus to requirements, having previously been used in association with the University's Langford Veterinary Campus for research and academic studies. It is readily available now, able to make a meaningful contribution to the Council's five-year land supply. Suitability: Site HE203031 offers a suitable location for development of housing. There are no development constraints that would prevent allocation of the site for its early development for housing. The site is		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								well related to a 'Category A' village (most sustainable) and so its allocation fits comfortably into the Council's emerging spatial strategy. The site is accessible by a choice of means of transport to local facilities, including employment opportunities, schools, shops and other services. 4 The site, comprising previously developed land, forms part of the existing built form along Stock Lane and is subject to no designations/constraints that would restrict redevelopment of the site for housing. Likely Economic Viability: There are no known extra-over costs associated with the development of this site nor any issues with utilities which would mean that it would be economically unviable. There is a realistic prospect that houses could be delivered on the site within five years. 4.7 The site has capacity for up to 64 dwellings, subject to detailed design and is available, suitable and economically viable. It should be allocated in the local plan to assist North Somerset providing a sufficient supply and mix of sites to meet their minimum required housing need. Land to the West of Wyndhurst Farm – HE20590: Availability: Site HE20590 is in single ownership by the University of Bristol. The land has been identified as surplus to requirements for some years. It is readily available now, able to make a meaningful contribution to the Council's five-year land supply. The site has consistently been promoted for allocation through the local plan process following the advice of the Council during a formal preapplication submission in 2020. Suitability: Site HE20950 offers a suitable location for development of housing. There are no development constraints that would prevent allocation of Site HE20590 for its early development for housing. The site lies adjoining a 'Category A' village (most sustainable) and so its allocation fits comfortably into the Council's emerging spatial strategy. The site is accessible by a choice of means of transport to local facilities, including employment opportunities, schools, shops and other services. The site lies abutting the settlement boundary of Churchill as proposed in the emerging local plan. It has no landscape, heritage or other designation. It is in Flood Zone 1 (low risk) and grade 3 agricultural land. Likely Economic Viability: There are no known extra-over costs associated with the development of this site nor any issues with utilities which would mean that it would be economically unviable. There is a realistic prospect that houses could be delivered on the site within five years. The site has capacity for circa for 90dwellings at a density of 29dwellings per hectare. An example of how the site might be developed for housing is provided below. Site HE20590 is available, suitable and economically viable and should be allocated in the local plan to assist North Somerset providing a sufficient supply and mix of sites to meet their minimum required housing need. Land south of Long Ashton – HE20139: Availability: The site is in single ownership by the University of Bristol. The land has been identified as surplus to requirements for some years. It is readily available now, able to make a significant contribution to the Council's housing need over the plan period. The site would form a natural extension to Long Asthon being contiguous with the existing settlement boundary of to the north and is physically contained between the A370 to the east/south and Wild Country Lane to the west. Allocation of the site for development, and its release from the Green Belt, is supported by NPPF paragraph 148 in that growth here will promote a sustainable pattern of development on Grey Belt land. This is a requirement of the NPPF. Notably, significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes as is the case for this site. Moreover, releasing land from the Green Belt for development are required to ensure that, inter alia, sustainable transport modes are prioritised, safe and suitable access can be achieved and any significant impacts from the development on the transport network, or on highway safety, can be cost effectively mitigated to an acceptable degree through a vison-led approach. The University's land south of Long Ashton fulfils all criteria with its strong relationship with the existing Long Ashton settlement and being in close proximity, and well connected to, Bristol. Suitability: The site offers a suitable location for development of housing on Grey Belt land. There are no development constraints that would prevent allocation of Site HE20139 for its development for housing. This conclusion is informed by a suite of past technical information on the site. The site lies adjoining a 'Category A' village (most sustainable) and so its allocation fits comfortably into the Council's stated spatial strategy. The site is accessible by a choice of means of transport to local facilities, including employment opportunities, schools, shops and other services. Likely Economic Viability: There are no known extra-over costs associated with the development of this site nor any issues with utilities which would mean that it would be economically unviable. There is a realistic prospect that houses could be delivered on the site over the plan period. The site is available, suitable and economically viable and should be allocated in the local plan to assist North Somerset providing a sufficient supply and mix of sites to meet their minimum required housing need. The proposal on the site is informed by the substantial of technical work which has been carried out to date. Key facets of a future development of this site could include:			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								• Up to 1,500 dwellings, including a mix of tenures and affordable housing; • Potential to include a mix of non-residential uses; • New access onto the A370 • Cycle routes and public footpaths; • Green infrastructure, including public open space; • Biodiversity Net Gain. A plan demonstrating how development could be achieved on the site is provided in the attached document.			
63299425	Mac Mic Strategic Land Flax Bourton	Planning Potential	Mac Mic Strategic Land	No	• Effective				Mac Mic Strategic Land supports the overarching objective of directing development to sustainable locations and acknowledges the importance of prioritising areas with access to services, facilities, and sustainable transport. This approach aligns with the principles of the National Planning Policy Framework (NPPF) to promote sustainable patterns of development. The potential development site comprises Land between Farleigh and Flax Bourton and the Land to the East of Flax Bourton. Although the site is not considered by NSC to comprise a 'most suitable' location for housing development, this appears to be 'black and white' assessment of the settlement against a high-level and arbitrary strategy that does not allow sufficient flexibility to recognise where alternative locations for development can provide significant, tangible benefits for North Somerset. Its proximity to Backwell (and the sites that are proposed to be allocated for development) means that it should be considered as conforming with the wider spatial strategy and would support the focussing of new residential growth around Nailsea/ Backwell. Its location means that it is in close proximity to facilities and sustainable travel modes and in conjunction with the proposed allocations to the east of Backwell can provide a highly sustainable comprehensive development. The land can provide important and wider benefits as part the delivery of a comprehensive development that is linked to the Land East of Backwell. These benefits include the provision of additional housing to meet any potential shortfall were any of the proposed allocation sites not to come forward. In addition, the inclusion of this area will enable other facilities to be created that will serve the wider Backwell area such as a new country park, strategic bat habitat and mitigation, areas for wider biodiversity net gain provision and Active Travel routes. This land could be maintained in perpetuity, thereby ensuring a permanent, natural separation so there is no coalescence between Backwell and Flax Bourton. There is also land that can be safeguarded for potential future expansion of Flax Bourton Church of England primary school. The development of land at Flax Bourton would be consistent with the overall Spatial Strategy. When considered alongside the developments proposed at Land East of Backwell, development of 200-250 dwellings at Flax Bourton would be consistent with the stated aim to give priority to 'new residential and mixed use development in or close to urban areas where there is an existing or proposed wide range of facilities, services and jobs, and there are opportunities to encourage active travel, particularly at locations which are currently, or have the potential to be, well served by public transport. " Although the Spatial Strategy considers that exceptional circumstances did not exist to consider development in village locations within		North Somerset Local Plan Pre-Submission Plan - Flax Bourton Representations Final.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 									the Green Belt, the national policy context has clearly changed, and there is now a need to consider these locations, particularly where development would be complementary to the overall strategy and where it would be close to existing towns and the edge of Bristol. This should be reflected within the spatial strategy. In any event, Mac Mic wish to register an objection to certain elements of the policy that, in our view, are inconsistent with national guidance and risk reducing flexibility in meeting housing and employment needs across North Somerset. Our objection is made on the grounds of soundness, specifically that aspects of the policy are not fully justified, lack clarity, and may not be effective when assessed against NPPF requirements. The policy states that "residential development in areas at risk of ffooding now or in the future will be minimised outside the towns." While flood risk management is essential, the phrase "in the future" is ambiguous and could lead to uncertainty in decision-making. The NPPF (paragraphs 159-161) sets out a clear framework for assessing flood risk through the sequential and exception tests. We recommend aligning the policy wording with national guidance to ensure clarity and consistency. Recommendation To ensure the policy is sound and consistent with national guidance, we recommend aligning the flood risk wording with the NPPF sequential and exception test framework. Mac Mic supports the overall objectives of this policy but considers that, without modification, certain elements risk being inconsistent with national guidance and could undermine the effectiveness and deliverability of the Local Plan. We therefore request that the Inspector recommends amendments to ensure the policy is justified, clear, and flexible to enable a comprehensive development of land east of Backwell and to the east and west of Flax Bourton that can provide much◈needed new housing, additional financial contributions for the Nailsea and Backwell rail crossing, as well as transformational benefits for the local area.		
63006177	Mac Mic Strategic Land (Land north of Banwell Road)	Planning Potential (Elliot Jones)	Mac Mic Strategic Land	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	No	Mac Mic supports the overarching objective of directing development to sustainable locations and acknowledges the importance of prioritising areas with access to services, facilities, and sustainable transport. This approach aligns with the principles of the NPPF to promote sustainable patterns of development. However, we wish to register an objection to certain elements of the policy that, in our view, are inconsistent with national guidance and risk reducing flexibility in meeting housing and employment needs across North Somerset. Our objection is made on the grounds of soundness, specifically that aspects of the policy are not fully justified, lack clarity, and may not be effective when assessed against NPPF requirements. The policy states that “residential development in areas at risk of flooding now or in the future will be minimised outside the towns.” While flood risk management is essential, the phrase “in the future” is ambiguous and could lead to uncertainty in decision-making. The NPPF (paragraphs 152–164) sets out a clear framework for assessing flood risk through the sequential and exception tests. We recommend aligning the policy wording with national guidance to ensure clarity and consistency. Recommendation To ensure the policy is sound and consistent with national guidance, we recommend aligning the flood risk wording with the NPPF sequential and exception test framework. Mac Mic supports the overall objectives of this policy but considers that, without modification, certain elements risk being inconsistent with national guidance and could undermine the effectiveness and deliverability of the Local Plan. 								provision of additional housing land, and the creation of other facilities that will serve the wider Backwell area, such as a new country park, strategic bat habitat and mitigation, areas for wider biodiversity net gain and active travel routes. When considered alongside the Land East and West of Flax Bourton, this development will be consistent with the overall spatial strategy and the stated aim to give priority to "new residential and mixed use development in or close to urban areas where there is an existing or proposed wide range of facilities, services and jobs, and there are opportunities to encourage active travel, particularly at locations which are currently, or have the potential to be, well served by public transport.''. We do, however, wish to register an objection to certain elements of the policy that, in our view, are inconsistent with national guidance and risk reducing flexibility in meeting housing and employment needs across North Somerset. Our objection is made on the grounds of soundness, specifically that aspects of the policy are not fully justified, lack clarity, and may not be effective when assessed against NPPF requirements. The policy states that "residential development in areas at risk of flooding now or in the future will be minimised outside the towns." While flood risk management is essential, the phrase "in the future" is ambiguous and could lead to uncertainty in decision-making. The NPPF (paragraphs 159-161) sets out a clear framework for assessing flood risk through the sequential and exception tests. We recommend aligning the policy wording with this national guidance to ensure clarity and consistency. Recommendation: To ensure the policy is sound and consistent with national guidance, we recommend aligning the flood risk wording with the NPPF sequential and exception test framework. Mac Mic supports the overall objectives of this policy but considers that, without modification, certain elements risk being inconsistent with national guidance and could undermine the effectiveness and deliverability of the Local Plan. We therefore request that the Inspector recommends amendments to ensure the policy is justified, clear, and flexible.	being inconsistent with national guidance and could undermine the effectiveness and deliverability of the Local Plan. We therefore request that the Inspector recommends amendments to ensure the policy is justified, clear, and flexible.

62802913	Pill & Easton-in-Gordano Parish Council		Pill & Easton-in-Gordano Parish Council	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	No	Pill & Easton-in-Gordano Parish Council objects to Policy SP3. Policy SP3 is unsound because it jumps Pill (a Category A village) to full strategic-location status without any prior consultation. The February–March 2025 consultation paper framed the sites only as non-strategic “other potential” village-scale allocations (Table 7.1). No question was ever asked about elevating the parish to a fourth strategic location. Yet the Cabinet report of 18 June 2025 (paras 3.20–3.21) cited “general support for the principle of development” to justify the change, misrepresenting responses that were never sought on strategic status. This arbitrary breach of the spatial hierarchy (NPPF para 36b) overrides our made Neighbourhood Plan without evidence and renders the policy unjustified. Not Positively Prepared (NPPF para 36a): SP3 fails to proactively meet needs through collaboration, sidelining village-scale alternatives and imposing disproportionate growth (55% stock increase) without addressing unmitigable harms like flood exacerbation. Not Justified (NPPF para 36b): Evidence lacks robustness; Sustainability Appraisal overlooks Defra MAGIC constraints (e.g., floodplain woodland in Zones 2/3 at Pill Green). No proportionate alternatives assessment justifies bypassing the hierarchy for Green Belt release over brownfield/ urban options (NPPF para 148). Not Effective (NPPF para 36c): Undeliverable: Draft IDP (Feb 2025, §8.3) flags high-risk, unfunded infrastructure (J19 upgrades). Cumulative ~700 peak trips from Pill, plus Portishead/dock growth, lack modelling (NPPF para 116 and 118), breaching SP3's own flood minimisation. Inconsistent with National Policy (NPPF para 36d): Violates spatial principles (NPPF para 74: Neighbourhood Plan conformity) and Green Belt protections. Legally non-compliant with Localism Act 2011 (developer-led over community needs). Duty to Cooperate unmet: No updated Statements of Common Ground on cross-boundary J19/ecology impacts (e.g., with Bristol/National Highways). This flawed strategy risks Plan-wide unsoundness, reverting to outdated policies and developer speculation.	To make SP3 sound and compliant, we request: Revise SP3 Hierarchy: Explicitly limit strategic growth to the three main towns; revert Pill to Category A village status, aligning with "local needs" only (NPPF para 74). Remove cross-references to LP4. Strengthen Evidence Base: Commission independent hierarchy review: Assess non-Green Belt alternatives via MAGIC-integrated SA; include 10-year J19 modelling (cumulative impacts) and NE/EA responses on flood/habitats. Pause and Extend Consultation: Halt until Statements of Common Ground (NPPF para 28) evidence Duty to Cooperate (e.g., Bristol transport). Enhance Safeguards: Revise SP3 to require infrastructure delivery before growth (e.g., J19 upgrades pre-occupation). These modifications ensure SP3 is positively prepared (community-aligned), justified (evidenced alternatives), effective (deliverable), and NPPF-consistent thus avoiding Examination rejection. 62913761	Miller Homes (Battens Farm)	Tom Rocke	Miller Homes	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	No	For reasons that are set out in later representations, the provisions of the Plan do not afford priority to locating new residential and mixed use development in or close to urban areas where there is an existing or proposed wide range of facilities, services and jobs, and there are opportunities to encourage active travel. On the contrary, it distributes a disproportionate amount of development to the villages that does not reflect local community needs, in direct conflict with the strategic intentions and objectives of the spatial strategy. For the foregoing reasons that will be substantiated through these representations as a whole, the provisions of the Plan will not deliver the spatial strategy it has set for itself, and is therefore unsound.	Review, and adjust, the distribution of housing growth between the towns and village settlements.		Annexes_final_composite.pdf
7800929	Wraxall and Failand Parish Council		Wraxall and Failand Parish Council	No	‣ Justified ‣ Effective	Unsure	Yes	The principles are supported. However, the justification is not, particularly with regard to Nailsea and Backwell being designated as a Strategic Location. The lack of local employment opportunities results in residents commuting, which stretches the rural road network to capacity in places and cannot properly serve Nailsea.	The preferred option is to remove Nailsea and Backwell as a strategic location and to reallocate the housing development to one that better fits the sustainability development objectives. 					with national policy			policy to reflect a presumption in favour of residential development close to well-connected railway stations. This presumption would go beyond a simple 'priority'. Further, whilst the policy intention to restrict development in the countryside is understood, this is not entirely consistent with the NPPF. Whilst it may be appropriate to limit development at a village to that associated with meeting local community needs, development beyond the settlement boundaries of the main settlements may be appropriate to meet district-wide needs, particularly in circumstances where there is a five-year housing land supply. In this respect, the policy should reflect the settlement hierarchy.	of locating residential development in a location close to a well-connected rail station.... Beyond strategic development areas, the amount of development at villages and in the countryside will reflect the settlement hierarchy.		
51446561	Woodstock Homes Ltd (multiple sites)	Kit Stokes	Woodstock Homes	No	• Effective • Consistent with national policy	Unsure	Unsure	StokesMorgan are North Somerset based planning consultants acting for numerous SME's and landowners in North Somerset including Woodstock Homes who have sites in Yatton, Banwell Sandford (HE201022) and Wrington (HE20198). This representation objects to the Spatial Strategy set out in Strategic Policy SP3 of the North Somerset Local Plan 2041, specifically the proposed allocation of the Woodspring (southwest of Bristol) site for 3,500 dwellings and the failure to allocate sufficient land elsewhere to ensure a sustainable and complaint approach to development delivery. Once more, the Council is concentrating all its resources into just a select few options which creates massive risk give infrastructure requirements and limits delivery to just a few select national housebuilders. It is submitted that the Sandford HE201022 and Wrington HE20198 should be included within the allocation, while the Woodspring (south west of Bristol) allocation for 3,500 houses should be excluded due to its failure to meet "grey belt" criteria and its substantial harm to Green Belt purposes, particularly urban sprawl and Purpose A. As evidenced in the 2025 Stage 2 Green Belt Assessment. Woodspring is deemed to only have a moderate impact to Green Belt Purpose A. This cannot possibly be an accurate assessment but one we suspect has been retrofitted by the LPA to ensure the longstanding site allocation meets the grey belt tests in the NPPG. This prevents other more sustainable options from being delivered. SP3 observes that rural development is often less sustainable because of greater reliance on cars, so any new growth should address local needs. Yet, the current strategy—with its strict allocations and boundaries—does not effectively support sustainable rural communities like Dundry, Wrington, Clapton in Gordano, Failand, Winford, Barrow Gurney, and Felton. Such rigidity limits the organic growth necessary for the health of villages, community organizations, sports clubs, and local builders. Many of these villages already benefit from schools and bus services, which could be further supported and expanded. They also make use of delivery options, remote work, school transportation, and the community West Link bus service. These settlements should therefore be given proportional opportunities for growth, either through appropriate allocation or by allowing expansion via infilling and rounding off at their edges. The settlement hierarchy and restrictive boundaries effectively preclude development in most villages, leading to an overreliance on large strategic sites and undermining the plan's stated objectives of sustainable, accessible growth.	Modification The modification required to address the objection centres on revising the North Somerset Local Plan 2041 so that it does not focus the majority of housing growth on a limited number of large strategic sites, particularly Woodspring (southwest of Bristol). Instead, the plan should allocate land at more sustainable locations such as Sandford (HE201022) and Wrington (HE20198), which better meet local needs and respect Green Belt criteria. Furthermore, the settlement hierarchy and restrictive boundaries must be relaxed to enable proportional growth in villages that already demonstrate sustainability, allowing for expansion through infilling and rounding off at their edges. This approach would promote a more balanced and resilient delivery of development, support the vitality of rural communities, and reduce reliance on national housebuilders. In summary, the plan should be modified to: (1) exclude Woodspring from the primary allocation due to its adverse impact on Green Belt purposes; (2) include Sandford and Wrington sites within the allocation; and (3) allow sustainable villages to grow through appropriate allocations and more flexible boundaries. This would ensure that development is distributed more fairly and sustainably across North Somerset, reflecting both local needs and strategic priorities.		
58594049	Woodstock Homes (Land west of Butts Batch, Wrington)	Oliver Ansell	Woodstock Homes	No	• Justified • Effective • Consistent with national policy	Unsure	Unsure	Please see representations document Policy SP3 (Spatial Strategy) states that "most development which takes place [in rural villages] will be at the relatively more sustainable villages". Wrington is demonstrably such a settlement and currently, Policy CS32 (Service Villages) identifies Wrington as one of the district's Service Villages, with CS14 (Distribution of new housing) offering a distinction between these and other less sustainable settlements in the settlement hierarchy. Policy CS32 also states that development within or adjoining the settlement boundary will be supported where it enhances overall sustainability and respects local character. The PSP makes no distinction between villages, rural settlements or service centres with the exception of Schedule 6 which identifies a hierarchy of town, district and local centres. Wrington is recognised here as a local centre with DP26 stating "it is important to maintain the viability and vitality of these local centres for the communities they serve". Despite this, Wrington is allocated no development, other than an existing extant permission for 37 dwellings located circa 300m outside of the settlement boundary to the northeast, which directly contradicts the stated intention of SP3. Other comparable, or less sustainable settlements such as Churchill have a higher level of growth allocated to them (290 dwellings in the case of Churchill). The failure to allocate any meaningful growth to Wrington also renders the Strategic Policies internally inconsistent. SP6 states that development within villages must "reflect local community needs" and connect to facilities via sustainable modes. However, the Plan prevents any ability for Wrington to meet such needs in practice because LP7 restricts all development outside the outdated boundary and no meaningful allocations are made. This internal contradiction between the aims of SP6 and the spatial reality created by LP7 undermines the coherence and effectiveness of the strategic policies as a whole. NPPF paragraph 83 requires planning policies to promote sustainable development in rural areas by supporting housing "where it will enhance or maintain the vitality of rural communities." It states that "planning policies should identify opportunities for villages to grow and thrive, especially where this will support local services". By limiting Wrington to windfall development within a tightly drawn boundary, the Plan is inconsistent with the national requirement to ensure rural vitality.	By limiting Wrington to windfall development within a tightly drawn boundary, the Plan is inconsistent with the national requirement to ensure rural vitality.		829 A5 OA 111225 Representations to Reg 19 Local Plan.pdf North Somerset Local Plan Pre-submission Plan - Representation form Part B.pdf
4601665	Leigh & Glennie Ltd		Leigh & Glennie Ltd	No	• Justified • Consistent with national policy	Yes	Yes	Please see attached document Summary The SHLAA was fundamentally flawed in its preparation, going back to the February 2025 consultation and in the October 2025 document. The Council appear to have recognised there is no Government definition of 'hard constraint' but did not alter their spatial strategy or identification of allocated sites. The Council's approach for Policies SP3 and SP8 is inconsistent with the NPPF and the PPG on how suitable sites should be allocated, and how constraints on sites should be considered. They failed to appraise sites put forward within such areas, including the site we promoted within the National Landscape; there was simply no appraisal of the site as the designation of National Landscape equalled a simple 'no' by the Council, contrary to national and local policy, and to the LURA. Policies SP3 and SP8 are therefore not sound and must be reappraised, along with all potential housing site allocations proposed to the Council. 43203041	National Highways		National Highways							National Highways supports Policy SP3 that gives priority to new development in or close to urban areas. The principal location for new development is Weston-super-Mare, with four additional strategic development locations at Wolvershill (north of Banwell), Woodspring (south-west of Bristol), Nailsea and Backwell, and Pill and Easton-in-Gordano. We support the proposed spatial strategy being focussed on larger settlements with existing or future opportunities for sustainable travel. Such an approach has the greatest potential to reduce travel demands, particularly those longer-distance journeys reliant on use of the SRN. Notwithstanding the suitability of this approach, National Highways will continue to review the supporting transport evidence to ensure that any residual cumulative issues for the SRN are acknowledged and addressed as necessary.	NSC Reg19 Local Plan Consultation.pdf
51549729	Andrew Luke			Unsure	‣ Positively prepared ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Response to Policy SP3: Spatial strategy The proposals put forward for the scale of development at Backwell are fundamentally wrong when considering the NPPF policy to achieve sustainable development. Development should be focussed on towns with existing and adequate centres, green infrastructure and community infrastructure. The Backwell falls considerably short of this definition as there is no community centre, insufficient public greenspace, community infrastructure is sparse or over subscribed, many of the public transport options are inaccessible when considering the locations of the allocated sites and typical walking distances of c.800m (Sustrans, 2022), and current active transport routes are unsafe. The plan as currently proposed is not sound as it is not the "most appropriate strategy when considered against the reasonable alternatives". More housing should be proposed in and around the towns of Weston-super-Mare, Clevedon, Nailsea and Portishead which have the community infrastructure and transport connectivity on a scale that dwarfs the provision at Backwell. The proposed quantum of development will fail to deliver the social objective of sustainable development as defined in the NPPF as, whilst it will deliver the housing numbers required at a local authority level, it will not "support strong, vibrant and healthy communities", deliver "accessible services and open spaces that reflect current and future needs and support communities' health, social and cultural well-being", and will certainly not support the environmental objective which seeks "to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy". The reasons for this are explained further below. Changing Backwell from a village to a Town without the necessary facilities - The scale of growth proposed for Backwell will fundamentally alter the nature of the settlement and will impact local residents and users of the A370 is a significantly negative way that will impact countless lives and livelihoods. Health and wellbeing - construction effects on the community over what should effectively be considered as a permanent timescale given the lifetime of the plan, should not be underestimated and are significant. We are already seeing a huge impact from one or two comparatively small developments when compared with the scale of development proposed. This has included extremely long delays and a build up of traffic on the A370 due to repeated periods of traffic measures which show a distinct lack of coordination, and which has brought with it associated air quality effects (Nox, dust and particulates), and the tracking of mud and dust from the construction site that exceeds 200m in both directions. The presence of construction vehicles is also notable and at times dangerous given the volume of school children who cross the A370 and Station road. Backwell is a village with an extremely small community centre and multiple schools, with a high proportion of children and older people. The quantum and locations of development that are proposed will disproportionately impact a generation of children in terms of health, wellbeing and educational attainment through noise disturbance, impacts on air quality, and road safety. It will also have a disproportionate impact on the elderly given that Backwell has an above average proportion of elderly people present which will inevitably be more reticent to venture out given the scale of disturbance and disruption. The loss of open space which is used by the community (and that has already started to occur) will further detrimentally impact the health of the population, as will the increased pressure on existing facilities which will mean that they are impacted and unable to provide the level of service which is currently available to Backwell residents (albeit that in certain areas this is already under pressure). Lack of services, facilities, greenspace and community infrastructure - Your own draft local plan acknowledges at Policy SP5 that the four towns of Weston-super-Mare, Clevedon, Nailsea and Portishead within North Somerset are "the most sustainable locations within North Somerset given their range of services, facilities and jobs, and accessibility from surrounding areas". There is a good reason that Backwell is not listed as one of the places considered most sustainable in terms of the services, jobs and facilities that are provided. This is because it is a village and has only the smallest fraction of facilities and services when compared with the other places listed. Backwell may have	Reduced quantum of housing at Backwell which should be located at sustainable locations with community services, facilities and infrastructure		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								schools, but apart from this the 'village centre', which comprises a spa, a bakery, a takeaway, an off licence and two café's, does not provide for the needs of the current village let alone the scale of development being proposed. The scale of change will take Backwell to a similar size to Nailsea which has many restaurants, 2 large supermarkets, several smaller supermarkets, a fishmongers, a butchers, 3 bakers, 3 banks, more than 5 pubs, many large shopping outlets (such as boots, WHSMITH etc). It seems highly unlikely that the CIL system will deliver the necessary community infrastructure or bring the infrastructure forward in a timely manner. The same applies with planning applications and amendments to conditions which are commonly undertaken in order to water-down benefits and avoid the need to mitigate impacts and provide for community needs. It is therefore easy to predict that the services and facilities required to serve such an increase in population will not materialise. The quantum of development proposed at Backwell will not deliver on the NPPF requirement for "accessible services and open spaces that reflect current and future needs and support communities' health, social and cultural well-being". Instead it will (and has already) result in the loss of community valued open space. The deliverability of the scale and rate of change in community infrastructure required has not been evidenced and has been put off for 'future studies', and delivery of the necessary infrastructure is simply unfeasible within the existing constraints of the area. Character and identity - The NPPF states that when considering density there is a need to take account of "the desirability of maintaining an area's prevailing character and setting" . It should be noted that Backwell has its own distinct character and identity which can be better understood when viewed from either side of the valley. Currently it is a village of a relatively large size but blends into the valley landscape due to its relatively modest density of housing and importantly the green spaces that break up the urban grain. This is already being eroded by two developments under construction at this time. It will be completely destroyed when it becomes what will effectively be single mass of urban development within the valley. Site allocations to the south of the A370 in Backwell are located on the side of the valley at higher elevations that would be visible over large areas impacting the sense and scale of urban form across the valley and the setting of areas of historic value such as Church Town, and would have a disproportionately adverse effect given their raised elevations. As well as spreading the settlement up onto the valley sides, the locations of some of the central sites between the A370 and the railway will change the character of the settlement and substantially alter its representation within numerous sensitive views. When currently viewed from raised land to the north within Nailsea and south of West Town and from the outskirts of church town, the urban settlements of Nailsea and Backwell are broken up by the landform, greenspace, fields and patches of trees. With the scale of development proposed the two settlement will appear as much larger urban masses within the wider landscape. This cannot be mitigated at a site or strategic level. Transport and Climate Change - The scale of development will place highly unsustainable levels of pressure on existing transport infrastructure particularly in terms of the capacity of the A370 and Station Road to accommodate cars and bus services which are already at and will exceed capacity (even in the event that a new bypass is secured which is highly unlikely), and will create significant delays for both public transport users and cars and increase the risk of accidents. Current planned works to enable public transport to deliver more rapid journeys are not sufficient to overcome the additional level of traffic that would arise through this proposed growth, and there is little further scope to improve bus lanes within the constraints of the existing traffic network. Backwell is already subject to significant severance on the A370 that divides the village, a road that is crossed by hundreds of school children on a daily basis. The only way that further severance could be avoided with the scale of development proposed, is by increasing crossings and traffic calming measures on the A370 or diverting traffic into nearby residential neighbourhoods. This will destroy the community within Backwell and dramatically increase the risk to the safety of the population (and particularly school children) in terms of risks of accidents and from pollution. Backwell does not have a village centre, let alone any form of centre that would be able to service the needs of residents for a settlement the scale of a town. There are no sizable shopping outlets in which food can be bought and there are no restaurants or cafes of any scale that could serve a community of this size. The scale of community infrastructure investment that is required even if only half the housing numbers identified are brought forward for Backwell is unlikely to be deliverable. Many of the sites proposed in Backwell, particularly those to the south of the A370, are located at considerably longer walking distances to key transport and amenities and further away than the 800m distance that people will typically walk for services and facilities (Sustrans (2022). Consequently, it is highly unlikely that the residents of any future development at these sites are able to access either public transport, shops or community facilities by walking or cycling and instead these sites will result on proportionately greater numbers of vehicles entering onto the local road network and the A370. This means that the vast majority of trips form new housing development in Backwell will be by car with unacceptable implications for road safety, congestion and consequently air, quality, noise and public health. The proposal will create or reinforce what is already a commuter town generating a huge increase in traffic and associated GHG emissions. Locating this scale of development in Backwell will not meet the NPPF policy to "minimise the number and length of journeys needed for employment, shopping, leisure, education and other activities" or to "[prioritise]"sustainable transport modes". Backwell has very limited cycle paths and networks and is the point at which some key national networks (Festival way) become fragmented and have to use roads which are unsafe for cyclists. Critically, the scale and location of development will dramatically increase vehicle movements on the A370 which currently severs the village and has in the past been the site of tragic accidents. This is a key crossing for school children yet cars drive at dangerous speeds and visibility is poor. The increase in housing will result in an unacceptable impact on highway safety and NMUs, with a specific risk for school children. The quantum and locations of development proposed for Backwell will not meet NPPF policy to avoid an "unacceptable impact on highway safety". The quantum of development proposed at Backwell does not represent the most appropriate strategy when considered against the reasonable alternatives and is not deliverable when considering the requirements of the NPPF. The quantum of development proposed at Backwell should be reduced and increased in areas of the 4 towns, or an argument should be made that the scale of development required to meet government targets will have a wholly unacceptable social and environmental impact that will leave a legacy of poor quality housing and a decrease in the quality of life for numerous communities within North Somerset. In respect of specific housing allocations at Backwell, it is positive to see that site HE201068 (Land south of Dark Lane) has not been brought forward as an allocated site. This is a correct and sound decision. In the event that a prospective developer makes a case for this site to be included, I would emphasise that the current proposed allocations are already excessive and will compromise the identity and character of Backwell village as well as adversely impacting the community, and that sites to the South of the A370 would have a disproportionate adverse impact on landscape, transport, heritage, ecology and health and safety. This site should not be reconsidered for housing but instead should be considered as a community green space. The reasons for housing being inappropriate are included in my previous Response to Regulation 19 - Additional Sites Consultation (February 2025), and if site HE201068 is raised again by another consultee any representations should be considered against my previous submission and the submission of other community members. I again summarise			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								here why site HE201068 is inappropriate for housing development: • It will significantly and adversely affect congestion at the crossroads with the A370, the junction between Church Lane and the A370, between Backwell and Nailsea, and the A370 with knock on effects in the form of public transport delays and to the health of the local population; • It cannot be directly accessed other than through residential streets that are often congested and reduced to one lane by parked cars; • It is located at a point where several walking routes to the local primary school join near the entrance to the school and poses aa serious risk to health and safety of primary school children both during construction and operation; • It is adjacent to a substantial source of vibration and noise from the waste recycling facility that would mean that residents would suffer adverse effects on health or would preclude use of large areas of the site; • It is a key part of a local walking route that attracts people from the wider area including Bristol and features in the book: Beyond Bristol: 24 Country Walks Paperback by Robin Tetlow; • It is on the hillside rather than within the valley meaning it is more prominent in views across a much wider area; • It is immediately adjacent to the Old Backwell Village or Church Town, and will detrimentally effect the historic setting of the village; • The PRoW that runs through the site provides access to woodland and nature and provides a critical recreational and health resource to the village; • It is a critical area of greenspace for attenuating surface water in an area already adversely affected by surface water flooding, and since the previous Reg 19 submission there have been further examples of surface water flooding on Church lane at the bottom of the hill on which the site is located meaning that loss of attenuation could create a much more serious surface water issue; • It is a valuable foraging site and resource for woodland species in the adjacent woodland and owl calls and bat activity are a nightly occurrence and can be readily observed; and • The complications of limited site access and site gradients will require substantial cut and fill and likely need to transport materials from site which will make development of this site disproportionality impactful and will likely have a longer than typical construction period.			
58448865	Avon Wildlife Trust		Avon Wildlife Trust	Yes		No	Yes	Avon Wildlife Trust's priorities are to maintain and improve recognised nature-rich places and to strengthen the networks between these sites to help nature recover. Maintaining, creating, connecting and restoring a diverse range of habitats to create thriving nature recovery networks across the region is a key part of our vision. Ensuring that cohesive areas around sensitive and ecologically important sites (buffer or impact risk zones) are protected is a key part of this. North Somerset is facing unprecedented development pressures from housing development and associated major infrastructure such as upgrading of the A38, the Banwell bypass, Bristol Airport expansion, and the installation of Hinkley Point C power lines. Avon Wildlife Trust acknowledges the government housing requirement for North Somerset of 23,895 dwellings over the 15-year plan period (an increase in 8,620 dwellings above the proposed target within the 2024 Regulation 19 Pre-submission Draft) presents the council with significant challenges. According to data set out in the Spatial Strategy Site Selection and Capacity Paper (Oct 2025), 27% of the 24,495 housing capacity identified is located within Green Belt with the potential to resulting in significant impacts to habitat connectivity and nature recovery. This significant number and the associated impact on Green Belt are of concern. Releasing land from Green Belt, is likely to threaten the integrity and connectivity of both designated sites and non-designated sites, across this area and beyond, which are critically important for biodiversity. We believe the current proposals ignore the cumulative effects of development and feel that assessments undertaken to date consider the impacts of allocation areas and loss of Green Belt in isolation; this risks undermining our collective ability to protect nature now and in the future. Within Policy SP7 – Green Belt, twelve sites have been identified for release from the Green Belt to support residential development - amounting to over 6,600 dwellings. However, the draft plan is not transparent on the maximum area of land that could potentially be released under SP7 and how this compares to the areas of new green belt being created. Avon Wildlife Trust is concerned that this plan will directly contribute to the cumulative erosion of local biodiversity networks. We believe the scale and location of the losses likely to result are in direct contravention of the National Planning Policy Framework (NPPF) Section 13 Protecting Green Belt Land which identifies one of the five key objectives of Green Belt "to assist in safeguarding the countryside from encroachment;" Furthermore NPPF Section 15 Conserving and Enhancing the Natural Environment sets out the requirement for planning policies and decisions to contribute to and enhance the natural and local environment by protecting and enhancing valued landscapes and sites of biodiversity value and by establishing coherent ecological networks that are more resilient to current and future pressures. Again, we feel this requirement is not currently being met by the draft plan Section 40 of Natural Environment and Rural Communities Act 2006 places a duty on public bodies to contribute to the coherence and resilient ecological networks. There is concern that some of the allocations currently set out in the draft plan will adversely affect this coherence and resilience of valuable ecological networks in North Somerset. We also believe some of the proposals undermine the principles of the North Somerset Local Nature Recovery Strategy (LNRS), which establishes priorities and specific actions to drive nature's recovery and provide wider environmental benefits within the region- requirements set out by Government in the Environment Act 2021. Under Section 102 of the Act, public authorities are obligated to conserve and enhance biodiversity, and in turn, have regard to the relevant local nature strategies, particularly when making planning policies. LNRS can serve to integrate local nature recovery strategies into the planning system, so areas of greatest potential for nature recovery can be better reflected in planning decisions. We believe that where land has been identified as having particular potential for habitat creation or nature recovery within the LNRS, the Local Plan should contribute towards the identified outcomes. This is not currently the case.			
39179649	Adrian Mealing			No	• Justified • Effective • Consistent with national policy	Yes	Yes	I consider Policy SP3 to be unsound because it is not positively prepared, not justified, not effective, and not consistent with national policy. SP3 forms the overarching Spatial Strategy for North Somerset, yet the allocations made for Congresbury (183 dwellings across three separate sites) do not align with the principles of directing growth to sustainable locations with appropriate access to infrastructure, services, and low-carbon transport options. My concerns are as follows: 1. SP3 is not positively prepared. SP3 requires growth to be aligned with infrastructure delivery. However, Congresbury receives no new: school capacity, GP or primary care provision, public transport improvements, strategic road upgrades, funded active travel links. The Spatial Strategy therefore does not meet objectively assessed development needs in a sustainable way.	Proposed modification to SP3: To make SP3 sound, North Somerset Council must revise the Spatial Strategy to ensure that any allocations in Congresbury are supported by a clear, funded and deliverable infrastructure package. This should include: demonstrated primary and secondary school capacity, GP/ healthcare expansion, deliverable active travel and public transport improvements, confirmed transport capacity upgrades on the A370 corridor, full ecological assessment		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								2. SP3 is not justified The Plan does not provide a transparent or evidence-based justification for selecting Congresbury as a location for significant housing growth. No comparative analysis is provided showing why lower-impact or better-served areas were not chosen instead. The absence of an alternatives assessment makes the strategy unjustified. 3. SP3 is not effective. The Congresbury allocations depend on infrastructure that is: unfunded, not designed, absent from the Infrastructure Delivery Plan, reliant on future "aspirational" schemes (e.g., Strawberry Line extensions, unspecified A370 improvements). The policy therefore cannot be delivered during the plan period. 4. SP3 is not consistent with national policy. The NPPF requires plans to: focus growth where it can be supported by infrastructure, reduce reliance on the private car, apply the flood-risk Sequential Test, protect designated heritage assets, avoid coalescence and protect settlement identity. The Congresbury allocations contradict all of these principles, especially as one site (Woodhill Nurseries) sits partly in higher flood-risk zones and impacts the setting of Cadbury Hill Fort (Scheduled Monument). Therefore, SP3 is not consistent with the NPPF's tests for sustainable locations, flood risk, climate resilience, heritage protection, and sustainable transport.	and mitigation for the North Somerset & Mendip Bats SAC, avoidance of partially flood-risk land, heritage-led review of allocations impacting Cadbury Hill Fort, evaluation of reasonable alternative locations with better sustainability credentials. Without these modifications, the Spatial Strategy remains neither justified nor deliverable.		
58043905	C Miles			Yes		Yes	Yes				
58582945	Nailsea Action Group		Nailsea Action Group	No	‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	In this iteration, Nailsea becomes a large sprawling conurbation, with an ineffective 'centre', offset at one end, and only easily accessible by a small proportion of the town. This aspect of the Local Plan is not sound because it is unlikely to be effective on account of the following:- • There is next to nothing in the Local Plan that promises necessary infrastructure in Nailsea. The current developments have brought none significant so far despite undertakings given in the plans. • Each development is treated singly, not cumulatively with those nearby. • Access to and from these recent substantial building developments is still via the narrow lanes that are consistent with Nailsea as a village. • As for access further afield, all routes into and out of the town have significant pinch points long recognised as unmitigatable and troublesome. Overall there is:- Failure of Consistency with National Policy • Flood risk conflict: NPPF requires directing development away from areas of highest flood risk. SP3 claims to minimise flood risk allocations, yet strategic sites are adjacent to Flood Zone 3. • Climate change pledge: NSC has pledged carbon neutrality by 2030, but the spatial strategy disperses growth in car dependent locations, undermining national and local climate objectives. Failure of the Justified Test • Evidence base is vague: The Infrastructure Delivery Plan and supporting transport papers list "possible" actions rather than definitive, funded schemes. This means the strategy is not based on proportionate evidence. Failure of the Effective Test • Deliverability uncertain: There is no clear mechanism or funding identified to deliver the promised bus, rail, and rapid transit improvements. Without this, the policy cannot be implemented effectively. • Reliance on external agencies: Many transport improvements depend on regional or national bodies (e.g. WECA, Network Rail), but there is no binding agreement in place. • Infrastructure lag: Housing allocations are front loaded, but transport improvements are aspirational, meaning development would outpace infrastructure delivery. Failure of Consistency with National Policy • NPPF requirement: National policy requires plans to promote sustainable transport and reduce reliance on private cars. SP10's wording is consistent in principle, but allocations undermine this by directing growth to locations with poor sustainable transport options. • Climate change conflict: The NPPF (para. 152–154) requires plans to support climate resilience. SP10's support for airport and port expansion increases carbon emissions, conflicting with national climate policy	Radical re-consideration of this part of the Local Plan that clearly fail the soundness tests, which also thread through much of the following sections.		
58629473	Shail Patel		n/a	Yes		Yes	Yes			In general I support this plan noting the following to ensure the proposal remains sound: Yes - we need more affordable housing - this must be sustainable and 'green' etc No: - we do not need any expansion of Bristol Airport for a very large number of reasons inc, pollution & climate change, lack of transport links, better alternatives elsewhere esp. Cardiff and Exeter, cf arguments put forward by BAAN: Bristol Airport Action Network - we do not need developer scale developments in Wrington for the reasons given by Keep Wrington as Wrington	
57928993	Kevin Payne			No	‣ Positively prepared ‣ Justified ‣ Effective			Policy SP3 is unsound because it elevates Pill—a Category A village—to a full strategic growth location without any prior consultation, evidence, or justification. The February–March 2025 consultation explicitly presented all sites as non-strategic "other potential" allocations (Table 7.1). No question was asked about strategic status. The Cabinet report (18 June 2025) then incorrectly claimed "general support for the principle of development" to justify reclassifying Pill as a strategic location. This is a direct breach of the Local Plan's spatial hierarchy and consultation requirements.	SP3 should be modified by removing Pill/Easton-in-Gordano as a strategic growth location. If Pill is to remain a strategic location, the Council must first:		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					• Consistent with national policy			Not Positively Prepared (NPPF 36a): SP3 imposes disproportionate growth (55% increase in housing stock) on a small village with very limited services, flood risk constraints, and no strategic infrastructure capacity. It overrides the made Neighbourhood Plan, which capped growth at 150–200 homes to 2038 (endorsed by 81% of voters). This shows the strategy is not needs-led or community-informed. Not Justified (NPPF 36b): Evidence is incomplete. The Sustainability Appraisal ignores key constraints shown in DEFRA MAGIC, including floodplain woodland and interacting fluvial–tidal risks at Pill Green. No alternatives assessment shows why Green Belt land near Pill was preferred over brownfield, higher-density, or urban options. No evidence justifies bypassing the spatial hierarchy. Not Effective (NPPF 36c): The strategy is undeliverable. The Draft IDP (Feb 2025 §8.3) identifies unfunded major infrastructure (including Junction 19). No cumulative transport modelling exists for Pill Green, Pill Road, Court Hay, Portbury Wharf, or Portishead growth, contrary to NPPF paras 116–118 and National Highways' requirements. Flood minimisation principles in SP3 are not met. Not Consistent with National Policy (NPPF 36d): • Concentrates 4.6% of district housing in a parish with only 1.9% of the electorate. • Conflicts with neighbourhood plan conformity (NPPF 74). • Proposes Green Belt release without exceptional circumstances (NPPF 147–152). • Duty to Cooperate failures: no updated Statements of Common Ground with Bristol or National Highways. Conclusion: SP3 fails all four soundness tests and is unjustified, undeliverable, and inconsistent with national policy. The policy should be removed or fundamentally rewritten.	• conduct full public consultation on strategic status; • provide an alternatives assessment including brownfield and urban options; • demonstrate deliverable infrastructure capacity with cumulative transport modelling (agreed with National Highways); • provide full flood-risk sequential testing; • demonstrate Green Belt exceptional circumstances; • provide Statements of Common Ground for cross-boundary impacts. Without this evidence, SP3 cannot be made sound.		
51207009	Barratt Bristol	Arwel Evans - Lichfields	Barratt Bristol	Yes		Yes	No			Policy SP3 sets out the spatial strategy for development in North Somerset. It introduces the four strategic development options and one of these is Pill and Easton-in-Gordano. Policy SP8 then notes that 1,100 dwellings (4% of the proportion of housing supply) is to be directed to Pill and Easton-in-Gordano. Barratt Homes welcome the identification of Pill and Easton in Gordano as a strategic location for growth in North Somerset. Whilst the settlement is currently surrounded by Green Belt designation, it is a sustainable and logical location to accommodate growth. The settlement is well located in proximity to the Bristol urban area, it is located within 500m of Junction 19 of the M5 and is bound to the south by the A369 which has a frequent direct bus service to Bristol. Soon, the village will benefit from the Portishead-Pill-Bristol railway line, which is due to open by 2028 - the station will be located approximately 750m from Barratt's site at Lodway Farm. Pill and Easton in Gordano also benefit from existing active travel routes. In addition, there are ample services and facilities available within the village including a primary school, medical centre, library, convenience store, allotments and playing fields all of which are within 1km of the Land at Lodway Farm. Not only is the village well placed to absorb future strategic scale growth, but the Barratt site is also ideally located in respect of major employment hubs, facilities and services which are all accessible via a range of active travel modes. We therefore agree with NSC's assessment that Pill and Easton in Gordano is one of the larger more sustainable villages in NSC with a wide range of services and facilities and should therefore accommodate a substantial amount of growth. We agree that land should be removed from the green belt to achieve this. Barratt Homes controls part of the land at Lodway Farm which is proposed to be allocated for 160 homes. We consider that land at Lodway Farm is the most logical of all of the sites proposed for allocation in Pill and Easton in Gordano given its central location and proximity to existing facilities and services including the new railway station. Land		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										at Lodway Farm is completely enclosed by long term defensible boundaries on all sides and presents a logical in-fill/ rounding off opportunity. Importantly the site has a house builder (Barratt Homes) on board and the site has no constraints that would curtail delivery in the short term. Whilst we support the allocation of Lodway Farm and the strategic location of Pill and Easton in Gordano in principle, we object to some of the requirements outlined in Policy LP4. These are addressed in separate representations.	
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	No	Whilst some of the provisions of this Policy appear reasonable, the Spatial Strategy that has been adopted here by the Council does not sensibly reflect appropriate planning principles and therefore undermines its effectiveness. The Policy does not present the housing requirement, explain its distribution or commit to meeting its housing requirement over the plan period. So it is questionable if it is deliverable over the plan period and does not appear to have been positively prepared. The delivery of development close to and adjoining urban areas is supported – and this should be reflected fully in the emerging policies. And where development is adjoining urban there should be recognition that in some cases that can bring about positive We note that its provisions are picked up in other draft development control policies. Whilst note that the policy does not rule out totally residential development in areas that are at risk of flooding now or in the future, we believe that the policy should recognise that where there are evidenced and demonstrable solutions that minimise the risk of flooding then this should be given appropriate weight in the determination of planning applications. However, other draft flood risk-related policies contradict this. To state that beyond development areas in villages and in the countryside will relate to community needs conflicts with the provisions of the first sentence in that priority will be given to development in or “close” to urban areas. Further, referencing community needs is unclear – particularly where needs go beyond that which is required by the community – for example villages benefitting from rail services which support sustainable commuting to places of work. The Local Plan does not therefore allocate sufficient land in villages to meet needs. Innovative technical approaches and responses to addressing flood risk should be explored so as to ensure that sites can be delivered in locations that are sustainable. In the justification text, it refers to the development being focused at towns and urban areas. However, the locational strategy and distribution of homes does not reflect that – notably Portishead which has seen significant growth over the past 20 years, but is only now to support up to 7% of the housing requirement as identified in the Local Plan; and of the 7% the vast proportion is through urban regeneration to which there is no real strategy and certainly not one which would deliver quickly a mixture of home types as the quantum presented reflects high density flatted developments – which does not fully align with Government policy. At Wolvershill (Banwell) some 14% of the Local Plan’s housing requirement is directed towards it – however, there are doubts over viability and therefore overall deliverability. In that regard the draft Local Plan and its Spatial Strategy do not present the most appropriate strategy and cannot be positively prepared to meet objectively assessed development requirements. No reference in the spatial strategy is made to a settlement hierarchy for the purposes of spatial planning and distribution – and therefore no reference is made (and so no clarity) to the evidence supporting the policy’s wording. This is a flaw in the draft Local Plan. The draft Local Plan does not address Bristol’s unmet need – a matter that should be addressed now and not left for a subsequent review. Further, the statement that the Green Belt sites are located in the most sustainable locations is incorrect. At Portishead, for example, land east of the town (North of the Portbury Hundred) land that is sustainably located adjoining the urban area with ready access to facilities including bus services and a new train station (opening 2028) can be readily delivered. Whilst in Green Belt, it is considered to be Grey Belt and issues of flood risk can be readily resolved through a technical response which includes land raising. It is an appropriate site and should be allocated. Approach and implications for site identification in Flood Zones The Council’s approach to spatial distribution is one which seeks to avoid development in areas of flood risk. The Council has not been consistent in that approach: in correspondence attached (26.9.25) from the Council in respect of a Judicial Review (JR) for 190 homes granted permission in Yatton, North Somerset, in Flood Zone 3, it confirms that the outcome of the JR is fundamental to the Council’s strategy. Therefore the Council recognise that the JR outcome will have implications for local plan making ("significant practical implications for the Council's strategy on land availability, development within flood plains, ..."). So, it is important. It therefore follows that should the JR be unsuccessful, then the Council should, in the interests of planning for the district over the next 15 years (and setting out a direction which is beyond that) reassess its approach (as presented in the draft Local Plan) to spatial planning: distribution of homes and other forms of development along with their delivery timescales; the sites identified themselves where flood mitigation as part of a scheme warrants investigation and technical responses (solutions) so the they can be readily resolved. A lack of consistency of approach to flood risk The Council has sought to avoid development in areas of flood risk – choosing to direct new land allocations to areas free of flooding (sea and river). However, it is clear from a simple review of allocations that the Council has not been consistent in that approach. For example and comparing draft allocated sites with EA Flood Risk Maps for Planning: - Portishead: Wyndham Way Development Framework Area (LP20) – land is within Flood Zone 2 and 3 - Clevedon: Castlewood (120 homes) – land is within Flood Zone 3 - Clevedon: Land North of Churchill (44 homes) – land is within Flood Zone 3 - Clevedon: Land off Millcross (50 homes) – land is within Flood Zone 3 - Easton-in-Gordano/Pill: Land at Lodway Farm (160 homes) – part of land within Flood Zones 2 and 3 In Weston-super-Mare, there are other sites in areas that flood and are greenfield, that have been allocated. It is clear therefore that the approach and objectives being pursued by the Council do not follow a methodology that avoids areas of flood risk and so the strategy is not consistent.	The Council’s Spatial Strategy is not based upon a sound approach. The outcome of the JR decision is fundamental to the spatial distribution of development in the district – and this has been made clear in correspondence from the Council (as referred to). I that regard, the Local Plan should await the outcome of the JR in respect of development at Yatton and then move to consider the implications of the judgement – with a view to undertaking another review of site allocations where sites in areas of flood risk and which are well located can be delivered through agreed mitigation measures. The Spatial Strategy should also address unmet needs – to ensure that it is positively prepared and justified and deliverable over its plan period.		Email NSC 26.9.25.pdf
58214273	Dr. David Portas		West Hay helpers group							We would like to express our support for this plan. We consider it is right to favour development around the large	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										towns, and the city of Bristol. Development around the villages of North Somerset is unwise for a number of reasons (local jobs, heritage assets,lack of transport, non-optimal use of greenfield sites), and also goes against many of the policies defined in the plan. We are fully supportive of the plan being submitted for approval.	
51242657	Rubix Strategic Limited	Arwel Evans - Lichfields	Rubix Strategic Limited	Yes		Yes	No			Policy SP3 sets out the spatial strategy for development in North Somerset. It introduces the four strategic development options, which includes Nailsea and Backwell. Rubix is supportive of the Plan's spatial strategy to prioritise locating strategic new residential and mixed-use development in or close to urban areas where there are existing or proposed facilities, services and jobs, as well as opportunities for active travel and public transport. The key evidence base document for Policy SP3, 'Spatial Strategy, site selection and Capacity paper' (October 2025) confirms that Nailsea and Backwell is identified as one of four strategic locations across North Somerset where significant levels of growth are proposed. Under Policy SP8 Nailsea and Backwell is expected to provide 3,728 dwellings, which amounts to 15% of the proportion of housing supply. Rubix welcomes the identification of Nailsea and Backwell as a strategic location for growth in North Somerset. Whilst the strategic location requires the release of some Green Belt land, we consider that as one of the most sustainable locations in North Somerset, with Nailsea being one of the main towns and the village of Backwell having an extensive range of essential services, the allocation of the area as a strategic location for growth and development is evidently justified. Nailsea and Backwell is a strategically significant urban area due to its proximity to Bristol and the presence of transport links such as the A370 and the Nailsea and Backwell Railway Station. The railway service provides links to Yatton, Weston-super-Mare and Exeter to the west and Bristol Temple Meads and Cardiff to the east. The area is also well served by frequent bus services which provides direct links between Weston-super-Mare, Congresbury, Backwell and Bristol City Centre. In addition, there are ample services and facilities available within Nailsea and Backwell including local shops, Backwell Leisure Centre, Backwell Secondary School, Fairfield Primary School and a Local Nursery. These facilities and services are all within walking distance of the Rubix site – Land east of Backwell. The land east of Backwell therefore is well located to major employment hubs, facilities and services which are accessible via a range of travel modes. We agree with NSC's assessment that as one of the main urban areas, Nailsea and Backwell is an appropriate location to accommodate significant growth. We agree that green belt releases are necessary to achieve this. Rubix and Mactaggart and Mickel ('Mac Mic') are in joint control of Land East of Backwell, which policy LP3 has identified as having an indicative capacity of 889 dwellings. Rubix control the land to the north, south and west whilst Mac Mic controls the land to the east. The Rubix site has capacity	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										for circa 400 dwellings alongside associated infrastructure. The Land East of Backwell as a whole provides a logical extension to Backwell, is sustainably located and is deliverable. Importantly, the site presents the opportunity to provide significant benefits for the existing community including amongst others the provision of a much-needed link road from the A370 to Station Road, land for a new primary school, extension and improvement of existing active travel routes, the provision of sports pitches and a Neighbourhood Equipped Area for Play, Public Open Space and the provision of a mobility hub. Whilst we support the strategic location of Nailsea and Backwell and the allocation of Land East of Backwell in principle, we object to some of the requirements outlined in Policy LP3 and Schedule 1. These are addressed in separate representations under Policy LP3.	
58613377	Hill Residential Ltd	Marrons		No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	No	1.1 The following representations have been prepared by Marrons on behalf of Hill Residential Ltd (our “Client”), with regard to land interests at Land west of Failand, Bristol (the “Site”), in response to the North Somerset Council (the “Council”) Local Plan 2041 Pre-submission Plan Regulation 19 Consultation (the “NSLP”). 1.2 Our Client has previously made representations to the NSLP in March 2025, via the ‘additional sites consultation’. We understand that the contents of these representations will still be considered and therefore for brevity are not repeated here. 1.3 A planning application has recently been submitted for development on the Site, which is now under consideration by the Council. This confirms the technical ability of the Site to accommodate sustainable development and the Council is encouraged to consider the application alongside these representations with regard to the Site’s suitability, availability and achievability. The associated description of Proposed Development is as follows: “Outline application (with all matters reserved except access) for a phased development of up to 200 dwellings with landscaping and open space, a flexible retail/café/community unit (non-residential uses to include Use Classes E and F2), and associated infrastructure”. 1.4 Hill Residential Ltd (“Hill”) is an award-winning 5-star housebuilder, creating a range of high-quality homes across London and southern England in an area stretching from Cambridge to Oxford and across to Bristol. Hill’s vision is to be the UK’s leading, most trusted housebuilder, creating exceptional homes and sustainable communities. 1.5 Hill considers sustainability a fundamental part of its business strategy and believe that a sustainable future is achievable only through a holistic approach that encompasses environmental, social, and governance considerations. Supporting Documentation 1.6 These representations should be read alongside the following supporting documents: • Site Location Plan – prepared by Marrons (Appendix 1); • Parameters Plan – prepared by Marrons (Appendix 2); • Illustrative Masterplan – prepared by Marrons (Appendix 3); • Grey Belt Report – prepared by Marrons (Appendix 4); Scope of representations 1.7 The Council confirms as part of the consultation that representations are invited within the specific remit of the ‘tests of soundness’, as set out in the National Planning Policy Framework 2024 (NPPF) at Paragraph 36. The Framework notes that plans are ‘sound’ if they are: “a) Positively prepared – providing a strategy which, as a minimum, seeks to meet the area’s objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development; b) Justified – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence; c) Effective – deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and d) Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in this Framework and other statements of national planning policy, where relevant.” 1.8 In the context of Paragraph 36 of the NPPF our Client also considers it imperative that the NSLP accounts for effective forward planning, given the emerging Spatial Development Strategy and the role North Somerset play within the West of England Combined Authority (WECA) in terms of spatial planning. 2. Land west of Failand, Bristol The Proposed Development: 2.1 The key elements in relation to the Site and the Proposed Development are best summarised as follows its characteristics are best summarised as follows: • Up to 200 new homes, delivering a mix of dwelling sizes to meet local housing needs. • Space for a flexible retail/café/community unit (uses to include Use Classes E and F2). • 45% affordable housing (up to 90 homes), ensuring a range of tenures to support local families and		Marrons on behalf of Hill Residential - Reg 19 Representations Final w_a.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								key workers. • Creation of a high-quality residential development to provide new housing for the village and help the Council meet its chronic undersupply. • Increases in biodiversity value, equating to 12.03% increase in the biodiversity value of habitats and 168.83% in relation to hedgerows post development. This will include new native woodland planting, trees, wildflower meadows and grassland. • New pedestrian, cycle and vehicular networks within the Site with pedestrian connections to existing pedestrian infrastructure on the curtilage of the Site to improve pedestrian connectivity within Failand. • A comprehensive Sustainable Urban Drainage Strategy (SuDs), which could include swales, rain gardens, attenuation basins and permeable surfaces. • A landscape and heritage sensitive development that responds thoughtfully to the Site's topography and maintains appropriate separation from the Tyntesfield Estate Registered Park and Garden (RPG), balancing new housing with protective measures and high-quality green infrastructure that delivers environmental, social, and visual benefits. • New open-space areas with enhanced planting and green buffers, a thoughtfully located public open space, which includes children's play space and improved biodiversity. • Retention of existing hedgerows and trees where possible with additional planting to minimise visual impact. • Significant financial contributions including a population contribution to the village to support local services and facilities (S106 and Community Infrastructure Levy (CIL) contributions). Planning History: 2.2 The Site was submitted to the Council's Regulation 19 Additional Sites Consultation in March 2025, where the Site was promoted for allocation in the Local Plan update following the reforms to the National Planning Policy Framework (NPPF) in December 2024. As stated, for brevity the Regulation 19 Representations are not repeated here. 2.3 We note that the outcomes from the Regulation 19 consultation were presented to Cabinet on 18 June 2025. Notably, the Site was not selected for allocation in the updated plan. Our position, as set out in our Regulation 19 representations, remains that the emerging Local Plan fails to adequately address Bristol's unmet housing need. These concerns were echoed by Council members at the Cabinet meeting on 18 June 2025. 2.4 A request for pre-application advice was submitted in August 2025. The Council provided formal written advice on 29 October 2025. The advice acknowledged the proposal for up to 200 dwellings at the Site, and assessed its alignment with planning policy, site constraints, and sustainability considerations. 2.5 Critically, the Council's advice recognised that the Site could be considered 'grey belt' in accordance with the current NPPF, given that it does not strongly contribute to the key purposes of the Green Belt. 2.6 Notably, several aspects of the proposal were not disputed in the advice provided. The Council acknowledged the potential for a layout that respects the Site's landscape and heritage context, including the offset from the RPG and the containment provided by surrounding woodland and built form. The indicative design approach, including perimeter block layout and active frontages, was broadly supported from an urban design perspective. The provision of affordable housing in line with policy requirements was also accepted, subject to further detail at application stage. 2.7 While the Council's advice raised some concerns regarding the sustainability of the Site, particularly in relation to access to services and reliance on private car travel, the submitted planning application, with reference to its suite of supporting technical documents, demonstrates that the Site can be considered sustainable. Moreover, the Council's advice did not take into account relevant planning appeal decisions that support the sustainability of the Site. These decisions are discussed in detail at Paragraphs 6.73 to 6.75 of the submitted Planning Statement. The demonstrable sustainability of the Site is addressed throughout the planning application, and the inclusion of a shop provision within the proposals further enhances this position. 2.8 The Council also outlined a range of technical matters to be addressed at application stage, including transport, ecology, flooding, heritage, and affordable housing provision. These matters have been considered and are addressed through the supporting documentation submitted with the application. 3. Response to the NSLP Grey belt: 3.1 A key aspect of the Government's planning reforms was the introduction of the 'grey belt' alongside the revised Standard Method for calculating housing need. The Government is very clear on its objective of delivering 1.5 million homes and considers national planning policy measures such as the grey belt, key in doing so. 3.2 The initial draft of the NSLP did not consider the role of the grey belt and therefore our Client is keen to understand how it has now been introduced to this latest version and what changes have been made as a result. 3.3 The term 'grey belt' is mentioned 3 times within the NSLP. Indeed, within Policy SP7: Green Belt, grey belt is mentioned just once within the supporting text. Paragraph 148 of the NPPF confirms that where it is necessary to release Green Belt land for development, plans should given priority to previously developed land, then consider grey belt which is not previously developed, and then other Green Belt locations. The Council states on page 30 of the NSLP that "a sequential approach to Green Belt release as been taken prioritising previously developed land, followed by grey belt sites and then other Green Belt locations". 3.4 Paragraph 3.3 of the Council's Green Belt Review Background Paper includes reference to Paragraph 148 of the NPPF but neglects to include the final sentence, which reads as follows: "…Strategic policy-making authorities should consider the consequences for sustainable development of channelling development towards urban areas inside the Green Belt boundary, towards towns and villages inset within the Green Belt or towards locations beyond the outer Green Belt boundary." 3.5 With regard to the above Paragraph 148 includes reference to Paragraph 110, which states: "The planning system should actively manage patterns of growth in support of these objectives.

								Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health. However, opportunities to maximise sustainable transport solutions will vary between urban and rural areas, and this should be taken into account in both plan-making and decision-making." (our emphasis - see attached doc) 3.6 With reference to the NPPF and grey belt, it can reasonably be assumed that villages within North Somerset which are inset from the Green Belt, are strong contenders for having a presence of grey belt land and therefore present opportunities for sustainable development in line with the sequential approach as set out in the NPPF. By way of example, Failand, where our Client's Site is located, is inset within the Green Belt and pre-application discussions have confirmed that it is considered grey belt land, which a technical Grey Belt Report (Appendix 4) in support of the submitted application now confirms. Despite this, Policy SP8: Housing confirms just 12% of the housing supply will be met in 'villages and rural areas'. 3.7 With regard to the above, the Council is reminded that Paragraph 73 of the NPPF states the following: "Small and medium sized sites can make an important contribution to meeting the housing requirement of an area, are essential for Small and Medium Enterprise housebuilders to deliver new homes, and are often built-out relatively quickly." 3.8 The NSLP continues to prioritise new residential development in or close to urban areas, optimising opportunities to encourage active and public transport modes of travel. Whilst our Client supports this in principle, in our view it does not provide the context to fully consider the role of the grey belt and opportunities to promote/improve sustainable transport options in rural areas. 3.9 It is not clear from the Green Belt Assessment undertaken or the wording within the NSLP if the Council has undertaken an objective exercise to determine whether or not it has grey belt land within the North Somerset, which can support sustainable development. Grey belt land provides a sustainable opportunity to provide housing within close proximity to Bristol, without affecting the purposes of the Green Belt in relation to the Bristol urban area. However. This has not been explored. Bristol's unmet need: 3.10 No mention is made within the NSLP regarding Bristol City Council's demonstrable and increasing unmet need. Bristol currently has an unmet need well in excess of 10,500 homes which it cannot meet within its boundary. Both South Gloucestershire to the north and Bath and North East Somerset to the south have confirmed difficulties in meeting their own needs, and therefore an inability to meaningfully assist Bristol in meeting its unmet needs. 3.11 The West of England Combined Authority (WECA) was established in 2017, following a devolution deal between Bristol, Bath and North East Somerset, and South Gloucestershire. In line with the Government's proposed move to strategic planning authorities, WECA is now taking a more active role in planning across the strategic region, and recently announced work had commenced on a Spatial Development Strategy. Alongside this, North Somerset continues to confirm its intention to join WECA, becoming the fourth local authority alongside Bristol, Bath and North East Somerset, and South Gloucestershire. 3.12 Our Client's Site is located in close proximity to the western edge of Bristol and therefore provides an opportunity to enhance connectivity between Bristol and North Somerset, whilst assisting with the unmet housing needs of Bristol. This in turn will also accord with the wider strategic objectives of WECA, in strengthening the connections between the local authority areas. 3.13 When considering a neighbouring authorities unmet need there is also a requirement to consider and support development that can come forward quickly to address this unmet need. Housing supply: 3.14 Paragraph 61 of the NPPF states that it is important to support the Government's objective of significantly boosting the supply of homes, for a sufficient amount an variety of land to come forward where it is needed. Paragraph 62 of the NPPF also states the following: "To determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning practice guidance. In addition to the local housing need figure, any needs that cannot be met within neighbouring areas should also be taken into account in establishing the amount of housing to be planned for." (our emphasis - see attached document) 3.15 Since the previous consultation, the Council has addressed its updated housing need and proposes allocations to meet the delivery of a minimum of 23,700 dwellings within North Somerset. Overall, our Client considers this to be a positive step. 3.16 Notwithstanding. Policy SP8: Housing confirms the Council's proposed housing supply totals 24,495 dwellings, when compared to the minimum requirement of 23,700, this represents only a 3% uplift. When divided across the plan period, the Council has given itself a 53 dwelling per annum tolerance. 3.17 The Planning Practice Guidance states that the Standard Method for calculating housing need provides a minimum number of homes to be planned for and suggests authorities use this as a starting point1. Our Client therefore does not consider the calculated housing requirement should be seen as a 'target', particularly where exceptional circumstances existing in Bristol which require neighbouring authorities to consider whether further need can be accommodated. 3.18 Moreover, it is essential that the housing trajectory is robust and attempts to sustain a rolling five year housing land supply throughout the Plan period, in accordance with the NPPF. Paragraph 72 of the NPPF states that planning policies should identify the supply of specific, deliverable sites for five years following the adoption of the plan. Paragraph 78 of the NPPF states the following: "Strategic policies should include a trajectory illustrating the expected rate of housing delivery over the plan period, and all plans should consider whether it is appropriate to set out the anticipated rate of development for specific sites." 3.19 We have been unable to find, either within the strategic policies or within the evidence base of the NSLP, a housing trajectory which details which sites are expected to come forward and when, alongside confirmation that this also enables the Council to demonstrate a five-year housing land supply upon adoption.

								4. Summary and Conclusions 4.1 These representations have been prepared by Marrons on behalf of Hill Residential Ltd, with regard to its land interests at Land west of Failand, Bristol, in response to the North Somerset Local Plan 2041 Pre-submission Regulation 19 Consultation. 4.2 It should be noted that our Client is in broad support of the NSLP and the draft allocations noted within, though does consider modifications are required in order for the NSLP to pass the relevant tests of soundness. The areas of the NSLP which we consider need to be addressed are set out below. 4.3 The Council requires the NSLP to be considered against the tests of soundness within the Framework at Paragraph 36. In response to these and with reference to the commentary made within these representations, our Client notes the following: 4.4 Positively prepared – The NSLP is not considered positively prepared. The strategy seeks to meet the Council's minimum housing requirement, however, there are concerns about the effectiveness of delivery across the Plan period and ability to maintain a rolling five year housing land supply. The NSLP pays no attention to the acute unmet need arising from Bristol and its ability to assist with this. In so doing, the Council has also failed to accurately assess the role of the grey belt and the ability to allocate sites close to Bristol, which are of a size that can deliver in the short-term. This is despite the Council confirming on an individual bases that such sites exist. It is our Client's position that the Council has sought to retrofit the requirement to consider the grey belt within a Plan and spatial strategy that had already been conceived. This is plainly evident from the lack of times 'grey belt' is mentioned within the NSLP or its evidence base. Given the grey belt represents one of the most significant changes to national policy in some time, it should feature heavily within the plan-making process for Green Belt authorities. 4.5 Justified – The NSLP is not considered justified. Whilst our Client considers the strategy is appropriate in part, there is potentially an over-reliance on strategic scale development which is not complemented by development of smaller sites, to enable effective delivery across the Plan period. However. This cannot be accurately determined given the absence of a site trajectory and anticipated delivery rates. Our Client therefore reserves the right to comment on this further once this evidence is made available. For the reasons stated above, our Client considers that a blended strategy is more appropriate, which the Council has not considered. 4.6 Effective – The NSLP is not considered effective. Our Client considers that there is a lack of recent evidence to demonstrate effective joint working on cross boundary strategic matters, and considers that a distinct lack of effort has been made to address housing requirements in and around Bristol, despite the clear opportunities to do so. As stated above, sufficient evidence also does not exist to be able to determine whether or not it is deliverable over the plan period. 4.7 Consistent with national policy – The NSLP is not considered consistent with national policy. Whilst the NSLP seeks to address national policy in some areas, there are clear omissions which mean it cannot be considered consistent with national policy overall. The Council appears to have taken a conservative approach, particularly with regard to housing supply, which is considered to go against the Government's objectives of delivering 1.5 million homes and boosting significantly the supply of homes, as set out at Paragraph 61 of the NPPF. Nor has it considered properly the requirements of Paragraph 62 of the NPPF, in not seeking to meet the unmet needs of its neighbouring authority, Bristol. 4.8 Consequently, our Client does not consider the NSLP to be sound in its current form and confirms that it would like to participate in any hearing sessions held at the examination in public, particularly on matters raised in these representations and those submitted earlier in the process. Our Client is willing to engage proactively with a view to assisting the Council in making the NSLP sound. 4.9 Our Client also re-affirms that Land west of Failand, Bristol is available for development now, represents a suitable location for development, and that development of the Site is achievable with a realistic prospect that housing can be delivered within the first five years of the draft plan period. The Site is deliverable and should therefore be favourably regarded in relation to its potential allocation for residential development within the emerging Local Plan. This is demonstrated via a live planning application, where supporting technical information is provided which the local plan team is invited to consider.			
58577601	Ruth Revell			No	• Justified • Effective	No	No	I feel it's not legally compliant as it doesn't balance out housing designations between areas, with some taking a disproportionate amount compared to other areas. I feel it's also not legally compliant as the consultation does not meet the accessible communications standard, a large percentage of the community will not be able to complete it due to the complexity of the online form and language used, I myself am struggling to understand all of the terminology.	Easy read versions of the consultation should have been produced, more engagement with minority groups to ensure everyone that would like to comment feels their needs are met so they are able to do do. Review site allocations to allocate more to other areas which have far less in the process, but with much higher population density.

39307329	S Rickard-Hughes			Unsure	• Effective	Unsure	Yes	Having lived in NS for a number of years, I highly doubt the efficacy of the infrastural scaffolding needed to make development in some of the key identified areas effective. Large developments near Banwell, Nailsea and Woodspring will inevitably lead to a large increase in the number of cars on the A370, M5 and other connected roads. NS's traffic problems are extreme. Getting out of Weston can take 30 mins on an average day. and with all the new housing planned near Locking and Worle, we will probably see this increase to an hour. No development should occur on any green space, particularly the Down at Portishead, any farm sites, which should remain agricultural, sold to charities that responsibly manage land, or be left to go wild. Reclaim more parking lots and defunct shops/buildings in these ailing towns! Work on buses, trains and install TRAM LINES and force cars off the road. Weston is a mess of cars. With good planning and policy you could easily adapt more large lots into housing. We also need to take pressure off the single hospital we have. And I see proposed new primary schools, but no secondary? I am glad to see the many brownfield sites identified in Weston. There are more, though. How about that carpark you're paying over £500k a year for that we can't use?	Demand from the central government that no more housing is built until they properly fund the transportation and community infrastructure that we already need. With infrastrastructure can come new housing developments. Build more flats, integrate ground source and community heating and shared solar - these terribly built semi-detached and detached houses with nothing gardens are depressing, inefficient and unneccessary.		
62776065	Paul Segar			Yes		Yes	Yes			I strongly agree that new developments should be close to urban areas, where active transport can be used and there are a wide range of employment opportunities and facilities. Developments in rural and village areas, such as Wrington, should only be on brownfield sites or within existing village boundaries, and not be on valuable agricultural land.	
51079969	Justin Saunders		Pill and Easton-In-Gordano Parish Council	No	• Positively prepared • Justified • Effective	No	Yes	LP4 does not align with the spatial strategy. Pill and Easton-In-Gordano is a rural community with central facilities constrained by the River Avon; it is not an urban centre. There is no strategy for improved public transport or any plans for additional employment. Additional leisure facilities are also not considered despite significant demand on existing facilities.	LP4 needs to be withdrawn and alternative proposals that meet the spatial strategy developed		
30736993	Kath Scargill									We support the Spatial Strategy	
63107361	Gladman Developments		Gladman Developments Ltd	No	• Justified • Effective			It is supported that the emerging Local Plan is directing growth towards both urban and rural areas to meet the growing housing needs of the district's population. Ensuring sufficient growth is directed towards the urban and rural areas strikes a positive balance and helps ensure local communities have access to high quality and affordable housing as well as ensuring the provision and retention of services, employment, social and community facilities. Gladman consider that the spatial strategy included within the Local Plan should be proactive and pragmatic in directing growth to the most suitable settlements in the district (as expressed in draft Policies SP5 (Towns) and SP6 (Villages and rural areas). Gladman support the HBF's assertion that the wording of draft Policy SP3 is not a policy but rather a statement of intent, as such this policy is ineffective and unjustified. This policy fails to provide any criteria against which a development proposal would be assessed. Although the wording provides a helpful summary of the spatial strategy the Council has chosen, it is not a policy and should be moved into supporting text. The actual Spatial Strategy of the Local Plan is set out in draft policies SP5 and SP6.	Although the wording provides a helpful summary of the spatial strategy the Council has chosen, it is not a policy and should be moved into supporting text. The actual Spatial Strategy of the Local Plan is set out in draft policies SP5 and SP6.		Gladman Developments - North Somerset Pre-Submission Plan (Reg 19).pdf
30975873	Chris Segar			Yes		Yes	Yes			I completely support SP3 Spatial Strategy as outlined in the document.	
39195009	David Sheridan			Yes							
711873	Easton-in-Gordano Parish Council		Pill & Easton-in-Gordano Parish Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Pill & Easton-in-Gordano Parish Council objects to Policy SP3. Policy SP3 is unsound because it jumps Pill (a Category A village) to full strategic-location status without any prior consultation. The February–March 2025 consultation paper framed the sites only as non-strategic "other potential" village-scale allocations (Table 7.1). No question was ever asked about elevating the parish to a fourth strategic location. Yet the Cabinet report of 18 June 2025 (paras 3.20–3.21) cited "general support for the principle of development" to justify the change, misrepresenting responses that were never sought on strategic status. This arbitrary breach of the spatial hierarchy (NPPF para 36b) overrides our made Neighbourhood Plan without evidence and renders the policy unjustified. Not Positively Prepared (NPPF para 36a): SP3 fails to proactively meet needs through collaboration, sidelining village-scale alternatives and imposing disproportionate growth (55% stock increase) without addressing unmitigable harms like flood exacerbation. Not Justified (NPPF para 36b): Evidence lacks robustness; Sustainability Appraisal overlooks Defra MAGIC constraints (e.g., floodplain woodland in Zones 2/3 at Pill Green). No proportionate alternatives assessment justifies bypassing the hierarchy for Green Belt release over brownfield/urban options (NPPF para 148). Not Effective (NPPF para 36c): Undeliverable: Draft IDP (Feb 2025, §8.3) flags high-risk, unfunded infrastructure (J19 upgrades). Cumulative ~700 peak trips from Pill, plus Portishead/dock growth, lack modelling (NPPF para 116 and 118), breaching SP3's own flood minimisation. Inconsistent with National Policy (NPPF para 36d): Violates spatial principles (NPPF para 74: Neighbourhood Plan conformity) and Green Belt protections. Legally non-compliant with Localism Act 2011 (developer-led over community needs). Duty to Cooperate unmet: No updated Statements of Common Ground on cross-boundary J19/ecology impacts (e.g., with Bristol/National Highways). This flawed strategy risks Plan-wide unsoundness, reverting to outdated policies and developer speculation.	To make SP3 sound and compliant, we request: Revise SP3 Hierarchy: Explicitly limit strategic growth to the three main towns; revert Pill to Category A village status, aligning with "local needs" only (NPPF para 74). Remove cross-references to LP4. Strengthen Evidence Base: Commission independent hierarchy review: Assess non-Green Belt alternatives via MAGIC-integrated SA; include 10-year J19 modelling (cumulative impacts) and NE/EA responses on flood/habitats. Pause and Extend Consultation: Halt until Statements of Common Ground (NPPF para 28) evidence Duty to Cooperate (e.g., Bristol transport). Enhance Safeguards: Revise SP3 to require infrastructure delivery before growth (e.g., J19 upgrades pre-occupation). These modifications ensure SP3 is positively prepared (community-aligned), justified (evidenced alternatives), effective (deliverable), and NPPF-consistent—avoiding Examination rejection.		
31091393	Waddeton Park Ltd (Land south of Greenhill Road)	Savills (Dan Yeates)	Waddeton Park Ltd	No	• Positively prepared • Consistent	Yes	Yes	These representations have been prepared and submitted by Savills on behalf of Waddeton Park Ltd. Waddeton Park have an interest in 1.95 hectares of land south of Greenhill Road, Sandford. This specific response relates to Policy SP3 (Spatial Strategy).	The proposal within draft Policy SP8 to direct only 12% of new homes to the villages and rural areas (a significant reduction from the 23% proposed at the previous Regulation 19 stage) is		North Somerset Local Plan Pre-submission Plan - Representations SP3.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					with national policy			Our comments on the consultation and supporting evidence base are made in accordance with paragraph 36 of the NPPF, to assist in ensuring that the Local Plan is found sound when examined in the future. Policy SP3: It is clear that the Site Selection Methodology Paper explains the approach to determining which sites to allocate in the draft Local Plan, informed by the 'spatial strategy'. The Site Selection Methodology references the spatial strategy (Policy SP3) at Stage 1 of the process - paragraph 2.1 reads as follows: "The spatial strategy states that the priority for new residential development is for it to be located in or close to urban areas where there is an existing or proposed wide range of facilities, services and jobs and there are opportunities to encourage active travel and are well served by public transport.". We are concerned however that there does not appear to be any mention in the plan, nor evidence supporting it, which confirms how this broad principle in the spatial strategy is to be applied to the distribution of development in order to deliver a sustainable form of development for this local authority area. Instead, there is a lack of application to North Somerset, and the Site Selection Methodology could be applied to any authority area in the country. We do not agree with this and consider there to be a lack of emphasis on how the approach has been applied to this authority area. It is particularly important as part of the spatial strategy to consider the location of the housing needs in North Somerset and from where the need for new housing arises. This is best considered with reference to the relationship between Bristol and North Somerset, and the two separate Housing Market Areas (HMAs). In this respect we have reviewed the ORS Local Housing Needs Assessment. For example, within the consultation document and supporting evidence there is no suggestion that the influence of Bristol to the north has had any influence on the spatial strategy or distribution of new homes that is contained in Policy SP8. This is key consideration and should in our view feature prominently in the decisions over the spatial strategy for the plan and the distribution of new homes. In terms of the spatial strategy, Draft Policy SP8 continues to propose a high distribution of new housing towards Weston-Super-Mare (WSM), including the strategic allocation at Wolvershill (North of Banwell). We have concerns over this approach and do not support the directing of such a high proportion of this growth to WSM given it disregards the dynamics of the housing market within the authority area and will in our view undermine the delivery of sustainable development. In order to promote sustainable development and reduce car use, it is not sufficient to simply adopt a spatial strategy which seeks to focus the majority of new residential development at WSM. Instead, there are a number of settlements which provide opportunities for sustainable growth, and which are well connected by public transport. Sandford, for example, is one such sustainable settlement. Indeed, Sandford has a good existing bus service and the village is well located to access the major job markets of Weston-Super-Mare and Bristol, including the nearby Bristol Airport. Sandford also has a range of services and facilities which provide for the day to day needs of residents. As a result, the proposal within draft Policy SP8 to direct 2,948 dwellings to the villages and rural areas (only 12%) is not supported. This is a significant reduction from the amount proposed at the previous Regulation 19 stage where draft Policy SP8 proposed 3,610 dwellings (23%). The overall housing requirement since that time has increased from 15,734 dwellings to 24,495 dwellings to reflect the standard method changes, but clearly there has not been a proportionate change in the spread towards the villages and rural areas. We consider an easy way to address this is to consider how an increase in the housing requirement to reflect the need to accommodate the unmet housing need from the Bristol HMA could help balance the current disproportionately low spread of housing towards the villages. Conclusion It is clear that the changing housing market have an impact upon commuting patterns and associated social, economic and environmental consequences. This factor should, in our view, have been taken into consideration in setting the sustainability of the housing distribution. It is our view that a more sustainable pattern of development should be proposed which directly addresses the strategic priorities of the draft Local Plan. It is not sufficient to simply adopt a spatial strategy which seeks to focus the majority of new residential development at WSM. Instead, there are a number of settlements which provide opportunities for sustainable growth, and which are well connected by public transport. Sandford, for example, is one such sustainable settlement. Indeed, Sandford has a good existing bus service and the village is well located to access the major job markets of Weston-Super-Mare and Bristol, including the nearby Bristol Airport. Sandford also has a range of services and facilities which provide for the day to day needs of residents. As a result, the proposal within draft Policy SP8 to direct only 12% of new homes to the villages and rural areas (a significant reduction from the 23% proposed at the previous Regulation 19 stage) is not proportionate to the increase in the overall housing requirement which has jumped from 15,734 dwellings to 24,495 dwellings to reflect the standard method changes. We therefore continue to maintain the strategy should be amended to address this to ensure that it represents a sustainable and sound spatial strategy and distribution of development in the authority area. We consider an easy way to address this is to consider how an increase in the housing requirement to reflect the need to accommodate the unmet housing need from the Bristol HMA could help balance the current disproportionately low spread of housing towards the villages.	not proportionate to the increase in the overall housing requirement which has jumped from 15,734 dwellings to 24,495 dwellings to reflect the standard method changes. We therefore continue to maintain the strategy should be amended to address this to ensure that it represents a sustainable and sound spatial strategy and distribution of development in the authority area.		
30790113	Richard Stockham			Yes		Yes	Yes			It looks as if the concerns of residents living in the villages outside the main urban areas have been taken in to	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										consideration. The villages generally have a poor road infrastructure which are not suitable for further traffic growth so concentrating future housing developments where there are good transport links and the availability of work makes sound sense. If we are going to meet climate change and CO2 targets we must continue to reduce the dependency on the motor car. This will also make the roads safer for cyclists and pedestrians.	
31062913	R Storrar		KWAW	Yes		Yes	Yes			I fully agree with this Spatial Policy. It identifies the needs of future residents and protects the rural landscape away from the already urbanised areas. This is necessary to minimise/reverse the effects of climate change and makes sure that food production can be guaranteed on agricultural land. It is time to stop building disconnected housing estates on green field sites.	
28903201	Ham Green Residents and other Supporters		None	No	• Justified	No	No	The Plan has been prepared against a centrally imposed housing target set by Government which bears no relation to existing environmental constraints and designations including flood risk, nor heeds local capacity constraints to construct 24,000+ homes in the Plan period to 2041. The Plan relies on ignoring these constraints and on weakening Green Belt protections by designating high visual amenity value productive areas of Green Belt as Grey Belt contradicting policy advice in the National Planning Policy Framework. The Plan is not Sound, Legally Compliant, Sustainable or Positively Prepared, nor in compliance with the Duty to Cooperate which it has negated for those reasons, and should be referred back to North Somerset Council for review and revision. No further comment on the Plan is appropriate in light of this response.	The Plan should be referred back to North Somerset Council for review and revision against a lower more realistic housing target that can be sustainably delivered within existing environmental and construction capacity constraints to build something in the order of 15-16,000 new homes in the Plan period.	Not applicable	
58534081	Verto Homes	tor&co (Jacqueline Mulliner)	Verto Homes	No	• Positively prepared • Effective • Consistent with national policy	Yes	No	Support is given to locating new residential development close to urban areas, broadly termed under the justification as a sequential approach. However, whilst the policy intention to restrict development in the countryside is understood, this is not entirely consistent with the NPPF. Whilst it may be appropriate to limit development at a small village to that associated with meeting local community needs, development beyond the settlement boundaries of the main settlements and larger villages, such as Banwell, may be appropriate to meet district-wide needs, particularly in circumstances where there is a five-year housing land supply. In this respect, the policy should reflect the settlement hierarchy.	SP3 should be amended to read, "…. Beyond strategic development areas, the amount of development at villages and in the countryside will reflect the settlement hierarchy."		Representation form Part B_SP3 Spatial Strategy.docx
62471329	Environment Agency		Environment Agency	Yes						Agree with policy, however DP9 should be linked. throughout the document.	
31106145	Miles Estate	Jeff Richards		No	• Positively prepared • Justified • Effective • Consistent with national policy		No	The stated Spatial Strategy (SP3) is logical for North Somerset on the basis of the ability to locate new development within or close to existing urban areas where there is greatest potential to access a wide range of facilities, services and jobs, and there are opportunities to use existing or enhanced active travel and public transport routes. However, the Spatial Strategy is stated in general terms only with no detail in terms of any settlement hierarchy or the specific locations, or areas, where new development might be encouraged (or conversely might be restricted). It is considered that there is considerable scope to add additional clarity and detail to the proposed Spatial Strategy (Policy SP3) in the interests of the overall effectiveness of the plan. Distribution of Housing: The draft policy states that priority will be given to locating new residential and mixed- use development in or close to urban areas where there is an existing or proposed wide range of facilities, services and jobs, and there are opportunities to encourage active travel. The approach taken in Draft Policy SP8 confirms that only 2% of housing (588 homes) will be provided at Clevedon, a substantially lower percentage (and quantum of homes) than any of the other main towns in North Somerset (with Portishead being the next lowest at 7%, but still over 1,000 homes more that proposed at Clevedon). It is a lower housing requirement also compared to the villages of Backwell, where 1,683 homes on sites in Schedule 1 of the Plan are proposed as allocations, and Pill and Easton in Gordano where 4% or 1,100 homes are proposed. Whilst the proportion of housing delivery in 'villages and rural areas' (beyond those villages specifically listed by Policy SP8) has reduced from 23% to 12% from the last Regulation 19 consultation, this remains considerably higher that housing growth proposed at Clevedon. Sequentially, existing towns must be preferred as locations for sustainable growth, ahead of the larger villages, consistent with the current settlement hierarchy and spatial strategy in the emerging local plan. The Council, within its consultation paper on additional sites, and in a number of earlier reports to Executive and other committees, set out a clear hierarchy to follow when considering the allocation of additional sites, as follows: (a) Sites outside the Green Belt, but well related to the towns (b) Sites outside the Green Belt, but well related to the larger villages. (c) Sites in the Green Belt well related to the towns, including Bristol. (d) Sites in the Green Belt well related to the larger villages. (e) Elsewhere. The above hierarchy provides a logical approach to identifying sites for new development in the most sustainable locations, consistent with the spatial strategy and in a manner that is also consistent with national policy (with consistency with the NPPF being a clear test of Soundness). As such, sequentially, where there is a need for the release of sites from the Green Belt (which we agree there is), suitable sites in the Green Belt adjoining existing towns (Portishead, Clevedon and Nailsea) must	More must be done at Clevedon to identify additional sites for residential development, reflective of its status as a main town.		02961 - The Miles Estate NSLP Reps - December 2025.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								be identified/prioritised, before any sites in the Green Belt at larger villages, including Backwell and Pill and Easton in Gordano. On this basis, the Draft Policy SP3 should be amended to recognise that the delivery of sustainable development should follow the sequential approach, where existing towns must be preferred as locations for sustainable growth, ahead of the larger villages. Delivery of housing within or adjoining existing settlement boundaries of existing towns (including Clevedon) should be considered acceptable. Flowing from this, more must be done at Clevedon to identify additional sites for residential development, reflective of its status as a main town.			

SP4: Placemaking

63191617	Various Taylor Wimpey Crest Nicholson Barratt Redrow Vistry Group	Nick Matthews (Savills)		No	• Effective • Consistent with national policy	Yes	Yes		These representations have been prepared and submitted by Savills on behalf of various clients including Taylor Wimpey, Crest Nicholson, Barratt Redrow, and Vistry Group. This draft policy encourages robust design processes taking into consideration the eight bullet points listed. The overarching aspiration is supported and the objective of creating high quality places that respond to their local context and create safe, attractive and desirable buildings and spaces which function well to serve the community, is shared by our clients. The policy is, however, a generalisation of policy provisions which are covered in detail elsewhere in the draft Local Plan, taking the first three bullet points for example: • ”Are of high quality architecture, landscaping, design and layout” – covered in detail by Policy DP1 (High Quality Design). • “Reflect, protect or enhance local character including local heritage” - covered in detail by Policy DP38 (Landscape) and Policy DP40 (Built Heritage). • “Contribute positively to addressing the climate and nature emergencies and are future-proofed against changing climatic conditions” - covered in detail by Policy DP5 (Climate Change Adaptation and Resilience). Paragraph 21 of the Framework, explains that strategic policies ‘should be limited to those necessary to address the strategic priorities of the area … to provide a clear starting point for any non-strategic policies that are needed. Strategic policies should not extend to detailed matters that are more appropriately dealt with through … other non-strategic policies’. Further, paragraph 16(f) of the Framework requires plans to ‘serve a clear purpose, avoiding unnecessary duplication of policies that apply to a particular area’. Strategic policies are only needed where they are dealing with genuinely strategic matters. Not all subsequent detailed policies need to have a related strategic policy. Placemaking is one such area. As important as it is, it is not a ‘strategic‘ issue and the positive objectives of the policy can just as easily be achieved by the more detailed development management policies. In light of the above, and for consistency with the Framework, we consider it would be preferable to appropriately convert this policy into supporting text which, in effect, sets the scene for the detailed development management policies which follow later in the draft Plan. Notwithstanding, if the policy is retained then

									changes are required to the final two paragraphs in order to ensure the policy approach is not in conflict with the Framework. Policy SP4 requires a Community Engagement Statement (CES) for all major applications (10+ dwellings / 1,000m²) and expects collaboration with local communities. This reads as a de facto requirement for early engagement before submission of a planning application. Paragraph 41 of the Framework makes clear that local planning authorities “cannot require … but where they think this would be beneficial, encourage any applicants who are not already required to do so by law to engage with the local community … before submitting their applications.” Additionally, paragraph 137 of the Framework says early, proactive engagement is looked on more favourably, i.e. it’s incentivised, not prescribed. Policy SP4 also introduces an expectation that development will be the subject of design review. Whilst our experience is that design review can be helpful, particularly on larger developments, it is not a process which should be written into policy as an expectation. The Design Review Panel operating in the West of England – Design West – operates on a commercial basis, with applicants required to paid for their scheme to be reviewed. Whilst it can be encouraged, it is not appropriate for policy to oblige an applicant to use an external paid for service. These aspects of the policy render it inconsistent with national policy and therefore unsound. If it is not deleted, in order to remedy this unsoundness, it is proposed that Policy SP4 is modified to encourage early engagement and design review rather than require or expect them		
29403105	Diverse Partnerships Yatton Ltd	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	Our client is supportive of the general principles of good placemaking outlined within this policy, which are clear and which align with current national policy. The presumption that community consultation is undertaken for major development proposals reflects accepted industry best practice, the published Statement of Community Involvement and the validation requirements for a Statement of Community engagement to be submitted with major applications. There is however no policy obligation to undertake such consultation under the NPPF and it is unclear on what grounds an application would be refused in respect of identifiable planning harms were an application to fail to do so. Moreover, there are a number of circumstances where this may not be relevant, such as following a previous application with clear pre-existing community feedback, or for example development within the Royal Portbury Dock estate that has no impact beyond the estate. The wording of this part of the policy should be amended to entertain flexibility in this respect and simply support such consultation being undertaken. The final component of the policy, relating to design review, is considered to be not clearly defined and will give rise to uncertainty by both applicants and decision makers as to the circumstances in which design review will be required. The drafting is ripe for conflict between applicants and the authority over a matter of process than necessarily substance. Again, while the use of independent design review reflects industry best practice, and is not actively opposed, it remains unclear on what identifiable planning harms a proposal would be refused upon without this being undertaken. It is considered that the policy text should be removed and if necessary redirected to the supporting text as a means of corroborating compliance with the policy. Both of these components elevate process over outcomes, when a plan’s policy tests should be outcome driven and simply encourage appropriate processes. Without the proposed changes the policy is not considered to be positively prepared, justified, effective or consistent with national policy.	It is considered that the policy text should be removed and if necessary redirected to the supporting text as a means of corroborating compliance with the policy. 								in accordance with paragraph 21 and 16(f) of the NPPF. Good placemaking is already underpinned by provisions in the NPPF, as well as the National Design Guide and National Model Design Guide. The concept of good placemaking is underpinned by good design, which should be inherently viewed as contextual and subject to some interpretation. As such, this is better detailed through a development management policy. Indeed, many of its requirements are already (and more specifically) communicated through development management policies. However, should this be retained (or otherwise located elsewhere in the plan), modifications to the policy requirements/text will be required to make them effective and consistent with national policy.	development and / or conflict with national policy direction. For example, the allowance for public benefits to outweigh less than substantial harm to heritage assets. In this specific regard, in order to be consistent with national policy, this part of the policy should be amended to: "Reflect, protect or enhance local character, including local heritage, subject to the balance of public benefits to be derived…" • In the policy text, we suggest the word 'collaboration' should be replaced with 'consultation' to be consistent with the NPPF (para 137), which instead expects community engagement and for designs to 'take account of the view of the community." Collaboration is defined as the action of two or more people, entities or organisations working in partnership to produce something together. Collaboration with local communities is therefore unlikely to be fully achievable in practice as there will often be differences of opinion regarding the principle of development and its detail / implementation. The word 'consultation' is more appropriate and should be used in this instance, as follows: "Applicants must demonstrate that a robust design process has been carried out, including, collaboration consultation with local communities where appropriate […]. • Reflecting already the text above, we also suggest the text regarding Community Engagement Statements is reflected as follows – noting that it will not always be necessary or appropriate to undertake engagement: • "A Community Engagement Statement must be submitted for major planning applications (10 or more dwellings or 1,000 square metres of floorspace), where relevant and appropriate, which sets out the local engagement that has been undertaken and any amendments to the scheme which have been made in response to it." (see attached document for specific amendments)		
21449761	Bloor Homes South West (Wolvershill)	Turley		No	• Positively prepared • Justified • Effective • Consistent with national policy		No	Policy SP4 is generally agreeable given that it sets clear expectations for high quality design. The requirement to "reflect" local character could be interpreted to be restrictive as a requirement in all circumstances – a narrow interpretation of this point would be to suggest a reproduction of whatever has gone before (in whatever area is defined to be local to a specific development site). It is considered preferable that the wording is amended (in the interests of effectiveness) to "Respond to and complement" local character. Requirements have been added to the policy which would mandate the provision of a Community Engagement Statement in respect of all major planning application proposals. It is not clear why this requirement is to be set for all such applications as there are many major applications at or around the threshold where only limited engagement may be needed or justified prior to the submission of an application. This requirement should be in supporting text or alternatively be set as part of the Council's Local List of validation requirements, if justified (rather than a policy requirement to be set by the plan). Likewise, the requirement for design review may represent good practice but is suggested to only be where justified by the circumstances of the scheme. This would also be better stated in supporting text rather than the policy wording.	It is considered preferable that the wording is amended (in the interests of effectiveness) to "Respond to and complement" local character. This requirement [for Community Engagement Statement] should be in supporting text or alternatively be set as part of the Council's Local List of validation requirements, if justified (rather than a policy requirement to be set by the plan). 62815873	E Beacon			No	• Justified • Consistent with national policy	Unsure	Unsure	Placemaking SP4 The proposed development is too dense. The Pill Green site will not create sociable places. The extension beyond settlement boundaries is not aligned with placemaking policies.	- A public meeting - A review of sites to ensure compliance with council policies. -An acknowledgemt to work within existing settlement boundaries -A review of how the A369 can handle extra traffic with acceptance that the train cannot really provide a solution when it will be permanently limited to 30 minute journeys with small carriages.		
51455297	St Philips	Richard Grant	St Philips	No	• Justified • Effective	Yes	Yes	Policy SP4 sets out high level placemaking principles that apply to all development in North Somerset. Although we support the broad topic areas which are set out in the policy and which provide a context for the design of development, we would make the following points: a. The policy sets out high level principles which are clearly intended to provide starting points for more detailed guidance. The text to the policy contains references to design codes, the National Design Guide, the West of England Placemaking Charter and Building for a Healthy Life. Although the emphasis on good design and strong placemaking is supported and in line with national policy and the NPPF, the number of different pieces of guidance and support in addition to design policies later in the draft NSLP may create confusion and lead to difficulties in making a decision on the quality of development. It is therefore suggested that separate guidance is prepared to explain how the different elements of design and placemaking guidance should be considered together. b. It is also noted that strategic development areas such as	See Comments above.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								Wolvershill are required by policy in the draft NSLP to be delivered using a single over-arching masterplan with design advice set out in Supplementary Planning Document (SPD). It is noted that a paragraph has been added to the Policy SP4 justification explaining that on larger sites masterplans, parameter plans and design codes may be prepared by developers, but this reference does not accurately capture the position regarding Strategic Locations. It would be helpful if the text to Policy SP4 could make clear that the policies for strategic locations make clear how specific arrangements to deliver placemaking principles will be put in place, in order to again be clear about how the over-arching placemaking principles set out in Policy SP4 should be applied. c. It is noted that additional text has been added to the justification regarding the use of higher densities. This emphasis is welcomed, but it should be made clear that those parts of the strategic locations which may be appropriate for higher densities should be set out through comprehensive masterplanning looking at the overall placemaking principles of the site. It should also set out that although higher densities will assist in delivering higher numbers of new homes, it will also be important to ensure that a housing mix is achieved which meets the needs of current and future residents, and that this mix may well require significant numbers of larger family homes. d. Finally, it is noted that the requirement for a Community Engagement Statement (CES) has been moved from the justification to the policy itself. There is little information in the policy or in the justification to set out what a CES should contain, nor is it clear how such a statement differs from the Statement of Community Involvement that should be submitted with an application. It is difficult to see how the addition of the CES to the policy makes it clear to a decision maker how to understand what the CES should contain and therefore how to decide whether the policy test has been met. We would therefore suggest that the reference should return to being an element of the justification which would enable the Council to be flexible about its interpretation and purpose.			
31037185	Nigel Cooke			Yes		Yes	Yes				
9138657	Home Builders Federation		Home Builders Federation	No	• Justified • Effective • Consistent with national policy				Policy SP4 is not considered to be sound as it is not effective, justified or consistent with national policy Again, this policy fails to provide clear criteria against which a development proposal could be assessed. For example, the policy wording refers to the National Design Guide and other national advice, without specifying what this other national advice is. HBF suggest that it is difficult to see how a developer would show compliance with this policy. The wording of where appropriate needs further definition. Similarly, it is unclear when an application will need to go to a Design Panel.		North Somerset 2nd Reg 19 Dec 25.docx

29187873	B Harland			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Unsound because this is fantasy land The transport policy does not have enough information or adequate modelling. I am a lay person but there are huge assumptions being made upon which theories not evidence is compiled. This is certainly relevant to Backwell and Nailsea LP3 No understanding is shown of the traffic flows or local pressures, it feels like this has been put together to fit a site rather than genuine viability. Viability and feasibility studies Must be done before sites are allocated, not to do so undermines placemaking The IDP is a part finished unsatisfactory document that I am surprised pasted internal controls, it lacks substantive information on times scales, phasing and funding, It is therefore unsound and undermines any commitment to placemaking.	Create a proper needs analysis with feasibility and viability statements which are evidenced and costed, with time frames and actual cashflow projections rather than an unachievable undeliverable wish list Write an IDP rather than produce a box to be completed later		
51732129	Gleeson Land	J Mulliner MRTPI / TOR	Gleeson Land	No	• Justified • Consistent with national policy	No	No	Policy requirements to demonstrate 'collaboration' with local communities is inconsistent with the NPPF (para 137), which instead expects community engagement and for designs to "take account of the view of the community." Collaboration is defined as the action of two or more people, entities or organisations working in partnership to produce something together. Collaboration with local communities is often unlikely to be achievable in practice, particularly where there is a strong objector group which acts to frustrate and sabotage community engagement. In any event, there will often be different, and competing, opinion regarding development principle and design approach, sometimes driven by personal preferences. Hence consultation and the need to take account of views is an appropriate and effective approach.	The word 'collaboration' should be replaced with 'consultation'.		North Somerset Reg 19 Reps (2025-12-12) - Gleeson Land (Appendix B).pdf
39179649	Adrian Mealing			No	• Justified • Effective • Consistent with national policy	Yes	Yes	Representation on Policy SP4 – Placemaking I consider Policy SP4 to be unsound because it is not justified, not effective, and not consistent with national policy. The Placemaking policy sets out principles of high-quality design, sustainable neighbourhoods, local character protection, and well-integrated infrastructure. However, the housing allocations for Congresbury (183 homes across three sites) directly conflict with these principles, for the following reasons: 1. SP4 is not justified SP4 requires development to be supported by appropriate facilities, services, transport options, and green infrastructure. Yet the Congresbury allocations: provide no new school or GP capacity, rely on future, unfunded active travel schemes, offer no village-centre enhancements, are not accompanied by any placemaking vision or masterplan, sit at the rural edge with no evidence of need for expansion into sensitive landscape areas. No evidence is provided that these sites can be integrated into the existing settlement in a manner consistent with SP4's placemaking criteria. 2. SP4 is not effective SP4 cannot be implemented in Congresbury because the necessary preconditions for placemaking are absent. Specifically: There is no masterplanning framework to guide the combined impact of three separate allocations. No design guidance or codes are provided to ensure development reflects the village's rural character. Required infrastructure (walking/cycling links, public transport improvements, landscape buffers, green infrastructure, junction upgrades) is: not funded, not costed, not scheduled, not included in the Infrastructure Delivery Plan (IDP). The cumulative impact of 183 additional homes has not been assessed in terms of movement, landscape character, or environmental constraints. Without supporting frameworks, SP4 cannot be delivered effectively. 3. SP4 is not consistent with national policy The NPPF requires plans to: secure high-quality, locally distinctive design (NPPF 126–130), protect landscape character (NPPF 174), ensure sustainable, walkable neighbourhoods (NPPF 105–110), integrate green and blue infrastructure (NPPF 169), protect heritage assets and their settings (NPPF 200). The Congresbury allocations contradict these principles, particularly due to: car-dependent layout imposed by A370 geography, absence of walkable access to village services, harm to the wider setting of Cadbury Hill Fort (Scheduled Monument), development extending into rural edge in a way that weakens village identity. As such, SP4 is not consistent with national policy requirements for placemaking, design quality and sustainable growth.	To make SP4 sound, the Plan must include: A clear placemaking and masterplanning framework for Congresbury setting out: landscape strategy, character assessment, heritage impact parameters, village separation strategy, active travel network design, community facility requirements. A deliverable infrastructure package for: school place expansion, healthcare capacity, A370 corridor safety and traffic management, funded and phased active travel improvements. A requirement for design codes or village character guidance before planning applications are submitted. Without these modifications, the policy cannot ensure high-quality placemaking in Congresbury and remains unsound.		
8126849	Sport England		Sport England							Support Active Design will help improve health and well-being as well as addressing climate change and promoting active travel – more walking and cycling. This has considerable understanding with the Plan in particular: SP4 Placemaking - Policy and the 'tools' e.g. masterplanning, parameter plans and design codes DP1 High Quality Design DP49 Healthy Places Sport England, working with Active Travel England and the Office for Health Improvement and Disparities, has produced the 3rd version of 'Active Design' (May 2023), a guide to planning new developments that create the right environment to help people get more active, more often in

										the interests of health and wellbeing. The guidance sets out ten key principles for ensuring new developments incorporate opportunities for people to take part in sport and physical activity. The Active Design principles are aimed at contributing towards the Government's desire for the planning system to promote healthy communities through good urban design. Sport England would commend the use of the guidance in the master planning process for new residential developments. The document can be downloaded via this link Sport England believes that being active should be an intrinsic part of everyone's life pattern. Active Design has a lot of synergy with the TCPA "20 minute neighbourhood" concept. https://www.youtube.com/watch?v=mDaVBh1Bs7Y and https://www.youtube.com/watch?v=oRCJ4JL_LjM&list=TLPQMTIwMTIwMjS3NyOvSTN83A&index=2 The developer's checklist (Appendix 1) has been revised and can also be accessed via www.sportengland.org/activedesign In particular new housing sites as set out in Policies LP1, LP2, LP3, LP4 and LP5. Sport England would encourage development in North Somerset be designed in line with the Active Design principles to secure sustainable design. This could be evidenced by use of the checklist.	
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	• Positively prepared • Consistent with national policy	Yes	No	The Company recognises the importance of placemaking. It is therefore important for the design and layout of a scheme to respond positively to its surroundings. As such it is unhelpful for the development to be supported where it accords with the principles set out in the National Design Guide; National Model Design Code and other documents as listed in the policy. It is reasonable for applicants to have regard to the provisions of the documents, but it is for design to be informed by site specific considerations such as access, landscape setting, and urban/built form context – as reflected in the remainder of the policy. We consider that to be a more consistent approach to applying national planning policy. The draft policy is not supported by evidence that justifies this approach of according with the aforementioned Guides and Codes. The expectation placed upon applicants to submit proposals for review by a design panel is unreasonable given that the policy does not set any size, scale or use criteria. Whilst design panels are helpful it should be noted that this service will inevitably come at a cost which is not recognised (and can be burdensome) and can protract application preparation unduly. Such a requirement for design review should be optional only.	Policy SP4 be reworded with greater emphasis that development schemes should be designed in response to development context. The Local Plan policy and supporting text should also provide further detail in respect of the use of design panels and their use is applicable to certain forms of development and can be optional in that regard. The supporting text must make clear that their use will not protract application preparation.		
62776065	Paul Segar			Yes		Yes			I agree with the above points. It is especially important to protect and enhance the local character of communities, such as Wrington, which has a number of important heritage assets. Unsympathetic development of smaller communities can easily override the local character and degrade the sense of place.		
38976161	S Scott			No	• Positively prepared	Unsure	Unsure	There should be a clearer committment to aspects of placemaking including the securing of a sum of money for public art and culture via condition/S106 on developments over a certain scale. This is alluded to very vaguely but it would need to be a clearer requirement upon developers to have any weight. Unless alluded to somewhere else in the plan?	This should be set out as a clearer requirement. This is a good way of securing money for culture in communities to make NS a better place to live.		
30975873	Chris Segar			Yes		Yes	Yes				
31062913	R Storrar		KWAW	Yes		Yes	Yes			I fully agree with the council about placemaking. For too long, unsuitable and overly large developments have been foisted on small villages, where the lack of employment and amenities (from shops to GP surgeries) have caused resentment. The developers are seen as greedy, opportunistic and uncaring about the effects there housing estates (50+ houses being the norm) have on existing and future residents. Collaboration with the local population is seen as a tick box exercise, with a handful of cheap leaflets circulated to a few neighbouring houses and an advert in an obscure local paper that no one is likely to buy in 2026. The opinions of local residents should have much more weight, following a proper period of consultation and engagement. Developers should have to hold in person meetings to properly gauge the feelings of local residents. Developments of all housing estates (30+ houses) should have at least one commercial building for use as a shop, GP surgery of Youth Centre. To simply build stand alone estates is not sustainable.	
58534081	Verto Homes	tor&co (Jacqueline Mulliner)	Verto Homes	No	• Justified • Consistent with national policy	Yes	No	Policy requirements to demonstrate 'collaboration' with local communities is inconsistent with the NPPF (para 137), which instead expects community engagement and for designs to 'take account of the view of the community." Collaboration is defined as the action of two or more people, entities or organizations working in partnership to produce something together. Collaboration with local communities is often unlikely to be achievable in practice, particularly where there is a strong objector group which acts to frustrate and sabotage community engagement. In any event, there will often be different, and competing, opinion regarding development principle and design approach, sometimes driven by personal preferences. Hence consultation and the need to take account of views is an appropriate and effective approach	The word 'collaboration' should be replaced with 'consultation'. 					• prepared • Justified			to the area would have provided clarity and a 'Not Suitable Location' decision. The access to the area will be via The Downs, off Down Rd, by the entrance to Highdown Infant and Junior Schools. There are currently approx. 180 properties in The Deans and The Downs that are accessed via this junction, this will increase threefold to approx. 600 should the houses be built creating a cul de sac of 600 houses. It should be noted that the current residents are essentially prisoners in their homes during School Start and Finish times due to excessive parking in The Downs and along Down Rd, aggravated by the staggered times of the 2 schools. Adding double yellow lines will not resolve the problem, it will only move it elsewhere. An additional 400 homes will significantly increase the problem. As it is, access to either the The Deans or The Downs by the Emergency Services during these periods is severely compromised. Should the 'go ahead' be given there will also be very significant issues caused by construction traffic.			
62471329	Environment Agency		Environment Agency	Yes							
63070401	Emilia Leung			No	• Effective	No	Unsure	The Proposal is overly reliant on inflated national targets and infrastructure that cannot be delivered – whilst at the same time, ignoring local constraints. The Proposal is also inconsistent with national policy. Green Belt boundaries should only be altered in exceptional circumstances – and the review must show no "clear evidence that doing so would fundamentally undermine the purposes…of the remaining Green Belt".

21472417	Mead Realisations Ltd	Oneleven Property		No	• Positively prepared • Justified • Effective • Consistent with national policy				The wording of this policy has not changed from the version contained in the Autum 2023 PsP. This policy should include flexibility to allow development adjacent to the settlement boundary subject to meeting certain criteria. The policy states that new development will be supported where the size type tenure and range of housing reflects local community needs although does not explain how this will be measured. If the Council is seeking for this to be justified by a specific housing needs assessment the policy should be clear on whose responsibility this is and how it will be undertaken. The policy should be amended as follows: Proposals for new development within or adjoining the settlement boundaries of Weston-super-Mare, Clevedon, Nailsea and Portishead as defined on the Policies Map will be supported provided that they: • Make a positive contribution to the built environment and sense of place and the creation of safe and attractive environments; • Support and enable walking, cycling and improved public transport, particularly in relation to connecting residential areas to the town centre, local centres, employment areas, educational establishments and other destinations; • Optimise housing densities and the use of other land, particularly at town centres and at accessible locations such as transport hubs; and • Can be successfully served by infrastructure such as transport, education and health facilities. Town centres will be the primary focus for a wide range of retail, employment, leisure, educational, cultural, community and other services which support, maintain or enhance their viability and vitality and their role and function. Sites outside the settlement boundaries in excess of about 75 dwellings at Weston super Mare or 50 dwellings at the other towns must be brought forward as allocations through Local Plans or Neighbourhood Plans.		Reg 19 Final Representations Mead Realisations 12.12.25 including appendices.pdf
20338913	Aston & Co		Aston and Co UK							We support SP5: Towns which was developed in line with NPPF using an iterative process with good public and wider interested party engagement. The Reg19 plan is well balanced and evidence based. Housing development should be located at the existing primary settlements as they are the most sustainable locations. Portishead will benefit from the new Metro West rail link and strategic active travel routes such as the Gordano Greenway, the final link of the coastal towns.	
53971713	Gill Bennett			Unsure		Unsure	No	Lyefield Road in Worle have various comments from the general public about this not being suitable yet it is still included in this plan.			
21219937	E Burden			No	• Justified	No	Yes	The Council has not, in relation to releasing land from the Green Belt at the Black Rock site below Weston Big Wood, taken into consideration the strategic ecological importance of this unique site in protecting the wood and its connection to the Gordano Valley green corridor. This land was added to the Green Belt in the late 1980s due to its high ecological value. National planning policy allows Green Belt changes only in exceptional circumstances and these have not been demonstrated for this site in Portishead, particularly as a similar sized site nearby, without such high ecological value, was in a recent version recommended for removal from the Green Belt without any significant objections but has not been taken forward in this consultation.	The removal or significantly lowering of the number of houses and area of land from the Black Rock site. The leaving of a significant buffer between development and the wood itself whilst maintaining a significant green corridor between the wood and the floor of the valley within the site.		
62850369	Maureen Butterly			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Policy SP5 correctly identifies Weston-super-Mare, Clevedon, Nailsea, and Portishead as the most sustainable locations for growth, given their range of services, employment opportunities, public transport networks, and potential for higher-density development. The policy is sound in principle, but the Local Plan does not apply SP5 consistently in its spatial strategy or site allocations. Because the distribution of development in the Plan does not reflect the priorities set out in SP5, this element of the Plan is not sound—failing the tests of justification, effectiveness, and consistency with national policy. 1. SP5 prioritises development in towns, yet the spatial strategy directs a substantial quantity of housing to Pill/Easton-in-Gordano SP5 states that towns are the first and most sustainable locations for new development. However, the Plan:	To make Policy SP5 and its application within the Local Plan sound, the following modifications are required: 1. Re-align the spatial strategy to reflect SP5's priority for directing growth to towns SP5 states clearly that the four towns (Weston-super-Mare, Clevedon, Nailsea, Portishead) are the most sustainable locations with the widest range of services, jobs, and transport options. Required modifications: • Increase the proportion of housing growth		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								• assigns 1,100 dwellings to Pill/Easton-in-Gordano (a village rather than a town), • identifies it as a Strategic Development Location, • allocates growth levels comparable to Nailsea/Backwell and greater than some existing urban regeneration opportunities. This contradicts SP5's sequential priority for towns and undermines the Plan's sustainability objectives. The policy cannot be considered effective if the spatial strategy ignores it. 2. SP5 emphasises optimising densities and brownfield land in towns, but the Plan does not demonstrate that this has been maximised SP5 and the NPPF both require: • higher densities in accessible town-centre locations, • maximisation of brownfield redevelopment, and • efficient use of land in existing urban areas. Yet the evidence base does not demonstrate that: • all brownfield land in towns has been fully assessed, • density uplifts have been applied consistently across urban sites, • regeneration potential in Weston-super-Mare, Clevedon, Nailsea and Portishead has been fully examined before turning to Green Belt release. This raises questions about whether the Plan's spatial strategy is justified. 3. SP5 requires good access to public transport, which is far stronger in the four towns than in Pill/Easton-in-Gordano The Plan acknowledges: • towns have established public transport networks, • development in towns can more effectively support active travel and reduced car dependency. By contrast, Pill/E-in-Gordano: • relies heavily on car travel, • lacks secured public transport improvements, • faces highway constraints at M5 Junction 19. Allocating strategic growth to a village over well-connected towns is inconsistent with SP5 and NPPF transport policy. 4. SP5 supports regeneration of town centres, yet the Plan places major growth elsewhere SP5 makes clear that: • town centres should be the primary focus for a wide range of uses, • regeneration and diversification of urban areas is a strategic priority. However, the Plan does not demonstrate how large-scale development in Pill/E-in-Gordano contributes to town centre renewal. The Plan therefore does not reflect SP5's stated goals and risk limiting the economic resilience of town centres by diverting new investment away from them. 5. SP5 requires development to be supported by infrastructure, which is more readily achievable in towns SP5 rightly notes that towns have: • established education, health and community facilities, • greater potential for viable active travel enhancements, • existing utility and transport networks. By contrast, the infrastructure required to support large-scale development at Pill/E-in-Gordano: • is not secured, • depends on unproven transport interventions, • faces viability concerns for delivering affordable housing and green space. This contradicts SP5's requirement for infrastructure-supported growth. Summary SP5 identifies the towns as the primary and most sustainable locations for development, but the Plan's spatial strategy does not follow its own policy. By directing significant strategic growth to a village with limited services, infrastructure and public transport—while not demonstrating full optimisation of brownfield town-centre opportunities—the Plan is not sound. SP5 is therefore undermined by the wider strategy and cannot be considered effective or justified until the spatial distribution of development is reviewed.	directed to the four towns, reflecting their higher sustainability and infrastructure capacity. • Reduce or remove the scale of strategic development allocated to Pill/Easton-in-Gordano, unless clear evidence demonstrates that it performs equally well against SP5's sustainability criteria (which is not currently shown). • Update the Sustainability Appraisal to examine expanded urban options versus rural Strategic Locations. 2. Demonstrate that all reasonable brownfield and density opportunities within the towns have been fully maximised SP5 requires that towns be the first place to consider for new development, particularly through optimising densities and re-using brownfield land. Required modifications: • Publish a comprehensive assessment of potential density uplift in town centres and at transport hubs. • Provide an updated brownfield capacity analysis showing which sites were considered, excluded or under-utilised. • If greater brownfield or higher-density opportunities exist, reduce or remove Green Belt allocations in Pill/E-in-Gordano accordingly. 3. Strengthen SP5 to require that major development in towns supports placemaking, regeneration, and low-carbon living SP5 correctly highlights the importance of towns for regeneration and sustainable transport, but the Plan does not sufficiently tie strategic growth to town-centre renewal. Required modifications: • Amend SP5 to explicitly require that significant new housing in towns is integrated with regeneration strategies, active travel improvements, and public transport investment. • Include a clear policy mechanism ensuring that urban development contributes to town-centre vitality before releasing rural or Green Belt land. 4. Demonstrate that infrastructure delivery in towns can support increased development, removing reliance on less sustainable rural allocations SP5 requires development in towns to be served by adequate infrastructure. Supporting evidence for the towns is more robust than for rural Strategic Locations, yet the Plan diverts major development away from these more deliverable locations. Required modifications: • Publish updated assessments showing the capacity of schools, health facilities, transport systems, and utilities within the four towns. • Where infrastructure upgrades are needed, provide funding routes and delivery timescales. • Reduce allocations in Pill/E-in-Gordano where infrastructure is uncertain or undeliverable. 5. Strengthen internal policy coherence between SP5 and SP3 (Spatial Strategy) SP5 identifies towns as the primary locations for growth, yet SP3 and the site allocations conflict with this principle. Required modifications: • Amend SP3 so that its spatial distribution of growth fully reflects SP5's hierarchy: towns first, followed by sustainable settlements, and rural areas only where proportionate. • Remove the Strategic Location designation for Pill/E-in-Gordano unless the Council can demonstrate—with evidence—that it offers sustainability outcomes comparable to the four towns. 6. Clarify the relationship between town-centre regeneration and housing allocations The justification for SP5 emphasises declining town centres and the need to revitalise them. Required modifications: • Include specific references within SP5 requiring that housing allocations contribute directly to town-centre revitalisation, not bypass it. • Require brownfield and town-centre regeneration opportunities to be exhausted before any Green Belt release is considered. Summary Modification To be sound, SP5 must be backed by a spatial strategy that: • directs more growth to the four towns,

									• maximises brownfield and higher-density urban development, • avoids disproportionate growth in less sustainable rural locations, • strengthens regeneration and low-carbon living in town centres, and • ensures infrastructure is deliverable and aligned with urban growth. Without these modifications, SP5 cannot be considered justified, effective, or consistent with national policy.		
51734849	Andrew Clarke			No	‣ Justified ‣ Effective	Yes	Yes	SP5,SP7, LP3 are my primary concern. Very concerned about diversity crisis and that's not even covered by the policies or vision. I'm commenting on the North Somerset Pre-submission Plan 2041. I do so as an interested member of the public rather than in any professional capacity. The local plan is a very substantive piece of work, developed over several years, it's hard to do it justice in the short time I have, and without a professional background in planning. That said, North Somerset's residents are key stakeholders in any plans. I note that I'm only invited to comment as to whether the plan is sound, legally compliant and meets a duty to co-operate. I'm sure the Council's response to the new imposed housing targets meets these overarching tests, however I don't believe the targets are sound and that's what I'd like to challenge, before considering specific points of policy.			
31037185	Nigel Cooke			Yes		Yes	Yes				
51242689	Latimer Developments Limited	Arwel Evans - Lichfields	Latimer Developments Limited	No	‣ Positively prepared ‣ Justified ‣ Effective	Yes	No	Draft Policy SP3 identifies Weston-super-Mare as the principal location for new development. New development will also be prioritised in the following four strategic locations: • Wolvershill (north of Banwell) – 3,300 homes; • Woodspring (south west of Bristol) – 3,500 homes; • Nailsea and Backwell – 3,728 homes; and, • Pill and Easton in Gordano – 1,100 homes. Draft Policy SP5 also states that development will be prioritised within the four town centres of North Somerset, those being Weston-super-Mare, Clevedon, Nailsea and Portishead owing to their sustainability credentials. Draft Policy SP6 seeks to limit new residential development outside of the settlement boundaries of villages and rural areas. The supporting text states that: 'development in the rural areas is relatively less sustainable given the absence of services, facilities and job opportunities'. This fails to acknowledge that the form, nature, size and sustainability credentials of Villages within the authority varies considerably, and is a step change from the adopted Core Strategy approach and the Council's own evidence base. It is incorrect to state that there is an absence of services, facilities and job opportunities in settlements outside the towns. This has essentially created a two-tier settlement strategy that does not reflect the nature and function of the settlements of North Somerset with all settlements apart from Weston -Super-Mare, Nailsea, Clevedon and Portishead (as well as the strategic development locations) considered in the 'Villages and rural areas' category. As set out in draft Policy SP8 the 'villages', account for 2,948 dwellings (12% of the housing supply) in the Regulation 19 plan with the remainder coming from the towns and the strategic allocations. We consider that the settlement strategy does not reflect the function and form of the settlements of North Somerset and as a result, the distribution of housing, set out in policy SP8 is not effective in ensuring delivery over the plan period. As it stands, we consider that draft Policy SP8 is not justified and is therefore unsound. The proposed settlement strategy does not reflect the existing settlement hierarchy as evidenced by the Council's own work. In order to be considered sound, a third tier should be added which should consist of the more sustainable villages, as evidenced by the Council's own work to assess the sustainability of villages. Policy SP6 (Villages and Rural Areas) is too restrictive to allow meaningful development to take place in villages that could suitably meet the needs of the area and to assist in supporting their viability. Policy SP6 as it stands appears to be drafted in order to protect rural areas from any development regardless of the characteristics of the rural settlements – some of which are large, sustainable and thriving communities. This appears to be an even stricter form of policy than that of the adopted Core Strategy that allowed sites of up to 25 dwellings outside of settlement boundaries for service villages subject to criteria. It appears that Yatton has been demoted from a Service Village in the new Local Plan to fall within the 'Villages and Rural Area' category even though it is a highly sustainable settlement that serves a wider catchment as evidenced through the recent residential permissions. As it stands, we consider that draft Policy SP6 is not justified and is therefore unsound. Policy SP6 should be amended to make it clear that sustainable housing developments adjacent to the settlement boundary of villages are acceptable subject to criteria. Whilst the Council has opted to allocate 1100 dwellings in the village of Pill and Easton in Gordano, we consider that other villages such as Yatton/Claverham also boast considerable sustainability credentials and would be suitable to accommodate further meaningful growth. The Council's own evidence recognises the sustainability credentials of Yatton/Claverham, with the 'Consultation paper on additional sites for the Regulation 19 plan' (February 2025) identifying Yatton/Claverham as a 'larger, most sustainable village'. From a functional perspective Claverham forms an important node along an arc of settlements in this quadrant of North Somerset that operate in unity. These comprise Yatton, Claverham, Cleeve and Congresbury. Claverham forms a natural extension to Yatton. Within the current adopted Core Strategy Yatton is designated as a 'Service Village' whilst Claverham is classified as an Infill Village. The Core Strategy supports development within or adjacent to existing settlement boundaries of Service Villages, subject to proposals enhancing the overall sustainability of the settlement. We consider that additional growth could be directed to other sustainable villages by either amending the settlement hierarchy under Policy SP3 to promote sustainable villages such as Yatton/Claverham (similar to the adopted Core Strategy where it is identified as a Service Village) or by re-drafting Policy SP6. The supporting text to Policy SP8 states that:	We consider that the settlement hierarchy should be amended to give status to the more sustainable settlements, as evidenced by the Council's own supporting documents. We also request that additional small sites are allocated within these sustainable settlement including Clarion's site at land north of High Street, Claverham (120 affordable homses) to ensure that the plan delivers over the plan period. 								"Across the villages and rural areas sites to accommodate 1,830 dwellings have been identified, predominantly at the larger more sustainable villages that have a range of services and facilities to support an appropriate amount of new development over the plan period." However, we query why no new allocations are proposed in Yatton/Claverham given its positive classification as part of the Rural Settlements Paper (March 2022) and the Consultation Paper on additional sites for the Regulation 19 Plan (February 2025). Only 300 dwellings have been allocated within Yatton/ Claverham, with all but one allocation (Oxford Plasma – 58 units) having extant planning permission . It's worth noting that the Oxford Plasma allocation is not a new allocation as it has been rolled forward from the Site Allocations Plan (April 2018). Therefore, there are no new allocations proposed for Yatton/Claverham which is surprising and at odds with the Council's own evidence base. The combined area of Yatton/Claverham is therefore proposed to accommodate a very limited quantum of growth compared to its evidenced strong sustainability credentials. We support the Council's assertion that Yatton/Claverham is considered as a single settlement due to their interdependency. We consider that the conjoined settlement should be considered a higher order settlement in the settlement hierarchy. The plan therefore fails to meet the tests of soundness as it is not justified, with Policy SP8 conflicting with the council's own evidence base. Whilst future opportunities for growth in Yatton are more limited (due to constraints such as flood risk), there remains opportunities for sustainable development within Claverham which forms a natural extension to Yatton; as recognised by NSC in the 'Consultation paper on additional sites for the Regulation 19 plan' and the Pre-submission Plan. We consider that Claverham in itself is a suitable location for development as it includes a primary school (including preschool), a Village Hall, a Community Church, a Scouts HQ as well as areas of functional open space. However, there is an opportunity to boost the facilities and services in Claverham itself through well planned developments such as that proposed for land north of High Street, Claverham. Although we support NSC's sequential approach, which prioritises the most sustainable locations for growth, we question its application within the plan. The plan has overlooked deliverable sites in lower order settlements, including the land north of High Street, Claverham, which are suitable, sustainable and deliverable, in favour of very large strategic sites and sites located within the Green Belt. Whilst the NPPF (paragraphs 145 and 146) states that Green Belt boundaries can be altered where there are exceptional circumstances, including in instances where an authority cannot meet its identified need for homes, we do not believe that NSC has fully considered suitable and deliverable housing sites outside of the Green Belt that could also aid in meeting this need. Having the other smaller sites alongside the larger strategic sites provides North Somerset with the best opportunity to meet the housing target. The Plan is not sound because it is not positively prepared (test of soundness 36.a), justified (test of soundness 36.b) or effective (test of soundness 36.c). The strategy to meet the housing needs of the authority is not effective because of the reasons outlined above. We consider that the settlement hierarchy should be amended to give status to the more sustainable settlements, as evidenced by the Council's own supporting documents. We also request that additional small sites are allocated within these sustainable settlement including Clarion's site at land north of High Street, Claverham (120 affordable homses) to ensure that the plan delivers over the plan period.

Ensure adequate infrastructure is in place prior to building.		
9138657	Home Builders Federation		Home Builders Federation	No	• Justified • Effective • Consistent with national policy				Policy SP5 is not considered to be sound as it is not effective, justified or consistent with national policy Although HBF does not comment individual housing allocations we would expect the housing land supply, including the sum of all the allocations, to meet the housings of North Somerset in full, including a contribution to meeting the unmet housing needs of Bristol. As this is not the situation in the case of this Plan, HBF argue additional allocations and enabling windfall policies are needed. The Plan should be amended to include additional housing allocations to fully meet the revised housing requirement HBF are requesting. Failure to do so means the Plan is not effective, justified or consistent with national policy, as national policy requires Local Plans to set an appropriate housing requirement and then to plan to meet that housing requirement, including considering the issue of any unmet need from neighbouring authorities. 63052097	Stephanie Fowler	Pegasus Group		No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Yes	Yes		Our client is supportive of this policy, which reflects the proposed settlement hierarchy and the presumption that the greatest levels of growth should be focused on the most sustainable settlements alongside the strategic new allocations. In particular, our client notes Nailsea's identification as one of the four main towns and agrees that its inherent sustainability is such that it should be a significant target for growth over the plan period. The associated policy should therefore positively receive all opportunities for new homes to be provided at such locations, where accessibility to jobs, transport and services is greatest. If adopted, it is recommended that this policy carries a presumption that settlement boundaries shall be frequently and routinely reviewed to ensure alignment development commitments and other changes 'on the ground' to ensure they remain up to date. 62913761	Miller Homes (Battens Farm)	Tom Rocke	Miller Homes	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	No	Policy SP5 endorses the role of the four towns within North Somerset as the foundations for delivering the spatial strategy due to their being the most sustainable locations, and therefore, sequentially, they are the first places to consider for future development. However, the policy refers only to support for proposals for new development 'within the settlement boundaries'. It is clear that, in order to deliver the needs for housing and mixed use development in full, development beyond the existing settlement boundaries of the towns will be necessary. The wording of Policy SP5 should therefore be amended to provide support for development 'at' the towns, both 'within and adjacent to the existing settlement boundaries'.	Amend the wording of Policy SP5 to support proposals for new development 'at' Weston-super-Mare, Clevedon, Nailsea and Portishead, and to delete the words 'within the settlement boundaries of'. 										locations outside settlement boundaries. This is supported due to the likelihood that development in such locations would encourage car use.	
58582945	Nailsea Action Group		Nailsea Action Group	No	• Justified • Effective	Unsure	Unsure	The consultation document states: “Proposals for new development will be supported provided that they:…Can be successfully served by infrastructure such as transport, education and health facilities.” For Nailsea, the bolded text above contains a significant proviso. It is doubtful, not least for reasons given in response to SP 3, that this proviso can be met. This aspect of the plan therefore has also to be unsound. As the Policies map for Nailsea illustrates, the town is expected cumulatively to grow significantly, and especially some way to the west and south of its centre, making the town in effect very heavily lop-sided. The proposals (see the italicised text below) for the future refreshment and re-vitalisation of the centre of the town are vague, uncosted, and, in any event, constrained by the lack of significant adjacent land on which to expand in order to accommodate the hoped-for increased footfall. If the suggested developments cannot “be successfully supported by infrastructure such as transport”, they may not even come to fruition at all. This is unlikely to attract future traders, retailers and businesses to Nailsea. It is likely that the lack of easy routes to the town centre shops from the outlying areas, coupled with the recently introduced parking fees (the absence of which hitherto have made Nailsea attractive to shoppers local and not so local), which everyone knows will increase, will encourage new residents – and old – to take their business elsewhere. Furthermore, they will use the car to do so. Few residents, especially in the new further-flung residential developments, are likely to do their (probably heavy) weekly – or any – shopping on foot to a bus stop (if there is one) to get to town and back again, especially if they also have young children in their care. The facts of the matter set against the aspirations of Policy SP5 for Nailsea demonstrate the unsuitability of Nailsea (and Backwell) as a location for such major expansion. This is emphasised by the challenges for transport, not only within the town, but to and from outside it, characterised, as every route is, by significant constraining pinch points. An added factor to Nailsea’s unsuitability as a location for major population growth is the very small allocation of land for more employment, a barely meaningful 1.1 hectares, which makes it more than likely that new residents will look towards Bristol for their work, and commute daily to and from it (see comments made relating to Policy SP9, Employment). A much more suitable location lies nearby where there would be good public transport connections with Bristol and job opportunities: the land west of Bristol close to the east boundary of Long Ashton. (Policy SP2 refers) This part of the plan is unsound because the evidence to suggest that the town “can be successfully served by infrastructure such as transport” is extremely weak. Many proposals are made for Nailsea in particular, some of which are copied below (in Italics): ‘The Nailsea Placemaking Strategy recognises as a priority regenerating the Town Centre through renewal, retrofitting, improving townscape and generating mixed use and outward facing active frontages and by bringing new homes into the town centre. The potential for concentrated activity around the west end of the Town Centre and Somerset Square in particular for leisure, retail, recreational and play spaces should be reflected in development proposals.’ All the above (and the proposals not listed) is unsound because it is not a plan, therefore not effective. It is a collection of aspirations. So-say intentions are hedged about with ‘should’, ‘where appropriate’, ‘recognises’, ‘potential’. A plan is a definite decision about what clearly is going to happen, the actual actions that will take place: not this.	Ensure that plans for infrastructure development are genuinely realistic and achievable.		
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	• Positively prepared • Consistent with national policy	Yes	No	The Policy is helpful inasmuch as it sets out what appear to be key considerations for the delivery at towns – but presents little detail in its wording. The Policy should promote the delivery of new housing by expressing that a mixture of homes both in type and tenure will be supported – this is reflected in NPPF policy. Policy SP6 recognises a mixture of type and tenure, but SP5 does not. In the assessment of a town’s capacity to accommodate growth, consideration should be given to the existing and proposed level of provision of facilities at a town. This would make the policy more effective and consistent with national policy. The Policy should include a settlement hierarchy with the towns of Weston-super-Mare, Portishead, Nailsea and Clevedon the main focus for new development recognising their size, scale and service offer. This is a conventional approach and one which provides clarity to users of the Local Plan.	The Policy should address the requirement for a mixture of homes to be provided to support the delivery of a robust planning strategy. The Local Plan should provide a settlement strategy against for the spatial distribution of objectively assessed development requirements. The hierarchy should consider towns and villages by their levels of sustainability. The most sustainable towns are Weston-super-Mare, Portishead, Nailsea/Backwell and Clevedon – and therefore sensible levels of distribution should be applied. In the case of Portishead, its proximity to Bristol; levels of accessibility by road and public transport (notably with the introduction of a new train line); and capacity to accommodate new development in suitable, sustainable locations on its periphery.		
30736993	Kath Scargill									We support housing at the main towns including Portishead. If the new train station comes into operation.

The fourth criteria is as follows Can be successfully served by infrastructure such as transport, education and health facilities. As far as Nailsea & Backwell are concerned this criterion in the NS Local plan 2041 has not been met for the following reasons • There is no transport mitigation in the north of Nailsea for all the extra traffic caused by the vastly increased population (41%) traveling through the town and moving and from the town to Tickenham. Clevedon the M5 and Bristol • Station Rd/Nailsea Park Rd is the only road that leads through Nailsea from the station and it is not designed or suitable to take all the extra buses, goods vehicles and motor vehicles outlined in the Plan. • In addition, there are 2 infant/junior schools in Station Rd Nailsea which is a major health and safety concern with all the extra traffic. • Station Rd/Nailsea Park Rd are not suitable for active travel as there are no cycle paths and the footpaths			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								are only on part of the road. Cross rail link road The railway (built on a high embankment) runs through Backwell and Nailsea is the main line which links London (Paddington) via Exeter to the West Country down as far as Penzance. The HSE state that the minimum vertical distance under a bridge is 16 feet 6 inches (5.03 metres). This height will allow double decker buses, 44ton articulated trucks etc to travel under the rail line. A new rail bridge will have to be constructed, the embankment removed and the ground level lowered to achieve the required clearance. This will cause major disruption and cost to Network Rail, the Train Companies and to all the passengers it will affect In addition, the proposed link road is to be built on flood plains that regularly flood. The proposed link road goes through one of the planned housing developments and joins A370 immediately opposite a school adding to more congestion and danger to school children. Also who would want to live in anew estate that had a commuter route running through it? The proposed link road goes across the flood plain north of the railway and joins Station Rd immediately by the existing single lane railway bridge and transport hub. The proximity of these things will mean more congestion, delay and health and safety issues. This is an immensely expensive project with all sorts of technical, logistic and regulatory problems to overcome. Developer contributions will not be anywhere enough to pay for this scheme. There is no budget to cover the building of this project. A proper cost/benefit analysis would most likely decide that it was not cost effective. The Local Plan 2041 is unsound			
31062913	R Storrar		KWAW	Yes		Yes	Yes			This policy is correct in identifying the sizeable towns that can not only take further areas of development but then support the future residents. It will encourage further employment opportunities and regenerate some of the centres that are feeling the effects of out of town shopping. Developers still need to provide infrastructure of localised food shopping, schools and health care. However, this will be more effective and more easily managed through the amalgamation of CiLs (s.106 payments). This policy also protects the rural nature of the county, which in turn prevents urban sprawl around isolated villages, and leads to more tourism.	
62471329	Environment Agency		Environment Agency	Yes						Agree with policy, but there is no mention or link to DP9 or SP2.	
51572577	BNSSG ICB		NHS Property Services	Yes						The ICB strongly supports the Policy SP5's recognition of the need for new developments within the settlement boundaries of Weston-Super-Mare, Clevedon, Nailsea and Portishead to be (our emphasis added) "successfully served by infrastructure such as transport, education and health facilities". We therefore consider this policy to be sound on the grounds that health infrastructure requirements have been proactively considered.	NSC Reg 19 Local Plan - NHS BNSSG ICB Response 101225.pdf

									appearance, style and vernacular".		
39325825	Highgrove Strategic Land	Lichfields (Bristol)		No	• Positively prepared • Justified • Effective	Yes	No	The Plan is not sound because it is not positively prepared (test of soundness 36.a), justified (test of soundness 36.b) or effective (test of soundness 36.c). Please see attached letter for further details.	Policy SP6 should be redrafted to be consist with the Council's evidence to acknowledge that development at sustainable settlements is supported. Flexibility should be added for sustainable sites to come forward outside of settlement boundaries for service villages subject to criteria. Please see attached letter for further details.		Highgrove Strategic Land - Local Plan Reg 19 Reps 2025.10.12.pdf
31149537	Strongvox Ltd	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	This policy as currently drafted strictly controls the distribution of housing at villages, limiting this to land within settlement boundaries save for in exceptional circumstances, and in this respect the policy differs considerable from its adopted equivalent, CS32. We consider this formulation unduly restricts the potential for suitable and proportionate residential development beyond, but well related to, settlement boundaries at the identified villages, which can make an important contribution to the balanced supply of housing and the vitality of these smaller settlements. It is understood that under the adopted settlement strategy, development at villages has accounted for more than the anticipated proportion of new housing across the authority area, indicating that such sites – including those immediately beyond settlement boundaries – can be delivered swiftly, often by SME developers who are able to formulate more bespoke schemes suited to the character of their context. Medium-sized residential schemes at villages also bring with them much-needed investment in local infrastructure, including public transport and active travel initiatives, education contributions, recreational facilities, and CIL payments that are essential to maintaining the vitality and viability of many of these communities. To unduly constrain the potential for proportionate growth of the area's villages, as the current policy would imply, therefore risks the stagnation of rural settlements through a lack of new affordable and family housing and investment in local facilities. The policy is therefore not effective, positively prepared or justified, and should be modified to set parameters for appropriately-scaled new housing beyond settlement boundaries, as per the adopted settlement strategy.	The policy should be modified to set parameters for appropriately-scaled new housing beyond settlement boundaries, as per the adopted settlement strategy.		R002v5 NSLP Reg19 Reps Strongvox Dec25.pdf
27458753	The Newcombe Estates Company Limited	Olivia Frost		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	The government now requires 23,895 new homes within North Somerset between 2025-2040. This is an additional 8,161 dwellings above the figure within the previous Regulation 19 Local Plan (November 2023) of 15,734 dwellings. The Council acknowledged in the Spring 2025 consultation that to meet this requirement new homes will need to be located on Green Belt land. However, Policy SP6 and SP7 impose significant restrictions. Policy SP7 states that development within settlement boundaries is acceptable in principle, while SP6 limits development outside boundaries to replacement dwellings, conversions, rural worker housing, or redevelopment of previously developed land. This approach excludes sites on the edge of settlement boundaries, even where they are demonstrably sustainable. The justification within the supporting text for Policy SP6 states "development in the rural areas is relatively less sustainable given the absence of a range of services, facilities and job opportunities and the distances involved in travelling which will encourage car use.".The supporting text states that rural areas are "relatively less sustainable" due to limited services and reliance on car travel. However, this overlooks the fact that many edge-of-boundary sites are not isolated rural locations but lie adjacent to established settlements with good access to services and transport. Two examples included in the Appendix, were previously submitted at the Regulation 19 stage and are located on the edge of settlement boundaries in sustainable locations. One example is Land east of Portbury, which is within walking distance of schools, community facilities, shops, small businesses, and employment opportunities. The site also benefits from proximity to several bus stops providing connections to surrounding towns and villages. A similar case applies to the site referenced in Appendix B (Land east of Long Ashton).These representations were originally submitted during the Spring 2025 consultation to promote site allocation in response to the Council's request for "convincing reasons why sites in less sustainable areas should be considered." Both sites adjoin Category A and B villages (as classified under the Regulation 18 consultation) and were previously regarded as sustainable locations with access to public transport and infrastructure. Despite these detailed submissions, no explanation has been provided for their exclusion.Furthermore, the Council does not currently have a five-year housing land supply, with its latest position indicating only between 2.33 and 3.07 years supply. This significant shortfall demonstrates a need for flexibility within the Local Plan to identify sustainable sites beyond settlement boundaries and through site allocations. This omission undermines the plan's ability to meet housing needs flexibly and efficiently, meaning it is not positively prepared. Justified The plan must be based on proportionate evidence and consider reasonable alternatives. During Regulation 18, villages were categorised from Category A (most sustainable) to Category D (least sustainable). In Spring 2025, this classification was abandoned, and previously sustainable villages were downgraded to "less sustainable" without any published evidence or justification. Despite representations requesting allocation of sites adjacent to these settlements, the Council has provided no explanation for their exclusion. This failure to assess reasonable alternatives demonstrates that the plan is not justified.The Council's Spatial Strategy and Site Selection Paper (October 2025) identifies steps for assessing sites well related to towns and larger sustainable villages (under steps 3 and 4). The promoted sites including Land east of Portbury and Land east of Long Ashton meet this criteria and the Council should provide evidence of why they were discounted compared to other allocations. Effective Policy SP8 concentrates 88% of new housing in Weston-super-Mare, Wolvershill,	The emerging Local Plan does not meet the tests of soundness set out in paragraph 36 of the NPPF. While the Council acknowledges the need for 23,895 new homes between 2025 and 2040 (an increase of over 8,000 dwellings from previous figures)it continues to impose restrictive policies (SP6 and SP7) that exclude sustainable sites on the edge of settlement boundaries. These sites, such as land east of Portbury and land east of Long Ashton, are well-related to Category A and B villages, offer good access to services and public transport, and could make a meaningful contribution to housing delivery. The failure to allocate these sites or provide evidence for their exclusion means the plan is not positively prepared, as it does not flexibly address housing needs or respond to the Council's acknowledged shortfall in its five-year housing land supply. It is also not justified, given the lack of proportionate evidence and consideration of reasonable alternatives, nor is it effective, as over-reliance on a limited number of strategic sites introduces significant delivery risk. Finally, the plan is not consistent with national policy, which requires sustainable patterns of development, the inclusion of small and medium-sized sites, and consideration of grey belt land. To ensure the Local Plan is sound, the Council should revisit its spatial strategy, provide transparent evidence for site selection, and allocate sustainable edge-of-boundary sites to deliver housing growth in line with national policy objectives.		Pre Submission December 2025 Reps with appendices.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								Woodspring, Nailsea and Backwell, Pill and Easton-in-Gordano, Portishead, and Clevedon, leaving only 12% for villages and rural areas. By excluding edge-of-boundary sites, the plan removes flexibility to respond if strategic sites face delays or infrastructure challenges. This over-reliance on a small number of large allocations creates delivery risk and makes the plan ineffective. Consistent with National Policy Paragraph 11 of the NPPF requires plans to promote sustainable patterns of development and meet identified needs. The plan fails to demonstrate that sustainably located sites on the edge of settlement boundaries have been considered either within Policy or within the allocations. Paragraph 73 of the NPPF sets out the importance of small and medium sized sites can make an important contribution to meeting the housing requirements of an area. A number of small sites in sustainable locations will be located on the edge of settlement boundaries including those set out in the examples in the Appendix. In December 2024, the NPPF introduced grey belt land and stated that development in the Green Belt should not be regarded as inappropriate where grey belt land would be utilised. By excluding land on the edge of settlement boundaries this excludes a number of potential grey belt sites including the examples set out in Appendix. Overall, excluding sites on the edge of settlement boundaries conflicts with national policy and undermines the objective of delivering sustainable growth. The plan is therefore not consistent with national policy.			
51643457	Chestnut Property Developments Ltd (Chestnut Farm, Yatton)	Collier Planning	-	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy			Please refer to attached letter. Existing Core Strategy Policy CS32 supports residential development of up to 25 dwellings within or adjoining settlement boundaries subject to certain criteria being met. Draft Policy SP6 removes this provision and only supports new residential development outside settlement boundaries in the form of replacement dwellings, residential subdivision, residential conversion of buildings where alternative economic use is inappropriate or unfeasible, or dwellings for essential rural workers. The supporting text states that new greenfield development or infilling is not acceptable as this would lead to a more dispersed, unsustainable pattern of development. Core Strategy Policy CS32 requires specific criteria to be met to ensure that only development appropriate to the location and settlement would be supported, whereas Policy ST6 prevents any new residential development coming forward adjacent to the settlement. The removal of the policy support for appropriate sites to come forward for development adjacent to the settlement boundaries is not consistent with paragraph 83 of the National Planning Policy Framework which states that 'Planning policies should identify opportunities for villages to grow and thrive, especially where this will support local services'. The development of appropriate sites adjoining settlement boundaries would contribute towards the Council's housing land supply. Given the Council's undersupply of housing in recent years, at a time where current policy supports housing outside of settlement boundaries, it would be counterproductive for a replacement policy to prevent these windfall sites coming forward in appropriate locations. We object to draft Policy ST6 on the basis that it is not positively prepared, justified, effective or consistent with the NPPF and is therefore unsound. It is recommended that the policy is amended to provide opportunities for villages such as Yatton to grow and thrive by supporting residential development on appropriate sites adjacent to the settlement boundary, in the same way as existing CS Policy CS32 currently does.	It is recommended that the policy is amended to provide opportunities for villages such as Yatton to grow and thrive by supporting residential development on appropriate sites adjacent to the settlement boundary, in the same way as existing CS Policy CS32 currently does. 21579777	Taylor Wimpey (Youngwood Lane, Nailsea)	Pegasus Group		No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Yes	Yes	This policy as currently drafted strictly controls the distribution of housing at villages, limiting this to land within settlement boundaries save for in exceptional circumstances, and in this respect the policy differs considerably from its adopted equivalent, CS32. The success of this policy from a strategic perspective therefore depends heavily on ensuring that larger allocations at the principal settlements within the authority area are sufficient, effective and deliverable, so that new homes will come forward promptly over the plan period.			R002v4_NSLP_Reg19_TWBristol.Dec25.pdf
29403105	Diverse Partnerships Yatton Ltd	Pegasus Group		No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Yes	Yes	This policy as currently drafted strictly controls the distribution of housing at villages, limiting this to land within settlement boundaries save for in exceptional circumstances, and in this respect the policy differs considerably from its adopted equivalent, CS32. Commentary upon the plans consistency to the more sustainable villages of Backwell and Yatton and appropriate nature of Yatton for accommodating further development is referenced above overall and further below in respect of our client's site. The success of this policy from a strategic perspective therefore depends heavily on ensuring that larger allocations at the principal settlements within the authority area are sufficient, effective and deliverable, so that new homes will come forward promptly over the plan period. This is considered to present considerable risk given the consistent delays to delivering strategic scale development within North Somerset and nationally, as reflected in the Lichfields Start to Finish Report (Third Edition March 2024), that indicates seven years from application submission to first home delivery for sites of over 2,000 homes and build out rates of c. 112 dwellings per annum for such scale of development. In particular the plan is reliant on new strategic allocations at Wolvershill and Woodspring for 6,800 homes in total (equivalent to 29% of the entire plan housing target). It is noted in this regard that no housing trajectory / supply paper is provided within the evidence base to set out how the Council envisages the delivery under the proposed housing strategy being advanced across the plan period, and the last full published housing supply position addressing existing deliverable supply for the Council is from April 2024. With respect to the lack of flexibility and supply of housing across all sources throughout the plan period, it is noted that the published Strategic Housing Land	The differing approaches between the adopted plan and the emerging plan therefore present a sea change in the potential for windfall development and the evidence base does not reflect this. It is therefore considered that without such changes either in policy or evidence base the plan is neither justified or effective. 								Availability Assessment Main Report makes reference to windfall projections of 2,550 (or 10% of the plans housing target) taking account of "…completions data across the full plan period." Read in context this is presumed to refer to the existing (previous) plan period, given 'completions data' is referred to. This position clearly ignores that the existing adopted plan has imbedded flexibility to deliver additional development adjacent to all settlements of the adopted settlement hierarchy from Weston-super-Mare down to 'Service Villages'. The differing approaches between the adopted plan and the emerging plan therefore present a sea change in the potential for windfall development and the evidence base does not reflect this. It is therefore considered that without such changes either in policy or evidence base the plan is neither justified or effective.			
63094305	Harrow Estates	Boyer		No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No		Policy SP6 sets out the approach to managing development in villages and rural areas. While the intention of the policy is understood, the drafting of SP6 is not justified, effective, or consistent with national policy because it is overly restrictive and does not acknowledge the important role of rural settlements, such as Failand, in contributing to sustainable development, supporting rural services and helping to meet the districts' housing needs. The policy relies heavily on a rigid settlement hierarchy that fails to reflect functional relationships, accessibility to higher-order centres, or the opportunities presented by sustainably located edge of village sites. This results in a blanket constraint-based approach that conflicts with both national rural planning objectives and the draft LP's wider growth strategy.Lack of Recognition of Rural Settlements' Strategic Role The draft LP categorises Failand as a Category C settlement. As stated in the evidence base: "Category C settlements are defined as villages with limited services and facilities such as just a primary school, village shop or pub and lack good access to higher order settlements by walking, cycling or frequent transport." However, this description does not accurately reflect the realities of Failand's connectivity, accessibility, or functional role. Failand is served by: • Failand Village Hall • A Local Village Store and Café (Honey & Ginger) • The Failand Inn • Failand Observatory – Local Landmark • Tyntesfield House (National Trust Park and Gardens) • Wraxall Piece (National Forest) • Ashton Hill Plantation (National Forest includes walking and cycling routes) • Bristol & Clifton Golf Club • Long Ashton Golf Club • X6 bus service connecting Failand to Bristol Failand is sustainably located on major transport corridor between Bristol and Clevedon, benefiting from a total of number of stops. The existing provision, the First X6 service provides Failand with a bi-hourly service with strategically connections to Bristol and Clevedon. The journey time into Bristol is circa 15 minutes to the city centre. Furthermore, Long Ashton Park & Ride is 4km east, connecting to the Metro Bus network as another form of sustainable travel option. The existing level of service provision, together with its proximity to Bristol and established transport links, demonstrates that Failand performs significantly stronger than a Category C settlement and should be treated as a sustainable location for growth. Failure to Apply NPPF Principles to Rural Settlements Paragraphs 79-80 of the NPPF (2024) support rural housing where it enhances or maintains the vitality of rural communities. SP6, however, adopts a restrictive approach that: • prevents sustainable edge-of-settlement growth; • does not recognise the ability of rural settlements to accommodate modest development; and • disregards the functional relationship between villages and nearby towns or cities. This approach is inconsistent with the NPPF's recognition that rural communities cannot remain static and require positive, sensitively designed new development to remain viable. The above is evident in the Taylor Review of Rural Economy and Affordable Housing (2008), which highlights that rural communities cannot remain static, and that without positive intervention, villages face long-term decline in population, housing affordability, and service provision. The review emphasises that planning policies should act as an "engine of regeneration," delivering affordable housing, enabling local enterprise, and sustaining vibrant rural life. Without modest levels of ongoing development, local services such as schools, shops, pubs, public transport, and community facilities risk decline or closure, further undermining rural vitality. Housing Affordability, Social Balance, and Local Needs SP6 does not provide any mechanism for meeting locally generated housing need in rural communities, nor does it account for the worsening affordability pressures evidenced in the LHNA (2025). Failand, with access to jobs in Bristol and a demonstrable ability to deliver affordable housing through grey belt policy, is well placed to support balanced communities and address rural housing inequalities. Misalignment Between SP6 and the Spatial Strategy (SP3) SP6 and SP3 must be consistent; however, the restrictive nature of SP6 undermines the draft LP's ability to deliver growth where it is most sustainable. SP3 directs growth toward Weston-Super-Mare despite evidence of unsustainable		251211 Land East of Failand Reg 19 Reps.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									commuting patterns and infrastructure constraints. Meanwhile, Failand, which is located 5-minutes from Bristol, with existing bus services, proximity to the Long Ashton Park & Ride, and well-established active travel routes, is excluded on the basis of an oversimplistic settlement categorisation. The evidence clearly shows that the categorisation of Failand fails to recognise its existing relationship with Bristol and the benefits from existing public transport routes into the city. This omission prevents the Plan from achieving a sustainable distribution of homes across the district. Lack of Flexibility to Support Rural Sustainability SP6 does not acknowledge these considerations and instead restricts opportunities for modest, well-located, sustainable growth that could support the vitality of rural communities. A sound Policy SP6 must: • Allow appropriate edge-of-settlement growth where it demonstrably supports local needs and sustainability. • Recognise the strategic role of villages with strong accessibility, such as Failand. • Integrate rural policy with wider spatial strategy objectives, rather than applying an inflexible hierarchy. Policy SP6 is unsound because it is not: • Positively prepared. It constrains opportunities for sustainable rural growth and fails to respond to local needs. • Justified. It misapplies the settlement hierarchy and does not reflect the functional role of places like Failand. • Effective. It undermines the spatial distribution of development and limits delivery of affordable and market housing. • Consistent with national policy. It conflicts with NPPF directives on rural vitality, community sustainability, and enabling modest rural growth. A revised Policy SP6 should explicitly support growth in sustainable rural settlements, including Failand, to ensure the long-term viability of rural communities and deliver a balanced spatial strategy.		
63250785	LiveWest	PCL Planning Ltd		No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	These representations should be read in conjunction with the representations made on Policy SP3 and the concerns of our client regarding the overall strategy of the plan. As with Policy SP3, Policy SP6 fails to provide a distinction between the wide range of villages that exist across North Somerset. In the absence of any clear identification within a settlement hierarchy of what constitutes sustainable and less sustainable villages and a lack of recognition of the wide variety between the level of services and facilities offered in individual villages, Policy SP6 is relatively meaningless. It simply focusses on settlement boundaries without providing any additional guidance on potential sustainable development opportunities within these places, that offer (as in the case for Wrington) a wide range of facilities. Unless allocations have been identified, the settlement boundaries in these places will simply constrain all development opportunities. Particularly given in most of these settlements infill opportunities are very limited and would not provide the level of development that could support existing services, deliver affordable housing or other infrastructure needs. It is therefore difficult to understand how such a constrained approach can benefit the local communities in those places. The approach of SP6 fails to recognise the valued role that development in villages, where there are existing services (such as Wrington), can play in delivering a diverse mix of new homes, including affordable whilst still reflecting the scale and character of those places. Policy SP6 as proposed will increase the likelihood of the delivery of the plan being ineffective given the lack of contingency and flexibility it provides in the event of land supply issues arising. It also runs contrary to the Additional Sites Consultation, where the Council has sought to make a distinction between the villages, recognising some are more and some are less sustainable. Places like Wrington were identified through that process as being more sustainable, clearly recognising the wide level of services and facilities the village offers. Providing mechanisms to support sustainable growth beyond existing boundaries in places like Wrington where there are no allocations can provide critical resilience and capacity in order to sustain existing services and their role and function to the benefit of their local communities. The alternative of not recognising growth opportunities in such places is stagnation, increased affordability issues and over time the creation of inherent unsustainable settlements failing to meet the needs of their communities. The issue stems from not clearly identifying in Policy SP3 what are the sustainable settlements. With this identified Policy SP6 can then make the appropriate distinction between (1) a more flexible policy approach that supports sustainable development in appropriate circumstances within the more sustainable villages (without relying on solely on allocations and inflexible settlement boundaries); and (2) a more constrained approach for those less sustainable settlements. Wrington has a wide range of services, including a primary school, nursery, post office, convenience store, independent shops and cafes, public houses, pharmacist, veterinary practice, memorial hall, sports and social club and places of worship. The village also includes opportunities for local employment within the existing Havyatt Road Business Park and is served by regular bus services. Despite this Policy SP6 (and SP3) significantly reduces the opportunity for the village to sustainably grow compared to the approach of the Core Strategy (which identified Wrington as an important Service Village). It is also contrary to the Council's own assessment of Wrington as a more sustainable village within the Additional Sites Consultation.	Policy SP6 should better relate to Policy SP3 which itself should be much clearer in identifying a settlement hierarchy that identifies what are the more and less sustainable places below the towns. Policy SP6 should then reflect this in its approach, making distinction between the villages and recognising that some have a wider range of services and facilities and are therefore more sustainable and more suitable to accommodate growth. Policy SP6 should provide policy guidance to support the flexible release of sites above and beyond the allocations and the settlement boundaries to provide for sustainable options for growth where this responds to specific needs, sustainable development opportunities and changing circumstances (including non-delivery of other sites). Wrington should be identified as a more sustainable settlement and its relevance to Policy SP6 (and the opportunity for additional release of sustainable sites) clarified. Our client's site at Land at East of Wrington (reference HE2033) should form part of the Green Belt review undertaken as part of the Plan process and removed from it and be specifically allocated for housing to support the delivery of sustainable development and the wide benefits to the local community this would bring. The Policy map should be amended accordingly.		Pre-submission Plan (Regulation 19) Representations - on behalf of LiveWest (Redacted).pdf 03-18-25 Livewest reps on Additional Sites Consultation_Redacted.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Despite the sustainability credentials of Wrington, the only 'growth' it faces over the Plan period is through infill within a tightly drawn settlement boundary with no obvious opportunity even for very minor levels of infill. Whilst Gatcombe Farm is identified as an allocation (solely based on an existing consent), it is so distant and unconnected to the village it will have no role at all in supporting and sustaining services and facilities within the village or provide any benefit to the local community. As a result of the Plan approach as set out in SP6 (and SP3) Wrington faces the prospect of no growth over the Plan period which will place services and facilities at significant risk, fail to address growing affordability issues and increase unmet need to the great detriment of the local community. There is no clear audit trail as to why Wrington continues to be overlooked by the Emerging Plan, particularly given its overall sustainability. Whilst it is noted that there was a degree of contention regarding the sites identified as potential allocations within the Additional Sites Consultation, this alone is not a reason for the Plan to turn its back on the village. Notwithstanding public objection, our client's site at Land to the East of Wrington (reference HE2033), as set out in previous representations is unconstrained in terms of landscape or ecological designation, has several suitable access options linking to existing residential areas and the core facilities of the village centre of which it is in close proximity. It is outside of the Conservation Area, there are no nearby heritage assets and the majority of the site lies within Flood Zone 1. It therefore represents a logical extension to the village to deliver sustainable development, providing wider benefits to the local community in respect of housing and supporting local services as well as opportunities to improve infrastructure and the setting of the village. We have previously confirmed that the site is available and deliverable. Whilst it lies within the margins of the Green Belt, the revised NPPF provides the tools to assess and evaluate the site's negligible role in serving Green Belt purposes. Particularly as the release of the site would provide greater longer term benefit in improving the landscape and visual context of the village as well as the wider sustainability benefits in respect of supporting the needs of the community. This would be consistent with the justification for other sites having been released from the Green Belt within the Plan. We further discuss Green Belt implications in our representations made under SP7. However it is clear that the continuing housing crisis requires a step change in planning for growth and a departure from traditional protectionism. It is for the reasons set out above that we consider Policy SP6 (alongside SP3) significantly undermines the soundness of the Plan overall as it has not been positively prepared as it is not seeking to meet identified needs. Its strategy is not justified as it contradicts clear evidence of need and the contribution the larger villages (including Wrington) could make to delivering sustainable development and does not take into account reasonable alternatives in to address this. The Plan's approach will not be effective in that there is no clear evidence that supports the Plan being deliverable. It is not consistent with national policy in that its approach limits rather than maximises the opportunities for the Plan to deliver sustainable development in accordance with the Framework. Please see previous representations made on earlier versions of the Plan for completeness. These are appended to the covering email for these and other representations made on the Reg 19 (Pre-Submission Plan).			
63213025	BackwellPC NailseaTC Flax BourtonPC BrockleyPC BackwellRA Nailsea Action Group	Lucy White Planning Limited	BackwellPC NailseaTC Flax BourtonPC BrockleyPC BackwellRA Nailsea Action Group	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure		BPC object to the proposed amendments to the settlement boundary of Backwell, which are vastly extended to include the strategic allocations of Grove Farm and Land East of Backwell, but which also incorporate other undeveloped land which lies between those allocations and the existing built-up areas of the village. This approach is contrary to the methodology for settlement boundary review1 The inclusion of these extra parcels of land could place additional pressure on undeveloped land for further residential development, which would result in denser development, a loss of important open spaces, visual breaks and recreational amenity spaces, to the detriment of the rural character of the village. Notwithstanding the concerns regarding the proposed limits of the settlement boundary, BPC strongly support the categorisation of Backwell as a Village under Policy SP6 and broadly support the wording of Policy SP6 to limit new development to land within the settlement boundary, subject to compliance with all policy criteria. The limitations imposed on development outside the settlement boundary are also supported to control the settlement from further outward expansion. Amendment Sought – Settlement boundary for Backwell to be amended to include site allocations (if found sound) but exclude any adjoining land which is not currently within the settlement boundary.		251118 Local Plan Reg 19 2025 reps FINAL.pdf R01 - Transport Statement - Rev 3 FINAL.pdf Hydrology LP3 BPC_NTC Appendix_2.2-compressed.pdf Hydrology LP3 BPC_NTC Appendix_2.1-compressed.pdf Hydrology LP3 BPC_NTC Appendix_9-compressed.pdf Hydrology LP3 BPC_NTC Appendix_7-compressed.pdf Hydrology LP3 Summary BPC_NTC Part 2 (1).pdf Hydrology LP3 Summary BPC_NTC Part 1 (1).pdf
63114593	Bloor Homes (North of Pound Lane Nailsea site)	Turley		No	• Positively prepared • Justified • Effective • Consistent with national policy		No	Policy SP5 (Towns) and SP6 (Villages and Rural Areas) The general approach taken with the development strategy at Towns and Villages & Rural Areas is supported. However, the sequential approach set out by these policies has not been wholly followed through in the final strategy for growth (Policy SP3) and the draft site allocations that have been identified. As set out above, Policy SP3 states that priority will be given to locating new residential and mixed-use development in or close to urban areas where there is an existing or proposed wide range of facilities, services and jobs, and there are opportunities to encourage active travel. The justification text under policy SP5 recognises that Towns are the most sustainable locations within North Somerset. Similarly, the justification text for Policy SP6 confirms that the rural areas are relatively less sustainable given the absence of a range of services, facilities and job opportunities.	There are inconsistencies in the proposed policy and draft housing allocations. It seems that villages have been considered areas appropriate for higher or equal levels of growth to defined Towns.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								There are inconsistencies in the proposed policy and draft housing allocations. It seems that villages have been considered areas appropriate for higher or equal levels of growth to defined Towns.			
21472417	Mead Realisations Ltd	Oneleven Property		No	• Positively prepared • Justified • Effective • Consistent with national policy			This policy should include flexibility to allow development adjacent to the settlement boundary subject to specific criteria. The policy text should be amended as follows: New development within (add..or adjoining) the settlement boundaries of villages (remove ...as defined on the Policies Map) will be supported where: • It results in a form, design and scale of development which is high quality, respects and enhances the local character, contributes to placemaking and the reinforcement of local distinctiveness, and can be readily assimilated into the village; • (remove..The size, type, tenure and range of housing reflects local community needs); • It will not cause significant adverse impacts on local services and infrastructure, including cumulative impacts; • The location of development (ass..supports) (remove.. maximises) opportunities to reduce the need to travel and connects to local facilities by high quality walking and cycling infrastructure, with good public transport connections for longer trips; and • The uses complement the defined local centres and contribute to their vitality and viability. (add ..Sites outside the settlement boundaries of Backwell, Banwell, Churchill, Congresbury, Easton in Gordano/Pill, Long Ashton, Winscombe, Wrington and Yatton in excess of 25 dwellings must be brought forward as allocations through Local Plans or Neighbourhood Plans.) Otherwise, outside settlement boundaries new residential development will be restricted to replacement dwellings, subdivision of existing dwellings, residential conversion of rural buildings where alternative economic use is inappropriate or unfeasible, dwellings for essential rural workers or the redevelopment of previously developed land in suitable locations. Rural buildings which have an existing permission to be converted to residential use will not be granted permission to be rebuilt and replaced to create a new build dwelling. Other non-residential uses may be acceptable outside settlement boundaries provided that: • There is a clear justification for the need for the proposed location; • Suitable alternative sites are not available within settlement boundaries; • Priority is given to locations well-located in relation to existing settlement boundaries; • Priority is given to previously developed land or buildings; and • Priority is given to accessible locations in relation to the nature of the use.		Reg 19 Final Representations Mead Realisations 12.12.25 including appendices.pdf
62815873	E Beacon			No	• Justified • Consistent with national policy	Unsure	Unsure	SP6- There has been deviation from settlement boundaries. Land outside the established village settlement boundaries should not be included in the proposed development allocation . Boundaries should exist to manage growth responsibly. This is a breach of DP6 which states residential development outside settlement boundaries will be restricted to "replacement dwellings, residential conversion of rural buildings, or redevelopment of previously developed land". Extending development beyond these boundaries undermines planning principles, and sets a dangerous precedent for further expansion. It will damage the village community. The deviation from established boundaries is also in conflict with SP11	- A public meeting - A review of sites to ensure compliance with council policies. -An acknowledgemt to work within existing settlement boundaries -A review of how the A369 can handle extra traffic with acceptance that the train cannot really provide a solution when it will be permanently limited to 30 minute journeys with small carriages.		
1019201	Wrington Parish Council		Wrington Parish Council							We support this Policy and especially note that 'Rural buildings which have an existing permission to be converted to residential use will not be granted permission to be rebuilt and replaced to create a new build dwelling.' We feel this will importantly help to retain the character and history of the local area.	
62850369	Maureen Butterly			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Policy SP6 correctly recognises that villages and rural areas are less sustainable locations due to limited services, fewer job opportunities, and greater likelihood of car dependency. However, the Local Plan does not apply SP6 consistently in its strategic allocations. By designating Pill and Easton-in-Gordano – a village with clear rural constraints – as a Strategic Development Location for approximately 1,100 homes, the Plan contradicts the policy requirements established in SP6. As a result, the application of SP6 is not sound. The Plan fails the tests of justification, effectiveness, and consistency with national policy. 1. SP6 requires development in villages to be proportionate and based on local community needs — yet Pill/E-in-Gordano is allocated an overwhelmingly disproportionate scale of growth SP6 states that development must: • reflect local community needs, and • be of a form, scale and range appropriate to a village. However, the Plan allocates approx. 1,100 dwellings to Pill/Easton-in-Gordano – equivalent to a 44% increase in population. This is not a proportionate level of rural growth. It far exceeds any reasonable interpretation of "local needs" and contradicts the stated purpose of SP6. 2. SP6 requires development not to cause significant adverse impacts on local services or infrastructure – but the evidence indicates it will SP6 states that proposals should not cause significant adverse impacts on local services and infrastructure, including cumulative impacts. Yet Pill/E-in-Gordano: • already experiences significant highway pressure at M5 Junction 19;	To make Policy SP6 and its application within the Local Plan sound, the following modifications are required: 1. Amend the spatial strategy so that development in villages is genuinely proportionate and reflects local needs SP6 requires that village development be based on local community needs and proportionate to the settlement's scale and character. Allocating approximately 1,100 homes to Pill/Easton-in-Gordano contradicts this. Required modifications: • Reduce or remove the strategic-scale housing allocations at Pill/ Easton-in-Gordano. • Reallocate growth to towns and sustainable urban areas in accordance with SP5 and SP3. • Update the Sustainability Appraisal to evaluate revised rural growth scenarios. 2. Strengthen SP6 by explicitly capping development levels in villages to avoid disproportionate scale To avoid ambiguity and ensure the policy is effective, SP6 should include clearer thresholds. Required modifications: • Add policy wording specifying that development in villages must not exceed a scale that would materially alter the settlement's character, size, or sustainability profile. • Require that any major development in villages undergo a specific sustainability appraisal demonstrating compliance with SP6. 3. Require robust, evidenced infrastructure capacity assessments		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								• has limited public transport provision; • relies on services (schools, healthcare, community facilities) that are already at or near capacity; • lacks existing active travel connections that meet SP6 standards. No evidence in the Plan shows that this scale of development can be accommodated without substantial adverse impacts. Therefore, SP6 is not effectively implemented. 3. SP6 requires development to maximise opportunities for reducing the need to travel – but the location encourages car dependency SP6 emphasises the need to reduce the need to travel and ensure good active travel and public transport connections. However: • commuting patterns from Pill/E-in-Gordano are heavily car-dependent; • sustainable travel options are limited; • proposed active travel enhancements are not costed, secured or evidenced; • reliance on a future railway link is uncertain. The proposed scale of development is not compatible with SP6's sustainability requirements. 4. SP6 requires high-quality integration into the village context – but strategic-scale development cannot be "readily assimilated" SP6 states that development must: • be assimilated into the village setting, and • enhance local character. A strategic allocation of 1,100 homes, spread across several Green Belt sites, cannot realistically be assimilated into a village of approx. 4,500 residents without fundamentally altering its character and scale. This directly contradicts SP6's core design and placemaking principles. 5. SP6 directs that outside settlement boundaries, new residential development should be heavily restricted — yet the Plan proposes extensive new build Green Belt development SP6 restricts new residential development outside settlement boundaries to limited, specific circumstances. However, the Plan proposes large-scale new-build Green Belt development outside the current boundaries of Pill/E-in-Gordano. This is inconsistent with SP6 unless exceptional circumstances are demonstrated – yet these are not evidenced for this particular location. 6. SP6 explicitly recognises that villages are less sustainable locations — yet Pill/E-in-Gordano is treated as a strategic development hub The justification for SP6 states that rural development is less sustainable and should be carefully controlled. Despite this, the Plan elevates Pill/E-in-Gordano to the same strategic status as Nailsea/Backwell and other urban expansions. This inconsistency weakens the Plan's internal coherence and makes SP6 ineffective as a guiding policy. Summary While SP6 is appropriate in principle, the Plan does not apply it consistently. The proposed strategic growth of 1,100 homes at Pill/E-in-Gordano is: • not proportionate, • not locally needed, • not sustainable, • not supported by infrastructure evidence, and • not compatible with SP6's design, transport or placemaking requirements. Therefore, SP6 is not sound as implemented and fails the tests of justification, effectiveness, and consistency with national policy.	before significant development is allocated in villages SP6 states that development must not cause adverse impacts on local services and infrastructure, yet the Plan allocates large-scale development without demonstrating capacity. Required modifications: • Include a requirement that infrastructure capacity assessments (schools, healthcare, transport, utilities) must be completed and published before allocating significant village growth. • Require binding phasing conditions to ensure infrastructure is delivered before occupation. • Remove allocations where infrastructure cannot realistically be delivered. 4. Strengthen SP6's requirements on sustainable travel and car dependency SP6 requires that development in villages maximises opportunities to reduce the need to travel and prioritises high-quality walking, cycling, and public transport connections. This is not deliverable for strategic-scale growth at Pill/E-in-Gordano. Required modifications: • Add wording requiring evidence of deliverable active-travel networks and viable public transport options as a prerequisite for any major development. • Remove allocations where reducing car dependency is not achievable. 5. Align SP6 with Green Belt policy (SP7) to prevent unjustified release of rural Green Belt land SP6's justification emphasises avoiding dispersed, unsustainable forms of development. This must be clearly linked to Green Belt protection. Required modifications: • Add explicit linkage between SP6 and SP7 confirming that Green Belt villages are unsuitable for strategic-scale development unless exceptional circumstances are robustly evidenced. • Require the Council to demonstrate that alternatives to Green Belt release in villages have been fully exhausted. 6. Require an enhanced landscape and character assessment for any development over a defined threshold in villages SP6 requires new development to be assimilated into the village, which is not possible for very large schemes. Required modifications: • Insert a policy requirement for settlement-specific landscape, character, and visual impact assessments for any proposal exceeding a defined size (e.g., >50 units in a village). • Remove allocations that fail to satisfy these assessments. 7. Improve internal consistency by revising SP3, SP5 and site allocations to reflect the principles in SP6 SP6 cannot be effective unless the rest of the Plan applies its principles. Required modifications: • Revise SP3 (Spatial Strategy) and SP5 (Towns) so that rural development is constrained to sustainable, proportionate levels. • Remove the Strategic Location designation for Pill/Easton-in-Gordano unless it can meet the sustainability criteria of SP6 (which the evidence does not support). Summary Modification To be sound, SP6 must be strengthened and consistently applied so that: • development in villages is truly proportionate, • allocations reflect local need, • infrastructure capacity is evidenced, • car dependency is minimised, • Green Belt release is avoided unless fully justified, • strategic-scale growth is directed to towns and sustainable urban areas, not rural settlements. Without these modifications, SP6 fails the tests of justification, effectiveness, and consistency with national policy.

51242689	Latimer Developments Limited	Arwel Evans - Lichfields	Latimer Developments Limited	No	• Positively prepared • Justified • Effective	Yes	No	Draft Policy SP3 identifies Weston-super-Mare as the principal location for new development. New development will also be prioritised in the following four strategic locations: • Wolvershill (north of Banwell) – 3,300 homes; • Woodspring (south west of Bristol) – 3,500 homes; • Nailsea and Backwell – 3,728 homes; and, • Pill and Easton in Gordano – 1,100 homes. Draft Policy SP5 also states that development will be prioritised within the four town centres of North Somerset, those being Weston-super-Mare, Clevedon, Nailsea and Portishead owing to their sustainability credentials. Draft Policy SP6 seeks to limit new residential development outside of the settlement boundaries of villages and rural areas. The supporting text states that: 'development in the rural areas is relatively less sustainable given the absence of services, facilities and job opportunities'. This fails to acknowledge that the form, nature, size and sustainability credentials of Villages within the authority varies considerably, and is a step change from the adopted Core Strategy approach and the Council's own evidence base. It is incorrect	We consider that the settlement hierarchy should be amended to give status to the more sustainable settlements, as evidenced by the Council's own supporting documents. We also request that additional small sites are allocated within these sustainable settlement including Clarion's site at land north of High Street, Claverham (120 affordable homes) to ensure that the plan delivers over the plan period. 								to state that there is an absence of services, facilities and job opportunities in settlements outside the towns. This has essentially created a two-tier settlement strategy that does not reflect the nature and function of the settlements of North Somerset with all settlements apart from Weston -Super-Mare, Nailsea, Clevedon and Portishead (as well as the strategic development locations) considered in the 'Villages and rural areas' category. As set out in draft Policy SP8 the 'villages', account for 2,948 dwellings (12% of the housing supply) in the Regulation 19 plan with the remainder coming from the towns and the strategic allocations. We consider that the settlement strategy does not reflect the function and form of the settlements of North Somerset and as a result, the distribution of housing, set out in policy SP8 is not effective in ensuring delivery over the plan period. As it stands, we consider that draft Policy SP8 is not justified and is therefore unsound. The proposed settlement strategy does not reflect the existing settlement hierarchy as evidenced by the Council's own work. In order to be considered sound, a third tier should be added which should consist of the more sustainable villages, as evidenced by the Council's own work to assess the sustainability of villages. Policy SP6 (Villages and Rural Areas) is too restrictive to allow meaningful development to take place in villages that could suitably meet the needs of the area and to assist in supporting their viability. Policy SP6 as it stands appears to be drafted in order to protect rural areas from any development regardless of the characteristics of the rural settlements – some of which are large, sustainable and thriving communities. This appears to be an even stricter form of policy than that of the adopted Core Strategy that allowed sites of up to 25 dwellings outside of settlement boundaries for service villages subject to criteria. It appears that Yatton has been demoted from a Service Village in the new Local Plan to fall within the 'Villages and Rural Area' category even though it is a highly sustainable settlement that serves a wider catchment as evidenced through the recent residential permissions. As it stands, we consider that draft Policy SP6 is not justified and is therefore unsound. Policy SP6 should be amended to make it clear that sustainable housing developments adjacent to the settlement boundary of villages are acceptable subject to criteria. Whilst the Council has opted to allocate 1100 dwellings in the village of Pill and Easton in Gordano, we consider that other villages such as Yatton/Claverham also boast considerable sustainability credentials and would be suitable to accommodate further meaningful growth. The Council's own evidence recognises the sustainability credentials of Yatton/Claverham, with the 'Consultation paper on additional sites for the Regulation 19 plan' (February 2025) identifying Yatton/Claverham as a 'larger, most sustainable village'. From a functional perspective Claverham forms an important node along an arc of settlements in this quadrant of North Somerset that operate in unity. These comprise Yatton, Claverham, Cleeve and Congresbury. Claverham forms a natural extension to Yatton. Within the current adopted Core Strategy Yatton is designated as a 'Service Village' whilst Claverham is classified as an Infill Village. The Core Strategy supports development within or adjacent to existing settlement boundaries of Service Villages, subject to proposals enhancing the overall sustainability of the settlement. We consider that additional growth could be directed to other sustainable villages by either amending the settlement hierarchy under Policy SP3 to promote sustainable villages such as Yatton/Claverham (similar to the adopted Core Strategy where it is identified as a Service Village) or by re-drafting Policy SP6. The supporting text to Policy SP8 states that: "Across the villages and rural areas sites to accommodate 1,830 dwellings have been identified, predominantly at the larger more sustainable villages that have a range of services and facilities to support an appropriate amount of new development over the plan period." However, we query why no new allocations are proposed in Yatton/Claverham given its positive classification as part of the Rural Settlements Paper (March 2022) and the Consultation Paper on additional sites for the Regulation 19 Plan (February 2025). Only 300 dwellings have been allocated within Yatton/ Claverham, with all but one allocation (Oxford Plasma – 58 units) having extant planning permission . It's worth noting that the Oxford Plasma allocation is not a new allocation as it has been rolled forward from the Site Allocations Plan (April 2018). Therefore, there are no new allocations proposed for Yatton/Claverham which is surprising and at odds with the Council's own evidence base. The combined area of Yatton/Claverham is therefore proposed to accommodate a very limited quantum of growth compared to its evidenced strong sustainability credentials. We support the Council's assertion that Yatton/Claverham is considered as a single settlement due to their interdependency. We consider that the conjoined settlement should be considered a higher order settlement in the settlement hierarchy. The plan therefore fails to meet the tests of soundness as it is not justified, with Policy SP8 conflicting with the council's own evidence base. Whilst future opportunities for growth in Yatton are more limited (due to constraints such as flood risk), there remains opportunities for sustainable development within Claverham which forms a natural extension to Yatton; as recognised by NSC in the 'Consultation paper on additional sites for the Regulation 19 plan' and the Pre-submission Plan. We consider that Claverham in itself is a suitable location for development as it includes a primary school (including preschool), a Village Hall, a Community Church, a Scouts HQ as well as areas of functional open space. However, there is an opportunity to boost the facilities and services in Claverham itself through well planned developments such as that proposed for land north of High Street, Claverham.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Although we support NSC's sequential approach, which prioritises the most sustainable locations for growth, we question its application within the plan. The plan has overlooked deliverable sites in lower order settlements, including the land north of High Street, Claverham, which are suitable, sustainable and deliverable, in favour of very large strategic sites and sites located within the Green Belt. Whilst the NPPF (paragraphs 145 and 146) states that Green Belt boundaries can be altered where there are exceptional circumstances, including in instances where an authority cannot meet its identified need for homes, we do not believe that NSC has fully considered suitable and deliverable housing sites outside of the Green Belt that could also aid in meeting this need. Having the other smaller sites alongside the larger strategic sites provides North Somerset with the best opportunity to meet the housing target. The Plan is not sound because it is not positively prepared (test of soundness 36.a), justified (test of soundness 36.b) or effective (test of soundness 36.c). The strategy to meet the housing needs of the authority is not effective because of the reasons outlined above. We consider that the settlement hierarchy should be amended to give status to the more sustainable settlements, as evidenced by the Council's own supporting documents. We also request that additional small sites are allocated within these sustainable settlement including Clarion's site at land north of High Street, Claverham (120 affordable homses) to ensure that the plan delivers over the plan period.			
31072289	Jeanne Craske			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The plan accepts that development in rural areas is less sustainable, yet Nailsea & Backwell are being targeted for large scale development in spite of the fact that they have both already grown larger than is sustained by their facilities and infrastructure. Grouping all villages together in one policy ignores their differences.			
9138657	Home Builders Federation		Home Builders Federation		• Justified • Effective • Consistent with national policy				Policy SP3 is not considered to be sound as it is not effective, justified or consistent with national policy Although HBF does not comment individual housing allocations other than to say the Plan should provide for a wide range of deliverable and developable sites across the area in order to provide competition and choice to ensure that housing needs are met in full. HBF would wish to see the Plan set out a logical settlement hierarchy which meets all the housing needs and addresses all areas of the housing market, with a range of sites proposed for allocation. The soundness of strategic and non-strategic site allocations, whether brownfield or greenfield, will be tested in due course at the Local Plan Examination. We would expect the housing land supply, including the sum of all the allocations, to meet the housing requirement of North Somerset in full, including a contribution to meeting the unmet housing needs of Bristol. As this is not the situation in the case of this Plan HBF argue additional allocations and enabling windfall policies are needed. The spatial strategy of the Plan should also recognise that there may be clusters of villages that provide a range of services for that area within reasonable travelling distance of each other, so villages may need to be grouped together. These areas might be able to sustainably support a substantial level of development but may not have all the services within one particular village. Similarly, the Local Plan should recognise that settlements that currently do not have services could expand to include those services if new development is allocated in those areas. The current range of village services should not be used as a basis for only locating development close to existing services, it could in fact also identify where services could be improved through new development. Allocating housing sites in rural areas can also provide opportunities for small sites which are particularly helpful for SME builders. For the North Somerset Plan to be effective there is, we agree that there is a clear need for Green Belt release both within Bristol's boundary and beyond them in order to meet the housing needs of the Bristol HMA. Failure to do so with hinder the growth, development, recovery and renaissance of the Bristol City Region, contrary to government policy. In relation to the villages and rural areas, HBF believe the current housing crisis and inability of Bristol to meet its own housing needs provides the exceptional justification necessary to review a comprehensive Green Belt review, including for the Green Belt in North Somerset. This should be in addition to meeting North Somerset's own needs. HBF supports the need for additional housing allocations including in villages and rural areas, including both greenfield and Green Belt sites. This must be in addition to the requirement for North Somerset Council also meets all if its own housing need in full. HBF request that the Plan is amended to include additional housing allocations to fully meet the housing requirement for North Somerset, a requirement which HBF believes itself should be increases for various reasons, set out more fully in our response to the Policy SP8 Housing.		North Somerset 2nd Reg 19 Dec 25.docx

									To be effective the policy should also include a list of villages, in the same way the four towns are listed in Policy SC4. Plan users should not have to consult the policy map to see which locations are villages.		
62865825	G Davies			Yes		Yes	Yes				
31088129	Bloor Homes South West	Turley		No	• Positively prepared • Justified • Effective • Consistent with national policy		No	Policy SP5 (Towns) and SP6 (Villages and Rural Areas) The general approach taken with the development strategy at Towns and Villages & Rural Areas is supported. However, the sequential approach set out by these policies has not been wholly followed through in the final strategy for growth (Policy SP3) and the draft site allocations that have been identified. As set out above, Policy SP3 states that priority will be given to locating new residential and mixed-use development in or close to urban areas where there is an existing or proposed wide range of facilities, services and jobs, and there are opportunities to encourage active travel. The justification text under policy SP5 recognises that Towns are the most sustainable locations within North Somerset. Similarly, the justification text for Policy SP6 confirms that the rural areas are relatively less sustainable given the absence of a range of services, facilities and job opportunities. From reviewing the strategic housing allocations listed in Schedule 1 of the emerging plan, 1683 homes are allocated at Backwell (a village), but 1,347 homes are allocated at Portishead (a town). The figure for Portishead includes 785 homes at Wyndham Way, despite the Council's own evidence base confirming that only 485 homes are deliverable in the Plan period and so the actual number of homes expected to be delivered in the Plan period at Portishead will be lower. Based on this example, there are clear inconsistencies in the proposed policy and draft housing allocations. It appears that villages have been considered areas appropriate for higher or equal levels of growth to defined Towns. Removing the entirety of the promoted land (HE20124) at Black Rock, Portishead represents an opportunity to strengthen delivery at the town in accordance with the Council's strategy, and this should be prioritised ahead of growth at lower order settlements.	Removing from the Green Belt the entirety of the promoted land (HE20124) at Black Rock, Portishead represents an opportunity to strengthen delivery at the town in accordance with the Council's strategy, and this should be prioritised ahead of growth at lower order settlements. 30898817	Ciara Donegan-Davies			Yes		Yes	Yes				
63052097	Stephanie Fowler	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes		This policy as currently drafted strictly controls the distribution of housing at villages, limiting this to land within settlement boundaries save for in exceptional circumstances, and in this respect the policy differs considerably from its adopted equivalent, CS32. The success of this policy from a strategic perspective therefore depends heavily on ensuring that larger allocations at the principal settlements within the authority area are sufficient, effective and deliverable, so that new homes will come forward promptly over the plan period.		R001v3_NSLP_Reg19_Fowler.Dec25.pdf
14181057	Dave Hayler			Yes							
57020033	Stuart Hunt			Yes		Yes	Yes				
51446561	Woodstock Homes Ltd (multiple sites)	Kit Stokes	Woodstock Homes	No	• Effective • Consistent with national policy	No	No	Objection to SP6: Villages and rural areas New development within the settlement boundaries of villages as defined on the Policies Map and listed in Schedule 5 will be supported where defined criteria are met. In response, the current strategy—with its strict allocations and boundaries—does not effectively support sustainable rural communities like Dundry, Wrington, Clapton in Gordano, Failand, Winford, Barrow Gurney, and Felton. Such rigidity limits the organic growth necessary for the health of villages, community organizations, sports clubs, and local builders. Many of these villages already benefit from schools and bus services, which could be further supported and expanded. They also make use of delivery options, remote work, school transportation, and the community West Link bus service. These settlements should therefore be given proportional opportunities for growth, either through appropriate allocation or by allowing expansion via infilling and rounding off at their edges. The settlement hierarchy and restrictive boundaries largely prevent development in most villages, resulting in an overdependence on large strategic sites and undermining the plan's aim for sustainable and accessible growth. The Plan contradicts itself by broadly prohibiting growth in Villages under LP7 and SP6, even where villages meet sustainability criteria. Completely excluding growth opportunities in and around villages is inconsistent with the Council's own Strategic Priorities. This approach moves away from CS32, which permitted some flexibility where development within or adjacent to settlement boundaries will be supported if it improves overall sustainability and respects local character. Again, the fundamental flaw is reliance on few strategic sites in the control of national housebuilders or promoters.	Modification The change that should be made, as argued in the provided context, is to revise the North Somerset Local Plan 2041 so that it does not concentrate nearly all housing growth into a small number of large strategic sites, particularly Woodspring (southwest of Bristol). Instead, the plan should allocate sites such as Sandford (HE201022) and Wrington (HE20198), which are considered more sustainable and better aligned with local needs and Green Belt criteria. Additionally, the settlement hierarchy and restrictive village boundaries should be relaxed to allow for proportional growth in villages that already demonstrate sustainability, either through new allocations or by permitting infilling and rounding off at their edges. This approach would diversify development delivery, support the vitality of rural communities, and reduce dependence on major national housebuilders.		
58594049	Woodstock Homes (Land west of Butts Batch, Wrington)	Oliver Ansell	Woodstock Homes	No	• Justified • Effective • Consistent with national policy	Unsure	Unsure	NSC state that development should be focused on locations that "maximise opportunities to reduce the need to travel" provide access to services, and support patterns of sustainable development. This is reiterated in the justification to Policy SP5 (Towns) and SP6 (Villages and Rural Areas), which emphasise the importance of accessible locations with good walking, cycling and public transport connections. However, despite Wrington meeting these criteria, being a well-served settlement with a primary school, local shops, medical facilities, bus services, and connections via the A38, the Local Plan allocates no growth at all to the village, nor does it review the long-standing, restrictive settlement boundary where Wrington's boundary is simply listed as "Retained and reviewed existing boundary".			829 A5 OA 111225 Representations to Reg 19 Local Plan.pdf North Somerset Local Plan Pre-submission Plan - Representation form Part B.pdf

								1.Litchfield acting as Latimer Developments Limited intend to submit a planning application to build 120 houses on land off the High Street, starting at Jasmine Lane opposite the historic St Barnabas church, going around the edge of the village past the Scout Hut and behind Dunsters Road. 2.Wain Homes intend to submit a planning application to build 130 houses on land towards the Moor on the north side of Claverham Road with access via the recently demolished house. Please be aware that these developments are not in scope of the 'North Somerset Local Plan 2041 - pre-submission plan (reg 19). See attached document for full representation.			
58506593	Helen Lewis			Yes		Yes	Yes	I am a resident of Claverham, a very small village. I am aware of 2 recent speculative development plans for parts of our village. Wain Homes intend to submit a planning application to build 130 houses on land towards the Moor on the north side of Claverham Road. Litchield, acting for Latimer Developments Limited intend to submit a planning application to build 120 houses on land off the High Street. NEITHER of these sites are allocated for development in the emerging North Somerset Local Plan 2041. Our village is very welcoming to newcomers – we have a friendly village hall but that is the only community facility. The housing development of the old “brownfield” site of Claverham PLC was very much welcomed. We are severely lacking amenities and employment, and most villagers rely on car use to drive to the doctor, dentist, work, shops and other services. Public transport options are extremely limited. It is a 20-minute walk to catch a bus to Bristol – a service which, from personal experience is unreliable. It takes 35 minutes to walk to the train station – at speed – from the ‘Old Post Office’. Another 2 large developments would put extreme pressures on our local roads which are barely 2 cars wide. There will be a severe impact on our farming community, and the extra traffic will cause enormous risk to the safety of pedestrians. Especially any with small children and buggies that are walking to and from our village school during the rush hours. Our local roads are extremely popular with cyclists, horses and riders and those exercising. Some of our roads have no pavements at all or intermittent pavements requiring one to cross backwards and forwards across roads or extremely narrow pavements. I have witnessed many instances of vehicles mounting the few pavements we have to avoid oncoming traffic. I believe the proposed development plans by Wain and Litchield should not be supported for the following reasons: • They DO NOT enhance the local character or contribute to placemaking and the reinforcement of local distinctiveness. They CANNOT be readily assimilated into the village; • The size, type, tenure and range of housing DOES NOT reflect local community needs; • They WILL CAUSE significant adverse impacts on local services and infrastructure, including cumulative impacts; • The location of the developments DOES NOT maximise opportunities to reduce the need to travel and DOES NOT connect to local facilities by high quality walking and cycling infrastructure, with good public transport connections for longer trips; • The developments DO NOT complement the defined local centres and contribute to their vitality and viability.			Claverham resident SP6 comments 10.12.25.docx
62864385	Richard Little		Your Land Partner	No	• Positively prepared • Justified • Effective	Unsure	Unsure	This representation relates to Land north of Caswell Lane, Portbury, previously assessed within the Council’s evidence base as HELAA/SHLAA reference HE202003. The Site was promoted through the Call for Sites process but has not been allocated in the Pre-Submission Local Plan 2041. This representation contends that the Local Plan is unsound under NPPF paragraph 35, as it is not positively prepared, not justified, and not effective, due to a failure to properly consider reasonable alternatives in a District that is heavily constrained by flood risk, geography, and administrative boundaries. Key Soundness Issues 1. Failure to Respond to Strategic Constraints North Somerset is significantly constrained by: • the Severn Estuary and extensive coastal and tidal flood risk to the west; • fluvial and surface water flood risk inland; • extensive Green Belt designation; • the Bristol administrative boundary to the north and east. In this context, the Plan must direct growth towards lower-risk, deliverable locations. The current spatial strategy fails to do so adequately. 2. Under-utilisation of Portbury as a Sustainable Location Portbury represents a sustainable northern settlement with: • strong functional and economic links to Bristol and Royal Portbury Dock; • excellent access to the strategic highway network (M5 Junction 19); • established local services and public transport connectivity. Despite these attributes, the Plan directs limited growth to the north of the District and instead relies heavily on locations that are more exposed to flood risk and delivery complexity. This approach is not justified. 3. Failure to Consider Reasonable Alternatives The Site was previously recognised in the HELAA/SHLAA evidence base and remains available, suitable, and deliverable. Its exclusion arises not from overriding technical constraints, but from an unduly restrictive settlement selection approach. The Plan therefore fails to properly consider reasonable alternatives, contrary to national policy and sound plan-making principles. 4. Grey Belt Considerations The Site exhibits clear Grey Belt characteristics, including:	Modification Sought To make the Plan sound, it should be modified to: 1. Recognise Portbury as an appropriate location for proportionate growth within the spatial strategy, and 2. Allocate Land north of Caswell Lane, Portbury (HE202003) for residential development (circa 50–80 dwellings), with associated green infrastructure and community facilities, and amend the Policies Map accordingly.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								• strong physical containment by the M5 motorway and the existing settlement edge; • severance from the wider countryside; • limited contribution to Green Belt purposes due to infrastructure influence. The Plan fails to meaningfully differentiate between strong Green Belt land and Grey Belt land in sustainable locations such as Portbury. This renders the Plan not justified and inconsistent with national policy. 5. Deliverability and Effectiveness The Plan relies heavily on a small number of large sites, increasing delivery risk. By contrast, the Site: • is under single ownership; • has no known deliverability constraints; • can deliver approximately 50–80 dwellings with significant green infrastructure and community facilities; • lies predominantly within Flood Zone 1 and passes the Sequential Test. Incorporating such sites would improve flexibility and effectiveness.			
58489121	Helena Markovic-Buck		Resident	No	‣ Positively prepared ‣ Justified ‣ Effective	Unsure	Unsure	These proposals would have significant and irreversible impacts on Wrington's infrastructure, environment, and heritage. The shortfall of houses NSC need to find outside of identified strategic growth locations is 1139 , of which 411 are proposed in Wrington, that equates to Wrington taking 36% of this shortfall, representing a 35% increase in population increase within the village. This is not sustainable as laid out below: 1. Butts Batch • Threat to Heritage and Infrastructure: Previous applications for this site have been refused due to serious impact on heritage assets and lack of adequate infrastructure. These concerns remain unchanged and still apply. • Environmental Destruction: This area supports important biodiversity and wildlife habitats. Development would lead to irreversible ecological damage. 2. Cox's Green • Loss of Agricultural Land: This is active, thriving farmland that would be lost forever if development proceeds. • Increased Traffic and Safety Concerns: Wrington's narrow, rural roads already face congestion and safety risks for pedestrians and cyclists. Additional housing would significantly worsen these conditions. • Strain on Local Services: o Schools: Wrington Church of England Primary School is usually oversubscribed, with no capacity for additional students. o Healthcare: Local GP services are under increasing pressure, with extended waiting times. More housing will exacerbate these issues. o Sewerage and Drainage: Wrington's drainage system struggles during heavy rainfall. Further development could increase the risk of flooding. • Flooding Risks: This site has a history of flooding. Building here would exacerbate drainage problems and increase risks to surrounding properties. 3. Land East of Wrington (Rickyard Road and Rydings Farm Area) • Traffic and Infrastructure Overload: Development in this area would place excessive pressure on Wrington's roads and services, worsening congestion and accessibility for residents. 4. Land at The Alburys/West Hay Road • Loss of High-Quality Farmland: This is Grade 2 agricultural land, a valuable and irreplaceable resource that should be protected. Developing this land contradicts sustainability principles. 5. Garston's Orchard • Severe Flooding and Environmental Damage: Previous applications for this site have been refused due to its high flood risk. Development here would jeopardise properties and worsen existing environmental issues. • Loss of Natural Habitats: This site plays an important role in local wildlife conservation. Construction would permanently destroy critical ecosystems. 6. Cumulative Impact on Wrington Beyond the concerns associated with individual sites, the combined effect of these developments would: • Overwhelm local roads and increase congestion – particularly near the A38, West Hay Road, and Butts Batch. • Place an unbearable strain on public services, including schools, healthcare, drainage, and transport infrastructure. • Encroach on Wrington's countryside, permanently altering its rural character. • Exacerbate flood risks, especially in Cox's Green and Garston's Orchard. 7. Contravention of Planning Policies These proposals do not align with the North Somerset Local Plan or National Planning Policy Framework (NPPF) principles of sustainable development. • Policy CS5 – Countryside Protection: The North Somerset Core Strategy states that countryside should be protected from unnecessary development. These proposals contradict this policy. • Policy CS32 – Development in Service Villages: Wrington is a service village, where only small-scale, community-led development should be permitted. The proposed developments exceed this scale and are unsustainable. 8. Cumulative Impact of Bristol Airport Expansion Wrington is already negatively affected by Bristol Airport's expansion, which has led to: • Increased traffic congestion, particularly along the A38 and surrounding roads. • Unauthorised airport parking on local green spaces. • Higher levels of noise and air pollution. Further large-scale development would intensify these existing issues, significantly diminishing residents' quality of life. Conclusion: Wrington is Not a Sustainable Location for Large-Scale Development For the reasons outlined above, I strongly urge North Somerset Council to reject these proposals. These plans do not align with local planning policies and will have detrimental and irreversible impacts on Wrington's infrastructure, environment, and community. Finally, on a personal note, our property is opposite The Alburys. We have bat conservation measures. We have a direct line of site to All Saints Church, a heritage intererest and any planting development would impact this. In fact the previous Butts			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Batch development was rejected for this reason. Furthermore we have a field opposite The Alburys and instead of building houses we have planted a woodland in cooperation with the Forest of Avon trust, to support local wildlife and ecological systems, increasing biodiversity. We are not adding to traffic or flooding. These are the kinds of initiatives the council should focus on. I trust that my concerns, along with those of many other residents, will be fully considered in the decision-making process.			
39179649	Adrian Mealing			No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	I consider Policy SP6 to be unsound because it is not positively prepared, not justified, not effective, and not consistent with national policy. SP6 states that development in villages must protect rural character, respect settlement form, support local services, and integrate sensitively into the landscape. The policy also emphasises directing growth to “sustainable” villages with suitable facilities and transport options. However, the allocations for Congresbury fail to meet these requirements for the following reasons: 1. SP6 is not positively prepared The Plan allocates 183 dwellings to Congresbury without providing the necessary infrastructure to support this scale of rural growth. There is no identified or funded: primary school expansion, GP capacity increase, public transport improvements, A370 highway or junction upgrades, delivery mechanism for safe walking/cycling connectivity. SP6 cannot deliver sustainable rural development without supporting infrastructure. 2. SP6 is not justified SP6 lacks a robust evidence base for selecting Congresbury as a growth location. The Plan does not explain why Congresbury — a village with limited facilities and no railway station — is allocated significant housing while other settlements with greater sustainability credentials receive less. There is also no assessment of alternative sites or settlement options, meaning the strategy is not justified or transparent, contrary to NPPF requirements. 3. SP6 is not effective SP6 cannot be implemented effectively in Congresbury due to: Absence of a rural masterplan or village character assessment. No defined measures to prevent coalescence with Yatton, despite both villages being within close proximity along the A370 corridor. Infrastructure required to support development (active travel routes, junction improvements, drainage upgrades) being unfunded or absent from the Infrastructure Delivery Plan. No cumulative impact assessment across the three Congresbury allocations. Without these components, SP6 is not deliverable. 4. SP6 is not consistent with national policy The NPPF requires rural development to: respect landscape setting, avoid settlement coalescence, promote sustainable transport in rural areas, locate development where services are accessible, protect natural and historic assets. The allocations in Congresbury contradict these principles because: They expand the village along the A370 in a way that threatens separation from Yatton. They rely on the car for almost all trips due to a lack of public transport and active travel infrastructure. The Woodhill Nurseries site impacts the wider setting of Cadbury Hill Fort (Scheduled Monument). No demonstration is provided that development avoids harmful impacts on the North Somerset & Mendip Bats SAC. SP6 therefore fails key NPPF sustainability tests.	SP6 should be made sound by: Preparing a detailed rural settlement hierarchy and clearly justifying why Congresbury has been selected for significant growth compared to better-connected villages. Introducing a Strategic Gap between Congresbury and Yatton to prevent coalescence. Providing a funded infrastructure package including: school place expansion, GP/ healthcare enhancement, active travel and bus service improvements, A370 corridor safety and capacity upgrades. Requiring a Congresbury-specific masterplan addressing rural character, landscape setting, heritage protection, ecological corridors and cumulative transport effects. Without these modifications, SP6 remains unjustified and cannot be delivered sustainably.		
30945217	B Northover			Yes		Yes	Yes			Although it is disappointing that so many houses are required by Central Government to be built in our area, I am pleased that much of the feedback in relation to proposals for Long Ashton given at the previous consultation stage has been taken into account.	
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	• Positively prepared • Consistent with national policy	Yes	No	Without a settlement hierarchy (see representation to draft Policy SP5, this draft policy does not function properly (nor does Policy SP1). A settlement hierarchy will allow for the plan to be monitored and managed and assist in the delivery of homes where site allocations have not come forward or are faltering badly set against anticipated delivery rates. Yatton, given its size, scale, composition and level of accessibility – notably its train station, should be set high in the settlement hierarchy. The draft Policy goes on to say that outside of settlement boundaries new development will be restricted (referring to examples). This is not consistent with the Policy SP3 which speaks of residential development at risk of flooding will be minimised, not resisted or restricted. There policies lack clarity and should be amended reflecting opportunities for residential development in locations where potential impacts, such as risk of flooding can be addressed through interventions. Other development including housing which reasonably relates to existing built and urban forms should also be considered acceptable and set against other planning considerations including meeting the Council’s obligation of delivering its housing requirement. That is the most appropriate strategy.	The Policy should be justified and positively prepared – so should refer to a settlement strategy (along with Policy SP5) – within which Yatton should be set high in the village hierarchy. The emerging policy approach to the delivery of housing close to a train station should be reflected in the policy and hierarchy.		
58613377	Hill Residential Ltd	Marrons		No	• Positively prepared • Justified • Effective • Consistent	No	No	1.1 The following representations have been prepared by Marrons on behalf of Hill Residential Ltd (our “Client”), with regard to land interests at Land west of Failand, Bristol (the “Site”), in response to the North Somerset Council (the “Council”) Local Plan 2041 Pre-submission Plan Regulation 19 Consultation (the “NSLP”). 1.2 Our Client has previously made representations to the NSLP in March 2025, via the ‘additional sites consultation’. We understand that the contents of these			Marrons on behalf of Hill Residential - Reg 19 Representations Final w_a.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					with national policy			representations will still be considered and therefore for brevity are not repeated here. 1.3 A planning application has recently been submitted for development on the Site, which is now under consideration by the Council. This confirms the technical ability of the Site to accommodate sustainable development and the Council is encouraged to consider the application alongside these representations with regard to the Site's suitability, availability and achievability. The associated description of Proposed Development is as follows: "Outline application (with all matters reserved except access) for a phased development of up to 200 dwellings with landscaping and open space, a flexible retail/ café/community unit (non-residential uses to include Use Classes E and F2), and associated infrastructure". 1.4 Hill Residential Ltd ("Hill") is an award-winning 5-star housebuilder, creating a range of high-quality homes across London and southern England in an area stretching from Cambridge to Oxford and across to Bristol. Hill's vision is to be the UK's leading, most trusted housebuilder, creating exceptional homes and sustainable communities. 1.5 Hill considers sustainability a fundamental part of its business strategy and believe that a sustainable future is achievable only through a holistic approach that encompasses environmental, social, and governance considerations. Supporting Documentation 1.6 These representations should be read alongside the following supporting documents: • Site Location Plan – prepared by Marrons (Appendix 1); • Parameters Plan – prepared by Marrons (Appendix 2); • Illustrative Masterplan – prepared by Marrons (Appendix 3); • Grey Belt Report – prepared by Marrons (Appendix 4); Scope of representations 1.7 The Council confirms as part of the consultation that representations are invited within the specific remit of the 'tests of soundness', as set out in the National Planning Policy Framework 2024 (NPPF) at Paragraph 36. The Framework notes that plans are 'sound' if they are: "a) Positively prepared – providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development; b) Justified – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence; c) Effective – deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and d) Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in this Framework and other statements of national planning policy, where relevant." 1.8 In the context of Paragraph 36 of the NPPF our Client also considers it imperative that the NSLP accounts for effective forward planning, given the emerging Spatial Development Strategy and the role North Somerset play within the West of England Combined Authority (WECA) in terms of spatial planning. 2. Land west of Failand, Bristol The Proposed Development: 2.1 The key elements in relation to the Site and the Proposed Development are best summarised as follows its characteristics are best summarised as follows: • Up to 200 new homes, delivering a mix of dwelling sizes to meet local housing needs. • Space for a flexible retail/café/community unit (uses to include Use Classes E and F2). • 45% affordable housing (up to 90 homes), ensuring a range of tenures to support local families and key workers. • Creation of a high-quality residential development to provide new housing for the village and help the Council meet its chronic undersupply. • Increases in biodiversity value, equating to 12.03% increase in the biodiversity value of habitats and 168.83% in relation to hedgerows post development. This will include new native woodland planting, trees, wildflower meadows and grassland. • New pedestrian, cycle and vehicular networks within the Site with pedestrian connections to existing pedestrian infrastructure on the curtilage of the Site to improve pedestrian connectivity within Failand. • A comprehensive Sustainable Urban Drainage Strategy (SuDs), which could include swales, rain gardens, attenuation basins and permeable surfaces. • A landscape and heritage sensitive development that responds thoughtfully to the Site's topography and maintains appropriate separation from the Tyntesfield Estate Registered Park and Garden (RPG), balancing new housing with protective measures and high-quality green infrastructure that delivers environmental, social, and visual benefits. • New open-space areas with enhanced planting and green buffers, a thoughtfully located public open space, which includes children's play space and improved biodiversity. • Retention of existing hedgerows and trees where possible with additional planting to minimise visual impact. • Significant financial contributions including a population contribution to the village to support local services and facilities (S106 and Community Infrastructure Levy (CIL) contributions).

								Planning History: 2.2 The Site was submitted to the Council's Regulation 19 Additional Sites Consultation in March 2025, where the Site was promoted for allocation in the Local Plan update following the reforms to the National Planning Policy Framework (NPPF) in December 2024. As stated, for brevity the Regulation 19 Representations are not repeated here. 2.3 We note that the outcomes from the Regulation 19 consultation were presented to Cabinet on 18 June 2025. Notably, the Site was not selected for allocation in the updated plan. Our position, as set out in our Regulation 19 representations, remains that the emerging Local Plan fails to adequately address Bristol's unmet housing need. These concerns were echoed by Council members at the Cabinet meeting on 18 June 2025. 2.4 A request for pre-application advice was submitted in August 2025. The Council provided formal written advice on 29 October 2025. The advice acknowledged the proposal for up to 200 dwellings at the Site, and assessed its alignment with planning policy, site constraints, and sustainability considerations. 2.5 Critically, the Council's advice recognised that the Site could be considered 'grey belt' in accordance with the current NPPF, given that it does not strongly contribute to the key purposes of the Green Belt. 2.6 Notably, several aspects of the proposal were not disputed in the advice provided. The Council acknowledged the potential for a layout that respects the Site's landscape and heritage context, including the offset from the RPG and the containment provided by surrounding woodland and built form. The indicative design approach, including perimeter block layout and active frontages, was broadly supported from an urban design perspective. The provision of affordable housing in line with policy requirements was also accepted, subject to further detail at application stage. 2.7 While the Council's advice raised some concerns regarding the sustainability of the Site, particularly in relation to access to services and reliance on private car travel, the submitted planning application, with reference to its suite of supporting technical documents, demonstrates that the Site can be considered sustainable. Moreover, the Council's advice did not take into account relevant planning appeal decisions that support the sustainability of the Site. These decisions are discussed in detail at Paragraphs 6.73 to 6.75 of the submitted Planning Statement. The demonstrable sustainability of the Site is addressed throughout the planning application, and the inclusion of a shop provision within the proposals further enhances this position. 2.8 The Council also outlined a range of technical matters to be addressed at application stage, including transport, ecology, flooding, heritage, and affordable housing provision. These matters have been considered and are addressed through the supporting documentation submitted with the application. 3. Response to the NSLP Grey belt: 3.1 A key aspect of the Government's planning reforms was the introduction of the 'grey belt' alongside the revised Standard Method for calculating housing need. The Government is very clear on its objective of delivering 1.5 million homes and considers national planning policy measures such as the grey belt, key in doing so. 3.2 The initial draft of the NSLP did not consider the role of the grey belt and therefore our Client is keen to understand how it has now been introduced to this latest version and what changes have been made as a result. 3.3 The term 'grey belt' is mentioned 3 times within the NSLP. Indeed, within Policy SP7: Green Belt, grey belt is mentioned just once within the supporting text. Paragraph 148 of the NPPF confirms that where it is necessary to release Green Belt land for development, plans should given priority to previously developed land, then consider grey belt which is not previously developed, and then other Green Belt locations. The Council states on page 30 of the NSLP that "a sequential approach to Green Belt release as been taken prioritising previously developed land, followed by grey belt sites and then other Green Belt locations". 3.4 Paragraph 3.3 of the Council's Green Belt Review Background Paper includes reference to Paragraph 148 of the NPPF but neglects to include the final sentence, which reads as follows: "…Strategic policy-making authorities should consider the consequences for sustainable development of channelling development towards urban areas inside the Green Belt boundary, towards towns and villages inset within the Green Belt or towards locations beyond the outer Green Belt boundary." 3.5 With regard to the above Paragraph 148 includes reference to Paragraph 110, which states: "The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health. However, opportunities to maximise sustainable transport solutions will vary between urban and rural areas, and this should be taken into account in both plan-making and decision-making." (our emphasis - see attached doc) 3.6 With reference to the NPPF and grey belt, it can reasonably be assumed that villages within North Somerset which are inset from the Green Belt, are strong contenders for having a presence of grey belt land and therefore present		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								opportunities for sustainable development in line with the sequential approach as set out in the NPPF. By way of example, Failand, where our Client's Site is located, is inset within the Green Belt and pre-application discussions have confirmed that it is considered grey belt land, which a technical Grey Belt Report (Appendix 4) in support of the submitted application now confirms. Despite this, Policy SP8: Housing confirms just 12% of the housing supply will be met in 'villages and rural areas'. 3.7 With regard to the above, the Council is reminded that Paragraph 73 of the NPPF states the following: "Small and medium sized sites can make an important contribution to meeting the housing requirement of an area, are essential for Small and Medium Enterprise housebuilders to deliver new homes, and are often built-out relatively quickly." 3.8 The NSLP continues to prioritise new residential development in or close to urban areas, optimising opportunities to encourage active and public transport modes of travel. Whilst our Client supports this in principle, in our view it does not provide the context to fully consider the role of the grey belt and opportunities to promote/ improve sustainable transport options in rural areas. 3.9 It is not clear from the Green Belt Assessment undertaken or the wording within the NSLP if the Council has undertaken an objective exercise to determine whether or not it has grey belt land within the North Somerset, which can support sustainable development. Grey belt land provides a sustainable opportunity to provide housing within close proximity to Bristol, without affecting the purposes of the Green Belt in relation to the Bristol urban area. However. This has not been explored. Bristol's unmet need: 3.10 No mention is made within the NSLP regarding Bristol City Council's demonstrable and increasing unmet need. Bristol currently has an unmet need well in excess of 10,500 homes which it cannot meet within its boundary. Both South Gloucestershire to the north and Bath and North East Somerset to the south have confirmed difficulties in meeting their own needs, and therefore an inability to meaningfully assist Bristol in meeting its unmet needs. 3.11 The West of England Combined Authority (WECA) was established in 2017, following a devolution deal between Bristol, Bath and North East Somerset, and South Gloucestershire. In line with the Government's proposed move to strategic planning authorities, WECA is now taking a more active role in planning across the strategic region, and recently announced work had commenced on a Spatial Development Strategy. Alongside this, North Somerset continues to confirm its intention to join WECA, becoming the fourth local authority alongside Bristol, Bath and North East Somerset, and South Gloucestershire. 3.12 Our Client's Site is located in close proximity to the western edge of Bristol and therefore provides an opportunity to enhance connectivity between Bristol and North Somerset, whilst assisting with the unmet housing needs of Bristol. This in turn will also accord with the wider strategic objectives of WECA, in strengthening the connections between the local authority areas. 3.13 When considering a neighbouring authorities unmet need there is also a requirement to consider and support development that can come forward quickly to address this unmet need. Housing supply: 3.14 Paragraph 61 of the NPPF states that it is important to support the Government's objective of significantly boosting the supply of homes, for a sufficient amount an variety of land to come forward where it is needed. Paragraph 62 of the NPPF also states the following: "To determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning practice guidance. In addition to the local housing need figure, any needs that cannot be met within neighbouring areas should also be taken into account in establishing the amount of housing to be planned for." (our emphasis - see attached document) 3.15 Since the previous consultation, the Council has addressed its updated housing need and proposes allocations to meet the delivery of a minimum of 23,700 dwellings within North Somerset. Overall, our Client considers this to be a positive step. 3.16 Notwithstanding. Policy SP8: Housing confirms the Council's proposed housing supply totals 24,495 dwellings, when compared to the minimum requirement of 23,700, this represents only a 3% uplift. When divided across the plan period, the Council has given itself a 53 dwelling per annum tolerance. 3.17 The Planning Practice Guidance states that the Standard Method for calculating housing need provides a minimum number of homes to be planned for and suggests authorities use this as a starting point1. Our Client therefore does not consider the calculated housing requirement should be seen as a 'target', particularly where exceptional circumstances existing in Bristol which require neighbouring authorities to consider whether further need can be accommodated. 3.18 Moreover, it is essential that the housing trajectory is robust and attempts to sustain a rolling five year housing land supply throughout the Plan period, in accordance with the NPPF. Paragraph 72 of the NPPF states that planning policies should identify the supply of specific, deliverable sites for five years following the adoption of the plan. Paragraph 78 of the NPPF states the following: "Strategic policies should include a trajectory illustrating the expected rate of housing delivery over the plan period, and all plans should consider whether it is appropriate to set out the anticipated rate of development for specific sites." 3.19 We have been unable to find, either within the strategic policies or within the evidence base of the NSLP, a housing trajectory which details which sites are		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								expected to come forward and when, alongside confirmation that this also enables the Council to demonstrate a five-year housing land supply upon adoption. 4. Summary and Conclusions 4.1 These representations have been prepared by Marrons on behalf of Hill Residential Ltd, with regard to its land interests at Land west of Failand, Bristol, in response to the North Somerset Local Plan 2041 Pre-submission Regulation 19 Consultation. 4.2 It should be noted that our Client is in broad support of the NSLP and the draft allocations noted within, though does consider modifications are required in order for the NSLP to pass the relevant tests of soundness. The areas of the NSLP which we consider need to be addressed are set out below. 4.3 The Council requires the NSLP to be considered against the tests of soundness within the Framework at Paragraph 36. In response to these and with reference to the commentary made within these representations, our Client notes the following: 4.4 Positively prepared – The NSLP is not considered positively prepared. The strategy seeks to meet the Council's minimum housing requirement, however, there are concerns about the effectiveness of delivery across the Plan period and ability to maintain a rolling five year housing land supply. The NSLP pays no attention to the acute unmet need arising from Bristol and its ability to assist with this. In so doing, the Council has also failed to accurately assess the role of the grey belt and the ability to allocate sites close to Bristol, which are of a size that can deliver in the short-term. This is despite the Council confirming on an individual bases that such sites exist. It is our Client's position that the Council has sought to retrofit the requirement to consider the grey belt within a Plan and spatial strategy that had already been conceived. This is plainly evident from the lack of times 'grey belt' is mentioned within the NSLP or its evidence base. Given the grey belt represents one of the most significant changes to national policy in some time, it should feature heavily within the plan-making process for Green Belt authorities. 4.5 Justified – The NSLP is not considered justified. Whilst our Client considers the strategy is appropriate in part, there is potentially an over-reliance on strategic scale development which is not complemented by development of smaller sites, to enable effective delivery across the Plan period. However. This cannot be accurately determined given the absence of a site trajectory and anticipated delivery rates. Our Client therefore reserves the right to comment on this further once this evidence is made available. For the reasons stated above, our Client considers that a blended strategy is more appropriate, which the Council has not considered. 4.6 Effective – The NSLP is not considered effective. Our Client considers that there is a lack of recent evidence to demonstrate effective joint working on cross boundary strategic matters, and considers that a distinct lack of effort has been made to address housing requirements in and around Bristol, despite the clear opportunities to do so. As stated above, sufficient evidence also does not exist to be able to determine whether or not it is deliverable over the plan period. 4.7 Consistent with national policy – The NSLP is not considered consistent with national policy. Whilst the NSLP seeks to address national policy in some areas, there are clear omissions which mean it cannot be considered consistent with national policy overall. The Council appears to have taken a conservative approach, particularly with regard to housing supply, which is considered to go against the Government's objectives of delivering 1.5 million homes and boosting significantly the supply of homes, as set out at Paragraph 61 of the NPPF. Nor has it considered properly the requirements of Paragraph 62 of the NPPF, in not seeking to meet the unmet needs of its neighbouring authority, Bristol. 4.8 Consequently, our Client does not consider the NSLP to be sound in its current form and confirms that it would like to participate in any hearing sessions held at the examination in public, particularly on matters raised in these representations and those submitted earlier in the process. Our Client is willing to engage proactively with a view to assisting the Council in making the NSLP sound. 4.9 Our Client also re-affirms that Land west of Failand, Bristol is available for development now, represents a suitable location for development, and that development of the Site is achievable with a realistic prospect that housing can be delivered within the first five years of the draft plan period. The Site is deliverable and should therefore be favourably regarded in relation to its potential allocation for residential development within the emerging Local Plan. This is demonstrated via a live planning application, where supporting technical information is provided which the local plan team is invited to consider.			
62776065	Paul Segar			Yes		Yes	Yes			I agree with the points above, particularly the need to maximise opportunities to reduce travel, especially by car, and the need to for housing to reflect local needs rather than what developers choose to maximise their profitability.	
51079969	Justin Saunders		Pill and Easton-In-Gordano Parish Council	No	• Positively prepared • Justified • Effective	No	Yes	Pill and Easton-In-Gordano is a rural community. The new locations on the south edge of the community do nothing to complement the existing local centres and contribute to viability and vitality because they are not connected in a way that will encourage use of that centre and provide no facilities to bring the community to the developments. The development is completely out of scale with community needs; surveys in the previous Neighbourhood Plan suggest less than 20% of this target would meet community need.	LP4 needs to be withdrawn and proper consideration given to development areas within the current settlement boundary that have already been developed but are much more likely to meet community needs and complement the existing rural community.		
30975873	Chris Segar			Yes		Yes	Yes			Villages such as where I live in

										Wrington are totally unsuitable for housing estate development because there is little employment and almost no public transport to stations and bus stops for commuters to Weston or Bristol. Local lanes are narrow and prone to flooding, therefore unsuitable for the extra road traffic and, particularly HGVs that would be engendered. The village school is already at capacity and we have no doctors surgery, so travel by car to get further afield is essential. Walking and cycling are not an option.	
31091393	Waddeton Park Ltd (Land south of Greenhill Road)	Savills (Dan Yeates)	Waddeton Park Ltd	No	• Positively prepared • Consistent with national policy	Yes	Yes	These representations have been prepared and submitted by Savills on behalf of Waddeton Park Ltd. Waddeton Park have an interest in 1.95 hectares of land south of Greenhill Road, Sandford. This specific response relates to draft Policy SP6 (Villages and Rural Areas). Our comments on the consultation and supporting evidence base are made in accordance with paragraph 36 of the NPPF, to assist in ensuring that the draft Local Plan is found sound when examined in the future. Policy SP6 Overall, it is important that the draft Local Plan provides for a wide range of deliverable and developable sites across the authority area in order to provide competition and choice to ensure that housing needs are met in full. The plan should, with particular reference to the villages in North Somerset, set out a logical settlement hierarchy which meets all the housing needs and addresses all areas of the housing market, with a range of sites proposed for allocation. In order to meet the housing requirement of North Somerset in full, including the need to address Bristol unmet housing need, additional allocations are likely to be required, as explained further in our representations to draft Policy SP8. Such allocations should not avoid the villages and rural areas. It remains our view that the spatial strategy should also recognise that are clusters of villages in North Somerset that provide a range of services for that area within reasonable travelling distance of each other, so there is potential for villages to be grouped together. These means that such areas might be able to sustainably support a higher level of development but may not have all the services within one particular village. In summary, to help address the current issues with draft Policy SP6 there will be a need to review additional allocations to help address the housing requirement in full including Bristol's unmet housing need, and a proportion of the allocations should be at the sustainable villages such as Sandford. We also consider that draft Policy SP6 should include a list of villages which are suitable for additional growth, similar to the way the four towns are listed in draft Policy SP5. Currently, the only way to do this is to review the supporting policy map to see which locations are villages and this is not effective.			North Somerset Local Plan Pre-submission Plan - Representations SP6.pdf
31062913	R Storrar		KWAW	Yes		Yes	Yes	I fully support Strategic Policy 6. Without these strict guidelines, the very fabric of the rural countryside (for which Somerset is rightly famous) will be destroyed. Historic and beautiful small villages (such as Wrington with it's Grade 1 church) will be surrounded by bland housing estates that obscure the original village boundaries, making it like a town full of bland suburban housing. It is fair to say, any mass of houses, even if very sympathetically modelled on the existing stone buildings, will overwhelm the original architecture and reduce tourism to the area, having a very negative impact on the local economy.			
58534081	Verto Homes	tor&co (Jacqueline Mulliner)	Verto Homes	No	• Effective • Consistent with national policy	Yes	No	There are only four towns within North Somerset, and whilst these are the focus for growth, the plan does allocate sites for development at some of the larger villages (and there have been a number of local planning permissions and approved appeals supporting development at the North Somerset villages), recognising their suitability credentials. Policy SP6 places all villages and rural areas within the same pool within the settlement hierarchy. This is inappropriate given the housing need, distributional strategy and opportunities available to secure sustainable development at some of the larger, well-serviced, villages. The policy should introduce a more layered and flexible approach, recognising the opportunities.	SP6 should be amended, to introduce a settlement hierarchy differentiating between well-serviced settlements and smaller villages / rural areas and if only to read, "…. Outside settlement boundaries new residential development will be permitted, if there is a demonstrable need and in accordance with the settlement hierarchy. In other circumstances, residential development will be restricted…."		Representation form Part B_SP6 Villages and rural areas.docx
62471329	Environment Agency		Environment Agency	Yes						Agree with policy, but there is no mention or link to DP9 or SP2.	
14339745	Paul Watkins			No	• Justified • Effective	No	No	More weasel words...what exactly is meant by There is a clear justification for the need for the proposed location; your words... and may be justified by the developer but not by those who live in the village..and as always we know whose 'justification' NSC will support What exactly is defined by It results in a form, design and scale of development which is high quality, respects and enhances the local character, contributes to placemaking and the reinforcement of local distinctiveness, and can be readily assimilated into the village; What is 'placemaking' and how would you notice a 'reinforcement of local distinctiveness' ??			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								More weasel words which are undefined and show a further contempt by NSC and lack of probity			
58636097	Nancy Wedin			Yes		Yes	Yes			I support this policy: Major alterations and development would not preserve the unique character and viability of the natural environment of Wrington. It would be in direct contravention of the North Somerset Council regulations regarding development and alterations within a conservation area. It is crucial that any changes respect and uphold these regulations to maintain the integrity of our village. Loss of valuable farmland and countryside encourages urban sprawl and the destruction of natural habitats, so it is essential that we preserve our countryside for future generations. Most people live here as they enjoy nature, rural landscapes and the peace of the countryside. It is true that local community needs must be met in this way.	
31106145	Miles Estate	Jeff Richards		No	• Positively prepared • Justified • Effective • Consistent with national policy		No	Policy SP5 (Towns) and SP6 (Villages and Rural Areas) The general approach taken with the development strategy at Towns and Villages & Rural Areas is supported. However, the sequential approach set out by these policies has not been wholly followed through in the final strategy for growth (Policy SP3) and the draft site allocations that have been identified. As set out above, Policy SP3 states that priority will be given to locating new residential and mixed-use development in or close to urban areas where there is an existing or proposed wide range of facilities, services and jobs, and there are opportunities to encourage active travel. The justification text under policy SP5 recognises that Towns are the most sustainable locations within North Somerset. Similarly, the justification text for Policy SP6 confirms that the rural areas are relatively less sustainable given the absence of a range of services, facilities and job opportunities. There are inconsistencies in the proposed policy and draft housing allocations. It seems that villages have been considered areas appropriate for higher or equal levels of growth to defined Towns.			02961 - The Miles Estate NSLP Reps - December 2025.pdf
59945953	Rich Coleman			No	• Positively prepared • Justified • Effective			Attempts are already being made to develop grade 1 agricultural land in spite of a work wide recognised Food Security crisis ?	Ensure valuable farmland is protected.		

SP7: Green Belt

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
61656193	Kate Wickens			No	• Justified • Effective	Yes	Yes	If you consider that the local plan is not sound, legally compliant or in compliance with the duty to cooperate, please provide details. Please be as precise as possible. The local plan requires approximately 27% of the new houses be built on Greenbelt, the majority of which is not grey belt and currently undeveloped. The risk to biodiversity and nature degradation is high, as there is great reliance in the plan for developers to contribute to protecting and preserving nature. For example developers are expected to contribute to the delivery of the new Nature Park. There is anecdotal evidence as well as the Lost Nature report, a Wild Justice report, written by researchers at the University of Sheffield, that reveals that housing developers are not keeping legally-binding promises to help wildlife on housing developments. (Report attached to email) The proposed sites in Nailsea and Backwell corresponds with land identified on the Local Nature Recovery strategy map as focus areas of nature recovery.	Please set out any modification(s) you consider necessary to make the plan legally compliant and sound, in respect of any issues you have identified. More provision in enforcing provisions regarding bio diversity and wildlife protections and enhancements.

					policy				demonstrated to justify releasing land from the Green Belt Soundness Test(s) • Positively Prepared • Justified • Effective • Consistent with National Policy 2.9 For the reasons set out in these representations, exceptional circumstances have not been demonstrated to justify the release of land from the Green Belt, and in particular the sites that it is proposed to allocate for housing development at Woodspring (South West of Bristol) and Pill / Easton-in-Gordano, which should only be released to meet unmet needs arising from Bristol City Council, and those at Nailsea / Backwell, where reasonable alternative non- Green Belt sites are available that should be afforded priority in accordance with the spatial strategy and the sequential approach to site selection by which it is underpinned. Changes Sought Policy SP7 • Remove reference to Land at Woodspring, Pill / Easton-in- Gordano and Land at Nailsea / Backwell from the list of land to be released from the Green Belt.		
63359201	Nailsea Holdings LVA LLP	Matthew Kendrick	Nailsea Holdings LVA LLP	No	• Justified • Effective • Consistent with national policy	Unsure	Unsure		On behalf of our client, Nailsea Holdings LVA LPP (LVA) Grass Roots Planning enclose representations to North Somerset Council's (NSC) pre-submission Local Plan (LP) Consultation. Our representations focus on a 27.9 hectare site known as Land North of Southfield Road Trading Estate, Clevedon Road, Nailsea (see submitted site location plan ref: 1033-LNN-APG-XX-ZZ-DR-A-001-P04), which is subject to a current planning application (Ref: 24/P/1586/OU2) and is also identified as a proposed allocation in LP under Policy SP7 We previously set out significant concerns in our previous representations made in 2023 regarding the housing requirement that was being planned for in the Regulation 19 Plan and the fact that it made no allowance for new housing allocations in Nailsea at all. We are pleased that the Council have now produced a more positive plan that seeks to meet the minimum housing requirement that the SM identifies and that the distribution of new proposed development now recognises the importance of the settlement of Nailsea and its ability to accommodate development in a sustainable manner.While positive changes have been made, and we applaud the council for changing course to adopt a plan that is far more ambitious than the previous Regulation 19 version, some further changes should be considered to ensure that the examining Inspector(s) can find the plan should in due course.	Previously we made representations to the Reg 19 Local Plan stage in January 2023. This focused on the past history of housing delivery in North Somerset, growing affordability issues, regional planning matters and of the failure to deliver a housing land supply over a prolonged period. We have been pleased to see that since this point the council has significantly changed its approach to the new Local Plan and now seems to be planning for the minimum housing requirement that is determined by the Standard Method (SM), and while some residual concerns remain in respect of the plan strategy, and cross boundary issues in particular, we welcome the council's change in direction that led to them consulting on additional site's in the Spring of this year. We then made further representations to the additional site's consultation stage in summer of this year, setting out why LVAs land north of Nailsea represented an appropriate location for development and should be include in the new Local Plan. While both of our previous representations should be read alongside this submission by the Examining Inspectors in due course for context, we are pleased to see that the site was then included in the emerging LP that is now subject to this consultation, and the Plan Strategy now allows for the sustainable growth of Nailsea. Policy SP7: Green Belt We welcome the release of land from the Green Belt to meet housing needs that this policy sets out. Our only comments on the policy text put forward is that refence to certain site's being considered to be Grey Belt would be appropriate, and the potential yield from the North Nailsea should be revisited. We have already set out in a detailed note how the site at North Nailsea meets the new definition of Grey Belt and we enclose this for ease of reference (Appendix E). This classification supports the decision to release it from the Green Belt and therefore we propose that the policy itself, or the supporting text at least, refers to this. In terms of the potential housing yields from the site we set out later how the current proposals have been amended to address consultee responses, which included a request that densities on the site be revised to make the most efficient use of the land. This has resulted in the overall numbers proposed being increased to 429 and we suggest that the policy is amended to reflect this. This will also have the advantage of increasing the housing supply the LP puts forward which will make it more flexible, and more likely to be found sound.	739 A3 MJK 101225 Reps to Pre-sub Draft LP V1-merged-compressed.pdf

63359201	Nailsea Holdings LVA LLP	Matthew Kendrick	Nailsea Holdings LVA LLP	Unsure	‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure			We strongly support the release of land to the north of the existing settlement edge of Nailsea, specifically the extent of land covered by our planning application 24/P/1586/OU2. This land constitutes Grey Belt land, as our note on the subject appended as Appendix E explains, and as such it is an obvious candidate for Green Belt release to provide much needed housing and employment land in a highly accessible location.	
31149537	Strongvox Ltd	Pegasus Group		No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Yes	Yes			Our client is supportive of the proposed release of land at Easton-in-Gordano from the Bristol and Bath Green Belt, and moreover the Council's willingness to meaningfully review Green Belt release in general given its varying quality and the acute need for new homes. As in the case of Pill and Easton-in-Gordano, it must be recognised that the quality and contribution made by the Green Belt across North Somerset varies considerably, with certain parts serving no meaningful function whatsoever to the five purposes of designation. The appropriate release of low-functioning Green Belt therefore actually reinforces the protection of those parts that make a meaningful contribution to the designation.	R002v5 NSLP Reg19 Reps Strongvox Dec25.pdf
21579777	Taylor Wimpey (Youngwood Lane, Nailsea)	Pegasus Group		No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Yes	Yes	Policy SP7: Green Belt Our client is supportive of the Council's willingness to meaningfully review Green Belt release in general given its varying quality and the acute need for new homes, and of the general proposition of additional Green Belt release to achieve a sufficient supply of new homes in line with the national standard method and in the most sustainable locations. The proposed extension of the Green Belt around Nailsea and Backwell is, however, in our client's view unjustified. Our client would highlight that this policy seeks to extend this already sizeable swathe of the Bristol and Bath Green Belt around the western edges of Nailsea and Backwell, ostensibly 'to maintain the separation of Nailsea and Backwell and prevent further encroachment into the countryside'. National policy makes clear that once established, Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified through the preparation or updating of plans. In this instance, the rationale given essentially reiterates the stated purposes of the Green Belt without clear justification for particular circumstances. As both Nailsea and Backwell are subject of site allocations that would enable a new, rationalised and appropriately landscaped outer edge of both	As both Nailsea and Backwell are subject of site allocations that would enable a new, rationalised and appropriately landscaped outer edge of both settlements adjoining the land proposed for extension as Green Belt, this additional policy designation is considered excessive and, in practice, overly protective against a perceived threat that may not exist. We would therefore recommend that this aspect of the policy is omitted.		R002v4_NSLP_Reg19_TWBristol.Dec25.pdf

63005121	Taylor Wimpey (Woodspring)	Nick Matthews (Savills)	Taylor Wimpey	No	• Consistent with national policy	Yes	Yes	Summary of Representation • Taylor Wimpey supports the release of land from the Green Belt in North Somerset, agreeing that exceptional circumstances exist due to insufficient non-Green Belt land to meet local housing needs, making such release necessary, justified, and sustainable. • The main objection is to the blanket application of the 'Golden Rules' for Green Belt development as these should not automatically apply to allocated sites, as strict requirements could threaten development viability. • Amended wording for Policy SP7 is proposed to align with national policy. This representation has been submitted by Savills on behalf of Taylor Wimpey. Taylor Wimpey has significant land interests in North Somerset including a majority control of the land proposed for release of land from the Green Belt and allocation as a Strategic Location at Woodspring. Taylor Wimpey strongly support the conclusion that exceptional circumstances exist which support the release of land from the Green Belt in North Somerset. Our detailed explanation for this is contained in Section B of our representations to Policy LP2. In summary, there is insufficient suitably and sustainably located non-Green Belt land to meet the development needs of the authority area. Releasing land from the Green Belt will therefore enable the Council to meet it's housing needs in full on land which is justified, developable and sustainable. The only objection we have to Policy SP7 is the blanket reference to the 'Golden Rules'. The 'Golden Rules' should certainly apply to any non-allocated sites which come forward once the Local Plan has been adopted, however, for allocated sites which are inherently therefore known and understood at this stage, it is important to have regard to the requirements of the policy in determining the extent to which the Golden Rules apply. There may, for example, be instances where the cumulative requirements of policy placed on a proposed allocation could have such a negative impact on development viability that it would render a site undeliverable. To understand how this should operate it is helpful to highlight the relevant paragraphs from the Framework. Paragraphs 67 and 68 of the Framework state that: "As part of the 'Golden Rules' for Green Belt development set out in paragraphs 156-157 of this Framework, a specific affordable housing requirement (or requirements) should be set for major development involving the provision of housing, either on land which is proposed to be released from the Green Belt or which may be permitted on land within the Green Belt. This requirement should: a) be set at a higher level than that which would otherwise apply to land which is not within or proposed to be released from the Green Belt; and b) require at least 50% of the housing to be affordable, unless this would make the development of these sites unviable (when tested in accordance with national planning practice guidance on viability). The affordable housing requirement for land within or released from the Green Belt may be set as a single rate or be set at differential rates, subject to the criteria above." [emphasis added]. Paragraph 156, which sets out the 'Golden Rules', then confirms that the affordable housing provision should be consistent with the policy plan where that policy has been produced in accordance with Paragraphs 67-68 of the Framework. It is not therefore the case that all land released from the Green Belt through the plan-making process must deliver 50% affordable housing. The viability testing of emerging allocations is crucial and, where necessary and appropriate, differential rates for sites should be set to respond to the evidence on viability. We therefore propose a change to that paragraph of the policy which brings it into line with the Framework; a change which is necessary for soundness in order to ensure consistency with national policy. Proposed Revised Policy Wording New residential development will only be permitted on land released from the Green Belt, as defined on the Policies Map, where it is demonstrated how the development meets the 'Golden Rules' as set out in the NPPF, unless this would make the development of these sites unviable (when tested in accordance with national planning practice guidance on viability).	Proposed Revised Policy Wording New residential development will only be permitted on land released from the Green Belt, as defined on the Policies Map, where it is demonstrated how the development meets the 'Golden Rules' as set out in the NPPF, unless this would make the development of these sites unviable (when tested in accordance with national planning practice guidance on viability). 									countryside'. National policy makes clear that once established, Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified through the preparation or updating of plans. In this instance, the rationale given essentially reiterates the stated purposes of the Green Belt without clear justification for particular circumstances. As both Nailsea and Backwell are subject of site allocations that would enable a new, rationalised and appropriately landscaped outer edge of both settlements adjoining the land proposed for extension as Green Belt, this additional policy designation is considered excessive and, in practice, overly protective against a perceived threat that may not exist. We would therefore recommend that this aspect of the policy is omitted		
51556641	Barratt Bristol (Land at Colliters Way)	Oneleven Property	Barrett Bristol	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy			Our client supports the proposed changes to the Green Belt in relation to land at Colliters Way. For the avoidance of any doubt our client also supports the proposed release of land north of Colliters Way referred to within Policy LP9. However, objection is raised to Policy SP7 where it states that "New residential development will only be permitted on land released from the Green Belt, as defined on the Policies Map, where it is demonstrated how the development meets the 'Golden Rules' requirements as set out in the NPPF." In accordance with paragraph 67 of the NPPF the wording should be amended to refer to viability as follows: "New residential development will only be permitted on land released from the Green Belt, as defined on the Policies Map, where it is demonstrated how the development meets the 'Golden Rules' requirements as set out in the NPPF unless this would make the development of these sites unviable (when tested in accordance with national planning practice guidance on viability)."	The wording should be amended to refer to viability as follows: "New residential development will only be permtted on land released from the Green Belt, as defined on the Policies Map, where it is demonstrated how the development meets the 'Golden Rules' requirements as set out in the NPPF unless this would make the development of these sites unviable (when tested in accordance with national planning practice guidance on viability)."		Local Plan Representations North Somerset December 2025 Final 12.12.25 with appendices.pdf
63043809	Wain Homes	Russell Smith	Wain Homes	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	No		This section sets out representation in relation to Policy SP7 Green Belt. SP7 states that "changes to the Green Belt made in this plan are a result of exceptional circumstances and land will be released from the Green Belt for residential development". Wain Homes acknowledges that North Somerset is a highly constrained area and that, with the increased housing requirement, some release of Green Belt land for residential development is likely to be required in sustainable locations. However, exceptional circumstances have not been fully evidenced and justified through the preparation of the Pre-submission Local Plan in accordance with NPPF paras 145 to 147.. NPPF para 147 states that "before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development." Accordingly, the Council must be able to demonstrate that the Pre-submission Plan has allocated all suitable non Green Belt sites that are sustainably located in accordance with the emerging Plans' spatial strategy. However, as we will discuss further in representations related to Schedule 1, Wain Homes site, referred to in the consultation as Stowey Road, Yatton (HE20800), has not been allocated despite being suitable and sustainably located in accordance with the spatial strategy. The site has been erroneously omitted from the plan on the basis of flood risk. However, evidence provided in support of these representations demonstrates that up to 130 homes can be delivered on areas of the site that are not at risk of flooding. In addition, NPPF para 146 states that in the case that exceptional circumstances are based on meeting identified need for homes, Green Belt alterations should seek to meet those needs in full. However, as we have discussed in our representations relating to the SA and Duty to Cooperate, the Council have not fully explored options to accommodate unmet need from Bristol. Having regard to the above Wain Homes considers that Policy SP7 is neither justified nor positively prepared and is therefore unsound.		North Somerset Local Plan Regulation 19 Wain Homes.pdf
51524513	Bellway Homes Ltd	tor&co	Bellway Homes Ltd	Unsure				Bellway agree with the Council that exceptional circumstances exist, as set out, which justify the review and revision of Green Belt boundaries to help meet their needs in full, in accordance with Paragraph 145 of the NPPF. This, however, may need to be considered further in line with observations regarding the overall housing requirement.	See above		20251212 504317 JE - North Somerset Reg 19 (Reps obo Bellway Homes).pdf

63094305	Harrow Estates	Boyer		No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	No	Policy SP7 sets out the Council's approach to the Green Belt. However, the policy and supporting evidence do not meet the requirements of the 2024 NPPF or PPG, and therefore the policy is not justified, not effective, and not consistent with national policy. The Green Belt Background Paper acknowledges that the 2024 NPPF introduced two major changes: • "the introduction of 'grey belt'… land in the Green Belt… that does not strongly contribute to any of purposes (a), (b) or (d)" • "if a Local Planning Authority is unable [to] meet its identified housing need this constitutes an exceptional circumstance for reviewing Green Belt boundaries" Despite this, the draft Local Plan does not apply these requirements consistently or transparently. The Green Belt evidence is incomplete and is not consistent with national policy The Stage 1 Strategic Green Belt Assessment (SGBA) published for the Regulation 19 consultation confirms that the SGBA is: • "an interim report" • "undertaken in stages, with the final full assessment to be published in 2026" This means the Council is preparing a Regulation 19 Plan without the complete strategic evidence required by the 2024 NPPF. The NPPF (para 147) requires that exceptional circumstances for Green Belt release must be demonstrated as part of the plan-making process, informed by a complete understanding of how the Green Belt performs across the housing market area. The national policy and guidance requires: • "Effective strategic planning across local planning authority boundaries," specifically to address shared spatial issues, including meeting housing needs. (NPPF para 24) • "Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development," which requires a proper, evidence-led Green Belt review before making choices in the Plan. (NPPF para 147) • "…authorities should review Green Belt boundaries in accordance with the policies in this Framework and propose alterations to meet these needs in full…," which requires an understanding of Green Belt purposes across the area of the Plan (NPPF para 146) • The PPG (2025) requires a complete, proportionate, plan-wide Green Belt assessment (004 Reference ID: 64-004-20250225) NSC does not yet have this information. This means the Council is preparing a Regulation 19 Plan without the complete strategic evidence required by the 2024 NPPF. As demonstrated above, the NPPF requires that exceptional circumstances for Green Belt release must be established as part of the plan-making process, informed by a complete understanding of how the Green Belt performs across the housing market area. NSC does not yet have this information. Stage 2 Assessment covers only selected parcels, contrary to PPG North Somerset's Stage 2 Green Belt Assessment (Oct 2025) states that it assesses only land adjacent to the more sustainable settlements: "A review of the area adjacent to the more sustainable settlements in North Somerset, in line with the local plan's spatial strategy, has been undertaken" (para 1.6). However, the PPG requires authorities to: • "consider all Green Belt within their Plan areas in the first instance" • ensure parcels are "sufficiently granular… to identify areas of grey belt" • avoid "a small number of large assessment areas" NSC did not assess: • all Green Belt land, • all settlement edges, or • all areas with potential for Grey Belt classification. This failure is fundamental. Under the 2024 NPPF, Grey Belt identification is mandatory, not optional. Failand has not been assessed at all, despite being a logical location for Grey Belt review. The Stage 2 Assessment lists settlements assessed at para 2.1, including: Portishead, Clevedon, Nailsea, South West Bristol, Backwell, Long Ashton, Easton-in-Gordano/Pill, Yatton, Congresbury and Wrington. Failand is not included. This is despite the Background Paper stating: • the Green Belt Review should assess areas adjacent to the more sustainable settlements (Para 3.10 states "…a Stage 2 Green Belt Assessment has also been undertaken to assess sites at the more granular level around the large urban areas, towns and more sustainable villages in line with the local plan's spatial strategy and the national planning practice guidance on Green Belt…"); and • the NPPF requires identification of Grey Belt land that "does not strongly contribute to purposes (a), (b) or (d)			251211 Land East of Failand Reg 19 Reps.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Failand clearly meets the criteria that warrants re-assessment: • Immediately adjacent to Bristol's administrative boundary; • Washed-over villages with existing built form (reducing contribution to purposes); • Strong connectivity to Bristol; and • Suitable, available land identified in the SHLAA. By not assessing any parcels around Failand, the Council has failed the PPG requirement to consider all Green Belt land and identify lower-performing (Grey Belt) parcels. The Green Belt Stage 1 Assessment identifies numerous weak-performing parcels that aren't included in the Spatial Strategy The Stage 1 SGBA identifies that 12 parcels make a 'weak' overall contribution to Green Belt purposes: "12 no. have been assessed as making a 'weak' overall contribution to Green Belt purposes." However, NSC does not map these parcels in its site selection process; nor does it explain why weak-performing land in the east (including the Failand - Long Ashton corridor) was not considered. To that end, the Plan does not link the Stage 1 outcomes to Policy SP7 or the Spatial Strategy This means the required process of a Green Belt review, which shapes spatial strategy; and then identifies allocations has not been followed. Instead, the Council chose a spatial strategy first (western-focused); and then used partial Green Belt analysis to support those choices. This directly contradicts paragraphs 147 to 151 of the NPPF. Exceptional circumstances exist but are not applied consistently The Stage 2 Green Belt Assessment states that "exceptional circumstances exist to consider land in the Green Belt for housing allocations" (para 1.6) because North Somerset cannot meet its housing need without looking beyond non-Green Belt options (para 5.1 LHNA 2025) and cannot accommodate growth without Green Belt release. However, the Council applies exceptional circumstances only in the west of the district while excluding sustainable, well-connected eastern locations such as Failand without: • Stage 1 evidence being complete • Stage 2 assessment covering the area • Grey Belt identification • Parcel-level analysis • Any comparative sustainability assessment This selective application of exceptional circumstances is contrary to national policy. The Local Plan conflicts with spatial sustainability evidence: The Spatial Strategy (Document 1) acknowledges that eastern parts of the district have the strongest relationship with Bristol, which is the principal economic centre. The Transport Assessment and Sustainability Appraisal also show that western growth locations are less able to achieve modal shift; associated with long-distance commuting; and less accessible to Bristol. Yet Policy SP7 protects the majority of eastern Green Belt land, while releasing western land in less sustainable locations. This contradicts the NPPF (para 151), which requires that Green Belt changes promote sustainable patterns of development and take account of transport corridors and accessibility. Failand is well placed to meet these criteria, but it is excluded from assessment: The SHLAA and Additional Sites evidence show Failand is suitable, available, and developable. The SHLAA identifies the edge of Bristol as an area of search and includes sites in this broad location for further assessment. The Additional Sites Consultation Report confirms the need for further deliverable sites; that Failand is in close proximity to Bristol; and that the discounting of Failand is disputed. Failand therefore meets all three tests for Green Belt consideration under the NPPF: • There is a proven housing need in the district; • The site is sustainably located, with strong accessibility to Bristol; and • The site qualifies as Grey Belt land. In conclusion, Policy SP7 is not sound because: • It is not Positively Prepared. It does not ensure adequate Green Belt release to meet the housing requirement. • Not Justified: – Stage 1 is interim and incomplete. – Stage 2 is selective and excludes Failand entirely. – Grey Belt is not identified. • Not Effective: – Key assessments will not be completed until 2026, after the Local Plan is

								submitted. – Not Consistent with National Policy – Fails NPPF paragraphs 147 to 155 and does not follow PPG methodology. • To comply with national policy, NSC must: – Complete the full Stage 1 SGBA and update Stage 2 assessments accordingly once the 2026 SGBA is published. – Assess all Green Belt parcels in North Somerset, including Failand in line with PPG requirements; and – Identify Grey Belt parcels and prioritise these for release as required by NPPF paragraph 148; – Reassess the Plan's Spatial Strategy, which follows the Plan's Green Belt evidence. – Reconsider Land East of Failand as a suitable, sustainable Grey Belt release based on SHLAA availability, proximity to Bristol, and ability to deliver early in the plan period.			
63114593	Bloor Homes (North of Pound Lane Nailsea site)	Turley		No	' Positively prepared ' Justified ' Effective ' Consistent with national policy		No	Policy SP7: Green Belt It is agreed that there are exceptional circumstances which justify the revision of the Green Belt boundary within North Somerset as part of the plan review. The fact that a review of the Green Belt has been undertaken is a positive approach for the plan to take. Land North of Pound Lane The proposed allocation of residential development on Land North of Pound Lane is supported. From reviewing the Policy Map and Schedule 1 of the emerging plan, it confirms the northern parcel will remain within the Green Belt, to provide ecological mitigation associated with the southern parcel. The proposed location for the repositioned Green Belt boundary is supported in principle. The site requirements listed in Schedule 1 are considered in further detail at Table 2.1 of our submission. Meeting the 'Golden Rules' Set Out in the NPPF: The draft policy states new residential development will only be permitted on land released from the Green Belt, where it is demonstrated how the development meets the 'Golden Rules' requirements as set out in the NPPF. Paragraph 151 of the NPPF confirms that where Green Belt land is released for development trough plan preparation or review, the 'Golden Rules' set out in paragraph 156 of the NPPF should apply. These 'Golden Rules' require: • The delivery of affordable housing, at a percentage that is (with regards to plan making) 15% above the highest affordable housing requirement, subject to a cap of 50%, and subject to viability assessment through the plan (following national planning practice guidance). • The securing of contributions towards necessary improvements to local and national infrastructure. • The provision of new, or improved, green space that are accessible to the public. It is considered the viability of providing 50% AH on GB sites should be tested and evidenced as part of the emerging local plan. The viability assessment that supports the emerging Local Plan does not test this scenario. It tests various levels up to 40% on greenfield sites but not 50%. Given the plan now includes for 30%, on greenfield sites elsewhere, it suggests 40% was found to not be a viable option, let alone 50% provision. It is worth noting that construction costs have increased, whilst market values have not risen. Indeed, respondents to the MHCLG NPPF (published in Dec 2024) consultations including RICS and HBF raised viability concerns, and supplied case studies highlighting that there would be few if any areas where 50% is achievable, highlighting the risk of allocating land and it then not coming forward for housing early in the plan period. It is therefore considered thateeting the 'Golden Rules' Set Out in the NPPF	The viability of providing 50% AH on GB sites should be tested and evidenced as part of the emerging local plan. The viability assessment that supports the emerging Local Plan does not test this scenario. It tests various levels up to 40% on greenfield sites but not 50%. Given the plan now includes for 30%, on greenfield sites elsewhere, it suggests 40% was found to not be a viable option, let alone 50% provision. So further evidence is required to appropriately justify the position in line with NPPF.		BLOA3068 - Nailsea - North Somerset Local Plan Regulation 19 Consultation - Dec 25.pdf
58664673	Catesby Estates	Stantec	Catesby Estates	No	' Justified ' Consistent with national policy			Policy SP7 correctly identifies that there exist exceptional circumstances to release land from the Green Belt and identifies the sustainable development opportunity that land at Pill Green represents. However, both policy wording and related Policies Map designation boundaries require review and amendment. Policy SP7 as presented in the Pre-Submission Plan 2041 for consultation is not 'justified' or 'positively prepared', or 'consistent with national policy' as required by NPPF paragraph 36 and requires amendment to be found sound. It is noted that figures shown within Policy SP7 do not accord with Locational Policy wording that requires 'up to' or 'approximate' housing delivery expectations for sites or indeed the sites' capacities presented in representations. National policies require a Local Plan to be clearly written, unambiguous, and avoid duplication of policies, as set out within NPPF Paragraph 16. However, the inclusion of figures as presented within Policy SP7 can result in confusion for a decision-maker. Policy SP7 includes, where applicable, dwelling numbers based on 'indicative' capacities and presents these as definitive, whereas Policy LP5 and associated Schedule 1 are the relevant policies to ascertain and guide decision-making on capacities. The inclusion of figures within Policy SP7 as a result can obscure expected delivery of homes and conflict with Policy LP5 and Schedule 1. Separately, Catesby support the intention of the Council within Policy SP7 to explore opportunities to enhance the beneficial use of Green Belt, however, the policy wording lacks detail for what the Council envisions, and no further detail is provided within explanatory text.Moreover, it is not apparent from the evidence base that any such measures have been taken into account to date. To ensure Policy SP7 is justified and consistent with national policy, inter alia, NPPF Paragraph 149 and 16, and therefore to meet the tests of soundness it	The Policies Map is updated in accordance with the Council's evidence base and it is proposed policy wording is amended as shown in the attached document below. 21449761	Bloor Homes South West (Wolvershill)	Turley		Yes						It is agreed that there are exceptional circumstances which justify the revision of the Green Belt boundary within North Somerset as part of the plan, and the fact that a review of the Green Belt is being undertaken is a positive approach for the plan to take. Additional detailed comments on the Green Belt and approach to Green Belt review/ release are made in other representations being submitted on behalf of Bloor Homes.	Reps on Behalf of Bloor Homes to NS LP 2041 Reg 19 Consultation (Wolvershill) merged.pdf
63143425	Long Ashton Nature Conservation and Environment Trust		-					The Trust is confused with the re-assessment of the Green Belt in 'strategic' areas of North Somerset for WECA by ARUP. Much of this affects Long Ashton and the Trust is surprised that areas not identified by NSC on its Policies Map in any way or labelled as less suitable are now identified as Grey Belt and, as such, may open the door to more unwelcome development that could, effectively turn Long Ashton into a suburb of South Bristol. The Trust is aware of the sterling work done by the Green Belt Working Party comprised of highly experienced town planners and architects that has taken the trouble to write three reports that have been submitted to North Somerset Council. The Trust endorses all three of these reports since they outline a sound strategy that should development go ahead on this site should ensure that it will be aspirational, positive, sustainable and future-proofed against the ongoing onslaught of climate change and biodiversity loss. None of the high volume house-builders should be entrusted in developing the masterplan for an invaluable site such as this. Instead, it's a great opportunity for highly experienced planning consultants to work with NSC in order to develop a master-plan that will tick all the boxes for a high quality, sustainable, green development that puts high-value green spaces and corridors at its heart. A truly ambitious project that NSC could be proud of. Appendix A submitted by the Green Belt Working Party on Biodiversity is so robust and thorough that the Trust will not repeat it here. Instead, the Trust reiterates that it is in total agreement with all that it contains.			
51710305	Wain Estates (Wolvershill)	Tetlow King Planning	Wain Estates	No	' Effective					As discussed above we support the release of Green Belt land to help meeting housing targets and the allocations that are identified in the Policy. Furthermore, the incorporation of the NPPF Golden Rules within the policy is also welcomed. We have no objection to the draft Policy.	0707-06.M23 Wain Estates NS Pre Submission Reg 19 Local Plan 12.12.25 with Appendices.pdf
63250785	LiveWest	PCL Planning Ltd		No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Unsure	No	These representations should be read in conjunction with the representations made on Policy SP3 and SP6 and the concerns of our client regarding the overall strategy of the plan and role of Wrington. We agree with the principle of the Plan seeking to review Green Belt as this accords with the approach of the revised NPPF and supports the Council's efforts in meeting its housing challenges. However, it was apparent from the Additional Sites Consultation that location within Green Belt was still being prioritised as a constraint regardless of the overall sustainability of a settlement or site and the role it played in the purpose of the Green Belt. This has meant that opportunities to deliver sustainable development on sites in Green Belt that do not contribute to its purpose and would provide strong rationale for removal have not been fully considered. It is our view that all settlements should have first been considered on that basis of their contribution to sustainable development first and then all sites considered in respect of planning constraints, including whether the site continues to meet the purpose of Green Belt. This would have provided the greatest opportunity to meet identified needs across all sustainable settlements. An example of where this has hindered the Plan's strategy is Wrington which benefits from a wide range of services and facilities. Without growth opportunities it will become impossible to sustain these, invest in new infrastructure and provide much needed affordable housing, therefore creating an inherently unsustainable place to the detriment of the local community. Recognising that Wrington benefits from a such wide range of services, including employment opportunities should have led to the Plan identifying growth within the village to prevent the above negative outcomes. This appeared to be the case at the Additional Sites Consultation, with the village identified as 'more sustainable' and views on site options invited. This included our client's site at Land to the East of Wrington (reference HE2033). As we set out in previous representations, the site is well located to existing services and facilities, has good options for access, provides opportunities for enhancement of the village edge and can support the expansion of the adjacent recreational facilities. Whilst it is Green Belt, it is clearly on its margins and includes land of no specific merit or character nor does it contribute to any Green Belt purpose (i.e. preventing unrestricted sprawl, merging of neighbouring towns and preserving the setting and special character of historic towns). Importantly it does not raise the issues of flood risk and heritage impact that	Our client's site at Land at East of Wrington (reference HE2033) should form part of the Green Belt review undertaken as part of the Plan process and removed from it and be specifically allocated for housing to support the delivery of sustainable development and the wider benefits to the local community this would bring. The Policy map should be amended accordingly. Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								other non Green Belt site options put forward within the consultation at Wrington have. It our strong view that the site should have been considered sequentially preferable to the non Green Belt sites because of how it performs across a range of factors that would support its delivery as sustainable development and because it does not fulfil a strong Green Belt purpose. However, the Plan avoids any growth at Wrington on the basis of an assumption that no suitable sites exist, highlighting the concerns of the other sites and identifying our client's site as being in the Green Belt. Given the clear benefits of growth in the village, a more robust assessment of the potential for release of Green Belt should have been undertaken. The Plan's approach to Green Belt, embodied in Policy SP7 is therefore considered flawed and too limited in seeking to maximise opportunities for sustainable development. This approach is also inconsistent with the wording of Policy SP7 which identifies that "villages in the Green Belt which do not contribute to openness are inset from the Green belt". Wrington itself is inset from the Green Belt which should be an indication of its role in terms of Green Belt purpose and the marginal nature of our client's site. It clearly sets it apart from those other settlements where Green Belt washes entirely over them. As a result of this flawed approach in not reviewing Green Belt across all relevant settlements to understand fully the potential for sustainable development opportunities, Wrington faces very limited growth despite its clear sustainability credentials. Ironically the only growth identified is through the allocation of Gatcombe Farm which also lies within the Green Belt but is so distant and unconnected to the village it will have no role at all in supporting and sustaining services and facilities within the village or provide any benefit to the local community. The release of my client's site at Land to the East of Wrington would provide greater longer-term benefit in improving the landscape and visual context of the village as well as the wider sustainability benefits in respect of supporting the needs of the community. This would be consistent with the justification for other sites having been released from the Green Belt within the Plan. It is for the reasons set out above that we consider Policy SP7 (alongside other policies raised in our separate representations) significantly undermines the soundness of the Plan overall as it has not been positively prepared as it is not seeking to meet identified needs. Its strategy is not justified as it contradicts clear evidence of need and the contribution the larger villages (including Wrington) could make to delivering sustainable development and does not take into account reasonable alternatives in to address this. The Plan's approach will not be effective in that there is no clear evidence that supports the Plan being deliverable. It is not consistent with national policy in that its approach limits rather than maximises the opportunities for the Plan to deliver sustainable development in accordance with the Framework. Please see previous representations made on earlier versions of the Plan for completeness. These are appended to the covering email for these and other representations made on the Reg 19 (Pre-Submission Plan).		
63213025	BackwellPC NailseaTC Flax BourtonPC BrockleyPC BackwellRA Nailsea Action Group	Lucy White Planning Limited	BackwellPC NailseaTC Flax BourtonPC BrockleyPC BackwellRA Nailsea Action Group	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure		BPC and NTC raise strong objection to the proposed removal of Green Belt around Nailsea and Backwell, in particular the claimed status of land East of Backwell as Grey Belt in the accompanying Green Belt Background Paper (2025). In determining whether sites can be identified as Grey Belt, the Council has considered whether the site would strongly contribute to Green Belt purposes a, b or d and whether a Footnote 7 constraint would justify refusal. Assuming that there is a demonstrable housing need to be met, the development must comply with the additional requirements of paragraph 155 of the National Planning Policy Framework (the Framework) to be Grey Belt. This includes that the development must be in a sustainable location, with particular reference to paragraphs 110 and 115 of the Framework. 1.32 Paragraph 110 requires the planning system to actively manage patterns of growth in support of a vision-led approach to identifying transport solutions that deliver well-designed, sustainable and popular places. Significant development should be focussed on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. Paragraph 115 of the Framework most notably requires the allocation of sites or specific applications for development to ensure that sustainable transport modes are prioritised and any significant impacts from the development on the transport network (in terms of capacity and congestion), or on highway safety, can be cost effectively mitigated to an acceptable degree through a vision-led approach. The Council acknowledges that the strategic development proposals for Nailsea and Backwell are reliant upon significant investment in transport		251118 Local Plan Reg 19 2025 reps FINAL.pdf R01 - Transport Statement - Rev 3 FINAL.pdf Hydrology LP3 BPC_NTC Appendix_2.2-compressed.pdf Hydrology LP3 BPC_NTC Appendix_2.1-compressed.pdf Hydrology LP3 BPC_NTC Appendix_9-compressed.pdf Hydrology LP3 BPC_NTC Appendix_7-compressed.pdf Hydrology LP3 Summary BPC_NTC Part 2 (1).pdf Hydrology LP3 Summary BPC_NTC Part 1 (1).pdf

									infrastructure, including the delivery of a “strategic rail crossing” from the A370 in Backwell to Nailsea. The evidence prepared by John Russell Transport Planning (appended) demonstrates that allocation of land East of Backwell for 889 dwellings does not represent a sustainable location and would result in significant impacts on the transport network which would not be cost effectively mitigated through the proposed strategic rail crossing. Accordingly, contrary to the findings of the Green Belt Background Paper, the land East of Backwell does not qualify as Grey Belt. Furthermore, paragraph 5.4 of the Green Belt Background Paper states that wider planning factors have been a key consideration in the selection of these Green Belt sites, including conformity with the spatial strategy, focussing development at the large urban areas, towns and more sustainable villages, deliverability of the sites over the plan period as well as the provision of infrastructure and benefits the release of land in these locations can provided particular in light of the NPPF ‘Golden Rules’. In response, BPC and NTC comment as follows: 1. As demonstrated in our response to Policy SP3, the concept of a strategic development location at Nailsea and Backwell has previously been rejected by the Council on the basis that it is not viable or deliverable. No evidence has been provided in support of this Regulation 19 version of the plan to justify this U-turn in the Council’s position. 2. The Council has failed to produce a Housing Trajectory in this Local Plan to demonstrate that the sites are deliverable over the plan period. 3. The Council seeks to justify the allocation of land East of Backwell on the basis of the strategic rail crossing to mitigate the transport impacts of the strategic development at Nailsea. However, the evidence produced by John Russell Transport Planning seriously questions the deliverability of and mitigation achieved by the strategic rail crossing. For these reasons, BPC and NTC find Policy SP7 to be unjustified in the absence of an appropriate evidence base to support the removal of land East of Backwell from the Green Belt. Accordingly, the policy is unsound. Notwithstanding the above, BPC and NTC support Policy SP7 in respect of the extension of the Green Belt to the south of Nailsea to maintain the separation of Nailsea and Backwell and prevent further encroachment into the countryside. The Landscape Sensitivity Assessment carried out by Wardell Armstrong (March 2018) concluded that the land between Nailsea and Backwell (either side of Station Road) including land south of Nailsea is of high sensitivity. The land to the south of the gap, south of Youngwood Lane, is of medium/high susceptibility to change due to its increased openness, distinct low-lying topography and its degree of separation from the southern edge of Nailsea. The assessment finds that the development south of Nailsea and north of Backwell has visually coalesced and the remaining land between the settlements has an important role in preventing the physical coalescence of the two settlements and further visual coalescence (paragraph 6.2.59). The Green Belt Review Part 3 explored several options for the potential extension of the Green Belt between Nailsea and Backwell. Option 1 sought to replace the land designated as strategic gap with Green Belt. However, this failed to provide a defensible boundary to the western extent of the Green Belt. Option 2 extended the Green Belt further west beyond the current limits of both settlements. The boundaries are defined by Youngwood Lane and Chelvey Road, providing clear and defensible boundaries. A final option sought to create a major extension to the Green Belt extending to the east of Clevedon. However, this was not considered necessary in the absence of any development threat to coalescence between Clevedon and Nailsea. In light of the scale of development proposed at Nailsea and Backwell, including Grove Farm which already benefits from a resolution to grant outline planning permission and land to the south west of Nailsea at Netherton Grange which is under-construction, there are exceptional circumstances to justify the extension of the Green Belt on the basis of the existing visual coalescence of the settlements and the need to protect against the

									physical merger of the settlements. For these reasons, regardless of the scale of development planned through this Local Plan, an extension to the Green Belt between Nailsea and Backwell, as defined on the Policies Map, is justified.		
43217217	Parker Strategic Land	Guy Wakefield, Ridge and Partners LLP		No	• Justified • Effective	Yes	Yes	This representation therefore supports the removal of Land at Tower Farm from the Green Belt and allocation to meet the housing land shortfall. Concern however is raised regarding the affordable housing requirement for the site, and the approach to primary school contributions, which is explained in more detail below. In addition, we also wish to bring to your attention that there is an error relating to the draft allocation boundary for the site as shown in the Council's draft policies map. The boundary line needs to be updated to be consistent with that shown in Appendix 2 (see attached). The change sought is to remove a small additional parcel of land from the Green Belt and include that as part of the housing allocation.	Amendment to boundary requested - see attached.		North Somerset Reg 19 Pre-Submission Plan - Portishead final 9.12.25.pdf
32585025	P Abrahams			No	• Consistent with national policy	No	Yes	1) While Policy DP12 is mostly similar to the previous DM12 and previous NPPF where it clarifies the circumstances in which infilling is not regarded as inappropriate development outside of a settlement boundaries in the Green Belt, it does contradict itself twice within the following two statements and thus makes the Local Plan unsound. Page 139 Outside of settlement boundaries and in the smaller settlements and hamlets which do not have a settlement boundary limited infilling is inappropriate development and likely to harm the openness of the Green Belt. Page 142 The remaining smaller settlements and hamlets have been assessed as having an open character which contributes to the openness of the Green Belt. Infilling in these locations would be inappropriate development in the Green Belt. 2) Infilling on previously developed sites in the Green Belt outside of the settlement boundaries is appropriate development provided it meets with certain listed criterion's. 3) Those infill sites will clearly be within the smaller settlements and hamlets and thus the above two statements should include a note to those exceptions which the policy lists on page 140 under the title "Redevelopment and infilling on previously developed sites in the Green Belt outside settlement boundaries'. 4) Without including those exceptions it could be interpreted by planning officers and potential applicants that infilling is inappropriate development in the Green Belt on all types of land classification, which would lead to a reduction in the council's calculated windfall sites, which further makes the Local Plan unsound 5) In those smaller settlements and hamlets new dwellings would be inappropriate on Greenfield land, but not in the case where sites are classed as being Previously Developed Land where infilling is an allowable exception. Ref the High Court Case, Dartford Borough Council v The Secretary of State for Communities and Local Government & Ors [2017] EWCA Civ 141 (14 March 2017) 6) I therefore suggest those two statements are amended to read something like the following: Page 139; Outside of settlement boundaries and in the smaller settlements and hamlets which do not have a settlement boundary, limited infilling is inappropriate development and likely to harm the openness of the Green Belt, unless it meets with one of the NPPF exception's such as Previously Developed or Grey Belt Land. Page 142 The remaining smaller settlements and hamlets have been assessed as having an open character which contributes to the openness of the Green Belt. Infilling in these locations would be inappropriate development in the Green Belt, unless it meets with one of the NPPF exception's such as Previously Developed Land or Grey Belt Land. Substantial harm to the openness 7) The previously 2023 NPPF test, for infill development on previously developed land in the Green Belt at para 149 (g), was that it should; " not have a greater impact on the openness of the Green Belt than the existing development". 8) In 2016 North Somerset had added 3-criterion's within DM12 and carried those forward without change to DP12, two criterion's related to the new dwellings size and position while the third related to sustainability. 9) But the NPPF test was revised within the recent December 2024 version that simplified and broadened the exception. 10) The test within para. 154 (g) is now simply that the development should ; "not cause substantial harm to the openness of the Green Belt". 11) This change in the threshold of harm is the only criteria in this NPPF policy, no other safeguards or even measures on its sustainability location	Within Appendix 1: Glossary on page 361 under Previously developed land: "land in built-up areas such as private residential gardens" which its excluded from being previously developed land. Suggest placing a note or reference so to ensure non-built up rural residential gardens can be classed as previously developed due to the the court case, Dartford Borough Council v The Secretary of State for Communities and Local Government & Ors [2017] EWCA Civ 141 (14 March 2017)		Appeal Decision 3347328.pdf Appeal Decision 3347517.pdf 25_P_1774_TDC-NORTH_SOMERSET_OFFICER_REPORT-3536754 for local plan.pdf 20_P_2648_FUL-NORTH_SOMERSET_OFFICER_REPORT-3037409 for local plan.pdf 20_P_0721_FUL-NORTH_SOMERSET_OFFICER_REPORT-2960939 for local plan.pdf Local Plan - Infilling on PDL - DP12 - 11th Dec 2025 (7).pdf

								were included. 12) The latter I believe is due to those sites being more rural than urban and because there is already an NPPF policy for extra allowances at rural locations that's covered in Section 9. Promoting sustainable transport where on page 31 within para 110 it states; 'However, opportunities to maximise sustainable transport solutions will vary between urban and rural areas, and this should be taken into account in both plan-making and decision-making'. 13)Therefore to be consistent with national policy the new local plan it should firstly include, "should not cause substantial harm to the openness of the Green Belt" 14) And secondly either remove the sustainability criterion or ensure it is worded so to reflect that sites in a rural location would normally have a lesser sustainability criterion when compared to an urban location as per para 110 of the NPPF. 15) Please also consider that the NPPF included a sustainability criterion within the new policy for Grey Belt Land at para 155 (c) where it states "that the development would be in a sustainable location, with particular reference to paragraphs 110 and also 115 of the Framework". 16) Not including a sustainable criterion within the Framework for Green Belt infill but within Grey Belt might also suggest that there's a lower sustainability bar for Previously Developed Land within the Green Belt than within Grey Belt Land! 17) Recent appeal decisions interpreting the 2024 National Planning Policy Framework (NPPF) have established that "sustainable location" for rural dwellings is a proportionate planning judgment rather than a rigid checklist that replicates urban mobility standards. Planning inspectors have found that because opportunities to maximise sustainable transport vary significantly between urban and rural areas, rural sites do not need to meet the same stringent accessibility benchmarks as urban ones. 18) Inspectors have now recognise that it is not appropriate to replicate "metropolitan mobility standards in inherently rural places". 19) Proportionate Judgments: A sustainable location in a rural or "grey belt" context is defined by realistic access to services and transport appropriate to the proposal's scale, rather than a total absence of car dependency. 20) NPPF Paragraph 155 and Transport: The 2024 NPPF revisions (specifically referencing paragraphs 110 and 115) emphasise managing growth to promote sustainable transport while explicitly acknowledging that rural areas have different capacities for this. 21) Flexibility for "Grey Belt" Land: Development on "Grey Belt" land (Green Belt land that does not strongly contribute to core purposes) may be approved even if it only has one "tangible non-car options". 22) Sites that were previously dismissed as inaccessible in rural areas has now be argued successfully where evidence showed realistic non-car options for some trips and negligible traffic impact. 23) To support my above comments I have listed just a few granted applications and appeals. 24) Appeal Ref: APP/V1505/W/24/3347517 Land West of Corner Road, North of Approach Road, Crays Hill, Basildon CM11 2UT - Decision date: 26 June 2025 - Appeal Allowed. While the Council and Inspector adjudged the site not to be infilling due to the loose grain of development and therefore would not meet any of the exceptions set out at paragraph 154 of the Framework, the Inspector when assessing the site for it's Grey Belt credentials stated on page 2. The Council has not contended that the appeal site is in an unsustainable location, having regard to access to facilities and services. I saw that the roads immediately adjacent to the site are quiet in nature, and although they do not have footpaths or street-lighting, there is no suggestion that pedestrian access would be unsafe. Access by pedestrian means would not always be attractive, particularly in darkness, but these stretches of road are relatively short, and a footway and lighting can be found once London Road is reached. The evidence also indicates that access to public transport can be found in Crays Hill, within reasonable walking distance. For these reasons, I find that the proposal would be in a sustainable location for the purposes of paragraph 155 of the Framework. As criterion (d) of paragraph 155 would not apply in this instance as the proposal would not amount to major development, and having found that the proposal would otherwise meet the relevant criteria for Grey Belt development, I conclude that it would not comprise inappropriate development in the Green Belt. The proposal would accord with paragraphs 153 and 155 of the Framework, and it is not, therefore, necessary for me to consider the effect of the proposal upon the openness of the Green Belt, nor is it necessary for very special circumstances to justify a grant of planning permission to be demonstrated. 25) Appeal Ref: APP/M3645/W/24/3347328 Woodside House, Copthorne Bank,			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								Copthorne, Surrey RH10 3JD. Proposal to demolish one existing dwelling, garage and outbuildings and construct two detached dwellings and one detached garage. Was judged to be Grey Belt Land and on page 4 the Inspector wrote the following: This section of Copthorne Bank has a rural character but, due to the presence of existing dwellings in the vicinity of the site, the proposed development would not be in an isolated location. Furthermore, the highway connects the site with nearby settlements including Copthorne with Burstow, Smallfield, and Domewood. Whilst there are bus stops nearby, Copthorne Bank is subject to a 50mph speed limit and there are no footpaths along this section. Future occupants would therefore be dependent on use of a private car to meet their day-to-day needs. However, paragraph 110 of the Framework recognises that opportunities to maximise sustainable transport solutions will vary between urban and rural areas. The proposal would result in a net increase of one dwelling on the site, and therefore the volume of traffic movements associated with the proposed development would be small. The proposed development would utilise the existing vehicular access and there would be space for the parking and turning of vehicles within the site. The local highway authority did not object to the proposal. Therefore, I am content the proposal would not have significant impacts on the capacity of the transport network, congestion, or highway safety. Within the context of its rural location, I am satisfied the proposal would be in a sustainable location, as required by criterion (c) of Framework paragraph 155, that fulfils the requirements of paragraphs 110 and 115 of the Framework. 26) 25/P/1774/TDC Erection of one detached dwelling at Hillview Naish Lane, Barrow Gurney, BS48 3ST was granted by the Case Officer on 7th November 2025. The Case Officer concluded that the proposed dwelling that would be sited within the garden of Hillview was considered to be limited infilling on Previously Developed Land in the Green Belt outside of a settlement boundary. 27) And to show consistency for over the last 5-years both 20/P/0721/FUL and 20/P/2648/FUL each for one new infill dwelling between existing dwellings on Old Weston Road Flax Bourton were both judged to be Previously Developed Land and granted due to the exceptions within the NPPF and DM12. 28) Consequently, the new Local Plan should not be stating on page 139 and 142 that limited infilling is inappropriate development outside of settlement boundaries and in the smaller settlements and hamlets and likely to harm the openness of the Green Belt unless it includes a proviso for the allowable NPPF exceptions, that of ‘infilling on Previously Developed Land in the Green Belt outside settlement boundaries’ and for the Grey Belt Land exception. 29) Otherwise this would lead to confusion by Planning Officers and in not allowing potential sites to come forward, thus not maximising the full use of previously developed land. 30) This surly makes the Local Plan unsound as it doesn’t agree with the NPPF and current DM12 policies and is not just prioritising Greenfield sites over infilling on Previously Developed Land but disallowing them altogether. 31) It’s mentioned numerous times that the development of previously developed land is actively encouraged in national and local planning guidance. The National Planning Policy Framework notes: “Planning policies and decisions should encourage the effective use of land by re-using land that has been previously developed (brownfield land), provided that it is not of high environmental value” 32) Windfall figures are homes that become's unexpectedly available for housing that were not specifically identified in a local development plan. Based on past trends from the last five years it is forecasted that a further 1,118 windfall homes will come forward on small sites across villages, smaller settlements and the rural areas. 33) I’ve highlighted just a few of the many windfall sites that were granted by being classed as infill on PDL in the Green Belt over the last 5-years. Consequently as the new Local Plan could now disallow infilling outside of settlement boundaries, which is clearly contrary to NPPF policy 154 (g) and to their own current policy in DM12 for infilling on previously developed sites in the Green Belt outside settlement boundaries then doesn’t those windfall forecasted figures of 1,118 further homes becomes an unsound number!			
62864929	Helen Adams			Unsure		Unsure	Unsure	Development of the land bordering Weston Big Wood would badly affect the ecology of the wood (an SSSI). The process of building would disturb wildlife and the presence of people so close would permanently damage the ecology of the wood and surrounding areas. The increased traffic would have an adverse effect on wildlife. Traffic around High Down school is already very bad at certain times of day. This would only get worse. The likelihood is that people living in the area would use cars as the steep hill deters people from walking into the town from their homes. This is directly against the aim of decreasing use of cars and increasing walking/ public transport. The fields are used regularly by a lot of people walking. This is valuable green space.			
17854273	Chris Ambrose			No				North Somerset Council Local Plan 2025 - 2041 Strategic Green belt Assessment response Objection to the methodology and proposed Greenbelt release- The Land Yeo Valley, Wraxall and Failand Parish, North of Nailsea	I request that the proposed release of The Land Yeo Valley land north of Nailsea be rejected, and that the site remain within the Greenbelt.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								I am submitting this response to challenge the reliance on “Professional Judgement” in the Strategic Greenbelt Assessment (SGA) (Arup, 2025) used to justify the release of Greenbelt at The Land Yeo Valley, (TLYV) north of Nailsea. The SGA is methodologically consistent but inherently flawed. Labels such as “moderate” or “weak contribution” are opinion based. Its reliance on professional judgement produces subjective outcomes, excludes critical environmental and social evidence and fails to demonstrate the exceptional circumstances required by national policy. (NPPF-155) I therefore suggest that the proposed local plan is unsound and request that the proposed release of TLYV land be rejected, and that the site remain within the Greenbelt. Arup’s Strategic Green Belt Assessment (SGBA) acknowledges that it was prepared in line with “the particular instructions and requirements of our client” This admission undermines the independence of the evidence base. It demonstrates that the methodology was shaped by the commissioning authority’s brief, which prioritises identifying parcels for potential release rather than safeguarding the Green Belt’s (GB) ecological integrity and community wellbeing and needs. Reliance on such consultant outputs risks prioritising development pressures over the statutory purposes of Green Belt Policy set out in NPPF 2024 (NPPF-155). A sound Local Plan (LP) must rest on impartial evidence, not reports constrained by client instructions. The Arup SGA is methodically consistent but inherently subjective. The assessment methodology considers only the five statutory Greenbelt (GB) Purposes. It ignores wider values: ecological corridors, food production, climate resilience, flood plain and community wellbeing. The omission undermines the claim that the evidence is balanced or objective. (NPPF-160) The Tits LYV corridor supports biodiversity, agriculture and recreation. None of these functions are adequately reflected in the assessment. The result is a skewed picture that undervalues the site’s real contribution. Arup applied the five national GB purposes from (NPPF-143) preventing sprawl, preventing towns merging, safeguarding countryside, preserving historic towns, encouraging regeneration. Each land parcel was assessed against these purposes with descriptors like strong, moderate or weak contribution. The “requirements” were to test for potential release, not to defend the GB per se. These descriptors are not based on measurable data (like biodiversity counts or soil productivity) but on professional opinion and interpretation. Such subjectivity cannot meet the (NPPF-155) requirement for exceptional circumstances to justify Green Belt release. The methodology considers only five statutory green Belt Purposes. It ignores wider values: ecology corridors, food production and its security, climate resilience, and community wellbeing, mental health, recreation and infrastructure. Councils are under government pressure to deliver housing numbers and the evidence must be independent and robust, not shaped by housing targets, not biased by release rather than genuine objectivity. It presents itself as balanced, yet its reliance on professional judgement means it can be challenged as flawed or incomplete. NPPF, Paragraph 44, (published on 12 December 2024) states that: “the right information is crucial to good decision-making particularly where formal assessments are required. The parcels will actually make a stronger contribution to GB purposes than the Council might expect. This can only conclude that the SGBA was tailored to Council’s instructions, to meet the Council’s planning needs, not impartial analysis. It prioritises development pressures over NPPF purposes, undermining its reliability as evidence. The “requirements” were to test for potential release, not to defend the GB per se. NPPF 2024 Para 155 and the 5 GB purposes stress “exceptional circumstances” must be demonstrated not assumed. Client shaped evidence isn’t independent – Please, don’t let profit override GB. Selecting parcels P005, P006, P024, and P025 as they border the potential development site all identified as potential areas for release, are wrongly scored as moderate contributors to Green Belt purposes. In reality they are critical in preventing sprawl, maintaining separation between settlements and safeguarding countryside character. The assessment’s parcel table underplays these functions, reflecting the client–led instructions rather than impartial evidence. Releasing these parcels would undermine NPPF 2024 para 155 and set a precedent for further erosion of the Green Belt. A number of parcels form the same corridor, whilst the assessment basis treats it as fragmented land with limited openness. This corridor is a wild life corridor comprising a river, trees and hedges, and flood plain and continues horseshoe-like from Clevedon to Thornbury and around Bristol and Bath, safeguarding countryside for agriculture and from encroachment and providing the green lung between Portishead, Bristol, Bath, Failand and Nailsea to Clevedon through Thornbury to the sea supporting food production. The Arup SGA is methodically consistent but inherently subjective. It presents itself as balanced yet its reliance on professional judgement means it can be challenged as flawed or incomplete as each parcel will have weaknesses in the way the assessment scores their GB purposes.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								For example, P024 woodland enhances openness by screening development, not reducing GB function. The parcel table uses relative scores. The scoring system is low, med, and high, without transparent weighting this is highly subjective and clearly shaped by client instructions. Even if one parcel is scored moderate releasing several adjacent parcels creates a strategic breach. Each parcel contributes to the settlement separation. The function of Green Belt is far stronger than the tables suggest. Fragmentation increases vulnerability, making protection more important. If released, P025 would create a precedent for further erosion. Wraxall, Long Ashton and Bristol would virtually merge, (GB Purpose 2, Prevention of merging). P006 edge of Nailsea, the report tends to down play openness because of existing road. Linear infrastructure does not negate openness and the parcel still prevents coalescence between it and Bristol fringe. It should be judged on permanence not convenience for development. Each assessment should have an Environmental Impact Assessments (EIA) which responds to the environment, balanced against the needs of development, ensuring that effects of development on the environment are understood and are taken into account in the planning process. Urbanisation and economic growth must be balanced with environmental and social impacts to ensure a sustainable future for all. NPPF 160 requires plans to promote sustainable patterns of development considering transport, climate change, and the natural environment. By reducing complex ecological, agricultural, and wellbeing functions to labels such as “moderate” or “weak contribution, the assessment excludes critical evidence and undermines the objectivity demanded by the NPPF.” Environmental Impact Assessment (EIA) plays a crucial safeguarding role in recognising the potential for effects on the environment and humans, informing design development, and identifying measures to protect and enhance our world, and your consultant (Arup) is well placed at the forefront of EIA practice to inform and communicate a clear understanding of the issues and opportunities, to enable the right decisions to be made at the right time, to undertake this requirement, as Arup’s web site explains, they are shaped by their engineering heritage, informed by their diverse skills, and powered by technology. They further state that, EIA is a decision-making tool to inform both project design and the consenting process. For many projects it is a legal requirement. It is an important part of ensuring that the likely effects of developments on the environment, including people, are understood, mitigated, and fully considered in the planning process. EIA is an iterative process that can ultimately be used to reduce the negative effects of a project and enhance the positive through design and assessment. The foregoing is concise, policy grounded and directly challenges the credibility of the evidence base. CPRE, the countryside charity, provides information on understanding the quality of countryside and greenbelt, contributing detailed information for an EIA. The following are extracts from CPRE’s publications. “Hedgerows are the vital stitching in the patchwork of our countryside and particularly The Land Yeo Valley. Not only are they beautiful, with shifting seasonal colours, but they also benefit wildlife and the wider environment. They store carbon and help slow climate change. The grass slows falling rain as it runs to The Land Yeo River”. The lines of hedges crisscrossing the valley and our countryside act as wildlife corridors, linking habitats together and providing safe movement for many scurrying, flying and scuttling animals such as endangered dormice…” You can find out more about the history and habitats of hedges from CPRE. Finally, I find it beyond comprehension that this area of Green Belt, which since its inception, has been serving to support the first, second, fourth and fifth core purposes of the Green Belt, and was rigorously enforced by the Council as supported by the earlier local draft plans which clearly recognised its value. So why the sudden change? Could it be the absurd pressure on housing numbers from a failing government? (They will never be built). Or am I to believe that the Council was swayed by money on offer from developers?			
32016289	Kieran Argo			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	I object to the proposed removal of Green Belt for housing at Pill Green, Lodway Farm, Land East of Gordano Services and Pill Road because these allocations do not meet the government’s Golden Rules for Green Belt release and therefore cannot be justified as “exceptional circumstances” under the NPPF. 1. Golden Rule 1 – 50% Affordable Housing Is Not Proven Deliverable The Golden Rules require Green Belt release sites to deliver at least 50% affordable housing, unless a robust viability case demonstrates otherwise. No viability evidence has been published for any of the Pill/Easton sites. This means: The Council has not shown that 50% affordable housing is financially deliverable. Significant abnormal costs (Markham Brook crossings, major road upgrades, M5 noise mitigation, ancient woodland buffers, biodiversity mitigation, flood attenuation) make 50% affordable housing highly unlikely. Without viability	I request that these allocations be withdrawn or reassessed with full evidence before the Local Plan proceeds to examination.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								testing, the Golden Rule requirement is unmet. Conclusion: This criterion is not satisfied. 2. Golden Rule 2 – Infrastructure Delivery Is Not Evidenced or Feasible Green Belt release requires clear, costed, and deliverable infrastructure, yet the Plan provides no evidence to support delivery of: A new 420-place primary school, A central transport hub, Multiple active-travel bridges over Markham Brook, Widening and upgrading Pill Road, Lodway, Ham Green and Anchor Way, Large-scale noise and pollution buffers for M5-side sites. Strategic active-travel routes linking all four sites. None of these items are supported by: Costed feasibility studies, Transport modelling, Flood or hydraulic modelling, Delivery plans or phasing. Critical parts of the strategy also rely on the unconfirmed Portishead Railway, contrary to Golden Rule requirements for certain, not speculative, infrastructure. Conclusion: Infrastructure delivery is not demonstrated. 3. Golden Rule 3 – The Sites Do Not Protect or Enhance Genuine Green Space The Golden Rules require the protection and enhancement of real, high-value green space, not its loss. The Pill/Easton sites fail this because the land is: Best and Most Versatile (Grade 1–2) agricultural land, Species-rich grassland and ancient woodland edge habitat, Part of a key bat corridor (Markham Brook and woodland margins), Habitat to several red-listed bird species (BTO BOCC list) A landscape gap that preserves the separate identity of Pill, Easton-in-Gordano and Ham Green, Functionally important flood-attenuation land The Local Plan provides no evidence of: Green infrastructure mapping, Biodiversity baseline surveys, Woodland buffer assessments, Nature-recovery alignment High-quality replacement green space, The proposals would remove, not enhance, genuine green space and would reduce openness—contrary to core Green Belt purposes. This Golden Rule is clearly not met. Overall Conclusion: The Pill & Easton-in-Gordano Sites Fail All Three Golden Rules. Because the Council has not demonstrated: 50% affordable housing is viable, Required infrastructure is deliverable, and Genuine green space is protected or enhanced, these allocations do not meet the Golden Rules, do not satisfy the NPPF tests for exceptional circumstances, and should not be removed from the Green Belt.			
20338913	Aston & Co		Aston and Co UK	No	• Positively prepared • Justified • Consistent with national policy	No	Unsure	We support the release of Green Belt which has been a misunderstood and misused constraint to development promoting jumping of the GB and unsustainable development across North Somerset and other authority areas. In accordance with NPPF24, updated PPG, the replacement plan included a comprehensive Green Belt review by Arup (Oct 25) and updated Stage 2, GB report by NSC. It is important that the replacement plan follows the evidence and Arup's report concludes for the promoted land at Black Rock, North of Clevedon Road (HE20124) makes a 'weak contribution' overall to the GB purposes (P002, page 72). Of all the other four relevant grey belt tests (a, b, d & e) there is no 'strong' contribution. NSC's, Stage 2 Green Belt Assessment , Oct 25 defines the promoted land at Black Rock as 'Cell 4'. This cell includes the entire promoted land parcel (HE20124). Based on grey belt policy test and NPPF guidance, NSC's replacement plan evidence, and TLPs Grey belt report submitted to the council in March 2025, ALL support defining the promoted land as 'Grey Belt'. NPPF replacement plan preparation policy requires (NPPF24, para 155): Protecting Green Belt land — drawing and reviewing boundaries: "When drawing up or reviewing Green Belt boundaries, local planning authorities should define boundaries clearly, using physical features that are permanent and likely to be permanent so they will be capable of enduring beyond the plan period and remain defensible in perpetuity; where necessary, define boundaries to accommodate development needs and ensure that any changes will not need to be altered at the end of the plan period." (National Planning Policy Framework). Given the need to find sustainable development land close to the major settlements, near transport links (Metro West and Gordano Greenway), then the clear defensible barrier for GB amendment is using the B3124, the FZ2/3 beyond (the Gordano Valley, Article 4 land), the natural limestone hillside (Black Rock Quarry), and SSSI should be utilised. This is particularly relevant given the connection between Black Rock villas and the former mineral and industrial heritage of the west of Portishead as evidenced in the Cultural & Heritage Report, 20.11.18 by Aston & Co. This document been submitted to NSC on several occasions during evolution of this plan and the Neighbourhood Plan. For placemaking and heritage purposes it is material, important and relevant.	Move the proposed Green Belt west of Portishead to include all the promoted land HE20124.		3_BlackRock_HE18124_CULTURE AND HERITAGE.pdf
58640257	Mr Greg Aston			No	• Justified	No

3106433	Yatton Parish Council		Yatton Parish Council						1. We are pleased to see that Yatton Station is intended to become a transport hub. Part of this should be the establishment of good public transport links with a frequent bus service (i.e. at least 2 buses per hour) serving Clevedon, Weston-super-Mare and Bristol. The provision of free		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									parking at the station would make a significant positive difference to its usefulness as a hub and also to the lives of Yatton residents living near the station. 2. Yatton Parish Council agrees that land south of Nailsea and west of Backwell should be designated as Green Belt. 3. The existing Strategic Gap between Yatton and Congresbury should be retained and a new Strategic Gap, between Yatton and Kenn, should be designated. 4. Land off The Batch should be used to expand the doctor's surgery, not for a primary school. Policy SP7: Green Belt Yatton Parish Council is in favour of taking a fresh look at areas designated as Green Belt with a view to targeting development to areas where it is needed rather than just fitting it in where existing constraints are minimal: the latter approach has served Yatton, particularly, very badly in the past and the village has been disfigured by a number of large, dense, identikit housing developments. The land north of Colliter's Way is well-connected, close to a good range of facilities, and a better location for new development than infill in already crowded villages		
62864769	Chew Stoke Parish Council		Chew Stoke Parish Council	Unsure		Unsure	Unsure				CSPC - North Somerset Local Plan consulation response.pdf
31074337	John Barratt			No	Justified	Unsure	Unsure	You cannot make the opening statement when you have just destroyed the most important strategic green belt that previously prevented urban sprawl, to build an appalling science park that could have been sited anywhere. This has opened the way for 3500 houses to be built on the next section of green belt, undoubtedly without amenities or suitable infrastructure or employment, and no doubt more will follow. At best it is disingenuous, but more likely it is a blatant lie. What does your declared climate emergency mean ? A hollow, pointless political statement.	Stop pretending you care about the greenbelt. Amend so that it reflects your honest intentions - what ever they might be. They are clearly not what is written.		
50316929	Long Ashton Parish Council		Long Ashton Parish Council	No				INTRODUCTION Long Ashton Parish Council recently carried out a survey of its residents to assess what matters most to them. Of those that replied, the top three most important areas in order of priority ranking 1st to 3rd were green spaces, planning and development, road safety and transport. The top second focus area in answer to the question what is most important and needs most improvement was the climate crisis and in particular ways to retain/build biodiversity in the parish. In answer to the question 'what do people most like about living in the parish?' almost every response was a combination of three areas: access to green spaces and countryside; separation as village but with proximity to Bristol plus sense of community. The Parish Council is also aware that 96% of the responses to EPIC's planning application in 2024 cited the importance of retaining the Green Belt whilst the majority cited the importance of visual separation from Bristol, and the importance of maintaining and increasing biodiversity. SUMAARY OF NSC DOCUMENTS & INFO In addition, LAPC would like to highlight the following points compiled from NSC's documents associated with previous consultations or current information on the emerging Revised Local Plan 1. The consultation on Additional Sites as part of NSC's revised Local Plan 2041 was held before anyone knew that WECA had commissioned ARUP to carry out a review of Green Belt status in North Somerset and other local authorities that includes much of Long Ashton 2. Policy SP 7: "Green Belt" (p 29 & 30) does not mention this review either yet it is relevant to this policy in particular with reference the Woodspring development and other potential development in and around the parish and neighbouring areas. 3. Policy DP 12: "Development in the Green Belt" (pp139-143) doesn't mention this review or the terminology 'Grey Belt' until the concluding paragraph on p 143 4. With reference the Composite Map of the current Sites Overview only the potential 'Woodspring" parcel of land was identified as 'Most Suitable'. The majority of other sites within and adjacent to the parish were identified as 'Hard Constraints', '"Less Sustainable" or ''Other Potential" with several parcels of land not labelled at all The views of residents who responded to the Additional Sites Consultation was based on the information available as listed above. However in the current Consultation on the Pre-submission plan 2041, LAPC notes that the ARUP review of Green Belt status for WECA has huge implications for Long Ashton and this is likely to have escaped the notice of many of our residents. QUERY ON SOUNDNESS The Parish Council therefore feels obliged to query the 'soundness' of this consultation and pre-submission plan. After EPIC's planning application was approved, many residents questioned the local democratic process and, indeed, the national planning process. This may have strengthened over the last year or due to a combination of factors and may be exacerbated by the		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								ARUP review. GREEN BELT ASSESSMENT (ARUP for WECA) Thanks to the Green Belt Working Party drawn from professional expertise within Long Ashton and Dundry who have examined both the Strategic Green Belt Assessment interim report and the more fine-grained and detailed Stage 2 Green Belt Assessment report, the Parish Council would also like to know more and be able to understand more about the analysis by ARUP. Taking the ARUP assessment into account and matching it up to the Policies Map, there seems to be a series of contradictions. This gives rise to queries as to why some sites on the Policies Map have been included as Most Suitable, others identified as Less Sustainable; and why some parcels of land aren't included at all. As said above, for the majority of LAPC's residents, this may be baffling too. COMPLEXITY OF CONSULTATION Responding effectively to such a complex consultation is beyond the expertise of most parish councillors and money to spend on professional advice is hard to come by. However, this consultation will pave the way to a plan with consequences that will impact the parish until 2041 or beyond. The years to come will see dramatic changes in weather, biodiversity loss and much else including the political landscape that gives many people in the younger generations huge concern. GREEN BELT WORKING PARTY DOCUMENTS Luckily, as referred to above, LAPC has been able to draw on the considerable expertise shown within the Green Belt Working Party drawn from Long Ashton and Dundry whose existence came about after both Natalie Richards (Planning Policy Manager, NSC) and Cllr Annemieke Waite reached out to key residents. The Working Party has now submitted three documents and conclusions to NSC's consultation process that have been endorsed by LAPC. CONCLUSIONS LAPC would also like to reinforce the Green Belt Working Party's suggestion for a collaborative governance arrangement and Area Action Plan SPDs prepared by NSC or suitably qualified, independent and experienced planning consultants to set out key parameters and sustainable aspirations for any large-scale development in Long Ashton including, primarily, the Woodspring area. Many of these aspirations are already expressed in relevant NSC policies within the Local Plan documents but the danger is that if the developers lead with their own masterplan these parameters and aspirations will be lost. The Council would also like to point out the following concerns: 1. Road safety and transport problems are at breaking point in both the village and beyond. Providence Lane is often unsafe for pedestrians, cyclists and residents as is Yanley Lane and Wild Country Lane. The EPIC site, Bristol Airport Expansion, planning developments already agreed and those included in this consultation will exacerbate this but there seems to be no resolution in sight. Instead the word 'potential' is used far too often and this does not inspire confidence. 2. Pressure on Local Green Space is increasing and will increase exponentially – Ashton Court has an increasing number of public events such as Luminate, music festivals, the balloon festival plus an increasing number of cyclists, walkers and others. Leigh Woods, too, experiences additional problems of increasing road traffic and parking issues. 3. The Office for National Statistics details the financial benefits our current green spaces give in terms of cooling benefits and mopping up air pollution to the benefit of South Bristol. 4. To combat the increasing problems of climate change, biodiversity loss needs to be halted and reverse yet the Office for Environmental Protection and other data compiled for differing scientific sources shows biodiversity loss is increasing. The proposed developments in Long Ashton will exacerbate #2, #3, #4 yet there are solutions as proposed in the Green Belt Working Party's document labelled Appendix A: Environmental Impacts as already submitted to NSC so the Parish Council endorses these as well.			
62815873	E Beacon			No	Justified Consistent with national policy	Unsure	Unsure	SP7 Release of green belt land. The council has not demonstrated that it has explored other options. Where is the evidence that brownfield sites have been explored. There is no evidence of using minimum density standards (optimising developments in nearby towns) or working with neighbouring authorities to accommodate housing needs.	- A public meeting - A review of sites to ensure compliance with council policies. -An acknowledgemt to work within existing settlement boundaries -A review of how the A369 can handle extra traffic with acceptance that the train cannot really provide a solution when it will be permanently limited to 30 minute journeys with small carriages.		
62659937	Mike Bevens			No	Justified	Yes	No	I do not believe this meets the soundness test or is justified. The policy has not taken into account reasonable alternatives for the use of the green belt, which should only be used in exceptional circumstances. Specifically, there has been no report into alternative brownfield sites that could and should be considered first, prior to green belt use, to ensure the environment and biodiversity is not negatively affected, even if minor.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
27331553	Jeremy Blatchford				• Consistent with national policy	Unsure	Yes	There appears to be no attention paid to the Avon Forest, by whatever name now known. Green belt is strategically essential to secure domestic food production and air quality			
62850913	Ellie Britton			No	• Positively prepared • Effective • Consistent with national policy	Unsure	Unsure	There is only 7% left of Grade 1 agricultural green belt land in North Somerset, how can we afford to lose such a large amount of it in Backwell to housing? It won't just affect the county's food production, but the wildlife and villagers who, like my family and I, have spent decades enjoying it!			
21202337	A Bryant			No	• Justified	Unsure	Unsure	I disagree with the recommendation to remove the land north of Nailsea from the green belt. I don't think this is justified as the government's so called 'golden rules' are highly unlikely to ever be met. There is no way that 50% or more of the housing will be 'affordable', especially given the flooding issues on the site, which will reduce land available for development and increase costs for the developers. This will make the development far less profitable than a site with good drainage. If this is permitted, I predict the developer will start tearing up the site and then claim that they can't afford to provide that much affordable housing and we'll end up with 20% or less. Secondly, I can't see how building houses, roads and 'light industrial units' on green fields can possibly improve biodiversity and provide more green open spaces. And they won't improve infrastructure. This development will add further traffic to the existing pinch points at stone edge batch and through Wraxall village. It is the wrong side of Nailsea for the new link road to the A370 and it is not within easy walking distance of the train station. Yet you propose to actually extend green belt on land that IS near both the station and A370?!	Don't take land out of the green belt that can't realistically meet the government's 'golden rules' and where there are no exceptional circumstances to justify the trashing of our countryside. I include the land north of Nailsea as such a site that should remain green belt.		
1019201	Wrington Parish Council		Wrington Parish Council							Despite pressures, North Somerset has generally been efficient at protecting Green Belt for both the local and wider area south of Bristol. This has meant whilst having a fast- expanding airport, key road infrastructure such as the M5 and A38 and an expanding City of Bristol it has provided a landscape and protected nature that both residents and visitors enjoy and who gain health benefits. The additional North Somerset housing numbers and proposals to expand further Bristol Airport require the best possible strategic solutions. We are pleased to see new areas of Green Belt proposed. Open green space of all types are vital for the health and wellbeing of the population.	
58517153	Matt Burley			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	• Exceptional circumstances not proportionately evidenced: The Stage 2 Green Belt Assessment identifies Pill/Easton-in-Gordano parcels as making overall "weak" Green Belt contributions, but the NPPF requires that any release must promote sustainable patterns of development and follow a genuine brownfield-first approach. The Sustainability Appraisal recognises significant greenfield take and uncertain biodiversity/flood effects; reasonable urban/brownfield alternatives and larger, more serviced edge-of-Bristol options have not been exhausted in evidence provided. • Golden Rules are not deliverable: The Council's Viability Addendum indicates Pill/Easton-in-Gordano struggles to sustain even 25–35% affordable housing in most scenarios; yet SP7/LP4 require 50% on Green Belt releases. If 50% is not viable, the justification for Green Belt release fails. • Environmental safeguards incomplete: The HRA screens LP4 as likely to have significant effects, with a need for Recreation Management Strategies for the Severn Estuary and Avon Gorge Woodlands. These safeguards are not secured at plan stage. • Legal compliance and effectiveness at risk: No published Statements of Common Ground demonstrating agreed strategic mitigation for A369/M5 J19 or the rail scheme. National Highways has already requested cumulative modelling for J19; without agreed mitigation/funding, SP7 is not effective or legally robust.	• Delete Pill/Easton-in-Gordano Green Belt releases: Remove Lodway Farm, East of Gordano Services, Pill Green, Pill Road and Ham Green from SP7. • Require completed, proportionate evidence before any GB release: Publish the full Stage 2/ Stage 3 Green Belt assessments; brownfield/urban capacity and minimum density testing; and a clear "grey belt first" demonstration. • Secure deliverability dependencies up-front: No GB boundary change unless Statements of Common Ground (SoCGs) evidence agreed and funded strategic mitigation for A369/M5 J19 and rail integration; incorporate HRA recreation strategies text as recommended. • Make Golden Rules contingent and site-tested: Add a policy clause that GB release only proceeds where 50% affordable housing and required infrastructure are proven viable on each site (site-specific viability and net developable area plans). • Sequential flood approach embedded in SP7: No GB release in Pill/E-i-G without sequential/ exception testing and EA-endorsed strategies for Markham Brook and surface water management.		Pill_R19_Representation.pdf 2041_SP7_Response.pdf
62850369	Maureen Butterly			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	While SP7 accurately summarises national Green Belt purposes and the requirement for exceptional circumstances before altering boundaries, the Local Plan does not demonstrate that such exceptional circumstances exist for the significant release of Green Belt land at Pill and Easton-in-Gordano. The evidence is incomplete, inconsistent, or absent in several key respects. Therefore, SP7 is not sound, failing the tests of justification, effectiveness, and consistency with national policy, especially NPPF 2024 Section 13. 1. The Plan does not demonstrate that all reasonable non–Green Belt alternatives have been exhausted (NPPF test for exceptional circumstances) The justification asserts exceptional circumstances on the basis that North Somerset cannot meet its needs outside the Green Belt. However, the Plan does not provide a transparent analysis showing that the following reasonable alternatives have been fully explored: • Maximising brownfield redevelopment in Weston-super-Mare, Clevedon, Nailsea, and Portishead. • Higher-density development in town centres and around transport hubs. • Regeneration-led growth, which is strongly supported in the Plan's own	To make Policy SP7 and the proposed Green Belt boundary changes sound, the following modifications are required: 1. Provide a full, transparent assessment of all reasonable alternatives before relying on Green Belt release Green Belt release is only justified when all non–Green Belt options have been fully explored, as required by the NPPF. The Plan does not currently demonstrate this. Required modifications: • Publish the complete assessment of brownfield capacity, regeneration opportunities, and potential for increased densities in the towns and transport hubs. • Publish evidence demonstrating whether growth could be redistributed to Weston-super-Mare and		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								strategic priorities. • Reallocating development to more sustainable non-Green Belt locations (e.g. Weston-super-Mare – the least constrained and most sustainable settlement). • Cross-boundary solutions, which must be considered before Green Belt release under the Duty to Co-operate. Without clear evidence of a sequential, alternatives-first approach, the justification for Green Belt release does not meet the exceptional circumstances threshold required by national policy. 2. The claim that all released sites are in "the most sustainable locations" is not supported by evidence for Pill/E-in-G The justification states that all Green Belt release sites are "in the most sustainable locations on the edges of urban areas." This is factually incorrect for Pill/Easton-in-Gordano: • It is not an urban area. • It lacks a wide range of services and jobs. • It is heavily car-dependent with limited public transport. • It is affected by serious transport constraints (Junction 19). • Several sites lie close to ecologically sensitive areas (SAC, SSSI, wildlife corridors). Allocating large-scale development here contradicts SP1, SP2, SP3, SP6 and the NPPF's requirement to prioritise sustainable sites. The "most sustainable locations" criterion is therefore not met. 3. The Plan does not demonstrate that Green Belt release in Pill/E-in-G delivers the NPPF "Golden Rules" NPPF policy requires that development on released Green Belt land: • delivers high levels of affordable housing, • provides infrastructure in step with growth, and • includes publicly accessible green space and environmental improvements. But the evidence base indicates: • The viability addendum notes that delivering 50% affordable housing at the Pill/E-in-G sites is likely to be "challenging". • Required infrastructure – schools, healthcare, active travel routes, public transport upgrades – is not secured or fully costed. • Ecological mitigation for the SAC and SSSI is not clearly deliverable. Without the ability to meet the Golden Rules, Green Belt release cannot be justified. 4. SP7 states that Green Belt protects rural settlement identity — yet the proposed allocations undermine this purpose Pill and Easton-in-Gordano are rural settlements whose character and separation from other areas are central to the Green Belt's function. Allocating 1,100 dwellings in a compressed geographic area: • threatens the openness and landscape character, • erodes separation between settlements, • fundamentally alters the scale and identity of the village. This contradicts both SP7's policy intent and NPPF Green Belt purposes. 5. Flood risk and climate considerations were not adequately factored into the Green Belt boundary changes Some proposed sites around Pill and Easton-in-Gordano lie near: • Flood Zone 3 areas associated with Markham Brook, • tidal and fluvial flood-risk zones. Exceptional circumstances cannot be justified when safer alternative sites exist. 6. Duty to Co-operate evidence is unclear for Green Belt decisions affecting cross-boundary transport and ecological constraints Large-scale development at Pill/E-in-Gordano has clear cross-boundary implications (Bristol transport network, SAC, SSSI, highway impacts). Yet there is no clear documentation showing sustained engagement with: • National Highways, • Natural England, • neighbouring Bristol authorities, • the Environment Agency. This creates uncertainty about legal compliance and further weakens the justification for Green Belt release. Summary SP7 is not sound because: • Exceptional circumstances for Green Belt release at Pill/E-in-Gordano are not adequately demonstrated. • Reasonable alternatives have not been fully explored. • The sites are not among the most sustainable locations, contrary to the Plan's assertion. • The development does not meet NPPF Golden Rules requirements. • Infrastructure, transport, ecological and flood-risk constraints have not been resolved. • The release undermines Green Belt purposes relating to openness, settlement character, and preventing urban sprawl. For these reasons, the policy is neither justified, effective, nor consistent with national policy.	other urban areas before releasing Green Belt in rural villages. • Undertake a detailed alternatives comparison showing why each non–Green Belt option was rejected. • Reduce or remove Green Belt allocations – particularly at Pill/Easton-in-Gordano – unless exceptional circumstances are clearly demonstrated. 2. Re-evaluate the sustainability credentials of each Green Belt release site, with Pill/Easton-in-Gordano reassessed against objective criteria The Plan asserts that all sites released from the Green Belt are "in the most sustainable locations." The evidence does not support this for Pill/E-in-Gordano. Required modifications: • Undertake a fresh sustainability appraisal of the Pill/E-in-Gordano sites, assessing public transport, access to services, employment proximity, infrastructure constraints and environmental sensitivities. • Remove or reduce allocations where sustainability performance does not justify Green Belt release. • Update SP3 (Spatial Strategy) to reflect these changes. 3. Demonstrate that the NPPF "Golden Rules" for Green Belt release can realistically be delivered The Plan does not show that the proposed Pill/E-in-Gordano developments can meet core requirements such as: • high levels of affordable housing, • in-step delivery of essential infrastructure, • publicly accessible green spaces, • biodiversity enhancements. Required modifications: • Provide robust viability analysis showing that mandated affordable housing levels and infrastructure contributions can be delivered. • Identify funded and secured infrastructure delivery mechanisms for schools, healthcare, transport upgrades, active travel links and ecological mitigation. • Where Golden Rules cannot be met, reduce or remove Green Belt allocations. 4. Address ecological constraints before altering Green Belt boundaries Several proposed release sites fall within consultation zones for the North Somerset & Mendip Bats SAC, near the Severn Estuary SSSI, or within important wildlife corridors. Required modifications: • Publish site-specific ecological assessments (Habitats Regulations Assessment-level detail) before confirming boundary changes. • Identify deliverable mitigation measures with secured funding and responsible bodies. • Remove sites where acceptable ecological mitigation cannot be achieved. 5. Integrate detailed flood risk analysis into Green Belt decisions Sequential testing and climate-adjusted flood modelling must inform Green Belt release. This is not evident for sites around Pill/E-in-Gordano. Required modifications: • Publish sequential test outcomes for all Green Belt release sites near flood zones, including those affected by Markham Brook. • Remove or amend allocations where safer, lower-risk alternatives exist. • Include explicit policy wording requiring climate-resilient design and no increase in offsite flood risk. 6. Strengthen Duty to Co-operate evidence for Green Belt boundary changes Green Belt release at Pill/E-in-Gordano has clear cross-boundary implications (Bristol travel patterns, strategic roads, ecological networks). Required modifications: • Provide documented evidence of sustained engagement with National Highways, Natural England, the Environment Agency, and neighbouring authorities. • Demonstrate how their input shaped Green Belt boundary decisions. • Where cross-boundary concerns remain unresolved, reduce or remove affected allocations. 7. Clarify how releasing large areas of Green Belt aligns with SP6 (Villages) and SP1/SP2 (Sustainability and Climate) The Plan currently conflicts with its own policies by		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									directing major development to a rural Green Belt location. Required modifications: • Amend SP7 to include a requirement that Green Belt release must also comply with SP1 (sustainable development), SP2 (climate change), SP3 (spatial strategy), and SP6 (villages). • Reassess Pill/E-in-Gordano against these policies and reduce allocations where compliance cannot be demonstrated. 8. Apply a consistent methodology for determining which villages are “relatively sustainable” The Plan states that only larger, relatively sustainable villages should be considered for Green Belt release, but no transparent criteria are presented. Required modifications: • Publish criteria for assessing village sustainability. • Reassess all proposed Green Belt releases against these criteria. • Remove releases where evidence does not support the classification of “relatively sustainable.” Summary Modification For SP7 to be sound, the Council must: • demonstrate robust exceptional circumstances, • exhaust all reasonable non–Green Belt alternatives, • prove that Golden Rules can be met, • resolve ecological, transport and flood risks, • ensure internal consistency with other strategic policies, • provide full Duty to Co-operate evidence, • and reduce or remove Green Belt allocations—particularly in Pill/Easton-in-Gordano—where sustainability, infrastructure and environmental tests are not met. Without these modifications, SP7 fails the soundness tests of justification, effectiveness, and consistency with national policy.		
30921569	Lucy Byrne			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The justification for this is in Strategic Policy SP7 of the Local Plan. It is based on the Council’s assertion that it cannot meet its identified need for homes at sustainable locations outside the Green Belt and this amounts to’ exceptional circumstances’ under the terms of Section 13 of the National Planning Policy Framework 2024 (NPPF). However the Council has not shown that it has fully examined reasonable alternatives, such as maximising brownfield capacity, optimising land in towns and cities with higher-density developments (for example there are two sites in Portishead which could take more higher density housing) and working with neighbouring authorities to better accommodate housing needs in relation to existing areas of employment. Supporting evidence is weak, in some cases absent and incomplete. I therefore believe it is not possible to argue that the ‘exceptional circumstances’ justification is valid. Where land is removed from the Green Belt, development proposals must demonstrate how they meet the ‘Golden Rules’ as set out in the NPPF relating to the provision of affordable housing, infrastructure and publicly accessible green spaces. The affordable housing target is demonstrated however as almost all of the 1,100 dwellings proposed in and around Pill are on green belt this would mean over 500 would need to be affordable. To provide this number of affordable homes close to Bristol is clearly on paper a good thing. However the reality on the ground IN PILL! which is already struggling with a high proportion of residents who are underserved, on benefits, out of work, suffering with poor health and wellbeing (see summary of what pill residents want from Power to pill community development report attached) is that this approach would carry a high risk of creating ghetto communities sitting adjacent to more expensive housing that developers would argue would need to be built to hit their high profit margins and cover the costs of the affordable housing. These more expensive dwellings would no doubt be used by wealthy newcomers to the village, many of whom would treat this accommodation as a convenient way to live close to work, treating the village as a ‘dormitory town’ in the way that a large proportion of the residents of the St. Katherine’s estate are locally perceived to do. This added burden to the already over stretched voluntary sector in Pill would be an impossible mountain to climb, even with additional investments from section 106 money (of which in the plan the majority would seem to go towards high cost transport mitigations at J19 on the M5 and a new primary school) Additional evidence in North Somerset's own ‘additional sites viability addendum’ (a document in the evidence base) suggests that a target of 50% affordable housing may be ‘challenging’ for the proposed sites in existing Green Belt land around Pill and Easton-in-Gordano. There are other sites in North Somerset which could be considered for housing development, which are not mentioned in the Local Plan. There are areas of land owned by North Somerset that have not been proposed. Logic tells us that if 100% of the 3rd tier allocations went to the 5 sites around Pill (resulting in 1,100 dwellings) that this would mean a large number of other 3rd tier suggested sites must have been awarded ZERO allocation or less than 10%. Hundreds of rural communities in North Somerset are hugely underserved by public transport connections. Busses that only connect to	To re-consult with residents and properly consider reasonable alternatives, to make a plan that better serves ALL the residents of NSC.		What Does Pill Want.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Bristol once a week mean that residents in rural communities HAVE to own cars to get to work. By dispersing the housing allocations a little more evenly around the county rural communities will feel invested in for the future. Their children will be able to afford places to live locally, local primary schools will remain open and much needed rural bus services will continue to run. Following a strategy to over supply places like Pill with more dwellings than the existing communities can comfortably integrate and support massively underserves rural communities. It puts unnecessary strains on particular transport arteries eg. along the A369 and J19 of the M5. The back ground paper assessment for grey belt status is woefully inaccurate! It ignores the SSSI status of the foreshore, and other significant biodiversity markers and ancient woodland status'. It down plays the visual and amenity value of each area as it splits the land into 8 areas around the village and doesn't consider the impact of ALL 5 sites being built on to 100% capacity! Pill is geographically PHYSICALLY cut off from accessing green spaces due to the Avon to the north, the Port and the M5 to the west and the A369 to the south east and private land ownership without public access to the east. To build on all of the proposed sites around Pill would have a devastating impact on the health and wellbeing of residents. Not only due to the reduction in safely accessible green spaces, but also in the higher pollution levels due to increased car ownership and numbers of residents forced to live adjacent to the M5 and a heavily congested A369. To take quotes from the above text from North somerset in this consultation 'In doing so it will protect rural settlements maintaining their character and separate identities' This is 100% NOT the case in Pill! and to list all the sites SEPERATELY as if they are not all connected is deliberately misleading! 'Woodspring, south west of Bristol – 3,500 dwellings Land at Lodway Farm, Pill and Easton-in-Gordano – 160 dwellings Land east of Gordano Services, Pill and Easton-in-Gordano – 200 dwellings Pill Green, Easton-in-Gordano – 600 dwellings Land at Pill Road, Pill and Easton-in-Gordano – 100 dwellings Land at Ham Green, Pill and Easton-in-Gordano – 40 dwellings Tower Farm, Portishead – 400 dwellings Black Rock, Portishead – 100 dwellings Land north of Nailsea – 381 dwellings Land off Pound Lane, Nailsea – 100 dwellings Land East of Backwell – 889 dwellings Land north of Colliter's Way – 215 dwellings' The TOTAL FOR PILL IS 1,100! I therefore conclude that this Plan is not sound and does not demonstrate that the Council has complied with the Duty to Co-operate.

10208161	The Bristol Port Company		The Bristol Port Company	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	1. Overview The Bristol Port Company (BPC) is the statutory harbour authority and competent harbour authority for Bristol Port. Bristol Port comprises Avonmouth Docks and Royal Portbury Dock (RPD); RPD is within North Somerset Council's (NSC) administrative area. For over 20 years, NSC has failed to acknowledge or enable the requirement for RPD to grow and expand. The imperative for a change of policy and mindset, as evidenced below, could not be more compelling or coherent. Growth is the single unifying agenda of the UK Government, the West of England Mayoral Combined Authority (WEMCA) and NSC. The failure to release land within Shipway Farm from the Green Belt has blighted any financial benefit for NSC since the Port's privatisation in 1991. It will instantly deliver jobs, skills, investment and significant economic dividend, but not at the expense of the environment. On the contrary, it will support the renewable and low carbon sector and deliver environmental enhancements. Indeed, BPC's credentials of sympathetic, considerate and innovative development are often cited as an exemplar to other businesses both locally and nationally. BPC submits that, in respect of Policy SP7 (Green Belt), the North Somerset Local Plan 2041: Pre-submission Plan (Regulation 19) (the Local Plan) is not sound on the basis that it is not positively prepared, justified, effective, or consistent with national policy. Further, BPC does not consider that the Local Plan is legally compliant nor has it been prepared in accordance with the Duty to Cooperate. 2. The Local Plan is not positively prepared Bristol Port is one of the largest UK commercial ports. It is a multimodal transport hub providing import, export and transit facilities for a wide range of cargo, with links by sea, road and rail between national and international destinations.	BPC requests that Policy SP7 and the Policies Map are amended to release land within Shipway Farm from the Green Belt. The following wording should be added to Policy SP7: "Land at Royal Portbury Dock will be released from the Green Belt to meet the development needs of Bristol Port over the plan period."		Green Belt statement.pdf North Somerset Local Plan Pre-submission Plan - Representation form Part B - SP7.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								For Bristol Port, and RPD specifically, to continue to play a significant role in the local, regional and national economy, it is essential that Policy SP7, and the Local Plan more broadly, fully support this strategically important transport infrastructure asset and employment site by providing a positive policy framework that is designed to meet RPD's needs over the plan period and fully realise the economic benefits of the Port for North Somerset and beyond. Central to Bristol Port's development needs over the period of the Local Plan is a requirement to bring forward land at RPD to accommodate additional facilities for transit storage, which are a fundamental need for all ports. BPC has identified land known as 'Shipway Farm', which is located immediately to the west of RPD, as being the most appropriate option to meet this requirement. Shipway Farm is located within the Green Belt and it is essential, therefore, that land within this site released from the Green Belt in order to ensure that the Local Plan provides a positive policy framework to guide development related to the Port. The Executive Summary to the Green Belt and Grey Belt Summary Position Statement appended to this representation identifies the Shipway Farm site. Policy SP7 of the Local Plan concerns the Green Belt. BPC notes that whilst changes to Green Belt boundaries are proposed in some locations across the plan area, no such provision is made for a change to the Green Belt in the vicinity of RPD. BPC maintains its position that this is a serious deficiency which renders the Local Plan unsound. The National Planning Policy Framework (December 2024) (NPPF) (paragraph 145) sets out that Green Belt boundaries should only be amended in 'exceptional circumstances'. BPC submits that there are several 'exceptional circumstances' which justify the removal of land within Shipway Farm from the Green Belt; they include: 1. National policy support for ports infrastructure. 2. The economic importance of Bristol Port. 3. The need for additional transit storage capacity at RPD. 4. The lack of alternative sites to accommodate the Port's needs outwith the Green Belt. 5. The social, economic and environmental benefits of removing land within Shipway Farm from the Green Belt. Each 'exceptional circumstance' is considered in-turn in full detail in the attached response. Given the clear 'exceptional circumstances' outlined above, BPC is disappointed that Policy SP7 does not make any provision for meeting the established development needs of RPD over the plan period by removing land within Shipway Farm from the Green Belt. In not proactively meeting the development needs of RPD, it is considered that Policy SP7 falls considerably short of meeting national planning policy objectives which seek to deliver economic growth and additional port capacity (as detailed in respect of Exception Circumstance 1 above). It is also: • in conflict with the Local Plan's own stated strategic priorities to increase the number and range of job opportunities across the district and deliver essential new strategic transport infrastructure; • not aligned with Policy SP1 (Sustainable Development), which sets out that new development should (inter alia) "support the delivery of opportunities for economic growth and job creation at accessible locations"; • inconsistent with Policy SP10 (Transport), which details that the improvement of strategic transport facilities including RPD will be supported; and • not aligned with national, regional and local economic strategy. Grey belt Having established that 'exceptional circumstances' exist for the release of land within Shipway Farm from the Green Belt and that no alternatives sites, including on previously developed land, are available, the NPPF (at paragraph 148) directs plan makers to consider grey belt. Annex 2 of the NPPF defines grey belt as "land in the Green Belt comprising previously developed land and/or any other land that, in either case, does not strongly contribute to any of purposes (a), (b), or (d) in paragraph 143. 'Grey belt' excludes land where the application of the policies relating to the areas or assets in footnote 7 (other than Green Belt) would provide a strong reason for refusing or restricting development". The supporting text to Policy LP14 (Royal Portbury Dock) justifies the retention of the Green Belt in the vicinity of RPD on the basis that "The remaining Green Belt land located between the port estate and Portishead is considered extremely sensitive in preventing coalescence and checking unrestricted urban sprawl". This conclusion is based on the Stage 1 Strategic Green Belt Assessment (October 2025) (SGBA). The SGBA identifies large parcels of land for the purposes of the assessment. Shipway Farm is located within Parcel P-007. Parcel P-007 sits between RPD and Portishead and extends up to Portbury Wharf on the edge of the Severn Estuary to the north and into the Gordano Valley to the south. The assessment concludes that Parcel P-007 makes an overall strong contribution to the five purposes of the Green Belt established in the NPPF and identifies the parcel as being one of three broad parcels that are 'fundamentally important' areas of Green Belt. On this basis, the assessment concludes that Parcel P-007 should not be included in an 'area of search' for potential grey belt. BPC does not consider that the SGBA provides sufficiently detailed evidence			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								on grey belt matters to justify the retention of the Green Belt in the vicinity of RPD. A Green Belt and Grey Belt Summary Position Statement has been prepared by The Landmark Practice and its Executive Summary is appended to this representation (BPC would be happy to provide the full Position Statement to NSC upon request). It identifies a number of important shortcomings with respect to the SGBA which render it unsound for the purposes of identifying land within the grey belt. In particular, these shortcomings include a recognised need for a more granular assessment to determine the presence of grey belt within the strategic parcels adopted for the purposes of the SGBA. To remedy these shortcomings, and provide robust evidence to inform the Local Plan, the Green Belt and Grey Belt Summary Position Statement presents a finer grained assessment of land within Shipway Farm, following the NPPF and National Planning Practice Guidance (NPPG) and mirroring NSC's Stage 2 Green Belt Assessment methodology. This finer grained assessment concludes that: • land within Shipway Farm (as identified in the Summary Position Statement and shown in the Executive Summary) does not make a strong contribution to Green Belt purposes (a), (b) and (d); • there are no areas or assets of importance (as defined in footnote 7 of the NPPF, other than Green Belt) that would potentially provide a strong reason for refusing or restricting the commercial development of the site; • release of the land from the Green Belt would not 'fundamentally undermine' the five Green Belt purposes (taken together) of the remaining Green Belt when considered across the area of the Local Plan. The Summary Position Statement also identifies that alternative, clearly defined, defensible edges using physical features that are readily recognisable and likely to be permanent, are available to re-define the Green Belt boundary around Shipway Farm, in line with paragraph 149 of the NPPF. Furthermore, the assessment also identifies ways in which the impact of removing land within Shipway Farm from the Green Belt can be offset through improvements to the environmental quality and accessibility of remaining Green Belt land in the vicinity, in accordance with paragraph 151 of the NPPF. Overall, the finer grain assessment identifies that land within Shipway Farm is grey belt land with strategic potential for Green Belt release. Accordingly, it is BPC's position that land within Shipway Farm (as identified in the Summary Position Statement) is grey belt and should be released from the Green Belt for the 'exceptional circumstances' outlined above. Conclusion Paragraph 36(a) of the NPPF sets out that, for local plans to be positively prepared, they must provide "a strategy which, as a minimum, seeks to meet the area's objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development". By inadequately assessing Shipway Farm from a grey belt perspective and not removing land from the Green Belt to accommodate the needs of RPD over the plan period, the Local Plan does not provide a positive planning framework in respect of RPD and has not been prepared in accordance with paragraphs 85 to 87 and 111 of the NPPF. Overall, it is BPC's view that Policy SP7 has not, therefore, been positively prepared. 3. The Local Plan is not justified BPC considers that the approach adopted in Policy SP7 (of not removing land from the Green Belt to meet the future needs of RPD) does not represent an appropriate strategy for guiding future development at RPD, considering reasonable alternatives and available evidence. On this matter, BPC notes that the supporting text to Policy LP14 states: "The Replacement Local Plan and Core Strategy considered port expansion issues and land was removed from the Green Belt and safeguarded for future port use, subject to demonstrating need and other detailed requirements. Further opportunities have been reviewed but no further Green Belt amendment is proposed. The remaining Green Belt land located between the port estate and Portishead is considered extremely sensitive in preventing coalescence and checking unrestricted urban sprawl". The position taken in the Local Plan is not consistent with that indicated by NSC in previous iterations of the emerging Local Plan (prior to the publication of the Preferred Options consultation document): • The Local Plan Issues and Options Document (September 2018) stated: "The accessibility and growth of international and regional gateways is linked with economic growth and delivering an improved transport system will be key to unlocking that growth". • The Local Plan Issues and Options Document expressly identified RPD as a strategic employment location in North Somerset. • The Local Plan Issues and Options Document stated: "At the Port, the focus will be on ensuring the most efficient use of the existing port area, but also considering any opportunities to support business growth associated with the Port. The latter could include making allowances for additional land supply in and around Portishead to meet demand for high growth businesses including those linked to port activities. If there are specific additional needs associated with the Port, the Local Plan process will need to consider the land use implications and future aspirations of the Port over the plan			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								period." • The Local Plan Challenges and Choices Part 1: Challenges for the Future consultation document (July 2020) expressly stated that the Local Plan will need to "address the requirements of the Port and Airport considering their wider economic role, and the jobs and benefits they generate". NSC's position is surprising given that BPC expressly requested that land within Shipway Farm be removed from the Green Belt in its earlier responses to the Local Plan Preferred Options consultation document and the Autumn 2023 Pre-submission Local Plan (Regulation 19) consultation. NSC, in its pre-application advice to BPC (dated 17 September 2020, case reference 91484 20/P/0575/PR3) in relation to Shipway Farm, actually advised BPC that "[w]e would strongly encourage you to participate in the plan making process, where your proposals [to develop Shipway Farm] can be presented in the context of the long-term growth strategy for the wider Port estate allowing NSC to comprehensively work with you to ensure long-term growth ambitions are thoroughly examined". Despite this, NSC does not appear to have considered BPC's request, nor has it robustly considered any opportunities involving the future growth of RPD. This contrasts sharply with the approach taken by NSC in the former Replacement Local Plan where land (Court House Farm) was removed from the Green Belt and safeguarded for future port-related use. In coming to its conclusion that "Further opportunities have been reviewed but no further Green Belt amendment is proposed", it is unclear what opportunities NSC is alluding to. Whilst options relating to the release of Green Belt land and grey belt at broad locations across the plan area have been assessed by NSC, there is no detailed assessment of the Green Belt in the vicinity of RPD (see Section 2) nor is there any indication of opportunities relating specifically to RPD having been identified, considered and reviewed by NSC within the Local Plan, its supporting evidence (beyond the North Somerset Employment Land Evidence Report which actually identifies the potential requirement for the release of land from the Green Belt to facilitate the expansion of RPD) or the accompanying Sustainability Appraisal (SA) Report (October 2025) (see also Section 6 of this response). Indeed, NSC has not prepared an up-to-date evidence base on this matter despite engagement by BPC with senior officers and councillors on several occasions when the Port held meetings and site visits and on each occasion noted the Port's development needs. BPC expressed this same concern at the Preferred Options stage and, subsequently, at the Autumn 2023 Pre-submission Local Plan stage. It has seemingly gone unheard and BPC maintains that this is a significant deficiency which renders the plan 'unsound'. Further, as demonstrated in Section 2, the SGBA on which decisions relating to the extent of the Green Belt in the vicinity of RPD have been based, does not provide the necessary finer grained assessment to support the position taken in the Local Plan. BPC would direct NSC to the serious concerns expressed by Inspectors which led (in part) to the withdrawal of the West of England Joint Spatial Plan (November 2017) (JSP). The withdrawn JSP identified Bristol Port (alongside Bristol Airport) as a key strategic infrastructure employment location (Policy 4); however, further to representations received from BPC and other parties on the emerging plan, Inspectors, in their letter dated 11 September 2019, advised at paragraph 32: "However, whilst policy 4 states that the Port and Airport (along with the other key strategic employment locations) will ensure the continued economic growth of the West of England, there is no clear indication of how this should be achieved or what it means in terms of the allocation of land". At paragraph 33 of their letter, the Inspectors continued: "The Councils explained to us that it would be for the local plans to consider the case for the allocation of land (and, if necessary, the removal of land from the Green Belt) to provide for growth at the strategic employment locations. However, it is a stated aim of the JSP to identify the amount of employment land needed and the most appropriate spatial strategy for this growth. Moreover, the Port and Airport are of fundamental and strategic importance to the whole of the West of England and, consequently, any growth at them would also be likely to have implications for the wider employment strategy for the area. In this context we anticipate it very likely that we would ultimately conclude that it is not a justified and effective approach for the plan to delegate, to a subsequent local plan, decisions on the nature, scale and location of growth at the Port and Airport and the existence or otherwise of exceptional circumstances to remove land from the Green Belt in connection with this. Consequently, we envisage it very likely that we would conclude that, for the plan to be sound in respect of the Port and Airport strategic employment locations, decisions on these matters should be addressed in the JSP. It is also the case that a considerable amount of work would be likely to be necessary to prepare the evidence to make justified decisions about the approach to take". It is BPC's view that the Local Plan is similarly flawed. There is no clear evidence that NSC has robustly considered the case for the expansion of RPD, which is surprising given the accepted strategic importance of the Port, national policy and BPC's representations on the Local Plan to-date; it is also in clear contrast to the views expressed by NSC during the examination into the JSP where its representative stated (at the hearing on 09 July 2019) that "yes, there is potential which needs to be assessed at…the port…in terms of intensification and potentially expansion and you're right certainly in North Somerset {sic] the Royal Portbury Dock…that would involve expansion into			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								the Green Belt". Paragraph 36(b) of the NPPF sets out that, for local plans to be justified, they must provide "an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence". NSC has unequivocally failed to take into account all the evidence in determining the policy approach in respect of RPD, it has not undertaken a detailed assessment of Shipway Farm and has not identified and robustly assessed options relating to the future growth of the Port. In fact, the adopted policy approach does not reflect the findings of the evidence base which has identified a potential need to release land in the Green Belt to enable the growth of RPD. On this basis, BPC submits that Policy SP7 is not 'justified'. 4. The Local Plan is not effective As set out in Section 2 above, Policy SP7 does not provide a robust, positive framework for the delivery of development to meet the future needs of RPD over the plan period. In consequence, BPC considers that the Local Plan is not deliverable. NSC has not worked jointly with BPC to ensure that the Local Plan makes appropriate provision for the development needs of RPD over the plan period. Whilst a Consultation Statement in respect of the Autumn 2023 Pre-submission Local Plan consultation has been prepared, BPC cannot find any evidence of how NSC has considered and responded to BPC's representations. This is contrary to the NPPF which states (at paragraph 111) that: "Planning policies should…provide for any large scale transport facilities that need to be located in the area, and the infrastructure and wider development required to support their operation, expansion and contribution to the wider economy." It also runs contrary to paragraphs 86 and 87, which make clear that planning policies should meet anticipated sectoral needs over the plan period to support economic growth. Paragraph 36(c) of the NPPF sets out that, for local plans to be 'effective', they must be "deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground". In not removing land from the Green Belt to accommodate port-related development, the Local Plan fails to make appropriate provision for RPD. This undermines the deliverability of the plan and NSC has not adequately engaged with BPC, nor responded to their appeals for development land to satisfy the demands of this key strategic infrastructure asset. On this basis, BPC submits that Policy SP7 is not 'effective'. 5. The Local Plan is not consistent with national policy As set out in Section 2 (in respect of Exceptional Circumstance 1), the UK Government's economic policy and nationally planning policies identify the need to deliver infrastructure, including in respect of ports, to support its objectives for economic growth. In accordance with this policy, it is essential that the Local Plan positively responds to the development needs of RPD. In not identifying grey belt and releasing land from the Green Belt to meet the development needs of RPD over the plan period, Policy SP7 of the Local Plan fails to make such positive provision. In this regard, it is BPC's view that, for the reasons outlined in Sections 2 to 4 above, the Local Plan is not in accordance with NPPF policy relating to Green Belts, economic growth and transport or the Ports NPS. Additionally, the current Local Plan approach will likely constrain renewable and low carbon energy development at RPD and the wider Port estate at Avonmouth Dock which is contrary to the Government's climate change commitments and national, regional and local objectives for the green economy. Paragraph 36(d) of the NPPF sets out that, for local plans to be consistent with national policy, they must enable "the delivery of sustainable development in accordance with the policies in this Framework and other statements of national planning policy, where relevant". Based on the foregoing, BPC does not consider that the Local Plan is consistent with national policy relating to Green Belts, economic development, transport infrastructure or ports. 6. The Local Plan is not legally compliant SA undertaken as part of the local plan preparation process must satisfy the requirements of The Environmental Assessment of Plans and Programmes Regulations 2004 (the SEA Regulations). Schedule 2 of the SEA Regulations requires that Environmental Reports (and, therefore, SA Reports prepared in respect of local plans) include "An outline of the reasons for selecting the alternatives dealt with". Part 4 (Regulation 16), meanwhile, requires information is provided relating to (inter alia) "the reasons for choosing the plan or programme as adopted, in the light of the other reasonable alternatives dealt with". The requirements of the SEA Regulations are reflected in the NPPG. The NPPG (018 Reference ID: 11-018-20140306, March 2014) states that a local plan SA "needs to consider and compare all reasonable alternatives as the plan evolves, including the preferred approach, and assess these against the baseline environmental, economic and social characteristics of the area and the likely situation if the plan were not to be adopted". Consistent with case law on SA, the NPPG goes on to state that SA reports should (inter alia) "outline the reasons the alternatives were selected, and identify, describe and evaluate their likely significant effects on environmental, economic and social factors using the evidence base (employing the same level of detail for each alternative option)" and "provide conclusions on the reasons the rejected options are not being taken forward and the reasons for selecting the preferred approach in light of the alternatives". Contrary to the legal requirements of the SEA Regulations, NSC does not appear to have			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								adequately identified and assessed reasonable alternatives relating to the future growth of RPD. The SA Report dated October 2025 has assessed the effects of Policy SP7; however, there is no consideration of options to extend the Port beyond its current boundary, including options involving the release of land from the Green Belt. The lack of assessment of reasonable alternatives in this regard is despite: • the Issues and Options Document expressly acknowledging the need to review options to meet the development needs of RPD over the plan period; • three of the four spatial strategy options considered in the subsequent North Somerset Local Plan: Challenges and Choices Part 2 – Choices for the Future consultation document (November 2020) explicitly noting that they present an opportunity "to explore potential new employment provision" at RPD; • BPC having consistently identified in its representations that removal of land within Shipway Farm from the Green Belt is critical to meeting RPD's development needs over the plan period; • NSC's pre-application advice to BPC, as summarised in Section 3; • the comments made by NSC's own representative at the examination into the JSP, as summarised in Section 3; • concerns expressed by Inspectors in respect of the withdrawn JSP, as summarised in Section 3; • the change to national planning policy to introduce grey belt; • national, regional and local economic policy objectives, summarised in Section 2; and • the requirements of the NPPF and policy contained in the Ports NPS, summarised in Section 2. Overall, BPC does not consider that the Local Plan has been prepared in accordance with the SEA Regulations as it has failed to consider reasonable alternatives relating to RPD. On this basis, the Local Plan is not legally compliant. 7. The Local Plan does not comply with the Duty to Cooperate Paragraph 25 of the NPPF sets out that local planning authorities "should collaborate to identify the relevant strategic matters which they need to address in their plans. They should also engage with their local communities and relevant bodies including…infrastructure providers". Paragraph 20 details that strategic issues where co-operation might be appropriate include transport infrastructure. Whilst BPC is not a 'prescribed body' within the meaning given in The Town and Country Planning (Local Planning) (England) Regulations 2012, owing to the strategic importance of RPD, BPC is strongly of the view that it should be an 'additional body' for the purposes of the preparation of the Local Plan and the Duty to Cooperate. Presently, NSC has not sought to meaningfully and formally engage with RPD on this basis. This is despite: • the strategic importance of Bristol Port in transport and economic terms having been clearly established; • the Challenges for the Future consultation document expressly recognising the wider economic role of RPD; • Policy SP10 (Transport) of the Pre-submission Local Plan identifying RPD as a strategic transport facility; • the Government's economic and planning policies identifying the strategic importance of infrastructure provision; • the strategic importance of RPD having been recognised in local and regional economic strategy; • BPC's representations on the previous iterations of the Local Plan; • the findings of the North Somerset Employment Evidence Report and its recommendation that NSC, Bristol Port Ltd, WEMCA and UK Government work together proactively; and • NSC expressly encouraging BPC to work with it on matters relating to the long term development needs for RPD. For the reasons set out above, BPC does not consider that the Local Plan has been prepared in accordance with the Duty to Cooperate. PLEASE SEE ATTACHMENTS FOR FULL RESPONSE AND STATEMENT ON GREEN BELT			
58507393	Lindsey Churchill			No	• Justified • Effective • Consistent with national policy	No	No	As a Portishead resident and frequent visitor to Weston Big Wood I feel it is vital we do everything possible to protect this vulnerable woodland, it would appear being in the green belt is no longer protection for ancient woodland or SSSi's. By removing the green belt and allowing development you are opening the door to development which on these two sites would damage the biodiversity to an irreparable point where we lose forever this delicate and wonderful location. In section DP35 of your draft plan you states "development within or in proximity to a Site of Special Scientific Interest (SSSI) or National Nature Reserve that is likely to have a direct or indirect adverse effect on its biodiversity or geological interest will not normally be permitted". I truly believe the impact would be felt not only here in Weston Big Wood with lose of rare endangered flora and fauna but as a vital wildlife corridor the impact will extend in both directions, north to the Severn estuary and south to the Mendips and Somerset Levels, as such your statement in DP35 would stop any development on these sites, so these sites should be removed from the list and replaced with sites which will not adversely effect Weston Big Wood. I would also like to bring to your attention the below list, which your plan breaches. Section 40 of Natural Environment and Rural Communities Act 2006. Para 124 of the National Planning Policy Framework.	you should be looking into other area which would not impact the environment

								Planning policies and decisions should promote an effective use of land in meeting the need for homes and other uses, while safeguarding and improving the environment and ensuring safe and healthy living conditions. Strategic policies should set out a clear strategy for accommodating objectively assessed needs, in a way that makes as much use as possible of previously-developed or 'brownfield' land Para 188 of the National Planning Policy Framework. Plans should: distinguish between the hierarchy of international, national and locally designated sites; allocate land with the least environmental or amenity value, where consistent with other policies in this Framework, take a strategic approach to maintaining and enhancing networks of habitats and green infrastructure; and plan for the enhancement of natural capital at a catchment or landscape scale across local authority boundaries. Para 192 of the National Planning Policy Framework. To protect and enhance biodiversity and geodiversity, plans should: (a) Identify, map and safeguard components of local wildlife-rich habitats and wider ecological networks, including the hierarchy of international, national and locally designated sites of importance for biodiversity, wildlife corridors and stepping stones that connect them; and areas identified by national and local partnerships for habitat management, enhancement, restoration or creation and (b) promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity.

51734849	Andrew Clarke			No	' Justified ' Effective	Yes	Yes	SP5,SP7, LP3 are my primary concern. Very concerned about diversity crisis and that's not even covered by the policies or vision. I'm commenting on the North Somerset Pre-submission Plan 2041. I do so as an interested member of the public rather than in any professional capacity. The local plan is a very substantive piece of work, developed over several years, it's hard to do it justice in the short time I have, and without a professional background in planning. That said, North Somerset's residents are key stakeholders in any plans. I note that I'm only invited to comment as to whether the plan is sound, legally compliant and meets a duty to co-operate. I'm sure the Council's response to the new imposed housing targets meets these overarching tests, however I don't believe the targets are sound and that's what I'd like to challenge, before considering specific points of policy.			
31037185	Nigel Cooke			Yes		Yes	Yes				
51242689	Latimer Developments Limited	Arwel Evans - Lichfields	Latimer Developments Limited	No	' Justified ' Consistent with national policy	Yes	No	In relation to Policy SP7, we consider that the Plan has overlooked deliverable sites in lower order settlements, most notably land north of High Street, Claverham, which are suitable, sustainable and deliverable, in favour of large strategic sites, many of which are located within the Green Belt. Whilst the NPPF (paragraphs 145 and 146) states that Green Belt boundaries can be altered where there are exceptional circumstances, including in instances where an authority cannot meet its identified need for homes, we do not believe that NSC has fully considered suitable and deliverable housing sites outside of the greenbelt that could help NSC meet its housing need. It therefore cannot be said that the Plan is justified as it has not taken into account reasonable, alternative and deliverable sites. We acknowledge that North Somerset is highly constrained, including large areas of flooding and the Mendip Hills National Landscape, however, deliverable and unconstrained sites are readily available, this includes Clarion's site at land north of High Street, Claverham that can provide a 100% affordable development. The land north of High Street can be delivered without having any impact on hard constraints and because it is not within the green belt it should be given priority in line with the NPPF (para 147). NSC's Consultation Paper on additional sites for the Regulation 19 plan (February 2025) utilised the following sequential approach to identify additional sites: 1 Sites outside of the Green Belt, but well related to the towns. 2 Sites outside the Green Belt, but well related to the larger villages. 3 Sites in the Green Belt well related to the towns, including Bristol. 4 Sites in the Green Belt well located to the larger villages. 5 Elsewhere. The Council's own evidence base (Consultation paper on additional sites for the Regulation 19 Plan – February 2025) states that land north of North of High Street falls within category 2 with Yatton/Claverham being considered a 'larger more sustainable village' located outside of the Green Belt. Paragraph 147 of the NPPF states that local authorities 'should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development' before making changes to Green Belt boundaries. Despite this, the Council has prioritised Green Belt sites ahead of sustainable sites outside the Green Belt. This contradicts the NPPF and the Council's own agreed search sequence. This is contrary to the NPPF and for these reasons we consider that the plan is unsound as it is not consistent with national policy. The Council appears to have diverted from the sequential approach utilised for the additional sites Regulation 19 Consultation and against its established evidence base. The land north of High Street presents an opportunity to aid NSC in meeting its housing needs without the need to change green belt boundaries. It would seem that allocating this site would fall squarely into the NPPF wording of	The Council should examine fully all other reasonable options for meeting its identified need for development. There are other sites in sustainable locations such as the Clarion site in Claverham that area available and deliverable and are not within the Green Belt. These should be fully explored and allocated where suitable.		LF62683-01 Claverham - Vision Document (update) - Apr25 v6 (HR)(33693312.1).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								“examining fully all other reasonable options for meeting its identified need for development” as is required (para 147). Latimer considers that Policy SP7 is unsound because it is inconsistent with national policy (test of soundness 36.d). The Council has not examined fully all other reasonable options for meeting its identified need for development. There are other sites in sustainable locations such as the Clarion site in Claverham that area available and deliverable and are not within the Green Belt. These should be fully explored. As a result, the strategy is not justified (test of soundness 36.b).			
58629377	T Crane			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I do not consider the proposed release of Green-Belt land at Nailsea and Backwell to be sound, because the council has not demonstrated exceptional circumstances. There is no evidence that all non-Green-Belt options have been exhausted, nor that the sites are deliverable without causing serious harm. The proposal conflicts with DP 9 (flood risk) by allocating land that is susceptible to flooding. The plan fails the “justified” and “consistent with national policy” tests of soundness, as the NPPF requires that Green-Belt boundaries are altered only where exceptional circumstances are fully evidenced and that sustainable alternatives have been considered. Insufficient exploration of alternatives: The plan allocates around 3 500–3 707 dwellings to the Nailsea/Backwell strategic location, but there is little evidence that the council has exhausted other options such as redeveloping brownfield sites, intensifying existing settlements or dispersing growth more evenly across the district. There are empty shops and underused land in other towns (e.g. Portishead, Weston-super-Mare) and opportunities to increase densities on previously developed land. The presence of general housing need does not constitute an “exceptional circumstance” when alternatives exist. Environmental and flood-risk value of the Green Belt: The areas proposed for release around Nailsea (north of the town near Jacklands Lake and Moorend Spout) and Backwell include low-lying farmland and watercourses that act as functional floodplains. DP 9 (Flood risk) requires development to avoid flood-risk areas, yet the plan would sacrifice Green-Belt land that floods regularly. This not only contradicts DP 9 but also undermines the role of the Green Belt in safeguarding the countryside from encroachment and preserving natural assets. Releasing flood-prone Green-Belt land cannot be justified as “exceptional”; it would exacerbate flood risk and reduce the district’s resilience to climate change. Harm to settlement separation and landscape character: One purpose of the Bristol–Bath Green Belt is to prevent neighbouring towns from merging. The proposed housing at East Backwell would significantly extend Backwell eastwards towards Nailsea; combined with the large allocations on Nailsea’s edge, this risks coalescence and loss of the distinctive identity of both settlements. The plan’s own consultation statement records “strong opposition to large-scale development in Backwell” and notes that an extra 1 000 homes at East Backwell would more than double the village’s size. Such a transformation would erode the openness and permanence that the Green Belt is meant to protect. Lack of infrastructure to support Green-Belt release: Even if exceptional circumstances were demonstrated, SP 7 requires that any released land can accommodate sustainable development. The transport network serving Nailsea and Backwell is already constrained (single-lane bridges, narrow lanes and congested junctions), and there are no firm commitments to provide new road or rail capacity. Without infrastructure, development on Green-Belt land would be car-dependent and contrary to national and local policies to reduce carbon emissions and promote active travel. Precedent and proportionality: Releasing Green-Belt land for thousands of dwellings sets a powerful precedent for further encroachment. The scale of the proposed allocations (nearly 4 000 homes) is disproportionate to the size of Backwell and Nailsea and the ability of local services and the environment to absorb growth. The Council has not demonstrated why smaller-scale, infill or brownfield opportunities across multiple settlements cannot meet the housing requirement without sacrificing the Green Belt.			
31072289	Jeanne Craske			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Large housing allocations in Nailsea & Backwell amount to unjustified Green Belt release, contrary to SP7 and national policy.	Identify brownfield sites in more sustainable locations.		
9138657	Home Builders Federation		Home Builders Federation	No	‣ Justified ‣ Effective ‣ Consistent with national				Policy SP7 is not considered to be sound as it is not effective, justified or consistent with national policy Although HBF do not comment on sites, we so agree with the Council, and that there is justification for the releases of Green Belt land for development. Although HBF support the allocation		North Somerset 2nd Reg 19 Dec 25.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 					policy				of land within the Green Belt for housing, we object to this policy as additional sites within the Green Belt are needed. HBF believe that in light of the housing requirement of North Somerset needing to be higher, a full green belt review is required along with the further Green Belt releases. HBF believe the exceptional circumstances of the housing crisis and the need to fully meet the housing needs of the area justify additional Green Belt releases and further housing allocations. HBF request that this policy is amended to include additional sites for housing.		
51477249	Burrington Parish Council		Burrington PC	No	• Justified • Effective	Yes	Unsure	The Local Plan proposes to remove from the Green Belt land required by the airport as 'operational land' which is currently defined in the planning permission granted on appeal in 2022 that permits growth of the airport to accommodate up to 12 million passengers per annum (mppa). However, the airport adopted a new Masterplan in June 2025 to increase capacity from 12 to 15 mppa. A planning application is expected early in 2026. Will that Masterplan require a further release of land from the Green Belt to accommodate the operational requirements of the expansion to 15 mppa? If so, that should be clarified in the local plan.	The airport adopted a new Masterplan in June 2025 to increase capacity from 12 to 15 mppa. A planning application is expected early in 2026. Will that Masterplan require a further release of land from the Green Belt to accommodate the operational requirements of the expansion to 15 mppa? If so, that should be clarified in the local plan.		
32925633	Bath and North East Somerset Council		Bath and North East Somerset Council							The plan sets out to release 12 sites from the Green Belt to accommodate development. Of greatest relevance to B&NES, land at Woodspring, south west of Bristol (situated directly adjacent to the boundary with Bristol to the east and north west to the boundary with B&NES – capacity for 3,500 dwellings) and land at Colliter's Way (situated directly adjacent to the boundary with Bristol to the east and north west to the boundary of B&NES – capacity for 215 dwellings) are identified for removal from the Green Belt and allocation for development. Major residential development involving the provision of housing in the Green Belt will be subject to policy DP12 and should meet the 'Golden Rules' as set out in the NPPF, relating to affordable housing, necessary improvements to local or national infrastructure, and publicly accessible green spaces. The plan also sets out the removal of Green Belt land at Bristol Airport (see section above), plus an area of additional land proposed to be designated as Green Belt. A new area of Green Belt is proposed south of Nailsea and west of Backwell to maintain the separation of the settlements and protect the countryside in this area from encroachment. Given the Green Belt review and proposed changes to the Green Belt in the areas identified above B&NES would welcome ongoing dialogue and engagement on the approach to the Green Belt to ensure, as necessary, consistency of approach with work in the WECA area and through the B&NES Local Plan 2025-2043.	North Somerset Local Plan Reg 19 Consultation 2025 FINAL.pdf

31088129	Bloor Homes South West	Turley		No	• Positively prepared • Justified • Effective • Consistent with national policy		No	Policy SP7: Green Belt It is agreed that there are exceptional circumstances which justify the revision of the Green Belt boundary within North Somerset as part of the plan review. The fact that a review of the Green Belt has been undertaken is a positive approach for the plan to take. Land at Black Rock Policy SP7 confirms that land at Black Rock is one of the sites to be released from the Green Belt for residential development. The proposed removal of the Site from the Green Belt and allocation of residential development is supported, in principle. From reviewing the Policy Map and Schedule 1 of the emerging plan, it confirms the western parcel will remain within the green belt, to provide ecological mitigation associated with the eastern parcel. This aspect of the allocation requires further adjustment in our view in order to maximise the Site's potential as a sequentially preferable site against the Councils hierarchy, being on Grey Belt land adjoining a main town. Not only will this help to deliver additional homes in a sustainable location, it offers the potential to deliver additional ecological and education benefits through its sensitive development. When considering points we set out, our view remains that the entirety of the site (both eastern and western parcels) should be allocated for residential development and released from the green belt. For reasons we set out, we consider the site firmly falls to be considered as Grey Belt land and must be prioritised for development before other Green Belt locations. We consider entirety of the Site has grey belt status and should be released from the Green Belt. Indeed, the release of the entirety of the site would ensure the Green Belt boundary would be readily recognisable in line with paragraph 149 of the NPPF. There is no evidential basis within the	Regarding Black Rock, we consider the western parcel should not be retained in the Green Belt. It could accommodate further sensitive residential development. This would be alongside the incorporation of appropriate pedestrian and cycle links between the two parcels and with the provision of further green infrastructure within the eastern parcel and opportunities for education.		BLOA3050 - Portishead Reps - NS Local Plan Regulation 19 - Turley Updated (V2).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Council's Green Belt work for subdividing the parcel or retaining the western part within the Green Belt. Historic mapping and 1945 RAF aerial imagery demonstrate that the western fringe of Portishead was historically industrial and quarried in character, with the woodland adjacent to the western parcel representing post-war regeneration rather than ancient or semi-ancient woodland (see the Cultural & Heritage Report previously submitted with the site promotion materials). This historic context strengthens the grey⟡belt classification and confirms that ecological matters can appropriately be addressed through mitigation rather than by retaining part of the site within the Green Belt. We consider the western parcel could accommodate further sensitive residential development. This would be alongside the incorporation of appropriate pedestrian and cycle links between the two parcels and with the provision of further green infrastructure within the eastern parcel and opportunities for education. Indeed, the retention of the western parcel within the Green Belt (despite its clear grey belt status, in our view) will lead to a reduction in the overall capacity of the site to accommodate homes, when North Somerset is clearly having to draw on a significantly number of sites to meet its need – for those sites being take forward, dwelling numbers need to be maximised. Additional development can support overall viability and provide the basis for the delivery of further green infrastructure to the west. Therefore, we consider an opportunity for maximising development on this Site should be taken.			
30898817	Ciara Donegan-Davies			Yes		Yes	Yes				
30802721	Jerry Evans		Southpoint	No	• Consistent with national policy	Yes	Yes	This representation concerns the designation of Green Belt, as shown on the proposed Policies Map of an area to the southeast of the village of Pill. We do not consider the proposed changes to be sound because they are not consistent with national policy on the Green Belt. Specifically, although the area designated Green Belt has been reduced, this reduction appears arbitrary because some of the retained area does not serve any one of the specific five purposes of the Green Belt which are stated in paragraph 138 of the National Planning Policy Framework as follows: "a) to check the unrestricted sprawl of large built-up areas; b) to prevent neighbouring towns merging into one another; c) to assist in safeguarding the countryside from encroachment; d) to preserve the setting and special character of historic towns; and e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land." Proposed Policy LP6 (Extent of the Green Belt) page 55 of the North Somerset Local Plan 2039 Pre-submission Plan reads: "Adjustments will be made to existing settlement boundaries, where applicable, to correct inconsistencies and anomalies and ensure the robustness of the boundary". The proposed changes are inconsistent because there is no substantive difference between the gardens of numbers 38, 36 and 34 Ham Green and the garden to number 40 Ham Green. Therefore the proposed changes have failed to remove this anomaly. This argument was made in detail in a document submitted to the North Somerset Council Local Plan 2038: Preferred Options Consultation - March 2022. This document forms part of this new representation. Please see attached files	Please see attached files		GreenBeltComments3 (1)_Redacted.pdf GreenBeltComments (1)_Redacted.pdf
62620257	Louise Fletcher			No	• Justified	No	No	The plan proposes to build on green belt land, ancient woodland, wildlife corridor and land that regularly floods/is water logged (Portishead). There seems to be no provision for additional infrastructure to support the new dwellings. It would cause a massive increase in traffic, destroy wildlife habitats, create flooding of roads and change what makes Portishead a desirable place to live.	I read that the land by Portbury Hundreds was considered - it seems more suitable as it's brown site, close to main roads out of Portishead for commuters so reducing the traffic pressure through the town, close to proposed new train station, reducing traffic.		
63052097	Stephanie Fowler	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes		Our client is supportive of the Council's willingness to meaningfully review Green Belt release in general given its varying quality and the acute need for new homes, and of the general proposition of additional Green Belt release to achieve a sufficient supply of new homes in line with the national standard method and in the most sustainable locations. The proposed extension of the Green Belt around Nailsea and Backwell is, however, in our client's view unjustified. Our client would highlight that this policy seeks to extend this already sizeable swathe of the Bristol and Bath Green Belt around the western edges of Nailsea and Backwell, ostensibly 'to maintain the separation of Nailsea and Backwell and prevent further encroachment into the countryside'. This extension directly bounds our client's interests, extending to the South and East of Youngwood Lane adjacent. It is critically important that does not act as a constraint on site efficiency through any perceived 'outside-in' impacts on openness, in respect of which appeal precedent is mixed in any case.		R001v3_NSLP_Reg19_Fowler.Dec25.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									National policy makes clear that once established, Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified through the preparation or updating of plans. In this instance, the rationale given essentially reiterates the stated purposes of the Green Belt without clear justification for particular circumstances. As both Nailsea and Backwell are subject of site allocations that would enable a new, rationalised and appropriately landscaped outer edge of both settlements adjoining the land proposed for extension as Green Belt, this additional policy designation is considered excessive and, in practice, overly protective against a perceived threat that may not exist. We would therefore recommend that this aspect of the policy is omitted.		
62792161	Nempnett Thrubwell Parish Council		Nempnett Thrubwell Parish Council						The summary of the provided policies is as follows: Nempnett Thrubwell Parish Council expresses concerns about the release of Green Belt land at Bristol Airport and argues that the proposed compensatory areas do not adequately offset these losses. Felton Common's omission from the Local Plan is highlighted, with a call for explicit protection measures.		
39076833	University of Bristol	Alder King Planning Consultancy	University of Bristol	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The University of Bristol's view is that the Local Plan is unsound and not legally compliant with regard to the Woodspring strategic development allocation (Policy LP2). The soundness of the plan in this regard is set out below. Positively Prepared: In accordance with the NPPF, positively prepared is defined as: "providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development." The NPPF is clear that, in calculating housing need under the standard method, this figure is to be treated as a minimum. Therefore, should there be suitable sites available to deliver housing over the local plan period, these should be supported notwithstanding the Council's position that is has reached its requisite 'target' under the standard method. Moreover, owing to the Council's most recent Housing Delivery Test measurement, it is appropriate that a 20% buffer is applied for the first five-years of the plan, in accordance with the NPPF. While stated as a minimum figure, we consider the quantum of housing planned for under Policy SP8 to be negative and insufficient. A number of suitable sites promoted through the local plan process have been unduly discounted by the Council and we consider this to be the antithesis of the plan being positively prepared. One such site comprises the University of Bristol's land south of Long Ashton (HE20139). The site lies adjacent to the settlement boundary, sustainably located in the context of Long Ashton and Bristol, comprising grey belt land which could/should comfortably be brought forward for development in the new local plan. The Council's Spatial Strategy, Site Selection and Capacity Paper (October 2025) identifies Long Ashton as a Category A village, which represents settlements "considered to be relatively sustainable in their own right with a range of easily accessible services and facilities and good public transport links to towns". It is very notable that despite its acknowledged sustainability credentials, and acknowledgement that Green Belt land is required to be released, Long Ashton has all but been ignored for any growth of scale over the plan period. Two small sites are identified within the existing settlement boundary to deliver 42 dwellings. We consider this to be highly irregular for such a sustainable settlement to be consistently overlooked by the Council for accommodating any real growth and raise significant concerns with the Spatial Strategy under Policy SP3 in this context. Planning for a mere 42 homes in Long Ashton to 2041 is not considered to be a positively prepared spatial strategy approach. Additional housing sites which have been consistently promoted to the Council by the University, and consistently overlooked through the emerging local plan process include land to the west of Wyndhurst Road (adjoining the Category A village of Churchill settlement boundary) (site: HE20590) and the nearby land at Stock Lane Farm, Langford (previously developed land) (site: HE203031). The Council's 'Duty to Co-operate Statement of Compliance Regulation 19 Stage' (October 2025) sets out that Bristol City Council (BCC) have requested for neighbouring authorities, including North Somerset Council, to accommodate its unmet housing need. The Council's Duty to Co-operate statement is clear that "North Somerset does not have capacity to meet some	The Council's overarching spatial strategy, housing numbers and allocation sites identified should be comprehensively reviewed and revisited as it is clear that. This requires review of suitable residential allocation sites omitted from the draft plan which are, in the first instance outside the Green Belt, and then sites which are agreed to be Grey Belt. We contend that the following sites owned by the University of Bristol represent suitable, available and viable development sites which would positively support sustainable growth over the plan period, including in the early years, and should be allocated for development in the new local plan: • Land at Stock Lane Farm, Langford – HE203031 • Land to the West of Wyndhurst Farm – HE20590 • Land south of Long Ashton – HE20139 The University supports Draft Policy LP19, albeit we consider that minor modifications to the policy wording should be made to acknowledge the sustainability of the location. As present, we consider the policy wording to present an overly negative position of the area which would conflict with the aspirations of the policy to support University development in this area.		NSLP_Pre_Submission_Plan_Representation_Form_Part_B_UOB_SP7.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								of Bristol's needs at this time". We do not agree with that position. We highlight the importance of North Somerset's position in the context of South Gloucestershire Council also making no provision in its Draft Local Plan (plan submitted for examination) to contribute towards Bristol's unmet need. Similarly, through its emerging local plan process, B&NES Council has made no commitment to contributing to Bristol's unmet need owing to it being heavily constrained and having to deal with its own significant housing requirement uplift (approximately double that before the new 2024 standard method). In this regard, it is noted that on 21 November 2025, the inspectors published their final post-hearing advice following examination of the new Bristol Local Plan. The inspectors have requested modifications to the plan from BCC to set out an increased housing need and clearly set out what the level of unmet housing need is. An extract from the inspectors' post-hearing advice is provided below, which reinforces the position that no agreement is in place between BCC and any neighbouring authority, including North Somerset, to accommodate the unmet need. The inspectors set out that they: "acknowledge that there is insufficient capacity to meet the Council's objectively assessed housing need, as calculated by the standard method. Nevertheless, we do not consider the figure of 34,650 dwellings over the Plan period to be positively prepared or justified. Given the significant shortfall in meeting overall needs, and the current lack of agreement between Bristol and any neighbouring authorities to provide assistance, we consider it imperative that the Council seeks to maximise housing delivery. Inherent uncertainties in housing delivery in the longer period do not justify setting a housing requirement substantially below the overall housing capacity figure identified at submission. The evidence submitted since the end of the hearing sessions has not persuaded us that a lower figure is justified." Therefore, it stands that BCC's significant unmet housing need will continue to go unmet with none of its neighbouring authorities committing to assist. We find this problematic with particular regard to North Somerset as we consider there to be appropriate scope for a greater number of housing sites to be identified in the new Local Plan and delivered through the course of the plan period. The Council's own additional sites consultation in February/ March 2025 demonstrated that this was the case. The unmet need for Bristol is significant, cannot be ignored and requires to be addressed within the new North Somerset Local Plan. National guidance within the NPPF is clear that plans should ensure that, inter alia, unmet development needs from neighbouring areas are provided for to ensure effective strategic planning across local planning authority boundaries. It is clear from the Council's own work that North Somerset are in a strong position to be able to identify significant additional housing sites through allocations in the new local plan. This would positively overachieve the Council's housing need target and provide a meaningful contribution to the unmet need of BCC. Pursuant to the Council's emerging local plan process, it carried out consultation on potential additional housing sites to be included as draft allocations in the Reg 19 plan ('Consultation paper on additional sites for the Regulation 19 Plan', February 2025). That identified sites which the Council considered to be 'most suitable', such as that at Yanley Lane South West Bristol (HE20110) in addition to a raft of sites identified as having 'other potential', including sites now identified as draft allocations i.e. around Pill and Easton-in-Gordano and sites now omitted as draft allocations i.e. the University of Bristol's land south of Long Asthon (site: HE20139) and land to the west of Wyndhurst Road, Churchill (site: HE20590). The Council set out within that consultation that sites with 'other potential' comprised: "sites at the towns and larger, more sustainable villages consistent with the spatial strategy". [our emphasis] It stands that the Council rightfully identified suitable residential sites in sustainable locations pursuant to the 'other potential' sites in the 'Consultation paper on additional sites for the Regulation 19 Plan' (February 2025). However, such sites have been unduly disregarded at the Reg 19 plan stage and, in our view insofar as the University of Bristol's land south of Long Asthon (site: HE20139) and land to the west of Wyndhurst Road, Churchill (site: HE20590) wrongfully omitted. The latter lies outside the Green Belt and so should be preferred to the various sites proposed to be released from the Green Belt, as sought be national planning policy guidance. Site HE20139 and HE20590 are available now and deliverable to contribute towards significant positive growth within the plan period and should be supported for allocation. We consider that there is scope for additional appropriate housing sites to deliver over the plan period which are available, suitable and viable. In the Council's own words these disregarded sites are "consistent with the spatial strategy" and yet have been ignored. We contend this is the wrong approach, particularly in the context of the significant identified unmet need for Bristol. We therefore disagree with the Council's position that it cannot accommodate any of the unmet housing need from Bristol in North Somerset. In this context, the North Somerset Local Plan is not considered to be positively prepared, justified, effective or consistent with national policy.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Justified: In accordance with the NPPF, to be justified this requires: “an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence.” As set out above, it is considered that reasonable alternative sites for housing allocations have been unduly discounted by the Council, in conflict with the evidence base which should otherwise support its approach. Therefore, we do not consider that all draft housing allocations are sufficiently justified which goes to the soundness of the plan. Paragraph 148 of the NPPF is clear that where it is necessary to release Green Belt land for development, as is established and agreed in North Somerset, plans should give: “priority to previously developed land, then consider grey belt which is not previously developed, and then other Green Belt locations.” Prior to this, non Green Belt sites should be prioritised for allocation. In this regard, our client has consistently promoted its land south of Long Ashton and at Wyndhurst Farm (site: HE20590) and Stock Lane Farm (site: HE203031) at Churchill/Langford. However, the Council is not supporting a draft housing allocation on any of the three land parcels. We consider this to be contrary to NPPF paragraph 148 and is not a justified approach in plan making terms. Land at Stock Lane Farm, Langford – HE203031: The University’s land at Stock Lane Farm comprises previously developed land, outside of the Green Belt. This is sustainably located in relation to Langford and Churchill and has been promoted for development with capacity for up to 64 dwellings. There is a realistic prospect that houses could be delivered on the site within five years. The site was previously identified as a ‘less sustainable’ site, wrongfully in our view, as part of the Council’s Consultation paper on additional sites for the Regulation 19 Plan’ (February 2025). The consultation ran to March 2025 to which representations were submitted by the University in relation to all three of its land parcels referenced. In this regard, the site is well related to the settlement and existing facilities and services in Churchill and Langford. Adjacent to the west of the University’s land at Stock Lane Farm, planning permission ref: 23/P/0448/OUT was approved by the Council in March 2025 for a mixed-use development comprising up to 120 dwellings, new flexible employment, children’s day nursery and café, along with associated car parking, landscaping, tree works, public open space and local equipped area for play, drainage infrastructure, access improvements and connections to the existing footpath network. We note the Council’s also identified that land as a ‘less sustainable‘ site in the previous consultation, while granted it planning permission, and now identifying it as a draft allocation. This outlines the inconstancy in the Council’s approach to its housing sites in the new local plan. The presence of planning permission 23/P/0448/OUT only further supports development on the University’s land adjacent at Stock Lane Farm (HE203031) which critically comprises previously developed land. In this context, the University’s land is annotated red on the plan (see attachement) which comprises the adjacent approved development (and now draft allocation). The Council’s decision to omit the University’s land at Stock Lane farm is not justified in the context of Draft Policies SP3 and SP8. The site is sustainably located, outside of the Green Belt on previously developed land and adjacent to the Monaghan Mushrooms site (Draft Policy LP23), pursuant to planning permission 23/P/0448/OUT. Land to the West of Wyndhurst Farm – HE20590: The University’s land west of Wyndhurst Farm Stock Lane Farm comprises greenfield land adjacent to the settlement boundary of Churchill. This is sustainably located and has been promoted for development with capacity for up to 90 dwellings at a density of 29 dwellings per ha. There is a realistic prospect that houses could be delivered on the site within five years. The site was previously identified as a site with ‘other potential’ as part of the Council’s Consultation paper on additional sites for the Regulation 19 Plan’ (February 2025). The Council set out within that consultation that sites with ‘other potential’ comprised: “sites at the towns and larger, more sustainable villages consistent with the spatial strategy”. [our emphasis] The Council’s published ‘North Somerset Strategic Housing Land Availability Assessment Main Report’ (October 2025) further sets out that the site was considered by the Council to have “potential for further consideration”. Notwithstanding this, the Council’s published ‘Spatial strategy, site selection and capacity paper’ (October 2025) confirms that this site is not a proposed allocation in the draft Local Plan with commentary provided as follows: “The site is outside settlement boundary with a distinctive rural character providing a clearly defined separation between the area of Churchill centred			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								around Bristol Road and Pudding Pie Lane, and the smaller settlement of Lower Langford to the east. Due to the impact on the landscape and potential impact on heritage assets, it is not considered appropriate to take this site forward as a housing allocation." We do not agree with the Council's assessment of the site and its position to omit this as a draft allocation. We note that pre-application discussions with the Council resulted in the suggestion to promote the site at that time through the local plan which has been comprehensively done and so it is disappointing to see this be omitted as a draft allocation. This is particularly the case given the extent of the Council's housing need which should, in the first instance be addressed by appropriate sites such as this outside of the Green Belt before seeking to remove land from the Green Belt. Development on the site would comfortably assimilate with the surrounding built form, providing sustainable development. It is notable that planning permission (ref: 22/P/2908/OUT) was approved in November 2024 for nine dwellings adjacent to the south of the site which only provides further support for development in this location. Different development options have been considered which would address all material considerations for the site, which include a scheme for 24 units and a scheme for up to 90 units in this regard, as illustrated below. The site is wholly sustainable with any associated impacts of development more than capable of being addressed with appropriate mitigation. In this regard, the Council's decision to omit the University's land is not justified in the context of Draft Policies SP3 and SP8. Land south of Long Ashton – HE20139: The University's land south of Long Ashton comprises land within the Green Belt, adjacent to the settlement boundary of Long Ashton. This is sustainably located and has been consistently promoted for a number of years to the emerging local plan, and previous WECA joint spatial plans for development with capacity for up to 1,500 dwellings. The site was previously identified as a site with 'other potential' as part of the Council's Consultation paper on additional sites for the Regulation 19 Plan' (February 2025). The Council's published 'North Somerset Strategic Housing Land Availability Assessment Main Report' (October 2025) further identifies that the site was considered by the Council to have "potential for further consideration". Notwithstanding this, the Council's published 'Spatial strategy, site selection and capacity paper' (October 2025) confirms that this site is not a proposed allocation in the draft Local Plan with commentary provided as follows: "Site not consistent with the spatial strategy as it is detached from the existing built-up area of Long Ashton." We do not agree with the Council's assessment of the site and its position to omit this as a draft allocation. It is clear that the site should accord with an appropriate spatial strategy which directs growth to the most sustainable locations. Therefore, the Council is not following this by omitting the University's land as an allocation. The site is well related to Long Ashton in addition to the city of Bristol. It appears that the Council have unduly set preference to directing growth to the neighbouring Yanley Lane/Woodspring site (HE20110) (draft allocation for 3,500 dwellings under Policy LP2) at an early stage of the plan making process. This position has not shifted even as the evidence base has been developed which indicates to the contrary. Attention is turned to the Council's Sustainability Appraisal Report (October 2025). This sets out the findings of the assessment of potential allocation sites against the sustainability appraisal objectives. A summary is provided (see attached document) with comparison of our client's land south of Long Ashton, which has been discounted by the Council and the Yanley Lane South West Bristol land, which is proposed to be allocated for development by the Council in the Local Plan. This comparison is provided owing to the proximity and context of both sites, and similarity with regard to scope to provide strategic growth. This sets out the similarities in the Council's assessment of both sites which, when compared, identifies fewer negative effects of development on our client's land than that identified for allocation by the Council at Yanley Lane. The sustainability credentials of our client's land are clear and development of this land should be supported. The Council's Spatial Strategy, Site Selection and Capacity Paper (October 2025) provides commentary on the potential allocation sites. For our client's land south of Long Ashton (HE20139) this states that the site is not proposed for allocation and that the: "Site not consistent with the spatial strategy as it is detached from the existing built-up area of Long Ashton". Whereas for the Yanley Lane site (HE20110), this states that the site is proposed for allocation and that the: "Site [was] previously identified (in smaller form) in Regulation 18 plan".			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The fact that the Yanley Lane/Woodspring site was preferred by the Council at early stages of the plan, in advance of the supporting evidence base work being carried out, is not sufficient justification for it to be allocated. This is required to be justified and supported by the evidence base, which we do not consider it to be, in the context of the University's land south of Long Ashton. The Council's approach contradicts NPPF paragraph 148 in identifies sites to be removed from the Green Belt for development. The Council's 'Stage 2 Green Belt Assessment' (October 2025) identifies the land south of Long Ashton to make an overall weak contribution to the purposes of the Green Belt. Whereas, the Yanley Lane/Woodspring site is determined to make a greater contribution, set at 'moderate' to the Green Belt purposes. This comparison is provided (see attached document), pursuant to the Council's Stage 2 Green Belt Assessment. In Green Belt terms, it is clear that the University's land south of Long Ashton makes less off a contribution to the Green Belt purposes than the Council's proposed allocation at Yanley Lane/Woodspring. Moreover, our client's land would wholly support sustainable patterns of development in the context of Long Asthon and Bristol, in accordance with NPPF paragraph 148. Further to this, as can be seen in the Green Belt assessment, the University's land makes a weak contribution to Green Belt purposes A, B and D. There are no relevant footnote 7 assets that would provide a strong reason for refusing or restricting development on the land. Therefore, this can be considered Grey Belt, subject to the specifics of the development proposal. The Council's Stage 2 Green Belt assessment agrees with this position however the Pre-Submission (Reg 19) version of the plan still determines not to allocate the land for development which we consider to not be justified. The NPPF is clear that Grey Belt land should be supported for directing development in new local plans (NPPF paragraph 148). In this context with the omission of our client's land for allocation, we dispute the Council's claim at page 30 of the Pre-Submission Plan (Reg 19) that: "A sequential approach to Green Belt release has been taken prioritising previously developed land, followed by grey belt sites and then other Green Belt locations". The omission of the University's land south of Long Ashton seemingly goes against the supporting evidence base and therefore we do not consider the approach to be justified, with particular regard to Draft Policies SP3, SP7, SP8 and LP2. The Council's overall spatial strategy and policies/allocations to direct housing growth are required to be informed by the evidence base. Effective: In accordance with the NPPF, to be effective means to be: "deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground." As set out above, where we consider the plan to not have been positively prepared, the Council's 'Duty to Co-operate Statement of Compliance Regulation 19 Stage' (October 2025) sets out that BCC have requested for neighbouring authorities, including North Somerset Council, to accommodate its unmet housing need. The Council's Duty to Co-operate statement is clear that "North Somerset does not have capacity to meet some of Bristol's needs at this time". We do not agree with that position on account of suitable sites being omitted for development allocations, particularly where the Council has previously acknowledged the sites to have 'other potential' which, in the Council's words are "sites at the towns and larger, more sustainable villages consistent with the spatial strategy". This is particularly relevant to the University's land south of Long Ashton and at Stock Lane Farm and Wyndhurst Farm in Churchill/Langford which comprise either previously developed land outside the Green Belt, land outside the Green Belt adjacent to the Category A village settlement boundary for Churchill, or Grey Belt land adjacent to the Category A village settlement boundary for Long Ashton. While the Council's housing figure over the plan period (Draft Policy SP8) is prescribes as a minimum, this is a negative approach when considering that additional sites are readily available to deliver above this figure, and should be set out as such in policy. This strongly supports our position that North Somerset is fully capable of accommodating additional growth, thereby contributing towards the unmet need from BCC. However, the Council is unduly deciding not to do this – this is not effective plan making. Moreover, the NPPF is clear that planning policies should identify a supply of specific, deliverable sites for five years following the intended date of adoption, with an appropriate buffer. It is likely that some of the larger strategic development/urban extension areas identified for allocation in the plan will not begin to deliver homes within the first five years and so this means that greater flexibility and contingency is required to be built in to ensure housing delivery is forthcoming in the early years of the plan to meet the minimum requirements. Ensuring early delivery of housing early in the plan period is critical. Consistent with National Policy: In accordance with the NPPF, consistency with national policy should be adhered to:			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								"enabling the delivery of sustainable development in accordance with the policies in this Framework and other statements of national planning policy, where relevant." For the reasons set out within these representations, it is considered that the Council's Reg 19 Pre-Submission Plan is not consistent with national policy with particular regard to the guidance in the NPPF relating to failure under the duty corporate and the approach to accommodate none of BCC's identified unmet housing need. The plan inadequately makes provision for insufficient housing in this context which is not justified owing to the evidence base supporting identification of additional land which could positively support housing growth over the plan period. Moreover, we consider the Council's approach to identifying the draft housing allocation sites is flawed and inconsistent with national policy in overlooking suitable sustainable previously developed land and greenfield sites in the first instance ahead of Green Belt sites; and subsequently overlooking suitable sustainable Grey Belt sites which should be prioritised for development ahead of the remainder of the Green Belt. Conclusions: For the reasons set out above, we consider the plan to be unsound in its current form. Ultimately, the primary reason the plan is not considered to be sound is owing to the approach that the evidence base has followed the Council's overall strategy; rather than the other way around. The evidence base should directly support the approach laid out in the plan and this is not the case. Notwithstanding this position, the University provides support for Draft Policy LP19 for the 'University of Bristol site in Langford' allocation. We welcome the recognition this policy provides for the significant educational and employment benefits made by the University of Bristol's campus in Langford to the local, and wider, area. The University of Bristol support the policy aims of LP19 which recognise the importance of the facility and support the new development opportunities that will enable the university to grow and accommodate necessary expansion in terms of student numbers and staff employment. We consider that Draft Policy LP19 in isolation is sound as this does not relate to the outstanding wider concerns raised which relate to housing in terms of housing growth quantum and spatial approach. Minor modifications are suggested to the wording of Draft Policy LP19, in so far as we consider this to present a negative picture of the existing sustainability credentials of the site. For users of the campus not based locally, this is readily accessible by non-car modes with regular bus services available. This includes the U2 service which the University provides free passes to students of the veterinary school to travel. Therefore, while this draft policy is strongly supported, we would support minor wording changes to the policy which acknowledge its sustainability. Further detail is hereby provided below and appended in relation to the University of Bristol's land at Stock Lane farm and Wyndhurst Farm in Churchill/Langford and land south of Long Ashton. Development on this land, with support from residential allocations should be provided in a new sound North Somerset Local Plan. Land at Stock Lane Farm, Langford – HE203031: Availability: Site HE203031 is in single ownership by the University of Bristol. The land has been identified as surplus to requirements, having previously been used in association with the University's Langford Veterinary Campus for research and academic studies. It is readily available now, able to make a meaningful contribution to the Council's five-year land supply. Suitability: Site HE203031 offers a suitable location for development of housing. There are no development constraints that would prevent allocation of the site for its early development for housing. The site is well related to a 'Category A' village (most sustainable) and so its allocation fits comfortably into the Council's emerging spatial strategy. The site is accessible by a choice of means of transport to local facilities, including employment opportunities, schools, shops and other services. 4 The site, comprising previously developed land, forms part of the existing built form along Stock Lane and is subject to no designations/constraints that would restrict redevelopment of the site for housing. Likely Economic Viability: There are no known extra-over costs associated with the development of this site nor any issues with utilities which would mean that it would be economically unviable. There is a realistic prospect that houses could be delivered on the site within five years. 4.7 The site has capacity for up to 64 dwellings, subject to detailed design and is available, suitable and economically viable. It should be allocated in the local plan to assist North Somerset providing a sufficient supply and mix of sites to meet their minimum required housing need.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Land to the West of Wyndhurst Farm – HE20590: Availability: Site HE20590 is in single ownership by the University of Bristol. The land has been identified as surplus to requirements for some years. It is readily available now, able to make a meaningful contribution to the Council's five-year land supply. The site has consistently been promoted for allocation through the local plan process following the advice of the Council during a formal preapplication submission in 2020. Suitability: Site HE20950 offers a suitable location for development of housing. There are no development constraints that would prevent allocation of Site HE20590 for its early development for housing. The site lies adjoining a 'Category A' village (most sustainable) and so its allocation fits comfortably into the Council's emerging spatial strategy. The site is accessible by a choice of means of transport to local facilities, including employment opportunities, schools, shops and other services. The site lies abutting the settlement boundary of Churchill as proposed in the emerging local plan. It has no landscape, heritage or other designation. It is in Flood Zone 1 (low risk) and grade 3 agricultural land. Likely Economic Viability: There are no known extra-over costs associated with the development of this site nor any issues with utilities which would mean that it would be economically unviable. There is a realistic prospect that houses could be delivered on the site within five years. The site has capacity for circa for 90dwellings at a density of 29dwellings per hectare. An example of how the site might be developed for housing is provided below. Site HE20590 is available, suitable and economically viable and should be allocated in the local plan to assist North Somerset providing a sufficient supply and mix of sites to meet their minimum required housing need. Land south of Long Ashton – HE20139: Availability: The site is in single ownership by the University of Bristol. The land has been identified as surplus to requirements for some years. It is readily available now, able to make a significant contribution to the Council's housing need over the plan period. The site would form a natural extension to Long Asthon being contiguous with the existing settlement boundary of to the north and is physically contained between the A370 to the east/south and Wild Country Lane to the west. Allocation of the site for development, and its release from the Green Belt, is supported by NPPF paragraph 148 in that growth here will promote a sustainable pattern of development on Grey Belt land. This is a requirement of the NPPF. Notably, significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes as is the case for this site. Moreover, releasing land from the Green Belt for development are required to ensure that, inter alia, sustainable transport modes are prioritised, safe and suitable access can be achieved and any significant impacts from the development on the transport network, or on highway safety, can be cost effectively mitigated to an acceptable degree through a vison-led approach. The University's land south of Long Ashton fulfils all criteria with its strong relationship with the existing Long Ashton settlement and being in close proximity, and well connected to, Bristol. Suitability: The site offers a suitable location for development of housing on Grey Belt land. There are no development constraints that would prevent allocation of Site HE20139 for its development for housing. This conclusion is informed by a suite of past technical information on the site. The site lies adjoining a 'Category A' village (most sustainable) and so its allocation fits comfortably into the Council's stated spatial strategy. The site is accessible by a choice of means of transport to local facilities, including employment opportunities, schools, shops and other services. Likely Economic Viability: There are no known extra-over costs associated with the development of this site nor any issues with utilities which would mean that it would be economically unviable. There is a realistic prospect that houses could be delivered on the site over the plan period. The site is available, suitable and economically viable and should be allocated in the local plan to assist North Somerset providing a sufficient supply and mix of sites to meet their minimum required housing need. The proposal on the site is informed by the substantial of technical work which has been carried out to date. Key facets of a future development of this site could include: • Up to 1,500 dwellings, including a mix of tenures and affordable housing; • Potential to include a mix of non-residential uses;			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								• New access onto the A370 • Cycle routes and public footpaths; • Green infrastructure, including public open space; • Biodiversity Net Gain. A plan demonstrating how development could be achieved on the site is provided in the attached document.			
39076833	University of Bristol	Alder King Planning Consultancy	University of Bristol	No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	No	No	The University of Bristol's view is that the Local Plan is unsound and not legally compliant with regard to the Woodspring strategic development allocation (Policy LP2). The soundness of the plan in this regard is set out below. Positively Prepared: In accordance with the NPPF, positively prepared is defined as: "providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development." The NPPF is clear that, in calculating housing need under the standard method, this figure is to be treated as a minimum. Therefore, should there be suitable sites available to deliver housing over the local plan period, these should be supported notwithstanding the Council's position that is has reached its requisite 'target' under the standard method. Moreover, owing to the Council's most recent Housing Delivery Test measurement, it is appropriate that a 20% buffer is applied for the first five-years of the plan, in accordance with the NPPF. While stated as a minimum figure, we consider the quantum of housing planned for under Policy SP8 to be negative and insufficient. A number of suitable sites promoted through the local plan process have been unduly discounted by the Council and we consider this to be the antithesis of the plan being positively prepared. One such site comprises the University of Bristol's land south of Long Ashton (HE20139). The site lies adjacent to the settlement boundary, sustainably located in the context of Long Ashton and Bristol, comprising grey belt land which could/should comfortably be brought forward for development in the new local plan. The Council's Spatial Strategy, Site Selection and Capacity Paper (October 2025) identifies Long Ashton as a Category A village, which represents settlements "considered to be relatively sustainable in their own right with a range of easily accessible services and facilities and good public transport links to towns". It is very notable that despite its acknowledged sustainability credentials, and acknowledgement that Green Belt land is required to be released, Long Ashton has all but been ignored for any growth of scale over the plan period. Two small sites are identified within the existing settlement boundary to deliver 42 dwellings. We consider this to be highly irregular for such a sustainable settlement to be consistently overlooked by the Council for accommodating any real growth and raise significant concerns with the Spatial Strategy under Policy SP3 in this context. Planning for a mere 42 homes in Long Ashton to 2041 is not considered to be a positively prepared spatial strategy approach. Additional housing sites which have been consistently promoted to the Council by the University, and consistently overlooked through the emerging local plan process include land to the west of Wyndhurst Road (adjoining the Category A village of Churchill settlement boundary) (site: HE20590) and the nearby land at Stock Lane Farm, Langford (previously developed land) (site: HE203031). The Council's 'Duty to Co-operate Statement of Compliance Regulation 19 Stage' (October 2025) sets out that Bristol City Council (BCC) have requested for neighbouring authorities, including North Somerset Council, to accommodate its unmet housing need. The Council's Duty to Co-operate statement is clear that "North Somerset does not have capacity to meet some of Bristol's needs at this time". We do not agree with that position. We highlight the importance of North Somerset's position in the context of South Gloucestershire Council also making no provision in its Draft Local Plan (plan submitted for examination) to contribute towards Bristol's unmet need. Similarly, through its emerging local plan process, B&NES Council has made no commitment to contributing to Bristol's unmet need owing to it being heavily constrained and having to deal with its own significant housing requirement uplift (approximately double that before the new 2024 standard method). In this regard, it is noted that on 21 November 2025, the inspectors published their final post-hearing advice following examination of the new Bristol Local Plan. The inspectors have requested modifications to the plan from BCC to set out an increased housing need and clearly set out what the level of unmet housing need is. An extract from the inspectors' post-hearing advice is provided below, which reinforces the position that no agreement is in place between BCC and any neighbouring authority, including North Somerset, to accommodate the unmet need. The inspectors set out that they:	The Council's overarching spatial strategy, housing numbers and allocation sites identified should be comprehensively reviewed and revisited as it is clear that. This requires review of suitable residential allocation sites omitted from the draft plan which are, in the first instance outside the Green Belt, and then sites which are agreed to be Grey Belt. We contend that the following sites owned by the University of Bristol represent suitable, available and viable development sites which would positively support sustainable growth over the plan period, including in the early years, and should be allocated for development in the new local plan: • Land at Stock Lane Farm, Langford – HE203031 • Land to the West of Wyndhurst Farm – HE20590 • Land south of Long Ashton – HE20139 The University supports Draft Policy LP19, albeit we consider that minor modifications to the policy wording should be made to acknowledge the sustainability of the location. As present, we consider the policy wording to present an overly negative position of the area which would conflict with the aspirations of the policy to support University development in this area.		NSLP_Pre_Submission_Plan_Representation_Form_Part_B_UOB_SP7.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								“acknowledge that there is insufficient capacity to meet the Council’s objectively assessed housing need, as calculated by the standard method. Nevertheless, we do not consider the figure of 34,650 dwellings over the Plan period to be positively prepared or justified. Given the significant shortfall in meeting overall needs, and the current lack of agreement between Bristol and any neighbouring authorities to provide assistance, we consider it imperative that the Council seeks to maximise housing delivery. Inherent uncertainties in housing delivery in the longer period do not justify setting a housing requirement substantially below the overall housing capacity figure identified at submission. The evidence submitted since the end of the hearing sessions has not persuaded us that a lower figure is justified.” Therefore, it stands that BCC’s significant unmet housing need will continue to go unmet with none of its neighbouring authorities committing to assist. We find this problematic with particular regard to North Somerset as we consider there to be appropriate scope for a greater number of housing sites to be identified in the new Local Plan and delivered through the course of the plan period. The Council’s own additional sites consultation in February/ March 2025 demonstrated that this was the case. The unmet need for Bristol is significant, cannot be ignored and requires to be addressed within the new North Somerset Local Plan. National guidance within the NPPF is clear that plans should ensure that, inter alia, unmet development needs from neighbouring areas are provided for to ensure effective strategic planning across local planning authority boundaries. It is clear from the Council’s own work that North Somerset are in a strong position to be able to identify significant additional housing sites through allocations in the new local plan. This would positively overachieve the Council’s housing need target and provide a meaningful contribution to the unmet need of BCC. Pursuant to the Council’s emerging local plan process, it carried out consultation on potential additional housing sites to be included as draft allocations in the Reg 19 plan (‘Consultation paper on additional sites for the Regulation 19 Plan’, February 2025). That identified sites which the Council considered to be ‘most suitable’, such as that at Yanley Lane South West Bristol (HE20110) in addition to a raft of sites identified as having ‘other potential’, including sites now identified as draft allocations i.e. around Pill and Easton-in-Gordano and sites now omitted as draft allocations i.e. the University of Bristol’s land south of Long Asthon (site: HE20139) and land to the west of Wyndhurst Road, Churchill (site: HE20590). The Council set out within that consultation that sites with ‘other potential’ comprised: “sites at the towns and larger, more sustainable villages consistent with the spatial strategy”. [our emphasis] It stands that the Council rightfully identified suitable residential sites in sustainable locations pursuant to the ‘other potential’ sites in the ‘Consultation paper on additional sites for the Regulation 19 Plan’ (February 2025). However, such sites have been unduly disregarded at the Reg 19 plan stage and, in our view insofar as the University of Bristol’s land south of Long Asthon (site: HE20139) and land to the west of Wyndhurst Road, Churchill (site: HE20590) wrongfully omitted. The latter lies outside the Green Belt and so should be preferred to the various sites proposed to be released from the Green Belt, as sought be national planning policy guidance. Site HE20139 and HE20590 are available now and deliverable to contribute towards significant positive growth within the plan period and should be supported for allocation. We consider that there is scope for additional appropriate housing sites to deliver over the plan period which are available, suitable and viable. In the Council’s own words these disregarded sites are “consistent with the spatial strategy” and yet have been ignored. We contend this is the wrong approach, particularly in the context of the significant identified unmet need for Bristol. We therefore disagree with the Council’s position that it cannot accommodate any of the unmet housing need from Bristol in North Somerset. In this context, the North Somerset Local Plan is not considered to be positively prepared, justified, effective or consistent with national policy. Justified: In accordance with the NPPF, to be justified this requires: “an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence.” As set out above, it is considered that reasonable alternative sites for housing allocations have been unduly discounted by the Council, in conflict with the evidence base which should otherwise support its approach. Therefore, we do not consider that all draft housing allocations are sufficiently justified which goes to the soundness of the plan. Paragraph 148 of the NPPF is clear that where it is necessary to release Green Belt land for development, as is established and agreed in North Somerset, plans should give: “priority to previously developed land, then consider grey belt which is not previously developed, and then other Green Belt locations.”			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Prior to this, non Green Belt sites should be prioritised for allocation. In this regard, our client has consistently promoted its land south of Long Ashton and at Wyndhurst Farm (site: HE20590) and Stock Lane Farm (site: HE203031) at Churchill/Langford. However, the Council is not supporting a draft housing allocation on any of the three land parcels. We consider this to be contrary to NPPF paragraph 148 and is not a justified approach in plan making terms. Land at Stock Lane Farm, Langford – HE203031: The University's land at Stock Lane Farm comprises previously developed land, outside of the Green Belt. This is sustainably located in relation to Langford and Churchill and has been promoted for development with capacity for up to 64 dwellings. There is a realistic prospect that houses could be delivered on the site within five years. The site was previously identified as a 'less sustainable' site, wrongfully in our view, as part of the Council's Consultation paper on additional sites for the Regulation 19 Plan' (February 2025). The consultation ran to March 2025 to which representations were submitted by the University in relation to all three of its land parcels referenced. In this regard, the site is well related to the settlement and existing facilities and services in Churchill and Langford. Adjacent to the west of the University's land at Stock Lane Farm, planning permission ref: 23/P/0448/OUT was approved by the Council in March 2025 for a mixed-use development comprising up to 120 dwellings, new flexible employment, children's day nursery and café, along with associated car parking, landscaping, tree works, public open space and local equipped area for play, drainage infrastructure, access improvements and connections to the existing footpath network. We note the Council's also identified that land as a 'less sustainable' site in the previous consultation, while granted it planning permission, and now identifying it as a draft allocation. This outlines the inconstancy in the Council's approach to its housing sites in the new local plan. The presence of planning permission 23/P/0448/OUT only further supports development on the University's land adjacent at Stock Lane Farm (HE203031) which critically comprises previously developed land. In this context, the University's land is annotated red on the plan (see attachement) which comprises the adjacent approved development (and now draft allocation). The Council's decision to omit the University's land at Stock Lane farm is not justified in the context of Draft Policies SP3 and SP8. The site is sustainably located, outside of the Green Belt on previously developed land and adjacent to the Monaghan Mushrooms site (Draft Policy LP23), pursuant to planning permission 23/P/0448/OUT. Land to the West of Wyndhurst Farm – HE20590: The University's land west of Wyndhurst Farm Stock Lane Farm comprises greenfield land adjacent to the settlement boundary of Churchill. This is sustainably located and has been promoted for development with capacity for up to 90 dwellings at a density of 29 dwellings per ha. There is a realistic prospect that houses could be delivered on the site within five years. The site was previously identified as a site with 'other potential' as part of the Council's Consultation paper on additional sites for the Regulation 19 Plan' (February 2025). The Council set out within that consultation that sites with 'other potential' comprised: "sites at the towns and larger, more sustainable villages consistent with the spatial strategy". [our emphasis] The Council's published 'North Somerset Strategic Housing Land Availability Assessment Main Report' (October 2025) further sets out that the site was considered by the Council to have "potential for further consideration". Notwithstanding this, the Council's published 'Spatial strategy, site selection and capacity paper' (October 2025) confirms that this site is not a proposed allocation in the draft Local Plan with commentary provided as follows: "The site is outside settlement boundary with a distinctive rural character providing a clearly defined separation between the area of Churchill centred around Bristol Road and Pudding Pie Lane, and the smaller settlement of Lower Langford to the east. Due to the impact on the landscape and potential impact on heritage assets, it is not considered appropriate to take this site forward as a housing allocation." We do not agree with the Council's assessment of the site and its position to omit this as a draft allocation. We note that pre-application discussions with the Council resulted in the suggestion to promote the site at that time through the local plan which has been comprehensively done and so it is disappointing to see this be omitted as a draft allocation. This is particularly the case given the extent of the Council's housing need which should, in the first instance be addressed by appropriate sites such as this outside of the Green Belt before seeking to remove land from the Green Belt. Development on the site would comfortably assimilate with the surrounding built form, providing sustainable development. It is notable that planning permission (ref: 22/P/2908/OUT) was approved in November 2024 for nine dwellings adjacent to the south of the site which only provides further support for development in this location.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Different development options have been considered which would address all material considerations for the site, which include a scheme for 24 units and a scheme for up to 90 units in this regard, as illustrated below. The site is wholly sustainable with any associated impacts of development more than capable of being addressed with appropriate mitigation. In this regard, the Council's decision to omit the University's land is not justified in the context of Draft Policies SP3 and SP8. Land south of Long Ashton – HE20139: The University's land south of Long Ashton comprises land within the Green Belt, adjacent to the settlement boundary of Long Ashton. This is sustainably located and has been consistently promoted for a number of years to the emerging local plan, and previous WECA joint spatial plans for development with capacity for up to 1,500 dwellings. The site was previously identified as a site with 'other potential' as part of the Council's Consultation paper on additional sites for the Regulation 19 Plan' (February 2025). The Council's published 'North Somerset Strategic Housing Land Availability Assessment Main Report' (October 2025) further identifies that the site was considered by the Council to have "potential for further consideration". Notwithstanding this, the Council's published 'Spatial strategy, site selection and capacity paper' (October 2025) confirms that this site is not a proposed allocation in the draft Local Plan with commentary provided as follows: "Site not consistent with the spatial strategy as it is detached from the existing built-up area of Long Ashton." We do not agree with the Council's assessment of the site and its position to omit this as a draft allocation. It is clear that the site should accord with an appropriate spatial strategy which directs growth to the most sustainable locations. Therefore, the Council is not following this by omitting the University's land as an allocation. The site is well related to Long Ashton in addition to the city of Bristol. It appears that the Council have unduly set preference to directing growth to the neighbouring Yanley Lane/Woodspring site (HE20110) (draft allocation for 3,500 dwellings under Policy LP2) at an early stage of the plan making process. This position has not shifted even as the evidence base has been developed which indicates to the contrary. Attention is turned to the Council's Sustainability Appraisal Report (October 2025). This sets out the findings of the assessment of potential allocation sites against the sustainability appraisal objectives. A summary is provided (see attached document) with comparison of our client's land south of Long Ashton, which has been discounted by the Council and the Yanley Lane South West Bristol land, which is proposed to be allocated for development by the Council in the Local Plan. This comparison is provided owing to the proximity and context of both sites, and similarity with regard to scope to provide strategic growth. This sets out the similarities in the Council's assessment of both sites which, when compared, identifies fewer negative effects of development on our client's land than that identified for allocation by the Council at Yanley Lane. The sustainability credentials of our client's land are clear and development of this land should be supported. The Council's Spatial Strategy, Site Selection and Capacity Paper (October 2025) provides commentary on the potential allocation sites. For our client's land south of Long Ashton (HE20139) this states that the site is not proposed for allocation and that the: "Site not consistent with the spatial strategy as it is detached from the existing built-up area of Long Ashton". Whereas for the Yanley Lane site (HE20110), this states that the site is proposed for allocation and that the: "Site [was] previously identified (in smaller form) in Regulation 18 plan". The fact that the Yanley Lane/Woodspring site was preferred by the Council at early stages of the plan, in advance of the supporting evidence base work being carried out, is not sufficient justification for it to be allocated. This is required to be justified and supported by the evidence base, which we do not consider it to be, in the context of the University's land south of Long Ashton. The Council's approach contradicts NPPF paragraph 148 in identifies sites to be removed from the Green Belt for development. The Council's 'Stage 2 Green Belt Assessment' (October 2025) identifies the land south of Long Ashton to make an overall weak contribution to the purposes of the Green Belt. Whereas, the Yanley Lane/Woodspring site is determined to make a greater contribution, set at 'moderate' to the Green Belt purposes. This comparison is provided (see attached document), pursuant to the Council's Stage 2 Green Belt Assessment. In Green Belt terms, it is clear that the University's land south of Long Ashton makes less off a contribution to the Green Belt purposes than the Council's proposed allocation at Yanley Lane/Woodspring. Moreover, our client's land would wholly support sustainable patterns of development in the context of			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Long Asthon and Bristol, in accordance with NPPF paragraph 148. Further to this, as can be seen in the Green Belt assessment, the University's land makes a weak contribution to Green Belt purposes A, B and D. There are no relevant footnote 7 assets that would provide a strong reason for refusing or restricting development on the land. Therefore, this can be considered Grey Belt, subject to the specifics of the development proposal. The Council's Stage 2 Green Belt assessment agrees with this position however the Pre-Submission (Reg 19) version of the plan still determines not to allocate the land for development which we consider to not be justified. The NPPF is clear that Grey Belt land should be supported for directing development in new local plans (NPPF paragraph 148). In this context with the omission of our client's land for allocation, we dispute the Council's claim at page 30 of the Pre-Submission Plan (Reg 19) that: "A sequential approach to Green Belt release has been taken prioritising previously developed land, followed by grey belt sites and then other Green Belt locations". The omission of the University's land south of Long Ashton seemingly goes against the supporting evidence base and therefore we do not consider the approach to be justified, with particular regard to Draft Policies SP3, SP7, SP8 and LP2. The Council's overall spatial strategy and policies/allocations to direct housing growth are required to be informed by the evidence base. Effective: In accordance with the NPPF, to be effective means to be: "deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground." As set out above, where we consider the plan to not have been positively prepared, the Council's 'Duty to Co-operate Statement of Compliance Regulation 19 Stage' (October 2025) sets out that BCC have requested for neighbouring authorities, including North Somerset Council, to accommodate its unmet housing need. The Council's Duty to Co-operate statement is clear that "North Somerset does not have capacity to meet some of Bristol's needs at this time". We do not agree with that position on account of suitable sites being omitted for development allocations, particularly where the Council has previously acknowledged the sites to have 'other potential' which, in the Council's words are "sites at the towns and larger, more sustainable villages consistent with the spatial strategy". This is particularly relevant to the University's land south of Long Ashton and at Stock Lane Farm and Wyndhurst Farm in Churchill/Langford which comprise either previously developed land outside the Green Belt, land outside the Green Belt adjacent to the Category A village settlement boundary for Churchill, or Grey Belt land adjacent to the Category A village settlement boundary for Long Ashton. While the Council's housing figure over the plan period (Draft Policy SP8) is prescribes as a minimum, this is a negative approach when considering that additional sites are readily available to deliver above this figure, and should be set out as such in policy. This strongly supports our position that North Somerset is fully capable of accommodating additional growth, thereby contributing towards the unmet need from BCC. However, the Council is unduly deciding not to do this – this is not effective plan making. Moreover, the NPPF is clear that planning policies should identify a supply of specific, deliverable sites for five years following the intended date of adoption, with an appropriate buffer. It is likely that some of the larger strategic development/urban extension areas identified for allocation in the plan will not begin to deliver homes within the first five years and so this means that greater flexibility and contingency is required to be built in to ensure housing delivery is forthcoming in the early years of the plan to meet the minimum requirements. Ensuring early delivery of housing early in the plan period is critical. Consistent with National Policy: In accordance with the NPPF, consistency with national policy should be adhered to: "enabling the delivery of sustainable development in accordance with the policies in this Framework and other statements of national planning policy, where relevant." For the reasons set out within these representations, it is considered that the Council's Reg 19 Pre-Submission Plan is not consistent with national policy with particular regard to the guidance in the NPPF relating to failure under the duty corporate and the approach to accommodate none of BCC's identified unmet housing need. The plan inadequately makes provision for insufficient housing in this context which is not justified owing to the evidence base supporting identification of additional land which could positively support housing growth over the plan period. Moreover, we consider the Council's approach to identifying the draft housing allocation sites is flawed and inconsistent with national policy in overlooking suitable sustainable previously developed land and greenfield sites in the first instance ahead of Green Belt sites; and subsequently overlooking suitable sustainable Grey Belt sites which should be prioritised for development ahead of the remainder of the Green Belt.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Conclusions: For the reasons set out above, we consider the plan to be unsound in its current form. Ultimately, the primary reason the plan is not considered to be sound is owing to the approach that the evidence base has followed the Council's overall strategy; rather than the other way around. The evidence base should directly support the approach laid out in the plan and this is not the case. Notwithstanding this position, the University provides support for Draft Policy LP19 for the 'University of Bristol site in Langford' allocation. We welcome the recognition this policy provides for the significant educational and employment benefits made by the University of Bristol's campus in Langford to the local, and wider, area. The University of Bristol support the policy aims of LP19 which recognise the importance of the facility and support the new development opportunities that will enable the university to grow and accommodate necessary expansion in terms of student numbers and staff employment. We consider that Draft Policy LP19 in isolation is sound as this does not relate to the outstanding wider concerns raised which relate to housing in terms of housing growth quantum and spatial approach. Minor modifications are suggested to the wording of Draft Policy LP19, in so far as we consider this to present a negative picture of the existing sustainability credentials of the site. For users of the campus not based locally, this is readily accessible by non-car modes with regular bus services available. This includes the U2 service which the University provides free passes to students of the veterinary school to travel. Therefore, while this draft policy is strongly supported, we would support minor wording changes to the policy which acknowledge its sustainability. Further detail is hereby provided below and appended in relation to the University of Bristol's land at Stock Lane farm and Wyndhurst Farm in Churchill/Langford and land south of Long Ashton. Development on this land, with support from residential allocations should be provided in a new sound North Somerset Local Plan. Land at Stock Lane Farm, Langford – HE203031: Availability: Site HE203031 is in single ownership by the University of Bristol. The land has been identified as surplus to requirements, having previously been used in association with the University's Langford Veterinary Campus for research and academic studies. It is readily available now, able to make a meaningful contribution to the Council's five-year land supply. Suitability: Site HE203031 offers a suitable location for development of housing. There are no development constraints that would prevent allocation of the site for its early development for housing. The site is well related to a 'Category A' village (most sustainable) and so its allocation fits comfortably into the Council's emerging spatial strategy. The site is accessible by a choice of means of transport to local facilities, including employment opportunities, schools, shops and other services. 4 The site, comprising previously developed land, forms part of the existing built form along Stock Lane and is subject to no designations/constraints that would restrict redevelopment of the site for housing. Likely Economic Viability: There are no known extra-over costs associated with the development of this site nor any issues with utilities which would mean that it would be economically unviable. There is a realistic prospect that houses could be delivered on the site within five years. 4.7 The site has capacity for up to 64 dwellings, subject to detailed design and is available, suitable and economically viable. It should be allocated in the local plan to assist North Somerset providing a sufficient supply and mix of sites to meet their minimum required housing need. Land to the West of Wyndhurst Farm – HE20590: Availability: Site HE20590 is in single ownership by the University of Bristol. The land has been identified as surplus to requirements for some years. It is readily available now, able to make a meaningful contribution to the Council's five-year land supply. The site has consistently been promoted for allocation through the local plan process following the advice of the Council during a formal preapplication submission in 2020. Suitability: Site HE20950 offers a suitable location for development of housing. There are no development constraints that would prevent allocation of Site HE20590 for its early development for housing. The site lies adjoining a 'Category A' village (most sustainable) and so its allocation fits comfortably into the Council's emerging spatial strategy. The site is accessible by a choice of means of transport to local facilities, including employment opportunities, schools, shops and other services.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The site lies abutting the settlement boundary of Churchill as proposed in the emerging local plan. It has no landscape, heritage or other designation. It is in Flood Zone 1 (low risk) and grade 3 agricultural land. Likely Economic Viability: There are no known extra-over costs associated with the development of this site nor any issues with utilities which would mean that it would be economically unviable. There is a realistic prospect that houses could be delivered on the site within five years. The site has capacity for circa for 90dwellings at a density of 29dwellings per hectare. An example of how the site might be developed for housing is provided below. Site HE20590 is available, suitable and economically viable and should be allocated in the local plan to assist North Somerset providing a sufficient supply and mix of sites to meet their minimum required housing need. Land south of Long Ashton – HE20139: Availability: The site is in single ownership by the University of Bristol. The land has been identified as surplus to requirements for some years. It is readily available now, able to make a significant contribution to the Council's housing need over the plan period. The site would form a natural extension to Long Asthon being contiguous with the existing settlement boundary of to the north and is physically contained between the A370 to the east/south and Wild Country Lane to the west. Allocation of the site for development, and its release from the Green Belt, is supported by NPPF paragraph 148 in that growth here will promote a sustainable pattern of development on Grey Belt land. This is a requirement of the NPPF. Notably, significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes as is the case for this site. Moreover, releasing land from the Green Belt for development are required to ensure that, inter alia, sustainable transport modes are prioritised, safe and suitable access can be achieved and any significant impacts from the development on the transport network, or on highway safety, can be cost effectively mitigated to an acceptable degree through a vison-led approach. The University's land south of Long Ashton fulfils all criteria with its strong relationship with the existing Long Ashton settlement and being in close proximity, and well connected to, Bristol. Suitability: The site offers a suitable location for development of housing on Grey Belt land. There are no development constraints that would prevent allocation of Site HE20139 for its development for housing. This conclusion is informed by a suite of past technical information on the site. The site lies adjoining a 'Category A' village (most sustainable) and so its allocation fits comfortably into the Council's stated spatial strategy. The site is accessible by a choice of means of transport to local facilities, including employment opportunities, schools, shops and other services. Likely Economic Viability: There are no known extra-over costs associated with the development of this site nor any issues with utilities which would mean that it would be economically unviable. There is a realistic prospect that houses could be delivered on the site over the plan period. The site is available, suitable and economically viable and should be allocated in the local plan to assist North Somerset providing a sufficient supply and mix of sites to meet their minimum required housing need. The proposal on the site is informed by the substantial of technical work which has been carried out to date. Key facets of a future development of this site could include: • Up to 1,500 dwellings, including a mix of tenures and affordable housing; • Potential to include a mix of non-residential uses; • New access onto the A370 • Cycle routes and public footpaths; • Green infrastructure, including public open space; • Biodiversity Net Gain. A plan demonstrating how development could be achieved on the site is provided in the attached document.			
20519041	Ann Gawthorpe			Unsure		Unsure	Unsure				
63006177	Mac Mic Strategic Land (Land north of Banwell Road)	Planning Potential	Mac Mic Strategic Land	No					Mac Mic supports the principles of the Green Belt set out in draft Policy SP7 and welcomes that the Council proposes to recognise the 'exceptional circumstances' that exist to justify the release of land from the Green Belt. Without the release of land from the Green Belt, it is clear that the Council would not be able to meet its own housing requirements in the period to 2041 . This would result in a failure of the plan-led system and leave the Council		North Somerset Local Plan Pre-Submission Plan - Flax Bourton Representations Final.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									vulnerable to speculative unplanned development elsewhere. Mac Mic does, however, consider that the wording of draft Policy SP7 (and draft Policy LP7) should be adjusted to provide a suitable level of flexibility and allow additional sites to be released from the Green Belt where they do not contribute to Green Belt objectives. Land that does not meet these objectives comprises 'Grey Belt' land, which is defined as sites comprising previously developed land and/or any other land that, in either case, does not strongly contribute to checking the unrestricted sprawl of large built-up areas, prevent neighbouring towns merging with one another or preserve the setting and special character of historic towns. This applies to Land to the East and West of Flax Bourton. The wording of draft Policy SP7 (and LP7) should be amended to ensure that the Plan is positively prepared and sufficiently sound to allow alternative sites to come forward were, for example, housing delivery on allocated sites not to come forward in the timescale or scope (in terms of housing numbers) envisaged. The Land at East and West of Flax Bourton is a clear example of this and Mac Mic considers that it should also be removed from the Green Belt. To be 'positively prepared' the NPPF is clear that the Plan should provide a strategy that as a minimum seeks to meet the area's objectively assessed needs. Mac Mic therefore considers that the draft Policies SP7 and LP7 should be re-worded to ensure that other sites can come forward and to ensure that the Council's minimum housing targets are met. Without this amendment the Council risks its policy basis being too inflexible to respond to site-specific delivery characteristics or changes in the market, and may lead to the Council being unable to demonstrate a five-year housing land supply in the future. The Land at East and West of Flax Bourton would provide this flexibility and has an indicative capacity of 200-250 dwellings. In any event, we note that villages in the Green Belt that do not contribute to openness are 'inset' from the Green Belt. The boundaries of the Green Belt do, however, remain tightly drawn around the existing settlement boundaries. We do not agree with this approach and recommend that the wording of draft Policy SP7 (and LP7) is amended to refer to both villages and sites that do not contribute to the objectives of the Green Belt being 'inset' from the Green Belt. In relation to Flax Bourton, we consider that this should apply to the land shown on Figure 2.1. Recommendation To ensure that the Plan is sound, positively prepared and effective, draft Policy SP7 (and LP7) should be re-worded (and the Proposals Map amended) to also inset from the Green Belt other sites that do not contribute to the Green Belt objectives, and that therefore represent 'Grey Belt' land, specifically including Land to the East and West of Flax Bourton.		
63298945	Mac Mic Strategic Land (Backwell)	Planning Potential		Yes	• Positively prepared • Effective	No	Yes	Mac Mic supports the principles of the Green Belt set out in draft Policy SP7 and welcomes that the Council proposes to recognise the 'exceptional circumstances' that exist to justify the release of land from the Green Belt, particularly with regard to the identification of Land East of Backwell. Without the release of land from the Green Belt, it is clear that the Council would not be able to meet its own housing requirements in the period to 2041. This would result in a failure of the plan-led system and leave the Council vulnerable to speculative unplanned development elsewhere. Mac Mic does, however, consider that the wording of draft Policy SP7 (and draft Policy LP7) should be adjusted to provide a suitable level of flexibility and allow additional sites to be released from the Green Belt where they do not contribute to Green Belt objectives and meet the definitions of 'Grey Belt' land. This is to ensure that the Plan is positively prepared and sufficiently sound to allow alternative sites to come forward were, for example, housing delivery on allocated sites not to come forward in the timescale or scope (in terms of housing numbers) envisaged. To be 'positively prepared' the NPPF is clear that the Plan should provide a strategy that as a minimum seeks to meet the area's objectively assessed needs. Mac Mic therefore considers that the draft Policies SP7 and LP7 should be re-worded to ensure that other sites are capable of coming forward and to ensure that the Council's minimum housing targets are met. Without this amendment the Council risks its policy basis being too inflexible to respond to site-specific delivery characteristics or changes in the market and may lead to the Council being unable to demonstrate a five-year housing land supply in the future.	Recommendation To ensure that the Plan is sound, positively prepared and effective, draft Policy SP7 (and LP7) should be re-worded (and the Proposals Map amended) to also inset from the Green Belt other sites that do not contribute to the Green Belt objectives. 								Recommendation: To ensure that the Plan is sound, positively prepared and effective, draft Policy SP7 (and LP7) should be re-worded (and the Proposals Map amended) to also inset from the Green Belt other sites that do not contribute to the Green Belt objectives.			
30797697	M Hall			Yes		Yes	Yes			I support the North Somerset local plan for Wrington. Wrington is unsuitable for further large - scale development, for the following reasons:- Development would cause harm to the setting of heritage assets around the village. Lack of public transport would necessitate the use of cars to access jobs and shopping centres. Potential sites are on valuable greenfield agricultural land. Available jobs are more than five miles away in places like Bristol, Weston Super Mare, Portishead, Nailsea - too far for most people to walk or cycle. Narrow approach roads would need to be upgraded. Local infrastructure has already reached saturation point.	
39299073	Jo Halfpenny			No	• Justified	Unsure	Unsure		The building of houses on parts of the Green Belt is inconsistent with the policy on climate change and protection of nature. There is also the issue of food security and once agricultural land is lost to development it is gone for ever. Building more and more houses on green spaces is not the answer. Stop land banking, change the law around second homes, empty buildings etc.		
58529729	Rob Harvey				• Justified • Effective • Consistent with national policy	Unsure	No	Removal of greenbelt status and allowing development on high quality agricultural land - the bulk of the affected sites have the highest ratings (1 or 2) for agricultural land). - goes against the notion of sustainability that NSC has embraced while declaring a climate crisis. The recent National Emergency Briefing (supported by many members of our sitting government) detailed just how crucial our food security is in a time of climate crisis and high quality agricultural land must be protected. In North Somerset's strategic greenbelt assessment they erroneously refer to the M5 motorway as a barrier to incursion from the Port of Bristol. The M5 is a bridge as it passes Lodway Farm fields and there is access to the Pill side of the motorway. There is access to the motorway bridge relief road as well as to land that the Port of Bristol already own on hte PIll side of the motorway. So the notion that the M5 provides any barrier is a nonsense and in the same way that land to the east of Portishead has been kept as greenbelt to buffer against Port encroachment, so Lodway and Court House Farm fields should be allowed to stay within the greenbelt to protect the village of Pill from the Port. There is also a strange suggestion in NSC's that Markham Farm Fields (erroneously refered to as Pill Green) should be removed from the greenbelt because it does nothing to protect Nailsea. This is an odd thing; it is obvious that what Markham Farm fields are, apart from high grade agricultural land and a biodiversity hotspot, are buffers against ribbon development (which is part of the greenbelt's role), defending us from the A369 seeing a sprawl of urban development along the road from Leigh Woods to Portishead.	Markham Farm and Lodway/ Court House Farm Fields should remain within the green belt		
62862401	Sustainable Pill & District		Sustainable Pill & District	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	Unsure	Please note this comment has also been uploaded as an attachment to enable the reader to activate internet links. This policy does not provide a clear and robust justification to override the strong presumption against inappropriate development in the Green Belt (section 153, National Planning Policy Framework 2024), in relation to the Strategic Location, Pill and Easton –in-Gordano and it is therefore Unsound. There are inconsistencies with the National Policy Planning Framework (NPPF) 2024 and within the Local Plan itself. There is also a lack of Legal Compliance in relation to obligations to take into account the policies and proposals of the made Neighbourhood Plan for Pill and Easton-in-Gordano. Failure to examine all other reasonable alternatives The Local Plan and supporting evidence does not demonstrate that North Somerset Council has examined fully all other reasonable alternatives prior to deciding to release land at Pill and Easton-in Gordano from the Green Belt, contrary to the NPPF's exceptional circumstances tests (section 147 NPPF) and the Plan's own sustainable objective 1.3 (page 12) which states that NSC will 'promote the optimal use of land which supports regeneration, maximise re-use of previously developed (brownfield) land and protects the rural economy.' Whilst the Local Plan's own evidence base claims urban/brownfield and densification assessment sweeps and some town centre intensification (e.g., Portishead/Wyndham Way), it has not shown why further intensification and edge of town brownfield models could not meet more of the uplift before considering release of Green Belt land at Pill& Easton-in-Gordano. A more thorough evaluation of brownfield, urban intensification, and capacity redistribution appears to have been truncated by the changes to the NPPF in December 2024. A consultation on additional sites took place in February 2025 and promised that 'The use of brownfield sites and density assumptions will be reassessed'	In order to make the Local Plan legally compliant and sound, there should be a re-assessment of the of the five sites around Pill and Easton-in Gordano for housing development and their identification collectively as a Strategic Location. The submitted comments on behalf of Sustainable Pill and District demonstrate considerable lack of community engagement, which fails the test for Legal Compliance and falls well below the engagement with communities in the other Strategic Locations referred to in the Plan. The comments also make clear that significant weaknesses exit in the assessment of these sites and in the application of 'exceptional circumstances' to justify their release from the Green Belt for housing development. Furthermore, weaknesses in site-specific policies indicate insufficient time and consideration has been given to the policies for this Strategic Location, likely due to its late inclusion in the Plan. A pause in the process of approving this Plan is requested so that the Pill and Easton-in Gordano Strategic Location can be re-assessed, following adequate and effective engagement with the local community.	Please see uploaded documents	Neighbourhood Plan complete.pdf Comments on Policy SP7.docx 18.06.2025 Report to NSC cabinet.pdf 25_P_1413_OUT-NATIONAL_HIGHWAYS_COMMENTS-3514484.pdf Short Guide to Additional Sites Consultation.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								(see attached Local Plan Reg 19: Additional Sites Consultation, A Short Guide). In the Minutes of the NSC Report to Cabinet dated 18th June 2025 (attached) the reason given for the inclusion of a new strategic location around Easton-in-Gordano and Pill is stated to be: 'genuine sustainable travel opportunities. It is considered that this location accords with that principle, with the re-opening of the Portishead Pill-Bristol railway line coming forward in the near future, and opportunities for improved bus services and active travel connections into Bristol in addition to the existing provisions.' (Section 3.20 in attached copy Minutes) There is no mention in the Local Plan or evidence base that re-assessment of brownfield sites took place prior to the inclusion of this new strategic location. Furthermore, the Minutes of the NSC Report to Cabinet dated 18th June 2025 state in section 8.2: 'The risk of delays to the local plan process exposing the council to a risk of speculative development, unplanned growth and costly planning appeals is recorded as high in the corporate risk register. To mitigate this risk it is recommended to progress the plan as rapidly as possible.' It is submitted that the release from the Green Belt of the five sites around Pill and Easton-in-Gordano is a hastily formulated strategy, with over-reliance on the impact of a possible railway link, without thorough examination of reasonable alternatives and is therefore unjustified, making this section of the Local Plan Unsound. Weaknesses in assessment of Green Belt land There is insufficient evidence, in the Local Plan and evidence base, that all the key steps in Green Belt assessment, as outlined in Government guidance https://www.gov.uk/guidance/green-belt have been applied rigorously. This guidance states that even where a site is judged to be grey belt, having first considered the application of NPPF Footnote 7 (see comment 1 below), and whether the site would fundamentally undermine the purposes of the remaining Green Belt across the plan area if released or developed, wider considerations are still relevant to the consideration of development proposals on the site. These would include determining whether potential development would not be inappropriate development in the Green Belt, as set out in paragraph 155 of the NPPF. That question would include consideration of whether a development is sustainably located (see comment 2 below), whether it would meet the 'Golden Rules' contributions (see comment 3 below), as set out Paragraphs 156-157 NPPF 2024. 1.Failure to take account of Footnote 7 protection A key step in the formulation of a Local Plan is to consider whether any sections of Green Belt land, being considered in the assessment as potential Grey Belt land, fall under one of the Footnote 7 NPPF 2024 protections (e.g. protected wildlife habitat sites). If these protections apply, the land cannot be Grey Belt and strong reasons exist to refuse development. The affected areas are: All five sites: Within consultation zones for the North Somerset & Mendip Bats Special Area of Conservation (SAC) for both Greater and Lesser Horseshoe Bats. This is shown on the NSC planning map https://n-somerset.gov.uk/my-services/planning-building-control/planning-map Pill Green - This site contains Ancient Woodland (an irreplaceable habitat) and its status is clearly marked both on the Natural England Inventory (https://naturalengland-defra.opendata.arcgis.com/datasets/ancient-woodland-england/explore?location=51.469515%2C-2.678230%2C13.97) and on the NSC planning map (https://map.n-somerset.gov.uk/dande.html) Land at Lodway Farm and Pill Green – both these sites are in flood risk areas (see further comments below re flood risks and evidence) Pill Green – this site includes Markham Brook. The River Avon and its network of tributaries, including Markham Brook, constitute an important ecological corridor. This corridor links the Severn Estuary European Marine Site—a designated Ramsar site, Special Protection Area, and Special Area of Conservation—with the broader Bristol region. Any development that interrupts this ecological connection or contributes to a decline in water quality could have adverse implications for habitat sites which are protected by Footnote 7. Lodway Farm – this site is adjacent to the Severn Estuary Site of Special Scientific Interest (SSSI) The summary in the Sustainability Appraisal (in Local Plan evidence base) acknowledges the significant areas of both statutory and non-statutory nature conservation sites and states that, 'due to the overall scale of development proposed in the Local Plan, adverse effects have inevitably been identified in relation to some of the SA objectives, in particular those relating to the landscape, biodiversity and cultural heritage. Some of these effects have the potential to be significant' Policy SP7 is not justified, and therefore Unsound, since there has been a failure to acknowledge that sections of the land contained within the 5 sites around Pill & Easton in Gordano are protected from release from the Green Belt. 2.Failure to demonstrate a sustainable location			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Local Plans should provide justification that Green Belt sites which may be released for development are sustainably located, in accordance with government Green Belt guidance https://www.gov.uk/guidance/green-belt Furthermore, Paragraph 110 NPPF states: 'Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes.' The proposed development sites around Pill & Easton-in-Gordano have not been shown to be at a location that "is or can be made sustainable" in transport terms at the Local Plan stage. District wide and Pill specific modelling provides evidence of existing network saturation, unresolved Strategic Road Network (M5 J19) and reliance on aspirational and unfunded mitigation, including the viability of the proposed Portishead-Pill- Bristol railway link – the latter is cited as the main factor in Local Plan decision making in relation to Pill & Easton in Gordano - see Section 3.20 Minutes of the NSC Report to Cabinet 18.06.25 (copy attached) and Policy LP4 in Local Plan. However, analysis of predicted railway capacity reveals: • Trains are planned to operate hourly between Portishead via Pill to Bristol from mid 2027 • The trains are expected to have 3 carriages, with a total capacity of ~200 seats • Weekday AM peak passenger demand from Portishead is forecast to exceed capacity (in 2031) before accounting for the proposed developments (at around 255 passengers) (DCO transport assessment, Table 6.8 & Figure 6.5). This calculation is based on 35% of total of 729 Portishead passengers. The corresponding demand in Pill is expected to be 43 (35% of 123 (assessment, Table 6.8 & Figure 6.55) • The modelling approach used to derive these forecasts (MOIRA) has significantly underestimated demand in previous schemes (for example: Borders Railway beats forecast passenger levels by 22% - CILT(UK), Dartmoor Line: early impact evaluation (page 8)), which makes it more likely that Pill residents will be unable to travel by train during the AM peak times. • This approach has also been found to underestimates new trips generated by housing growth: otm-rail-demand-forecasting.pdf It is likely that the forecasts for rail demand have been underestimated, which makes it less likely that Pill residents will be able to use the train to commute. This means that any traffic reductions in Pill as a result of the new railway are likely to have been overestimated. Without the ability to travel by train, residents would be dependent on the bus services and car travel via A369 and the M5 Junction 19. There is overwhelming evidence that the impact of the housing developments will cause significantly increased congestion on M5 J19 and on the primary road network: M5 J19 (Strategic Road Network) • M5 J19 is very congested, with several junctions at or above capacity and with junctions close to J19, especially the Portbury junction and the A369 to St Georges Hill junction also at or near capacity. (Local Plan Transport Assessment: Portishead, Portbury & Junction 19) • The effect of the planned developments is to increase the utilisation of these junctions. (Local Plan Transport Assessment: Portishead, Portbury & Junction 19) • The mitigations to the increased congestion are to facilitate public transport by converting the A369 HOV to a bus lane and by remodelling the southbound off-ramp section of J19 (Local Plan Transport Assessment p71) • No detailed modelling of the proposed J19 redesign has been carried out, although it is acknowledged that "there will be increases in congestion on the circulatory of the roundabout, which has the potential for knock-on impacts" (Local Plan Transport Assessment para. 5.166) • The proposed redesign of J19 does not form part of funded schemes as part of RIS3 (National Highways planned schemes) to 2031. The impact of the developments on J19 is therefore likely to be unmitigated, with increased congestion which has not been adequately addressed by the Transport Assessment. Furthermore, National Highways has raised concerns about the impact of housing developments in this area. In relation to a proposed development at Court Hay, near the service station, (NSC planning ref 25/P/1413/OUT – copy attached), National Highways stated that further transport modelling is required to assess cumulative impacts on Junction 19. It is not clear from the Local Plan and evidence base that the required modelling or cumulative impact assessment has been carried out or that the Council has adequately co-operated with National Highways in addressing these concerns. A369 (Primary Road Network) • The A369 and the two junctions which serve Pill, St Georges Hill and Pill Road, are all predicted to become more congested as a result of the housing developments, and the conversion of the A369 HOV to a bus lane Local Plan Transport Assessment para. 4.63) • The North Somerset strategic transport model is particularly poorly validated along the A369 near Pill (appendix c). The model is noted as failing validation checks at both the Portbury and Beggar Bush Lane junctions which bound the section of the A369 serving Pill. In the worst case, the model underestimates traffic flow in these locations by 350 vehicles (observed=1044, modelled=694). This indicates that the modelled traffic flows around Pill are particularly poor and may well be underestimating the traffic flows into Pill (given that the discrepancy reduces from one side of Pill to the other). Given the scale of these errors, the model does not provide a sound basis for the assessment of the magnitude of any impact, or effectiveness of any mitigation around Pill. • The proposed change of the HOV lane to a bus lane is dependent on			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								National Highways RIS3 due to the potential impact on J19. This improvement is judged as "hypothetical" by North Somerset and RIS3 has been delayed, which makes the delivery of this mitigation uncertain (appendix e) The shortfalls in the modelling, and uncertainties in the deliverability of proposed mitigations, make the assessment of the impact on the primary road network inadequate. Policy SP7 does not therefore provide justification of sustainability, contrary to Green Belt guidance and the NPPF, making this policy Unsound. This policy is also Unsound due to inconsistency with its own policy SP6 which states: 'All Green Belt sites that have been identified are located in the most sustainable locations' 3. Failure to meet 'Golden Rules' requirements Paragraph 151 NPPF states: 'Where Green Belt land is released for development through plan preparation or review, the 'Golden Rules' in paragraph 156 below should apply'. The 'Golden Rules' requirements are set out in paragraphs 156-157 NPPF and state: In the absence of a pre-existing requirement for affordable housing, a 50% affordable housing contribution should apply by default' This requirement is confirmed in Strategic policy DP3 in the Local Plan which states: 'Developments will be expected to provide 50% affordable housing on land released from the Green Belt as set out in Policy SP7'. However, the Additional Sites Viability Addendum, Final Report, October 2025 (in Local Plan evidence base) Section 3.4 states that 'testing was undertaken at 50% affordable housing as requested by NSC. The results indicate poor viability across the values range thought to be typically relevant for the area (in terms of likely new build values) suggesting that a target of 50% affordable housing may be challenging unless higher values can be evidenced'. The conclusion section (Section 3.5) of the same report states: the results suggest that an affordable housing quantum of no more than 30% is likely to be viable at the Nailsea and Backwell strategic location and possibly up to 35% at SW Bristol and in Pill / Easton-in-Gordano.' Policy SP7 cannot therefore be justified in relation to compliance with the 'Golden Rules' and is therefore Unsound. Failure to exclude flood risk areas from potential development sites Flood risk acts as a major environmental constraint that heavily influences which Green Belt land is considered suitable for potential release and development. Paragraph 170 NPPF states: Inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing or future). Two of the sites identified in policy SP7 – Land at Lodway Farm and Land at Pill Green – are in flood risk areas: - The Western part of the Lodway Farm site is in flood zone 3a tidal, with parts 3b fluvial - Markham Brook (within the Pill Green site) is culverted at certain points and connects to the tidal River Avon. The majority of the site is within Flood Zone 3a. A small area along the boundary also falls into the functional floodplain (Flood Zone 3b). Section 6.97 of the Sustainability Appraisal (included in evidence base) clearly states that Land at Lodway farm is at risk of flooding and that policy LP4 does not identify any mitigation. In addition, serious concerns have been raised in relation to surface water drainage from proposed development on the Land East of Gordano Services (also included as land to be released from Green Belt in SP7). Comments from the National Highways Agency in response to outline planning application 25/P/1413/OUT copy attached) included strong objections to the applicant's surface water proposals, which 'would have a detrimental impact on National Highways infrastructure'. Further comments state: 'we consider this matter is significant and is not capable of being addressed by planning condition'. Despite these areas of potential flooding having been identified (Section 6.1.8 North Somerset Strategic Flood Risk Assessment Level 1 2025 - in evidence base) no sequential testing of these areas has been carried out. Government guidance https://www.gov.uk/guidance/flood-risk-and-coastal-change is clear that local authorities should assess the risk to an area from flooding from all sources, now and in the future, taking account of the impacts of climate change, and to assess the cumulative impact that land use changes and development in the area will have on flood risk. It should be noted that Paragraph C.103 in the Sustainability Appraisal (in Local Plan evidence base) has identified Pill an area likely to experience increased flood risk in the future. The proposed development of 1,100 new dwellings at Pill will lead to a significant increase in impermeable surface area within the locality. This change will result in additional surface water runoff, which must be carefully managed to avoid elevating flood risk downstream, particularly within the shared River Avon catchment. Strategic policy SP7 refers to the entire sites being released from Green Belt and fails to provide sufficient evidence which would justify the inclusion of flood risk areas as potential development sites. It is inconsistent with the NPPF and government flood risk guidance and is therefore Unsound. Failure to protect Best and Most Versatile (BMV) Agricultural Land		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								BMV land has greater protection in UK planning law than non-BMV land. This is reflected in the NPPF 2024 Chapter 15 (Conserving and enhancing the natural environment), specifically paragraphs 187 and 188. Footnote 65 NPPF states: 'Where significant development of agricultural land is demonstrated to be necessary, areas of poorer quality land should be preferred to those of a higher quality.' Policy DP53 in the Local Plan recognises that BMV land should be protected 'from significant, inappropriate and unsustainable proposals' but goes on to state that 'this local plan does allocate some residential developments on land in higher quality grades where it has been considered that this is sustainable, appropriate and justified.' Four of the sites referred to in Policy SP7 have been identified in the BMV Land Background Paper October 2025 (in the Local Plan evidence base) as follows: Land at Lodway Farm – Grades 2 and 3 Land East of Gordano Services – Grades 1 and 2 Pill Green – Grade 2 Land at Pill Road – Grades 2 and 3 For all these sites, the BMV background paper states: 'Site allocated as part of Pill and Easton-in-Gordano strategic location. Loss of BMV land considered to be outweighed by other sustainability factors, such as the opportunity to secure significant levels of affordable housing, active and sustainable travel measures and other benefits as required by Local Plan policy LP4.' It is submitted that this is insufficient justification for the BMV land in the 4 sites listed above to be released from Green Belt land. Previous comments above demonstrate the lack of evidence for the delivery of affordable housing (Failure to meet 'Golden Rules' requirement) and sustainable travel (Failure to demonstrate a sustainable location) which make Policy SP7 unsound. The inclusion of BMV land in sites released from the Green Belt, for reasons already insufficiently justified, adds further weight to the argument that Policy SP7 is Unsound. Failures to take into account the policies and proposals of the Neighbourhood Plan North Somerset Council has a statutory duty (pursuant to S19(2)(a) of the Planning and Compulsory Purchase Act 2004 (as amended)) to have regard to the government's National Planning Practice Guidance (NPPG) when preparing a new local plan. Guidance in the NPPG (Paragraph: 006 Reference ID: 61-006-20190723) states that: 'Where a neighbourhood plan has been brought into force, the local planning authority should take its policies and proposals into account when preparing the local plan.' Furthermore, it is 'important for local plans to make appropriate reference to neighbourhood plan policies and proposals' https://www.gov.uk/guidance/plan-making The proposal in policy SP7 to release land from the Green Belt for the development of 1,000 homes around Pill and Easton-in Gordano fails to take account the recommendations of the Abbots Leigh, Ham Green, Pill and Easton-in-Gordano Neighbourhood Plan which was made by Full Council on 9 November 2021 and makes no reference to that plan. The Neighbourhood Plan concluded on page 13 (see attached plan) that a major housing development of up to 1,000 dwellings: 'not only runs counter to Green Belt and Landscape Quality policies, (North Somerset Council. Landscape Sensitivity Assessment, 2018 pp 45-47) but would threaten biodiversity and the ecological framework of the Area, would exacerbate peak hour traffic congestion and overload on both the A369 and the Pill Loop, would threaten environment and biodiversity, would create further pollution and would hinder attempts to address climate change. In short this scenario is both damaging and unsustainable. Whilst the Joint Spatial Plan is now redundant, it concluded that the Easton in Gordano/Pill corridor was 'a very constrained location in terms of transport, Green Belt, heritage, landscape and ecology'. Expansion of this scale would increase the number of households in Pill & Easton-in-Gordano by 50% and would radically damage the social patterns of community life.' Failure to take account of the above section of the Neighbourhood Plan in the formulation of Policy SP7, which provides justification for the development of 1,000 homes on Green Belt land around Pill and Easton-in Gordano, renders this policy both not Legally Compliant and Unsound.			
62802913	Pill & Easton-in-Gordano Parish Council		Pill & Easton-in-Gordano Parish Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Pill & Easton-in-Gordano Parish Council objects to Policy SP7 (Green Belt). This policy is unsound because it allows the release of five high-quality Green Belt sites around our village (total ~1,100 homes) without meeting any of the strict national tests in the NPPF (December 2024). It has not shown that all non-Green Belt options (brownfield sites, higher density in towns) have been used up first. It has not demonstrated that these five sites are low-value "grey belt" – in fact they include ancient woodland edges, priority habitats, floodplain and woodland. There is no published Green Belt review or exceptional-circumstances report that justifies taking this land out of the Green Belt. Policy SP7 is unsound and inconsistent with NPPF para 145, as it fails to demonstrate "exceptional circumstances" for Green Belt release in Pill & Easton-in-Gordano. Two LP4 sites (HE206 and HE20491) constitute the remaining narrow Green Belt corridor between the parish and Royal Portbury Dock, vital for preventing coalescence and urban sprawl. Yet when assessing Portbury Dock, NSC stated: "The remaining Green Belt land located between the port estate and Portishead is considered extremely sensitive in preventing	Delete the proposed Green Belt deletions around Pill & Easton-in-Gordano (the five sites in Policy LP4). Amend SP7 to explicitly protect Pill-Dock Green Belt corridors as strategic gaps to prevent merger/coalescence (per NPPF para 143(b)), deleting LP4 sites HE206/HE20491. Require full alternatives appraisal before any release (para 148). Keep the Green Belt boundary exactly as it is now, or at the very least only allow removal if a proper, published Green Belt review proves exceptional circumstances and shows the land is genuine low-value "grey belt". Add wording to SP7 that says: "Green Belt release will only happen after all reasonable non-Green Belt alternatives have been exhausted and a full exceptional-circumstances report has been published and consulted on."		ALC Defra MAGIC Pill Sites Grades 1 and 2 Dec2025.png Markham Brook Ancient Woodland and Priority Habitat Inventory.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								coalescence and checking unrestricted urban sprawl" (This consultation within section "4 Locational Policies" - "Policy LP14: Royal Portbury Dock"). Allocating these sites now contradicts this, prioritising development over high-value Green Belt without grey belt proof or alternatives assessment. This developer-led approach breaches Localism Act 2011; Duty to Cooperate unmet with no joint work on landscape gaps (e.g., with Bristol on port impacts). It fails para 148 by releasing Pill's sensitive corridor (HE206/HE20491) without proving alternatives, misusing Feb responses that objected to Green Belt loss. Cabinet's 'well supported' claim (3.21) ignores this, no strategic consult occurred, making boundary changes unjustified and inconsistent with Portishead's 'extremely sensitive' protection (LP14) This sudden change only appeared in June 2025 – it was not in the July 2024 draft. It looks rushed and reactive rather than properly planned. Releasing this Green Belt without the proper evidence breaks national policy and makes the whole plan unsound.	These changes would bring the policy back into line with national rules and stop our high-quality countryside being lost without proper justification.

7800929	Wraxall and Failand Parish Council		Wraxall and Failand Parish Council	No	‣ Justified ‣ Effective	Unsure	Yes	NSC mapping shows a parcel of land to the north of Nailsea removed from the Green Belt for housing development. It is denoted as Nailsea – Parcel 1: Land North of Nailsea' in the Stage 2 Green Belt Assessment page 60 and re-classified as Grey Belt. The Green Belt Assessment also re-classifies 'Nailsea – Parcel 2: Land North East of Nailsea' as Grey Belt. It would have a direct impact on the openness of the valley of the Land Yeo and would create urbanisation from Nailsea into rural Wraxall land. Currently, there is a strong sense of separation, as for Parcel 1 the existing housing is only partially visible from the B3130 travelling south over a short distance and for Parcel 2 when travelling west over a short distance. Both parcels of land are in an area defined by North Somerset Landscape Sensitivity Assessment dated March 2018 as of 'High' sensitivity. They are also identified as 'Focus areas for nature recovery' in the Open Data Portal for the West of England Mayoral Combined Authority. Considering the guidance for the potential impact of development on the openness of the Green Belt (at Paragraph: 013 Reference ID: 64-013-20250225 Green Belt - GOV.UK), it is likely that the openness will be undermined and traffic by those commuting will increase through the parish of Wraxall & Failand. Further information is provided in the W&F PC Position paper.	To re-consider the classification of these parcels of land with respect to the openness of the Green Belt		Wraxall & Failand Parish Council Position Paper - North Somerset Local Plan 2041 - 11 Dec 2025.pdf
58347361	C Jones			No		Yes	Yes	My stance relates to the release of Green Belt. In particular that relating to the lifting of it for the 100 houses at Black Rock, North Weston, Portishead. North Somerset Council members have at it's central chambers expressed they do not agree with the governments calculations for the number of new dwellings in our area (North Somerset). Therefore, I deem this release of Green Belt at Black Rock unjustified from a top down view. Can I encourage North Somerset Council to challenge this pressure on calculated quantity of dwellings needed in North Somerset with central government. Black Rock development would disproportionally impact the recreational space locals have for access to fields for mental and physical well being. Equally, and potentially more importantly, the impact on the local sensitive ecosystem would be irreversible. Weston Big Woods is an area of ancient woodland and an SSSI. A small corridor of protected land will not mitigate the impacts of the development. The green corridor from the field here will be lost for the local wildlife and drainage network. None withstanding the impact from additional noise and light. More specifics found here including the contradiction to wider policy: https://www.avonwildlifetrust.org.uk/news/nature-threatened-north-somerset-local-plan Access into the site would be restricted and impact local residents disproportionately. The congestion due to this will increase localised pollution both for local residents and wildlife.	Remove Black Rock housing plans (100) from the local plan. Listen to local feedback and reputable organisations such as Avon Wildlife Trust before any irreversible damage is caused. Seek alternative locations in brownfield sites or away from sensitive SSSIs.		
51732129	Gleeson Land	J Mulliner MRTPI / TOR	Gleeson Land	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	No	Policy SP7 includes an extension of the Green Belt (circa 164 ha) to the south of Nailsea, the stated purpose being to, "…maintain the separation of Nailsea and Backwell and prevent further encroachment into the countryside." The supporting text provides no further justification other than adding "…and environmental and recreational benefits of the Green Belt are available to residents and visitors." Notwithstanding the flawed approach of releasing land from the Green Belt on the north side of Nailsea, whilst designating new areas to the south side, in direct conflict with NPPF para 147, the approach sits uncomfortably both in the context of the overall purpose of the wider Bristol and Bath Green Belt, which is to "check the unrestricted urban sprawl of Bristol" (as stated in Policy SP7), and in the context of further national policy which sets clear prerequisites for new designations. Nailsea is on the outer edge of the Green Belt. This edge is informed, and in many ways defined, by the location of outlying larger towns and villages. The	The proposed Green Belt extension between Nailsea and Backwell should be abandoned		North Somerset Reg 19 Reps (2025-12-12) - Gleeson Land (Appendix B).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								Green Belt protects those towns and villages from merging with Bristol, but intentionally it does not envelop or extend across the land between those outer towns. The proposed extension would alter the approach to Green Belt designation in this area only (between Nailsea and Backwell), introducing an irregularity with an entirely different purpose, well removed from checking the unrestricted sprawl of Bristol. To amend Green Belt boundaries, or establish new areas of Green Belt, exceptional circumstances must be demonstrated. For new areas, NPPF para 144 provides key criteria. The 'Green Belt Background Paper' (October 2025) and Green Belt Review Part 3 Green Belt Extension' (January 2022) are provided in the evidence base as the Council's case for compliance with the NPPF 144 requirements. However, the case fundamentally fails. First, 3 options for a Green Belt extension are considered and option 2 selected, and whilst there is some inconsistency between the two evidence-base documents, the Background Paper (at para 7.9) confirms that the extended Green Belt only serves two out of the five Green Belt purposes. Significantly it does not serve purposes a), b), or d). This is significant because it means that the area of proposed designation would immediately be classified as Grey Belt, noting the sustainability of the location –supported by the allocations made – and lack of contribution to the overall purpose, i.e. to check the unrestricted sprawl of Bristol. In terms of overall purpose, we would further highlight the significant extent of the existing Green Belt, and it is obvious that because this area of land is not part of that existing Green Belt its development could not rationally be considered to fundamentally undermine the purposes (taken together) of the remaining Green Belt. This is important, because of the NPPFs approach to Grey Belt, and potential for residential development of Grey Belt to be 'not inappropriate', where there is a lack of five-year supply. Consequently, the case put that normal development management policies would not provide adequate protection (NPPF para 144a)) is irrational. Whether Grey Belt or strategic gap/countryside, a five year housing land supply shortfall would indicate that important development plan policies are out of date, triggering (without disengaging) the tilted planning balance. In terms of NPPF 144b, whilst development is proposed at South Nailsea, reducing the physical extent of the existing strategic gap, there would remain visual and physical separation between Nailsea and Backwell as a consequence of the rail line and flood plain. Further, it can be seen from the plan at para 7.7 of the Background Paper that the northern most part of the land proposed for Green Belt cuts into the new settlement boundary, contributing little additional benefit to physical separation. In any event the need for a new road through the Green Belt from Station Road (to facilitate delivery of the allocated areas – see our representations on Policy LP11) would introduce an urbanising feature segregating the northern parcels of the proposed Green Belt land from the southern parcels (those southern parcels being also located within the flood plain and close to the railway line). The effect would be that land to the north of the road would be well related to the urban area and retain a highly sustainable location, away from the flood plain. Hence, its designation as Green Belt would frustrate further sustainable development at south Nailsea (see representations to Policy LP3). Compliance with the requirements of NPPF 144 a), b) and c), is clearly not able to be demonstrated. Equally, in terms of NPPF 144 d) and e), the case is not made out in the Background Paper or Green Belt Review. Specifically, there is a need to secure a deliverable LP3 allocation, including the provision of viable, suitable and safe access infrastructure. The Green Belt designation would frustrate this provision, hence providing an inconsistency with strategic policies around sustainable housing development at the main settlements. Further, and put simply, the designation provides an unnecessary and unjustified restriction over otherwise sustainable development, on the edge of a main town and close to a railway station, which is entirely inconsistent with the thrust of the NPPF and current government thinking. Indeed, the Ministry of Housing, Communities and Local Government, The Rt Hon Steve Reed OBE MP and The Rt Hon Rachel Reeves MP have stated (18/11/25) that housebuilding around train stations which are well-connected, as is the Nailsea & Backwell Station, will be given a default 'yes'. With housebuilders encouraged to build more homes near such transport links. The Rt Hon Rachel Reeves MP added that "Recognising the significant benefits for jobs and growth that can be unlocked by building around train stations, these rules will extend to land within the Green Belt…" It is worth raising here, that neither of the evidence base documents address Green Belt boundary matters (NPPF para 149), which is a further fundamental fail, particularly given the need to look longer-term in the context of future opportunities for sustainable development. Land to the north of the new access road will inevitably offer a sustainable location to meet current and/or future housing needs. Notwithstanding the above, it is unclear how designation of this extended area of Green Belt will provide recreational benefits to residents and visitors, as none of the land relates to development proposals / allocations and therefore none of the new land is available or can be secured, through development, as publicly accessible. The same applies with respect to any opportunities for environmental improvement. There is no demonstrable recreational or environmental benefit to the designation of this area as Green Belt. In conclusion, the proposed Green Belt extension fails to meet the designation requirements and would only serve to frustrate sustainable housing development. It is unjustified and inconsistent with the NPPF			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
62854369	Peter Kirsen			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	No	No deliverability plan for A369, M5 J19, Schools, GP Access or Drainage by 2041	Whilst I accept the need for additional housing in the area, the concept of building 600 new houses on the Pill Green site is incredibly shortsighted, in the absence of a new arterial road connecting M5 Junction 19 to Bristol. The three major bottlenecks are : 1. The sharp bend at Martcombe Bottom 2. The narrowing of the road at Abbots Leigh (The George pub) 3. Rownham Hill		
62816641	Colin Knowles		Cleeve Parish Council	No	‣ Positively prepared ‣ Justified ‣ Effective	Yes	Unsure	We do not consider the North Somerset Local Plan 2041: Pre-Submission Plan to be sound. Based on the detailed representations of Cleeve Parish Council, we believe the Plan fails three of the tests of soundness set out in NPPF paragraph 36: Positively Prepared, Justified, and Effective. 1. Positively Prepared The Plan does not adequately address the needs of young people or newly forming households, nor does it ensure that new development will be properly supported by essential infrastructure. The repeated use of discretionary language (“will be expected”, “should have regard to”) leaves critical requirements—such as drainage, healthcare capacity, active travel connections, affordable housing percentages, biodiversity measures, renewable energy deployment, and sustainable design—insufficiently guaranteed. The Plan also fails to provide a clear and sustainable policy position on future growth at Bristol Airport, or on how Green Belt releases will be compensated or justified. As a result, the Plan does not convincingly meet the district’s needs in a sustainable and deliverable way. 2. Justified The policy choices taken in the Plan do not always represent the most appropriate strategy when tested against reasonable alternatives. The evidence base appears inadequate or incomplete in several areas, including: (a) the justification for Green Belt releases at Bristol Airport; (b) the robustness of climate-adaptation measures given the known risks of flooding, sea level rise, extreme heat, and pressure on water resources; (c) the lack of evidence demonstrating that non-mandatory design guidance will achieve sustainable outcomes; (d) the omission of low-rise flats in existing towns as a viable and necessary option for delivering affordable housing for young people; and (e) insufficient assessment of the landscape, safety, environmental and carbon impacts of airport-related growth, including the absence of a cumulative emissions assessment. In each case, reasonable and more sustainable policy alternatives have not been adequately explored. 3. Effective The Plan’s delivery mechanisms are weak and do not provide confidence that its policies will be realised. Critical infrastructure (roads, drainage, healthcare, active travel routes, mass transit provision and energy resilience) is not tied to development in a sufficiently enforceable manner. Policies that rely on voluntary interpretation or “expectations” are unlikely to secure required outcomes, particularly in relation to affordable housing percentages, design quality, biodiversity net gain, native woodland expansion, protection of commons, and the safeguarding of Best and Most Versatile agricultural land. Policies concerning Bristol Airport do not demonstrate effective cross-boundary working or credible mitigation strategies, while the approach to flood-risk management does not provide sufficient assurance that developments requiring the Exception Test would be safe, sustainable, or financially deliverable. As drafted, there is insufficient certainty that the Plan can be implemented as intended.			CleeveParishCouncil_LocalPlan2041_feedback.pdf
51446561	Woodstock Homes Ltd (multiple sites)	Kit Stokes	Woodstock Homes	No	‣ Effective ‣ Consistent with national policy	No	Unsure	Objection to SP7: Green Belt We are planning consultants for numerous SME’s and landowners in North Somerset including Woodstock Homes who have sites in Yatton, Sandford (HE201022) Banwell (HE2098) and Wrington (HE20198). These comments are submitted on behalf of Woodstock Homes and StokesMorgan. This representation objects to the SP7 of the North Somerset Local Plan 2041, specifically the proposed allocation of the Woodspring (southwest of Bristol) site for 3,500 dwellings and the failure to allocate sufficient land elsewhere to ensure a sustainable and complaint approach to development delivery. As we have stated in Reps to SP3, the Council is concentrating all its resources into just a select few options which creates massive risk, relies on difficult infrastructure requirements, and limits delivery to just a few select national housebuilders. It is argued that the Woodspring (southwest of Bristol) allocation for 3,500 houses should be excluded due to its failure to meet “grey belt” criteria and the significant impact it would have on Green Belt objectives, particularly with respect to urban sprawl and Purpose A. According to the 2025 Stage 2 Green Belt Assessment, Woodspring is assessed as having a moderate impact on Green Belt Purpose A (the prevention of urban sprawl). However, this assessment does not appear consistent with the likely effects of the proposal. The development would connect to Colliters Way and the Epic campus, resulting in an expansion of the Bristol conurbation to the southwest and increasing the city's footprint by approximately 1.84 km by 1.27 km. It is therefore suggested that the assessment may have been influenced by efforts to justify the long-standing site allocation under the grey belt criteria outlined in the NPPG. This allocation, or the potentially erroneous classification as grey belt, limits the delivery of other viable sites—such as Woodstock Homes in Sandford (HE201022) Banwell (HE2098) and Wrington (HE20198)—which do meet the	Modification The modification that should be made is to adjust the North Somerset Local Plan 2041 so that housing growth is not almost exclusively concentrated within a few large strategic sites, such as Woodspring (southwest of Bristol). Instead, the plan ought to allocate additional, more sustainable sites like Sandford (HE201022) and Wrington (HE20198), which are better aligned with local needs and Green Belt policies. Furthermore, the settlement hierarchy and restrictive village boundaries should be relaxed, enabling proportional growth in already sustainable villages through new allocations or by allowing modest infilling and rounding off at their edges. This would support rural vitality, diversify housing delivery, and reduce overreliance on national housebuilders.

								required criteria.			
30922945	Matt Lansdkwn			No	• Justified	No	Unsure	Exceptional circumstances Has not been demonstrated for greenbelt release when other non greenbelt sites have been identified with the same strategic growth locations. There is a complete lack of understanding about active travel routes. There is no link to existing infrastructure from nailsea to the festive way link.			
58641441	Jenny Leavett								Greenbelt grade 1 land should be protected.		
57964929	Jane Mather			No	• Effective	Unsure	Unsure	NSC has not considered the ecological impact of the Tower Farm site in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. Both areas were added to the Green Belt in the late 1980's due to their high ecological value. National planning policy allows Green Belt only in exceptional circumstances - and these have not been demonstrated.	Find alternative brownfield or greenfield sites with far lower ecological impact in both Portishead across North Somerset.	None	
58448865	Avon Wildlife Trust		Avon Wildlife Trust	Yes		No	Yes	Within Policy SP7 – Green Belt, twelve sites have been identified for release from the Green Belt to support residential development - amounting to over 6,600 dwellings. However, the draft plan is not transparent on the maximum area of land that could potentially be released under SP7 and how this compares to the areas of new green belt being created. Avon Wildlife Trust is concerned that this plan will directly contribute to the cumulative erosion of local biodiversity networks. We believe the scale and location of the losses likely to result are in direct contravention of the National Planning Policy Framework (NPPF) Section 13 Protecting Green Belt Land which identifies one of the five key objectives of Green Belt "to assist in safeguarding the countryside from encroachment;" Furthermore NPPF Section 15 Conserving and Enhancing the Natural Environment sets out the requirement for planning policies and decisions to contribute to and enhance the natural and local environment by protecting and enhancing valued landscapes and sites of biodiversity value and by establishing coherent ecological networks that are more resilient to current and future pressures. Again, we feel this requirement is not currently being met by the draft plan			
55749537	John McGrath			No	• Consistent with national policy	No	No	Infrastructure does not support more building in Portishead, particularly on Green belt when alternative non Green belt sites are available, for example in or near Weston-Super-Mare As there are few schools, jobs, doctors, dentists etc people will have to use cars on roads already overused, to get to schools or work in places like Bristol, Weston-Super-Mare etc. Public transport is not sufficient to cover the amount of travel necessary. House prices in Portishead would be too high (due to market forces) for any first-time buyers. Ie the sort of people who need new homes. Weston-Super-Mare (or nearby) would far better support first-time buyers as house prices will be lower.	Significantly reduce the build in Portishead, making any such properties for higher end buyers, ie moving up the ladder and freeing up cheaper houses elsewhere. Substituting this with more build elsewhere, such as W-S-M, which is not Green belt and more suitable	No I do not	
58043905	C Miles			Yes		Yes	Yes				
4113729	Portishead Town Council		Portishead Town Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Legal compliance and Duty to Cooperate To be legally compliant the local plan must meet a number of procedural tests. Portishead Town Council (PTC) consider that policy SP7 has not been informed by full and effective cross border discussions regarding housing need and the sustainable location of new development. PTC has reviewed the duty to cooperate statement and considers that the relationship with Bristol and Bath to be unclear in terms of meeting housing needs. The statement explains that the plan area is strongly influenced by the adjacent larger urban areas and whilst it states that each authority agreed to meet their own housing need within their own boundaries, it is unclear how each strategy and approach to housing interacts. Soundness To be considered 'sound' the North Somerset Local Plan (NSLP) must be positively prepared, justified, effective and consistent with national policy. PTC consider that policy SP7 is not sound for the following reasons: Positively prepared To meet this requirement, the NSLP should be prepared based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, consistent with achieving sustainable development. This assessment should also be informed by agreements with other authorities, so that unmet needs from neighbouring areas are accommodated where it is practical to do so and consistent with achieving sustainable development. Page 32 of the draft NSLP explains that the minimum number of new dwellings that the council is required to plan for over the plan period is 23,700, however the plan proposes 24,495. This is in excess of the level identified by the Government. PTC acknowledges that there is a requirement for significant levels of housing to be planned for. However, the strategy must be consistent with achieving sustainable development. It is stated within the draft NSLP that land must be released from the Green Belt in order to deliver development within sustainable locations, however no consideration appears to have been given to the implications of planning for a higher level of housing development and the resulting need for more Green Belt deletions. Furthermore, as detailed within the PTC response to policy SP8 it is explained that Portishead not a sustainable location for the level of growth proposed. It is clear, therefore that the housing requirement is not an objective assessment of development needs and therefore not positively prepared. Justified	Amend policy SP7 to remove reference to Tower Farm, Portishead and Black Rock, Portishead – therefore retaining these two sites within the Green Belt.		Response for policy LP5 - why policy is not sound DRAFT 251210.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								To meet this requirement, the NSLP should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate, robust and credible evidence. The NSLP should show how its policies and proposals help to ensure that the social, environmental, economic and resource objectives of sustainability will be achieved. In addition to their location within the Green Belt, the Tower Farm and Black Rock sites have a strategic ecological role in protecting the unique environment of Weston Big Wood (SSSI) and the Gordano Valley strategic green corridor. PTC submits that the approach to the proposed removal of the sites from the Green Belt is not fully justified as it has not fully considered all reasonable alternatives particularly with regard to sites which are less environmentally sensitive, neither has the approach considered the impact of increasing density levels on other more sustainable sites, furthermore, consideration does not appear to have been given to the reasons for the designation of the current Green Belt. These matters are explained in more detail below. Alternative sites: Wyndham Way is an example of the consideration of an alternative sites . This contains a 1.1 hectare “green field” which is effectively wasteland and has been earmarked for commercial development for many years, but no plans have ever been brought forward because of lack of viability. The vision of the Wyndham Way area is for a mixed housing and commercial development which would bring more jobs to Portishead and therefore prevent it becoming purely a commuter town. The site is near to the new railway station which is due to open in 2028. The allocation of the site for mixed residential and commercial development will increase the probability of the site being developed as the first phase of the Wyndham Way area vision/Town Centre regeneration. Another site which should be allocated is Land South of Clevedon Road. This was included as a site reference HE20488 in the 2023 NSC Local Plan draft but is not within the current draft plan, PTC understands that this is because the Environment Agency has reclassified the land is being in the flood plain. It is considered that further investigation is required regarding flood risk on this site - it is on a small ridge overlooking the Somerset Levels and is in fact on higher ground than most of the land developed in Portishead over the last 25 years. The 2023 proposal was for 80 homes on this 2.67 Hectare Green Belt site, mostly larger Executive style homes. It should be noted that the proposal for executive homes was in conflict with the Portishead Housing Needs Assessment carried out by AECOM for the Portishead Neighbourhood Plan - which highlighted the need for affordable and smaller dwelling units. This site is in a sustainable location, very close to the local Secondary school and a short flat walk to Portishead High Street. It is submitted that it should be included within the NSLP and classified as a suburban or urban site and using national housing density guidelines the 2.67 acre site could accommodate 250 to 500 dwellings which would help to reduce any potential need for Green Belt deletions in unsustainable locations. PTC considers that the NSLP should also include two further sites in Portishead: • Planning permission was granted in 2017 for 33 homes at a site in Portishead between Wyndham Way and Cheviot Meadow (17/P/1229/FUL). These were not built, and permission was later granted for a care home there, but that has also not been built and the site is for sale again. • Land is also for sale next to The Poacher public house, with an indicative 8 homes. Density PTC consider that a number of sites should have the proposed density reassessed. In the previous iteration of the draft NSLP the Wyndham Way site in Portishead was increased from 485 to 785 homes, something that was suggested by PTC as this approach would deliver sustainable development particularly as it is a brownfield and is within, rather than on the edge of the town. Only one other significant proposed site in North Somerset saw an increase in its allocation between the previous and current draft. The Castlewood site in Clevedon is owned by North Somerset Council and has an allocation of only 120 homes. It is a sustainable site with an area of 3.37 hectares with a flat walk to the High Street, served by several bus services (X5, X6, X7/X7a, X10 and X11 – both local and Bristol services). PTC consider that as a result of the location and characteristics the density should be increased – accommodating between 300 to 600 homes rather than the 120 currently proposed. Several other proposed allocations across North Somerset (at least 23) are clearly, from their descriptions within the draft plan are brownfield sites. If 300 homes can be added to Wyndham Way by increasing the density, it is submitted that this approach could be taken elsewhere, removing the need to develop land within the Green Belt. Previous Green Belt Designation The Green Belt designation of Portishead Down, which included the Tower Farm and Black Rock sites was tested in 1988 as part of the South West Avon Green Belt Local Plan which resulted in a planning enquiry (See Report by County of Avon Planning, Highways and Transport Committee 20th June 1988) The Planning inspector recommend an increase in the area of Green Belt to include two areas on the Northern boundary of the Tower Farm site resulting			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								in all parts of both the Tower Farm and Black Rock sites being designated as Green Belt. Regarding Portishead Down, the report states “The inclusion of this land in the Green Belt conforms with the Structure Plan. It is an area of open land on Portishead Down which should remain open. The boundary would form an acceptable Green belt boundary protecting not only the character of this part of Portishead Down but also the setting of both the Gordano Valley and the town of Portishead. The remainder of Portishead Down to the South West is in the designated Green Belt as an area of the land which should remain open in the long-term” The report goes on to say that “The deposited Local Plan contains this Policy which states WITHIN THOSE AREAS DESIGNATED ON THE PROPOSALS MAP, DEVELOPMENT WILL NOT NORMALLY BE PERMITTED EXCEPT IN VERY SPECIAL CIRCUMSTANCES FOR PURPOSES OTHER THAN AGRICULTURE, FORESTRY AND OUTDOOR RECREATION. These matters remain fully relevant today. The sites protect the character of Portishead Down and the setting of both the Gordano Valley and the town. PTC contends that the special and relatively late designation of some of this land has not been properly considered by the NSC Green Belt assessment and therefore Policy SP7. It is submitted that the proposed removal of the Tower Farm and Black Rock sites from the Green Belt is not justified. Consistent with national policy To meet this requirement, the local plan should enable the delivery of sustainable development in accordance with the NPPF. Section 145 of the NPPF is clear that Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified through the preparation or updating of plans. Section 146 explains that exceptional circumstances include where an authority cannot meet its identified need for homes, commercial or other development through other means. Section 147 states that before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development. Reference is made to the need for the strategy to: a) make as much use as possible of suitable brownfield sites and underutilised land; b) optimise the density of development - including whether policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport; and c) have been informed by discussions with neighbouring authorities about whether they could accommodate some of the identified need for development. PTC submit that the NSLP and its associated evidence base does not demonstrate exceptional circumstances, in particular that: • an alternative spatial distribution would reduce the need for Green Belt deletions in Portishead, delivering more sustainable development; • a reduction in the overall housing number, to accord with those identified by the government’s standard method for calculating housing need; • alternative, more sustainable sites are available in the town; • density could be increased on other more sustainable proposed housing sites; and • lack of clarity regarding the duty to cooperate. The proposed Green Belt deletions within policy SP7 are therefore not consistent with national policy.			
58342433	H Moody			No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Unsure	I do not believe the land at Tower Farm or Black Rock, Portishead should be released from green belt or therefore be developed on. Environment: These sites were specifically added to the Green Belt in the late 1980’s because of their high ecological value. Section 40 of Natural Environment and Rural Communities Act 2006 places a duty on public bodies to contribute to the coherence and resilience of ecological networks. There are alternative brown and green field sites with much less ecologic impact and developing it will impact negatively on the wildlife, flora and ecology of the whole Gordano Valley. At least 2 existing brownfield sites in Portishead have not been included in the Plan - Wyndham Way and Cheviot Meadow, these have already been given planning permission. The opportunity to increase housing on brown field sites across North Somerset would mean Black Rock and Tower Farm sites are not required to meet local housing targets. These fields are as important for nature as they are for us - mentally and physically. I do not believe there are exceptional circumstances to change these green belt boundaries - there are exceptional reasons to protect it.	The use of brown field sites for development, many of which have not been included in this local plan.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
58582945	Nailsea Action Group		Nailsea Action Group	Unsure	‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Nailsea Action Group considers that the release of Green Belt land north of Nailsea and east of Backwell is not justified. The NPPF requires “exceptional circumstances” for Green Belt release. Case law confirms that this is a high bar. In Gallagher Homes Ltd v Solihull MBC [2014] EWCA Civ 1610, the Court of Appeal held that the mere unsuitability of land for housing cannot amount to exceptional circumstances. More recently, in Save Greater Manchester Green Belt Ltd v Secretary of State [2025] EWHC 2742 (Admin), Lang J clarified that while authorities have discretion, they must demonstrate a clear evidential basis for exceptional circumstances, not simply rely on housing need. The evidence base here does not demonstrate why Nailsea and Backwell must bear this burden compared to reasonable alternatives such as brownfield redevelopment or urban intensification. Without a transparent comparison of alternatives, the allocations are not justified. Nailsea Action Group appreciates the positive approach to the extension to the Green Belt proposed to the south of Nailsea as defined on the Policies Map to maintain the separation to prevent the merger of Nailsea and Backwell and prevent further encroachment into the countryside. However, even if ratified, the ease with which it might be later overruled to allow developers to build, is not reassuring.	In the light of the legal implication that exceptional circumstances do not apply to the Nailsea scenario, leave the green belt unbuilt on.	The suggestion to extend the green belt to the sough of Nailsea is sound.	
58582945	Nailsea Action Group		Nailsea Action Group	No	‣ Justified ‣ Consistent with national policy	Unsure	Unsure	The plan is inconsistent with national policy. The Green Belt release undermines the purposes of the Green Belt, including preventing urban sprawl and safeguarding the countryside. The ecological mitigation measures, such as the proposed Nature Park and wetland creation, are vague, unfunded, and risk failing to meet statutory duties under the Habitats Regulations and biodiversity net gain requirements. In Compton Parish Council v Guildford BC [2019] EWHC 3242 (Admin), the High Court emphasised that Green Belt changes must be supported by clear evidence and lawful reasoning. Similarly, the principle in Tesco Stores Ltd v Dundee City Council [2012] UKSC 13 confirms that policy interpretation is a matter of law, requiring clarity and enforceability. National policy requires clear, enforceable measures to protect biodiversity and deliver net gain, which this plan does not provide. Nailsea Action Group judges the inclusion of the north Nailsea site in SP7 as unsound because it contravenes much of what is expressed in that policy and in DP12: “Inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances,” and “Proposals for major development involving the provision of housing in the Green Belt should meet the ‘Golden Rules’ as set out in the NPPF, relating to affordable housing, necessary improvements to local or national infrastructure, and publicly accessible green spaces.” “The NPPF indicates that development in the Green Belt is inappropriate unless specified exceptions apply.” With respect to the North Nailsea site, it is not clear that such exceptions are sufficiently strong to merit the appropriateness of the site.	NSC should select a site closer to Bristol, where public transport is usable and practicable.		
8126849	Sport England		Sport England					Sport and Recreation in the Green Belt - SP7 Green Belt / Development in the Green Belt DP12 Comment By virtue of its location adjoining urban areas and comprising essentially open land, the Green Belt makes an ideal location for outdoor sports facilities and can accommodate a wide range of sports close to major centres of population. The NPPF recognises outdoor sport as an appropriate land use in the Green Belt and advises that new buildings which provide essential facilities for outdoor sport, including changing rooms and small spectator accommodation, may be developed. Sport England promotes the development of outdoor sports facilities in the Green Belt including essential ancillary built facilities. In exceptional circumstances Sport England will support the development of indoor or other built facilities associated with outdoor sports, where there is an identified need and no suitable site is available elsewhere in the locality. Sport England will promote policies and practices that: • encourage the provision of outdoor sport facilities in the Green Belt which help to sustain community life; • identify suitable sites for outdoor strategic sports facilities where there is a clearly identified demand for such facilities and where no suitable site exists elsewhere in the locality; • set out criteria against which ancillary built facilities will be considered; and • recognise that there may be circumstances where floodlit facilities are appropriate in the Green Belt subject to satisfactory management arrangements. As pressure increases on open land in urban areas, many sports clubs which have outgrown their current homes are looking to the Green Belt for space to expand. Sports which require extensive areas of land, such as golf, have little chance of finding large enough sites in built up areas. In many parts of England the Green Belt offers the nearest available open land. Outdoor sport can also play a part in keeping the Green Belt open, act as a buffer between urban uses and agricultural land and help to regenerate brownfield land. Whilst there is a general presumption against built development in the Green Belt a special exception is made for essential ancillary facilities. They should be acceptable as long as they are unobtrusive, small in scale and do not conflict with the purposes of including land within the Green Belt. Sport England would encourage a positive for sport approach Local Plan to enable the existing and future users opportunity to take part in recreational			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								activities that meet social, health and well being agendas.			
58601697	David J Patterson			No	• Consistent with national policy	Yes	Yes	I dispute the statement that due to the constrained nature of North Somerset including areas at risk of flooding and the Mendip Hills National Landscape it is not possible to meet the government's standard methodology housing need figure for North Somerset outside of the Green Belt in a sustainable way. There are brownfield sites in North Somerset that could be better-utilised that would yield equivalent, affordable housing without impacting sites designated as greenbelt. As a consequence, I do not believe there is sufficient justification for exceptional circumstances as defined in national policy and I find the plan to be unsound.	The plan proposes 500 dwellings in Portishead at Tower Farm and BlackRock. I believe it is necessary to re-evaluate the available brownfield sites available in the town of Portishead and remove these plots from the existing plan.		
57928993	Kevin Payne			No	• Justified • Effective • Consistent with national policy	Unsure	Unsure	I consider the proposed allocation of Pill Green unsound, not legally compliant, and not demonstrably compliant with the Duty to Cooperate for the following reasons: The Plan does not demonstrate exceptional circumstances for Green Belt release. The evidence base does not show a comprehensive examination of reasonable alternatives, including maximising brownfield land, increasing densities in existing settlements, or cooperating with neighbouring authorities. Instead, the Council appears to be taking Green Belt land as the default or "easy" option, rather than properly testing other approaches. Four of the five Pill sites are high-quality agricultural land (Grades 1–3a), yet no assessment demonstrates that lower-grade land or brownfield alternatives have been exhausted, contrary to NPPF requirements. No evidence demonstrates that Pill Green must be released from the Green Belt; alternatives including brownfield sites, higher-density urban development, or cooperation with neighbouring authorities have not been fully considered. The Parish Council highlights that Pill/Easton-in-Gordano comprises only 1.9% of North Somerset's electorate, yet the Plan proposes it would accommodate 4.6% of all new housing, far exceeding the growth cap in the made Neighbourhood Plan (150–200 homes to 2038, supported by 81% of voters). The Parish Council strongly objects to the scale of proposed allocations in the parish. The evidence base acknowledges that achieving 50% affordable housing may be challenging. Releasing Green Belt without delivering genuinely affordable housing contradicts the NPPF requirement that exceptional circumstances must yield clear community benefits. The lack of affordable housing would undermine the NPPF 'golden rules' required when releasing Green Belt. The allocation conflicts with the existing Neighbourhood Plan, which was supported by 81% of voters and limits growth on principle; there is no demonstrated justification for overriding that democratic and statutory local policy. The proposed 600 homes at Pill Green represent a disproportionate share of growth for the parish and are not supported by adequate infrastructure or evidence of sustainable development. The Council has already permitted development on Green Belt land near Long Ashton, including the EPIC technology campus, despite concerns about Green Belt protection and local opposition. This suggests a trend of approving development in Green Belt locations without clear exceptional circumstances, reinforcing the concern that Green Belt release at Pill Green is being treated as the default option rather than as a last resort. Transport and infrastructure are not adequately addressed. Junction 19 of the M5 already experiences acute congestion. National Highways raised concerns in relation to the Court Hay application (25/P/1413/OUT) and required cumulative transport modelling. There is no evidence in the Plan that these concerns have been addressed. There appears to be an over-reliance on the proposed railway station without showing that rail and bus services can realistically absorb demand from up to 600 homes at Pill Green plus other sites. The Parish Council has stated that no cumulative transport modelling has been published for Pill Green, Pill Road, Court Hay, Portbury Wharf, and other nearby sites. Without a cumulative assessment, the transport evidence is not reliable or robust. The constrained local network (A369, Pill Centre, Martcombe Road, Pill/E-in-G lanes) has very limited capacity. I live on the A368, which already experiences high traffic volumes, noise, and strong loud vibrations that rattle windows. The development is likely to increase traffic, worsen noise and vibrations, and create a "noise tunnel" effect, as fields that currently absorb sound are removed. The removal of open fields is likely to amplify road noise due to reflective surfaces and the loss of natural sound-dampening landform, yet no acoustic assessment has been carried out at allocation stage. LP4 and Schedule 1 propose school and active travel links, but no funded or deliverable plan. The proposed green belt sites also lay within a civil aerodrome safeguarding area, which imposes restrictions on building heights, layout, and lighting. The Plan does not assess how these constraints would affect the deliverability of the proposed allocation. The proposed allocation at Pill Green should be considered in combination with other nearby sites, including Pill Road, Court Hay, Portbury Wharf, and Ham Green. The Plan provides no cumulative assessment of the impacts on traffic, noise, infrastructure capacity (including schools, healthcare, drainage, and utilities), or local biodiversity. Without this assessment, the transport and	To make SP7 sound, the Council must provide robust evidence demonstrating exceptional circumstances for any Green Belt release and show that reasonable alternatives have been fully considered, including brownfield sites, higher densities in existing settlements, and cooperation with neighbouring authorities. The Council must also demonstrate that cumulative impacts on traffic, transport infrastructure, flood risk, and local biodiversity have been properly assessed and mitigated. If this cannot be demonstrated, the strategic allocation of Green Belt land around Pill and Easton-in-Gordano should be removed.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								infrastructure evidence is not robust, environmental impacts are not mitigated, and the Plan cannot be considered effective, justified, or consistent with national policy. Biodiversity and environmental impacts are inadequately addressed. Sites lie within bat SAC consultation zones and near the Severn Estuary SSSI. Pill and Easton-in-Gordano lie within sensitive ecological zones, including: • consultation zones for the North Somerset & Mendip Bats SAC • proximity to the Severn Estuary SSSI • wildlife corridors identified in the Wild Service Ecology Review (2019) The Wild Service Ecology Review (2019) identifies the Pill Green area as part of an important ecological corridor. Development would sever habitat connectivity unless significant mitigation is provided, which the Plan does not set out. The proposed release of Pill Green from the Green Belt (SP7) directly affects sensitive ecological areas identified under SP11 and DP35–DP37. The Plan does not provide site-specific mitigation measures, buffers, or enforceable biodiversity net gain to ensure that protected habitats, ancient and veteran trees, and ecological corridors are safeguarded. Without such measures, the release of this Green Belt land undermines the objectives of SP11 and DP37 and fails to meet NPPF requirements for biodiversity protection. Concerns: • It is unclear whether the Plan has fully assessed impacts on protected species and habitats when proposing the release of Green Belt land (SP7). • Policies SP11, DP35–DP37 lack site-specific mitigation measures, and there is no clear, funded strategy for habitat protection around Pill Green. • The Plan does not demonstrate how measurable biodiversity net gain will be secured or how ecological buffers will be enforced. • High-quality agricultural land near the village does not appear to have been protected, contrary to NPPF Section 15. • The site also contains several ancient and veteran oak trees and lies near sensitive ecological zones, which should be protected under DP37 and the NPPF. The Plan provides no site-specific measures, buffers, or measurable biodiversity net gain to comply with NPPF requirements and ensure their long-term protection. Land around Markham Brook and Pill Green includes areas within Flood Zone 3 with both fluvial and tidal risk. There is insufficient evidence that sequential testing was properly applied, as required by the NPPF (NPPF, pp. 49–52) to ensure that lower-risk areas were considered before higher-risk sites. The Parish Council notes that the flood modelling used for this allocation is not suitable for allocation-level decision-making and does not reflect the interactions between tidal and fluvial flows in the Pill/Easton-in-Gordano area. It is also unclear whether LP4 and Schedule 1 provide adequate assurance that future development at Pill Green will avoid high-risk areas or include robust, enforceable mitigation. Sequential testing is unclear, and high-risk areas may be included in the allocation. Lower-risk sites exist elsewhere in the district, meaning Pill Green should have been screened out at an early stage of the sequential test, yet no evidence demonstrates this happened. Policies DP9 and DP11 do not guarantee that flood risk will be avoided or mitigated. Conclusion: The allocation does not meet NPPF requirements on managing flood risk. The Pill Green site also forms part of the rural setting separating Pill from Easton-in-Gordano. Its development would visually merge the settlements and erode their landscape character, contrary to NPPF guidance on protecting valued landscapes and settlement identity. No landscape-led assessment appears to have informed this allocation.			
51207009	Barratt Bristol	Arwel Evans - Lichfields	Barratt Bristol	No	• Justified • Effective	Yes	No	Barratt Homes supports Policy SP7's proposal to remove 'Land at Lodway Farm, Pill and Easton-in-Gordano' from the Green Belt. Barratt considers that Land at Lodway Farm is grey belt land as it does not strongly contribute to Green Belt purposes (a), (b) or (d) outlined in paragraph 144 of the NPPF. We note that the recent PPG states that Green Belt purposes a), b) or d) do not apply to villages. Notwithstanding this, we have previously demonstrated (in representations to the additional sites consultation) that Land at Lodway Farm (HE20491) does not strongly contribute to Green Belt purposes a), b) and d) and therefore should be considered grey belt and given priority for release to assist the Council in meeting its local housing need on sustainable sites. 1 Purpose a) - The Site comprises land between the settlement edge of Easton-in-Gordano and the M5 motorway to the north west and Portishead railway line to the north east. It is fully enclosed by physical long-term defensible boundaries. It is therefore clear that development of the site could not lead to the unrestricted sprawl of development. 2 Purpose b) - Pill/Easton-in-Gordano is not a town and the Green Belt in this location does not form a gap between two towns. The proposed development of the Site would enclose the built form of Easton/Pill to within physical long term defensible boundaries in the form of a motorway and railway line and the proposed development therefore would not result in neighbouring towns merging into one another. Even beyond the physical barrier of the motorway and railway there is no town that this development would merge into.	Policy SP7 should therefore be updated to make reference to meeting Golden Rules subject to viability, as per the NPPF. Otherwise these sites will not be able to come forward. Policy SP7 should also be amended to refer to 175 dwellings rather than 160 dwellings for Land at Lodway Farm, Pill and Easton-in-Gordano.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								3 Purpose d) - Pill/Easton-in-Gordano is not considered a historic town, therefore purpose d) is not considered applicable. In accordance with paragraph 146 of the NPPF, it is clear that due to the enclosed nature of the site that its release would not fundamentally undermine the purposes (taken together) of the remaining Green Belt, when considered across the area of the plan. Land at Lodway Farm (HE20491) is free from footnote 7 constraints identified in NPPF (apart from Green Belt). We therefore concur that it should be released from the Green Belt. However, Barratt Homes objects to the draft policy because it fails to qualify that the requirement to provide 50% affordable homes on sites is subject to viability as set out in paragraph 67 of the NPPF. As set out in our response to Policy DP43 (affordable housing) development at 50% affordable housing is unviable as confirmed by the Council's own viability evidence. A review of the Additional Sites Viability Addendum for North Somerset Local Plan 2041 prepared by Dixton Searle shows (Table 7) that at 50% affordable housing development schemes in Easton in Gordano are unlikely to be viable, taking account of all the costs and policy requirements. Policy SP7 should therefore be updated to make reference to meeting Golden Rules subject to viability, as per the NPPF. Otherwise, these sites will not be able to come forward. Policy SP7 should also be amended to refer to 175 dwellings rather than 160 dwellings for Land at Lodway Farm, Pill and Easton-in-Gordano. Policy SP7 is unsound as the policy conflicts with the Local Plan's evidence base which notes that 50% affordable housing is unviable for development in Easton-in-Gordano. The policy is therefore not effective (test of soundness 36.c) or justified (test of soundness 36.b).			
58638305	H Pirouet			No	• Justified • Effective	No	Unsure	NSC has not properly considered: Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset Opportunities to increase housing density on proposed brownfield site, which could remove the need to develop Tower Farm and Black Rock The strategic ecological importance of these sites in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor The fact that both areas were added to the Green Belt in the late 1980s due to their high ecological value. National planning policy allows green belt changes only in exceptional circumstances - and these have not been demonstrated In addition: Neither site can provide safe and suitable access Development would create unacceptable transport impacts, failing national soundness tests.	For the above reasons, Tower Farm and Black Rock should be removed from the Local Plan.		
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	• Positively prepared • Consistent with national policy	Yes	No	We note that land is identified in this policy for removal from the Green Belt. We recognise that sites will need to be uncovered through the removal of the Green Belt to meet the Council's housing requirements. However, we question i) whether the correct sites (and their quantum) have been identified in the list; and ii) why land on the eastern edge of Portishead and north of Festival Way, Long Ashton has not been removed from the Green Belt as a means of delivering much needed homes in sustainable locations. The sites presented will require robust assessment in terms of their suitability and deliverability – and those with notable constraints which will need to be reviewed and addressed – as they may not be readily suitable for development. However, as illustrated by separate objections made by the Company (accompanied by supporting information) the following should be included within a list of locations: - Land at East Portishead – 650 dwellings - Land north of Festival Way, Long Ashton – 20 dwellings We note that villages in the Green Belt which do not contribute to openness are inset in the Green Belt and this is welcomed. If they do not contribute to Green Belt openness then in is reasonable to believe that land on their edges is not so sensitive inasmuch as it relates to a village that is inset for a reason. Their inclusion would make the plan sound by reason of making the plan effective by delivering new homes; and justified through an appropriate strategy. Reference in the policy to Grey Belt should also be made, given that it is a factor in the sequential site identification process. Please refer to other information submitted to this consultation promoting the aforementioned two sites.	That the policy be amended to include the following sites: - Land at East Portishead – 650 dwellings - Land north of Festival Way, Long Ashton – 20 dwellings Grey Belt should be referenced in the Policy. Also, that there is a commentary provided in the plan relating to the delivery of development on the edges of settlements inset in the Green Belt.		
63026465	South West Housing Association Planning Consortium		South West Housing Association Planning Consortium							Draft policy SP7 sets out that new residential development will be permitted on land released from the Green Belt, as defined on the Policies Map, where it is demonstrated how the development meets the 'Golden Rules' requirements as set out in the NPPF. The SWHAPC welcome the addition of this draft policy in accordance with the latest NPPF.	1118-35.M5 Local Plan 2041 Pre-submission plan (Reg 19).pdf
51242657	Rubix Strategic Limited	Arwel Evans - Lichfields	Rubix Strategic Limited	No	• Justified • Effective • Consistent with	Yes	No	Rubix supports Policy SP7's proposal to remove the southern site parcel of 'Land east of Backwell', located to the south of the railway from the Green Belt. Rubix considers that the southern site parcel of 'Land east of Backwell' is grey belt land as it does not strongly contribute to Green Belt purposes a), b)	Rubix object to Policy SP7 as it does not explain that the requirement to provide 50% affordable homes on site is subject to viability as set out in paragraph 67 of the NPPF. As set out in our response to policy DP43 and as confirmed by the Councils own evidence base, the requirement to		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					national policy			or d) outlined in paragraph 144 of the NPPF. We note that the recent PPG states that Green Belt purposes a), b) or d) do not apply to villages. Notwithstanding this, we do not consider that the southern site parcel contributes to green belt purposes a), b) or d) and therefore should be given priority for release to assist the Council in meeting its local housing needs on sustainable sites. The land north of the railway does not comprise grey belt land nor is it proposed to be released from the Green Belt. We agree with this decision and note that this area is only required for the delivery of critical transport infrastructure and a mobility hub. These elements are not deemed inappropriate development in the Green Belt as per paragraph 154 of the NPPF. We consider that the mobility hub site could be utilised more efficiently to accommodate a 2 form primary school in due course. We request that the emerging Plan simply acknowledges the potential use of this land at this stage in light of the exceptional circumstances that exist. If the primary school site were to be identified within the grey belt land south of the railway line, it would result in a reduction in the number of homes that can be brought forward undermining the delivery of critical infrastructure. In any event, Rubix object to Policy SP7 as it does not explain that the requirement to provide 50% affordable homes on site is subject to viability as set out in paragraph 67 of the NPPF. As set out in our response to policy DP43 and as confirmed by the Councils own evidence base, the requirement to provide 50% affordable housing is unviable and therefore not effective. Policy SP7 should be updated to make reference to meeting the Golden Rules subject to viability, as per the NPPF to ensure the deliverability of sites. Other elements of the Golden Rules could still be secured.	provide 50% affordable housing is unviable and therefore not effective. Policy SP7 should be updated to make reference to meeting the Golden Rules subject to viability, as per the NPPF to ensure the deliverability of sites. Other elements of the Golden Rules could still be secured.		
58613377	Hill Residential Ltd	Marrons		No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The following representations have been prepared by Marrons on behalf of Hill Residential Ltd (our “Client”), with regard to land interests at Land west of Failand, Bristol (the “Site”), in response to the North Somerset Council (the “Council”) Local Plan 2041 Pre-submission Plan Regulation 19 Consultation (the “NSLP”). Our Client has previously made representations to the NSLP in March 2025, via the ‘additional sites consultation’. We understand that the contents of these representations will still be considered and therefore for brevity are not repeated here. A planning application has recently been submitted for development on the Site, which is now under consideration by the Council. This confirms the technical ability of the Site to accommodate sustainable development and the Council is encouraged to consider the application alongside these representations with regard to the Site’s suitability, availability and achievability. The associated description of Proposed Development is as follows: “Outline application (with all matters reserved except access) for a phased development of up to 200 dwellings with landscaping and open space, a flexible retail/café/community unit (non-residential uses to include Use Classes E and F2), and associated infrastructure”. Hill Residential Ltd (“Hill”) is an award-winning 5-star housebuilder, creating a range of high-quality homes across London and southern England in an area stretching from Cambridge to Oxford and across to Bristol. Hill’s vision is to be the UK’s leading, most trusted housebuilder, creating exceptional homes and sustainable communities. Hill considers sustainability a fundamental part of its business strategy and believe that a sustainable future is achievable only through a holistic approach that encompasses environmental, social, and governance considerations. Supporting Documentation These representations should be read alongside the following supporting documents: • Site Location Plan – prepared by Marrons (Appendix 1); • Parameters Plan – prepared by Marrons (Appendix 2); • Illustrative Masterplan – prepared by Marrons (Appendix 3); • Grey Belt Report – prepared by Marrons (Appendix 4); Scope of representations The Council confirms as part of the consultation that representations are invited within the specific remit of the ‘tests of soundness’, as set out in the National Planning Policy Framework 2024 (NPPF) at Paragraph 36. The Framework notes that plans are ‘sound’ if they are: “a) Positively prepared – providing a strategy which, as a minimum, seeks to meet the area’s objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development; b) Justified – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence; c) Effective – deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and d) Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in this Framework and other			Marrons on behalf of Hill Residential - Reg 19 Representations Final w_a.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								statements of national planning policy, where relevant." In the context of Paragraph 36 of the NPPF our Client also considers it imperative that the NSLP accounts for effective forward planning, given the emerging Spatial Development Strategy and the role North Somerset play within the West of England Combined Authority (WECA) in terms of spatial planning. Land west of Failand, Bristol The Proposed Development: The key elements in relation to the Site and the Proposed Development are best summarised as follows its characteristics are best summarised as follows: • Up to 200 new homes, delivering a mix of dwelling sizes to meet local housing needs. • Space for a flexible retail/café/community unit (uses to include Use Classes E and F2). • 45% affordable housing (up to 90 homes), ensuring a range of tenures to support local families and key workers. • Creation of a high-quality residential development to provide new housing for the village and help the Council meet its chronic undersupply. • Increases in biodiversity value, equating to 12.03% increase in the biodiversity value of habitats and 168.83% in relation to hedgerows post development. This will include new native woodland planting, trees, wildflower meadows and grassland. • New pedestrian, cycle and vehicular networks within the Site with pedestrian connections to existing pedestrian infrastructure on the curtilage of the Site to improve pedestrian connectivity within Failand. • A comprehensive Sustainable Urban Drainage Strategy (SuDs), which could include swales, rain gardens, attenuation basins and permeable surfaces. • A landscape and heritage sensitive development that responds thoughtfully to the Site's topography and maintains appropriate separation from the Tyntesfield Estate Registered Park and Garden (RPG), balancing new housing with protective measures and high-quality green infrastructure that delivers environmental, social, and visual benefits. • New open-space areas with enhanced planting and green buffers, a thoughtfully located public open space, which includes children's play space and improved biodiversity. • Retention of existing hedgerows and trees where possible with additional planting to minimise visual impact. • Significant financial contributions including a population contribution to the village to support local services and facilities (S106 and Community Infrastructure Levy (CIL) contributions). Planning History: The Site was submitted to the Council's Regulation 19 Additional Sites Consultation in March 2025, where the Site was promoted for allocation in the Local Plan update following the reforms to the National Planning Policy Framework (NPPF) in December 2024. As stated, for brevity the Regulation 19 Representations are not repeated here. We note that the outcomes from the Regulation 19 consultation were presented to Cabinet on 18 June 2025. Notably, the Site was not selected for allocation in the updated plan. Our position, as set out in our Regulation 19 representations, remains that the emerging Local Plan fails to adequately address Bristol's unmet housing need. These concerns were echoed by Council members at the Cabinet meeting on 18 June 2025. A request for pre-application advice was submitted in August 2025. The Council provided formal written advice on 29 October 2025. The advice acknowledged the proposal for up to 200 dwellings at the Site, and assessed its alignment with planning policy, site constraints, and sustainability considerations. Critically, the Council's advice recognised that the Site could be considered 'grey belt' in accordance with the current NPPF, given that it does not strongly contribute to the key purposes of the Green Belt. Notably, several aspects of the proposal were not disputed in the advice provided. The Council acknowledged the potential for a layout that respects the Site's landscape and heritage context, including the offset from the RPG and the containment provided by surrounding woodland and built form. The indicative design approach, including perimeter block layout and active frontages, was broadly supported from an urban design perspective. The provision of affordable housing in line with policy requirements was also accepted, subject to further detail at application stage. While the Council's advice raised some concerns regarding the sustainability of the Site, particularly in relation to access to services and reliance on private car travel, the submitted planning application, with reference to its suite of supporting technical documents, demonstrates that the Site can be considered sustainable. Moreover, the Council's advice did not take into account relevant planning appeal decisions that support the sustainability of the Site. These decisions are discussed in detail at Paragraphs 6.73 to 6.75 of the submitted Planning Statement. The demonstrable sustainability of the Site is addressed throughout the planning application, and the inclusion of a shop provision within the proposals further enhances this position. The Council also outlined a range of technical matters to be addressed at application stage, including transport, ecology, flooding, heritage, and affordable housing provision. These matters have been considered and are		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								addressed through the supporting documentation submitted with the application. Response to the NSLP Grey belt: A key aspect of the Government's planning reforms was the introduction of the 'grey belt' alongside the revised Standard Method for calculating housing need. The Government is very clear on its objective of delivering 1.5 million homes and considers national planning policy measures such as the grey belt, key in doing so. The initial draft of the NSLP did not consider the role of the grey belt and therefore our Client is keen to understand how it has now been introduced to this latest version and what changes have been made as a result. The term 'grey belt' is mentioned 3 times within the NSLP. Indeed, within Policy SP7: Green Belt, grey belt is mentioned just once within the supporting text. Paragraph 148 of the NPPF confirms that where it is necessary to release Green Belt land for development, plans should given priority to previously developed land, then consider grey belt which is not previously developed, and then other Green Belt locations. The Council states on page 30 of the NSLP that "a sequential approach to Green Belt release as been taken prioritising previously developed land, followed by grey belt sites and then other Green Belt locations". Paragraph 3.3 of the Council's Green Belt Review Background Paper includes reference to Paragraph 148 of the NPPF but neglects to include the final sentence, which reads as follows: "…Strategic policy-making authorities should consider the consequences for sustainable development of channelling development towards urban areas inside the Green Belt boundary, towards towns and villages inset within the Green Belt or towards locations beyond the outer Green Belt boundary." With regard to the above Paragraph 148 includes reference to Paragraph 110, which states: "The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health. However, opportunities to maximise sustainable transport solutions will vary between urban and rural areas, and this should be taken into account in both plan-making and decision-making." (our emphasis - see attached doc) With reference to the NPPF and grey belt, it can reasonably be assumed that villages within North Somerset which are inset from the Green Belt, are strong contenders for having a presence of grey belt land and therefore present opportunities for sustainable development in line with the sequential approach as set out in the NPPF. By way of example, Failand, where our Client's Site is located, is inset within the Green Belt and pre-application discussions have confirmed that it is considered grey belt land, which a technical Grey Belt Report (Appendix 4) in support of the submitted application now confirms. Despite this, Policy SP8: Housing confirms just 12% of the housing supply will be met in 'villages and rural areas'. With regard to the above, the Council is reminded that Paragraph 73 of the NPPF states the following: "Small and medium sized sites can make an important contribution to meeting the housing requirement of an area, are essential for Small and Medium Enterprise housebuilders to deliver new homes, and are often built-out relatively quickly." The NSLP continues to prioritise new residential development in or close to urban areas, optimising opportunities to encourage active and public transport modes of travel. Whilst our Client supports this in principle, in our view it does not provide the context to fully consider the role of the grey belt and opportunities to promote/improve sustainable transport options in rural areas. It is not clear from the Green Belt Assessment undertaken or the wording within the NSLP if the Council has undertaken an objective exercise to determine whether or not it has grey belt land within the North Somerset, which can support sustainable development. Grey belt land provides a sustainable opportunity to provide housing within close proximity to Bristol, without affecting the purposes of the Green Belt in relation to the Bristol urban area. However. This has not been explored. Bristol's unmet need: No mention is made within the NSLP regarding Bristol City Council's demonstrable and increasing unmet need. Bristol currently has an unmet need well in excess of 10,500 homes which it cannot meet within its boundary. Both South Gloucestershire to the north and Bath and North East Somerset to the south have confirmed difficulties in meeting their own needs, and therefore an inability to meaningfully assist Bristol in meeting its unmet needs. The West of England Combined Authority (WECA) was established in 2017, following a devolution deal between Bristol, Bath and North East Somerset, and South Gloucestershire. In line with the Government's proposed move to strategic planning authorities, WECA is now taking a more active role in planning across the strategic region, and recently announced work had			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								commenced on a Spatial Development Strategy. Alongside this, North Somerset continues to confirm its intention to join WECA, becoming the fourth local authority alongside Bristol, Bath and North East Somerset, and South Gloucestershire. Our Client's Site is located in close proximity to the western edge of Bristol and therefore provides an opportunity to enhance connectivity between Bristol and North Somerset, whilst assisting with the unmet housing needs of Bristol. This in turn will also accord with the wider strategic objectives of WECA, in strengthening the connections between the local authority areas. When considering a neighbouring authorities unmet need there is also a requirement to consider and support development that can come forward quickly to address this unmet need. Housing supply: Paragraph 61 of the NPPF states that it is important to support the Government's objective of significantly boosting the supply of homes, for a sufficient amount an variety of land to come forward where it is needed. Paragraph 62 of the NPPF also states the following: "To determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning practice guidance. In addition to the local housing need figure, any needs that cannot be met within neighbouring areas should also be taken into account in establishing the amount of housing to be planned for." (our emphasis - see attached document) Since the previous consultation, the Council has addressed its updated housing need and proposes allocations to meet the delivery of a minimum of 23,700 dwellings within North Somerset. Overall, our Client considers this to be a positive step. Notwithstanding. Policy SP8: Housing confirms the Council's proposed housing supply totals 24,495 dwellings, when compared to the minimum requirement of 23,700, this represents only a 3% uplift. When divided across the plan period, the Council has given itself a 53 dwelling per annum tolerance. The Planning Practice Guidance states that the Standard Method for calculating housing need provides a minimum number of homes to be planned for and suggests authorities use this as a starting point1. Our Client therefore does not consider the calculated housing requirement should be seen as a 'target', particularly where exceptional circumstances existing in Bristol which require neighbouring authorities to consider whether further need can be accommodated. Moreover, it is essential that the housing trajectory is robust and attempts to sustain a rolling five year housing land supply throughout the Plan period, in accordance with the NPPF. Paragraph 72 of the NPPF states that planning policies should identify the supply of specific, deliverable sites for five years following the adoption of the plan. Paragraph 78 of the NPPF states the following: "Strategic policies should include a trajectory illustrating the expected rate of housing delivery over the plan period, and all plans should consider whether it is appropriate to set out the anticipated rate of development for specific sites." We have been unable to find, either within the strategic policies or within the evidence base of the NSLP, a housing trajectory which details which sites are expected to come forward and when, alongside confirmation that this also enables the Council to demonstrate a five-year housing land supply upon adoption. Summary and Conclusions These representations have been prepared by Marrons on behalf of Hill Residential Ltd, with regard to its land interests at Land west of Failand, Bristol, in response to the North Somerset Local Plan 2041 Pre-submission Regulation 19 Consultation. It should be noted that our Client is in broad support of the NSLP and the draft allocations noted within, though does consider modifications are required in order for the NSLP to pass the relevant tests of soundness. The areas of the NSLP which we consider need to be addressed are set out below. The Council requires the NSLP to be considered against the tests of soundness within the Framework at Paragraph 36. In response to these and with reference to the commentary made within these representations, our Client notes the following: Positively prepared – The NSLP is not considered positively prepared. The strategy seeks to meet the Council's minimum housing requirement, however, there are concerns about the effectiveness of delivery across the Plan period and ability to maintain a rolling five year housing land supply. The NSLP pays no attention to the acute unmet need arising from Bristol and its ability to assist with this. In so doing, the Council has also failed to accurately assess the role of the grey belt and the ability to allocate sites close to Bristol, which are of a size that can deliver in the short-term. This is despite the Council confirming on an individual bases that such sites exist. It is our Client's position that the Council has sought to retrofit the requirement to consider the grey belt within a Plan and spatial strategy that had already been conceived. This is plainly evident from the lack of times 'grey belt' is			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								mentioned within the NSLP or its evidence base. Given the grey belt represents one of the most significant changes to national policy in some time, it should feature heavily within the plan-making process for Green Belt authorities. Justified – The NSLP is not considered justified. Whilst our Client considers the strategy is appropriate in part, there is potentially an over-reliance on strategic scale development which is not complemented by development of smaller sites, to enable effective delivery across the Plan period. However. This cannot be accurately determined given the absence of a site trajectory and anticipated delivery rates. Our Client therefore reserves the right to comment on this further once this evidence is made available. For the reasons stated above, our Client considers that a blended strategy is more appropriate, which the Council has not considered. Effective – The NSLP is not considered effective. Our Client considers that there is a lack of recent evidence to demonstrate effective joint working on cross boundary strategic matters, and considers that a distinct lack of effort has been made to address housing requirements in and around Bristol, despite the clear opportunities to do so. As stated above, sufficient evidence also does not exist to be able to determine whether or not it is deliverable over the plan period. Consistent with national policy – The NSLP is not considered consistent with national policy. Whilst the NSLP seeks to address national policy in some areas, there are clear omissions which mean it cannot be considered consistent with national policy overall. The Council appears to have taken a conservative approach, particularly with regard to housing supply, which is considered to go against the Government's objectives of delivering 1.5 million homes and boosting significantly the supply of homes, as set out at Paragraph 61 of the NPPF. Nor has it considered properly the requirements of Paragraph 62 of the NPPF, in not seeking to meet the unmet needs of its neighbouring authority, Bristol. Consequently, our Client does not consider the NSLP to be sound in its current form and confirms that it would like to participate in any hearing sessions held at the examination in public, particularly on matters raised in these representations and those submitted earlier in the process. Our Client is willing to engage proactively with a view to assisting the Council in making the NSLP sound. Our Client also re-affirms that Land west of Failand, Bristol is available for development now, represents a suitable location for development, and that development of the Site is achievable with a realistic prospect that housing can be delivered within the first five years of the draft plan period. The Site is deliverable and should therefore be favourably regarded in relation to its potential allocation for residential development within the emerging Local Plan. This is demonstrated via a live planning application, where supporting technical information is provided which the local plan team is invited to consider.			
39315297	Epic Systems	Ben Larcombe	Epic Systems					Draft Policy SP7 outlines the proposed changes to the Green Belt. The proposed Plan essentially seeks to maintain existing Green Belt boundaries, save for the proposed release of 12 sites from the Green Belt, for the purposes of providing residential development (6,600 dwellings in total). In respect of the Epic employment campus, Epic do not seek the site's removal from the Green Belt. The allocation/designation of this site, via draft Policy SP22, sufficiently recognises the site's strategic significance for the region, and sets out the parameters for which the development can be brought forward in an efficient and timely manner. However, as the Council will be aware, Epic also own a further 37 acres to the north of Colliters Way (as identified in blue at Appendix A - see attached document). This land was purchased after the submission of the planning application but was 'blue-lined' within the application amendments submitted in July 2024. In support of the Reg19 Plan, it is noted that a SGBA has been undertaken. A parcel of land located to the north east of Colliters Way / south east of the A370, which is inclusive of Epic's 37 additional acres (Appendix B), has been included in the Assessment (Ref. P-018). This parcel of land has been assessed as having a weak contribution to Green Belt purposes (a), (b), (c) and (d) and a moderate contribution to purpose (e). In consideration that the areas' contribution to Green Belt purposes (a), (b), and (d) has been assessed as weak, the SGBA concludes that the parcel can be considered as an area of search for potential grey belt land. Epic fully support and concur with the conclusions of the SGBA relative to this assessed parcel and note that they also fundamentally accord with the prior conclusions of the Local Planning Authority in their assessment of application ref: 23/P/2185/FU2 whereby members were advised (at paragraph 28 of the Committee Report) that: There is a well-defined boundary within the Green Belt itself (but not the Green Belt boundary), in this case Feeder Road, Ashton Vale Trading Estate and the A4174, creating a strong demarcation of the existing built-up area of Bristol. In this regard, this boundary provides clear distinction between the built-up area and the open countryside. In note of the above, Epic consider that there is clear and convincing	Epic consider that the Green Belt boundary at the south-western fringe of Bristol should be amended so that the boundary is delineated by Colliters Way (A4174, Feeder Road and the Ashton Vale Trading Estate).		Regulation 19 Local Plan Pre-submission Representations - Epic Bristol Limited 11.12.25.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								evidence to justify the removal of parcel P-018 from the Green Belt. It is notable that the north-eastern component of parcel P-018, commonly known as Longmoor, which falls within the administrative boundary of Bristol City Council, is already proposed to be removed from the Green Belt through the Bristol Local Plan Review due to the prior grant of Outline permission (ref: 21/03166/P) for 510 No. dwellings and 5,000 sq.m of commercial/community floorspace. Epic consider that the Green Belt boundary at the south-western fringe of Bristol should be amended so that the boundary is delineated by Colliters Way (A4174, Feeder Road and the Ashton Vale Trading Estate). As the Local Planning Authority have previously determined, this arrangement would form a well-defined boundary between the urban fringes of Bristol and North Somerset and the parcel would be located within an area, as explained in the Committee Report, that would read as part “of the existing built-up area of Bristol”. This approach would support the opportunity for future ancillary campus functions; including the potential for further renewable energy generation within Epic’s additional landholding. To further support this opportunity, Epic seek further revision to Policy LP22 that provides a positive framework for such delivery within the Plan period. This is considered further within paras 2.22 – 2.26 of this representation. Ultimately, it is considered that the effect of establishing a positive framework around parcel P-018 would have the effect of ‘completing the jigsaw’ - with the area of land bounded by Colliters Way (A4174) to the west, the A370 to the north, the urban area of Bristol to the east and south, and the railway line around that on the southern edge. The SGBA has also undertaken a review of the Epic employment campus land (Ref. P-019). This area of land has been found to make a ‘Moderate’ contribution to the Green Belt and therefore cannot be classified as potential grey belt. Whilst Epic does not contest this assessment, it would be keen to understand whether there are any segments of grey belt land falling within the site by way of a more granular analysis, as suggested by the SGBA. On this basis, Epic would like to be fully informed about any further assessment of this land, should it occur.			
30361825	K Riches			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The removal of 'Land East of Backwell' from the Green Belt is Not Sound and the test of exceptional circumstances is not agreed.	The removal of 'Land East of Backwell' from the Green Belt should be re-considered.		
30659873	Penelope Riley			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	To be legally compliant the local plan must meet a number of procedural tests. Portishead Town Council (PTC) consider that policy SP7 has not been informed by full and effective cross border discussions regarding housing need and the sustainable location of new development. PTC has reviewed the duty to cooperate statement and considers that the relationship with Bristol and Bath to be unclear in terms of meeting housing needs. The statement explains that the plan area is strongly influenced by the adjacent larger urban areas and whilst it states that each authority agreed to meet their own housing need within their own boundaries, it is unclear how each strategy and approach to housing interacts. Soundness To be considered ‘sound’ the North Somerset Local Plan (NSLP) must be positively prepared, justified, effective and consistent with national policy. PTC consider that policy SP7 is not sound for the following reasons: Positively prepared To meet this requirement, the NSLP should be prepared based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, consistent with achieving sustainable development. This assessment should also be informed by agreements with other authorities, so that unmet needs from neighbouring areas are accommodated where it is practical to do so and consistent with achieving sustainable development. Page 32 of the draft NSLP explains that the minimum number of new dwellings that the council is required to plan for over the plan period is 23,700, however the plan proposes 24,495. This is in excess of the level identified by the Government. PTC acknowledges that there is a requirement for significant levels of housing to be planned for. However, the strategy must be consistent with achieving sustainable development. It is stated within the draft NSLP that land must be released from the Green Belt in order to deliver development within sustainable locations. Furthermore, in response to policy SP8 it is explained that Portishead not a sustainable location for the level of growth proposed. It is clear, therefore that the housing requirement is not an objective assessment of development needs and therefore not positively prepared. Justified To meet this requirement, the NSLP should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate, robust and credible evidence. The NSLP should show how its policies and proposals help to ensure that the social, environmental, economic and resource objectives of sustainability will be achieved. In addition to their location within the Green Belt, the Tower Farm and Black Rock sites have a strategic ecological contribution in protecting the unique environment of Weston Big Wood (SSSI) and the	Examples of the consideration of alternative sites also relates to the Wyndham Way site. This contains a 1.1 hectare “green field” which is effectively wasteland and has been earmarked for commercial development for many years, but no plans have ever been brought forward because of lack of viability. The vision of the Wyndham Way area is for a mixed housing and commercial development which would bring more jobs to Portishead and prevent it becoming purely a commuter town. This particular site is near to the new railway station which is due to open in 2028. Reclassifying it as a mixed residential and commercial site on this wasteland will increase the probability of the site being developed as the first phase of the Wyndham Way area vision/Town Centre regeneration. Land South of Clevedon Road was included as a site reference HE20488 in the 2023 NSC Local Plan draft but has been removed from the latest version, PTC understands that this is because the Environment Agency has reclassified the land is being in the flood plain. It is considered that further investigation is required in respect of this as the site is on a small ridge overlooking the Somerset Levels and is in fact on higher ground than most of the land developed in Portishead over the last 25 years. The 2023 proposal was for 80 homes on this 2.67 Hectare Green Belt site, mostly larger Executive style homes. It should be noted that the proposal for executive homes was in conflict with the Portishead Housing Needs Assessment carried out by AECOM for the Portishead Neighbourhood Plan - which highlighted the need for affordable and smaller dwelling units. This site is in a sustainable location, very close to the local Secondary school and a short flat walk to Portishead High Street. It is submitted that it should be included within the NSLP and classified as a suburban or urban site and using national housing density guidelines the 2.67 acre site could accommodate 250 to 500 dwellings which would help to reduce any potential need for Green Belt deletions. The NSLP should also include two further sites in		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Gordano Valley strategic green corridor. PTC consider the approach to Green Belt deletion is not fully justified as it has not fully considered all reasonable alternatives particularly with regard to which are less environmentally sensitive as well as proposed density levels of other sites.	Portishead: • Planning permission was granted in 2017 for 33 homes at a site in Portishead between Wyndham Way and Cheviot Meadow (17/P/1229/FUL). These were not built, and permission was later granted for a care home there, but that has also not been built and the site is for sale again. • Land is also for sale next to The Poacher public house, with an indicative 8 homes.		
51427233	S Roberts		Resident	No	‣ Justified	Unsure	Unsure	The local plan destroys Grade 1 land in Backwell. Simply put land of this quality is very rare and should not be built on. It is also a flood plane and therefore no appropriate. In addition the number of home in Backwell is disproportionate to other areas. Given the vulgar approach that is being taken for supporting new homes I reject this proposal.	Reduce the target homes in Backwell and leave Grade 1 land alone. It cannot be replaced.	It is naive and ill thought through.	
62776065	Paul Segar			Yes		Yes	Yes			I have a concern that in some circumstances Green Belt land may be requested by developers in preference to other non-Green Belt sites, e.g. brown field sites. In my view, Green Belt sites should only be released for development once all other available sites have been, or are in the process of being, developed.	
51079969	Justin Saunders		Pill and Easton-In-Gordano Parish Council	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	Yes	LP4 means that a small community has the second highest loss of green belt to houses in North Somerset. This equates to 80% of the accessible green belt around the community and creates urban sprawl with the port. The current green belt provides active travel opportunities in nature for the most deprived areas of the community which will be significantly reduced by these proposals. Insufficient work has been done to identify smaller brownfield sites which could meet a substantial part of this need rather than relying on the easy approach of looking at areas land banked by large developers over a number of years with previously failed planning applications.	LP4 needs to be withdrawn and alternative sustainable sites within settlement boundaries given due consideration ahead of green belt allocation.		
30736993	Kath Scargill			Yes		Yes	Yes				
30736993	Kath Scargill									We support the release of green belt so housing can be next to the town and services	
30975873	Chris Segar			Yes		Yes	Yes			I support the policy on green belt. It should be preserved except as a last resort in order to maintain the distance between towns and villages and preserve our green fields.	
41396737	Bristol Airport		Bristol Airport Ltd	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	Yes	Click or tap here to enter text.Bristol Airport Ltd (BAL) welcomes the release of land from the Green Belt to reflect the grant of planning permission for an increase in operational capacity up to 12 million passengers per annum (mppa). However, our fundamental objection to the Pre-submission Local Plan is that it has failed to consider the future identified needs and requirements of Bristol Airport, North Somerset's largest employer, a strategically important piece of regional infrastructure and an international transport hub. Our position has been clear throughout the Plan making process. The Local Plan Issues and Options Document (September 2018) identified four potential options for a new policy for Bristol Airport and in our response to that consultation, we set out the reasons why BAL was strongly in favour of Option 4 (Remove Airport area from the Green Belt and allocate land for expansion now and in the future). Our position has not changed, and we are unaware of any justification for why Option 4 was removed and why the Council has pursued the approach it has. The Sustainability Appraisal (SA) supporting the Local Plan must be undertaken in accordance with 'The Environmental Assessment of Plans and Programmes Regulations 2004' which require that the Council: outlines the reasons the alternatives were selected; identifies, describes and evaluates their likely significant effects; details the reasons why alternatives were rejected; and sets out the reasons for selecting the preferred approach in light of the alternatives. In our opinion, the Council has not fulfilled these requirements in its SA Report with respect to Bristol Airport. As part of our Preferred Options consultation response in April 2022, we again emphasised the importance of Bristol Airport's longer-term growth to North Somerset and the wider region and requested that land should be allocated to accommodate longer-term development to support infrastructure for circa 15mppa, in line with our emerging Master Plan. We repeated our views again in January 2024 for the Pre-submission Local Plan which was later withdrawn. Our Master Plan is no longer emerging and was formally adopted in June 2025. This followed an extensive period of consultation with the public and key stakeholders, including the Council, during the winter period of 2024/ 2025. The adopted Master Plan clearly sets out the Airport's future development requirements to meet anticipated demand. In accordance with the Aviation Policy Framework (APF) (March 2013), para 4.11 notes that the 'primary objective of master plans is to provide a clear statement of intent on the part of an airport operator to enable future development of the airport to be given due consideration in local planning processes'. There is no evidence that the Council has given our Master Plan appropriate due consideration in relation to Green Belt boundaries. In addition, and in accordance with the NPPF paragraph 85, 'planning policies and decisions should help create the conditions in which businesses can invest, expand and adapt'. Paragraphs 86 and 87 set out how planning policies can help build a strong and competitive economy and NPPF Policy	BAL requests that the Green Belt Inset is extended to reflect our adopted Master Plan land requirements to accommodate longer-term development up to 15mppa.		North Somerset Local Plan Pre-submission Plan - Representation form Part B - SP7 Green Belt_submitted 08.12.25.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								111(e) specifically identifies ‘airports’ as an example of a large-scale transport facility. It notes that planning policies should provide for large scale transport facilities that need to be located in the area, and the infrastructure and wider development required to support their operation, expansion and contribution to the wider economy. The Pre-submission Local Plan fails to address these national policies and therefore fails to meet soundness tests (A) Positively prepared and (D) Consistent with national policy. The Pre-submission Local Plan is supported by a Stage 1 Green Belt Assessment. The Stage 1 Green Belt Assessment has considered a parcel of land which includes Bristol Airport (P-032). This parcel is a sizeable area, one of the largest within the Stage 1 assessment. Goblin Combe SSSI, along with King’s Wood and Urchin Wood SSSI to the west, account for approximately 40% of the parcel, while areas of ancient woodland located to the south and west also cover around 40%. The Stage 1 Assessment concludes that Parcel 032 makes a ‘moderate’ and not a ‘strong’ contribution to the Green Belt purposes and, accordingly, notes that the parcel should be included in an ‘area of search’ for potential grey belt land. Due to the scale of the parcel, and the significant amount of woodland included, we do not consider it was particularly representative of Bristol Airport and land surrounding the Airport. In our view, it would have been appropriate to conduct a more focused Stage 2 Assessment on the proposed Bristol Airport expansion land immediately adjacent to the Green Belt Inset (as set out in the Airport’s adopted Master Plan). The failure to conduct a Stage 2 Assessment and the failure to consider further amendments to the Green Belt Inset is not ‘Justified’ and as a result Policy SP7 within the Pre-submission Plan as drafted cannot be considered sound. The purpose of the Stage 2 Assessment, as identified within the document itself, was to assess parcels of land on the edge of identified more sustainable towns and villages in Green Belt. It appears that the Stage 2 Assessment has only focussed on housing need, noting that the “assessment, in accordance with the NPPF paras 145 and 149, has helped the Council consider which areas to propose for release from Green Belt and allocate for housing to meet the identified house need”. Considering the potential for grey belt land within Parcel 032 (as acknowledged in the Stage 1 Assessment) along with the Airport’s adopted Master Plan and previous representations calling for expansion land to be allocated, the absence of a Stage 2 Assessment on land surrounding the Airport (as identified within the adopted Master Plan) is significant. We consider this to be a significant omission within the Stage 2 Green Belt Assessment which ultimately renders Policy SP7 unsound. We believe the proposed Bristol Airport expansion land immediately adjacent to the Green Belt Inset to be grey belt as i) it does not contribute strongly to purposes a), b) and d) of the Green Belt as defined by NPPF para 143; and ii) applying the policies relating to the areas or assets of particular importance in footnote 7 of the NPPF would not provide a strong reason for refusing or restricting development. It is our view that development of the expansion land as defined with the Airport’s Adopted Master Plan would not fundamentally undermine the purposes of the Green Belt across the wider Plan area. The lack of consideration for airport growth requirements is an issue that has been previously highlighted during the preparation of the West of England Joint Spatial Plan (JSP). In September 2019, the Planning Inspectorate wrote to the Combined Authority with a list of fundamental concerns, which ultimately led to the JSP being withdrawn from examination. Amongst these concerns was the lack of evidence for allocating land for airport requirements and removal of Green Belt land if necessary. At the time, the Councils explained it would be for subsequent Local Plans to consider the case for the allocation of land for Bristol Airport. The Inspectors noted that they would be likely to conclude, for the JSP to be sound, that decisions on the nature, scale and location of growth at Bristol Airport should be addressed through the JSP. Following the withdrawal of the JSP, the identified requirements, set out within our Master Plan to support Bristol Airport’s growth, have not been considered and positively planned for at a regional level, and to compound this, have not been considered at the local level through the Local Plan. By contrast, without going into specific detail on Policy LP14; Royal Portbury Dock, the Policy notes that ‘the Replacement Local Plan and Core Strategy considered port expansion issues and land was removed from the Green Belt and safeguarded for future port use, subject to demonstrating need and other detailed requirements. Further opportunities have been reviewed but no further Green Belt amendment is proposed’. The fact that ‘expansion issues’ have been considered, and land was previously safeguarded, demonstrates a direct contrast between how the Port’s needs have at least been considered, compared to no consideration of airport needs. The NPPF sets out that Green Belt boundaries should only be amended where exceptional circumstances exist. The exceptional circumstances that establish the need for changes to the Green Belt boundary in respect of Bristol Airport are set out below: • National policy: National aviation policy set out in the APF and The Future of UK Aviation: Making Best Use of Existing Runways (June 2018) recognises the important role regional airports play in UK connectivity and economic growth and establishes in principle support for regional airports such as Bristol making best use of their runways. The NPPF affords significant weight to the need to support economic growth and, as set out above, stipulates that local plans make provision for large scale transport infrastructure. An amendment to the Green Belt to make provision for the growth and development of Bristol Airport over the Plan period would be consistent with the Government’s aviation and planning policy. It would ensure that best use			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								is made of the airport runway and support local, regional and national economic priorities and objectives. • Development requirements: Bristol Airport's development requirements in the short to medium term have been clearly established and accepted by the grant of planning permission for the development of the Airport to accommodate 12 mppa. BAL forecasts that passenger demand will rise over and above 12 mppa during the Local Plan period, increasing to around 15 mppa and our adopted Master Plan provides a positive strategy for this growth, establishing the longer development requirements of the Airport. However, the Airport is constrained by the Green Belt and it is therefore essential that the Inset is reviewed in order to ensure that the Local Plan makes positive provision for growth beyond 12 mppa linked to wider economic priorities and that the Green Belt endures. • Openness: The NPPF makes clear that the fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence. At paragraph 143, the NPPF establishes five purposes of including land within the Green Belt. The Green Belt in the vicinity of Bristol Airport only engages one of these purposes in any substance, which is 'to assist in safeguarding the countryside from encroachment'. This is supported by the Council's own Stage 1 Assessment, but critically no further investigation in the form of a Stage 2 Assessment has been undertaken. • Grey belt: As set out above, we consider the expansion land to be grey belt. Its development will not fundamentally undermine the purposes of the Green Belt across the wider Plan area. • The economic importance of Bristol Airport: Bristol Airport is a significant economic driver within North Somerset, the West of England sub-region, the South West region and South Wales. The Airport's adopted Master Plan outlines the expected economic impact of growth, including an increase of over 7,000 jobs and almost £700m of GVA. It is therefore essential that the Green Belt Inset is reviewed in order to accommodate the continued operation and growth of the Airport. This would be consistent with the evidence provided by the Employment Land Evidence Report (2025), which states that 'expansion of the airport could be beneficial to the North Somerset economy, providing jobs in target sectors and is likely to be commercially attractive to the market' • The specific contribution Bristol Airport will make to the effectiveness of the Local Plan: Bristol Airport is at the heart of the Local Plan's ability to deliver its employment growth aspirations. When considering the exceptional circumstances that might exist, the Airport's significance to Local Plan effectiveness should be taken into account. In conclusion, the North Somerset Local Plan is meant to set out a vision and a framework, addressing needs to 2041. Whereas future housing need has been considered, future retail need, future employment land need etc. no consideration has been given to the Airport's future requirements. Simply reflecting the Airport's 12mppa planning permission is a reactive approach and defeats the purpose of forward planning and the purpose of Local Plan production. As a result, we believe the Pre-submission Plan is unsound.			
39195009	David Sheridan			Yes		Yes	Yes				
39195009	David Sheridan			Yes		Yes	Yes			I fully support these long overdue modifications to the Green Belt.	
50493793	M Slade			No	• Justified	No	No	Green belt and high grade agricultural land should be protected for future generations and to maintain food security which si estimated to only stand at about 65%. This has been achieved and protected throughout recent history so why are we allowing this draconian and chaotic government to tear up these sound custodial protections rather than standing up to these unreasonable demands? Food security is one the government's own 13 Critical Infrastructure Sectors and therefore must be protected at all costs. Housing and building solar farms is not.	Ring-fence and protect any farmland that can support a yield relating to food supply and construct plans to support this activity as a matter of urgency.		
49505505	J Slade			No	• Justified • Effective	Unsure	No	Green belt and high grade agricultural land should be protected for future generations and to maintain food security which si estimated to only stand at about 65%. This has been achieved and protected throughout recent history so why are we allowing this draconian and chaotic government to tear up these sound custodial protections rather than standing up to these unreasonable demands? 711873	Easton-in-Gordano Parish Council		Pill & Easton-in-Gordano Parish Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Pill & Easton-in-Gordano Parish Council objects to Policy SP7 (Green Belt). This policy is unsound because it allows the release of five high-quality Green Belt sites around our village (total ~1,100 homes) without meeting any of the strict national tests in the NPPF (December 2024). It has not shown that all non-Green Belt options (brownfield sites, higher density in towns) have been used up first. It has not demonstrated that these five sites are low-value "grey belt" – in fact they include ancient woodland edges, priority habitats, floodplain and woodland. There is no published Green Belt review or exceptional-circumstances report that justifies taking this land out of the Green Belt. Policy SP7 is unsound and inconsistent with NPPF para 145, as it fails to demonstrate "exceptional circumstances" for Green Belt release in Pill & Easton-in-Gordano. Two LP4 sites (HE206 and HE20491) constitute the remaining narrow Green Belt corridor between the parish and Royal Portbury Dock, vital for preventing coalescence and urban sprawl. Yet when assessing Portbury Dock, NSC stated: "The remaining Green Belt land located between the port estate and Portishead is considered extremely sensitive in preventing coalescence and checking unrestricted urban sprawl" (This consultation	Delete the proposed Green Belt deletions around Pill & Easton-in-Gordano (the five sites in Policy LP4). Amend SP7 to explicitly protect Pill-Dock Green Belt corridors as strategic gaps to prevent merger/ coalescence (per NPPF para 143(b)), deleting LP4 sites HE206/HE20491. Require full alternatives appraisal before any release (para 148). Keep the Green Belt boundary exactly as it is now, or at the very least only allow removal if a proper, published Green Belt review proves exceptional circumstances and shows the land is genuine low-value "grey belt". Add wording to SP7 that says: "Green Belt release will only happen after all reasonable non-Green Belt alternatives have been exhausted and a full exceptional-circumstances report has been published and consulted on." These changes would bring the policy back into line		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								within section "4 Locational Policies" - "Policy LP14: Royal Portbury Dock"). Allocating these sites now contradicts this, prioritising development over high-value Green Belt without grey belt proof or alternatives assessment. This developer-led approach breaches Localism Act 2011; Duty to Cooperate unmet with no joint work on landscape gaps (e.g., with Bristol on port impacts). It fails para 148 by releasing Pill's sensitive corridor (HE206/HE20491) without proving alternatives, misusing Feb responses that objected to Green Belt loss. Cabinet's 'well supported' claim (3.21) ignores this, no strategic consult occurred, making boundary changes unjustified and inconsistent with Portishead's 'extremely sensitive' protection (LP14) This sudden change only appeared in June 2025 – it was not in the July 2024 draft. It looks rushed and reactive rather than properly planned. Releasing this Green Belt without the proper evidence breaks national policy and makes the whole plan unsound.	with national rules and stop our high-quality countryside being lost without proper justification.		
62853473	Lindsay smith			No	, Justified	Unsure	Unsure	Green belt is just that.. Provided to protect the well-being the people and the environment. Removing this essential piece of land from green belt status will only benifit those making a profit from the housing. The community will once again be voiceless and the wildlife whose home you are destroying will become extinct. Than the irony of it all the roads will be named after the wildlife that's once lived in the woodland. We have seen this time and time again in other developments.	Use brown field s		
29190241	Waddeton Park Ltd (Land at Pill Road)	Alder King Planning Consultancy	Waddeton Park Ltd	Yes		Yes	Yes		Waddeton Park Limited strongly supports the proposed allocation of its land within the new local plan for development. However, it has drawn attention to the indicative site capacity and site requirements laid out for the Land at Pill Road in the Pre-Submission Plan. Related amendments are, therefore, proposed. For clarity, and for the avoidance of uncertainty and unnecessary delays in determining the future planning application, Waddeton Park suggests that it would be appropriate for a modification to be made to the proposed allocation wording to the extent that development would permit up to 100 dwellings and a care home. The allocation should be worded to specifically 'permit up to 100 dwellings' and additionally 'support, but not require, a care home on the site' (or similar wording). In this regard, there is a demonstrable need for older persons housing in North Somerset over the plan period to 2041, as supported by the 'North Somerset Local Housing Need Assessment Report of Findings, September 2025' (LHNA). Figure 49 of the LHNA, which forms part of the local plan evidence base, quantifies the need for specialist older person housing to 2041. This sets out that there would be need to provide an additional 1,400-1,500 specialist older person housing units over the 15-year plan period 2026-2041. Therefore, the need for this type of development is clear and should be appropriately accommodated for in the local plan. The appended illustrative masterplan outlines one way in which a care home could appropriately form part of the development scheme, in addition to 100 dwellings on the site. Waddeton Park proposes that the following requirement is removed from being a site requirement: "Active travel connection required between Pill Green and Land at Pill Road, crossing Markham Brook to enable creation of safe walking routes to schools, along with proportionate contribution to Markham Brook active travel overbridge." Waddeton Park suggests that it would be appropriate for a modification to be made to the proposed allocation to remove this element as a 'site requirement'. Firstly, the site has appropriate accessible connections for future residents to walk to St Katherine's School opposite. This site already benefits from safe walking routes to schools; therefore, it is onerous and unreasonable to expect development on the site to fund/deliver additional connections where not necessary to make the site itself acceptable in planning terms. As assessed within the appended Transport Technical Note, the site's accessibility review shows that the key desire line to travel from the site is to Pill village centre along Pill Road north and St Katherine's secondary school opposite the site. To the north, Pill Road also connects to Crockerne Primary School. Overall, access to day-to-day facilities and amenities for education, shopping, and community uses is	Waddeton Park Limited's view is that the Local Plan is legally compliant regarding the proposed site allocation for residential development at Land at Pill Road in Pill (Schedule 1 of the Local Plan, page 280), to which these representations relate. Moreover, Waddeton Park Limited believes that the proposed Local Plan, as set out in the Regulation 19 consultation can be found to be sound in that that the allocation of the land at Pill Road, Pill for residential development (identified on page 280 under Schedule 1) is consistent with each of the tests of soundness insofar as they are directly relevant. These representations are supported by the appended Transport Technical Note, prepared by Ridge, which supports the sustainability of the land at Pill Road for development. The land at Pill Road site allocation is part of the proposed means of implementing the spatial strategy, which has been properly arrived at through the identification of properly explained strategic options and their testing through sustainability and deliverability evidence and appraisals, and through stakeholder and community consultation. It is, therefore, a proper product of the positive preparation of the Local Plan and is justified. This forms part of the spatial strategy in appropriately directing strategic growth at Pill and Easton-in-Gordano under Policy LP4. The allocation of the site will be effective, in that it will assist in making the Local Plan deliverable. The site is wholly in one ownership and free of any significant constraints so its development can begin and be completed in the early years of the local plan period. The allocation is consistent with national policy and with the policies in the emerging Local Plan which is to be examined according to relevant national planning policy. It is clear that exceptional circumstances exist, and have been appropriately evidenced, to justify release of Green Belt land to support growth to meet North Somerset Council's identified housing need for the plan period. Paragraph 148 of the NPPF is clear that where it is necessary to release Green Belt land for development, as is established and agreed in North Somerset, plans should give: "priority to previously developed land, then consider grey belt which is not previously developed, and then other Green Belt locations." In this regard, Waddeton Park has consistently promoted the land at Pill Road throughout the emerging local plan process	North_Somerset_Local_Plan_Pre-Submission_Plan_Representation_Form_Part_B_WPL_SP7.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									primarily towards the north and east (to the secondary school). In addition, there are existing PRoWs opposite the site on Pill Road for recreational walks. Therefore, it does not seem reasonable for the Land at Pill Road site to have to deliver and/or contribute to the delivery of the connection over Markham Brook to the west as this is not necessary for future residents. The sustainability credentials of the site without this link are clearly acceptable; the delivery of the land at Pill Road without any reliance on the Pill Green land should be wholly supported. It seems the benefit of such connection would be for the Pill Green site (draft allocation for 600 dwellings) and, as such, should this connection be necessary it should be delivered by that site. Furthermore, an 'overbridge' to Markham Brook is very likely to be impractical and unrealistic physically, given the sloping valley and steep topography around the brook, and it is likely to have detrimental effects upon trees and biodiversity. Furthermore, the financial implications could risk the viability of the land at Pill Road allocation coming forward for development and this would materially affect the Council's housing position. Finally, fundamentally the requirement for an active travel bridge over Markham Brook is not considered to be necessary, as set out in the appended Transport Technical Note. There is no desire line to travel to the south/west of the site, as this has excellent accessibility to local facilities and amenities in the village centre and the secondary school is conveniently located opposite the site. These proposed minor changes need not be a matter of any significance for the examination but could be a modification proposed by the Council before submission of the Local Plan to the Secretary of State, and as a minor change should not trigger a need for any further consultation.	and strongly supports its allocation for residential development in the plan. The site is sustainably located with a strong relationship with the existing settlement of Pill. This strong cohesion between site and settlement is a significant benefit in allocating residential development here. The site is well located to the existing settlement with good accessibility to local services and in walking distance to key facilities. Pursuant to the Council's 'Spatial strategy, site selection and capacity paper' (October 2025), Pill/Easton-in-Gordano is identified as a Category A village which are described as "villages considered to be relatively sustainable in their own right with a range of easily accessible services and facilities and goof public transport links to towns". The Council's approach is wholly appropriate to direct growth to such settlements. It is highlighted that work to reopen the railway line has commenced with Pill train station set to reopen by 2028 which will only further enhance the existing sustainability of the settlement. The land at Pill Road has been appropriately and comprehensively assessed as suitable through the SHLAA and adjoins a Category A village in a sustainable location where exceptional circumstances for Green Belt release have been identified. With regard to the Green Belt, the site has been assessed by the Council, as part of a slightly larger land parcel, within the 'Stage 2 Green Belt Assessment' (October 2025), as delineated below (see attached document). The overall assessment of this parcel concludes it makes a weak contribution to the purposes of the Green Belt. This is set out in turn as follows: Purpose A - to check the unrestricted sprawl of large builtup area; (Bristol): Weak Purpose B - to prevent neighbouring towns merging into one another: Weak Purpose C - to assist in safeguarding the countryside from encroachment: Moderate Purpose D - to preserve the setting and special character of historic towns: Weak Purpose E -To assist in urban regeneration, by encouraging the recycling of derelict and other urban land: Neutral Further to this, as can be seen in the Green Belt assessment, our Waddeton Park's land makes a weak contribution to Green Belt purposes A, B and D. There are no relevant footnote 7 assets that would provide a strong reason for refusing or restricting development on the land. Therefore, this can be considered Grey Belt, subject to the specifics of the development proposal. The Council's Stage 2 Green Belt assessment agrees with this position in that the parcel can be identified as Grey Belt. This wholly supports the Council's approach to allocate development on the land, in accordance with the provisions of NPPF paragraph 148 which first priorities previously developed land and then Grey Belt land before any other Green Belt locations. The site is easily accessible, being within walking and cycling distance to a number and facilities and services within the village and nearby. This includes St Katherine's School opposite the site to the east. The site is available in the short term and can be delivered as a standalone development, without dependency on any major infrastructure intervention. The residential development has been driven by the context and topography, and by a wish to achieve an appropriate network of green infrastructure, positively responding to the	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										woodland around Markham Brook to the west. The site is within Flood Zone 1 and, therefore, having a low risk of flooding and being appropriate for residential development. It is the preferred location under the flood sequential approach to selection of housing sites. Supporting technical surveys and assessments have been carried out to inform the development allocation. Demonstration of the deliverability of development on the site is the intention to submit an outline planning application for development of the site, following pre-application discussions with the Council, shortly after the close of this Regulation 19 consultation. This will ensure development can be brought forward in the early years of the plan and supports the requirement for the Council to identify “specific, deliverable sites for five years following the intended date of adoption.” (NPPF paragraph 72). Overall, the proposed allocation on land at Pill Road is strongly supported. Comment is, however, made with regard to the site-specific deliverability of the development, with regard to the site requirements as set out on page 280 of the published Reg 19 Pre-submission Plan for the proposed allocation. In this context, the draft allocation makes provision for an indicative capacity of 100 dwellings on the site. Pursuant to the work undertaken to date the site may also be able to accommodate a care home, ensuring an efficient use of land and meeting a need for such facilities. As illustrated on the appended illustrative masterplan, a scheme is currently being progressed via pre-application discussions for 100 dwellings and a c. 70-bed care home. It is appropriate that the supporting wording for the allocation is amended to reflect this potential development, without making it an absolute requirement. The site can comfortably and appropriately accommodate a care home in addition to traditional residential dwellings, which will make a significant contribution in an area where there is demonstrable need. In accordance with the enclosed plan, key elements of Waddeton Park Limited’s development proposal on the land at Pill Road include: • New homes generally to the eastern boundary with lower density residential frontage towards the woodland; • Policy compliant affordable housing; • Care home in accessible location in the north of the site with views across landscape edge and woodland, providing a sensitive response to existing dwellings in St Catherine’s Mead; • Vehicular access from Pill Road; • Pedestrian/cycle and potential emergency access connection to the north of the site, serving a foot/cycle path which runs north/south within the site; • Mobility hub, with potential for electric scooter/bicycle hire, bicycle parking, car club space, parcel lockers and occasional events (i.e. food truck); • Traffic management to help create a low speed environment; • Potential for pedestrian crossing of Pill Road to Public Right of Way running east; • Pedestrian/cycle access to Pill Road linking with existing bus stop, serving a foot/cycle path which runs north/south within the site; • Potential for improved crossing/traffic management along Pill Road; • Wildlife area with informal recreation; • Northern pocket park responding to existing space in St Catherine’s Mead; • Multi-functional green corridor with swale, footpath and new planting; • Open space with play area in an accessible	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 										location, helping to retain an open character at the gateway to the village; • North to south swale within landscape edge to woodland. • New and retained hedgerow to south of vehicular access, along the eastern boundary with Pill Road, helping to retain a green character on the entrance to the village; • Green corridor with significant tree planting on site high point to help soften views; • Attenuation pond within landscape corridor.	
29025697	P Sterndale			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	No	No	Development of the areas around Pill & Easton-in-Gordano has previously been limited due to its location within the Green Belt. Land should only be released from the Green Belt 'in exceptional circumstances' (Section 13 of the NPPF). However, exceptional circumstances only apply if the Local Plan has maximised the use of brownfield sites available within North Somerset, which it has not. Two examples are the Castlewood site in Clevedon, and the Old Mill Road site in Portishead. There has been insufficient consideration to increasing housing density in larger towns and cities. The assertion that all of the proposed allocations in Pill and Easton in Gordano will be required to deliver 50% affordable housing (as is necessary to justify building on green belt land) is already recognised as 'challenging' in the 'additional sites viability addendum' to the Local Plan, and will not be achievable. In any event they are unlikely to be 'affordable' to residents who live in areas of Pill recognised as being amongst the 40% most deprived neighbourhoods.	Remove the five proposed sites in Pill and Easton in Gordano from the Local Plan		
18477217	Kit Stokes	Kit Stokes	StokesMorgan Planning Ltd	Yes	' Effective ' Consistent with national policy	No	Unsure	Objection to Policy LP9 – Insetting Villages We object to Policy LP9 because the approach of insetting villages within tightly drawn boundaries removes any potential for growth. This rigid policy fails to recognise the need for flexibility and proportionate development that supports rural communities. It also fails to recognise caselaw (Julian Wood) which allows infilling inside settlements (regardless of insets). Rather than imposing absolute limits, the Local Plan should consider rounding off villages to allow them to grow in a sustainable and sensitive manner. This would enable modest development that meets local housing needs, supports community vitality, and provides opportunities for younger and older generations to remain in their villages. The following villages are particularly affected by this restrictive approach: • Abbots Leigh • Clapton-in-Gordano • Cleeve • Dundry • Failand • Flax Bourton • Felton • Leigh Woods • Portbury • Redhill • Tickenham • Weston-in-Gordano • Winford These settlements have capacity for small-scale, well-designed growth without compromising their character or landscape setting. A more balanced policy would allow organic expansion while safeguarding key environmental and heritage assets.	We request that LP9 be revised to permit rounding off and proportionate growth in these villages, ensuring rural communities remain vibrant and adaptable to future needs especially where land meets grey belt definitions. .		
31062913	R Storrar		KWAW	Yes		Yes	Yes			The loss of some Green belt is an unavoidable consequence of the pressure to build sustainable housing and minimise the effects of climate change, whilst supporting the commercial viability of Bristol and surrounding areas, that are already heavily built up. The reasoning and logic of the policy is sound. It protects the rural agricultural areas of the county and helps encourage tourism, not only with passenger numbers at the airport, but also maintains the attractiveness of the rural landscape, keeping it free from developments.	
30664385	Toby Thurlow			No	' Justified	Unsure	Unsure	Not Justified Analysis (Stage 2 Green Belt Assessment) provided in support of this document look at a number of possible parcels of Green Space around Portishead that could be released. Many are judged Weak, yet only two are judged suitable and it is not clear why they have been chosen over the others. In some cases, e.g. Blackrock the proposal to release (as per https://map.n-somerset.gov.uk/LocalPlan2041.html) is different than included in the assessment. This means that analysis is non-valid. Tower Farm and Blackrock both border Weston Big Wood, and SSSI and classified Ancient Woodland. Ancient Woodland has greater protections that normal Greenbelt land. "Guidance Ancient woodland, ancient trees and veteran trees: advice for making planning decisions" https://www.gov.uk/guidance/ancient-woodland-ancient-trees-and-veteran-trees-advice-for-making-planning-decisions Buffer zones are an important part of a woodland area - not just to reduce the interaction between 2 zones, but also provide ecological services to support	Remove the parcels of Green Belt land around Portishead from the list to be cancelled.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								the woodland environment. For instance, deer use open farmland during dusk and dawn for feeding, and then retreat to the denser woodland during the day. This surrounding greenbelt provides a wildlife corridor to the rest of the Gordano Valley. Building on these 2 parcels of land would impact >25% of the border of Weston Big Wood, and a very major proportion of the borders with open grassland and fields. These larger buffer zones, not just 15m, should be considered when evaluating development which may impact Ancient Woodland. This is considered in the Government Guidance under "Indirect Impacts". The key outcome from this Government Guidance is:- Avoid impacts, reduce (mitigate) impacts, and compensate as a last resort The analysis fails to consider all these impacts. Other references. Bentrup, G. (2008) 'Conservation Buffers—Design guidelines for buffers, corridors, and greenways', Gen. Tech. Rep. SRS–109. Asheville, NC: U.S. Department of Agriculture, Forest Service, Southern Research Station. 110 p., vol. 109 [Online]. DOI: 10.2737/SRS-GTR-109 (Accessed 11 July 2023). https://www.woodlandtrust.org.uk/media/43634/buffers-an-overview-factsheet.pdf https://www.woodlandtrust.org.uk/media/43635/buffer-design-factsheet.pdf Effective It is not clear that all suitable Brownfield sites have been sufficiently given weight to development.			
62846721	Cleeve Parish Council		Cleeve Parish Council	No	• Positively prepared • Justified • Effective			We do not consider the North Somerset Local Plan 2041: Pre-Submission Plan to be sound. Based on the detailed representations of Cleeve Parish Council, we believe the Plan fails three of the tests of soundness set out in NPPF paragraph 36: Positively Prepared, Justified, and Effective. 1. Positively Prepared The Plan does not adequately address the needs of young people or newly forming households, nor does it ensure that new development will be properly supported by essential infrastructure. The repeated use of discretionary language ("will be expected", "should have regard to") leaves critical requirements—such as drainage, healthcare capacity, active travel connections, affordable housing percentages, biodiversity measures, renewable energy deployment, and sustainable design—insufficiently guaranteed. The Plan also fails to provide a clear and sustainable policy position on future growth at Bristol Airport, or on how Green Belt releases will be compensated or justified. As a result, the Plan does not convincingly meet the district's needs in a sustainable and deliverable way. 2. Justified The policy choices taken in the Plan do not always represent the most appropriate strategy when tested against reasonable alternatives. The evidence base appears inadequate or incomplete in several areas, including: (a) the justification for Green Belt releases at Bristol Airport; (b) the robustness of climate-adaptation measures given the known risks of flooding, sea level rise, extreme heat, and pressure on water resources; (c) the lack of evidence demonstrating that non-mandatory design guidance will achieve sustainable outcomes; (d) the omission of low-rise flats in existing towns as a viable and necessary option for delivering affordable housing for young people; and (e) insufficient assessment of the landscape, safety, environmental and carbon impacts of airport-related growth, including the absence of a cumulative emissions assessment. In each case, reasonable and more sustainable policy alternatives have not been adequately explored. 3. Effective The Plan's delivery mechanisms are weak and do not provide confidence that its policies will be realised. Critical infrastructure (roads, drainage, healthcare, active travel routes, mass transit provision and energy resilience) is not tied to development in a sufficiently enforceable manner. Policies that rely on voluntary interpretation or "expectations" are unlikely to secure required outcomes, particularly in relation to affordable housing percentages, design quality, biodiversity net gain, native woodland expansion, protection of commons, and the safeguarding of Best and Most Versatile agricultural land. Policies concerning Bristol Airport do not demonstrate effective cross-boundary working or credible mitigation strategies, while the approach to flood-risk management does not provide sufficient assurance that developments requiring the Exception Test would be safe, sustainable, or financially deliverable. As drafted, there is insufficient certainty that the Plan can be implemented as intended.	Policy SP7: Green Belt Cleeve Parish Council believes that the release of land from the Green Belt to Bristol Airport is entirely unacceptable and entirely unjustifiable. There is no sustainability benefit in this proposal and we think it should be removed from the Local Plan. In any case it clearly conflicts with Policy SP11.		Submission on behalf of Cleeve Parish Council in respect of Pre.docx
62471329	Environment Agency		Environment Agency	Yes						Agree with this policy	EA Response - NSC Reg 19.pdf
58636097	Nancy Wedin			Unsure	• Justified	Yes	Unsure		We must protect our Green Belt from further development. I am very concerned about the plans to build on/ exploit our green belt land as part of the Airport's expansion plans. This land should be protected for wildlife and nature. Releasing green belt land for extra Bristol Airport operational capacity may cause significant adverse effects on the rural landscape and the local ecology, including soil, air, and water pollution. These sites are home to rare birds, insects, and protected bats, and their destruction would disrupt habitat and feeding grounds, affecting biodiversity. Rather than		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									treating land solely as a commodity, it is important to balance development with conservation, recognising the value these natural spaces provide to wildlife and our community. From both an environmental and social perspective, allowing Bristol Airport to use Green Belt land represents an unsustainable and damaging course of action that runs counter to the long-term interests of the region.		
58415265	Mr D Wheeler			No	‣ Positively prepared ‣ Justified ‣ Effective	No	No	Firstly the Green Belt should be protected. No housing or ant construction should be provided on Greenbelt. This is a legally protected space. No thought is given to the impact of the construction on local resources such as health care schools or roads. I am not sure that there is a requirement for so many houses and those proposed will not meet the needs of those who really need them. Who are young local people on low incomes often doing poorly paid essential jobs. The number of houses required should be challenged. Who says these are needed and why?	Make lots more effort to build low cost affordable housing on brown field sites. Where larger construction is needed and local populations are to increase money should be given to increase the size of schools and medical centres. If this is not possible then construction should not go ahead. We all know that the housing that will be constructed will be £400k plus homes for those who can afford them. This will not release lower value homes for the not so well off. All this policy is about is the Council bowing to central government pressure when they should say NO.		
58562753	C Wheeler			No	‣ Justified	No	Unsure	This planning process is not inclusive. Most people aren't aware of it and most people wouldn't have enough understanding to participate in it. I therefore believe that it isn't democratic. All the developments listed contradict the noble opening statement about the Green Belt ie protecting the green land around Bristol and containing its sprawl. Generally the developments are principally about PROFIT. The land isn't just for people. I believe that the measure put in place to protect wildlife are lip service only. I have direct experience of the devastating loss of habitat that occurs due to housing development. How can we not prioritise nature at this pivotal time of the world. It completely beggars belief.	I am not qualified to respond to this. This is why we have experts who we hope we can rely on.		
58415265	Mr D Wheeler			No	‣ Positively prepared ‣ Justified ‣ Effective	No	Unsure	As Previously stated this plan allows construction on Green Belt this is protected by law. Thus the plans are illegal. Even if the laws have altered the green belt was set up to protect the countryside for the enjoyment of every one. these plans go against the whole point of the green belt. Wildlife species protected by law will be affected in a bad way. No one seems to question whether or not this plan is needed. We all know that the homes provided will be expensive and for the wealthy middle classes. Not for those who really need homes and cant afford them. Traffic will also be a major issue the road into and out of Bristol for this location is a single carriageway. What about the impact on services such as electricity, gas, sewage drainage flood prevention .....etc.			
30466337	Doug Willis			No	‣ Positively prepared ‣ Justified ‣ Consistent with national policy	No	No	Regarding greenbelt land in & around Nailsea.the plan has not evaluated other land options including non greenbelt land to the south & southwest.the land is also above potential flood risk.NTC & NSC have both failed to look at the potential of this land. They have failed to evaluate it because the only consideration given for any development has come from asking developers to put forward what they want. The land to the north of Nailsea is important greenbelt as it marks town boundaries includes a river that needs help from not being polluted by nearby development is open wildlife habitat/corridor to woodland.The greenbelt also helps protect Moore end spout which is a designated sssi.possible brown field site at the end of Southfield Road has been ignored (old cider factory/ warehouse). This land also contains a high pressure aviation fuel line. This will make insurance costs extremely high what with flooding risks as well			
62793857	Clive Wilson		Resident	No	‣ Justified	Unsure	Yes	I am unsure as to whether the plan is legally compliant, but question the threat to the the ancient woodland outlined in LP7. Specifically Weston Big Wood.	The inclusion of the required protection boundary between the ancient woodland and the proposed development of adjacent land.		
63070401	Emilia Leung			No	‣ Effective	No	Unsure	The Proposal is overly reliant on inflated national targets and infrastructure that cannot be delivered – whilst at the same time, ignoring local constraints. The Proposal is also inconsistent with national policy. Green Belt boundaries should only be altered in exceptional circumstances – and the review must show no “clear evidence that doing so would fundamentally undermine the purposes…of the remaining Green Belt”.			
31106145	Miles Estate	Jeff Richards		No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy		No	It is agreed that there are exceptional circumstances which justify the revision of the Green Belt boundary within North Somerset as part of the plan review. The fact that a review of the Green Belt has been undertaken is a positive approach for the Plan to take. However, our client’s sites on Land at Castle Road and south of the B3124 have been omitted as sites to be released from the Green Belt despite, as we have set out under Policies SP3 and SP8, Clevedon having the lowest proposed level of growth of all the main towns in North Somerset by some considerable margin, and despite this being lower than levels of growth in lower order villages.	Various sites should be identified for release from the Green Belt under SP7 as set out above.		02961 - The Miles Estate NSLP Reps - December 2025.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								In addition, based on our comments under Policy SP8, it is clear that additional sites for more homes will be required to meet minimum local housing needs over the plan period We object to the omission of our client's sites from Policy SP7, and we set out why our client's sites should be identified as additional sites to be included in SP7 to be released from the Green Belt and allocated for residential development. Land at Castle Road: This site (HE202004), owned by our client, the Miles Estate, should be identified under Policy SP7 as a site to be released from the Green Belt and as an allocation site in the emerging Local Plan, for reasons we state. Land South of the B3124: This site, owned by our client, the Miles Estate, was put forward as part of the additional sites consultation.However, it does not appear to have been assessed further by the Council – it is not a site that is referenced in the 'Residential Sites – Reasonable Alternatives Document'. It is also not assessed as a site in the Council's 2025 SHLAA including in Appendix 2 'Further Site Assessment'. When approached on how the Council intended to consider additional sites that were put forward through the additional sites consultation (such as land to the south of the B3124 with Officers), we were informed that the site falls outside of the current area of search they had identified around Based on the above, it seems inevitable that when asking through the additional sites consultation for any other potential locations for consideration, that these will likely fall outside of the assessment boundary which was broadly drawn based on previous SHLAA submission. This begs the question whether the request for additional site to be put forward was a meaningful one. Land South of the B3124 - The Site's Suitability and Sustainability: As a result of the site south of the B3124 being located adjoining the main town of Clevedon, all of the reasons as to why additional sites should be allocated at the town, as set out above, equally apply to this site. Land South of the B3124 - Overall Summary: Overall, land to the south of the B3124 should also be identified under Policy SP7 as a site to be released from the Green Belt and as an allocation site in the emerging Local Plan for reasons we set out.			
39313345	Thomas Jackson			No	• Positively prepared • Justified • Effective	Unsure	Unsure	I do not believe that this plan has been prepared with due consideration for the communities impacted and the total destruction to the environment to meet an arbitrary target from central government that makes no reference to the direct need of North Somerset communities and or the availability of available employment. I do not believe it adequately addresses the infrastructure needs going from already overstretched community infrastructure to in some cases an almost 100% in population	I do not believe any green belt site should be considered unless the land is considered unfit for farming purposes or a clear flood plane and there is already adjacent infrastructure that could be modified with limited impact.		
58507233	Paul Gardner			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	I am a resident of Portishead who witnessed the severe degradation and fragmentation of Weston Big Wood during Covid. The Tower farm and Black Rock sites in Portishead are green belt. In 1988 the area of Green Belt on Portishead Down which is where these sites are located was actually EXTENDED. Even in 1998 the special nature of Portishead Down was recognised. Nothing has changed locally to justify thee redesignation of these sites as grey belt. Government Policy is for "low quality green belt land to be released" This land is exactly the opposite - high quality green belt land which should be redesignated to receive bio diversity net gain credits so that the biodiversity degradation of the last 50 years can be reversed.	Amend policy SP7 to remove reference to Tower Farm, Portishead and Black Rock, Portishead – therefore retaining these two sites within the Green Belt		Response for policy SP7 - why policy is not sound DRAFT 251210.docx

SP8: Housing

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 64415137	Miller Homes (Locking Parklands)	Tom Rocke							Issue • Whether the Plan is seeking to provide a sufficient amount of housing • Notwithstanding, and without prejudice to, the foregoing, whether the broad distribution of housing proposed in the Plan is in accordance with the spatial strategy Soundness Test(s) • Positively Prepared • Justified • Effective • Consistent with National Policy Overall Housing Provision The Council's acceptance on this occasion that it must plan to meet the local housing need deriving from the standard method is welcomed. It is also noted that, whereas in the previous Regulation 19 Plan, the Council sought to argue that environmental constraints precluded it from planning to meet the full local housing need, they also seem to have abandoned that position notwithstanding that the revised standard method has resulted in a substantial		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									escalation in the number of homes for which the current Regulation 19 Plan must make provision. It therefore appears that the environmental factors are not as ‘constraining’ as the Council previously sought to argue. Notwithstanding the foregoing, the housing need deriving from the standard method is a minimum requirement that must be delivered during the plan period. To ensure that it is ‘met’, the Council should therefore be planning to exceed the minimum figure to allow for implementation nd delivery failures. That is particularly so given the evidence in North Somerset of slow delivery of strategic sites that have failed to keep pace with the Council’s delivery trajectories. Moreover, as will be addressed in later representations, the allocations in the Plan include sites that have been allocated in successive Development Plans for over 25 years, yet have still failed to come forward for development (for example, Land at North West Nailsea). The Plan should therefore incorporate a contingency, and a minimum of 15% would seem to be prudent in the current circumstances, equating to an additional 3,555 dwellings. It is significant that, through the draft West of England Joint Spatial Plan (JSP) that was submitted for Examination in April 2019, North Somerset Council did not seek to argue that there were environmental constraints on it accommodating the level of housing growth that was proposed in that plan, and which was equivalent to the level that currently derives from the national standard method. Moreover, in planning to meet the requirement that was set for it though the JSP, no land in the Green Belt was planned for allocation in North Somerset confirming that there are suitable non-Green Belt options for accommodating the scale of housing need for which the current plan must provide which accord with the sequential approach in the spatial strategy that it has set for itself. Whilst the JSP subsequently stalled at Examination stage and was ultimately withdrawn, it is relevant in that the Council did not seek to argue that there were environmental constraints on it meeting the requirements for growth, and without necessitating the use of Green Belt land. For reasons that are set out in these representations, there are suitable alternatives sites at the main towns and outside the Green Belt that can contribute to meeting overall housing needs in accordance with the Plan’s spatial priorities. Unmet Needs from Adjacent Local Authority Area Through the JSP North Somerset accepted the obligation to make provision for unmet needs arising within the adjacent administrative area of Bristol City Council. Even on the basis of their own ‘self-assessment’, Bristol City Council have an unmet need of circa 10,000 homes, and up to 15,000 taking the standard method as the starting point. This, alone, is compelling reason and justification for uplifting the housing requirement for North Somerset above the Standard Method figure. Bristol’s own evidence points to a greater proportionate need for houses (rather than apartments) than they have historically delivered. Given the highly urbanised nature of Bristol that has largely been developed to its limits given the tight Green Belt constraints around its boundaries, this can only realistically be achieved around the fringes of the city in areas more suited to medium and lower density housing. It is reliant on the adjacent authorities, and in particular North Somerset and South Gloucestershire, to deliver an appropriate number and mix of homes. There are sound planning reasons for the neighbouring authorities to Bristol to work collaboratively to meet the needs of the greater Bristol area. That was the essential purpose of the strategic planning measures that were put in place through the West of England JSP. The collapse of those arrangements does not expunge the need to provide the homes that the strategic vehicle was intended to deliver, or the obligation on the neighbouring authorities to work collaboratively and effectively to provide for them. There is no compelling evidence to confirm that the Duty to Co-operate has been effective in terms of meeting Bristol’s unmet needs, and therefore that it has been satisfactorily discharged. The Statement of Compliance outlines a degree of consultation, but no ‘effective and on-going joint working’3 that has actually delivered on accommodating the unmet		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									housing needs. Through the Statement of Compliance it is acknowledged that Bristol City Council has requested that neighbouring authorities assist with accommodating some of its unmet needs. However, this is rejected on the following basis: The evidence supporting the local plan demonstrates that North Somerset does not have the capacity to meet some of Bristol's needs at this time(4). The Council is therefore once again falling back on a capacity argument that it previously relied on to justify not planning to meet the much lower housing need deriving from the previous standard method. However, it now appears that that position was unfounded and unjustified. The available evidence, that will be considered further in later representations, indicates that there are additional suitable and sustainable sites that can contribute to meeting an escalated housing requirement to contribute to meeting Bristol's unmet needs. Those sites include sites that are part of the wider Weston-super-Mare urban area, and land at south west Nailsea that was the preferred growth location in the JSP. For the foregoing reasons it is considered that the Duty to Co-operate has not been satisfactorily discharged in that there has not been 'effective' joint-working between the Council and Bristol City Council to accommodate the latter's unmet housing needs. The evidence does not support the Council's contention that it does not have the capacity to meet some of Bristol's needs given that there are additional opportunities for meeting North Somerset's own needs in accordance with the spatial strategy, that remain available and are being actively promoted through this Local (Plan. 3 NPPF, para. 26, 4 North Somerset Local Plan, Duty to Co-operate Statement of Compliance, Regulation 19 Stage, October 2025, p.20) For the foregoing reasons the Plan is not considered to be legally compliant. Plan Period 2.23 Notwithstanding, and without prejudice to, the foregoing, as is reflected in the consultation documents, the Government's requirement set out in the NPPF is for strategic policies to look ahead for a minimum period of 15 years from the date of adoption5. However, it is acknowledged that it is good practice to plan for a longer time horizon. In the consultation document6, adoption of the Local Plan is anticipated to be achieved by late 2026. Assuming that this is achieved, then the Plan will barely look ahead for the 'minimum' required period of 15 years. In all likelihood there will be slippage in the progression towards adoption. The assumed adoption date of late 2026 is based on the LDS published in February 2025. However, the timetable that foreshadowed adoption in November 2026 was based on consultation on the Regulation 19 Plan in June 2025, submission to the Secretary of State in October 2025, and Examination Hearings commencing in February 2026. Therefore, there has already been slippage by at least 6 months which, assuming no further delays, means adoption will not be until May / June 2027 at the earliest. The adoption of the Plan even by May / June would seem to be an ambitious target for a Plan of this nature, which has already taken over five years since the initial stage of consultation and has already been through two Regulation 19 iterations. A partial update of the Bath and North East Somerset Local Plan recently took over twelve months to progress through the Examination stage to adoption. The current plan is a much more comprehensive and over-arching review, and inherently more complex, than the former. Research undertaken by David Lock Associates7 based on an analysis of MHCLG data, and derived from evidence relating to 300 Local Plans over the ten year period 2007-2017, found an average time-period of 19 months from submission of a Local Plan for Examination to adoption. Given that this is an average time, there are many that have taken longer, with the research finding that, for several, the time period was 35-45 months. The research also (5 NPPF, para 22 6 North Somerset Local Plan – Pre-Submission Plan (Reg 19), p.5 7 How long does it take to adopt a Local Plan, David Lock Associates, 2018) found that, since 2012, the average has increased from 15 months to 25 months in the context of the demise of regional planning, and the introduction of the NPPF and PPG.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									As a benchmark, the publication version of North Somerset's Core Strategy was subject to consultation in January 2011 and submitted to the Secretary of State for Examination in July 2011. It was subject to Examination in November- December 2011 and was adopted in April 2012. It therefore took a period of 16 months from publication version to adoption in the first instance. It was subsequently the subject of a successful legal challenge resulting in nine policies being remitted back for re-Examination. The final version was adopted in January 2017, some six years after submission of the initial publication version. It is significant that the Core Strategy was a 'partial' Local Plan, that did not contain either development management policies or non-strategic site allocations, which were to be included in the subsequent Sites and Policies Plan. It is a reasonable assumption that the current Plan, containing a full suite of strategic and non-strategic allocations and Development Management policies, will give rise to a greater range of issues and potentially take longer than the 16 months from publication version to initial adoption of the Core Strategy. Having regard to the complexities of the circumstances in North Somerset, and the issues identified through these representations, it is a reasonable (albeit perhaps 'optimistic') assumption that adoption will not now be until mid to late 2027 at the earliest, and this would only require a very small delay given the timetable set out. Given the requirement for Local Plans to look ahead over a 'minimum' period of 15 years 'from adoption', this necessitates a further extension of the plan period to 2042, and possibly 2043. In the light of the above it is necessary to extend the Plan period by at least a year.Accordingly, the plan should include provision for at least an additional year's housing requirement, and therefore at least 1,600 additional dwellings. Any further slippage, as would seem a distinct possibility given the issues to which the plan and its proposed allocations are likely to give rise, will mean that consideration should be given to including a further year's housing requirement, and therefore a minimum of 3,200 additional dwellings. Housing Distribution The broad distribution of housing proposed in the Plan will not deliver the spatial strategy, with its priority to locate new residential and mixed use development in or close to urban areas, and to limit development at the villages to local community needs (Policy SP3). The share of housing growth to be distributed to the district's four towns combined amounts to only 56%. The share to be distributed to the villages and rural areas is assessed to be 12%. However, the distribution set out in Policy SP8 is misleading and inaccurate for the reasons summarised below. First, it fails to disaggregate the proportion of growth between Nailsea and Backwell, which are separate settlements at different tiers and performing very different roles in the spatial strategy, instead treating them as a single entity and assigning the combined growth to the 'towns' category. The quantum of housing growth allocated to Backwell (1,683 dwellings) is almost in parity with Nailsea (1,817 dwellings), exceeds that allocated to Portishead, and is almost three times the scale of growth allocated to Clevedon. If Backwell's quantum of growth is disaggregated from Nailsea, and properly included in the 'villages and rural areas' location, then the proportion of growth allocated to the towns falls below 50% (48%), whilst the proportion of growth at the 'villages and rural areas' increases to 19%. However, the actual distribution is further obfuscated by identifying Wolvershill (an extension to Banwell), Woodspring and Pill / Easton-in-Gordano as entities apart from the settlement hierarchy, rather than as what they really are, which is part of the 'villages and rural areas' location. If they are properly included in the latter, then the proportion of growth in the 'villages and rural areas' location increases to over 51%. 2.37 It is clear from this proposed distribution that, apart from Weston-super-Mare, the other three towns are punching well below their weight and not performing their intended roles in the spatial strategy as the most sustainable, and therefore priority, locations for growth. By way of comparison, in the adopted Core Strategy, which was underpinned by a similar spatial strategy to the Regulation 19

Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									Plan, the distribution to Weston-super Mare (including the Weston Villages) and the other three main towns equated to 85% of the overall housing growth(8). As is acknowledged in the evidence base documents: The strategy focuses most new growth in locations that are in, or well-related to, existing centres. This is the most effective and efficient way of utilising and enhancing existing services and infrastructure and delivering new provision, alongside ensuring that the carbon impact of the proposed growth is minimised compared to more dispersed approaches to distributing development.(9). This reflects national policy and guidance, which seek to deliver sustainable patterns of development by ensuring that priority is given to development at towns and urban areas (focused first on brownfield sites), followed by the larger more sustainable villages. This provides an appropriate overall framework, acknowledging that there must still be a mix of different sizes and types of sites to ensure delivery.(10). There would therefore seem to be a disconnect between the strategy focus set out in the evidence base documents, and the distribution of growth identified in Policy SP8. That disconnect is obfuscated by introducing growth 'locations' that have no locus in the settlement hierarchy. The Spatial Strategy Site Selection and Capacity Paper provides little more than a schedule of the sites selected for development, and provides little assistance with understanding alternatives that were considered and the reasons for their rejection. It therefore provides little justification for the distribution of development contained in Policy SP8. Focusing Growth at Weston-super-Mare The failure to allocate the Moss II land illustrates how the allocation and distribution of development is inconsistent with the spatial strategy and the sequential approach that the Council has set for itself. (8 North Somerset Core Strategy, January 2017, Policy CS14 9 Spatial Strategy and Site Selection Capacity Paper, October 2025, para. 2.3 10 Ibid, para. 2.3) In accordance with Policy SP3, the site is, at worst, 'close to' an urban area where there is both an existing and proposed wide range of facilities, services and jobs, and there are opportunities to encourage active and sustainable travel. As is evident from the previous Regulation 19 representations submitted on behalf of SM and included at Annex 1 to the current representations, the Moss II land is fully compliant with the spatial strategy set out in Policy SP3. It will maximise the potential of land at the principal urban area of Weston super- Mare, consolidating the key strategic development location of Locking Parklands, which is being delivered as a sustainable, integrated and connected new community as an urban village extension to the town. As set out in previous representations: … the extensive infrastructure commitments that are being delivered at Parklands Village comprising social, physical, educational, green and blue infrastructure offer significant opportunities to ensure that development is delivered sustainably and in accordance with the Council's clear aspirations as expressed via emerging Policy SP3. In this regard, every opportunity should be taken via the development strategy to maximise the potential of existing committed sites (notably the Weston Villages where commitments to placemaking and infrastructure delivery are in place) and to build upon the policy approach that has already been subject to examination and thorough testing (including via legal challenges). It is incumbent on the Council to ensure that every available opportunity is taken to build upon and supplement the development potential of the Weston Villages through the review of the development plan as an ongoing commitment to sustainable placemaking.(11). The Moss II land could supplement the existing masterplan through a logical and cohesive addition to the overall settlement that is being developed, without compromising other development objectives that are being consulted upon. …(12) Expanding the capacity of Parklands Village would be entirely consistent with national policy which confirms that the supply of large numbers of new homes can often be best achieved through planning for larger scale development, such as new settlements or significant extensions to existing villages and towns, provided they are well located and designed, and supported by the necessary		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									infrastructure and facilities. Parklands Village is optimally located as an urban extension in relation to the district's largest settlement, and has been (11 See Annex. 1, Representations on behalf of SM to North Somerset Regulation 19 Additional Sites Consultation, February 2025, para. 27 12 Ibid, para. 28) comprehensively planned to be supported by necessary infrastructure and facilities. It is therefore in accordance with the precepts of good planning to capitalise upon the substantial investment in infrastructure and facilities through maximising the scale of development that can benefit from it. Opportunities such as that represented by the Moss II land would equate to Step 3 of the sequential approach to the identification of potential site allocations as set out in the evidence base13, and would arguably amount to 'urban intensification' (Step 2). They are therefore a priority ahead of development at the larger more sustainable villages outside the Green Belt, and of sites in the Green Belt at the main towns and sustainable villages. It is therefore a preferred location compared with many of the allocated sites in the Plan. If sequentially preferable opportunities such as that represented by the Moss II land are to be overlooked, then there must be clear justification for not following the spatial hierarchy and strategy. It is understood that the Moss II land was discounted from further consideration in the SHLAA for two principal reasons, those being that it is in Flood Zone 3 due to risk of tidal flooding and in a strategic gap14. However, given the scale of housing growth that the district must now accommodate, and the need to deliver it in sustainable locations in accordance with the spatial strategy, neither of these reasons is considered to be sufficient justification for discounting sustainable housing development opportunities of this nature. Each of these issues will be considered briefly below. Flood Risk Much of the existing urban area of Weston-super-Mare is at risk of tidal and / or fluvial flooding, including areas of the Weston Villages. Nevertheless, in order to accommodate growth in the most sustainable location at the district's main town, a comprehensive flood management solution has been conceived and agreed in close collaboration with the Council and the Environment Agency to protect the Weston Villages15. The mitigation strategy incorporates a combination of strategic protection measures (including a flood storage area either side of the Cross Rhyne forming areas of wetland and open water lake), together with (13 Spatial Strategy, Site Selection and Capacity Paper, October 2025, para. 4.4 14 North Somerset Strategic Housing Land Availability Assessment Main Report, October 2025, paras 6.1-6.3 and Figure 3 15 See Weston Villages SPD, June 2012, paras. 2.26 – 2.33) on-site measures. In conjunction with their representations to the earlier Regulation 19 consultation, SM submitted a preliminary flood risk and drainage appraisal which demonstrated that, through ground reprofiling within the site, it can be demonstrated that the proposed development would be safe for its lifetime whilst not generating any off-site detriment. The Weston Villages were conceived and allocated under a similar spatial strategy approach to focus growth at the district's main towns, and in particular at Weston-super-Mare, and in the context of national policy relating to flood risk that sought to steer vulnerable development to areas of lower risk, as far as possible. It was previously accepted that, in order to deliver growth in accordance with this sustainable strategy, it was necessary to accommodate it in areas at risk of flooding at Weston-super-Mare. Nothing has materially changed in this respect since the strategy remains to focus growth to meet what is now an escalated scale of housing need at the towns, and with a priority to accommodate it at Weston-super-Mare as the top tier settlement in the hierarchy. Given these circumstances, then suitable opportunities that can capitalise upon the substantial investment in the strategic flood mitigation measures (and other infrastructure) that have already been made, to maximise growth in the most sustainable locations in the district, should be considered favourably where it can be demonstrated that it would be safe for its lifetime. The Council has not subjected the Moss II land to appropriate scrutiny since it is understood that it was rejected without being taken forward for further consideration. The Council's approach is also inconsistent since it is		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									allocating sites elsewhere within the urban area of Weston-super-Mare that are in flood risk zones, and in other locations, including Land West of Hutton and nearby Elm Grove Nursery at Locking. Whilst some, but not all, of the sites may occupy Step 1 of the sequential approach, all potential opportunities in Steps 2/3 should be given due consideration ahead of those in steps 4-6 if the spatial strategy is to be delivered. The fact that sites such as Moss II have been discarded without due consideration means that the Council has not followed the approach that it has set for itself, and which is putting the spatial strategy at risk as is evident from the distribution of development in which the majority share is being directed to locations other than the main towns. It is germane that, since the Regulation 18 consultation stage, the Council's sequential approach has been reduced from seven to six steps. Step 6 previously related to 'other opportunities' which included 'sites well related to urban areas but which are located in flood zone 2/3a'16. This meant that sites at 'other sustainable settlements' (Step 4) and 'rural areas' (Step 5) were sequentially preferable. However, the removal of the former Step 6 means that all sites that are 'well related to towns and urban areas outside the Green Belt', including those in flood risk zones, categorise as Step 3 sites and are therefore sequentially preferable to 'sites well related to larger more sustainable villages' and all Green Belt sites. In the recent Appeal decision relating to Land at Rectory Farm (North) Chescombe Road, Yatton17, the Inspector acknowledged the necessity to allocate some sites that are at risk of flooding to meet the housing needs of the district, as reflected in the 18 proposed housing allocations that were identified in the previous Regulation 19 Plan that were at risk of tidal flooding. Whilst he held that there were sequentially preferable sites available, drawing on a decision in the High Court18, he did not consider the failure to comply with the sequential test was fatal since there were wider sustainability benefits that outweighed the flood risk and it had been demonstrated that the proposed development would be safe for its lifetime. This decision of the Inspector in the Yatton Appeal has been endorsed very recently by another Inspector in determining an Appeal relating to the Police Maintenance Depot, Stuart Road, Weston-super-Mare19. In that case the Inspector found that the proposals failed the sequential test since there were alternative sites available since there were reasonably available sites appropriate for the proposed development in areas with a lower risk of flooding. However, she was satisfied that development on the Appeal site could be made safe for its lifetime without increasing the flood risk elsewhere. For this reason she concluded that failure to satisfy the sequential test did not provide a strong reason for refusal such as to disengage the tilted balance. She found that the benefits of the proposals, including increased housing delivery at the district's main settlement, outweighed any adverse impacts of the proposals.(16 North Somerset Local Plan 2038, Spatial Strategy and Capacity, February 2022, para. 47, 17 Appeal ref. APP/D0121/W/24/3343144, 18 Mead Realisations Ltd v SoS LUHC [2024] EWHC Civ 32 19 Appeal ref. APP/D0121/W/25/3365348, DL, 1 December 2025 – see paras. 12 and 36 in particular. The allocations in the current Regulation 19 Plan to meet the escalated housing requirement deriving from the revised standard method, confirm that it is necessary to continue to allocate sites in areas at risk of flooding in order to deliver the homes that are required in sustainable locations. Having regard to the findings of the Inspector in the Yatton decision, the Council has therefore erred in its approach to reject without due consideration sites at the most sustainable location of Weston-super-Mare, which are sequentially preferable in terms of the spatial strategy, particularly in the context of the scale of housing growth that it is having to accommodate in less sustainable locations. 2.53 The weight of sustainability benefits pertaining to the Moss II land in a location that is a priority focus for housing growth, is greater than at Yatton which is at Step 4 of the search sequence. This accentuates the justification for allocation of sites in flood risk zones at Weston-super-Mare compared with a lower order settlement such as Yatton. For reasons outlined in earlier representations there is a need to allocate significant additional land in		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									order both to accommodate an extended plan period and to meet needs arising from Bristol City Council. Moreover, as is confirmed in the Yatton decision, the Council's five year supply of deliverable housing land is currently well below the minimum requirement, and to which many of the strategic allocations that are being made in the Regulation 19 Plan are unlikely to contribute to alleviating given the lead-in times before they are likely to deliver homes ready for 26 occupationn. 2.55 Given all of these factors, and the current distribution of growth that does not uphold the spatial strategy priority focus on existing towns, there is a need to allocate smaller, immediately deliverable sites at Weston-super-Mare, which inevitably means giving consideration to locations that are at risk of flooding. The Moss II land is an example of an immediately deliverable site that can capitalise upon the substantial investment in strategic flood mitigation measures that has already been made, and which can be demonstrated to be safe for its lifetime. It follows that the Council's approach to automatically exclude from further consideration the Moss II land and similar sites on the basis of flood risk is both flawed and inconsistent. It is demonstrably a threat, and prejudicial, to the distribution of growth in accordance with the settlement hierarchy and spatial strategy. Strategic Gaps First, the automatic exclusion from further assessment of some sites, such as the Moss II land, on the basis that they are included in a strategic gap is incorrect and inconsistent. The Council has tacitly accepted that it is necessary and appropriate to remove land from the strategic gaps in order to deliver growth in accordance with the settlement hierarchy and spatial strategy. The nearest example to the Moss II land is the proposed allocation at Elm rove, Locking. Other examples include the proposed allocation on land south of Nailsea. In allocating the site at Elm Grove Nursery the Council has clearly found that circumstances have materially changed to justify departing from the findings of the Appeal Inspector who, in dismissing an Appeal relating to the land in December 2019, held that the scheme would have an unacceptable effect on the function and openness of the strategic gap20. Following consistent approach, there is now no justification for continuing to resist residential development on the Moss II Land, which forms part of a much more expansive gap than the land at Elm Grove Nursery. It is wholly inconsistent to have excluded the Moss II land from further consideration through the SHLAA in the basis that it is included in a strategic gap, whilst not only taking the Elm Grove Nursery site forward for consideration, but now including it as draft allocation in the Plan, contrary to the previous Appeal decision. The Council's approach to automatically exclude sites from further consideration through the SHLAA on the basis that they are in a strategic gap is therefore flawed. That is particularly so where sites are at, or close to, the principal settlements in the hierarchy. In the case of the Moss II land, the Landscape Technical Note accompanying SM's representations to the earlier Regulation 19 consultation confirms that the site can be developed without fundamentally compromising the purposes and function of the strategic gap between Locking and Weston-super-Mare21. The gap between the Moss II land, and the urban edge of Weston-super-Mare to the north contained by the A370 would remain substantially greater (20 Appeal ref. APP/D0121/W/19/3229938, DL, para. 36 21 See Annex 1 to the current representations than the residual gap between Locking Parklands and the southern edge of the urban area to the north east). More fundamentally, there is an issue relating to the appropriateness of continuing with the strategic gap designations at all, and whether it is consistent with the NPPF. This is dealt with in representations relating to Policy LP10. However, at a time when the Government has introduced changes to national policy relating to Green Belts, which is the most stringent of all restraint designations, to facilitate its objective to significantly boost housing delivery and at sustainable locations, it would seem unjustifiable, and inherently wrong, to maintain designations that effectively impose a blanket restraint on development at some of the most sustainable locations that is more

Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									restrictive than Green Belt policies. At the very least, it would seem rational that the strategic gaps, which have no locus in national policy, should yield to enable growth to be accommodated at sustainable locations ahead of adjustments to Green Belt boundaries which require justification by exceptional circumstances. Five Year Housing Land Supply In accordance with national policy, planning policies are required to identify a supply of specific deliverable sites for years one to five of the plan period 22. Moreover, the Plan should identify a supply of land well beyond five years.23 The Plan does not incorporate a delivery trajectory that makes transparent how this supply is to be met. As such, it does not comply with this requirement of national policy. Changes Sought Policy SP8 • Amend the Plan to meet the minimum housing need of 25,300 homes (1,600 per annum) for the period 2026-2042. • Add a minimum additional requirement of 1,600 homes to allow for the Plan to look ahead at least 15 years from the date of adoption. (22 NPPF, September 2023, para. 68, 23 Ibid, para 69 • Review the requirement to meet a proportion of Bristol City's unmet housing needs and include the requirement in the overall housing quantum to be delivered during the Plan period. • Remove Woodspring, Wolvershill and Pill / Easton-in-Gordano as separate locations in the schedule incorporated in the Policy, and which is inconsistent with other strategic policies, and apportion the growth to the 'Villages and Rural Areas' location. • Review the apportionment of growth to meet North Somerset's needs between the 'towns' and 'villages and rural areas' locations, and revise the distribution to a ratio of 80:20 to deliver the intentions of the spatial strategy. • Review the apportionment of growth to Green Belt locations. • Increase the distribution to the towns, and in particular the allocation of small to medium size sites at Weston-super-Mare (including the Weston Villages) that can deliver homes quickly and therefore contribute to the five year supply of deliverable housing land, to provide homes for needs arising during the current plan post-2027. • Delete sites with planning permission from the site allocations. • Incorporate a delivery trajectory to identify a supply of specific, deliverable sites for years one to five of the plan period.		
39325825	Highgrove Strategic Land	Lichfields (Bristol)		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	No	The Plan period is unlikely to be sufficient to cover a minimum 15-year period in accordance with para. 22 of the NPPF. Policy SP8 does not provide flexibility to maintain sufficient supply to meet North Somerset's needs, has not been sufficient evidenced to demonstrate deliverability, nor does it evidence effective joint working with neighbouring authorities (i.e. Bristol) in accordance with the Duty to Cooperate. Please see attached letter for further details.	An increased buffer should be applied to the local housing requirement, the deliverability of the large strategic sites should be robustly evidenced and that additional sites in sustainable locations are made to ensure that SP8 can deliver the housing that is required. Please see attached letter for further details.		Highgrove Strategic Land - Local Plan Reg 19 Reps 2025.10.12.pdf
62993313	Wall Holdings Ltd	Tom Rocke		No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Policy SP8 (Housing) The Council's acceptance on this occasion that it must plan to meet the local housing need deriving from the standard method is welcomed. However, it is a minimum requirement that must be met during the plan period. To ensure that it is 'met', the Council should therefore be planning to exceed the minimum figure to allow for implementation and delivery failures for which there is a past track record in North Somerset. The adjoining administrative area (Bristol City Council) has a significant unmet need for homes, which provides compelling reason and justification for uplifting the housing requirement for North Somerset above the standard method figure. The particular need is for more houses rather than apartments, which can only realistically be achieved on greenfield sites around the fringes of the city in areas more suited to medium and lower density housing. To comply with the NPPF requirement for the Plan to look ahead for a minimum period of 15 years from the date of adoption, the Plan period will need to be extended by at least a year, to 2042. Research from elsewhere, and past evidence from North Somerset's previous plan◈making activities, confirms that adoption by the end of 2027 may be ambitious, and failing which would result in a necessary plan period extension by two years. Extension of the plan period by a year will require provision for an additional 1,600 dwellings based on the standard method, and therefore an extension by two years would increase the requirement by an additional 3,200 homes. The broad distribution of housing proposed in the Plan will not deliver the spatial strategy priority to locate new residential development in, or close to, urban areas. Over 51% of the proposed housing growth is directed to the 'villages and rural areas' location based on a proper assessment against the Council's settlement hierarchy. Other than Weston-super◈Mare, the other three towns are punching well below their weight and not performing their intended roles in the spatial strategy as the most sustainable, and therefore priority, locations for growth. The failure to allocate sites such as the Land South of Laney's Drove is illustrative of how the allocation and distribution of development is inconsistent with the spatial strategy and sequential approach to site selection that the Council has set for itself. It is in accordance with national policy and precepts of	Amend the Plan to meet the minimum housing need of 25,300 homes (1,600 per annum) for the period 2026-2042. • Add a minimum additional requirement of 1,600 homes to allow for the Plan to look ahead at least 15 years from the date of adoption. • Review the requirement to meet a proportion of Bristol City's unmet housing needs and include the requirement in the overall housing quantum to be delivered during the Plan period. • Remove Woodspring, Wolvershill and Pill / Easton-in-Gordano as separate locations in the schedule incorporated in the Policy, and which is inconsistent with other strategic policies, and apportion the growth to the 'Villages and Rural Areas' location. • Review the apportionment of growth to meet North Somerset's needs between the 'towns' and 'villages and rural		Representations_final.pdf

								good planning to capitalise upon the substantial investment in infrastructure and other facilities that has already been made. Moreover, sites such as the Land South of Laney's. Drove are priority locations ahead of development at the larger, more sustainable villages outside the Green Belt, and Green Belt locations. The Land South of Laney's Drove was erroneously discounted from further consideration through the SHLAA for reasons which are inconsistent with allocations elsewhere and do not justify discounting housing development opportunities in the most sustainable locations. There is an evident need to accommodate growth in flood risk zones given the circumstances in North Somerset, as evidenced through both the Regulation 19 Plan and previous Plans. Moreover, it has been demonstrated that the site would be safe for its lifetime. The need to allocate sites in flood risk zones, where they would be safe for their lifetime, in order to meet the housing needs of the district, was endorsed by the Inspector in the Appeal decision relating to Land at Rectory Farm, Yatton, and very recently by the Inspector in determining the Appeal at Police Maintenance Depot, Stuart Road, Weston-super-Mare It is also clear that it is necessary to utilise land in strategic gaps to accommodate growth in sustainable locations, and therefore the automatic exclusion of sites such as the Land South of Laney's Drove on the basis that it is within a strategic gap is both unjustified, and again, inconsistent with the intended allocation of land in strategic gaps elsewhere (in particular the nearby site at Elm Grove Nursery). More fundamentally, blanket restraint designations of this nature have no locus in current national policy, and their retention is therefore inconsistent with it and unjustified. Nothwithstanding, and without prejudice to, the foregoing, sites such as Land South of Laney's Drove can be developed without prejudicing the continued separation of Locking from the urban area of Weston-super-Mare. At a time when the Government has introduced changes to national policy relating to Green Belts, which is the most stringent of all restraint designations, to facilitate its objective to significantly boost housing delivery and at sustainable locations, it would seem unjustifiable, and inherently wrong, to maintain designations that effectively impose a blanket restraint on development at some of the most sustainable locations that is more restrictive than Green Belt policies. The evidence therefore indicates that there are alternative options at Weston-suer-Mare which are a better fit with the spatial strategy and the sequential approach to site selection that the Council has set for itself, that will enable the Council to meet the housing needs that emerge from the standard method without land-take from the Green Belt. In turn, that would release the Green Belt locations adjacent to the Bristol urban area to accommodate unmet needs arising from Bristol City Council to which the Plan is not currently proposing to contribute. Finally, the housing provisions of the Plan are inconsistent with national policy since it fails to incorporate a delivery trajectory to identify a supply of specific, deliverable sites for years one to five of the plan period, as required.	areas' locations, and revise the distribution to a ratio of 80:20 to deliver the intentions of the spatial strategy. • Review the apportionment of growth to Green Belt locations. • Increase the distribution to the towns, and in particular the allocation of small to medium size sites at Weston-super-Mare (including the Weston Villages) that can deliver homes quickly and therefore contribute to the five year supply of deliverable housing land, to provide homes for needs arising during the current plan post-2027. • Delete sites with planning permission from the site allocations. • Incorporate a delivery trajectory to identify a supply of specific, deliverable sites for years one to five of the plan period.		
63359201	Nailsea Holdings LVA LLP	Matthew Kendrick	Nailsea Holdings LVA LLP	Unsure	• Justified • Effective • Consistent with national policy	Unsure	Unsure		In respect of the housing requirement that this policy sets out, while we welcome the change in approach that now utilises the SM to determine the minimum requirement, we still have some residual concerns that no allowance is made to address unmet needs arsing in Bristol City's administrative boundaries, the scale of windfall provision and the reliance on large strategic sites at Banwell and Woodspring. In respect of unmet needs we will not be presenting evidence on this point but we are aware of the representations of others and share similar concerns this has not been accounted for. Windfalls seem to account for 2,928 of the total housing supply proposed by the council, which equates to 12.4% of the total. Given that windfalls are an unplanned and not necessarily reliable source of supply we suggest that they should not be relied on to such a significant degree and instead should be seen to be a 'top-up' that provide further flexibility if they come forward. In our experience maximum allowances of 10% for windfalls are normally more typical, with many authorities plans even allowing for a lower proportion than that. In addition to the above, this approach fails to acknowledge that historic windfall delivery occurred within a markedly different policy context. Under the adopted Core Strategy, policies such as CS32 (Service Villages), amongst others, expressly support "development within or adjoining the settlement boundary" where it enhances sustainability and respects local character. This policy approach enabled a consistent pipeline of small and medium-scale edge-of-settlement schemes across the district over the last 7+ years. By contrast, the PSP introduces a materially different framework. The emerging policies collectively remove this positive presumption for development adjoining settlement boundaries, and instead restricts windfall almost exclusively to sites within tightly drawn boundaries. This represents a logical inconsistency: windfall rates achieved under current policy cannot be assumed to continue when that policy basis has been withdrawn. The result is an artificially inflated windfall allowance which risks undermining the soundness of the plan. A more cautious windfall allowance, or preferably, the identification of additional small and medium allocations in sustainable settlements, is required to ensure the plan is positively prepared and deliverable. Accordingly, we suggest that the council reconsider this allowance and allocate further specific sites to replace what is an unplanned and unreliable source of supply that might render achieving the minimum development requirements of NSC difficult to achieve. Boosting delivery on sites such as North Nailsea in the early part of the plan period will also		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 									assist. Finally, while we support the provision of large strategic sites to ensure a broad portfolio of allocation types and also to provide a reliable long term supply the council needs to accept that delivery on such sites takes time, with required infrastructure usually meaning that first completions will be many years in the future. Both the Banwell and Woodspring strategic sites are yet to obtain planning permisson, and Lichfield's 'Start to Finish' assessment (3rd Addition – March 2024) makes it clear that statistically site's in such a position are not expected to start delivering for 6.7 years after the validation of the first planning application. The Banwell site has been subject to a planning application for nearly one year, but Woodspring is yet to be subject to an application. Therefore, even assuming a quicker than average delivery of first completions on these sites (say 5 years) over the remaining 10 years of the plan these site's would average 330 dwellings and 350 dwellings per year respectively. This rate of average completions would significantly exceed the national average on site's of 2,000+ dwellings which equate to 100-188 dpa according to Lichfield's analysis. On the basis of this evidence the current supply is overestimated by at least 3,040 homes. This underlines that overreliance on these sites to deliver a five-year housing land supply in particular would be foolhardy. While we do not suggest that either site be deleted from the LP, we do recommend that the potential for additional site's should be considered to boost supply, and greater emphasis on the early delivery of other sites contained in the plan, that can deliver housing supply quickly, should be made. For example the proposed allocation at North Nailsea offers one such site that does not require extensive new infrastructure to deliver, and compliments and strengthens the existing infrastructure of the Townwhich means it can deliver early in the plan period – the LP should make that expectation clear and also the current live planning application should be approved as soon as possible to ensure that this happens.

										noted that smaller sites suitable for SME developers are often quicker to come forward. Alongside this strategy, it is critical that the Local Plan supports the bringing forward of urban land where available, maximising the efficient use of land for new homes given the challenges for securing a sufficient supply of housing and the fact that such sites, in requiring less additional infrastructure by keying into existing provision, are often quicker to deliver and may come forward sooner in the plan period.	
62907617	Summerfield Homes Ltd	Lucy White Planning Limited		No	‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Summerfield Homes object to the plan period as defined under Policy SP8 to establish the housing requirement. The policy defines the plan period as 2026-2041. The National Planning Policy Framework (Framework), paragraph 22, requires strategic policies to look ahead over a minimum 15 years from adoption. North Somerset Council's Local Development Scheme (February 2025) anticipated adoption of the local plan in November 2026. This assumption was based on consultation on the pre-submission Reg 19 plan in June 2025 and submission to the Secretary of State in October 2025. These timescales have been subject to delay, with the Regulation 19 consultation held in November/ December 2025 (concluding on 12 December 2025). Applying the Council's own timescales beyond the Regulation 19 consultation (i.e. 16 months to adoption), to the revised consultation date of November/ December 2025, it is unlikely that the Local Plan will be adopted before March 2027. On this basis, the local plan period is unlikely to commence until 1st April 2027, which would take the plan period to at least March 2042 and potentially 2043. As a consequence the housing requirement should be increased by at least a further 1,580 dwellings (possibly 3,160) to reflect an additional year (or two) of housing needs, this to make very clear guidance at NPPF paragraph 22. Consequently, Policy SP8 as drafted is contrary to the Framework and therefore unsound. To achieve a sound policy in this regard, the plan period should be adjusted to 2026-2042 and the housing requirement increased to at least 25,280 dwellings, with the consequent provision of further land for housing.	See attached letter. To achieve a sound policy in this regard, the plan period should be adjusted to 2026-2042 and the housing requirement increased to at least 25,280 dwellings, with the consequent provision of further land for housing. 63191617	Various Taylor Wimpey Crest Nicholson Barratt Redrow Vistry Group	Nick Matthews (Savills)		No	• Positively prepared • Consistent with national policy	Yes	Yes		Summary of Representation • The consortium support the use of the latest Standard Method output to calculate the housing requirement over the 15 year plan period. • If the Inspectors come to the conclusion through the Examination process that there should be an uplift to the housing requirement in order to accommodate a proportion of the unmet needs of Bristol, the groundwork to facilitate this during the Examination has been undertaken and the local authority could move swiftly to allocate further land for residential development if required to do so. 1. These representations have been prepared and submitted by Savills on behalf of various clients including Taylor Wimpey, Crest Nicholson, Barratt Redrow, and Vistry Group. 2. Some clients have specific sites in North Somerset which are either allocated or being promoted for development as omission sites, others do not have site specific interests but wish to ensure that the North Somerset Local Plan positive supports future housing development and provides a positive policy context. 3. Representations were submitted at the previous Regulation 19 Stage in October 2023. Since that time there has been a significant uplift in the housing requirement in order to accommodate the output of the revised Standard Method published in December 2024. That uplift and the increase over the plan period will ensure that North Somerset delivers		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									sufficient housing to meet its own needs during the lifetime of the plan, consistent with the relevant provisions of the Framework. 4. The one area related to the housing requirement that we commented upon extensively at the previous Regulation 19 stage was the need to accommodate a proportion of the unmet housing needs from Bristol City. In the time since those representations, the Bristol Local Plan has progressed into the Examination stage and the other local authority with the Bristol Housing Market Area – South Gloucestershire – has consulted upon a Regulation 19 Local Plan and subsequently submitted it for Examination. 5. The Inspectors examining the Bristol Local Plan have advised in their Examination Note IN11 (dated 21 November 2025) that the housing requirement should be increased from 1,925 dwellings per annum (dpa) to 2,218 dpa. The Inspectors have also concluded in the same Note that: "The Council must also set out what the level of unmet housing need is. While the objectively assessed housing need may change over time, we consider it necessary for this Plan to be clear about the situation at the time of adoption. This may, for example, be important in continuing work being done on other Plans. MMs should be drafted to paragraph 6.8 to set out what remaining need exists". 6. Based on the current Standard Method output (from May 2025), the updated housing requirement for Bristol City proposed by the Inspectors falls 745 dpa short of the identified level of need1 and the South Gloucestershire Local Plan proposes a housing requirement which falls 195 dpa short of the identified level of need2. 7. Across the Housing Market Area, there is therefore a shortfall of 940 dpa and, as far as we can see, no mechanism in place to grasp the nettle and proactively accommodate these homes. For the Local Plan to be sound it must be 'consistent with national policy' in the Framework and be 'positively prepared'. At the present time the Local Plan does not seek to accommodate the unmet housing need arising from the wider HMA and, unless justified, there is potential for the Inspector(s) at the Examination stage to require an uplift to the housing requirement for North Somerset in order to accommodate a proportion of this overall shortfall. Should they do so, the process that the local authority has followed in evaluating the potential contribution from, and sustainability of, additional sites through the consultation in early 2025 places it in a strong position to introduce further allocations through the Examination process. There would no doubt be a need to evaluate the potential additional sites further and to engage with the relevant developers but the ground work has been done to enable the Examination to progress swiftly		
51556641	Barratt Bristol (Land at Colliters Way)	Oneleven Property	Barrett Bristol	No	• Positively prepared • Justified • Effective • Consistent with national policy			Earlier representations to the previous PsP on behalf of our client raised concerns in relation to the Plan Period, Housing Requirement, Distribution and Supply. As discussed at section 2 (see attached document) the plan period, which is now expressed as 2026-2041 is still of concern. Our client is also still concerned about the proposed housing requirement despite it now being significantly higher than proposed previously. The increased minimum housing requirement from 14,902 in the 2024 PsP to 23,700 is generally welcomed. However, due to the very acute need for market and affordable housing in North Somerset, and the Council's poor track record of delivery the plan does not go far enough. Based on the Council's evidence base it is also not clear whether the proposed housing requirement will meet the housing needs of all housing types (such as affordable) or sufficiently support the economy as set out at paragraph 85 of the NPPF. The Council should therefore test other housing requirements which go beyond the standard method housing requirement. Paragraph 11b of the NPPF requires that local plans provide for the objectively assessed needs for housing as well as any needs that cannot be met within neighbouring areas, as a minimum, unless either the application of footnote 7 policies provides a strong reason for restricting the scale of growth or any adverse impacts of meeting housing needs would significantly and demonstrably outweigh the benefits. Paragraph 61 states that "To support the Government's objective of significantly boosting the supply of homes, it is important that a sufficient amount and variety of land can come forward where it is needed…" and that "The overall aim should be to meet an area's identified housing need, including with an appropriate mix of housing types for the local community." Paragraph 62 requires that the minimum number of homes needed should be informed by a local housing needs assessment conducted using the standard method. In addition to the local housing need figure, any needs that cannot be met within neighbouring areas should also be taken into account in establishing the amount of housing to be planned for. Paragraph 35a of the NPPF identifies that in order to be 'positively prepared' and therefore found sound, local plans will need to be informed by agreements with other LPAs to ensure that unmet needs are accommodated where it is practical to do so and consistent with achieving sustainable development.	Modifications required: In order for the local plan to be found sound it will be necessary to amend the plan period to 2027-42 as a minimum, and adjust the housing requirement and trajectory accordingly. In addition the housing requirement should be increased or as an alternative the policy should make it clear how flexibility has been imbedded to allow for more houses in excess of the minimum, over the plan period. In addition the Council should publish a housing trajectory and reduce the reliance on supply arising from the small site windfall.		Local Plan Representations North Somerset December 2025 Final 12.12.25 with appendices.pdf

								Paragraph 35c also states that to be ‘effective’ the plan must be based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred in order for a Local Plan to be found sound. Policy SP8 seeks to deliver a ‘minimum’ of 23,700 dwellings over the plan period. However, even if it is reached it is difficult to see how this figure could ever be exceeded based on the restrictive nature of the policies contained within the plan. For consistency the table contained within policy SP8 should also include the word ‘minimum’ dwellings. The table also sets out a broad distribution of new dwellings although the table includes percentages relating to the proportion of housing supply. This should also be amended to state ‘broad’ proportion. Taking the above into account Policy SP8 is considered unsound as it is contrary to national policy, unjustified, not positively prepared or effective. It is not clear how the proposed allocation at Colliters Way Bristol has been accounted for in the table contained within Policy SP8. This should be clarified by including a separate source of supply for this site. It also appears that the Council has not included a housing trajectory in the evidence base which is critical to understand whether housing policies in the plan will be effective. This should also be addressed before the plan is submitted for examination. The justification for Policy SP8 states that the figures include windfall assumptions which are ‘set out in full’ in the SHLAA (2025). The SHLAA (2025) appears to suggest at Table 6 that over the plan period a total of 4,000 dwellings will be delivered as windfall. This is a significant proportion of the overall housing requirement and confirms that much of the housing growth for North Somerset over the next plan period is expected to be unallocated and unplanned. To ensure flexibility in the plan and address the fact that the housing requirement is expressed as a minimum the windfall allowance should be excluded from and treated as additional to the housing figures set out in policy SP8. It is worth noting the changes that have been made to Policy SP8 since the Autumn 2023 PsP was published. This is summarised in the table in the attached document. This demonstates the greater burden expected on delivery from Wolvershill (north of Banwell) and the reduction in growth at the villages and rural areas. It is clear from the findings of the recent Bristol City Council local plan examination that Bristol will struggle to meet the housing needs of the area over the plan period. The need for cross boundary working across the area is obvious and has been recognised for some time. North Somerset Council has previously attempted to work collaboratively with Bristol City, Bath and NE Somerset and South Gloucestershire Councils to prepare a West of England Joint Spatial Plan (JSP) although this was subsequently abandoned. The JSP recognised that there was insufficient capacity in Bristol City to meet its needs and this was to be addressed across the remainder of the plan area including in North Somerset. It is logical that the same approach should be applied now. Page 18 of the North Somerset ‘Duty to Co-operate Statement of Compliance’ confirms that Bristol City Council has requested that North Somerset accommodate some of its unmet needs, but “The evidence supporting the local plan demonstrates that North Somerset does not have capacity to meet some of Bristol’s needs at this time.” Overall, this seems to be a missed opportunity. Even if no specific provision is made to address the unmet needs of Bristol City, given the very strong inter relationship between the two LPAs, this unmet need will place a significant additional demand for housing in North Somerset and could both compromise the affordability of housing in North Somerset and increase the rates of commuting from North Somerset to Bristol. In summary policy SP8 is considered to be unsound as it will not provide for a fifteen-year period post-adoption period contrary to paragraph 22 of the NPPF. It is also not clear whether the policy will sufficiently support the economy and provide sufficient housing for all types including affordable housing. It also doesn’t take into account of or respond to the substantial unmet needs of neighbouring Bristol City and is therefore contrary to the requirements of paragraphs 35a and 35c of the NPPF. Overall the policy is not positively prepared or effective and does not include a housing requirement which is robust enough to meet needs over the plan period.			
29403105	Diverse Partnerships Yatton Ltd	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	While we acknowledge the housing target reflects the defined position under the Standard Method, it is apparent that no meaningful attempt has been made to engage with the potential for addressing the unmet need from neighbouring Bristol beyond dismissing any such action outright. While the direction of travel away from the Duty to Co-operate under the expected ‘new plan making system’ is noted, this remains a relevant consideration under paragraph 24 of the NPPF as published at the time of this consultation. Should this position change our client will update these comments at the next available opportunity. Accordingly, the position within North Somerset as of now should be seen within the broader housing supply picture across the wider West of England housing market area, with North Somerset expected to join the West of England Combined Authority (WECA) in 2026, and so likely prior to any examination of the emerging plan. The meeting of housing need across this area has been underrepresented by a whole generation of adopted plans and delayed new local plans. This is due to the past failures of two attempts at delivering strategic planning within the region, in turn leading to delays in local plan progression. Of most note is Bristol City Council’s emerging plan, which underwent examination hearings in 2025. This sets out a ‘capacity’ led approach to housing delivery resulting in under-delivery of homes at 1,017 homes per year against the up-to-date Standard Method. None of the neighbouring authorities have indicated any intent to address this unmet need. Indeed, South Gloucestershire Council’s emerging local plan submitted for examination in October 2025 compounds this by utilising transitionary measures to build in a further under-delivery of 127 homes per annum against their Standard Method. 								Neither North Somerset Council or Bath and North-East Somerset Council's emerging plans seek to address the unmet housing demand from either authority. To give context to the future strategic planning across the region, a formal timetable for a new West of England 'Spatial Development Strategy' (SDS) was agreed at the 17th October 2025 meeting of the West of England Combined Authority Committee for adoption by Spring 2029. This will be informed by the West of England Combined Authority (WECA) 'Growth Strategy' published on 24th September 2025, which identifies that a target of 7,750 homes per annum across the West of England area will be pursued under the SDS. This represents a significant uplift against the combined adopted or emerging housing targets of the authorities. This makes clear that each constituent authority's intent to minimise housing delivery will render all emerging plans functionally out-of-date well within their respective plan periods. Should the housing target not be uplifted, the plan should acknowledge the need for early review to reflect the future SDS. This strategic planning position will no doubt further clarify itself as the emerging plan proceeds towards examination. In addition to this broader picture on the housing target, our client has concerns regarding the distribution proposed, in particular with regard to the above commentary relating to the role of Yatton and the lack of flexibility for enabling development at this sustainable settlement within the adopted strategy. The observations set out above in relation to SP3 and SP6 extend to Policy SP8.			
63043809	Wain Homes	Russell Smith	Wain Homes	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No		This section sets out representations in relation to Policy SP8: Housing. Policy SP8 states that Land will be identified to secure the delivery of a minimum of 23,700 dwellings within North Somerset 2026-2041, equivalent to 1,580 dwellings per annum. This is the local housing need figure derived by the standard method as set out in the Local Housing Needs Assessment (September 2025). The NPPF is clear that the local housing need figure derived from the standard method is the minimum number of homes needed. Para 62 of the NPPF states that "in addition to the local housing need figure, any needs that cannot be met within neighbouring areas should also be taken into account in establishing the amount of housing to be planned for." As we have set out in our representations to the SA and Duty to Cooperate, the Pre-submission Plan is not positively prepared, as options to accommodate Bristol's unmet need have not been robustly explored. Notwithstanding the above, the Council should seek to identify a supply of new homes that exceeds the minimum standard method figure to provide a buffer, should any identified sources of supply fail to come forward or deliver the anticipated amount of homes within the plan period. The table contained within SP8, showing the broad distribution of new developments, identifies a supply of 24,495 homes, which equates to a 3% buffer over the standard method-derived figure. The justification text states that these figures include anticipated small-scale windfall. Wain Homes considers that 3% is insufficient to ensure the delivery of the plan, especially given its reliance upon large strategic development locations. In response to the previous Additional Sites consultation, we set out that Wain Homes supports the principle of identifying strategic growth locations, as such locations can provide the critical mass of development required to deliver significant new infrastructure. However, we have concerns that an over-reliance on strategic growth locations could negatively affect the deliverability of the plan and result in fundamental issues of soundness. These concerns have not been addressed as the Pre-submission Plan relies on two new strategic locations (Wolvershill and Woodspring) to provide 6,800 new homes or 28% of the identified housing land supply. It is fundamental to the soundness of the plan that the deliverability of these sites is robustly evidenced and interrogated at Examination. In our view, the necessary standard of evidence has not been published alongside the Pre-submission Plan. Of particular concern is the expectation that these sites will deliver 3,300 and 3,500 homes respectively, within the 15-year plan period. Widely recognised evidence found in the most up-to-date edition of Lichfields Start to Finish, suggest this is highly unlikely. Large-scale strategic sites have extended lead-in times with complex land assembly, master-planning, consenting and infrastructure delivery processes, followed by extended build-out times. Lichfields Start to Finish found that sites of 1,000+ dwellings take on average five years to obtain detailed planning permission, then a further 1.3 to		North Somerset Local Plan Regulation 19 Wain Homes.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									1.6 years to deliver the first dwelling. Thereafter, the average annual build-out rate range for schemes of 2,000+ dwellings was between 100-188 dwellings per annum. Even if these sites were to benefit from detailed planning permission, had delivered their first dwelling by the beginning of the plan period, and could be assumed to deliver at the upper average build-out rate of 188 homes per dwelling, they would only deliver 2,760 homes each during the plan period. However, in reality, these sites are unlikely to benefit from detailed planning permission at the beginning of the plan period, and so will inevitably deliver far fewer homes, if indeed they come forward. The Council must provide a fully evidenced housing trajectory for the plan period. The table contained within SP8 shows that just 2,948 homes or 12% of the overall identified development, goes to villages and rural areas. This includes existing commitments and windfalls. This category covers 40 villages (Assuming Pill/Easton-in Gordano and Backwell are excluded) and includes a number of larger villages that are identified as sustainable in their own right within the Spatial Strategy Site Selection and Capacity Paper. As set out in our representations to SP3, this demonstrates that the spatial strategy is underutilising some of the most sustainable locations within North Somerset. In particular, Wain Homes considers that Yatton, which has a railway station, access to a wide range of services, facilities and employment opportunities and suitable sites such as HE20800, can and should accommodate more development. The supply identified in SP8 includes anticipated windfalls. The Spatial Strategy Site Selection and Capacity Paper states that this is an allowance of 200 homes per annum or 3000 homes over the plan period. The paper states, “this is largely trend based with a small uplift to account for national policy changes that are expected to lead to an increased yield from small sites.” However, the specific evidence for this allowance has not been published alongside the Pre-submission Plan. The Council should provide further evidence demonstrating how this allowance has been arrived at, confirming windfall delivery over an appropriate period of time and the extent and rationale for the policy based uplift. SPA8 states that “For designated neighbourhood plan areas, the minimum housing requirement will be determined on the basis of the local plan allocations, existing commitments and estimated windfall.” The Council should provide a schedule setting out the minimum housing requirements for neighbourhood plan areas. Overall, Wain Homes considers Policy SP8 to be unsound as it is not positively prepared, justified or effective.		
51524513	Bellway Homes Ltd	tor&co	Bellway Homes Ltd	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Relevant NPPF: The current revision of the National Planning Policy Framework (NPPF) was published by the Government on 12 December 20241 – superseding the previous version from December 2023. Upon its publication, transitional arrangements were established at Annex 1 of the Framework. Paragraph 234 at Annex 1 states (as relevant to this context): “For the purpose of preparing local plans, the policies in this version of the Framework will apply from 12 March 2025 other than where one or more of the following apply: a) the plan has reached Regulation 19 (pre-submission stage) on or before 12 March 2025, and its draft housing requirement meets at least 80% of local housing need; b) the plan has been submitted for examination under Regulation 22 on or before 12 March 2025; […]” In the context of the present Regulation 19 consultation, neither a) nor b) apply. The previous Regulation 19 plan (consulted in 2024) only met 74% of the need (based on the lower standard method need figure at that time) and as a result failed to meet at least 80% of the latest increased standard method published 12 December 2024, as the NPPF sets out. Accordingly, references to the NPPF in these representations and subsequent Examination of the Local Plan) are made with regard to the current (2024) version of the Framework. Plan Period: The proposed plan period outlined in the Local Plan and informing subsequent strategic policies such as housing, is confirmed as being from 2026-2041 (over a 15-year plan period). Paragraph 22 of the NPPF requires strategic policies to look ahead over a minimum 15-year period from the date of adoption. The latest Local Development Scheme (LDS) was published in February 2025. Principally, we observe this LDS is out-of-date, with the current consultation scheduled for June 2025 and therefore 4 months behind schedule. The LDS anticipated Local Plan submission is in October 2025, with Examinations commencing in February 2026, before adoption in November 2026.	To achieve consistency with national policy, the plan period should be extended to February/March 2042 as a minimum. Clearly a longer extension would assist in providing greater certainty going forward as well as enabling the local plan to comply with the minimum expectation of national policy in the event that an Examination is more protracted. In any event, this should be carefully considered by the Council, with necessary amendments (including housing and economic need) amended accordingly. Confirmation of correct plan period and associated requirements, necessary clarifications on higher growth options in the SA (and if necessary additional allocations) and publication of a housing trajectory.		20251212 504317 JE - North Somerset Reg 19 (Reps obo Bellway Homes).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Should the timescales to adoption be achieved, taking into account the current delay, adoption of the Local Plan should not be expected until February/March 2027. Housing Need: Draft Policy SP8 (Housing) identifies a minimum housing requirement of 23,700 across the proposed 15-year plan period of 2026-2041 (equivalent to 1,580 dwellings per annum), with 24,495 dwellings identified through a broad distribution. Principally, Bellway welcome the Council's decision to retract its approach in the previous Regulation 19 consultation published in December 2023, in favour of pursuing the Government's new standard method (SM) as a minimum requirement. Notwithstanding the above, there are additional factors that suggest the figure should be even higher to accommodate the following: • Plan Period: In accordance with our general comments on the plan (see above), there is a need to extend the Plan Period to ensure it covers at least a minimum 15 years from the date of adoption, and consequently, the overall housing requirement would need to be reviewed to accommodate this. • Duty to Cooperate: North Somerset is part of the wider Bristol Housing Market Area (alongside Bristol City and South Gloucestershire). The Bristol Local Plan itself is currently at Examination and the Inspector has raised concerns that it is still not addressing and will subsequently need to set out the level of unmet need, which continues to be a key discussion point within the current Examination. In terms of unmet need, whilst the Duty to Cooperate is not being 'saved' under transitional arrangements moving to the new plan-making system, the Government and national policy continues to expect collaboration and effective cooperation over unmet need. The Council need to address these points and review the housing requirement, to also assist further with affordability / support infrastructure provision. Boosting the supply of homes will ensure the policy is positively prepared and justified and the plan can be found sound. Further, the SA is clear that it tests the SM LHN and tests difference spatial options to meet that need (e.g. see SA para 2.28). What it doesn't do is test a higher growth option which renders the plan unsound, it is not positively prepared and not justified or effective in meeting overall housing requirements. The knock-on effect of failing to assist in meeting the unmet need will be to increase affordability issues, as pressure for housing is increased. An uplift in the housing requirement should be considered and tested through the SA. Housing Trajectory: Paragraph 72 of the NPPF requires planning policies to identify a supply of "specific, deliverable sites for five years following the intended date of adoption; and specific, developable sites or broad locations for growth, for the subsequent years 6-10 and, where possible, for years 11-15 of the remaining plan period". Paragraph 78 then goes onto require, under the 'Maintaining supply and delivery', that this "include a trajectory illustrating the expected rate of housing over the plan period". The Council has not published a housing trajectory with the Regulation 19 plan, which is a significant and fundamental flaw. There is no detail regarding the delivery of existing commitments or proposed allocations, nor the confirmation of the existence of a five-year housing land supply, which should be published on adoption. Without this information for review, the Local Plan cannot be deemed justified, effective or consistent with the NPPF through its failure to include a housing trajectory and confirm a five-year housing land supply.			
63057537	Hallam Land	David Lock Associates		No	• Justified • Effective • Consistent with national policy	Yes	Yes	Housing Requirement Paragraph 62 of the NPPF refers to strategic policies using the standard method to provide the "minimum" number of homes that need to be planned for. Paragraph 69 states that the housing requirement may be higher than the identified local housing need in some circumstances, for example, where it reflects growth ambitions linked to economic development or infrastructure investment. Hallam Land consider the recent endorsement of the Economic Growth Plan which contains a key thread of "Pro-Business" and a recognition to drive forward "a new investment approach to enable a step change in the North Somerset economy" recognising the potential to make a greater contribution to the West of England regional economy provides justification for this. The "Employment Site and Premises Requirements Evidence" (ESPRE) study prepared by Hardisty Jones Associates and Lambert Smith Hampton and published in March 2025, concludes that in order to maintain a balanced labour market within North Somerset there will be a need for 20,000 additional jobs to be created over the period 2023-43. This is an increase from the estimated 13,000 additional jobs required at the time of the 2023 ESPRE. The ESPRE reports that this is a substantial uplift to the level of job growth indicated by baseline economic forecasts from both Oxford Economics and Cambridge Econometrics (para 6.3). The NPPF also refers to consideration of a higher housing requirement to reflect housing needs of different groups in the community for example those who require affordable housing. The Economic Growth Plan identifies one of the barriers to the district economic growth is high property prices relative to wages, and the need for more affordable, high-quality housing (Page 4). Taking a 5-year average for North Somerset, the median house price is 9.7 times higher than the median workplace-based annual earnings (ONS 2024). Hallam Land's view is that the Council should be considering if there are any factors which justify a higher requirement figure, two such examples are put forward, however that exercise has not been undertaken by the Council. The government have made clear that Council's must do all they can to address the housing crisis and boost the delivery of housing and help to drive economic growth. The current approach constrains economic potential and undermines the delivery of affordable housing. Housing Trajectory There is no housing trajectory provided as part of this Plan, contrary to paragraph 78 of the NPPF. It is therefore not possible consider the deliverability of the selected strategy, nor how much reliance is placed on delivery of strategic growth locations across the Plan period, nor the reliance placed on supply from windfalls. A trajectory that sets out the amount of homes from different sources of supply is a fundamental part of the demonstrating the effectiveness of a strategy. Plan Period Paragraph 22 of the NPPF requires strategic policies to "look ahead over a minimum 15-year period from adoption". The Plan proposes a Plan period of 2026 to 2041, and whilst a Plan period of 15 years, the Framework requires the period to be taken from the date of adoption. The Council's LDS (February 2025) targeted adoption of the Plan at the end of 2026 (November 2026), that date was predicated on a Regulation 19 stage occurring in June 2025 with submission of the Plan for examination in October	The Plan only provides for the minimum number of new dwellings. A minimum of 23,700 dwellings within North Somerset 2026-2041, equivalent to 1,580 dwellings per annum. Should the examination conclude that additional housing sites must be found to meet additional needs identified, Hallam propose that additional land at East of Clevedon, (east of the proposed employment allocation), could deliver a sustainable new community, with the capacity to accommodate some 2,200 new homes, supported by a range of retail uses, co-located with a community and health provision to meet the needs of the resident population, in a location that is already well connected and accessible to Clevedon and can support improvements in active and sustainable travel in the locality. Hallam Land strongly maintain that development in areas benefitting from flood defences, are inherently sustainable. Defended land is not at the same risk of flooding as the high-risk flood zone it is otherwise categorized within and are a feature of the historic pattern of growth, and indeed the approach taken to growth in the current plan, demonstrated through the allocation at Weston Villages. The Plan must be supported by a housing trajectory and the Plan period be extended to demonstrate 15 years from adoption.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								2025. The Council are now some 6 months behind target and therefore adoption of a Plan in 2026 is considered to be most unlikely. The Council must therefore extend the Plan period by at least an additional year in order to demonstrate 15 years at the time of adoption.			
63094305	Harrow Estates	Boyer							As drafted the LP is not sound and does not meet its legal requirements to be prepared with the objective of contributing to the achievement of sustainable development. To be found sound this must be addressed alongside identifying additional housing allocations to deliver the housing requirement over the plan period. We say this because: • The Plan is unlikely to be examined or adopted in 2026 and as a result the plan period should be amended to start from 2027 and extend for a minimum 15-year period. • The Plan's spatial strategy has a reliance on the delivery of Strategic Locations, notably 6,660 dwellings are expected to be delivered on allocated sites at Weston Super Mare and a further 3,300 identified at Wolvershill representing 46% of the Plans supply within the west of the district. Despite the Council having increased the distribution of homes elsewhere across the district, additional homes should be provided to the east of the district; • The Plan has been prepared in isolation, despite being functionally part of the West of England Housing Market Area; there is a chronic significant under supply of market and affordable housing; and the Plan fails to address Bristol's unmet need. • The significant under supply of affordable housing within the district, is not considered by the Council's alternative housing needs assessment. Plan Period Given the delays to LP making to date, and historic delays experienced with the adoption of the Core Strategy, the plan period should be amended. In accordance with paragraph 22 of the NPPF, strategic policies should look ahead over a minimum 15-year period from adoption, to anticipate and respond to long-term requirements and opportunities, such as those arising from major improvements in infrastructure. Accordingly, the plan period should be amended to read 2027 (at the earliest, if the LP is able to be examined and adopted within the same year) to 2042. Delivery of Strategic Locations Aside from the delivery of substantial growth at Weston-Super-Mare, the Plan includes the allocation of four Strategic Locations which concentrates substantial growth at a limited number of strategic sites. This is considered high-risk with the draft LP reliant on optimistic assumptions. Large-scale strategic developments, require extended timeframes to secure the necessary planning permissions, implementation and delivery. Consequently, the Council needs to take a realistic delivery approach. Notably, the strategic developments at Wolvershill (north Banwell), Woodspring (south west of Bristol), Nailsea and Backwell all require large scale infrastructure which will inevitably have a knock-on consequence in terms of the timescales for delivery and the draft LP's ability to deliver much needed homes. Currently, the Council's approach places excessive dependence on a small number of large sites and, assumes large-scale infrastructure will be delivered on time and on budget without incurring delays. This directly undermines SP8's effectiveness, as the policy relies upon unrealistic build-out assumptions that cannot deliver the required housing. Delivery of Affordable Housing There is significant under supply of affordable housing within the district, which is not considered by the Council's alternative housing needs assessment. North Somerset's evidence base demonstrates a long-term and severe failure to meet affordable housing needs, with delivery far below both locally identified need and the requirements of the wider West of England Housing Market Area. The latest AMR (2023–24) confirms just 200 affordable homes were delivered last year which is above the long-term average of only 161 per year since 2006; however, this is a 50% reduction in comparison to the last reported year. This level of delivery is wholly inconsistent with successive strategic assessments: the West of England SHMA (2009) identified 904 households per year in need, the Wider Bristol SHMA (2015) calculated a requirement of 240 per year, and subsequent updates have maintained similarly high figures. The 2021 LHNA identified a need for 224–320 per year, and the previous 2023 LHNA shows worsening pressure whilst the most recent			251211 Land East of Failand Reg 19 Reps.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 									LHNA 2025 again shows the annual requirement of 271 affordable homes per year across the space of the emerging LP 2026–2041. These assessments consistently demonstrate that the affordable housing need in North Somerset is many times greater than the modest outputs historically achieved. The emerging LP's highlights that NSC is not planning positively in providing level of affordable homes across the district. The authority's historic under-delivery means that level of affordable housing in North Somerset is worsening. A sound plan must increase its housing requirement to ensure that affordable housing can be delivered at scale, and it must participate in a coordinated West of England strategy to address unmet need across the HMA. The current approach does neither, and therefore the Plan cannot be considered positively prepared, justified, or effective		
58664673	Catesby Estates	Stantec	Catesby Estates	Unsure				Policy SP8 states that: "Land will be identified to secure the delivery of a minimum of 23,700 dwellings within North Somerset 2026-2041, equivalent to 1,580 dwellings per annum". Explanatory text to the strategic housing policy further clarifies that the Council has assessed North Somerset's local housing need within the Local Housing Needs Assessment (2025) and that the calculation for North Somerset results in the minimum requirement set out within Policy SP8. The Pre-submissions Plan 2041 consequently sets out a strategy and policies to meet the minimum housing needs of North Somerset, which is supported in principle. It is noted that the minimum housing requirement does not include additional housing provision in the form of a buffer, typically ranging between 10%-20% depending on local circumstances, which has become widespread plan-making practice to allow for flexibility and to ensure minimum targets are met where uncertainty arises. North Somerset has set out clear allocations following the Council's evidence base in order to meet its own housing needs, however, should external considerations arise, it is recommended that the principle of a buffer to housing delivery requirements is considered. Explanatory text to Policy SP8 further clarifies that: "The overall distribution of housing reflects the spatial strategy, constraints and the assessment of potential development opportunities. These figures include the anticipated small scale windfall over the plan period which has been forecast using trends from the previous plan period along with a modest uplift accounting for anticipated increases in delivery to take account of national policy and permitted development changes". It is acknowledged that the minimum housing requirement set within Policy SP8 has also been reached via the uplift of densities at one of the strategic allocations to deliver 500 more dwellings as a result of the Site having more capacity available, as set out within the Report to the Placemaking, Economy and Sustainable Communities Policy and Scrutiny Committee (July 2025). In this context it is noted that proposals for Pill Green as shown in the Vision Document provided at Appendix B has an expected capacity capable to easily deliver up to 1,000 homes applying the same principles that underpin Policy DP8 and throughout the Pre-submission Plan 2041 policies. It is clear that the Pre-Submission Plan 2041 makes provisions for the minimum housing needs of North Somerset. The Council's Duty to Cooperate Statement of Compliance (October 2025) sets out the engagement undertaken with neighbouring Councils and at Paragraph 2.4 reconfirms that North Somerset Council, Bristol City Council, South Gloucestershire Council and Bath and North East Somerset Council together comprised the West of England Functional Economic Market Area (FEMA). Responses included from the West of England Combined Authority within the compliance statement set out that: "At the time of writing, government has made clear to the West of England Combined Authority that they are expected to produce a Spatial Development Strategy by the end of the current parliamentary term and that North Somerset Council are expected to be a part of this. Governance processes and arrangements are yet to be confirmed and put in place, however an update will be submitted along with the plan for examination". It is noted that Bristol City Council previously requested whether neighbouring authorities could accommodate some of its unmet needs for housing and North Somerset Council assessed at that time that it did not have the capacity available. Bristol City Council's Local Plan is at Examinations and is now at an advanced stage, and heading towards adoption. North Somerset should be seeking to meet both its own local housing needs (as set by the standard method calculation) and working with Bristol City Council (and other West of England authorities) to agree on how and where the unmet needs of Bristol can be delivered. If the Bristol Local Plan is adopted as submitted, with main modifications outstanding, the remaining unmet need of housing of Bristol that cannot be accommodated within its own boundaries, at the time of writing, is set out by Bristol City Council to be a need of 1,132 homes per annum. In the circumstance where North Somerset Council is required to consider any unmet need as a result of the duty to cooperate, any need to maintain effective cooperation, as part of future procedures associated with the Spatial Development Strategy, or as part of North Somerset's own Plan-making requirements to allow for flexibility and to ensure minimum targets are met where uncertainty arises it should be recognised that Pill Green has the additional housing capacity to contribute to any such purposes due to its location and potential to deliver sustainable development where it is needed. Pill Green has capacity to deliver up to 1,000 new homes in accordance with the sound principles already established to underpin the North Somerset Pre-Submission Plan 2041 and assist North Somerset in the delivery of much needed homes. 63249345	Rubix Land Ltd (Havyatt Green, Langford)	OG Group		No	Justified Effective	Yes	No	Rubix Land Ltd ("Rubix") is promoting a significant area of land to the SE of Langford, between the A38 and A368, for a strategic residential-led allocation of up to 2,500 dwellings ("Havyatt Green"). Representations were submitted to the previous Reg.19 consultation in March 2025 and further commentary on this is provided later in this section. Rubix considers that the Havyatt Green site should be allocated as part of the emerging Local Plan, to assist with meeting a shortfall in local housing need and to ensure the Local Plan can be made sound. This is stated for the following reasons: Local Plan Period: The draft Plan is based on a plan period of 2024 to 2041, which represents the minimum 15-year period which is specified by national policy for strategic polices and relies on the Plan being adopted in 2026. It is likely that the Examination and adoption process will go beyond 2026 (supporting text on Page 10 of the Plan acknowledges that "adoption is not expected until late 2026"), meaning that there is a high risk that the Plan will not meet national policy expectations for strategic policies to cover a minimum 15-year period. National policy, through the NPPF, also encourages local plans to take a longer-term view and that, where strategic policies contemplate larger scale developments, as is the case with this Local Plan, policies should be set within a vision that looks further ahead than 15 years. A plan period that is longer than 15 years will help the Council plan positively and effectively for the area and consideration should be given to strategic policies that cover a period in excess of 15 years. As a minimum, the plan period should be extended to 2042. Quantity of New Homes: Policy SP8 identifies that land will be identified to secure the delivery of a minimum of 23,700 dwellings within North Somerset during the plan period 2026-2041. This is a rate of 1,580 dwellings per annum and is based on the Government's standard method requirement for calculating local housing need, as updated following the publication of the December 2024 NPPF. This housing requirement is a significant increase compared to previous versions of the Plan, where 14,902 dwellings were proposed in the period 2024 to 2039. The decision of NSC to pause the progress of its Plan, in order to identify additional sites to meet the up-to-date (higher) housing requirement, was wholly supported and will ensure that the Plan is positively prepared, to meet up-to-date housing needs. It will also ensure that it is robust over the longer term. However, the NPPF is also clear that local housing need derived from the standard method requirement is a minimum figure and any final housing requirement should take into account affordable housing needs, ambitions for economic development and any unmet need within neighbouring authorities. Local Housing Need: Whilst Rubix recognises the housing requirement in Policy SP8 is expressed as a minimum, evidence documents such as the Local Housing Need Assessment (September 2025) (LHNA) point to the need for more homes to be planned for. The LHNA confirms that there is a total net affordable need of 10,577 homes; based on a housing requirement of 23,700 homes, this would require 45% of all homes to be delivered as affordable housing. However, whilst 50% affordable housing is currently proposed on Green Belt release sites, 30% is proposed (based on viability testing) on other greenfield sites and 20% on brownfield sites. In addition, the Council's viability work by Dixon Searle Partnership (October 2025) indicates that affordable housing at more than 30% at Nailsea and Backwell and beyond 35% in South West Bristol and Pill/Easton-in Gordano is unlikely to be viable. Overall, therefore, affordable housing needs will not be met by the current proposed levels of housing, and there is a case for the final housing requirement to be set higher. Bristol's Unmet Need: It is important to note Bristol's unmet housing needs in the context of NSC's approach to meeting housing need in the draft Plan. NSC's Duty to Co-operate Statement of Compliance recognises unmet need from neighbouring authorities to be important strategic matters. However, it concludes that Bristol's request for neighbouring authorities (including North Somerset) to accommodate some of its	1. Extension of the Plan period to at least 2042, in order to ensure that the Plan for North Somerset covers a period of at least 15 years from adoption, with a longer period likely to enable the Council to more effectively plan for future development in the area. 2. A higher housing requirement should be set to address evidenced affordable housing needs and to accommodate some of Bristol's unmet needs. 3. Notwithstanding point 2 above, the total housing supply number should be increased to at least 26,070 or 29,546 when accepting the need for 2 additional years to the plan period (1 above) including a 10% flexibility allowance, in line with South Gloucestershire Council's approach. 4. Allocation of the Rubix Land site at Havyatt Green for a strategic residential-led new community of up to 2,500 dwellings		3728 Havyatt Green Langford Transport Appraisal Note2 Dec25 Final.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								unmet need cannot be addressed as "…the evidence supporting the local plan demonstrates that North Somerset does not have capacity to meet some of Bristol's needs at this time" (pg. 20). Bristol City Council's (BCC) draft Local Plan is currently at Examination; the hearings have concluded and the 'Final Advice and Actions' letter from the Inspectors was issued on 21 November 2025. This includes some key conclusions on housing: "We acknowledge that there is insufficient capacity to meet the Council's objectively assessed housing need, as calculated by the standard method. Nevertheless, we do not consider the figure of 34,650 dwellings over the Plan period to be positively prepared or justified. Given the significant shortfall in meeting overall needs, and the current lack of agreement between Bristol and any neighbouring authorities to provide assistance, we consider it imperative that the Council seeks to maximise housing delivery. Inherent uncertainties in housing delivery in the longer period do not justify setting a housing requirement substantially below the overall housing capacity figure identified at submission; The Council should draft MMs which set the housing requirement to be the 39,915 dwellings' capacity that was identified at submission [we note this is an additional 5,265 homes, adding to unmet need]; and The Council must also set out what the level of unmet housing need is. While the objectively assessed housing need may change over time, we consider it necessary for this Plan to be clear about the situation at the time of adoption. This may, for example, be important in continuing work being done on other Plans." This is highly relevant, as Bristol has a significant remaining unmet need and this must be accounted for by neighbouring authorities including North Somerset, South Gloucestershire and Bath & North East Somerset, who are all preparing new local plans. To date no other local authority has positively responded to BCC's request confirming their ability to accommodate any unmet need, which further amplifies the issue. The various plans are deferring their obligations to deal with these important cross boundary issues which will only serve to increase affordability pressures within North Somerset and Bristol. NSC's availability of other sustainable opportunities to accommodate some additional growth for BCC's unmet need will require further consideration at the Examination. Housing Supply Flexibility: Policy SP8 explains that the Local Plan is to provide 24,495 homes to meet the requirement of 23,700 homes. This only provides a flexibility allowance of 795 homes (3.35%). This is a very low percentage and does not provide sufficient flexibility to meet the local housing need figure of 23,700 should any of the proposed allocations run into delivery issues or if the windfall allowance is lower than anticipated. By way of comparison the emerging South Gloucestershire Local Plan includes a flexibility allowance of 10.5%. In Rubix' view this is a far more sensible figure that will assist the Council in meeting its local housing need figure as calculated by the standard method. There is a longstanding issue of poor housing delivery in North Somerset and it is therefore vital that there is sufficient flexibility in the number of sites to meet the requirement figure acknowledging that some sites will deliver slower or not at all. The total supply number should be increased to at least 26,070 to provide a 10% flexibility allowance, or 29,546 when accepting the need for 2 additional years to the plan period. Land at Havyatt Green, Langford: Representations were submitted on behalf of Rubix Land Ltd to the Reg.19 Additional Sites Consultation in March 2025, regarding this proposed strategic site (given reference number HE208099), which lies outside the Green Belt. A copy of the March 2025 reps (main report + site location plan and illustrative masterplan) are attached for reference. This proposed site can accommodate in the region of 2,500 dwellings with associated community facilities, commercial/employment, drainage and open space. It can also provide a new link road between the A38 and A368, helping to alleviate congestion in the area and "rat-running" along Ashley Lane. It's location close to Bristol Airport, which has significant long-term expansion plans, could bring forward provision of a well-located new community with a strong working age population that could contribute towards the airport expansion, with significant long-term economic benefits for North Somerset. The March 2025 reps were accompanied by a Transport Technical Appraisal Note (TAN), undertaken by Peter Evans Partnership (PEP), which highlighted how the proposed development could provide significant improvements to the local road network, as well as providing strong active travel and public transport links to the airport and beyond. Following submission of the March 2025 reps, Rubix commissioned PEP to undertake traffic surveys along Ashley Lane, to assess its use and any correlation with holiday periods, in terms of increases associated with the airport. PEP has produced a further TAN that provides conclusions on this survey, as well as considering recent and updated transport-related plans/schemes in the area, including: • Bristol Airport 2040 Masterplan, published June 2025; • North Somerset Economic Plan Growth Plan 2025 to 2035, published March 2025; • North Somerset Bus Service Improvement Plan (BSIP); • A38 Major Road Network (MRN) scheme, Department for Transport (DfT) - commitment confirmed July 2025; • Progress on the A371 Banwell Bypass; This further TAN is attached to these representations; it concludes as follows: The site would provide a range of facilities and amenities and is well located to maximise sustainable travel opportunities and allow accessibility to day to day facilities such as primary schools, employment and local shops by walking and cycling.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Pedestrian and cycle permeability through the site would be achieved and improvements are proposed to the walking and cycling network surrounding the site, including on Ashley Lane and Langford Lane, enabling journeys by non-car means for residents of the site but also residents of Langford, Wrington, Burrington and Blagdon. The site is well related to the existing A371 - A38 bus corridor and is therefore able to maximise benefits from existing sustainable transport infrastructure. A proposed Mobility Hub on site would support residents and offer a wider benefit by helping improve public transport provision and connectivity to / from rural areas using WESTLink and between Weston-super-Mare, Bristol Airport, Bristol Temple Meads railway station and Bristol city centre. The main employment opportunities at Bristol Airport, Thatchers, Yeo Valley and south of Bristol (at Gravity/Agratas for example) would be accessible by bus from the site providing opportunities to travel to work by other modes than the car. Equally, facilities such as office space/broadband in homes or on-site community / business hub with digital connectivity would give residents the opportunity to work from home and reduced the need to travel to work. Satisfactory vehicle access to the site can be achieved and there is therefore no reason to suggest the scheme proposals would have a material impact on the traffic capacity or road safety of the local road network. The proposals would have a positive impact on road safety with a new A38 – A368 link, downgrading Ashley Lane and Langford Lane, reducing turning movements at their junctions with the A38 and A368 where there are recorded accidents and where there will be increased traffic flows from the Bristol Airport expansion and new employment in South Bristol. The site is a suitable location for development as it is well placed to assist local employment aspirations, provide homes for employees and help enhance accessibility to Bristol Airport by non-car modes. The site would support and benefit from public transport and highway infrastructure improvements.		
63250785	LiveWest	PCL Planning Ltd		No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	No	As with Policy SP3 (Spatial Strategy), Policy SP8 fails to identify an appropriate settlement hierarchy below the town level with the broad distribution of housing being unclear in terms of the how the housing requirement identified within the villages and rural areas will be met, despite accounting for 12% of the overall housing requirement. Whilst the policy identifies the objective of creating mixed and balanced communities with a mix of housing to support identified housing needs, it is unclear how this will be achieved within the villages and rural areas, particularly given only very few villages have been given positive provision through allocation and revised settlement boundaries. Opportunities for any growth outside of only some of the largest villages is very constrained, despite the opportunity to provide sustainable and proportionate levels of growth. Instead, those villages where growth is identified is limited to Banwell, Bleadon, Churchill, Congresbury, Long Ashton, Sandford, Winscombe and Yatton where allocations are identified. Outside of those places despite in some cases offering a wide range of services and facilities, no provision for growth is made by the Plan despite the clear benefits in respect supporting services, infrastructure investment and providing opportunities for affordable housing. Without this there is a risk that places will stagnate and fail to meet the needs of its existing community leading to circle of unsustainability. Wrington is one example of this risk, despite being identified as more sustainable in the Additional Sites Consultation and benefiting from a wide range of services and facilities, no provision at all is made for additional housing. This is because no allocations have been identified and an already constrained settlement boundary has no proposed changes. It continues to be a significant concern regarding the Plan's soundness as to how the continued omission of Wrington's role to deliver sustainable development and meet identified housing needs, can be justified. It represents a significant downgrade for the village's role within the Core Strategy despite its still wide service offer. Policy SP8 relies on almost 3000 dwellings coming forward within the villages and rural areas, despite acknowledging sites have been identified to provide just 1,830 dwelling towards this, leaving around 1,200 to come forward on small (unidentified sites). It is unclear how this can be achieved given the very limited opportunity the Plan provides for accommodating additional growth beyond the allocations. For example Wrington, despite its clear sustainability credentials and wide level of facilities, in the absence of allocation and with a very constrained settlement boundary faces a clear no growth future. Whilst Policy SP8 identifies the role windfall might play in meeting overall housing requirements, the SHLAA suggests this is based on a mixture of past windfall rates and additional opportunities within the main towns and small scale Green Belt releases. Given the greater constraint on development within the villages and rural areas compared to the previous Core Strategy it must be of significant uncertainty as to the role windfall will play in meeting the overall proportion of housing identified in the villages and rural areas. Therefore, there must be significant doubt that the overall housing requirement of the Plan can be delivered. As we have raised on our client's behalf previously, the Core Strategy approach in clearly identify sustainable places and providing positive policy support for the release of sites for appropriate development provided a much more flexible approach to delivering sustainable development and was critical in supporting the high levels of windfall development as well as affordable housing delivery. Without this the Plan is far more inflexible and unable to respond to future needs, opportunity and circumstances. It is for the reasons set out above that we consider Policy SP8 significantly undermines the soundness of the Plan overall as it has not been positively prepared as it is not seeking to meet identified needs. Its strategy is not justified as it contradicts clear evidence of need and the contribution the larger villages (including Wrington) could make to delivering sustainable development and does not take into account reasonable alternatives in to address this. The Plan's approach will not be effective in that there is no clear evidence that supports the Plan being deliverable. It is not consistent with national policy in that its approach limits rather than maximises the opportunities for the Plan to deliver sustainable development in accordance with the Framework. Please see previous representations made on earlier versions of the Plan for completeness. These are appended to the covering email for these and other representations made on the Reg 19 (Pre-Submission Plan).	Policy SP8 should be amended to reflect a clear settlement hierarchy and distribution of housing across the villages where sustainable growth can be accommodated, with individual indicative housing requirements identified . This will provide greater clarity on the overall distribution of housing as well as providing clarity on the Plan's Spatial Strategy. This will also provide greater recognition that the larger villages have a wider range of services and facilities that can support sustainable growth. Wrington should be identified as a more sustainable settlement within the settlement hierarchy, reflecting its wide range of services and facilities and opportunities for accommodating sustainable growth and its role in accommodating housing recognised in Policy SP8. Further evidence is required to clarify how the additional 1,200 dwellings in the villages and rural areas will be provided without identifying sites or revising constrained settlement boundaries. Growth at Wrington should be identified and a specific housing requirement identified for the village. Further clarity as to how the levels of anticipated windfall will support the housing requirements within the villages and rural areas should be provided, taking into account the more constrained nature of the Plan in respect of those areas than the previous Core Strategy. The Policy map should be amended accordingly. 41434017	Wain Homes (Severn Valley) Limited	J Millard	Wain Homes (Severn Valley) Limited	No	• Justified • Effective	Yes	Yes	The Spatial Strategy [SP3] provides the policy framework to meet the identified housing needs which is set out at Policy SP8 [Housing]. SP8 confirms that the Local Plan must provide for a minimum of 23,700 new homes (1,580 per annum) over the Plan period 2026-2041. This level of growth is derived from the Local Housing Needs assessment (LHN) as calculated through the Standard Method. This Reg 19 Local Plan seeks to respond positively to this housing challenge by ensuring that that the full LHNA is addressed. This is the correct approach and is supported. The scale of housing that needs to be delivered across the plan period to 2041 should be set in the context of historic delivery rates. Between 2006-2024 a total of 15,019 homes have been delivered, an average of c.835 dwellings per year. This rate of delivery is below that set out in the adopted Core Strategy (2006-2026) which requires an average annual delivery rate of 1,049 dwellings. This means that at 18yrs into the current plan period, housing delivery is c.3,836 dwellings below where it should be at this stage and requires completion rates to more than double annually if the Core Strategy housing requirement is going to be addressed in the current plan period to 2026. This demonstrates the challenges faced historically within North Somerset in terms of meeting the identified housing need. Further evidence of the failure to deliver sufficient housing in North Somerset can be found within the latest published data on housing delivery (Residential Land Survey and Housing Land Supply Position Report – April 2024). This shows that in the last monitoring year (2023/24), 753 dwellings were completed. It is only in the monitoring year 2007/08 that North Somerset has delivered an annual rate of delivery that is anywhere near the annualised rate that required through the LHNA, where the district achieved 1,474 dwellings in that year. Since 2020, housing delivery has averaged 916 dwellings each year, equal to 60% of the rate that is required to meet the full LHNA annualised requirement. The most up to date assessment of housing land supply for North Somerset (2024-2029) identifies a supply of just 3.88yrs(1), although the Annual Monitoring Report (2024) notes that through recent planning appeals, housing land supply for the district has been assessed as being 2.79yrs. It is therefore clear that there is an immediate and urgent need to support a step⟐change in housing delivery and for this to be maintained at levels significantly above historic completion rates. To achieve this the Spatial Strategy should provide a positive policy framework that maximises opportunities for sustainable development opportunities to come forward in the immediate and longer term.	The principles and objectives of the Spatial Strategy are supported. However, there is concern that the spatial distribution of development is informed by a site selection process which is inconsistent and not justified. As a strategic location, opportunities to support sustainable development options at Nailsea should be maximised and based on a sound process through which sites are assessed. Our representations set out concerns regarding the site selection process in respect of Land Northeast Nailsea which we consider is based on an inconsistent approach and excludes this site, which if allocated, would be entirely consistent with the overarching approach set out in the Spatial Strategy. As such, the selection and assessment of site options at Nailsea should be revisited to ensure this is based on sound basis. 63213025	BackwellPC NailseaTC Flax BourtonPC BrockleyPC BackwellRA Nailsea Action Group	Lucy White Planning Limited	BackwellPC NailseaTC Flax BourtonPC BrockleyPC BackwellRA Nailsea Action Group	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure		BPC and NTC express the strongest objection to the proposed distribution of development defined under Policy SP8, in particular, the direction of 3,728 dwellings to Nailsea and Backwell (15% of the total housing supply). Nailsea Town Council accepts that as a town it should be a focus for growth, as supported by the Urban Focus approach in the early iterations of the spatial strategy. However, objection is raised to the identification of Nailsea and Backwell as a strategic development location, which is expected to accommodate the highest level of housing growth outside Weston-Super-Mare. To put these figures into context, the population of Nailsea in 2021 was 15,917 and Backwell had a population of c. 4,800 in 2021. This equates to an approximate combined population of c. 20,700. Policy SP8 proposes to direct 3,728 dwellings to these settlements over the plan period to 2041. This equates to an additional 8,574 persons (based on 2.3 persons per household). This represents a 41% increase in the combined population of Nailsea and Backwell. The figures are even more stark when the scale of growth proposed for Backwell is extrapolated. Schedule 1 of the Local Plan identifies allocations totalling 1,683 dwellings at Backwell. Using the same formula to calculate population generated by this scale of development, the population of Backwell would increase by 3,871 persons over the plan period, representing a 81% increase in the population of Backwell village. By comparison the proposed population growth at the other locations is as follows: (see attached document) It is acknowledged that the relative scale of growth north of Banwell is considerable and far in excess of Backwell. However, the proposed scale of growth here is justified to support the delivery of the Banwell bypass. The scale of growth directed to the main towns represents less than half (circa 48%) of the total housing requirement. Policy SP8 is reliant upon four strategic development locations to deliver 47% of its housing requirement. 2 North Somerset average household size, Census 2021 The substantial scale of population growth directed to Backwell through this Local Plan, which is more		251118 Local Plan Reg 19 2025 reps FINAL.pdf R01 - Transport Statement - Rev 3 FINAL.pdf Hydrology LP3 BPC_NTC Appendix_2.2-compressed.pdf Hydrology LP3 BPC_NTC Appendix_2.1-compressed.pdf Hydrology LP3 BPC_NTC Appendix_9-compressed.pdf Hydrology LP3 BPC_NTC Appendix_7-compressed.pdf Hydrology LP3 Summary BPC_NTC Part 2 (1).pdf Hydrology LP3 Summary BPC_NTC Part 1 (1).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									than that proposed for the town of Portishead, is wholly disproportionate to the existing settlement and coupled with the significant growth proposed for Nailsea, will place undue pressure on existing facilities, services and infrastructure and have a significant, detrimental impact on the character and nature of the area and its communities. The Infrastructure Delivery Plan (Main Report) recognises that the large-scale development planned for Nailsea and Backwell will have significant infrastructure requirements, reflecting the scale and complexity of the developments, including transport infrastructure, education, environmental infrastructure, social infrastructure and utilities (paragraph 6.9). The IDP is expected to provide the framework for bringing forward that infrastructure, ensuring it is phased appropriately alongside the development (paragraph 6.10). However, the IDP Schedule includes scant information on the nature of the infrastructure required, the infrastructure cost and the timing of delivery. For example, access improvements to Nailsea and Backwell Station (TR31) has no indication of cost, funding is expected to require grant funding, although it is unclear whether the project would qualify and timescales are unknown. Similarly, ED1, School playing fields at Church Lane, has no indication of cost, or timing of delivery. The relocation of the waste transfer station at Backwell is also identified (UT2) to meet additional capacity requirements, yet there are no costs, funding or timescales attributed to the project. The existing facility is close to the Junior School and the HGVs serving the recycling centre use the same route as pupils, along Dark Lane, a steep, narrow residential road, posing a significant risk to pedestrian safety. The relocation of the waste transfer is critical during this plan period to improve highway safety in the village. As currently drafted the IDP is unsound, providing no evidence that the relocation of the waste transfer station can be delivered within the plan period. In addition, the direction of such significant growth to Nailsea and Backwell, as proposed would bring substantial adverse transport and environmental impacts, including: 1. Severe impacts upon the capacity of the existing highway network, which would not be adequately mitigated; 2. Significant loss of best and most versatile agricultural land; 3. Significant impacts on the setting of heritage assets; and 4. Significant erosion of the foraging habitat supporting the Brockley Hall Stables SSSI to the detriment of this important population of Greater and Lesser Horseshoe bats. Impacts on the Highway Network John Russell Transport Planning has prepared the attached note to demonstrate the adverse impacts of the proposed Nailsea and Backwell strategic development location on the existing highway network and the shortcomings of the proposed transport strategy to mitigate the development impacts following their reinstatement in the latest Pre-Submission Local Plan 2025. Impacts on Best and Most Versatile Agricultural Land In preparing local plans, local planning authorities should distinguish between the hierarchy of international, national and locally designated sites, allocate land with the least environmental or amenity value, where consistent with other policies in this Framework (paragraph 188, the Framework). In doing so, footnote 65 advises that where significant development of agricultural land is demonstrated to be necessary, areas of poorer quality land should be preferred to those of a higher quality. The Best and Most Versatile Agricultural Land Background Paper (October 2025) acknowledges that only 7% (2,522ha) of all agricultural land within North Somerset is Grade 1, with a further 10% (3,842ha) Grade 2. 60% (22,469ha) falls into Grade 3. In response, the Local Plan includes policy DP53 which, in accordance with the Framework, serves to safeguard Grade 1 and 2 land, directing significant development to poorer quality soils.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									However, the Local Plan has failed to take this approach in establishing its spatial strategy and identifying suitable land for residential development. Based on the HELAA (Appendix 1) Site Data and Assessments, the total area of sites allocated in Nailsea and Backwell which occupy best and most versatile land is 269.83 hectares, of which up to 95 hectares is Grade 1 and at least 92 hectares is Grade 23. With a total of circa 187 hectares of Grade 1 and 2 agricultural land to be lost as a consequence of the strategic development location at Nailsea and Backwell, this represents about 4% of the entire Grade 1 and 2 land within North Somerset. It is acknowledged that some of these sites already benefit from planning permission, a resolution to grant or are under construction, however, most notably, land at East Backwell (circa 52 hectares) is Grade 1 and all land allocated at Backwell is Grade 1 or 2, whilst 50% of the sites in Nailsea are also Grade 1 or 2. No other location within the plan area occupies such high levels of Grade 1 and 2 land, as illustrated by the table below. (3 Grove Farm (Grade 1 and 2) is included in full as Grade 1 (hence the figure is referred as “up to”). Some of this would be Grade 2 which would increase this figure (hence this is referred to as “at least”). ANNEX 1 (see attached) — The Best and Most Versatile Agricultural Land Background Paper states that land East of Backwell is “part of a wider package of strategic allocations around Nailsea and Backwell is considered justified on the basis that without it the development of key infrastructure in the form of a new link road connecting Nailsea and Backwell would not be deliverable. This wider sustainability benefit outweighs the loss of BMV land in this location.” This justification is also applied to land south of Nailsea (Grade 2). However, as evidenced through the accompanying submissions by John Russell Transport Planning on behalf of BPC and NTC, the proposed new link road does not represent suitable mitigation for development at Nailsea or Backwell. The proposed road link would not mitigate the adverse impacts of the development proposed at Nailsea and Backwell and the viability and deliverability of the infrastructure, crossing the railway line from Bristol Temple Meads to Weston-Super-Mare on an embankment, affected by flood risk, will be extremely challenging and uncertain. In the absence of the road link providing proven, deliverable mitigation, the loss of Grade 1 and 2 agricultural land is not justified. Loss of Bat Habitat The North Somerset and Mendip Bats Special Area of Conservation is an internationally importance designation under the European Habitats Directive centred around Sites of Special Scientific Interest including the Brockley Hall Stables, a summer maternity roost for the Greater Horseshoe Bats. The roost lies approximately 1 kilometre from the western boundary of Backwell and approximately 2 kilometres from the south-western extent of Nailsea with tracts of farmland separating the roost from the settlements. The latest draft of the North Somerset and Mendip Bats SAC Supplementary Planning Document (October 2025) records a peak population at the roost of 757 bats in 2020, however since then there has been a rapid decline in the population, with only 180 adults recorded in 2025. (See attached). This evidence raises serious concerns regarding the health and long-term sustainability of the Greater Horseshoe Bat (GHB) population at the SSSI which is not reflected in roosts elsewhere in North Somerset. The fall in population is believed to be symptomatic of the bats needing to travel further to new foraging sites and therefore relocating to sites closer to new foraging locations. The expansion of the airport to 12mppa and the recent development of the West End of Nailsea are likely to be contributing factors. Although further evidence is required it is of deep concern that the numbers are falling so dramatically in this primary maternity roost. The increased pressure of house building, well-lit		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									developments, the continuing decline in the local cattle population and changes to local farming practices poses an existential threat to the internationally important GHB population. Although the Local Plan refers to the potential for Nature Parks to provide bat mitigation, no certainty is provided in terms of the location, scale or mechanisms for delivery of these proposals or to ensure their protection in perpetuity. In the absence of adequate and effective mitigation, the identification of a strategic development location in close proximity to the Bat SAC and a SSSI which is evidently under threat, is likely to place this internationally important designation at further risk of demonstrable harm, contrary to the Habitat Regulations. For the above reasons, Policy SP8 and specifically the housing allocation to Nailsea and Backwell is unjustified, ineffective and contrary to the national planning policy framework. Amendment sought: The policy should be amended to extrapolate the housing requirements for Nailsea and Backwell as two separate figures, reduce the figures to reflect the deletion of allocations on land south of Nailsea, land east of Backwell, land at Pound Lane and Land at Poplar Farm.		
63114593	Bloor Homes (North of Pound Lane Nailsea site)	Turley		No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy		No	The Plan as proposed risks not allowing for sufficient time (15 years from adoption) to meet a basic requirement for strategic polices set by national policy. A longer plan period is required to ensure that the plan for North Somerset covers a period of at least 15 years from adoption, with a longer period likely to enable the Council to more effectively plan for future development in the area. The plan must be extended to 2041 as a minimum. • There is concern, and risks in respect of the soundness of the Plan as proposed where, whilst seeking to meet the minimum level of housing need identified using the standard method, there is evidence to suggest that a higher housing requirement should be set to address affordable housing needs and to also accommodate some of Bristol's unmet needs. • There is concern, and risks in respect of the soundness of the Plan as proposed, where no housing delivery trajectory has been provided for the Plan as a whole, or for the specific sites which are identified as part of the proposed strategic policies. This should be addressed as part of the submission of the plan	A longer plan period is required A higher housing requirement should be set to address affordable housing needs and to also accommodate some of Bristol's unmet needs. Lack of housing delivery trajectory has been provided for the Plan as a whole, or for the specific sites which are identified as part of the proposed strategic policies, which should be addressed.

SP8 / Housing Trajectory (supporting text): include the promoted land within the years 1–5 reserve supply, with explicit phasing triggers linked to Infrastructure Delivery Plan items (Long Ashton Transport Hub expansion; mass transit safeguarding; active travel bridges/ underpasses; Nature Park establishment), ensuring infrastructure and housing are delivered in step.		Barrow Gurney Report.pdf BARROW GURNEY 11 12 2025.pdf
21472417	Mead Realisations Ltd	Oneleven Property		No					Objection is raised to this policy as, although the housing requirement is now based on the standard method it is not clear how unmet need from neighbouring areas has been taken into account. The policy seeks to deliver a 'minimum' of 23,700 dwellings over the plan period. However, it is not clear how this could ever be exceeded based on the restrictive nature of the policies contained within the plan. To be consistent the table contained within policy SP8 should also include the word 'minimum' dwellings. The table also sets out a broad distribution of new dwellings although the table includes percentages relating to the proportion of housing supply. This should also be amended to state 'broad' proportion. The policy also states that for designated neighbourhood plan areas the minimum housing requirement will be determined on the basis of the local plan allocations, existing commitments and estimated windfall. However, this approach may conflict with neighbourhood plans which are already made. The Policy text should be amended as follows: Land will be identified to secure the delivery of a minimum of 23,700 dwellings within North Somerset 2026-2041. The Council will seek to ensure the creation of mixed and balanced communities with a mix of house types and tenures to support a range of household sizes, ages and incomes to meet identified housing needs, including the provision of affordable and specialist housing. The broad distribution of new dwellings in accordance with the spatial strategy will be as follows. (see attached document) (remove...For designated neighbourhood plan areas the minimum housing requirement will be determined on the basis of the local plan allocations, existing commitments and estimated windfall.) 									The justification for Policy SP 8 states that the figures include a windfall assumptions which are 'set out in full' in the SHLAA (2025). The SHLAA (2025) appears to suggest at Table 6 that ver the plan period a total of 4,000 dwellings will be delivered as windfall. This is a significant proportion of the overall housing requirement and suggests that much of the housing growth for North Somerset over the next plan period will be unallocated and unplanned. This is unrealistic. To ensure flexibility in the plan and to reflect the fact that the housing requirement is expressed as a minimum the windfall allowance should be excluded from and treated as additional to the housing figures set out in policy SP8. It is also worth considering the changes that have been made to Policy SP8 since the Autumn 2023 PsP was published. This is summarised in the table below: (see attached document) This particularly shows the greater burden expected on delivery from Wolvershill (north of Banwell) and the reduction in growth at the villages and rural areas.		
53971713	Gill Bennett			Unsure		Unsure	Unsure	Banwell is so close to what is classed as Weston-super-Mare that this may as well be included in the numbers. There will be too much development in this area. Why not look to Long Ashton for development.			
51455297	St Philips	Richard Grant	St Philips	No	‣ Positively prepared ‣ Justified ‣ Effective	Yes	Unsure	Policy SP8 - Housing Policy SP8 sets out the approach of the draft NSLP towards housing need and delivery. It sets out a plan requirement for 23,700 new homes to be delivered between 2026 and 2041, or 1,580 dpa. The policy goes on to set out a high level land supply position which suggests that 24,495 new homes could be delivered between 2026 – 2041 in support of the housing requirement, and that 3,300 of these homes should be delivered at the strategic growth location at Wolvershill. We support the identification of Wolvershill in Policy SP8 as a strategic location for growth which is clearly a critical element of the draft NSLP's approach to meeting housing need. We would, however make the following comments regarding Policy SP8: a. The plan period is set at 15 years from 2026 to 2041. Clearly, this period runs for 15 years and therefore meets the requirement set out in paragraph 22 of the NPPF (2024 version). However, it is noted that in order to have a 15 year plan period from adoption, the NSLP will need to be adopted in 2026 – and technically should be adopted by April 2026 when the next monitoring year will start. The Local Development Scheme and plan timetable set out on page 10 of the NSLP suggests that the plan will be submitted in early 2026, and could be adopted by the end of 2026. This timetable seems optimistic, and clearly shows that the plan will not be adopted by April 2026. It would be helpful for the NSLP to be clear about the approach to be taken in the event that the plan is not adopted in 2026, to ensure that the NSLP looks ahead for a period of at least 15 years. For example, if the intention was to roll the plan period forwards to ensure the plan period is at least 15 years, how will the plan ensure that the supply of land for new homes is still sufficient to meet the housing requirement? In addition, para 22 of the NPPF also sets out that "Where larger scale developments such as new settlements or significant extensions to existing villages and towns form part of the strategy for the area, policies should be set within a vision that looks further ahead (at least 30 years), to take into account the likely timescale for delivery". Given that the Local Plan sets out a plan period from 2026 – 2041, and does not provide any indication of a longer term vision, we also question whether this requirement has been met. b. We note that the draft NSLP now assesses the housing requirement using the calculation of local housing need based on the revised Standard Methodology introduced in December 2024. We support this assessment and consider that the housing requirement is in compliance with the NPPF. c. However, we note that the draft NSLP does not contain a housing trajectory or set out a 5 year land supply from the point of adoption of the Local Plan. It would be helpful to see the detail of the housing trajectory and the land supply position which underpins the housing supply table in Policy SP8 set out in a Housing Topic Paper supporting the plan, particularly as these apply to the Wolvershill Strategic Location and the assumptions which have been made regarding first completions and build out rates. d. Finally, it is noted that the draft NSLP makes no mention of accommodating unmet housing need from Bristol, which the City Council has asked if its neighbouring authorities can accommodate. The draft NSLP makes no reference to Bristol's unmet need, nor is there a Statement of Common Ground with Bristol City Council included in the evidence base. A Duty to Cooperate Compliance Statement is included in the Evidence Base, and thus includes a statement that "Evidence supporting the Local Plan demonstrates that North Somerset does not have capacity to meet some of Bristol's needs at this time". It is not clear, however where this evidence is presented or where the specific question of whether North Somerset could make provision for meeting some of Bristol's unmet need is addressed. It is noted that the Minister of State for Housing and Planning, Matthew Pennycook MP set out in a Ministerial Statement on 27th November 2025 that the Duty to Cooperate is not part of the new Local Plan system introduced by the Levelling Up and Regeneration Act 2023, and that the Government has decided that it will not apply to any plans being progressed under the current, 'legacy' Local Plan system. However, the Minister also made clear that "Local planning authorities should continue to collaborate across their boundaries, including on unmet development needs from neighbouring areas, and we expect Planning Inspectors to continue to examine plans in line with the policies in the NPPF on 'maintaining effective co-operation'". It is therefore clear that the matter of accommodating an element of the unmet need of neighbouring authorities remains a soundness issue for the North Somerset Local Plan. We would urge the Council to set out a clearer and more robust position on this matter when the Local Plan is submitted for examination.	See Comments Above.		
30301601	Ainscough Strategic Land	Chris Price	Ainscough Strategic Land	No	‣ Positively prepared ‣ Justified ‣ Effective	Yes	No	SEE ATTACHED REPRESENTATION FOR FULL COMMENTS. Summary 1 The Plan as proposed risks not allowing for sufficient time (15 years from adoption) to meet a basic requirement for strategic polices set by national policy. A longer plan period is required to ensure that the Plan for North Somerset covers a period of at least 15 years from adoption, with a longer period likely to enable the Council to more effectively plan for future development in the area. 2 There is concern, and risks in respect of the soundness of the Plan, that whilst seeking to meet the minimum level of housing need identified using the standard method, a higher housing requirement should be set to address evidenced affordable housing needs and to accommodate some of Bristol's unmet needs. 3 There is concern, and risks in respect of the soundness of the Plan as proposed, that no housing			61683 - NSC Reg 19 Representations December 2025 2-12-25.pdf

								delivery trajectory has been provided for the Plan as a whole, or for the specific sites which are identified as part of the proposed strategic policies. This should be addressed as part of the submission of the Plan, given some of the allocated sites' housing delivery will fall beyond the current plan period.			
62850369	Maureen Butterly			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	While SP8 sets out the headline housing requirement and distribution across North Somerset, the proposed distribution does not reflect the sustainability principles set out in SP1, SP2, SP3, SP5 and SP6, nor does it demonstrate that the chosen allocations represent the most sustainable and appropriate pattern of growth. In particular, the identification of Pill and Easton-in-Gordano as a strategic growth location for 1,100 dwellings is not justified, not effective, and not consistent with national policy, for the following reasons. 1. The distribution of housing does not align with the spatial strategy or sustainability principles in SP3 and SP5 SP8 allocates: • 1,100 homes (4% of the total supply) to Pill/Easton-in-Gordano • Significantly less growth to Portishead, Clevedon and other towns that national policy and the Plan's own strategy recognise as more sustainable locations This contradicts SP3 and SP5, which state that: • Towns and urban areas are the most sustainable locations for new development • Growth should be concentrated where there is existing infrastructure, public transport, services and employment Pill/E-in-Gordano does not meet these criteria. It is a village with: • limited services, • heavy car dependency, • constrained roads (especially M5 Junction 19), • limited public transport, • major ecological and landscape constraints, • flood-risk concerns in some locations. The housing distribution in SP8 therefore does not reflect the Local Plan's own strategic aims. 2. The Plan does not demonstrate that brownfield opportunities and town-centre capacity have been fully maximised before allocating Green Belt housing SP8 relies heavily on large Green Belt releases, including at Pill/E-in-Gordano, without clear evidence that the Council has: • maximised brownfield land in Weston-super-Mare, Portishead, Clevedon or Nailsea, • optimised densities in accessible urban areas, • fully explored regeneration-led growth, • engaged neighbouring authorities under the Duty to Co-operate to consider cross-boundary alternatives. The absence of this evidence means the distribution in SP8 is not justified. 3. SP8 does not demonstrate that the required infrastructure for 1,100 homes at Pill/E-in-Gordano is deliverable Large housing allocations must be supported by: • transport infrastructure improvements, • school places, • accessible healthcare, • active travel routes, • viable public transport, • utilities capacity. However, for Pill/E-in-Gordano: • no cumulative transport modelling is presented for M5 J19 • National Highways has flagged concerns about cumulative impacts nearby • school and healthcare capacity assessments are incomplete • active travel connections are not evidenced or costed • public transport improvements are aspirational, not secured SP8 is therefore not effective, because the distribution of development depends on infrastructure that may not be deliverable. 4. The Pill/E-in-Gordano housing allocation is disproportionate to village scale and exceeds any reasonable interpretation of "local need" SP8 directs 1,100 homes (a 44% population increase) to a rural area that: • is explicitly described in SP6 as less sustainable, • lacks full settlement-level services, • has limited employment opportunities, • already experiences infrastructure and environmental pressures. This level of growth is inconsistent with: • SP6 (Villages should receive proportionate, needs-based development) • the NPPF (which discourages large-scale growth in unsustainable rural locations) The Pill/E-in-Gordano allocation is therefore not consistent with national policy. 5. The housing distribution does not demonstrate compliance with climate objectives in SP2 Directing substantial growth to a location with limited public transport and heavy car dependency undermines: • the Council's net zero ambitions, • SP2's requirement to reduce greenhouse gas emissions and prioritise sustainable travel. This renders the policy internally inconsistent. 6. The evidence does not demonstrate that ecological constraints have been properly factored into site selection Multiple Pill/E-in-Gordano sites lie within: • North Somerset & Mendip Bats SAC consultation zones, • Severn Estuary SSSI influence zones, • important wildlife corridors. There is no clear evidence that these constraints were fully weighed when determining the housing distribution. SP8 is therefore not justified or effective in ecological terms. 7. SP8 relies on Green Belt release without demonstrated exceptional circumstances for Pill/E-in-Gordano As argued under SP7, exceptional circumstances have not been demonstrated for these specific Green Belt releases. This undermines the legality and soundness of the associated housing distribution in SP8. Summary SP8 is not sound because: • the distribution of housing does not reflect the spatial strategy or sustainability hierarchy, • brownfield alternatives have not been fully assessed, • infrastructure delivery is uncertain, • ecological and flood risks are not adequately addressed,	To make SP8 and the housing distribution sound, the following modifications are required: 1. Reassess and redistribute housing growth to prioritise genuinely sustainable locations (towns and urban areas) The current distribution provides only 4% of the housing supply to Pill/Easton-in-Gordano despite its rural, constrained and less sustainable characteristics, while placing disproportionate strategic growth there. Required modifications: • Reduce or remove the 1,100 homes allocated at Pill/Easton-in-Gordano. • Reallocate this growth primarily to the four towns (Weston-super-Mare, Portishead, Clevedon, Nailsea) and to strategic locations with better public transport, services and infrastructure. • Update the Sustainability Appraisal (SA) to include revised distribution options that prioritise brownfield and town-centre opportunities. 2. Fully demonstrate that brownfield land and higher-density opportunities in towns have been maximised before releasing Green Belt land The Plan does not currently show that towns have been tested to their full sustainable capacity. Required modifications: • Publish a detailed brownfield register assessment showing developable and deliverable capacity across Weston-super-Mare, Portishead, Clevedon and Nailsea. • Conduct and publish a higher-density capacity study for town centres and transport hubs. • Reduce Green Belt allocations (including Pill/E-in-Gordano) where additional brownfield capacity exists. 3. Require housing distribution to align with climate and sustainable transport objectives (SP1 and SP2) Current allocations undermine the Council's climate objectives by directing housing to car-dependent locations. Required modifications: • Amend SP8 to require that major allocations demonstrate achievable modal shift to active travel and public transport. • Reallocate growth away from locations where car dependency is unavoidable and public transport improvements are uncertain. • Include carbon impact assessments for each strategic housing area. 4. Require robust, deliverable and funded infrastructure plans before confirming housing allocations The Plan allocates major housing at Pill/E-in-Gordano without showing that schools, healthcare, transport and utilities can be delivered. Required modifications: • Include a policy requirement that strategic allocations must be supported by secured infrastructure funding and phasing strategies prior to adoption. • Publish infrastructure delivery plans for each strategic location, including cumulative transport modelling for M5 Junction 19. • Reduce or remove allocations where infrastructure delivery is not feasible. 5. Clarify how ecological constraints and flood risk inform the housing distribution SP8 does not sufficiently reflect environmental constraints affecting strategic sites. Required modifications: • Publish ecological capacity assessments and HRA-level analysis for Pill/E-in-Gordano sites affected by the SAC, SSSI and wildlife corridors. • Remove allocations where ecological mitigation is not deliverable. • Publish sequential testing for all sites with flood-risk implications, removing or modifying those in higher-risk zones. 6. Ensure the housing distribution complies with SP6 (Villages and Rural Areas) SP6 states that villages should only accommodate proportionate growth based on local need. Required modifications: • Amend SP8 so that development in villages does not exceed levels proportionate to settlement size, character and service capacity. • Reduce the Pill/E-in-Gordano allocation accordingly. 7. Demonstrate exceptional circumstances for Green Belt release (in line with SP7 and the NPPF)		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								• climate and transport objectives are undermined, • the scale of development at Pill/E-in-Gordano is disproportionate, • exceptional circumstances for Green Belt release are not evidenced. Until these issues are resolved, SP8 fails the tests of justification, effectiveness, and consistency with national policy.	SP8 relies heavily on Green Belt releases, but exceptional circumstances have not been robustly demonstrated. Required modifications: • Publish the full alternatives analysis required by NPPF Section 13. • Remove Green Belt housing allocations where exceptional circumstances cannot be justified. • Amend SP8 to state explicitly that Green Belt sites may only be allocated once brownfield and non–Green Belt alternatives have been demonstrated insufficient. 8. Introduce housing distribution flexibility that allows adjustments if infrastructure or environmental constraints prevent delivery Without flexibility, the Plan risks under-delivery. Required modifications: • Insert a clause allowing redistribution of housing numbers to more sustainable locations if infrastructure, ecological or viability issues prevent delivery at strategic rural locations. • Require annual Housing Trajectory review to trigger redistribution where delivery is uncertain. Summary Modification To be sound, SP8 must be revised to: • Prioritise sustainable, urban and brownfield locations • Remove or reduce unsustainable rural allocations (especially Pill/E-in-Gordano) • Ensure infrastructure is secured before development • Protect Green Belt in line with national policy • Address climate, transport, ecological and flood constraints • Align with SP1, SP2, SP3, SP5 and SP6 • Demonstrate full exceptional circumstances for any Green Belt release Without these modifications, SP8 fails the tests of justification, effectiveness, and consistency with national policy.		
62851905	David Cannon			No	• Justified	Unsure	No	I feel that the council are following a national schematic layed down by the government and it will not benefit future generations , the constant trend to build more and more houses is way of generating more monies through the community tax, sadley we see the council squander this result on odd ball schemes all too often .			
51560705	Dan Clarke-Hall (Gibson Architecture)	Dan Clarke-Hall (Gibson Architecture)	Gibson Architecture	No	• Effective	Unsure	Unsure	I believe the plan to disproprtionately affect small developers. I am unsure of the validity of the housing allocation, especially the windfall sites which I believe the plan overestimates. Windfall numbers are decreasing and flood, climate policy among others are making North Somerset incredibly unattractive to small to medium developers. The attached document includes all of my opinions on the plan.	My proposed modifications are included in the associated representation. SP8 – Housing • Issue: Windfall allowance (~3000 dwellings) is unrealistic given settlement boundaries, flood constraints, bat SAC, and conservation areas. • Modification: Reinstate the former policy permitting sites adjacent to settlement boundaries. 51242689	Latimer Developments Limited	Arwel Evans - Lichfields	Latimer Developments Limited	No	• Positively prepared • Justified • Effective	Yes	No	Draft Policy SP3 identifies Weston-super-Mare as the principal location for new development. New development will also be prioritised in the following four strategic locations: • Wolvershill (north of Banwell) – 3,300 homes; • Woodspring (south west of Bristol) – 3,500 homes; • Nailsea and Backwell – 3,728 homes; and, • Pill and Easton in Gordano – 1,100 homes. Draft Policy SP5 also states that development will be prioritised within the four town centres of North Somerset, those being Weston-super-Mare, Clevedon, Nailsea and Portishead owing to their sustainability credentials. Draft Policy SP6 seeks to limit new residential development outside of the settlement boundaries of villages and rural areas. The supporting text states that: ‘development in the rural areas is relatively less sustainable given the absence of services, facilities and job opportunities’. This fails to acknowledge that the form, nature, size and sustainability credentials of Villages within the authority varies considerably, and is a step change from the adopted Core Strategy approach and the Council’s own evidence base. It is incorrect to state that there is an absence of services, facilities and job opportunities in settlements outside the towns. This has essentially created a two-tier settlement strategy that does not reflect the nature and function of the settlements of North Somerset with all settlements apart from Weston -Super-Mare, Nailsea, Clevedon and Portishead (as well as the strategic development locations) considered in the ‘Villages and rural areas’ category. As set out in draft Policy SP8 the ‘villages’, account for 2,948 dwellings (12% of the housing supply) in the Regulation 19 plan with the remainder coming from the towns and the strategic allocations. We consider that the settlement strategy does not reflect the function and form of the settlements of North Somerset and as a result, the distribution of housing, set out in policy SP8 is not effective in ensuring delivery over the plan period. As it stands, we consider that draft Policy SP8 is not justified and is therefore unsound. The proposed settlement strategy does not reflect the existing settlement hierarchy as evidenced by the Council’s	We consider that the settlement hierarchy should be amended to give status to the more sustainable settlements, as evidenced by the Council’s own supporting documents. We also request that additional small sites are allocated within these sustainable settlement including Clarion’s site at land north of High Street, Claverham (120 affordable homes) to ensure that the plan delivers over the plan period.		LF62683-01 Claverham - Vision Document (update) - Apr25 v6 (HR)(33693312.1).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								own work. In order to be considered sound, a third tier should be added which should consist of the more sustainable villages, as evidenced by the Council's own work to assess the sustainability of villages. Policy SP6 (Villages and Rural Areas) is too restrictive to allow meaningful development to take place in villages that could suitably meet the needs of the area and to assist in supporting their viability. Policy SP6 as it stands appears to be drafted in order to protect rural areas from any development regardless of the characteristics of the rural settlements – some of which are large, sustainable and thriving communities. This appears to be an even stricter form of policy than that of the adopted Core Strategy that allowed sites of up to 25 dwellings outside of settlement boundaries for service villages subject to criteria. It appears that Yatton has been demoted from a Service Village in the new Local Plan to fall within the 'Villages and Rural Area' category even though it is a highly sustainable settlement that serves a wider catchment as evidenced through the recent residential permissions. As it stands, we consider that draft Policy SP6 is not justified and is therefore unsound. Policy SP6 should be amended to make it clear that sustainable housing developments adjacent to the settlement boundary of villages are acceptable subject to criteria. Whilst the Council has opted to allocate 1100 dwellings in the village of Pill and Easton in Gordano, we consider that other villages such as Yatton/Claverham also boast considerable sustainability credentials and would be suitable to accommodate further meaningful growth. The Council's own evidence recognises the sustainability credentials of Yatton/Claverham, with the 'Consultation paper on additional sites for the Regulation 19 plan' (February 2025) identifying Yatton/Claverham as a 'larger, most sustainable village'. From a functional perspective Claverham forms an important node along an arc of settlements in this quadrant of North Somerset that operate in unity. These comprise Yatton, Claverham, Cleeve and Congresbury. Claverham forms a natural extension to Yatton. Within the current adopted Core Strategy Yatton is designated as a 'Service Village' whilst Claverham is classified as an Infill Village. The Core Strategy supports development within or adjacent to existing settlement boundaries of Service Villages, subject to proposals enhancing the overall sustainability of the settlement. We consider that additional growth could be directed to other sustainable villages by either amending the settlement hierarchy under Policy SP3 to promote sustainable villages such as Yatton/Claverham (similar to the adopted Core Strategy where it is identified as a Service Village) or by re-drafting Policy SP6. The supporting text to Policy SP8 states that: "Across the villages and rural areas sites to accommodate 1,830 dwellings have been identified, predominantly at the larger more sustainable villages that have a range of services and facilities to support an appropriate amount of new development over the plan period." However, we query why no new allocations are proposed in Yatton/Claverham given its positive classification as part of the Rural Settlements Paper (March 2022) and the Consultation Paper on additional sites for the Regulation 19 Plan (February 2025). Only 300 dwellings have been allocated within Yatton/ Claverham, with all but one allocation (Oxford Plasma – 58 units) having extant planning permission . It's worth noting that the Oxford Plasma allocation is not a new allocation as it has been rolled forward from the Site Allocations Plan (April 2018). Therefore, there are no new allocations proposed for Yatton/Claverham which is surprising and at odds with the Council's own evidence base. The combined area of Yatton/Claverham is therefore proposed to accommodate a very limited quantum of growth compared to its evidenced strong sustainability credentials. We support the Council's assertion that Yatton/Claverham is considered as a single settlement due to their interdependency. We consider that the conjoined settlement should be considered a higher order settlement in the settlement hierarchy. The plan therefore fails to meet the tests of soundness as it is not justified, with Policy SP8 conflicting with the council's own evidence base. Whilst future opportunities for growth in Yatton are more limited (due to constraints such as flood risk), there remains opportunities for sustainable development within Claverham which forms a natural extension to Yatton; as recognised by NSC in the 'Consultation paper on additional sites for the Regulation 19 plan' and the Pre-submission Plan. We consider that Claverham in itself is a suitable location for development as it includes a primary school (including preschool), a Village Hall, a Community Church, a Scouts HQ as well as areas of functional open space. However, there is an opportunity to boost the facilities and services in Claverham itself through well planned developments such as that proposed for land north of High Street, Claverham. Although we support NSC's sequential approach, which prioritises the most sustainable locations for growth, we question its application within the plan. The plan has overlooked deliverable sites in lower order settlements, including the land north of High Street, Claverham, which are suitable, sustainable and deliverable, in favour of very large strategic sites and sites located within the Green Belt. Whilst the NPPF (paragraphs 145 and 146) states that Green Belt boundaries can be altered where there are exceptional circumstances, including in instances where an authority cannot meet its identified need for homes, we do not believe that NSC has fully considered suitable and deliverable housing sites outside of the Green Belt that could also aid in meeting this need. Having the other smaller sites alongside the larger strategic sites provides North Somerset with the best opportunity to meet the housing target. The Plan is not sound because it is not positively prepared (test of soundness 36.a), justified (test of soundness 36.b) or effective (test of soundness 36.c). The strategy to meet the housing needs of the authority is not effective because of the reasons outlined above. We consider that the settlement hierarchy should be amended to give status to the more sustainable settlements, as evidenced by the Council's own supporting documents. We also request that additional small sites are allocated within these sustainable settlement including Clarion's site at land north of High Street, Claverham (120 affordable homes) to ensure that the plan delivers over the plan period.		
51242689	Latimer Developments Limited	Arwel Evans - Lichfields	Latimer Developments Limited	No	• Positively prepared • Justified • Effective	Yes	No	We consider that the plan is overly reliant on the large strategic allocations including Woodspring (3,500 homes) which will be essentially creating a new settlement from scratch. Sustainable villages offer the potential to provide deliverable housing sites at a smaller and manageable scale over a shorter timeframe. Whilst we do not object to the strategic allocation at Woodspring (as well as other large strategic sites), we question the deliverability of the whole site over the plan period and as a result the effectiveness of the plan (test of soundness 36.c). Lichfields Start to Finish (Third Edition, March 2024) research (enclosed), found that sites of 2000+ dwellings take on average 5.1 years to obtain detailed planning permission, then a further 1.6 years to	To make SP8 sound we request that the total supply number is increased to 26,945 to provide sufficient flexibility, that the deliverability of the large strategic sites should be robustly evidenced and that additional sites in sustainable locations are made to ensure that SP8 can deliver the housing that is required.		start-to-finish-3_how-quickly-do-large-scale-housing-sites-deliver.pdf LF62683-01 Claverham - Vision Document (update) - Apr25 v6 (HR)(33693312.1).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								deliver the first dwelling. Whereas sites of 100-499 dwellings take on average 2.8 years to obtain planning permission, with the delivery of the first dwelling taking on average 3.2 years. Strategic sites also require a significant amount of infrastructure that can elongate the development process. This is the case for the Woodspring Allocation, which requires the provision of a local centre, 10 hectares of new employment land, one new secondary school and three primary schools. It is clear therefore that the proposed new settlement Woodspring would take a significant amount of time to deliver especially given that a planning application is yet to be submitted for this site. An over reliance on large strategic sites will not make up for current and pressing shortfalls. It is clear therefore that the proposed new settlements would take a significant amount of time to deliver; meaning an over reliance on large strategic sites may not be an effective way to meet the housing requirement. North Somerset Council has not provided evidence to show the proposed trajectory of the large strategic sites and how long they will take to start delivering. This is critical in order to evidence the deliverability of the sites and therefore the plan. In the absence of this evidence, we consider that the Plan is not justified as it is not based on proportionate evidence as required by the 36b) test of soundness (justified). The Start to Finish evidence also notes that the median build out rates for sites of over 2,000 units is 138 dwellings per annum. Taking the lead in time into account this means that Woodspring for example would only be able to deliver 1,380 dwellings within the plan period (approximately 40% of the housing anticipated from this site). It is clear that additional smaller sites are required to support the plan so that it can meet the housing requirement. The Clarion site at Claverham is ideally placed to be one of these additional sites. Latimer are committed developers who are dedicated to delivering a 100% affordable housing scheme at the land north of High Street, Claverham - this is evidenced through the recent pre-application submission and the numerous representations submitted. The developer intends to submit a planning application in the near future. The allocation of this site will provide additional certainty to the developer, ensuring its deliverability. Clarion consider that SP8 is unsound as it is not positively prepared (test of soundness a)) – it does not provide a strategy to meet the area's objectively assessed needs as a minimum. It is clear that the supply identified through the emerging Plan will not deliver the required number of houses during the Plan period. The strategy also fails the 'effective' test of soundness as the strategy put forward is not effective in delivering the growth that is required. The Clarion/Latimer site at Claverham should be included as an allocation to assist in boosting the supply so that the strategy to meet the area's objectively assessed needs is more robust. Flexibility Allowance Policy SP8 explains that the Local Plan is to provide 24,495 homes to meet the requirement of 23,700 homes. This only provides a flexibility allowance of 795 homes (3.35%). This is a very low percentage and does not provide sufficient flexibility to meet the local housing need figure of 23,700 should any of the allocations run into delivery issues or if the windfall allowance is lower than anticipated. By way of comparison, the emerging South Gloucestershire Local Plan includes a flexibility allowance of 10.5%. In our view this is a much more sensible figure that will assist the Council in meeting its local housing need figure as calculated by the standard method. There is a longstanding issue of poor housing delivery in North Somerset and it is therefore vital that there is a sufficient number of sites to meet the requirement figure taking account that some sites will deliver slower or not at all. Clarion's site at Claverham could assist in providing additional certainty that the housing requirement can be met. The total supply number should be increased to at least 26,945 to provide a 10% flexibility allowance. Additional sites should be added to Schedule 1 to make up this increased supply. The Clarion site at Claverham should be one of these additional sites. Bristol's Unmet Need It is important to note Bristol's unmet housing needs in the context of NSC's approach to meeting housing need in the draft Plan. NSC's Duty to Co-operate Statement of Compliance recognises unmet need from neighbouring authorities to be important strategic matters. It, however, concludes that Bristol's request for neighbouring authorities (including North Somerset) to accommodate some of its unmet need cannot be addressed as "…the evidence supporting the local plan demonstrates that North Somerset does not have capacity to meet some of Bristol's needs at this time" (pg. 20). Bristol City Council's (BCC) draft Local Plan is currently at Examination; the hearings have concluded and the 'Final Advice and Actions' letter from the Inspectors was issued on 21 November 2025. This includes some key conclusions on housing: " We acknowledge that there is insufficient capacity to meet the Council's objectively assessed housing need, as calculated by the standard method. Nevertheless, we do not consider the figure of 34,650 dwellings over the Plan period to be positively prepared or justified. Given the significant shortfall in meeting overall needs, and the current lack of agreement between Bristol and any neighbouring authorities to provide assistance, we consider it imperative that the Council seeks to maximise housing delivery. Inherent uncertainties in housing delivery in the longer period do not justify setting a housing requirement substantially below the overall housing capacity figure identified at submission; The Council should draft MMs which set the housing requirement to be the 39,915 dwellings' capacity that was identified at submission [we note this is an additional 5,265 homes, adding to unmet need]; and The Council must also set out what the level of unmet housing need is. While the objectively assessed housing need may change over time, we consider it necessary for this Plan to be clear about the situation at the time of adoption. This may, for example, be important in continuing work being done on other Plans." This is highly relevant, as Bristol has a significant remaining unmet need and this must be accounted for by neighbouring authorities including North Somerset, South Gloucestershire and Bath & North East Somerset, who are all preparing new local plans. To date no other local authority has positively responded to BCC's request confirming their inability to accommodate any unmet need, which further			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								amplifies the issue. The various plans are deferring their obligations to deal with these important cross boundary issues which will only serve to increase affordability pressures within North Somerset and Bristol. NSC's availability of other sustainable opportunities to accommodate some additional growth for BCC's unmet need will require further consideration at the Examination. The Clarion Offer The land north of Claverham presents an opportunity to deliver 120 100% affordable dwellings in an area that has no new allocations, has a high evidenced housing need and high house prices. The site also presents an excellent opportunity to aid NSC in meeting its high affordable housing need. Beyond the housing benefits, it provides an opportunity to provide a village shop which will further boost the sustainability of the area. The development of this site can also preserve and extend the proposed Local Green Space designation (North of Chestnut Drive), providing a valuable facility for local people. The masterplan that has been developed shows adjacent fields to Chestnut Drive being proposed for open space, forming a natural extension to this community area. Please see enclosed vision document that outlines the suitability and sustainability of the site. Clarion Housing Group is the UK's largest provider of affordable housing, with over 125,000 homes and more than 350,000 residents across the country. Latimer, the development arm of Clarion offers a unique proposition which sets it apart from traditional volume house builders: 1 A long-term commitment to the people who live in their homes 2 Latimer communities are both socially and environmentally sustainable 3 A consistent commitment to high quality and net zero carbon compatible properties 4 Latimer does not have shareholders, so it doesn't face short-term demands to make profit at any cost 5 Latimer is driven by its commitment to quality, community and places that succeed 6 Latimer is a dependable development partner. Latimer is fully committed to delivering a 100% affordable housing scheme at the land north of High Street and has recently received a positive pre-application response from NSC. The developer intends to submit a planning application in the near future. The allocation of this site would provide additional certainty to the developer, ensuring its deliverability. Policy SP8 is unsound as it is not based on proportionate evidence as required by the 36b) test of soundness (justified). Sufficient evidence has not been put forward to demonstrate the deliverability of the large strategic sites. In addition SP8 does not provide a strategy to meet the area's objectively assessed needs as a minimum. Effective joint working with neighbouring authorities (i.e. Bristol) has not been properly evidenced. It is clear that the supply identified through the emerging Plan will not deliver the required number of houses during the Plan period. The strategy also fails the 'effective' test of soundness as the strategy put forward is not effective in delivering the growth that is required. The Clarion/Latimer site at Claverham should be included as an allocation to assist in boosting the supply so that the strategy to meet the area's objectively assessed needs is more robust. To make SP8 sound we request that the total supply number is increased to provide sufficient flexibility, that the deliverability of the large strategic sites should be robustly evidenced and that additional sites in sustainable locations are made to ensure that SP8 can deliver the housing that is required.			
58629377	T Crane			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I do not consider SP 8 to be sound for Nailsea & Backwell. The policy allocates 3 500 dwellings (plus 228 windfall) to this "strategic growth location" but that designation is undefined in national policy and relies on earlier strategic policies in the list (SP 3 and SP 7) that are themselves unsound. North Somerset Council has not shown exceptional circumstances to justify Green-Belt release, nor has it provided evidence that road, rail and bus infrastructure can support the proposed scale of development. Flood-risk and environmental constraints further undermine deliverability. Reasoned justification: Undefined "strategic growth location": SP 8 introduces the concept of a "strategic growth location" for Nailsea/Backwell but does not define it or explain why it is appropriate. The NPPF does not recognise such a designation, and using it to justify large-scale housing is unjustified. Dependence on unsound policies: SP 8's housing numbers derive from SP 3 (Spatial strategy) and SP 7 (Green Belt), which I have objected to separately. SP 3 concentrates growth at Nailsea/Backwell despite severe transport and flood-risk constraints, while SP 7 proposes Green-Belt release without demonstrating exceptional circumstances. Because the underlying policies are flawed, the housing distribution is not positively prepared or justified. Infrastructure deficits: Nailsea and Backwell are served by only three road routes, each with physical pinch points (Station Road's single-file rail bridge, narrow sections on the B 3130 via Tickenham Hill and through Wraxall). SP 8 does not ensure that these constraints will be resolved before housing is delivered. Bus services to Bristol and Bath are infrequent, untimely and unreliable; the railway station lacks step-free access to the southbound platform. Trains to Bath/London are unrelaible, lack adequate passenger capacity and not frequent enough. Without clear commitments to road and rail improvements, a housing-led strategy is not effective. Environmental and flood-risk constraints: Proposed housing sites include Green-Belt land north of Nailsea and east of Backwell that suffers from surface-water and fluvial flooding. DP 9 (Flood risk) requires development to avoid flood-risk areas, yet SP 8 allocates those very areas for housing. There is also no strategy for mitigating the loss of productive farmland or biodiversity. Lack of economic balance: Allocating 3500 homes without commensurate employment or retail provision will turn Nailsea into a dormitory town. There are empty commercial units in the town centre, (or they are occupied only by charity shops) and the plan proposes only 6.1 ha of employment land which will not compensate for the loss of existing business space that has been/is planned to be converted to dwellings in recent years. This conflicts with the NPPF's requirement to promote sustainable, mixed-use communities.	Rebalance housing distribution: Reduce the housing allocation for Nailsea/Backwell and redistribute growth to locations with better transport links, available brownfield land and fewer environmental constraints (e.g., Weston-super-Mare, Clevedon, Portishead). Define and justify strategic growth locations: If the council uses this concept, set clear criteria (e.g., infrastructure capacity, absence of flood risk and Green-Belt constraints, scope for mixed-use development) and assess each location against them. Otherwise remove the term and revert to NPPF terminology. Link housing to infrastructure delivery: Require that major road improvements (e.g. resolving pinch points on Station Road and the B 3130), step-free access and parking at Nailsea & Backwell station, and enhanced bus services are provided before significant housing is occupied. Include a phasing schedule tying housing completions to specific infrastructure milestones. Avoid flood-risk areas: Apply the sequential test mandated by the NPPF to steer development away from flood-prone Green-Belt land around Jacklands Lake and Moorend Spout. Incorporate comprehensive flood-mitigation measures for any remaining sites. Promote economic growth alongside housing: Increase employment allocations within existing settlement boundaries (e.g. reuse vacant commercial units in Nailsea town centre) and plan for mixed-use development, co-working and light industrial uses, rather than relying on greenfield employment sites that reduce the Green Belt.		
31072289	Jeanne Craske			No	• Positively prepared • Justified	Unsure	Unsure	I think it's unlikely that the numbers are deliverable and supported by infrastructure.

					• Effective • Consistent with national policy						
9138657	Home Builders Federation		Home Builders Federation	No	• Justified • Effective • Consistent with national policy				Policy SP8 is not considered to be sound as it is not effective, justified or consistent with national policy The NPPF is quite clear that the standard method should be used a starting point unless there are exceptional circumstances that justify a different approach. HBF do not believe there are any such exceptional circumstances exist that would warrant a different approach than the standard method being used for North Somerset. HBF see no evidence or justification not to plan for the standard method housing number, indeed in HBF's view the Council should in fact be considering if there are any factors, which justify a higher figure. HBF believe the standard method should be used at the starting point setting the housing requirement, but that the unective in meeting housing need of wider Bristol area. For North Somerset this should include making a contribution to Bristol's unmet housing need. 49. The current approach proposed in the Plan is not justified or supported by the evidence and runs counter to the government's ambition to do more to address the housing crisis. As such the plan fails to comply with national policy in relation to housing. Incorrectly constraining housing numbers will impact on not just open market housing delivery but also impact the size, and type of housing that can be provided within North Somerset and undermine the delivery of affordable housing. The Government has made it clear that it still supports the national target of 300,000 new homes per year. However, the standard method housing requirement has always been only the starting point for setting the housing requirement in a Plan. Indeed, HBF would support more housing than the standard method housing requirement in order to support economic growth, provide a range and type of sites and to support small and medium house builders. There is a need to provide a range and choice of sites, a need for flexibility and viability considerations to be taken into account and a need for the Council to consider whether higher levels of open-market housing are required in order to secure the delivery of affordable housing and/or support economic growth. HBF does not comment on individual sites, other than to say the Plan should provide for a wide range of deliverable and developable sites across the area in order to provide competition and choice to ensure that housing needs are met in full. HBF would wish to see the Plan set out a logical settlement hierarchy which meets all the housing needs and addresses all areas of the housing market, with a range of sites proposed for allocation. The soundness of strategic and non-strategic site allocations, whether brownfield or greenfield, will be tested in due course at the Local Plan Examination. Our detailed comments on the spatial strategy can be found in Chapter 4. However, in light of the need for a higher housing requirement the spatial strategy may need to be revisited in order to reflect and enable the additional housing allocations required to meet the full housing requirement of North Somerset. HBF remain concerned that neighbouring authorities are actively seeking to minimise their own housing numbers, and certainty not being accepting of, or seeking to plan for, any additional housing too help met the wider needs of the Region. This is an unsound approach to plan-making and a failure of North Somerset's Local requirements for effective plan-making. The failures of the previously envisaged joint working across the wider Bristol area must not create a context where planning to meet housing need ends up simply in the too difficult box. This can not be effective plan-making.		North Somerset 2nd Reg 19 Dec 25.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									The Need for an Annualised Housing Requirement The plan-led system requires Council to proactively plan to meet the needs of their community. This means that there is a need to provide a range and choice of sites, a need for flexibility and viability considerations to be taken into account, and a need for the Council to consider whether higher levels of open-market housing are required in order to secure the delivery of affordable housing and/or support economic growth. The plan should therefore be delivering more. The Need to address Bristol's unmet need HBF sympathise with the Council's challenge in preparing a Local Plan for North Somerset in the absence of a wider Bristol HMA Plan which HBF agree would represent a better way to ensure the housing needs of Bristol are addressed. The lack of a strategic plan for the wider HMA presents many challenges for plan-making in the area, but none of these are justification to fail to set the housing requirement at the right level, or to ensure that the Council is doing all it can to meet its own needs within its own boundaries, including through Green Belt release and ensuring maximum efforts are made to work collaboratively across the wider Bristol HMA so the needs of Bristol that cannot be met within the City boundary are adequately planned for as close to where they occur as possible. Without this range of actions the Plan is failing to meet the housing needs as required by the NPPF and therefore fails to be justified or effective, meaning the Plan is unsound. The NPPF requires that Local Planning Authorities to embrace the standard method as a starting point, then go through a process of setting the housing requirement including considering if it should be higher. LPAs must arrive at evidenced and justified view of what their housing requirement should be. In the case of North Somerset this much include recognition Bristol City's housing requirement and their work on development capacity. HBF agree that robust process must be undertaken to arrive at figure for much Bristol City housing requirement and to reach an understanding of how much of that housing need can be met within Bristol City. If all the housing need cannot be met within Bristol the Council, then the resulting 'unmet needs' should be cause for Bristol City Council and its neighbouring authorities working in partnership to see how this unmet need could be addressed elsewhere. North Somerset's housing requirement should therefore include a specific and explicit contribution towards meeting some of Bristol City's unmet need. The Council's failure to follow to this approach is unsound. The housing requirement calculations for all the neighbouring authorities around Bristol including the North Somerset Plan should include a component towards meeting Bristol's unmet need. Failure to grasp this issue results in ineffective plan making that holds back growth and prosperity of Bristol City Region. The Need for Small Sites The NPPF also requires Local Plans to identify land to accommodate at least 10% of the housing requirement on sites no larger than one hectare, unless there are strong reasons why this cannot be achieved. The HBF has undertaken extensive consultation with its small developer members. One of the chief obstacles for small developers is that funding is extremely difficult to secure without a full, detailed, and implementable planning permission. Securing an implementable planning permission is extremely difficult if small sites are not allocated. Without implementable consents lenders are uneasy about making finance available or the repayment fees and interest rates they set will be very high. Small developers, consequently, need to invest a lot of money and time up-front in the risky business of trying to secure an allocation and a planning permission, and this is money that many small developers do not have. In order to be effective and justified the Plan's policies and evidence base should set out how the plan will deliver 10% of homes on sites of less than one hectare, as required by the NPPF. Indeed, HBF		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									would advocate that a higher percentage of small sites are allocated if possible. Such sites are important for encouraging the growth in SME housebuilders who will tend to develop these sites but rarely see the benefits that arise from the allocation of sites in a local plan. Up until the 1980s, small developers once accounted for the construction of half of all homes built in this country resulting in greater variety of product, more competition, and faster build-out rates. Since then, the number of small companies has fallen by 80%. Although small sites may come forward as windfall, HBF believe that in order for the Plan to be effective and justified the small sites requirements should be met through allocations. Windfall Allowance The NPPF (para 71) only permits an allowance for windfall sites if there is compelling evidence that such sites have consistently become available and will continue to be a reliable source of supply. By including windfalls within the Plan's housing requirement, the opportunity for windfalls to provide some additional housing numbers is removed. Windfalls do not provide the same choice and flexibility in the market as additional allocations. HBF are of the view that any allowance for windfall should not be included until the fourth year of a housing trajectory, given the likelihood that dwellings being completed within the next three years will already be known about (as they are likely to need to have already received planning permission to be completed within that timeframe). HBF are also of the view that any buffer provided by windfall sites should be in addition to the buffer added to the housing need figures derived from the Standard Method to provide choice and competition in the land market. HBF request the windfall allowance in the Plan is properly explained and evidenced in the Housing Trajectory.		
51477249	Burrington Parish Council		Burrington PC	Unsure	Consistent with national policy	Yes	Unsure	On previous drafts of the local plan we expressed concern that a wider range of sites for housing would be needed to avoid challenges to the supply of housing land and the ad hoc addition of sites through planning appeals, especially in view of the substantial increase in housing requirements arising from the new standard method of calculating housing requirements. We can see that North Somerset Council has now made significant changes to the settlement strategy to include new large sites for housing which now include a substantial urban extension south west of Bristol ('Woodspring'), a number of strategic housing sites at Nailsea and Backwell, some of which already have planning consent, the 'Wolvershill' strategic allocation north of Banwell and strategic sites at Pill and Easton-in-Gordano, as well as continuing development adjoining Weston-super-Mare (Parklands Village and Winterstoke Village), new site allocations at Clevedon and Portishead and redevelopment sites within Weston, some of which are carried forward from the Site Allocations Plan of 2018.It seems to us that the Council has thus sought to identify a realistic and as wide as possible range of options to accommodate the increased housing requirement. Some rural settlements like Churchill and Winscombe are also making significant contributions to housing land supply, although some sites were committed through planning appeals which means that they are not always well integrated with the existing settlement (or other appeal sites). Committed housing sites in the larger villages do not therefore always achieve the aims set in the Core Strategy for 'Service Villages' in terms of more self-containment in jobs and services, protecting the character of the settlement, or achieving improvements in public transport.	More detail is required about the allocated housing sites to demonstrate their feasibility, desirability and consistency with other planning policies– in the form of a development brief		
32925633	Bath and North East Somerset Council		Bath and North East Somerset Council							The North Somerset Housing Requirement is now identified as 1,580 dwellings pa or 23,700 dwellings over the plan period. Housing provision will be focussed primarily on strategic development locations and on sites within and close to the towns within North Somerset. Weston-Super-Mare is the primary town within the district and as	North Somerset Local Plan Reg 19 Consultation 2025 FINAL.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										such is identified for significant growth. To the south west of Bristol a strategic location for further growth has been identified and is referred to as the Woodspring development. This area is expected to accommodate a total of 3,500 homes across one large area that will be comprehensively masterplanned. Across the villages and rural areas sites have been identified to accommodate 2,948 dwellings, predominantly at the larger more sustainable villages that have a range of services and facilities to support an appropriate amount of new development over the plan period. B&NES council is broadly supportive of this spatial strategy. The housing supply identified in the Reg 19 plan is 24,495 dwellings, so there is no unmet need identified. Therefore, North Somerset Council considers that it can meet in full its housing need identified through the LHNA and that as such no request has been made of B&NES Council to respond to any unmet need. It is noted that the North Somerset pre-submission plan does not explicitly seek to address unmet need in neighbouring authorities. B&NES council will continue to work with North Somerset Council and other authorities in the West of England in

										considering solutions to addressing unmet need arising in Bristol City Council, including through the WECA Spatial Development Strategy.	
62865825	G Davies			Yes		Yes	Yes				
31088129	Bloor Homes South West	Turley		No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy		No	We are broadly supportive of the revised minimum housing need figure, as set out in Policy SP8, over the plan period. It meets the government's standard method for calculating the minimum level of local housing need set out in national planning policy and guidance. This change from the previous version of the plan is welcomed and it represents a significant increase in homes compared to earlier draft plans. However, national policy is clear that local housing need is a minimum starting point and that the final housing requirement may be higher to address affordable housing need, to support economic ambitions and/or to address the needs of neighbouring areas. Importantly,there is a requirement to address Bristol's acknowledged unmet needs, and this is not addressed in any way by the Plan. North Somerset must work positively with Bristol City and other West of England Authorities to agree on an approach to meeting these needs in a sustainable way. As such, the overall planned level of growth should increase to meet overall housing needs, including affordable needs, for North Somerset and the wider West of England area. the NPPF is also clear that local housing need derived from the standard method requirement is a minimum figure and any final housing requirement should take into account affordable housing needs, ambitions for economic development and any unmet includes within neighbouring authorities. Whilst we recognise the housing requirements in Policy SP8 is expressed as a minimum, evidence documents such as the Local Housing Need Assessment (September 2025) (LHNA) point to the need for more homes to be planned for. The LHNA confirms that there is a total net affordable need of 10,577 homes - based on a housing requirement of 23,700 homes, this would require 45% of all homes to be delivered as affordable housing. However, whilst 50% affordable housing is currently proposed on Green Belt sites, 30% is proposed (based on viability testing) on other greenfield sites and 20% on brownfield sites. In addition, the Council's viability work has not tested the viability of 50% affordable housing on Green Belt sites, as required by national policy. Overall, therefore, affordable housing needs will not be met by the current proposed levels of housing, and there is a clear case for the final housing requirement to be set higher. In respect of unmet needs, the Plan makes no provision for the unmet needs of Bristol City. The Inspectors for the Bristol Local Plan have recently (on 21st November 2025) issued its final advice entitled "IN11: Final advice and actions arising from the Council's responses to IN7 to IN10" which, whilst increasing the housing requirement to 39,915 dwellings, acknowledges that there is insufficient capacity to meet the Council's objectively assessed housing need, as calculated by the standard method. The Inspectors also require Bristol City Council to set out what the level of unmet housing need is, to be clear about the situation at the time of adoption, which may be important in continuing work being done on other Plans. That is clearly the case here where unmet housing needs from Bristol City exists, where national policy required effective cooperation to address unmet needs, but where there are no provisions in the NSC Local Plan to address any of these eeds or any clear evidence setting out why NSC is unable to meet any of the city's unmet needs. Overall, North Somerset Council should address both affordable housing needs across the district and consider its ability to meet some of Bristol's unmet housing needs when setting its final housing requirement Given that the Plan includes large-scale strategic allocations for new homes it would be appropriate for Policy SP8 to be accompanied by a delivery trajectory, to identify the expected delivery of new homes in these locations, either as part of a comprehensive trajectory for the plan associated with Policy SP8, or to accompany policies associated with the strategic allocations. It is important to ensure that these trajectories provide a realistic assessment of delivery that can be expected from each site in the Plan period, with realistic lead in times and delivery rates.	North Somerset Council should address both affordable housing needs across the district and consider its ability to meet some of Bristol's unmet housing needs when setting its final housing requirement. There is concern, and risks in respect of the soundness of the Plan as proposed, where no housing delivery trajectory has been provided for the Plan as a whole, or for the specific sites which are identified as part of the proposed strategic policies. This should be addressed as part of the submission of the plan.		BLOA3050 - Portishead Reps - NS Local Plan Regulation 19 - Turley Updated (V2).pdf
30898817	Ciara Donegan-Davies			Yes		Yes	Yes				
62883969	Innova Consulting Services	Innova Consulting Services	Corylus Planning and Environmental Ltd	No	‣ Positively prepared ‣ Effective	Yes	No	Policy SP8 states that land is identified to deliver a minimum of 23,700 dwellings for the period 2026-2041 equivalent to 1,580 dwellings per annum. The North Somerset Local Housing Needs Assessment Report of Findings (ORS Sept 2025) identifies at p. 5 an annualised requirement of 1,580 dwellings however others have identified the North Somerset annual housing requirement under the NPPF (2024) standard method to be 1,593 per annum. https://www.pegasusgroup.co.uk/the-new◈standard-method-what-does-it-mean-for-local◈housing-need/ This results in a shortfall of 195 dwellings over the plan period (13x15). The policy wording is also misleading as land is not 'identified' for 23,700 as there is a reliance identified in the Spatial Strategy evidence paper (Oct 2025) at paragraph 5.4 on 'small site' windfalls delivering 3,000 dwellings over the 15- year period. This is a rate of 200 dpa over 15 years, or 250dpa over 12 years. There is no certainty that these dwellings will be delivered. NPPF (2024) paragraph 75 states that there "should be compelling evidence" that windfalls "will provide a reliable source of supply" where an allowance is made for them to be part of anticipated supply. It is also very unlikely that 23,700 dwellings will be delivered in the 15-year plan period owing to the reliance on past allocations being rolled forward plus large new development locations/strategic allocations that require the delivery of strategic infrastructure to facilitate their delivery. Table 5 (p.30) and Table 6 (p.31) of the SHLAA Main report (Oct 2025) set out anticipated build out rates and delivery from sources of supply for the plan period. This delivery is optimistic compared to evidencepresented in the Lichfield's Start to Finish Report Third Edition (Sept 2024). Based in empirical evidence this report finds that sites of 1000 dwellings plus take 5 years to obtain detailed planning permission and up to a further 1.6 years to deliver the first dwelling. Annual build out rates or schemes of 2,000+ dwellings are 100-188 dpa (compared to the Council's assumption of 180dpa) and schemes of 500-999 dwellings build out at 44-83dpa (compared to the Councils 100dpa). In summary, the Council do not identify sufficient dwellings to meet their standard method requirement. The housing requirement will increase should the plan period lengthen to take account of any extended Examination and Main Modification consultation; the Council rely heavily on small site windfalls (3,000 dwellings) rather than allocating sufficient land to meet their requirements; the Council make assumptions on delivery that are not founded in empirical national evidence. Also it is considered that the Council have not complied with the Duty to Co-operate in the preparation of their Reg 19 Pre-Submission Plan. While the Duty to Co-operate Paper (October 2025) lists in detail the	The Council should increase their plan period housing requirement to accurately reflect thestandard method calculation in the NPPF (2024), not supress it. The Council should consider increasing their Plan Period to 2045 to account for delays in submission or Examination of the plan and the need for any additional and main modification consultations. The Council should allocate additional small to medium sites, in accordance with NPPF paragraph 73, in sustainable locations adjacent to main towns such as Weston-super-Mare that can deliver quickly and contribute to the Council's five-year supply of deliverable housing sites on adoption of the Local Plan. One such site for consideration is our client's site located to the south of Bleadon Lane (SHLAA ref: HE2035). The SHLAA spreadsheet table lists a single constraint against our client's site as Landscape, yet the site immediately to the north on higher sloping ground and more visible in the landscape from urn Hill (SHLAA ref:HE201030) also has landscape listed as a single constraint and yet it is allocated for 81 dwellings. The photo attached at Appendix 2 taken from Purn Hill shows how prominent the allocated site will be in the landscape once developed (the bright greenfield) and yet our client's site shown at Appendix 3 is hidden from view between mature hedgerows to the south of Bleadon Hill and will have less impact when viewed from this location. Appendix 4 a contour plan shows the		NSC Reg 19 - Rep form Part B - Plan Period.pdf Appendix 4 - Contour Plan.pdf NSC Reg 19 - Rep form Part B - Duty to co-operate.pdf Appendix 2 - Site Plan.pdf Appendix 3 - View of site from Purn Hill.pdf Submission letter 11.12.25.pdf NSC Plan Pre-submission Plan - Reps form Housing Numbers.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								supposed co-operation with adjacent authorities including Bristol City Council, the plan fails to make any contribution to meeting Bristol's unmet housing needs.	allocated site situated on rising ground. Neither site is situated within the National Landscape. While the NPPF is clear at paragraph 189 that great weight is to be given to conserving and enhancing National Landscapes paragraph 189 also states that development within the setting of a National Landscape "should be sensitively located and designed to avoid or minimise adverse impacts on the designated areas". Development at our client's site would be able to meet this test. The Council, for the reasons stated above are requested to give further consideration to the allocation of our clients site ref: HE2035 Land south of Bleadon Hill. Also consideration be given by North Somerset to meeting some of the unmet needs of Bristol City while allocating additional sites at sustainable locations adjacent to key towns such as Weston-super-Mare to provide for the housing requirements of North Somerset.		
62883969	Innova Consulting Services	Innova Consulting Services	Corylus Planning and Environmental Ltd	No	• Positively prepared • Consistent with national policy	Yes	No	It is considered that the Council have not complied with the Duty to Co-operate in the preparation of their Reg 19 Pre-Submission Plan. While the Duty to Co-operate Paper (October 2025) lists in detail the supposed co-operation with adjacent authorities including Bristol City Council, the plan fails to make any contribution to meeting Bristol's unmet housjng needs. The failure of the West of England Joint Strategic Plan (JSP) in 2019 (which would have contributed to a plan led approach to meeting Bristol's unmet housing needs), left a hiatus in plan making across the region with each authority instead pursuing preparation and submission of their own new Local Plan. The NPPF (2024) para 24 is clear that effective strategic planning across authority boundaries is vital in addressing key spatial issues including meeting housing needs. The ability of Bristol to meet its full housing requirements under the NPPF 2021 and lack of co-operation from adjacent authorities to assist is addressed in the Local Plan Inspector's letter of 21st November 2025 attached at Appendix 1 (para's 5- 10). Paragraph 6 states; "We acknowledge that there is insufficient capacity to meet the Council's objectively assessed housing need, as calculated by the standard method… Given the significant shortfall in meeting overall needs, and the current lack of agreement between Bristol and any neighbouring authorities to provide assistance, we consider it imperative that the Council seeks to maximise housing delivery." The Inspectors raise Bristol City's housing requirement by an additional 5,265 dwellings over the plan period to a total of 39,915 dwellings. While they accept a 5-year supply using the 'Liverpool' method they state at paragraph 9, "The Council must also set out what the level of unmet housing need is. While the objectively assessed housing need may change over time, we consider it necessary for this Plan to be clear about the situation at the time of adoption. This may, for example, be important in continuing work being done on other Plans." The Bristol City Inspector's state at paragraph 10 that an immediate review of the Bristol City Local Plan will be required. Given the level of growth proposed in the North Somerset Council Local Plan in close proximity to Bristol City, including Green Belt releases, it would have been entirely possible under the Duty to Cooperate for this growth to have been allocated to meet Bristol City's unmet housing needs with other sites allocated in sustainable locations elsewhere in North Somerset, for instance adjacent to the settlement boundary at Weston-super-Mare, to meet the Council's own needs.	That consideration be given by North Somerset to meeting some of the unmet needs of Bristol City while allocating additional sites at sustainable locations adjacent to key towns such as Weston-super-Mare to provide for the housing requirements of North Somerset. 63052097	Stephanie Fowler	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes		Our client is supportive of this policy, which inter alia recognises the inherent sustainability of Nailsea through its identification in the second tier of settlements, behind only Weston⟐super-Mare as the area's principal settlement, as a suitable location for development at a strategic scale. It is essential, in our view, that such strategic development locations are identified in order that housing, together with necessary supporting infrastructure, can be submitted promptly and at scale given the considerable need within the authority area. Targeting the most sustainable locations, where infrastructure such as rail connections are already in situ, offers the optimal means of expediting delivery and building on the vitality and viability of existing communities. Notwithstanding, we agree that the Council will be reliant on a mix of urban extensions,smaller urban sites, new strategic development locations such as Nailsea and Backwell, together with generally smaller village and rural sites to create a diversified and resilient source of housing that provides the varied accommodation required across North Somerset. Alongside this strategy, it is critical that the Local Plan supports the bringing forward of urban land where available, maximising the efficient use of land for new homes given the challenges for securing a sufficient supply of housing.		R001v3_NSLP_Reg19_Fowler.Dec25.pdf
62836257	L Power			No	• Positively prepared • Justified • Effective	No	No	North Somerset Council are REPEATEDLY consulting on the same thing. Over and over again, until they get the answer they want. You keep consulting on 'Land north of Churchill Avenue, Clevedon' and have used several different names to describe this land. Please just leave this land alone!! This is green space enjoyed by local residents and is the ONLY green space that the council flats have along Churchill Avenue. Just STOP trying to ruin the environment. This proposal will also have an impact on flood risk for all of the surrounding properties. There are also BATS in this area (I see them most nights).	Remove Penny Field (Land north of Churchill Avenue, Clevedon) from your consultation. Give it permanent protection from development. Stop picking on one of the poorest areas of the town (do you do this because you think you can push us around?) and simply leave this field to the people, as was originally intended.		
39076833	University of Bristol	Alder King Planning Consultancy	University of Bristol	No	• Positively prepared • Justified • Effective	No	No	The University of Bristol's view is that the Local Plan is unsound and not legally compliant with regard to the Woodspring strategic development allocation (Policy LP2). The soundness of the plan in this regard is set out below. Positively Prepared:	The Council's overarching spatial strategy, housing numbers and allocation sites identified should be comprehensively reviewed and revisited as it is clear that. This requires review of suitable residential allocation sites omitted from the draft plan which are, in the first instance outside the Green Belt, and		NSLP_Pre_Submission_Plan_Representation_Form_Part_B_UOB_SP8.pdf

					• Consistent with national policy			In accordance with the NPPF, positively prepared is defined as: “providing a strategy which, as a minimum, seeks to meet the area’s objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development.” The NPPF is clear that, in calculating housing need under the standard method, this figure is to be treated as a minimum. Therefore, should there be suitable sites available to deliver housing over the local plan period, these should be supported notwithstanding the Council’s position that is has reached its requisite ‘target’ under the standard method. Moreover, owing to the Council’s most recent Housing Delivery Test measurement, it is appropriate that a 20% buffer is applied for the first five-years of the plan, in accordance with the NPPF. While stated as a minimum figure, we consider the quantum of housing planned for under Policy SP8 to be negative and insufficient. A number of suitable sites promoted through the local plan process have been unduly discounted by the Council and we consider this to be the antithesis of the plan being positively prepared. One such site comprises the University of Bristol’s land south of Long Ashton (HE20139). The site lies adjacent to the settlement boundary, sustainably located in the context of Long Ashton and Bristol, comprising grey belt land which could/should comfortably be brought forward for development in the new local plan. The Council’s Spatial Strategy, Site Selection and Capacity Paper (October 2025) identifies Long Ashton as a Category A village, which represents settlements “considered to be relatively sustainable in their own right with a range of easily accessible services and facilities and good public transport links to towns”. It is very notable that despite its acknowledged sustainability credentials, and acknowledgement that Green Belt land is required to be released, Long Ashton has all but been ignored for any growth of scale over the plan period. Two small sites are identified within the existing settlement boundary to deliver 42 dwellings. We consider this to be highly irregular for such a sustainable settlement to be consistently overlooked by the Council for accommodating any real growth and raise significant concerns with the Spatial Strategy under Policy SP3 in this context. Planning for a mere 42 homes in Long Ashton to 2041 is not considered to be a positively prepared spatial strategy approach. Additional housing sites which have been consistently promoted to the Council by the University, and consistently overlooked through the emerging local plan process include land to the west of Wyndhurst Road (adjoining the Category A village of Churchill settlement boundary) (site: HE20590) and the nearby land at Stock Lane Farm, Langford (previously developed land) (site: HE203031). The Council’s ‘Duty to Co-operate Statement of Compliance Regulation 19 Stage’ (October 2025) sets out that Bristol City Council (BCC) have requested for neighbouring authorities, including North Somerset Council, to accommodate its unmet housing need. The Council’s Duty to Co-operate statement is clear that “North Somerset does not have capacity to meet some of Bristol’s needs at this time”. We do not agree with that position. We highlight the importance of North Somerset’s position in the context of South Gloucestershire Council also making no provision in its Draft Local Plan (plan submitted for examination) to contribute towards Bristol’s unmet need. Similarly, through its emerging local plan process, B&NES Council has made no commitment to contributing to Bristol’s unmet need owing to it being heavily constrained and having to deal with its own significant housing requirement uplift (approximately double that before the new 2024 standard method). In this regard, it is noted that on 21 November 2025, the inspectors published their final post-hearing advice following examination of the new Bristol Local Plan. The inspectors have requested modifications to the plan from BCC to set out an increased housing need and clearly set out what the level of unmet housing need is. An extract from the inspectors’ post-hearing advice is provided below, which reinforces the position that no agreement is in place between BCC and any neighbouring authority, including North Somerset, to accommodate the unmet need. The inspectors set out that they: “acknowledge that there is insufficient capacity to meet the Council’s objectively assessed housing need, as calculated by the standard method. Nevertheless, we do not consider the figure of 34,650 dwellings over the Plan period to be positively prepared or justified. Given the significant shortfall in meeting overall needs, and the current lack of agreement between Bristol and any neighbouring authorities to provide assistance, we consider it imperative that the Council seeks to maximise housing delivery. Inherent uncertainties in housing delivery in the longer period do not justify setting a housing requirement substantially below the overall housing capacity figure identified at submission. The evidence submitted since the end of the hearing sessions has not persuaded us that a lower figure is justified.” Therefore, it stands that BCC’s significant unmet housing need will continue to go unmet with none of its neighbouring authorities committing to assist. We find this problematic with particular regard to North Somerset as we consider there to be appropriate scope for a greater number of housing sites to be identified in the new Local Plan and delivered through the course of the plan period. The Council’s own additional sites consultation in February/March 2025 demonstrated that this was the case. The unmet need for Bristol is significant, cannot be ignored and requires to be addressed within the new North Somerset Local Plan. National guidance within the NPPF is clear that plans should ensure that, inter alia, unmet development needs from neighbouring areas are provided for to ensure effective strategic planning across local planning authority boundaries. It is clear from the Council’s own work that North Somerset are in a strong position to be able to identify significant additional housing sites through allocations in the new local plan. This would positively overachieve the Council’s housing need target and provide a meaningful contribution to the unmet need of BCC. Pursuant to the Council’s emerging local plan process, it carried out consultation on potential additional housing sites to be included as draft allocations in the Reg 19 plan (‘Consultation paper on additional sites for the Regulation 19 Plan’, February 2025). That identified sites which the Council considered to be ‘most suitable’, such as that at Yanley Lane South West Bristol (HE20110) in addition to a raft of sites identified as having ‘other potential’, including sites now identified as draft allocations i.e. around Pill and Easton-in-Gordano and sites now omitted as draft allocations i.e. the University of	then sites which are agreed to be Grey Belt. We contend that the following sites owned by the University of Bristol represent suitable, available and viable development sites which would positively support sustainable growth over the plan period, including in the early years, and should be allocated for development in the new local plan: • Land at Stock Lane Farm, Langford – HE203031 • Land to the West of Wyndhurst Farm – HE20590 • Land south of Long Ashton – HE20139 The University supports Draft Policy LP19, albeit we consider that minor modifications to the policy wording should be made to acknowledge the sustainability of the location. As present, we consider the policy wording to present an overly negative position of the area which would conflict with the aspirations of the policy to support University development in this area.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								Bristol's land south of Long Asthon (site: HE20139) and land to the west of Wyndhurst Road, Churchill (site: HE20590). The Council set out within that consultation that sites with 'other potential' comprised: "sites at the towns and larger, more sustainable villages consistent with the spatial strategy". [our emphasis] It stands that the Council rightfully identified suitable residential sites in sustainable locations pursuant to the 'other potential' sites in the 'Consultation paper on additional sites for the Regulation 19 Plan' (February 2025). However, such sites have been unduly disregarded at the Reg 19 plan stage and, in our view insofar as the University of Bristol's land south of Long Asthon (site: HE20139) and land to the west of Wyndhurst Road, Churchill (site: HE20590) wrongfully omitted. The latter lies outside the Green Belt and so should be preferred to the various sites proposed to be released from the Green Belt, as sought be national planning policy guidance. Site HE20139 and HE20590 are available now and deliverable to contribute towards significant positive growth within the plan period and should be supported for allocation. We consider that there is scope for additional appropriate housing sites to deliver over the plan period which are available, suitable and viable. In the Council's own words these disregarded sites are "consistent with the spatial strategy" and yet have been ignored. We contend this is the wrong approach, particularly in the context of the significant identified unmet need for Bristol. We therefore disagree with the Council's position that it cannot accommodate any of the unmet housing need from Bristol in North Somerset. In this context, the North Somerset Local Plan is not considered to be positively prepared, justified, effective or consistent with national policy. Justified: In accordance with the NPPF, to be justified this requires: "an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence." As set out above, it is considered that reasonable alternative sites for housing allocations have been unduly discounted by the Council, in conflict with the evidence base which should otherwise support its approach. Therefore, we do not consider that all draft housing allocations are sufficiently justified which goes to the soundness of the plan. Paragraph 148 of the NPPF is clear that where it is necessary to release Green Belt land for development, as is established and agreed in North Somerset, plans should give: "priority to previously developed land, then consider grey belt which is not previously developed, and then other Green Belt locations." Prior to this, non Green Belt sites should be prioritised for allocation. In this regard, our client has consistently promoted its land south of Long Ashton and at Wyndhurst Farm (site: HE20590) and Stock Lane Farm (site: HE203031) at Churchill/Langford. However, the Council is not supporting a draft housing allocation on any of the three land parcels. We consider this to be contrary to NPPF paragraph 148 and is not a justified approach in plan making terms. Land at Stock Lane Farm, Langford – HE203031: The University's land at Stock Lane Farm comprises previously developed land, outside of the Green Belt. This is sustainably located in relation to Langford and Churchill and has been promoted for development with capacity for up to 64 dwellings. There is a realistic prospect that houses could be delivered on the site within five years. The site was previously identified as a 'less sustainable' site, wrongfully in our view, as part of the Council's Consultation paper on additional sites for the Regulation 19 Plan' (February 2025). The consultation ran to March 2025 to which representations were submitted by the University in relation to all three of its land parcels referenced. In this regard, the site is well related to the settlement and existing facilities and services in Churchill and Langford. Adjacent to the west of the University's land at Stock Lane Farm, planning permission ref: 23/P/0448/OUT was approved by the Council in March 2025 for a mixed-use development comprising up to 120 dwellings, new flexible employment, children's day nursery and café, along with associated car parking, landscaping, tree works, public open space and local equipped area for play, drainage infrastructure, access improvements and connections to the existing footpath network. We note the Council's also identified that land as a 'less sustainable' site in the previous consultation, while granted it planning permission, and now identifying it as a draft allocation. This outlines the inconstancy in the Council's approach to its housing sites in the new local plan. The presence of planning permission 23/P/0448/OUT only further supports development on the University's land adjacent at Stock Lane Farm (HE203031) which critically comprises previously developed land. In this context, the University's land is annotated red on the plan (see attachement) which comprises the adjacent approved development (and now draft allocation). The Council's decision to omit the University's land at Stock Lane farm is not justified in the context of Draft Policies SP3 and SP8. The site is sustainably located, outside of the Green Belt on previously developed land and adjacent to the Monaghan Mushrooms site (Draft Policy LP23), pursuant to planning permission 23/P/0448/OUT. Land to the West of Wyndhurst Farm – HE20590: The University's land west of Wyndhurst Farm Stock Lane Farm comprises greenfield land adjacent to the settlement boundary of Churchill. This is sustainably located and has been promoted for development with capacity for up to 90 dwellings at a density of 29 dwellings per ha. There is a realistic prospect that houses could be delivered on the site within five years. The site was previously identified as a site with 'other potential' as part of the Council's Consultation paper on additional sites for the Regulation 19 Plan' (February 2025). The Council set out within that consultation that sites with 'other potential' comprised:			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								"sites at the towns and larger, more sustainable villages consistent with the spatial strategy". [our emphasis] The Council's published 'North Somerset Strategic Housing Land Availability Assessment Main Report' (October 2025) further sets out that the site was considered by the Council to have "potential for further consideration". Notwithstanding this, the Council's published 'Spatial strategy, site selection and capacity paper' (October 2025) confirms that this site is not a proposed allocation in the draft Local Plan with commentary provided as follows: "The site is outside settlement boundary with a distinctive rural character providing a clearly defined separation between the area of Churchill centred around Bristol Road and Pudding Pie Lane, and the smaller settlement of Lower Langford to the east. Due to the impact on the landscape and potential impact on heritage assets, it is not considered appropriate to take this site forward as a housing allocation." We do not agree with the Council's assessment of the site and its position to omit this as a draft allocation. We note that pre-application discussions with the Council resulted in the suggestion to promote the site at that time through the local plan which has been comprehensively done and so it is disappointing to see this be omitted as a draft allocation. This is particularly the case given the extent of the Council's housing need which should, in the first instance be addressed by appropriate sites such as this outside of the Green Belt before seeking to remove land from the Green Belt. Development on the site would comfortably assimilate with the surrounding built form, providing sustainable development. It is notable that planning permission (ref: 22/P/2908/OUT) was approved in November 2024 for nine dwellings adjacent to the south of the site which only provides further support for development in this location. Different development options have been considered which would address all material considerations for the site, which include a scheme for 24 units and a scheme for up to 90 units in this regard, as illustrated below. The site is wholly sustainable with any associated impacts of development more than capable of being addressed with appropriate mitigation. In this regard, the Council's decision to omit the University's land is not justified in the context of Draft Policies SP3 and SP8. Land south of Long Ashton – HE20139: The University's land south of Long Ashton comprises land within the Green Belt, adjacent to the settlement boundary of Long Ashton. This is sustainably located and has been consistently promoted for a number of years to the emerging local plan, and previous WECA joint spatial plans for development with capacity for up to 1,500 dwellings. The site was previously identified as a site with 'other potential' as part of the Council's Consultation paper on additional sites for the Regulation 19 Plan' (February 2025). The Council's published 'North Somerset Strategic Housing Land Availability Assessment Main Report' (October 2025) further identifies that the site was considered by the Council to have "potential for further consideration". Notwithstanding this, the Council's published 'Spatial strategy, site selection and capacity paper' (October 2025) confirms that this site is not a proposed allocation in the draft Local Plan with commentary provided as follows: "Site not consistent with the spatial strategy as it is detached from the existing built-up area of Long Ashton." We do not agree with the Council's assessment of the site and its position to omit this as a draft allocation. It is clear that the site should accord with an appropriate spatial strategy which directs growth to the most sustainable locations. Therefore, the Council is not following this by omitting the University's land as an allocation. The site is well related to Long Ashton in addition to the city of Bristol. It appears that the Council have unduly set preference to directing growth to the neighbouring Yanley Lane/Woodspring site (HE20110) (draft allocation for 3,500 dwellings under Policy LP2) at an early stage of the plan making process. This position has not shifted even as the evidence base has been developed which indicates to the contrary. Attention is turned to the Council's Sustainability Appraisal Report (October 2025). This sets out the findings of the assessment of potential allocation sites against the sustainability appraisal objectives. A summary is provided (see attached document) with comparison of our client's land south of Long Ashton, which has been discounted by the Council and the Yanley Lane South West Bristol land, which is proposed to be allocated for development by the Council in the Local Plan. This comparison is provided owing to the proximity and context of both sites, and similarity with regard to scope to provide strategic growth. This sets out the similarities in the Council's assessment of both sites which, when compared, identifies fewer negative effects of development on our client's land than that identified for allocation by the Council at Yanley Lane. The sustainability credentials of our client's land are clear and development of this land should be supported. The Council's Spatial Strategy, Site Selection and Capacity Paper (October 2025) provides commentary on the potential allocation sites. For our client's land south of Long Ashton (HE20139) this states that the site is not proposed for allocation and that the: "Site not consistent with the spatial strategy as it is detached from the existing built-up area of Long Ashton". Whereas for the Yanley Lane site (HE20110), this states that the site is proposed for allocation and that the: "Site [was] previously identified (in smaller form) in Regulation 18 plan". The fact that the Yanley Lane/Woodspring site was preferred by the Council at early stages of the plan,			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								in advance of the supporting evidence base work being carried out, is not sufficient justification for it to be allocated. This is required to be justified and supported by the evidence base, which we do not consider it to be, in the context of the University's land south of Long Ashton. The Council's approach contradicts NPPF paragraph 148 in identifies sites to be removed from the Green Belt for development. The Council's 'Stage 2 Green Belt Assessment' (October 2025) identifies the land south of Long Ashton to make an overall weak contribution to the purposes of the Green Belt. Whereas, the Yanley Lane/Woodspring site is determined to make a greater contribution, set at 'moderate' to the Green Belt purposes. This comparison is provided (see attached document), pursuant to the Council's Stage 2 Green Belt Assessment. In Green Belt terms, it is clear that the University's land south of Long Ashton makes less off a contribution to the Green Belt purposes than the Council's proposed allocation at Yanley Lane/ Woodspring. Moreover, our client's land would wholly support sustainable patterns of development in the context of Long Asthon and Bristol, in accordance with NPPF paragraph 148. Further to this, as can be seen in the Green Belt assessment, the University's land makes a weak contribution to Green Belt purposes A, B and D. There are no relevant footnote 7 assets that would provide a strong reason for refusing or restricting development on the land. Therefore, this can be considered Grey Belt, subject to the specifics of the development proposal. The Council's Stage 2 Green Belt assessment agrees with this position however the Pre-Submission (Reg 19) version of the plan still determines not to allocate the land for development which we consider to not be justified. The NPPF is clear that Grey Belt land should be supported for directing development in new local plans (NPPF paragraph 148). In this context with the omission of our client's land for allocation, we dispute the Council's claim at page 30 of the Pre-Submission Plan (Reg 19) that: "A sequential approach to Green Belt release has been taken prioritising previously developed land, followed by grey belt sites and then other Green Belt locations". The omission of the University's land south of Long Ashton seemingly goes against the supporting evidence base and therefore we do not consider the approach to be justified, with particular regard to Draft Policies SP3, SP7, SP8 and LP2. The Council's overall spatial strategy and policies/allocations to direct housing growth are required to be informed by the evidence base. Effective: In accordance with the NPPF, to be effective means to be: "deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground." As set out above, where we consider the plan to not have been positively prepared, the Council's 'Duty to Co-operate Statement of Compliance Regulation 19 Stage' (October 2025) sets out that BCC have requested for neighbouring authorities, including North Somerset Council, to accommodate its unmet housing need. The Council's Duty to Co-operate statement is clear that "North Somerset does not have capacity to meet some of Bristol's needs at this time". We do not agree with that position on account of suitable sites being omitted for development allocations, particularly where the Council has previously acknowledged the sites to have 'other potential' which, in the Council's words are "sites at the towns and larger, more sustainable villages consistent with the spatial strategy". This is particularly relevant to the University's land south of Long Ashton and at Stock Lane Farm and Wyndhurst Farm in Churchill/Langford which comprise either previously developed land outside the Green Belt, land outside the Green Belt adjacent to the Category A village settlement boundary for Churchill, or Grey Belt land adjacent to the Category A village settlement boundary for Long Ashton. While the Council's housing figure over the plan period (Draft Policy SP8) is prescribes as a minimum, this is a negative approach when considering that additional sites are readily available to deliver above this figure, and should be set out as such in policy. This strongly supports our position that North Somerset is fully capable of accommodating additional growth, thereby contributing towards the unmet need from BCC. However, the Council is unduly deciding not to do this – this is not effective plan making. Moreover, the NPPF is clear that planning policies should identify a supply of specific, deliverable sites for five years following the intended date of adoption, with an appropriate buffer. It is likely that some of the larger strategic development/urban extension areas identified for allocation in the plan will not begin to deliver homes within the first five years and so this means that greater flexibility and contingency is required to be built in to ensure housing delivery is forthcoming in the early years of the plan to meet the minimum requirements. Ensuring early delivery of housing early in the plan period is critical. Consistent with National Policy: In accordance with the NPPF, consistency with national policy should be adhered to: "enabling the delivery of sustainable development in accordance with the policies in this Framework and other statements of national planning policy, where relevant." For the reasons set out within these representations, it is considered that the Council's Reg 19 Pre-Submission Plan is not consistent with national policy with particular regard to the guidance in the NPPF relating to failure under the duty corporate and the approach to accommodate none of BCC's identified unmet housing need. The plan inadequately makes provision for insufficient housing in this context which is not justified owing to the evidence base supporting identification of additional land which could positively support housing growth over the plan period. Moreover, we consider the Council's approach to identifying the draft housing allocation sites is flawed and inconsistent with national policy in overlooking suitable sustainable previously developed land and greenfield sites in the first instance ahead of Green Belt sites; and subsequently overlooking suitable sustainable Grey Belt sites which should be prioritised for development ahead of the remainder of the Green Belt. Conclusions:			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								For the reasons set out above, we consider the plan to be unsound in its current form. Ultimately, the primary reason the plan is not considered to be sound is owing to the approach that the evidence base has followed the Council's overall strategy; rather than the other way around. The evidence base should directly support the approach laid out in the plan and this is not the case. Notwithstanding this position, the University provides support for Draft Policy LP19 for the 'University of Bristol site in Langford' allocation. We welcome the recognition this policy provides for the significant educational and employment benefits made by the University of Bristol's campus in Langford to the local, and wider, area. The University of Bristol support the policy aims of LP19 which recognise the importance of the facility and support the new development opportunities that will enable the university to grow and accommodate necessary expansion in terms of student numbers and staff employment. We consider that Draft Policy LP19 in isolation is sound as this does not relate to the outstanding wider concerns raised which relate to housing in terms of housing growth quantum and spatial approach. Minor modifications are suggested to the wording of Draft Policy LP19, in so far as we consider this to present a negative picture of the existing sustainability credentials of the site. For users of the campus not based locally, this is readily accessible by non-car modes with regular bus services available. This includes the U2 service which the University provides free passes to students of the veterinary school to travel. Therefore, while this draft policy is strongly supported, we would support minor wording changes to the policy which acknowledge its sustainability. Further detail is hereby provided below and appended in relation to the University of Bristol's land at Stock Lane farm and Wyndhurst Farm in Churchill/Langford and land south of Long Ashton. Development on this land, with support from residential allocations should be provided in a new sound North Somerset Local Plan. Land at Stock Lane Farm, Langford – HE203031: Availability: Site HE203031 is in single ownership by the University of Bristol. The land has been identified as surplus to requirements, having previously been used in association with the University's Langford Veterinary Campus for research and academic studies. It is readily available now, able to make a meaningful contribution to the Council's five-year land supply. Suitability: Site HE203031 offers a suitable location for development of housing. There are no development constraints that would prevent allocation of the site for its early development for housing. The site is well related to a 'Category A' village (most sustainable) and so its allocation fits comfortably into the Council's emerging spatial strategy. The site is accessible by a choice of means of transport to local facilities, including employment opportunities, schools, shops and other services. 4 The site, comprising previously developed land, forms part of the existing built form along Stock Lane and is subject to no designations/constraints that would restrict redevelopment of the site for housing. Likely Economic Viability: There are no known extra-over costs associated with the development of this site nor any issues with utilities which would mean that it would be economically unviable. There is a realistic prospect that houses could be delivered on the site within five years. 4.7 The site has capacity for up to 64 dwellings, subject to detailed design and is available, suitable and economically viable. It should be allocated in the local plan to assist North Somerset providing a sufficient supply and mix of sites to meet their minimum required housing need. Land to the West of Wyndhurst Farm – HE20590: Availability: Site HE20590 is in single ownership by the University of Bristol. The land has been identified as surplus to requirements for some years. It is readily available now, able to make a meaningful contribution to the Council's five-year land supply. The site has consistently been promoted for allocation through the local plan process following the advice of the Council during a formal preapplication submission in 2020. Suitability: Site HE20950 offers a suitable location for development of housing. There are no development constraints that would prevent allocation of Site HE20590 for its early development for housing. The site lies adjoining a 'Category A' village (most sustainable) and so its allocation fits comfortably into the Council's emerging spatial strategy. The site is accessible by a choice of means of transport to local facilities, including employment opportunities, schools, shops and other services. The site lies abutting the settlement boundary of Churchill as proposed in the emerging local plan. It has no landscape, heritage or other designation. It is in Flood Zone 1 (low risk) and grade 3 agricultural land. Likely Economic Viability: There are no known extra-over costs associated with the development of this site nor any issues with utilities which would mean that it would be economically unviable. There is a realistic prospect that houses could be delivered on the site within five years. The site has capacity for circa for 90dwellings at a density of 29dwellings per hectare. An example of how the site might be developed for housing is provided below. Site HE20590 is available, suitable and economically viable and should be allocated in the local plan to assist North Somerset providing a sufficient supply and mix of sites to meet their minimum required housing need. Land south of Long Ashton – HE20139: Availability: The site is in single ownership by the University of Bristol. The land has been identified as surplus to		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								requirements for some years. It is readily available now, able to make a significant contribution to the Council's housing need over the plan period. The site would form a natural extension to Long Asthon being contiguous with the existing settlement boundary of to the north and is physically contained between the A370 to the east/south and Wild Country Lane to the west. Allocation of the site for development, and its release from the Green Belt, is supported by NPPF paragraph 148 in that growth here will promote a sustainable pattern of development on Grey Belt land. This is a requirement of the NPPF. Notably, significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes as is the case for this site. Moreover, releasing land from the Green Belt for development are required to ensure that, inter alia, sustainable transport modes are prioritised, safe and suitable access can be achieved and any significant impacts from the development on the transport network, or on highway safety, can be cost effectively mitigated to an acceptable degree through a vison-led approach. The University's land south of Long Ashton fulfils all criteria with its strong relationship with the existing Long Ashton settlement and being in close proximity, and well connected to, Bristol. Suitability: The site offers a suitable location for development of housing on Grey Belt land. There are no development constraints that would prevent allocation of Site HE20139 for its development for housing. This conclusion is informed by a suite of past technical information on the site. The site lies adjoining a 'Category A' village (most sustainable) and so its allocation fits comfortably into the Council's stated spatial strategy. The site is accessible by a choice of means of transport to local facilities, including employment opportunities, schools, shops and other services. Likely Economic Viability: There are no known extra-over costs associated with the development of this site nor any issues with utilities which would mean that it would be economically unviable. There is a realistic prospect that houses could be delivered on the site over the plan period. The site is available, suitable and economically viable and should be allocated in the local plan to assist North Somerset providing a sufficient supply and mix of sites to meet their minimum required housing need. The proposal on the site is informed by the substantial of technical work which has been carried out to date. Key facets of a future development of this site could include: • Up to 1,500 dwellings, including a mix of tenures and affordable housing; • Potential to include a mix of non-residential uses; • New access onto the A370 • Cycle routes and public footpaths; • Green infrastructure, including public open space; • Biodiversity Net Gain. A plan demonstrating how development could be achieved on the site is provided in the attached document.

58544865	Peter and Susan Gearing									We write in support of North Somerset Council's draft local plan: specifically, what appears to be the recognition that some areas are unsuitable and ill equipped for large scale housing development. Wrington is one such area. • Access is via narrow country lanes whether for local inhabitants or emergency services. • Employment opportunities are few and far between, necessitating more coming and going along the already difficult lanes. • There is no public transport worthy of the name. • The very popular school defies the odds,	North Somerset Council.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 										functioning out of an old building and temporary classrooms. • The nearest GP surgery is in a neighbouring village, necessitating more car journeys • Despite the relatively recent successful flood relief scheme, based on Webbs Brook, flooding remains an issue for some of the village • Wrington's heritage is important particularly the grade 1 listed All Saints Church and views of its historic and imposing presence, from the surrounding area, are much valued • Wrington's character is framed by surrounding fields and beautiful landscape. • Many of those fields are of agricultural value, particularly important in a country striving for more domestic food production. • All around, there are important wildlife habitats. Implicit in North Somerset Council's Local Plan 2041 is a recognition of much of the above and we are very grateful	
58654113	David Glynn							The proposed Plan appears to be generally sound, although with such a large number of sites and related issues there are, of course, reservations on the detail. However, while an extended comment is resisted here, the opportunity has been taken to raise some specific and potentially flawed issues. First, the number of new dwellings apparently imposed on NSC appears excessive, especially bearing in mind the structure of the district. This is of course defined, and limited, by Bristol, the coastline, the Mendips, the Green Belt, the towns and rural villages, and the road network that links all these. What's not known is the extent to which NSC argued against the number of houses, and what might happen in the future. In an uncertain world, a better national approach might be less ambitious, with fewer new dwellings imposed. New houses aren't going to be bought if people can't afford them, or if other building finance isn't available, this illustrated by the current very slow private housing market. However, it is argued that in approving the Epic business development NSC was mistaken, with this likely to result in pressures for more new housing development. Although included in the Plan is a nearby housing development on the north side of Colliters Way (215 units), which is effectively a South Bristol site, and, of course, the proposed, and very significant potential 'Woodspring' development. i. Rural development: It is appreciated that further development around most of the rural villages has been resisted, which is very sensible. If not, this would create a range of potentially serious issues which could impact on village and rural life generally. There are already issues related to public services, including road use and access, which would be further impacted by more housing or other built development. To illustrate the potential issues related to rural housing development the following comment is offered on Gatcombe Farm, Wrington. See 'Schedule 1 - Large Sites for Residential Locations'. On page 311 this is shown as a 'new allocation' with an indicative capacity of 37 dwellings. In fact, planning permission was granted in December 2021 for 38 dwellings, together with a small employment unit, see application no. 21/P/0019/OUT, with construction now underway.

								While some of the new houses have been completed, this is a relatively isolated site, well outside the village settlement boundary, and it seems that it is not attracting new residents as building operations appear to have been slowed. It is unfortunate that previous applications for fewer houses on this site were refused, with these far more appropriately designed. This development will certainly result in more private car use and impacts, and probably in poorly considered environmental issues, including with drainage and sewage disposal. This is highlighted here as an essential point is that new rural housing developments need to be carefully considered in relation to their setting and connection with the neighbouring land and its use, the nearby roads, pedestrian access and, importantly, public services. Inadequate public transport obviously results in more private car use on sometimes poor roads, especially when essential access is needed to facilities such as medical services, education, training and employment sites.			
63299425	Mac Mic Strategic Land Flax Bourton	Planning Potential	Mac Mic Strategic Land	No	• Effective	No	Yes		Policy SP8 identifies the overall housing requirement of 23,700 dwellings within North Somerset during the plan period 2026 - 2041 . This figure is a minimum with a broad distribution of new dwellings to be in accordance with a spatial strategy that indicates that a high proportion of the new dwellings are to be located towards Weston-super-Mare and the other strategic development locations. The Council considers that this approach will seek to create mixed and balanced communities with a mix of house types and tenures to support a range of household sizes, ages and incomes to meet identified housing needs, including the provision of affordable and specialist housing. Mac Mic are supportive of the overall approach adopted in Policy SP8 (which supports the spatial strategy in Policy SP3). It is, however, critical that the housing requirement of 23,700 remains a minimum figure. There will be opportunities within allocated sites to increase site capacity through the detail design process. This will enable additional housing to be provided over and above that set out in the Local Plan and such design iteration should not be precluded by policy. It is therefore imperative that Policy SP8 allows for positive movement in site capacity. The need is therefore to retain a minimum figure for the overall housing requirement as set out in PolicySP8. Recommendation There are no recommendations to change Policy SP8 but it is imperative that the overall housing requirement remains a minimum figure of 23,700 dwellings and that this is clearly and specifically set out. 28796449	D A Gray			No	• Justified • Consistent with national policy	Unsure	Unsure	The plan is unsound because a) It gives no guidance that would assist planning control to balance the Plan's policies against conflicts with any of the 13 National Critical Infrastructure Sectors. b) Food is one of the 13 National Critical Infrastructure Sectors but, as it stands the Plan does not protect against the PREMATURE loss of productive farmland, which would conflict with the need to maintain food production assets c) Analysis of historic build rates suggests the realistic possibility that the number of completed homes will fall so far short of the Plan's requirement leaving most of the completed homes being surrounded by the desolation of substantial ongoing building works, which would be an unwelcome outcome.	Please refer to the attached document "Proposed policy 'Ensuring reasonable build-out time'", which proposes a development management policy to resolve that conflict		Proposed policy Ensuring reasonable build-out time.odt
29307745	Phoenix Life Ltd (Fraser Green)	Giulia Bunting	Phoenix Life Limited	Yes		Yes	Yes			Policy SP8 Housing provides for Land will be identified to secure the delivery of a minimum of 23,700 dwellings within North Somerset 2026-2041, equivalent to 1,580 dwellings per annum with 1,601 identified in Portishead. At Portishead allocations have been identified for 562 homes and the Wyndham Way Broad Location can accommodate up to 785 new dwellings. The Councils published SHLAA October 2025 refers to Wyndham Way, Portishead as a broad location for growth rather than a traditional site allocation. The justification of the capacity of 785 dwellings is based on the July 2024 Delivery Testing Report which assessed the potential yield across the main sites based on high level site options and viability modelling, recognising that this housing may be delivered later in the plan period – or potentially beyond. Reference is made to key sites such as Old Mill Road with capacity of up to 567 units in the Plan period, which has been shown by the evidence base to be viable in principle. Support Policy

										SP8	
62913761	Miller Homes (Battens Farm)	Tom Rocke	Miller Homes	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	No	Legal compliance As a preliminary to this section of the representations it is important to consider the context in which they are to be considered. The revised NPPF was published on 19th December 2023. For reasons set out below, it is SMD's position that the changes, insofar as they relate to the matters relevant to these representations, are in emphasis and clarification rather than substance. However, of fundamental importance is the transitional arrangements set out in Annex 1, which are clear that: The policies in this Framework (published on 19 December 2023) will apply for the purpose of examining plans, where those plans reach regulation 19 of the Town and Country Planning (Local Planning) (England) Regulations 2012 (pre-submission) stage after 19 March 2024. Plans that reach pre-submission consultation on or before this date will be examined under the relevant previous version of the Framework in accordance with the above arrangements. …4 In accordance with these arrangements, the current Plan therefore falls to be considered under the previous version of the NPPF published on 5th September 2023. Therefore, to the extent that Plan relies on proposed draft revisions to the NPPF, whether or not they have not been confirmed through the final version published on 19th December 2023, the Plan is neither legally compliant nor sound. Overall housing provision The Plan does not seek to meet the local need established using the national standard method. As such, it is in prima facie conflict with current national policy set out in the NPPF. The evidence base is contradictory in terms of whether the Council is seeking to justify its position on the basis of then draft revisions to the NPPF, or the then current NPPF. In the Spatial Strategy and Capacity paper the principal justification seems to be the Government's proposed changes to the NPPF and the Council's interpretation that they introduce greater flexibility in terms of the identification of the housing requirement and greater protection for the Green Belt5. As advised in the evidence base, the consultation draft NPPF has had "… significant implications for the North Somerset Local Plan"6. Notwithstanding the foregoing, the evidence paper also cites paragraph 61 of the then current NPPF that permitted departure from the standard method if exceptional circumstances justified an alternative approach which reflected demographic trends and market signals: ORS advised that the standard method does not provide a realistic assessment of local housing needs for North Somerset, as the outdated 2014 household projections that are the starting point for the calculation do not provide an accurate reflection of current and future demographic trends. …7 The Council's principal justification for departing from the local housing need that derives from the national standard method is therefore understood to be based on proposed revisions to national policy which, at the time of preparing the Regulation 19 Plan, were still in draft, but had not been confirmed following consultation. However, if that justification fails, then it appears that the Council will seek to argue that exceptional circumstances justify departing from the requirements of national policy which normally expect the housing requirement to be set using the local need derived from the standard method. The final revisions to the NPPF have now been published. There is no substantive change to the provisions relating to the determination of the number of homes that are needed. The provisions of paragraph 61 which continue deal with this matter are reproduced below, with the amendments introduced in December 2023 incorporated in red (see attached full representation on page 14): The provisions of paragraph 67 (formerly 66) have not materially changed between the former and current NPPF, other than to confirm that the housing requirement may be 'higher' than the identified housing need if, for example, it includes provision for neighbouring areas, or reflects growth ambitions linked to economic development or infrastructure investment. There has been no change to the wording of this paragraph to provide for a 'lower' requirement to be set. The overall position therefore remains that strategic policies should be informed by a local housing need assessment conducted using the standard method unless there are 'exceptional circumstances' that justify an alternative approach. As is confirmed in the Government's response document to representations to the draft proposed revisions to the NPPF: … These changes are intended to provide greater clarity and certainty to plan-makers. … … The government is clear that the standard method should still be used to inform the process of planning for new homes. Policy continues to expect local housing need to be determined using the standard method, unless there are exceptional circumstances which justify an alternative approach. … 9 Simply put, the Plan relied on draft revisions to national planning policy that have now been superseded, and the confirmed revisions simply introduce 'clarification' rather than 'substantive change'. Since it does not meet the policy 'expectation' that the local housing need 'should' be determined using the standard method, it is in conflict with current national policy, and with which it must comply. Ipso facto, it is unsound on this basis. Current national policy is unequivocal that strategic policies 'should' be informed by a local housing need assessment 'conducted using the standard method in national planning guidance'. Through the PPG it is confirmed that the NPPF 'expects' strategic policy-making authorities to follow the standard method for assessing local housing need10, and that there is an 'expectation that it will be used and that any other method will be used only in exceptional circumstances'11. This guidance in the PPG has not changed following publication of the revised NPPF. Given the above policy and guidance, and the requirement to demonstrate exceptional circumstances for not following the standard method, the Plan is surprisingly light on the justification of exceptional circumstances. The justification given in the supporting paragraphs to Policy SP8 simply refers to the requirement having been informed by the ORS review and LHNA that are included in the evidence base. ORS' alternative position is premised on the use of 2018-base household projections, rather than the 2014-based projections used in the standard method. The reasons why the 2014-based household projections are used as the baseline for the standard method is expressly addressed in the PPG as follows: The 2014-based household projections are used within the standard method to provide stability for	• Amend the Plan to meet the minimum housing need of 20,205 homes (1,347 per annum) for the period 2024-2039; • Add a minimum additional requirement of 1,347 homes to allow for the Plan to look ahead at least 15 years from the date of adoption; • Remove Wolvershill as a separate location in the schedule incorporated in the Policy, and which is inconsistent with other strategic policies, and apportion its growth to the Villages. • Review the apportionment of growth between the towns and villages, and revise the distribution to a ratio of 80:20 to deliver the intentions of the spatial strategy. • Increase the distribution to Nailsea, as the least constrained town apart from Weston-super-Mare, to provide homes for needs arising during the current plan post-2026 (current allocations are largely carried forward from the Site Allocations Plan and therefore intended to meet needs in the period up to 2026). • Incorporate a delivery trajectory to identify a supply of specific, deliverable sites for years one to five of the plan period.		Annexes_final_composite.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								planning authorities and communities, ensure that historic under-delivery and declining affordability are reflected, and to be consistent with the Government's objective of significantly boosting the supply of homes.12 Any attempt to depart from the 2014-based projections and to use later projections that may indicate a lower requirement, is therefore to depart from the specific intentions of the Government in setting the 2014-based projections as the baseline, which is intrinsically connected to the overarching national policy objective to significantly boost the supply of homes. The continuing relevance of the 2014-based household projections has been confirmed by the Government in its published response to consultation on the draft proposed changes to the NPPF, in which it clearly stated as follows: We note the comments received around the continued use of 2014-based household projections within the standard method for assessing housing need, and the calls for more up-to-date projections to be used. Through the consultation we explained that the use of this data provides stability, consistency, and certainty to local planning authorities. Nevertheless, we committed to review the approach to assessing housing need once we have considered the implications of new 2021 Census based household projections, planned to be published by the Office for National Statistics in 2024. The Office for National Statistics recently confirmed that the next set of household projections are now planned for release in 2025. As with all policies we keep the standard method under review, and we intend to review the approach to assessing housing needs once this data is available.13 It is therefore uncontestable that, as of now, the 2014-based household projections should continue to be used for the purposes of assessing housing need. The guidance in the PPG cited in paragraph 2.18 above, remains unchanged. The basis on which the Council has assessed housing needs is therefore unequivocally in conflict with the Government's position as endorsed in December 2023. The Planning Practice Guidance remains unchanged and unequivocal in relation to the use of a different method and how this will be tested at examination: Where an alternative approach results in a lower housing need figure than that identified using the standard method, the strategic policy-making authority will need to demonstrate, using robust evidence, that the figure is based on realistic assumptions of demographic growth and that there are exceptional local circumstances that justify deviating from the standard method. This will be tested at examination. … Any method which relies on using household projections more recently published than the 2014-based household projections will not be considered to be following the standard method as set out in paragraph 60 of the National Planning Policy Framework. As explained above, it is not considered that these projections provide an appropriate basis for use in the standard method.14 ORS is therefore not following the standard method. As such, it is incumbent on them to identify exceptional circumstances that justify such a departure. 2.25 ORS' justification for departing from the standard method seems to be grounded in the more recent household projections indicating lower rates of household growth than the 2014-based projections. However, this completely disregards the express reasons why the Government has chosen to maintain the 2014-based projections as the basis for the standard method – to ensure that historic under-delivery and declining affordability are reflected, and to be consistent with the Government's objective of significantly boosting the supply of homes. ORS attempt to discredit the outputs from the standard method on the basis of the uplifts that would ensue beyond the ten year trend growth projections that they identify, with an inference that this would be disproportionate growth. However, the standard method incorporates checks and balances against disproportionate growth through capping the level of any increase. Those caps are not triggered in this instance indicating that the local housing need is not disproportionate. The circumstances outlined by ORS are neither exceptional nor locally-specific. By their own admission, they are reverting to an approach that they recommended to the combined West of England authorities 'before the Government's standard method was introduced'15. ORS have simply demonstrated that utilising the 2018-based household projections results in a reduced output in terms of local housing needs. The same outcome is likely to prevail in many local planning authorities across the country, meaning that the exception becomes the norm. What ORS has failed to do is to demonstrate that utilising the 2018-based projections in North Somerset results in an outcome that is so exceptionally different when compared against the outcome from the 2014-based projections and considered in relation to the demographic characteristics of the district, as to justify an alternative approach. They have wholly failed to demonstrate those exceptional circumstances. Whichever way ORS seeks to justify not adhering to the housing need that results from the standard method, the evidence of their own assessment in relation to affordable housing need is compelling reason alone not to move down from it. The total households needing affordable housing during the plan period is almost equivalent to the overall housing requirement that ORS is advocating. ORS rather glibly tries to diminish this need on the basis of a change in the definition of affordable housing to include those aspiring to home ownership, and through an extraordinary suggestion that the plan should seek to meet the needs only of those households that are likely to form an effective demand. The scale of affordable housing need is evidence in itself that the housing market is not working, and is under-delivering in relation to needs. This simply endorses the imperative of following the intentions of the national standard method with its embedded provisions to correct for historic underdelivery and declining affordability, and to significantly boost the supply of homes going forward. The assessment by ORS therefore represents an attempt to revert to past practice, the limitations and dangers of which in terms of under-providing the homes that are needed, has been outlawed through the introduction of the standard method. The case that it presents is unexceptional since it is premised on a move away from use of the 2014-based household projections that the Government has affirmed remain the appropriate baseline for assessing housing need in order to deliver its overarching objective of significantly boosting the supply of homes. It is a wholly unjustifiable and untenable position, and the circumstances advanced in support are not locally exceptional. The gap between the local housing need for which the plan is seeking to provide, and that indicated by the standard method, is not minor. It is a very substantial deviation equating to a 27% reduction. More importantly, it will result in more that 5,300 fewer homes being provided for than the standard method			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								indicates are needed. The consequences of North Somerset underestimating housing need, and failing to provide for over 5,300 households in need of a decent home, will be increased ipressure on the existing stock, further inflating house prices and rents, increasing those confined to overcrowded and/or unsuitable accommodation, and ultimately increasing homelessness. It must therefore be subject to the closest scrutiny and most robust and convincing justification. Such justification is nowhere near having been demonstrated. For this reason alone the Plan is unsound, and the provisions that it makes for housing are so far short of what is required, that to correct the deficit will result in a materially different Plan. For this reason it should be withdrawn for reconsideration and amendment since it is wholly inconsistent with fundamental tenets and requirements of national policy. In the light of the foregoing, it is concluded that exceptional, locally-specific circumstances simply do not exist for departing from the standard method to justify a lower housing requirement, and particularly one that undershoots the requirement that emerges from the standard method by such a magnitude. In the spatial strategy paper reference is also made to constraints of Green Belt, as well as other sensitive areas such as areas at risk of flooding, the Mendip Hills AONB and a range of heritage, ecological and other environmental constraints16. However, there is no detailed and robust environmental capacity analysis to demonstrate that the district cannot accommodate a higher level of growth than that proposed in the Plan, or the level of growth that is required in accordance with the standard method. The principal capacity reason given for undershooting the standard method requirement relates to the softening of the requirement to consider use of land within the Green Belt where there are no other options, and which has prompted the removal of Green Belt sites that were proposed for allocation in the Regulation 18 Plan. In the light of the transitional arrangements relating to the revised NPPF, this justification is untenable. Moreover, for reasons set out below, this does not provide anything approximating to the exceptional circumstances that are necessary to justify not meeting needs in full. It is significant that, through the draft West of England Joint Spatial Plan (JSP) that was submitted for Examination in April 2019, North Somerset Council did not seek to argue that there were environmental constraints on it accommodating the level of housing growth that was proposed in that plan, and which was higher than the level that currently derives from the national standard method. Moreover, in planning to meet the requirement that was set for it though the JSP, no land in the Green Belt was planned for allocation in North Somerset. Whilst the JSP subsequently stalled at Examination stage and was ultimately withdrawn, it is relevant in that the Council did not seek to argue that there were environmental constraints on it meeting the requirements for growth, and without necessitating the use of Green Belt land. Moreover, the focus for objections were the proposed new garden villages at Churchill and Banwell rather than the proposed urban extensions at Nailsea and Backwell. The question that is begged is therefore on what basis is it alluding to there now being capacity constraints that preclude it from meeting the higher level of housing need that arises from the standard method? There is therefore no robust evidence to indicate that the Council cannot meet the housing requirement that derives from the standard method due to environmental constraints and/or without involving the removal of land from the Green Belt. If it was able to meet a higher requirement in 2019 and without necessitating land-take from the Green Belt, why is it unable to do so now? That question is unanswered and unevidenced. In conclusion on this matter, there is no credible, evidenced justification for the Council to adopt a housing requirement below the minimum indicated by the standard method, and no evidence to confirm that there are environmental constraints on its meeting the need in full, with or without landtake from the Green Belt. Ipso facto, on this basis alone, the Plan makes insufficient provision for housing, and on this basis alone is unsound and should proceed no further in its current form. Unmet needs from adjacent Local Authority Area Through the JSP North Somerset accepted the obligation to make provision for unmet needs arising within the adjacent administrative area of Bristol City Council. Even on the basis of their own ‘selfassesment’ of need, Bristol City Council have an umet need of circa 10,000 homes, and more than double that taking the standard method as the starting point. This, alone, is compelling reason and justification for uplifting the housing requirement for North Somerset above the Standard Method figure. Bristol’s own evidence points to a greater proportionate need for houses (rather than apartments) than they have historically delivered. Given the highly urbanised nature of Bristol that has largely been developed to its limits given the tight Green Belt constraints around its boundaries, this can only realistically be achieved around the fringes of the city in areas more suited to medium and lower density housing. It is reliant on the adjacent authorities, and in particular North Somerset and South Gloucestershire, to deliver an appropriate number and mix of homes. There are sound planning reasons for the neighbouring authorities to Bristol to work collaboratively to meet the needs of the greater Bristol area. That was the essential purpose of the strategic planning measures that were put in place through the West of England JSP. The collapse of those arrangements does not expunge the need to provide the homes that the strategic vehicle was intended to deliver. Plan Period Notwithstanding, and without prejudice to, the foregoing, as is reflected in the consultation documents, the Government’s requirement set out in the NPPF is for strategic policies to look ahead for a minimum period of 15 years from the date of adoption17. However, it is acknowledged that it is good practice to plan for a longer time horizon. In the consultation document18, adoption of the Local Plan is anticipated to be achieved by December 2024. When compared with the timetable set out in the most recent iteration of the LDS19, there has already been slippage by over two years to get to the current, Regulation 19, consultation stage, and by a year to arrive at the adoption of the Plan. It seems likely that there will be further slippage, particularly given that the current consultation is on a Plan that is grounded in draft proposed changes to the NPPF that have not been reflected in the revised version in the way anticipated by the Council.

Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The adoption of the Plan by December 2024 is a very ambitious target indeed for a Plan of this nature. A partial update of the Bath and North East Somerset Local Plan recently took over twelve months to progress through the Examination stage to adoption. The current plan is a much more comprehensive and over-arching review, and inherently more complex, than the former. Research undertaken by David Lock Associates20 based on an analysis of MHCLG data, and derived from evidence relating to 300 Local Plans over the ten year period 2007-2017, found an average time-period of 19 months from submission of a Local Plan for Examination to adoption. Given that this is an average time, there are many that have taken longer, with the research finding that, for several, the time period was 35-45 months. The research also found that, since 2012, the average has increased from 15 months to 25 months in the context of the demise of regional planning, and the introduction of the NPPF and PPG. As a benchmark, the publication version of North Somerset's Core Strategy was published for consultation purposes in January 2011 and submitted to the Secretary of State for Examination in July 2011. It was subject to Examination in November- December 2011 and was adopted in April 2012. It therefore took a period of 16 months from publication version to adoption in the first instance. It was subsequently the subject of a successful legal challenge resulting in nine policies being remitted back for re-Examination. The final version was adopted in January 2017, some six years after submission of the initial publication version. It is significant that the Core Strategy was a 'partial' Local Plan, that did not contain either development management policies or non-strategic site allocations, which were to be included in the subsequent Sites and Policies Plan. It is a reasonable assumption that the current Plan, containing a full suite of strategic and non-strategic allocations and Development Management policies, will give rise to a greater range of issues and potentially take longer than the 16 months from publication version to initial adoption of the Core Strategy. Having regard to the complexities of the circumstances in North Somerset, and the issues identified through these representations, it is a reasonable (albeit perhaps 'optimistic') assumption that adoption will not now be until some time in mid to late 2025 at the earliest, and this would only require a very small delay given the timetable set out. Given the requirement for Local Plans to look ahead over a 'minimum' period of 15 years 'from adoption', this necessitates a further extension of the plan period to 2040. Accordingly, this will increase the housing requirement to be incorporated in the plan by a minimum of 993 dwellings based on the Council's local housing needs assessment, or a minimum of 1,347 dwellings based on the national standard method. Housing Distribution The broad distribution of housing proposed in the Plan will not deliver the spatial strategy, with its priority to locate new residential and mixed use development in or close to urban areas, and to limit development at villages to local community needs (Policy SP3). The share of housing growth to be distributed to the district's four towns combined amounts to only 60%. The share to be distributed to the villages and rural areas is assessed to be 23%. However, the distribution set out in Policy SP8 treats Wolvershill as a separate category in the settlement hierarchy. Since it is an extension to Banwell, which is a village settlement, the growth at Wolvershill should properly be assigned to the Villages21. This means that the villages will account for 41% of proposed housing growth, which is more than double the proposed distribution to the three towns of Clevedon, Nailsea and Portishead in combination. It is clear from this proposed distribution that, apart from Weston-super-Mare, the other three towns are punching well below their weight and not performing their intended roles in the spatial strategy as the most sustainable, and therefore priority, locations for growth. Distribution of Housing Growth to Nailsea The distribution of housing growth to Nailsea in particular is unjustifiably low. Whilst Clevedon and Portishead are tightly constrained by Green Belt, land to the south-west and west of Nailsea is not within the designation. Nailsea has not received significant growth for more than two decades, which is reflected in an ageing population and declining services. A site at North-West Nailsea that has been allocated for 450 dwellings in several plan periods since the Millenium, has failed to come forward, and has now been reduced to an allocation for 75 dwellings in the current Plan. The most significant residential development during the past two decades, on the site North of Youngwood Lane / East of Nethertonwood Lane which is identified as a site allocation in the current Plan, was allowed on Appeal. Other than that, and the planning permission granted for 180 dwellings on Land West of Engine Lane that was in the Town Council's ownership and is again identified as an allocation in the current plan notwithstanding that it has planning permission and is therefore a commitment, growth at Nailsea has been limited. In the current Plan the scale of new growth identified for Nailsea is lower than in any plan period since the Millenium. This is notwithstanding its potential for an urban extension of approximately 3,300 dwellings that was identified in the JSP without the need to remove land from the Green Belt. The Council's justification for the negligible scale of growth that it is proposing at Nailsea, one of its main towns and intended as a priority focus for development in the spatial strategy, is stated as follows: The Preferred Options proposed Nailsea / Backwell as a strategic growth location subject to, in particular, deliverable strategic transport mitigations being identified. This related to a potential new road crossing of the railway to alleviate capacity issues at Backwell crossroads and Station Road. The transport evidence at the time indicated that the rail crossing could be either to the west or east of Backwell and could be a bridge or a tunnel. None of these options are straightforward given flooding issues which could affect any crossing under the railway and the visual impact of a bridge crossing a railway on an embankment. Further technical assessment following Preferred Options resulted in the preference being for a bridge crossing to the east of Backwell. However, taking account of potential development contributions and other sources of funding, the costs of delivery were prohibitive which meant that delivery was highly unlikely over the plan period.22 Without the transport infrastructure to unlock large scale development the focus shifted to what scale of development could be accommodated on the existing network. Without a bridge crossing the exceptional circumstances related to deleting Land East of Backwell from the Green Belt to support the delivery of the transport improvements no longer applied. Land at Grove Farm, Backwell (515 dwellings) is retained as an allocation as access to the A370 does not require a rail crossing but land			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								south of Nailsea (400 dwellings) was deleted given the severe impact development in this location would cause on the local road network.23 The conclusions relating to the transport and Green Belt implications of growth at Nailsea / Backwell meant that the proposed scale of development in the area was significantly scaled back, and this is no longer proposed as a strategic growth location in the plan.24 The scale of new, 'plan-led' growth at Nailsea during the plan period is negligible. By the Council's own admission in the above-cited extract, it means that Nailsea will not perform its strategic role in the settlement hierarchy. Of the projected plan-period growth of 926 dwellings at Nailsea, 596 is already committed through planning permissions, 28 are categorised as 'urban capacity', and 225 are projected windfalls25. Therefore the 'plan-led' growth through allocations is a mere 75 dwellings at a settlement that the spatial strategy identifies as a priority focus for growth. That equates to a mere 0.5% of the minimum plan period growth for which the plan is seeking to make provision. Furthermore, the 75 dwellings are proposed on a site that has been allocated in previous planperiods for over 20 years, and which has failed to come forward. The scale of plan-led growth at Nailsea is therefore a mere 2.3% of that for which there was deemed to be capacity in the West of England JSP without taking land from the Green Belt. Moreover, it equates to a mere 6.7% of the town expansion capacity proposed at Nailsea in the Regulation 18 Consultation Plan26. Through the evidence base the Council sets out a sequential approach to act as a framework for the assessment of potential sites, consistent with the spatial strategy27. That approach places 'town expansion' as the third preference, and land in the Green Belt as a last resort (Step 6). Other than the reduction in steps to six by the amalgamation of 'other sustainable settlements' (Yatton and Backwell) into the 'rural areas', that approach has not changed between the Regulation 18 and 19 Plans. Moreover, it is reflected in the West of England JSP provisions for North Somerset which identified a strategic growth location to the west and south-west of Nailsea on land that is not within the Green Belt. As is evident from the concept plan for Nailsea that was included in the West of England JSP (below right), there was identified potential for substantial urban extension of the town to the west and south-west that is not subject to constraints of Green Belt, flooding or of an overriding environmental nature. The concept plan indicated a new strategic transport route to the west of the town, including a connection to the A370 over the railway to the west of Backwell. The JSP was submitted for Examination, with an evidence base to support the deliverability and viability of the provisions that it contained, including the proposed urban extension for up to 3,300 dwellings at Nailsea / Backwell. It is therefore clear that the Council did not perceive there to be either deliverability or viability issues with that scale of housing growth, with associated supporting infrastructure, or overriding environmental constraints, including a new strategic highway connection between Nailsea and the A370 routed to the west of Backwell. Whilst the JSP was subsequently abandoned, it was due primarily to a lack of clarity and consistency in the strategy for selecting development locations rather than specific issues relating to those selected, including evidence to indicate that there were non-Green Belt locations that could have been selected ahead of locations within the Green Belt. As was clearly set out in the Inspectors' letter: … we have not definitively reached the view that any of the individual SDLs proposed in the JSP could not, in principle, form a sound part of a plan for the West of England or for any of the individual local authority areas. However, in the light of the above, we conclude that robust evidence has not been provided that the 12 SDLs proposed in the plan have been selected against reasonable alternatives on a robust, consistent and objective basis. Consequently, given that the SDLs are an integral part of the plan's strategy, we cannot conclude that the spatial strategy is itself sound. …28 The potential for significant growth at Nailsea was also canvassed in a Local Plan Issues and Options Document published by the Council in September 2018 (see concept plan, below right). This clearly illustrated how significant growth could be accommodated to the west and south west of the town without removing land from the Green Belt, supported by a new link road connecting to Station Road, with a potential further link to the A370 without the need for accompanying development in the Green Belt. Again, it would be surprising if the Council were to have canvassed such proposals through a formal consultation document without reasonable certainty that there would be no overriding constraints in terms of environmental impacts, viability and/or deliverability. Given the above circumstances, it was surprising, and somewhat inexplicable that, in the Regulation 18 Plan, the Council opted for the release of Green Belt land to the east of Backwell rather than focusing on available options outside the Green Belt at Nailsea. This was in overt conflict with the sequential approach which places expansion at the towns ahead of both village expansion and Green Belt releases. In their representations to the Regulation 18 consultation it was SMD's submission that the exceptional circumstances for release of land from the Green Belt had not been demonstrated. Much of the justification related to the delivery of a new multi-modal transport route to the east of Backwell. However, as was confirmed in the evidence base documents accompanying the Regulation 18 Plan, transport work was still underway to test the deliverability of the required transport mitigation schemes29. A number of options were canvassed in the transport evidence, and which confirmed that there were no distinct advantages of a multi-modal route to the east of Backwell compared with a route to the west as was contemplated in the Concept Plan that was included in the JSP. Even if it did, that failed to provide sufficient justification for removing land from the Green Belt for development, particularly so given that the route was proposed to continue north of the railway through Green Belt land. SMD commissioned a detailed critique of the transport evidence accompanying the Regulation 18 consultation, and which they submitted with their representations. That confirmed that, when subject to proper scrutiny and considered holistically in the context of potential strategic improvements, a multi-modal route to the west of Station Road and Backwell had the potential to deliver substantially greater benefits for both existing and future communities than a route to the east. That assessment remains part of the Council's evidence base as a submission to the Regulation 18 Plan. SMD's position was that the option of a multi-modal route across the railway to the east of Backwell did not justify removing land from the Green Belt for development, and allocation of the land risked pre-empting the route of a new rail crossing which the evidence indicated not to be the most beneficial.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								That was not considered to be a correct approach, since the preferred route should properly have been informed by the objective to protect the Green Belt, and therefore a route to the east only selected if there were overriding advantages that would supersede this additional weight of disadvantage compared with a route to the west. There was no evidence to confirm that this was the case, the detailed transport evidence accompanying SMD's representations confirming that the balance of advantage in transportation terms was clearly in favour of a route to the west, endorsing the position promoted by the Council through the JSP. Since the proposed allocation of land within the Green Belt east of Backwell has now been deleted from the Regulation 19 Plan, there is no opportunity to test whether the proposed road link that was associated with it amounted to the exceptional circumstances for removing land from the Green Belt. However, the Council is now using the deletion of the proposed allocation on grounds of a draft proposed change in national policy that affords greater protection to the Green Belt, in justification for not meeting local needs identified by the standard method. It is therefore a perverse situation that, in the case of Nailsea, the Council is now placing reliance on the removal of a draft proposed allocation in the Green Belt, that had not been tested through Examination to confirm whether exceptional circumstances existed to justify its removal from the Green Belt, as reason for departing from the national standard method and not meeting the housing needs that it identifies. Reliance is also placed on 'uncertainty' surrounding the environmental impact and deliverability of the transport infrastructure required to facilitate the scale of growth presented at the Regulation 18 stage. There is no evidence to confirm that reasonable alternatives do not exist at Nailsea, and that they have been properly explored. On the contrary, the evidence from the JSP confirms that there are alternatives that have real potential. This is reflected in the planning permission granted on Appeal on land north of Youngwood Lane that the Council is seeking to allocate in the Regulation 19 Plan, and which the Inspector required to safeguard a route through the site for future new transport infrastructure to serve strategic growth in this location. The safeguarded route reflects the line of the link road canvassed in the Issues and Options Document cited earlier. 2.69 Given that the Council has now decided to reinstate the primacy given to protection of the Green Belt, there is no evidence to confirm that they have given further, and due, consideration to non-Green Belt options previously canvassed through the JSP. In particular, the option of a strategic scale of growth to the west and south-west of Nailsea that has potential to deliver a greater scale of growth than that contemplated in the Regulation 18 Plan, and therefore to enhance the viability and deliverability of strategic transport infrastructure. As is endorsed through the Transport Technical Note at Annex 3 to these representations, there is no evidence in the public domain that supports the preferred option for a rail crossing to the east of Backwell rather than to the west. Furthermore, there is no evidence that has been published post-Regulation 18 consultation that now confirms that there are delivery 'challenges' that are fatal to it; or that significant additional growth at Nailsea cannot be accommodated without substantial new highway infrastructure. The Council has therefore chosen the soft option to remove allocations from the Green Belt, reinforced by an argument of uncertain infrastructure deliverability, all justified on the basis that it no longer has to meet the need identified by the standard method. The Council has had ample opportunity to find solutions to the infrastructure constraints at Nailsea, with little evidence that they have taken a proactive approach to doing so. This is simply insufficient reason when it is clear there are genuine alternatives available for growth that were previously canvassed by the Council and promoted by them through a strategic plan that was submitted for, and subject to preliminary scrutiny at, Examination, and that can make a significant contribution towards meeting those needs simultaneously with enhancing the prospects for delivering the necessary infrastructure. It is insufficient reason for not providing homes that are desperately needed, with the consequences of increasing unaffordability and homelessness that are likely to ensue. Notwithstanding, and without prejudice to, the foregoing, the Transport Technical Note confirms that, applying post-Covid 19 trip rates accepted by the highway authority in connection with the planning application relating to the Council's own, neighbouring land South of the Uplands and in the context of the increased accessibility of the locality by the sustainable transport modes associated with the Youngwood Lane development, additional significant growth of up to 600 dwelliings at Batten's Farm can be accommodated on the network without giving rise to additional adverse impacts. As is confirmed through the evidence in the Transport Technical Note, in the context that the projected impact of traffic associated with the Land North of Youngwood Lane development has been accepted by the Secretary of State as not giving rise to severe residual adverse impacts on Backwell Crossroads, "a development of up to 600 dwellings at Batten's Farm which results in lower capacity values than those previously forecast in relation to the 'Land north of Youngwood Lane' development, should remain acceptable to NSC"30. In their representations to the Regulation 18 consultation, SMD demonstrated how the allocations in the draft Plan were not supported by the Sustainability Appraisal (SA) of the individual site options. The headline points were as follows: • The proposed allocation at North West Nailsea (450 dwellings) performed worse than any of the other site options. • The site option West of Nailsea performed as well as the proposed allocation South of Nailsea. SMD also submitted as follows: It is pertinent to note that the North of Youngwood Lane option performs as well as the West of Backwell option in terms of SA Objectives SA2.2, SA2.4, SA2.5 and SA3.3. Given that this site is sandwiched between the South of Nailsea and West of Nailsea site options, it is not preferentially located in relation to any of these SA objectives than those other two Nailsea options. Its superior performance can only be assumed to reflect the fact that the site benefits from planning permission, and as part of which specific measures have been secured to enhance active travel routes and sustainable transport infrastructure, and which have influenced its assessment in the SA.31 There is no reason why the sustainability credentials of the West of Nailsea site option could not, and would not, be enhanced through a similar portfolio of sustainable transport and other measures that would be secured through an application for planning permission. That is particularly so given that the West of Nailsea option is contiguous with the North of Youngwood Lane option, and can benefit from, and further enhance, the measures that are being implemented as part of the planning permission for the latter. It is worth noting that previous consultation documents have included reference to completing a link road across the Batten's Farm site, and SMD are committed to delivering it. There is therefore no reason why the West of Nailsea option could not achieve the same top rating for SA		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								objectives SA2.2, SA2.5 and SA3.3 following a grant of planning permission. This being the case, in terms of its sustainability credentials as determined through the SA, its status would significantly exceed that of the East of Backwell option, reflecting its superior location in relation to the 'town' of Nailsea. If, as should properly be the case, avoiding harm to the Green Belt was included as an SA objective, then its superiority as reflected in the SA would be further enhanced.32 The Sustainability Appraisal of the residential site options for Nailsea / Backwell have been extracted from SAs of both the Regulation 18 and Regulation 19 Plans, and are included in Annex 4 for comparison purposes. This confirms that there is very little difference between the assessment outcomes for the individual sites in both appraisals. The headline points are as follows: • The proposed (albeit reduced) site allocation at North West Nailsea continues to be one of the worst performing options, and performs worse than West of Nethertonwood Lane, which is a much larger site. • North of Youngwood Lane continues to be one of the strongest performing sites reflecting the committed sustainable transport infrastructure to be delivered in conjunction with the ongoing development of that site. • West of Backwell continues to perform better than East of Backwell raising further questions as to the justification for the allocation to the east in the Regulation 18 Plan, and the deletion of which, with associated link road to the east, has caused the downscaling of Nailsea / Backwell as a strategic growth location which contributes significantly to the Council's justification for rejecting the housing requirement set by the standard method. The SAs for both the Regulation 18 and 19 Plans confirm that there are no overriding sustainability reasons for not allocating land West of Nailsea given that it performs similarly to the committed site West of Engine Lane, and can connect into the same sustainable transport infrastructure that is surmised to account for the favourable performance of the committed site North of Youngwood Lane. Moreover the consistency between the SAs of the individual sites consolidates the doubts regarding the soundness of the allocation East of Backwell in the Regulation 18 Plan. The allocation East of Backwell was fundamentally wrong for a number of planning reasons, including conflict with the spatial strategy, conflict with the sequential approach to site selection that the Council set for itself, and with no justification arising from the SA of individual sites. It was not even justified by the delivery of new highway infrastructure since, by the Council's own admission in the Regulation 18 evidence base, the merits of a route to the east or the west of Backwell had not been determined. The removal of an allocation in the Regulation 18 Plan that was demonstrably unsound and is unlikely to have survived examination, and to then seek to justify not meeting local needs since the Council in no longer required to turn to sites in the Green Belt to meet its housing needs, is insufficient justification. Particularly so when the evidence, from both past plan-making33, and the current one, confirms that there are alternative options available that actually perform better through the SA and are consistent with the spatial strategy. The Council are now seeking to argue that infrastructure constraints preclude further growth at Nailsea, and are therefore downgrading its growth to a level at which it will not perform its intended role in the spatial strategy. However, it confidently promoted a much larger scale of strategic growth at Nailsea, accompanied by much more extensive new strategic highway infrastructure, at the Examination into the JSP. Moreover, at the Regulation 18 Plan stage, it was confident a new railway crossing to the A370 at Backwell could be delivered, the only issue being whether it should route to the east through the Green Belt, or to the west as proposed in the JSP thus avoiding the Green Belt. To the extent that there are infrastructure constraints, it is a result of a lack of proactivity in seeking to resolve them, first, in the interim period since the JSP was withdrawn, and more recently, since the expiry of the consultation period on the Regulation 18 Plan. The publication of the draft proposed changes to the NPPF caused a pause in plan-making, and it is evident that the Council now perceives there to be a soft landing that avoids difficult decisions and proactivity in procuring infrastructure solutions. The alleged infrastructure constraints on further strategic growth at Nailsea now appear to be relied upon to support the Council's ambition not to meet the housing requirement that derives from the standard method. They were not mooted either through the JSP or at Regulation 18 Plan stage, and have only emerged following the publication of the proposed draft changes to the NPPF with its inference (not confirmed in the final version) that local planning authorities were not obligated to adopt the housing requirement set by the standard method, or to take land from the Green Belt where alternative options are not available. There are alternative options at Nailsea which are a better fit with the spatial strategy and sequential approach to site selection that the Council has set for itself, that will enable the Council to get much closer to meeting the housing needs that emerge from the standard method, and do not involve land-take from the Green Belt. There is no evidence that the necessary supporting infrastructure cannot be delivered, and which a larger scale of growth than that provided through the Regulation 18 Plan can assist with. Moreover, the evidence of the Transport Technical Note accompanying these representations is that a significantly greater quantum of growth can now be accommodated without giving rise to greater impacts on Backwell Crossroads than considered acceptable by the Secretary of State in allowing the Appeal on the North of Youngwood Lane site. [See attached full representation for continued]			
51732129	Gleeson Land	tor&co (Jacqueline Mulliner)	Gleeson Land	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	SP8 sets the housing requirement for the District, this being 1,580 dpa across the plan period based on the standard methodology (SM LHN). Setting aside concerns regarding the plan period (which is too short), we agree that the starting point for setting the requirement should be the standard method but are concerned that a further uplift has not been contemplated, specifically to help with the unmet need generated from Bristol and Bath, or to assist further with affordability, or to support infrastructure provision. The NPPF is clear about needing to boost housing land supply, to meet objectively assessed needs and to provide for needs that cannot be met within neighbouring areas, supported by the PPG which states, "Where authorities plan for higher growth this should not normally have to be thoroughly justified at examination." In terms of unmet need, whilst the Duty to Cooperate is not being 'saved' under transitional arrangements moving to the new plan-making system, the Government and national policy continues to expect collaboration and effective cooperation over unmet need. For context, North Somerset lies within the wider Bristol City Housing Market Area (comprising Bristol	An uplift in the housing requirement must be considered and tested through the SA, and if appropriate additional land allocations made to meet the need. An uplift in the housing provision at south Nailsea should be secured in the plan.		North Somerset Reg 19 Reps (2025-12-12) - Gleeson Land (Appendix B).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								City, North Somerset and South Gloucestershire, where the void in addressing Bristol's unmet need has persisted over several years, through failed attempts at joint strategic planning. At the present time, the Bristol Local Plan emerging requirement of 1,925 homes a year leaves an annual unmet need of 1,037 homes (BC SM LHN 2,962 dpa). Bristol has asked all of the relevant neighbouring authorities to assist but North Somerset's Duty to Cooperate compliance statement states that, "The evidence supporting the local plan demonstrates that North Somerset does not have capacity to meet some of Bristol's needs at this time." However, this is not the case, the evidence does no such thing, and despite differing evidence supporting the Bristol Local Plan examination which clearly anticipates some help from North Somerset, to be actioned through the current local plan preparation, an uplift in North Somerset's housing numbers has simply not been contemplated and has not therefore been tested in the Sustainability Appraisal. The SA is clear that it tests the SM LHN and tests difference spatial options to meet that need (e.g. see SA para 2.28). What it doesn't do is test a higher growth option which renders the plan unsound, it is not positively prepared and not justified or effective in meeting overall housing requirements. The knock-on effect of failing to assist in meeting the unmet need will be to increase affordability issues, as pressure for housing is increased. Whilst the plan will fail to address affordability issues in full, no consideration was given to increasing the housing requirement to better redress the acute problem. Just looking at Nailsea, the Housing Needs Survey confirms that "Around 540 people have moved away from Nailsea in the past 5 years because they could not find a suitable home in the town." and, "There is an annual gross need for 173 affordable dwellings in Nailsea and after taking into account supply there is a net need of 147 each year." The Local Plan doesn't go far enough to boost supply given this context. Finally, in order to deliver the infrastructure necessary to support the delivery of housing, a more flexible and positive approach should be taken to the housing requirement, to ensure development is viable. This particularly relevant with respect to south Nailsea, where development is to support a new railway crossing. In conclusion, the SA is flawed, because it fails to consider the option of a higher housing requirement (higher growth scenario) and the plan strategy is therefore unjustified, ineffective, and unsound. Moving to the spatial distribution of the housing requirement, there is greater capacity at Nailsea and Backwell, as set out in our response to LP3. Nailsea is one of only four towns in the district and has a good range of services and facilities as well as access to a rail station. The approach to sustainable patterns of development in the NPPF (para 11) is, in part, to align growth and infrastructure. Further the Government has recently announced intentions to support, through the presumption, growth close to well-connected rail stations. Further growth at south Nailsea and Backwell would clearly align with the national policy direction, and would further support viability/delivery of the necessary infrastructure (LP11) to support growth in a sustainable location			
58493505	Susan Lamburne								1. The current infrastructure of Wrington will not accommodate the two proposed building developments at Cox's Green and Butt's Batch. 2. There is minimal public transport available for the residents of Wrington. 3. The Wrington lanes barely accommodate the amount of cars at present. 4. There is no health centre in Wrington, with no plans to provide one. 5. Wrington primary school is already full with a waiting list. 6. The area around Wrington, ie Wrington Hill and Old hill are areas of outstanding natural beauty which must be maintained. 7. Wrington floods. 8. Access into and out of Wrington for the emergency services is an outstanding safety issue for all involved. A delay in receiving emergency medical care exists.		
58594049	Woodstock Homes (Land west of Butts Batch, Wrington)	Oliver Ansell	Woodstock Homes	No	• Justified • Effective • Consistent with national policy	Unsure	Unsure	In respect of the housing requirement that Policy SP8 sets out, while we welcome the change in approach that now utilises the SM to determine the minimum requirement, we still have some residual concerns that no allowance is made to address unmet needs arsing in Bristol City's administrative boundaries, the scale of windfall provision and the reliance on large strategic sites at Banwell and Woodspring. In respect of unmet needs, we will not be presenting evidence on this point, but we are aware of the representations of others and share similar concerns this has not been accounted for. Windfalls seem to account for 2,928 of the total supply proposed by the council, which equates to 12.4% of the total. Given that windfalls are an unplanned and not necessarily reliable source of supply, we suggest that they should not be relied on to such a significant degree and instead should be seen to be a 'top-up' in supply, that provides further flexibility if they come forward. In our experience maximum allowances of 10% for windfalls are normally more typical, with many authorities' plans even allowing for a lower proportion than that. In addition to the above, this approach fails to acknowledge that historic windfall delivery occurred within a markedly different policy context. Under the adopted Core Strategy, policies such as CS32 (Service Villages) amongst others expressly support "development within or adjoining the settlement boundary" where it enhances sustainability and respects local character. This policy approach enables a consistent pipeline of small and medium◈scale edge-of-settlement schemes across the district, including in sustainable villages such as Wrington, a designated Service Village with strong facilities and employment opportunities. By contrast, the PSP introduces a materially different framework. The emerging policies collectively remove this positive presumption for development adjoining settlement boundaries, and instead restricts windfall almost exclusively to sites within tightly drawn boundaries. The settlement boundary for Wrington has not been amended, despite its clear suitability for meeting local needs. The Council is therefore relying on historic windfall delivery while simultaneously removing the very policy mechanisms that previously enabled such sites to come forward. This represents a logical inconsistency: windfall rates achieved under CS32 cannot be assumed to continue when the policy basis that generated them has been withdrawn. The result is an artificially	We urge the Council to allocate, sustainable, non-Green Belt, non-strategic sites, such as Land West of Butts Batch, to ensure that SP8 can be delivered as intended. Without such allocations, SP8's delivery strategy is not justified or effective.		829 A5 OA 111225 Representations to Reg 19 Local Plan.pdf North Somerset Local Plan Pre-submission Plan - Representation form Part B.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								inflated windfall allowance which overstates the reliability of this source and risks undermining the soundness of the plan. A more cautious windfall allowance, or preferably, the identification of additional small and medium allocations in sustainable settlements such as Wrington, is required to ensure the plan is positively prepared and deliverable. Accordingly, we suggest that the council reconsider this allowance and allocate further tangible sites to replace what is an unplanned and unreliable source of supply that might render achieving the minimum development requirements of NSC difficult to achieve. Finally, while we support the provision of large strategic sites to ensure a broad portfolio of allocation types and also to provide a reliable long term supply, the council needs to accept that delivery on such sites takes time, with required infrastructure usually meaning that first completions will be many years in the future. Both the Banwell and Woodspring strategic sites are yet to obtain planning permission. Lichfield's 'Start to Finish' assessment (3rd Addition – March 2024) makes it clear that statistically, sites in such a position are not expected to start delivering homes for 6.7 years after the validation of the first planning application. The Banwell site has been subject to a planning application for nearly one year, but Woodspring is yet to be subject to an application. Therefore, even assuming a quicker than average delivery of first completions on these sites (say 5 years) over the remaining 10 years of the plan these sites would average 330 dwellings and 350 dwellings per year respectively. This rate of average completions would significantly exceed the national average on sites of 2,000 dwellings which equate to 100-188 dpa according to Lichfield's analysis. This underlines that overreliance on these sites to deliver a five-year housing land supply in particular would be foolhardy. We urge the Council to allocate, sustainable, non-Green Belt, non-strategic sites, such as Land West of Butts Batch, to ensure that SP8 can be delivered as intended. Without such allocations, SP8's delivery strategy is not justified or effective.			
31069025	Alex Layard			No	• Justified • Effective	Unsure	Unsure	It's as if you've made it as complicated and bureaucratic as possible for regular members of the public to comment on this consultation which is disappointing. But we'll repeat what so many of us have said before, there is not the demonstrated need for all this housing. Yes it's in response to national government, but I have yet to see any substantive and current local evidence to justify so much new housing being build. If needs assessments from 2022 are the best you have, that's pretty underwhelming. Again there is no clear, systematic approach to the already creaking infrastructure - roads, public transport, cycle ways, doctors, schools, employment and training options. These need to come before planning permission for more housing. Let alone environmental considerations which should be at the forefront of all plans especially with increasing flooding and very hot summers. And again, there is no demonstrated need for more 3-4 family homes. There needs to be more provision and more imagination around accessible, affordable (not in the social/affordable housing sense) development for single people, the many older people, people with limited mobility and other disabilities. There is no evidence you are taking your obligations for self building into consideration. It feels like you just want to parcel up land for the big commercial developers and then wash your hands of it. That hasn't worked in South Glos and look at Netherton Grange in Nailsea which has been a commercial mess.			
4601665	Leigh & Glennie Ltd		Leigh & Glennie Ltd	No	• Justified • Consistent with national policy	Yes	Yes	Please see attached document Summary The SHLAA was fundamentally flawed in its preparation, going back to the February 2025 consultation and in the October 2025 document. The Council appear to have recognised there is no Government definition of 'hard constraint' but did not alter their spatial strategy or identification of allocated sites. The Council's approach for Policies SP3 and SP8 is inconsistent with the NPPF and the PPG on how suitable sites should be allocated, and how constraints on sites should be considered. They failed to appraise sites put forward within such areas, including the site we promoted within the National Landscape; there was simply no appraisal of the site as the designation of National Landscape equalled a simple 'no' by the Council, contrary to national and local policy, and to the LURA. Policies SP3 and SP8 are therefore not sound and must be reappraised, along with all potential housing site allocations proposed to the Council. 43203041	National Highways		National Highways							Between 2026 and 2041, North Somerset Council plans to deliver at least 23,700 new dwellings, in line with the government's Local Housing Needs Assessment (2025). Major growth areas include Weston-super-Mare (6,660 allocated dwellings plus 1,070 expected windfall), Wolvershill	NSC Reg19 Local Plan Consultation.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										(3,300 dwellings), a new Woodspring development southwest of Bristol (3,500 dwellings), Nailsea and Backwell (3,500 plus 228 windfall), and Pill and Easton-in-Gordano (1,100 dwellings). Clevedon and Portishead will see smaller allocations, with Clevedon accommodating 258 dwellings plus 330 expected windfall dwellings, and Portishead 562 dwellings plus up to 785 at Wyndham Way and 254 windfall. Across villages and wider rural areas, the plan seeks to allocate 1,830 dwellings, with an additional 1,118 expected from small sites. National Highways supports the principle of concentrating housing development within or adjacent to existing built up areas that already have an existing range of sustainable transport links. Nevertheless, new development in urban areas will inevitably generate additional travel demands that may impact on the SRN, whether for longer distance travel to the north and south, or movements across the M5 via J19 or J21.	
39179649	Adrian Mealing			No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	I consider Policy SP8 to be unsound because it is not positively prepared, not justified, not effective, and not consistent with national policy. SP8 sets out the housing requirement and provides the basis for how and where homes should be delivered. However, the application of SP8 in relation to Congresbury is fundamentally flawed. The Plan allocates 183 dwellings to the village across three separate sites without demonstrating that such growth can be delivered sustainably or in line with SP8's housing principles. My specific concerns are as follows: 1. SP8 is not positively prepared SP8 seeks to meet the area's housing requirements, but it does so without aligning delivery to necessary infrastructure. Congresbury is identified as accommodating a significant proportion of rural growth, yet: no new school capacity is planned, no GP or healthcare expansion is identified, no public transport improvements are included, no funded active travel connections exist, the A370 corridor remains unaddressed despite severe congestion. This means SP8 does not plan positively for growth supported by infrastructure, contrary to the NPPF.	To make SP8 sound, the Plan should: Provide a clear, evidence-based settlement hierarchy demonstrating why Congresbury is selected for significant growth. Identify and secure a funded infrastructure package including: school place expansion, GP/healthcare improvements, A370 corridor and junction capacity upgrades, deliverable active travel routes connecting the housing sites to village services. Apply the flood risk Sequential Test robustly and remove or amend allocations where safer, reasonable alternatives exist. Include heritage-led criteria to prevent harm to the setting of Cadbury Hill Fort. Provide a coordinated masterplan for Congresbury addressing cumulative impact, landscape character, ecological corridors, and transport. Without these changes, SP8 is not deliverable or justified.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								2. SP8 is not justified The selection of Congresbury as a location for housing growth has not been justified through transparent evidence. SP8 does not demonstrate: why Congresbury is appropriate for this scale of housing compared with better-served settlements, that reasonable alternatives were assessed, that environmental constraints (bats SAC, heritage impacts, flood risk) were properly considered, that the cumulative impact of three allocations has been tested. The absence of a rational, evidence-driven settlement hierarchy makes SP8 unjustified. 3. SP8 is not effective Housing delivery in Congresbury is dependent on infrastructure that is: unfunded, not programmed, not included in the Infrastructure Delivery Plan, reliant on future “aspirational” improvements (e.g., Strawberry Line links, Smallway junction upgrades). SP8 cannot be considered effective when key enabling infrastructure has no delivery mechanism. Additionally, there is no masterplan or coordinated approach to ensure that the three allocations integrate properly into the village, meaning SP8 will not deliver coherent or sustainable outcomes. 4. SP8 is not consistent with national policy The NPPF requires plans to: locate housing in sustainable locations with access to services and transport, reduce reliance on the private car, protect the natural environment, apply the flood risk sequential test, conserve heritage assets, avoid settlement coalescence. The Congresbury allocations contradict these requirements because: The village is predominantly car-dependent. No sustainable transport improvements accompany the housing. One site (Woodhill Nurseries) includes areas requiring the Sequential Test. The site also impacts the setting of Cadbury Hill Fort (Scheduled Monument). Expansion along the A370 threatens settlement separation from Yatton. No SAC mitigation strategy is identified. Therefore, SP8 is not consistent with national policy.			
58043905	C Miles			Yes		Yes	Yes				
4113729	Portishead Town Council		Portishead Town Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Legal compliance and Duty to Cooperate To be legally compliant the local plan must meet a number of procedural tests. Portishead Town Council (PTC) consider that policy SP8 has not been informed by full and effective cross border discussions regarding housing need and the sustainable location of new development. PTC has reviewed the duty to cooperate statement and considers that the relationship with Bristol and Bath to be unclear in terms of meeting housing needs. The statement explains that the plan area is strongly influenced by the adjacent larger urban areas and whilst it states that each authority agreed to meet their own housing need within their own boundaries, it is unclear how each strategy and approach to housing interacts. Soundness To be considered ‘sound’ the North Somerset Local Plan (NSLP) must be positively prepared, justified, effective and consistent with national policy. PTC consider that policy SP8 is not sound for the following reasons: Positively prepared To meet this requirement, the NSLP should be prepared based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, consistent with achieving sustainable development. This assessment should also be informed by agreements with other authorities, so that unmet needs from neighbouring areas are accommodated where it is practical to do so and consistent with achieving sustainable development. Page 32 of the draft NSLP explains that the minimum number of new dwellings that the council is required to plan for over the plan period is 23,700, however the plan proposes 24,495. This is in excess of the level identified by the Government. PTC acknowledges that there is a requirement for significant levels of housing to be planned for. However, the strategy must be consistent with achieving sustainable development. It is considered that the proposed approach, to distribute 7% of the housing supply within Portishead would not deliver sustainable development. New housing development should be located within towns where occupants of the new housing would have greater access to services and facilities, thereby delivering sustainable development. Justified To meet this requirement, the NSLP should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate, robust and credible evidence. The draft NSLP is clear that the impact of distributing 7% of the housing supply within Portishead would result in the need for Green Belt deletions. As explained within the submission for policy SP7, this is disputed by PTC. Furthermore, the level of development and proposed Tower Farm and Black Rock sites would have a significant effect on the natural environment and are not sustainable locations for future development, as detailed within the submission for policy LP5. Given these significant constraints, the approach to the spatial distribution is not justified. There are at least 23 brownfield sites across North Somerset that could accommodate higher densities and are more sustainable locations with less environmental constraints. PTC consider the approach to the distribution of housing is not fully justified as it has not fully considered all reasonable alternatives particularly with regard to settlements which are less environmentally constrained. Consistent with national policy To meet this requirement, the local plan should enable the delivery of sustainable development in accordance with the NPPF. Section 11 of the NPPF requires development plans to apply a presumption in favour of sustainable development. It explains that for plan making: a) all plans should promote a sustainable pattern of development that seeks to: meet the development needs of their area; align growth and infrastructure; improve the environment; mitigate climate change (including by making effective use of land in urban areas) and adapt to its effects; b) strategic policies should, as a minimum, provide for objectively assessed needs for housing and	Amend policy SP8 to reduce the proportion of housing supply proposed for Portishead to better reflect the level of services and infrastructure capacity		Response for policy SP8 - why policy is not sound DRAFT 251210.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								other uses, as well as any needs that cannot be met within neighbouring areas, unless: i. the application of policies in this Framework that protect areas or assets of particular importance provides a strong reason for restricting the overall scale, type or distribution of development in the plan area; or ii. any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole. As detailed above, PTC submit that locating 7% of the housing supply within Portishead would not promote a sustainable pattern of development and the impact of the proposed development on the rich natural environment. The proposed distribution of housing development for Portishead within policy SP8 is therefore not consistent with national policy.			
58575841	A Morris			No	• Justified	No	Unsure	This is a very important proposal that will shape the future of the region. The net result is build, build and more building. This isn't the required outcome, supported by those living, paying taxes and voters.			
62626657	Rubix Strategic Ltd	OG Group Ltd	Rubix Strategic Ltd	No	• Justified • Effective	Yes	No	On behalf of our client, Rubix Strategic Limited (RS), it is considered that Land off Moor Lane, Backwell (see attached site location plan), is suitable and available for development and should be included as an allocation within the emerging Local Plan to provide additional flexibility allowance towards the housing requirement set out in the Plan. For a variety of reasons, and as Rubix has advised as part of representations submitted by Lichfields, it is considered that the Local Plan approach to meeting housing need and plan period are considered to be unsound, as follows: 1. The Plan as proposed risks not allowing for sufficient time (15 years from adoption) to meet a basic requirement for strategic polices set by national policy. A longer plan period is required to ensure that the Plan for North Somerset covers a period of at least 15 years from adoption, with a longer period likely to enable the Council to more effectively plan for future development in the area. 2. There is concern, and risks in respect of the soundness of the Plan, that whilst seeking to meet the minimum level of housing need identified using the standard method, a higher housing requirement should be set to address evidenced affordable housing needs and to accommodate some of Bristol's unmet needs. 3. There is concern, and risks in respect of the soundness of the Plan as proposed, that no housing delivery trajectory has been provided for the Plan as a whole, or for the specific sites which are identified as part of the proposed strategic policies. This should be addressed as part of the submission of the Plan, given some of the allocated sites' housing delivery will fall beyond the current plan period. Land at Moor Lane, Backwell In the previous Reg.19 (Additional Sites) consultation in March 2025, this site (as part of a larger area of land off Moor Lane) was identified as an "Other Potential" location, suitable for around 150 dwellings in total. The supporting text for this site states: "Site to the west of Backwell, adjacent to the railway and close to Nailsea and Backwell station. Potential is indicated on parts of site at lower risk of flooding. Development not considered suitable on parts of the site at higher flood risk due to presence of sequentially preferable alternatives." In general terms, RS supports the identification of this site as a potential location for residential development and considers that it should be included as an allocation in the emerging Local Plan. As the above text advises, the site lies within very close proximity to the Nailsea & Backwell rail station and is within walkable distance of other key facilities, including primary schools. As a designated "Category A" village, Backwell is clearly a sustainable location for additional growth and the site at Moor Lane represents a suitable site in this regard. As the local planning authority is aware, the site submitted here was the subject of a planning appeal, with outline planning permission for up to 35 dwellings having been refused in May 2024 (Application Ref: 22/P/0252/OUT). The Inspector dismissed the Appeal in April 2025, primarily on the grounds that there were outstanding concerns over the flood modelling undertaken and whether the post-development mitigation would increase flood risk elsewhere. Following this Appeal decision, Rubix' flood consultant (Rappor) has undertaken further baseline modelling, taking into account the concerns raised by the Council's flood consultant (JBA) at the Appeal Hearing. A bespoke pre-application submission was made by Rubix in August 2025, specifically to agree the baseline flood modelling. Following receipt of the Council's response in October 2025, a meeting between Rappor, NSC and JBA was held on 13 November to discuss outstanding issues. It is considered that all flood-related issues have now been resolved and Rubix is in a position to assess alternative development options for the site, based on this agreed baseline flood modelling, which will ensure that proposed development of the site can be designed to ensure it remains safe for its lifetime. In accordance with the PPG, this will negate the need for the site to be subject to the sequential test. On this basis, it is considered that the site can be allocated for development as the previous flood-related evidence is no longer relevant and so the conclusions on Moor Lane can no longer be justified.	1. Extension of the Plan period to at least 2042, in order to ensure that the Plan for North Somerset covers a period of at least 15 years from adoption, with a longer period likely to enable the Council to more effectively plan for future development in the area. 2. A higher housing requirement should be set to address evidenced affordable 3. Notwithstanding point 2 above, the total housing supply number should be increased to at least 26,945 to provide a 10% flexibility allowance, in line with South Gloucestershire Council's approach. 4. Allocation of the Rubix Strategic site at Moor Lane, Backwell (as indicated on the attached site location plan) for residential development 5. housing needs and to accommodate some of Bristol's unmet needs.		MR50007_1000A Site Location Plan.pdf
58582945	Nailsea Action Group		Nailsea Action Group	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The Local Plan's proposals for Nailsea and Backwell are not positively prepared. The allocation of 3,500 homes and 6.1 hectares of employment land is not supported by robust evidence that the required transport, school, health, and ecological infrastructure can be delivered in step with housing growth. The phasing strategy is vague and unenforceable, leaving a real risk that housing will be built without the promised infrastructure. This mirrors concerns raised by Inspectors in the Tandridge Local Plan examination (2023), where unresolved highway capacity issues and lack of secured funding for junction improvements led to findings of unsoundness. A plan that relies on aspirational measures without secured delivery mechanisms cannot be considered positively prepared under paragraph 35 of the NPPF.	As a plan that relies on aspirational measures without secured delivery mechanisms cannot be considered positively prepared under paragraph 35 of the NPPF, ensure the delivery mechanisms are securely deliverable.		
11678657	Bristol City Council		Bristol City Council	No	• Positively prepared	Yes	Yes	Bristol City Council suggests a modification to Policy SP8 ('Housing') which would include a commitment to an early review of North Somerset's housing policies to reassess whether North Somerset could accommodate any the unmet housing needs arising across the West of England area.	The suggested modification is to incorporate the following wording into Policy SP8: 'The appropriate level of new homes will be subject to an early review following the adoption of the Local Plan in order to take account of any unmet housing		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									needs of neighbouring authorities where these can be accommodated, in the context of the emerging Spatial Development Strategy for the West of England area.'		
57928993	Kevin Payne			No	• Justified • Effective • Consistent with national policy	Unsure	Unsure	I object to Strategic Policy SP8 because the Plan's housing strategy relies heavily on Green Belt release in Pill and Easton-in-Gordano without demonstrating exceptional circumstances or fully considering alternatives. The Plan does not show that housing needs could not be met through maximising brownfield land, higher densities in existing settlements, or cooperation with neighbouring authorities. This approach undermines the justification for the strategy and makes the proposed allocations in Pill and Easton-in-Gordano, including Pill Green and Pill Road, potentially undeliverable. The housing allocation detailed in this local plan directly conflicts with the existing Neighbourhood Plan, which was supported by 81% of voters and limits growth on principle; there is no demonstrated justification for overriding that democratic and statutory local policy. The proposed 600 homes at Pill Green represent a disproportionate share of growth for the parish, exacerbate cumulative impacts with nearby allocations, and are not supported by adequate infrastructure, transport, or evidence of sustainable development. As a result, SP8 is not justified, not effective, and not consistent with NPPF paragraphs 60–68.	To make SP8 sound, the Council must demonstrate that its housing strategy does not rely on unjustified Green Belt release and that reasonable alternatives have been fully explored. If exceptional circumstances cannot be shown, the strategy should be adjusted to remove or reduce allocations in Pill and Easton-in-Gordano, and/or show how housing needs can be met elsewhere.		
51207009	Barratt Bristol	Arwel Evans - Lichfields	Barratt Bristol	No	• Positively prepared • Justified	Yes	No	Policy SP8 explains that the Local Plan is to provide 24,495 homes to meet the requirement of 23,700 homes. This only provides a flexibility allowance of 795 homes (3.35%). This is a very low percentage and does not provide sufficient flexibility to meet the local housing need figure of 23,700 should any of the allocations run into delivery issues or if the windfall allowance is lower than anticipated. By way of comparison the emerging South Gloucestershire Local Plan includes a flexibility allowance of 10.5%. In our view this is a far more sensible figure that will assist the Council in meeting its local housing need figure as calculated by the standard method. There is a longstanding issue of poor housing delivery in North Somerset and it is therefore vital that there is sufficient flexibility in the number of sites to meet the requirement figure acknowledging that some sites will deliver slower or not at all. The total supply number should be increased to at least 26,945 to provide a 10% flexibility allowance. Bristol's Unmet Need It is important to note Bristol's unmet housing needs in the context of NSC's approach to meeting housing need in the draft Plan. NSC's Duty to Co-operate Statement of Compliance recognises unmet need from neighbouring authorities to be important strategic matters. It, however, concludes that Bristol's request for neighbouring authorities (including North Somerset) to accommodate some of its unmet need cannot be addressed as "…the evidence supporting the local plan demonstrates that North Somerset does not have capacity to meet some of Bristol's needs at this time" (pg. 20). Bristol City Council's (BCC) draft Local Plan is currently at Examination; the hearings have concluded and the 'Final Advice and Actions' letter from the Inspectors was issued on 21 November 2025. This includes some key conclusions on housing: 1 We acknowledge that there is insufficient capacity to meet the Council's objectively assessed housing need, as calculated by the standard method. Nevertheless, we do not consider the figure of 34,650 dwellings over the Plan period to be positively prepared or justified. Given the significant shortfall in meeting overall needs, and the current lack of agreement between Bristol and any neighbouring authorities to provide assistance, we consider it imperative that the Council seeks to maximise housing delivery. Inherent uncertainties in housing delivery in the longer period do not justify setting a housing requirement substantially below the overall housing capacity figure identified at submission; 2 The Council should draft MMs which set the housing requirement to be the 39,915 dwellings' capacity that was identified at submission [we note this is an additional 5,265 homes, adding to unmet need]; and 3 The Council must also set out what the level of unmet housing need is. While the objectively assessed housing need may change over time, we consider it necessary for this Plan to be clear about the situation at the time of adoption. This may, for example, be important in continuing work being done on other Plans. This is highly relevant, as Bristol has a significant remaining unmet need and this must be accounted for by neighbouring authorities including North Somerset, South Gloucestershire and Bath & North East Somerset, who are all preparing new local plans. To date no other local authority has positively responded to BCC's request confirming their inability to accommodate any unmet need, which further amplifies the issue. The various plans are deferring their obligations to deal with these important cross boundary issues which will only serve to increase affordability pressures within North Somerset and Bristol. NSC's availability of other sustainable opportunities to accommodate some additional growth for BCC's unmet need will require further consideration at the Examination. Policy SP8 is unsound as it is not based on proportionate evidence as required by the 36b) test of soundness (justified). SP8 does not provide a strategy to meet the area's objectively assessed needs as a minimum. Effective joint working with neighbouring authorities (i.e. Bristol) has not been properly evidenced. It is clear that the supply identified through the emerging Plan will not deliver the required number of houses during the Plan period. The strategy also fails the 'effective' test of soundness as the strategy put forward is not effective in delivering the growth that is required.	The total supply number should be increased to at least 26,945 to provide a 10% flexibility allowance. Bristol's unmet need should be properly considered.		
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	• Positively prepared • Effective • Consistent with national policy	Yes	No	The housing requirement is set over the plan period of 2026 to 2041 – equivalent of 1,580 homes. However, it is notable that the plan period is unrealistic and is likely to run until 2042 (reflecting 15 years (minimum) from adoption in 2027). The reason for changing the plan period is that the Local Development Scheme published in February is already out of date in its local plan preparation timings by around 6 months as it stands. It follows that adoption is pushed into the Spring of 2027. In that regard, it would be sensible to include a further year's uplift in the housing requirement – so a further 1,580 homes – thereby increasing the requirement for 2026-2042 to 25,280 homes – with is significantly above the Standard Method requirement and the 24,495 that the spatial strategy allocations sum to.	The Policy should be amended so to reflect the contents of this representation. However, the distribution of houses should be corrected with a view to increasing the proportion on homes in Portishead – with sites identified to accommodate that quantum. The additional homes to be sourced from the redistribution of homes from those settlements not capable of realistically delivering homes in the next 5 years or longer; and by		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								As a result, it is sensible for the draft Local Plan to reconsider its housing requirement and plan for the shortfall. It would be sensible too for this to be done now in advance of the Submission of the Local Plan as this is only a matter which the Examination will need to consider. The draft Local Plan should be deemed sound by the Council before its Submission – and it should have been addressed with corrections before the Plan's consultation. Spatial Distribution: The quantum of development is disproportionate to the district settlements – reflecting a flawed spatial distribution policy. There should be more sites, with those larger unsustainable allocations reduced in size. The number of homes (and proportion of homes) identified for each settlement does not reflect accurately the status and level of sustainability of key settlements or the effect of site constraints – notably flood risk given that the Council is taking a very precautionary approach in allocating homes in areas susceptible to flooding. To be clear, and as presented in National Policy, flooding takes numerous forms: tidal, river and surface water. The sites identified and the capacities presented do not, in some cases reflect these constraints. Therefore an inconsistent and therefore unsound approach/ methodology has been applied. The Plan cannot be said to be positively prepared, justified, effective or consistent with national policy. Weston-super-Mare – whilst it is the largest and most sustainable location, some draft allocations are located in areas susceptible to flooding (having regard to the Flood Risk Maps), and therefore the approach to identification of sites outside of areas that flood areas does not appear to be being followed. Wolvershill – this is an allocation on the eastern edge of Weston-super-Mare which does not appear to follow any clear logic. It is a substantial allocation and one which means other settlements are prejudiced. It is allocated as it is outside of the flood plain only - and that does not mean it is locationally sustainable. It prejudices the ability of other sites to come forward as allocations where mitigation can form part of the scheme's development. The development trajectory of the site is significantly over that which is realistic, which itself prejudices the a healthy rolling 5 year supply of homes. This allocation requires careful scrutiny. Woodspring – this allocation represents a site which borders Bristol and therefore, geographically, supports Bristol's needs – albeit it is not made up of the redistribution of unmet Bristol housing need. Nailsea and Backwell – Having regard to the number of homes proposed and then breaking those down on a site specific basis, it is noted that with a total of some 3,728 homes planned, high quality accessibility (so to facilitate permeability) is fundamental to achieve this quantum. It is noted that for land taking access off Youngwood Lane (and so allocations "South of Nailsea" for 582 homes and "Youngwood Lane" for 282 homes) to benefit from access to the north up to The Perrings. Therefore, it would be beneficial for the Youngwood Lane junction with The Perrings to be recognised as a key component of the development and referenced at Schedule 1 Large Sites at the sites' requirements. Ready access can be provided as evidenced in the submitted information supporting this representation. Pill and Easton-in-Gordano – receiving 4% of the housing numbers (1100 homes) its centre is constrained as is its level of centre offer, but the difference between the village and Portishead in terms of quantum is only some 37% which is inexplicable when considering the profile and status of Portishead. Portishead – in receiving just 7% of the planned housing growth (1601 homes) given that Portishead was until recently, Europe's fastest growing town is bewildering. The town has seen a growth is services and facilities – but as with other towns has seen a contraction in some areas. There needs to be further development directed at the town through urban growth. The town is proximate and accessible by a choice of mode of transport to Bristol and the major employment areas of Royal Portbury Dock, Avonmouth and Severnside. The town is also seeing major investment in infrastructure through the reinstatement of its railway line within the next three years – with train services running between the town and central Bristol. From a sustainability appraisal perspective, the town should be receiving a significantly greater proportion of the housing requirement – so that it can respond to need for new housing in attractive locations that also respond to neighbouring Bristol's unmet need. Clevedon – it has constraints and notably housing sites are identified that are in Flood Zone 3. There needs to be a strategy for its growth and regeneration that responds to local constraints. Villages and rural areas – the Council's approach to development in villages is confused. Settlements, such as Yatton which are served by train stations are inherently sustainable. This has reinforced by the Government in a recent Ministerial Statement highlighting specifically the opportunities for housing development proximate to train stations. Therefore, it is important for North Somerset to respond to this now, and positively, to meet its housing supply obligations. Yatton presents such opportunities with land at Rectory Farm (North) benefitting from being close to and accessible from a train station. It has planning permission for the development of up to 190 new homes (50% affordable). This site should be allocated in the emerging local plan and its quantum included in the overall supply for the district – being a commitment. Of particular note is the omission of any reference to Bristol City Council's unmet need. Whilst it has been recently suggested by Government that that in 2026 the Duty to Cooperate will no longer be a policy requirement, what remains – and has, obviously, been the case always, is for neighbouring local authorities or those that have a close relationship in neighbouring cities or major urban areas, to engage in constructive inter-district or regional planning. That ensures a plan is effective. Such joined up working naturally delivers better results more promptly. It is accepted that some 10,400 homes cannot be accommodated by the neighbouring Bristol City Council and therefore neighbouring authorities should assist in meeting (accommodating) this unmet need. For North Somerset this means that sites must be found to accommodate a proportion of these homes. Through engagement with Bristol City Council on this longstanding issue, North Somerset must, by now, have agreed a solution and agreed to accommodate some of Bristol's need, not merely evidenced discussions about it. Should it be that, say 40% of the unmet need requires redistribution then just over 4,000 new homes should be added to the overall requirement for the district and distributed to locations that respond to Bristol's needs and supports North Somerset's growth.	addressing Bristol's unmet need through further homes. The distribution of the sites should also be considered given that development at Wolvershill is of a scale that prejudices the delivery of other sustainable sites that are capable of bolstering housing supply.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								To be clear, it is unacceptable for the district to come forward with a plan which ignores this matter or simply does not address it because it is not, yet, a member district of WECA. Such an approach is not forward planning but ducking an issue.			
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	• Positively prepared • Consistent with national policy	Yes	No	A delivery trajectory is provided for Wolvershill within the evidence base of 200 homes per annum in the "Appendix I – Development appraisal and assumptions build up and overview". This does not appear to be evidenced elsewhere - in the evidence base documentation. 200 homes per annum is a significant number on a large strategic site - and there is no evidence that such a rate has been achieved in North Somerset historically. Indeed the housing delivery rates across the district have been overestimated consistently by the district which has distorted and adversely affected the Council's 5 year housing supply position. There is no full, transparent site delivery information presented in the evidence base supporting this consultation.	There should be clear information relating to housing delivery rates for sites so to asses the likelihood of delivery. Without this information, the plan is fundamentally flawed as no certainly can be provided relating to the Council meeting its housing supply obligations.		
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	No	The draft Local Plan does not recognise nor look to clearly remedy the housing land supply shortfall. Having regard to the appeal decision notice with regard to APP/D0121/W/24/3343144 in respect of the an application for up to 190 new homes at Yatton, approved March 2025, the issue of housing supply and the delivery of market housing was a key topic for discussion. There was a material and significant shortfall in assessed housing land supply between 2024-2029 with the Council and Persimmon Homes suggesting a figure of between 3.07 years and 2.33 years respectively - with the Inspector at that time concluding 2.79 years' supply. Since then there has been no significant uplift in delivery. The Inspector considered that the Yatton site would make a useful contribution towards supply given that the Local Plan clearly needed to allocate more homes to address the shortfall and satisfy forecast needs. Given that there is no clear trajectory presented regarding the delivery of the sites identified, then this is a matter which requires scrutiny, and careful consideration and a positive response.	The Council, in identifying the site allocations should ensure that they are deliverable in their entirety and the Inspector should be comfortable that accurate delivery trajectories have been presented to ensure this.		
62802881	John Polden			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The plan's section on housing is largely silent on the type of housing to be provided to comply with the overall housing targets. In my opinion this misses a serious opportunity to rethink the provision of housing and move away from the implicit assumption that most of the housing will be provided by private developers building on green fields. The country's urgent need is for high density, starter homes and social housing that are much better organised by local government (see attached letter). Such housing should be sited near public transport service hubs rather than the implicit assumption that cars will continue to be the primary transport mode in the area	The plan should include a projection of housing needs in the area highlighting the social and financial nature of the housing to be provided. I believe this will support my assertion that the primary need is for well designed high density, starter homes and social housing.		NSC REG 19 LOCAL PLAN 2041^J Autumn 2025 consultation.pdf
63026465	South West Housing Association Planning Consortium		South West Housing Association Planning Consortium						As prescribed by the government’s standard method for calculating housing need, the minimum number of new dwellings required in North Somerset is 1,580 dwellings per annum, or 23,700 dwellings over the 2026 to 2041 plan period. This is evidenced by the Local Housing Needs Assessment (“LHNA”) (2025). It is positive to see that draft Policy SP8 sets out that land will be allocated to deliver a minimum of 23,700 dwellings in North Somerset between 2026 and 2041, equivalent to 1,580 homes per year, in line with local housing need. The SWHAPC welcomes that since the previous Regulation 19 consultation, the Council has increased its proposed housing requirement for the plan period by 59%, up from 14,902 dwellings. The increased housing requirement will help to significantly boost the delivery of much needed affordable housing across the authority in sustainable locations. The draft Local Plan does not provide for the unmet needs of Bristol. The Inspectors for the Bristol Local Plan issued its final advice to Bristol City Council on 21 November 2025 ‘IN11: Final advice and actions arising from the Council’s responses to IN7 to IN10’ which acknowledges that there is insufficient capacity to meet the Council’s objectively assessed housing need. The Inspectors require Bristol City Council to set out what the level of unmet housing need is, to be clear about the situation at the time of adoption, which may be important in continuing work being done on other Local Plans. The NPPF requires North Somerset Council to undertake effective cooperation with Bristol City Council and to consider the ability to address Bristol’s unmet needs.The supporting text to draft policy SP8 recognises that addressing affordable housing needs is an important component of sustainable development. The SWHAPC is supportive of the broad distribution of new dwellings in accordance with the spatial strategy, given that it allows for the delivery of new affordable homes in all settlements in urban and rural areas. This will help to meet local needs and sustain rural communities. The Council’s viability work has not tested the viability of 50% affordable housing on Green Belt sites, as required by national policy.			1118-35.M5 Local Plan 2041 Pre-submission plan (Reg 19).pdf
51242657	Rubix Strategic Limited	Arwel Evans - Lichfields	Rubix Strategic Limited	No	• Positively prepared • Justified • Effective • Consistent with national	No	No	Local Plan Period The draft Plan is based on a plan period of 2024 to 2041. This is the minimum 15-year period which is specified by national policy for strategic polices and relies on the Plan being adopted in 2026. It is likely that the Examination and adoption process will go beyond 2026 (supporting text on Page 10 of the Plan acknowledges that “adoption is not expected until late 2026”), meaning that there is a high risk that the Plan will not meet national policy expectations for strategic policies to cover a minimum 15-year period.	1 The Plan as proposed risks not allowing for sufficient time (15 years from adoption) to meet a basic requirement for strategic polices set by national policy. A longer plan period is required to ensure that the Plan for North Somerset covers a period of at least 15 years from adoption, with a longer period likely to enable the Council to more effectively plan for future development in the area.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					policy			National policy also encourages local plans to take a longer-term view and, where strategic policies contemplate larger scale developments, that policies should be set within a vision that looks further ahead than 15 years. A plan period that is longer than 15 years will help the Council plan positively and effectively for the area and consideration should be given to strategic policies that cover a period in excess of 15 years. As a minimum, the plan period should be extended to 2042. Quantity of New Homes Policy SP8 identifies that land will be identified to secure the delivery of a minimum of 23,700 dwellings within North Somerset during the 15 year period 2026-2041. This is a rate of 1,580 dwellings per annum and is based on the Government's standard method requirement for calculating local housing need, as updated following the publication of the December 2024 NPPF. This housing requirement is a significant increase compared to previous versions of the Plan, where 14,902 dwellings were proposed in the period 2024 to 2039. The decision of NSC to pause the progress of its Plan, in order to identify additional site to meet the up-to-date (higher) housing requirement, is wholly supported and will ensure that the Plan is positively prepared, to meet up-to-date housing needs. This will ensure that it is robust over the longer term. However, the NPPF is also clear that local housing need derived from the standard method requirement is a minimum figure and any final housing requirement should take into account affordable housing needs, ambitions for economic development and any unmet includes within neighbouring authorities. Local Housing Need Whilst we recognise the housing requirement in Policy SP8 is expressed as a minimum, evidence documents such as the Local Housing Need Assessment (September 2025) (LHNA) point to the need for more homes to be planned for. The LHNA confirms that there is a total net affordable need of 10,577 homes - based on a housing requirement of 23,700 homes, this would require 45% of all homes to be delivered as affordable housing. However, whilst 50% affordable housing is currently proposed on Green Belt release sites, 30% is proposed (based on viability testing) on other greenfield sites and 20% on brownfield sites. In addition, the Council's viability work by Dixon Searle Partnership (October 2025) indicates that affordable housing at more than 30% at Nailsea and Backwell and beyond 35% in South West Bristol and Pill/Easton-in Gordano is unlikely to be viable. Overall, therefore, affordable housing needs will not be met by the current proposed levels of housing, and there is a case for the final housing requirement to be set higher. Bristol's Unmet Need It is important to note Bristol's unmet housing needs in the context of NSC's approach to meeting housing need in the draft Plan. NSC's Duty to Co-operate Statement of Compliance recognises unmet need from neighbouring authorities to be important strategic matters. It, however, concludes that Bristol's request for neighbouring authorities (including North Somerset) to accommodate some of its unmet need cannot be addressed as "…the evidence supporting the local plan demonstrates that North Somerset does not have capacity to meet some of Bristol's needs at this time" (pg. 20). Bristol City Council's (BCC) draft Local Plan is currently at Examination; the hearings have concluded and the 'Final Advice and Actions' letter from the Inspectors was issued on 21 November 2025. This includes some key conclusions on housing: 1 We acknowledge that there is insufficient capacity to meet the Council's objectively assessed housing need, as calculated by the standard method. Nevertheless, we do not consider the figure of 34,650 dwellings over the Plan period to be positively prepared or justified. Given the significant shortfall in meeting overall needs, and the current lack of agreement between Bristol and any neighbouring authorities to provide assistance, we consider it imperative that the Council seeks to maximise housing delivery. Inherent uncertainties in housing delivery in the longer period do not justify setting a housing requirement substantially below the overall housing capacity figure identified at submission; 2 The Council should draft MMs which set the housing requirement to be the 39,915 dwellings' capacity that was identified at submission [we note this is an additional 5,265 homes, adding to unmet need]; and 3 The Council must also set out what the level of unmet housing need is. While the objectively assessed housing need may change over time, we consider it necessary for this Plan to be clear about the situation at the time of adoption. This may, for example, be important in continuing work being done on other Plans. This is highly relevant, as Bristol has a significant remaining unmet need and this must be accounted for by neighbouring authorities including North Somerset, South Gloucestershire and Bath & North East Somerset, who are all preparing new local plans. To date no other local authority has positively responded to BCC's request confirming their inability to accommodate any unmet need, which further amplifies the issue. The various plans are deferring their obligations to deal with these important cross boundary issues which will only serve to increase affordability pressures within North Somerset and Bristol. NSC's availability of other sustainable opportunities to accommodate some additional growth for BCC's unmet need will require further consideration at the Examination. Housing Supply and Delivery The NPPF requires that strategic policies should include a trajectory illustrating the expected rate of housing delivery over the plan period, with consideration given as to whether it is appropriate to set out the anticipated rate of development for specific sites. The Plan does not contain / is not accompanied by any broad or detailed housing trajectory which identifies the proposed or expected delivery of housing across the plan period, or from key strategic sites (such as Land East of Backwell). Given that no housing trajectory has been provided, it is not clear from the Plan that a sufficient	2 There is concern, and risks in respect of the soundness of the Plan, that whilst seeking to meet the minimum level of housing need identified using the standard method, a higher housing requirement should be set to address evidenced affordable housing needs and to accommodate some of Bristol's unmet needs. 3 There is concern, and risks in respect of the soundness of the Plan as proposed, that no housing delivery trajectory has been provided for the Plan as a whole, or for the specific sites which are identified as part of the proposed strategic policies. This should be addressed as part of the submission of the Plan, given some of the allocated sites' housing delivery will fall beyond the current plan period.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								deliverable supply of housing sites during the first five years of the plan will be achieved. Nor is it clear how the Council anticipates housing to come forward on allocation sites to meet the minimum housing requirements over the plan period. The absence of a delivery trajectory and a lack of clarity in respect of housing delivery during the first five years of the new plan period and over the plan period as a whole is a clear omission and should be addressed pre-examination. Once the Council has published it housing delivery trajectory, we may wish to comment further on the assumptions being made during the Examination. Given that the Plan includes large-scale strategic allocations for new homes, it would be appropriate for this policy to be accompanied by a delivery trajectory, to identify the expected delivery of new homes in these locations, either as part of a comprehensive trajectory for the plan associated with Policy SP8, or to accompany policies specifically associated with the strategic allocations. It is important to ensure that these trajectories provide a realistic assessment of deliver that can be expected from each site in the Plan period, with realistic lead in times and delivery rates. Policy SP8 explains that the Local Plan is to provide 24,495 homes to meet the requirement of 23,700 homes. This only provides a flexibility allowance of 795 homes (3.35%). This is a very low percentage and does not provide sufficient flexibility to meet the local housing need figure of 23,700 should any of the allocations run into delivery issues or if the windfall allowance is lower than anticipated. By way of comparison the emerging South Gloucestershire Local Plan includes a flexibility allowance of 10.5%. In our view this is a far more sensible figure that will assist the Council in meeting its local housing need figure as calculated by the standard method. There is a longstanding issue of poor housing delivery in North Somerset and it is therefore vital that there is sufficient flexibility in the number of sites to meet the requirement figure acknowledging that some sites will deliver slower or not at all. 4.20 The total supply number should be increased to at least 26,945 to provide a 10% flexibility allowance. Summary 1 The Plan as proposed risks not allowing for sufficient time (15 years from adoption) to meet a basic requirement for strategic polices set by national policy. A longer plan period is required to ensure that the Plan for North Somerset covers a period of at least 15 years from adoption, with a longer period likely to enable the Council to more effectively plan for future development in the area. 2 There is concern, and risks in respect of the soundness of the Plan, that whilst seeking to meet the minimum level of housing need identified using the standard method, a higher housing requirement should be set to address evidenced affordable housing needs and to accommodate some of Bristol's unmet needs. 3 There is concern, and risks in respect of the soundness of the Plan as proposed, that no housing delivery trajectory has been provided for the Plan as a whole, or for the specific sites which are identified as part of the proposed strategic policies. This should be addressed as part of the submission of the Plan, given some of the allocated sites' housing delivery will fall beyond the current plan period.			
58613377	Hill Residential Ltd	Marrons		No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Policy SP8: Housing confirms just 12% of the housing supply will be met in 'villages and rural areas'. With regard to the above, the Council is reminded that Paragraph 73 of the NPPF states the following: "Small and medium sized sites can make an important contribution to meeting the housing requirement of an area, are essential for Small and Medium Enterprise housebuilders to deliver new homes, and are often built-out relatively quickly." The NSLP continues to prioritise new residential development in or close to urban areas, optimising opportunities to encourage active and public transport modes of travel. Whilst our Client supports this in principle, in our view it does not provide the context to fully consider the role of the grey belt and opportunities to promote/improve sustainable transport options in rural areas. Bristol's unmet need: No mention is made within the NSLP regarding Bristol City Council's demonstrable and increasing unmet need. Bristol currently has an unmet need well in excess of 10,500 homes which it cannot meet within its boundary. Both South Gloucestershire to the north and Bath and North East Somerset to the south have confirmed difficulties in meeting their own needs, and therefore an inability to meaningfully assist Bristol in meeting its unmet needs. The West of England Combined Authority (WECA) was established in 2017, following a devolution deal between Bristol, Bath and North East Somerset, and South Gloucestershire. In line with the Government's proposed move to strategic planning authorities, WECA is now taking a more active role in planning across the strategic region, and recently announced work had commenced on a Spatial Development Strategy. Alongside this, North Somerset continues to confirm its intention to join WECA, becoming the fourth local authority alongside Bristol, Bath and North East Somerset, and South Gloucestershire. Our Client's Site is located in close proximity to the western edge of Bristol and therefore provides an opportunity to enhance connectivity between Bristol and North Somerset, whilst assisting with the unmet housing needs of Bristol. This in turn will also accord with the wider strategic objectives of WECA, in strengthening the connections between the local authority areas. When considering a neighbouring authorities unmet need there is also a requirement to consider and support development that can come forward quickly to address this unmet need. Housing supply: Paragraph 61 of the NPPF states that it is important to support the Government's objective of significantly boosting the supply of homes, for a sufficient amount an variety of land to come forward where it is needed. Paragraph 62 of the NPPF also states the following: "To determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning practice guidance. In addition to the local housing need figure, any needs that cannot be met within neighbouring areas should also be taken into account in establishing the amount of housing to be planned for." (our emphasis - see attached document) Since the previous consultation, the Council has addressed its updated housing need and proposes allocations to meet the delivery of a minimum of 23,700 dwellings within North Somerset. Overall, our		Marrons on behalf of Hill Residential - Reg 19 Representations Final w_a.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Client considers this to be a positive step. Notwithstanding. Policy SP8: Housing confirms the Council's proposed housing supply totals 24,495 dwellings, when compared to the minimum requirement of 23,700, this represents only a 3% uplift. When divided across the plan period, the Council has given itself a 53 dwelling per annum tolerance. The Planning Practice Guidance states that the Standard Method for calculating housing need provides a minimum number of homes to be planned for and suggests authorities use this as a starting point. Our Client therefore does not consider the calculated housing requirement should be seen as a 'target', particularly where exceptional circumstances existing in Bristol which require neighbouring authorities to consider whether further need can be accommodated. Moreover, it is essential that the housing trajectory is robust and attempts to sustain a rolling five year housing land supply throughout the Plan period, in accordance with the NPPF. Paragraph 72 of the NPPF states that planning policies should identify the supply of specific, deliverable sites for five years following the adoption of the plan. Paragraph 78 of the NPPF states the following: "Strategic policies should include a trajectory illustrating the expected rate of housing delivery over the plan period, and all plans should consider whether it is appropriate to set out the anticipated rate of development for specific sites." We have been unable to find, either within the strategic policies or within the evidence base of the NSLP, a housing trajectory which details which sites are expected to come forward and when, alongside confirmation that this also enables the Council to demonstrate a five-year housing land supply upon adoption.			
30361825	K Riches			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The inclusion of Nailsea and Backwell as a single Strategic Location hides the true impact of proposed new housing in the Village of Backwell - an amount which is totally unreasonable.	Nailsea and Backwell should be treated separately.		
30659873	Penelope Riley			No	• Positively prepared • Justified • Effective	No	No	Legal compliance and Duty to Cooperate As explained in response to policies SP7 and SP8 Portishead Town Council (PTC) consider that the draft local plan has not been informed by full and effective cross border discussions regarding housing need and the sustainable location of new development. PTC has reviewed the duty to cooperate statement and considers that the relationship with Bristol and Bath to be unclear in terms of meeting housing needs. The statement explains that the plan area is strongly influenced by the adjacent larger urban areas and whilst it states that each authority agreed to meet their own housing need within their own boundaries, it is unclear how each strategy and approach to housing interacts. Soundness To be considered 'sound' the North Somerset Local Plan (NSLP) must be positively prepared, justified, effective and consistent with national policy. PTC consider that policy LP5 is not sound for the following reasons: Positively prepared To meet this requirement, the NSLP should be prepared based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, consistent with achieving sustainable development. This assessment should also be informed by agreements with other authorities, so that unmet needs from neighbouring areas are accommodated where it is practical to do so and consistent with achieving sustainable development. Page 32 of the draft NSLP explains that the minimum number of new dwellings that the council is required to plan for over the plan period is 23,700, however the plan proposes 24,495. This is in excess of the level identified by the Government. PTC acknowledges that there is a requirement for significant levels of housing to be planned for. However, the strategy must be consistent with achieving sustainable development. It is considered that the proposed approach, to distribute 7% of the housing supply within Portishead would not deliver sustainable development. Justified To meet this requirement, the NSLP should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate, robust and credible evidence. Given the above, Portishead Town Council contends that two specific sites in Portishead "Tower Farm" and "Black Rock, north of Clevedon Road" do not conform to an approach that is the most appropriate strategy. PTC consider that these sites are not justified as the most appropriate locations for housing development. The key concerns relate to the environmental impact of the site on the adjacent Weston Big Wood Site of Special Scientific Interest and Gordano Valley Strategic Green Corridor, landscape impacts, sustainability of the site, access, and highway safety	There are other sites available in Portishead such as Wyndham Way (brown field) and HE20488 Land South of Clevedon Road which are within Portishead that have much better access to the full set of retail and community services in and around Portishead High Street, and where development would do far less damage to the environment. These alternative sites are much more sustainable being substantially closer to the new Portishead Railway station and an easy walking distance over flat terrain to bus services . There are at least 23 brownfield sites across North Somerset that could accommodate higher densities and are more sustainable locations with less environmental constraints.		
32388609	James Ryan			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	It is not sound because other avenues have not been exhausted ideally towns derelict areas or empty properties. Roads etc are not big enough to take this strain. Village will disappear and become a town.	There are no modifications that would make any justifyable reasons why you would entertain building on green belt when other options are available. Why build houses here when there are better locations that can take these houses. ? The roads are already busy .	Legally you do not build on green belt for houses that alone is not enough. It us there for a reason.	
32388609	James Ryan			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	I want the village to stay as a village not a mini town. Portbury roundabout traffic and the A369 will be horrendous. We want clean air and be able to walk across fields seeing wildlife in open spaces. It is green belt for a reason. Why do we need all these houses when we have houses for sale already. The places to build are in towns edge of towns .these should be built on first and in line with regulations. Not tare up green fields and ruin our green and pleasant land. I am an elderly resident and can remember the village having a lovely character. It should stay as it is .There is no need to build anywhere in this district to create more problems when infrastructure exists already in towns.	To throw out the plans. It is not needed. It will not help the village but destroy it. Where are all these people coming from?	It is unsound because breaching the agreements associated with the green belt

32388609	James Ryan			No	• Justified • Effective	No	No	No because I believe the green belt does not appear to follow national policy. The infrastructure does not support the proposals. Also trying to create a concrete jungle yet will live in a village that suits us. Traffic is bad at the best of times. You cannot rely on the train as it us not up and running yet. Even when it is will it be sustainable? Waiting an hour and trains sharing one track is hardly sustainable.	Remove the allocation at Pilland Easton in Gordano .Do not release green belt land. Reassess the green belt properly. There are old buildings in the city that could be knocked down and rebuilt. You could build tower blocks to take high numbers in towns where the infrastructure already is there.	No i do not support the soundness or legal compliance of the plan.	
32388609	James Ryan			No	• Positively prepared • Justified • Effective	No	Unsure	I am young and don't want houses to ruin the fields. You cannot just build on green belt without a good reason. You have to build on brown belt and places that can take all these people. We are a village and are fine as we are we do not need more houses. You should be trying to make the place better not worse.At the moment you have to wait weeks to see a G.P. As I go to the hospital often the traffic can get jammed on the A369.More houses mean more cars.The train will not make a difference . It just is all excuses to build when we do not need them around here	There is nothing you can do at the moment which makes it ok to build on green belt. You have not built on towns or cities where there are many run down places that can house mire people. Next should come brown belt after that. That is how you should do it	I do not agree with any of it.	
32388609	James Ryan			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	Unsure	Too much. It will overload the village with roads doctors etc. The sewage it is a lot of marsh land. Taking up the land that should not be used without looking at the other proper locations. A village is a village it should not be made into a town.	All locations are green belt meaning they can only release under exceptional circumstances. As other areas have not been explored towns that makes this unsound.	No i do not wish to support this	
32388609	James Ryan			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Not thought of the traffic. Not thought of who lives here. Legally you should be building in run down areas derelict areas like bedminster/ ashton/ weston super mare. Where they cope . Pill is only a village only 3 exits out of pill. All of them are busy at crucial times of the day. We don't need more houses when we already have houses for sale. We don't want it to become a town and lose its character.	No because it is green belt.	No because it is unsound..not thought outside the box just a way to make money.akso not thinking of the consequences. I have lived in the village for 40 years. .20 years not in the village .my late parents would also agree with my comments	
51445569	Fran Slade			No	• Positively prepared • Justified	No	No	What about infrastructure, there will not be enough Hospitals, Schools, Doctors surgeries and all other facilities that affect the population.	Revert back to the housing targets in the initial Local Plan that was based on sound analysis.		
51079969	Justin Saunders		Pill and Easton-In-Gordano Parish Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	Yes	The policy identifies 24,495 houses when the requirement is for 23,700 over the term of the plan. This represents an oversupply of 795 houses. Pill and Easton-In-Gordano Parish represents around 2% of the population but is expected to provide 4% of the housing (one location is in Abbots Leigh but is adjacent to Pill and Easton-In-Gordano). As the rate of 1,500 per annum is unsustainable based upon historical figures. Removing these 795 from LP4 aligns growth in Pill and Easton-In-Gordano with community needs using sites previously built rather than green belt farmland.	LP4 should be withdrawn and a smaller more proportional development proposal put forward using previously built on sites which would keep within the overall housing target.		
30736993	Kath Scargill			Yes		Yes	Yes			I support more housing generally especially for young people particularly at Portishead	
63107361	Gladman Developments		Gladman Developments Ltd	Yes						The Government's aim is to significantly boost the supply of housing, setting an aspirational target of building 1.5 million homes. To achieve this goal, the NPPF requires the Council to use the updated standard methodology when setting the housing requirement and Councils must ensure this is met in full. The NPPF is clear that the standard method should be used	Gladman Developments - North Somerset Pre-Submission Plan (Reg 19).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										as a starting point unless there are exceptional circumstances that justify a different approach. The PPG sets out that there will be circumstances where the housing requirement could be increased to a level higher than that identified through the application of the standard method1. These circumstances include but are not limited to: Where growth strategies are in place, particularly where those growth strategies identify that additional housing above historic trends is needed to support growth or funding is in place to promote and facilitate growth (e.g. housing deals); Where strategic infrastructure improvements are planned that would support new homes; Where an authority has agreed to take on unmet need, calculated using the standard method, from neighbouring authorities, as set out in a SoCG; Where previous delivery levels have exceeded the minimum figure identified; and Where recent assessments of need, such as a SHMA, suggest higher levels of need. Gladman support the Council's use of the stock-based standard method, as the basis for determining the minimum annual housing requirement. This results in 1,580dpa equal to a minimum overall housing requirement of 23,700 dwellings over the 2026-2041 plan period. There	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										may be a requirement for the Council to include an apportionment of unmet housing and/or employment need from Bristol. This will be subject to further discussions between the neighbouring authorities under the Duty to Cooperate moving forward with the Local Plan. It is critical that the Council provide sufficient headroom within the housing supply. Typically, many planning experts advocate the need to identify sufficient deliverable sites to provide a 10-20% buffer between the housing requirement and supply to ensure a responsive supply of housing land is available. As currently drafted, there is only a headroom for a flexibility of 3.35% (+795 dwelling surplus). Gladman are supportive of the distribution of development outlined in draft Policy S8, although suggest that the proposed level of development within the plan period may need to be kept under review up to the point of submission of the Plan as expectations may be revised in response to comments received as part of this consultation.	
50493793	M Slade			No	• Consistent with national policy	No	No	The UK government through the NPPF has "imposed" these massively increased housing targets on NSC but do not have the jurisdiction to do so as they have already stated they would need a court order. NSC need to stand up to the government and these draconian measures that are being imposed on it. Courts only become involved if a council challenges the legality of government action but this has not been tested and needs to be.	Revert back to the housing targets in the initial Local Plan that was based on sound analysis rather than this chaotic governments whim.		
49505505	J Slade			No	• Justified • Consistent with national policy	Unsure	No	The UK government through the NPPF has "imposed" these massively increased housing targets on NSC but do not have the jurisdiction to do so as they have already stated they would need a court order. 								This plan will turn our town into a city, given the number of people who would occupy them. The current infrastructure wouldn't support the increase in population. If this plan went ahead, who would the new homes be for? How can you predict what the increase in population would be? Is this consultation with the residents actually worth completing, as by the time this plan is put into practice, the goal posts will have been moved again? I strongly believe that whatever proposals are put to us, at a local level, the government at that given time will overturn them and they will force North Somerset Council to proceed with their agenda, and residents will have to take it, without being heard.			
62849409	Lizzie Slocombe			No	• Positively prepared • Justified	Unsure	Unsure	I feel that the revised pre-submission plan has not considered the impact on specific localities in sufficient detail and that the scale of building in specific areas is not justified. The documentation is not convincing that the "assessed needs" include building 1000 houses on green belt land, or that "reasonable alternatives" have been accounted for.	Reducing the scale of the development. Ensuring any planned building includes infrastructure such as schools, doctors and dentists - and these are actually included on the plans, not just mentioned.		
62437057	Sarah Snell								I am writing to formally object to the proposed large-scale housing developments in Wrington, as detailed in the North Somerset Local Plan. These proposals would have significant and irreversible impacts on Wrington’s infrastructure, environment, and heritage. 1. Butts Batch Threat to Heritage and Infrastructure: Previous applications for this site have been refused due to serious impact on heritage assets and lack of adequate nfrastructure. These concerns remain unchanged and still apply. Environmental Destruction: This area supports important biodiversity and wildlife habitats. Development would lead to irreversible ecological damage. 2. Cox’s Green Loss of Agricultural Land: This is active, thriving farmland that would be lost forever if development proceeds. Increased Traffic and Safety Concerns: Wrington’s narrow, rural roads already face congestion and safety risks for pedestrians and cyclists. Additional housing would significantly worsen these conditions. Strain on Local Services: Schools: Wrington Church of England Primary School is usually oversubscribed, with no capacity for additional students. Healthcare: Local GP services are under increasing pressure, with extended waiting times. More housing will exacerbate these issues. Sewerage and Drainage: Wrington’s drainage system struggles during heavy rainfall. Further development could increase the risk of flooding. Flooding Risks: This site has a history of flooding. Building here would exacerbate drainage problems and increase risks to surrounding properties. 3. Land East of Wrington (Rickyard Road and Rydings Farm Area) Traffic and Infrastructure Overload: Development in this area would place excessive pressure on Wrington’s roads and services, worsening congestion and accessibility for residents. 4. Land at The Alburys/West Hay Road Loss of High-Quality Farmland: This is Grade 2 agricultural land, a valuable and irreplaceable resource that should be protected. Developing this land contradicts sustainability principles. 5. Garston’s Orchard Severe Flooding and Environmental Damage: Previous applications for this site have been refused due to its high flood risk. Development here would jeopardise properties and worsen existing environmental issues. Loss of Natural Habitats: This site plays an important role in local wildlife conservation. Construction would permanently destroy critical ecosystems. 6. Cumulative Impact on Wrington Beyond the concerns associated with individual sites, the combined effect of these developments would: Overwhelm local roads and increase congestion – particularly near the A38, West Hay Road, and Butts Batch. Place an unbearable strain on public services, including schools, healthcare, drainage, and transport infrastructure. Encroach on Wrington’s countryside, permanently altering its rural character. Exacerbate flood risks, especially in Cox’s Green and Garston’s Orchard. 7. Contravention of Planning Policies These proposals do not align with the North Somerset Local Plan or National Planning Policy Framework (NPPF) principles of sustainable development. Policy CS5 – Countryside Protection: The North Somerset Core Strategy states that countryside should be protected from unnecessary development. These proposals contradict this policy. Policy CS32 –		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									Development in Service Villages: Wrington is a service village, where only small-scale, community-led development should be permitted. The proposed developments exceed this scale and are unsustainable. 8. Cumulative Impact of Bristol Airport Expansion Wrington is already negatively affected by Bristol Airport's expansion, which has led to: Increased traffic congestion, particularly along the A38 and surrounding roads. Unauthorised airport parking on local green spaces. Higher levels of noise and air pollution. Further large-scale development would intensify these existing issues, significantly diminishing residents' quality of life. Conclusion: Wrington is Not a Sustainable Location for Large-Scale Development For the reasons outlined above, I strongly urge North Somerset Council to reject these proposals. These plans do not align with local planning policies and will have detrimental and irreversible impacts on Wrington's infrastructure, environment, and community.		
29190241	Waddeton Park Ltd (Land at Pill Road)	Alder King Planning Consultancy	Waddeton Park Ltd	Yes		Yes	Yes		Waddeton Park Limited strongly supports the proposed allocation of its land within the new local plan for development. However, it has drawn attention to the indicative site capacity and site requirements laid out for the Land at Pill Road in the Pre-Submission Plan. Related amendments are, therefore, proposed. For clarity, and for the avoidance of uncertainty and unnecessary delays in determining the future planning application, Waddeton Park suggests that it would be appropriate for a modification to be made to the proposed allocation wording to the extent that development would permit up to 100 dwellings and a care home. The allocation should be worded to specifically 'permit up to 100 dwellings' and additionally 'support, but not require, a care home on the site' (or similar wording). In this regard, there is a demonstrable need for older persons housing in North Somerset over the plan period to 2041, as supported by the 'North Somerset Local Housing Need Assessment Report of Findings, September 2025' (LHNA). Figure 49 of the LHNA, which forms part of the local plan evidence base, quantifies the need for specialist older person housing to 2041. This sets out that there would be need to provide an additional 1,400-1,500 specialist older person housing units over the 15-year plan period 2026-2041. Therefore, the need for this type of development is clear and should be appropriately accommodated for in the local plan. The appended illustrative masterplan outlines one way in which a care home could appropriately form part of the development scheme, in addition to 100 dwellings on the site. Waddeton Park proposes that the following requirement is removed from being a site requirement: "Active travel connection required between Pill Green and Land at Pill Road, crossing Markham Brook to enable creation of safe walking routes to schools, along with proportionate contribution to Markham Brook active travel overbridge." Waddeton Park suggests that it would be appropriate for a modification to be made to the proposed allocation to remove this element as a 'site requirement'. Firstly, the site has appropriate accessible connections for future residents to walk to St Katherine's School opposite. This site already benefits from safe walking routes to schools; therefore, it is onerous and unreasonable to expect development on the site to fund/deliver additional connections where not necessary to make the site itself acceptable in planning terms. As assessed within the appended Transport Technical Note, the site's accessibility review shows that the key desire line to travel from the site is to Pill village centre along Pill Road north and St Katherine's secondary school opposite the site. To the north, Pill Road also connects to Crockerne Primary School. Overall, access to day-to-day facilities and amenities for education, shopping, and community uses is primarily towards the north and east (to the secondary school). In addition, there are existing PRoWs opposite the	Waddeton Park Limited's view is that the Local Plan is legally compliant regarding the proposed site allocation for residential development at Land at Pill Road in Pill (Schedule 1 of the Local Plan, page 280), to which these representations relate. Moreover, Waddeton Park Limited believes that the proposed Local Plan, as set out in the Regulation 19 consultation can be found to be sound in that that the allocation of the land at Pill Road, Pill for residential development (identified on page 280 under Schedule 1) is consistent with each of the tests of soundness insofar as they are directly relevant. These representations are supported by the appended Transport Technical Note, prepared by Ridge, which supports the sustainability of the land at Pill Road for development. The land at Pill Road site allocation is part of the proposed means of implementing the spatial strategy, which has been properly arrived at through the identification of properly	North_Somerset_Local_Plan_Pre-Submission_Plan_Representation_Form_Part_B_WPL_SP8.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									site on Pill Road for recreational walks. Therefore, it does not seem reasonable for the Land at Pill Road site to have to deliver and/or contribute to the delivery of the connection over Markham Brook to the west as this is not necessary for future residents. The sustainability credentials of the site without this link are clearly acceptable; the delivery of the land at Pill Road without any reliance on the Pill Green land should be wholly supported. It seems the benefit of such connection would be for the Pill Green site (draft allocation for 600 dwellings) and, as such, should this connection be necessary it should be delivered by that site. Furthermore, an 'overbridge' to Markham Brook is very likely to be impractical and unrealistic physically, given the sloping valley and steep topography around the brook, and it is likely to have detrimental effects upon trees and biodiversity. Furthermore, the financial implications could risk the viability of the land at Pill Road allocation coming forward for development and this would materially affect the Council's housing position. Finally, fundamentally the requirement for an active travel bridge over Markham Brook is not considered to be necessary, as set out in the appended Transport Technical Note. There is no desire line to travel to the south/west of the site, as this has excellent accessibility to local facilities and amenities in the village centre and the secondary school is conveniently located opposite the site. These proposed minor changes need not be a matter of any significance for the examination but could be a modification proposed by the Council before submission of the Local Plan to the Secretary of State, and as a minor change should not trigger a need for any further consultation.	explained strategic options and their testing through sustainability and deliverability evidence and appraisals, and through stakeholder and community consultation. It is, therefore, a proper product of the positive preparation of the Local Plan and is justified. This forms part of the spatial strategy in appropriately directing strategic growth at Pill and Easton-in-Gordano under Policy LP4. The allocation of the site will be effective, in that it will assist in making the Local Plan deliverable. The site is wholly in one ownership and free of any significant constraints so its development can begin and be completed in the early years of the local plan period. The allocation is consistent with national policy and with the policies in the emerging Local Plan which is to be examined according to relevant national planning policy. It is clear that exceptional circumstances exist, and have been appropriately evidenced, to justify release of Green Belt land to support growth to meet North Somerset Council's identified housing need for the plan period. Paragraph 148 of the NPPF is clear that where it is necessary to release Green Belt land for development, as is established and agreed in North Somerset, plans should give: "priority to previously	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 										developed land, then consider grey belt which is not previously developed, and then other Green Belt locations.” In this regard, Waddeton Park has consistently promoted the land at Pill Road throughout the emerging local plan process and strongly supports its allocation for residential development in the plan. The site is sustainably located with a strong relationship with the existing settlement of Pill. This strong cohesion between site and settlement is a significant benefit in allocating residential development here. The site is well located to the existing settlement with good accessibility to local services and in walking distance to key facilities. Pursuant to the Council’s ‘Spatial strategy, site selection and capacity paper’ (October 2025), Pill/ Easton-in-Gordano is identified as a Category A village which are described as “villages considered to be relatively sustainable in their own right with a range of easily accessible services and facilities and goof public transport links to towns”. The Council’s approach is wholly appropriate to direct growth to such settlements. It is highlighted that work to reopen the railway line has commenced with Pill train station set to reopen by 2028 which will only further enhance the existing

Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										sustainability of the settlement. The land at Pill Road has been appropriately and comprehensively assessed as suitable through the SHLAA and adjoins a Category A village in a sustainable location where exceptional circumstances for Green Belt release have been identified. With regard to the Green Belt, the site has been assessed by the Council, as part of a slightly larger land parcel, within the 'Stage 2 Green Belt Assessment' (October 2025), as delineated below (see attached document). The overall assessment of this parcel concludes it makes a weak contribution to the purposes of the Green Belt. This is set out in turn as follows: Purpose A - to check the unrestricted sprawl of large builtup area; (Bristol): Weak Purpose B - to prevent neighbouring towns merging into one another: Weak Purpose C - to assist in safeguarding the countryside from encroachment: Moderate Purpose D - to preserve the setting and special character of historic towns: Weak Purpose E -To assist in urban regeneration, by encouraging the recycling of derelict and other urban land: Neutral Further to this, as can be seen in the Green Belt assessment, our Waddeton Park's land makes a weak contribution to Green Belt purposes A, B	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										and D. There are no relevant footnote 7 assets that would provide a strong reason for refusing or restricting development on the land. Therefore, this can be considered Grey Belt, subject to the specifics of the development proposal. The Council's Stage 2 Green Belt assessment agrees with this position in that the parcel can be identified as Grey Belt. This wholly supports the Council's approach to allocate development on the land, in accordance with the provisions of NPPF paragraph 148 which first priorities previously developed land and then Grey Belt land before any other Green Belt locations. The site is easily accessible, being within walking and cycling distance to a number and facilities and services within the village and nearby. This includes St Katherine's School opposite the site to the east. The site is available in the short term and can be delivered as a standalone development, without dependency on any major infrastructure intervention. The residential development has been driven by the context and topography, and by a wish to achieve an appropriate network of green infrastructure, positively responding to the woodland around Markham Brook to the west. The site is within Flood Zone 1	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										and, therefore, having a low risk of flooding and being appropriate for residential development. It is the preferred location under the flood sequential approach to selection of housing sites. Supporting technical surveys and assessments have been carried out to inform the development allocation. Demonstration of the deliverability of development on the site is the intention to submit an outline planning application for development of the site, following pre-application discussions with the Council, shortly after the close of this Regulation 19 consultation. This will ensure development can be brought forward in the early years of the plan and supports the requirement for the Council to identify “specific, deliverable sites for five years following the intended date of adoption.” (NPPF paragraph 72). Overall, the proposed allocation on land at Pill Road is strongly supported. Comment is, however, made with regard to the site-specific deliverability of the development, with regard to the site requirements as set out on page 280 of the published Reg 19 Pre-submission Plan for the proposed allocation. In this context, the draft allocation makes provision for an indicative capacity of 100 dwellings on the site. Pursuant to	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										the work undertaken to date the site may also be able to accommodate a care home, ensuring an efficient use of land and meeting a need for such facilities. As illustrated on the appended illustrative masterplan, a scheme is currently being progressed via pre-application discussions for 100 dwellings and a c. 70-bed care home. It is appropriate that the supporting wording for the allocation is amended to reflect this potential development, without making it an absolute requirement. The site can comfortably and appropriately accommodate a care home in addition to traditional residential dwellings, which will make a significant contribution in an area where there is demonstrable need. In accordance with the enclosed plan, key elements of Waddeton Park Limited's development proposal on the land at Pill Road include: • New homes generally to the eastern boundary with lower density residential frontage towards the woodland; • Policy compliant affordable housing; • Care home in accessible location in the north of the site with views across landscape edge and woodland, providing a sensitive response to existing dwellings in St Catherine's Mead; • Vehicular access from Pill

										tree planting on site high point to help soften views; • Attenuation pond within landscape corridor.	
31091393	Waddeton Park Ltd (Land south of Greenhill Road)	Savills (Dan Yeates)	Waddeton Park Ltd	No	‣ Positively prepared ‣ Consistent with national policy	Yes	Yes	These representations have been prepared and submitted by Savills on behalf of Waddeton Park Ltd. Waddeton Park have an interest in 1.95 hectares of land south of Greenhill Road, Sandford. This specific response relates to draft Policy SP8 (Housing). Our comments on the consultation and supporting evidence base are made in accordance with paragraph 36 of the NPPF, to assist in ensuring that the Local Plan is found sound when examined in the future. Policy SP8 Representations were submitted at the previous Regulation 19 Stage in October 2023. It is clear that since that time there has been a significant uplift in the housing requirement in order to accommodate the output of the revised Standard Method published in December 2024. We support that uplift and the increase over the plan period as it will ensure that North Somerset delivers sufficient housing to meet its own needs during the lifetime of the plan, consistent with the relevant provisions of the Framework. We did however comment at the previous Regulation 19 stage on the need to accommodate a proportion of the unmet housing needs from Bristol City. Since that time, the Bristol Local Plan has progressed into the Examination stage and another local authority within the Bristol Housing Market Area - South Gloucestershire - has consulted upon a Regulation 19 Local Plan and subsequently submitted it for Examination. It is clear from the Inspectors Examination Note IN11 (dated 21 November 2025) for the Bristol Local Plan that the housing requirement should be increased from 1,925 dwellings per annum (dpa) to 2,218 dpa. The Inspectors have also concluded in the same Note that: “The Council must also set out what the level of unmet housing need is. While the objectively assessed housing need may change over time, we consider it necessary for this Plan to be clear about the situation at the time of adoption. This may, for example, be important in continuing work being done on other Plans. MMs should be drafted to paragraph 6.8 to set out what remaining need exists”. It is also clear that based on the current Standard Method output (from May 2025), the updated housing requirement for Bristol City proposed by the Inspectors falls 745 dpa short of the identified level of need. The South Gloucestershire Local Plan also proposes a housing requirement which falls 195 dpa short of the identified level of need. Therefore, across the Housing Market Area, there is a shortfall of 940 dpa. There is no clear mechanism in place accommodate these homes. In our view, for the Local Plan to be sound it must be ‘consistent with national policy’ in the Framework and be ‘positively prepared’. At the present time the Local Plan does not seek to accommodate the unmet housing need arising from the wider HMA and, unless justified, there is potential for the Inspector(s) at the Examination stage to require an uplift to the housing requirement for North Somerset in order to accommodate a proportion of this overall shortfall. Should they do so, the process that the local authority has followed in evaluating the potential contribution from, and sustainability of, additional sites through the consultation in early 2025 places it in a good position to introduce further allocations through the Examination process. There would no doubt be a need to evaluate the potential additional sites further and to engage with the relevant developers but the ground work has been done to help this process as part of the Examination. The same position would also be the case should the authority look to extend the proposed plan period which we note has been set at the ‘minimum’ 15 years in line with the Framework. Should a more proactive approach be taken then that would require a proportionate increase in the housing requirement and therefore additional sites. In this context, the land south of Greenhill Road, Sandford, is a good candidate for inclusion to help address the need for housing in the Sandford and Winscombe area.			North Somerset Local Plan Pre-submission Plan - Representations SP8.pdf
18477217	Kit Stokes	Kit Stokes	StokesMorgan Planning Ltd	No	‣ Effective ‣ Consistent with national policy	Yes	Unsure		Objection to SP8: Housing Clevedon is the district's second largest town, yet only a small percentage of growth is allocated. With new flood risk strategies and Green Belt considerations in 2025, why isn't more development planned here?	The modifications proposed within the context of the North Somerset Local Plan 2041 focus on distributing housing growth more evenly across the district, rather than concentrating development within a few large strategic sites such as Woodspring (southwest of Bristol). These changes recommend allocating additional, more sustainable sites	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										like Sandford (HE201022) and Wrington (HE20198), which better align with local needs and Green Belt policies. Furthermore, it is suggested that the settlement hierarchy and restrictive village boundaries be relaxed, enabling proportional growth in already sustainable villages through new allocations or by allowing modest infilling and rounding off at their edges. Additional modifications call for revising restrictive policies such as LP7 and LP9, which currently impose tight settlement boundaries and insetting approaches that limit village growth. The proposals advocate for a more flexible approach, allowing for well-designed, proportionate development beyond current boundaries. This would support rural vitality, encourage local SME builders, and enable both younger and older residents to remain within their communities. Overall, the modifications aim to diversify housing delivery, support local services, and ensure the principles of sustainable development are more thoroughly reflected in planning policy.	
62810017	Guy Stone			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The approach to new housing is unsustainable and a knee jerk reaction from North Somerset Council to satisfy the polital aims of central government. Huge areas of green field sites, including existing greenbelt, are proposed for permanent destruction under tarmac. Very little focus has been placed on development of the use of existing developed land and brownfield sites. This will be a disaster for biodiversity and will not satisfy the local housing needs of existing residents as the bulk of housing will end up being occupied by wealthy professional people with no connnection to North Somerset moving in from other parts of the UK, who will commute to big urban centres such as Bristol, Cardiff or Birmingham. This adds nothing to our area apart from more pollution, noise and overcrowding and a decrease in quality of life.	North Somerset Council need to listen to its residents rather than pandering to developers and central government. I struggle to see who the council represents as it certainly isn't its existing residents. More effort and focus needs to be placed on development of brownfied and developed land rather than destroying the environment that is greatly valued by those who currently live here.		
31062913	R Storrar		KWAW	Yes		Yes	Yes			I support the logic of building upon the already identified sites. The number of houses to be built is a

Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										Government target that NSC have done well to accommodate within the areas identified, keeping them away from the more remote villages, which lack any sustainable transport links. The reliance on private vehicles to commute, shop, education or obtain healthcare is not sustainable, creating congested roads, pollution and increasing the rate of climate change. The mental wellbeing of future residents needs to be considered and being in a remote rural location is not a suitable social environment for any young person, who will have to rely on social media, precisely at the time the Government are recognising how unhealthy this is. The requirement to build small numbers of affordable housing for local employment is fine, providing it is for sustainable employment needs and only limited to the houses needed, not a justification for a mass of 'executive' housing with a handful of 'affordable' homes at the entrance to the estate.	
63085185	National Farmers Union		National Farmers Union					The National Farmers' Union (NFU) represents over 44,000 farming and growing businesses across England and Wales. The NFU supports farmers, growers, agricultural workers, and rural communities across a diverse range of sectors, encompassing all agricultural life, campaigning for a stable and sustainable future. The NFU has a number of members with farming and growing businesses across North Somerset. Our aim is to support members to champion British agriculture and horticulture and campaign for a stable and sustainable future for British farmers. It is critical that farming businesses within the county remain economically and environmentally sustainable, as a valued part of Somerset. We welcome the opportunity to provide input to this consultation in relation to the proposed Somerset Local Plan and its vision, policy framework and delivery. The farming community continues to face formidable challenges including the ongoing impacts of the Ukraine war, labour shortages and input cost inflation which is disproportionately impacting agriculture. Alongside these challenges farmers are working under increasingly changeable climate conditions. Successive governments have acknowledged that food security is national security, and with this background it is more important than ever that we support farming businesses to develop and modernise to secure their ongoing operation. Farming has shaped our landscapes, creating varied fabrics and bringing value to local and rural economies. Our landscapes are living, working landscapes that are constantly changing through continuous management by farmers through grazing, cropping and cultivations, and management of boundaries.			North Somerse Council Local Plan 2026-2041 - NFU consultation response.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								We welcome the Local Plan's recognition of the countryside as a valuable resource and its commitment to protecting the best and most versatile (BMV) agricultural land. High-quality farmland underpins food security and supports resilient farm businesses that deliver benefits for climate and nature. NFU members strongly support the principle that Grades 1 and 2 land should be safeguarded from development, and we would like to see this commitment strengthened with clear wording that exceptions will only apply in cases of genuine necessity and with full restoration plans. We stress the importance of ensuring that objectives for nature recovery and climate resilience are practical and work alongside food production. Agriculture plays a vital role in delivering environmental outcomes while producing food, and planning policy should reflect this dual purpose. We welcome recognition of water as a critical resource for food production and urge greater support for water management infrastructure on farms, which will be essential for future resilience. The Local Plan should remain open to a range of approaches to achieving net zero, including recognising the positive contributions farming can make through energy crops, renewable energy generation, and land management practices. We also welcome policies that enable farm diversification, rural workers' housing and infrastructure development, as these are key to building resilient businesses and supporting the rural economy. Whilst we acknowledge the need for public access to the countryside, it is essential to recognise that this is a working landscape. Increased access must consider biosecurity, wildlife, animal and public safety, and landowner rights. We would welcome options for funded fencing along footpaths where appropriate, as well as improved signage to promote responsible access and protect both livestock and visitors. We would like to see clarity on terms such as "regenerative land use practices", along with practical guidance for farms to adopt these practices. Many farms already employ techniques that could be considered regenerative without using the label. Finally, we stress the principle of "the right tree in the right place," ensuring that woodland expansion does not occur on BMV land and that food production remains a priority. Summary The NFU welcomes the Local Plan's approach to countryside development and support of development for agriculture. The Local Plan must recognise the essential role of agriculture in delivering food security, climate resilience, and a thriving rural economy. Protecting the best and most versatile land, supporting farm infrastructure, and enabling sustainable practices are critical to achieving these goals, alongside policies that allow diversification and innovation. We urge the Council to ensure planning decisions work in harmony with productive farming, safeguarding this vital sector while balancing environmental objectives for future generations.			
62110593	Abbots Leigh Parish Council Chair		Abbots Leigh Parish Council	Unsure	• Positively prepared	Unsure	No	There was no cooperation or consultation with the Local Parish councils affected by the proposed area covered by LP4 as a Strategic Location at the initial stages because LP4 was not included in the initial consultation stages	The section LP4 of the Plan will need to be modified once mitigation measures have been identified, if there are any possible, to address serious traffic congestion which will occur on the A369 through the local neighbourhood and its junction with the M5. In addition the congestion of the A369 where it connects into the Bristol road network will need mitigation measures which are outside the control of North Somerset Council. The additional traffic caused by traffic from developments in Woodspring and Long Ashton, Nailsea and Backwell, the new Epic Development and the future expansion of Bristol Airport will also have an additional significant impact on teh traffic levels using teh A 369 and its junction with the M5 at junction 19		
15430817	Mike Tremlett		Graham Moir Associates					There is a fatal flaw in these numbers. This comment is focussed on Weston-super-Mare (WsM) but is relevant to the whole district. The document states: "Weston - super-Mare is the primary town within the district and as such is identified for significant growth, 6,600 dwellings are expected to be delivered on allocated sites within and around the town (including the Weston Villages developments which are continuing to build out) and a further 1,070 homes are expected to come forward on small windfall sites across the town." Where are the 1070 windfall houses coming from in WsM when the settlement boundary is densely populated? The image below refers: Additionally, the town is heavily constrained by flood, Conservation area and bat zones – the image below just shows flood zone: The same principal on windfall houses applies to all other settlement boundaries across the district as they are all densely populated so it is also fair to say that larger housing sites will not be achievable in those settlement boundaries. Therefore windfall allowance figures quoted in the plan do not appear to be achievable and they do not appear to have been backed up with statistics to prove otherwise. The NPPF states that smaller sites make big contribution to housing targets as they are easily deliverable, as per the appeal allowed at 68 Beach Road WsM where the appeal inspector stated: "While the proposal is for one dwelling, it would nonetheless make an important contribution to meeting the housing requirement for the area, as indicated by paragraph 73 of the Framework which recognises that small sites can be built out relatively quickly. Furthermore, paragraph 125 of the Framework advises that substantial weight should be given to the value of using suitable brownfield land within settlements for homes, proposals for which should be approved unless substantial harm would be caused. The site is near to the town centre and its wide range of facilities and services. By changing this policy, this will enable small builders to quickly apply for and build out windfall sites where they are indeed available within settlement boundaries. However. It is a reasoned assumption to say that based on fact and degree and on the balance of probability, schemes for 10 or more houses in the settlement boundaries of the main towns will not be forthcoming through the windfall allowance as there is nowhere to build the volume suggested.

58534081	Verto Homes	tor&co (Jacqueline Mulliner)	Verto Homes	No	• Positively prepared • Effective • Consistent with national policy	Yes	No	The NPPF (para 22) expects plans to be prepared to cover a minimum 15 year period from adoption. The February 2025 LDS anticipated submission of the plan for examination in October 2025 with adoption November 2026. Slippage has already occurred, pushing adoption into 2027. On this basis, the plan period should extend to 4042. SP8 sets the housing requirement for the District, this being 1,580 dpa across the plan period based on the standard methodology (SM LHN). Setting aside concerns regarding the plan period (which is too short), we agree that the starting point for setting the requirement should be the standard method but are concerned that a further uplift has not been contemplated, specifically to help with the unmet need generated from Bristol and Bath, or to assist further with affordability, or to support infrastructure provision. The NPPF is clear about needing to boost housing land supply, to meet objectively assessed needs and to provide for needs that cannot be met within neighbouring areas, supported by the PPG which states, “Where authorities plan for higher growth this should not normally have to be thoroughly justified at examination.” In terms of unmet need, whilst the Duty to Cooperate is not being ‘saved’ under transitional arrangements moving to the new plan-making system, the Government and national policy continues to expect collaboration and effective cooperation over unmet need. For context, North Somerset lies within the wider Bristol City Housing Market Area (comprising Bristol City, North Somerset and South Gloucestershire, where the void in addressing Bristol’s unmet need has persisted over several years, through failed attempts at joint strategic planning. At the present time, the Bristol Local Plan emerging requirement of 1,925 homes a year leaves an annual unmet need of 1,037 homes (BC SM LHN 2,962 dpa). Bristol has asked all of the relevant neighbouring authorities to assist but North Somerset’s Duty to Cooperate compliance statement states that, “The evidence supporting the local plan demonstrates that North Somerset does not have capacity to meet some of Bristol’s needs at this time.” However, this is not the case, the evidence does no such thing, and despite differing evidence supporting the Bristol Local Plan examination which clearly anticipates some help from North Somerset, to be actioned through the current local plan preparation, an uplift in North Somerset’s housing numbers has simply not been contemplated and has not therefore been tested in the Sustainability Appraisal. The SA is clear that it tests the SM LHN and tests difference spatial options to meet that need (e.g. see SA para 2.28). What it doesn’t do is test a higher growth option which renders the plan unsound, it is not positively prepared and not justified or effective in meeting overall housing requirements. The knock-on effect of failing to assist in meeting the unmet need will be to increase affordability issues, as pressure for housing is increased. Whilst the plan will fail to address affordability issues in full, no consideration was given to increasing the housing requirement to better redress the acute problem. Finally, in order to deliver the infrastructure necessary to support the delivery of housing, a more flexible and positive approach should be taken to the housing requirement, to ensure development is viable. In conclusion, the SA is flawed, because it fails to consider the option of a higher housing requirement (higher growth scenario) and the plan strategy is therefore unjustified, ineffective, and unsound. Moving to the spatial distribution of the housing requirement, there is greater capacity at Banwell, particularly noting the anticipated completion of the Banwell by-pass in 2027 which presents a significant change in the village’s circumstances, characteristics, and status. The highway itself provides a new defensible development boundary to the settlement, which should be utilised to deliver additional ‘developable’ housing capacity. This land is well-related to the north-eastern edge of Banwell, and sits outside the proposed strategic gap to the north of Banwell. It can be developed such that it is not subject to flood constraints (contrary to the SHLAA assessment which is flawed in this respect - given the scale of the site there is potential to introduce a sequential approach whereby the developable area avoids areas of flood risk).	Extend the plan period to 2042, which would have consequences for development requirements across the plan period. Also an uplift in the housing requirement must be considered and tested through the SA, and if appropriate additional land allocations made to meet the need. An uplift in the housing provision at the villages should be made, presenting a settlement hierarchy approach whereby larger villages such as Banwell can be identified as sustainable locations to deliver the additional growth needed. This more refined settlement hierarchy approach should be secured in the plan, with the allocation of land for housing between the existing settlement of Banwell and the by-pass, outside the proposed strategic gap. The allocation of this land would deliver 250 – 300 homes at a sustainable location.		Representation form Part B_SP8 Housing.docx

63070401	Emilia Leung			No	• Effective	No	Unsure	The Proposal is overly reliant on inflated national targets and infrastructure that cannot be delivered – whilst at the same time, ignoring local constraints. The Proposal is also inconsistent with national policy. Green Belt boundaries should only be altered in exceptional circumstances – and the review must show no “clear evidence that doing so would fundamentally undermine the purposes…of the remaining Green Belt”.			
31106145	Miles Estate	Jeff Richards		No	• Positively prepared • Justified • Effective • Consistent with national policy		No	The Plan as proposed risks not allowing for sufficient time (15 years from adoption) to meet a basic requirement for strategic polices set by national policy. A longer plan period is required to ensure that the plan for North Somerset covers a period of at least 15 years from adoption, with a longer period likely to enable the Council to more effectively plan for future development in the area. The plan must be extended to 2041 as a minimum. There is concern, and risks in respect of the soundness of the Plan as proposed where, whilst seeking to meet the minimum level of housing need identified using the standard method, there is evidence to suggest that a higher housing requirement should be set to address affordable housing needs and to also accommodate some of Bristol’s unmet needs. There is concern, and risks in respect of the soundness of the Plan as proposed, where no housing delivery trajectory has been provided for the Plan as a whole, or for the specific sites which are identified as part of the proposed strategic policies. This should be addressed as part of the submission of the plan.	The plan must be extended to 2041 as a minimum. There is evidence to suggest that a higher housing requirement should be set to address affordable housing needs and to also accommodate some of Bristol’s unmet needs. Need to address concern, and risks in respect of the soundness of the Plan as proposed, where no housing delivery trajectory has been provided for the Plan as a whole, or for the specific sites which are identified as part of the proposed strategic policies.		02961 - The Miles Estate NSLP Reps - December 2025.pdf
58507233	Paul Gardner			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Portishead has seen massive housing growth over the last 30 years (tripling in size of population) It has a large infrastructure deficit covering all forms of infrastructure (sustainable transport community space, amenities, local services etc etc). The independent housing needs assessment carried out by AECOM for the Portishead Neighbourhood Plan in 2021 assessed the housing need to be much lower than the housing numbers being proposed for Portishead in the Neighbour hood Plan. The AECOM study also highlighted there was no need for any more 4-bed properties in Portishead, Please also see attached document	Amend policy SP8 to reduce the proportion of housing supply proposed for Portishead to better reflect the level of services and infrastructure capacity		Response for policy SP8 - why policy is not sound DRAFT 251210.docx

SP9: Employment

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
63057537	Hallam Land	David Lock Associates		No	• Justified • Effective • Consistent with national policy	Yes	Yes	The proposed employment supply does not present market-driven opportunities and therefore is set up to deliver more of the same, at a time where the commercial and employment market is undergoing significant structural changes. The policy text for SP9 “identified for business purposes across North Somerset to meet needs and aspirations across a range of economic sectors over the plan period” is not being delivered. Supply of sites is not fleet of foot nor aspirational. The employment strategy does not follow the evidence insofar as its lack of positive planning for important and growing sectors such as manufacturing, industrial and logistics, as required by National Policy that directs an uplift in planning for such growth; and having regard to the uplift in homes now to be planned for as set out in the revised Draft Plan. Planning for Economic Development: Supporting the Industrial and Logistics Sector These representations are supported by a Statement prepared by Claire Pearce, Real Growth, providing independent advice to Hallam Land in respect of current government economic policy and national planning policy which are material considerations to be taken into account in planning policy and development management decision making. The statement provides further detail and clarity on the national policy position which should directly inform a Councils corporate plan, its strategic ambitions, as well as its and economic development, local planning and highway functions. Specific consideration is given to North Somerset. It makes clear that a basic input to any local plan or planning decision process, the industrial strategy and its sector plans and the South West strategy, represents a key material consideration. The North Somerset Economic Growth Plan 2025 that supports the argument for additional logistics land. The Growth Plan confirms that Logistics is explicitly part of the Foundational Economy priority sector (Section 2.5) and is linked to enabling growth in other sectors like green economy and advanced manufacturing. The Plan warns that without unlocking strategic sites, North Somerset could lose investment to competing areas. It stresses the need to signal that the area is ‘open for business’ (Section 4.1 Conclusion and Key Asks). It highlights the following key considerations stating there is “significant competition for land across the area and a shortage of suitable and commercially viable land that is ‘shovel-ready’ for investment” and calls for “allocating and promoting commercially attractive and ambitious employment sites in the new Local Plan”. The Growth Strategy is clear in its focus, that the Local Plan should allocate additional land specifically suited to logistics and distribution, ensuring alignment with national policy objectives to support the modern economy and strategic employment sectors. This approach reflects the need for fit-for-purpose sites, rather than an increase in headline floorspace figures, and will help future-proof the area’s economic offer. The draft Local Plan is also supported by a new June 2025 “North Somerset Employment Land Evidence Report” (NSELER) study prepared by Stantec. Is an example of a business as usual approach being taken to assess and make recommendations on employment plan provision within a local plan process. It builds on a previous study (HJA 2025) which specifically assesses the level of employment land required to meet the new levels of population growth. The report does not seem to integrate the ambitions of the North Somerset 10 year Economic Plan. Despite this compelling evidence, this has patently not followed through into the Plan strategy. The allocation of Land East of Clevedon as a strategic employment site, adjacent to the M5, with access directly from Junction 20, is now removed from the Draft Plan. The NSELER does not appear to fully consider the requirements of the NPPF to make provision for modern industrial strategy needs to accommodate high growth sectors, nor take into consideration the regional and cross boundary opportunities presented to the South, as a result of supply chain development needs for the Somerset enterprise zone, Gravity - home to the new Agratas gigafactory. Gigafactories being one of the specific economic needs identified and therefore this is a missed opportunity. Land East of the M5 at Clevedon, Junction 20, would appear to be of sufficient scale to host supply chain development/ advanced manufacturing for the gigafactory or indeed other strategic economic land use needs in the M5 corridor, required by the MIS. The conclusions of the report for large scale logistics and phasing from 2035 – 2045, does not take sufficient account of the MIS to 2035 or the supply chain requirements to support the UK’s largest gigafactory in the South West, just south of North Somerset. Jobs and Homes Imbalance: The draft policy SP9 identifies the provision of 72.8ha of employment land within North Somerset to “ensure the area has sufficient capacity to continue to provide a range of local employment opportunities and support a balance/sustainable form of growth”. This quantum has reduced from 81.25 ha in the previous Regulation 19 Consultation. Taking account of the uplift in homes now proposed to be required compared with that presented in the previous Regulation 19 plan (uplift of some 63%) this now must be aligned to an appropriate uplift in jobs growth, critically spatially distributed to meet evidenced need. The NSELER recognises the significant risk of an imbalance of housing to employment, as demonstrated by the net out-commuting of residents (c.5,000 source: ONS/Census). It refers to data and commentary from local commercial agents and developers, which suggests that NSC has high demand, particularly for industrial and logistics uses, and a relative shortage of appropriate space. The quantitative demand estimates based on employment forecasts, as set out in the HJIA ESPRE report, suggest that NSC requires around 50 to 60 hectares of new employment land. The assessment of potential employment at the six NS sites/locations assessed in this study suggest a higher level of employment land could be delivered than the ESPRE figure. A recommendation of the report sets out the suggestion of including further employment land for logistics and goes on to identify J20 as a suitable site for this purpose. The draft Local Plan is supported by a new “Employment Site and Premises Requirements Evidence” (ESPRE) study prepared by Hardisty Jones Associates and Lambert Smith Hampton and published in March 2025, which concludes that in order to maintain a balanced labour market within North Somerset there will be a need for 20,000 additional jobs to be created over the period 2023-43. This is an increase from the estimated 13,000 additional jobs required at the time of the 2023 ESPRE and has a significant influence on future floorspace requirements. Lack of industrial and logistics sites – the case for Land east of Clevedon. The ESPRE also encourages the Council to consider the need for more strategic capacity for uses such as transport and logistics or datacentres. The Plan now commits to an increase of 63% in homes from the previous Regulation 19 Plan, yet the amount of employment land has reduced by 10ha. The Draft Plan now takes an approach to align the scale of employment to the updated housing requirement through additional employment allocations as part of new mixed use strategic development locations. Small allocations at mixed use sites will not support strategic employment needs, nor does it support expedient timescales (given the long -lead in times associated with bringing such sites forward and an inherent focus on delivery of new homes) to react sufficiently quickly to capitalise on the a dynamic commercial market for larger sites that can accommodate logistics and distribution close to the strategic road network. More of the same will not provide opportunities for real choice in the market (driven by changing consumer and business demand, changing space requirements, increased automation, sector diversification and a new focus on sustainability).	In order to make the plan sound, some 25 of land East of J20 at Clevedon should be allocated as a strategic employment site to proactively meet the evidenced demand from the distribution, logistics, and warehousing sector.		NSC Pre-submission Plan - Part B SP 9 Employment on behalf of Hallam Land.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								Supplementing employment supply with additional employment land allocations to be delivered as part of proposed strategic growth areas which by their nature have not been selected having regard to their unique locational drivers to support economic growth and satisfy proven market demand, but instead are generic employment allocations that are part of larger residential-led growth, is questionable and lacks a clear and coherent economic strategy. While the inclusion of employment land within proposed strategic growth areas may appear to address economic needs, this approach does not respond effectively to the evidence-based requirement for logistics and industrial land identified in the updated evidence base documents. Indeed, the ESPRE identifies a limited supply of sites within North Somerset that meet the locational and operational requirements of modern logistics occupiers, which risks limiting the area's ability to capture growth in this sector and respond to market demand. Contrary to the ESPRE report, Hallam do not agree that Land west of Kenn (at some 8/9 hectares) could provide a similar number of jobs to Land East of Clevedon once fully developed. The site characteristics and opportunities are inherently different. The Council's own evidence does not support the Sustainability Appraisal conclusions reported for Land East of Clevedon "The allocation of this site is not considered a necessity within the plan as the plan is meeting business needs identified through the evidence on alternative sites". An Economic Assessment prepared by Avison Young is appended to these representations, and provides a commentary on how market data demonstrates the need for, and supply of, employment land and floorspace from a market perspective, concluding that, based both on local employment growth projections and strategic market signals, there remains considerable demand for large scale (100,000sqft+) industrial/warehouse space within the Clevedon/North Somerset area. It reinforces that the Council's proposed approach to planning for employment will not meet need nor demand from the active commercial market. The market/site analysis presented by Avison Young highlights the important and active role the industrial and distribution sector plays in the North Somerset economy now and the ongoing role it will play in the future and therefore is at odds with the current draft Local Plan which limits the provision of sites for logistics. The stock and market data clearly concludes that the existing stock of land and floorspace within North Somerset is simply not fit for purpose to meet future needs. Its scale, location and quality all act as barriers to the area being able to accommodate the identified need and realise the full economic potential of the area. Avison Young evidence provides an analysis of the local employment floorspace market, evidencing a lack of recent delivery with a net increase of only c.32,000 sq. ft. delivered since the start of 2024 at a time when demand was increasing. Looking ahead this is likely to be exacerbated going forward with CoStar recording just c.26,000sqft under construction, suggesting the area will continue to be constrained by a lack of modern stock. Avison Young reviewed a range of industrial sites that have the ability to provide units over 100,000sqft, identifying major schemes in North Somerset and then considering adjacent areas of Somerset and WECA geography. It is notable that the majority of space in the pipeline remains focussed at Severnside and the Somerset Council area, with a much smaller pipeline within North Somerset. 60% of the employment being planned for is directed at Weston Super Mare. This lack of supply leads to the significant danger that North Somerset will be losing out to other locations within the WECA geography which are delivering new high-quality stock, which could see North Somerset being left behind in terms of economic development and employment growth. A risk identified by the Council's own Economic Growth Plan. A commitment to deliver on the ambition committed to by Members through the Economic Plan to promote the area, capitalise on its competitive advantage and capture investment in the context of not keeping up with demand and trends is not being fulfilled. The evidence points to an even more acute need for new employment land in North Somerset. The reduction in available stock, negligible development pipeline, and ageing nature of existing premises underscore the urgency of delivering modern logistics and distribution space. Land East of Clevedon, Junction 20 M5, is evidenced to be necessary, in order to make the Plan sound. The benefits of this site as a key strategic employment allocation are compelling, and provide an opportunity which although acknowledged, is not currently realised in the draft Plan to attract nationally significant employers, including distribution and logistics occupiers. It can unlock significant direct benefits to the area, likely to generate an additional 1,267 FTE jobs in the local area and contribute over £90mn in GVA per annum to the local economy once fully operational. A further 500+ jobs and £36mn in GVA per annum would be created in the wider region. The site is therefore not only aligned with policy objectives but is critical to addressing a worsening supply-demand imbalance and safeguarding North Somerset's economic competitiveness.		
21449761	Bloor Homes South West (Wolvershill)	Turley		Yes					Policy SP9 (Employment) identifies that the Plan will deliver around 72.8ha of land for business purposes during the plan period, in order to meet needs and aspirations across a range of economic sectors. As part of the Wolvershill strategic location there is an identified requirement for additional employment provision of 3ha as part of the masterplanning of this development. This level of provision has been reduced from previous versions of the plan, reflecting the slight reduction in the overall provision for the plan and the specific circumstances of this strategic site. It is agreed that the strategic location should make provision for new employment land to be delivered via a new business park (as part of the wider masterplan) and smaller scale land and premises as part of a mixed use local centre. This provision is appropriate having regard to the close connection between Wolvershill and Weston-super-Mare as the principal economic centre within North Somerset, and where additional substantial employment provision is proposed by the plan (43.6ha. increased by some 5ha from the previous version of the plan). The provision of employment land as part of the emerging Wolvershill strategic location development has been the subject of detailed submissions by the Main Parties at Wolvershill as part of previous stages in the preparation of the plan. The provision proposed to be made is considered to be appropriate to the context of the site and is expected to be successfully accommodated through the ongoing	Reps on Behalf of Bloor Homes to NS LP 2041 Reg 19 Consultation (Wolvershill) merged.pdf

										masterplanning process. The precise type of employment floorspace will remain flexible as the masterplan and specific development proposals evolve, to help ensure that local market conditions can be addressed, and the optimum provision made as part of delivery of new jobs and homes at this site.	
51710305	Wain Estates (Wolvershill)	Tetlow King Planning	Wain Estates	No	• Effective			Draft Policy SP9 includes a requirement to strengthen and reinforce the role of Weston-super-Mare as the principal economic centre alongside housing growth with 43.6 ha of employment proposed for the settlement. We also note the latest Employment Land Supply Background Paper (2025) which forms part of the evidence base. In section 4.4 it states that studies/evidence: “Reconfirmed business land opportunities at Weston-super-Mare, that is preferred over Wolvershill”. As a result, the employment allocated at Wolvershill has been reduced to 3ha. We agree with the findings of the evidence and support allocation of employment that can be viably delivered. On this basis, Wain Estates supports draft Policy SP9 in principle. A reduction in employment at Wolvershill also allows for the future planning and delivery of a new motorway junction on the M5 south of J21 is not precluded. (see our comments below on J21A). Please see our comments on employment provision under draft Policy LP1.			0707-06.M23 Wain Estates NS Pre Submission Reg 19 Local Plan 12.12.25 with Appendices.pdf
30301601	Ainscough Strategic Land	Chris Price	Ainscough Strategic Land	Yes				ASL supports Policy SP9 in principle in relation to its employment land requirements for the Wolvershill draft allocation. Policy SP9 includes a requirement to strengthen and reinforce the role of Weston-super-Mare (WSM) as the principal economic centre alongside housing growth with 43.6 ha of employment proposed for the settlement. ASL fully supports this objective as it is important that the employment provision at Wolvershill is considered within its local employment context and the priority for the continued regeneration of WSM. There will be a close connection between Wolvershill and WSM supported by the creation of sustainable transport links including active travel which will enable people to travel quickly and efficiently to work in WSM. This complementarity will boost the local economy and ensure that the new community is well integrated into the wider area, rather than seeking to act as a freestanding self-contained settlement. The policy proposes 3.0ha of employment at Wolvershill. Policy LP1 states: “The provision of a minimum of 3 hectares of new employment delivered through the creation of a new business park and potential for smaller-scale business land provision as part of the mixed use local centre”. ASL welcomes the amended requirement for 3ha of employment land at Wolvershill and considers that this provides the basis for a more balanced and deliverable economic strategy. ASL is confident that this is an appropriate, realistic and deliverable level of employment land provision, and that it will ensure a strong balance between securing the regeneration of Weston-super-Mare and delivering a sustainable mixed use development at Wolvershill. The reduction in employment use will assist with the Council’s aspiration to see additional dwellings delivered at Wolvershill. Further, the Consortium is confident that this 3ha of employment can successfully be accommodated within Wain Estates’ land interest through the ongoing masterplanning process with the creation of a new business park. Some additional potential smaller-scale higher density workspaces could also potentially be interspersed as part of the mixed use local centre. This fully aligns with the policy LP1 expectations in relation to employment provision at Wolvershill.			61683 - NSC Reg 19 Representations December 2025 2-12-25.pdf
62850369	Maureen Butterly			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	SP9 appropriately seeks to locate employment growth in the most sustainable locations – primarily the four towns and designated strategic development areas – to support economic self-containment, reduce car dependency, and promote sustainable commuting patterns. However, the Local Plan’s housing distribution, particularly the strategic allocation of 1,100 dwellings at Pill and Easton-in-Gordano, is fundamentally inconsistent with the employment strategy outlined in SP9. As a result, SP9 is not sound as implemented. The Plan fails the tests of justification, effectiveness, and consistency with national policy. 1. SP9 prioritises towns and urban areas for employment – but Pill/E-in-Gordano is allocated no employment land despite major housing growth SP9 states that: • towns will be the main focus for employment growth; • Weston, Woodspring, Nailsea/Backwell, Clevedon and Portishead will accommodate strategic employment land; • employment should be located where sustainable travel and labour supply are strongest. Yet Pill and Easton-in-Gordano, despite being identified as a strategic housing location, is allocated: • 0 hectares of employment land, • no safeguarded business sites, • no plan-led strategy for local job creation. This creates a mismatch between where people will live and where jobs will be created, directly undermining SP9’s intention to support balanced and self-contained communities. 2. The housing–employment imbalance at Pill/E-in-Gordano will increase car dependency and commuting – contrary to SP1, SP2, SP3 and SP9. SP9 emphasises reducing out-commuting and supporting sustainable patterns of development. Yet allocating 1,100 homes to a village that: • lacks local employment opportunities, • offers no planned new job provision, • is heavily dependent on the M5 for commuting, • faces serious existing congestion at Junction 19, • has limited sustainable transport connectivity, will inevitably result in higher levels of long-distance commuting by car. This not only contradicts SP9, but also conflicts with: • SP1 (Sustainable development) – reducing the need to travel • SP2 (Climate change) – lowering carbon emissions from transport • SP3 (Spatial strategy) – allocating growth to the most sustainable locations • SP6 (Villages) – avoiding disproportionate development in rural areas The Plan therefore lacks internal consistency. 3. SP9 relies on employment land being located near the main workforce—but the housing distribution does not support this objective. SP9 states that employment land should be located close to where people live to reduce commuting. However:	To make SP9 justified, effective, and consistent with national policy, the following modifications are required: 1. Align the housing distribution with SP9 by ensuring strategic housing locations include proportionate, accessible employment provision The Plan currently allocates 1,100 homes to Pill/Easton-in-Gordano without assigning any employment land to the area. Required modifications: • Reassess the Pill/Easton-in-Gordano strategic allocation in SP8 and LP4 to ensure that housing growth is matched with local employment opportunities or reallocate housing to areas with identified job growth (Weston, Woodspring, Nailsea/Backwell). • Insert wording requiring all strategic growth locations to provide sufficient, accessible employment land to support self-containment and reduce out-commuting. 2. Provide evidence that the housing–employment relationship has been modelled, and revise allocations where this relationship is unsustainable The Plan does not demonstrate that commuting impacts, labour supply, or journey-to-work patterns were tested. Required modifications: • Publish commuting impact modelling for each strategic area, including Pill/E-in-Gordano, showing forecast car trips, congestion effects, and CO_2 emissions. • Where evidence shows unsustainable commuting patterns or worsened congestion at pinch-points (e.g. M5 J19), reduce or remove associated housing allocations.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								• the majority of new jobs are planned in Weston-super-Mare, Woodspring and Nailsea/Backwell • yet 1,100 new homes are allocated at Pill/Easton-in-Gordano, far from the centres of future job creation This undermines the effectiveness of SP9 and may worsen congestion in areas such as: • the A369 corridor, • M5 Junction 19, • the wider Bristol commuter belt. No evidence is provided to demonstrate how this mismatch will be addressed. 4. SP9 emphasises reuse of business land and town-centre regeneration, but the Plan does not demonstrate that these have been prioritised before Green Belt release To justify Green Belt release for housing, employment-led regeneration opportunities must be maximised first. However, the Plan does not show: • that all town-centre and brownfield employment sites have been fully assessed for mixed-use potential; • how employment intensification in towns has influenced the spatial distribution of housing; • whether additional jobs could be supported in Portishead, Clevedon or Weston before diverting growth to rural locations. This omission undermines the justification for strategic housing allocations outside employment centres. 5. The lack of employment land at Pill/E-in-Gordano conflicts with the Plan's economic evidence base. The employment studies cited in the justification identify: • Weston-super-Mare as the main economic centre • Woodspring and Nailsea/Backwell as strategic growth locations • No economic rationale for strategic job creation in Pill/E-in-Gordano Yet the Plan still allocates a large quantum of housing there without corresponding employment provision. This inconsistency makes SP9 ineffective, as it cannot achieve its objective of sustainable commuting patterns. 6. SP9 recognises that new employment land should support sustainable transport access – but Pill/E-in-Gordano lacks such access Employment land is purposefully directed to locations which: • are well served by public transport, • have strong active-travel links, • connect easily with urban centres. Pill/E-in-Gordano, however: • has no dedicated new public transport investments secured, • lacks high-quality cycling/walking infrastructure, • relies on constrained, car-dominated roads. This reinforces why strategic housing growth here is inconsistent with SP9. Summary SP9 is sound in principle, but the overall Plan does not implement it soundly. The strategic allocation of 1,100 dwellings at Pill/Easton-in-Gordano: • undermines sustainable commuting patterns, • increases car dependency, • conflicts with the spatial strategy, • fails to integrate housing with employment opportunities, • and weakens the internal coherence of the Plan. Therefore, SP9 is not sound as implemented and does not satisfy the soundness tests of justification, effectiveness, or consistency with national policy.	3. Strengthen the policy requirement for employment land to be located where sustainable travel is realistic and deliverable SP9 currently encourages sustainable transport but does not require it. Required modifications: • Amend SP9 to state that new employment land will only be allocated where sustainable travel modes are already available or can be delivered at the outset of development, with funding and commitments secured. • Require masterplans for strategic locations to demonstrate concrete, costed delivery of public transport, walking and cycling links. 4. Reassess the spatial distribution of employment land to ensure consistency with the Plan's climate and transport objectives (SP1, SP2, SP3) The employment strategy should reinforce, not contradict, the Plan's sustainability goals. Required modifications: • Reconsider whether additional employment land should be allocated at Portishead and Clevedon—both towns with strong labour markets and better transport connections—before relying on rural travel-to-work locations. • Reduce dependence on remote strategic locations unless robust evidence supports low-carbon commuting. 5. Clarify how the reuse and intensification of existing employment sites has been maximised before allocating new greenfield land The justification for some new employment land allocations remains unclear. Required modifications: • Publish a full assessment of existing employment sites' capacity for intensification, redevelopment or mixed use. • Where extra capacity is identified, reduce greenfield employment allocations accordingly. 6. Insert an explicit requirement for employment allocations at strategic locations to be deliverable, viable, and supported by infrastructure Employment land at strategic locations must not depend on unproven infrastructure. Required modifications: • Amend SP9 to require detailed phasing and infrastructure-delivery plans, including transport improvements and utilities, before permission is granted. • Remove or reduce employment allocations where infrastructure cannot be delivered in step with development. 7. Strengthen the Duty to Co-operate requirements relating to employment land and cross-boundary commuting Given the proximity to Bristol and the regional functional economic market, Duty to Co-operate evidence is essential. Required modifications: • Include a clear statement of how the Council has co-operated with Bristol City Council, WECA, National Highways and other neighbouring authorities regarding labour supply, commuting flows and spatial employment distribution. • Where unresolved issues exist, reconsider the scale and location of strategic housing and employment allocations. 8. Add a policy requirement that employment land must reflect the realities of transport capacity and congestion constraints This is particularly relevant to Pill/Easton-in-Gordano and areas feeding into Junction 19.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									Required modifications: • Insert wording preventing employment land (or large volumes of housing) from being located where transport constraints cannot be mitigated. • Require cumulative modelling for strategic sites that influence the M5, A369 and wider Bristol commuter network. Summary of Required Modifications For SP9 to be sound, the Local Plan must: • align the housing distribution with the employment strategy; • ensure strategic housing areas have local employment or excellent sustainable transport links; • provide robust commuting and transport evidence; • maximise brownfield employment opportunities first; • demonstrate cross-boundary co-operation; • revise or reduce allocations where infrastructure cannot support sustainable commuting. Without these changes, SP9 fails the soundness tests of justification, effectiveness, and consistency with national policy.		
30921569	Lucy Byrne			No	• Positively prepared • Justified • Effective	Unsure	Unsure	Why is there no allocation for more employment in Pill? The plan sets to increase the population by around 44% however the roads can't take any more cars. The railway only has very limited capacity to serve the existing population let alone one with so much growth. Employment opportunities must therefore be a priority for this efffectively new town that is being created.	It would be better to make some of the allocations of land around Pill for ecconomic developments that make use of the high grade agricultural land for farming related diversification businesses such as cider orchards, market gardens or flower farms to supply Bristol.		
31037185	Nigel Cooke			Yes		Yes	Yes				
31072289	Jeanne Craske			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The small amount of employment land in Backwell conflicts with the goal of creating balanced communities.			
9138657	Home Builders Federation		Home Builders Federation	No					Policy SP9 is not considered to be sound as it is not effective, justified or consistent with national policy HBF believes the Plan needs to do more to recognise the links between housing and employment and the impacts that failing to provide to properly plan for housing will have on the economic performance and competitiveness of Bristol City Region. HBF believe that higher housing numbers are needed for a variety of reasons including addressing the current housing crisis, meeting housing need, providing affordable housing and supporting employment growth. There is therefore a need to more fully consider future housing in conjunction with the Plan's strategy for employment. HBF also suggests there is a need for a clearer link and explanation between the spatial strategy, housing and employment allocations and the topic specific policies later in the Plan. Such matters need to be considered on an area by area basis that fully recognises the links between housing policy and employment policy. Employment allocations and opportunities within a particular housing market area could give rise to an additional housing need that should be accommodated within that area. The failure to provide new housing close to where people work results in longer commuting times, less sustainable patterns of development and harms the economic performance of an area. 7800929	Wraxall and Failand Parish Council		Wraxall and Failand Parish Council	No	• Justified • Effective	Unsure	Yes	Nailsea & Backwell land allocation is 6.1 ha. Schedule 2 states that provision is made in LP3 and site boundaries will be identified through master planning and planning applications. LP3 states that land is to be identified as part of planned growth to the east of Backwell and north of Nailsea. The North Somerset Employment Land Evidence Report dated 27 June 2025 section 3.6 and Table 3 (pages 15 and 16) propose a potential location to the north east of Nailsea, near the Baker Hughes site of c. 5 to 7.5 ha for light industrial use. This parcel of land, currently in the Green Belt, is shown as Grade 3 on the Agricultural Land Classification (ALC) Map South West Region (ALC006). The Employment Land Evidence Report fails to consider the flood zone, and historic monuments) and the high-risk coalmining areas. The NSC Policies map does not show parcel 2 used being removed from the Green Belt and proposed for Employment land. The topography (on the side of hill also limits the extent of the site for development. It is submitted that this parcel of land is unsuitable for employment land for all the reasons stated in W&F PC Position paper.	To provide clarity where additional employment land is to be sited in a location that is not in the Green Belt and is complaint with Policy DP53: Best and most versatile land.		Wraxall & Failand Parish Council Position Paper - North Somerset Local Plan 2041 - 11 Dec 2025.pdf
43203041	National Highways		National Highways							Policy SP9 proposes that Weston-super-Mare will remain the main focus for employment growth, with the committed Weston Villages development, allocated employment land at the J21 Enterprise Area, and additional employment land within the strategic locations at Wolvershill, Woodspring, and Nailsea and Backwell. The spatial distribution of employment land is supported by National Highways, but we will seek to ensure that the cumulative impacts of employment travel are planned for and addressed as necessary.	NSC Reg19 Local Plan Consultation.pdf
30918593	Jane Miller			No	• Effective	Yes	No	Once again, this has ignored the cinstant calls from residents of no more building homes until well paid jobs are created. Ie not minimum wage retail jobs.	More employment space in Portishead. NHS hospital /clincs instead of having to go 10 niles to Bristol or over 20 miles to Weston s Mare. No more homes - esp apartments. Improved bus service not just into Bristol city cente.		
58582945	Nailsea Action Group		Nailsea Action Group	No	• Justified • Effective	Unsure	Unsure	Nailsea Action Group notes that 1.1 hectares of employment land has been allocated to Nailsea. Also noted is that the Nailsea and Backwell area does not feature in Schedule 2, employment sites. This Policy (SP9) states that there is 72.8 hectares allocated for employment in North Somerset, whereas Schedule 2: Employment sites only lists 53.7 hectares. The 1.1 hectares is a tiny allocation of employment land to a town that is expecting such a large number of new dwellings. The residents of most will inevitably seek employment further afield and use their cars to get there and back, thereby increasing road congestion, pollution, and unavoidably contradicting the local authority's espoused policies on climate change. This insufficient allocation cannot realise the overall aims of the Local Plan and is therefore unsound. In the current economic climate, a significant proportion of new employment is created by light industry such as basic manufacture and assembly, warehousing etc. Nailsea is inherently unsuitable for such light industry, mainly due to transport access difficulties detailed above. Anecdotally, it has been suggested that organisations have investigated Nailsea as a site for light industry but have been put off by the difficulty of getting large trucks and goods into and out of the town. Until this situation is remedied, the prospects of light industry coming to Nailsea is remote. There are currently very few service sector, public services, and administrative organisations operating in Nailsea, and there have been no significant employers added over the last few years. Apart from Pelican Services which has a staff of over 300 people, there are no major stand-out employers, despite there being three trading estates: Blackfriars Road, Southfield Road and the old Coates site. Two large supermarkets – Tesco and Waitrose – and several medium sized stores, such as Iceland, employ almost exclusively from the immediate locality. The units on the trading estates all employ relatively small numbers of people with the possible exception of Brabantia and Proper Job. Most other employment is with retail in single figures. As at March 2025 some 30 jobs are advertised on the internet in Nailsea, mostly low paid and with small employers or for individual working. There is not a tradition of administration, services and public sector opportunities in Nailsea. For example, the Nailsea Business Directory identifies about a dozen small accountancy firms, about half a dozen IT establishments, and there are at least half a dozen solicitors, estate agents and refreshment outlets all in close proximity to each other. Without significantly better infrastructure – and there is none planned at present - it seems unlikely that Nailsea will attract major stakeholders in administration, services and the public sector.	Either securely identify and allocate far more land for employment, or reduce the housing plans for Nailsea so that what is provided will meet the needs of the present and future population and prevent a great deal of commuting.		
39315297	Epic Systems	Ben Larcombe	Epic Systems							2.15 Draft policy SP9 proposes to allocate 72.8ha of employment land (excluding the Epic campus) across the region. The overarching objective to deliver an increase in jobs and improve the local economy is commendable.	Regulation 19 Local Plan Pre-submission Representations - Epic Bristol

										2.16 Within the Policy justification, recognition has been shown of the economic growth opportunities for the local area that may arise as a result of the Epic employment campus. This statement is supported by Epic, and it is pleased to see that the Council has taken a positive view of the important role the Epic employment campus will play within the economic context of North Somerset and the wider region.	Limited 11.12.25.pdf
51079969	Justin Saunders		Pill and Easton-In-Gordano Parish Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	Yes	Policy LP4 is not consistent with this policy. No provision is made for providing locations for additional employment or improving access to employment opportunities. Lack of active travel improvements to local employment opportunities, or provision of additional employment opportunities in the community will mean that the default mode of transport will be cars which will further overload Junction 19 of the M5 and the A369.	LP4 needs to be withdrawn and local employment opportunities provided as part of an integrated plan in the same way as other strategic locations		
31022913	Peter Sims			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The amount of additional employment area being allocated in Nailsea is only 6.1 hectares. The increase in the population that require to find work is likely to be well over 4500 from the 3728 new homes that are proposed for Nailsea and Backwell in the Plan. It is most likely that most of the new residents will have to 1) Seek employment away from Nailsea and Backwell. The most likely places being the airport, Weston-Super-Mare, Bristol and Avonmouth. 2) Already have jobs away from Nailsea and Backwell. Most of these journeys will probably be by car unless public transport methods happen to allow people to get to their job on time. Therefore, the whole premise of active travel to employment locally will not work in Nailsea and Backwell as the number of people needing/having work far exceeds local supply. The Plan does absolutely nothing to cater for these facts The Local Plan 2041 is unsound			
62943009	Homes England	Avison Young (Peter Stockall)	Homes England	Unsure		Unsure	Unsure	The wording of Policy SP9 on employment is supported. Homes England welcomes the move away from the previous Local Plan requirement of 1.5 jobs per home within Weston-super-Mare. The evidence to date from building out the Weston Villages development has demonstrated that this is a very challenging proposition and is likely to hinder the Council's ability to meet its housing requirement and maintain a five year housing land supply going forward. However, we do still note and support the reference to seeking to deliver the principle of housing and employment development in tandem within SP9 to strengthen and reinforce Weston-super-Mare as a principal economic centre "with employment opportunities provided in step with housing growth". We note this "includes the delivery of employment commitments as part of the ongoing build-out of the Weston Villages development," such as Locking Parklands with those commitments being as reflected in the revisions / proposals of this emerging plan.			
31062913	R Storrar		KWAW	Yes		Yes	Yes			This allocation of land for commercial use is a sound policy. To simply build houses is not sustainable, there needs to be adequate provision for employment in the local area.

61656193	Kate Wickens			No	• Justified • Effective		Yes	The increase of 3500 houses to Nailsea and Backwell (LP3) would increase car usage, rather than be mitigated by the provisions in the local plan. Page 67 states " Nailsea is a main town on the A370 corridor." It's not as it is 2 miles from the town centre to Backwell crossroads, the current junction with the A370. The local plan appears to be directing Nailsea residents to Bristol via bus via the A370. This would be particularly an issue for the residents of the site planned north of Nailsea (381 dwellings). Developments generally north of Nailsea would need new bus routes as the reasonable distance requirement would only be met in certain areas of the development. Nailsea town centre is 1.5 miles to Nailsea and Backwell railway station. Behaviour change as written about on Page 149 is unlikely regarding developments north of Nailsea as the distance to the train station and the A370 bus corridor is not attractive to walk to and the route to the station, especially the return up a steep hill with a curve on the brow of it, will not appeal to the less confident cyclist. Station is currently not accessible to those with mobility issues due to the length of the ramp from ground level to the station platform north bound of the distance from the car park, to the ramp to the platform south bound. There are no toilet facilities at the station either. New employment land "must facilitate effective active travel links to the railway station" For that designated to be built north of Nailea, this is unlikely for the same reasons. Car usage is more likely to rise. The local plan does not consider the road issues that Nailsea has regarding adequate main roads out of the town in all directions. An increase of 3500 houses, would increase the road usage issues because the infrastructure issues have not been adequately addressed.			
63094305	Harrow Estates	Boyer		No	• Positively	No	No		Harrow Estates notes that the intention of LP Policy SP10 is to deliver a transport network that supports sustainable		251211 Land East of Failand Reg 19 Reps.pdf

					prepared Justified Effective Consistent with national policy				development, reduces carbon emission and prioritises active and public transport. However, as drafted, SP10 does not align with the spatial strategy or pattern of allocations proposed in the draft LP. The policy's transport objectives cannot realistically be achieved while the Plan directs the majority of growth to less sustainable locations, such as Banwell, that do not perform well in terms of accessibility. In its current form, Policy SP10 is neither effective nor consistent with national planning policy. The NPPF requires transport policies to promote sustainable patterns of development based on accessibility. Harrow draws attention to the Spatial and Local Accessibility Study prepared by Calibro, which establishes the most sustainable locations for housing growth. The study demonstrates that when combined, both Bristol and South Glos represent 71% of all out commuting from North Somerset. It is therefore vital that additional residential allocations are provided closer to the City to allow people to live closer to where they work. These findings reinforce that the Plan's transport objectives can only be achieved if growth is directed towards eastern settlements that have functional accessibility to Bristol. For Policy SP10 to be effective and deliverable, the distribution of growth must reflect transport evidence and enable sustainable travel patterns. This is only achievable by allocating development at highly accessible eastern settlements such as Failand, rather than concentrating growth in locations known to exacerbate long-distance car commuting. Without realignment of the spatial strategy to follow the transport evidence, Policy SP10 cannot be considered justified or consistent with the NPPF's requirement to promote sustainable transport and reduce the need to travel		
51710305	Wain Estates (Wolvershill)	Tetlow King Planning	Wain Estates	No	Effective			Please see our comments on transport provision under draft Policy LP1.			0707-06.M23 Wain Estates NS Pre Submission Reg 19 Local Plan 12.12.25 with Appendices.pdf
21472417	Mead Realisations Ltd	Oneleven Property		No	Positively prepared Justified Effective Consistent with national policy				This policy requires that new development must be located and designed to minimise the carbon impact of transport through limiting elite travel although this approach is inconsistent with the Framework. The policy refers to facilitating the delivery of net zero emissions and reducing the adverse environmental effects of transport although this policy requirement appears to be at odds with the proposed strategic allocation at Wolvershill, North of Banwell. The allocation appears to represent a flagship development for the PsP and therefore it should set the benchmark for other development in relation to minimising carbon impact transport and delivering net zero emissions. Policy SP10 should be amended as follows: New development (add…should, as far as possible where reasonable and proportionate,) (remove ..must) be located and designed to minimise the carbon impact of transport through limiting the need to travel and prioritising walking, wheeling (this includes wheelchairs, mobility scooters and other wheel-based mobility aids) and cycling and the use of public transport opportunities. In order to facilitate the delivery of net-zero emissions and reduce the adverse environmental effects of transport, development proposals and transport schemes (add..should consider) (remove.. must address) the following principles in line with the following hierarchy: • Delivery of attractive, safe, and inclusive routes for walking and cycling which are well integrated into existing networks and provide access to effective and frequent public transport. • Delivery of better local bus, rail and rapid transit services and infrastructure supporting uptake in public transport use for journeys to work, leisure and other purposes. (remove…This includes journeys within and between towns in North Somerset and further afield including, better connections to, from and within the rural areas, journeys to and from public transport connections (known as first and last mile provision), new and improved bus stops and the reallocation of highway space); and • Delivery of infrastructure to facilitate the use of electric vehicles. Adequate parking for motor vehicles and cycles must be provided and managed to meet the needs of anticipated users (residents, workers and visitors) in usable spaces. The improvement of strategic transport facilities at Bristol Airport and Royal Portbury Dock will be supported subject to the policy guidance set out elsewhere in the local plan. The justification to policy SP10 refers to the growing health emergency although the Council does not provide any specific details of how these issues have been considered through the evidence base. This should be addressed.		Reg 19 Final Representations Mead Realisations 12.12.25 including appendices.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
	Council								establishment of good public transport links with a frequent bus service (i.e. at least 2 buses per hour) serving Clevedon, Weston-super-Mare and Bristol. The provision of free parking at the station would make a significant positive difference to its usefulness as a hub and also to the lives of Yatton residents living near the station. 2. Yatton Parish Council agrees that land south of Nailsea and west of Backwell should be designated as Green Belt. 3. The existing Strategic Gap between Yatton and Congresbury should be retained and a new Strategic Gap, between Yatton and Kenn, should be designated. 4. Land off The Batch should be used to expand the doctor's surgery, not for a primary school. Policy SP10: Transport Yatton Station is a valuable local resource but it is badly compromised by a lack of connecting public transport services. This is not what a sustainable transport network looks like. Furthermore, it forces people to drive to the station, increasing congestion on local roads and thus compromising bus services. Yatton Station should be configured as a local transport hub with free parking and good connections to bus, walking and wheeling routes.		
62850273	Nicholas Ball			No	• Consistent with national policy	Unsure	No	No proper assessment of the suitability of the only access road , the A369, has been carried out.	My comment is to doubt the soundness of the proposal as it would appear no proper assessment of the suitability of the only access road , the A369, has been carried out. The A369 has been at full capacity for some time, more recently Bristol has introduced a Pollution Charging Zone for which the A369 is exempt and the A369 has seen a big increase in traffic particularly HGVs. It is also a main route to Bristol Airport which itself is rapidly expanding There are 4 problem areas for the A369 which have been ignored, 1) The junction with the M5, difficulty accessing the A369 causes queuing stationery traffic on the motorway which is a concern to the authorities. 2) At Abbots Leigh the A369 narrows on the brim of a hill and buses and HGVs are too wide to pass each other causing tailbacks. 3) Where the A369 meets the long Ashton bypass there are frequently long tail backs particularly at rush hour or when there are events at Ashton Gate Stadium. 4) The road often floods in the Leigh woods area The report suggests the proposed new rail link from Portishead to Bristol with a stop at Pill will help, but omits to mention the train proposals are for just a single 3 carriage train once an hour which is unlikely to have any room when it gets to Pill. A proper assessment of the issues facing the A369 in view of the extra traffic created by the development		
8668193	Tickenham Parish Council		Tickenham Parish Council	No	• Positively prepared • Justified • Effective	Unsure	No	There are no proposals to substitute or improve the road infrastructure that currently serves Tickenham despite the increase in traffic that would inevitably emanate from the proposed approximately 4,000 house developments in Nailsea and Backwell. Tickenham is currently served by the B3130, B3128, The Causeway, Washingpound Lane and Church Lane. The B3130 is a sub standard road that runs through part of Tickenham. Substandard means: a pinch point where HGVs/buses cannot pass each other, a pinch point where HGVs/buses struggle to pass each other, 3 x 90degree bends, inadequate road width below accepted national standards, lack of footpaths and narrow footpaths below accepted national standards, 145 houses directly access onto a length of the B3130 less than 1.5miles long. Tickenham school children walking to school are forced to walk on narrow footpaths with traffic thundering by within inches. The Causeway, Washingpound Lane and Church Lane are rural lanes and although proposed to be classified as Rural Quiet Lanes there are no proposals in the transport section of the Infrastructure Delivery Plan to provide any works to improve them or reduce traffic onto them, and North Somerset Council have warned that any improvements are highly susceptible to funding issues. The Local Plan needs to provide workable proposals and establish that funding will be available. All of the aforementioned roads will be subject to traffic flows above their capacity. Relating to the North Somerset Council duty to cooperate (which has been lacking), please see second attachment relating to an email from an officer of North Somerset Council, (22 July 2025),. Tickenham Parish Council wanted to have a meeting with North Somerset Council to discuss proposals to The Causeway. We were told they were too busy to talk to us. Sadly we were never sent further information and there are no further concrete proposals/details in the Local Plan.	Provide suitable transport infrastructure to cater for the proposed approximately 4,000 house developments in Nailsea and Backwell, in terms of: 1. the construction of a road link between Nailsea and Clevedon using existing and improved roads as shown on the plan attached to this response. 2. infrastructure improvements to The Causeway, Washingpound Lane and Church Lane to make these routes more attractive to those travelling by active modes, and less attractive to general traffic.		NailseaTickenhamLink.pdf 250722EmailFROM EmilyMcDonaldCausewayMeeting.pdf
62738625	William David Billington		Resident	No	• Effective	Unsure	Yes	There are very serious traffic issues associated with these proposed plans for the Pill and Easton-in-Gordano villages. The A369 from Portishead to Bristol and including the J19 roundabout on the M5 is already exhibiting major traffic problems leading to congestion up to Clifton Suspension Bridge and Rownham Hill. This road has apparently already been deemed to be at maximum capacity. With the added possibility of an additional 1100 homes plus 1601 dwellings in Portishead the traffic situation on the A369 would be intolerable. The Highways Authority need to be consulted at an early stage.	Reduce the number of proposed sites for development to a level appropriate to the capacity of the local road systems.		
62850369	Maureen Butterly			No	• Positively prepared • Justified • Effective • Consistent	Unsure	Unsure	While the principles in SP10 correctly reflect national policy – prioritising active travel, reducing car dependency, and supporting sustainable transport – the Local Plan does not implement these principles in a way that is justified, effective, or consistent with the evidence, particularly in relation to the proposed strategic growth at Pill and Easton-in-Gordano. SP10 is therefore not sound, because the Plan assigns major housing development to the most transport-constrained part of North Somerset without demonstrating that the transport objectives can realistically be achieved.	To make SP10 justified, effective, and consistent with national policy, the following modifications are required: 1. Require cumulative transport modelling for all strategic development locations before adoption of the Plan The Plan allocates major growth in areas with known congestion (e.g., Pill/E-in-Gordano and M5 J19) but presents no cumulative modelling.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					with national policy			1. SP10 requires development to minimise car dependency – but the allocations at Pill/Easton-in-Gordano would increase car use and congestion Pill and Easton-in-Gordano: • are highly dependent on the M5 and A369, • contain no strategic employment land (forcing residents to commute by car), • have limited and unreliable bus services, • rely on narrow, constrained local roads, • already experience significant peak-hour congestion. The Local Plan provides no evidence that: • sustainable travel modes can meet demand for 1,100 new homes, or • active travel routes are deliverable in a way that would meaningfully change behaviour. This directly conflicts with SP10's hierarchy, which places car use last. 2. No cumulative modelling has been published to show that major new development can be accommodated at or near M5 Junction 19 National Highways has already expressed concerns about cumulative traffic impacts in the area (e.g. Court Hay application). Despite this, SP10 does not present: • cumulative transport modelling for all Pill/E-in-Gordano sites, • analysis of M5 Junction 19 capacity, • modelling of A369 corridor impacts, • evidence of mitigation measures or confirmed funding. Without this evidence, SP10 cannot be considered effective. 3. The Plan relies on a hypothetical future rail service as a key mitigation measure, contrary to NPPF requirements for realistic, deliverable transport solutions The reopening of the Portishead Line is referenced repeatedly throughout the Local Plan as a justification for development in the area. However: • the line has not yet been delivered, • no date for operational service is guaranteed, • there is no evidence of capacity for dramatically increased passenger use. SP10 requires development to be located where sustainable transport exists or can be delivered, not where it is hoped for. This reliance on uncertain rail infrastructure makes SP10 not justified. 4. Active travel infrastructure is not demonstrated to be deliverable or adequate for the scale of growth proposed SP10 places heavy emphasis on walking and cycling. However: • Pill/E-in-Gordano has steep topography, • many roads are narrow with no space for segregated routes, • safe routes to schools, Portishead, and Bristol are limited or non-existent, • no detailed route plans, costings, or delivery mechanisms are provided. Without evidence that the necessary infrastructure can be delivered, SP10 is not effective. 5. SP10's principles contradict the Local Plan's decision to allocate 1,100 homes in a demonstrably car-dependent location The National Planning Policy Framework (NPPF) states that plans should: • promote sustainable transport, • locate significant development where the need to travel is minimised, • ensure development does not cause unacceptable transport impacts. By allocating one of the largest village-scale growth areas in North Somerset to a highly constrained and car-dependent location, the Plan does not follow these principles. SP10 therefore lacks internal consistency with the spatial strategy and the Plan's sustainability objectives. 6. There is insufficient evidence of Duty to Co-operate engagement regarding strategic transport impacts Given that Pill/E-in-Gordano's transport impacts extend into: • National Highways' strategic road network, • Bristol's transport system, • WECA rail and bus networks, The Plan should demonstrate structured Duty to Co-operate engagement. This is not presented. SP10 is therefore not clearly supported by legally necessary cross-authority collaboration. 7. Climate and carbon reduction objectives in SP2 cannot be met if major development is located in a car-dependent location SP10 forms part of the climate response in the Local Plan. But because the Plan: • allocates major development to a location that cannot reduce car use, and • provides no evidence of modal shift potential, SP10 will not contribute effectively to the delivery of net-zero ambitions. This undermines both SP10 and SP2. Summary SP10 is sound in principle but not sound in implementation. Because the Local Plan directs substantial growth to a location where: • walking and cycling routes are constrained, • public transport is insufficient or uncertain, • road infrastructure is over capacity, and • no cumulative transport modelling is presented, SP10 fails the soundness tests of effectiveness, justification, and consistency with national policy.	Required modifications: • Insert policy text requiring full cumulative transport modelling for all strategic allocations, including impacts on: o M5 Junction 19, o the A369 corridor, o routes into Bristol, o junctions within Portishead and surrounding villages. • Require this modelling to be completed and published before the Green Belt is released or allocations are confirmed. If modelling demonstrates unsustainable impacts, reduce or remove the associated housing allocations. 2. Amend SP10 to require transport infrastructure for strategic sites to be identified, costed, funded and deliverable before development proceeds As written, SP10 contains only aspirational statements. Required modifications: • Add wording that major development will only be permitted where the necessary transport infrastructure is secured upfront, through: o committed funding, o identified delivery bodies, o clear phasing plans. • Require each strategic site to produce a Transport Infrastructure Delivery Plan (TIDP) prior to planning approval. 3. Remove reliance on uncommitted or uncertain rail improvements (e.g., Portishead Line) as justification for strategic allocations The Plan assumes future rail provision that is not guaranteed. Required modifications: • Amend SP10 to state that strategic allocations must not rely on rail infrastructure that is not fully committed, funded and scheduled for delivery within the early Plan period. • Reassess allocations—especially Pill/E-in-Gordano—without assuming new rail service availability. 4. Insert a requirement for all strategic allocations to demonstrate realistic, deliverable modal shift away from the private car Currently, the Plan sets a hierarchy but does not require development to prove that modal shift is achievable. Required modifications: • Add policy text requiring strategic sites to submit evidence on: o expected modal split, o walking and cycling catchments, o bus service viability, o long-term public transport commitments. • Where modal shift cannot be achieved (e.g., Pill/E-in-Gordano), reduce or remove site allocations. 5. Require deliverable active travel networks—with maps, phasing and costings—for all strategic development locations The policy obliges development to prioritise active travel but provides no evidence it is feasible in constrained areas. Required modifications: • Insert a requirement that active travel routes must be: o mapped, o continuous, o safe, o fully funded, and o deliverable within early phases of development. • Require feasibility studies for constrained areas (e.g., steep topography, narrow roads in Pill/E-in-Gordano). • Remove development allocations where such networks cannot be delivered. 6. Strengthen the link between SP10 and the spatial strategy (SP3) to prevent major development in car-dependent rural locations SP10's objectives are incompatible with allocating 1,100 homes in Pill/E-in-Gordano. Required modifications: • Add wording that major development must be located where walking, cycling and public transport are already viable or can be delivered in a realistic and evidenced manner. • Require reassessment of Pill/E-in-Gordano's strategic designation against these criteria. 7. Insert an explicit requirement for Duty to Co-operate engagement with National Highways, Bristol City Council, and WECA on transport impacts Strategic transport issues cross boundaries. Required modifications: • Add wording requiring documented Duty to Co-operate discussions about infrastructure needs, congestion impacts and sustainable travel provision. • Require the Plan to be modified where cross-boundary issues remain unresolved. 8. Include a policy safeguard preventing development that increases congestion or carbon emissions where mitigation is not deliverable This ensures consistency with SP1 (sustainable development) and SP2 (climate change). Required modifications: • Add a clause stating that development will not be permitted		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									where transport impacts cannot be mitigated without unacceptable congestion, safety impacts or increased carbon emissions. • Reassess strategic allocations, particularly at Pill/E-in-Gordano, under this principle. Summary of Required Modifications SP10 can only be sound if: • cumulative transport modelling is undertaken and published; • transport infrastructure delivery is secured up front; • strategic allocations do not rely on speculative rail improvements; • active travel feasibility is demonstrated; • development is directed away from inherently car-dependent rural locations; • cross-boundary transport issues are addressed; • allocations are reduced or removed where transport impacts cannot be mitigated. Without these changes, SP10 fails the tests of justification, effectiveness, and consistency with national policy.		
30921569	Lucy Byrne			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The Local Plan does not address potential traffic congestion at Junction 19 of the M5. Concerns have been raised by National Highways re: development at Court Hay near the service station (see NSC planning portal, ref 25/P/1413/OUT). The National Highways report stated that transport modelling is required to assess the cumulative impact of developments on Junction 19. It is not evident from the proposed Local Plan that NSC has co-operated sufficiently with National Highways and taken its advice. There is a clear over-reliance in this Local Plan on the impact of the proposed railway in Pill. There is no evidence in the Local Plan that transport links, including buses and trains, will be sufficient for the proposed number of new homes. See attached supporting doc of evidence found by my neighbour who has done some deep diving into the evidence base and found it to be lacking and inaccurate in several important areas.	It is clear that the transport planning for Pill was a late addition to the plan. supporting evidence needs to be more detailed and based on accurate data. This plan cannot proceed until this transport plan is sound.		Transport evidence analysis.pdf
62744545	D Cartwright-Beale			No	• Justified	Unsure	Unsure	The speed limit on the B3124 is far too fast for allowing access for homes along the road. Even existing houses that need access from the B3124 are in danger entering and exiting their houses at all times. The area is also green belt and should not even be considered due to that fact. Weston big wood is an area of natural beauty. there are plenty of unused buildings and brownfield sites that could be used instead. I do not feel that these are exceptional circumstances to build on green belt land. No site along this route would provide safe and suitable access for people. Transport usage is already high along this road, and so further noise and light pollution would be unacceptable. 31037185	Nigel Cooke			Yes		Yes	Yes				
58629377	T Crane			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	While SP10 aspires to reduce car dependency and promote sustainable travel, it is unsound in relation to Nailsea and Backwell. The policy assumes that thousands of new dwellings can be delivered before resolving critical transport infrastructure problems, yet it does not set binding conditions or timelines. As drafted, SP10 will not “discourage the overall number of car trips”; instead, it will inevitably increase car use because residents will have no practical alternative. The policy also fails to apply other relevant transport policies; LP11 (safeguarded infrastructure), DP14 (Highway safety), DP15–DP18 (Active and sustainable transport, active travel routes, public-transport accessibility, travel plans) and DP19 (Parking), to the specific circumstances of Nailsea and Backwell. The unique geography (three constrained roads, flood-prone lowlands, protected habitats and a substandard railway station) means that many of these policies cannot be met by developers, and thus the plan is irrational and ineffective. Reasoned justification (integrating LP11, DP14–DP20 and local context): SP10 will not reduce car trips; it will increase them: The policy lists measures such as bus-priority improvements, active-travel routes and a strategic rail crossing, but there is no requirement that these be delivered before housing. Building 3500+ dwellings first will inevitably generate thousands of additional car journeys on Station Road and the B3130 because residents will commute to Bristol, Bath and further afield. Without functioning rail, bus or walking/cycling alternatives, car use will rise, directly contradicting the policy’s aim to “discourage the overall number of car trips”. DP14 (Highway safety, traffic and provision of infrastructure) requires that development should not prejudice highway safety or cause severe residual cumulative impacts. Allowing housing before infrastructure upgrades clearly fails this test. The constrained road network already struggles, and additional traffic will worsen pollution, congestion and accident risks. DP15–DP18 set out requirements for active and sustainable travel, active travel routes, public-transport accessibility and travel plans. In Nailsea and Backwell, these are largely aspirational because there is nowhere for residents to walk or cycle to (workplaces are elsewhere, retail is limited) and public transport is infrequent. Travel plans alone will not make up for the structural absence of local jobs and services. Unique geographical constraints make policy compliance unrealistic. Constrained road network: Nailsea is accessed only via three routes with fixed pinch points. Widening or bypassing these is physically challenging and expensive. SP10 and LP3 recognise the “strategic measures” needed to alleviate traffic but offer no deliverable solutions for Nailsea. DP14’s safety	Revisit the Vision and strategic approach: Acknowledge that the “one-size-fits-all” vision does not work for all settlements. Tailor the vision and strategic priorities to reflect the unique characteristics and constraints of Nailsea and Backwell. Commit to tailoring policies to local circumstances. This includes recognising that Nailsea and Backwell cannot accommodate a large proportion of the district’s housing growth without first resolving fundamental infrastructure problems. Require infrastructure to be delivered before housing: State unequivocally that development cannot proceed until key transport schemes (identified through LP11) are funded, consented and programmed for early delivery. Tie housing occupations to these infrastructure milestones via planning obligations or conditions. Update LP11 and Schedule 7: Include Nailsea-specific infrastructure (i.e the rail crossing, highway widening or bypass schemes for Station Road and the B3130, and station accessibility works) as formal allocations or safeguarded routes. Without such designation, these improvements will not attract funding or protect corridors from piecemeal development. Embed DP14’s highway-safety requirements into SP10: Require developers to demonstrate, through independent Road Safety Audits, that their proposals will not exacerbate existing hazards at pinch points and junctions. If cumulative impacts are severe, scale back or refuse developments until solutions are in place. Recognise that the unique geography of Nailsea’s roads may make compliance impossible for schemes of the size proposed. Align DP15 - DP18 with local realities: Where active-travel improvements (DP16) or travel plans (DP18) are proposed, require them to be evidence-based and deliverable. For example, cycle routes should connect Nailsea		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								requirements cannot be met under current conditions, and DP 16's active-travel improvements (e.g. Festival Way extension) will be counter-productive if they reduce carriageway width and further delay buses, delivery vehicles and emergency services. Flood risk: The area's propensity for flooding (e.g. near Jacklands Lake and Moorend Spout) affects roads, rights of way and proposed active-travel routes. Even modest surface-water flooding renders cycle paths and footways unusable, undermining DP 16. Locating development on flood-prone green-belt land contradicts DP 9 (Flood risk) and will require expensive mitigation, diverting funds from transport improvements. Environmental and ecological constraints: The Nailsea Moors and surrounding countryside contain Sites of Special Scientific Interest (SSSIs) and important bat habitats. LP 3 requires a Nature Park and bat flight corridors, but these constraints limit where new roads or rail crossings can go and restrict lighting, width and use of active-travel routes. This raises costs and complexity, making it unlikely that transport policies can be delivered. Railway station deficiencies: Nailsea & Backwell station has steep stairs to the southbound platform and no step-free access. This is contrary to the Public Sector Equality Duty, which requires public services to be accessible to people with disabilities. Until the station is made compliant, encouraging rail use discriminates against people who cannot use the stairs. The plan's failure to prioritise station upgrades before housing growth undermines both SP 10 and DP 17 (Public transport accessibility). One-size-fits-all vision fails local realities: The overarching Vision and Strategic Priorities adopt a uniform approach across North Somerset. Yet Nailsea's geography, socio-economic profile and environmental constraints differ substantially from other towns. Imposing a generic transport policy without adapting it to local conditions results in irrational and undeliverable requirements. For instance, policies that assume retrofitting of bus lanes or cycle highways ignore the narrow, historic road network in Wraxall and Tickenham. Parking pressures and DP 19: DP 19 (Parking) states that adequate parking for motor vehicles and cycles must be provided and managed. In Nailsea, public car parking is already severely limited. The loss of a large town-centre car park to private use and the recent implementation of car parking charges has exacerbated the situation; on-street parking frequently encroaches onto pavements, obstructs visibility at junctions and creates hazards for pedestrians and cyclists. New residential development in Nailsea and Backwell will add to this pressure unless the plan delivers new parking capacity. Restricting parking to force modal shift is unrealistic in a town with poor public-transport options. Residents will simply park on side streets, increasing congestion and undermining DP 14's safety aims. Moreover, insufficient parking provision discriminates against people with mobility impairments who cannot rely on walking or cycling. Misalignment between employment provision and transport objectives: SP 10 promotes active travel and reduced car use, but LP 3 proposes 6.1 ha of employment land on greenfield/green-belt sites at the edges of Nailsea and Backwell. Locating jobs outside the town centre forces workers to travel by car or bus to peripheral business parks, increasing traffic on constrained roads. Meanwhile, existing commercial premises in the town centre have been converted to housing, further reducing local employment opportunities. This spatial mismatch contravenes the NPPF's aim of integrating land use and transport, and it negates the potential effectiveness of DP 16 and DP 17. Cumulative policy conflict: Taken together, SP 10, LP 11 and DP 14–DP 20 create a comprehensive framework for safe, sustainable transport. However, the Local Plan fails to apply this framework coherently at Nailsea and Backwell. Instead of phasing development behind infrastructure delivery, the plan front-loads housing and leaves critical transport schemes unfunded. This is irrational and inconsistent with both national policy and the council's own evidence base.	and Backwell residents to actual employment, retail and education destinations within the town. If those destinations do not exist, require mixed-use development to provide them. Ensure that public-transport improvements (DP 17) include accessible, step-free routes and bus shelters designed for people with disabilities. Ensure that active-travel measures, public-transport improvements and travel plans are realistic and linked to local destinations. Reconsider the employment land strategy: Focus employment provision within Nailsea town centre or accessible locations rather than on greenfield peripheries. encourage investment and thus employment into the town centre or within walking distance of homes, rather than on greenfield peripheries. Provide incentives for SMEs, co-working hubs and creative industries to occupy vacant town-centre units. Address parking comprehensively (DP 19):Before approving major development, require a holistic parking strategy that: Assesses existing public and private parking capacity; Provides additional public parking and EV charging where necessary; Implements controlled parking zones to prevent pavement parking and protect pedestrian safety; Incorporates inclusive design, recognising the needs of people with disabilities; Includes enforcement mechanisms to prevent overspill onto narrow roads. Recognise that restricting parking without viable alternatives increases congestion and harms health and safety. Incorporate equalities and health-impact assessments: Require that transport and development proposals include Public Sector Equality Duty assessments to ensure that people with disabilities can access rail and bus services. Include health-impact assessments that consider how increased traffic, air pollution and stress could affect residents, especially in a town already lacking adequate healthcare infrastructure.		
31072289	Jeanne Craske			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	In respect of Nailsea and Backwell improvements to the transport system are very uncertain. There is poor access to the train station which is on a narrow road and is impossible for disabled travellers to use on the southward side (campaigners have tried and failed to get improvements.) Together with a poor onward bus service this does not make for a good transport hub. The same applies to a large extent to Yatton. Infrastructure needs to be improved massively in advance of building work starting or, together with the Congresbury junction, the area will become a car park.			
32925633	Bath and North East Somerset Council		Bath and North East Somerset Council							Transport B&NES Council would welcome further clarity on the anticipated impact of North Somerset Local Plan growth on the B&NES highway network. While we note that a significant proportion of trips will occur within North Somerset and Bristol City, there is potential for impacts on strategic and rural routes within B&NES, particularly through the Chew Valley and corridors connecting to the A37. Clarification is sought through ongoing engagement on how cumulative impacts in B&NES communities and on key corridors will be mitigated.	North Somerset Local Plan Reg 19 Consultation 2025 FINAL.pdf
31058625	Wayne Davey			No	• Effective	Unsure	Unsure	Most of the general words supporting active travel are sound, it is the lack of detail that is unsound because they make the plan ineffective. I'm mostly interest in the routes in and around Pill as that's where I live. I currently commute by bike to Bristol most weekdays. As far as I can read (and there is a real lack of clarity in this plan), there are vague suggestions for what could be done but the only commitment appears to be to protect the two routes listed in schedule 7. One of which, the River Avon Pill Path, is almost entirely OUTSIDE the management of North Somerset. This fact is not noted as far as I can see. Also, the two other key routes available do not	Amongst a range of other issues I think there should be detailed commitments on active travel that have been sensibly worked out with the input of local active travel users.		Additional travel notes.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								even appear to be protected per schedule 7.: A369 pavement shared path to Ashton Court - not quite to Bristol notably! Path to Portishead To my mind each of these will be made significantly worse by the planned development unless there is a strong commitment to protecting, and ideally enhancing, them. Why worse? Dangerous construction traffic (these trucks are statistically more likely to kill cyclists), higher traffic loading on A369 - it's already a challenge to safely cross the A369 on the traffic island (which is not even big enough to safely accommodate a regular bike) without waiting for ages either at the edge or on the tiny island. The railway plans are likely to severely hamper, or even end, usage of the Pill Path (and probably the Portishead path too). Last time there was construction preparation activity along that area (2023 I think) the path was dangerously cut up. I tried reporting it everywhere - note it was ineffective reporting it to North Somerset Council because it is outside your management - a fact which does not seem to be acknowledged appropriately in your plan. On page 279 the plan says "improvements and/or contributions towards River Avon Trail to Bristol required". However there is no outline of what these might be, or what North Somerset's ability to impose them is. There are LOADS of improvements that could be made - it's too narrow, bumpy, muddy, wet, dark for most people to even contemplate using as a commuter route. I love it but can only use it for 6 months of the year due to those reasons. Finally there is an exciting pipe dream idea in the plan (p279) mentioning a crossing over Markham Brook. Done well, this could enable good local active travel opportunities. However, there appears to be no commitment to do so. It really has the look of a last minute idea, thrown into the plan and is a good example of the lack of thought and local consultation that seems to have gone into LP4. I cannot imagine funding would be found for this - bearing in mind that it would need to be a high crossing over Markham Brook which is ancient woodland.

62792161	Nempnett Thrubwell Parish Council		Nempnett Thrubwell Parish Council						On transport infrastructure, the council insists on thorough consultation regarding the Mass Transit link to Bristol Airport, emphasising the need for rural communities to be considered.		
62802913	Pill & Easton-in-Gordano Parish Council		Pill & Easton-in-Gordano Parish Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Policy SP10 is unsound, ineffective and inconsistent with national policy (NPPF para 109) because the transport evidence for the 1,100-home Pill allocation (LP4) is extraordinarily sparse and demonstrably inadequate (see also para 118 on required assessments). The council's own Infrastructure Delivery Plan (October 2025, section 8.3) classifies M5 Junction 19 upgrades as "high risk" with no funding or delivery plan. No cumulative 10-year traffic modelling has been carried out for the combined impact of Pill (≈ 700 peak-hour car trips), Portishead growth, and expanding Royal Portbury Dock traffic. The active travel routes shown on the Policies Map – notably the Markham Brook overbridge and connections across private land – appear to have been drawn freehand without site visits, surveys or landowner agreements. They cut directly through ancient woodland, floodplain woodland and private property, ignoring the mandatory 15-metre buffer (Natural England Standing Advice) and basic topography. These routes are undeliverable and give every impression of a rushed, last-minute insertion to justify a housing numbers gap rather than a properly prepared, evidence-led strategy. SP10's requirement to "minimise adverse effects" on the highway network and the environment is therefore meaningless for Pill. The policy fails on the council's own evidence.	To make SP10 sound and deliverable it must be amended to state: "No development at the Pill & Easton-in-Gordano Strategic Location (Policy LP4) shall commence until M5 Junction 19 capacity improvements are completed, funded and open to traffic." And "The safeguarded active travel route across Markham Brook (Schedule 7) shall be deleted or re-routed to avoid all ancient woodland and its 15-metre buffer zone." Without these changes SP10 is ineffective and the Plan risks being found unsound.		Markham Brook Ancient Woodland and Priority Habitat Inventory.pdf
57020033	Stuart Hunt			Yes		Yes	Yes				
7800929	Wraxall and Failand Parish Council		Wraxall and Failand Parish Council	No	• Justified • Effective	Unsure	Yes	The principles of SP10 are supported but there is no provision for supporting the proposed development around the strategic location of Nailsea and Backwell. The aim of improving public transport is laudable. However, it is not an attractive option for those residents commuting from Nailsea and Backwell in terms of journey time or frequency. Existing bus services are subsidised but in the current financial climate an improvement is not likely to be considered commercially viable. It would be difficult for any development proposals to predict in a Travel Plan where their residents will be commuting, given the lack of employment opportunities in Nailsea & Backwell. Further information is in the W&F PC Position paper			Wraxall & Failand Parish Council Position Paper - North Somerset Local Plan 2041 - 11 Dec 2025.pdf
62485185	Warwick Leaman			No	• Positively prepared • Effective	No	Unsure	You are not thinking about the risk to life of all the additional traffic blocking up the roads heading to Weston General Hospital. In the past few years, we have had the developments at Wentworth Drive, Devils Bridge and the Bleadon Quarry all feeding cars onto the A370 by the hospital. I live at Hillcote and walk everywhere and I have not seen one person walking out of any of the three developments, they all drive because it is too far to walk. Your new Pre-submission Plan has three possible sites, Uphill Grange, Uphill, Land at Bridgwater Road and Land at Leighton Crescent which will feed even more congestion to the roundabout by the hospital. If you've seen the ambulances struggling to get through the traffic, its just a nightmare for them and these three possible locations for more housing will be a serious risk to lives. Even a few seconds of delay can make the difference of life or death. Please remove these sites from your proposals.	Remove the three sites detailed above, as ambulances are seriously struggling to get to the hospital already let alone with another few hundred cars adding to the problem.	The rest of the plans seem ok to me.	
43203041	National Highways		National Highways							Whilst the policy objectives are supported, with a focus on improving safety, reducing the need to travel and promoting sustainable travel, it should be noted that National Highways will continue to seek appropriate transport investment and capacity enhancements where the residual cumulative impacts of development are severe. We will continue to liaise with North Somerset Council and their consultants to identify any requirements for further transport investment in light of the findings of the Transport Assessment and follow-on operational assessment work for SRN junctions.	NSC Reg19 Local Plan Consultation.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										We note that the policy is supportive of improvements to strategic transport facilities at Bristol Airport and the Royal Portbury Dock. Both sites have implications for SRN travel as international gateways, and the Royal Portbury Dock is accessed directly from M5 J19. National Highways would therefore take an interest in any proposals to improve transport facilities for either site.	
57964929	Jane Mather			No	• Effective	Unsure	Unsure	Tower Farm site cannot provide safe or suitable access Development would create unacceptable transport impacts, especially at school drop off and pick up times. No quick link to town centre amenities, eg medical centre, on public transport. Only one bus route which goes one way round the town, and takes 20 minutes.	Add extra access route, coming from North Weston, in order that all vehicles do not have to travel through an already contested Portishead town centre.	None	
39179649	Adrian Mealing			No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	I consider Policy SP10 to be unsound because it is not positively prepared, not justified, not effective, and not consistent with national policy. SP10 sets out the transport principles for the Local Plan, requiring development to minimise carbon emissions, promote walking and cycling, improve public transport use, and reduce private car dependency. However, the allocations for Congresbury (183 dwellings) directly contradict these principles. My concerns are as follows: 1. SP10 is not positively prepared SP10 requires alignment between transport infrastructure and the scale of growth, but the Plan identifies no strategic transport improvements for Congresbury despite allocating three housing sites. There is: No improvement to the heavily congested A370 corridor, No upgrade to the Smallway junction, No safe or continuous walking or cycling routes, No bus service enhancement, reliability guarantee, or frequency increase. SP10 therefore fails to plan for transport in a meaningful or forward-looking way. 2. SP10 is not justified SP10 is not supported by the necessary evidence base. No transport modelling, junction capacity analysis or impact assessment has been provided for Congresbury, even though the village sits on a known traffic bottleneck. The absence of any analysis of cumulative impact from 183 new homes means the policy lacks justification and does not meet NPPF requirements for evidence-led planning. 3. SP10 is not effective SP10 cannot be delivered in Congresbury because: Proposed “active travel enhancements” are not funded, not designed, and not included in the Infrastructure Delivery Plan. The Strawberry Line extensions mentioned elsewhere in the plan are aspirational only and not guaranteed within the plan period. Walking and cycling from the new housing sites to village facilities is currently unsafe, due to a lack of pavements, dangerous A370 road conditions, and missing crossings. No mechanism exists to ensure that new homes will be supported by sustainable transport solutions. This makes SP10 undeliverable in practice. 4. SP10 is not consistent with national policy The NPPF requires plans to: enable sustainable transport modes for everyday journeys (NPPF 104–106), reduce the need to travel by car, ensure safe and suitable access for all users (NPPF 110), avoid development that results in severe residual impacts (NPPF 111). Allocating 183 homes in a location that is entirely car-dependent, with no rail station, infrequent bus services, and no funded active-travel infrastructure, fails all of these requirements. In addition, the A370 routinely experiences congestion and safety issues; adding further traffic without mitigation is inconsistent with national transport policy. SP10 therefore fails all four soundness tests.	To make SP10 sound, the Plan must include: A fully costed and funded transport infrastructure package for Congresbury, including: A370 corridor upgrades and junction improvements, A safe, continuous walking and cycling route connecting all three housing allocations to village services, Funded pedestrian crossings (including Smallway junction), Public transport frequency improvements and service guarantees, New or improved bus priority measures. An evidence-based transport modelling assessment showing whether Congresbury can support the planned growth without severe residual impacts. Clear phasing requirements linking housing delivery to completion of active travel and highway improvements. Without these changes, SP10 remains unjustified and undeliverable.		
31042785	Bill Millar			No	• Effective	Yes	Yes	It appears to have completely missed the issue that the road network in the area is not adequate for the current traffic far less the extra traffic that would be generated with new housing. The policy is to build houses near workplaces. There are few job vacancies in Churchill, for example, but a significant number of houses are planned nearby. The road to Clevedon is not fit for early 20th century traffic far less the 21st century. If you build more houses near villages like Churchill residents will have to travel towards the M5 or Bristol simply aggravating a hopeless traffic situation. How on earth can you have a housing policy without a road improvement policy. Get a grip.	If you inlcude a plan to improve the road network to support current needs and plan to build houses where ther are jobs you might just be on the right track. Perhaps you need to include a plan of where the job need is.		
58582945	Nailsea Action Group		Nailsea Action Group	No	• Effective	Unsure	Unsure	Every entrance / exit from Nailsea has restrictions and pinch points. In addition, links to Bristol and other large towns are completely inadequate. A cross rail link from Nailsea to the A370 has been discussed many times, and indeed in the last Local Plan, was discounted as too expensive. The public transport facilities in the area may be excellent by some measures, but they are not fit for purpose because there are far too few jobs in the area. The first table below shows that, like most of the other locations in North Somerset, most of the area’s working population drive to work. That is because public transport lacks sufficient capacity. Also, the need to change the public transport service during the commute prevents public transport from providing reasonable commuting times to the diversity of mid-distance workplace locations. The second table below shows that a third of Nailsea and Backwell’s (N & B’s) working population commute that sort of distance, between 10 and 20 km. Census table QS701EW - Method of travel to work (see the attachment below for the table) Census table QS702EW - Distance travelled to work (see the attachment below for the table) Nailsea Action Group also notes that some operational changes by public transport authorities affect NSC objectives. For instance, the reduced capacity of the High Speed Trains results in severe difficulties boarding an already full train at peak times in Nailsea Backwell train station. North Somerset Council has endeavoured, in the past, to facilitate the delivery of net-zero, and to remove the detrimental effects of transport. In the transition period between 2025 and 2040, it is important that the effects on residents’ lives and livelihoods are not unnecessarily adversely affected. For instance, creating a bus lane on the A370 is beneficial for public transport, but unnecessarily mandating it 24 /7 is not.			Travel census tables.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 30624833	J Palmer			No	• Effective	Unsure	Unsure	Reasons for saying that the North Somerset Local Plan 2041 is not effective: - LAND NORTH OF NAILSEA (Wraxall land) for development by LVA THE EXISTING UNSATISFACTORY INFRASTRUCTURE has not been considered; ROADS The road provision has not changed or been improved for many decades. While a connecting road has been proposed for the new site, that alone will not alleviate the current problems with traffic in the whole area. On the contrary, any new roundabouts will add to them. The B3130 Clevedon Road leading to the 'pinch point' at Stone Edge Batch is already causing problems for drivers due to it being no wider than a country lane. Not only are the roads inadequate, there is yet to be a proposal to redesign the road network in general in this and other areas. POUND LANE/EMERGENCY VEHICLES Increased construction traffic, possible temporary traffic lights, and a new roundabout built near Pound Lane will impede not only the residents of Nailsea going to work and school but also emergency vehicles that are required. Police, fire crews and ambulances are all centrally stationed at Nailsea Ambulance Station in the Pound Lane area. The B3130 road is crucial, for accessing the M5 in an emergency; the traffic density would be considerably increased after the development.	Not possible to comment	Not possible to comment	
57928993	Kevin Payne			No	• Justified • Effective • Consistent with national policy	Unsure	Unsure	I object to Strategic Policy SP10 because the Plan does not provide adequate evidence of cumulative transport impacts for Pill and Easton-in-Gordano. The A368 and Pill Road are already heavily trafficked, generating noise and vibration that affect residents. The policy does not demonstrate how these roads could accommodate additional traffic from proposed developments, nor how noise and vibration impacts will be mitigated. Junction 19 of the M5 is already congested, and the Plan lacks cumulative modelling or deliverable infrastructure plans. There is also an over-reliance on the proposed railway station without confirming that rail and bus services could realistically absorb demand from new homes. The Plan also fails to demonstrate how increased traffic from Pill Green and other allocations would avoid or mitigate adverse impacts on air quality, contrary to the Local Plan's sustainable development and environmental protection objectives (SP1, SP11, DP37) The parish council observes that no cumulative transport modelling has been published for Junction 19 or local roads, undermining the policy's effectiveness. Junction 19, the A369, and village lanes cannot safely accommodate the additional vehicles, and the plan over-relies on a new railway station without evidence that it can absorb the increased demand. The Infrastructure Delivery Plan identifies essential transport and flood mitigation as high-risk and unfunded, suggesting the Plan's effectiveness is unproven.	To make SP10 sound, the Council must provide cumulative transport modelling for Junction 19 and all local roads affected by strategic growth, including the A368 and Pill Road, and demonstrate that necessary infrastructure and public transport capacity will be deliverable and funded. Noise and vibration mitigation must be properly assessed and included in the policy.		
39305665	Marcus Plaw Persimmon Homes Severn Valley		Persimmon Homes	No	• Positively prepared • Consistent with national policy	Yes	No	Whilst the Company is supportive of development that is connected appropriately to transport facilities and services, we note that bullet 3 requires development proposals to deliver "… better local bus, rail and rapid transit services and infrastructure supporting uptake in public transport use for journeys to work, leisure and other purposes.". The policy does not provide adequate clarity as to how all these requirements must be demonstrated or achieved. Further, how can an applicant demonstrate, for example, uptake and patronage will be improved through development? It is reasonable to expect that development next to existing transport facilities will add to patronage and be supportive, however providing clear evidence, certainly for smaller developments will be challenging, time consuming and costly – presenting an unduly onerous requirement on applicants. This policy should be re-written as it lacks precision and therefore is not effective.	The Policy should provide clarity over how the uptake in public transport will be achieved. Further, the Policy should reference how improvements will be funded – through CIL or S106 contributions.		
62776065	Paul Segar			Yes			Yes			I support the points outlined in the Policy, particularly locating new development where it reduces the need for travel, especially by car.	
51079969	Justin Saunders		Pill and Easton-In-Gordano Parish Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	Yes	Active travel for employment and to schools opportunities is limited in the rural community of Pill and Easton-In-Gordano. LP4 does not address this. On the main sites to the south, there are natural barriers to east to west travel, and little connectivity with the port which is the nearest large employment location - particularly from Easton-In-Gordano. The proposed active travel route from the largest site damages ancient woodland and does not address access issues for other sites. There is no structured plan to improve any modes of transport for employment or leisure in line with the LP4 development. No additional bus transport planning, no capacity improvements on the once an hour rail link in line with developments in the area, no structured plan for dealing with Junction 19 of the M5 or the A369 despite significant growth in Portishead and the strategic site LP4. This is unsustainable and will harm the delivery of this plan.			
30736993	Kath Scargill			Yes		Yes	Yes				
30736993	Kath Scargill									Active travel including Gordano Greenway and the fact that Trains will again be running to Portishead	
20454017	Ian Slatter		Mr	No	• Effective • Consistent with national policy	No	No	The Stage 7 Transport Assessment document submitted in support of the NSC Plan contains inaccuracies, for example on page 40 it claims that the X5 bus service from Portishead to Weston-Super-Mare has been recently enhanced by the "Introduction of Sat & Sun service". There has however been a Saturday service for many years (ie this was not added recently) and there is no Sunday service. The document itself notes "that minor changes to some quanta of development (including Wyndham Way residential allocation, and Wolvershill and Woodspring employment allocations) were made prior to publication, following agreement of the draft site allocations which were used to inform the strategic modelling." The increase at Wyndham Way was significant, a 61% increase, and the modelling therefore cannot be seen to be accurate or representative. In addition, the following potential BSIP schemes were all consulted on previously with respondents overwhelmingly opposing the proposals: • A369 Bridge Road - Bus Lanes for priority on A369 • B3133 South Way Central Way (Clevedon) - Bus Priority at roundabout for EB and WB movements • Ettlingen Way Roundabout - EB and NB bus priority	A new Transport Assessment document is required, with public consultation on the proposed measures such as BSIP schemes and properly evidenced, realistic modelling based on accurate housing numbers. The impact on roads immediately next to developments such as Tower Farm should also be included.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								• Tickenham Road Northern Way - Larger Roundabout with EB and WB bus priority. "79% of respondents say 'disagree' with creating bus lanes at the Tesco roundabout while maintaining the same number of car lanes... 87% of respondents say 'disagree' with creating bus lanes on northbound and eastbound approaches... 90% say 'disagree' to changing a car lane into a bus lane on Central Way... 80% say 'disagree' to widening the carriageway on Moor Lane for a bus lane... 85% of respondents say 'disagree' to creating bus lanes on Tickenham Road on the east and west side of the roundabout)." Many members of the public voiced concerns that the proposals would make traffic worse, not only for car users but also for the buses that would be stuck in traffic jams before they could reach the bus lanes intended to help them. The following were also part of the BSIP plans but were removed from the consultation and the plans put on hold, presumably because of the strong evidence provided by Portishead Town Councillors that showed that the proposals would make traffic worse for all road users, again including buses that would again be stuck in traffic before reaching the bus lanes: • A369 Martcombe Road south of the M5 J19 - New 24-hour bus lane towards Junction 19, replacing High Occupancy Vehicle Lane • Portbury Hundred - Bus Lane on A369 towards Junction 19. Now, with no further consultation, these schemes appear to have been resurrected to justify the Plan, accompanied by claims that they will reduce journey times and make the use of public transport more attractive. Additional development in areas such as Portishead with "mitigation" that would actually make traffic worse would be disastrous, and destroys the report's claims that the effects of such development can be mitigated. It should also be noted that there is no mention of the impact of proposed developments such as Tower Farm and Black Rock on the roads immediately around them and providing direct access to them, or on cross-town traffic generated as a result of the developments. How can it be claimed, therefore, that the impacts of these developments is being successfully mitigated? These plans are therefore contrary to NPPF S110 and S115.			
711873	Easton-in-Gordano Parish Council		Pill & Easton-in-Gordano Parish Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Policy SP10 is unsound, ineffective and inconsistent with national policy (NPPF para 109) because the transport evidence for the 1,100-home Pill allocation (LP4) is extraordinarily sparse and demonstrably inadequate (see also para 118 on required assessments). The council's own Infrastructure Delivery Plan (October 2025, section 8.3) classifies M5 Junction 19 upgrades as "high risk" with no funding or delivery plan. No cumulative 10-year traffic modelling has been carried out for the combined impact of Pill (≈ 700 peak-hour car trips), Portishead growth, and expanding Royal Portbury Dock traffic. The active travel routes shown on the Policies Map – notably the Markham Brook overbridge and connections across private land – appear to have been drawn freehand without site visits, surveys or landowner agreements. They cut directly through ancient woodland, floodplain woodland and private property, ignoring the mandatory 15-metre buffer (Natural England Standing Advice) and basic topography. These routes are undeliverable and give every impression of a rushed, last-minute insertion to justify a housing numbers gap rather than a properly prepared, evidence-led strategy. SP10's requirement to "minimise adverse effects" on the highway network and the environment is therefore meaningless for Pill. The policy fails on the council's own evidence.	To make SP10 sound and deliverable it must be amended to state: "No development at the Pill & Easton-in-Gordano Strategic Location (Policy LP4) shall commence until M5 Junction 19 capacity improvements are completed, funded and open to traffic." And "The safeguarded active travel route across Markham Brook (Schedule 7) shall be deleted or re-routed to avoid all ancient woodland and its 15-metre buffer zone." Without these changes SP10 is ineffective and the Plan risks being found unsound.		
29025697	P Sterndale			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Development on the five proposed sites in Pill & Easton-in-Gordano relies heavily on the Portishead – Pill – Bristol Railway line which it states has secured government funding and is due to be delivered by 2028, and would provide direct rail links to Bristol Temple Meads railway station. However, the railway does not yet exist, and as campaigns for it to be built have been going on for at least 25 years, with many promises made and then broken, its future is in fact by no means secured. If it is built, then there will only be 2 trains per hour, and passenger predictions suggest that the trains will already be full when they leave Portishead, with no room left for passengers from Pill. The direct road access to the A369 will be via an already busy junction which is frequently congested at peak times already. Junction 19 of the M5 is already saturated and frequently grinds to a halt. It is made worse by the Services being accessed from the roundabout. The junction cannot cope with any increase in traffic. The National Highways report stated that transport modelling is needed to assess the cumulative impact on junction 19, but the results of that investigation are unknown. It is therefore not known if the Council has either received the report or taken note of its findings. It is clear that major redesign of the Junction would be necessary.	The Transport policy needs review.		
28910369	T Stock			No	• Justified • Effective	No	No	Climate change is a money making scam run by our establishment against the people to make us poorer and restrict of freedoms.	Stop all of your so called traffic calming measures, remove any furniture you've installed in the carriageways to block traffic from using that side of the carriageway, stop all future bus lanes that stop all other legally documented vehicles from using that carriageway, for instance the likes of Long Aston Bypass, bus lanes must only be allowed for a limited time of the day, a short time for the morning rush hour and again in the evening rush hour, also motorcycles must be allowed the use of bus lanes at all times. 20mph speed limits to be scrapped everywhere except for around schools at opening and closing times. Stop cyclists from using roads where there are cycle ways in the same area. Stop all future development of your illegal Low Traffic areas that stop vehicles from using roads, you are acting against the wishes of the majority of people that need to get from point A to point B in the shortest and safest way possible (reread the above comment of your so called traffic calming measures above). You're obviously operating an anti car and anti freedom of movement policy for the population where buses and even cyclists have rights of way over the people that are and have paid for the road infrastructure. You must reverse and remove your speed bumps and dangerous structures put up in the carriageways. You clearly need to be reminded you work for us and not the other way round especially when you ideas go against the public.	I disagree as the U.K. is now a two tier police state where unelected anti British people are actively going against the people.	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									Here's one that's make no sense whatsoever, Wansbrough Road obstructions in the carriageway to stop car's and people safety going about their business.		
31062913	R Storrar		KWAW	Yes		Yes	Yes			The need to ensure non-carbon reliant transport is essential to ensure that the effects of climate change are minimised. Mass transport solutions are needed to reduce the reliance on private vehicles. This is all part of the housing and spatial policies. Where active travel opportunities are identified, they need to be realistically evaluated. The fact that it is possible to walk/cycle to a train station, does not mean it is very likely if the route to it is unlit, narrow or dangerous due to other traffic. Active travel is still mostly a leisure activity, not a viable alternative to the car!	
62857665	Mr James Joseph Sullivan			No	• Effective		Yes	It is not sound in respect of the Transport considerations around Nailsea and Backwell. This view is consistent with the reports own statement that the scale of development has previously been considered and rejected on this basis (para 4.33). The proposed East of Backwell Cross Rail Link (para 4.38) serves to move traffic around the local proposed developments but does not not address the wider issue of the additional traffic volume generated buy the developments and how this traffic would link up with the exiting infrastructure towards Bristol or indeed towards the M5 motorway. It is also widely known that the area around the proposed East of Backwell Cross Rail Link is a flood risk, as evidenced by regular flooding athe the cross rail bridge at Chapel Hill in Backwell.	Significant improvements to capacity and facilities at Nailsea and Backwell railway station would be a start. However, the road infrastructure will still struggle to cope.		
56291297	D Treeby			No	• Effective	Yes	Yes	I do not believe this plan to be sound. The transport/road infrastructure within N Somerset has historically been beyond inadequate. Specifically around the village of Banwell. After almost a century of horrific traffic for both commuters and residents a suitable bypass has finally been approved. However, this simply fixes a historic infrastructure issue, it does not cater for increased traffic capacity when existing roads are already significantly over. Whilst I understand, for the council to spend money it must gain development opportunities in order to justify this to Westminster, this bypass is a single lane, 30mph country road. Not a commuter trunk road capable of large traffic volume. Given the council's plans for large residential developments to the East of WSM, this will place huge strain on a solution created to fix a historic issue, it does not increase capacity significantly if at all. The new bypass will be over capacity given the councils plan, with it being the only effective access inland from the coast.	Large, congested developments do not suit the topography of N Somerset. Roads do not have the necessary bandwidth to maintain acceptable traffic flow. I suggest splitting strategic development up to alleviate this. Heavily reducing development plans Woolvershill Batch, and adding development in the vicinity of Bleadon along the A370 and to the East of Clevedon, to the north of Kenn, would alleviate hotspots of traffic, spreading out the traffic load on what are strained roads. Development to the North of Kenn would be my primary suggestion, with Clevedon clearly underdeveloped, and additional impact for far fewer existing residents. As well as a motorway junction providing great transport access. Key benefits are that this also diversifies routes inland as Davis Ln and Twickenham Rd could be more efficiently incorporated into the existing network. I suggest this would still allow the council to hit its development goals, whilst spreading out development. Which as I've explained, suits the county's historic infrastructure.		
14339745	Paul Watkins			No	• Justified • Effective	No	No	you write New development must be located and designed to minimise the carbon impact of transport through limiting the need to travel and prioritising walking, wheeling (this includes wheelchairs, mobility scooters and other wheel-based mobility aids) and cycling and the use of public transport opportunities. How does NSC measure the carbon impact of transport, and where does it publish this data? Surely 'wheeling', ie using wheels for transport, includes cars and motorbikes...?? so why have they been excluded from your defintion?			
58636097	Nancy Wedin			Yes		Yes	Yes	Implementing a better public transport infrastructure would go further to enhance the work NSC has been doing to reduce greenhouse gas emissions. I would welcome the delivery of all the services, as living rurally we do have to often rely on private vehicles for travel; better connections through advanced public transport would help lessen our carbon impact and save congestion on the roads which is becoming a major problem locally - particularly with the Airport close by. It is essential that the network for electric vehicle charging is suitable and meets growing demand. I would love to see the reopening of the old Wrington Vale railway into an active travel route, this is being championed by our councillor Tom Dawe.			
58415265	Mr D Wheeler			No		Unsure	Unsure	The transport plan needs to be far more imaginative and bolder. this just tinkers at the edges. The number of buses serving villages is decided by the bus companies not the council. This has caused major problems in long ashton this year,			
63070401	Emilia Leung			No	• Effective	No	Unsure	The Proposal is overly reliant on inflated national targets and infrastructure that cannot be delivered – whilst at the same time, ignoring local constraints. The Proposal is also inconsistent with national policy. Green Belt boundaries should only be altered in exceptional circumstances – and the review must show no "clear evidence that doing so would fundamentally undermine the purposes…of the remaining Green Belt".			
59945953	Rich Coleman			No	• Positively prepared • Justified • Effective			The EV bubble has burst, sales are dropping and manufacturers are moving back to ICE vehicles with a emphasis on bio fuels. The EU has pushed their EV mandate back to 2040. Why waste further vital funds on a "dead" technology. let the market dictate the vehicle type. If any investment is required let it come from private investors not North Somerset Council.	Halt any investment into Electric Vehicle infrastructure.		

SP11: Historic and natural environment

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
39374913	Tony Harden								Page 42 policy SP11 sensible seeks the retention of existing trees. However parts of the area have been subject to the growth of invasive tree species such as holm oak which have a negative impact on biodiversity. Please can this policy be qualified by only seeking the retention of BRITISH NATIVE trees. Such an amendment would then make SP11 consistent with DP35		comments on Local Plan.pdf
31149537	Strongvox Ltd	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	We would observe that this policy captures a broad range of objectives, including landscape, heritage, ecology, green and blue infrastructure together with settlement identity and strategic gaps. In respect of the latter, it is noted that this is, in its own terms, 'strategic' in nature and, like the Green Belt, not for the purposes of highlighting or assessing landscape or other character or quality; it is simply a tool for resisting development. This should therefore be omitted from the policy as it unduly conflates specific characteristics with spatial planning initiatives. It is noted that the policy seeks to 'protect the best and most versatile agricultural land' and this objective is supported as consistent with national planning policy. It would not be reasonable or appropriate to go beyond this in terms of unduly restricting development in areas of higher agricultural quality, however, given the need to balance the objective of protecting BMV land with securing the right development in the right places, with associated technical requirements.	Strategic Gaps should be omitted from the policy as it unduly conflates specific characteristics with spatial planning initiatives.		R002v5 NSLP Reg19 Reps Strongvox Dec25.pdf
21579777	Taylor Wimpey (Youngwood Lane, Nailsea)	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy			Policy SP11: Historic and Natural Environment We would observe that this policy captures a broad range of objectives, including landscape, heritage, ecology, green and blue infrastructure together with settlement identity and strategic gaps. In respect of the latter, it is noted that this is, in its own terms, 'strategic' in nature and, like the Green Belt, not for the purposes of highlighting or assessing landscape or other character or quality; it is simply a tool for resisting development. This should therefore be omitted from the policy as it unduly conflates specific characteristics with spatial planning initiatives. It is noted that the policy seeks to 'protect the best and most versatile agricultural land' and this objective is supported as consistent with national planning policy. It would not be reasonable or appropriate to go beyond this in terms of unduly restricting development in areas of higher agricultural quality, however, given the need to balance the objective of protecting BMV land with securing the right development in the right places, with associated technical requirements. 63191617	Various Taylor Wimpey Crest Nicholson Barratt Redrow Vistry Group	Nick Matthews (Savills)		No	• Justified • Effective • Consistent with national policy	Yes	Yes		These representations have been prepared and submitted by Savills on behalf of various clients including Taylor Wimpey, Crest Nicholson, Barratt Redrow, and Vistry Group. This draft policy sets out the approach to the determination of planning applications impacting upon green infrastructure and the historic environment. In so doing, the Policy is seeking to cover a lot of ground and only therefore touches upon some policy areas at a very high level, often with a short sentence. The challenge with covering these policy requirements in such a summary form is the potential for inconsistencies with national policy. This is what has happened with Policy SP11 and there are various components of the draft policy which need to be revisited. By way of example, we highlight three elements of the policy which are inconsistent with the Framework, each considered in turn below. A) 'Preserve and enhance conservation areas, listed buildings, buildings of local significance, scheduled monuments other archaeological sites, registered and unregistered historic parks and gardens' 4. The Framework states that "when considering the impact of a proposed development on the significance of a designated heritage asset, great weight should be given to the asset's conservation (and the		Policy SP11 (Historic and Natural) for Various (Dec 25).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									more important the asset, the greater the weight should be)" (paragraph 212). It goes on to state that "any harm to, or loss of, the significance of a designated heritage asset (from its alteration or destruction, or from development within its setting), should require clear and convincing justification" (paragraph 213). Paragraph 214addresses proposals which would lead to a substantial harm to heritage, stating that 'local planning authorities should refuse consent, unless it can be demonstrated that the substantial harm or total loss is necessary to achieve substantial public benefits that outweigh that harm or loss or all of the following apply'. 5. Paragraph 215 explains how decision takers should approach development which would "lead to less than substantial harm to the significance of a designated heritage asset". In such circumstances "this harm should be weighed against the public benefits of the proposal including, where appropriate, securing its optimum viable use". 6. The draft policy establishes a different test to that set out in the Framework, requiring development to 'preserve and enhance' heritage assets rather than allowing the level of harm to the significance of the heritage assets to be assessed, followed by an evaluation of whether the level of harm is outweighed by the public benefits arising from the development. B) 'Conserve and enhance the landscape and scenic beauty of the Mendip Hills National Landscape and the wildlife and cultural heritage, including ensuring that development in its setting is sensitively located and designed to avoid or minimise adverse impacts' 7. Paragraph 189 of the Framework states that "great weight should be given to conserving and enhancing landscape and scenic beauty in National Parks, the Broads and National Landscapes which have the highest status of protection in relation to these issues" (emphasis added). Whilst much of the wording is similar, the removal of the emphasised text above changes the nature of this policy test from a factor which should be considered in the planning balance, albeit with great weight, to a binary test which excludes other considerations. In effect it therefore goes above and beyond National Policy and applies a test which, in many instances will be unachievable. If the policy is retained, to be sound this criteria must be revised to more accurately reflect the provisions of the Framework. C) 'Protection of the best and most versatile agricultural land' 8. Paragraph 187 of the Framework states that 'Planning policies and decisions should contribute to and enhance the natural and local environment by: … b) recognising the intrinsic character and beauty of the countryside, and the wider benefits from natural capital and ecosystem services – including the economic and other benefits of the best and most versatile agricultural land, and of trees and woodland' (emphasis added). The draft policy goes far beyond national policy in applying a blanket requirement to protect the best and most versatile agricultural land, rather than requiring its economic and other benefits to be recognised and taken into consideration in determining planning applications. D) 'Retain existing trees and support new planting, including street trees, and woodland creation to help increase district-wide canopy cover' 9. While retention of existing trees is desirable, this wording reads as an absolute expectation, which is inconsistent with the NPPF's proportionate approach. Paragraph 136 of the Framework states that "Trees make an important contribution to the character and quality of urban environments, and can also help mitigate and adapt to climate change. Planning policies and decisions should ensure that new streets are tree-lined, that opportunities are taken to incorporate trees elsewhere in developments (such as parks and community orchards), that appropriate measures are in place to secure the long-term maintenance of newly◈planted trees, and that existing trees are retained wherever possible" [emphasis added]. SP11 should therefore qualify retention using the same caveat, recognising that some tree loss may be unavoidable when balancing competing policy objectives such as housing delivery and infrastructure. 10. In light of the examples above, and in order to satisfy the requirements of Paragraph 35 of the Framework, we recommend that the draft policy wording is revised in line with the Framework. An alternative approach, and one we prefer, is to remove this draft policy from the plan and to instead rely upon the subsequent development management policies set out later in the draft plan. This would remove duplication and be consistent with the Framework which states that 'Strategic policies should not extend to detailed matters that are more appropriately dealt with through … other non-strategic policies' (paragraph 21). The deletion of this policy would also ensure that there is no duplication or confusion once the National Development Management Policies are published alongside the December 2025 update to the Framework See attached document for underlined text/emphasis added.

29403105	Diverse Partnerships Yatton Ltd	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	We would observe that this policy captures a broad range of objectives, including landscape, heritage, ecology, green and blue infrastructure together with settlement identity and strategic gaps. It is noted that the policy seeks to 'protect the best and most versatile agricultural land' (BMV land). This however extends beyond the NPPF position of recognizing the benefits of such land. Large swathes of the authority area fall within BMV land and this should be factored into any wider planning balance when making a decision. Indeed, the Natural England guidance on this (Guide to assessing development proposals on agricultural land 2021) directs to a threshold of 20ha and smaller losses "If they're significant". The policy should be amended in this regard to move away from 'protect' to "have regard to the benefits of" BMV land to be consistent with national policy. Without such change the policy is not positively prepared, consistent with national policy, effective or justified.	The policy should be amended in this regard to move away from 'protect' to "have regard to the benefits of" BMV land to be consistent with national policy. 51524513	Bellway Homes Ltd	tor&co	Bellway Homes Ltd	No	• Justified • Effective • Consistent with national policy			Draft Policy SP11 (Historic and natural environment) lists overarching principles related to green infrastructure and the historic environment. However, the policy covers a lot of ground and is considerably lengthy. Bellway consider these matters referred are better placed in detailed development management policies. Indeed, this is already the case in other policies.	Bellway suggest the best course of action is emphasise this in supporting text or the Vision section – deleting this policy, in accordance with Paragraph 21 and 16(f) of the NPPF.		20251212 504317 JE - North Somerset Reg 19 (Reps obo Bellway Homes).pdf
63114593	Bloor Homes (North of Pound Lane Nailsea site)	Turley		No	• Positively prepared • Justified • Effective • Consistent with national policy		No	Policy SP11 (Historic and Natural Environment) We support the broad aims and aspirations of this draft policy. However, we do have concerns regarding the wording and the level of detail the policy seeks to set out. Some of the terminology proposed is vague at present, and we consider it may be challenging/ difficult for planning applications to demonstrate how they adhere to the various requirements. It is in contradiction with part (d) of paragraph 16 of the NPPF which states plans should contain policies that are clearly written and unambiguous, so it is evident how a decision maker should react to development proposals. We welcome the caveat at the start of the second paragraph in the policy that confirms the bullet point examples apply only 'where appropriate', albeit some of the detail may be best refined and streamlined to be less generic. Alternatively, some of the lengthy wording may be better captured as accompanying paragraphs to support the policy itself	Some of the policy detail may be best refined and streamlined to be less generic. Alternatively, some of the lengthy wording may be better captured as accompanying paragraphs to support the policy itself		BLOA3068 - Nailsea - North Somerset Local Plan Regulation 19 Consultation - Dec 25.pdf
63143425	Long Ashton Nature Conservation and Environment Trust		-					It's useful to set the pre-submission plan into a more national context. The Office for Environment Protection warns that the 2030 national strategy to reverse biodiversity decline is failing. Yet the latest Office for National Statistics report published in December 2025 shows the total annual value of ecosystem service in the UK was £41 billion in 2013, we lose invaluable green spaces at our peril. At the same time, the health benefits from recreation ecosystem service provided the largest contribution to the total UK asset value, at £508 billion in 2023. However, Long Ashton stands to lose much of its ecosystem services if this plan goes ahead.

63213025	BackwellPC NailseaTC Flax BourtonPC BrockleyPC BackwellRA Nailsea Action Group	Lucy White Planning Limited	BackwellPC NailseaTC Flax BourtonPC BrockleyPC BackwellRA Nailsea Action Group	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure		BPC and NTC support the overarching principles of Policy SP11 to protect and enhance the historic and natural environment. However, the policy should go further to protect these environments. Amendment Sought: The policy states that "New development will, where appropriate, be expected to:…". The words "where appropriate" should be removed from the policy and replaced with "where applicable" to avoid any misinterpretation of the policy intention and ensure development proposals comply with all relevant aspects of the policy. The policy includes an expectation to protect the best and most versatile (BMV) agricultural land. This provision is fully supported by BPC and NTC. However, the local plan spatial strategy allocates substantial areas of the highest quality agricultural land at Nailsea and Backwell for residential development. The expectations of Policy SP11 could not reasonably be met through development of these allocations which will result in the inevitable loss of BMV agricultural land and are therefore ineffective in respect of these development proposals which are central to the overall strategy for housing delivery. The policy includes an expectation to support the establishment and delivery of Nature Parks to protect and enhance internally important bat habitats. Policy DP35 states that Nature Parks will be identified to protect and enhance greater and lesser horseshoe bat habitat at the strategic development locations including Nailsea and Backwell. However, the policy provides no details of the required extent, nature or location of the Nature Parks, how they would be delivered and secured in perpetuity. The provisions within Policy SP11 are therefore The policy justification states that Nature Parks should be unlit and not impacted by light spill from adjacent land to make it suitable for light-intolerant horseshoe bats. However, the policy makes no provision for safeguarding dark skies or protecting Nature Parks or bat habitat/ green corridors from light spill. The policy should include a specific requirement for development proposals to include sufficient measures to safeguard dark skies and such potential measures should be explicitly referenced within the local plan. The provision of street lighting on new developments would be entirely out of keeping with Backwell, which is largely unlit on public highways. BPC is aware that other councils have adopted measures such as red street lighting (Oxfordshire, Worcestershire, Birmingham) to safeguard dark skies in areas within 2 kilometres of bat SSSIs. In addition, conditions to require street lighting to be set on timers to turn off at midnight are already in place in Backwell and should apply to new developments. The policy as drafted is ineffective in securing sufficient safeguards and enhancements of the natural environment to achieve the objectives of the policy and the plan as a whole and to comply with the Framework.		251118 Local Plan Reg 19 2025 reps FINAL.pdf R01 - Transport Statement - Rev 3 FINAL.pdf Hydrology LP3 BPC_NTC Appendix_2.2-compressed.pdf Hydrology LP3 BPC_NTC Appendix_2.1-compressed.pdf Hydrology LP3 BPC_NTC Appendix_9-compressed.pdf Hydrology LP3 BPC_NTC Appendix_7-compressed.pdf Hydrology LP3 Summary BPC_NTC Part 2 (1).pdf Hydrology LP3 Summary BPC_NTC Part 1 (1).pdf
