								PART 5: INFRASTRUCTURE AND COMMUNITY IMPACT 5.1 Infrastructure Capacity Critical Questions: • Transport: Can local roads handle increased traffic? What about public transport? • Schools: Are there sufficient school places? • Healthcare: Can GP surgeries and hospitals accommodate new residents? • Water and Sewage: Is infrastructure adequate? • Utilities: Can electricity, gas, and broadband networks support development? Cost Implications: • Who pays for infrastructure improvements? • Will Council Tax increase to fund necessary upgrades? • Are developer contributions (CIL/S106) sufficient? 5.2 Loss of Green Space and Recreation Community Impact: • Portishead Down and Weston Big Wood are valuable community assets • Loss of recreational space for walking, cycling, and nature appreciation • Negative impact on physical and mental health • Reduction in accessible green space per capita (contrary to NPPF guidance [2]) 5.3 Character and Heritage • Development may fundamentally alter the character of Portishead • Loss of rural/woodland setting • Impact on views and landscape • Potential harm to heritage assets PART 6: LEGAL PRECEDENTS SUPPORTING OBJECTION 6.1 North Somerset Precedents Lynchmead Farm Case (2024): • Planning Inspectorate upheld North Somerset Council's decision to refuse 75 houses [12] • Reason: Future flood risks • Key Learning: Environmental concerns, particularly flood risk, are valid grounds for refusal • Application: If Portishead sites have flood risk, this precedent supports refusal Slade Road, Portishead: • Council deprioritized development following community opposition [13] • Key Learning: Organized community resistance can influence planning outcomes • Application: Demonstrates that community opposition in Portishead has previously been effective [13] 6.2 UK Supreme Court Precedents (2024) Horse Hill Oil Well Case (June 2024): • Ruling: Planning authorities must consider full environmental impact, including downstream emissions [14] • Outcome: Planning permissions quashed • Key Principle: Inadequate environmental assessment renders planning decisions unlawful • Application: Council must conduct comprehensive environmental assessment including carbon impact West Cumbria Coal Mine (September 2024): • High Court ruled government approval unlawful [15] • Reason: Inadequate consideration of environmental consequences • Application: Demonstrates that environmental concerns can successfully challenge planning decisions [14], [15] PART 7: ALL QUESTIONS FOR THE COUNCIL Legal and Process Questions: 1. How is the Council ensuring that the consultation on soundness and legality is comprehensive and addresses all four soundness tests (positively prepared, justified, effective, consistent with national policy)? 2. Has the Council complied with the duty to cooperate? 3. What evidence demonstrates that all reasonable alternatives have been considered? 4. How does the plan comply with the NPPF soundness tests [2]? 5. What protected species surveys have been conducted? 6. How will 10% biodiversity net gain [5] be achieved? Infrastructure Questions: 7. What is the capacity of local roads, and what improvements are planned? 8. Are there sufficient school places, and where will new schools be located? 9. Can healthcare services accommodate additional residents? 10. Is water and sewage infrastructure adequate? 11. Who will pay for necessary infrastructure improvements? Environmental Questions: 12. What is the carbon impact of the proposed development? (Required by Supreme Court precedent [14]) 13. What flood risk assessments have been conducted, and do they meet the standards that led to Lynchmead Farm refusal [12]? 14. How will air quality be protected? 15. What measures will protect watercourses from pollution? 16. Is this ancient or semi-natural woodland [17], and if so, why is development proposed?			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								17. Has Natural England been consulted regarding the SSSI (Weston Big Wood) [16]? 18. Has the Council considered the Supreme Court ruling in Horse Hill (June 2024) [14] requiring full environmental impact assessment? Economic Questions: 19. What is the cost-benefit analysis of the development? 20. What is the value of ecosystem services that will be lost? 21. How will local businesses be affected? 22. What guarantees exist that developers will deliver promised infrastructure? Discrimination and Equality Questions: 23. Why is Portishead being asked to sacrifice protected green spaces when other areas are not required to make equivalent sacrifices [9]? 24. Has the Council assessed the per-capita impact on existing Portishead residents' access to amenities (GP appointments, school places, recreational facilities)? 25. Given Portishead's smaller size (26,366 residents [7]), how can it absorb significant new development without impact on existing residents' quality of life? 26. Why are Portishead residents being asked to bear a double burden: (1) loss of protected green spaces, and (2) increased competition for remaining amenities? 27. Has an Equality Impact Assessment been conducted, including per-capita impact analysis? 28. How does targeting Portishead (higher house prices [20]) comply with the Public Sector Equality Duty [19]? 29. Do the proposals conflict with the Portishead Neighbourhood Plan (approved by referendum [11])? 30. Why is Portishead being treated differently from other areas with brownfield development opportunities [13]? 31. What is the justification for targeting an area with higher property values for development? 32. How does this align with equitable distribution of development across North Somerset? 33. Given that Portishead is being asked to sacrifice protected green spaces, how is this equitable compared to other areas? Transparency and Accountability Questions: 34. How many meetings have councillors held with property developers in relation to the Local Plan, compared to meetings with local residents and environmental groups? 35. Are councillor appointment diaries publicly available, and if so, where can they be accessed? 36. Have any councillors declared interests in property development companies or land in areas proposed for development? 37. What proportion of Planning Committee meeting time has been allocated to developer presentations versus community group presentations? 38. How does the Council ensure equitable access to decision-makers for all stakeholder groups? PART 8: ALTERNATIVE SOLUTIONS 8.1 Brownfield First • Prioritise brownfield sites for development [13] • Use existing planning powers to bring forward brownfield land • Explore opportunities for urban regeneration 8.2 Density and Infill • Increase density in existing settlements • Focus on infill development • Redevelopment of underused sites • Conversion of existing buildings 8.3 Neighbouring Authorities • Work with neighbouring authorities to meet housing needs • Explore cross-boundary development opportunities • Share infrastructure and services PART 9: CONCLUSION The proposed development of Portishead Down, Weston Big Wood, Tower Farm, and Black Rock [10] represents a significant threat to our community's green spaces, biodiversity, and quality of life. While the Council is now consulting on the soundness and legality of the plan [10], I have serious concerns about whether this consultation is comprehensive enough and whether the plan meets the statutory soundness requirements [1], [2]. Critical Environmental Concerns: • Weston Big Wood is a Site of Special Scientific Interest (SSSI) [16] - the highest level of statutory protection [3], [4] • Development threatens ancient or semi-natural woodland [17] - irreplaceable habitats that have existed since at least 1600 AD • Recent Supreme Court precedents (2024) [14], [15] require comprehensive environmental assessment, including carbon impact • Biodiversity net gain (10%) [5] may be impossible to achieve given loss of protected habitat [16], [17] Evidence of Discriminatory Targeting: • Portishead is being asked to sacrifice protected green spaces [9], [10] • Other areas (e.g., Weston-super-Mare) [9] are not required to sacrifice equivalent green spaces • Per-capita impact: Portishead residents [7] face significant population increase while losing protected green spaces (SSSI [16], ancient woodland [17])			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								• Double burden: Portishead residents lose green space amenity [10] AND face increased competition for remaining amenities [7], [9] • Portishead has higher house prices [20], making development more profitable for developers • Smaller town size (26,366 [7] vs ~85,000 [8]) means less capacity to absorb growth without significant impact on existing residents • This suggests profit-driven targeting rather than equitable distribution [9], [20] • May breach Public Sector Equality Duty under Equality Act 2010 [19] Strong Legal Precedents: • Lynchmead Farm (North Somerset): Planning Inspectorate upheld refusal due to flood risk [12] • Horse Hill (Supreme Court 2024): Ruled planning must consider full environmental impact [14] • West Cumbria Coal Mine: Approval ruled unlawful due to inadequate environmental assessment [15] • These precedents support challenging the proposals on environmental grounds [12], [14], [15] I strongly urge North Somerset Council to: 1. Withdraw these proposals from the Local Plan 2. Prioritise brownfield development [13] and explore all alternatives 3. Ensure comprehensive consultation on soundness and legality addresses all concerns raised [1], [2] 4. Protect our green spaces for current and future generations 5. Engage meaningfully with the community on all planning decisions 6. Ensure equitable access to decision-makers for all stakeholder groups 7. Conduct Equality Impact Assessment including per-capita analysis [19] I reserve the right to: • Submit further evidence and representations • Present at the Local Plan examination • Pursue legal remedies if the process is flawed • Escalate concerns to the Planning Inspectorate and other relevant bodies I look forward to the Council's response and hope that these proposals will be reconsidered in light of the serious concerns raised. 58524321	Lesley Carver			No	• Justified • Effective • Consistent with national policy	No	Unsure	I do not believe plans to build at Tower Farm, Portishead are in line with Sutstainable Development Objectives. Very little employment is available within walking distance at West Hill. The town centre is not within easy walking or cycling distance, being 330ft climb up Avon Way, as well as the climb up from the estate to The Downs. Electric bikes cost £2,000+ and it is not an easy or safe cycle to the town centre. Shuttle bus from estate would be expensive to run (doubtful that developer would fund) and the road from the site entrance to Down Road is too narrow for a bus. The Downs and Down Road are already dangerous for pedestrians and road users and development could add 500-600 extra cars. There are limited primary school places to sustain such a large development and a drop off point is not suitable for 4-11 year old children. This is one of the few green spaces and brownfield sites should be considered as the priority. There is very little infrastructure within walking/cycling distance. Main infrastructure is in the town centre. It seems unlikely that affordable housing would be high on the developer's priorities. There is only a primary school, community hall and pharmacist locally. The development would not provide extra cultural facilities. Healthy living opportunities would be reduced with the removal of green space currently used by many residents and destruction of miles of hedgerows (providing habitat for birds and wildlife) would be detrimental. The impact on Weston Big Wood (SSSI) would be immense, as it could have housing within 50m and be left in shade, affecting trees and sustained wildlife. Carbon emissions would be increased by large number of additional cars. The fields at Tower Farm currently get very waterlogged and water drains from the top of the hill. Building could provide less area for excess water to drain, forcing it down to housing below and increasing flood risk. The location is hilly and roads narrow. It is unlikely that many residents would walk or e-bike and much more likely that car usage would greatly increase. The new junction onto The Downs would struggle to cope and junction from The Downs to Down Road is already hazardous. The impact on diverse wildlife would be immense. Weston Big Wood is an important local asset and would be spoilt by a large development. According to UK Health Security Agency the area of Tower Farm has higher that average Radon levels and great care would need to be taken to ensure the safe health of residents.	I do not believe that a development at Tower Farm is appropriate or sustainable and local brownfield sites should be developed.		
58638369	ES Dawson			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	This site is immediately adjacent to a site of nature conservation interest and an ancient woodland. It would result in loss of irreplacable habitat (non consistent with national policy) Wildlife corridors and nature connection are of huge societal and intrsinsic value. Biodiveristy loss is not something which can be balanced out by planting of new trees - ancient woodland habitat takes venturies to grow and species will be gone from the Gordano valley forever. There is no plan for additional amenities e.g. schools, bus services - the last of which is already dire in Portishead The location intensifies pressures on already strecthed services in Portishead As green space next to an ancient woodland this site is wholly inappropriate for residential development. No adaptations would make it suitable. I strongly oppose and cannot support the NS local plan for Tower Hill location			
58602369	Claire Cave			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Failure to consider reasonable alternative sites The Council has not adequately assessed alternative brownfield or greenfield locations within Portishead and across the wider district that would have far lower ecological impact. National planning policy requires that all appropriate alternatives be examined before releasing Green Belt land, yet there is no clear evidence that such alternatives have been fully explored. Insufficient assessment of increased density on brownfield sites Opportunities to deliver higher-density development on the proposed brownfield allocations have not been considered in any meaningful way. A modest increase in density on these sites could avoid the need to release Tower Farm and Black Rock from the Green Belt, thus preventing harm to valuable landscapes and ecosystems. Strategic ecological importance of the sites Both locations form an integral part of the ecological network supporting Weston Big Wood (SSSI) and the wider Gordano Valley green corridor. These areas provide habitat connectivity, protect biodiversity, and buffer the SSSI from disturbance. Developing these sites would cause irreversible ecological harm inconsistent with national policy on nature recovery. Green Belt purposes and historic justification Tower Farm and Black Rock were added to the Green Belt in the late 1980s specifically because of their high ecological and landscape value. The plan does not provide evidence that these qualities have diminished. National policy allows Green Belt alterations only in exceptional circumstances, and no such circumstances have been demonstrated.	Take Tower Farm and Black Rock out of the allocations Neither site meets the bar for Green Belt release. The plan should keep both areas in the Green Belt unless the Council can show truly exceptional circumstances — and at present, it hasn’t. Do a proper look at the alternatives The plan needs a fresh review of other sites, including brownfield land and lower-impact greenfield areas. This should also include a serious look at increasing density on the brownfield sites already identified. Without this work, the plan isn’t justified. Revisit the ecological evidence A clearer, updated assessment is needed that recognises how important these sites are for Weston Big Wood (SSSI) and the wider Gordano Valley green corridor. This should then feed directly into how sites are selected or rejected. Keep the Green Belt boundaries as they are These boundaries were set for good reasons in the late 1980s, and nothing has changed to weaken those reasons. Unless the Council can show solid	There are parts of the North Somerset Local Plan 2041 that I do support. The overall aim to focus development on sustainable locations, make better use of brownfield land, and protect important natural areas is the right direction for the district. I also support the plan’s emphasis on improving walking, cycling and public transport, and reducing the need to travel by car. These priorities will benefit both residents and the environment. However, to stay consistent with these principles, the Green Belt should not be changed. Protecting the Green Belt is essential for safeguarding wildlife, maintaining green corridors, and preventing unnecessary loss of valued landscapes. The plan’s general approach aligns with national policy, but it should follow through fully by keeping existing Green Belt boundaries intact. My supportive comments reflect the fact that the broad strategy is sound — but it must be applied consistently, which means no release of Green Belt land.	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Transport and access constraints Neither site can deliver safe or suitable access. Significant highways constraints remain unresolved, and any development would generate unacceptable transport impacts, contrary to the National Planning Policy Framework's requirement that plans be effective and deliverable. These failures mean the plan does not meet the tests of soundness.	evidence that the situation is different now, the boundaries should stay in place. Sort out the access and transport problems before allocating anything At the moment, neither site has safe or workable access, and the transport impacts look unacceptable. If these issues can't be resolved, the sites simply shouldn't be allocated. Make the plan fit the national tests of soundness For the plan to be credible, it needs to show that: it has chosen the most suitable sites; Green Belt release is a last resort, not a first step; access and transport issues have actual solutions; and ecological evidence has been properly taken into account.		
62812001	N Chalk			No		No	No	Not positively prepared: The proposed location and volume of development will adversely impact on services in Portishead that are already under pressure - schools, pharmacies, GP surgeries and particularly transport infrastructure (for example the A369 and Down Road). This site would significantly increase private vehicle use (accessing main roads via the side roads of the Deans and Downs that are already difficult to access), increasing pollution, rather than support sustainable travel options (contrary to National Planning Policy framework [NPPF] Dec 24 publication paragraphs 109-110). Not justified: There is no robustly presented alternatives assessment that demonstrates the Tower Hill Farm site is the only or most appropriate option for growth in Portishead. The loss of best and most versatile (BMV) farmland (grade 2/3a by reference to the Agricultural Land Classification dataset) and risk of irreversible damage to the ancient Weston Big Woods make this proposed site untenable. Not effective: Delivery of development at this site relies on multiple other factors that have not been fully planned - new school provision, increased bus services, off-site bio-diversity management and creation of buffer zones. There is no published phasing plan, funding stream or legal agreements to deliver these dependencies. Without these, the proposal cannot be considered viable within the plan period (NPPF paragraph 35). Not consistent with national policy: The proposal is in conflict with the NPPF paragraphs 193 b&c. These include the detail that "developments resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland and ancient or veteran trees) should be refused, unless there are wholly exceptional reasons and a suitable compensation strategy exists". There are no demonstrated "wholly exceptional reasons" to develop this land and the compensation suggested by the Council of an 'ecological buffer' is not clear and is insufficient to address indirect impacts such as root-zone damage and wildlife disturbance. The Woodland Trust and Avon Wildlife Trust state that ancient woodland (such as Weston Big Wood) is irrecoverable once damaged. The NPPF requires delivery of net-gain in biodiversity. There is no clear demonstration to that effect within this proposal. The farmland / woodland edge surrounding the Weston Big Wood serves as a critical ecological and landscape transition corridor. Development of these areas (including Tower Hill Farm) would fragment habitats and negatively impact on the Gordano Valley wildlife corridor. The proposed 'buffer' would not fully mitigate this impact. This development would also alter surface-water run-off and soil composition of what is currently farmland. This has the potential to negatively impact the hydrological system that sustains the adjacent ancient woodland. No modification could be made to the proposal that would make this site suitable. The fact that the site is adjacent to Weston Big Wood, a SSSI / ancient woodland would mean that any development would result in irreversible damage to this important area. The land should be retained as green space to benefit the community and wildlife and should be managed to enhance biodiversity. I do not support the North Somerset Local Plan 2041 for the Tower Hill Farm location			
62843009	Zoe Chalk			No	, Justified	Unsure	No	'valued areas will be protected. People's well-being, a strong sense of community, opportunity and fairness will be at the heart of all development in North Somerset.' The plans to develop Black Rock and Tower farm directly contravene this commitment from North Somerset Council. Both are adjacent to Weston Big Wood, a site of SSSI. Ancient woodland that has been recognised as being of strategic interest and part of the protected Green belt since the 1980s. National Guidelines state that Greenbelt can only be developed in' exceptional circumstances' and this has not been demonstrated when there are other development opportunities on brownfield sites in Portishead and across the whole of North	The proposed developments at Black Rock and Tower Farm need to removed to protect this ancient woodland and precious natural resource. Development proposals should be fully explored on Brownfield sites across the county.	The proposals at both Black Rock and Tower Farm are not sound as they do not meet the exceptional circumstances for allowing destruction of Greenbelt land and the transport and traffic impacts on the town would not meet ANY soundness test or measure.	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Somerset. Preventing the destruction of irreplaceable greenbelt would be to the benefit of all, with the exception of developer's profits. The woodland itself supports a vast array of wildlife from bats, through funghi to apex predators such Buzzards and Kestrels. The woodland is accessible to all and we simply cannot lose or endanger this resource. This is not progress, this is destruction. This is at a time when the 2023 State of Nature report described the UK as 'one of the most nature depleted countries on Earth' I cannot comprehend why North Somerset council would wish to allow more destruction. Neither of the proposed sites are within a sensible walking distance from the town centre. They are not served with a regular bus service. When the X5 service does run, it stops at 18:00. This means that residents who are older or with young families will necessarily have to drive, on roads that are already saturated by traffic. Over the last 20 years Portishead has had a threefold increase in population with absolutely no change whatsoever in infrastructure. The new railway will bring limited relief due to its tiny capacity. Arguably, it just brings the town to the level it should have been before the development of the Marina. We only have 2 health centres and 1 pharmacy serving a population of over 27,000. The secondary school, Gordano is at over 2000 pupils with no expansion or development planned. I note that there are no proposals to increase employment within Portishead, meaning more people will have to commute to surrounding towns, further burdening our infrastructure. There is a huge need for safe, secure, affordable housing in North Somerset but this cannot be at the expense of precious ancient woodland and greenbelt because it is an easy option for developers. It begs the question of what is tangible progress			
58310305	M Chambers			No	• Justified	Unsure	Unsure	Therr are alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset. Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm. The strategic ecological importance of this site in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor has not been considered. This site had been added to the Green Belt in the late 1980s due to its high ecological value - this has not been considered. National planning policy allows Green Belt changes only in exceptional circumstances — and these have not been demonstrated. This site cannot provide safe or suitable access. Development would create unacceptable transport impacts, failing national soundness tests. Need to consider other brownfield sites first, such as Old Mill business park.			
62741633	Heidi Chapman-Mercer			No	• Justified • Consistent with national policy	No	Unsure	Alternative brown sites could be used rather than those proposed in Portishead, these are present elsewhere in Portishead and would have less impact that the locations chosen. The Weston Big Wood and Gordano Valley Green Corridor have both been part of the Green Belt since the 1980s - the Pre-submission Plan ignores this. Whilst the reality of the incoming train line will bring more interest in the area and the prospect of more inhabitants, this needs to be done well with solid infa-structure.	Alternative brown sites could be used rather than those proposed in Portishead, these are present elsewhere in Portishead and would have less impact that the locations chosen. These would have much lower ecological impact and project the wildlife within these areas for future generations. How much more does our green space and wildlife have to be affected?! Green Belts must only be looked at in exceptional circumstances and these have not been met, especially with other sites available within the town and local area that would meet the needs of the developments but with less ecological impact. Neither site proposed includes any additional service developments for the town - our High Street is failing with large shops closing and only one pharmacy, the secondary school recently only just passed Ofsted inspections, the Police local unit are stretched already, the parking is far from acceptable for a town this size - the pre-submission needs to include details of how it will support these elements of the town.		
58599457	M Cherchi			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The proposed allocation of land at Tower Farm, which encompasses approximately 400 homes, is situated directly adjacent to Weston Big Wood, an ancient woodland and Site of Nature Conservation Interest (SNCI) managed by the Woodland Trust and supported by the Avon Wildlife Trust. This woodland is integral to the Gordano Valley ecological network and constitutes a nationally significant habitat mosaic comprising open grassland, wetland, and woodland. Not Justified: There exists a lack of robust, published alternatives assessment that demonstrates that this sensitive site is the sole or most suitable option for further development. The potential loss of the best and most versatile (BMV) farmland (designated as Grade 2/3a according to the Agricultural Land Classification dataset) and the imminent risk of irreversible damage to the ancient woodland render this allocation inappropriate. Not Consistent with National Policy: The allocation contravenes the National Planning Policy Framework (NPPF)			10-year strategy 2020-2030.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								paragraphs 180–182, which stipulate that development leading to the loss or deterioration of irreplaceable habitats, such as ancient woodland, should be refused unless there are wholly exceptional circumstances. The reference to an "ecological buffer" by the Council is ambiguous, unenforceable, and inadequate to mitigate indirect impacts such as root-zone damage, hydrological alterations, or wildlife disturbance. The Woodland Trust and the Avon Wildlife Trust assert that ancient woodland is irretrievable once damaged. Furthermore, the Framework mandates the delivery of biodiversity net gain, yet the allocation provides no clear mechanism to ensure this outcome. Not Positively Prepared: The location exacerbates existing pressures in Portishead; schools, healthcare, and transport infrastructure are already under stress (for instance, the A369 corridor). This peripheral site would likely lead to increased private vehicle usage and pollution, contravening NPPF paragraphs 104–106 which advocate for support of sustainable travel patterns. Not Effective: The feasibility of delivery hinges on multiple unresolved dependencies, including new school provisions, contributions to bus services, off-site biodiversity management, and enhancements to rights-of-way and buffer zones. No phasing plan, funding mechanism, or legal agreement has been disclosed to secure these aspects. In the absence of such mechanisms, the allocation cannot be regarded as deliverable within the plan period, as stipulated in NPPF paragraph 35(c). Landscape and Connectivity: The edge between farmland and woodland serves as an essential ecological and landscape transition zone. Development in this area would fragment habitats, diminish the Gordano Valley wildlife corridor, and erode the rural fringe character. Even with the inclusion of a buffer, the visual and ecological impact on the woodland and surrounding landscape would be substantial. Drainage and Hydrology: Construction and development activities would alter surface water runoff and induce soil compaction on the former farmland, potentially disrupting the hydrological regime that supports the adjacent ancient woodland. The associated risks of nutrient runoff, altered infiltration, and damage to the woodland root zone are significant. Cumulative Impact: When evaluated alongside other allocations in the Portishead area, such as Black Rock north of Clevedon Road, the cumulative pressure on ecology, infrastructure, and transport is considerable and undermines the Council’s commitments to nature recovery and sustainable growth. No modification, short of completely withdrawing the allocation, would render this site appropriate for development. Given its immediate proximity to ancient woodland, any loss would be irreversible and cannot be sufficiently mitigated. The land should be preserved as undeveloped green space, managed to enhance biodiversity and facilitate sustainable public access, in accordance with the Avon Wildlife Trust’s 2030 Strategy and the national “30 by 30” nature-recovery goals. I do not endorse the North Somerset Local Plan 2041 for the Tower Hill Farm location.			
58311073	Paul Churchill			No	• Justified • Effective • Consistent with national policy	No	No	As a Portishead resident and frequent visitor to Weston Big Wood I feel it is vital we do everything possible to protect this vulnerable woodland, it would appear being in the green belt is no longer protection for ancient woodland or SSSi’s. By removing the green belt and allowing development you are opening the door to development which on these two sites would damage the biodiversity to an irreparable point where we lose forever this delicate and wonderful location. In section DP35 of your draft plan you state “development within or in proximity to a Site of Special Scientific Interest (SSSI) or National Nature Reserve that is likely to have a direct or indirect adverse effect on its biodiversity or geological interest will not normally be permitted”. I truly believe the impact would be felt not only here in Weston Big Wood with lose of rare endangered flora and fauna but as a vital wildlife corridor the impact will extend in both directions, north to the Severn estuary and south to the Mendips and Somerset Levels, as such your statement in DP35 would stop any development on these sites, so these sites should be removed from the list and replaced with sites which will not adversely effect Weston Big Wood. I would also like to bring to your attention the below list, which your plan breaches. Section 40 of Natural Environment and Rural Communities Act 2006. Para 124 of the National Planning Policy Framework. Planning policies and decisions should promote an effective use of land in meeting the need for homes and other uses, while safeguarding and improving the environment and ensuring safe and healthy living conditions. Strategic policies should set out a clear strategy for accommodating objectively assessed needs, in a way that makes as much use as possible of previously-developed or ‘brownfield’ land Para 188 of the National Planning Policy Framework. Plans should: distinguish between the hierarchy of international, national and locally designated sites; allocate land with the least environmental or amenity value, where consistent with other policies in this Framework, take a strategic approach to maintaining and enhancing networks of habitats and green infrastructure; and plan for the enhancement of natural capital at a catchment or landscape scale across local authority boundaries. Para 192 of the National Planning Policy Framework. To protect and enhance biodiversity and geodiversity, plans should: (a) Identify, map and safeguard components of local wildlife-rich habitats and wider ecological networks, including the hierarchy of international, national and locally	remove Tower and Black Rock from the list, identify other locations which do not impact on locations such as ancient woodland / SSSI's

								designated sites of importance for biodiversity 68 ; wildlife corridors and stepping stones that connect them; and areas identified by national and local partnerships for habitat management, enhancement, restoration or creation 69 ; and (b) promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity.			
62833505	Daisy Clayton		Local homeowner	No	• Consistent with national policy	No	No	Tower Farm and Black Rock are not only home to an enormous amount of wildlife such as squirrels, birds and endless amounts of insects that are all so important to our ecosystem, but also provides a large vast green open space for cows, dogs being walked, children walking on their way to school that get to see open green spaces before sitting in a classroom all day. This area is in a Green belt area, which means changes can only happen in exceptional circumstances, these haven't been demonstrated? These fields also get extremely waterlogged, as someone who walks my dog there regularly I can tell you this first hand. If you were to build as many houses as you are proposing you would have to somehow drain the water, and what would happen to the water running down this hill along tarmac? I see no way that would not directly affect Western Big Wood below it which has so much wildlife including deer. As someone who lives on a hill in Portishead, who sees what happens to the bottom of my road after a heavy shower I do not want to get behind anymore buildings that will encourage even more flooding.	Do not build in an area that is protected. Look after the people you already have living in Portishead before adding more. Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm and Black Rock. Choose somewhere to develop that will have less ecological impact.		
62768481	S Coates			No	• Positively prepared	Unsure	No	North Somerset Council has not considered alternative brownfield or greenfield sites with far lower ecological impact especially in relation to the Tower Farm proposed development. Opportunities to develop other sites within Portishead would remove the need to develop Tower Farm The strategic ecological importance of the Tower Farm site, especially in protecting Weston Big Wood cannot be overestimated I have lived in Portishead since the mid 1970's have seen it treble in size to a point of saturation. I have lived in The Deans, next to the proposed Tower Farm site for 35 years and now the adverse implications to traffic/access the development would cause. The proposed developer's in my opinion have not done a thorough job in relation to the Tower Farm site. In my opinion 300-400 houses on the site is out of the question. Access to construction traffic alone would cause immense disruption let alone possibly 400 vehicles spilling out onto The Downs daily where there is an infant school. At present there is almost gridlock in The Downs and surrounding roads twice a day. I see in the plans there may be a drop off point below this school but this will definitely not solve the problem. It would only be a matter of time before there would be a serous accident involving a pupil because of the chaos that would result and who would want that on their conscience. There are other sites in Portishead, mainly Wyndham Way which offer far more suitable housing for one/two/threee bedroom properties which would help the young families gain access to housing in this pricey town. Public transport would also be easily accessible where it is not at Tower Farm. Only one company will benefit from this and that is the developers in cramming as many expensive houses into a small unsuitable plot of land.	I am only interested in the development of the Tower Farm development and cannot comment on any other modifications or their legality.	No	
62766433	Julie Coffin			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Alternative brownfield sites have not been considered. The strategic ecological importance of the site has not been considered. It's a Green Belt site due to its high ecological value. National planning policy allows green belt changes only in exceptional circumstances; these have not been demonstrated. There is no suitable access. There would be unacceptable transport impacts. Drop the idea.			
62766433	Julie Coffin							In response to the above... There are alternative brownfield and greenfield sites with less ecological impact and the fact that the proposed sites were in fact added to the green belt in 1980s because of their high ecological value. Neither site can provide suitable or safe access. Such development would result in unacceptable transport impact and thereby likely to fail national sound tests. Portishead is already stretched for facilities..limited school places, particularly in area proposed, limited access to medical services, currently one pharmacy, soon no banks, small postal facility and limited parking throughout the town. Traffic along Down Road, particularly at school times, often results in gridlock so additional access in this area would make that situation even worse and add to the potential for road accidents. Therefore we believe, based on the above facts alone, the Tower Farm and Black Rock sites should be removed from the Local Plan.			
58404161	Millie Colston			No	• Justified	No	No	1- Alternative brown field or green field site with far lower ecological impact both in Portishead and across north somerset. 2- Opportunity's to increase housing density on proposed brown field site which could remove the need to develop tower farm and black rock 3- The strategic ecological importance of these sites in protecting Weston big wood and the Gordano valley green corridor	n/a	I do not support	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								4- The fact that both areas were added to the green belt in the late 1980's due to the high ecological value 5- National planning policy allows green belt changes only in exceptional circumstances, and these have not been demonstrated. In addition - neither sights can provide safe, legal or suitable access Development would create unacceptable transport impacts, failing national soundness tests FOR ALL THESE REASONS TOWER FARM AND BLACK ROCK SHOULD BE REMOVED FROM THE LOCAL PLAN			
62773601	Peter Connelly			No		No	No	Development of the Tower Farm site is in breach of Green Belt policy as introduced in 1988. It's proximity to Weston Big Wood (SSSI) will be ecologically damaging as this is an important site for wildlife and the environment - trees, plants, birds, insects, animals need access to- and -from all the fields surrounding it creating the Gordano Valley green corridor. Life is sustained by things eating other things. National planning policy allows changes to the Green Belt only in exceptional circumstances and these have not been demonstrated. The site cannot provide safe or suitable access, with unacceptable transport impact. It is unrealistic to state that the town centre and proposed railway station is within walking distance as the route entails a very steep gradient, cars will certainly be used. Development at Tower Farm should be prohibited. Other brownfield sites with far lower ecological and transport impacts are available and should be considered for development. If they have already been considered then density should be increased e.g. high-rise at Wyndham Way around the new station, and Castlewood. There is also Petersfield, an abandoned site in need of renewal.			
62773537	Sharon Connelly			No		No	No	The area around Tower Farm leads to Weston Big Wood a Triple SI. It is ancient woodland- very special with connectivity to the rest of the Gordano Valley. It allows movement of insects and wildlife. Buffer areas around it are needed and it is vital a sensible buffer is between the woods and the estuary, and wood to floor of the valley. Many species of birds, insects, wildlife and rare trees make up the woods and surrounding areas. Due to the ecological importance of the area Tower Farm was added to the Green Belt in the late1980s. The Weston Big Wood and all the surrounding areas and all the Gordano Valley are worthy of protection. Weston Big Wood and surrounding areas and fields are important for people - for their physical and mental health. National planning policy allows changes to the green belt only in exceptional circumstances and these are not being demonstrated. NSC are in breach of Section 110 and 115. The area around Tower Farm has no real employment available, it is not easily walkable into the main areas of the town and public transport is not frequent. Brownfield sites should be used instead of using the land in the Green Belt . There are other sites within Portishead that could see further development - Wyndham Way is around the new train station area and could see high rise buildings that would increase capacity but continue in keeping with the modern designs of that area. Petersfield area has been left derelict but should be developed. Castlewood in Clevedon is a large Brownfield site and has the potential for more homes than the 120 already designated. It is close to amenities. We have other Brownfield sites in North Somerset . Green field sites should not be allowed for future development . We must use Brownfield if we allocate Greenfield sites we are lost....especially when they are as important as the areas around the ancient Weston Big Wood and the Gordano Valley! Development at Tower Farm will be damaging for many reasons.			
62734433	Liz Cook			Unsure		Unsure	Unsure	I am very concerned that the "sustainable" plans included in the North Somerset Local Plan 2041 are not doing enough to protect wild habitats. Specifically the risk of continued degradation of the wonderful Weston Big Wood SSSI and the surrounding areas. The Big Wood is a vitally important habitat of ancient woodland - one of the rarest and most precious habitats in the country. Sadly, planners don't appear to consider it worth protecting. All planners have a legal responsibility to protect the environment, I don't think the North Somerset Local Plan is following these laws closely enough.	Fewer houses and associated infrastructure, especially in and close to wildlife reserves, SSSI and other areas that contain important wildlife habitats.		
62766689	PhilCook			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	NSC has not properly considered: Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset. Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm and Black Rock. The strategic ecological importance of these sites in protecting Weston Big Wood and the Gordano Valley green corridor.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The fact that both areas were added to the Green Belt in the late 1980's due to their high ecological value. It seems strange that this has now been removed. National Planning Policy allows Green Belt changes only in exceptional circumstances and these have not been demonstrated. Neither site can provide safe or suitable access - development would create unacceptable transport impacts, failing national soundness tests. FOR THESE REASONS, BOTH TOWER FARM & BLACK ROCK SHOULD BE REMOVED FROM THE LOCAL PLAN. I do NOT support the North Somerset Local Plan 2041 for the Tower Farm lication.			
62860673	Joel Cox			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The site is not demonstrated to be deliverable or developable There is insufficient evidence that the site can realistically be delivered within the plan period. There are unresolved issues with land ownership, access, viability, infrastructure costs, drainage, utilities and environmental constraints. The Council has relied heavily on future technical work to be completed at the planning application stage, which is contrary to the NPPF requirement that allocated sites must be supported by proportionate, up-to-date evidence at the plan-making stage. For these reasons, the allocation does not meet the tests of "justified" or "effective". The site is in an unsustainable location The proposed allocation performs poorly in terms of access to essential services such as schools, healthcare, shops and public transport. The location would increase car dependency and commuter traffic, contradicting both North Somerset Council's own sustainability objectives and national policy requiring plans to promote sustainable travel and reduce reliance on private vehicles. The Council has not demonstrated that essential services or public transport improvements can be delivered, funded or supported by operators. Transport and access impacts not resolved The transport evidence is incomplete and in places relies on outdated data. The plan does not show that surrounding roads and junctions have the capacity to support the additional traffic associated with this allocation. There is no clear or funded package of mitigation measures, nor any timetable for delivery. Without credible transport solutions, the plan is not "effective" and does not comply with the soundness requirements of the NPPF. Harm to landscape, settlement character and separation Development of this site would result in the loss of important open land and harm the landscape setting of the area. It would erode the character of the settlement and risk coalescence between neighbouring communities. These impacts have not been adequately assessed or mitigated. The allocation is therefore not "justified" and is inconsistent with national policy protecting the character and distinctiveness of settlements. Insufficient evidence on biodiversity and environmental impacts Survey work is incomplete or missing, particularly in relation to protected species, habitat value and ecological connectivity. The Council relies on future mitigation without demonstrating that it is deliverable or effective. This approach risks non-compliance with the Habitats Regulations and fails the requirement for a sound evidence base. Flood risk concerns and inadequate assessment Portions of the site and surrounding area may be vulnerable to surface water flooding or insufficient drainage capacity. The sequential test and exception test have not been adequately demonstrated. Reliance on future drainage solutions, without proven feasibility or funding, fails national policy requirements for flood risk management. Infrastructure delivery not guaranteed The Infrastructure Delivery Plan does not provide clear evidence of how schools, GP capacity, highways upgrades, utilities and community facilities will be delivered in step with development. Many items are unfunded, lack committed partners, or are dependent on contributions that may be insufficient. Without a realistic delivery mechanism, the plan cannot be considered effective. Failure to consider reasonable alternatives (potential legal issue) The Sustainability Appraisal does not demonstrate that reasonable alternatives were assessed in a fair, comparable and lawful manner. Some alternative sites or strategies appear to have been dismissed without transparent or proportionate analysis. This raises a potential failure to comply with the Environmental Assessment of Plans and Programmes Regulations 2004. Inadequate publication or availability of evidence (potential legal issue) Certain technical documents, background papers or assessments were not made available at the correct stage or were published late. This may constitute a failure under the Town and Country Planning (Local Planning) (England) Regulations 2012, as all relevant evidence must be available to the public during consultation. This raises questions of legal compliance. Consultation process may not meet statutory requirements (potential legal issue)			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								If key documents were missing, changed late, referenced but not published, or consultation materials were unclear or incomplete, this could constitute a procedural failure under Regulation 19. Any procedural irregularity risks rendering the plan legally non-compliant. For all these reasons, the proposed allocation is not sound, not legally compliant, and should be removed from the Local Plan or substantially revised.			
58513537	Lisa Crees			Unsure		Unsure		NSC has not properly considered: Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset. Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm and Black Rock. The strategic ecological importance of these sites in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. The fact that both areas were added to the Green Belt in the late 1980s due to their high ecological value. National planning policy allows Green Belt changes only in exceptional circumstances — and these have not been demonstrated. In addition: Neither site can provide safe or suitable access. Development would create unacceptable transport impacts, failing national soundness tests. For these reasons, Tower Farm and Black Rock should be removed from the Local Plan.			
58630433	L Cresswell		Lee Cresswell	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Failure to properly consider reasonable alternatives The Council has not demonstrated that it has fully assessed reasonable alternative sites, either within Portishead or across the wider district, that would have significantly lower ecological impact. National planning policy is clear that all suitable alternatives must be examined before Green Belt land is released. At present, there is no clear evidence that this has been done. Insufficient consideration of higher density on brownfield sites The plan does not meaningfully explore opportunities to increase density on the proposed brownfield allocations. Even modest uplifts in density could materially reduce housing pressure and remove the need to release Tower Farm and Black Rock from the Green Belt, avoiding unnecessary harm to sensitive landscapes and habitats. Strategic ecological importance of the sites Tower Farm and Black Rock form a critical part of the wider ecological network associated with Weston Big Wood (SSSI) and the Gordano Valley green corridor. They provide habitat connectivity, biodiversity protection and an important buffer to the SSSI. Development on these sites would result in irreversible ecological harm and would conflict with national policy objectives for nature recovery. Green Belt purpose and original justification Both sites were incorporated into the Green Belt in the late 1980s specifically because of their ecological and landscape value. There is no evidence in the plan to suggest that these characteristics have diminished. National policy allows Green Belt boundaries to be altered only in exceptional circumstances, and no such circumstances have been demonstrated here. Transport and access constraints Neither site has been shown to deliver safe, suitable or viable access. Significant highways and transport constraints remain unresolved, and development would result in unacceptable transport impacts. This directly conflicts with the National Planning Policy Framework requirement that plans be effective and deliverable, meaning the plan fails key tests of soundness in respect of these allocations.	Remove Tower Farm and Black Rock from the allocations Neither site meets the high bar required for Green Belt release. They should remain within the Green Belt unless genuinely exceptional circumstances can be demonstrated — which has not been done. Properly re-examine alternatives The Council should undertake a robust review of alternative sites, including brownfield land and lower-impact greenfield locations. This must also include a serious assessment of increased densities on already-identified brownfield sites. Without this work, the plan cannot be considered justified. Revisit and strengthen the ecological evidence An updated and clearer assessment is needed to fully recognise the importance of these sites to Weston Big Wood (SSSI) and the wider Gordano Valley ecological network. This evidence should then directly inform site selection decisions. Retain existing Green Belt boundaries The current Green Belt boundaries were set for sound and defensible reasons in the late 1980s. Nothing has changed to undermine those reasons, and without compelling new evidence, the boundaries should remain unchanged. Resolve access and transport issues before allocating sites At present, neither site has safe or workable access, and the transport impacts appear unacceptable. If these issues cannot be properly resolved, the sites should not be allocated. Ensure the plan meets the national tests of soundness For the plan to be credible, it must clearly demonstrate that: the most suitable and least harmful sites have been selected; Green Belt release is a last resort, not a starting point; access and transport issues have deliverable solutions; and ecological evidence has been fully and properly	There are aspects of the North Somerset Local Plan 2041 that I support. The overarching strategy to focus development in sustainable locations, make better use of brownfield land, and protect important natural environments is broadly the right direction for the district. I also support the plan’s emphasis on improving walking, cycling and public transport, and on reducing reliance on the private car. These priorities will deliver clear benefits for both residents and the environment. However, to remain consistent with these principles, the Green Belt should not be altered. Protecting the Green Belt is essential for safeguarding biodiversity, maintaining green corridors and preventing unnecessary loss of valued landscapes. While the plan’s overall approach aligns with national policy, it should follow through fully by retaining existing Green Belt boundaries. My supportive comments reflect the fact that the overall strategy is sound — but it must be applied consistently, and that means no release of Green Belt land.	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 									taken into account.		
20318049	Janet Davey		portishead tc councillor	No	• Consistent with national policy	No	No	National policy allows green belt to be used for development only after all brown field sites have been properly investigated and used. Castlewood in Clevedon could have a higher density of housing, for example, as it is within the town and close to amenities, and other sites could be used in Portishead so that it would not be necessary to build near Weston Big Wood, which is a triple SI and extremely important within the Gordano Valley. Tower Farm developers state that their development is sustainable; in order to get to Bristol, Weston or the new train station residents would need to use their cars. It is a 45min walk to the new station, and longer returning because of Avon Way, a mile long steep hill. This hill also precludes the use of bicycles, unless one is young and fit. Current public transport is unreliable and poor in this area. To reach Weston College students have to go into the town and catch a bus that takes 1.5 hours to get to college. The Black Rock development is on a steep hill near Weston Big Wood. Any run off would cause flooding across Clevedon Road and into the homes opposite. The land there is very low lying and subject to frequent flooding. I do not believe there is a sufficient buffer either side of the Big Wood to safeguard its ecological value. There is evidence of a hill fort on Portishead Down, which would have been within one hours walking distance of the Iron age fort at Eastwood and close to the main earthworks at Cadbury Camp.	There is building land elsewhere in Portishead. Wyndham Way is still in the Local plan and is a brown field site. There is land on the Vale intended for a care home which has not been used - we have too many care home spaces currently in the town and no need for more. More building could be done near the new station; high rise would give enough homes to stop the need for development near the Big Wood. The Portishead Local Plan states that we do not need more 4 bed homes, but more smaller starter homes and one person flats. Weston Big Wood is too precious both nationally and locally to be harmed by building so close. In the 1980s examiners made the area around the wood into green belt as they said the wood needed that protection.		
58489761	Glen Davies			No	• Consistent with national policy	Yes	Yes	The site is claimed to comply with sustainability requirements - but claims that people can easily walk or cycle to transport links, the proposed train station, shops or the town centre, are false and misleading. The site is 350 feet higher than the town, the hillside is very steep, I believe is nearly 2 miles away from the town/station etc, so people will be forced to use cars, adding to an already highly congested junction at Down Road, where there is also a school, so traffic pollution and children will be caused, plus the obvious traffic dangers around schools.	A different access road/route is essential, perhaps Tower Road, Merlin, or a new access from Valley Road.		
58489761	Glen Davies			No	• Effective	Yes	Yes	To create 400 homes, meaning (say) 550 cars that's only accessible through 1 road (Top of the Downs), which, particularly at school drop off/pick up times, is a single track road cannot be safe or effective from any planning point of view. The No of cars already entering and leaving Portishead - through Junction 19 (M5) is already at a maximum level, with queues on the M5 Avonmouth Bridge, Junction 19 & Portbury Hundred, so additional traffic & the already dangerous traffic levels cannot be ignored. Portishead is already considered a cul de sac, which is gridlocked following any M5 incident. Furthermore, The impact of this No of cars accessing & leaving the site on the top of the Downs road will impact the freedom to access & leave their properties safely	Better & more access routes required - locally & from/to the M5		
58489761	Glen Davies			No	• Consistent with national policy	No	Yes	This is green belt - recognised in the 1980's - & should only be declassified as a last resort & in exceptional circumstances. Neither test has been passed in this case - other land is available			
58578177	Margaret Davies			Unsure		No	Unsure	I don't consider that north somerset council have utilised all brown field sites to be able to justify taking a recently added greenfield site,only added in the late 1980 's due to a high ecological value ,a value which has not changed , a greenfield site which is next to a SSSI , a small buffer zone would not protect these precious woods from being destroyed, there seems to be no consideration of the effect of the noise and light pollution would have on this area. Also the access would be down one road, by a school which already gets very congested at times, I'm surprised that there has never been a serious accident already, to put more cars in the area is a disaster waiting to happen, so the site cannot provide safe or suitable access. The company which has the land, has said it's in easy walking distance of the train station, which does not yet exist and the local shops, they have obviously never tried to walk it and are only looking at a map, quite the fairy story. The high street is always congested and to put another 500 plus cars a day into the mix is not in my opinion viable. The housing that Portishead is really in need of is smaller starter homes, close to the local amenities, for local people, not large expensive homes which is what these would probably be. National planning policy also states that Green Belt changes can only been made in exceptional circumstances, which these are not, I believe there is no justification for the council to allow this develpoement to proceed.	To remove Tower Farm completely from the document		
58076545	E Dawson			No	• Positively prepared • Justified	No	Unsure	NSC has not properly considered: Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset. 								Tower Farm and Black Rock should be removed from the Local Plan.			
58241249	Alison Delaplace			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	I am a local resident, living on The Deans. My experience of living here shows me that this plan is not sound, and not compliant with current objectives for sustainable development. Access problem NPPF S115 It is proposed to make access to the new housing uniquely via The Downs. The Downs is a cul-de-sac residential road with my own road, The Deans, leading off it. Each of these 2 roads has 80-100 houses on it with an average of 2 cars per house ie there are already around 350 cars regularly using this one exit onto Down Road. Using a car to get anywhere from this location is essential. There isn't any realistic alternative for most residents. At certain times of day (school drop-off and pick-up) this exit is already gridlocked. An additional 400 dwellings would potentially mean another 800 cars using this same one exit onto Down Road. This would have a massive impact on traffic congestion at this junction and all along a section of Down Road, not to mention the danger to the safety of pedestrians, especially children. Conclusion: I can't see how safe and suitable access to their homes can be achieved for all residents via this one access road. Transport problem NPPF S110 Most residents in my area cannot comfortably walk or cycle into the town because we are situated at the top of a long steep hill, whether up West Hill or up Avon Way. Local facilities are NOT within reasonable walking distance for the vast majority of our local residents. As a result almost every house here has 2 cars on the drive or parked on the road outside. A development of 400 houses would likely mean an additional 800 vehicles using our roads. The congestion around High Down school at the beginning and end of the school day would be greatly exacerbated, and indeed potentially dangerous. (Access is even worse when the weather is inclement. It can take 20 mins to get from The Triangle to my house in The Deans at school fetching time.) The bus service here is inadequate and takes long indirect routes, so it is not a viable alternative. We will also be almost 2 miles away from the new Portishead Railway station when it comes. Conclusion: I can't see how this site could be considered to support sustainable travel as there are NO realistic alternatives to car use. Green Belt Harm. NPPF S147 and NPPF S187 I understand that as a matter of principle there is a need to exhaust all other alternative sites before encroaching on the Green Belt, and even then I think that not enough consideration has been given in this proposal to the fact that Tower Farm land is not in ordinary Green Belt land, but in Extraordinary Green Belt land due to its ecological significance (designated so in 1988). I am concerned about the threat that this development poses for a unique ecological site. It seems to me to fail all 3 statutory biodiversity protection tests, and the project seems to bring no benefits to outweigh the ecological harm it will cause. In my opinion no modification would make this site appropriate. Because it is situated at the top of a hill, the people who live here are car dependent. I know because I live here. This reality can not be changed. The land should be retained as undeveloped green space, managed to enhance biodiversity and accessible to all.			
20752993	K Dickens			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	NSC has not properly considered: Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset. Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm and Black Rock. The strategic ecological importance of these sites in protecting Weston Big Wood (SSSI) and the Gordano Valley Corridor. The fact that both areas under consideration were added to the Green Belt in the late 1980s due to their high ecological value. National planning policy allows development to Green Belt in exceptional circumstance only. These have not been demonstrated. In addition: Neither site can provide safe or suitable access. Development would create unacceptable transport impacts, failing national soundness tests. Tower Farm: Down Road, Tower Road, The Deans and The Downs are already congested at school drop-off and pick-up and the additional traffic from 400-500 houses would further compound the proposed single access point issues. It is already necessary to time arrivals and departures to the cul-de-sacs off Down Road due to this congestion. Walking accessibility assumptions are unrealistic due to the gradient of the Avon Way gradient. The timings provided are very optimistic and ignore the hills in the area, maybe the are close for walking down the hills, but certainly not up them.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The suggested use of e-bikes does not consider the lack of safe and segregated pedestrian routes. There is no evidence that these would be suitable for the prospective householders, or in reducing the number of car journeys to the school. There is limited public transport in the area, and the forthcoming railway line will do little to alleviate this, the hourly service is unlikely to change the habits of current households. There are little shopping options, 2 small supermarkets and a pharmacy, in the area so the use of cars would increase. The proposal states that flood risk is very low (Flood Zone 1) but includes Attenuation basins throughout the site. The proposal also states that the development will provide green space for all which is rather ironic since it will be covering an existing Green Belt area with 400-500 dwellings.			
1190049	Catherine Dixon			No	• Justified	No	No	re Tower Farm and Black Rock areas these are in Green Belt. If they have been taken out of Green Belt why is this and why was there no public consultation? If these two pieces of land are built on it will set a precedent for the rest of the Gordano Valley and the ripping up of Green Belt sites across the country. The sites are too close to Weston Big Wood, a SSSI. The Gordano Valley is a wildlife corridor and should stay that way. That is why it is protected by Green Belt. Access to both sites would be by unsuitable local roads. Alternative brownfield sites should be considered first with lower ecological impact, both in Portishead and across North Somerset.			
62862849	L Donadel			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	There are two main areas of concern 1) access to the site both during construction and when the development has be completed. 2) The damage that will occur to the Weston Big Wood Nature reserve and biological site of special interest. Access to the site is through a residential housing estate, in close proximity to a school, where there are existing issues with parent parking restricting access with other road users. The additional vehicle traffic will cause issues of safety. The roads are congested especially from Down Road onto West Hill and perhaps Avon Way. Where buses and other traffic are a hazard to pedestrians and cyclists. The Weston Big Wood Nature reserve managed by Avon Wild life Trust is a site that we all made a small donation to preserve and protect. We have been on a talk organised by the Trust which pointed out the significance of the woodland with regard to the Iron age and medieval period. The rare plants such as ancient White beam trees and Herb Paris. Also the abundance of rare butterflies in the woods. It has been an area where you can relax and enjoy nature away from the built environment.	Suggest using old mill road as set out on the Portishead town council Web Site. Maintaining the green belt between Clevedon and Portishead.		
62829761	Libby Donald			No	• Justified	No	No	The two proposed housing developments would destroy the biodiversity of Weston Big Wood (SSSI), endanger wildlife and disrupt the green corridor that is Gordano Valley. There is enough new housing in Portishead already. Black Rock and Tower Farm sites are green belt. Road traffic in and out of the sites would be atrocious.	No modification needed just cancel the plan.		
58600193	J Drew			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	There are more suitable areas around Wyndom way. The roads around West Hill cannot cope with the hundreds of cars that the development would generate. We live in the Deans and it is impossible getting in or out at school drop-off and pick-up, we try to avoid those times but we had an appointment and came back at afternoon pick-up, it took us 20 minutes to travel 200 yards, it was total gridlock, people were getting frustrated because no-one could move and shouting abuse at other drivers. Using the Wyndom side of Portishead the traffic would be in a better position for the M5, A359 and the new railway station. The impact on wildlife would be enormous there are deer and a large variety of birds that habitat these fields, the food source, light and noise pollution would have a devastating effect on them, beside the fact that the number of cats would increase significantly which have a huge effect on the bird and mammal population they are the biggest threat to the bird population and small mammals that birds of prey rely on. It will also have a huge impact on people's mental and physical health. Lots of people young and old enjoy walking in the fields it is a way of socialising for a lot of older people and to see the deer and hear the birds song lifts anyone's spirit. Footfall in the woods would be inevitable and that would have a huge effect on the rare plants and trees of which are of SSSI. This area was made a green belt area in the 1980's for that reason and it should remain as it is.			
63106881	N.D.R. Eade							In response to the proposed new housing development at two of Portishead's green belt areas namely Tower Farm and Black Rock. I am very much against this proposal because firstly Portishead does not have the necessary infrastructure to accommodate hundreds of new residents and their families. Portishead health centres, dentist, school and nurseries are over subscribed at the moment and with only one pharmacy in operation more people added to the Portishead community would create endless waiting time, far worse than it is at the present time. Secondly and very important is the road system in and out of Portishead. At present there is only three exit and incoming roads to Portishead, two of which, Clapton Lane and Clevedon Road are totally inadequate for high volume traffic. On numerous occasions in the past when traffic is disrupted on the M-5 motorway some of the traffic is diverted through Portishead to Clevedon Road for the traffic to rejoin the motorway in Clevedon when this has happened it caused serious disruption to the			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Portishead community. Having more and more people settling in the area would only make things worse especially those who live in North Weston and Weston-in-Gordano where the road is a very narrow. Also the proposed new housing estate on green belt land will surely disrupt the natural biodiversity of the area which is rich in wild life and woodlands and is regularly used as part of the-leisure-and-educational activities by the Portishead community: I realise the need for more housing is important throughout the country but in some areas such as Portishead one has to be realistic. Adding more people to a community that is already over populated and with the current infrastructure in the town I foresee many problems on the horizon.			
29216481	Ellis			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The Land at Tower Farm site is adjacent to the ancient woodland of Weston Big Wood which is also a Site of Nature Conservation Interest. Weston Big Wood is an intrinsic part of the Gordano Valley ecological network - an important biodiverse habitat of open grassland, wetland and woodland. Any development on this site will have a significant negative environmental impact and the Council therefore has a duty to ensure that development is avoided. The visual and ecological intrusion into the woodland and surrounding landscape would be extremely detrimental. The Council has not robustly considered the full breadth of environmental factors in allocating this site (and the Black Rock site) for development. This allocation conflicts with the National Planning Policy Framework (NPPF) which requires that development resulting in the deterioration of irreplaceable habitats such as Weston Big Wood should be refused unless exceptional circumstances exist. The NPPF also requires the delivery of biodiversity net gain which this allocation does not address in any realistic manner. This allocation will place additional pressure on all of Portishead's infrastructure and as a peripheral site at the top of a steep hill would increase private vehicle usage and pollution rather than support sustainable transport. There can therefore be no presumption in favour of sustainable development on this site. Any development would never protect and enhance a valued landscape and site of biodiversity. The Council should recognise that Weston Big Wood and all of its adjacent natural landscape is an important ecological network and should be enhancing its resilience not compromising it. The allocation of this site should be removed. The land at Tower farm needs to remain undeveloped and be managed to enhance and protect its biodiversity. I do not support the allocation of land at Tower Farm in the North Somerset local Plan 2041.			
62777057	Charlie Evans			No	• Effective	No	No	The Tower Farm and Black Rock proposals in Portishead would create unacceptable transport impacts, failing national soundness tests. Neither site can provide safe or suitable access. Portishead does NOT have the infrastructure to support more housing. The services, schools and shopping area cannot absorb any more people. NSC has NOT considered the strategic ecological importance of these sites in protecting Weston Big Wood (SSSI) and the Gordano Valley Green corridor. National planning policy allows Green Belt changes ONLY in exceptional circumstances - and these have NOT been demonstrated. Do NOT build on green belt sites.			
62856225	Heather Evans			No		Unsure	Unsure	I realise comments made will probably be ignored but how on earth can the traffic system and roads around the Down Road area of Portishead and Tower Farm cope what will almost certainly be at least 500-700 extra cars and the traffic they will create? Saying that people can cycle is ridiculous, Portishead isn't a cycling town there are too many hills. Saying that people will use the railway, they will want to drive to the station and where will they all park? Crazy proposal all round!			
58563489	M Excell			No	• Justified	No	Unsure	Strongly believe that before including the Tower Farm and Black Rock sites in the Local plan, NSC have not properly considered alternative brown and green field sites with much less ecological impact both in Portishead and across North Somerset There is opportunity to build housing on proposed brown field sites in Portishead which would mean these precious green belt sites would not be required to meet local housing targets. These sites were added specifically to the Green Belt in the late 1980s because of their high ecological value These sites are situated where they contribute to protecting the ancient and unique environment of Weston Big Wood (SSSI) and the Gordano Valley strategic green corridor essential to wildlife and for the physical and mental well being of humans. National Planning policy states that sites can only be removed from Green Belt for development under exceptional circumstances and these exceptional circumstances are not proven. Neither site is sustainable or capable of safe and suitable access and would give rise to unacceptable transport impacts which fails the soundness tests set out in the National Planning policy			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Therefore the Tower Farm and Black Rock sites should both be removed from the Local Plan			
62657857	L Fearnside			No	• Justified • Effective • Consistent with national policy	No	No	Both the Tower Hill and Black Rock sites were added to the Green Belt in the late 1980s due to their high ecological value. The strategic ecological importance of these sites in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor has not been properly addressed . National planning policy allows Green Belt changes only in exceptional circumstances — and these have not been demonstrated. In addition, these developments would cause unacceptable transport impacts and are too far away from the proposed rail link. The town is congested with cars as it is. A reality would be 500 plus cars extra on those roads daily. People taking their children to school and extracurricular activities in the local area. This is not sustainable. As a result, failing national soundness tests. Tower Farm and Black Rock should be removed from the Local Plan. Find more alternative brownfield sites CLOSER to the rail link.			
62814721	Michelle Flay			No	• Justified • Effective • Consistent with national policy	Unsure	Unsure	The uk has very few wild areas left. Weston Big Wood is a site of SSI. Housing cannot be built up to the edge of this ancient woodland. It will to to the detriment of the flora fauna and wild animals that reside there. The green belt should be protected.	Brown field sites in Portishead need to be developed.		
58385441	Robert Flook			No	• Justified • Consistent with national policy	Unsure	Unsure	I do not consider the proposed green belt site of Tower Farm to be suitable for the development of some 400 houses for the following reasons:- The proposal indicates vehicle access from The Downs or St Marys road/Wetlands Lane. The Downs is adjacent to the Highdown schools and is extremely busy with parked vehicles along both sides of Down Road and The Downs at school drop-off and pick-up times. Neither road is suitable for the additional traffic that would be generated by the number of houses proposed. Vehicle access to St Marys Road/ Wetlands Lane would be outside of the proposed area and is significantly lower than the proposed development. The site borders Weston Big Wood which is a SSSI site and ancient woodland and was added to the Green Belt in the 1980's to protect this important site. As such a buffer would have to be provided to prevent the degradation of the woodland. The buffer itself would have to be maintained. As the site is not level there would be significant rainfall run-off from the roads and roofs. This run-off would particularly impact the lower parts of the development and the Wetlands Lane area with an increase of flood risk in these areas. It is unlikely that the Highdown schools would be able to take the additional number of pupils in the immediate area leading to an increase in traffic to get them to alternative schools adding to the congestion in The Downs and Down Road. The proposal indicates that the town centre is within a 20 minute walk of the site. This may be true but the town centre is significantly lower than the proposed site and is not an easy walk back from the town up a steep Avon Way or Rippleside/Lower Down Road. The proposed site should be removed from the Local Plan as it is unsuitable for development			
62857601	B Forgham & J Charters			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Tower Farm Major disadvantages to the proposal are the access and egress considerations to established residents. This is already a no go area between 8am to 9 am and 3pm to 4pm due to traffic volume and double parking. The proposed plans do not resolve this. A brand new road out of the proposed estate leading onto Down Road on the other side of the school would need to be installed in order to cope with increased volume. Disrupting the existing road as shown on the plans will not achieve satisfactory regular and emergency traffic flows. The proposed area is already designated green belt due to them strategic importance of Weston Big Wood and the Gordano Valley corridor. Brownfield sites in Portishead and environs should be considered before attempts to rape the green belt by yet another grubby gold digging developer. Reduction in current resident council tax will be demanded due to the increased inconvenience to current residents, effect on property values in a select and sought after area, and the general degradation of an established green belt.			
58487873	S Foxen		None	No		No	No	The proposed allocation of Land at Tower Farm with the building of a minimum of 400 homes, lies immediately beside Weston Big Wood which is an ancient woodland and Site of Nature Conservation Interest (SNCI) managed by the Woodland Trust and supported by Avon Wildlife Trust. The woodland forms part of the Gordano Valley ecological network and is a nationally important habitat mosaic of open grassland, wetland and woodland. It is not Justified, as there are no robust published alternatives demonstrating that this sensitive site is the only, or most appropriate option for growth. The loss of best and most versatile (BMV) farmland (Grade 2/3a by reference to the ALC dataset) and the risk of irreversible damage to the ancient woodland make this allocation unsuitable. It is not Consistent with National Policy, as the allocation conflicts with the National Planning Policy Framework (NPPF) paragraphs 180–182, which require that development resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland) should be refused unless wholly exceptional reasons exist. The Council's reference to an "ecological buffer" is vague, unenforceable and insufficient			Snippets.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								to address indirect impacts such as root-zone damage, hydrological change or wildlife disturbance. The Woodland Trust and Avon Wildlife Trust state that ancient woodland is irrecoverable once damaged. Moreover the Framework requires delivering biodiversity net gain, yet the allocation offers no clear mechanism for ensuring that outcome. It is not positively prepared. The location will increase existing pressures in Portishead, particularly in relation to schools and healthcare. We already cannot have face to face appointments with doctors, and finding NHS dentist places are non existent. Our transport infrastructure is already under strain, particularly along the A369, and trying to get out of the Downs onto the main road can take ten minutes already on a morning, and often ten to fifteen minutes to reach the Gordano Services roundabout. This peripheral site would likely increase private vehicle usage and pollution rather than support sustainable travel patterns, contrary to NPPF paragraphs 104–106. As a resident of Portishead for 30 years, I can count on one hand the number of cyclists I have seen trying to cycle up the steep inclines from the High Street to either Valley Road, or Avon Way. The roads are too busy already to allow young children to cycle down, or up them, and especially at school pick off and drop off times. It is not effective as the delivery depends on many unresolved dependencies, such as bus service contributions, off-site biodiversity management, new school provision and upgrades to rights-of-way and buffer zones. No funding mechanism or legal agreement is published to secure these. Without such mechanisms the allocation cannot be considered deliverable within the plan period (NPPF paragraph 35(c)). The farmland and woodland edge acts as a critical ecological and landscape transition zone. Development here would fragment the habitat, diminish the Gordano Valley wildlife corridor and erode the rural fringe character. Even with a buffer the visual and ecological intrusion into the woodland and surrounding landscape would be significant. Construction and built developments would alter surface-water run-off and soil compaction on the former farmland, potentially affecting the hydrological regime that sustains the adjacent ancient woodland. The risk of nutrient runoff, altered infiltration and woodland root zone damage is likely. When considered alongside other allocations in the Portishead area (such as Black Rock north of Clevedon Road), the combined pressure on ecology, infrastructure and transport is significant and undermines the Council's commitments to nature recovery and sustainable growth. I and every resident that I have spoken to about this plan, believe that no modification short of removing the allocation entirely would make this site appropriate. Given its direct adjacency to ancient woodland, its loss would be irreversible and cannot be mitigated sufficiently. The land should instead be retained as undeveloped green space, managed to enhance biodiversity and provide sustainable public access, in line with the Avon Wildlife Trust's 2030 Strategy and national "30 by 30" nature recovery goals. I do not support the the North Somerset Local Plan 2041 for the Tower Farm location.			
62725377	JFullick			No	• Justified • Consistent with national policy			I OBJECT to the North Somerset Local Plan 2041: Pre-submission Plan on the grounds that it is neither sound nor legally compliant, and that the Council has not demonstrated compliance with the Duty to Cooperate. My objections are set out precisely below. 1. Not sound (fails the four tests of soundness) The Plan is unsound because it is not positively prepared, justified, effective, or consistent with national policy for the following reasons: a) Unjustified Green Belt releases (Black Rock — HE20124). The Plan allocates land at Black Rock (site ref HE20124, north of Clevedon Road) without demonstrating the "very special circumstances" required to justify permanent removal of land from the Green Belt. There is insufficient, published evidence that alternative, sustainable brownfield options have been fully tested and discounted, and no clear demonstration that the allocation is the least harmful way to meet housing needs. This undermines the Plan's justification and consistency with national Green Belt policy. b) Insufficient deliverability evidence (Tower Farm, Portishead). The allocation of Tower Farm (Portishead) for ~400 homes (or similar capacity) is not supported by robust, up-to-date evidence showing deliverability. The Plan lacks clear, site-specific confirmation that critical infrastructure — highways capacity, foul water/ sewerage capacity, primary school places, GP/healthcare capacity and utilities — is available or will be provided in step with development. Without firm evidence of delivery mechanisms, the allocation is not effective. c) Inadequate assessment of cumulative impacts. The Plan does not supply a satisfactory cumulative assessment of the combined impacts of new allocations around Portishead (including Tower Farm and Black Rock) on transport networks, education, health services, sewage and surface water drainage. The absence of cumulative modelling and mitigation plans means the Plan cannot be considered effective or positively prepared. d) Flood risk & drainage evidence absent or inadequate. For sites where flood risk or drainage constraints are material (including fields near Portishead), the Plan does not present the necessary sequential/exception testing, up-	I consider that the following modifications are necessary and essential for the North Somerset Local Plan 2041 to be legally compliant, sound, and capable of adoption. Without these changes the Plan should not proceed. 1. Removal of Black Rock (HE20124) from the Plan unless Green Belt tests are lawfully satisfied Required Modification: Delete the allocation of site HE20124 (Black Rock, north of Clevedon Road) from the Plan, unless and until the Council can demonstrate: - That all reasonable non-Green Belt and brownfield alternatives have been fully assessed and exhausted through a transparent site selection process; - That "very special circumstances" objectively exist to justify permanent Green Belt release; -That exceptional circumstances required by national policy for Green Belt boundary changes have been clearly evidenced. Reason: The Plan currently fails to satisfy national Green Belt policy and is therefore not justified, not consistent with national policy, and not legally compliant. 2. Removal of Tower Farm pending firm infrastructure commitments Required Modification: Remove the Tower Farm allocation unless the following are published and secured through the Plan: - Written confirmation from the sewerage		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								to-date flood modelling or Environment Agency sign-off on proposed mitigation. This fails the tests in national planning policy and renders allocations unsafe and unjustified. e) Biodiversity and landscape harm not properly demonstrated as mitigable. The Plan does not set out sufficient site-level ecological surveys or clear, funded mitigation/compensation measures for likely impacts on local habitats and landscape character. Without this, allocations risk causing irreversible ecological harm and the Plan is not justified or consistent with national policy on biodiversity net gain. 2. Not legally compliant / failure to provide necessary evidence a) Lack of necessary technical evidence on the public record. At Regulation 19 the Council must publish the background evidence that demonstrates soundness and legal compliance. There is insufficient published evidence demonstrating that statutory providers (Environment Agency, health providers, sewerage undertaker, highways authority/National Highways) have confirmed delivery arrangements and necessary mitigation for the proposed allocations. This absence means the Plan cannot be shown to be legally compliant or sound. b) No robust viability and delivery programme. The Plan does not contain a transparent, site-specific viability assessment and a clear delivery/timescale programme (including trigger points for infrastructure). Absent this, the Plan fails the effectiveness test. 3. Failure (or insufficient demonstration) of the Duty to Cooperate a) Insufficient evidence of strategic engagement. There is no adequate, published evidence demonstrating that North Somerset has proactively engaged and agreed strategic matters with neighbouring authorities and prescribed bodies where cross-boundary impacts arise (for example, highways / strategic transport, education and health capacity). The Council must publish Statements of Common Ground (SoCGs) or equivalent evidence showing how objections from statutory bodies have been resolved — this is not apparent on the public record. b) Consequences of the failure. Without demonstrable, constructive engagement and agreement on strategic issues, the Plan may not have addressed cross-boundary needs or infrastructure responsibilities, and therefore may be legally non-compliant with the Duty to Cooperate.	undertaker that foul and surface water infrastructure has sufficient capacity or that upgrades are fully funded and programmed; - Written confirmation from the NHS/health authority that GP and primary healthcare capacity will be expanded in step with development; - Written confirmation from the local education authority that sufficient primary and secondary school places will be delivered; - A fully published independent transport assessment demonstrating that cumulative traffic impacts in Portishead can be safely mitigated. Reason: Without firm infrastructure commitments the allocation fails the effectiveness and positively prepared tests and is therefore unsound. 3. Mandatory cumulative impact modelling for Portishead and surrounding sites Required Modification: Insert a new policy requirement that no planning permission shall be granted for any major housing site in or around Portishead until: - Cumulative transport modelling (not site-by-site) has been completed and approved; - Cumulative impacts on healthcare, schools, drainage and utilities have been fully assessed and funded. Reason: The current Plan relies on piecemeal site-level assessments, which is inadequate and renders the strategy ineffective and unjustified. 4. Binding infrastructure delivery and phasing schedules Required Modification: Add site-specific infrastructure delivery schedules for every major allocation, including: - Trigger points for roads, schools, healthcare and drainage upgrades; - Identification of funding sources (CIL, S106, public funding); - Clear phasing controls preventing occupation before infrastructure is in place. Reason: Without binding delivery mechanisms, the Plan lacks certainty of implementation and fails the effectiveness test of soundness. 5. Updated flood risk, drainage and Environment Agency approval Required Modification: Require updated site-specific flood risk assessments, sequential testing and drainage strategies for all greenfield sites near Portishead; - Require written confirmation from the Environment Agency that each site is acceptable in flood risk and drainage terms before allocation is retained. Reason: Allocating land without confirmed flood safety is a direct failure of national policy and renders the Plan unsound and potentially unlawful. 6. Legally robust biodiversity evidence and net gain delivery Required Modification: Insert a policy requiring: - Full ecological surveys at allocation stage (not deferred to application stage); - Legally secured biodiversity net gain, with off-site compensation sites identified and funded upfront. Reason: Deferring ecological certainty undermines the Plan’s justification and exposes it to legal risk.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									7. Full publication of Statements of Common Ground (Duty to Cooperate) Required Modification: The Council must publish full Statements of Common Ground with all prescribed bodies and neighbouring authorities, including: - Highways and strategic transport providers; - Health authorities; - Education authorities; - Sewerage and water infrastructure providers. These must demonstrate how objections have been resolved, not merely recorded. Reason: Without published and evidenced agreement on strategic matters, the Plan fails the Duty to Cooperate and is legally non-compliant. 8. Revised housing trajectory based on proven deliverability Required Modification: - Recalculate the housing trajectory using only sites with proven infrastructure capacity and confirmed delivery timescales; - Remove reliance on speculative or infrastructure-constrained sites to meet the five-year supply. Reason: An unrealistic trajectory undermines positive preparation and effectiveness. 9. Stronger protection for settlement boundaries and countryside Required Modification: Insert a reinforced policy protecting: - The open setting of Portishead; - Settlement separation; - The intrinsic character of countryside land. Reason: The current strategy risks coalescence, urban sprawl and irreversible landscape harm, contrary to national policy. Conclusion: Unless the above modifications are made in full, the North Somerset Local Plan 2041: - Fails the tests of soundness (positively prepared, justified, effective and consistent with national policy), - Fails legal compliance, and - Fails to adequately demonstrate fulfilment of the Duty to Cooperate by North Somerset Council. These are main modifications, not minor edits. If they are not implemented, the Plan should be found unsound and incapable of adoption.		
58643105	Charmaine Furlong		Mrs Charmaine Furlong	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The proposed allocation of Land at Tower Farm (400 homes) lies immediately beside Weston Big Wood - an ancient woodland and Site of Nature Conservation Interest (SNCI) managed by Woodland Trust and Avon Wildlife Trust. The woodland forms part of the Gordano Valley ecological network and a nationally important habitat mosaic of open grassland, wetland and woodland. Before including he Tower Farm site in the local Plan, NSC has not properly considered: Alternative brown and green field sites with much less ecological impact both in Portishead and across North Somerset. The opportunity to increase housing density on proposed brown field sites across North Somerset which would mean these sites are not required to meet local housing targets. The strategic ecological contribution of these specific sites in protecting the unique environment of Weston Big Wood (SSSI) and the Gordano Valley strategic green corridor. These sites were specifically added to the Green Belt in the late 1980s because of their high ecological value. For the above reasons, the Local Plan is unsound because National Planning Policy states that sites can only be removed from Green Belt development under exceptional circumstances and these exceptional circumstances are not proven. In addition, the site is not sustainable or capable of providing safe and suitable access,			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								and would give rise to unacceptable transport impacts, which fails the soundness tests set out in National Planning Policy. Therefore, the Tower Farm site should be removed from the Local Plan. No modification short of removing the allocation entirely would make this site appropriate. Given its direct adjacency to ancient woodland, its loss would be irreversible and cannot be mitigated sufficiently. The land should instead by retained as undeveloped green space, managed to enhance biodiversity and provide sustainable public access, in line with Avon Wildlife Trust's 2030 Strategy and national "30 by 30" nature-recovery goals. I do not support the North Somerset Local Plan 2041: Pre-submission Plan for the Tower Farm location.			
62268513	Lesley Gorringe			No		Unsure	Unsure	I feel that the proposal is a bad one because: Portishead is already a very busy town with often gridlocked roads and to add another very large housing estate, with all the additional associated vehicles, to the mix would be unbearable to the community. The proposed development would have just one access road at The Downs/Down Road junction. How can this be justified especially when this junction is gridlocked at school run time on every single school day? Open spaces, available to all, should be treasured and protected. Once lost, lost forever not only to current but to future generations. The above open space creates a vital buffer zone to Weston Bigwood (an SSSI) encouraging floral and fauna to thrive. The survival of Weston Bigwood in such close proximity to a new population cannot be underestimated and could not be reversed if this new development proceeds. The joni Mitchell song 'they paved paradise and put up a (housing estate)' comes to mind! I cannot support any proposal to destroy the beautiful Portishead Down and Weston Bigwood area and feel there must be alternative less sensitive sites. I would urge all associated with any final decision to pause and be completely sure that it is the right decision for all the life in this area (wildlife, plant life and human life). Thank you.			
8064449	Evelyn Grounsell							Tower Farm and Black Rock should be removed from the Local Plan for housing in Portishead. Those areas are adjacent to protected woodland, and development would lead to damage to those habitats. The land is neither poor, nor does it offer no amenity to the locale. As such those areas read as outside the categories of land worthy of consideration under the Government policy described by the Prime Minister in his speech on this topic. If my memory serves, at least part of the area by the woods was added to green belt in recent years, further confirming the value of land surrounding the woods to the environment and to the community. And the error of considering building there. Moreover Tower Farm and Black Rock are ideal areas to allow extension of the habitat and at low cost provide the expansion of rewilding that is the policy of the current and previous North Somerset councils.			
62853217	Adrian Geisow			No	Justified	Unsure	Unsure	The justification for release of Tower Farm from green belt amounts to a bald statement that land cannot be found elsewhere; there appears to be no detailed demonstration of that assertion. The land protects Weston Big Wood SSSI - building on it removes significant green space and will put more pressure on Weston Big Wood itself. The presence of an SSSI should require increased justification over other greenbelt areas, which are eg just to limit urban spread. No such justification is given. The proposal for 400 homes at Tower Farm would inevitably cause much increased traffic on St Mary's Road & Wetlands Lane. These are already unsuitable for the current volume of traffic, particularly in the morning work/school run.	Tower Farm should be removed from the plan, or at least the number of homes proposed radically reduced.		
62905025	Roberta George							I have been a resident of The Deans in Portishead since 2002 and I would like to request that Tower Farm and Black Rock is removed from the local plan for development. My biggest concern with the proposed development is safe access. The Downs is congested at school drop off and pick up times and even with the addition of double yellow lines on both sides of the road, I believe that this road is not wide enough to cope with the additional traffic that would be generated during the building phase with large vehicles and then by the additional residents. I am concerned for the safety of the pupils, staff and parents at High Down, and for the many students from Gordano School who also walk this way to and from school. Furthermore, Weston Big Wood and the Gordano Valley are ecologically important sites which should not be disturbed. I understand that such sites should only be used for developments in exceptional circumstances and, as there are multiple brownfield sites which are available for development, I cannot see that the proposed development is legal or necessary. Weston Big Wood is such a beautiful area. For the residents of Portishead and beyond, this is a wonderful location to walk dogs, bathe in nature, escape from the stresses of life, have social time and exercise, fly kites and model planes, have picnics, watch the sunrise and gaze at the stars. Please do not take this away.

								Thank you for your time reading this. I hope the right decision will be made for the residents of Portishead and for nature.			
58043937	F Gooch			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Alternative brownfield or greenfield sites with lower ecological impact have not been considered. This area is of such strategic ecological importance it was classified green belt in 1980s due to its high ecological value. The fields surrounding provide vital infrastructure to inter-connectivity of the ecosystem. Weston Big Wood dates back to Iron Age with rare fauna and flora - a site of special scientific interest. National planning policy only allows green belt changes in exceptional circumstances. These have not been demonstrated. Traffic around The Downs leading onto Down road is extremely congested (and often dangerous) at school drop off and pick up times. More traffic would create unacceptable transport impacts failing national soundness tests. The site cannot provide safe and suitable access. The site fails to be located within easy walking distance of key amenities as claimed by potential developers. It seems that their proposals are not based on sound research of the area. It has restricted access (particularly at peak times) and is located over a mile away with a steep gradient (over 100m) to and from the centre. It is my understanding that a well-known large developer already researched this as a potential site for development and subsequently dismissed it as a result of that thorough research.	Alternative brownfield sites should be considered. Sites allowing safe and suitable access (not on an already highly congested junction adjacent to a primary school) should be considered. This greenfield site which includes the vital inter-connectivity of the woodland and fields should be protected due to its ecological importance and significance.		
58511745	Matthew Gooch			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	NSC has not properly considered: Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset. Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm. The strategic ecological importance of this site in protecting Weston Big Wood (SSSI) and the Gordon Valley green corridor. The fact that this area was added to the Green Belt in the late 1980s due to its high ecological value. National planning policy allows Green Belt changes only in exceptional circumstances - and these have not been demonstrated. In addition: There is neither safe nor suitable access to the site. Development would create unacceptable transport impacts failing national soundness tests. Consider brown field sites and greenfield sites with significantly less ecological impact.			
58549313	Phoebe Gooch			No	• Justified	No	No	The fields in question are regarded as “brownfield” which is completely untrue. There are many brownfield sites in North Somerset and this is not one of them! The fields play a critical role in the community, with large numbers of the population appreciating the green space they provide, hence they are part of the Green Belt and therefore cannot be called brownfields. Furthermore the access to the proposed housing estate is NOT SUITABLE. During school drop off and pick up hours, The Downs is an extremely busy road. It takes locals up to half an hour to leave the road they live on during these times - imagine how chaotic it would be with another couple hundred cars. The proposed plans are clearly unsound, they appear to be the work of someone who has never visited Portishead or spoken to any of the residents and are therefore barbaric.	Due to the ecological value of the fields and their importance in supporting the wildlife and green corridor, I believe Tower Farm will never be a suitable place to build houses, hence the plans will never be sound.		
62444737	Nigel Gorringe			No		Unsure	Unsure	This does not take into account the already chaotic traffic issues that affect The Downs, The Deans and Down Road during school drop-off and collection times. During these periods we already experience difficulties entering and leaving our homes. The proposal shows only a single access point by re-routing The Downs and that will cause unbearable congestion, especially at the above times. The ecological buffer proposed is insufficient to protect Weston Big Wood. With an increased population so close to this protected woodland it could become a playground and lost forever. Consider the local population and the disturbance this increase of 400+ houses will cause to an already overgrown town. A town that has expanded inexorably over the last 20+ years. What about the infrastructure to service the new houses - power, water, gas, telecoms, health provisions, education and how will this affect an already over-stretched town? I do not support the Tower Farm 400+ houses proposal. What about the infrastructure to service the new houses - power, water, gas, telecoms, health provisions, education and how will this affect an already over-stretched town?			
62444737	Nigel Gorringe			No		No	Unsure	The proposed development of Green Belt land at Tower Farm is not sound as it provides a safety buffer between existing housing and Weston Big Wood — an ancient woodland and an SSSI which will be severely jeopardized due to the proximity to 400+ new houses. This woodland is a part of the Gordano Valley ecological corridor and development will impede the natural movement of wildlife or worse kill it off			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								altogether. The removal of Green Belt status can only be achieved in exceptional circumstances, there are no exceptional circumstances applicable in this case only following a dictat from a much maligned Labour government. 400+ houses at Tower Farm would greatly exacerbate the traffic congestion at the junction of The Downs and Down Road particularly at school drop-off and collection times. Public transport along Down Road is the X4 only in one direction every 20 minutes or so and the X10 occasionally. The site is on top of a steep hill and walking/cycling for many will be impossible thus producing extra traffic flows. There seems to be little thought on the impact on services in Portishead - schools, health care, transport, etc. The North Somerset Local Plan 2041: Pre-submission Plan should remove Tower Farm completely as being an ecologically important site and totally unsuitable for any development. Access to this site would be difficult with perhaps as many as 400 to 600 cars exiting and returning daily. The proposal is unsound at it gives no indication how the concerns above will be addressed. The site should remain as protected Green Belt as it is totally unsuitable for development. I do not support this proposal in it's current form.			
58452161	Julia Gregory			No	• Consistent with national policy						
8124577	P Gregory			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The proposed allocation of Land at Tower Farm for 400 homes lies close to Weston Big Wood — a precious ancient woodland and Site of Nature Conservation Interest (SNCI). The woodland needs to be considered with the surrounding area and forms part of the Gordano Valley ecological network and a nationally important habitat mosaic of open grassland, wetland and woodland. This plan is not Justified There is no robust published alternatives assessment demonstrating that this sensitive site is the only or most appropriate option for growth. The risk of irreversible damage to the ancient woodland make this allocation unsuitable. There are other possible locations. The plan is not consistent with National Policy The allocation conflicts with the National Planning Policy Framework (NPPF) paragraphs 180–182, which require that development resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland) should be refused unless wholly exceptional reasons exist. The reference to an 'ecological buffer' is too vague, unenforceable and insufficient to address indirect impacts such as root-zone damage, hydrological change or wildlife disturbance. The NPPF requires delivering biodiversity net gain, yet the allocation offers no clear mechanism for ensuring that outcome. The plan is not positively prepared The location intensifies existing pressures in Portishead: schools, healthcare and transport infrastructure are already under strain. This peripheral site would likely increase private vehicle usage and pollution rather than support sustainable travel patterns, contrary to NPPF paragraphs 104–106. The site is too far from the town's amenties: High Street, Library, Surgeries etc to be a sustainble solution for most people. The plan is not effective Delivery depends on multiple unresolved dependencies: new school provision, bus service contributions, off-site biodiversity management, and upgrades to rights-of-way/ buffer zones. No phasing plan, funding mechanism or legal agreement is published to secure these. Without such mechanisms the allocation cannot be considered deliverable within the plan period. Landscape & Connectivity The farmland/woodland edge acts as a critical ecological and landscape transition zone. Development here would fragment habitat, diminish the Gordano Valley wildlife corridor and erode the rural fringe character. Even with a buffer the visual and ecological intrusion into the woodland and surrounding landscape would be significant and unacceptable. Drainage & Hydrology Construction and built development is bound to alter surface-water run-off and soil compaction on the former farmland, potentially affecting the hydrological regime that sustains the adjacent ancient woodland. The risk of nutrient runoff, altered infiltration			10067.JPG

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								and woodland root zone damage would be substantial. Cumulative Impact When considered alongside other allocations in the Portishead area (such as Black Rock), the combined pressure on ecology, infrastructure and transport is significant and undermines the Council's commitments to nature recovery and sustainable growth. This site is completely inappropriate for development. No modification would make this site appropriate. The adjacent ancient woodland is pricless and nothing can be done to mitigate any damage to it. The land should instead be retained as undeveloped green space, managed to enhance biodiversity and provide sustainable public access. I do not support the the North Somerset Local Plan 2041 for the Tower Hill Farm location.			
58506529	David Gunnell		Portishead Town Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	I am making this submission both as a Portishead resident and Town Councillor. I lived on the Downs - a residential Road adjacent to the proposed development - for 6 years and so have first hand experience of the issues i describe below. I have also spoken to many concerned residents over the last month, my response is based on these experiences, discussions and a careful review of the plans. Concerns in relation to NPPF S187 Tower Farm sits directly beside Weston Big Wood, an ancient woodland SSSI and one of North Somerset's most biodiverse sites, and close to the geological and ecological interest of Nightingale Valley SSSI. The surrounding unimproved grassland, hedgerows and shelterbelts act as essential wildlife corridors linking the wood to the wider Gordano Valley. Weston Big Wood is a rare Ice-Age remnant with oak, hazel, ash and elm, plus uncommon species such as small-leaved lime, wild service tree and rock whitebeam. Its rich ground flora and fungi support birds of prey, owls, bats, deer, badgers and red-listed linnet. The Gordano Valley's mix of rhynes, saltmarsh, woodland, grassland, orchards, hedgerows, quarries and limestone outcrops sustains a wide range of invertebrates, bats, wetland birds and plants. Long-standing studies by WWF, Avon Wildlife Trust and the Town Council stress that this is an interconnected ecological system dependent on continuous corridors. Recent assessments show Weston Big Wood is in unfavourable, declining condition, with rising recreational pressure and fragmentation, and record high bat activity around Tower Farm and Black Rock. As a frequent visitor to these woods over the last 30 years I can attest to the deterioration they have undergone through increased footfall and use by mountain bikers. Path widths have increased in number and size, encroaching on root systems and there has been a diminution in diversity of wildlife I first enjoyed 30 years ago. Placing 400 homes so close to this location, with consequent increases in the number of cats, noise and light pollution as well as footfall from dog walkers could be the death knell for this valued SSSI. Long-standing evidence from Natural England, Avon Wildlife Trust and other studies confirms that ancient woodland ecosystems cannot be recreated or compensated for once damaged. Recent assessments already show Weston Big Wood in unfavourable, declining condition, with severe recreational impacts during the Covid period and high bat activity around Tower Farm and Black Rock—signs that further pressure would be ecologically damaging. The site forms part of a crucial wildlife corridor connecting Weston Big Wood to the Gordano Valley, Walton Common and other habitats. Development would fragment this network, contrary to NPPF requirements to safeguard biodiversity and ecological linkages. Narrow buffers or off-site mitigation cannot prevent these impacts. The proposals also fail to demonstrate how the required 10% Biodiversity Net Gain could be achieved, and because ancient woodland and associated ecosystems are irreplaceable, they cannot be offset by credits or new planting. The scheme therefore conflicts with the Portishead Neighbourhood Plan, which requires protection and enhancement of ecological networks. Tower Farm also lies within the long-established South West Avon Green Belt and the Gordano Valley Strategic Green Corridor. Development would erode the Green Belt buffer around Weston Big Wood and is particularly inappropriate given the area's proximity to two SSSIs and its high ecological sensitivity. North Somerset's own Landscape Sensitivity Assessment identifies this landscape as high-sensitivity, with a wooded, rural and secluded character that would be visibly degraded by new urban edges, contrary to guidelines calling for conservation of woodland, open grassland and peaceful landscape qualities. Decades of research, including the WWF/Avon Wildlife Trust PhD project and Portishead's 2023 ecological update, confirm the Gordano Valley functions as a single interconnected ecological system that cannot be protected piecemeal. Geological features linked to the Nightingale Valley SSSI are also likely present at Tower Farm, further increasing its conservation value. The proposal conflicts with multiple NPPF requirements: it fails to protect valued landscapes and ecological networks (NPPF 187), does not contribute to conservation or measurable biodiversity gain (NPPF 192), and fails all statutory biodiversity tests under NPPF 193. Development affecting an SSSI "should not normally be permitted", and no exceptional justification has been provided. The proposed 50 m buffer is inadequate to protect ancient woodland from indirect effects such as lighting, hydrological change, recreation and predation. Expert ecological opinion indicates the environmental impacts have been significantly underestimated, particularly the loss of semi-natural grassland and wildlife corridors integral to the woodland ecosystem. Tower Farm sits within a cluster of interconnected SSSIs whose integrity depends on maintaining continuous ecological links. Development here would undermine this			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								wider network. The site is also in an unsustainable location that brings no benefits capable of outweighing the extensive ecological harm, especially given the documented pressures already affecting Weston Big Wood. Development at Tower Farm and Black Rock would encircle 20—25% of woodland edge and further strangle development this much loved ancient woodland. With British ancient woodlands now struggling to regenerate and under increasing climate and ecological stress, developments that further threaten Weston Big Wood should be refused, and there are no “wholly exceptional reasons” to permit them. Objections in relation to NPPF S110 Tower Farm is not a sustainable location for residential development due to its distance from essential services and the steep topography that prevents most residents from comfortably walking or cycling to key destinations. The site sits at the top of a long, steep hill, making active travel impractical for many—particularly older people, families with children, and those with mobility issues. As a former resident of the Downs – a residential road adjacent to the proposed Tower Farm development I can attest to the impact this steep hill had on my ability to commute to Bristol by bike. Whilst living at the Downs I cycled to work on only a couple of occasions. The steep hill at the end of the journey added 10 minutes to my commute and the prospect of ascending it after a long ride home was a major disincentive to communting regularly by bike. Once I moved to Woodhill road, closer to the High Street, I could avoid Portishead’s challenging topography and commuted to the Clifton area of Bristol once or twice weekly. Although the developer claims that local facilities are within “reasonable walking distance” and that active travel is viable, the actual distances and climbs involved show the opposite. In practice, the site is significantly disconnected from Portishead’s main amenities, employment areas and transport links. Tower Farm fails to meet NPPF S110 sustainability requirements because its steep gradients and long distances to essential services make walking and cycling unrealistic for most residents, despite developers’ claims. Key amenities—including schools, shops, GP services, leisure centres, the High Street and the future rail station—are over a mile away with climbs of 300–350 ft, making active travel impractical and undermining assertions that the area is “walkable” or that Down Road constitutes a meaningful local centre. The developer’s transport assessment misrepresents accessibility, underestimates walking times, ignores topography and overstates cycling prospects, including unrealistic suggestions about e-bike use. Public transport provision is also inadequate: no bus route directly serves the site, nearby services require uphill walks, and the X4 takes far longer than car travel. As a result, residents would be heavily reliant on private vehicles, increasing traffic and congestion—especially around High Down School—and conflicting with national and local goals to cut emissions, reduce car dependency and promote healthier, more sustainable travel choices. Residents I’ve spoken to speak of long delays exiting the junction between Down Road and The Downs, with on occasions traffic coming to a standstill for 15-20 minutes and angry confrontations between drivers. As a former resident of the Downs and parent of former pupils of High Down school, I have first hand experience of these issues. Remove this land from the local plan			
63106753	Andy Haines							I am responding to the proposed housing developments at two sites at Portishead, they are at Tower Farm and Black Rock. I understand that both sites are green belt land which dates back to the 1980s and cannot be built on except in exceptional circumstances which have not been met by these proposaIs. We have been very fortunate to have at least lpair of Red Kites, a bird of prey making a comeback here in the UK. Kites are listed under Schedule 1 of the UK1s Wildlife and Countryside act 1981. This gives them extra legal protection. The Red Kites use these open areas to hunt, if the feeding grounds are built on, the birds will leave or die. The whole area is rich in bat biodiversity with Pipistrelle, Noctule, Long-eared, Greater and Lesser Horseshoe Bats having been spotted in the area. These are also protected by law. I have concerns regarding access to both sites. Tower Farm access road would send traffic in the direction of the infant school causing safety issues. The Black Rock site would be accessed by the B3124, a busy road at any time due to it being the main artery between Portishead and Clevedon. Portishead has limited road system to support a population of around 27000 people. There is the Portbury Hundred, Clapton lane (which is not suitable for large vehicles) and the B3124. The proposed developments would create an unacceptable impact on traffic in the area. The infrastructure in Portishead is not sufficient to support such a large numbers of new houses proposed. There would not be enough doctors surgeries, dentists, car spaces - the things people need every day. This was highlighted after the last large number of houses built and continues to cause problems to this day. For the reasons stated, l do not think Black Rock or Tower Farm developments should proceed. I do, however, appreciate the need for housing and would suggest an alternative location at Old Mill Road which is a brown belt site that is potentially larger than the Black Rock proposal. Any shortfall in housing numbers could be made up by building small brown belt sites within Portishead itself such as the building site at St Marys			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								road. Building houses at Old Mill Road would put housing in the heart of the village and as such, residents would need to use their vehicles less as all amenities would be within walking or cycling distance. The impact on traffic congestion and its pollution would be less than the Blackrock or Tower Farm proposals, demonstrating a more green approach. Portishead would retain its open spaces, with reduced the impact on the environment and protect our wildlife habitat.			
58602337	William Hall			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The North Somerset Local Plan 2041: Pre-submission Plan is not sound, not legally compliant, and not in compliance with the Duty to Cooperate for the following reasons: Green Belt & exceptional circumstances: The Plan allocates Tower Farm (and similar sites) without demonstrating exceptional circumstances for removal from the Green Belt, contrary to national policy. Other brownfield or lower-impact sites could meet housing needs without harming protected land. Environmental protection: Tower Farm is adjacent to Weston Big Wood, Nightingale Valley, and the Gordano Valley corridor, which are nationally and locally important ecological areas. Proposed ecological buffers are insufficient, and long-term management is not clearly enforceable. Biodiversity, geodiversity, and landscape impacts have not been fully assessed. Transport & safety: School traffic on The Downs already creates severe congestion and unsafe conditions during pick-up and drop-off, despite long-standing voluntary mitigation requests. Additional housing would worsen these hazards. Proposed active travel connections and bus service contributions do not adequately address the risks. Flood risk: The site slopes towards lower areas of Portishead, and surface water runoff mitigation has not been fully assessed or evidenced. The Plan does not demonstrate that flood risk can be managed without increasing risks elsewhere. Deliverability: Safe and suitable access for vehicles, walking, and cycling is not demonstrated. Duty to Cooperate: There is insufficient evidence of engagement with statutory bodies or neighbouring authorities on environmental, transport, and flood risk impacts.	Remove Tower Farm and similar high-impact Green Belt sites from the Plan. Prioritise brownfield and lower-impact sites for housing allocations to meet needs sustainably. Conduct comprehensive independent assessments of ecology, biodiversity, landscape, flood risk, and transport before any allocation. Secure enforceable long-term management of ecological buffers and mitigation measures. Demonstrate safe and deliverable access for vehicles, walking, and cycling, including mitigation of school traffic hazards. Ensure full engagement with statutory bodies and neighbouring authorities to comply with the Duty to Cooperate.	Support the Plan’s overall objectives to create sustainable, high-quality, liveable neighbourhoods, improve access to facilities, promote regeneration, and support climate resilience, provided these do not conflict with Green Belt, ecological protection, public safety, or flood risk requirements.	
58602401	Rebecca Hall			No	• Positively prepared	No	No	Green Belt & exceptional circumstances: Allocating Tower Farm (and similar sites) takes land out of the Green Belt without showing exceptional circumstances. There are alternative brownfield or lower-impact sites that could meet housing needs without damaging protected areas. Environmental protection: Tower Farm sits next to Weston Big Wood, Nightingale Valley, and the Gordano Valley corridor. The ecological assessments are incomplete, proposed buffers are too small, and there is no clear long-term plan to protect wildlife or maintain habitats. Transport & safety: The Downs already suffers heavy congestion at school pick-up, with cars often mounting pavements. Additional housing would make this worse. Proposed active travel and bus improvements are insufficient to make the area safe. Flood risk: The land slopes toward lower parts of Portishead. The Plan does not show how surface water runoff and flood risks will be safely managed. Deliverability: Safe access for vehicles, walking, and cycling has not been proven. Duty to Cooperate: The Council has not demonstrated sufficient engagement with neighbouring authorities or statutory bodies regarding the environmental, transport, and flood impacts of this site.	Remove Tower Farm (and similar Green Belt allocations) from the Plan. Focus on brownfield and lower-impact sites to meet housing needs. Require full ecological, transport, and flood risk assessments before any allocation. Ensure enforceable long-term management of ecological buffers and mitigation measures. Demonstrate safe and deliverable access that addresses current and future traffic pressures. Engage fully with statutory bodies and neighbouring authorities to meet the Duty to Cooperate	I support the Plan’s general aims to create sustainable, liveable neighbourhoods, improve access to facilities, support regeneration, and address climate change — but only where these objectives do not compromise Green Belt protection, environmental safety, or public safety.	
30658465	Tom Hamilton-James							I am a Portishead resident and I am horrified at your plans for housing at Tower Farm and Black Rock. Please record these comments as part of your formal consultation (although probably another tick box exercise and you will proceed and do what you want). NSC has not properly considered the following: There are alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and North Somerset. There are opportunities to increase housing density on proposed brownfield sites which could negate the need to develop Tower Farm and Black Rock. The areas of Tower Farm and Black Rock have strategic ecological importance in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. Both proposed areas were added to the Green Belt in the late 1980s due to their high ecological value. National planning policy allows Green Belt changes only in exceptional circumstances, and these have not been demonstrated. In addition, neither site can provide safe or suitable access. Also, development would create unacceptable transport impacts, failing national soundness tests. Your assertion that everyone would cycle everywhere or use electric bikes is laughable. The areas are used by walkers and is important green space for the local community. For all the above reasons, Tower Farm and Blackrock should be removed from the Local Plan.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
62682273	Chris Hammond				• Consistent with national policy			I am writing to formally object to the inclusion of Tower Farm and Black Rock Portishead within the current planning proposal. My objection is based on the following grounds: Availability of Alternative Sites There are suitable brownfield and alternative greenfield sites locally which would deliver housing with far lower ecological impacts. Increasing housing density on already proposed brownfield sites would remove the need to develop Tower Farm and Black Rock, ensuring more sustainable land use. Ecological Importance and Green Corridors The proposed sites form part of strategic green corridors that connect directly to Sites of Special Scientific Interest (SSSIs), including Weston Big Wood and the wider Gordano Valley. Development here would fragment habitats and undermine biodiversity, contrary to both local and national ecological priorities. Green Belt Designation Both Tower Farm and Black Rock were added to the green belt in the 1980s due to their recognised high ecological value. Current national planning policy permits changes to green belt boundaries only in exceptional circumstances. No such exceptional circumstances have been demonstrated in this case. Access and Infrastructure Concerns Neither site can provide suitably safe or viable access routes. This raises significant concerns about traffic safety, congestion, and the practicality of servicing the developments. Noise and Environmental Standards Development of these sites would generate unacceptable noise levels, failing to meet national sound tests and thereby breaching environmental standards designed to protect residents' wellbeing. Conclusion In summary, the proposed development of Tower Farm and Black Rock is unnecessary, hugely ecologically damaging, and inconsistent with both national planning policy and local sustainability objectives. I urge the Council to reject these proposals and instead prioritise housing delivery through existing brownfield opportunities and less sensitive sites.			
57951457	Karl Harrison			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	My objection is that the allocation of Land at Tower Farm is Unsound because it fundamentally fails the tests of being Positively Prepared, Justified, and Effective, and is Inconsistent with National Policy. The arguments directly challenging the Plan's Soundness are as follows: Inconsistent with National Policy / Justified - The allocation conflicts with core policy objectives and fails to be justified by its own evidence base, particularly concerning Green Belt protection and sustainability. - Green Belt (Policy SP7): The allocation is inconsistent with the primary purpose of Green Belt protection. The Green Belt Assessment Stage 2 (2023) rates the parcel as performing a "strong Green Belt function.". - Sustainability (Policy SP1): The allocation is not supported by the core sustainability principle (Policy SP1, page 16), which requires development to minimise car reliance. The Sustainability Appraisal Report (LUC, 2025) (pages 93–94, Section 5.39) explicitly finds that sites distant from rail and cycling networks reinforce car dependency, contradicting the plan's net zero objectives. Effective / Justified - The site is rendered undeliverable and ineffective due to severe, unmitigable constraints on highways and flood risk, failing the test of an effective policy. - Highway Safety (Policy DP14): Relying on Tower Road for access guarantees a severe residual impact, violating Policy DP14 (Highway Safety, page 146). This policy prohibits development that introduces traffic of "excessive volume, size or weight into... residential areas." The Stage 7 Transport Assessment (AECOM, 2025) confirms the network is constrained and that all adverse impacts must be mitigated to avoid being 'severe'. The use of this narrow residential road makes the mitigation ineffective. - Flood Risk (Policies DP9/DP10): The allocation conflicts with Policy DP9 (Flood Risk, page 132) and DP10 (Sustainable Drainage, page 135). Developing this area replaces crucial permeable land, increasing surface-water runoff and undermining natural flood defences (Strategic Flood Risk Assessment, 2022). --- 1. Summary I am submitting this representation in strong objection to the proposed allocation of Tower Farm, Portishead, as identified in the North Somerset Local Plan 2041 – Pre-submission Plan (Regulation 19). If the Council nonetheless proceeds with the allocation, I strongly object to any proposal that would allow vehicular access via Tower Road into or out of the	The necessary modification is the REMOVAL of the Land at Tower Farm allocation from Schedule 1 (Portishead Allocations, page 297) and the removal of the site from the Green Belt release list in Policy SP7 (page 29). Alternatively, if the allocation is retained, a specific modification must be included prohibiting all vehicular access into the site via Tower Road or other unsuitable minor residential roads in the area, to ensure compliance with Policy DP14 (Highway Safety, page 146).		North Somerset Plan - Karl Harrison - Response.pdf IMG_0256.jpeg

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								development. 2. Objection to the Tower Farm Allocation 2.1 Inappropriate loss of Green Belt land The Local Plan 2041 identifies Land at Tower Farm within Schedule 1 (Portishead Allocations) (page 297) for about 400 dwellings. This site lies within the Green Belt. Under Policy SP7 (Green Belt) (page 29), the Tower Farm site is explicitly listed for release. However, development should only be permitted in exceptional circumstances and must preserve openness and prevent urban sprawl. The North Somerset Green Belt Assessment Stage 2 (2023) rates the Tower Farm parcel as performing a strong Green Belt function, preventing sprawl and maintaining separation between Portishead and surrounding countryside. Allocating Tower Farm therefore conflicts with the stated objectives of SP7 and undermines the Local Plan's objective of protecting sensitive landscapes around Portishead. 2.2 Unsustainable and poorly supported location Policy SP1 (Sustainable Development Principles) (page 16) states that new housing should be located to minimise private-car reliance. Tower Farm sits at the top of a steep hill, distant from the town centre and public-transport corridors, making it inherently car-dependent. The Stage 7 Transport Assessment (AECOM, 2025) (pages 96–103, Section 5.4) analyses the constraints of the Portishead network and requires all adverse impacts to be mitigated to avoid being 'severe' (Section 1.5, page 8). The Sustainability Appraisal Report (LUC, 2025) (pages 93–94, Section 5.39) finds that allocating sites distant from rail and cycle networks reinforces car dependency, contradicting the plan's sustainability aims. Earlier Stage 4 & 5 Transport Assessments (AECOM, 2021) identify the A369 corridor and connecting minor roads as "operating near or at capacity." Together, these documents demonstrate that the allocation fails SP1 and the Plan's sustainability objectives. 2.3 Flood risk and water management concerns Policy DP9 (Flood Risk) (page 132) and Policy DP10 (Sustainable Drainage) (page 135) require development to reduce, not increase, flood risk. The Strategic Flood Risk Assessment (2022) identifies upper-slope farmland such as Tower Farm as crucial for water infiltration, supporting flood protection in lower Portishead. Development would replace permeable land with hard surfacing, increasing surface-water runoff and undermining these natural defences, contrary to DP9 and DP10. 3. If Development Proceeds: Vehicular Access via Tower Road Must Be Prohibited 3.1 Tower Road is unsuitable for additional traffic Policy DP14 (Highway Safety, Traffic and Infrastructure) (page 146) requires that development: "…not generate traffic that would prejudice highway safety or overload the local network." Furthermore, Policy DP14 states that permission will be refused where development "introduces traffic of excessive volume, size or weight into a network of country lanes, or residential areas". Tower Road is a narrow residential street with limited width, poor visibility with residents cars lining the streets at all times of day / night. Using it for estate access would compromise safety for existing residents and pedestrians. The Stage 7 Transport Assessment (2025) explicitly requires mitigation to avoid severe traffic impacts. The inevitable consequences of using Tower Road would violate this requirement. The entrance to Tower Road already features a large square planter and traffic-calming layout, deliberately installed to slow vehicles entering from Down Road. This measure supports pedestrian safety, particularly for children walking to and from school. In practice, Tower Road operates as single-file for most of the day, not only at peak times. Parked cars line both sides of the street, so vehicles must regularly wait to allow others to pass. Queues frequently form on Down Road as drivers wait to turn into Tower Road. Tower Road and its smaller side roads together serve roughly 100 existing homes. Introducing traffic for an additional 400 dwellings (from the proposed Tower Farm site) would be catastrophic for safety and congestion. 3.2 The Plan discourages access through residential streets		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The site requirements listed in Schedule 1 for the Tower Farm site explicitly direct the provision of: "Active travel connections required to The Downs, St Marys Road/Wetlands Lane." The intent of the Plan's policy for strategic sites (Policy LP5, referenced via Schedule 1) is to promote safe, sustainable movement, implicitly discouraging reliance on unsuitable narrow residential lanes. 3.3 Impacts on amenity, safety, and environment Increased traffic would endanger pedestrians and cyclists, including children walking to nearby schools. Noise, air pollution, and vibration would harm residential amenity, contrary to Policy DP1 (High-Quality Design) (page 113), which requires developments to protect neighbouring amenity. Road-widening or junction works could remove hedgerows and mature trees, conflicting with Policy DP37 (Trees, woodlands and hedges) (page 196) and Policy DP38 (Landscape) (page 199). Additional hard surfacing would heighten runoff, breaching DP9 and DP10. 4. Conclusion The allocation of Tower Farm: Conflicts with SP7 (Green Belt), SP1 (Sustainability), DP9/DP10 (Flood Risk and Drainage), and DP14 (Highway Safety). Lacks credible mitigation in the evidence base (Transport Assessment, SFRA, and Sustainability Appraisal). Would permanently damage landscape character, Green Belt openness, and local amenity. If the Council continues with this allocation, vehicular access via Tower Road must be expressly prohibited, consistent with the principles of Policy DP14 and the sustainability aims of the Local Plan.		
63092897	Jane Hawker							We are writing re the threat of development at the above. There would be major impact on local schools plus all other infrastructure, eg the already stretched GP services, also parking issues in and around the ‘village’ and the inevitable increase in traffic. Access to and from these areas noted above from Down Road would become chaotic. Anyone (local residents in particular) in the vicinity of Highdown Schools at the start and end of the school day will be well aware of the existing chaos.			
58452257	M Hayes			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	NSC has not adequately given due consideration to the following. Alternatively brown and green field sites exist with far less damage to the ecology both on Portishead and across North Somerset. Availability to increase the density of housing on the proposed brown sites across North Somerset which would mean these sites are not required to meet local housing targets. The strategic ecological contribution of these specific sites in protecting the unique environment of Weston Big Wood (SSSI) and the Gordano Valley Strategic green corridor. The fact that these sites were only added to the Green Belt recently and specifically in recognition of their extremely high ecological value. Traffic volumes on St Marys Rd where I live is already too high and presents a danger to over 2000 children at Gordano School. This will be greatly incresed by this proposal. For the above reasons the Local Plan is unsound because National Planning policy states that sites can only be removed from the Green Belt for development under exceptional circumstances and these exceptional circumstances have not been proven. There can be none except removing this allocation completely for this site.The land should be retained intact as green space to be used to preserve and increase biodiversity purposes. NSC should insead increase housing density on already known and new brown field sites in Portishead and North Somerset and look to develop on other green field sites in Portishead and the rest of the district which will have much less ecological impact.			
58575905	Jill Hellings			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The proposed allocation of Land at Tower Farm (≈ 400 homes) lies immediately beside Weston Big Wood — an ancient woodland and Site of Nature Conservation Interest (SNCI) managed by Woodland Trust and supported by Avon Wildlife Trust. The woodland forms part of the Gordano Valley ecological network and a nationally important habitat mosaic of open grassland, wetland and woodland. There is no robust published alternatives assessment demonstrating that this sensitive site is the only or most appropriate option for growth. The loss of best and most versatile(BMV) farmland (Grade 2/3a by reference to the ALC dataset) and the risk of irreversible damage to the ancient woodland make this allocation unsuitable. The allocation conflicts with the National Planning Policy Framework (NPPF)			ptc-response-for-policy-sp7-why-policy-is-not-sound-251209.pdf ptc-response-for-policy-lp5-why-policy-is-not-sound-251209.pdf avon-wildlife-trust-draft-response-to-north-somerset-local-plan-2041 (1).pdf gordano-valley-ecological-development-strategy-report.pdf ptc-response-for-policy-sp8-why-policy-is-not-sound-251209.pdf gordano-valley-ecological-study.pdf avon-wildlife-trust-draft-response-to-north-

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								paragraphs180–182, which require that development resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland) should be refused unless wholly exceptional reasons exist. The Council's reference to an "ecological buffer" is vague, unenforceable and insufficient to address indirect impacts such as root-zone damage, hydrological change or wildlife disturbance. The Woodland Trust and Avon Wildlife Trust state that ancient woodland is irrecoverable once damaged. Moreover the Framework requires delivering biodiversity net gain, yet the allocation offers no clear mechanism for ensuring that outcome. The location intensifies existing pressures in Portishead: schools, healthcare and transport infrastructure are already under strain (for example the A369 corridor). This peripheral site would likely increase private vehicle usage and pollution rather than support sustainable travel patterns, contrary to NPPF paragraphs 104–106. Delivery depends on multiple unresolved dependencies: new school provision, bus service contributions, off-site biodiversity management, and upgrades to rights-of-way/ buffer zones. No phasing plan, funding mechanism or legal agreement is published to secure these. Without such mechanisms the allocation cannot be considered deliverable within the plan period (NPPF paragraph 35(c)). The farmland/woodland edge acts as a critical ecological and landscape transition zone. Development here would fragment habitat, diminish the Gordano Valley wildlife corridor and erode the rural fringe character. Even with a buffer the visual and ecological intrusion into the woodland and surrounding landscape would be significant. Construction and built development would alter surface-water run-off and soil compaction on the former farmland, potentially affecting the hydrological regime that sustains the adjacent ancient woodland. The risk of nutrient runoff, altered infiltration and woodland root zone damage is material. When considered alongside other allocations in the Portishead area (such as Black Rock north of Clevedon Road), the combined pressure on ecology, infrastructure and transport is significant and undermines the Council's commitments to nature recovery and sustainable growth. No modification short of removing the allocation entirely would make this site appropriate. Given its direct adjacency to ancient woodland, its loss would be irreversible and cannot be mitigated sufficiently. The land should instead be retained as undeveloped green space, managed to enhance biodiversity and provide sustainable public access, in line with the Avon Wildlife Trust's 2030 Strategy and national "30 by 30" nature recovery goals. I do not support the the North Somerset Local Plan 2041 for the Tower Hill Farm location.			somerset-local-plan-2041.pdf
58500417	Tom Henley			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The proposed allocation of Land at Tower Farm (≈ 400 homes) lies immediately beside Weston Big Wood — an ancient woodland and Site of Nature Conservation Interest (SNCI) managed by Woodland Trust and supported by Avon Wildlife Trust. The land should instead be retained as undeveloped green space, managed to enhance biodiversity and provide sustainable public access, in line with the Avon Wildlife Trust's 2030 Strategy and national "30 by 30" nature-recovery goals. The proposed allocation of Land at Tower Farm is unsound. It sits adjacent to Weston Big Wood — a high-value ancient woodland. Development would irreversibly damage habitats, fragment the Gordano Valley ecological network and undermine nature recovery ambitions. No mitigation or buffer can render this site suitable. The land should be managed as open countryside to support biodiversity, landscape quality and sustainable community use. I do not support this plan.			
58018945	Sarah Highnam-Sadd		Sarah Highnam-Sadd	No	• Positively prepared • Justified • Effective • Consistent	No	No	a) this is NOT justified AT ALL. This proposed site is an important landscape feature within Gordano valley. It will affect Weston Bigwood which is a known Ancient Woodland and local nature reserve and all the environmental corridors that are needed to prevent detrimental harm to wildlife and ecosystems (with its proximity to National conservation Interests in Gordano valley itself) It will be irreversible. Its a site on BMV farmland. This site is TOTALLY UNSUITABLE.		no, i do not There is no sound or legal reasoning to this proposal. I object fully to this local plan 2041 for this site of Tower Hill Farm	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					with national policy			b) The site is contrary to both the National Planning Policy and also of North Somersets Core strategy. It would see significant environmental and ecological harm, let alone affect the community by taking away wellbeing and obliterating the landscape. c) In paragraph 180c of The National Planning Policy Framework, it clearly states that any development that causes loss, or deterioration of,ancient woodland should be refused unless there are EXCEPTIONAL REASONS .....of which there aren't.....as there are many other sites within North Somerset that could be used and are , quite frankly, more suitable. This development conflicts with NATIONAL POLICY. I cannot begin to stress the importance of this site.....development would disturb and destroy protected species, like birds, bats, dormice through loss of habitat, sheltering from trees and fragmentation.The woodland edge would be degraded so the woodland 'corridor' or ecological buffer would not exist. Weston Bigwood is part of our GREEN BELT!!!!!!!!!!!!! Nocturnal animals would suffer from the intrusive artificial lighting of streetlights, home lights. The noise would drive animals away that were left. The environment would no longer be peaceful. Where does this all comply with the Core Strategy of your policy CS4, CS5 and CS12???????????? This part in case you are unaware, says that sites such as this require 'protection'. where would residents go for their wellbeing????Its used by walkers, birdwatchers, children to learn about nature in forest school. Our peaceful, tranquil needed clean and fresh green space would be obliterated!!!!!!!!!!!!!!!!!! As for traffic, well..... d)The access roads for this site are steep, unsuitable for increased traffic flow and for construction traffic. It isnt compatible with highway safety policy as there would be limited passing points, risk to pedestrians and adding to congestion which is already appalling on The Portbury Hundred,road link to the M5. e) Isnt this plan AGAINST all that is required in our response to the climate emergency???? Mature woodland such as this is our local carbon storage, heat mitigatiion . Its not sustainable place making. It goes against EVERYTHING that we need to be doing to help our planet, by doing what we need to do locally. f) Portishead is my home. It has grown exponentially over the past 20 years. It has very poor infrastructure as it stands. We cannot support more housing. There are NO amenities up in that part of the town.Traffic would be a nightmare. There would be ZERO modifications apart from removing this site from the plan completely. It should remain as it is. Ancient woodland. Undeveloped to enhance biodiversity in line with Avon Wildlife Trusts 2030 strategy.			
63005761	Lisa Hiscocks							I completely oppose to the proposed development of Tower Farm and Black Rock. These are areas where animals live, it's their home. It will also be destroying all the beautiful wild flowers, insects etc. We will be unable to enjoy the outdoors and exploring these beautiful places. Please do NOT build on these beautiful areas.			
62848193	Dr D R Homer			No	• Justified • Effective • Consistent with national policy	No	Unsure	There are alternative brownfield sites with significantly less ecological impact within North Somerset and Portishead in particular. Alternative sites are likely to allow an increased density of housing meaning that the Tower Farm and Black Rock sites are not needed. The sites at Tower Farm and Black Rock constitute, and are adjacent to, extremely important ecological sites that protect Weston Big Wood and the green corridor of the Gordano Valley. These areas have been part of the corridor since the 1980's. North Somerset Council have not shown a clear demonstration that these changes to the Green Belt are justified or required in exceptional circumstances. This is a clear requirement of the national planning policy which is infringed here by the Council. Neither site will provide safe access for the housing. There will be unacceptable transport impacts that are likely to fail the national soundness tests in this domain. Remove the Tower Farm and Black Rock proposals from the Local Plan 2041.			
29101729	Marjorie Hookham				• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The proposed development is on green fields adjacent to Weston Big Wood, an ancient woodland and an SNCI. The whole parcel of land is essential to the green corridor through the Gordano Valley, provides valuable habitats and assists with water retention. The Wood itself is managed by the Woodland Trust and supported by Avon Wildlife Trust. In addition, placing houses in this location would inevitably put intense pressure on already overloaded infrastructure. Although not far from the High Street it is at the top of a significant hill and most residents use their cars knowing that if they walk or cycle they are faced with the inevitable hard slog back up to the top. Traffic in and around The Downs and Down Road is already frequently jammed at school drop off and pick up times with resulting pollution. This land should not be developed but should be kept as green space, protecting the wood and the green corridor, so important to diversity and the health of the community. I do not support the 2041 Plan for development at Tower Hill Farm			
62676097	Rob Hookham		Private	No	• Justified	No	No	The Tower Hill Farm and Black Rock impinge on Weston Big wood a nature reserve and biological Site of Special Scientific Interest, notified in 1971. Alternative Brown field sites elsewhere in Portishead have NOT been considered.	Investigate Brown field sites on Wyndham way other suggested by Portishead town council		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					• Consistent with national policy			The NPPF paragraphs 180-182 require that plans deliver net gains for biodiversity and prevent deterioration and conserve such habitats. Tower Hill farm is on top of a 300 foot hill meaning that access to the high street,doctors, shops will depend on car travel contrary to NPPF paragraphs 104-106 The present road system is not organised for this and blocks even now. Also of interest is that an aquifer under the site will need to be dealt by the developers with which no doubt will affect Weston Big wood itself			
58879073	Ellie Hookham			No	• Justified • Consistent with national policy	Unsure	Unsure	I do not believe this aspect of the plan to sound. The building of 400 (likely more) houses on tower farm, skirting Weston big wood, would be an ecological disaster for our town. As the site is an SSI I cannot understand the logic of putting housing alongside it when there is already bountiful housing running parallel to it but at a sound distance. I do not believe that NSC have considered; alternative brown and green field sites with much less ecological impact both in Portishead and across North Somerset. The opportunity to increase housing density on proposed brown field sites across North Somerset which would mean these sites are not required to meet local housing targets. The strategic ecological contribution of these specific sites in protecting the unique environment of Weston Big Wood (SSSI) and the Gordano Valley strategic green corridor The fact that these sites were specifically added to the Green Belt in the late 1980's because of their high ecological value. As a side note, as a resident of The Downs, I'd like to say in the few short years I have lived here, I have a handful of times had to get out of my car to direct traffic at peak school drop off/pick up times due to absolute carnage at the down road/the downs junction. The idea of adding access to yet another housing estate to this junction, when it already serves two AND a huge primary school is nonsense and outright dangerous. Your traffic consultation was conducted down the road from this junction, on the downs itself I believe, and not during these peak times...it should be redone to gather an accurate picture at the very least. Alternative brown and green field sites should be considered across the town.			
62658625	Ben Houldsworth			No	• Justified • Effective • Consistent with national policy	No	No	Regulation 19 Representation – North Somerset Local Plan 2041 Objection to Allocations at Tower Farm (400 homes) and Black Rock (100 homes), Portishead Submitted on grounds of Soundness and Legal Compliance Dear Sir/Madam, I am writing as a resident of Portishead to object to the proposed housing allocations at Tower Farm and Black Rock in the North Somerset Local Plan 2041, totalling 500 homes. I do not believe these developments are sound or legally compliant, and I ask the Inspector to remove them from the local Plan. The Plan is Not Justified These sites were selected without a clear evidence-led explanation for why they must be developed when there are alternative approaches, including further use of brownfield land and higher density in central areas. This land is currently Green Belt and provides important landscape, ecological and recreational value. Exceptional circumstances for releasing this Green Belt have not been demonstrated. The Plan is Not Consistent with National Policy The sites sit beside Weston Big Wood, a designated SSSI and ancient woodland. Earlier ecological evidence recommended a 150-metre exclusion buffer, yet the plan now refers only to a vague "suitable buffer" without justification. This weakens the required level of environmental protection and could damage the woodland and wildlife habitat, contrary to national policy. The sites are on the edge of Portishead, detached from essential services, and realistically car-dependent. Promised bus and walking improvements are speculative and unfunded, conflicting with national policy aims for sustainable transport and reducing emissions. The Plan is Not Effective The proposals depend on major infrastructure—school places, road improvements, active travel links, and ecological mitigation—but these lack confirmed funding, delivery mechanisms and timescales. Without certainty, these developments are not realistically deliverable. 4. Legal Compliance Concerns • The Sustainability Appraisal does not appear to assess realistic alternatives, such as excluding these sites or retaining the 150-metre buffer. • The Habitats Regulations Assessment does not convincingly evaluate cumulative impacts on Weston Big Wood or demonstrate certain mitigation. • Consultation has lacked transparency, with key evidence difficult to access and			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								understand, limiting genuine participation. I don't support in any way. Requested Change I request that the Inspector: removes Tower Farm and Black Rock from the Local Plan			
62772897	Martin Howard							In response to the above… There are alternative brownfield and greenfield sites with less ecological impact and the fact that the proposed sites were in fact added to the green belt in 1980s because of their high ecological value. Neither site can provide suitable or safe access. Such development would result in unacceptable transport impact and thereby likely to fail national sound tests. Portishead is already stretched for facilities..limited school places, particularly in area proposed, limited access to medical services, currently one pharmacy, soon no banks, small postal facility and limited parking throughout the town. Traffic along Down Road, particularly at school times, often results in gridlock so additional access in this area would make that situation even worse and add to the potential for road accidents. Therefore we believe, based on the above facts alone, the Tower Farm and Black Rock sites should be removed from the Local Plan.			
62796289	Liz Howarth			No	• Consistent with national policy	No	No	Thank you for the opportunity to comment There has not been full consideration of brownfield sites in N Somerset before considering the erosion of green belt land. ie building on Tower Farm Both Tower Farm and Black rock are greenbelt land with massive strategic ecological importance protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. Both areas were added to the Green Belt in the late 1980s due to their high ecological significance. Greenbelt land should only be built on in when other options to build on brownfield sites have been exhausted. Therefore this situation can not be considered as an exceptional circumstance. Other considerations of this site Unsafe access (800 cars via The Downs!!) . The road is exceptionally unsafe at school drop off and pick up time. The developers proposal included access via Merlin Park for emergency vehicles - this is very vague and land has not be secured.	Explore and build on brown land before green In exceptional circumstances, green belt land can be considered but this land should not be of ecological significance (as Tower Farm and Black Rock are) Access needs to be improved - all cars can not come via The Downs		
58246657	Lisa Hughes			No	• Justified • Effective	Unsure	No	Building on this land will have a devastating impact on Weston Big Wood, which is one of our few remaining ancient woodlands. It will change the whole drainage system in the woods and is a massive loss of habitat for the wildlife that calls it home. Simply the vibration caused by heavy plant machinery, will have cause massive root disturbance and cause a huge decline in the health of the wood. Local people also need this space for their mental health. Our green spaces are crucial in this day and age. That aside, the infrastructure of Portishead, simply cannot cope with more housing. The town has tripled in size within 15 years. It cannot cope any more. Our governments have been urging us all to change our ways to combat climate change for years, but yet here they are saying it's fine to build on all our green spaces. It is in complete contradiction, to the massage they give us on a daily basis. Once these places have gone, we can never get them back.			
62849761	Nikki Hunt			No	• Justified • Consistent with national policy	No		The proposed allocation of Land at Tower Farm (≈ 400 homes) lies immediately beside Weston Big Wood — an ancient woodland and Site of Nature Conservation Interest (SNCI) managed by Woodland Trust and supported by Avon Wildlife Trust. The woodland forms part of the Gordano Valley ecological network and a nationally important habitat mosaic of open grassland, wetland and woodland. Not Justified There is no robust published alternatives assessment demonstrating that this sensitive site is the only or most appropriate option for growth. The loss of best and most versatile (BMV) farmland (Grade 2/3a by reference to the ALC dataset) and the risk of irreversible damage to the ancient woodland make this allocation unsuitable. Not Consistent with National Policy The allocation conflicts with the National Planning Policy Framework (NPPF) paragraphs 180–182, which require that development resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland) should be refused unless wholly exceptional reasons exist. The Council's reference to an "ecological buffer" is vague, unenforceable and insufficient to address indirect impacts such as root-zone damage, hydrological change or wildlife disturbance. The Woodland Trust and Avon Wildlife Trust state that ancient woodland is irrecoverable once damaged. Moreover the Framework requires delivering biodiversity net gain, yet the allocation offers no sure mechanism to achieve the outcomes.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								Not Positively Prepared The location intensifies existing pressures in Portishead: schools, healthcare and transport infrastructure are already under strain (for example the A369 corridor). This peripheral site would likely increase private vehicle usage and pollution rather than support sustainable travel patterns, contrary to NPPF paragraphs 104–106. Not Effective Delivery depends on multiple unresolved dependencies: new school provision, bus service contributions, off-site biodiversity management, and upgrades to rights-of way/ buffer zones. No phasing plan, funding mechanism or legal agreement is published to secure these. Without such mechanisms the allocation cannot be considered deliverable within the plan period (NPPF paragraph 35(c)). Landscape & Connectivity The farmland/woodland edge acts as a critical ecological and landscape transition zone. Development here would fragment habitat, diminish the Gordano Valley wildlife corridor and erode the rural fringe character. Even with a buffer the visual and ecological intrusion into the woodland and surrounding landscape would be significant. Drainage & Hydrology Construction and built development would alter surface-water run-off and soil compaction on the former farmland, potentially affecting the hydrological regime that sustains the adjacent ancient woodland. The risk of nutrient runoff, altered infiltration and woodland root zone damage is material. Cumulative Impact When considered alongside other allocations in the Portishead area (such as Black Rock north of Clevedon Road), the combined pressure on ecology, infrastructure and transport is significant and undermines the Council's commitments to nature recovery and sustainable growth. No modification short of removing the allocation entirely would make this site appropriate. Given its direct adjacency to ancient woodland, its loss would be irreversible and cannot be mitigated sufficiently. The land should instead be retained as undeveloped green space, managed to enhance biodiversity and provide sustainable public access, in line with the Avon Wildlife Trust's 2030 Strategy and national "30 by 30" nature recovery goals. I do not support the the North Somerset Local Plan 2041 for the Tower Hill Farm location.			
62745217	Iain Johnston			No	• Justified	No	No	The proposed development of the land on Tower Farm for 500 new homes is not viable on many levels : Access - the development plans show no consideration for additional access roads in and out of the proposed site. The only road in and out of this area is The Downs which is adjacent to one of the largest Junior Schools in the region and also Down Road which a very busy main road and bus route. The junction is already under severe strain at school drop off / pick up times so with the addition of 500 new homes, this will then represent a serious hazard to locals / children with a hugely increased amount of traffic. Building - in the construction phase of this project there would be a large increase in the numbers of plant vehicles / machinery requiring access, again endangering lives and causing traffic chaos at peak times. Pollution - with 500 more homes, this will probably equate to 500 more vehicles using this one road in / out on a daily basis therefore causing an increase in pollutants in very close proximity to a primary school and affecting the health of both children and local residents. Environmental - the proposed development of the land on Tower Farm is extremely close to an area of outstanding natural beaty at Weston Big Wood - a wooded area that has existed for centuries and home to a multitude of species. This development will have massively detrimental effect on the natural habitats of the creatures who live in the woods. This is also a place that is regularly used by dogwalkers / runners and locals for recreational purposes. Well Being - The development will remove this land and social space will give extremely limited access to Weston Big Wood. Having these areas removed will have a very negative impact on people's wellbeing and mental health which will then put an increased strain on local doctor's surgeries. Without doubt there is a need for housing but surely there are numerous altrernatives in Portishead for brownfield development that won't have the same massively negative impacts as I have listed here. Therefore the development of Tower Farm land should definitely not go ahead.			
62809057	Mike Johnston		Gordano Civic Society	No	• Positively prepared • Justified • Effective • Consistent with national	No		NSC propose removing the Green Belt status from this area of land. The designation made in 1988 specifically acknowledged the importance of the environmental, geographic, geological and ecological impact these agricultural fields have on the neighbouring Weston Big Wood (SSSI), Portishead Down and the Gordano Valley. There is a proposal to remove this status & 'designate' this land as 'Grey Belt'. As this recent nomenclature refers to, in the words of Sir Keir Starmer "poor quality scrubland, mothballed on the outskirts of town" - it clearly does not fulfil this definition. As is clearly obvious, this proposed development land is decent pasture. The			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 					policy			proposal to develop this land is not compliant with National Planning Policy (NPPF S192, S193 and S187). The proposal to remove the land form the Green Belt is not compliant with NPPF S147 as exceptional circumstance to remove it are not proven. In fact there are special circumstances to retain it as part of the green Belt and perhaps use the land for Bio Diversity Net Gain purposes to protect it in perpetuity. Tower Farm needs to be removed from the Local Plan site allocation. This is the only feasible modification.			
24296225	L Johnston			No	• Justified • Effective • Consistent with national policy	No	Unsure	Please refer to the comments submitted by Portishead Town Council and Avon Wildlife Trust; both of which I fully support.			Tower Farm Black Rock Comments.pdf
29026721	S Jones			No	• Positively prepared • Justified • Effective	Yes	No	Land at Tower Farm Site (Portishead) should not be built on. Using green belt will have devastating consequences for the environment, including Weston Big Wood, Deer use the whole field which would obviously not be able to happen if built on, also have flooding concerns. It would be irresponsible to build on. Also issues with connectivity.	Land at Tower Farm Site (Portishead) should not be built on. Using green belt will have devastating consequences for the environment, including Weston Big Wood, Deer use the whole field which would obviously not be able to happen if built on, also have flooding concerns. It would be irresponsible to build on. Also issues with connectivity.		
62776033	Isobel Jones			No	• Consistent with national policy	Unsure	Unsure		The current proposals ignore the cumulative effects of development in key areas, and the significant net loss of Green Belt, and are in direct contravention of the National Planning Policy Framework. Critically important buffer zones were put in place to protect Weston Big Wood and the land at Tower House farm would badly damage the buffer zone. The SSSI is currently in unfavourable declining condition, due to the pressure from the existing level of footfall, with biodiversity in the woodland and surrounding area already having been significantly reduced. Weston Big Wood is an integral part of the Gordano Valley nature reserve stretching from the Severn estuary, through Portbury Wharf Nature reserve, along the Gordano Valley to the Somerset Levels and Mendips and is of national strategic environmental importance. Degrading it further by additional development will result in the loss of a key part of the Gordano Valley environment and impact negatively on the wildlife, flora and ecology of the whole Gordano Valley. Section 40 of Natural Environment and Rural Communities Act 2006 places a duty on public bodies to contribute to the coherence and resilience of ecological networks. Some of the proposals undermine the principles of the North Somerset Local Nature Recovery Strategy (LNRS), which establishes priorities and specific actions to drive nature's recovery and provide wider environmental benefits within the region - requirements set out by Government in the Environment Act 2021. As it stands, the Plan presents a significant threat to the essential connections between international, national, and locally designated sites, and will bring about the irreversible loss of wildlife corridors and stepping stones that connect these sites.		
58604545	C Jones			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Not Justified: reasonable alternatives have not been fully considered NPPF 36(b) requires the Plan to be "an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence." The evidence base does not demonstrate that brownfield opportunities within Portishead—particularly around Wyndham Way and other underutilised areas—have been properly explored or optimised at higher densities. These brownfield sites offer the potential to regenerate Portishead's high street and town centre, which has seen little investment despite significant residential growth, and is now tired and depressing. Directing development towards brownfield land, with increased housing density, would support sustainable regeneration and avoid the unnecessary loss of green belt. It could also reinvigorate a tired High Street. Because reasonable alternatives clearly exist but have not been robustly assessed, the allocation is not justified. Not Positively Prepared: failure to meet development needs without unnecessary environmental harm The NPPF requires the Plan to meet development needs as far as possible. A strategy that knowingly selects a highly constrained green belt site, despite reasonable brownfield capacity, does not represent a positively prepared approach. Sacrificing Portishead's last major natural landscape, where alternatives remain available, indicates the Plan has not been shaped by a genuinely objective assessment of where development is most appropriate. Not Consistent with National Policy: Conserving and enhancing the natural			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								environment NPPF 187 require plans to protect and enhance valued landscapes, priority habitats, and ecological networks, and to prevent harm to irreplaceable habitats. The Tower Farm / Portishead Down site borders Weston Big Wood SSSI and forms part of the Gordano Valley Green Corridor. Natural England, the Woodland Trust and Avon Wildlife Trust all emphasise that ancient woodland and associated ecosystems cannot be recreated once lost. The Plan's reference to an "ecological buffer" is vague, unenforceable, and does not address indirect impacts such as root-zone compaction, hydrological change, increased recreational pressure, or disturbance to wildlife. The allocation is therefore inconsistent with national environmental policy and the NPPF's requirement to protect irreplaceable habitats. Not Effective: the site is not sustainably accessible and would increase car dependency NPPF 109(e) requires plans to promote walking and cycling. This site is neither accessible nor capable of supporting sustainable travel patterns. The hill is long and steep; even as a physically fit runner, I need to drive to the bottom before running. Only the fittest residents could realistically walk or cycle. Public transport to the top of Portishead is infrequent, and essential services are not within practical walking distance. The local shops that are within walking distance are small convenience stores, you would need to travel by car to do anything other pick up a few essential items. The site would therefore be overwhelmingly car-dependent, directly contrary to NPPF 110 - 111, which require development to promote sustainable transport and reduce reliance on the private car. Not Effective: severe unresolved transport impacts Traffic in this area is already heavily constrained, particularly around the school at peak times, where congestion is well known to residents. Adding a large development in this constrained location would significantly worsen an already severe problem. No robust or deliverable mitigation has been provided, contrary to NPPF 115, which require developments to be safe, suitable for all users, and supported by appropriate mitigation. Because the transport impacts cannot realistically be mitigated, the allocation is not effective. By developing the brown field sites within Portishead, and not an inappropriate green field site, all of the NPPF guidelines could be met. This site is inappropriate for development and should be removed from the plan in favour of fully developing the brown field sites that have been identified. I do not support the the North Somerset Local Plan 2041 for the Tower Farm location.			
58613217	Claire Jones			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	I don't understand how this site has been selected when it is part of the green belt and other brown field site in Portishead have not been selected or further developed. This is the last open green area of any size left for Portishead residents, and building here before fully developing all brown field sites cannot be justified. Everyone is calling this site Tower Farm, but its Portishead Down and should remain there for wildlife. To my understanding it is not consistent with planning policy to build here. It is a vital green area for wildlife and supports Weston big wood. Deer live in the woods and I regularly see them with there fawn in these fields. The buffer zone proposed would remove too much of the area they use. The buffer zone would not be used by the deer as it will be busy with dog walkers who will now not have a large area to walk in. I live by the school that will be increased in size as part of the development. Roads at school time around this area are already a nightmare, increasing the size of the school and the number of cars using the roads will make this significantly worse. It will have a significant negative impact on the lives of those already living in that area, it has not been positively prepared. I don't believe the site has been fully evaluated for this of development, if it had it would not be proposed. The site is at the top of Portishead. It is impossible for me to walk, yet alone cycle, to the high street or the large supermarkets, it is too long and steep to allow me to get there other than by care. When there are sites in Portishead that are much closer to the town amenities these should be developed first. The only way to access this site is via car. This is not consistant with planning policy I do not support the the North Somerset Local Plan 2041 for the Tower Hill Farm location.	None, its just not suitable		
62831681	Imie Jones			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The plan is not sound. It fails to recognise the significant negative impact the development will have on the existing residents. The roads around this site are busy and expanding the school and adding more houses will only make this worse. The only way to access the area is by car as it is so far from the town centre and up a huge hill that cannot be walked or cycled. Weston Big Wood is an SSSI and various experts and organisations have spoken about how developing the land around it will have permanent negative impacts on the site. Understand people have to live somewhere and new houses are needed. Surely the brown field site in Portishead should be developed first before destroying this area. I dont believe it is sound or legally compliant	None, the site is not suitable		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 62690561	Mike Jones			No	• Effective • Consistent with national policy	No	Yes	I am writing in support of the objections made by Portishead Town Council in their submission against the proposed development at Tower Farm. In addition: - As Tower Farm was added in 1988 to the Green Belt as having significant ecological value in protecting Weston Big Wood (SSSI) and the Gordano Valley strategic green corridor it is hard to understand 40 years later how Tower Farm now less ecological value has given the climate change challenges we face. Portishead Town Council states within the National Planning Policy Framework a site can only be removed from the Green Belt for development under exceptional circumstances and that North Somerset Council has not shown this and so the site should be removed from the Local Plan. North Somerset Council has not adequately considered alternative brown and green field sites which they are obliged to do, and which have much less ecological impact in Portishead and across North Somerset and may also provide greater housing densities. Consequently, the site should be removed from the Local Plan. Building on green belt land will have detrimental impacts on both the natural environment and quality of life for future generations. We should first consider building on available brownfield sites and or converting empty commercial properties rather than rush to get spades in the ground and loose green belt land for ever. ““Councils have given planning permission for more than 1.4 million homes since 2007 that have not been built, research has found. A new report by the Institute for Public Policy Research (IPPR) says planned homes are often not built because developers instead want to increase the land’s value before selling it on, or they are ‘land banking‘ to slow building rates and maintain high house prices”.			
62858433	Evie Jones			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	I consider the allocation of the Tower Farm / Portishead Down site to be unsound. The Plan does not demonstrate that reasonable alternatives have been properly considered. Brownfield land within Portishead, particularly around Wyndham Way and other underused areas, offers clear opportunities for higher-density development and meaningful town-centre regeneration. Portishead has experienced significant housing growth in recent years, yet its centre remains tired and underdeveloped. Directing development towards brownfield sites would improve the town’s vitality while avoiding unnecessary loss of green belt land. The absence of a robust comparison of these alternatives means the allocation is not adequately justified. The environmental impacts of developing this site are unacceptable. The area is a valued natural landscape used by residents and lies adjacent to Weston Big Wood SSSI and within the Gordano Valley Green Corridor. The proposed “ecological buffer” is poorly defined and incapable of preventing indirect harm such as damage to root systems, changes to drainage patterns, increased recreational pressure, and disturbance to wildlife. Once this landscape is lost, the harm is irreversible. The site is also inherently unsustainable. Access relies on a long, steep hill that makes walking and cycling impractical for most people, while public transport to the top of Portishead is infrequent. As a result, residents would be almost entirely dependent on cars. Traffic conditions in the area, particularly around the school during peak times, are already severe and would be significantly worsened by additional development. No realistic mitigation has been demonstrated. For these reasons, the allocation is not justified, not deliverable in practice, and environmentally harmful. It should be removed from the Plan in favour of more sustainable brownfield options within Portishead. No modifications could make this site suitable No I do not support this site			
62859809	Tony Jones			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	I object to the inclusion of the Tower Farm / Portishead Down site in the Local Plan, as I do not believe its allocation is sound or appropriate. Portishead has already absorbed substantial development over recent years, yet the town centre has seen little improvement. There remain underused and previously developed sites within the town, including areas near Wyndham Way, that could accommodate additional housing at higher density while also revitalising the centre. These options appear to have been overlooked in favour of developing open green belt land, despite the clear potential for brownfield regeneration. This undermines confidence that the chosen site represents the most suitable option available, making its inclusion unjust. The environmental consequences of developing this land are particularly concerning. The site forms part of a well-used natural area and lies adjacent to Weston Big Wood SSSI and within the wider Gordano Valley green corridor. Development here would permanently erode an important landscape and place additional pressure on sensitive habitats. References to mitigation through an “ecological buffer” lack sufficient detail and do not convincingly address indirect impacts such as changes to water movement, disturbance to wildlife, or long-term degradation of nearby woodland. No modifications could make the site suitable In practical terms, the site is poorly located for sustainable living. The steep hill severely limits walking and cycling for most people, and public transport provision is limited. As a result, future residents would be heavily reliant on private cars. Traffic congestion is already a serious issue in this area, particularly during school peak times, and additional housing would worsen an already difficult situation. For these reasons, I do not believe this allocation is appropriate and consider it should be removed from the Local Plan in favour of more sustainable and less harmful alternatives.			
62858881	Adrian Jones		local resident	No	• Positively prepared	No	No	I fully endorse Portishead Town Councils (PTCs) draft respons to the NSC Local Plan 2041 and I do not support the development of the Tower Farm location. The site is far too close to the nationally important Big Wood Nature Reserve and			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					• Justified • Effective • Consistent with national policy			associated wildlife corridors. We have already seen a significant reduction in the wildlife that visits our garden especially badgers, hedgehogs and squirrels. There has also been a noticable decline in the number of species of wild birds seen around our garden since moving to High View in 1999. For at least the 35 years the land designated for this development has been considered as Green belt and current Guidence stipulates that it should only be considered for development in exceptional circumstances. How can this be considered exceptional when there are a number of undeveloped brown field sites within less than 3 miles of this site. The irreversable loss of productive farm land/accessible green space will never be able to be restored. The statement contained in the LP 2041 referring to the 'ecological buffer', delivery of biodiversity net gain, preventing the deterioration of irreplacable habitats and delivery of a sustainable plan is extremely wooly, poorly thought through and lacking in a clear and positive plan to address these issues so is clearly not in accordance with the NPPF. The sustainabilty argument for the site cannot be made at the current time for the following reasons: The horrendous traffic consditions around the school at peak times and school sponsored events (Fetes, Sports days, parents evenings etc). The lack of any current or planned safe cycling routes. We live at the top of a steep hill making walking/cycling into the town centere or to transport hubs extremly difficult for young, old or disabled residents. Even with current traffic levels J19 (M5) and the A369 are heavily congested during rush hour periods. The current Bus Service is not good as evidenced by the number of people not using it. This is not because people want to use their cars but the fact that the service is unreliable and extremely long winded, getting from A to B involves going through the alphabet backwards. The M5 turns into a car park at the weekends during the holiday periods forcing local residents to find other (less maintained) routes affecting both local businesses and visitors. This is our main access in and out and there are no plans to improve it. The long long awaited railway will do little to alleviate this. Down road is in extremelt poor repair despite being relaid only a few years ago. In its current condition it will not survive the inevitable heavy construction traffic or the increased traffic due to the extra housing. There is a public RoW through the center of the proposed development and the whole area is heavily used by dog walkers, school children walking to school (which must be encouraged), joggers and people just needing to experience some 'green' time as seen during the pandemic. The fuel pipeline from the Redcliffe Bay depot to Avonmouth passes directly through the site. This will have to be removed prior to any work starting otherwise it could be fractured and leak during construction. If not removed it could cause later subsidence or leakage issues. There are frequent day and late night helecopter operations in and around the A+S Police HQ heli pad. Currently in case of a malfunction or failure an aircraft can put down in the field in an emergency. This option would disappear if the development were to go ahead. There would also likely be an increase in complaints over the noise which may cause operational issues. The area is a recocognised 'sink' for rain water especially during heavy downpours., tarmacing it over will lead to a detrimental change in local water flows and an increase in the pollution levels of water flowing towards and alongside the Big Wood. . There is clear evidence contained in the wildlife studies carried out that the biodiversity of the Big Wood SSSI and surrounding area is already under significant threat, the disappearance of the colony of greater crested newts is an example. Approval for the development of this site will indicate that NSC is willing to accept this dramatic decline and is committed to doing nothing to try to restore this vitally important habit to its previous condition. As a conclusion, the inclusion of the Tower farm site as a permitted development site in the Local Plan 2041 is unsound, not properly considered and having major sustainability issues that will not be easily overcome to allow a justifiable and viable mitigation case to be provided by either NSC or any subsequent potential developer. The case that the development of green belt land is 'Exceptional' has not been made. The only modification to be made is to totally remove the Tower Farm development proposal from the Local Plan 2041. This is valuable and irreplaceble green space and justification cannot be provided to sanction its loss. Consideration should be given to making it compulsory to developing existing brown field sites first. I do not support the proposed Tower Farm development as laid out in the NSC Local plan 2041		
58244993	JV Kay		Householder	No	• Effective	No	No	Neither site can provide safe or suitable access. They would create unacceptable transport impacts, failing national soundness tests. The top of The Downs is by High Down schools and this access is not available all day. There are always cars parked at the top of the hill. These houses would create strategic ecological importance relating to Weston Big Wood (SSSI) and the Gordano Valley green corridor.	Traffic lights would need to be set up at the top of the Downs and this would not work well. Protecting Weston Big Wood and the Gordano Valley green corridor have NOT been met.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								National planning policy allows Green Belt changes only in exceptional circumstances- and these have not been met.			
62560417	Charlotte Knight			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The proposed allocation of Land at Tower Farm (≈ 400 homes) lies immediately beside Weston Big Wood — an ancient woodland and Site of Nature Conservation Interest (SNCI) managed by Woodland Trust and supported by Avon Wildlife Trust. The woodland forms part of the Gordano Valley ecological network and a nationally important habitat mosaic of open grassland, wetland and woodland. Not Justified There is no robust published alternatives assessment demonstrating that this sensitive site is the only or most appropriate option for growth. The loss of best and most versatile (BMV) farmland (Grade 2/3a by reference to the ALC dataset) and the risk of irreversible damage to the ancient woodland make this allocation unsuitable. Not Consistent with National Policy The allocation conflicts with the National Planning Policy Framework (NPPF) paragraphs 180–182, which require that development resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland) should be refused unless wholly exceptional reasons exist. The Council's reference to an "ecological buffer" is vague, unenforceable and insufficient to address indirect impacts such as root-zone damage, hydrological change or wildlife disturbance. The Woodland Trust and Avon Wildlife Trust state that ancient woodland is irrecoverable once damaged. Moreover the Framework requires delivering biodiversity net gain, yet the allocation offers no clear mechanism for ensuring that outcome. Not Positively Prepared The location intensifies existing pressures in Portishead: schools, healthcare and transport infrastructure are already under strain (for example the A369 corridor). This peripheral site would likely increase private vehicle usage and pollution rather than support sustainable travel patterns, contrary to NPPF paragraphs 104–106. Not Effective Delivery depends on multiple unresolved dependencies: new school provision, bus service contributions, off-site biodiversity management, and upgrades to rights-of way/ buffer zones. No phasing plan, funding mechanism or legal agreement is published to secure these. Without such mechanisms the allocation cannot be considered deliverable within the plan period (NPPF paragraph 35(c)). Landscape & Connectivity The farmland/woodland edge acts as a critical ecological and landscape transition zone. Development here would fragment habitat, diminish the Gordano Valley wildlife corridor and erode the rural fringe character. Even with a buffer the visual and ecological intrusion into the woodland and surrounding landscape would be significant. Drainage & Hydrology Construction and built development would alter surface-water run-off and soil compaction on the former farmland, potentially affecting the hydrological regime that sustains the adjacent ancient woodland. The risk of nutrient runoff, altered infiltration and woodland root zone damage is material. Cumulative Impact When considered alongside other allocations in the Portishead area (such as Black Rock north of Clevedon Road), the combined pressure on ecology, infrastructure and transport is significant and undermines the Council's commitments to nature recovery and sustainable growth No modification short of removing the allocation entirely would make this site appropriate. Given its direct adjacency to ancient woodland, its loss would be and cannot be mitigated sufficiently. The land should instead be retained as undeveloped green space, managed to enhance biodiversity and provide sustainable public access, in line with the Avon Wildlife Trust's 2030 Strategy and national "30 by 30" nature-recovery goals. I do not support the the North Somerset Local Plan 2041 for the Tower Hill Farm location. The proposed allocation of Land at Tower Farm is unsound. It sits adjacent to Weston Big Wood —a high-value ancient woodland. Development would irreversibly damage habitats, fragment the Gordano Valley ecological network and undermine nature recovery ambitions. No mitigation or buffer can render this site suitable. The land should be managed as open countryside to support biodiversity, landscape quality and sustainable community use.			
58012641	Joe Knowles			No	• Positively prepared • Justified • Effective	Unsure	No	The number of dwellings proposed is far, far too high for the wider area in Portishead. While provisions have been made for the junior school (though nothing said of how or the disruption), there's none for secondary schools. Where do we expect all the children to go to after high down? There's also no apparent thought given to the sheer amount of traffic this will introduce to the area and Portishead in general. It's already gridlocked most mornings due to there being one principal road in and out of the town - this only exacerbates the issue. That's before you consider the environmental aspect around Weston wood and the general area. It would make the town overloaded. It's not			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								'sound' to suggest we can incorporate 400 more dwellings, especially on that land. Green belt land, next to an ancient wood, SSSI. I don't want to be a NIMBY, and recognise more housing is needed, but the number is plain stupid. You could reduce it significantly but still build and make everyone happy. Destroying our green belt is surely not something anyone wants on their cv.			
58013857	Katherine Knowles			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	Unsure	The plan is in breach of the following sections of the NPPF - s110, s115, s147, s156, s187, s192 and s193. This is not a sustainable site for significant development. The site is over 300ft elevation, and over a mile walk from GP surgeries, nurseries, the high street, secondary school, and all the large supermarkets, and leisure facilities. This means that walking and cycling are not realistic. Bus services are limited and slow. The reality is that this means residents would drive both to the main facilities of Portishead and to leave Portishead to access the motorway etc. s110 requires that sites limit the need to travel and offer a genuine choice of transport modes. The proposals would mean adding around 500 cars to the single access road for the town centre and to leave Portishead to access the motorway or to Bristol. There is a primary school adjacent to the site and the roads surrounding the area are significantly congested and dangerous particularly at school pick up and drop off times. Congestion extends down to the High Street, the Portbury Hundred, and the M5 junction 19 roundabout particularly at peak times. Adding an estimated 500 additional cars to this limited road network would be unsustainable and dangerous. This would include for emergency services vehicles (the police headquarters being next to this site). Safe and suitable access to the site cannot be achieved, as required by s115 of NPPF. The transport impacts would be unacceptable and fail national soundness tests. Employment - there are not sufficient employment opportunities within a reasonable distance. A business area at West Hill/Avon Way consists of approximately 10 very small shops and businesses. This is not sufficient to employ over 400 residents and therefore a significant proportion of residents would be driving to work. This is therefore not a sustainable site. School places - there are insufficient school places at High Down primary school for the proposed number of additional homes. Plans to extend the primary school have not been agreed or thought through. No proposals have been made for secondary school places - there being only one secondary school in Portishead which could not accommodate the number of proposed additional residents. It should also be noted there are no nursery facilities for under 3's within walking distance of this site. GP surgeries - there are two GP surgeries in Portishead which are significant distance from this site and would not have sufficient resources to accommodate the proposed number of additional residents. Ecological impact - NSC have not demonstrated that there are exceptional circumstances to release this land from the Green Belt, as required under s147. This land was only added to the Green Belt relatively late, in the 1980s, recognising its ecological importance. Weston Big Wood is an SSSI area. The surrounding fields are equally as important for the wildlife as the wood itself, and developer plans for a limited "buffer" around the wood are wholly insufficient and do not address the light and noise pollution of such a significant development, as well as the lack of food for the wildlife from the destruction of the open fields. NSC have not proposed making as much use as possible of brownfield sites or optimising the density of other sites. For example, density could be increased at Wyndham Way, and Castlewood, and Land South of Clevdon Road. There are at least two other brownfield sites not included in the Local Plan - land between Wyndham Way and Cheviot Meadows, and land next to the Poacher Pub. Others are likely to be available as this shows that NSC have not properly and carefully searched for sites. NSC have not demonstrated that they have properly and carefully considered all other possible sites and therefore that exceptional circumstances exist for development on the Green Belt. Tower Farm is also exceptional Green Belt due to its strategic ecological importance to the Gordano Valley, and the need to protect the Gordano Valley green corridor - as noted by the Secretary of State in 1988. s156 states that where major development is proposed on Green Belt land, certain Golden Rules must be made, including improvements to local or national infrastructure, and the provision of other new or improved green spaces for the public. The plan does not comply with these requirements. There is no proposal for improved infrastructure (other than vague plans for extending one primary school, which would at most mitigate the harm caused by the development, and not be an overall improvement or anywhere near sufficient infrastructure to support this plan), and no plans for how the green belt land (which is enjoyed by the public every day) would be replaced for local residents. There is no provision for access to new or improved green spaces. s187 states that planning policies should support and contribute to and enhance the natural and local environment. National Planning Policy also mandates that there should be no adverse impacts to SSSIs, that there should be no deterioration to irreplaceable habitats including ancient woodland, and ecological networks and wildlife corridors should be created/maintained. s193 states that development on land within or outside an SSSI and which is likely to have an adverse effect on it should not normally be permitted. And that development resulting in the loss or deterioration of irreplaceable habitats should be refused unless there are wholly exceptional reasons and a suitable compensation strategy. As set out above there are not exceptional reasons, as other sites have not been properly considered, and no suitable compensation strategy has been set out. Careful consideration should be given to the ecological concerns being raised - this land is very important for Weston Big Wood (an SSSI) and has specific unique characteristics which have ensured its protection thus far. Far from supporting, and			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								enhancing the natural environment, this plan would ensure the destruction of an SSSI and ensure significant harm to biodiversity. The Local Plan and the developers "vision" does not set out how a development of this scale could possibly protect the SSSI, or ensure wildlife corridors. The proposed "buffers" are wholly inadequate and weight should be placed on the views of ecological and wildlife experts, and not property developers, as to the likely impact of this proposal. The proposal is also not compliant with the Portishead Neighbourhood Plan Policy PEN4. Land at Tower Farm and Black Rock should be removed from the Local Plan.			
58543553	JL			No	• Justified • Effective	Unsure	Yes	Development should not be permitted if it results in an adverse effect on local Nature Reserves or local wildlife sites. The proposed building at Tower Farm area in Portishead encroaches the Nature Reserve and would squeeze the habitat of a vast number of wildlife to their detriment. There is no way to compensate the wildlife for their loss of habitat as they will simply reduce in numbers. Once the habitat and the wildlife are destroyed they are gone. Green Belt was created for a reason!! What is the point in having Green Belt Land which is supposed to be protected if politicians can simply justify its irreversible destruction by using the 'exceptional circumstances' clause when those 'exceptional circumstances' are quite literally that they have built everywhere else and have no other land left to build on. Additionally the impact of the concreted developments in the selected areas in Portishead will pose a flood risk - Clevedon Road already floods regularly with heavy rain and this will only worsens when the 'natural' soakways are concreted over. Increases into infrastructure need to be in place BEFORE any further housing is built. The strains on primary schools may be easing but there is only one comprehensive school. GP facilities are at breaking point with difficulties getting access to face to face appointments, pharmacy facilities are poor - currently one pharmacy to serve the whole of portishead. Multiple roads are in a poor and dangerous state and several areas are traffic hotspots and need improvement. Bus services are often unreliable and only provide minimum routes. All of these things need to be in place BEFORE any building of houses starts because if it isn't it won't happen and the infrastructure we have now will not cope. Sort out and, where appropriate build, all infrastructure BEFORE any houses are built or it won't get done. Do not build on Green Belt Land - using up all the land that you are allowed to build on SHOULD NOT be an excuse and really shouldn't be 'Exceptional Circumstances'. Green Belts are there for a reason! Once you start squeezing the habitat that wildlife needs to survive you will destroy them. Once the habitat and the wildlife are gone there is no getting it back. Wildlife play a massive part in our climate - councils and governments are supposed to consider this too. I do not. They are trying to justify building on Green belt land simply because they have run out of other land. That is not right and is not an 'exceptional circumstance'			
62788865	Christina Lawlwy								I would like to lodge an objection to the development of the above mentioned sites on the grounds that NSC has not properly considered: • Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across Somerset. • Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm and Black Rock. • The strategic ecological importance of these sites in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. • The fact that both areas were added to the Green Belt in the late 1980's due to their high ecological value. • National planning policy allows Green Belt changes only in exceptional circumstances - and these have not been demonstrated. In addition • Neither site can provide safe or suitable access. • Development would create unacceptable transport impacts, failing national soundness tests. For these reasons, Tower Farm and Black Rock should be removed from the Local Plan.		
62819937	Lin Lawrence			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Here are my concerns, and why I feel that this plan is unsound: The proposed allocation of Land at Tower Farm (approx 400 homes) lies immediately beside Weston Big Wood — an ancient woodland and Site of Nature Conservation Interest (SNCI) managed by Woodland Trust and supported by Avon Wildlife Trust. The woodland forms part of the Gordano Valley ecological network. It is a nationally important habitat mosaic of open grassland, wetland and woodland. This plan is Not Justified There are no robust published alternative assessments demonstrating that this sensitive site is the only or most appropriate option for growth. The loss of best and			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								most versatile farmland (Grade 2/3a by reference to the ALC dataset) and the risk of irreversible damage to the ancient woodland make this allocation unsuitable. This plan is Not Consistent with National Policy The allocation conflicts with the National Planning Policy Framework paragraphs 180–182, which require that development resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland) should be refused unless wholly exceptional reasons exist. The Council's reference to an "ecological buffer" is vague, unenforceable and insufficient to address indirect impacts such as root-zone damage, hydrological change or wildlife disturbance. The Woodland Trust and Avon Wildlife Trust state that ancient woodland is irrecoverable once damaged. Moreover the Framework requires delivering biodiversity net gain, yet the allocation offers no clear mechanism for ensuring that outcome. This plan is Not Positively Prepared The location intensifies existing pressures in Portishead: schools, healthcare and transport infrastructure are already under strain. In addition, this peripheral site will increase private vehicle usage and pollution rather than support sustainable travel patterns, contrary to NPPF paragraphs 104–106. This plan is Not Effective Delivery depends on multiple unresolved dependencies: new school provision, bus service contributions, off-site biodiversity management, and upgrades to rights-of-way/ buffer zones. No phasing plan, funding mechanism or legal agreement is published to secure these. Without such mechanisms the allocation cannot be considered deliverable within the plan period. The following also need to be highlighted: Landscape & Connectivity The farmland/woodland edge acts as a critical ecological and landscape transition zone. Development here would fragment habitat, diminish the Gordano Valley wildlife corridor and erode the rural fringe character. Even with a buffer the visual and ecological intrusion into the woodland and surrounding landscape would be significant. Drainage & Hydrology Construction and built development would alter surface-water run-off and soil compaction on the former farmland, potentially affecting the hydrological regime that sustains the adjacent ancient woodland. The risk of nutrient runoff, altered infiltration and woodland root zone damage is material. In addition, assessment has not been made of the impact of the run off onto the housing and roads below. The current urban drainage system is based on what is considered normal for now. Adding in the addition hard surfaces of such a massive new housing site will cause exceptional conditions leading to flooding. Cumulative Impact When considered alongside other allocations in the Portishead area (such as Black Rock north of Clevedon Road), the combined pressure on ecology, infrastructure and transport is significant and undermines the Council's commitments to nature recovery and sustainable growth. No modification short of removing the allocation entirely would make this site appropriate. Given its direct adjacency to ancient woodland, its loss would be irreversible and cannot be mitigated sufficiently. The land should instead be retained as undeveloped green space, managed to enhance biodiversity and provide sustainable public access, in line with the Avon Wildlife Trust's 2030 Strategy and national "30 by 30" nature- recovery goal. Why are construction firms, with no links to our area be allowed to build on greenfield sites? They never see the impact their works have had; instead, they move onto other areas where money can be made. Brownfield sites should always be prioritised above all else. I was born and grew up in Portishead. I appreciate the need for new housing in some areas, but this should never be at the expense of exceptional, ancient woodland and ecosystems that are part of the Gordon Valley that we all benefit from. I do not support the the North Somerset Local Plan 2041 for the Tower Hill Farm location.			
58588225	Mona Le			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	North Somerset Council (NSC) appears not to have robustly addressed several key planning considerations in proposing allocations at Tower Farm: Assessment of reasonable alternatives: There is no clear evidence that NSC has fully assessed alternative brownfield and lower-impact greenfield sites, both within Portishead and elsewhere in North Somerset, which could deliver the required housing with substantially reduced ecological harm. Optimisation of brownfield land: The potential to increase densities on identified brownfield sites appears underexplored. A genuine "brownfield first" approach, including appropriate higher-density development in accessible locations, could obviate the need to release Tower Farm. Strategic ecological value: The role of these sites in maintaining the ecological integrity of Weston Big Wood (SSSI) and the Gordano Valley green corridor does not appear to have been fully acknowledged or appropriately weighted in the site selection			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								process. Green Belt status and justification: The site was added to the Green Belt in the late 1980s specifically because of its ecological importance and contribution to the openness and purposes of the Green Belt. This historic and ongoing justification for designation is not convincingly addressed in the evidence supporting its proposed release. Exceptional circumstances test: National planning policy permits changes to Green Belt boundaries only in genuinely exceptional circumstances, supported by a proportionate review of need, alternatives and impacts. On the information available, such circumstances have not been demonstrated. Furthermore: Highway access and safety: There is no convincing evidence that either site can provide safe, suitable and policy-compliant access arrangements without giving rise to significant adverse effects. Transport impacts and soundness: The likely transport consequences, including increased congestion and reliance on private car use, appear inconsistent with national policy on sustainable transport. In the absence of credible mitigation and mode-shift measures, these allocations are at risk of failing the plan soundness tests relating to justification, effectiveness and consistency with national policy. Infrastructure: Besides the likely transport consequences, have the plan considered about the potential negative impact on the publics and neighbourhood surrounding on security, living, medical and education standards i.e., an extension or new establishment for secondary schools, GP healthcare services...? In combination, these deficiencies indicate that the allocation of Tower Farm is not justified when measured against national policy requirements, alternative options and the acknowledged sensitivity of these Green Belt and ecologically important locations.			
58558369	Jenny Lee			No	• Justified	Unsure	Unsure	NSC has not properly considered: Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset. Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm and Black Rock. The strategic ecological importance of these sites in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. The fact that both areas were added to the Green Belt in the late 1980s due to their high ecological value. National planning policy allows Green Belt changes only in exceptional circumstances — and these have not been demonstrated. In addition: Neither site can provide safe or suitable access. Development would create unacceptable transport impacts, failing national soundness tests. -The existing public infrastructure utilities in the Tower Farm estate (water, sewage, electricity, broadband) is not capable of supporting the proposed expansion without significant infrastructure upgrade with the associated significant disruption to the existing area and residents. -The wider Portishead local amenities such as schools, dental, pharmacy and doctor have not been considered and therefore require to be considered in more detail prior to acceptance of this plan. -The previous local plan clearly has not been taken into account and in light of this latest consultation has not provided value for money for the taxpayer. The National Audit Office (NAO) and National Infrastructure and Service Transformation Authority (NISTA) should provide a review of the assurance and scrutiny that was conducted and feasibility of the delivery of the previous plan prior to a revision or replacement plan is approved or considered. For these reasons, Tower Farm and Black Rock should be removed from the Local Plan. Consider other areas for development. Tower Farm is unsuitable.			
17699457	Ursula Lucas			No	• Justified	Yes	Yes	Tower Farm is in a sensitive location. In my view, NSC has not properly considered the following: Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset. Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm. The strategic ecological importance of this site in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. The fact that this area was added to the Green Belt in the late 1980s due to its high ecological value.

								I would argue that national planning policy allows Green Belt changes only in exceptional circumstances — and these have not been demonstrated. In addition, this site cannot provide safe or suitable access and development would create unacceptable transport impacts, failing national soundness tests.			
62691649	Paul Madge		N/A	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The proposed development of Land at Tower Farm is next to Weston Big Wood which is an ancient woodland and Site of Nature Conservation Interest (SNCI) managed by Woodland Trust and supported by Avon Wildlife Trust. The woodland forms part of the Gordano Valley ecological network and a nationally important habitat Not Justified There is no robust published alternatives assessment demonstrating that this sensitive site is the only or most appropriate option for growth. The risk of irreversible damage to the ancient woodland make this allocation unsuitable. Not Consistent with National Policy The allocation conflicts with the National Planning Policy Framework (NPPF) paragraphs 180–182, which require that development resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland) should be refused unless wholly exceptional reasons exist. Not Positively Prepared The location intensifies existing pressures in Portishead: schools, healthcare and transport infrastructure are already under strain. The plan seems to be based on people being able to cycle to and from the proposed new railway station, however no one of average fitness could cycle this route due to the incline. I believe this would be dangerous and result in injuries or worse, if people are encouraged to do this. The access via Down Road is also too narrow and congested already and this will multiply the situation making it also potentially dangerous. Not Effective Delivery depends on multiple unresolved dependencies: new school provision, bus service contributions, off-site biodiversity management, and upgrades to rights-of-way/ buffer zones. Portishead is already over developed and no modification would make this site appropriate. Given its direct adjacency to ancient woodland, its loss would be irrevtersible and cannot be mitigated sufficiently. I do not support this at all.			
62913889	Ian Manley							I'm emailing to express my concerns over the possible development of the two sites of Black Rock and Tower Farm. My prime concern is on the ecological affects on Weston Big Big Wood ,ancient woodland, of which only 5% of UK woodland is classed as ancient.This woodland is a significant part of our ecological heritage and will be irreversibly damaged should the ajoining green belt fields currently acting as a buffer zone be used for housing purposes. Current land, is green belt, and should only be used in exceptional circumstances. Any development is not an exceptional circumstance and has not been demonstrated as such. Blocks in the 'green corridor' through the Gordano Valley and it's other SSI sites. Increased foot traffic through the woods.The damage of increased traffic has been demonstrated by the increased footfall during the covid 19 pandemic. My secondary concerns are yet more pressure on the existing infrastructure,services and amenities in Portishead e.g schools ,GP's, roads etc. Any proposed housing will almost certainly be the usual bland low quality thrown up in the usual identikit housing schemes as we have already seen in Portishead .They won't be affordable to many actual local residents. Impact of increased traffic ,presumably going past High Down School for access. Consideration should be given to alternate brownfield sites within North Somerset. Policy should be directed at property speculators both national and international treating the market as a game of monopoly and hoarding assets that prevent our children's generation from ever owning property and being forever paying sky high rents to the already wealthy .			
58557537	P Margerison			No	• Consistent with national policy	Unsure	Unsure	The Tower Farm area was added to the Green Belt in the late 1980s due to their high ecological value. National planning policy allows Green Belt changes only in exceptional circumstances. These have not been demonstrated. Weston Big Wood (WBW), adjacent to the Tower Farm area, is a nature reserve and a biological Site of Special Scientific Interest. The Tower Farm area acts as an important wildlife corridor between WBW, the coastline along the Bristol Channel & the Gordano Valley. The proposal to build 400 houses on Green Belt land would cause significant ecological disturbance & damage to the abundant flora & fauna. The Tower Farm area is used & enjoyed by a significant number of Portishead residents for recreational purposes. The site also cannot provide suitable access. It would create unacceptable transport impacts exiting The Downs onto Down Road which is a major arterial road for the town. This would exacerbate the already significant level of traffic & inconsiderate

								parking by High Down School. Remove the Tower Farm area from the Local Plan. Don't build on a Green Belt site.			
58492065	Susan Martin			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The proposed allocation of Land at Tower Farm (≈ 400 homes) lies immediately beside Weston Big Wood — an ancient woodland and Site of Nature Conservation Interest (SNCI) managed by Woodland Trust and supported by Avon Wildlife Trust. The woodland forms part of the Gordano Valley ecological network and a nationally important habitat mosaic of open grassland, wetland and woodland. Not Justified There is no robust published alternatives assessment demonstrating that this sensitive site is the only or most appropriate option for growth. The loss of best and most versatile (BMV) farmland (Grade 2/3a by reference to the ALC dataset) and the risk of irreversible damage to the ancient woodland make this allocation unsuitable. Not Consistent with National Policy The allocation conflicts with the National Planning Policy Framework (NPPF) paragraphs 180–182, which require that development resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland) should be refused unless wholly exceptional reasons exist. The Council's reference to an "ecological buffer" is vague, unenforceable and insufficient to address indirect impacts such as root-zone damage, hydrological change or wildlife disturbance. The Woodland Trust and Avon Wildlife Trust state that ancient woodland is irrecoverable once damaged. Moreover the Framework requires delivering biodiversity net gain, yet the allocation offers no clear mechanism for ensuring that outcome. Not Positively Prepared The location intensifies existing pressures in Portishead: schools, healthcare and transport infrastructure are already under strain (for example the A369 corridor). This peripheral site would likely increase private vehicle usage and pollution rather than support sustainable travel patterns, contrary to NPPF paragraphs 104–106. Not Effective Delivery depends on multiple unresolved dependencies: new school provision, bus service contributions, off-site biodiversity management, and upgrades to rights-of-way/ buffer zones. No phasing plan, funding mechanism or legal agreement is published to secure these. Without such mechanisms the allocation cannot be considered deliverable within the plan period (NPPF paragraph 35(c)). Landscape & Connectivity The farmland/woodland edge acts as a critical ecological and landscape transition zone. Development here would fragment habitat, diminish the Gordano Valley wildlife corridor and erode the rural fringe character. Even with a buffer the visual and ecological intrusion into the woodland and surrounding landscape would be significant. Drainage & Hydrology Construction and built development would alter surface-water run-off and soil compaction on the former farmland, potentially affecting the hydrological regime that sustains the adjacent ancient woodland. The risk of nutrient runoff, altered infiltration and woodland root zone damage is material. Cumulative Impact When considered alongside other allocations in the Portishead area (such as Black Rock north of Clevedon Road), the combined pressure on ecology, infrastructure and transport is significant and undermines the Council's commitments to nature recovery and sustainable growth. No modification short of removing the allocation entirely would make this site appropriate. Given its direct adjacency to ancient woodland, its loss would be irreversible and cannot be mitigated sufficiently. The land should instead be retained as undeveloped green space, managed to enhance biodiversity and provide sustainable public access, in line with the Avon Wildlife Trust's 2030 Strategy and national "30 by 30" nature-recovery goals. I do not support the the North Somerset Local Plan 2041 for the Tower Hill Farm location.			
57964929	Jane Mather			No	• Effective	Unsure	Unsure	NSC has not considered the ecological impact of the Tower Farm site in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. Both areas were added to the Green Belt in the late 1980's due to their high ecological value. National planning policy allows Green Belt only in exceptional circumstances - and these have not been demonstrated.	Find alternative brownfield or greenfield sites with far lower ecological impact in both Portishead across North Somerset.	None	
58448865	Avon Wildlife Trust		Avon Wildlife Trust	Yes		No	Yes	The current proposal for this allocation breaches sections 124, 188, and 192 of the NPPF, and Section 40 of Natural Environment and Rural Communities Act 2006. Both Tower and Black Rock allocation sites will result in the loss of Green Belt land and significantly reduce the buffer area around Weston Big Wood SSSI, considered to be one of the most important biodiversity sites in North Somerset. The ancient woodlands at Weston Big Wood have developed over centuries and are now amongst the most fragile and rare of all landscapes in the country. Once damaged they cannot be restored. Under DP35 of this draft Plan (Nature Conservation), it is clearly stated that "development within or in proximity to a Site of Special Scientific Interest (SSSI) or			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								National Nature Reserve that is likely to have a direct or indirect adverse effect on its biodiversity or geological interest will not normally be permitted". The SSSI is currently in unfavourable declining condition, due to the existing level of footfall, with biodiversity in the wood land and surrounding area already having been significantly reduced. Weston Big Wood is an integral part of the Gordano Vally nature reserve stretching from the Severn estuary, through Portbury Wharf Nature reserve, along the Gordano Valley to the Somerset Levels and Mendips and is of national strategic environmental importance. Degrading it further by additional development will result in the loss of a key part of the Gordano Valley environment and impact negatively on the wildlife, flora and ecology of the whole Gordano Valley. The wood requires a substantial buffer zone and a wildlife corridor in and out of the site in order to survive and regenerate. Any allocations in the area should be planned to take account of the integrated nature and value of the Gordano valley as a whole. In conclusion NPPF Section 15, para 192 states that plans should safeguard the components of local wildlife-rich habitats and wider ecological networks, including the hierarchy of international, national and locally designated sites of importance for biodiversity wildlife corridors and stepping stones that connect them as well as promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species. At present there are elements of the plan as outlined above that threaten existing ecological networks, including the loss of Green Belt, and through damaging connections between international, national and locally designated sites and significant loss of the corridors and stepping stones that connect these sites. Specific proposals also undermine the North Somerset Local Nature Recovery Strategy (LNRS) which sets out priorities and actions to drive nature's recovery, as well as identifying specific locations where nature's recovery should be prioritised.			
30738529	S Mead			No	• Justified	Unsure	Unsure	I believe there is no sound reason for the development of this land. Over the past 20 years Portishead has already had massive development leaving little green space. If development goes ahead on this piece of land without proper road infrastructure being in place total congestion will ensue. At present there is one road providing access and egress to The Downs from Down Road. This road is already overburdened with traffic and at times it is not possible to get to Down Road from The Downs and vice versa especially during school times when parents are dropping off and picking up their children. Is it so necessary to bring further traffic into the town centre and up Avon Way or Valley Road, thereby causing more congestion on these already overburdened roads. There is flat land as I am sure you are already aware on lower levels with direct and easy access to 'A' roads and the motorway. To funnel thousands more cars into a town centre up steep hills to a housing development where there is not sufficient road infrastructure to cope, would cause more congestion in all directions. At present the development plan I am looking at shows only one road in and out, with a possible build of 400 or so homes - this would cause total congestion. There is another major concern, that being drainage, at times of heavy rain tons of water runs off those fields also Down Road leading to The Downs and this in the past has led to flooding in The Downs and also Cedar Way. If this development is allowed to go ahead this huge concrete and tarmac apron will eject many tons of more water down the hill and across remaining land. At present there is a buffer with the land soaking up a considerable amount of rain water. I see on the plan I have in front of me there are a large number of attenuation basins dotted throughout the proposed development site, would this be sufficient - very doubtful. Finally there are options, as aforementioned, there is land on low flat levels with a good road infrastructure already in place that does not necessitate the bringing of traffic into an already overburdened town centre.			
58360225	Portishead			No		No		Weston Big Wood is home to many. The ecological features will be impacted. BADGERS - The rural landscape which provides suitable foraging, self-building and commuting resources, badgers are likely to be present locally and could use this site for foraging and commuting, therefore could be impacted by development. BATS - The trees provide home for bats, grassland surrounding the woods provide valuable foraging resource. Light pollution from the housing development will eliminate the valuable foraging. BIRDS - The trees and adjacent habitats provide suitable bird nesting habitat. HEDGEHOG Due to the rural landscape, tree lines, woodland and grassland which will provide suitable foraging, commuting and sheltering resource, therefore hedgehogs will be impacted by this development. DOORMICE - The mature trees in this wood will link to the wider landscape through the ancient woodland and network of hedgehogs. Additional footfall and activity will affect vegetation and a potential for them to be affected by the development. REPTILES & AMPHIBIANS - The surrounding habitat could provide habitat for widespread reptiles and amphibian species, therefore there the housing development will have a negative impact. The proposed buffer zone to the woods will have high footfall and dog activity. Therefore, as a result of the housing development there would be a loss of good grassland for foraging animals. UK law has been significantly updated in England and Wales through the new Dogs (Protection of Livestock)(Amendment) bill to tackle attacks on livestock, the development on Tower Farm would destroy valuable Green Belt and reduce dog			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								walking areas further. The road to accomodate the new development is showing as The Downs, this road is highly congested at peak times, the new development traffic would raise safety concerns for the school children attending Highdown School which will also increase in numbers. The roads in this area are not suitable for the volume of traffic the new development will create and cause misery to the residents in The Deans and The Downs. No building should take place on the Green Belt when suitable Brown sites are available within Portishead and have been identified. NSC should be looking to protect our Green Belt and Green spaces for all to enjoy especially our ancient wood. Do not believe this is a sensible option to build on Tower Farm, can not see how the houses would be affordable for 1st time buyers due to the area. Brown sites at the bottom of Portishead can accomodate affordable housing with scope for high rise buildings as built on the Marina. High Rise on Tower Farm would impact on Weston Big Wood.			
62810977	Claire Miller			No	• Positively prepared	No	No	NSC has not properly considered: Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset. Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm and Black Rock. The strategic ecological importance of these sites in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. The fact that both areas were added to the Green Belt in the late 1980s due to their high ecological value. National planning policy allows Green Belt changes only in exceptional circumstances — and these have not been demonstrated. In addition: Neither site can provide safe or suitable access. Development would create unacceptable transport impacts, failing national soundness tests. For these reasons, Tower Farm and Black Rock should be removed from the Local Plan.			
4113729	Portishead Town Council		Portishead Town Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	(Full formatted response including charts and images attached) Tower Farm NPPF S147 states that before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development. This will be assessed through the examination of its strategic policies, which will take into account the preceding paragraph and whether the strategy: a) makes as much use as possible of suitable brownfield sites and underutilised land; b) optimises the density of development in line with the policies in chapter 11 of this Framework, including whether policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport... Formal List of Objections in relation to NPPF S147 1. Failure to Optimise Density on Brownfield Sites Across North Somerset 1.1 The increase in density at Wyndham Way (from 485 to 785 homes) between the previous draft of the NSC Local Plan and this one, as suggested by Portishead Town Council, demonstrates that substantial additional capacity exists on brownfield land when properly assessed. 1.2 No comparable density uplift has been applied to other major sites in the NSC area. NSC provides no credible evidence that densities have been systematically reviewed, contrary to NPPF 147 and its own Green Belt Review claims. 1.3 At least 23 other brownfield sites in North Somerset could accommodate higher densities, reducing the need to release Green Belt land. 2. Under-Utilisation of Key Brownfield Sites 2.1 Castlewood, Clevedon (4.5 ha and NSC Council-owned) is allocated only 120 homes, despite being a highly sustainable site with excellent public transport. National density guidelines indicate potential for 400–800 homes. 2.2 Optimising Castlewood alone would reduce pressure on ecologically sensitive locations such as Tower Farm and help correct the severe imbalance in housing numbers across settlements (e.g., Clevedon: 258 vs Weston: 6,084 vs. Portishead: 1,347 vs. Backwell 1,683. 2.3 NSC also has a duty to maximise the value of sites it owns—something it has failed to do at Castlewood. 3. Omission of Viable Brownfield Sites in Portishead 3.1 At least two deliverable brownfield sites are missing from the Plan: • Land between Wyndham Way and Cheviot Meadow (previous permissions for 33 homes; currently for sale) (17/P/1229/FUL) • Land adjacent to The Poacher (c. 8 homes) 3.2 NSC must identify all such sites before proposing Green Belt release. 4. Misclassification and Missed Opportunity at Wyndham Way 4.1 The so-called “1.1 ha green field” within Wyndham Way is in reality derelict land long earmarked for commercial use but never viable if used solely for that purpose..	Remove Land at Tower Farm as housing allocation from the NS Local Plan site allocations.		PTC Tower Farm reformatted 20251209.docx Gordano Valley The future of Wildlife.pdf gordano-valley-ecological-development-strategy-report.pdf

								4.2 Reclassifying it for mixed residential and commercial development would support the Town Centre/Wyndham Way regeneration vision, deliver jobs, 100 plus dwellings, and make full use of its proximity to the 2028 railway station. 4.3 Doing so would reduce pressure to build adjacent to the SSSI from development at Tower Farm. 5. Removal of a Sustainable Greenfield Site in Portishead Without Clear Justification 5.1 Land South of Clevedon Road (HE20488) was dropped following an Environment Agency flood plain reclassification, despite being on higher ground than much of modern Portishead. 5.2 The 2023 proposal for this site focused on executive homes, contradicting the AECOM's Housing Needs Assessment commissioned by the Portishead Neighbourhood Plan, which identifies need primarily for 2–3 bedroom affordable homes and no need at all for any more 4 bedroom houses. 5.3 Using national density guidance, this 2.67 ha site could accommodate 250–500 dwellings, avoiding the need for more damaging options such as Tower Farm. 6. Incorrect Assessment of Tower Farm and Green Belt Harm 6.1 Tower Farm lies within Green Belt designated in 1988 specifically to protect the ecological integrity of the Strategic Gordano Valley Green Corridor. 6.2 NSC's Green Belt assessment fails to reflect these unique circumstances, treating Tower Farm as ordinary Green Belt when it is exceptional in ecological and strategic significance. 7. NSC Has Not Met the NPPF Requirement to Exhaust All Reasonable Alternatives 7.1 NSC has not demonstrated that all brownfield and sustainable urban/suburban opportunities have been fully explored. 7.2 CPRE analysis confirms there is sufficient brownfield capacity nationally to meet housing targets—reinforcing that Green Belt release is not inevitable. 7.3 NSC therefore fails the test set out in NPPF 147, which requires exhausting all reasonable non–Green Belt options before altering Green Belt boundaries. --- NPPF S156 states that where major development involving the provision of housing is proposed on land released from the Green Belt through plan preparation or review, or on sites in the Green Belt subject to a planning application, the following contributions ('Golden Rules') should be made: ... b) necessary improvements to local or national infrastructure; and the provision of new, or improvements to existing, green spaces that are accessible to the public. New residents should be able to access good quality green spaces within a short walk of their home, whether through onsite provision or through access to offsite spaces Formal list of objections in relation to NPPFS156 1.0 There is nothing in the Draft Infrastructure Delivery Plan Schedule document in Portishead other than: a cycle lane to Clevedon; the railway line that has been used to justify every development in the town for the past 30 years so can't be described as "necessary improvements to local or national infrastructure" in response to the proposed loss of Green Belt land; and something vague about possibly building a new school. 2.0 There is also no "provision of new, or improvements to existing, green spaces" in the NSC Plan. 3.0 The developer's Vision Document includes plans to provide a small amount of additional land to and changes to Merlin Park (which is public land not owned by them), but shows a complete lack of understanding of the current area. Their plans would be out of keeping with the current use, and also assumes that the current/future owners of the existing land would want to make those changes. 4.0 This version of the Local Plan is developer led rather than community led and this has led to too much focus on "easy to develop" green belt sites at the expense of a full and proper consideration of "more difficult to develop" brown field and lower environment impact and more sustainable green field sites. It can therefore not be demonstrated that the Golden Rule for releasing land from the Green Belt for the provision of housing of "necessary improvements to local or national infrastructure; and the provision of new, or improvements to existing, green spaces that are accessible to the public" will be met, contrary to NPPF S156. --- NPPF S187 1. Planning policies and decisions should contribute to and enhance the natural and local environment by: a) protecting and enhancing valued landscapes, sites of biodiversity or geological value and soils (in a manner commensurate with their statutory status or identified quality in the development plan); b) recognising the intrinsic character and beauty of the countryside, and the wider benefits from natural capital and ecosystem services – including the economic and other benefits of the best and most versatile agricultural land, and of trees and woodland; c) … …minimising impacts on and providing net gains for biodiversity, including by establishing coherent ecological networks that are more resilient to current and future pressures and incorporating features which support priority or threatened species such as swifts, bats and hedgehogs; … Background: Tower Farm lies immediately beside Weston Big Wood, an ancient woodland SSSI recognised as one of North Somerset's richest biodiversity sites, and close to the geological and ecological interest of Nightingale Valley SSSI. The surrounding unimproved grassland, hedgerows and shelterbelts form vital wildlife corridors linking the wood to the wider Gordano Valley. Weston Big Wood itself is a rare remnant of Ice-Age woodland, dominated by oak, hazel, ash and elm and supporting uncommon tree species such as small-leaved lime, wild service tree and rock whitebeam. Its exceptionally rich ground flora includes bluebells, wild garlic, violets, wood anemone and herb paris, alongside notable fungi. The woodland provides habitat for birds of prey including buzzards, red kites and peregrine falcons, as well as			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								owls, roosting bats, deer and badgers, while its expanding woodland fringe supports red-listed species such as linnet. The wider Gordano Valley contains a mosaic of habitats—rhynes, saltmarsh, woodland, unimproved grassland, orchards, hedgerows, quarries and limestone outcrops—that together sustain butterflies, dragonflies, bats, wetland birds and diverse flora. Decades of ecological studies by WWF, Avon Wildlife Trust and Portishead Town Council emphasise that this is an interconnected ecological system whose species and habitats depend on maintaining uninterrupted wildlife corridors. Recent assessments show Weston Big Wood to be in unfavourable and declining condition, with increasing pressure from recreation and habitat fragmentation, and note high bat activity around Tower Farm and Black Rock. Geological features similar to those that underpin Nightingale Valley's SSSI designation are also likely to be present at Tower Farm, further underscoring the area's ecological and conservation importance. In addition to Weston Big Wood, Tower Farm is also in close proximity to Nightingale Valley SSSI. In all likelihood the location shares the geological features that Nightingale Valley's citation protects, and perhaps should be protected itself for the same reasons. Sources: World Wildlife Fund and Avon Wildlife Trust Biodiversity study PhD https://www.portishead.gov.uk/uploads/gordano-valley-ecological-study.pdf?v=1763999384; (1988) ; Portishead Town Council Commissioned update report: https://www.portishead.gov.uk/uploads/gordano-valley-ecological-development-strategy-report.pdf?v=1741102465 (2023) The map below shows the proposed development (in red) and all nearby SSSIs (in blue: Weston Big Wood, Nightingale Valley, Weston in Gordano, Gordano Valley, Walton Common and Court Hill), demonstrating how they act to protect a vital nature corridor, of which Tower Farm is currently a part. Formal list of objections in relation to NPPF S187 1. Harm to SSSIs and Irreplaceable Habitats 1.1 Tower Farm directly adjoins Weston Big Wood SSSI and lies close to Nightingale Valley SSSI, both highly sensitive and legally protected sites. 1.2 Development would cause significant harm to these irreplaceable habitats through noise, light pollution, increased footfall and domestic predation. 1.3 Natural England, Avon Wildlife Trust and long-standing ecological studies confirm that ancient woodland ecosystems cannot be recreated or compensated for once damaged. Please see this link. avon-wildlife-trust-draft-response-to-north-somerset-local-plan-2041.pdf In their response to this consultation, AWT highlights that "Under DP35 of this draft Plan (Nature Conservation), it is clearly stated that "development within or in proximity to a Site of Special Scientific Interest (SSSI) or National Nature Reserve that is likely to have a direct or indirect adverse effect on its biodiversity or geological interest will not normally be permitted" 1.4 the most recent report (2023) on Weston Big Wood found severe recreational damage during the Covid period—an indicator of how intensified human pressure from developments like Tower Farm or Black Rock would be ecologically devastating. 2. Loss and Fragmentation of Ecological Networks 2.1 Tower Farm forms a critical wildlife corridor linking Weston Big Wood, the Gordano Valley, Walton Common and surrounding habitats. 2.2 Development would fragment the Gordano Valley ecological network, contrary to NPPF paragraphs 179, 187, 192 and 193. 2.3 Reliance on off-site mitigation or a narrow ecological buffer represents a reactive and wholly inadequate approach that fails to prevent ecological harm. 3. Conflict with Biodiversity Policy and Biodiversity Net Gain Requirements 3.1 The developer provides no credible method for achieving the required 10% Biodiversity Net Gain. 3.2 Evidence shows the proposal would result in a net loss of biodiversity over time due to its proximity to the ancient woodland boundary. 3.3 Ancient woodland and associated ecosystems cannot be offset through BNG credits or mitigation planting, as confirmed by the Woodland Trust and Avon Wildlife Trust. 3.4 The proposal fails to comply with Portishead Neighbourhood Plan Policy PEN4, which requires protection, sufficient buffering to protect wild-life corridors and enhancement of ecological networks. 4. Green Belt Harm 4.1 The site forms part of the long-established South West Avon Green Belt and the Gordano Valley Strategic Green Corridor. 4.2 All land surrounding Weston is Green Belt, reinforced by North Somerset's Green Infrastructure Strategy (2021) and development would erode the Green Belt buffer between Portishead and Weston Big Wood, contrary to the purposes of 4.3 This location is among the least appropriate in North Somerset for any potential Green Belt release, given its proximity to two SSSIs and its high ecological sensitivity. 5. Landscape and Visual Harm 5.1 North Somerset's Landscape Sensitivity Assessment identifies this area as "high sensitivity", with a strong rural character that would be irreversibly damaged. 5.2 The wooded, secluded landscape of the Gordano Valley escarpment would be visually degraded by new urban edges. 5.3 Development conflicts with landscape guidelines requiring the conservation of woodland, open grassland, peaceful character and avoidance of intrusive urban encroachment. 6. Established Scientific Evidence Demonstrating Ecological Importance 6.1 Decades of research—including the WWF/Avon Wildlife Trust PhD study (1988) and the 2023 Portishead-commissioned ecological update—confirm the Gordano Valley is an interconnected ecological system that cannot be protected piecemeal. 6.2 Geological features linked to Nightingale Valley SSSI are likely present at Tower Farm, further raising its conservation importance. 7. Non-Compliance with National Planning Policy Framework (NPPF) 7.1 NPPF 187 – The proposal fails to protect or enhance valued landscapes, biodiversity, ecological networks or priority species.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								7.2 NPPF 192 – The development does not safeguard wildlife-rich habitats or contribute to conservation, restoration or measurable biodiversity gain. 7.3 NPPF 193(a–c) – The development fails all three statutory biodiversity protection tests: • Significant biodiversity harm cannot be avoided or adequately mitigated. • Development likely to adversely affect an SSSI “should not normally be permitted”. • Irreplaceable habitats (ancient woodland) would be put at risk, with no exceptional justification. 8. Failure of Proposed Mitigation 8.1 The suggested £15m “No-Dig” and 50m “No Build” buffer is insufficient to protect ancient woodland from indirect impacts such as noise, light, recreation, hydrological change and predation. 8.2 On-site mitigation proposals cannot compensate for loss of semi-natural grassland and wildlife corridors that form part of the woodland ecosystem. 8.3 Local naturalist expert, Chris Sperring MBE, states “Footfall pressure on Weston Big Wood is happening now and is already fragmenting the wood. The Wood will simply be unable to function without the current buffer of surrounding fields. Where will human beings go to feel good if there is nowhere green to go, to immerse themselves in trees and bird song?” The developer proposals will stop the wood functioning and accelerate the loss of species in the wider Gordano Valley strategic green corridor. These losses have been witnessed and recorded by Chris and many others over the past half century. 9. Impact on the Wider SSSI Network 9.1 Tower Farm lies within a cluster of connected SSSIs (Weston Big Wood, Nightingale Valley, Gordano Valley, Walton Common, Court Hill). 9.2 The integrity of this network would be compromised, contrary to national policy requiring protection of the wider SSSI network, not just individual site boundaries. 10. Unsustainable Location 10.1 The site is not sustainably located and brings no benefits that outweigh the significant ecological and environmental harms. 10.2 Development pressure here would exacerbate recreational and ecological stress already documented in Weston Big Wood during recent years. A recent report https://www.theguardian.com/environment/2025/jul/10/britain-ancient-woodlands-failing-regenerate-forests-climate-drought-heat-disease-deer-hope-aoe has found that British ancient woodland is struggling to regenerate and is under threat. We should therefore not be allowing any development that threatens the health of Weston Big Wood, which this proposal does, and it “should be refused”. There are also not “wholly exceptional reasons” not to refuse development here. _____ Conclusion PTC questions the deliverability of this site. We would expect to have seen detailed Policy requirement on how to mitigate such an ecologically sensitive and unsustainable site but these are not evident in the NS Plan. In our view, the only way to create reasonable access to the site would be to construct a new road around or through the Weston Big Wood (SSSI) effectively fragmenting and destroying it. Housing density would need to be low in order to protect the local environment. It is impossible to quantify the amount of Biodiversity Net Gain Credits that would be needed to “mitigate” the short and long term damage to Weston Big Wood, its surrounding ecosystem and the reduced wellbeing of the people that enjoy the area. Instead, PTC recommends that instead of development, the Tower Farm Site should be allocated as an area to receive BNG credits to help repair the ecological damage created by humans over the last 50 years or more. The Tower Farm proposal causes unavoidable and significant ecological, landscape and policy harm. It conflicts with national and local planning policy, fails statutory biodiversity protections, threatens irreplaceable habitats and undermines decades of environmental stewardship across the Gordano Valley. It will reduce the quality of life for human beings living in the area. It is impossible to mitigate the loss of an ancient woodland. Once it is gone it is gone. The Tower Farm site should be removed from the Local Plan. --- NPPF S110 ... Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health... Tower Farm is not a sustainable location for residential development due to its distance from essential services and the steep topography that prevents most residents from comfortably walking or cycling to key destinations. The site sits at the top of a long, steep hill, making active travel impractical for many—particularly older people, families with children, and those with mobility issues. Although the developer claims that local facilities are within “reasonable walking distance” and that active travel is viable, the actual distances and climbs involved show the opposite. In practice, the site is significantly disconnected from Portishead’s main amenities, employment areas and transport links. Public transport provision is also inadequate. No bus service can enter the site itself, leaving residents reliant on the X4 and occasional X10 services, both reached only after a hilly walk and operating indirect routes to the High Street. The developer’s Transport Sustainability and Access Strategy significantly underestimates walking times and ignores both topography and existing congestion, especially around High Down School. As a result, nearly all residents would drive for daily activities, increasing traffic, emissions and air quality impacts. The distance to the proposed Portishead rail station—almost two miles—further undermines claims of sustainable travel and does not provide a realistic alternative to car use.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Formal List of Objections 1. Failure to Meet Sustainability Requirements (NPPF S110) 1.1 Tower Farm cannot be made a sustainable location due to steep gradients and long walking distances to essential services, contrary to NPPF S110's requirement that significant development be focused on locations that limit the need to travel. 1.2 Active travel options are unrealistic for most residents, undermining claims of walkability and sustainable access. 2. Inadequate Access to Local Amenities 2.1 Contrary to the developers' claims, key facilities—including schools, shops, GP services, leisure centres and the High Street—are over a mile (see table below) away and require climbs of 300–350 ft, making walking or cycling impractical for large sections of the population. 2.2 The developer's assertion that amenities are within a "reasonable walking distance" is demonstrably inaccurate. 2.3 Labelling a small retail cluster at Down Road as a "local centre" exaggerates its scale and importance. _____ Distances and Elevation Table Miles Climb (ft) Folk Hall Town Council 1.2 335 Post Office 1.3 335 Somerset Hall 1.3 335 Aldi 1.3 338 Library 1.4 328 Lake Grounds (Wheels & Skate Park) 1.4 335 Gordano Secondary School 1.4 335 Nearest GP practice: Portishead Medical Group 1.4 338 Sainsbury's 1.6 351 Lidl 1.6 331 Parish Wharf Leisure Centre 1.6 331 Waitrose Portishead Football Club 1.7 344 Portishead Station (when built) 1.9 338 _____ 3. Misrepresentation of Transport Accessibility 3.1 The developer's Transport Sustainability and Access Strategy significantly underestimates walking times and ignores the steep topography of Portishead. 3.2 Claims regarding cycling access to the future rail station are misleading; the station will be nearly two miles away and inaccessible for many users. 3.3 Suggestions that residents should mitigate access problems by purchasing e-bikes are unrealistic and discriminatory toward less affluent, older or mobility-impaired residents. 4. Insufficient Public Transport Provision 4.1 No bus route will directly serve the development; residents must walk uphill to reach the X4 or X10. 4.2 The X4 route through High Down and Bruton Avenue operates only one-way, taking 17 minutes to reach the High Street—far longer than by car. 4.3 This limited public transport offer will result in high car dependency. 5. Increased Traffic and Congestion 5.1 Daily car use will rise significantly, worsening congestion on already overburdened roads, particularly around High Down School during peak times. 5.2 The transport assessment fails to account for future pressures from planned expansions at High Down School or additional housing elsewhere in Portishead. 5.3 The Transport Sustainability and Access Strategy omits known local congestion issues and misrepresents the true accessibility of the site. 6. Excessive Dependence on Private Cars 6.1 Nearly all residents will have to drive for shopping, school, work, healthcare and leisure. 6.2 This conflicts with local and national policy objectives to reduce emissions, improve air quality and promote healthier lifestyles. _____ Conclusion The Tower Farm site demonstrably fails the sustainability tests required under NPPF S110. Its steep topography, long distances to amenities, inadequate public transport provision and misleading transport claims mean that development here would create a car-dependent community, worsen congestion and undermine local and national transport, health and environmental objectives. Planning permission should therefore be refused on sustainability and transport grounds. --- NPPF S115 In assessing sites that may be allocated for development in plans, or specific applications for development, it should be ensured that: a) sustainable transport modes are prioritised…; b) safe and suitable access to the site can be achieved for all users; … and c) any significant impacts from the development on the transport network (in terms of capacity and congestion), or on highway safety, can be cost effectively mitigated to an acceptable degree through a vision-led approach. Background: Regarding b), access to a development at Tower Farm is proposed via The Downs. This is a cul-de-sac with further cul-de-sacs leading off it. It is also right next to High Down infants and Junior Schools, the whole area around which is already extremely congested and chaotic at drop-off/pick-up times despite numerous campaigns to reduce car use. The map below shows the typical extent of parking at these times (marked in red). Portishead Town Council regularly receive requests from residents for		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								schemes to improve traffic safety and flow in this area (see Agenda item 8.2.2, Planning and Placemaking Cttee, August 2025 https://www.portishead.gov.uk/council-meetings?month=08&year=2025&submit=Go#item-2005053) Formal List of Objections – Transport, Access and Highway Safety 1. Non-Compliance with NPPF S110 (Unsustainable Location) 1.1 All sustainability concerns previously identified under NPPF S110 apply equally here. 1.2 Tower Farm's steep topography and long distances to services make sustainable travel impossible for most residents. 1.3 The development would create a car-dependent community, contrary to national policy requiring significant development to limit the need to travel. _____ 2. Unsafe and Unsuitable Access via The Downs 2.1 Access is proposed through The Downs, a cul-de-sac feeding multiple smaller cul-de-sacs, creating an inherently constrained network. 2.2 This road sits directly beside High Down School, an area already dangerously congested at school drop-off and pick-up times. 2.3 Introducing construction vehicles and traffic from 400 new homes (approx. 548 additional cars) would greatly increase risks to children, parents and pedestrians. 2.4 Safe and suitable access for all users cannot be achieved, contrary to NPPF requirements. _____ 3. Severe Worsening of Local Congestion 3.1 Tower Road, The Downs and Down Road already experience regular gridlock; development traffic would significantly worsen this. 3.2 Town-wide congestion—Avon Way, Combe Road, High Street, Cabstand, Gordano Roundabout—would also increase as residents must drive for all essential trips. 3.3 Increased traffic from future school expansions or a new school on-site has not been adequately assessed. _____ 4. Inaccurate and Misleading Transport Assessment 4.1 The Local Plan Transport Assessment is inconsistent, using both 485 and 785 dwellings for Wyndham Way, undermining its credibility. 4.2 It claims congestion will improve with mitigation, but no meaningful mitigation is identified apart from the railway almost 2 miles away. 4.3 The developer's Transport Sustainability and Access Strategy incorrectly states that 400 dwellings will not create severe residual impacts at Down Road/The Downs. _____ 5. Lack of Deliverable Mitigation Measures 5.1 The impacts on the transport network cannot be mitigated to an acceptable degree. 5.2 Proposed "active travel connections" offer no practical benefit; upgraded footpaths would destroy green space and require work on third-party land. 5.3 A "contribution to bus services" is meaningless, as the road network cannot physically accommodate bus access once the development is built. _____ 6. Railway Reopening Does Not Provide Sustainable Access 6.1 The developer repeatedly cites the railway as justification for development, despite the station being nearly two miles away. 6.2 Walking or cycling to the station is unrealistic for many residents due to steep gradients. 6.3 No credible plan exists for a shuttle bus; any such promise is vague and likely temporary based on the experience of bus services in Portishead which in recent years, have been regularly cut back, trialled and changed and are unable to survive without large public subsidyies. 6.4 The railway has already been used for decades to justify thousands of new homes elsewhere in Portishead, and can no longer be relied upon to support further car-dependent development at Tower Farm. _____ 7. Professional Industry Concern About Site Unsuitability 7.1 Persimmon Homes Severn Valley has formally stated that Tower Farm is not suitable for development due to its impact on the local transport network. 7.2 They highlight that the site forces unnecessary traffic through the centre of Portishead and up steep access roads, and is far less sustainable than locations closer to main routes and the station. _____ 8. Non-Compliance with NPPF S115 8.1 Sustainable transport modes are not prioritised. 8.2 Safe and suitable access cannot be achieved for all users. 8.3 Significant impacts on capacity, congestion and highway safety cannot be mitigated cost-effectively. 8.4 Therefore, the proposal fails to meet the requirements of NPPF S115. _____ Conclusion The Tower Farm proposals would create unmanageable congestion, unsafe school-side access, and a car-dependent settlement fundamentally at odds with national transport policy. Key assessments rely on misleading or inaccurate information, and no viable mitigation exists. Planning permission should therefore be refused on transport, access and highway safety grounds. --- NPPF S110-112 The developer's own technical evidence (Vision Document and Transport Sustainability & Access Strategy) confirms several access constraints that cannot be overcome without significant adverse impact on the local highway network. Inadequate Access Strategy — Single Access Point		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The developer proposes one main vehicular access via The Downs and a second access limited to emergency, pedestrian and cycle use only via Tower Road (typically bollarded). This means the entire development of at least 400–500 homes would rely on a single functioning access point. The single access point proposed is contrary to best practice, introduces unnecessary risk for emergency response resilience, and does not provide “safe and suitable access for all users” as required by NPPF 110–112. The only alternative access routes are also not suitable: 1 - Via Tower Road - This has a narrower junction with Down Road than The Downs does. It could not have double-yellow lines added, as is proposed for The Downs, as there are houses on both sides all the way along. 2 - Via Valley Road - Valley Road already experiences road traffic accidents on a fairly regular basis and an additional access road onto Valley Road would be dangerous and further harm / restrict wildlife movement in the area of green belt surrounding the SSSI.			
28791073	A Mock			No	• Justified	No	No				
62683009	Julie Moon							I ask you to please remove Tower Farm and Black Rock, Portishead from the Local Plan for the following reasons: - These areas are vital to supporting the ecologically important West Big Wood. They form a wildlife corridor and habitat. Deer, buzzards, many birds of prey and a huge range of song birds use the land for habitat, access and food. Both these areas were added to the Green Belt in the 1980s because of their high ecological value. National planning policy allows Green Belt changes only in exceptional circumstances and there are none in this case. Portishead traffic is very congested and the roads in and out of town and within the town are not coping at present. 500 more houses with an extra 1,000 or more cars will not be feasible or safe. The Clevedon Road B3124 which would be most impacted by building on Black Rock and Tower Farm is already constantly busy. There is often flooding near Gordano school which creates traffic queues and any M5 congestion creates severe traffic problems on this road. More traffic will add to this. The transport impacts would fail national soundness tests. Other brownfield sites with far lower impact are available within Portishead and across North Somerset. There is room within existing developments to increase housing density negating the need for developing Tower Farm and Black Rock. Portishead facilities e.g. schools, GP surgeries, sports facilities, parking in town will not cope with potentially 2,000 or more new residents. This green space is very important to the mental and physical health of current residents. These precious areas are essential to wildlife and the people of Portishead. Please protect them.			
62686401	Joe Morris							I have lived in Portishead for 45 years and in general enjoyed my time in the Town. However, in that time we have experienced an increase in the population of almost a factor of 3 from 10,000 residents to 27,000 residents. We feel this increase has effectively "saturated" the Town in terms of the Infrastructure which for most of the basic amenities is at "breaking point". In addition, another very important issue is the impact on the environment. The development plans currently under review will impact the Town generally and definitely have an adverse impact on Weston Big Wood. This site is designated Green Belt and has a iii rating, which makes it unique in the area. While we realize it is unlikely you will obtain planning permission to build on Weston Big Wood, although not fully guaranteed in the future, the only way affordable housing can be built within a certain price range, is to build Highrise flats, which will adversely affect the Woods, particularly as there is only a 50 metre corridor between the development and the Woods. We cannot emphasis enough how important this area is for animals, birds, insects, plants and trees, some of which are rare and unique to these Woods. Loss of such an area to community would be unforgivable to this generation and the generations to follow. In addition, the Woods provide a wonderful setting for people to enjoy the wildlife etc, which for many people improves their health both physically and mentally.. While we appreciate affordable housing is necessary, there has to be a balance with the cost to the infrastructure, environment and physical and mental well being of the population. It is well reported that the Governments housing development targets throughout the Country are impossible to achieve and are ill conceived with no real consideration of the impact on communities around the Country. Surely, a partial solution is to utilize some of the vast number of empty buildings in			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								and around Portishead which could be turned into affordable housing at a reasonable cost. As an example, the area around the Old Mills could be developed as it is close to the Town Centre and has easy access to the main roads and amenities in the Town. In conclusion, we are opposed to any new development in the Town, but if some houses are required then it should be restricted to as few as houses as possible and be built on a Brown Field site.			
62716257	Sylvia Morris							Having attended the recent Portishead Town Councils meeting which outlined the proposed development scheme near Weston Bigwood. I was completely shocked that this plan could possibly be considered. This area is of crucial importance and is an ancient Iron Age site. The rare plants are of the utmost significance and the wild life too. The Red Kites and Peregrines are very rare and need protecting. Weston Bigwood is a necessary habitat to maintain this balance. Green Belt Land should never be considered for development and in particular Weston Bigwood. There are Brown Field sites around Wyndham Way that are appropriate- this to me would meet the government's quota. Other issues are the access roads. This area has issues already and is very difficult to drive through, due to the school traffic!!! Parking is absolutely impossible at time. Buses have difficulty in driving through the heavy traffic. It's totally illogical to even consider this plan. Having lived in Portishead for over 45 years I'm devastated about this proposal. Please consider the future of this important site for future generations.			
62770049	Philippa Morris			No	• Consistent with national policy	No		The plan does not take into consideration the ecological importance of Weston Big Wood. The plan is not in line with EIP interim targets- for instance; 'halt the decline of species abundance by 2030'. Building so close to the wood and demolishing hedgerows in the process will have a detrimental effect on local habitats and species. This is a greenfield site and has been since the 1980s. The plan shows no exceptional circumstances for building on thos greenbelt site. The infrastructure of Portishead is not fit for more houses. We currently have one pharmacy, Gordano school has a huge amount of pupils - one could argue more than they can facilitate and support effectively, and trying to see a doctor is extremely challenging. The town facilities are at capacity. The access road is not suitable. Observe this road during school opening and leaving times and ypu will see how hazardous it is. The town has one main road in and out Portishead. Which frequently has high traffic volume and traffic jams. Adding more vehicles to this is enhancing the probelm further.	Whilst I appreciate that there is a demand for local councils to provide affordable houses - destroying greenbelt sites cannot be the answer. If more housing is needed - a brownsite should be used. A better road system in place. Although the long awaited railway is meant to be happening, this has been spoken about for years. This addition of a railway was partly why the Marina development and Vale development happened all those years ago - but the railway never did. Even if this does happen now, the additonal houses built back then, on the premise of a railway being established, should be taken into consideration. An additional secondary school should also be built before more housing. Our local MP is working hard to establish more pharmacies however, these should be in place and working effectively before more housing is built and added pressure to an already oversubscribed health system.		20251124_100544.jpg
62765889	Frances Morris			No	• Consistent with national policy	Unsure	No	It is not in compliance with the Environmental Improvement Plan (EIP) 2025, Published 1 December 2025. It does not help the local community, and will obviously cause huge traffic issues. Having this increase with also obviously put a strain on all local doctors surgeries, dentists, pharmacies, and schools to mention the primary ones. Environmental issues such as endangering the wildlife there foxes, hedgehogs, small mammals, badgers, many many types of birds inc red kites. Drainage issues will inevitably become an issue - I'm unsure of you're aware of this, but trees and grasslands tend to absorb moisture and heaving rain much better than concrete. Don't do any of it. It's not wanted by anyone who actually lives in the area. Stop being so weak, and allowing yourselves to be so easily manipulated by these money people. You will be hated by all if you think building more housing is going to improve anything including your reputation. It might be fun to try implementing decisions which actually have a positive influence, worth a try at least I'd say.		Absolutely not.	
62659457	William Nelson			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The North Somerset Local Plan 2041 is not sound or legally compliant on many issues, these are being set out clearly with the proposed allocation of land at Tower Farm, Portishead for residential development within the emerging North Somerset Local Plan. The proposed development fails to meet planning policy compliance, has a significant environmental impact, infrastructure capacity issues, and does not meet sustainable development principles. 1. Conflict with National and Local Planning Policy • Green Belt Protection: Tower Farm lies within the Green Belt. The NPPF (paragraphs 147–151) states that Green Belt boundaries should only be altered in exceptional circumstances, which must be fully evidenced and justified. No such evidence has been provided. The fundamental aim of Green Belt policy is to prevent urban sprawl and safeguard the countryside from encroachment (NPPF para. 142–145). • Green Belt Review Findings: The Council's own review acknowledges Tower Farm's openness and landscape			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								sensitivity. Even if harm is rated “low,” NPPF requires all reasonable alternatives (brownfield sites, higher-density urban development) to be exhausted first—this has not been demonstrated. • Local Plan Strategic Policies: o SP1 – Sustainable Development: Requires development to meet sustainability objectives and minimize environmental harm. o SP2 – Climate Change: Mandates development that supports carbon reduction and resilience. o SP7 – Green Belt: Reinforces national policy by restricting inappropriate development in the Green Belt. o DP12 – Development in the Green Belt: States that proposals in the Green Belt will only be permitted in very special circumstances, which are absent here. Including Tower Farm fails the tests of soundness under the NPPF and Local Plan because it undermines strategic Green Belt objectives and disregards sustainable development principles. Environmental and Ecological Harm • NPPF Paragraphs 180–182 require planning decisions to protect and enhance biodiversity, prevent harm to irreplaceable habitats, and deliver net gains for nature. Tower Farm borders Weston Big Wood, an ancient woodland and SSSI, and forms part of the Gordano Valley ecological corridor. Development would fragment habitats and cause irreversible harm, contrary to these provisions. • Local Plan Policy SP11 – Historic and Natural Environment and DP5 – Climate Change Adaptation and Resilience require safeguarding of ecological networks and adaptation to climate impacts. This proposal conflicts with both. Infrastructure Deficit • Transport (Policy SP10 and DP14–DP17): Development must minimize carbon impact by prioritizing walking, cycling, and public transport. Tower Farm is remote from the proposed railway station and lacks sustainable transport links, increasing car dependency and emissions. Landscape and Heritage Impact • Local Plan Policy DP38 (Landscape Protection) and Portishead Neighbourhood Plan Policies PEN2 and PEN6 emphasize safeguarding green spaces and heritage assets. Tower Farm’s elevated position means development would permanently alter the rural character and harm views over the Gordano Valley. • NPPF Paragraph 174: Development should recognize the intrinsic character and beauty of the countryside. Tower Farm would erode this by introducing large-scale housing into a sensitive rural fringe. Unsustainable Location • Policy SP1 (Sustainable Development) and SP2 (Climate Change) prioritize development that minimizes car dependency and maximizes public transport use. • Tower Farm is over 2km from the proposed railway station and on steep terrain, discouraging walking and cycling to the town centre. • Vehicular traffic would funnel through The Downs and Tower Road, worsening congestion near High Down School and Portishead town centre, which already suffers severe traffic issues. • Policy SP2 & DP6 (Net Zero Construction): Requires developments to minimize carbon emissions and support sustainable transport. • Tower Farm’s car-dependent nature undermines these objectives and North Somerset’s Climate Emergency commitments. Alternative Approach: Sheepway Road This site, located between Sheepway Road and the railway line, is approximately 500 metres from the proposed Portishead railway station. Although the site has previously been discounted due to flood risk this could be mitigated against and it offers significant advantages over Tower Farm: • Excellent Rail Accessibility: Ideal for rail-based commuting into Bristol, reducing car dependency and supporting NPPF paragraph 105 and Local Plan SP10 (Transport). • Minimal Traffic Impact: Vehicular access would avoid Portishead town centre, which already suffers severe congestion. • Pedestrian-Friendly Location: The site is on flat terrain, making walking and cycling to the town centre practical and attractive—unlike Tower Farm’s steep incline. • Policy Alignment: o DP8 – Efficient Use of Land o DP15–DP17 – Active and Sustainable Transport If this site (or similar) near to the Portishead Railway Station cannot be brought forward I would stress for a further densification of the Wyndham Way site. Wyndham Way • Proximity to to Portishead Railway Station providing direct access into Bristol City Centre. • Brownfield Regeneration: The site comprises previously developed land, avoiding harm to the Green Belt and ecological corridors. • Town Centre Integration: Supports vitality of Portishead’s High Street and Marina, aligning with SP4 (Placemaking) and SP10 (Transport). Policy Support • Local Plan: o LP20 – Wyndham Way: Requires efficient land use, increased connectivity, and			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								mixed-use development. o DP8 – Efficient Use of Land: Encourages higher densities in sustainable locations. o DP15–DP17 – Active and Sustainable Transport: Prioritizes walking, cycling, and public transport. • Neighbourhood Plan Objective O12: Calls for a connected, vibrant town centre and integration with the transport hub. National and Best Practice Principles • NPPF Paragraph 105: Promotes development that reduces car dependency and supports sustainable transport. Practical Measures • Increase housing density at Wyndham Way by: o Allowing mid-rise apartments (6–10 storeys). o Reducing parking minimums and introducing mobility hubs. o Integrating affordable housing and co-working spaces to create inclusive communities. • Transit-Oriented Development Benefits: o Reduces greenhouse gas emissions and congestion. o Stimulates local economy and job creation. o Improves quality of life through walkable, mixed-use communities. Conclusion The Tower Farm proposal: • Breaches NPPF paragraphs 147–151 and 180–182. • Conflicts with Local Plan policies SP1, SP2, SP7, SP10, SP11, DP6, DP12. • Threatens protected habitats and landscapes. • Exacerbates infrastructure deficits. • Contradicts sustainability and climate goals. For these reasons housing delivery for Portishead should be in locations that are closer to the proposed railway station and existing infrastructure. No modification short of removing the allocation entirely would make this site appropriate. Given its direct adjacency to ancient woodland, its loss would be irreversible and cannot be mitigated sufficiently. The land should instead be retained as undeveloped green space. I do not support the the North Somerset Local Plan 2041 for the Tower Hill Farm location.			
58586721	T Nguyen			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	North Somerset Council (NSC) has not adequately considered the following matters in bringing forward these allocations: Reasonable alternatives: There appears to be insufficient assessment of alternative brownfield and/or less sensitive greenfield sites with materially lower ecological impacts, both within Portishead and across North Somerset. Optimising brownfield capacity: The opportunity to increase housing density on the proposed brownfield sites does not appear to have been fully explored. A robust “brownfield-first and optimise” approach could remove the need to allocate Tower Farm and Black Rock. Strategic ecological function: The strategic role of these sites in safeguarding the wider ecological network — including the protection of Weston Big Wood (SSSI) and the Gordano Valley green corridor — has not been properly evidenced or weighed in the site selection process. Green Belt purpose and history: Both areas were added to the Green Belt in the late 1980s, reflecting their high ecological value and contribution to the Green Belt’s purposes. This context appears underplayed in the justification for release. Policy tests for Green Belt change: National policy permits Green Belt alterations only in exceptional circumstances. On the evidence presented, such circumstances have not been clearly demonstrated through a proportionate assessment of need, alternatives, and harm. In addition: Access constraints: Neither site appears capable of providing safe, suitable, and deliverable access without unacceptable impacts. Transport impacts and plan soundness: The likely cumulative transport effects are significant and, as presented, would be difficult to reconcile with national policy and the plan soundness tests. Without a clearer mitigation strategy and evidence base, these allocations risk being unsound on transport and deliverability grounds. Taken together, the above points suggest that the case for allocating Tower Farm and Black Rock has not been robustly made, particularly given the sensitivity of these Green Belt and ecologically strategic locations.			
62718689	GR Norman			No	• Justified • Effective • Consistent with national policy	No	No	Portishead is a small village that has expanded as the number of residents has increased, but the infrastructure (roads, schools, dr surgeries, NHS dentists) has not been delivered. Any accident on the M5 or A369 means there instant traffic chaos and gridlock, with the B-roads unable to cope with the volume of traffic that is much greater than when the B-roads were built to cope with. This proposal for 400 homes will add 1,000 approx new cars to local roads, and remove key scientific and ecological landscape, dramatically affecting wildlife that depends on the site. Nature is under threat in North Somerset and this proposal threatens the future of critically important sites for nature, including Weston Big Wood SSSI. This development threatens existing ecological networks, including the loss of Green Belt, by damaging the critical connections between international, national and locally designated sites, and through significant loss of the corridors and stepping stones that			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								connect these sites. Key Reasons to oppose: Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm and Black Rock. • The strategic ecological importance of these sites in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. • The fact that both areas were added to the Green Belt in the late 1980s due to their high ecological value. • National planning policy allows Green Belt changes only in exceptional circumstances — and these have not been demonstrated. In addition: • Neither site can provide safe or suitable access. • Development would create unacceptable transport impacts, failing national soundness tests. Do not build on Tower farm. Find an alternative brownfield site, with existing amenities and road connections in place, for example the fields around Failand offer, without the risk of flooding. For these reasons, Tower Farm and Black Rock should be removed from the Local Plan. I do not support this proposal.			
30793121	Alan David Norrie			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	No	1) The proposed allocation of this site in summer 2025 was made "subject to the Evidence Base" ie site specific. The published Evidence Base does not address this site: a) The Habitat Assessment makes reference to bats in Weston Big Wood (SSSi) but does not mention other flora and fauna which is reliant on Weston Big Wood and the surrounding fields and are interlinked to provide a local wildlife rich habitat. b) The Transport Assessment only refers to congestion at J19 with the M5 and is silent on the added congestion development of this site would bring at the junction of The Downs and Down Road, or the junction of Avon Way and High Street. Therefore NSC have not complied with their own statement of "subject to the Evidence Base". 2) The proposed Local Plan shows an "indicative" number of dwelling at 400. We all know that the developer will cram in as many as they can, as their only interest is profit margin, so an "indicative" 400 could easily rise to 450 - 500. Therefore even the badly flawed "Evidence Base" is further compromised by the fact that the number of dwellings will inevitable rise above 400. 3) Development of this site will increase private vehicle usage and pollution. The site is at the top of a long and steep hill and is 1.5 miles from the town centre and shops. People will not walk to bus stops on Down Road to use a limited bus service as this service is only in one direction and takes a very indirect route to the High Street. Or walk or cycle and be faced with a steep and long hill to return. There is already gridlock at The Downs/Down Road junction at school drop off/ collection times. The proposed new rail link is not within cycling distance of the site and certainly does not offer a genuine choice of transport modes. In any event the rail link will only provide one service an hour. If an expansion of High Down School takes place then parents from elsewhere in the town (eg proposed expansion of housing at Wyndham Way) will be driving their children through the down and up the hill to reach any such expanded school. Other locations in the town for development would be more sustainable, eg Old Mill Road and increasing further the density at Wyndham Way and would be closer to the rail station and the road infrastructure without going through the congested High St. It is unclear what possible mitigation would ease this. Safe and suitable access to the site cannot be achieved. The developer proposes one main vehicular access point to service 400 - 500 homes. This is contrary to the requirements of NPPF s110-112 and would cause a severe problem for emergency response vehicles. 3) NSC has not maximised the use of existing brownfield sites and has not optimised the density at Castlewood in Clevedon owned by NSC and is in a very sustainable location. In addition NSC should challenge the recent assessment by the Environment Agency of site HE20488 being in a flood zone. This site is on a small ridge overlooking neighbouring land. This site is in a far more sustainable position than Tower Farm 4) Tower Farm site is in the Green Belt and NSC has not demonstrated "exceptional circumstances" or examined fully other options to release the site from the Green Belt. See 3) above. 5) Tower Farm fields are immediately next to Weston Big Wood (SSSi) and any development on the fields would result in the loss of this irreplaceable habitat and severe wildlife disturbance. The site serves as a vital buffer and wildlife corridors to the wider Gordano Valley. Weston Big Wood is home to roosting bats, buzzards and owls, sparrowhawks and badgers and are dependant on the fields. Frequently I have seen kestrels hovering when looking for food on the fields of Tower Farm. The hedgerows in the fields also provide a natural habitat for smaller creatures and provides for natural green corridors for wildlife. All this would be lost if any development took place. NSC refer to a "buffer" but any such "buffer" would be insufficient to protect Weston Big Wood, or prevent loss of wildlife or root zone damage.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Weston Big Wood is ancient woodland and any development would mean it's loss. NSC have not consulted local wildlife experts in this regard. 6) The site slopes steeply to the east and my garden and my neighbours were in 2012 flooded from run off from the fields . The NSC Flood Risk Engineer inspected the site in 2015. Any development of hard surfaces would increase this potential. The developers suggest attenuation pools but it is unclear whether this would be sufficient and the developers would only perform the absolute minimum they can get away to protect their profit margins. I understand that the NPPF refers to development on land adjacent to a SSSi which is likely to have an adverse effect on it should not be permitted and in line with the "Golden Rules". 7) The population of Portishead has tripled in less than 25 years and local services , doctors and pharmacies are currently overwhelmed. 8) This site was designated Green Belt in 1988, and not part of the original UK wide designation. It was specifically designated as such to protect the Gordano Valley Green Corridor which of course includes Weston Big Wood. NSC has not taken this into consideration. This is another reason why the present Local Plan is not sound or compliant. No modification can be suitable given the presence of Weston Big Wood. The land must be maintained to preserve the ancient woodland and the natural biodiversity that it supports. Development of the site would be contrary to NPPF paras 180-182. Development would increase private vehicle usage and the suggested mitigations are not feasible. No mitigation or buffer zone can make this site suitable. It should remain open countryside to support biodiversity and for the local community to enjoy sustainably as now. I do not support it.			
62761249	Isobelle Notley			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	There is no robust published alternatives assessment demonstrating that this sensitive site is the only or most appropriate option for growth. The loss of best and most versatile (BMV) farmland (Grade 2/3a by reference to the ALC dataset) and the risk of irreversible damage to the ancient woodland make this allocation unsuitable. The allocation conflicts with the National Planning Policy Framework (NPPF) paragraphs 180–182, which require that development resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland) should be refused unless wholly exceptional reasons exist. The Council's reference to an "ecological buffer" is vague, unenforceable and insufficient to address indirect impacts such as root-zone damage, hydrological change or wildlife disturbance. The Woodland Trust and Avon Wildlife Trust state that ancient woodland is irrecoverable once damaged. Moreover the Framework requires delivering biodiversity net gain, yet the allocation offers no clear mechanism for ensuring that outcome. Construction and built development would alter surface-water run-off and soil compaction on the former farmland, potentially affecting the hydrological regime that sustains the adjacent ancient woodland. The risk of nutrient runoff, altered infiltration and woodland root zone damage is material. Additionally changes in surface water run off could affect the existing houses below the planned development through flooding. This has been the case with even small developments of <20 houses and affected the surrounding green space equally, irrespective of "measures" implemented. When considered alongside other allocations in the Portishead area (such as Black Rock north of Clevedon Road), the combined pressure on ecology, infrastructure and transport is significant and undermines the Council's commitments to nature recovery and sustainable growth. Research has also been undertaken following the pandemic with regards to the use of green space, and its effects on wellbeing. Creating a town that no longer has sufficient green space will have negative long term effects not just on the wildlife and ecology of the woodland but of the residents of Portishead. No modification short of removing the allocation entirely would make this site appropriate. Given its direct adjacency to ancient woodland, its loss would be irreversible and cannot be mitigated sufficiently. The land should instead be retained as undeveloped green space, managed to enhance biodiversity and provide sustainable public access, in line with the Avon Wildlife Trust's 2030 Strategy and national "30 by 30" nature-recovery goals. I do not consider this submission to be sound.			
58530753	Claudia Oakes							I am writing to you about the fields off The Downs surrounding Weston Wood. I will list my reasons for strongly opposing the development of these fields. Traffic congestion which is really bad already at school times. Proximity to Weston Wood which is an SSI and home to wildlife who graze on the surrounding fields..including deer and birds of prey. There is a working farm here and that in itself is precious.			
28755393	Phil Oakes		Mr	No		Unsure		The existing public infrastructure utilities in the Tower Farm estate (water, sewage, water run off, electricity, broadband) is not capable of supporting the proposed expansion without significant infrastructure upgrade with the associated significant			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								disruption to the existing area and residents. The wider Portishead local amenities such as schools, dental, pharmacy and doctor h have not been considered and therefore require to be considered in more detail prior to acceptance of this plan. The previous local plan clearly has not been taken into account and in light of this latest consultation has not provided value for money for the taxpayer. The National Audit Office (NAO) and National Infrastructure and Service Transformation Authority (NISTA) should provide a review of the assurance and scrutiny that was conducted and feasibility of the delivery of the previous plan prior to a revision or replacement plan is approved or considered. The proposal would place unsustainable traffic pressure on the local road network, based upon N.Somerset average car ownership of 1.38 vehicles per household, 400 dwellings would create at least 1200 vehicle movements per day during daylight hours (notwithstanding any school expansion, which would likely increase this figure). The assumption that most commutes would be via foot or e-bike to the proposed rail-link are derisory given; a)the stated notion that the journey can be walked in 20-30 minutes (one would struggle to achieve that going down the hill, let alone the 300ft elevation on the return) is totally unrealistic. b) the lack of capacity on the proposed rail-link due to the lack of proper signaling, which will prevent a useful service frequency. Given the shortcomings in the proposal, it's lack of appreciation of the environmental, ecological and logistical disbenefits, it should be rejected as fundamentally unsound. An expansion of the existing school site could be considered (without the additional housing) which could make more sense by delivering a benefit for the wider community without impinging significantly on the local ecology, and road infrastructure.			
58602721	S Oram			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	It is not justified - there is no robust published alternatives assessment demonstrating that this sensitive site is the only or most appropriate option for growth. The risk of irreversible damage to the ancient woodland make this allocation unsuitable. It is not Consistent with National Policy - the allocation conflicts with the National Planning Policy Framework, which require that development resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland) should be refused unless wholly exceptional reasons exist. The Council's reference to an "ecological buffer" is vague, unenforceable and insufficient to address indirect impacts such as root-zone damage, hydrological change or wildlife disturbance. The Woodland Trust and Avon Wildlife Trust state that ancient woodland is irrecoverable once damaged. Moreover the Framework requires delivering biodiversity net gain, yet the allocation offers no clear mechanism for ensuring that outcome. It is not positively prepared - the location intensifies existing pressures in Portishead. This peripheral site would increase private vehicle usage and pollution rather than support sustainable travel patterns, contrary to NPPF paragraphs 104–106. Delivery depends on multiple unresolved dependencies: new school provision, bus service contributions, off-site biodiversity management, and upgrades to rights-of way/ buffer zones. No phasing plan, funding mechanism or legal agreement is published to secure these. Without such mechanisms the allocation cannot be considered deliverable within the plan period (NPPF paragraph 35(c)). The farmland/woodland edge acts as a critical ecological and landscape transition zone. Development here would fragment habitat, diminish the Gordano Valley wildlife corridor and erode the rural fringe character. Even with a buffer the visual and ecological intrusion into the woodland and surrounding landscape would be significant. Construction and built development would alter surface-water run-off and soil compaction on the former farmland, potentially affecting the hydrological regime that sustains the adjacent ancient woodland. The risk of nutrient runoff, altered infiltration and woodland root zone damage is material. The area already suffers from flooding during heavy rainfall. When considered alongside other allocations in the Portishead area (such as Black Rock north of Clevedon Road), the combined pressure on ecology, infrastructure and transport is significant and undermines the Council's commitments to nature recovery and sustainable growth. No modification short of removing the allocation entirely would make this site appropriate. Given its direct adjacency to ancient woodland, its loss would be irreversible and cannot be mitigated sufficiently. The land should instead be retained as undeveloped green space, managed to enhance biodiversity and provide sustainable public access, in line with the Avon Wildlife Trust's 2030 Strategy and national "30 by 30" nature recovery goals. I do not support the the North Somerset Local Plan 2041 for the Tower Hill Farm location.			
58628705	James Oram			No	• Positively prepared • Justified • Effective • Consistent with	No	No	I am concerned about the proposed developments on Tower Farm. Both sites form an essential part of the Gordano Valley green corridor, which includes Weston Big Wood. They were added to the green belt because of their ecological value, containing ancient woodland and a wide variety of plant and animal species. I can see no exceptional circumstances that would justify reversing this designation. As a resident of North Weston, one of the proposed sites would be directly across from my home. It is already extremely difficult to exit Clifton Street during commuting			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					• national policy			hours, and additional housing opposite would worsen this, with the increased number of cars creating a bottleneck on Clevedon Road. In my opinion, this access would be unsafe, and I believe the resulting traffic could fail national sound-level tests. There are far more suitable locations across North Somerset to meet the need for new housing. One such area is the 'Old Mill' site near Sainsbury's. Its central position and future access to the new train line make it ideal for development, particularly for flats aimed at first-time buyers. In addition, many other brownfield sites are available across the region. I feel that the interest in these sites is driven more by financial potential than by their suitability for housing. No modification short of removing the allocation entirely would make this site appropriate. Given its direct adjacency to ancient woodland, its loss would be irreversible and cannot be mitigated sufficiently. The land should instead be retained as undeveloped green space, managed to enhance biodiversity and provide sustainable public access, in line with the Avon Wildlife Trust's 2030 Strategy and national "30 by 30" nature recovery goals. I do not support the the North Somerset Local Plan 2041 for the Tower Hill Farm location.			
30660673	Kelly Packham			No	• Justified	Unsure	No	The plans to build on Tower Farm and Black Rock should not be considered whilst brownfield sites remain undeveloped. The infrastructure of Portishead will not cope with the intended number of extra vehicles. The NHS services are already pushed to their limit of providing safe healthcare.	Brownfield sites used first. Consider the Castlewood site in Clevedon as an alternative to Portishead since there has been very little expansion in Clevedon.		
58406881	Philip STEPHEN Palmer			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	I have lived in Portishead for many years, and I am writing to object to the proposed allocation of Tower Farm (HE2068). My concerns come not only from reading the Local Plan documents but also from living right next to the area affected. I care deeply about the Downs, the woods, the wildlife, and the community here. This response explains why I believe the allocation is not legally compliant and why it fails the four soundness tests required by the NPPF. But more importantly, it explains why this development would harm the place that many of us call home. 1. Soundness: Positively Prepared The Plan is not positively prepared, in my opinion: So much brownfield capacity is sitting unused, including Castlefield in Clevedon, which could take hundreds of homes and has much better transport options. Tower Farm is being chosen even though it is one of the least suitable places for development. It feels like the Council is avoiding harder decisions about regenerating brownfield land and instead taking the easier option of open fields. 2. Soundness: Justified I do not believe Tower Farm is justified as a development site: The fields, valley and woodland form a natural space that supports countless birds, insects, and other wildlife. It is a peaceful buffer that makes this part of Portishead what it is. A previous Planning Inspector recognised how important these woods and this buffer were — I don't understand why this view seems to have been abandoned. Compared with the alternatives, Tower Farm simply doesn't stack up when it comes to sustainability or environmental value. 3. Soundness: Effective On a practical level, the allocation does not feel deliverable: Access is already a problem here. The Downs is narrow, heavily parked, and extremely busy at school times. Adding hundreds of homes feeding onto this road just seems unsafe. The emergency access from Tower Road wouldn't function as a true second access. If the main route is blocked, people would still be stuck. The Council's documents suggest people will walk or cycle to key services, but anyone who knows the area understands how steep Avon Way is. It's difficult enough going down it — coming back up is something many residents simply couldn't do. The run-off from the fields is already noticeable in heavy rain. Building over them will only push more water downhill towards existing houses. Traffic across Portishead is already a serious issue. This development would add significantly more pressure onto a network that is barely coping as it is. The housing mix doesn't make sense for local people. Portishead needs more smaller homes, not another set of large four-bedroom properties. 4. Soundness: Consistent with National Policy			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								To me, the allocation goes directly against national policy: The woodland and valley are part of what makes this area special. Damaging them would contradict the environmental protections set out in the NPPF. The Downs are a lifeline for many people — a place for exercise, fresh air, and a break from the pressures of daily life. National policy emphasises the importance of public health and wellbeing, and this site plays a huge role in that for thousands of residents. National planning guidance is clear about prioritising brownfield land. But this Plan has not done so. The proposed transport strategy feels detached from real local conditions. Sustainable transport isn't achieved by assuming large numbers of people will cycle up steep hills or walk long distances from isolated housing. 4. Personal Concerns About Tower Farm I am strongly opposed to this allocation for personal and community reasons: The woods and the valley behind the Downs are part of Portishead's identity. They are more than just land — they are part of our wellbeing. The wildlife here is extraordinary. The birdsong that fills the air in the mornings comes directly from those fields and woods. Losing that would be a loss to the whole town. Development here would change the character of the Downs permanently. The strain on roads, schools, and community services would be felt everywhere, not just by those of us living nearby. Portishead has grown quickly, and many of us feel the town is struggling to keep up. Building at Tower Farm would make that worse. Tower Farm is not a sustainable or suitable site for development. It fails the legal tests, the soundness tests, and the simple common-sense test of whether it would benefit the community. For all these reasons, I respectfully request that the allocation be removed from the North Somerset Local Plan. I am asking the Council to remove HE2068 (Tower Farm) from the Local Plan. I believe future growth should: Focus on brownfield regeneration, Make use of sites like Castlefield, and Protect the natural areas that residents depend on for their wellbeing.			
30660641	I Palmer			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Legal Compliance The Plan is not legally compliant for the following reasons: Reasonable alternatives—including brownfield sites and Castlefield in Clevedon—were not properly assessed, contrary to national policy requirements for plan-making. The proposed Green Belt release has not met the exceptional circumstances test, nor has the Council demonstrated that non-Green Belt alternatives were exhausted. Biodiversity impacts, including the risk of the adjacent woodland losing its SSSI status, have not been adequately considered. The transport evidence is incomplete, does not demonstrate safe and suitable access, and therefore fails to meet statutory requirements. Soundness: Positively Prepared The Plan has not been positively prepared because: The Local Plan identifies 23 brownfield sites, and 22 of these have capacity for additional development, but this capacity has not been fully utilised. Castlefield in Clevedon could accommodate hundreds of homes and has far better public transport connections. The Council has not demonstrated that it is optimising brownfield land before proposing release of sensitive greenfield areas such as Tower Farm. Soundness: Justified The allocation of Tower Farm is not justified because: It is not the most appropriate site when compared with reasonable alternatives that are more sustainable and less constrained. The valley, woodland, and surrounding fields form an ecologically valuable landscape supporting a diverse range of species. A previous Planning Inspector supported retaining the woods and the protective buffer that Tower Farm would undermine.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Soundness: Effective The allocation is not effective due to the following reasons: The site relies on one main vehicular access via The Downs, which is already congested, especially during school peak times. The emergency-only access via Tower Road is unreliable and does not provide the resilience required for a development of this scale. The steep gradient of Avon Way makes the developer's walking-times and accessibility claims unrealistic. Surface water run-off from the site risks impacting existing homes on The Downs. The proposal will cause town-wide congestion, yet relies on unrealistic assumptions such as widespread e-bike commuting. The housing mix is inappropriate: Portishead does not need more 4-bedroom properties. The local need is for 1–3 bedroom homes, including affordable and downsizer accommodation. Soundness: Consistent with National Policy The allocation is not consistent with national policy because: The development poses a risk to the woodland's SSSI status and would undermine biodiversity objectives in the NPPF. The Portishead Downs provide essential wellbeing and mental health benefits for the town's 27,000 residents, consistent with national policy on healthy communities. The Plan does not follow brownfield-first principles, which national policy requires. The transport strategy fails to demonstrate safe, suitable and sustainable access as required by NPPF paragraphs 110–115. Site-Specific Objection to HE2068 In addition to the legal and soundness issues above, Tower Farm is an unsuitable allocation because: The valley and woodland form a functioning ecosystem essential to local biodiversity and landscape character. Allowing greenfield development would undermine brownfield regeneration across the district. The proposal will cause increased traffic throughout all of Portishead, worsening already severe congestion. Portishead is already under significant development pressure; Tower Farm would add further strain to infrastructure, transport, and community facilities. For the reasons set out above, allocation HE2068 is not legally compliant and not sound. The site is not deliverable, not sustainable, and conflicts with both local and national policy. I therefore request that Tower Farm be removed from the North Somerset Local Plan 2041. I formally request that: The allocation HE2068 (Tower Farm) be removed from the Local Plan. The Council should instead: Prioritise brownfield regeneration on the 22 sites already identified. Reassess Castlefield and other more sustainable alternatives. Protect SSSI woodland and key ecological networks. Reevaluate transport, access, and drainage constraints affecting the Tower Farm site.			
58342593	Agnieszka Parry			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	This development would have a severely negative impact on an area of ancient woodland and an SNCI because of the loss of an appropriate sized ecological buffer, as well as degradation of the woodland because of an increase footfall. The plan is not justified because there has not been an assessment of alternatives showing that the Tower Hill Farm development is the only possible solution. The development is not consistent with National Policy because the NPPF requires that, unless there are exceptional reasons, developments should not be allowed if there will be deterioration of irreplaceable habitats. Biodiversity net gain should be delivered but there is no description of how this will be achieved. The proposal is not effective because it is dependent on a whole host of other factors which cannot be considered achievable in the timeframe (eg new school provision, bus services, new road links, changes to rights of way etc) because of a lack of planning, funding and legal agreement.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Unfortunately there are no effective modifications that would protect the ancient woodland and SNCI sufficiently. I do not support the plans for the Tower Hill Farm location.			
62814273	J Partridge			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Please bear in mind that the UK is considered one of the most nature depleted countries globally and has some of the lowest biodiversity in Europe. with significant declines in species abundance and habitat loss, ranking bottom of 14 European nations, due to intensive land use, pollution and climate change. Studies show the UK has less than half its original biodiversity left, with species populations declining significantly since 1970, making it a stark example of environmental degradation. The proposed allocation of Land at Tower Farm for 400 homes lies immediately beside Weston Big Wood, which is an an ancient woodland and site of Nature Conservation Interest SNCI managed by the Woodland Trust and supported by Avon Wildlife Trust. The woodland forms part of the Gordano Valley ecological network and a nationally important habitat mosaic of ancient woodland, grassland, wetland and woodland. 1 Not justified There is no robust published alternative assessment demonstrating that this sensitive site is the only or most appropriate option for growth. The loss of best and most versatile BMV farmland Grade 2/3a by reference to the ALC dataset and the risk of irreversible damage to the ancient woodland make this allocation unsuitable. Not Consistent with National Policy The allocation conflicts with National Planning Policy Framework NPPF paragraphs 180-182 which require that the development resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland) should be refused unless wholly exceptional reasons exist. The councils reference to an ecological buffer is vague, unenforceable and insufficient to address indirect impacts such as root-zone damage. hydrological change or wildlife disturbance. The Woodland Trust and Avon Wildlife Trust state that ancient woodland is irrecoverable once damaged. Moreover the Framework requires delivering biodiversity net gain, yet the allocation offers no clear mechanism for ensuring that outcome. Not Positively Prepared. The allocation intensifies existing pressures in Portishead schools, healthcare and transport infrastructure are already under strain for example the A369 corridor. This peripheral site would likely increase private vehicle usage and pollution rather than support sustainable travel patterns, contrary to NPPF paragraphs 104-106. Not Effective Landscape and Connectivity The farmland, woodland edge acts as a critical ecological and landscape transition zone.Development here would fragment habitat, diminish the Gordano wildlife corridor and erode the rural fringe character. Even with a buffer the visual and ecological intrusion into the woodland and surrounding landscape would be significant. Drainage & Hydrology Construction and build development would alter surface water run off and soil compaction on the former farmland, potentially affecting the hydrological regime that sustains the adjacent woodland. The risk of nutrient runoff, altered infiltration and woodland root zone damage is material. Cumulative Impact When considered alongside other allocations in the Portishead area, such as Black Rock, north of Clevedon Road, the combined pressure on ecology, infrastructure and transport is significant and undermines the Councils commitments to nature recovery and sustainable growth. No modification short of removing the allocation entirely would make this site appropriate. Given its direct adjacency of ancient woodland, its loss would be irreversible and cannot be mitigated sufficiently. The land should instead be retained as underdeveloped green space, managed to enhance biodiversity and provide sustainable public access, in line with the Avon Wildlife Trusts 2030 Strategy and national 30 by 30 nature recovery goals. Please save our wood and wildlife I do not support the North Somerset Local Plan 2041 for the Tower Hill Farm Location			FB_IMG_1765318153049.jpg
57944897	S Patterson			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The proposed allocation of land at Tower Farm, comprising approximately 400 dwellings, is located immediately adjacent to Weston Big Wood. This site is an ancient woodland and a designated Site of Nature Conservation Interest (SNCI), under the stewardship of the Woodland Trust and supported by the Avon Wildlife Trust. Weston Big Wood forms a critical element of the Gordano Valley ecological network and contributes to a nationally important habitat mosaic encompassing open grassland, wetland, and woodland. The proximity of large-scale residential development to such a sensitive and irreplaceable natural asset raises significant concerns regarding adverse impacts on biodiversity, habitat integrity, and the wider ecological connectivity of the valley. The introduction of intensive housing in this location would place substantial pressure			buffers-an-overview-factsheet.pdf Tower Farm Site.webp

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								on the woodland and its associated habitats, through increased recreational use, disturbance, pollution, and fragmentation. These impacts are incompatible with the statutory and policy commitments to protect ancient woodland and designated conservation sites. In light of these considerations, the allocation of Tower Farm for residential development is inappropriate and should be rejected to safeguard the ecological value and long-term resilience of Weston Big Wood and the Gordano Valley network. Not Justified There is no robust published alternatives assessment demonstrating that this sensitive site is the only or most appropriate option for growth. The loss of best and most versatile (BMV) farmland (Grade 2/3a by reference to the ALC dataset) and the risk of irreversible damage to the ancient woodland make this allocation unsuitable. Not Consistent with National Policy The allocation conflicts with the National Planning Policy Framework (NPPF) paragraphs 180–182, which require that development resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland) should be refused unless wholly exceptional reasons exist. The Council's reference to an "ecological buffer" is vague, unenforceable and insufficient to address indirect impacts such as root-zone damage, hydrological change or wildlife disturbance. The Woodland Trust and Avon Wildlife Trust state that ancient woodland is irrecoverable once damaged. Moreover the Framework requires delivering biodiversity net gain, yet the allocation offers no clear mechanism for ensuring that outcome. Not Positively Prepared The location intensifies existing pressures in Portishead: schools, healthcare and transport infrastructure are already under strain (for example the A369 corridor). This peripheral site would likely increase private vehicle usage and pollution rather than support sustainable travel patterns, contrary to NPPF paragraphs 104–106. Not Effective Delivery depends on multiple unresolved dependencies: new school provision, bus service contributions, off-site biodiversity management, and upgrades to rights-of-way/ buffer zones. No phasing plan, funding mechanism or legal agreement is published to secure these. Without such mechanisms the allocation cannot be considered deliverable within the plan period (NPPF paragraph 35(c)). Landscape & Connectivity The farmland/woodland edge acts as a critical ecological and landscape transition zone. Development here would fragment habitat, diminish the Gordano Valley wildlife corridor and erode the rural fringe character. Even with a buffer the visual and ecological intrusion into the woodland and surrounding landscape would be significant. Drainage & Hydrology Construction and built development would alter surface-water run-off and soil compaction on the former farmland, potentially affecting the hydrological regime that sustains the adjacent ancient woodland. The risk of nutrient runoff, altered infiltration and woodland root zone damage is material. Cumulative Impact When considered alongside other allocations in the Portishead area (such as Black Rock north of Clevedon Road), the combined pressure on ecology, infrastructure and transport is significant and undermines the Council's commitments to nature recovery and sustainable growth. No adjustment short of withdrawing the allocation altogether would render this site acceptable. Owing to its immediate proximity to ancient woodland, any development would result in irreversible loss that cannot be adequately mitigated. The land should therefore be safeguarded as undeveloped green space, actively managed to strengthen biodiversity and deliver sustainable public access, consistent with the Avon Wildlife Trust's 2030 Strategy and the national "30 by 30" nature recovery objectives. I do not support the the North Somerset Local Plan 2041 for the Tower Hill Farm location.			
58601697	David J Patterson			No	• Positively prepared • Justified • Consistent with national policy	Yes	Yes	I do not consider the site requirements as described for this plot to be accurate. Active travel provisions, as described in the requirements, ignore the fact that site is too far from other local amenities and the vertical climb too steep to make cycling or walking a practical option for the majority of potential residents. This has consequences for vehicle impact. The access to the site is already constrained at the entrance to High Down school. This access could not safely accommodate the additional daily load of an extra 400 households. The additional traffic will also impact the wider road network of the town, in contravention of national soundness tests. The requirement for an ecological buffer at the border of Weston Big Wood does not sufficiently address the significance of the site as an SSSI that requires protection. The fields at Tower Farm are the "suitable ecological buffer" that is necessary to protect the site, as demonstrated by the greenbelt allocation that was assigned in a comparatively recent timeframe. For these reasons I do not believe the proposal meets the areas needs by objective assessment and I see no credible evidence to support the suitability of the site. I propose revisiting the assessment of potential brownfield sites in the town and removing this location from the plan.			
58509345	John Pirouet			No	• Positively prepared • Justified • Effective	No	No	The plan does not appear to recognise the feedback to the earlier consultation, whereby the land at Tower Farm received a great dal of justified opposition and the conclusions of the consultation did not appear to fall in favour of development at this location. Many of the points made in that consultation still hold true in terms of lack of			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					• Consistent with national policy			justification for this site, given the significantly adverse impacts on nature, amenity and infrastructure. NSC has not properly considered alternative brownfield or greenfield sites with far lower ecological impact. Green Belt changes are only allowed by national planning policy in exceptional — and these have not been demonstrated. In addition: • The site cannot provide safe or suitable access. • Development would create unacceptable transport impacts, failing national soundness tests To preserve the greenbelt land and all the positives this brings to the community, through proper consideration of the below the Council should find more appropriate sites than the land at Tower Road: • Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset. • Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm. The council needs to recognise the strategic ecological importance of these sites in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. Both these areas were added to the Green Belt in the late 1980s due to their high ecological value.			
58067841	Nathan Pottecary			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The proposed allocation of land at Tower Farm for approximately 400 homes is wholly unacceptable. This site is directly adjacent to Weston Big Wood, an ancient woodland and Site of Nature Conservation Interest (SNCI), managed by the Woodland Trust and backed by the Avon Wildlife Trust. This vibrant woodland is a cornerstone of the Gordano Valley ecological network and comprises a nationally significant habitat mosaic of open grassland, wetland, and woodland. Not Justified: There is a glaring absence of robust and published alternatives assessment proving that this sensitive site is the only or most suitable option for further development. The potential destruction of the best and most versatile (BMV) farmland (designated as Grade 2/3a according to the Agricultural Land Classification dataset) and the imminent risk of irreversible damage to the ancient woodland categorically render this allocation inappropriate. Not Consistent with National Policy: This allocation is in direct violation of the National Planning Policy Framework (NPPF) paragraphs 180–182, which clearly stipulate that any development leading to the loss or deterioration of irreplaceable habitats, such as ancient woodland, must be refused unless there are wholly exceptional circumstances. The Council's reference to an "ecological buffer" is vague, unenforceable, and wholly inadequate to address indirect impacts like root-zone damage, hydrological alterations, or wildlife disturbance. The Woodland Trust and the Avon Wildlife Trust emphasize that once ancient woodland is damaged, it is irretrievable. Moreover, the Framework mandates the delivery of biodiversity net gain, yet this allocation fails to provide a clear mechanism to ensure such an outcome. Not Positively Prepared: The location aggravates existing pressures in Portishead. Schools, healthcare services, and transport infrastructure are already stretched (for instance, the A369 corridor). This outlying site would inevitably lead to increased private vehicle usage and pollution, violating NPPF paragraphs 104–106, which advocate for supporting sustainable travel patterns. Not Effective: The feasibility of delivery is contingent on multiple unresolved dependencies, including new school provisions, contributions to bus services, off-site biodiversity management, and enhancements to rights-of-way and buffer zones. The lack of a phasing plan, funding mechanism, or legal agreement to secure these essential elements means this allocation cannot be classified as deliverable within the plan period as stipulated in NPPF paragraph 35(c). Landscape & Connectivity: The boundary between farmland and woodland is a critical ecological and landscape transition zone. Development in this area would fragment habitats, undermine the Gordano Valley wildlife corridor, and degrade the rural character of the fringe. Even with a proposed buffer, the visual and ecological impacts on the woodland and surrounding landscape would be severe. Drainage & Hydrology: Construction and development will inevitably alter surface water runoff and lead to soil compaction on the former farmland, jeopardising the hydrological regime that supports the adjacent ancient woodland. The risks of nutrient runoff, disrupted infiltration, and damage to the woodland root zone are significant and unacceptable. Cumulative Impact:			10-year strategy 2020-2030.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								When assessed alongside other allocations in the Portishead area, such as Black Rock north of Clevedon Road, the cumulative pressure on ecology, infrastructure, and transport becomes overwhelming. This undermines the Council's commitments to nature recovery and sustainable growth. There is no modification, short of entirely withdrawing the allocation, that could make this site suitable for development. Given its close proximity to ancient woodland, any loss would be irreversible and cannot be adequately mitigated. This land must be preserved as undeveloped green space, managed to enhance biodiversity and promote sustainable public access, in accordance with the Avon Wildlife Trust's 2030 Strategy and the national "30 by 30" nature recovery goals. I unequivocally reject the North Somerset Local Plan 2041 for the Tower Hill Farm location.			
62863105	Robert Potton			No	• Positively prepared • Justified • Effective	No	Unsure	NSC has not properly considered: - Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset - Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm and Black Rock - The strategic ecological importance of these sites in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. - The fact that both areas were added to the Green Belt in the late 1980s due to their high ecological value - National planning policy allows Green Belt changes only in exceptional circumstances – and these have not been demonstrated. In addition: - Neither site can provide safe or suitable access - Development would create unacceptable transport impacts, failing national soundness tests.			
17467393	Ali Price			No	• Justified • Consistent with national policy	No	No	Tower Farm development on Green Belt, brown belt should be used first. Local schools (primary and secondary) are insufficient. Road network amd wider links to M5 not suitable. Develop brownfield sites as a priority			
62854817	Quin-Jones			No	• Justified	No	No	NSC has not properly considered: Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset.Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm and Black Rock.The strategic ecological importance of these sites in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor.The fact that both areas were added to the Green Belt in the late 1980s due to their high ecological value.National planning policy allows Green Belt changes only in exceptional circumstances — and these have not been demonstrated. In addition: Neither site can provide safe or suitable access.Development would create unacceptable transport impacts, failing national soundness tests. For these reasons, Tower Farm and Black Rock should be removed from the Local Plan.			
62846113	Martin Rayner							Hi, to whom ever this may concern, I thought until recently that logic and common sense had prevailed on this matter, why is this even being proposed again when there are so many reasons against it? The most obvious and important reason as far I can see is the preservation of the big wood and all that it contains. Anyone who thinks that surrounding the wood as suggested is not going to have a disastrous effect is kidding themselves for the wrong reasons. Surely we should be doing the opposite, by allowing the wood to expand naturally as we have precious few of these places. The worrying question is why has this been even been considered?			
62775905	M Reardon			No	• Justified • Consistent with national policy	Unsure	Unsure	The area is green belt and exceptional circumstances have not been evidenced. Alternative brown field sites exist that should be developed ahead of Tower Farm. In addition the single point access would cause significant congestion and would be unsafe due to the location of the junior school.			
58522177	Michael Rees			No	• Positively prepared • Justified • Consistent with	Unsure		In Choices For the Future Nov 20 NSC commits to retain the Green Belt; and Weston Big Wood (SSI) and the Gordano Valley green corridor were added to the Green Belt in the 1980's. No exceptional reasons in accordance with actional government requirements has demonstrated that these areas should be classed otherwise. Indeed in recent years various strategies and reports have merely reaffirmed the environmental importance of these areas to wildlife, trees and fauna in their own right and as part of larger connected geographical areas.	Remove the proposed Tower Farm and Black Rock housing developments; and focus on other site such as the Wyndham Way, Portishead and Castlewood, Clevedon locations. Indeed in responses to the feedback from last response 300 units have been added to the former site.		AWT.docx

					national policy						
30659873	Penelope Riley			No	• Positively prepared • Justified • Effective	No	No	Legal compliance and Duty to Cooperate As explained in response to policies SP7 and SP8 Portishead Town Council (PTC) consider that the draft local plan has not been informed by full and effective cross border discussions regarding housing need and the sustainable location of new development. PTC has reviewed the duty to cooperate statement and considers that the relationship with Bristol and Bath to be unclear in terms of meeting housing needs. The statement explains that the plan area is strongly influenced by the adjacent larger urban areas and whilst it states that each authority agreed to meet their own housing need within their own boundaries, it is unclear how each strategy and approach to housing interacts. Soundness To be considered ‘sound’ the North Somerset Local Plan (NSLP) must be positively prepared, justified, effective and consistent with national policy. PTC consider that policy LP5 is not sound for the following reasons: Positively prepared To meet this requirement, the NSLP should be prepared based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, consistent with achieving sustainable development. This assessment should also be informed by agreements with other authorities, so that unmet needs from neighbouring areas are accommodated where it is practical to do so and consistent with achieving sustainable development. Page 32 of the draft NSLP explains that the minimum number of new dwellings that the council is required to plan for over the plan period is 23,700, however the plan proposes 24,495. This is in excess of the level identified by the Government. PTC acknowledges that there is a requirement for significant levels of housing to be planned for. However, the strategy must be consistent with achieving sustainable development. It is considered that the proposed approach, to distribute 7% of the housing supply within Portishead would not deliver sustainable development. Justified To meet this requirement, the NSLP should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate, robust and credible evidence. Given the above, Portishead Town Council contends that two specific sites in Portishead “Tower Farm” and “Black Rock, north of Clevedon Road” do not conform to an approach that is the most appropriate strategy. PTC consider that these sites are not justified as the most appropriate locations for housing development. The key concerns relate to the environmental impact of the site on the adjacent Weston Big Wood Site of Special Scientific Interest and Gordano Valley Strategic Green Corridor, landscape impacts, sustainability of the site, access, and highway safety There are other sites available in Portishead such as Wyndham Way (brown field) and HE20488 Land South of Clevedon Road which are within Portishead that have much better access to the full set of retail and community services in and around Portishead High Street, and where development would do far less damage to the environment. These alternative sites are much more sustainable being substantially closer to the new Portishead Railway station and an easy walking distance over flat terrain to bus services . There are at least 23 brownfield sites across North Somerset that could accommodate higher densities and are more sustainable locations with less environmental constraints.			
58513153	Andrew Rix			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Weston Big Wood and the nearby fields are irreplaceable resources for the people of Portishead and deserve appropriate protection. The greenbelt around the wood is the youngest greenbelt in North Somerset, that protection was put in place because it was unequivocally shown that it was critical to the natural environment of the woodland and essential for wildlife connections to the Gordano valley and Somerset levels, and the protection of the woodland. These development proposals put forward threaten the delicate natural habitat and SSSI status of the wood, especially at the edge of the woods, where there is a massive diversity of plant and animal life which is critical for the ecosystem of the woodland. The buffer zone around the wood is incredibly important and should be a minimum of 100m. There are several other options for building this number of houses around Portishead and Clevedon which are not in the greenbelt, so I challenge how the “exceptional circumstances” clause to be allowed to build on greenbelt has been met. There are several other local viable sites which are not in the greenbelt. For example, Wyndham Way, another at the end of The Vale, and the area between the Flower Show field and the allotments would more than make up the numbers to meet the required demand from the government. Furthermore, the Castlewood site in Clevedon is another very well-placed option nearby and within North Somerset. Should these alternatives be disregarded in support of developing prime greenbelt land, it would suggest a significant problem with the planning procedure. The other significant challenge, particularly with the Tower Farm development is			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								sustainability. The climb up from the High Street involves an elevation gain of approximately 100m, and very few people who live in the area make that walk due to how hard it is. Because of this, people in the houses around Tower Farm tend to drive to town. The buses run infrequently and are often unreliable, with frequent significant delays and regular unexplained cancellations or no-shows. The traffic through Portishead from Avon Way gridlocks daily during the working week at today's traffic levels, these developments at Tower Farm and Blackrock would add more than 600 more cars which will make that much worse. The impeding Portishead train station is often sited as the magic bullet which will solve all Portishead's traffic problems, but a single track train line with only one train of two coaches per hour is not going to make a dent in the rush hour traffic problems into and out of Portishead. Furthermore, the Portishead motorway junction is already causing significant delays in morning and evening rush hours and would need fundamental major improvements to support more traffic. The other viable non-greenbelt sites I listed above all have much better sustainability with a generally shorter and flat walking access to the high-street or train station. No modification short of removing the allocation entirely would make this site appropriate. Given its direct adjacency to ancient woodland, its loss would be irreversible and cannot be mitigated sufficiently. The landshould instead be retained as undeveloped green space,managed to enhance biodiversity and provide sustainable public access, in line with the Avon WildlifeTrust's 2030 Strategy and national "30 by 30" nature-recovery goals. There are several other options for building this number of houses around Portishead and Clevedon which are not in the greenbelt, so I challenge how the "exceptional circumstances" clause to be allowed to build on greenbelt has been met.			
62758049	Brynley Robbins							With Regard To The Above Subject I am - along with very many others Deeply Concerned with the proposed development of the area of Tower Farm - Portishead Down - Black Rock & Weston Big Wood North Somerset Council Has Not Properly Considered the implications of this ill-conceived project & Avoided or Ignored the opportunity to increase housing density on areas which would have Less Ecological Impact The Unwanted Increase In Traffic in the surrounding area will add even more to the current Heavily Congested Roads we have to deal with on a Daily Basis along with the potential to Further Damage our residents & our children's Health Also not considered - These areas were added in the 1980's to the Green Belt because of the High Ecological Value & this should only be altered in the Most Exceptional Circumstances - these not having yet been demonstrated - Neither site can provide safe or suitable access - these woodlands are Our Planets Lungs - don't deprive us of that The damage to the The Biodiversity Of Our Wildlife is likely to be No Less Than Catastrophic There is a current wide spread desire for more community facilities & amenities which would be further stretched by the impact of this project & it would also impact heavily on the already thin infrastructure with its lack of Healthcare - Schools - Retail Outlets & The Other Associated Facilities we lack - a Strange & Somewhat Unfathomable Use of the Recreational Space at Merlin Park only beggars belief - Why suggest The Addition of Pointless Allotments & Extra Football Pitches ? When there are just Absolutely No Facilities for Parking - Toilets or Changing Rooms for that potential number of up to One Hundred people & cars in an already crowded Small & Narrow Circular Road - What about the other folk who regularly use this space - children happily playing - the dog walkers - the exercise enthusiasts - Are their access rights taken away ? This has not been thought through very carefully at all It is also considered a Major Concern & The Potential For Flood Risk to the Lower Portishead & Gordano Valley Areas by Promoting or Undertaking even more Heavy Construction Work in the Tower Farm - Portishead Down - Black Rock & Big Wood Areas along with the inevitable Climate Change & Those Altered Weather Patterns that we will have no protection against This Proposed Development Is A Time Bomb Waiting To Be Released Upon An Unsuspecting Audience - It Must Be Reconsidered			
62771169	Pamela Robbins							With Regards To The Above Subject I am - along with very many others Extremely Concerned with the proposed development of this area of Tower Farm Portishead Down - Black Rock & Weston Big Wood North Somerset Council is not Properly Considering the implications of this ill-conceived project & have Avoided or Ignored the opportunity to increase housing density on areas which would have less ecological impact. The Unwanted Increase In Traffic in the surrounding area will add even more to the current Heavily Congested Roads we have to deal with on a Daily Basis along with the potential to Further Damage our residents & our children's Health Also not considered - These areas were added in the 1980's to the Green Belt because of the High Ecological Value & this should only be altered in the Most Exceptional Circumstances - these not having yet been demonstrated - Neither site can provide safe or suitable access - these woodlands are Our Planets Lungs - don't deprive us of that The damage to the The Biodiversity Of Our Wildlife is likely to be No Less Than Catastrophic There is a current wide spread desire for more community facilities & amenities which

With the increase in traffic taking up parking spaces making the estate more congested than it already is my fear is how would any emergency vehicals gain access. This has not been thought through very carefully at all It is also considered a Major Concern & The Potential For Flood Risk to the Lower Portishead & Gordano Valley to Promote or Undertake even more Heavy Construction Work in the Portishead Down - Black Rock & Big Wood Areas along with the inevitable Climate Change & Those Altered Weather Patterns that we will have no protection against This Proposed Development Is A Time Bomb Waiting To Be Released Upon An Unsuspecting Audience - It Must Be Reconsidered			
62684673	Amanda Roberts							I have lived in Portishead (near Highdown Schools) for nearly 9 years. I would like to add my support to the concerns about the development of Tower Farm and Black Rock in Portishead. I understand that these 2 areas are part of the proposed NSC draft local plan. I would like these 2 areas removed from the plan because I feel that: we need to preserve the wildlife in the Weston Big Wood extended area and the beautiful Gordano Valley the local infrastructure cannot support additional building of homes in this green belt area. Portishead is big enough. There has been extensive building over the past 30 years.			
62860321	L Robinson			No	• Consistent with national policy	Unsure	Unsure	I object to the inclusion of Tower Farm, Portishead in the proposed local plan on the basis of the insufficient Transport Sustainability and Access Strategy. There are many sites more suitable in Portishead in terms of transport links, bus access and active travel opportunities. Claims made in support of the active travel potential of the site do not match the Local Walking and Cycling Infrastructure Plan or the requirements of Local Transport Note 1/20. Transport Sustainability and Access Strategy There is some crucial information not discussed in the report: • The site itself is steep with approximately 25 metres elevation difference between highest and lowest points. This means that anyone living in a property at the bottom of the proposed site next to the wood will need to first walk uphill towards Down Road prior to walking downhill to go anywhere they wish to. This is highly likely to deter active travel. It suggests that even internal active travel may be difficult to achieve. • The report talks of connecting to existing links. There are no existing cycle links. The closest cycle routes are over one mile away. The West of England Local Cycling and Walking Infrastructure Plan 2020 to 2036 (LCWIP) includes some cycling improvements for Portishead but none of these will be closer to the site than existing facilities and will all be in the lower areas of Portishead. In order to cycle to the site from existing cycle facilities (and the proposed), it is necessary to travel along a road with a 30mph limit (the 85th percentile speed is likely to be higher than 30) which has gradients in excess of 7%. In accordance with Local Transport Note 1/20 'Cycle Infrastructure Design' fig 4.1, these routes are unlikely to be suitable for any but the most confident cyclist. In order to comply with the requirements of LTN 1/20 significant new cycle infrastructure is required to connect the site to separate cyclists from motor vehicles, access to electric bikes is completely insufficient to overcome these issues. • Effect on existing footpaths A large number of secondary school pupils/students (in the hundreds) walk daily to and from Gordano School from the vicinity of the site. In drier weather they can and do use footpaths crossing the site to both shorten their walks and to keep them safer from road traffic. At other times, only much longer routes, along roads where they are in potential conflict with road traffic, some sections do not have footways, are possible. The proposal for the site would appear to include diversions of existing footpaths, extending their length and in some cases routing them through proposed attenuation basins. Basins that are designed to hold water rather than provide amenity. The proposed development will increase the number of 11 to 18 year olds living on the site needing to make the daily journey to Gordano and the number of under 11s going to primary schools. There are no proposals to improve the daily walking journey either in the LCWIP or the plans for the site, on the contrary the proposals may make journeys worse. • Runoff and Topography The existing site is steep and irregular at around 5%. The existing footpath running along the edge of Weston Big Wood is often waterlogged making it inaccessible. The proposed development will exacerbate the situation as the speed of runoff will increase. • Increased car journeys The proposed sports pitches and allotments in Merlin Park will also increase the number of car journeys into the Merlin Park estate and cause parking issues. No mitigation measures are proposed as part of this new development. No measures are proposed to improve active travel to this location. To make them usable with the topography involved, the sports pitches will require expensive reprofiling. This will put the land out of us for significant time and reduce the recreational opportunities for	Remove proposed Tower Farm Development from local plan or produce an alternative proposal for the site which addresses the significant transport and environmental issues it poses, by significantly reducing the size of the proposals.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								existing residents. This development will not achieve sustainable transport objectives and will significantly increase car journeys to the local area.			
62778017	Catherine Robson			No	• Consistent with national policy	Unsure	Unsure	Section 40 of Natural Environment and Rural Communities Act 2006 places a duty on public bodies to contribute to the coherence and resilience of ecological networks. I am concerned that some of the allocations currently set out in the draft plan will adversely affect the coherence and resilience of valuable ecological networks in North Somerset. The plan for 400 houses on the borders of Weston Big Wood will have a significant detrimental effect on thus important SSSI. The Gordano Valley is a nationally significant site for wildlife with a mosaic of habitats. The SSSI at Weston Big Wood has already deteriorated as a result of footfall, and if the adjacent sire is allowed to be developed it will degrade further. Please remove this allocation from the draft plan.			
62559521	Ian Roebuck			Unsure		Unsure	Unsure				
62559521	Ian Roebuck			No	• Justified	Unsure	Unsure	1. According to Portishead Town Council, there are brown field sites in lower Portishead with sufficient capacity to make this green belt development unnecessary. 2. The altitude difference between the site and the town centre will make walking or cycling to and from the town centre impractical for most residents. The bus service is already inadequate so the inevitable result would be yet more traffic on Down Road (which is already anarchic especially at school drop off and pick up) 2. The plan shows an unsuitable ecological buffer to Weston Big Wood to the south of the site. Avon Wildlife Trust should be consulted over this.			
62677057	Stephen Rogers			No	• Positively prepared • Justified • Effective	No	No	LP7 Blackrock and Tower Farm Portishead. I don't believe that this land falls in to the category of exceptional circumstances for building. Weston Big Wood is adjacent to these sites, it is an ancient woodland and should be protected, the councils vision states "Valued areas will be protected" this development will have an adverse effect on the woodland and the habitat which does not comply with the stated vision. The council aims to reduce pollution and noise. Building more houses on green belt land in an already congested area without any regard to the current road infrastructure is hardly going to achieve this aim. By building on these sites it will deprive this generation and all future generations of the right to walk freely in open countryside on the legally protected footpaths traversing this land, obstructing them is illegal. There are several brown field sites in Portishead, Clevedon and other areas in North Somerset that should be built on before development on any green field sites are contemplated. Builders are delaying building on land which they have already obtained planning permission for, all existing sites should be developed fully before any new sites are considered and started.			
58634753	Kerry Ross		None	No	• Justified • Effective • Consistent with national policy	No	Unsure	The site is in the greenbelt. From the REPRESENTATIONS IN RESPONSE TO THE NORTH SOMERSET LOCAL PLAN REGULATION 19: ADDITIONAL SITES CONSULTATION March 2025 - prepared for Parker Strategic Land Limited : Purpose 3 - to assist in safeguarding the countryside from encroachment The Site is scored as making a ‘Moderate’ contribution to this purpose (purpose c). It states: “This land is mainly an open land on an elevated site. Development would not significantly encroach into the wider countryside as it would be contained for the most part behind the ridge of woodland however harm to openness is augmented by the visible location.” The 'ridge' of Woodland is of course, Weston Big Wood, an ancient Woodland and SSSI. Not just 'any' land. The Wood itself is not huge and would is also potentially be further affected by the plan to build to the south at Black Rock. Though 'buffer zones' are proposed the impact of urbanisation so close to such a delicate habitat is bound to be harmful. Footfall is bound is bound to increase which will also impact the natural habitat. Weston Big Wood is also part of a much larger nature corridor which makes up the Gordano Valley. Losing any part of the 'corridor' affects the whole valley. Indeed in the Parker Report there is a suggestion that the site could be increased to include more Green Belt land: "Whilst the site can be delivered as a ‘standalone’ option, the updated Vision Document also demonstrates the possibility of extending the site to include redundant and underused parts of the land associated with the Avon and Somerset Police Headquarters. This option could enable a continuous connection to Valley Road to the west of the site, and increase the development potential to approximately 500 dwellings" The site is on the outskirts of the town and not an easy walk to the centre of town. This does not seem like the most sensible location for a new housing estate. In summary the proposal seems to contravene S110, S115, S147, S156, S187, S192 & S193 sections of the NPPF	Identify brownfield sites that have yet to be developed (e.g. Wyndham Way), and sites closer to the town centre and public transport.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
62741601	Julia Mary Rothery			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	Unsure	Alternate brown and green field sites with much less ecological impact both in Portishead and across North Somerset. The opportunity to increase housing density on proposed brown field sites across North Somerset which would mean these sites are not required to meet local housing targets. The strategic ecological contribution of these sites in protecting the unique environment of Weston Big Wood (SSI) and the Gordano Valley strategic green corridor. The fact that these sites were specifically added to the Green Belt in the late 1980. because of their high ecological value. For the above reasons, The Local Plan is unsound because National Planning Policy state that sites can only be removed from Green Belt for development under exceptional circumstances and these exceptional circumstances are not proven. No modification short of removing the allocation entirely would make the site appropriate. Given its direct adjacency to ancient woodland, its loss would be irreversible and cannot be mitigated sufficiently. The land should be retained as undeveloped green space managed to enhance biodiversity and provide sustainable public access, in line with the Avon Wildlife Trust's 2030 Strategy and national "30 by 30" recovery goals. I do not support the North Somerset Local Plan 2041 for the Tower Farm location.			
62858017	R Rumble			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	This site should be removed from the local plan. Before building on greenfield sites all brownfield sites within Portishead should be fully developed at an increased density, and this is not the case. Some brownfield sites are not in the plan and others are not fully utilised. If they were in the plan, greenfield sites in Portishead would not be needed, so there inclusion cannot be justified. Having listened to the experts, the damage to the SSSI Weston Big Wood would be significant and irreversible. Avon Wildlife Trust are against the plans as are local wildlife groups. The sites were only added to greenbelt in the late 1980's due to their ecological value, this has not changed. National planning policy says that sites can only be removed from the greenbelt in exceptional circumstances, the fact there are still undeveloped brown field site means this is not the case and their inclusion is unjustified. The site is at the top of a long and steep hill (from all directions). I've lived in the upper part of Portishead for decades now and have never walked or cycled that hill, to suggest the people living in this new estate will do otherwise is fanciful. No sustainable transport is possible to this site and this is against planning policy. Adding a new buses will not mitigate this. Other sites in Portishead would allow walking and cycling, but not this one. The roads around this site are jammed every school day. This estate will only compound this problem. If the school increases in size, it will be further compounded. The roads cannot be changed, so increasing the number of cars using them will cause significant further issues. I use the site daily for dog walking. In Winter significant sections are at times underwater, with the ground unable to absorb more. I dont know what would happen if the site is unable to absorb any water. Parts of Portishead High Street already flood after heavy rain. Building here will not improve this. The site is inappropriate, no modifications will change this, it should be removed. I do not support its inclusion			
62791105	Michele Rundle							As a local resident of Portishead living near the proposed housing developments in Tower Farm and Black Rock, I would like to make the following comments. North Somerset Council needs to explore alternative Brownfield sites for both areas. I.T.V. West did a Feature on this on the 2nd of Dec, and it seems there are many more possibilities in this part of the world that can be utilised. By increasing housing density on Brownfield sites the need to develop Tower Farm and Black Rock would be eliminated. It is my understanding that these areas were added to the green belt in the 1980's due to their high ecological value. If the developments go ahead, the green "buffer" corridors will not be preserved, and there will be environmental damage to a unique habitat. National planning allows Green Belt changes only in exceptional circumstances and these have not been demonstrated. The proposed housing developments will significantly increase traffic in an already congested road system. Public transport, particularly towards North Weston on the Clevedon road is extremely poor. The current network of roads around existing schools i.e. Gordano and High Down will not be able to accommodate the increased volume of traffic or pupils. I envisage much of the area being grid locked, particularly with the added possibility of increased traffic on the Clevedon road if there are any issues with the MS, and cars trying to access the tip. The Clevedon road is also prone to flooding and this will be compounded if the flood plan is built on. Portishead needs a better plan to enhance its current infrastructure before any more housing is built. New schools will need to be addressed, along with doctor's surgeries, dentists and chemists, and a much improved bus service. Lots of areas in Portishead do not have easy access to regular public transport. When these priority issues are resolved, then a meaningful discussion can be had about where appropriate housing should be built. The council needs to meet the needs of the current residents, before adding to the problems.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant? 								Neither of the proposed sites provides safe or suitable access.For these reasons, in my opinion, Tower Farm and Black Rock should be removed from the local plan.			
62777985	David Russell			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	NSC has not properly considered: Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset. Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm and Black Rock The strategic ecological importance of these sites in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor The fact that both areas were added to the Green Belt in the late 1980s due to their high ecological value. National planning policy allows Green Belt changes only in exceptional circumstances and these have not been demonstrated. In addition: Neither site can provide safe or suitable access. Development would create unacceptable transport impacts, failing national soundness tests. The existing public infrastructure utilities in the Tower Farm estate (water, sewage, electricity, broadband) is not capable of supporting the proposed expansion without significant infrastructure upgrade with the associated significant disruption to the existing area and residents. The wider Portishead local amenities such as schools, dental, pharmacy and doctor have not been considered and therefore require to be considered in more detail prior to acceptance of this plan. The previous local plan clearly has not been taken into account and in light of this latest consultation has not provided value for money for the taxpayer. The National Audit Office (NAO) and National Infrastructure and Service Transformation Authority (NISTA) should provide a review of the assurance and scrutiny that was conducted and feasibility of the delivery of the previous plan prior to a revision or replacement plan is approved or considered. For these reasons, Tower Farm and Black Rock should be removed from the Local Plan.	N/A	N/A	
62815041	Tom Sadd			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Dear sirs. I am writing to register my strong objection to the above planning proposal relating to land immediately adjacent to or affecting Weston Bigwood, a designated Ancient Woodland, Local Nature Reserve (LNR), and an important landscape feature within the Gordano Valley. This proposed development would result in significant environmental, ecological, landscape and community harm, contrary to both national planning policy (NPPF) and North Somerset's Core Strategy. Weston Bigwood is an irreplaceable habitat, with ecological value recognised by: - Its status as Ancient Woodland - Its designation as a Local Nature Reserve - Proximity to the wider Gordano Valley Sites of Nature Conservation Interest The National Planning Policy Framework (para 180c) states that development resulting in the loss or deterioration of ancient woodland should be refused, unless there are wholly exceptional reasons. The proposal would harm this protected habitat through: - Direct habitat loss, shading or fragmentation - Disturbance to protected species (bats, dormice, woodland birds) - Degradation of the woodland edge, which is a crucial ecological buffer These impacts cannot be meaningfully mitigated, and therefore the development conflicts with national policy. Weston Bigwood is a defining natural feature in North Somerset, forming part of the Green Belt and contributing to the landscape character of the Gordano valley. The development would: - Break up a continuous woodland corridor - Reduce the sense of openness central to Green Belt purposes - Introduce artificial lighting, noise, and built form into a tranquil environment This is at odds with Core Strategy policies CS4, CS5 and CS12, which require the protection of valued landscapes and natural assets. The woodland is heavily used for walking, recreation, wellbeing, and outdoor learning. Increased development pressure would: - Reduce accessible natural space - Introduce traffic and safety concerns on narrow rural lanes - Diminish the tranquillity that residents and visitors value			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The proposal therefore undermines the council's objectives relating to health, wellbeing, and public access to green space. The access roads around the site are narrow, steep and unsuitable for increased traffic flows, especially construction traffic. Issues include: - Limited passing points - Risk to pedestrians and cyclists - Exacerbation of existing congestion near Portbury and the M5 corridor The development would materially worsen these conditions, contrary to highway safety policies. Protecting mature woodland is one of the most effective local actions for carbon storage, heat mitigation, and ecosystem resilience. Removing or degrading this woodland edge conflicts with the council's commitments on: - Climate emergency response - Biodiversity net gain - Sustainable place-making Any claimed benefits of the development fall far short of the environmental loss. For the reasons set out above, the proposal is in conflict with the NPPF, North Somerset's Core Strategy, and established protections for ancient woodland and the Green Belt. The environmental harm is significant, irreversible, and unsupported by any exceptional justification. This is our home, Portishead has grown exponentially in the last 20 years, without thought for the infrastructure around it, impacting residents, the biodiversity, climate change and the quality of life. We regularly suffer appalling traffic issues, and we are a town that cannot support more housing. The proposed site is not near to, or supported by any amenities, and is entirely unsuitable. Regards, Tom Sadd There are no modifications, short of removing the allocation from the site entirely that will rectify the issues, the proposal is not sound and should not be approved. The land should instead be retained as undeveloped green space, managed to enhance biodiversity, and provide sustainable public access, in line with the Avon Wildlife Trust's 2030 strategy and "30 by 30" nature recovery goals. I do not, there is no sound, or legal reasoning where this proposal becomes workable. I object to it entirely and resolutely.			
62860417	Victoria Sale		none	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	PTC cites the plan in breach of 7 sections of the NPPF: S110, S115, S147, S156, S187, S192 & S193. Avon Wildlife Trust cites that it is in breach of sections of the NPPF – 124, 188, 192 and Section 40 of Natural Environment and Rural Communities Act 2006 The Plan is not sound or legally compliant. NSC did not adequately consider alternative sites with lower ecological impact before proposing the Tower Farm and Black Rock sites in the Local Plan. More housing could be built on brownfield sites to eliminate the need to develop these locations. These sites play a key ecological role for Weston Big Wood (SSSI and SNCI) and the Gordano Valley corridor and were added to the Green Belt in the late 1980s due to their high ecological value. National Planning Policy requires exceptional circumstances for removal of Green Belt status, which have not been demonstrated. Additionally, both sites lack sustainable, safe access and would cause transport issues, failing policy soundness tests. Therefore, Tower Farm and Black Rock should be excluded from the Local Plan. The Gordano Valley is a connected ecosystem, with habitats that depend on each other; development anywhere disrupts the entire system. The long-recognized ecological value of the area is highlighted by both historic and recent studies. A 2023 report commissioned by Portishead Town Council found further decline and significant recreational damage to Weston Big Wood during the Covid pandemic, warning that developments like Tower Farm or Black Rock would lead to significantly increased footfall, noise and light pollution which would have devastating ecological effects on the wood. The valley features diverse habitats - rhynes, saltmarsh, woodland, grassland, orchards, hedgerows, quarries, and rock exposures which support various species, including butterflies, dragonflies, bats, rare birds, birds of prey and rich flora. The 2023 assessment found Weston Big Wood in a declining state due to ash dieback, poor management, and recreational use. The Gordano Valley is highlighted as the area's key wet meadow and wetland bird habitat, with a need to reconnect fragmented environments using Biodiversity Net Gain measures. Black Rock and Tower Farm are within a protected development avoidance zone, also showing high bat activity. Developing on these sites would harm both Weston Big Wood and the larger valley system. Scientific consensus over more than fifty years confirms this landscape is exceptionally valuable and vulnerable, recognised nationally as "one of the most important biodiversity sites in North Somerset. The ancient woodlands at Weston Big Wood have developed over centuries and are now amongst the most fragile and rare of all landscapes in the country. Once damaged they cannot be restored." Avon Wildlife Trust The proposed development of around 400 homes at Tower Farm is situated adjacent to Weston Big Wood which is managed by the Woodland Trust with support from Avon Wildlife Trust. Thie area forms part of to the Gordano Valley ecological network and is a nationally significant habitat mosaic that includes open grassland, wetland, and woodland areas.		I do not support the North Somerset Local Plan 2041 for the Tower Hill Farm location. Developing this site would result in irreversible harm to this area given its direct adjacency to the ancient woodland and its vital role in local biodiversity. To allow development here would be a profound and permanent mistake for both nature and our community. The land here must be preserved as open, undeveloped green space—managed for the benefit of our wildlife and people, not sacrificed for short-term gain. We must protect this site as it is an irreplaceable habitat, thereby upholding our society's commitment to nature recovery. Alternative brownfield sites allowing far lower ecological impact, both in Portishead and across North Somerset have not been properly and fully considered by NSC. Sustainable development can certainly be delivered on brownfield sites across North Somerset, for example Wyndham Way in Portishead and the Castlewood site in Clevedon. The Wyndham Way site is currently unused but has long been set aside for commercial use. Developing this with both housing and businesses could boost local employment and make use of its proximity to the new railway station. Reclassifying the area as mixed-use would encourage development and remove the need for homes near a sensitive SSSI. Increasing housing density on such brownfield sites should most definitely be the priority here and full and proper consideration of these sites may well negate the need to encroach upon green belt land. Castlewood, owned by North Somerset Council, has an area of 3.37 hectares, allows a flat walk to the High Street and is served by multiple local Bristol buses. National guidance classifies sites as suburban (100–120 dwellings per hectare) or urban (200+ dph). This brownfield site could therefore support 300–600 homes, rather than the planned 120, removing pressure on ecologically sensitive areas like Tower Farm and Black Rock. Higher density should be considered before altering Green	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Taken from the Foreword from the Avon Wildlife Trust: We know the natural world is in crisis. Every year we're overwhelmed with new statistics about the shocking losses in wildlife around us. Nature is declining globally at rates unprecedented in human history. Since 1970, we have lost 69% of our wild animals, 50% of all marine wildlife and a staggering 83% of freshwater wildlife. Here in Avon the picture is equally bleak – for example we have 96% fewer starlings and swifts than we did in the 1990s and we've seen sharp declines in familiar friends like nesting birds and hedgehogs. The loss of our natural world is rapid, and it's accelerating at an alarming rate. The first Wildlife Trusts were set up to protect at-risk habitats – and that aim is still central to our mission. For decades we've worked hard to protect the few wild areas that remain, saving species in nature reserves and even bringing some back from local extinction. For over 30 years we have worked with landowners across whole landscapes to create more spaces for nature and join them up with wildlife corridors. But now, in the face of these devastating losses, we need to go further to restore, regenerate and rewild places everywhere, creating more space for nature to recover - before it's too late. The next 10 years are crucial. The 2020s must be a powerful decade of transformation, where people everywhere start taking meaningful action on the ecological crisis. We are encouraged that local authorities in our region have declared nature emergencies and are developing plans for how to respond. Not Justified A robust alternatives assessment has not been published which demonstrates that this sensitive site is the sole or most suitable location for development. The potential loss of best and most versatile (BMV) farmland (classified as Grade 2/3a according to the ALC dataset), together with the risk of permanent harm to ancient woodland, renders this allocation wholly inappropriate. Not Consistent with National Policy The allocation is not consistent with paragraphs 180–182 of the National Planning Policy Framework (NPPF), which stipulate that developments causing the loss or degradation of irreplaceable habitats, such as ancient woodland, should be refused unless there are wholly exceptional circumstances. The Council's reference to an "ecological buffer" lacks specificity, enforceability, and adequacy in mitigating indirect effects, including root-zone disturbance, hydrological alterations, or impacts on wildlife. Both the Woodland Trust and Avon Wildlife Trust have indicated that damage to ancient woodland is irreversible. Furthermore, while the Framework mandates delivering biodiversity net gain, the allocation does not provide a clear mechanism to secure this outcome. Expert opinion from naturalist Chris Sperring MBE concludes in relation to the developer's report: "The plans will represent a significant loss of biodiversity over time due to the proximity of the site to Weston Big Wood. No amount of mitigation or BNG credits are going to replace an ancient Woodland and SSSI and the ecosystem that it supports. The Woodland Trust and Avon Wildlife Trust state that ancient woodland is irrecoverable once damaged. Once it is gone it will be gone forever. Instead, consideration should be made for designating Tower Farm as a Biodiversity Net Gain site which would allow some of the ecological damage over the last 50 years to be repaired." Not Positively Prepared The proposed locations piles pressure on established and ongoing challenges within Portishead, including strains on schools, healthcare services, and transport infrastructure such as those affecting the A369 corridor. Development at these peripheral sites would increase reliance on private vehicles and contribute to higher pollution levels, rather than fostering sustainable travel habits as outlined in NPPF paragraphs 104–106. Not Effective Delivery is contingent upon several as yet unsettled dependencies, including the provision of a new school, contributions to bus services, off-site biodiversity management, and improvements to rights-of-way and buffer zones. There is no published phasing plan, funding mechanism, or legal agreement to secure these requirements. In the absence of such mechanisms, the allocation cannot be deemed deliverable within the plan period (NPPF paragraph 35(c)). Landscape & Connectivity The farmland and woodland boundary serves as a vital ecological and landscape transition zone: development within this would likely result in habitat fragmentation, reduce the effectiveness of the Gordano Valley wildlife corridor, and impact the rural fringe character. Even with the implementation of a buffer, considerable visual and ecological intrusion on the woodland and surrounding landscape would be substantial. Drainage & Hydrology Construction and built environment will alter surface water run-off, compact soil, and disrupt the hydrology that supports nearby ancient woodland. These changes increase risks of nutrient run-off, changes to infiltration and harm to the woodland's root zone. Cumulative Impact When considered alongside other allocations in the Portishead area, such as Black Rock, the cumulative impact on ecology, infrastructure and transport is considerable and compromises the Council's commitments to nature recovery and sustainable development.		Belt boundaries to comply with NPPF. Efficient development at Castlewood would increase Clevedon's housing supply, currently low compared to other North Somerset towns, promoting fairer distribution. It's worth noting that Portishead's population has grown 60% between 2001 and 2025, and NSC has a duty to maximise revenue from their land. Brownfield sites provide valuable opportunities to increase housing density across North Somerset. According to the AECOM Housing Needs Assessment, in Portishead there is a priority demand for affordable 1, 2, and 3-bedroom homes for diverse needs and incomes, with no additional need for 4-bedroom properties. Fully utilizing North Somerset's brownfield sites could eliminate the need to develop Tower Farm and Black Rock. These locations are better suited to deliver affordable, well-planned housing near local amenities and sustainable transport, without impacting the ecologically significant Green Belt and SSSI woodland around Weston Big Wood, protected for its strategic importance since 1988. With decades of evidence supporting its importance, the Tower Farm site should not be considered for development. Furthermore, there are some additional greenfield sites which should be proposed before considering any alternation to the Green Belt, for example in Backwell and Long Ashton which could better accommodate development as even these greenfield sites are not of the same ecologically vital calibre as the land surrounding Weston Big Wood. Neither Tower Farm nor Black Rock offers safe or practical access, especially for vulnerable groups. Developing these sites would increase car dependency and infrastructure strain in Portishead. National planning policy restricts Green Belt changes to exceptional cases, which have not been shown here. Any development at Tower Farm and/or Black Rock would irreversibly damage habitats, fragment the Gordano Valley ecological network and undermine nature recovery ambitions. No mitigation or buffer can render this site suitable. The land here must be managed as open countryside to support biodiversity, landscape quality and sustainable community use.	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								No modification could be made apart from removing the allocation entirely. The Tower Farm and Black Rock sites are inappropriate for development. The immediate proximity of the ancient woodland means that its inevitable decline caused by any development here would be permanent and cannot be adequately mitigated. The land should be preserved and protected as undeveloped green space, actively managed to support biodiversity and facilitate sustainable public access, consistent with the Avon Wildlife Trust's 2030 Strategy and national "30 by 30" nature recovery goals.			
51423809	Denise saunders			Yes	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes			i support the plans for this site	
62846401	Christine Suanders							I am emailing to object to the plan to build more houses on Tower Farm and Black Rock because this is a greenbelt area. Further developments in this area will impact on transport, school, GP surgeries, pharmacies and more. I object to this development and wish to protect the local environment.			
58097953	Liam Saunders			No	• Positively prepared • Justified • Effective	Unsure	Unsure	- There is evidence to suggest that there hasn't been sufficient and significant research into the ecological impact on the wildlife and eco system within Weston Big Wood. - A significant green space and area of Green belt is being targeted, when there are other significant sites within Portishead, that can be used with less ecological impact. - There is going to be a significant increase in traffic risk, traffic flow, air pollution, strain on utilities and local resources, as a result of building on this site. - Residents of The Deans/The Downs will see a significant negative impact to their transport route around their homes, based on the proposed road structure. - Other sites available around Portishead are more viable, based on pre existing utilities, proximity of Portishead's main road infrastructure, local amentities that are reachable by foot. The land at Tower Farm doesnt offer this and will result in a significant amount of additional people having to use their cars locally as the public transport wont support or meet the needs of those in the area. - Providing one access and exit route to the site is highly dangerous and an increased risk in this particular area. The plan is proposing to divert hundreds of additional vehicles, within close proximity of a primary school and will only result in the potential danger to life.	I believe there are too many significant risks to health and safety, with regards to building on this proposed site. There is no evidence to suggest that modification to this proposed plan will remove the increased danger to life, with regards to increased traffic flow and air pollution. I believe overall, serious consideration into other available sites within the area needs to be taken. They will have less of an impact on health and wellbeing of local residents, as well as contribute to the overall protection of local wildlife and ecological systems.	I do not wish to support these plans.	
30736993	Kath Scargill									I support affordable housing here and also to help our young people	
62692673	Tim Scott			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The land at Tower Farm NSC has not properly considered alternative brown/green field sites with much lower ecological impact in Portishead or across N Somerset. Opportunities have not been taken to increase housing density on proposed brown field sites which would remove the need to develop the existing green belt land at Tower Farm. The ecological importance of protecting Weston Big Wood (SSSI) which lies adjacent to the land at Tower Farm and the Gordano Valley green corridor beyond should be maintained. This area was added to the Green Belt in the late 1980s due to its high ecological value. National Planning Policy allows green belt changes only in EXCEPTIONAL circumstances; these have not been demonstrated. In addition a single access from The Downs to the Tower Farm site cannot provide safe or suitable access particularly bearing in mind the location of High Down Schools at the top of The Downs at the junction of Down Road which is already heavily congested at school drop off/pick up times. Adding a further 400 homes using this single access would severely exacerbate existing traffic problems. This would also affect the density of traffic in the surrounding roads and in Portishead. The land at Tower Farm is totally unsuitable for development and should be removed from the plan given its proximity to important ancient woodland (Weston Big Wood) the loss of which would be irreversible. The land should instead be retained as undeveloped green space managed to enhance biodiversity and provide sustainable public access. I do not support the North Somerset Local Plan 2041 for the Tower Farm location.			
58443777	John Scott			No	• Justified • Effective	Yes	Yes	This proposal has not thought through access issues from The Downs this road is not appropriate for a development of this size. Being that the development will be larger than the existing housing and that the road is gridlocked at school drop off and pick up times and the surrounding area. Big wood is an area of special scientific interest this development will have a negative impact on the nature and wildlife that reside there. It is used as a place for physical activity as well as a place i regularly use to aid my mental health wellbeing.			
62784417	Keith Shepherd			No	• Positively prepared	No	No	This area is exceptional Green Belt in contradiction to the NSC Green Belt assessment which fails to factor in the special circumstances that led to this relatively late designation as Green Belt in 1998.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					• Justified • Effective • Consistent with national policy			There is no robust published alternatives assessment demonstrating that this sensitive site is the only or most appropriate option for growth. The site is not close to employment opportunities or reliable public transport and therefore there will be a increase in private vehicle use - the current road infrastructure is already struggling. Completely remove the allocation of this site from the plan. The site should be left as undeveloped green space to protect Weston Big Wood and the Gordano Valley Green corridor. I do not support the North Somerset Local Plan 2041 for the Tower Hill Farm location.			
62855137	Rosemary Shepherd			No		No	No	There are other suitable development sites within Portishead and the county as a whole with lower ecological impact and without having to build on Green Belt land. Weston Big Wood is an important part of the Gordano Valley green corridor and a development at Tower Farm would have a negative impact on the wood due to increased light, noise and air pollution and the large numbers of additional people using the wood as their green space. No buffer zone would be large enough to protect the wood. This development would threaten the integrity of the wood. Does North Somerset Council want to be responsible for the destruction of ancient woodland? Access to the Tower Farm site would be unsafe due to the large numbers of additiional vehicles exiting on to Down Road, which is already virtually gridlocked at certain times of day. This site is too far from Portishead High Street to make it easily accessible by foot or cycle. It is a 25-30 minute walk down a steep hill, so cars will be the preferred way to travel. The roads from Tower Farm down into Portishead are already extremely busy. Public transport is unreliable, and when the station eventually opens it will be much further than the recommended 10-15 minute walk so cars will again be used. Exceptional circumstances for removing this area from Green Belt have not been proven.			
42816289	Brenda Shyne			No		No	No	I believe that there are more suitable sites for development than Tower Farm. Other sites, some previously dismissed have not been given renewed vigorous consideration. Tower Farm is adjacent to an ancient woodland. Under DP 35 of the draft plan {Nature Conservation} it points out that development within or in proximity to a SSI will not normally be permitted. During Covid it was found that the temporary increased use of the woodland had a negative impact on the wood from which it is still to recover. This suggests that a housing estate so close to the woods, together with increased surface water rainwater would lead to permanent and irreversible damage to the woods, it's ecology and result in loss of biodiversity. I do not see the justification for conflicting with National Planning Policy Framework paragraphs 180-182. This is designed to protect habitats such as Ancient Woodland and as no exceptional circumstances exist it should be adhered to. Tower Farm is a working farm and is designated as of Highest Quality Agricultural Land. The National Planning Framework requires local authorities to protect BMV land. The proposed development of Tower Farm would greatly increase the number of cars in use. This would have a negative impact on the environment, especially harmful to a Site of Nature Conservation Interest. The very long and very steep gradient leading from the town and it's facilities to the proposed site would deter all but the very fittest walker or cyclist. But allow for shopping, small children and pushchairs, even this hardy minority will choose to use a car. In fact this location could probably lead to two cars per family being seen as a necessity. In conclusion, surely the development of other sites, even those previously dismissed for various reasons would have a less catastrophic effect than the potential loss of an irreplaceable Ancient Woodland that we should be preserving for future generations. No modifications to the proposed development of Tower Farm could ensure the preservation of The Ancient Woodland, Weston Big Wood. The development of this site is inappropriate and I hope the removal of the proposal will allow The Woodland Trust, with the support of The Avon Wildlife trust to continue to conserve this habitat for generations to come. I do not wish to support the North Somerset Local Plan 2014 for the location at Tower Farm, Portishead.			
62859873	John Shyne		John Shyne	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The Tower Farm allocation isn’t backed by a transparent assessment of alternatives and would result in the loss of good-quality farmland beside an ancient woodland, making the site poorly chosen. The plan risks irreversible harm to Weston Big Wood, contrary to national policy protecting irreplaceable habitats. Proposed “buffers” are unclear and don’t address indirect impacts such as hydrology changes or wildlife disturbance. Local services and transport routes, already stretched, would face further pressure. The location would likely increase car use rather than support sustainable travel. Essential elements needed to make the development deliverable—school funding, transport improvements and biodiversity measures—are not secured, calling the allocation’s effectiveness into question.	Only by not continuing with the plan and removing allocation entirely. Keep the land as essential green space in Portishead		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Development would erode the farmland–woodland transition zone, weaken ecological connectivity across the Gordano Valley and alter the area's landscape character. With Weston Big Wood being a SSSI. Surface-water and soil changes from construction pose risks to the woodland's hydrology and root environment. In combination with nearby proposed sites, the cumulative ecological and infrastructure impacts undermine commitments to nature recovery and sustainable growth. I do not support the soundness or legal compliance for Tower Hill Farm area.			
62954785	Stephen Stoklosa							The Family has lived in Portishead for since 1977. I have enjoyed walking across those fields to Gordano School. Please do not develop an area which has been designated as 'Green Belt' since I have lived here. The development of the 'Green Belt Land' will lead to 'upsetting the balance of nature in Weston Big Wood' and 'overtime its demise'. This is the choice that has to be made. Destroy Nature with Development or Keep It? I believe the planning should be looking at the development of 'Brown Field Sites'. Portishead has already had a lot of expansion. Dr Liam Fox, MP at the time, has given a previous presentation in Parliament describing exactly, 'Why the development of this land doesn't work and I believe His arguments hold true'. This presentation is available on 'You tube'. This development is not within 'walking distance' of the 'Centre of Portishead'. We already have 'morning traffic'. The Railway was removed in 1964 and is due back. This will enhance the ability of the already expanded Population to be able to live and work in Bristol. I am just 'one little voice in the wilderness'. I wish to see 'Brown Field Sites' developed and 'current run down housing repaired and restored with technology upgrade for insulation and lower carbon footprint'. Climate is changing and We really shouldn't be removing nature. 'Nature is Our Future Families Lifeline'. Our current 'World Human Activity', is slowly crawling to 'Destruction of the Environment' and at some point, Our Future Families will look back and say, 'Why did they do that?'. Some of Us forget, Time is beating us all up, We won't be around to see the 'result of Our Decisions', but Our Children Will. I will sign off whilst Listening to 'Bird Chorus'. Not a Christmas Reading Psalm 65:- God Bess - Psalm 65 - Verse 12 - 'The Grasslands of Wilderness overflow' - verse 13 - The meadows are covered with flocks and the valleys are mantled with grain; they shout for joy and sing.			
20454017	Ian Slatter		Mr	No	• Consistent with national policy	No	Unsure	I believe that in respect of the Tower Farm development site proposal North Somerset Council's Plan is in breach of seven sections of the NPPF (S110, S115, S147, S156, S187, S192 & S193). I am going to focus on S147. NPPF S147 states that "Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development. This will be assessed through the examination of its strategic policies, which will take into account the preceding paragraph and whether the strategy: a) makes as much use as possible of suitable brownfield sites and underutilised land; b) optimises the density of development in line with the policies in chapter 11 of this Framework, including whether policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport." North Somerset Council claims in its Green Belt Review Background Paper that there is insufficient capacity to meet their housing target using "Brownfield Sites and Underutilised Land." However, at least two brownfield sites in Portishead exist yet have not been included in NSC's Plan. Planning permission was granted in 2017 for 33 homes at a brownfield site in Portishead between Wyndham Way and Cheviot Meadow (17/P/1229/FUL), a short walk to the town centre and close to the location of the new railway station. These were not built, and permission was later granted for a care home there, but that has also not been built and the site is for sale again. Land is also for sale next to The Poacher public house, on the High Street, with an indicative 8 homes. That is 41 homes for starters, maybe more depending on the density of developments, that do not need to be built of the Green Belt. How many other brownfield sites are there in North Somerset that NSC has overlooked and that should be included before releasing Green Belt land? NSC also claims in its Green Belt Review Background Paper that "The North Somerset Local Plan 2041 has… ensured that opportunities to promote a significant uplift in minimum density standards in towns, strategic allocations and other appropriate locations well served by public transport have been incorporated into policies throughout the plan." This can also, however, be shown not to be the case. The density of the Wyndham Way site in Portishead was increased from 485 to 785 homes in the latest version of the Plan, but only after this was suggested by Portishead residents (as a way to reduce the requirement for Green Belt releases). NSC also mentions the Woodspring, and Wolvershill sites, but no others. Many other sites (at least 23) are clearly, from their descriptions, brownfield. If 300 homes can be added to Wyndham Way by increasing the density, this could surely be done elsewhere,			Response to North Somerset Local Plan 2041-Tower Farm.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								removing the need to build on the Green Belt in Portishead and elsewhere. A prime example of a site that is not being made full use of is Castlewood in Clevedon. This is a disused office site owned by North Somerset Council and has an allocation of just 120 homes. It is a sustainable location measuring 3.37 hectares with a flat, half a mile, 12 minute walk to the centre of town. It is served by the X5, X6, X7/X7a, X10 and X11 bus services, with bus stops immediately next to the site. It should be classified as either a suburban or urban site and national guidance recommends a dwelling density of 100-120 dph (dwellings per hectare) for suburban sites and 200+dph for urban sites. This brownfield site could therefore accommodate between 300 to 600 homes rather than the 120 currently planned, without causing any damage to the environment or to the local heritage. It is also truly baffling that NSC is not seeking to maximise its financial return from the site. Surely it has a statutory duty to obtain the maximum return from the sell-off of assets such as this, and if they sold a site that could accommodate more than 300 homes to a developer based on an allocation of 120 this would be a breach of their duty to council tax payers. It should also be noted that at present Clevedon currently only has an allocation of 258 compared with 6,084 in Weston, 1,347 in Portishead, 1,683 in Backwell, 1,817 in Nailsea and 1,100 in Pill. Increasing the density at Castlewood would provide more new homes for the residents of Clevedon to purchase and would also help to give a fairer distribution of development across North Somerset. This Plan therefore does not maximise the use of brownfield sites, which should be done before making changes to the Green Belt. A significant amount of Green Belt land could be protected whilst maintaining the total number of new homes within the Plan, if all brownfield sites were included and their density properly considered. Even if some Green Belt allocations are still required, the Tower Farm site should be one of the sites removed from the Plan as it is an environmentally crucial site, adjoining Weston Big Wood SSSI and playing a key part in the Gordano Valley ecosystem, as evidenced by Gordano Valley - The Future of Wildlife and Gordano Valley Ecological & Development Strategy Report. It was surely not the intention of the changes to the NPPF that now allow Green Belt revisions to reclassify land such as this as Grey Belt, and to do so would be in breach of NPPF sections 187, 192 and 193. Tower Farm should therefore be removed from the Plan as NSC has not complied with NPPF 147, and could provide the target number of homes without its inclusion. Please also see the attached document - Response to North Somerset Local Plan 2041- Tower Farm.		
29270401	Ingrid Slatter			No	• Consistent with national policy	No	Unsure	NPPF S147 makes it clear that brownfield sites should be used and their density maximised BEFORE revisions to the Green Belt are made. North Somerset Council has not done this, which is clear as numerous brownfield sites have been omitted from the Plan and others could have their density increased considerably. Enough homes can be provided using brownfield sites to make the 400 homes proposed at Tower Farm unnecessary. If Green Belt is still needed in order for NSC to hit its centrally imposed housing target then Tower Farm should not be one such site due to its ecological importance adjacent to Weston Big Wood NSSI. Tower Farm is also unsuitable as a development site due to its location. It is not a sustainable site as residents would need to drive to get everywhere, and as there is already considerable congestion on the roads that would be used to access it, eg Down Road and The Downs, traffic issues, carbon emissions and poor air quality problems would be considerably exacerbated by the addition of 400 new homes.	Tower Farm should be removed from the development list and the 400 homes provided preferably on brownfield sites.		
62727745	D Smart			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The proposed allocation of Land at Tower Farm (≈ 400 homes) lies immediately beside Weston Big Wood — an ancient woodland and Site of Nature Conservation Interest (SNCI) managed by Woodland Trust and supported by Avon Wildlife Trust. The woodland forms part of the Gordano Valley ecological network and a nationally important habitat mosaic of open grassland, wetland and woodland. Not Justified There is no robust published alternatives assessment demonstrating that this sensitive site is the only or most appropriate option for growth. The loss of best and most versatile (BMV) farmland (Grade 2/3a by reference to the ALC dataset) and the risk of irreversible damage to the ancient woodland make this allocation unsuitable. Not Consistent with National Policy The allocation conflicts with the National Planning Policy Framework (NPPF) paragraphs 180–182, which require that development resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland) should be refused unless wholly exceptional reasons exist. The Council's reference to an "ecological buffer" is vague, unenforceable and insufficient to address indirect impacts such as root-zone damage, hydrological change or wildlife disturbance. The Woodland Trust and Avon Wildlife Trust state that ancient woodland is irrecoverable once damaged. Moreover the Framework requires delivering biodiversity net gain, yet the allocation offers no clear mechanism for ensuring that outcome. Not Positively Prepared The location intensifies existing pressures in Portishead: schools, healthcare and transport infrastructure are already under strain (for example the A369 corridor). This peripheral site would likely increase private vehicle usage and pollution rather than support sustainable travel patterns, contrary to NPPF paragraphs 104–106.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Not Effective Delivery depends on multiple unresolved dependencies: new school provision, bus service contributions, off-site biodiversity management, and upgrades to rights-of way/ buffer zones. No phasing plan, funding mechanism or legal agreement is published to secure these. Without such mechanisms the allocation cannot be considered deliverable within the plan period (NPPF paragraph 35(c)). Landscape & Connectivity The farmland/woodland edge acts as a critical ecological and landscape transition zone. Development here would fragment habitat, diminish the Gordano Valley wildlife corridor and erode the rural fringe character. Even with a buffer the visual and ecological intrusion into the woodland and surrounding landscape would be significant. Drainage & Hydrology Construction and built development would alter surface-water run-off and soil compaction on the former farmland, potentially affecting the hydrological regime that sustains the adjacent ancient woodland. The risk of nutrient runoff, altered infiltration and woodland root zone damage is material. Cumulative Impact When considered alongside other allocations in the Portishead area (such as Black Rock north of Clevedon Road), the combined pressure on ecology, infrastructure and transport is significant and undermines the Council's commitments to nature recovery and sustainable growth. No modification short of removing the allocation entirely would make this site appropriate. Given its direct adjacency to ancient woodland, its loss would be irreversible and cannot be mitigated sufficiently. The land should instead be retained as undeveloped green space, managed to enhance biodiversity and provide sustainable public access, in line with the Avon Wildlife Trust's 2030 Strategy and national "30 by 30" nature recovery goals. I do not support the the North Somerset Local Plan 2041 for the Tower Hill Farm location.			
39209857	Rebecca Smith			No	• Justified	Unsure	Unsure	While there is a legal requirement to build more houses and North Somerset are required to have an allocation of these, Portishead has seen more than its fair share of development over the last few decades. The infrastructure has not matched the development, with doctor's surgeries being at capacity and roads becoming ever more congested. Therefore I do not feel it justified to build any more houses in Portishead as there simply isn't room. With reference specifically to Tower Farm and 400 houses being built there, I strongly object to this. This green space is a vital resource for local people to access recreationally and provides much benefit for mental wellbeing. Removing this would be a huge loss and deny locals of a space in nature to walk and enjoy the outside. Additionally, removing any green space will always affect wildlife as it would be removing a natural habitat for many creatures, upsetting the existing balance. The proximity to Weston Big Woods is also a concern. 400 houses means 800 new cars in this space. We are already way too congested with vehicles in Portishead. Therefore I strongly object to this development.			
62862241	Angela Smith			Unsure	• Effective	Unsure	Unsure	We live in Hilltop which is a road off Tower Road. We consider that the plans to build at Tower Farm could only make the parking at High Down School area much worse. In our opinion the parking there at school drop off and pick up times creates the possibility of an accident (waiting to happen!) - very dangerous for schoolchildren and parents! I agree with the argument that the area should be kept as green belt and not built on as it includes the lovely Weston Bigwood and surrounding countryside. There are other more suitable sites which wouldn't impact on the local beauty. Please can we keep Portishead to a reasonable size which is supported by a decent amount of infrastructure (doctors, schools etc) and also make it possible to get in and out of the town at rush hour times as we still have no railway opened - which has also been promised! Geoff and Angela Smith			
58558273	Paul Sperring			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The proposed Tower Farm allocation is unsound and should not proceed because it places around 400 homes directly beside Weston Big Wood — an ancient, irreplaceable woodland at the heart of the Gordano Valley ecological network. Ecological damage would be irreversible, harming protected habitats, and fragmenting a nationally important landscape. No robust alternatives assessment has been published, the site involves the loss of high-grade farmland, and the proposal conflicts with the National Planning Policy Framework, which requires refusal of developments that threaten ancient woodland unless wholly exceptional circumstances exist. Claims of an 'ecological buffer' are vague and inadequate, with no enforceable protections against hydrological change or wildlife disturbance. The allocation also fails key planning tests - it is not positively prepared, given existing pressures on Portishead's schools, healthcare and transport; not effective, as delivery depends on unresolved and unfunded infrastructure and environmental measures; and not aligned with sustainable travel objectives, as this peripheral location would increase private-car dependency. Additionally, the cumulative impact alongside other local allocations would further undermine nature recovery and overstretch already burdened			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								infrastructure. No modification short of removing the allocation entirely would make this site appropriate. Given its direct adjacency to ancient woodland, its loss would be irreversible and cannot be mitigated sufficiently. The land should instead be retained as undeveloped green space, managed to enhance biodiversity and provide sustainable public access, in line with the Avon Wildlife Trust's 2030 Strategy and national '30 by 30' nature recovery goals I don't support the the North Somerset Local Plan 2041 for the Tower Hill Farm location.			
62861761	Sarah Sprason			No	‣ Justified ‣ Consistent with national policy	Unsure	No	As I understand it the local plan should support the views of residents and make sure that as far as possible the needs of the environment are also highly regarded. Locally, the inclusion of Tower Hill Farm and Black Rock for future housing does not do either of those things	With regard to housing brownfield and sustainable sites should be explored before allowing building on green spaces, particularly where local towns have been already been swamped with housing and grown exponentially over recent years.		
58520865	Giacomo Squintani			No	‣ Positively prepared ‣ Justified	Unsure	Unsure	You state: "By 2041 there will be a transformation in the way we live which reflects a more responsible attitude to climate change and the use of resources. New homes, buildings and communities will be highly sustainable, accessible and attractive places with higher quality standards. There will be more diversity in terms of the form and type of new development to increase variety and choice to better meet the needs of all, create jobs and to tackle inequality. Regeneration will transform and breathe new life into existing towns and valued areas will be protected. People's well-being, a strong sense of community, opportunity and fairness will be at the heart of all development in North Somerset." I am wholeheartedly in agreement. Which is why I strongly urge North Somerset Council to work with the local Portishead Council to identify sites that are better suited to deliver on this vision. In particular, at a time when a railway appears to be on its way, "highly sustainable" must surely mean affordable housing within walking distance of the new railway station? I have read comments about the site near Weston Big Wood being earmarked because it is within "cycling distance" of the new railway station. On medical grounds (epilepsy) I neither drive nor cycle, but have run to Bristol Temple Meads, Bristol Parkway, Bristol International Airport and Bristol Bus and Coach Station - so I have first-hand experience of runcommuting and indeed, from further back, cycle-commuting. It tends to require showering and changing facilities, and most people who might be willing to cycle to work will be put off, understandably, by unclement weather, not least when carrying electronics. These are generic points: specifically to Weston Big Wood, the ease with which the gradient has been dismissed, with the focus placed solely on the distance treating a steep climb the same way one would treat a flat stretch, is naive at best and insulting at worst. I am a father of two teenagers. Teenagers who may ultimately find employment in Bristol and wish to commute there by train. Should they ever leave home, they will not be looking at the type of properties most new developments deliver. Should they wish to either get on the housing ladder or even just rent, they will be looking for flats. Affordable, sustainable housing is what is needed: and that means easy access not just to the train station but also bus routes and shops. It means proximity to the new railway station, for example in the area near Old Mill Road which I believe has not yet received the attention it deserves. On a final point: I live on top of the hill, opposite the Merlin Park field which features a ditch that tends to fill up at times of heavy rain. I have had visitors who have expressed surprise when it has not been full, as they believed "the lake" to be a permanent fixture. Whilst I appreciate draining would be considered, the notion of housing at the bottom of this field, but with significant sections covered in tarmac to enable access and allow for two football pitches, sounds utterly unappealing. I moved to Portishead in 1999 and recall houses near the High Street being hit by mild flooding in my first winter here: indeed, it is one of the reasons that made buying at the top of the hill appealing, not least as I was able to drive back then and a railway station was being mooted. Twenty-six years later, the lack of discussion around the risk of flooding in new areas or compounding the risk in areas which already feature housing is concerning.	I believe it necessary to liaise with the Portishead Town Council to identify more suitable sites, prioritising the Old Mill Road area and spaces closer to the proposed railway station site. Anything beyond a ten-minute walk is going to result in unsatisfactory walking / cycling commuting rates.		
62716801	Bryan Stokes							Tower Farm and Black Rock - proposals I object to both of these sites for the following reasons: They will have a serious detrimental impact on the Weston Big Wood SSSI site. - A significant border around the woodland is essential for the ecology of the woodland species. - These areas are in the Green Belt and were added as late as the 1980s as essential protection. - Removing their Green Belt status is not sufficiently justified. There are other areas of brownfield sites in Portishead that have not been sufficiently investigated to provide housing that would be a more suitable alternative to the above mentioned sites. Access to sites around Weston Big Wood will have a major impact on the existing residents in an already congested area around the vicinity of Highdown school. Undoubtedly the majority of newcomers to these sites would have an occupation needed to fund their ownership, that required them to travel in the direction of Bristol or the M5 Motorway or even to the new railway connection by motor car.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
62907425	Maggie Storey							I am very concerned about the ecological impact that the proposals for the development of Tower Farm and Black Rock would have and believe there are alternative brownfield sites or greenfield sites with lower ecological impact, both in Portishead and across North Somerset. I also believe that there are opportunities to increase the housing density on proposed brownfield sites, which could reduce the need to develop these two sites. Both these areas were added to the Green Belt in the 1980s due to their high ecological importance. The strategic ecological importance of both these sites in relation to Weston Big Wood (designated a SSSI) and the Gordano Valley green corridor needs to be taken into consideration. In addition, there has been no demonstration of the exceptional circumstances for using these Green Belt sites for development. For these reasons, Tower Farm and Black Rock should be removed from the Local Plan and alternative proposals considered as mentioned above.			
62915169	John Storey							Please reconsider the plans for the above development. The ecological impact that the proposals for the development of Tower Farm and Black Rock will be devastating There are alternative brownfield sites already approved for development, or greenfield sites with lower ecological impact The strategic ecological importance of both these sites in relation to Weston Big Wood (designated a SSSI) and the Gordano Valley green corridor do not appear to have been taken into consideration There has been no demonstration of the exceptional circumstances for using these Green Belt sites for development. For these reasons, Tower Farm and Black Rock should be removed from the Local Plan and alternative proposals considered as mentioned above.			
62831617	Stephen Tanner		Retired	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Not Justified There is no robust published alternatives assessment demonstrating that this sensitive site is the only or most appropriate option for growth. The loss of best and most versatile farmland and the risk of irreversible damage to the ancient woodland make this allocation unsuitable. Not Consistent with National Policy The allocation conflicts with the National Planning Policy Framework which require that development resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland) should be refused unless wholly exceptional reasons exist. The Council's reference to an "ecological buffer" is vague, unenforceable and insufficient to address indirect impacts such as root-zone damage, hydrological change or wildlife disturbance. The Woodland Trust and Avon Wildlife Trust state that ancient woodland is irrecoverable once damaged. Moreover the Framework requires delivering biodiversity net gain, yet the allocation offers no clear mechanism for ensuring that outcome. Not Positively Prepared The location intensifies existing pressures in Portishead: schools, healthcare and transport infrastructure are already under strain (for example the A369 corridor). This peripheral site would likely increase private vehicle usage and pollution rather than support sustainable travel patterns, contrary to the National Planning Policy Framework. Not Effective Delivery depends on multiple unresolved dependencies: new school provision, bus service contributions, off-site biodiversity management, and upgrades to rights-of way/ buffer zones. No phasing plan, funding mechanism or legal agreement is published to secure these. Without such mechanisms the allocation cannot be considered deliverable within the plan period. Landscape & Connectivity The farmland/woodland edge acts as a critical ecological and landscape transition zone. Development here would fragment habitat, diminish the Gordano Valley wildlife corridor and erode the rural fringe character. Even with a buffer the visual and ecological intrusion into the woodland and surrounding landscape would be significant. Drainage & Hydrology Construction and built development would alter surface-water run-off and soil compaction on the former farmland, potentially affecting the hydrological regime that sustains the adjacent ancient woodland. The risk of nutrient runoff, altered infiltration and woodland root zone damage is material. Cumulative Impact When considered alongside other allocations in the Portishead area (such as Black Rock north of Clevedon Road), the combined pressure on ecology, infrastructure and transport is significant and undermines the Council's commitments to nature recovery and sustainable growth. No modification short of removing the allocation entirely would make this site appropriate. Given its direct adjacency to ancient woodland, its loss would be irreversible and cannot be mitigated sufficiently. The land should instead be retained			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								as undeveloped green space, managed to enhance biodiversity and provide sustainable public access, in line with the Avon Wildlife Trust's 2030 Strategy and National Nature Recovery goals I do not support the the North Somerset Local Plan 2041 for the Tower Hill Farm location			
63024481	Mark Taylor							I have visited the North Somerset local plan 2041 site and would like to comment on particular developments proposed around Portishead, in particular the sites at Tower Farm and Black Rock. I have lived in North Weston since 2000 and I have seen a huge development of Portishead from a small town into what it is today. The developments on the Vale and on and around the Marina has saturated a small community with massive infrastructure issues, such as road networks, schools and general facilities. A railway link has been promised for many years in the area and funding has continually been withdrawn. Now the government is insisting on more houses to be built then there is now funding promised. This is nothing new, as this was always part of a plan when the previous developments were put forward. As always the developments get completed and then the funding for the infrastructure is withdrawn. I believe the government requires affordable housing. If you look at the average house prices in and around Portishead these are not affordable to the people that want to get on the housing ladder. Four- and Five-bedroom houses are not required. What is required is good old fashioned two- and three-bedroom houses that can be starter homes or council owned rented accommodation. Developing the above sites will never filter down sufficiently to get people onto the housing ladder. The above sites were deemed green belt sites in the 1980's and a green corridor created from the marina area of Portishead to Clevedon to protect the surrounding wildlife. The government have relaxed the rules to allow green belt to be recategorized so development of housing can take place in EXCEPTIONAL CIRCUMSTANCES. I believe there are no exceptional circumstances that exist for the development of these sites. There are plenty of alternative brown sites that can be developed without massively disrupting and in part destroying the local wildlife infrastructure. The ecological impact that housing development would case Weston Big Wood would be catastrophic. There is a need to protect the Weston Big Wood SSSI and the Gordano Valley green corridor, for today and future generations. I side point about protecting green corridors is the fact that during the Covid pandemic time, the government pushed and promoted that people should get out and enjoy the green spaces as part of their own well being and mental health. Why has this policy changed? The mental health capacity within the NHS is under massive strain already without removing valuable areas where people can help themselves at no real cost and keep their mental health in check. We have a cost-of-living crisis so free spaces such as Weston Big Wood should not be put under threat. One such brown site is around the Old Mill area. It is mentioned that to build would mean lose of jobs. I disagree. There could be suitable development where workspace is development at ground level and smaller one or two bedroomed homes could be built above. These would be affordable and jobs would not be lost. This would be forward thinking and rejuvenate an area that would benefit from re-development. Both the proposed sites above would struggle to provide safe and suitable access into the communities surrounding them. The Clevedon Road area in particular is already busy with the traffic travelling through most of the day, but specifically early morning, between 0630hrs and 0930hrs and evening times, from about 1430hrs until 1800hrs. Police headquarters employs a large number of people who mainly travel to the site in a vehicle. There are two schools, St Josephs and Gordano Comprehensive, that again have a huge amount of children attending, who also create traffic issues on the Bristol Road and Clevedon Road and surrounding areas. Finally, there are the commuters who need to travel out of Portishead to Bristol or return home. As I mentioned at the beginning Portishead is already saturated with people and the road network is already under pressure. No train, with two carriages and leaving once an hour is going to solve this problem that already exists. Further development meaning, more cars and people, would bring Portishead to a standstill. In addition to the access and movement of vehicles and people, in, out and around Portishead is the additional issue of when the M5 motorway closes. This happens regularly due to accidents and repairs work. It also raises traffic levels during school holiday times when vehicles use Clevedon Road as a way of avoiding the inevitable car park that is the M5 during the summer months, when people head to Devon and Cornwall. Large HGV's on strict delivery times come hurtling through North Weston at all times of the day and night when this happens. My questions are simple. Is this safe? Is this sustainable? Is this not creating more of a problem? Does this meet the national soundness tests? I believe not and I believe this has not properly been considered when these plans have been proposed to develop the areas above. There is one more point I would like to make in respect of the impact of the traffic. Police headquarters and the fire service run out of Blackrock and Valley Road. Operational staff regularly travel at high speed with their appropriate sirens and lights displayed as they rush to an emergency. Again, these vehicles travel along Clevedon Road, past two schools and the main road out to the motorway network. Placing more vehicles in this already crowded space would only increase the possibility of further accidents or delay for them to reach the emergency they are attending. In submission I do not believe these areas should be developed. There is no sustainable infrastructure. It is unsafe to the residents with the amount of traffic it would bring. It would destroy and well needed green corridor for both the wildlife and the residents of Portishead. For these and the above reasons I believe the Tower Farm or Black Rock areas should be removed from the local Plan.			
63078209	Debbie							I have lived in North Weston for 27 years and have walked the big wood nearly every

	Taylor							day . The idea of houses being built up so close to those woods is absolutely catastrophic. Every day I see so much wildlife in both the fields and inside the quarry and woods. The value of this open green space for human beings and their well being there is the fact that it is an ancient woodland housing hundreds of different species should never be put at risk. this space should be protected and preserved for many generations to come especially as it's a sssi. The green belt should only be changed in EXCEPTIONAL circumstances and as they are adequate other brown sites I can't believe this is correct. The houses that are being proposed will not be affordable housing which is what is needed and also the main roads surrounding this are also already saturated with police headquarters traffic, 2 schools at the bottom and one at the top all of which are bursting at the seams , adding into that any issues on the motorway which is regular lead to gridlock on the road running from portishead to clevedon with massive hgvs thundering through at 60/70 mph. The bus service is poor particularly after 7pm when you have to walk at least a mile to get back to north Weston and the route to Bristol does not exist at any time unless you again walk a mile. There are no local facilities to these areas unless you own a car which again is adding to the problem. I believe this is just about money and the parties involved are not thinking about the future of our beautiful countryside. This decision once made to these sites can never be reversed and will be catastrophic. This needs to be stopped and alternative land used. I do not agree with these plans.			
63084993	Zack Taylor							I am writing to object to the proposed allocation of Tower Farm and Black Rock for housing development in the emerging North Somerset Local Plan 2041 (Pre-submission, Regulation 19). These sites lie in the Green Belt on the edges of Portishead and should be removed from the plan for the following reasons: Unsuitable Location and Lack of Sustainable Infrastructure Portishead has experienced significant housing growth in recent decades with limited corresponding improvements to transport and community infrastructure. Road networks — especially Clevedon Road and Bristol Road — already struggle during peak times due to school traffic, commuters to Bristol, and vehicles accessing the M5. Introducing hundreds of additional homes at Tower Farm and Black Rock would exacerbate congestion, increase journey times, and reduce road safety, failing the Local Plan's soundness requirements on transport and accessibility. The promised railway link has repeatedly been delayed or lost funding, so it cannot be relied upon to mitigate such impacts. Green Belt, Environmental and Ecological Harm Both sites were designated as Green Belt in the 1980s to protect landscape openness and natural habitats. National planning policy allows Green Belt removal only where exceptional circumstances are demonstrated — and no such circumstances have been properly justified here. The planned developments would sever vital parts of the Gordano Valley green corridor and harm Weston Big Wood, a Site of Special Scientific Interest (SSSI) and ancient woodland. Expert evidence and local environmental advocates have highlighted risks to biodiversity, including rare flora and fauna, and the need for buffer zones around protected sites. Recent consultation feedback makes clear that ecological impacts have not been adequately addressed. Affordability and Housing Mix Concerns While there is a clear need for new housing in North Somerset, the current proposals at Tower Farm and Black Rock focus largely on larger dwellings that do not meet the urgent local need for genuinely affordable two- and three-bedroom homes. Building high-value homes on these Green Belt sites will do little to help local people get onto the housing ladder. Instead, the plan should prioritise brownfield sites and mixed-use development, such as around the Old Mill area, where smaller homes could be delivered alongside workspace without destroying valued green space. Health, Well-Being and Loss of Public Access to Green Space Access to open countryside and woodland around Portishead has significant value for residents' physical and mental health. During the Covid-19 pandemic, public policy emphasised the importance of green spaces for well-being — a priority that seems to have been overlooked in these proposals. Threatening access to popular natural spaces like Weston Big Wood undermines resident well-being, especially at a time of ongoing pressure on NHS mental health services. Safety Risks and Emergency Services Additional traffic from new housing would add pressure to already busy local roads. The police headquarters and fire service on Black Rock and Valley Road depend on these routes for rapid response. Increased congestion raises the risk of delays for emergency responders attending urgent calls, particularly during peak travel times. Inadequate Consideration of Alternatives There are alternative brownfield and lower-impact sites within Portishead and North Somerset that have not been fully explored or maximised in the housing strategy. The			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								council has not demonstrated that these alternatives could not meet housing needs without the environmental and infrastructure costs associated with undermining the Green Belt. Conclusion For the above reasons — including unsustainable transport impacts, unacceptable greenbelt and ecological harm, failure to address housing affordability, negative effects on community well-being, and poor consideration of alternatives — I strongly object to the allocation of Tower Farm and Black Rock in the North Somerset Local Plan 2041. I urge the council to remove these sites from the plan and instead focus development on genuinely sustainable locations.			
58597377	Anthony Thompson			No	‣ Justified	No	No	Un justified due to over expansion ,to close to ancient woods ,not enough amenities, bringing in 2000 cars for all proposed sites is dangerous and un healthy .flooding and light pollution.			
58572449	E Thomspon			No		No	Unsure	This has not been very well publicised which means the responses will be limited which could be deemed to be intentional. The road infrastructure around High Down School can not cope with the current demand without adding to this which would make this much more dangerous. Lower levels of Portishead frequently flood, adding more development will increase the risk to the residents in these areas, which would be negligent on NSC's part. This is adjacent to Weston Big Wood which is a nature reserve and SSSI. As an SSSI there are restrictions and protections to consider. The government has a Environmental Improvement Plan to rewild corridors of Britain, reduce air pollution and boost biodiversity. Weston Big Wood and its surrounding areas already provide these benefits and developing next to it will suppress the woods and the wildlife within that use the surrounding area irrevocably. This will increase traffic in an around Portishead dramatically and put more strain on the infrastructure, there is very limited public transport links and local amenities.	please consider other areas of North Somerset that are not green belt, have better road/transport links and access to jobs. Where the infrastructure isn't already at breaking point and has the potential to further increase the risk of flooding.		
30664385	Toby Thurlow			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Not Justified The analysis for releasing this land from the green belt is not more compelling than other land not released. Almost all were rated medium or weak for impact. https://n-somerset.gov.uk/sites/default/files/2025-11/stage%202%20green%20belt%20assessment%20-%20October%202025.pdf Not Consistent with National Policy This is highly sensitive site that provides an open Grassland/Grade2/3a Farmland to circa 50% of the North Eastern section of Weston Bigwood. This land provides both a buffer to the impact of humans , and provides ecosystem services to the Woodland. Building on this land would have indirect impacts as laid out in the Government Guidance on Ancient woodland, ancient trees and veteran trees: advice for making planning decisions. https://www.gov.uk/guidance/ancient-woodland-ancient-trees-and-veteran-trees-advice-for-making-planning-decisions. Not Effective. There are insufficient proposals to protect the Eco-systems services provided by this land. Not Positively Prepared Proposals for local services (e.g. school, shops, health) to support the large number of dwellings are not developed enough. This would lead to an excessive pressure on the local services, causing new residents to drive further afield.			
58368129	Paul Tregedeon			No	‣ Justified	Unsure	Unsure	NSC has not properly considered: Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset.Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm and Black Rock.The strategic ecological importance of these sites in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. The fact that both areas were added to the Green Belt in the late 1980s due to their high ecological value.National planning policy allows Green Belt changes only in exceptional circumstances — and these have not been demonstrated. In addition: Neither site can provide safe or suitable access.Development would create unacceptable transport impacts, failing national soundness tests. For these reasons, Tower Farm and Black Rock should be removed from the Local Plan.			
62770945	Steven Trueman							I am a resident of Tower Road and would like to object on the grounds of both traffic and pollution. Tower Road is already impossible to access both in and out but especially out twice a day due to the school drop offs at High Down School, this starts at approximately 8.30am until 9.15 am and again at 3pm until 3.45pm. The proposal to build 400 houses on Tower Farm will bring another 800 cars to the development once complete all making at least 2 journeys a day (out of the development and back again) onto already extremely busy roads. The junctions out from both Tower Road and the Downs onto Down Road are not able to cope with the amount of traffic currently especially at school drop off and collection times. The junctions are just not big enough to handle the traffic or is Down Road big enough to Handle all the extra car journeys that it will have to manage. The top of Portishead is already very busy due to countless previous developments and			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								is just not capable of taking a massive increase in congestion that this proposed development would bring. The result if it were to go through would be mass congestion on already under pressure roads trying to access lower Portishead the motorway etc etc from upper Portishead. The result will mean masses of traffic queuing to access Down road resulting in massive increases in pollution and putting the children that actually walk to the school under greatly increased danger from excessive traffic. If anyone cares to look at either drop off or collection time from High Down School now you will see the chaos that ensues every day currently with parents parking everywhere blocking all surrounding roads and turning Down Road into a single lane road. If you view this first hand you will clearly see that these roads just cannot handle this proposed large development and to say otherwise is both dangerous and nonsensical. As I understand it Portishead Town Council have already offered alternative brown field sites to build on in Portishead please use these and apply some much needed common sense to this situation.			
62700225	Martin Van Eker			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	Unsure	I feel that before including the Tower Farm site in the local plan, the council has not properly considered alternative brown and greenfield sites, both within Portishead and in the wider North Somerset County, with significantly less ecological impact. The council could consider increasing the density of housing on proposed brown field sites across the county when would mean they could meet their housing targets and thus avoiding building on this unique and precious environment. The unique and strategic ecological contribution to the Tower Farm site is protecting the unique environment of the Weston Big Wood (SSSI) and the wider Gordano Valley green corridor. If we lose these valuable fields, it will have a significant impact on Weston Big Wood as a whole. Black Rock and Tower farm site were only granted greenbelt status in the 1980s because of their high ecological value and the connection with Weston Big Wood. Therefore, the Tower farm and Black Rock sites should be removed from the Local Plan. I believe that no modification short of removing the allocation entirely would make this site appropriate. Given its direct adjacency to ancient woodland, its loss would be irreversible and cannot be mitigated sufficiently. The land should instead be retained as undeveloped green space, managed to enhance biodiversity and provide sustainable public access, in line with the Avon Wildlife Trust's 2030 Strategy and national "30 by 30" nature recovery goals.

58522241	D Van Luttmer			No	• Justified	No	Unsure	NSC has not properly considered: Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset. Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm and Black Rock. The strategic ecological importance of these sites in protecting Weston Big Wood (SSSI) and the Cordano Valley green corridor. The fact that both areas were added to the Green Belt in the late 1980s due to their high ecological value. National planning policy allows Green Belt changes only in exceptional circumstances - and these have not been demonstrated. In addition: Neither site can provide safe or suitable access. Development would create unacceptable transport impacts, failing national soundness tests. For these reasons Tower Farm and Black Rock should be removed from the Local Plan			
26060801	CJ Waite			No	• Positively prepared • Justified • Consistent with national policy	No	No	Considering the proposed Tower Farm development, I believe it contravenes the National Policy that allows land to be taken out of Green Belt in exceptional circumstances. The proposed site is situated alongside Weston Big Wood (WBW), a nationally recognised SSSI. The fields are an essential element in the green corridor from the Bristol Chanel to the Mendip Hills. One of the criteria for the proposal to be judged against is 'does it enhance biodiversity and/or protect high quality land', in this case 'high quality' means beneficial for nature. Clearly this proposed site does not as it will negatively impact on WBW in both constraining the interaction of nature with the surrounding fields and encourage greater footfall to the detriment of the wood. The area under consideration is currently Green Belt, a status achieved in the late 1980's, it is difficult to see why this has now changed. If it was considered vitally important to protect the area then, why is this not so now? By placing it under Green Belt protection then it preceded the Natural & Environmental and Rural Communities Act of 2006 Section 40 that places a duty on Public Bodies to contribute to the coherence and resilience of valuable ecological networks. It also seems to be in contradiction to the North Somerset Local Nature Recovery Strategy that defines how the Act of 2006 will be met. The revised Planning Regulations allow land to be taken out of Green Belt, however the criteria is that it may only be in exceptional circumstances. The Tower Farm proposal is not an exceptional circumstance, Brown Field Sites and other less ecologically import sites exist within the area and must be reconsidered prior to formal submission of the Plan. The selection of the Tower Farm site is not justified, I do not believe a robust and credible investigation was undertaken prior to selecting this site. The access to the area will be via The Downs, off Down Rd, by the entrance to Highdown Infant and Junior Schools. Currently there are approx. 180 properties in The Deans and The Downs that are accessed via this junction, this will increase threefold to approx. 600 should the houses be built, essentially a cul de sac with 600 houses! It should be noted that the current residents are virtual prisoners in their homes during School Start and Finish times due to excessive parking in The Downs and along Down Rd, aggravated by the staggered times of the 2 schools. An additional 400 homes will significantly increase the problem. As it is, access to either the The Deans or The Downs by the Emergency Services during these periods is severely compromised. Should the 'go ahead' be given there will also be very significant issues caused by construction traffic.	Consider Brown Field sites, where identified possible increase the density. Additionally consider other green field sites that do not currently act as a buffer for a nationally important SSSI. In choosing a site ensure that there is more than one access road to minimise congestion, ideally one that that does not have 2 schools at the entrance.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The Council is seeking to encourage Walking, Cycling and Public Transport, an admirable aim. The site however is on the top of the ridge, approx. 120m elevation above the Portishead High St. I am fit and able whose hobbies include Hill Walking, should I wish, it takes me 20-25 minutes to walk from the High St to my house, 6 The Downs. The Public Transport is intermittent so as it currently stands a Car is the only option if you wish to access the High St or the local Super Markets.			
62863841	Lauren Walker			No	• Justified			Both proposed sites have been poorly thought out - other sites have not been considered, there are major issues when building to close to Weston Big Wood (as identifies by local wildlife groups) and the infrastructure is already massively under pressure. There is inadequate access.	I understand that the council are under pressure from the national government - how much have you pushed back against the unrealistic targets? Other locations should be considered that have less impact on important areas for wildlife. Neither site has safe or suitable access. Traffic is already a nightmare - the lovely idea of a train link has yet to come into fruition and its effectiveness unproven. The greenbelt needs protecting - exceptional circumstances have not been proven.		
62865985	T Walker			No	• Justified	Yes	Yes	The development of tower farm and black rock are not appropriate sites. They are both green belt sites and have been designated as such since the late 1980s due to their much ecological value. National planning policy only allows for de-designation in exceptional circumstances. These circumstances have not been demonstrated. Weston big wood is a SSSI and these developments will undoubtedly negatively affect the site through the course of the development and the change to the drainage characteristics of the site. In addition, there is far from adequate transport infrastructure planning to support the increased population of the are once the development was complete.			
62849153	Mrs K Warrington			No	• Justified • Consistent with national policy	No	Unsure	Tower Farm, portishead site allocation- My objection is the proposal to include this site for residential housing. The site is located next to Weston Big Woods SSSI and should be protected as such. The proposal for residential development morning the woods would affect the setting of the woods. The existing access to the site is unsuitable. Down road and The Downs are already busy roads due to the volume of traffic around the top of portishead and High Down Schools. The addition of 400 homes and potentially car movements from 400+ vehicles would put excessive strain on the existing infrastructure. There doesn't seem to be a sensible access option off Valley Road either.	As above comments. The Tower Farm site allocation is unsuitable and would have a negative impact on the existing local infrastructure.	N/A	
								I have serious concerns about the density of housing proposed at this site and its suitability. Portishead has one main access road in and out. Other services like doctors surgeries and dentists are at capacity and have no NHS spaces. The proposed housing allocation would exacerbate these issues which only seem to be getting worse. I consider smaller pockets of residential development in and on the edge of portishead would be more suitable, and would not have such a significant impact on the SSSIs and Green Belt. I am not against further residential development in portishead, but this particular site is concerning and would to the detriment of existing residents who live at the top of Portishead. As well as finishing the significance of the protected SSSIs.			
62738817	Matthew Williams			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The proposed allocation of Land at Tower Farm (≈ 400 homes) lies immediately beside Weston Big Wood — an ancient woodland and Site of Nature Conservation Interest (SNCI) managed by Woodland Trust and supported by Avon Wildlife Trust. The woodland forms part of the Gordano Valley ecological network and a nationally important habitat mosaic of open grassland, wetland and woodland. Not Justified There is no robust published alternatives assessment demonstrating that this sensitive site is the only or most appropriate option for growth. The loss of best and most versatile farmland (Grade 2/3a by reference to the ALC dataset) and the risk of irreversible damage to the ancient woodland make this allocation unsuitable Not Consistent with National Policy The allocation conflicts with the National Planning Policy Framework (NPPF) paragraphs 180–182, which require that development resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland) should be refused unless wholly exceptional reasons exist. The Council's reference to an "ecological buffer" is vague, unenforceable and insufficient to address indirect impacts such as root-zone damage. Moreover, the Framework requires delivering biodiversity net gain, yet the allocation offers no clear mechanism for ensuring that outcome. Not Effective Delivery depends on multiple unresolved dependencies: new school provision, bus service contributions, off-site biodiversity management, and upgrades to rights-of way/ buffer zones. No phasing plan, funding mechanism or legal agreement is published to secure these. Without such mechanisms the allocation cannot be considered deliverable within the plan period (NPPF paragraph 35(c)) Not given enough Thought The location intensifies existing pressures in Portishead: schools, healthcare and transport infrastructure is already under strain (for example the A369 corridor). This peripheral site would likely increase private vehicle usage and pollution rather than support sustainable travel patterns, contrary to NPPF paragraphs 104–106. The access			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								to the land at Tower farm has not been through. Access at present on the Downs is extremely difficult at 8-9am and again from 2.30 to 3.30pm during School run, making it extremely difficult for emergency vehicles to access The Downs. There is nothing mentioned about improving access to the Downs eg widening the Road to accommodate an estimated extra 500 plus cars. Cumulative Impact When considered alongside other allocations in the Portishead area (such as Black Rock north of Clevedon Road), the combined pressure on ecology, infrastructure and transport is significant and undermines the Council's commitments to nature recovery and sustainable growth. No modification short of removing the allocation entirely would make this site appropriate. Given its direct adjacency to ancient woodland, its loss would be irreversible and cannot be mitigated sufficiently. The land should instead be retained as undeveloped green space, managed to enhance biodiversity and provide sustainable public access, in line with the Avon Wildlife Trust's 2030 Strategy and national "30 by 30" nature recovery goals I do not support the North somerset plan 2041for the Tower Farm Hill location, as it is going to have a detrimental effect on the surrounding woodland. There has not been enough evidence provided towards providing the appropriate infrastructure and services that is required for a larger population. eg Health services, pharmacies, regular bus services. I believe north Somerset council should identify and use Brown Field sights first in North Somerset before planning to develop Green Belt and areas specified as scientific importance			
58493633	J Wills			No	• Effective	Unsure	Unsure	The site at Tower road and Black rock would have substantial impact on local transport routes. The proposed road comes out on to a fast and dangerous road which could cause accidents. The other road will increase traffic on an already busy junction.	Do not build these houses.		
62700673	Peter Willis		Lequin Ltd	No	• Effective • Consistent with national policy	No	No	I am objecting to the current draft of the North Somerset Local Plan on the grounds that it is not sound and not consistent with national policy, for the following reasons: 1. Conflict with the National Planning Policy Framework (NPPF) The draft plan allocates over a quarter of its total housing capacity to Green Belt land, contrary to NPPF requirements that Green Belt release must be a last resort and only justified in exceptional circumstances. No such justification has been demonstrated. 2. Harm to a designated SSSI and its legally required buffer zones The proposed 500-home development adjacent to Weston Big Wood (SSSI) encroaches into protective buffer zones and will increase footfall, disturbance and fragmentation. The SSSI is already in "unfavourable declining" condition; further recreational pressure would cause irreversible damage. 3. Failure to maintain ecological networks as required by law Under Section 40 of the Natural Environment and Rural Communities Act (2006), the Council has a statutory duty to maintain the coherence and resilience of ecological networks. The current allocations undermine key wildlife corridors across the Gordano Valley, reducing connectivity between internationally, nationally and locally important sites. 4. Inconsistency with the Local Nature Recovery Strategy (LNRS) The proposals directly undermine the principles and mapped priorities of the LNRS, as required under the Environment Act 2021. The plan neither protects nor enhances the identified strategic ecological network. 5. Lack of cumulative impact assessment The draft plan does not demonstrate that cumulative ecological effects of multiple developments have been properly assessed. This is a core component of justified and effective spatial planning. 6. Absence of reasonable alternative options The plan appears to rely heavily on Green Belt release without transparent assessment of brownfield capacity, redevelopment opportunities, or alternative spatial strategies. This fails the "justified" test of soundness.	1. Remove or significantly amend allocations that threaten Weston Big Wood SSSI and its buffer zones Delete or relocate the proposed 500-home allocation that encroaches into the established protective buffer zones of Weston Big Wood. Ensure any remaining development is supported by a legally robust Habitats Regulations Assessment. Reason: The Council has a statutory duty under the NERC Act (2006) to maintain ecological networks, and must protect designated sites from increased recreational pressure. The current allocation conflicts with these duties and with NPPF requirements to safeguard SSSIs. 2. Reinstate protection of strategic ecological corridors across the Gordano Valley Redesign the spatial strategy to avoid fragmentation of the Gordano Valley ecological network, which connects the Severn Estuary, Portbury Wharf, Weston Big Wood, and the Somerset Levels. Introduce policy wording requiring habitat buffers, wildlife corridors, and net-gain designs aligned with the Local Nature Recovery Strategy (LNRS). Reason: The Plan currently undermines the LNRS and the NERC Act duty to secure resilient ecological networks. 3. Reduce reliance on Green Belt land and demonstrate genuine exceptional circumstances where release is proposed Reassess housing distribution to reduce the amount allocated to Green Belt. Prioritise brownfield land, urban intensification, and sustainable settlement extensions. Where Green Belt release is still proposed, provide a transparent, evidence-based justification establishing "exceptional circumstances" in line with national policy. Reason: The current Green Belt strategy is not justified or consistent with the NPPF. 4. Produce a comprehensive cumulative ecological impact assessment Update the Strategic Environmental Assessment (SEA) and Habitats Regulations Assessment (HRA) to consider the combined impact of all allocations on designated sites and ecological networks. Include modelling of visitor pressure, recreational impacts, hydrology changes, and species disturbance. Reason: The absence of cumulative assessment means the		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									plan is not legally compliant, not justified, and not effective. 5. Demonstrate meaningful cross-boundary cooperation on strategic environmental issues Provide evidence of Duty to Cooperate agreements with Bristol, South Gloucestershire, Somerset, Natural England, and Avon Wildlife Trust regarding Green Belt strategy and nature recovery networks. Incorporate any jointly agreed ecological priorities into the plan. Reason: The Duty to Cooperate has not been demonstrated in relation to nature recovery and Green Belt strategy. 6. Align all ecological and spatial policies with the Local Nature Recovery Strategy (LNRS) Amend policies to explicitly protect LNRS priority areas and map these within the plan. Require all major developments to demonstrate how they contribute to LNRS delivery. Reason: The Environment Act 2021 requires Local Plans to support nature recovery priorities, which the draft plan currently contradicts. 7. Strengthen biodiversity, landscape, and recreation policies to avoid harm to sensitive sites Introduce a requirement for visitor management plans, green infrastructure networks, and off-site mitigation where development borders sensitive habitats. Ensure biodiversity net gain is meaningful and locally relevant (e.g., supporting woodland, wetlands, and species corridors). Reason: This ensures the plan is effective, deliverable, and compliant with environmental duties. These modifications are essential for the Plan to: -Comply with statutory duties (NERC Act, LNRS obligations, SEA/HRA requirements), - Meet NPPF tests for Green Belt protection and environmental safeguarding, satisfy the Duty to Cooperate, and - Become sound (positively prepared, justified, effective, and consistent with national policy).		
58572641	C Willis			No	• Positively prepared	No	No	No infrastructure to support the new housing. One road in, one out Portishead-Bristol causing horrendous traffic chaos Impact greatly on GP surgeries, Dentists and schools which are already struggling to meet present Portishead residents needs	I can think of none. The areas allocated in Portishead will cause absolute chaos for present residents		
62793857	Clive Wilson		Resident					LP 7 Concerns – relating to the Tower Farm and Black Rock development. The impact to Weston Big Wood (area of SSSI) this ancient woodland is currently protected by greenbelt status to ensure the sustainability of wildlife and the prevention of ecological disaster. Both developments appear to encroach the required ecological boundaries required to sustain the Woodland. Site access to both the proposed Tower Farm and Black Rock are of major concern as the existing roads are already continually busy, in the case of Tower Farm school drop off / pickup times see Down Road frequently in a state of gridlock. In the case of Black Rock the B3124 Clevedon Road is a busy road with a 50mph limit which will require traffic calming measures. The existing estates by the proposed Tower Farm development will be greatly impacted by the increases in traffic from the development particularly if access to the development proposes the use of existing estate roads as these are already congested with parked cars and not suitable for through traffic. The current poor state of the road surface along Down Road, despite being relatively recently resurfaced, Is indicative of how busy this road is and question its ability to cope with more traffic. Valley Road is already dangerous due to the presence of the Civic Amenity site opposite the Avon & Somerset facility situated on a blind bend which sees stationary traffic queuing for the amenity site to Open. This road currently is derestricted. Please reconsider the placement of some 400 homes at Tower Farm and 100 at Black Rock.			
62848801	C Winward			No	• Effective	No	No	I do not believe this plan is compliant or justified due to the location of the site. The site has poor access through small roads which are only suitable for the houses that they feed. The access at The Downs is a dead end and for years traffic from the school has been impacted by it being a no through road. During the period where there were			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								increased intakes at Highdown school the traffic situation was unsafe for road users and pedestrians. Bearing in mind that this was a probable increase of around 100 cars (as most overspill classes were to provide spaces from the village quarter) and the area was bumper to bumper everyday because of the lack of access to travel through or choose alternative routes. Even if every house planned has only one car there is absolutely no way that the school, The Downs and surrounding roads would be able to support that level of usage. The plan claims that the site is close to local amenities and reasonable distance to transport links but the bus links on Down Road are not linked to Clevedon-WsM, the bus to Cribbs is over a handful of services per day and the x4 bus does not head directly to the town centre therefore not making it a time efficient service. As to the train station and amenities we are nearly 400 foot higher than the town centre. It is not reasonable to believe that people will consider walking or using e- bikes over this distance. The distances spoken of in the plan are more of a 'as the crow flies' measurement. The area considered is a poor choice due to the scientific and ecological interest attatched to the land and woodlands at Weston Big Wood. The animals we see in our area will be massively impacted by this development and every consideration should be made to protect the birds, animals and flora and fauna. The land surrounding the woods allow the woods to grow and breath. The introduction of habitation will result in animals not being able to access surrounding fields and the woods not being able to expand as it must to regenerate. The loss of rare wild orchids and primroses as well as other plants will be likely as their preferred home ground is taken away. The solution to supplying housing to Portishead needs to start with proper consideration of amenities and facilities. We are now a town without banking services, with only one chemist, with poor road access in and out of Portishead. The development should be built on brown land, closer to the train station, in order to make the traffic flow around the town as affected as little as possible. Regenerating brown sites, such as Old Mill Road could provide added amenities, serviceable roads as well as the train station being within realistic walking distance from the train station.			
62772961	Tim Withers							I am writing to register real concern about the proposed developments for the following reasons: The erosion of the green margins of Portishead, with impact on the mental health of children and adults A query over, planning for the longer term, so much development is needed; consider the falling rates of children on roll in N Somerset schools and fact that many schools are changing structure to accommodate this (ask Lighthouse Schools Partnership!) I don't feel alternative green and grey field alternatives have been properly considered Britain is already a nature-depleted country; adding to this is potentially disastrous. Once gone, green spaces are rarely returned to green, and never as they were The infrastructure of the town cannot accommodate further growth; Portishead has grown so much already - for example, it's secondary school is the second largest in the SW			
28744929	Anthony Woolf							The proposal to build on greenfield sites Tower Farm and Black Rock is an ecological disaster. Both of these sites were added to the Green Belt in the 1980s to protect Weston Big Wood(SSSI) and retain a green corridor in the Gordano valley. If building any closer to Weson big Wood were to go ahead the woods would become "sterile" as per Eastwood in Portishead. Access to Tower Road and The Downs is already difficult, unsafe and over utilised due to the proximity of Highdown School. I am not convinced that enough effort has been made to adopt brown field sites in the area. National planning policies allows Green Belt changes only in exceptional circumstances and these have not been demonstrated.			
62761057	Kateryna Zubinska			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	I believe the allocation of Land at Tower Farm is not sound because this location is extremely sensitive and directly borders Weston Big Wood, which is a well-known ancient woodland and part of an important ecological network. Any large development so close to the woodland risks long-term damage to wildlife, the landscape and the character of the area. In addition, Portishead is already under significant pressure. My own child has just started Reception this year, and there were very few school places available. Adding 400 new homes will place even more stress on the already limited school capacity, healthcare services and local transport. This development would also increase the number of cars in an area where the roads are already congested, especially during school runs. This would not only make transport more difficult but also reduce the quality of life for families. Another concern is community wellbeing. A sudden increase in population of this scale, without enough community facilities, risks creating areas with low cohesion. This can lead to social and psychological stress for families, particularly children, and may affect the overall safety and character of the neighbourhood. Finally, the document itself shows that this site requires many unresolved conditions: ecological mitigation, new school provision, transport upgrades and more. None of these are clearly planned or guaranteed, making the proposal unreliable and not deliverable. The only modification that would make this plan acceptable is to remove the Tower Farm allocation entirely. The location is too environmentally sensitive, the		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								infrastructure is already overstretched, and the community cannot absorb this level of development without significant harm to families, schools and the local environment. Instead, the land should remain as open countryside and be used to support biodiversity and accessible green space for the community. I do not support the North Somerset Local Plan 2041 for the Tower Farm location.			
62790113	Yulia Zubinska			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The allocation of Land at Tower Farm is unsound because it is not justified, not consistent with national policy, not positively prepared and not effective. The site is directly adjacent to Weston Big Wood, an ancient woodland and a nationally important ecological habitat. Development here would cause irreversible ecological damage, including risk to woodland hydrology, wildlife connectivity and the Gordano Valley ecological network. No robust alternatives assessment has been provided, despite the loss of best and most versatile agricultural land (Grade 2/3a) and the high sensitivity of this location. The allocation also conflicts with NPPF paragraphs 180–182, which require avoiding harm to irreplaceable habitats such as ancient woodland. Infrastructure in Portishead is already under significant pressure. Additional development in this location would increase car dependency, worsen congestion on the A369 corridor, and undermine sustainable travel objectives. Delivery of this allocation depends on multiple unresolved infrastructure requirements, including new school provision, transport improvements, ecological buffers and long-term habitat management, none of which are secured. For these reasons, the allocation cannot be considered sound or deliverable. No modification would make this allocation acceptable. Due to its direct adjacency to ancient woodland, the environmental risks are irreversible and cannot be mitigated. The allocation should be removed entirely from Schedule 1 and the land should be retained as open countryside and green space, in line with biodiversity objectives and national policy requirements for protecting irreplaceable habitats. I do not support the North Somerset Local Plan 2041 for the Tower Farm allocation.			
62791201	Serhii Zubinskyi			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	I do not consider the allocation at Tower Farm to be sound. The site sits directly next to Weston Big Wood, which is an ancient woodland and an irreplaceable habitat. National planning policy (NPPF paragraphs 180–182) makes it very clear that developments which risk the loss or deterioration of ancient woodland should be refused unless there are wholly exceptional circumstances. I do not believe anything about this allocation meets that standard. Even indirect impacts — such as changes to drainage, increased nutrient runoff, soil compaction or disturbance to wildlife — are considered by organisations like the Woodland Trust to be damaging and, in many cases, irreversible. Once an ancient woodland's ecological balance is altered, it cannot be restored. This is why the proposed "ecological buffer" mentioned in the Plan is not sufficient: it does not address how the woodland's root zone, hydrology and wildlife corridors would be protected in the long term. The allocation also involves the permanent loss of high-quality agricultural land (Grade 2/3a), yet there is no published assessment showing why this is necessary or why less sensitive land elsewhere could not be used. NPPF paragraph 174 requires planning authorities to conserve and enhance valued landscapes and natural assets, and I do not believe this evidence has been provided. On a practical level, Portishead's infrastructure — schools, transport and healthcare — is already under strain. Development in this location would only increase car dependency because public transport options are limited. This goes against the sustainable travel aims of NPPF paragraphs 104–106. Finally, the delivery of this allocation depends on several major elements (new school provision, bus service contributions, habitat management, footpath upgrades), but none of these are secured or funded. Without firm mechanisms in place, the allocation cannot be considered effective or deliverable, as required by NPPF paragraph 35. For all these reasons, I do not believe the allocation is justified, consistent with national policy or capable of being delivered as proposed. In my view, no changes or minor adjustments would make this site suitable for development. Because of its position next to ancient woodland and its important farmland and landscape qualities, the only reasonable modification is to remove this allocation from the Local Plan entirely. The land should remain open countryside and contribute to nature recovery rather than be lost to housing. I do not support the North Somerset Local Plan 2041 for the Tower Farm allocation.			
58507233	Paul Gardner			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	I am a resident of Portishead who witnessed the severe degradation and fragmentation of Weston Big Wood during Covid. The Tower farm and Black Rock sites in Portishead are green belt. In 1988 the area of Green Belt on Portishead Down which is where these sites are located was actually EXTENDED. Even in 1998 the special nature of Portishead Down was recognised. Nothing has changed locally to justify thee redesignation of these sites as grey belt. Government Policy is for "low quality green belt land to be released" This land is exactly the opposite - high quality green belt land which should be redesignated to receive bio diversity net gain credits so that the biodiversity degradation of the last 50 years can be reversed.	Retain the Land at Tower farm in the Green Belt. Remove it from the list of sites for development and protect the land, Weston Big Wood and The Gordano Valley for people to enjoy forever.		PTC Tower Farm reformatted 20251209.docx
58466529	David White			No	• Justified	Unsure	Unsure	The proposed housing development at tower farm in Portishead is unsound for a number of reasons.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Road access is unsuitable for the addition of new houses on the top of Portishead Down. The area is a haven for wild animals such as Greater and lesser Horshoe Bats which can be observed every night in the area. Downland should be protected in England as it is a globally rare and sensitive environment. Portishead Down is Downland. As such, destruction of Downland should not be permitted. Portishead is over capacity already for the size of population. It has undergone massive residential developments over the past 20 years and should be allowed a rest now to consolidate itself and address the problems that exist without adding more accommodation to make the overcrowding issues worse. Massive housing developments are already taking place at nearby Cribbs Causeway in South Gloucestershire as such further development cannot be required such a short distance down the road in Portishead.			

Black Rock, north of Clevedon Road

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
62819521	Andrew Abernethy			No	• Justified	Unsure	Unsure	Weston Big Wood is an exceptional area for flora and fauna. The most visible and significant wildlife is the herd of deer that periodically visit. There is a risk that narrowing the existing buffer zone around the wood will result in significant loss of grazing habitat, increased sound and light pollution to the extent that the deer no longer visit. The plan does not specify the precise scale of the buffer zone and the justification for any buffer zone has not been articulated.			
63111297	Maryam Afzal							I'm a resident of Portishead and the plans to build houses behind high down school and close to the Western big wood concerns me greatly. The residents of our town would need another doctor surgery, pharmacies, better roads and infrastructure to support any further residents in the town. We are already overstretched with resources, not to mention the traffic and congestion that would be created from the top of the hill all the way to the Portbury 100 that is the only main access route in and out of the town. Terrible idea to overpopulate Portishead. It will completely loose the small town character and become a city - and it's certainly not ready to become that. Please take these concerns seriously as it is widespread concern of all residents!			
58246305	Sally Allen			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Black Rock is not a suitable location for around 100 dwellings, as ecological needs cannot be met on-site and require off-site mitigation. This conflicts with NPPF paragraph 180(a), which prioritises avoiding environmental impact over remediation or compensation. The necessity for offset land highlights the site's unsuitability, and there is no evidence that less sensitive alternatives were considered. Not Consistent with National Policy – Failure to protect and enhance biodiversity The approach of relying on off-site mitigation and a "suitable ecological buffer" illustrates a reactive rather than preventative approach to biodiversity protection. NPPF paragraphs 180–182 require Local Plans to conserve habitats, prevent deterioration of irreplaceable habitat, and deliver net gains for biodiversity. The allocation fails this by offloading its ecological burden onto unspecified land, without securing long-term management or legal protection for compensatory habitats. It also conflicts with the Avon Wildlife Trust's 2030 Strategy, which emphasises restoration of 30 percent of land for nature and enhancing landscape connectively in the Gordano Valley. Not Positively Prepared – Unsustainable pattern of growth The site lies on the western approach to Portishead along Clevedon Road, where public transport is limited and local services are minimal. Residents would be heavily reliant on private vehicles to access schools, health care and employment. The fact that footways and new bus stop contributions are required underlines existing infrastructure inadequacy. This car-dependent pattern of development conflicts with the sustainable transport objectives of NPPF paragraphs 104–106. Not Effective – Unclear delivery and infrastructure dependencies The site depends on multiple off-site and third-party mitigations including ecological offset land, new footway construction, bus service contributions and delivery of a section of the Gordano Greenway. No clear funding mechanism, responsible delivery body, or phasing plan is identified in the Plan. Consequently, the allocation lacks deliverability and fails the effectiveness test under NPPF paragraph 35(c). Landscape & Setting The site lies within open countryside forming part of the rural setting of Portishead and the Gordano Valley. The expansion westwards into this part of the countryside would diminish the settlement edge, reduce landscape	No modification would make this allocation acceptable. The need for off-site mitigation and multiple infrastructure dependencies shows the site is environmentally and logistically unsuitable for housing. The allocation should be removed entirely from Schedule 1. Instead, the land should remain open countryside, contributing to biodiversity and landscape value, in line with the Avon Wildlife Trust's 2030 Strategy, Woodland Trust guidance and national biodiversity objectives.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								openness, and risk urbanising what should remain a transitional zone between town and countryside. Agriculture & Soils The farmland in question is likely to be of best and most versatile quality (Grade 2/3a) and its loss for housing is not justified when less sensitive land could be used. The Plan does not robustly demonstrate why this agricultural land must be released. Cumulative Impact Combined with the Tower Farm allocation and other nearby proposals, the Black Rock site would add to cumulative ecological, transport and infrastructure burdens around Portishead – contrary to the Council's stated nature-recovery and sustainable growth objectives. I do not support the North Somerset Local Plan 2041 for the Black Rock location.			
62856353	Eric Arsenault		Eric Arsenault Architecture Ltd	Unsure		Unsure	Unsure	I would appreciate more communication between the local population and goverment officers, developers, and the local Member of Parliament to get a wider view and implications of the Local Plan .	It would be interesting to add more concrete supporting documents concerning local economic planning and transportation improvements as we simply see an increase in the number of housing units, without any concrete measures taking into account the economic development of the areas or the improvement of traffic flow on the currently congested roads and highways. The issue of the balance between nature, roads and dwellings needs to be addressed, particularly for Portishead: Tower Farm and Black Rock: these two areas are located in a very sensitive natural area (green belt) and the road network is insufficient, as the existing roads are already congested. Portishead planned dwellings need to get closer to main existing roads and public transport. It is necessary to provide more details on these two subjects: Economic mapping and planning for existing and planed areas: Where will the new residents go to work every day? In Bristol? Will they commute daily? How can we avoid the cities of the Local Plan become even more like dormitory towns? Economic areas must be planned and supported as well as we increase number of dwellings. What about local shops, schools, and amenities? Transport planning To reverse the trend towards road congestion, it is essential to implement an ambitious and incentive-based public transport plan, including, for example, direct buses to Bristol every 15 minutes from each city and carpooling during peak hours.		
62762593	Sue Ascott			No	' Justified ' Effective	Unsure	Unsure	NSC has not considered the strategic ecological importance of Tower Farm and Black Rock sites in protecting Weston Big Wood (SSI) and the Gordano Valley green corridor. NSC has not considered the fact that both areas were added to the Green Belt in the late 1980's dur to their high ecological value. NSC has not considered the fact that National Planning Policy allows Green Belt changes only in exceptional circumstances and these have not been demonstrated. NSC has not considered that neither Tower Farm or Black Rock can provide safe or suitable access. NSC has not considered that development would create unacceptable transport impacts, failing national soundness tests.	NSC has not considered alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset. These should be considered now. NSC has not considered opportunities to increase housing density on proposed brownfield sites which could remove the need to develop Tower Farm and Black Rock. These should be considered now. For these and the above reasons, Tower Farm and Black Rock should be removed from the local plan.		
58640257	Mr Greg Aston			No	' Consistent with national policy	No	No	Before including the Tower Farm and Black Rock sites in the Local Plan, NSC has not properly considered: • Alternative brown and green field sites with much less ecological impact both in Portishead and across North Somerset. • The opportunity to increase housing density on proposed brown field sites across North Somerset which would mean these sites are not required to meet local housing targets. • The strategic ecological contribution of these specific sites in protecting the unique environment of Weston Big Wood (SSSI) and the Gordano Valley strategic green corridor • The fact that these sites were specifically added to the Green Belt in the late 1980's because of their high ecological value. For the above reasons, the Local Plan is unsound because National Planning Policy states that sites can only be removed from Green Belt for development under exceptional circumstances and these exceptional circumstances are not proven. In addition, neither site is sustainable or capable of providing safe and suitable access, and would give rise to unacceptable transport impacts, which fails the soundness tests set out in National Planning Policy. Therefore, the Tower Farm and Black Rock sites should both be removed from the Local Plan We note that developer proposals for both Black Rock and Tower Farm developments were submitted long before the funding and go-ahead for the Portishead-Bristol rail link were approved. We here describe multiple concerns about these two specific locations relating to the unique SSSI status of the adjacent Weston Big Wood woodland as well as ecological, sustainability and other concerns. Taken together, the Black Rock and Tower Farm proposed developments will encircle ~20% of Weston Big Wood's boundary. We also note that the population of Portishead has increased from circa 17000 to approximately 27000 in the last twenty-five years and	Before including the Tower Farm and Black Rock sites in the Local Plan, NSC has not properly considered: • Alternative brown and green field sites with much less ecological impact both in Portishead and across North Somerset. • The opportunity to increase housing density on proposed brown field sites across North Somerset which would mean these sites are not required to meet local housing targets. • The strategic ecological contribution of these specific sites in protecting the unique environment of Weston Big Wood (SSSI) and the Gordano Valley strategic green corridor • The fact that these sites were specifically added to the Green Belt in the late 1980's because of their high ecological value. For the above reasons, the Local Plan is unsound because National Planning Policy states that sites can only be removed from Green Belt for development under exceptional circumstances and these exceptional circumstances are not proven. In addition, neither site is sustainable or capable of providing safe and suitable access, and would give rise to unacceptable transport impacts, which fails the soundness tests set out in National Planning Policy. Therefore, the Tower Farm and Black Rock sites should both be removed from the Local Plan We note that developer proposals for both Black Rock and Tower Farm developments were submitted long before the funding and go-ahead for the Portishead-Bristol rail link were approved. We here describe multiple concerns about these two specific locations relating to the unique SSSI status of the adjacent Weston Big Wood woodland as well as ecological, sustainability and other concerns. Taken together, the Black Rock and Tower Farm proposed developments will encircle	Before including the Tower Farm and Black Rock sites in the Local Plan, NSC has not properly considered: • Alternative brown and green field sites with much less ecological impact both in Portishead and across North Somerset. • The opportunity to increase housing density on proposed brown field sites across North Somerset which would mean these sites are not required to meet local housing targets. • The strategic ecological contribution of these specific sites in protecting the unique environment of Weston Big Wood (SSSI) and the Gordano Valley strategic green corridor • The fact that these sites were specifically added to the Green Belt in the late 1980's because of their high ecological value. For the above reasons, the Local Plan is unsound because National Planning Policy states that sites can only be removed from Green Belt for development under exceptional circumstances and these exceptional circumstances are not proven.	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								currently struggles with sufficient infrastructure, so any additional development must ensure that this infrastructure deficit is fully addressed. 1 NPPF S147 Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development. This will be assessed through the examination of its strategic policies, which will take into account the preceding paragraph and whether the strategy: a) makes as much use as possible of suitable brownfield sites and underutilised land; b) optimises the density of development in line with the policies in chapter 11 of this Framework, including whether policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport… 1.1 In comparison with the previous iteration of the NSC Local Plan draft, the density of the Wyndham Way site in Portishead was increased from 485 to 785 homes. This increase in density is compatible with National Policy as it is a brownfield and is far more sustainable than the others being proposed in the town. However, only one other significant proposed site in North Somerset saw an increase in its allocation between the previous and current draft. There is no evidence that density at the other sites in the Plan has been properly considered. This should be done in order to comply with NPPF S147, and NSC's claim within its Green Belt Review Background Paper that this has been done is not credible. The Wyndham Way site contains a 1.1 hectare "green field" which is effectively wasteland and has been earmarked for commercial development for many years, but no plans have ever been brought forward because of lack of viability. The vision of the Wyndham Way area is for a mixed housing and commercial development which would bring more jobs to Portishead and prevent it becoming purely a commuter town. This particular site It is near to the new railway station which is due to open in 2028. Reclassifying it as a mixed residential and commercial site on this wasteland will increase the probability of the site being developed as the first phase of the Wyndham Way area vision/Town Centre regeneration and avoid the need for housing to be built so close to an SSSI and its inevitable detrimental impact 1.2 Many other sites across North Somerset (at least 23) are clearly, from their descriptions, brownfield. If 300 homes can be added to Wyndham Way by increasing the density, this should be done elsewhere, removing the need to build on the Green Belt in Portishead and elsewhere. 1.3 One example of a site that is not making full use of a brownfield site or optimising the density of development is Castlewood in Clevedon. The site is owned by North Somerset Council and has an allocation of just 120 homes. It is a sustainable site with an area of 3.37 hectares with a flat walk to the High Street, served by the X5, X6, X7/X7a, X10 and X11 bus services (i.e. local and Bristol services). It should be classified as either a suburban or urban site and national guidance recommends a dwelling density of 100-120 dph (dwellings per hectare) for suburban sites and 200+dph for urban sites. This brownfield site could therefore accommodate between 300 to 600 homes rather than the 120 currently planned which would mean that ecologically sensitive sites such as Tower Farm would no longer be needed. Increasing density on this site should be done "Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries", in order to comply with the NPPF. 1.4 In respect of the Castlewood site, more efficient use of it would also boost the availability of new homes in Clevedon, which currently only has an allocation of 258 compared with 6,084 in Weston, 1,347 in Portishead, 1,683 in Backwell, 1,817 in Nailsea and 1,100 in Pill. This would also help to give a fairer distribution of development across North Somerset. In addition, NSC should surely has a statutory duty to maximise their potential income from a site that they own. 1.5 Despite rapid growth in Portishead in recent years (the population has increased in size by 60% between 2001 and 2025) and a tightly drawn settlement boundary there is still some green field land in a sustainable location that would not damage the local environment if brought forward for development. An example is a plot (known as "Land South of Clevedon Road". This was included as a site reference HE20488 in the 2023 NSC Local Plan draft but has been removed from the latest version, we understand that this is because the Environment Agency has reclassified the land is being in the flood plain. This is surprising as the field is on a small ridge overlooking the Somerset Levels and is in fact on higher ground than most of the land developed in Portishead over the last 25 years. The 2023 proposal was for 80 homes on this 2.67 Hectare Green Belt site, mostly larger Executive style homes. That proposal was in conflict with the independent Portishead Housing Needs Assessment carried out by AECOM for the Portishead Neighbourhood Plan which highlighted the need for affordable and smaller dwelling units in Portishead. To quote the AECOM report "Our model suggests that what is most needed to be built in Portishead over the plan period is 3 bedroom properties (48%); followed by 2 bedroom (32%); plus a smaller amount of 1 bedroom properties (15%); a very small amount of very large properties with 5 bedrooms or more. There is no need for more 4 bedroom properties… Most of all, while prioritising mid-sized homes, a variety of housing should be provided to cater for incomes of different needs, incomes, sizes, and life-stages… the demand for smaller properties from those with less purchasing power is of priority concern". This site is in a sustainable location, very close to the local Secondary school and a short flat walk to Portishead High Street. It should be brought back into	~20% of Weston Big Wood's boundary. We also note that the population of Portishead has increased from circa 17000 to approximately 27000 in the last twenty-five years and currently struggles with sufficient infrastructure, so any additional development must ensure that this infrastructure deficit is fully addressed. 1 NPPF S147 Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development. This will be assessed through the examination of its strategic policies, which will take into account the preceding paragraph and whether the strategy: a) makes as much use as possible of suitable brownfield sites and underutilised land; b) optimises the density of development in line with the policies in chapter 11 of this Framework, including whether policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport… 1.1 In comparison with the previous iteration of the NSC Local Plan draft, the density of the Wyndham Way site in Portishead was increased from 485 to 785 homes. This increase in density is compatible with National Policy as it is a brownfield and is far more sustainable than the others being proposed in the town. However, only one other significant proposed site in North Somerset saw an increase in its allocation between the previous and current draft. There is no evidence that density at the other sites in the Plan has been properly considered. This should be done in order to comply with NPPF S147, and NSC's claim within its Green Belt Review Background Paper that this has been done is not credible. The Wyndham Way site contains a 1.1 hectare "green field" which is effectively wasteland and has been earmarked for commercial development for many years, but no plans have ever been brought forward because of lack of viability. The vision of the Wyndham Way area is for a mixed housing and commercial development which would bring more jobs to Portishead and prevent it becoming purely a commuter town. This particular site It is near to the new railway station which is due to open in 2028. Reclassifying it as a mixed residential and commercial site on this wasteland will increase the probability of the site being developed as the first phase of the Wyndham Way area vision/Town Centre regeneration and avoid the need for housing to be built so close to an SSSI and its inevitable detrimental impact 1.2 Many other sites across North Somerset (at least 23) are clearly, from their descriptions, brownfield. If 300 homes can be added to Wyndham Way by increasing the density, this should be done elsewhere, removing the need to build on the Green Belt in Portishead and elsewhere. 1.3 One example of a site that is not making full use of a brownfield site or optimising the density of development is Castlewood in Clevedon. To quote the AECOM report "Our model suggests that what is most needed to be built in Portishead over the plan period is 3 bedroom properties	In addition, neither site is sustainable or capable of providing safe and suitable access, and would give rise to unacceptable transport impacts, which fails the soundness tests set out in National Planning Policy. Therefore, the Tower Farm and Black Rock sites should both be removed from the Local Plan We note that developer proposals for both Black Rock and Tower Farm developments were submitted long before the funding and go-ahead for the Portishead-Bristol rail link were approved. We here describe multiple concerns about these two specific locations relating to the unique SSSI status of the adjacent Weston Big Wood woodland as well as ecological, sustainability and other concerns. Taken together, the Black Rock and Tower Farm proposed developments will encircle ~20% of Weston Big Wood's boundary. We also note that the population of Portishead has increased from circa 17000 to approximately 27000 in the last twenty-five years and currently struggles with sufficient infrastructure, so any additional development must ensure that this infrastructure deficit is fully addressed. 1 NPPF S147 Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development. 								the Local Plan, classified as a suburban or urban site and using national housing density guidelines the 2.67 acre site could accommodate 250 to 500 dwellings which would help to remove the need for developing on other much less sustainable and environmentally damaging sites such as Tower Farm. 1.6 At least 2 existing brownfield sites in Portishead have not been included in the Plan. Planning permission was granted in 2017 for 33 homes at a site in Portishead between Wyndham Way and Cheviot Meadow (17/P/1229/FUL). These were not built, and permission was later granted for a care home there, but that has also not been built and the site is for sale again. Land is also for sale next to The Poacher public house, with an indicative 8 homes.How many other brownfield sites are there in North Somerset that have not been included and that should be considered before releasing Green Belt land? 1.7 The analysis is sections 1.31 to 1.35 shows that NSC's claim within its Green Belt Review Background Paper that the use of brownfield sites has been properly assessed is not credible. It has not fully assessed the opportunities for sustainable, brown field or greenfield development in urban and suburban sites. 1.8 The CPRE has recently emphasised the value of brownfield sites in achieving house-building targets and the fallacy that Green Belt revisions are required. Their research "shows that there are enough brownfield sites in England to build 1.4 million new homes": https://www.cpre.org.uk/news/over-half-of-brownfield-sites-could-be-built-on-rapidly-report◈shows/ . This is something that NSC should be prioritising. 1.9 Tower Farm is situated in the Green Belt. The area was defined as Green Belt relatively recently in 1988, it was not part of the original UK wide Green Belt designation. The 1988 designation was part of the South West Avon Green Belt Local Plan and made after a Planning decision made by the Secretary of State at the time regarding the development of the Avon and Police Headquarters and a housing estate on Portishead down next to Tower Farm. The Secretary of State at the time, whilst allowing the development, emphasised the strategic ecological importance of the adjacent Gordano Valley and need to protect the integrity of the Strategic Gordano Valley Green Corridor (now defined as a North Somerset Council Strategic Green corridor). The judgement also led to the subsequent purchase in 1997 of the 38 acres of the Weston Big Wood SSSI for safekeeping by Avon Wildlife Trust. The Strategic Green corridor runs all the way from the Severn Estuary through Portbury Wharf Nature Reserve, along the Gordano valley and through to the Somerset Levels and the Mendips. This area is exceptional Green Belt in contradiction to the NSC Green Belt assessment which fails to factor in the special circumstances that led to this relatively late designation as Green Belt. NSC has therefore not demonstrated that "Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries… it has examined fully all other reasonable options for meeting its identified need for development", contrary to NPPF S147. 2 NPPF S156 Where major development involving the provision of housing is proposed on land released from the Green Belt through plan preparation or review, or on sites in the Green Belt subject to a planning application, the following contributions ('Golden Rules') should be made: … b) necessary improvements to local or national infrastructure; and the provision of new, or improvements to existing, green spaces that are accessible to the public. New residents should be able to access good quality green spaces within a short walk of their home, whether through onsite provision or through access to offsite spaces. 2.1 There is nothing in the Draft Infrastructure Delivery Plan Schedule document in Portishead other than: a cycle lane to Clevedon; the railway line that has been used to justify every development in the town for the past 30 years so can't be described as "necessary improvements to local or national infrastructure" in response to the proposed loss of Green Belt land; and something vague about possibly building a new school. 2,2 There is also no "provision of new, or improvements to existing, green spaces" in the NSC Plan. 2.3 The developer's Vision Document includes plans to provide a small amount of additional land to and changes to Merlin Park (which is public land not owned by them), but shows a complete lack of understanding of the current area. Their plans would be out of keeping with the current use, and also assumes that the current/future owners of the existing land would want to make those changes. 2.4 It can therefore not be demonstrated that the Golden Rule for releasing land from the Green Belt for the provision of housing of "necessary improvements to local or national infrastructure; and the provision of new, or improvements to existing, green spaces that are accessible to the public" will be met, contrary to NPPF S156. t can therefore not be demonstrated that the Golden Rule for releasing land from the Green Belt for the provision of housing of "necessary improvements to local or national infrastructure; and the provision of new, or improvements to existing, green spaces that are accessible to the public" will be met, contrary to NPPF S156. 3 NPPF S187 1. Planning policies and decisions should contribute to and enhance the natural and local environment by: a) protecting and enhancing valued landscapes, sites of biodiversity or geological value and soils (in a manner commensurate with their statutory status or identified quality in the development plan); b) recognising the intrinsic character and beauty of the countryside, and the wider benefits from natural capital and ecosystem services – including the economic and other benefits of the best and most versatile agricultural land,	(48%); followed by 2 bedroom (32%); plus a smaller amount of 1 bedroom properties (15%); a very small amount of very large properties with 5 bedrooms or more. There is no need for more 4 bedroom properties… Most of all, while prioritising mid-sized homes, a variety of housing should be provided to cater for incomes of different needs, incomes, sizes, and life-stages… the demand for smaller properties from those with less purchasing power is of priority concern". 										to the proposed loss of Green Belt land; and something vague about possibly building a new school. 2,2 There is also no “provision of new, or improvements to existing, green spaces” in the NSC Plan. 2.3 The developer’s Vision Document includes plans to provide a small amount of additional land to and changes to Merlin Park (which is public land not owned by them), but shows a complete lack of understanding of the current area. Their plans would be out of keeping with the current use, and also assumes that the current/future owners of the existing land would want to make those changes. 2.4 It can therefore not be demonstrated that the Golden Rule for releasing land from the Green Belt for the provision of housing of “necessary improvements to local or national infrastructure; and the provision of new, or improvements to existing, green spaces that are accessible to the public” will be met, contrary to NPPF S156. t can therefore not be demonstrated that the Golden Rule for releasing land from the Green Belt for the provision of housing of “necessary improvements to local or national infrastructure; and the provision of new, or improvements to existing, green spaces that are accessible to the public” will be met, contrary to NPPF S156. 3 NPPF S187 1. Planning policies and decisions should contribute to and enhance the natural and local environment by: a) protecting and enhancing valued landscapes, sites of biodiversity or geological value and soils (in a manner commensurate with their statutory status or identified quality in the development plan); b) recognising the intrinsic character and beauty of the countryside, and the wider benefits from natural capital and ecosystem services – including the economic and other benefits of the best and most versatile agricultural land, and of trees and woodland; c) … minimising impacts on and providing net gains for biodiversity, including by establishing coherent ecological networks that are more resilient to current and future pressures and incorporating features which support priority or threatened species such as swifts, bats and hedgehogs; … 3.1 Tower Farm adjoins Weston Big Wood, an SSSI and one of the most valued landscapes and most important biodiversity sites in North Somerset. It is also close to Nightingale Valley SSSI. This planning decision should do everything possible to protect these special places.	
58640257	Mr Greg Aston			No	Consistent with national policy	No	No	Before including the Tower Farm and Black Rock sites in the Local Plan, NSC has not properly considered: • Alternative brown and green field sites with much less ecological impact both in Portishead and across North Somerset. • The opportunity to increase housing density on proposed brown field sites across North Somerset which would mean these sites are not required to meet local housing targets.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								• The strategic ecological contribution of these specific sites in protecting the unique environment of Weston Big Wood (SSSI) and the Gordano Valley strategic green corridor • The fact that these sites were specifically added to the Green Belt in the late 1980's because of their high ecological value. For the above reasons, the Local Plan is unsound because National Planning Policy states that sites can only be removed from Green Belt for development under exceptional circumstances and these exceptional circumstances are not proven. In addition, neither site is sustainable or capable of providing safe and suitable access, and would give rise to unacceptable transport impacts, which fails the soundness tests set out in National Planning Policy. Therefore, the Tower Farm and Black Rock sites should both be removed from the Local Plan We note that developer proposals for both Black Rock and Tower Farm developments were submitted long before the funding and go-ahead for the Portishead-Bristol rail link were approved. We here describe multiple concerns about these two specific locations relating to the unique SSSI status of the adjacent Weston Big Wood woodland as well as ecological, sustainability and other concerns. Taken together, the Black Rock and Tower Farm proposed developments will encircle ~20% of Weston Big Wood's boundary. We also note that the population of Portishead has increased from circa 17000 to approximately 27000 in the last twenty-five years and currently struggles with sufficient infrastructure, so any additional development must ensure that this infrastructure deficit is fully addressed. 1 NPPF S147 Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development. This will be assessed through the examination of its strategic policies, which will take into account the preceding paragraph and whether the strategy: a) makes as much use as possible of suitable brownfield sites and underutilised land; b) optimises the density of development in line with the policies in chapter 11 of this Framework, including whether policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport... 1.1 In comparison with the previous iteration of the NSC Local Plan draft, the density of the Wyndham Way site in Portishead was increased from 485 to 785 homes. This increase in density is compatible with National Policy as it is a brownfield and is far more sustainable than the others being proposed in the town. However, only one other significant proposed site in North Somerset saw an increase in its allocation between the previous and current draft. There is no evidence that density at the other sites in the Plan has been properly considered. This should be done in order to comply with NPPF S147, and NSC's claim within its Green Belt Review Background Paper that this has been done is not credible. The Wyndham Way site contains a 1.1 hectare "green field" which is effectively wasteland and has been earmarked for commercial development for many years, but no plans have ever been brought forward because of lack of viability. The vision of the Wyndham Way area is for a mixed housing and commercial development which would bring more jobs to Portishead and prevent it becoming purely a commuter town. This particular site It is near to the new railway station which is due to open in 2028. Reclassifying it as a mixed residential and commercial site on this wasteland will increase the probability of the site being developed as the first phase of the Wyndham Way area vision/Town Centre regeneration and avoid the need for housing to be built so close to an SSSI and its inevitable detrimental impact 1.2 Many other sites across North Somerset (at least 23) are clearly, from their descriptions, brownfield. If 300 homes can be added to Wyndham Way by increasing the density, this should be done elsewhere, removing the need to build on the Green Belt in Portishead and elsewhere. 1.3 One example of a site that is not making full use of a brownfield site or optimising the density of development is Castlewood in Clevedon. The site is owned by North Somerset Council and has an allocation of just 120 homes. It is a sustainable site with an area of 3.37 hectares with a flat walk to the High Street, served by the X5, X6, X7/X7a, X10 and X11 bus services (i.e. local and Bristol services). It should be classified as either a suburban or urban site and national guidance recommends a dwelling density of 100-120 dph (dwellings per hectare) for suburban sites and 200+dph for urban sites. This brownfield site could therefore accommodate between 300 to 600 homes rather than the 120 currently planned which would mean that ecologically sensitive sites such as Tower Farm would no longer be needed. Increasing density on this site should be done "Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries", in order to comply with the NPPF. 1.4 In respect of the Castlewood site, more efficient use of it would also boost the availability of new homes in Clevedon, which currently only has an allocation of 258 compared with 6,084 in Weston, 1,347 in Portishead, 1,683 in Backwell, 1,817 in Nailsea and 1,100 in Pill. This would also help to give a fairer distribution of development across North Somerset. In addition, NSC should surely has a statutory duty to maximise their potential income from a site that they own. 1.5 Despite rapid growth in Portishead in recent years (the population has increased in size by 60% between 2001 and 2025) and a tightly drawn settlement boundary there is still some green field land in a sustainable location that would not damage the local environment if brought forward for development. An example is a plot (known as "Land South of Clevedon Road". This was included as a site reference HE20488 in the 2023 NSC Local Plan draft but has been removed from the latest version, we understand that this is because the Environment Agency has reclassified the land is being in the flood plain. This is surprising as the field is on a small ridge overlooking			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								the Somerset Levels and is in fact on higher ground than most of the land developed in Portishead over the last 25 years. The 2023 proposal was for 80 homes on this 2.67 Hectare Green Belt site, mostly larger Executive style homes. That proposal was in conflict with the independent Portishead Housing Needs Assessment carried out by AECOM for the Portishead Neighbourhood Plan which highlighted the need for affordable and smaller dwelling units in Portishead. To quote the AECOM report “Our model suggests that what is most needed to be built in Portishead over the plan period is 3 bedroom properties (48%); followed by 2 bedroom (32%); plus a smaller amount of 1 bedroom properties (15%); a very small amount of very large properties with 5 bedrooms or more. There is no need for more 4 bedroom properties… Most of all, while prioritising mid-sized homes, a variety of housing should be provided to cater for incomes of different needs, incomes, sizes, and life-stages… the demand for smaller properties from those with less purchasing power is of priority concern”. This site is in a sustainable location, very close to the local Secondary school and a short flat walk to Portishead High Street. It should be brought back into the Local Plan, classified as a suburban or urban site and using national housing density guidelines the 2.67 acre site could accommodate 250 to 500 dwellings which would help to remove the need for developing on other much less sustainable and environmentally damaging sites such as Tower Farm. 1.6 At least 2 existing brownfield sites in Portishead have not been included in the Plan. Planning permission was granted in 2017 for 33 homes at a site in Portishead between Wyndham Way and Cheviot Meadow (17/P/1229/FUL). These were not built, and permission was later granted for a care home there, but that has also not been built and the site is for sale again. Land is also for sale next to The Poacher public house, with an indicative 8 homes. How many other brownfield sites are there in North Somerset that have not been included and that should be considered before releasing Green Belt land? 1.7 The analysis is sections 1.31 to 1.35 shows that NSC’s claim within its Green Belt Review Background Paper that the use of brownfield sites has been properly assessed is not credible. It has not fully assessed the opportunities for sustainable, brown field or greenfield development in urban and suburban sites. 1.8 The CPRE has recently emphasised the value of brownfield sites in achieving house-building targets and the fallacy that Green Belt revisions are required. Their research “shows that there are enough brownfield sites in England to build 1.4 million new homes”: https://www.cpre.org.uk/news/over-half-of-brownfield-sites-could-be-built-on-rapidly-report◈shows/ . This is something that NSC should be prioritising. 1.9 Tower Farm is situated in the Green Belt. The area was defined as Green Belt relatively recently in 1988, it was not part of the original UK wide Green Belt designation. The 1988 designation was art of the South West Avon Green Belt Local Plan and made after a Planning decision made by the Secretary of State at the time regarding the development of the Avon and Police Headquarters and a housing estate on Portishead down next to Tower Farm. The Secretary of State at the time, whilst allowing the development, emphasised the strategic ecological importance of the adjacent Gordano Valley and need to protect the integrity of the Strategic Gordano Valley Green Corridor (now defined as a North Somerset Council Strategic Green corridor). The judgement also led to the subsequent purchase in 1997 of the 38 acres of the Weston Big Wood SSSI for safekeeping by Avon Wildlife Trust. The Strategic Green corridor runs all the way from the Severn Estuary through Portbury Wharf Nature Reserve, along the Gordano valley and through to the Somerset Levels and the Mendips. This area is exceptional Green Belt in contradiction to the NSC Green Belt assessment which fails to factor in the special circumstances that led to this relatively late designation as Green Belt. NSC has therefore not demonstrated that “Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries… it has examined fully all other reasonable options for meeting its identified need for development”, contrary to NPPF S147. 2 NPPF S156 Where major development involving the provision of housing is proposed on land released from the Green Belt through plan preparation or review, or on sites in the Green Belt subject to a planning application, the following contributions (‘Golden Rules’) should be made: b) necessary improvements to local or national infrastructure; and the provision of new, or improvements to existing, green spaces that are accessible to the public. New residents should be able to access good quality green spaces within a short walk of their home, whether through onsite provision or through access to offsite spaces. 2.1 There is nothing in the Draft Infrastructure Delivery Plan Schedule document in Portishead other than: a cycle lane to Clevedon; the railway line that has been used to justify every development in the town for the past 30 years so can’t be described as “necessary improvements to local or national infrastructure” in response to the proposed loss of Green Belt land; and something vague about possibly building a new school. 2,2 There is also no “provision of new, or improvements to existing, green spaces” in the NSC Plan. 2.3 The developer’s Vision Document includes plans to provide a small amount of additional land to and changes to Merlin Park (which is public land not owned by them), but shows a complete lack of understanding of the current area. Their plans would be out of keeping with the current use, and also assumes that the current/future owners of the existing land would want to make those changes. 2.4 It can therefore not be demonstrated that the Golden Rule for releasing land from the Green Belt for the provision of housing of “necessary improvements to local or national infrastructure; and the provision of new, or improvements to existing, green spaces that are accessible to the public” will be met, contrary to NPPF S156.

								It can therefore not be demonstrated that the Golden Rule for releasing land from the Green Belt for the provision of housing of “necessary improvements to local or national infrastructure; and the provision of new, or improvements to existing, green spaces that are accessible to the public” will be met, contrary to NPPF S156. 3 NPPF S187 1. Planning policies and decisions should contribute to and enhance the natural and local environment by: a) protecting and enhancing valued landscapes, sites of biodiversity or geological value and soils (in a manner commensurate with their statutory status or identified quality in the development plan); b) recognising the intrinsic character and beauty of the countryside, and the wider benefits from natural capital and ecosystem services – including the economic and other benefits of the best and most versatile agricultural land, and of trees and woodland; c)minimising impacts on and providing net gains for biodiversity, including by establishing coherent ecological networks that are more resilient to current and future pressures and incorporating features which support priority or threatened species such as swifts, bats and hedgehogs; ... 3.1 Tower Farm adjoins Weston Big Wood, an SSSI and one of the most valued landscapes and most important biodiversity sites in North Somerset. It is also close to Nightingale Valley SSSI. This planning decision should do everything possible to protect these special places.			
20338913	Aston & Co		Aston and Co UK						To achieve a sound Local Plan, the following modifications are required: Modification 1 – Full Release of HE20124 (Grey Belt) - Amend the Green Belt boundary to the western defensible edge (B3124 / escarpment / valley floor), releasing the entire parcel HE20124. Modification 2 – Deletion or Reduction of Wyndham Way Allocation - Remove or significantly reduce Wyndham Way allocation due to non-deliverability. Replace capacity through full allocation of HE20124. Modification 3 – Allocate HE20124 in Full for Residential Development - Allocate HE20124 for approximately up to 1251 dwellings with integrated buffers, green infrastructure, sustainable movement corridors, and heritage-led placemaking. Modification 4 – Affordable Housing Flexibility - Apply a viability-led AH policy to ensure deliverability, reflecting DSP evidence and local market conditions. This Representation is submitted by Aston & Co UK Ltd in respect of the North Somerset Local Plan 2041 (Pre-Submission Plan) and concerns the promoted allocation at Black Rock, Portishead (HE20124). The case advanced is structured, proportionate and founded on a multi-year, multi-disciplinary evidence base (2017–2025), including material already submitted to NSC, and independent technical work by Turley, Landmark Practice, Connect Consultants and other specialists. This representation relates to the full extent of site HE20124 as defined in NSC’s published Proposals Map and described within the Green Belt and Strategy Evidence Base. References to ‘the promoted land’ are synonymous with HE20124 and encompass both component land parcels, which NSC consistently treat as a single spatial unit within the evidence base. This representation is submitted on behalf of the landowners, the Aston and Crook families. The land is subject to a promotion agreement with Bloor Homes, whose planning advisors Turley are submitting a separate Regulation 19 representation. This Aston & Co submission complements — and does not duplicate — the promoter’s technical case; it focuses specifically on matters of soundness, Green Belt justification, and the legal and evidential basis for the full allocation of HE20124. Aston & Co UK Ltd acts for the landowners in the promotion of HE20124, and a director holds a declared land interest within the promoted land. 2.1 Grey Belt – Evidence, Legal Tests & Consequences All components of NSC’s own Green Belt evidence base independently and consistently identify the entire HE20124 parcel as grey belt. This is not contested in any NSC document (Background Paper; Arup Stage 1; Stage 2 Assessment). Weak performance is recorded across all determining purposes. The implications are legally and policy significant: • The Very Special Circumstances (VSC) test does not apply • The correct tests are NPPF 2024 paragraphs 31, 35, 36 and 155 • Partial release of a single parcel treated as a whole in the evidence base would risk irrationality • Ecology cannot redefine Green Belt boundaries • Full allocation is required for soundness given housing need and deliverability	The Black Rock (HE20124) site assists North Somerset Council in demonstrating compliance with the replacement plan legal tests: Positively prepared — meets objectively assessed need Justified — supported by proportionate, robust multi-year evidence and EIA screening Effective — deliverable within plan period Consistent with national policy — especially NPPF paras 31, 35, 36, 104–110, 155[8]	APPENDIX 4 - Wyndham Way Deliverability.pdf Document 4_EIA Screening Appeal_Decision_22.05.18.pdf APPENDIX 3 - Soundness_Consequences_of_Wyndham_Way_HE20124.pdf APPENDIX 2 - Grey_Belt_Legal_Tests_Consequences.pdf Document 5A_RAF Aerial Image Black Rock (HE20124) Industrial Scale Quarrying.jpg Document 5B_AERIAL IMAGE AND HISTORIC MAPPING PACK.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									This is set out in Appendix 1 (Grey Belt One-Page Evidence Summary) and Appendix 2 (Grey Belt Legal Tests & Consequences). The promoted site is: • Available • Suitable • Achievable • Supported by comprehensive technical evidence (EIA screening; ecology; LVIA; heritage; transport; drainage; deliverability; viability) It delivers: • Early housing • Clear enduring Green Belt boundaries • Biodiversity mitigation and enhancement • Active travel connections and sustainable movement • Heritage-led placemaking • Appropriate scale and form The site therefore meets all four soundness tests. 2.4 Historic Landscape & Industrial Setting (RAF Imagery) Document 5A/5B contains the full 1945 RAF aerial survey of Portishead's western fringe. The imagery shows: • The land immediately north of the western parcel formed part of an active limestone quarry complex with extraction benches visible in 1945 • The current woodland in this location is post-1950s regrowth, not ancient or semi-ancient • The small copse to the north-west of the arable field sits on quarry overburden, with no continuous woodland cover prior to the mid-20th century (see pp.9–11 of Aston & Co Cultural & Heritage Report, 2018) • The light railway connected directly into the Black Rock and Nightingale quarries, with a loading terminus to the south-west and Black Rock Villas constructed for quarry workers (see pp.25–29 of the same report) This confirms: • A historically industrial landscape, • statements of 'semi-ancient woodland' relating to the woodland blocks adjoining the site are factually incorrect, • And that Purpose (c) (encroachment) is not strengthened by the existing woodland, which is neither ancient nor reflective of pre-industrial naturalness.We respect the habitat value present today. EIA screening (2018), Ecological surveys (2019 & 2025), and iterative site assessment work have addressed woodland interface issues responsibly, balancing much-needed housing with robust mitigation, a 50m buffer, and opportunities for nature enhancement. See Turley's separate submission. The evidence demonstrates that: • HE20124 is grey belt, • Its release is policy compliant, • It is a deliverable, sustainable strategic growth opportunity, • Wyndham Way is not deliverable, • NSC's evidence necessitates full allocation of HE20124, and • The Plan is unsound without these modifications. These modifications ensure a lawful, rational and sound Local Plan for Portishead and North Somerset		
62675745	Susan Barkwith			No	Consistent with national policy			In summary: "Before including the Tower Farm and Black Rock sites in the Local Plan, NSC has not properly considered: Alternative brown and green field sites with much less ecological impact both in Portishead and across North Somerset. 62846273	Steve & Hazel Barlow							Please can we add our names to the list of those local residents and others who are concerned about the proposed development plans for Portishead Down and Weston Big Wood. We would echo the concerns about the ecological impact, and believe that alternative brownfield sites should be sought, and/or proposals to increase housing density on brownfield sites be considered. We are concerned that Green Belt should not be developed unless exceptional circumstances require it. Access safety and suitability will clearly be major issues, and resulting transport impacts would be significant. We would ask that Tower Farm and Black Rock be removed from the Local Plan.			
62718721	Samantha bell			No	Justified	No	No	1- Alternative brown field or green field site with far lower ecological impact both in Portishead and across north somerset. 2- Opportunity's to increase housing density on proposed brown field site which could remove the need to develop tower farm and black rock 3- The strategic ecological importance of these sites in protecting Weston big wood and the Gordano valley green corridor 4- The fact that both areas were added to the green belt in the late 1980's due to the high ecological value 5- National planning policy allows green belt changes only in exceptional circumstances, and these have not been demonstrated. In addition - neither sights can provide safe, legal or suitable access Development would create unacceptable transport impacts, failing national soundness tests FOR ALL THESE REASONS TOWER FARM AND BLACK ROCK SHOULD BE REMOVED FROM THE LOCAL PLAN	NO	ABSOLUTELY NOT	
62865761	Gayle Bennett			No	Justified	Unsure	Unsure	This plan is not justified as it will adversely affect Ancient Woodland and its ecosystem/ inhabits . The extra volume of traffic from both sites will have to go through North Weston Village causing congestion and chaos. This route of traffic will cause significant risk to the public accessing Gordano School and St Joseph’s School. There is also not enough school places and doctors as it stands, so to increase any more housing in these two areas will be detrimental to Portishead’s current population.			
58528865	Joe Boardman							I am a Portishead resident and have lived here all my life. I would like to comment on the Local Plan 2041 proposals, specifically the Tower Farm and Black Rock development plans. I disagree with these plans and believe them to be ill thought through. Several good points in this vein are: NSC has not properly considered: Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm and Black Rock. The strategic ecological importance of these sites in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. The fact that both areas were added to the Green Belt in the late 1980s due to their high ecological value. National planning policy allows Green Belt changes only in exceptional circumstances — and these have not been demonstrated. In addition: Neither site can provide safe or suitable access. Development would create unacceptable transport impacts, failing national soundness tests. I found these on the Portishead Town Council website and wholeheartedly agree. Furthermore, my childhood home is on The Downs, which is very close to the proposed developments at Tower Farm. It's an absolute nightmare already with High Down school traffic which I believe these plans will only make worse. You're taking away from a beautiful green belt area that is loved by many in (and outside) of Portishead. I think it would be a great shame if this went ahead. I hope you decide to take into consideration people's views who live nearby and love this green space.			
62770401	Alan & Jacky Bond							We object to this plan. Accessibility is very limited and therefore too dangerous due to the congestion that the traffic would cause.It is green belt land and far too close to Weston Bigwood and the wildlife that occupies it.			
62862337	Natasha Bowey		N/A	No	• Justified • Effective	No	Unsure	I believe the North Somerset Local Plan 2041: Pre-submission plan (for houses to be built in Tower Farm and Black Rock) for the following reasons: I believe the NSC has not properly considered: Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm and Black Rock The strategic ecological importance of these sites in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. The fact that both areas were added to the Green Belt in the late 1980s due to their high ecological value National planning policy allows Green Belt changes only in exceptional circumstances – and these have not been demonstrated. In addition: Neither site can provide safe or suitable access Development would create unacceptable transport impacts, failing national soundness tests. In relation to the transport – before you mention the plans for Portishead to have a railway, you should bear in mind that when I moved to Portishead 22 years ago we were promised a railway at that time, 22 years on and we are still waiting, so I will believe we will get the railway when the train is on its platform. Whoever planned on putting this housing scheme in place obviously haven't been to Portishead during the mornings, lunchtimes and early evenings when the traffic often comes to gridlock – this is especially bad anywhere near the schools. For the above reasons, Tower Farm and Black Rock should be removed from the Local Plan. I do not think any modifications would make it legally compliant or sound. I believe the only way to make it legally compliant and sound in respect to the issues I have raised is for Tower Farm and Black Rock to be removed from the Local Plan totally.			
62906945	Dave Carroll							Formal Objection to North Somerset Council Draft Local Plan Development Proposals for Portishead Down, Weston Big Wood, Tower Farm, and Black Rock EXECUTIVE SUMMARY	Formal Objection to North Somerset Council Draft Local Plan Development Proposals for Portishead Down, Weston Big Wood, Tower Farm, and Black Rock EXECUTIVE SUMMARY I am writing to formally object to the proposed development of		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								I am writing to formally object to the proposed development of Portishead Down, Weston Big Wood, Tower Farm, and Black Rock as outlined in North Somerset Council's draft Local Plan [10]. These proposals represent a significant threat to protected green spaces, biodiversity, and community wellbeing. While I note that the Council is now consulting on the soundness and legality of the plan [10], I have serious concerns about whether the consultation is comprehensive, adequate, and properly addresses all the critical issues raised in this objection. This objection addresses: 1. Legal and process failures 2. Environmental protection concerns (SSSI, ancient woodland, biodiversity) 3. Discriminatory targeting of Portishead for green space sacrifice 4. Per-capita impact on existing residents 5. Transparency and accountability issues 6. Infrastructure capacity concerns 7. Climate change and carbon impact 8. All questions requiring Council response PART 1: LEGAL ARGUMENTS AND PROCESS CONCERNS 1.1 Consultation on Soundness and Legality Current Status: The Council is now consulting on the soundness and legality of the plan [10]. While this is welcome, I have serious concerns about whether the consultation is comprehensive and adequately addresses all soundness tests. Legal Requirements: • Under the Planning and Compulsory Purchase Act 2004 [1], Local Plans must be "sound" and comply with legal requirements • The National Planning Policy Framework (NPPF) [2] requires Local Plans to be: o Positively prepared - providing a strategy which meets objectively assessed development needs o Justified - based on proportionate evidence o Effective - deliverable over the plan period o Consistent with national policy - enabling the sustainable use of land Concerns About Consultation: • Is the consultation comprehensive enough to properly assess soundness? • Are all soundness tests being explicitly addressed? • Is sufficient information provided to enable proper assessment? • Are all stakeholders being adequately engaged? • Is the consultation period sufficient? Questions: • How is the Council ensuring that all four soundness tests are properly assessed? • What evidence is being provided to demonstrate soundness? • How are responses to the soundness consultation being evaluated? • Will the Council publish its assessment of soundness before the plan proceeds to examination? 1.2 Environmental Protection Legislation Statutory Protections: • Wildlife and Countryside Act 1981 [3] - Protection of habitats and species • Countryside and Rights of Way Act 2000 [4] - Protection of Sites of Special Scientific Interest (SSSI) • Environment Act 2021 [5] - Biodiversity net gain requirements (10% minimum) • Climate Change Act 2008 [6] - Carbon reduction obligations 1.3 Green Belt and Protected Landscape Considerations • Green Belt land should only be developed in "very special circumstances" (NPPF paragraph 144) [2] • NPPF paragraph 102 [2] provides strong protection for Local Green Spaces • Development should only be permitted in "very special circumstances" 1.4 Public Sector Equality Duty • Under the Equality Act 2010 [19], public authorities have a Public Sector Equality Duty • This requires consideration of how decisions affect people with protected characteristics • Development decisions must not discriminate or have disproportionate impact PART 2: ENVIRONMENTAL CONCERNS - CRITICAL PROTECTIONS 2.1 Site of Special Scientific Interest (SSSI) and Ancient Woodland Protection Critical Environmental Status: • Weston Big Wood is designated as a Site of Special Scientific Interest (SSSI) [16] - this is the highest level of statutory protection for wildlife sites in England • Ancient or Semi-Natural Woodland - These woodlands are irreplaceable habitats that have existed since at least 1600 AD [17] • Development adjacent to or affecting SSSIs requires exceptional justification under the Wildlife and Countryside Act 1981 [3]	Portishead Down, Weston Big Wood, Tower Farm, and Black Rock as outlined in North Somerset Council's draft Local Plan [10]. These proposals represent a significant threat to protected green spaces, biodiversity, and community wellbeing. While I note that the Council is now consulting on the soundness and legality of the plan [10], I have serious concerns about whether the consultation is comprehensive, adequate, and properly addresses all the critical issues raised in this objection. This objection addresses: 1. Legal and process failures 2. Environmental protection concerns (SSSI, ancient woodland, biodiversity) 3. Discriminatory targeting of Portishead for green space sacrifice 4. Per-capita impact on existing residents 5. Transparency and accountability issues 6. Infrastructure capacity concerns 7. Climate change and carbon impact 8. All questions requiring Council response PART 1: LEGAL ARGUMENTS AND PROCESS CONCERNS 1.1 Consultation on Soundness and Legality Current Status: The Council is now consulting on the soundness and legality of the plan [10]. While this is welcome, I have serious concerns about whether the consultation is comprehensive and adequately addresses all soundness tests. Legal Requirements: • Under the Planning and Compulsory Purchase Act 2004 [1], Local Plans must be "sound" and comply with legal requirements • The National Planning Policy Framework (NPPF) [2] requires Local Plans to be: o Positively prepared - providing a strategy which meets objectively assessed development needs o Justified - based on proportionate evidence o Effective - deliverable over the plan period o Consistent with national policy - enabling the sustainable use of land Concerns About Consultation: • Is the consultation comprehensive enough to properly assess soundness? • Are all soundness tests being explicitly addressed? • Is sufficient information provided to enable proper assessment? • Are all stakeholders being adequately engaged? • Is the consultation period sufficient? Questions: • How is the Council ensuring that all four soundness tests are properly assessed? • What evidence is being provided to demonstrate soundness? • How are responses to the soundness consultation being evaluated? • Will the Council publish its assessment of soundness before the plan proceeds to examination? 1.2 Environmental Protection Legislation Statutory Protections: • Wildlife and Countryside Act 1981 [3] - Protection of habitats and species • Countryside and Rights of Way Act 2000 [4] - Protection of Sites of Special Scientific Interest (SSSI) • Environment Act 2021 [5] - Biodiversity net gain requirements (10% minimum) • Climate Change Act 2008 [6] - Carbon reduction obligations 1.3 Green Belt and Protected Landscape Considerations • Green Belt land should only be developed in "very special circumstances" (NPPF paragraph 144) [2] • NPPF paragraph 102 [2] provides strong protection for Local Green Spaces • Development should only be permitted in "very special circumstances" 1.4 Public Sector Equality Duty • Under the Equality Act 2010 [19], public authorities have a Public Sector Equality Duty • This requires consideration of how decisions affect people with protected characteristics • Development decisions must not discriminate or have disproportionate impact PART 2: ENVIRONMENTAL CONCERNS - CRITICAL PROTECTIONS 2.1 Site of Special Scientific Interest (SSSI) and Ancient Woodland Protection Critical Environmental Status: • Weston Big Wood is designated as a Site of Special Scientific Interest (SSSI) [16] - this is the highest level of statutory protection for wildlife sites in England • Ancient or Semi-Natural Woodland - These woodlands are irreplaceable habitats that have existed since at least 1600 AD [17] • Development adjacent to or affecting SSSIs requires exceptional justification under the Wildlife and Countryside Act 1981 [3] • The Countryside and Rights of Way Act 2000 [4] provides additional protection for SSSIs Expert Concerns: • Local wildlife expert Chris Sperring MBE has highlighted the ecological risks associated with these proposals [18] • Development threatens rare flora and fauna that depend on these protected habitats • Loss of habitat connectivity will fragment wildlife populations		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								• The Countryside and Rights of Way Act 2000 [4] provides additional protection for SSSIs Expert Concerns: • Local wildlife expert Chris Sperring MBE has highlighted the ecological risks associated with these proposals [18] • Development threatens rare flora and fauna that depend on these protected habitats • Loss of habitat connectivity will fragment wildlife populations Legal Requirements: • Any development affecting SSSIs must demonstrate: o No reasonable alternative exists o Overriding public interest o Appropriate mitigation and compensation • Question: Has Natural England been properly consulted? What is their position? 2.2 Biodiversity Net Gain - Legally Binding Requirement Environment Act 2021 Requirements: • Mandatory 10% biodiversity net gain for all developments [5] • This must be measurable, deliverable, and maintained for at least 30 years • Loss of ancient woodland and SSSI habitat makes achieving net gain extremely difficult, if not impossible Critical Questions: • Can 10% net gain be achieved on-site given the loss of protected woodland? • If off-site compensation is proposed: o Where will this be located? o Is the compensation land of equivalent ecological value? o How will it be secured and maintained for 30 years? o Who will monitor and enforce this? 2.3 Climate Change Impact - Supreme Court Precedents Recent Legal Precedents (2024): • Horse Hill Oil Well Case (June 2024): UK Supreme Court ruled that planning authorities must consider the full environmental impact, including downstream greenhouse gas emissions, when approving projects [14]. This includes: o Emissions from construction o Emissions from use of developed land o Loss of carbon sequestration capacity o Long-term climate impacts • West Cumbria Coal Mine (September 2024): High Court ruled government approval unlawful due to inadequate consideration of environmental consequences [15] Application to This Development: • Loss of Carbon Sinks: Woodland acts as a vital carbon sink. Development would: o Remove existing carbon sequestration capacity o Release stored carbon from soil and vegetation o Eliminate future carbon capture potential • Embodied Carbon: Construction of new homes generates significant embodied carbon • Transport Emissions: Additional housing will increase car dependency and transport emissions • Urban Heat Island Effect: Loss of woodland increases local temperatures Legal Requirement: • The Council must conduct a comprehensive carbon impact assessment • This must include both direct and indirect emissions • Failure to do so could render the plan unlawful under recent Supreme Court precedents [14], [15] 2.4 Flood Risk - Critical Precedent Lynchmead Farm Case (North Somerset, 2024): • Planning Inspectorate upheld the Council's decision to refuse 75 houses due to flood risks [12] • This demonstrates that flood risk is a valid reason for refusal • Development increases impermeable surfaces, leading to: o Increased surface water runoff o Risk of flash flooding o Overwhelming of drainage systems o Impact on watercourses Question: What flood risk assessments have been conducted, and do they meet the standards that led to Lynchmead Farm refusal? 2.5 Air Quality and Public Health • Trees filter air pollution (particulate matter, nitrogen oxides, ozone) • Loss of woodland reduces natural air filtration • Increased traffic from development will worsen air quality • Poor air quality causes respiratory and cardiovascular disease • Children and elderly are particularly vulnerable PART 3: DISCRIMINATION AND EQUALITY - DISPROPORTIONATE TARGETING 3.1 The Key Discrimination - Double Burden	Legal Requirements: • Any development affecting SSSIs must demonstrate: o No reasonable alternative exists o Overriding public interest o Appropriate mitigation and compensation • Question: Has Natural England been properly consulted? What is their position? 2.2 Biodiversity Net Gain - Legally Binding Requirement Environment Act 2021 Requirements: • Mandatory 10% biodiversity net gain for all developments [5] • This must be measurable, deliverable, and maintained for at least 30 years • Loss of ancient woodland and SSSI habitat makes achieving net gain extremely difficult, if not impossible Critical Questions: • Can 10% net gain be achieved on-site given the loss of protected woodland? • If off-site compensation is proposed: o Where will this be located? o Is the compensation land of equivalent ecological value? o How will it be secured and maintained for 30 years? o Who will monitor and enforce this? 2.3 Climate Change Impact - Supreme Court Precedents Recent Legal Precedents (2024): • Horse Hill Oil Well Case (June 2024): UK Supreme Court ruled that planning authorities must consider the full environmental impact, including downstream greenhouse gas emissions, when approving projects [14]. This includes: o Emissions from construction o Emissions from use of developed land o Loss of carbon sequestration capacity o Long-term climate impacts • West Cumbria Coal Mine (September 2024): High Court ruled government approval unlawful due to inadequate consideration of environmental consequences [15] Application to This Development: • Loss of Carbon Sinks: Woodland acts as a vital carbon sink. Development would: o Remove existing carbon sequestration capacity o Release stored carbon from soil and vegetation o Eliminate future carbon capture potential • Embodied Carbon: Construction of new homes generates significant embodied carbon • Transport Emissions: Additional housing will increase car dependency and transport emissions • Urban Heat Island Effect: Loss of woodland increases local temperatures Legal Requirement: • The Council must conduct a comprehensive carbon impact assessment • This must include both direct and indirect emissions • Failure to do so could render the plan unlawful under recent Supreme Court precedents [14], [15] 2.4 Flood Risk - Critical Precedent Lynchmead Farm Case (North Somerset, 2024): • Planning Inspectorate upheld the Council's decision to refuse 75 houses due to flood risks [12] • This demonstrates that flood risk is a valid reason for refusal • Development increases impermeable surfaces, leading to: o Increased surface water runoff o Risk of flash flooding o Overwhelming of drainage systems o Impact on watercourses Question: What flood risk assessments have been conducted, and do they meet the standards that led to Lynchmead Farm refusal? 2.5 Air Quality and Public Health • Trees filter air pollution (particulate matter, nitrogen oxides, ozone) • Loss of woodland reduces natural air filtration • Increased traffic from development will worsen air quality • Poor air quality causes respiratory and cardiovascular disease • Children and elderly are particularly vulnerable PART 3: DISCRIMINATION AND EQUALITY - DISPROPORTIONATE TARGETING 3.1 The Key Discrimination - Double Burden Portishead is being asked to SACRIFICE PROTECTED GREEN SPACES (SSSI [16], ancient woodland [17]) to accommodate this growth [10] Weston-super-Mare is NOT being required to sacrifice equivalent protected green spaces [9] This is double discrimination: 1. Loss of green space amenity [10], [16], [17] - Protected green spaces destroyed 2. Increased competition for remaining amenities [7], [9] - significantly more people competing for same services Additional Critical Factors: • Portishead has higher average house prices than other areas in North Somerset [20] • Developers can achieve higher profit margins in Portishead [20] • Portishead is being singled out to sacrifice its most valuable protected green spaces [9], [10] • This suggests profit-driven targeting rather than equitable		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Portishead is being asked to SACRIFICE PROTECTED GREEN SPACES (SSSI [16], ancient woodland [17]) to accommodate this growth [10] Weston-super-Mare is NOT being required to sacrifice equivalent protected green spaces [9] This is double discrimination: 1. Loss of green space amenity [10], [16], [17] - Protected green spaces destroyed 2. Increased competition for remaining amenities [7], [9] - significantly more people competing for same services Additional Critical Factors: • Portishead has higher average house prices than other areas in North Somerset [20] • Developers can achieve higher profit margins in Portishead [20] • Portishead is being singled out to sacrifice its most valuable protected green spaces [9], [10] • This suggests profit-driven targeting rather than equitable distribution [9], [20] • Portishead's smaller size (26,366 residents [7] vs ~85,000 in Weston-super-Mare [8]) means less capacity to absorb growth without significant impact Impact on Existing Residents: New residents will compete with existing Portishead residents for: • GP appointments (already under pressure) • School places (limited capacity) • Recreational facilities (will be reduced by loss of green spaces) • Road capacity (already congested) • Parking spaces Additional burden: Loss of green spaces means fewer recreational amenities available Infrastructure Capacity Per Capita: • Portishead's smaller size means infrastructure is less able to absorb growth • Smaller towns have less spare capacity in schools, healthcare, roads • Question: Has the Council assessed per-capita impact on existing residents' access to services? 3.2 Neighbourhood Plan Conflict Portishead Neighbourhood Plan: • Approved by referendum in July 2023 [11] • Represents the democratically expressed will of the community • Any development conflicting with the Neighbourhood Plan may be: o Unlawful o Discriminatory (ignoring community's expressed preferences) o Undemocratic Question: Do the proposed developments conflict with the Neighbourhood Plan? 3.3 Brownfield Development Programme Council's Own Strategy: • North Somerset Council has a brownfield development programme [13] • The Council has moved forward with delivering homes on brownfield sites • Question: Why is Portishead being asked to sacrifice green spaces when brownfield alternatives exist? Inequity: • If brownfield development is the Council's strategy [13], why is Portishead being treated differently [10]? • Are other areas being required to sacrifice green spaces, or only Portishead [9], [10]? • This suggests unequal treatment and potential discrimination [9], [10], [19] PART 4: TRANSPARENCY AND ACCOUNTABILITY 4.1 Unequal Access to Decision-Makers Critical Concern: • There is a lack of transparency regarding councillor meetings with different stakeholder groups • Question: Have councillors met more frequently with property developers than with local residents and environmental groups? • This raises concerns about: o Bias in decision-making - if developers have greater access to councillors o Unequal influence - if community voices are not heard equally o Accountability - if meetings are not properly recorded or declared o Conflicts of interest - if councillors have undeclared relationships with developers Evidence Required: • Records of councillor meetings with property developers • Records of councillor meetings with local residents and community groups • Records of councillor meetings with environmental organisations • Comparison of meeting frequency and access • Register of Interests - any undeclared relationships with developers Legal Implications:	distribution [9], [20] • Portishead's smaller size (26,366 residents [7] vs ~85,000 in Weston-super-Mare [8]) means less capacity to absorb growth without significant impact Impact on Existing Residents: New residents will compete with existing Portishead residents for: • GP appointments (already under pressure) • School places (limited capacity) • Recreational facilities (will be reduced by loss of green spaces) • Road capacity (already congested) • Parking spaces Additional burden: Loss of green spaces means fewer recreational amenities available Infrastructure Capacity Per Capita: • Portishead's smaller size means infrastructure is less able to absorb growth • Smaller towns have less spare capacity in schools, healthcare, roads • Question: Has the Council assessed per-capita impact on existing residents' access to services? 3.2 Neighbourhood Plan Conflict Portishead Neighbourhood Plan: • Approved by referendum in July 2023 [11] • Represents the democratically expressed will of the community • Any development conflicting with the Neighbourhood Plan may be: o Unlawful o Discriminatory (ignoring community's expressed preferences) o Undemocratic Question: Do the proposed developments conflict with the Neighbourhood Plan? 3.3 Brownfield Development Programme Council's Own Strategy: • North Somerset Council has a brownfield development programme [13] • The Council has moved forward with delivering homes on brownfield sites • Question: Why is Portishead being asked to sacrifice green spaces when brownfield alternatives exist? Inequity: • If brownfield development is the Council's strategy [13], why is Portishead being treated differently [10]? • Are other areas being required to sacrifice green spaces, or only Portishead [9], [10]? • This suggests unequal treatment and potential discrimination [9], [10], [19] PART 4: TRANSPARENCY AND ACCOUNTABILITY 4.1 Unequal Access to Decision-Makers Critical Concern: • There is a lack of transparency regarding councillor meetings with different stakeholder groups • Question: Have councillors met more frequently with property developers than with local residents and environmental groups? • This raises concerns about: o Bias in decision-making - if developers have greater access to councillors o Unequal influence - if community voices are not heard equally o Accountability - if meetings are not properly recorded or declared o Conflicts of interest - if councillors have undeclared relationships with developers Evidence Required: • Records of councillor meetings with property developers • Records of councillor meetings with local residents and community groups • Records of councillor meetings with environmental organisations • Comparison of meeting frequency and access • Register of Interests - any undeclared relationships with developers Legal Implications: • Unequal access may breach principles of: o Fairness - all stakeholders should have equal opportunity to influence decisions o Transparency - public should know who influences decision-makers o Accountability - councillors should be accountable for their engagements o Public Sector Equality Duty [19] - decisions should not discriminate PART 5: INFRASTRUCTURE AND COMMUNITY IMPACT 5.1 Infrastructure Capacity Critical Questions: • Transport: Can local roads handle increased traffic? What about public transport? • Schools: Are there sufficient school places? • Healthcare: Can GP surgeries and hospitals accommodate new residents? • Water and Sewage: Is infrastructure adequate? • Utilities: Can electricity, gas, and broadband networks support development? Cost Implications: • Who pays for infrastructure improvements? • Will Council Tax increase to fund necessary upgrades? • Are developer contributions (CIL/S106) sufficient? 5.2 Loss of Green Space and Recreation Community Impact:		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								• Unequal access may breach principles of: o Fairness - all stakeholders should have equal opportunity to influence decisions o Transparency - public should know who influences decision-makers o Accountability - councillors should be accountable for their engagements o Public Sector Equality Duty [19] - decisions should not discriminate PART 5: INFRASTRUCTURE AND COMMUNITY IMPACT 5.1 Infrastructure Capacity Critical Questions: • Transport: Can local roads handle increased traffic? What about public transport? • Schools: Are there sufficient school places? • Healthcare: Can GP surgeries and hospitals accommodate new residents? • Water and Sewage: Is infrastructure adequate? • Utilities: Can electricity, gas, and broadband networks support development? Cost Implications: • Who pays for infrastructure improvements? • Will Council Tax increase to fund necessary upgrades? • Are developer contributions (CIL/S106) sufficient? 5.2 Loss of Green Space and Recreation Community Impact: • Portishead Down and Weston Big Wood are valuable community assets • Loss of recreational space for walking, cycling, and nature appreciation • Negative impact on physical and mental health • Reduction in accessible green space per capita (contrary to NPPF guidance [2]) 5.3 Character and Heritage • Development may fundamentally alter the character of Portishead • Loss of rural/woodland setting • Impact on views and landscape • Potential harm to heritage assets PART 6: LEGAL PRECEDENTS SUPPORTING OBJECTION 6.1 North Somerset Precedents Lynchmead Farm Case (2024): • Planning Inspectorate upheld North Somerset Council's decision to refuse 75 houses [12] • Reason: Future flood risks • Key Learning: Environmental concerns, particularly flood risk, are valid grounds for refusal • Application: If Portishead sites have flood risk, this precedent supports refusal Slade Road, Portishead: • Council deprioritized development following community opposition [13] • Key Learning: Organized community resistance can influence planning outcomes • Application: Demonstrates that community opposition in Portishead has previously been effective [13] 6.2 UK Supreme Court Precedents (2024) Horse Hill Oil Well Case (June 2024): • Ruling: Planning authorities must consider full environmental impact, including downstream emissions [14] • Outcome: Planning permissions quashed • Key Principle: Inadequate environmental assessment renders planning decisions unlawful • Application: Council must conduct comprehensive environmental assessment including carbon impact West Cumbria Coal Mine (September 2024): • High Court ruled government approval unlawful [15] • Reason: Inadequate consideration of environmental consequences • Application: Demonstrates that environmental concerns can successfully challenge planning decisions [14], [15] PART 7: ALL QUESTIONS FOR THE COUNCIL Legal and Process Questions: 1. How is the Council ensuring that the consultation on soundness and legality is comprehensive and addresses all four soundness tests (positively prepared, justified, effective, consistent with national policy)? 2. Has the Council complied with the duty to cooperate? 3. What evidence demonstrates that all reasonable alternatives have been considered? 4. How does the plan comply with the NPPF soundness tests [2]? 5. What protected species surveys have been conducted? 6. How will 10% biodiversity net gain [5] be achieved? Infrastructure Questions: 7. What is the capacity of local roads, and what improvements are planned? 8. Are there sufficient school places, and where will new schools be located?	• Portishead Down and Weston Big Wood are valuable community assets • Loss of recreational space for walking, cycling, and nature appreciation • Negative impact on physical and mental health • Reduction in accessible green space per capita (contrary to NPPF guidance [2]) 5.3 Character and Heritage • Development may fundamentally alter the character of Portishead • Loss of rural/woodland setting • Impact on views and landscape • Potential harm to heritage assets PART 6: LEGAL PRECEDENTS SUPPORTING OBJECTION 6.1 North Somerset Precedents Lynchmead Farm Case (2024): • Planning Inspectorate upheld North Somerset Council's decision to refuse 75 houses [12] • Reason: Future flood risks • Key Learning: Environmental concerns, particularly flood risk, are valid grounds for refusal • Application: If Portishead sites have flood risk, this precedent supports refusal Slade Road, Portishead: • Council deprioritized development following community opposition [13] • Key Learning: Organized community resistance can influence planning outcomes • Application: Demonstrates that community opposition in Portishead has previously been effective [13] 6.2 UK Supreme Court Precedents (2024) Horse Hill Oil Well Case (June 2024): • Ruling: Planning authorities must consider full environmental impact, including downstream emissions [14] • Outcome: Planning permissions quashed • Key Principle: Inadequate environmental assessment renders planning decisions unlawful • Application: Council must conduct comprehensive environmental assessment including carbon impact West Cumbria Coal Mine (September 2024): • High Court ruled government approval unlawful [15] • Reason: Inadequate consideration of environmental consequences • Application: Demonstrates that environmental concerns can successfully challenge planning decisions [14], [15] PART 7: ALL QUESTIONS FOR THE COUNCIL Legal and Process Questions: 1. How is the Council ensuring that the consultation on soundness and legality is comprehensive and addresses all four soundness tests (positively prepared, justified, effective, consistent with national policy)? 2. Has the Council complied with the duty to cooperate? 3. What evidence demonstrates that all reasonable alternatives have been considered? 4. How does the plan comply with the NPPF soundness tests [2]? 5. What protected species surveys have been conducted? 6. How will 10% biodiversity net gain [5] be achieved? Infrastructure Questions: 7. What is the capacity of local roads, and what improvements are planned? 8. Are there sufficient school places, and where will new schools be located? 9. Can healthcare services accommodate additional residents? 10. Is water and sewage infrastructure adequate? 11. Who will pay for necessary infrastructure improvements? Environmental Questions: 12. What is the carbon impact of the proposed development? (Required by Supreme Court precedent [14]) 13. What flood risk assessments have been conducted, and do they meet the standards that led to Lynchmead Farm refusal [12]? 14. How will air quality be protected? 15. What measures will protect watercourses from pollution? 16. Is this ancient or semi-natural woodland [17], and if so, why is development proposed? 17. Has Natural England been consulted regarding the SSSI (Weston Big Wood) [16]? 18. Has the Council considered the Supreme Court ruling in Horse Hill (June 2024) [14] requiring full environmental impact assessment? Economic Questions: 19. What is the cost-benefit analysis of the development? 20. What is the value of ecosystem services that will be lost? 21. How will local businesses be affected? 22. What guarantees exist that developers will deliver promised infrastructure? Discrimination and Equality Questions: 23. Why is Portishead being asked to sacrifice protected green spaces when other areas are not required to make equivalent sacrifices [9]? 24. Has the Council assessed the per-capita impact on existing Portishead residents' access to amenities (GP appointments, school places, recreational facilities)? 25. Given Portishead's smaller size (26,366 residents [7]), how can it absorb significant new development without impact on existing		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								9. Can healthcare services accommodate additional residents? 10. Is water and sewage infrastructure adequate? 11. Who will pay for necessary infrastructure improvements? Environmental Questions: 12. What is the carbon impact of the proposed development? (Required by Supreme Court precedent [14]) 13. What flood risk assessments have been conducted, and do they meet the standards that led to Lynchmead Farm refusal [12]? 14. How will air quality be protected? 15. What measures will protect watercourses from pollution? 16. Is this ancient or semi-natural woodland [17], and if so, why is development proposed? 17. Has Natural England been consulted regarding the SSSI (Weston Big Wood) [16]? 18. Has the Council considered the Supreme Court ruling in Horse Hill (June 2024) [14] requiring full environmental impact assessment? Economic Questions: 19. What is the cost-benefit analysis of the development? 20. What is the value of ecosystem services that will be lost? 21. How will local businesses be affected? 22. What guarantees exist that developers will deliver promised infrastructure? Discrimination and Equality Questions: 23. Why is Portishead being asked to sacrifice protected green spaces when other areas are not required to make equivalent sacrifices [9]? 24. Has the Council assessed the per-capita impact on existing Portishead residents' access to amenities (GP appointments, school places, recreational facilities)? 25. Given Portishead's smaller size (26,366 residents [7]), how can it absorb significant new development without impact on existing residents' quality of life? 26. Why are Portishead residents being asked to bear a double burden: (1) loss of protected green spaces, and (2) increased competition for remaining amenities? 27. Has an Equality Impact Assessment been conducted, including per-capita impact analysis? 28. How does targeting Portishead (higher house prices [20]) comply with the Public Sector Equality Duty [19]? 29. Do the proposals conflict with the Portishead Neighbourhood Plan (approved by referendum [11])? 30. Why is Portishead being treated differently from other areas with brownfield development opportunities [13]? 31. What is the justification for targeting an area with higher property values for development? 32. How does this align with equitable distribution of development across North Somerset? 33. Given that Portishead is being asked to sacrifice protected green spaces, how is this equitable compared to other areas? Transparency and Accountability Questions: 34. How many meetings have councillors held with property developers in relation to the Local Plan, compared to meetings with local residents and environmental groups? 35. Are councillor appointment diaries publicly available, and if so, where can they be accessed? 36. Have any councillors declared interests in property development companies or land in areas proposed for development? 37. What proportion of Planning Committee meeting time has been allocated to developer presentations versus community group presentations? 38. How does the Council ensure equitable access to decision-makers for all stakeholder groups? PART 8: ALTERNATIVE SOLUTIONS 8.1 Brownfield First • Prioritise brownfield sites for development [13] • Use existing planning powers to bring forward brownfield land • Explore opportunities for urban regeneration 8.2 Density and Infill • Increase density in existing settlements • Focus on infill development • Redevelopment of underused sites • Conversion of existing buildings 8.3 Neighbouring Authorities • Work with neighbouring authorities to meet housing needs • Explore cross-boundary development opportunities • Share infrastructure and services PART 9: CONCLUSION The proposed development of Portishead Down, Weston Big Wood, Tower Farm, and Black Rock [10] represents a significant threat to our community's green spaces, biodiversity, and quality of life. While the Council is now consulting on the soundness and legality of the plan [10], I have serious concerns about whether this consultation is comprehensive enough and whether the plan meets the statutory soundness requirements [1], [2]. Critical Environmental Concerns: • Weston Big Wood is a Site of Special Scientific Interest (SSSI) [16] - the highest level of statutory protection [3], [4]	residents' quality of life? 26. Why are Portishead residents being asked to bear a double burden: (1) loss of protected green spaces, and (2) increased competition for remaining amenities? 27. Has an Equality Impact Assessment been conducted, including per-capita impact analysis? 28. How does targeting Portishead (higher house prices [20]) comply with the Public Sector Equality Duty [19]? 29. Do the proposals conflict with the Portishead Neighbourhood Plan (approved by referendum [11])? 30. Why is Portishead being treated differently from other areas with brownfield development opportunities [13]? 31. What is the justification for targeting an area with higher property values for development? 32. How does this align with equitable distribution of development across North Somerset? 33. Given that Portishead is being asked to sacrifice protected green spaces, how is this equitable compared to other areas? Transparency and Accountability Questions: 34. How many meetings have councillors held with property developers in relation to the Local Plan, compared to meetings with local residents and environmental groups? 35. Are councillor appointment diaries publicly available, and if so, where can they be accessed? 36. Have any councillors declared interests in property development companies or land in areas proposed for development? 37. What proportion of Planning Committee meeting time has been allocated to developer presentations versus community group presentations? 38. How does the Council ensure equitable access to decision-makers for all stakeholder groups? PART 8: ALTERNATIVE SOLUTIONS 8.1 Brownfield First • Prioritise brownfield sites for development [13] • Use existing planning powers to bring forward brownfield land • Explore opportunities for urban regeneration 8.2 Density and Infill • Increase density in existing settlements • Focus on infill development • Redevelopment of underused sites • Conversion of existing buildings 8.3 Neighbouring Authorities • Work with neighbouring authorities to meet housing needs • Explore cross-boundary development opportunities • Share infrastructure and services PART 9: CONCLUSION The proposed development of Portishead Down, Weston Big Wood, Tower Farm, and Black Rock [10] represents a significant threat to our community's green spaces, biodiversity, and quality of life. While the Council is now consulting on the soundness and legality of the plan [10], I have serious concerns about whether this consultation is comprehensive enough and whether the plan meets the statutory soundness requirements [1], [2]. Critical Environmental Concerns: • Weston Big Wood is a Site of Special Scientific Interest (SSSI) [16] - the highest level of statutory protection [3], [4] • Development threatens ancient or semi-natural woodland [17] - irreplaceable habitats that have existed since at least 1600 AD • Recent Supreme Court precedents (2024) [14], [15] require comprehensive environmental assessment, including carbon impact • Biodiversity net gain (10%) [5] may be impossible to achieve given loss of protected habitat [16], [17] Evidence of Discriminatory Targeting: • Portishead is being asked to sacrifice protected green spaces [9], [10] • Other areas (e.g., Weston-super-Mare) [9] are not required to sacrifice equivalent green spaces • Per-capita impact: Portishead residents [7] face significant population increase while losing protected green spaces (SSSI [16], ancient woodland [17]) • Double burden: Portishead residents lose green space amenity [10] AND face increased competition for remaining amenities [7], [9] • Portishead has higher house prices [20], making development more profitable for developers • Smaller town size (26,366 [7] vs ~85,000 [8]) means less capacity to absorb growth without significant impact on existing residents • This suggests profit-driven targeting rather than equitable distribution [9], [20] • May breach Public Sector Equality Duty under Equality Act 2010 [19] Strong Legal Precedents: • Lynchmead Farm (North Somerset): Planning Inspectorate upheld refusal due to flood risk [12] • Horse Hill (Supreme Court 2024): Ruled planning must consider full environmental impact [14] • West Cumbria Coal Mine: Approval ruled unlawful due to inadequate environmental assessment [15] • These precedents support challenging the proposals on environmental grounds [12], [14], [15] I strongly urge North Somerset Council to:

62812001	N Chalk			No		No	No	Not positively prepared: The Black Rock field site lies on the Clevedon Road access to Portishead. This area is poorly served by public transport and does not have easy / close access to amenities. Residents in the proposed development would, therefore, rely heavily on private vehicles to access services such as primary schools and healthcare. The proposal identifies that additional footways and bus provision is required which highlights the insufficiency of current provision. The NPPF (Dec 24 publication, paragraphs 109-110) details that patterns of development should be where there are genuine options for a variety of sustainable transport. The Black Rock site will not meet this requirement even with the proposed (but not clearly planned) transport infrastructure changes. Not justified: The Black Rock field is an unsuitable location as environmental and ecological requirements cannot be met on-site (as acknowledged by the Council in the proposal) but will need to met "off site on land to the southwest". This is in conflict with NPPF paragraph 193(a) which states that alternative sites with "less harmful impacts" should be sought and that compensation for environmental impact should be a last resort. Not effective: The viability of the site relies on multiple dependencies including ecological off-set land, new footways and bus services and delivery of a section of the 'Gordano Greenway'. There is no clear, published plan of responsibility or funding for these elements. Therefore, the proposal for Black Rock does not meet the 'effective' requirement outlined in paragraph 36(c) of the NPPF. Not consistent with national policy: The site requires off-site mitigation for environmental and ecological elements and relies on the provision of a "suitable ecological buffer". These features are not clearly planned and not detail sustainability. This means that the site does not clearly meet environmental requirements laid out in the NPPF. The proposal is in conflict with the NPPF paragraphs 193 b&c. These include the detail that "developments resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland and ancient or veteran trees) should be refused, unless there are wholly exceptional reasons and a suitable compensation strategy exists". There are no demonstrated "wholly exceptional reasons" to develop this land and, as outlined above, the compensations suggested by the Council are insufficient to address indirect impacts such as root-zone damage and wildlife disturbance. The Woodland Trust and Avon Wildlife Trust state that ancient woodland (such as Weston Big Wood) is irrecoverable once damaged. The NPPF requires delivery of net-gain in biodiversity. There is no clear demonstration to that effect within this proposal. The farmland / woodland edge surrounding the Weston Big Wood serves as a critical ecological and landscape transition corridor. Development of these areas (including Black Rock) would fragment habitats and negatively impact on the Gordano Valley wildlife corridor. The proposed environmental / ecological mitigations would not fully alleviate this impact. No modification could be made to the proposal that would make this site suitable. The fact that the site is adjacent to Weston Big Wood, a SSSI / ancient woodland would mean that any development would result in irreversible damage to this important area. The land should be retained as open countryside to benefit the community and wildlife and should be managed to enhance biodiversity. I do not support the North Somerset Local Plan 2041 for the Black Rock location			
62843009	Zoe Chalk			No	' Justified	Unsure	No	'valued areas will be protected. People's well-being, a strong sense of community, opportunity and fairness will be at the heart of all development in North Somerset.' The plans to develop Black Rock and Tower farm directly contravene this	The proposed developments at Black Rock and Tower Farm need to removed to protect this ancient woodland and precious natural resource. Development proposals should be fully explored on Brownfield sites	The proposals at both Black Rock and Tower Farm are not sound as they do not meet the exceptional circumstances for allowing destruction of Greenbelt land and	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								commitment from North Somerset Council. Both are adjacent to Weston Big Wood, a site of SSSI. Ancient woodland that has been recognised as being of strategic interest and part of the protected Green belt since the 1980s. National Guidelines state that Greenbelt can only be developed in' exceptional circumstances' and this has not been demonstrated when there are other development opportunities on brownfield sites in Portishead and across the whole of North Somerset. Preventing the destruction of irreplaceable greenbelt would be to the benefit of all, with the exception of developer's profits. The woodland itself supports a vast array of wildlife from bats, through funghi to apex predators such Buzzards and Kestrels. The woodland is accessible to all and we simply cannot lose or endanger this resource. This is not progress, this is destruction. This is at a time when the 2023 State of Nature report described the UK as 'one of the most nature depleted countries on Earth' I cannot comprehend why North Somerset council would wish to allow more destruction. Neither of the proposed sites are within a sensible walking distance from the town centre. They are not served with a regular bus service. When the X5 service does run, it stops at 18:00. This means that residents who are older or with young families will necessarily have to drive, on roads that are already saturated by traffic. Over the last 20 years Portishead has had a threefold increase in population with absolutely no change whatsoever in infrastructure. The new railway will bring limited relief due to its tiny capacity. Arguably, it just brings the town to the level it should have been before the development of the Marina. We only have 2 health centres and 1 pharmacy serving a population of over 27,000. The secondary school, Gordano is at over 2000 pupils with no expansion or development planned. I note that there are no proposals to increase employment within Portishead, meaning more people will have to commute to surrounding towns, further burdening our infrastructure. There is a huge need for safe, secure, affordable housing in North Somerset but this cannot be at the expense of precious ancient woodland and greenbelt because it is an easy option for developers. It begs the question of what is tangible progress	across the county.	the transport and traffic impacts on the town would not meet ANY soundness test or measure.	
58310305	M Chambers			No	• Justified	Unsure	Unsure	There are alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset. There are more opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop on Black Rock, such as Old Mill business park. The strategic ecological importance of these sites in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor has not been considered and the fact that this are was added to the Green Belt in the late 1980s due to the high ecological value. National planning policy allows Green Belt changes only in exceptional circumstances — and these have not been demonstrated. There is no safe or suitable access and development would create unacceptable transport impacts, failing national soundness tests.			
62741633	Heidi Chapman-Mercer			No	• Justified • Consistent with national policy	No	Unsure	Alternative brown sites could be used rather than those proposed in Portishead, these are present elsewhere in Portishead and would have less impact that the locations chosen. The Weston Big Wood and Gordano Valley Green Corridor have both been part of the Green Belt since the 1980s - the Pre-submission Plan ignores this. Whilst the reality of the incoming train line will bring more interest in the area and the prospect of more inhabitants, this needs to be done well with solid infa-structure.	Alternative brown sites could be used rather than those proposed in Portishead, these are present elsewhere in Portishead and would have less impact that the locations chosen. These would have much lower ecological impact and project the wildlife within these areas for future generations. How much more does our green space and wildlife have to be affected?! Green Belts must only be looked at in exceptional circumstances and these have not been met, especially with other sites available within the town and local area that would meet the needs of the developments but with less ecological impact. Neither site proposed includes any additional service developments for the town - our High Street is failing with large shops closing and only one pharmacy, the secondary school recently only just passed Ofsted inspections, the Police local unit are stretched already, the parking is far from acceptable for a town this size - the pre-submission needs to include details of how it will support these elements of the town.		
58311073	Paul Churchill			No	• Justified • Effective • Consistent with national policy	No	No	As a Portishead resident and frequent visitor to Weston Big Wood I feel it is vital we do everything possible to protect this vulnerable woodland, it would appear being in the green belt is no longer protection for ancient woodland or SSSi's. By removing the green belt and allowing development you are opening the door to development which on these two sites would damage the biodiversity to an irreparable point where we lose forever this delicate and wonderful location. In section DP35 of your draft plan you state "development within or in proximity to a Site of Special Scientific Interest (SSSI) or National Nature Reserve that is likely to have a direct or indirect adverse effect on its biodiversity or geological interest will not normally be permitted". I truly believe the impact would be felt not only here in Weston Big Wood with lose of rare endangered flora and fauna but as a vital wildlife corridor the impact will extend in both directions, north to the Severn estuary and south to the Mendips and Somerset Levels, as such your statement in DP35 would	remove Tower and Black Rock from the list, identify other locations which do not impact on locations such as ancient woodland / SSSI's		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								stop any development on these sites, so these sites should be removed from the list and replaced with sites which will not adversely effect Weston Big Wood. I would also like to bring to your attention the below list, which your plan breaches. Section 40 of Natural Environment and Rural Communities Act 2006. Para 124 of the National Planning Policy Framework. Planning policies and decisions should promote an effective use of land in meeting the need for homes and other uses, while safeguarding and improving the environment and ensuring safe and healthy living conditions. Strategic policies should set out a clear strategy for accommodating objectively assessed needs, in a way that makes as much use as possible of previously-developed or 'brownfield' land Para 188 of the National Planning Policy Framework. Plans should: distinguish between the hierarchy of international, national and locally designated sites; allocate land with the least environmental or amenity value, where consistent with other policies in this Framework, take a strategic approach to maintaining and enhancing networks of habitats and green infrastructure; and plan for the enhancement of natural capital at a catchment or landscape scale across local authority boundaries. Para 192 of the National Planning Policy Framework. To protect and enhance biodiversity and geodiversity, plans should: (a) Identify, map and safeguard components of local wildlife-rich habitats and wider ecological networks, including the hierarchy of international, national and locally designated sites of importance for biodiversity 68 ; wildlife corridors and stepping stones that connect them; and areas identified by national and local partnerships for habitat management, enhancement, restoration or creation 69 ; and (b) promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity.			
62833505	Daisy Clayton		Local homeowner	No	• Consistent with national policy	No	No	Tower Farm and Black Rock are not only home to an enormous amount of wildlife such as squirrels, birds and endless amounts of insects that are all so important to our ecosystem, but also provides a large vast green open space for cows, dogs being walked, children walking on their way to school that get to see open green spaces before sitting in a classroom all day. This area is in a Green belt area, which means changes can only happen in exceptional circumstances, these haven't been demonstrated? These fields also get extremely waterlogged, as someone who walks my dog there regularly I can tell you this first hand. If you were to build as many houses as you are proposing you would have to somehow drain the water, and what would happen to the water running down this hill along tarmac? I see no way that would not directly affect Western Big Wood below it which has so much wildlife including deer. As someone who lives on a hill in Portishead, who sees what happens to the bottom of my road after a heavy shower I do not want to get behind anymore buildings that will encourage even more flooding.	Do not build in an area that is protected. Look after the people you already have living in Portishead before adding more. Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm and Black Rock. Choose somewhere to develop that will have less ecological impact.		
62766433	Julie Coffin			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Alternative brownfield sites have not been considered. The strategic ecological importance of the site has not been considered. It's a Green Belt site due to its high ecological value. National planning policy allows green belt changes only in exceptional circumstances; these have not been demonstrated. There is no suitable access. There would be unacceptable transport impacts. Drop the idea			
58404161	Millie Colston			No	• Justified	No	No	1- Alternative brown field or green field site with far lower ecological impact both in Portishead and across north somerset. 2- Opportunity's to increase housing density on proposed brown field site which could remove the need to develop tower farm and black rock 3- The strategic ecological importance of these sites in protecting Weston big wood and the Gordano valley green corridor 4- The fact that both areas were added to the green belt in the late 1980's due to the high ecological value 5- National planning policy allows green belt changes only in exceptional circumstances, and these have not been demonstrated. In addition - neither sights can provide safe, legal or suitable access Development would create unacceptable transport impacts, failing national soundness tests FOR ALL THESE REASONS TOWER FARM AND BLACK ROCK SHOULD BE REMOVED FROM THE LOCAL PLAN	n/a	I do not support	
62773601	Peter Connelly			No	• Justified • Effective • Consistent with national policy	No	No	Development of the Black Rock site is in breach of Green Belt policy as introduced in 1988. It's proximity to Weston Big Wood (SSSI) will be ecologically damaging as this is an important site for wildlife and the environment - trees, plants, birds, insects, animals need access to- and -from all the fields surrounding it creating the Gordano Valley green corridor. Life is sustained by things eating other things. National planning policy allows changes to the Green Belt only in exceptional	Development at Black Rock should be prohibited. Other brownfield sites with far lower ecological and transport impacts are available and should be considered for development. At those already considered then density should be increased e.g. high-rise at Wyndham Way around the new station, and Castlewood. There is also Petersfield, an abandoned site in need of renewal.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								circumstances and these have not been demonstrated. The site cannot provide safe or suitable access to amenities, with unacceptable transport impact. The Clevedon Road is a very busy "B" road especially at rush hour times, exacerbated when issues on the motorway means all traffic uses it as an alternative route north and south, failing national soundness tests.			
62773537	Sharon Connelly			No	' Justified ' Effective ' Consistent with national policy	No	No	The area around Black Rock leads to Weston Big Wood a Triple SI. It is ancient woodland- very special with connectivity to the rest of the Gordano Valley. It allows movement of insects and wildlife. Buffer areas around it are needed and it is vital a sensible buffer is between the woods and the estuary, and wood to floor of the valley. Many species of birds, insects, wildlife and rare trees make up the woods and surrounding areas. Due to the ecological importance of the area Black Rock was added to the Green Belt in the late1980s. The Weston Big Wood and all the surrounding areas and all the Gordano Valley are worthy of protection. Weston Big Wood and surrounding areas and fields are important for people - for their physical and mental health. National planning policy allows changes to the green belt only in exceptional circumstances and these are not being demonstrated. Black Rock site sits alongside Clevedon Rd which is an exceptionally busy B road. It is the only road from Portishead to Clevedon without going onto the M5 motorway. When there is an accident on the M5 or it is shut and traffic is diverted the road in front of the proposed site is at a standstill. Adding further traffic means that the site can't provide safe or suitable access to amenities. It would create unacceptable transport impacts, failing soundness tests. Added transport will also mean extra pollution impacting both people and the Gordano Valley green corridor and Weston Big Wood.	Brownfield sites should be used instead of using the land in the Green Belt . There are other sites within Portishead that could see further development - Wyndham Way is around the new train station area and could see high rise buildings that would increase capacity but continue in keeping with the modern designs of that area. Petersfield area has been left derelict but should be developed. Castlewood in Clevedon is a large Brownfield site and has the potential for more homes than the 120 already designated. It is close to amenities. We have other Brownfield sites in North Somerset . Green field sites should not be allowed for future development . We must use Brownfield if we allocate Greenfield sites we are lost....especially when they are as important as Black Rock and areas around the ancient Weston Big Wood and the Gordano Valley! Development at Black Rock will be damaging for many reasons.		
62734433	Liz Cook			Unsure		Unsure	Unsure	I am very concerned that the "sustainable" plans included in the North Somerset Local Plan 2041 are not doing enough to protect wild habitats. Specifically the risk of continued degradation of the wonderful Weston Big Wood SSSI and the surrounding areas. The Big Wood is a vitally important habitat of ancient woodland - one of the rarest and most precious habitats in the country. Sadly, planners don't appear to consider it worth protecting. All planners have a legal responsibility to protect the environment, I don't think the North Somerset Local Plan is following these laws closely enough.	Fewer houses and associated infrastructure, especially in and close to wildlife reserves, SSSI and other areas that contain important wildlife habitats.		
62766689	PhilCook			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	No	No	Unsound. The land lies immediately beside Weston Big Wood, an ancient woodland site of nature conservation, managed by Woodland Trust & Avon Wildlife Trust. The woodland forms part of the Gordano Valley ecological network and is a nationally important habitat for open grassland, wetland & woodland. Not justified. There is no robust published alternative assessment demonstrating that this sensitive site is the only or most appropriate option for growth. The loss of best and most versatile farmland and the risk of irreversible damage to the ancient woodland make this allocation unsuitable. Not consistent with national policy. The plan conflicts with National Planning Policy framework paragraphs 180-182 which require that development resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland) should be refused unless wholly exceptional reasons exist. The council's reference to an ecological buffer is vague, unenforceable and insufficient to address indirect impacts such as root-zone damage, hydrological change or wildlife disturbance. The Woodland Trust & Avon Wildlife Trust state that ancient woodland is irrecoverable once damaged. Moreover, the Framework requires delivering biodiversity gain but the allocation offers no clear mechanism to ensure the outcome. I do NOT support this plan. No modifications would make the plan sound. The site is environmentally and logistically unsuitable for housing due to multiple infrastructure dependency requirements. The allocation should be removed entirely. Instead the land should remain open countryside in line with Avon Wildlife Trust's 2030 strategy, Woodland Trust guidance and national biodiversity objectives.			
62860673	Joel Cox			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	No	No	The site is not demonstrated to be deliverable or developable There is insufficient evidence that the site can realistically be delivered within the plan period. There are unresolved issues with land ownership, access, viability, infrastructure costs, drainage, utilities and environmental constraints. The Council has relied heavily on future technical work to be completed at the planning application stage, which is contrary to the NPPF requirement that allocated sites must be supported by proportionate, up-to-date evidence at the plan-making stage. For these reasons, the allocation does not meet the tests of "justified" or "effective".			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The site is in an unsustainable location The proposed allocation performs poorly in terms of access to essential services such as schools, healthcare, shops and public transport. The location would increase car dependency and commuter traffic, contradicting both North Somerset Council's own sustainability objectives and national policy requiring plans to promote sustainable travel and reduce reliance on private vehicles. The Council has not demonstrated that essential services or public transport improvements can be delivered, funded or supported by operators. Transport and access impacts not resolved The transport evidence is incomplete and in places relies on outdated data. The plan does not show that surrounding roads and junctions have the capacity to support the additional traffic associated with this allocation. There is no clear or funded package of mitigation measures, nor any timetable for delivery. Without credible transport solutions, the plan is not "effective" and does not comply with the soundness requirements of the NPPF. Harm to landscape, settlement character and separation Development of this site would result in the loss of important open land and harm the landscape setting of the area. It would erode the character of the settlement and risk coalescence between neighbouring communities. These impacts have not been adequately assessed or mitigated. The allocation is therefore not "justified" and is inconsistent with national policy protecting the character and distinctiveness of settlements. Insufficient evidence on biodiversity and environmental impacts Survey work is incomplete or missing, particularly in relation to protected species, habitat value and ecological connectivity. The Council relies on future mitigation without demonstrating that it is deliverable or effective. This approach risks non-compliance with the Habitats Regulations and fails the requirement for a sound evidence base. Flood risk concerns and inadequate assessment Portions of the site and surrounding area may be vulnerable to surface water flooding or insufficient drainage capacity. The sequential test and exception test have not been adequately demonstrated. Reliance on future drainage solutions, without proven feasibility or funding, fails national policy requirements for flood risk management. Infrastructure delivery not guaranteed The Infrastructure Delivery Plan does not provide clear evidence of how schools, GP capacity, highways upgrades, utilities and community facilities will be delivered in step with development. Many items are unfunded, lack committed partners, or are dependent on contributions that may be insufficient. Without a realistic delivery mechanism, the plan cannot be considered effective. Failure to consider reasonable alternatives (potential legal issue) The Sustainability Appraisal does not demonstrate that reasonable alternatives were assessed in a fair, comparable and lawful manner. Some alternative sites or strategies appear to have been dismissed without transparent or proportionate analysis. This raises a potential failure to comply with the Environmental Assessment of Plans and Programmes Regulations 2004. Inadequate publication or availability of evidence (potential legal issue) Certain technical documents, background papers or assessments were not made available at the correct stage or were published late. This may constitute a failure under the Town and Country Planning (Local Planning) (England) Regulations 2012, as all relevant evidence must be available to the public during consultation. This raises questions of legal compliance. Consultation process may not meet statutory requirements (potential legal issue) If key documents were missing, changed late, referenced but not published, or consultation materials were unclear or incomplete, this could constitute a procedural failure under Regulation 19. Any procedural irregularity risks rendering the plan legally non-compliant. For all these reasons, the proposed allocation is not sound, not legally compliant, and should be removed from the Local Plan or substantially revised.			
20318049	Janet Davey		portishead tc councillor	No	Consistent with national policy	No	No	National policy allows green belt to be used for development only after all brown field sites have been properly investigated and used. Castlewood in Clevedon could have a higher density of housing, for example, as it is within the town and close to amenities, and other sites could be used in Portishead so that it would not be necessary to build near Weston Big Wood, which is a triple SI and extremely important within the Gordano Valley. Tower Farm developers state that their development is sustainable; in order to get to Bristol, Weston or the new train station residents would need to use their cars. It is a 45min walk to the new station, and longer returning because of Avon Way, a mile long steep hill. This hill also precludes the use of bicycles,	There is building land elsewhere in Portishead. Wyndham Way is still in the Local plan and is a brown field site. There is land on the Vale intended for a care home which has not been used - we have too many care home spaces currently in the town and no need for more. More building could be done near the new station; high rise would give enough homes to stop the need for development near the Big Wood. The Portishead Local Plan states that we do not need more 4 bed homes, but more smaller starter homes and one person flats. Weston Big Wood is too precious both nationally and locally to be harmed by building so close. In the 1980s examiners made the area		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								unless one is young and fit. Current public transport is unreliable and poor in this area. To reach Weston College students have to go into the town and catch a bus that takes 1.5 hours to get to college. The Black Rock development is on a steep hill near Weston Big Wood. Any run off would cause flooding across Clevedon Road and into the homes opposite. The land there is very low lying and subject to frequent flooding. I do not believe there is a sufficient buffer either side of the Big Wood to safeguard its ecological value. There is evidence of a hill fort on Portishead Down, which would have been within one hours walking distance of the Iron age fort at Eastwood and close to the main earthworks at Cadbury Camp.	around the wood into green belt as they said the wood needed that protection.		
58578177	Margaret Davies			No	' Justified ' Consistent with national policy	No	Unsure	This area is already a buffer between the road and Weston Big Wood, any development in this area would seriously undermine the viability of the wood, an area of SSSI and as such was added to the Green Belt in the late 1980's and cannot justifiably be removed after such a short time, when nothing has changed. National planning policy allows changes only in exceptional circumstances, which these are not, there are plenty of other brown field sites around the wider area, especially Clevedon. Portishead has had so much development over the last 20 years that the road infrastructure is a breaking point.	To remove Black Rock from the Local Plan.		
58076545	E Dawson			No	' Positively prepared ' Justified	No	Unsure	NSC has not properly considered: Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset. Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm and Black Rock. The strategic ecological importance of these sites in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. The fact that both areas were added to the Green Belt in the late 1980s due to their high ecological value. National planning policy allows Green Belt changes only in exceptional circumstances — and these have not been demonstrated. In addition: - Neither site can provide safe or suitable access. - Development would create unacceptable transport impacts, failing national soundness tests. Tower Farm and Black Rock should be removed from the Local Plan.			
20752993	K Dickens			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	No	No	NSC has not properly considered: Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset. Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm and Black Rock. The strategic ecological importance of these sites in protecting Weston Big Wood (SSSI) and the Gordano Valley Corridor. The fact that both areas under consideration were added to the Green Belt in the late 1980s due to their high ecological value. National planning policy allows development to Green Belt in exceptional circumstance only. These have not been demonstrated. In addition: Neither site can provide safe or suitable access. Development would create unacceptable transport impacts, failing national soundness tests. Tower Farm: Down Road, Tower Road, The Deans and The Downs are already congested at school drop-off and pick-up and the additional traffic from 400-500 houses would further compound the proposed single access point issues. It is already necessary to time arrivals and departures to the cul-de-sacs off Down Road due to this congestion. Walking accessibility assumptions are unrealistic due to the gradient of the Avon Way gradient. The timings provided are very optimistic and ignore the hills in the area, maybe the are close for walking down the hills, but certainly not up them. The suggested use of e-bikes does not consider the lack of safe and segregated pedestrian routes. There is no evidence that these would be suitable for the prospective householders, or in reducing the number of car journeys to the school. There is limited public transport in the area, and the forthcoming railway line will do little to alleviate this, the hourly service is unlikely to change the habits of current households. There are little shopping options, 2 small supermarkets and a pharmacy, in the area so the use of cars would increase. The proposal states that flood risk is very low (Flood Zone 1) but includes Attenuation basins throughout the site.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The proposal also states that the development will provide green space for all which is rather ironic since it will be covering an existing Green Belt area with 400-500 dwellings.			
1190049	Catherine Dixon			No	• Justified	No	No	re Tower Farm and Black Rock areas these are in Green Belt. If they have been taken out of Green Belt why is this and why was there no public consultation? If these two pieces of land are built on it will set a precedent for the rest of the Gordano Valley and the ripping up of Green Belt sites across the country. The sites are too close to Weston Big Wood, a SSSI. The Gordano Valley is a wildlife corridor and should stay that way. That is why it is protected by Green Belt. Access to both sites would be by unsuitable local roads.	Alternative brownfield sites should be considered first with lower ecological impact, both in Portishead and across North Somerset.		
31088129	Bloor Homes South West	Turley		No	• Positively prepared • Justified • Effective • Consistent with national policy		No	From reviewing the strategic housing allocations listed in Schedule 1 of the emerging plan, 1683 homes are allocated at Backwell (a village), but 1,347 homes are allocated at Portishead (a town). The figure for Portishead includes 785 homes at Wyndham Way, despite the Council's own evidence base confirming that only 485 homes are deliverable in the Plan period and so the actual number of homes expected to be delivered in the Plan period at Portishead will be lower. Based on this example, there are clear inconsistencies in the proposed policy and draft housing allocations. It appears that villages have been considered areas appropriate for higher or equal levels of growth to defined Towns.	Removing from the Green Belt the entirety of the promoted land (HE20124) at Black Rock, Portishead represents an opportunity to strengthen delivery at the town in accordance with the Council's strategy, and this should be prioritised ahead of growth at lower order settlements		BLOA3050 - Portishead Reps - NS Local Plan Regulation 19 - Turley Updated (V2).pdf
62829761	Libby Donald			No	• Justified	No	No	The two proposed housing developments would destroy the biodiversity of Weston Big Wood (SSSI), endanger wildlife and disrupt the green corridor that is Gordano Valley. There is enough new housing in Portishead already. Black Rock and Tower Farm sites are green belt. Road traffic in and out of the sites would be atrocious.	No modification needed just cancel the plan.		
63106881	N.D.R. Eade							In response to the proposed new housing development at two of Portishead's green belt areas namely Tower Farm and Black Rock. I am very much against this proposal because firstly Portishead does not have the necessary infrastructure to accommodate hundreds of new residents and their families. Portishead health centres, dentist, school and nurseries are over subscribed at the moment and with only one pharmacy in operation more people added to the Portishead community would create endless waiting time, far worse than it is at the present time. Secondly and very important is the road system in and out of Portishead. At present there is only three exit and incoming roads to Portishead, two of which, Clapton Lane and Clevedon Road are totally inadequate for high volume traffic. On numerous occasions in the past when traffic is disrupted on the M-5 motorway some of the traffic is diverted through Portishead to Clevedon Road for the traffic to rejoin the motorway in Clevedon when this has happened it caused serious disruption to the Portishead community. Having more and more people settling in the area would only make things worse especially those who live in North Weston and Weston-in-Gordano where the road is a very narrow. Also the proposed new housing estate on green belt land will surely disrupt the natural biodiversity of the area which is rich in wild life and woodlands and is regularly used as part of the-leisure-and-educational activities by the Portishead community: I realise the need for more housing is important throughout the country but in some areas such as Portishead one has to be realistic. Adding more people to a community that is already over populated and with the current infrastructure in the town I foresee many problems on the horizon.			
29216481	Ellis			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The allocation of Black Rock is unjustifiable as the Council itself acknowledges that environmental and ecological requirements cannot be met onsite. This need for off-set land demonstrates the unsuitability of the site. there is no published evidence of lead sensitive sites being considered and then discounted. This allocation due to its location with no local services would increase car dependency and therefore conflicts with the sustainable transport objectives of the NPPF. The site depends on multiple off-site and third party mitigations. There is no clear pathway to deliver and fund any of these mitigations meaning that the allocation itself fails the effectiveness test set out in the NPP para 36(c). Combined with the allocation of land at Tower Farm, the allocation of Black Rock will exacerbate the ecological, transport and infrastructure burdens that already exist in Portishead. This runs contrary to the Council's nature recovery and sustainable growth objectives. I do not support the allocation of Black Rock in the North Somerset Plan 2041.	No modification would make the allocation of Black Rock acceptable. Black Rock needs to be removed from the North Somerset Local Plan 2041. The land should remain undeveloped, contributing to much needed biodiversity and the character of the natural landscape.		
62814721	Michelle Flay			No	• Justified • Effective • Consistent with national policy	Unsure	Unsure	Weston big wood is a sight of SSI. It needs the green field land around it to protect it from further damage due to human interference. The Gordano Valley is a unique ecosystem that needs to be protected.	Develop brown field sites and populate uninhabited properties in the area.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
62856097	R Flower			No	• Justified	Unsure	Unsure	NSC has not considered alternative brownfield or green field sites with far lower ecological impact. NSC has not considered the ecological importance of Weston Big Wood and the Gordano Valley green corridor. Clevedon Road is not able to deal with the additional traffic caused by construction and the future residents of these properties. The road becomes gridlocked when the M5 is shut as it is and residents cannot get out of their drives let alone travel between Portishead and Clevedon. National planning allows Green Belt changes in exceptional circumstances which this does not meet. Tower Farm and Black Rock should be removed from the Local Plan			
8064449	Evelyn Grounsell							Tower Farm and Black Rock should be removed from the Local Plan for housing in Portishead. Those areas are adjacent to protected woodland, and development would lead to damage to those habitats. The land is neither poor, nor does it offer no amenity to the locale. As such those areas read as outside the categories of land worthy of consideration under the Government policy described by the Prime Minister in his speech on this topic. If my memory serves, at least part of the area by the woods was added to green belt in recent years, further confirming the value of land surrounding the woods to the environment and to the community. And the error of considering building there. Moreover Tower Farm and Black Rock are ideal areas to allow extension of the habitat and at low cost provide the expansion of rewilding that is the policy of the current and previous North Somerset councils.			
62905025	Roberta George								I have been a resident of The Deans in Portishead since 2002 and I would like to request that Tower Farm and Black Rock is removed from the local plan for development. My biggest concern with the proposed development is safe access. The Downs is congested at school drop off and pick up times and even with the addition of double yellow lines on both sides of the road, I believe that this road is not wide enough to cope with the additional traffic that would be generated during the building phase with large vehicles and then by the additional residents. I am concerned for the safety of the pupils, staff and parents at High Down, and for the many students from Gordano School who also walk this way to and from school. Furthermore, Weston Big Wood and the Gordano Valley are ecologically important sites which should not be disturbed. I understand that such sites should only be used for developments in exceptional circumstances and, as there are multiple brownfield sites which are available for development, I cannot see that the proposed development is legal or necessary. Weston Big Wood is such a beautiful area. For the residents of Portishead and beyond, this is a wonderful location to walk dogs, bathe in nature, escape from the stresses of life, have social time and exercise, fly kites and model planes, have picnics, watch the sunrise and gaze at the stars. Please do not take this away. Thank you for your time reading this. I hope the right decision will be made for the residents of Portishead and for nature.		
58577441	Victoria Giles			No	• Justified • Effective • Consistent with national policy	No	Unsure	In breach of 7 sections of the NPPF: S110, S115, S147, S156, S187, S192 and S193	Needs to comply with the above 7 sections.		
58506529	David Gunnell		Portishead Town Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Impact on a site of Special Scientific Interest and conflict with Portishead's recent (2023) Neighbourhood plan The proposed Black Rock development sits beside Weston Big Wood, an ancient woodland SSSI and one of North Somerset's richest biodiversity sites. Grazing fields and maize land run directly to the woodland edge, while surrounding unimproved grassland, hedgerows and shelterbelts form key wildlife corridors linking the wood to the wider Gordano Valley. Weston Big Wood is a rare Ice-Age remnant dominated by oak, hazel, ash and elm, with uncommon species such as small-leaved lime and rock whitebeam. Its rich ground flora and fauna support birds of prey, owls, bats, deer, badgers and red-listed linnet. The wider Gordano Valley comprises rhynes, saltmarsh, woodland, grassland, orchards, hedgerows, quarries and limestone outcrops that support diverse invertebrates, bats, wetland birds and flora. Spanning over the last 35 years, long-term studies supported by WWF, Avon Wildlife Trust and the Town Council describe the valley as an interconnected ecological system reliant on			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								intact wildlife corridors. Recent assessments show Weston Big Wood is in unfavourable, declining condition, with rising recreational pressure and fragmentation. The proposals conflict with the National Planning Policy Framework (NPPF) because they fail to protect designated sites, particularly Weston Big Wood, which is both a SSSI and ancient woodland. The NPPF states that development causing harm to irreplaceable habitats should not normally be permitted unless wholly exceptional reasons exist, and no such reasons apply here. Building right up to the woodland edge with only a minimal buffer fails to safeguard the site or its ecosystem. The scheme also fails to avoid, mitigate, or compensate for biodiversity harm. The BNG report relies on creating new woodland, species-rich grassland, orchards, swales and ponds on existing semi-natural land, which does nothing to address the loss of ancient woodland ecosystem integrity or the disruption of established nature corridors. Significant long-term biodiversity loss is therefore unavoidable. Since ancient woodland and SSSI features are irreplaceable, neither mitigation nor biodiversity credits can compensate; once lost, these habitats are gone forever. The proposals also fail to protect wider ecological networks, contrary to NPPF paragraphs 179, S187 and S192. Black Rock forms part of an important wildlife corridor linking Weston Big Wood with the Gordano Valley, Walton Common and other SSSIs, and the development would fragment this network and undermine nature-recovery objectives. There are also concerns about the quality of agricultural land affected. While NSC's background papers classify the area as Grade 3, Natural England/ DEFRA mapping shows that part of the site is actually Grade 1, falling within the "Best and Most Versatile" category. Under NPPF footnote 65, development should avoid high-quality agricultural land (Grades 1, 2 and 3a) wherever possible, which this proposal fails to do. The plans are additionally at odds with the NSC Landscape Sensitivity Assessment for the Portishead Ridges and Combes. This area—including Black Rock—is recognised as highly sensitive because of its rural character, visibility, and proximity to Nightingale Valley SSSI and Middle Hill Common LNR. The Assessment identifies threats from intrusive urban edges and emphasises conserving woodland, open grassland, pasture, ancient hilltop sites, and the peaceful, secluded landscape. It calls for minimising the impact of urban encroachment and avoiding visually intrusive land uses. The proposed development would intensify the urban edge, degrade valued woodland character, and harm a landscape specifically identified for conservation. Issues in relation to NPPF S110 NPPF S110 requires significant development to be located where it can genuinely support sustainable travel, reduce car dependence, and improve air quality. The Black Rock site fails to meet these aims. It sits on the far southern edge of Portishead with no shops, services or employment within a practical walking distance, and most residents would find walking or cycling to key amenities—often 30 minutes or more—impractical for daily needs. Access to essential facilities such as the High Street, supermarkets, the leisure centre and the future rail station is too distant to support routine active travel. Active-travel options are similarly weak. The Gordano Greenway link is uncertain due to land and funding complications, and the small cycle segment proposed would lead directly onto a busy, unsafe road; a further two miles of high-quality infrastructure would be needed to reach Clevedon safely. A direct cycle or footway link to the new rail station is unrealistic because it lies on the opposite side of town. More sustainable, well-connected sites exist elsewhere in Portishead, yet no Transport Sustainability or Access Strategy has been provided to justify this location. With the station nearly two miles away, Black Rock gains little from the rail reopening, as residents would still need to drive or pay for multiple fares. Overall, the site does not limit the need to travel or offer a genuine choice of transport modes and therefore fails to meet the NPPF's fundamental sustainability requirements. Remove this land from the plan			
63106753	Andy Haines							I am responding to the proposed housing developments at two sites at Portishead, they are at Tower Farm and Black Rock. I understand that both sites are green belt land which dates back to the 1980s and cannot be built on except in exceptional circumstances which have not been met by these proposaIs. We have been very fortunate to have at least lpair of Red Kites, a bird of prey making a comeback here in the UK. Kites are listed under Schedule 1 of the UK1s Wildlife and Countryside act 1981. This gives them extra legal protection. The Red Kites use these open areas to hunt, if the feeding grounds are built on, the birds will leave or die. The whole area is rich in bat biodiversity with Pipistrelle, Noctule, Long-eared, Greater and Lesser Horseshoe Bats having been spotted in the area. These are also protected by law. I have concerns regarding access to both sites. Tower Farm access road would send traffic in the direction of the infant school causing safety issues. The Black Rock site would be accessed by the B3124, a busy road at any time due to it being the main artery between Portishead and Clevedon. Portishead has limited road system to support a population of around 27000			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								people. There is the Portbury Hundred, Clapton lane (which is not suitable for large vehicles) and the B3124. The proposed developments would create an unacceptable impact on traffic in the area. The infrastructure in Portishead is not sufficient to support such a large numbers of new houses proposed. There would not be enough doctors surgeries, dentists, car spaces - the things people need every day. This was highlighted after the last large number of houses built and continues to cause problems to this day. For the reasons stated, I do not think Black Rock or Tower Farm developments should proceed. I do, however, appreciate the need for housing and would suggest an alternative location at Old Mill Road which is a brown belt site that is potentially larger than the Black Rock proposal. Any shortfall in housing numbers could be made up by building small brown belt sites within Portishead itself such as the building site at St Marys road. Building houses at Old Mill Road would put housing in the heart of the village and as such, residents would need to use their vehicles less as all amenities would be within walking or cycling distance. The impact on traffic congestion and its pollution would be less than the Blackrock or Tower Farm proposals, demonstrating a more green approach. Portishead would retain its open spaces, with reduced the impact on the environment and protect our wildlife habitat.			
63122945	Christopher Haire			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	NSC has not properly considered: Alternative brown and green field sites with much less ecological impact both in Portishead and across North Somerset. The opportunity to increase housing density on proposed brown field sites across North Somerset which would mean these sites are not required to meet local housing targets. The strategic ecological contribution of these specific sites in protecting the unique environment of Weston Big Wood (SSSI} and the Gordano Valley strategic green corridor The fact that these sites were specifically added to the Green Belt in the late 1980's because of their high ecological value. For the above reasons, the Local Plan is unsound because National Planning Policy states that sites can only be removed from Green Belt for development under exceptional circumstances and these exceptional circumstances are not proven. No modifications short of removing the allocation completely is appropriate for this site. The land should be retained as undeveloped green space and potentially used for biodiversity net gain purposes. North Somerset Council should instead increase housing density on already known and new brown field sites in Portishead and North Somerset and look to develop on other green field sites in Portishead and the rest of the district which will have much less ecological impact. (please see supporting paper for details).			Attachment.pdf
63123137	Marta Haire			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	NSC has not properly considered: Alternative brown and green field sites with much less ecological impact both in Portishead and across North Somerset. 58602337	William Hall			No	• Positively prepared	No	No	Climate resilience: Flood risk has not been fully assessed or mitigated at Tower Farm and Black Rock. Transport and liveable neighbourhoods: School traffic on The Downs is already unsafe, and the steep gradient restricts walking and cycling,	Remove Tower Farm and Black Rock from the Local Plan. Prioritise brownfield and lower-impact sites to meet housing, economic, and sustainability objectives.	I support the Plan's high-level objectives to deliver sustainable, high-quality development, create liveable neighbourhoods, and improve access to facilities.	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								undermining sustainable transport objectives. Housing and community needs: Alternative sites with lower environmental impact are not sufficiently considered. Affordable and specialist housing could be delivered elsewhere without harming Green Belt or ecological assets. Environmental protection: Weston Big Wood, Nightingale Valley, and the Gordano Valley corridor are inadequately protected. Biodiversity, landscape, and ecological integrity are at risk. Efficient land use: The Plan allocates largely undeveloped Green Belt instead of maximising previously developed brownfield land.	Conduct full environmental, ecological, and flood risk assessments for all proposed allocations. Demonstrate safe and suitable access to new developments and mitigate existing school traffic hazards. Ensure consultation with statutory bodies and neighbouring authorities on environmental, transport, and flood risk matters.	I support policies aimed at climate resilience, efficient land use, regeneration of town centres, and promotion of walking, cycling, and public transport where these do not conflict with environmental or safety protections.	
30658465	Tom Hamilton-James							I am a Portishead resident and I am horrified at your plans for housing at Tower Farm and Black Rock. Please record these comments as part of your formal consultation (although probably another tick box exercise and you will proceed and do what you want). NSC has not properly considered the following: There are alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and North Somerset. There are opportunities to increase housing density on proposed brownfield sites which could negate the need to develop Tower Farm and Black Rock. The areas of Tower Farm and Black Rock have strategic ecological importance in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. Both proposed areas were added to the Green Belt in the late 1980s due to their high ecological value. National planning policy allows Green Belt changes only in exceptional circumstances, and these have not been demonstrated. In addition, neither site can provide safe or suitable access. Also, development would create unacceptable transport impacts, failing national soundness tests. Your assertion that everyone would cycle everywhere or use electric bikes is laughable. The areas are used by walkers and is important green space for the local community. For all the above reasons, Tower Farm and Blackrock should be removed from the Local Plan.			
62682273	Chris Hammond				Consistent with national policy			I am writing to formally object to the inclusion of Tower Farm and Black Rock Portishead within the current planning proposal. My objection is based on the following grounds: Availability of Alternative Sites There are suitable brownfield and alternative greenfield sites locally which would deliver housing with far lower ecological impacts. Increasing housing density on already proposed brownfield sites would remove the need to develop Tower Farm and Black Rock, ensuring more sustainable land use. Ecological Importance and Green Corridors The proposed sites form part of strategic green corridors that connect directly to Sites of Special Scientific Interest (SSSIs), including Weston Big Wood and the wider Gordano Valley. Development here would fragment habitats and undermine biodiversity, contrary to both local and national ecological priorities. Green Belt Designation Both Tower Farm and Black Rock were added to the green belt in the 1980s due to their recognised high ecological value. Current national planning policy permits changes to green belt boundaries only in exceptional circumstances. No such exceptional circumstances have been demonstrated in this case. Access and Infrastructure Concerns Neither site can provide suitably safe or viable access routes. This raises significant concerns about traffic safety, congestion, and the practicality of servicing the developments. Noise and Environmental Standards Development of these sites would generate unacceptable noise levels, failing to meet national sound tests and thereby breaching environmental standards designed to protect residents' wellbeing. Conclusion In summary, the proposed development of Tower Farm and Black Rock is			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								unnecessary, hugely ecologically damaging, and inconsistent with both national planning policy and local sustainability objectives. I urge the Council to reject these proposals and instead prioritise housing delivery through existing brownfield opportunities and less sensitive sites.			
63092897	Jane Hawker								We are writing re the threat of development at the above. There would be major impact on local schools plus all other infrastructure, eg the already stretched GP services, also parking issues in and around the 'village' and the inevitable increase in traffic. Access to and from these areas noted above from Down Road would become chaotic. Anyone (local residents in particular) in the vicinity of Highdown Schools at the start and end of the school day will be well aware of the existing chaos.		
58452257	M Hayes			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	No	No	NSC has not adequately given due consideration to the following. Alternatively brown and green field sites exist with far less damage to the ecology both on Portishead and across North Somerset. Availability to increase the density of housing on the proposed brown sites across North Somerset which would mean these sites are not required to meet local housing targets. The strategic ecological contribution of these specific sites in protecting the unique environment of Weston Big Wood (SSSI) and the Gordano Valley Strategic green corridor. The fact that these sites were only added to the Green Belt recently and specifically in recognition of their extremely high ecological value. Traffic volumes on St Marys Rd where I live is already too high and presents a danger to over 2000 children at Gordano School. This will be greatly incresed by this proposal. The proposed site regularly floods. For the above reasons the Local Plan is unsound because National Planning policy states that sites can only be removed from the Green Belt for development under exceptional circumstances and these exceptional circumstances have not been proven.	There can be none except removing this allocation completely for this site. The land should be retained intact as green space to be used to preserve and increase biodiversity purposes. NSC should instead increase housing density on already known and new brown field sites in Portishead and North Somerset and look to develop on other green field sites in Portishead and the rest of the district which will have much less ecological impact.		
58500417	Tom Henley			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	No	No	Not Justified – Unsuitable location requiring off-site ecological mitigation The allocation of approximately 100 dwellings at Black Rock is not justified because the Council itself acknowledges that key environmental and ecological requirements cannot be met on-site, and must instead be located "off-site on land to the south-west". This approach directly conflicts with NPPF paragraph 180(a), which requires avoidance of impact before remediation or off-site compensation is considered. The need for offset land demonstrates the inherent unsuitability of the site for development. There is no published evidence of less sensitive alternative sites being considered and discounted. Not Consistent with National Policy – Failure to protect and enhance biodiversity The approach of relying on off-site mitigation and a "suitable ecological buffer" illustrates a reactive rather than preventative approach to biodiversity protection. NPPF paragraphs 180–182 require Local Plans to conserve habitats, prevent deterioration of irreplaceable habitat, and deliver net gains for biodiversity. The allocation fails this by offloading its ecological burden onto unspecified land, without securing long-term management or legal protection for compensatory habitats. It also conflicts with the Avon Wildlife Trust's 2030 Strategy, which emphasises restoration of 30 per cent of land for nature and enhancing landscape connectivity in the Gordano Valley. Not Positively Prepared – Unsustainable pattern of growth The site lies on the western approach to Portishead along Clevedon Road, where public transport is limited and local services are minimal. Residents would be heavily reliant on private vehicles to access schools, health care and employment. The fact that footways and new bus stop contributions are required underlines existing infrastructure inadequacy. This car-dependent pattern of development conflicts with the sustainable transport objectives of NPPF paragraphs 104–106. Not Effective – Unclear delivery and infrastructure dependencies The site depends on multiple off-site and third-party mitigations including ecological offset land, new footway construction, bus service contributions and delivery of a section of the Gordano Greenway. No clear funding mechanism, responsible delivery body, or phasing plan is identified in the Plan. Consequently, the allocation lacks deliverability and fails the effectiveness test under NPPF paragraph 35(c). Landscape & Setting The site lies within open countryside forming part of the rural setting of Portishead and the Gordano Valley. The expansion westwards into this part of the countryside would diminish the settlement edge, reduce landscape openness, and risk urbanising what should remain a transitional zone	No modification would make this allocation acceptable. The need for off-site mitigation and multiple infrastructure dependencies shows the site is environmentally and logistically unsuitable for housing. The allocation should be removed entirely from Schedule 1. Instead, the land should remain open countryside, contributing to biodiversity and landscape value, in line with the Avon Wildlife Trust's 2030 Strategy, Woodland Trust guidance and national biodiversity objectives.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								between town and countryside. Agriculture & Soils The farmland in question is likely to be of best and most versatile quality (Grade 2/3a) and its loss for housing is not justified when less sensitive land could be used. The Plan does not robustly demonstrate why this agricultural land must be released. Hydrology & Ecology Development on this edge farmland will affect surface-water drainage, soil compaction and wildlife connectivity into the adjoining woodlands and wetland systems associated with the Gordano Valley. The cumulative effect of development pressure in the area further stresses the existing fragile ecological network. Cumulative Impact Combined with the Tower Farm allocation and other nearby proposals, the Black Rock site would add to cumulative ecological, transport and infrastructure burdens around Portishead – contrary to the Council's stated nature-recovery and sustainable growth objectives. I do not support the plan for this location.			
63005761	Lisa Hiscocks							I completely oppose to the proposed development of Tower Farm and Black Rock. These are areas where animals live, it's their home. It will also be destroying all the beautiful wild flowers, insects etc. We will be unable to enjoy the outdoors and exploring these beautiful places. Please do NOT build on these beautiful areas.			
20752737	Hilary Holley			No	• Justified • Consistent with national policy	No	No	These fields are green belt for a reason, Weston Big Wood is an SSSI building house that close will be detrimental to the woods. You cannot change green belt unless there are exceptional circumstances these have not been demonstrated. The doctors, school, dentists cannot cope now. Bus service does not cover North Weston. No modifications unless you class removal of the plans a modification.			
62848193	Dr D R Homer			No	• Justified • Effective • Consistent with national policy	No	Unsure	There are alternative brownfield sites with significantly less ecological impact within North Somerset and Portishead in particular. Alternative sites are likely to allow an increased density of housing meaning that the Tower Farm and Black Rock sites are not needed. The sites at Tower Farm and Black Rock constitute, and are adjacent to, extremely important ecological sites that protect Weston Big Wood and the green corridor of the Gordano Valley. These areas have been part of the corridor since the 1980's. North Somerset Council have not shown a clear demonstration that these changes to the Green Belt are justified or required in exceptional circumstances. This is a clear requirement of the national planning policy which is infringed here by the Council. Neither site will provide safe access for the housing. There will be unacceptable transport impacts that are likely to fail the national soundness tests in this domain. Remove the Tower Farm and Black Rock proposals from the Local Plan 2041.			
29101729	Marjorie Hookham			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	This farmland lies below Weston Big Wood and is again part of the green corridor, so important for habitat, biodiversity and water retention. It borders the Portishead to Clevedon Road to which development would add pressure. Portishead residents who currently use the route with current traffic levels would no doubt attest to the fact that cyclists already come under pressure from impatient drivers. Concreting and tarmacing greenbelt land goes against national policy, increases flood risk and impacts community health. Instead we should be protecting such assets and concentrating development on brownfield sites, especially those closer to amenities and, in particular, close to transport links, thus avoiding additional pressure on already overloaded infrastructure. I do not support the Plan for the Black Rock location	No modification would make the Plan acceptable. The land should remain as countryside		
62676097	Rob Hookham		Private	No	• Justified • Consistent with national policy	No	No	The Tower Hill Farm and Black Rock impinge on Weston Big wood a nature reserve and biological Site of Special Scientific Interest, notified in 1971. Alternative Brown field sites elsewhere in Portishead have NOT been considered. The NPPF paragraphs 180-182 require that plans deliver net gains for biodiversity and prevent deterioration and conserve such habitats. Tower Hill farm is on top of a 300 foot hill meaning that access to the high street,doctors, shops will depend on car travel contrary to NPPF paragraphs 104-106 The present road system is not organised for this and blocks even now. Also of interest is that an aquifer under the site will need to be dealt by the developers with which no doubt will affect Weston Big wood itself	Investigate Brown field sites on Wyndham way other suggested by Portishead town council		
62658625	Ben Houldsworth			No	• Justified	No	No	Regulation 19 Representation – North Somerset Local Plan 2041 Objection to Allocations at Tower Farm (400 homes) and Black Rock (100			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					• Effective • Consistent with national policy			homes), Portishead Submitted on grounds of Soundness and Legal Compliance Dear Sir/Madam, I am writing as a resident of Portishead to object to the proposed housing allocations at Tower Farm and Black Rock in the North Somerset Local Plan 2041, totalling 500 homes. I do not believe these developments are sound or legally compliant, and I ask the Inspector to remove them from the local Plan. The Plan is Not Justified These sites were selected without a clear evidence-led explanation for why they must be developed when there are alternative approaches, including further use of brownfield land and higher density in central areas. This land is currently Green Belt and provides important landscape, ecological and recreational value. Exceptional circumstances for releasing this Green Belt have not been demonstrated. The Plan is Not Consistent with National Policy The sites sit beside Weston Big Wood, a designated SSSI and ancient woodland. Earlier ecological evidence recommended a 150-metre exclusion buffer, yet the plan now refers only to a vague “suitable buffer” without justification. This weakens the required level of environmental protection and could damage the woodland and wildlife habitat, contrary to national policy. The sites are on the edge of Portishead, detached from essential services, and realistically car-dependent. Promised bus and walking improvements are speculative and unfunded, conflicting with national policy aims for sustainable transport and reducing emissions. The Plan is Not Effective The proposals depend on major infrastructure—school places, road improvements, active travel links, and ecological mitigation—but these lack confirmed funding, delivery mechanisms and timescales. Without certainty, these developments are not realistically deliverable. Legal Compliance Concerns • The Sustainability Appraisal does not appear to assess realistic alternatives, such as excluding these sites or retaining the 150-metre buffer. • The Habitats Regulations Assessment does not convincingly evaluate cumulative impacts on Weston Big Wood or demonstrate certain mitigation. • Consultation has lacked transparency, with key evidence difficult to access and understand, limiting genuine participation. Requested Change I request that the Inspector: • removes Tower Farm and Black Rock from the Local Plan. I don’t support in any way.			
62772897	Martin Howard							In response to the above… There are alternative brownfield and greenfield sites with less ecological impact and the fact that the proposed sites were in fact added to the green belt in 1980s because of their high ecological value. Neither site can provide suitable or safe access. Such development would result in unacceptable transport impact and thereby likely to fail national sound tests. Portishead is already stretched for facilities..limited school places, particularly in area proposed, limited access to medical services, currently one pharmacy, soon no banks, small postal facility and limited parking throughout the town. Traffic along Down Road, particularly at school times, often results in gridlock so additional access in this area would make that situation even worse and add to the potential for road accidents. Therefore we believe, based on the above facts alone, the Tower Farm and Black Rock sites should be removed from the Local Plan.			
62796289	Liz Howarth			No	• Consistent with national policy	No	No	Thank you for the opportunity to comment There has not been full consideration of brownfield sites in N Somerset before considering the erosion of green belt land. ie building on Tower Farm Both Tower Farm and Black rock are greenbelt land with massive strategic ecological importance protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. Both areas were added to the Green Belt in the late 1980s due to their high ecological significance. Greenbelt land should only be built on in when other options to build on brownfield sites have been exhausted.	Brown land to be built on before building on green land (and only in exceptional circumstances)

I do not support the the North Somerset Local Plan 2041 for the Black Rock location			
58578145	R James							I am emailing to object to the proposed development of Tower Farm. We live on The Downs, and the single access route would cause chaos. It already takes us 15 mins to get out of our street at school times. We bought our house due to the open space and common land because there is nowhere to walk up at West Hill with children, there is no green space or	We would appreciate any support you can give to objecting this proposal, and any advice to us on what we can do to continue to object / fight this.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								outside space, unless we drive to the marina. These, I understand, are green belt areas and other sites haven't been fully explored before this proposal. These sites also protect the Weston Big Wood, and changes to the green belt need to be in exceptional circumstances and this hasn't been demonstrated. There are many vacant brownfield sites that could be redeveloped and actions to reduce vacant housing in the area which would reduce the need to develop greenfield. I am sure that the other areas proposed were less impactful in terms of development. The single access via The Downs is just not viable or sustainable. We would appreciate any support you can give to objecting this proposal, and any advice to us on what we can do to continue to object / fight this.			
62809057	Mike Johnston		Gordano Civic Society	No	• Positively prepared • Justified • Effective • Consistent with national policy	No		NSC propose removing the Green Belt status from this area of land. The designation made in 1988 specifically acknowledged the importance of the environmental, geographic, geological and ecological impact these agricultural fields have on the neighbouring Weston Big Wood (SSSI), Portishead Down and the Gordano Valley. There is a proposal to remove this status & 'designate' this land as 'Grey Belt'. As this recent nomenclature refers to, in the words of Sir Keir Starmer "poor quality scrubland, mothballed on the outskirts of town" - it clearly does not fulfil this definition. As is clearly obvious, this proposed development land is decent pasture. The proposal to develop this land is not compliant with National Planning Policy (NPPF S192, S193 and S187). The proposal to remove the land form the Green Belt is not compliant with NPPF S147 as exceptional circumstance to remove it are not proven. In fact there are special circumstances to retain it as part of the green Belt and perhaps use the land for Bio Diversity Net Gain purposes to protect it in perpetuity. Remove Black Rock from the Local Plan site allocation. This is the only possible modification.			
24296225	L Johnston			No	• Justified • Effective • Consistent with national policy	No	Unsure	Please refer to comments submitted by Portishead Town Council and Avon Wildlife Trust, both of which I fully support.			Tower Farm Black Rock Comments.pdf
62690561	Mike Jones			No	• Effective • Consistent with national policy	No	Yes	I am writing in support of the objections made by Portishead Town Council in their submission against the proposed development at Black Rock. In addition: As Black Rock was added in 1988 to the Green Belt as having significant ecological value in protecting Weston Big Wood (SSSI) and the Gordano Valley strategic green corridor it is hard to understand 40 years later how Black Rock now less ecological value has given the climate change challenges we face. Portishead Town Council states within the National Planning Policy Framework a site can only be removed from the Green Belt for development under exceptional circumstances and that North Somerset Council has not shown this and so the site should be removed from the Local Plan. North Somerset Council has not adequately considered alternative brown and green field sites which they are obliged to do, and which have much less ecological impact in Portishead and across North Somerset and may also provide greater housing densities. Consequently, the site should be removed from the Local Plan. Building on green belt land will have detrimental impacts on both the natural environment and quality of life for future generations. We should first consider building on available brownfield sites and or converting empty commercial properties rather than rush to get spades in the ground and loose green belt land for ever. ""Councils have given planning permission for more than 1.4 million homes since 2007 that have not been built, research has found. A new report by the Institute for Public Policy Research (IPPR) says planned homes are often not built because developers instead want to increase the land's value before selling it on, or they are 'land banking' to slow building rates and maintain high house prices".			
58244993	JV Kay		Householder	No	• Effective	No	No	Neither site can provide safe or suitable access. They would create unacceptable transport impacts, failing national soundness tests. The top of The Downs is by High Down schools and this access is not available all day. There are always cars parked at the top of the hill. These houses would create strategic ecological importance relating to Weston Big Wood (SSSI) and the Gordano Valley green corridor. National planning policy allows Green Belt changes only in exceptional circumstances- and these have not been met.	Traffic lights would need to be set up at the top of the Downs and this would not work well. Protecting Weston Big Wood and the Gordano Valley green corridor have NOT been met.		
62560417	Charlotte Knight			No	• Positively prepared • Justified	No	No	Not Justified – Unsuitable location requiring off-site ecological mitigation The allocation of approximately 100 dwellings at Black Rock is not justified because the Council itself acknowledges that key environmental and ecological requirements cannot be met on-site, and must instead be located	Modifications required to make the Plan sound No modification would make this allocation acceptable. The need for off-site mitigation and multiple infrastructure dependencies shows the site is

					• Effective • Consistent with national policy			"off-site on land to the south-west". This approach directly conflicts with NPPF paragraph 180(a), which requires avoidance of impact before remediation or off-site compensation is considered. The need for offset land demonstrates the inherent unsuitability of the site for development. There is no published evidence of less sensitive alternative sites being considered and discounted. Not Consistent with National Policy - Failure to protect and enhance biodiversity The approach of relying on off-site mitigation and a "suitable ecological buffer" illustrates a reactive rather than preventative approach to biodiversity protection. NPPF paragraphs 180–182 require Local Plans to conserve habitats, prevent deterioration of irreplaceable habitat, and deliver net gains for biodiversity. The allocation fails this by offloading its ecological burden onto unspecified land, without securing long-term management or legal protection for compensatory habitats. It also conflicts with the Avon Wildlife Trust's 2030 Strategy, which emphasises restoration of 30 per cent of land for nature and enhancing landscape connectivity in the Gordano Valley. Not Positively Prepared – Unsustainable pattern of growth The site lies on the western approach to Portishead along Clevedon Road, where public transport is limited and local services are minimal. Residents would be heavily reliant on private vehicles to access schools, health care and employment. The fact that footways and new bus stop contributions are required underlines existing infrastructure inadequacy. This car-dependent pattern of development conflicts with the sustainable transport objectives of NPPF paragraphs 104–106. Not Effective – Unclear delivery and infrastructure dependencies The site depends on multiple off-site and third-party mitigations including ecological offset land, new footway construction, bus service contributions and delivery of a section of the Gordano Greenway. No clear funding mechanism, responsible delivery body, or phasing plan is identified in the Plan. Consequently, the allocation lacks deliverability and fails the effectiveness test under NPPF paragraph 35(c). Landscape & Setting The site lies within open countryside forming part of the rural setting of Portishead and the Gordano Valley. The expansion westwards into this part of the countryside would diminish the settlement edge, reduce landscape openness, and risk urbanising what should remain a transitional zone between town and countryside. Agriculture & Soils The farmland in question is likely to be of best and most versatile quality (Grade 2/3a) and its loss for housing is not justified when less sensitive land could be used. The Plan does not robustly demonstrate why this agricultural land must be released. Hydrology & Ecology Development on this edge farmland may affect surface-water drainage, soil compaction and wildlife connectivity into the adjoining woodlands and wetland systems associated with the Gordano Valley. The cumulative effect of development pressure in the area further stresses the ecological network. Cumulative Impact Combined with the Tower Farm allocation and other nearby proposals, the Black Rocksite would add to cumulative ecological, transport and infrastructure burdens around Portishead – contrary to the Council's stated nature-recovery and sustainable growth objectives I do not support the the North Somerset Local Plan 2041 for the Black Rock location.	environmentally and logistically unsuitable for housing. The allocation should be removed entirely from Schedule 1. Instead, the land should remain open countryside, contributing to biodiversity and landscape value, in line with the Avon Wildlife Trust's 2030 Strategy, Woodland Trust guidance and national biodiversity objectives.		
58013857	Katherine Knowles			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	Unsure	Ecological impact - NSC have not demonstrated that there are exceptional circumstances to release this land from the Green Belt, as required under s147. This land was only added to the Green Belt relatively late, in the 1980s, recognising its importance as Weston Big Wood is an SSSI area. The surrounding fields are equally as important for the wildlife as the wood itself, and developer plans for a limited "buffer" around the wood are wholly insufficient and do not address the light and noise pollution of such a significant development, as well as the lack of food for the wildlife from the destruction of the open fields. NSC have not proposed making as much use as possible of brownfield sites or optimising the density of other sites. For example, density could be increased at Wyndham Way, and Castlewood, and Land South of Clevdon Road. There are at least two other Brownfield sites not included in the Local Plan - land between Wyndham Way and Cheviot Meadows, and land next to the Poacher Pub. NSC have not demonstrated that they have properly and carefully considered all other possible sites and therefore that exceptional circumstances exist for development on the Green Belt. Black Rock is also exceptional Green Belt due to its strategic ecological importance to the Gordano Valley, and the need to protect the Gordano Valley green corridor - as noted by the Secretary of State in 1988.	Black Rock and Land at Tower Farm should be removed from the Local Plan.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								s156 states that where major development is proposed on Green Belt land, certain Golden Rules must be made, including improvements to local or national infrastructure, and the provision of other new or improved green spaces for the public. The plan does not comply with these requirements. There is no proposal for improved infrastructure (other than vague plans for extending one primary school, which would at most mitigate the harm caused by the development, and not be an overall improvement or anywhere near sufficient infrastructure to support this plan), and no plans for how the green belt land (which is enjoyed by the public every day) would be replaced for local residents. There is no provision for access to new or improved green spaces. s187 states that planning policies should support and contribute to and enhance the natural and local environment. National Planning Policy also mandates that there should be no adverse impacts to SSSIs, that there should be no deterioration to irreplaceable habitats including ancient woodland, and ecological networks and wildlife corridors should be created/maintained. s193 states that development on land within or outside an SSSI and which is likely to have an adverse effect on it should not normally be permitted. And that development resulting in the loss or deterioration of irreplaceable habitats should be refused unless there are wholly exceptional reasons and a suitable compensation strategy. As set out above there are not exceptional reasons, as other sites have not been properly considered, and no suitable compensation strategy has been set out. Careful consideration should be given to the ecological concerns being raised - this land is very important for Weston Big Wood (an SSSI) and has specific unique characteristics which have ensured its protection thus far. Far from supporting, and enhancing the natural environment, this plan would ensure the destruction of an SSSI and ensure significant harm to biodiversity. The Local Plan and the developers "vision" does not set out how a development of this scale could possibly protect the SSSI, or ensure wildlife corridors. The proposed "buffers" are wholly inadequate and weight should be placed on the views of ecological and wildlife experts, and not property developers, as to the likely impact of this proposal.			
62788865	Christina Lawlwy							I would like to lodge an objection to the development of the above mentioned sites on the grounds that NSC has not properly considered: Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across Somerset. Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm and Black Rock. The strategic ecological importance of these sites in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. The fact that both areas were added to the Green Belt in the late 1980's due to their high ecological value. National planning policy allows Green Belt changes only in exceptional circumstances - and these have not been demonstrated. In addition Neither site can provide safe or suitable access. Development would create unacceptable transport impacts, failing national soundness tests. For these reasons, Tower Farm and Black Rock should be removed from the Local Plan.			
62819937	Lin Lawrence				• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The plan is Not Justified – Unsuitable location requiring off-site ecological mitigation The allocation of approximately 100 dwellings at Black Rock is not justified because the Council itself acknowledges that key environmental and ecological requirements cannot be met on-site, and must instead be located “off-site on land to the south-west”. This approach directly conflicts with NPPF paragraph 180(a), which requires avoidance of impact before remediation or off-site compensation is considered. The need for offset land demonstrates the inherent unsuitability of the site for development. There is no published evidence of less sensitive alternative sites being considered and discounted. The plan is Not Consistent with National Policy – Failure to protect and enhance biodiversity The approach of relying on off-site mitigation and a “suitable ecological buffer” illustrates a reactive rather than preventative approach to biodiversity protection. NPPF paragraphs 180–182 require Local Plans to conserve habitats, prevent deterioration of irreplaceable habitat, and deliver net gains for biodiversity. The allocation fails this by offloading its ecological burden onto unspecified land, without securing long-term management or legal protection for compensatory habitats. It also conflicts with the Avon Wildlife Trust’s 2030 Strategy, which emphasises restoration of 30 per cent of land for nature and enhancing landscape connectivity in the Gordano Valley.	No modification would make this allocation acceptable. The need for off-site mitigation and multiple infrastructure dependencies shows the site is environmentally and logistically unsuitable for housing. The allocation should be removed entirely from Schedule 1. Instead, the land should remain open countryside, contributing to biodiversity and landscape value, in line with the Avon Wildlife Trust’s 2030 Strategy, Woodland Trust guidance and national biodiversity objectives.	I do not support the the North Somerset Local Plan 2041 for the Black Rock location The proposed allocation of Land at Black Rock (north of Clevedon Road) is unsound and should be removed. It relies on off-site ecological mitigation, cannot meet biodiversity standards on its own, and will increase car dependency and infrastructure pressure. No mitigation can make this site appropriate for new housing. The land should be retained as open countryside, maintaining its role in biodiversity, landscape character and community wellbeing.	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								This plan is Not Positively Prepared – Unsustainable pattern of growth The site lies on the western approach to Portishead along Clevedon Road, where public transport is limited and local services are minimal. Residents would be heavily reliant on private vehicles to access schools, health care and employment. The fact that footways and new bus stop contributions are required underlines existing infrastructure inadequacy. This car-dependent pattern of development conflicts with the sustainable transport objectives of NPPF paragraphs 104–106. This plan is Not Effective – Unclear delivery and infrastructure dependencies The site depends on multiple off-site and third-party mitigations including ecological offset land, new footway construction, bus service contributions and delivery of a section of the Gordano Greenway. No clear funding mechanism, responsible delivery body, or phasing plan is identified in the Plan. Consequently, the allocation lacks deliverability and fails the effectiveness test under NPPF paragraph 35(c). Landscape & Setting The site lies within open countryside forming part of the rural setting of Portishead and the Gordano Valley. The expansion westwards into this part of the countryside would diminish the settlement edge, reduce landscape openness, and risk urbanising what should remain a transitional zone between town and countryside. Agriculture & Soils The farmland in question is likely to be of best and most versatile quality (Grade 2/3a) and its loss for housing is not justified when less sensitive land could be used. The Plan does not robustly demonstrate why this agricultural land must be released. Hydrology & Ecology Development on this edge farmland may affect surface-water drainage, soil compaction and wildlife connectivity into the adjoining woodlands and wetland systems associated with the Gordano Valley. The cumulative effect of development pressure in the area further stresses the ecological network. Cumulative Impact Combined with the Tower Farm allocation and other nearby proposals, the Black Rock site would add to cumulative ecological, transport and infrastructure burdens around Portishead – contrary to the Council's stated nature-recovery and sustainable growth objectives.			
58588225	Mona Le			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	North Somerset Council (NSC) appears not to have robustly addressed several key planning considerations in proposing allocations at Black Rock: Assessment of reasonable alternatives: There is no clear evidence that NSC has fully assessed alternative brownfield and lower-impact greenfield sites, both within Portishead and elsewhere in North Somerset, which could deliver the required housing with substantially reduced ecological harm. Optimisation of brownfield land: The potential to increase densities on identified brownfield sites appears underexplored. A genuine "brownfield first" approach, including appropriate higher-density development in accessible locations, could obviate the need to release Black Rock. Strategic ecological value: The role of these sites in maintaining the ecological integrity of Weston Big Wood (SSSI) and the Gordano Valley green corridor does not appear to have been fully acknowledged or appropriately weighted in the site selection process. Green Belt status and justification: The site was added to the Green Belt in the late 1980s specifically because of its ecological importance and contribution to the openness and purposes of the Green Belt. This historic and ongoing justification for designation is not convincingly addressed in the evidence supporting its proposed release. Exceptional circumstances test: National planning policy permits changes to Green Belt boundaries only in genuinely exceptional circumstances, supported by a proportionate review of need, alternatives and impacts. On the information available, such circumstances have not been demonstrated. Furthermore: Highway access and safety: There is no convincing evidence that either site can provide safe, suitable and policy-compliant access arrangements without giving rise to significant adverse effects. Transport impacts and soundness: The likely transport consequences, including increased congestion and reliance on private car use, appear inconsistent with national policy on sustainable transport. In the absence of credible mitigation and mode-shift measures, these allocations are at risk of failing the plan soundness tests relating to justification, effectiveness and consistency with national policy. Infrastructure: Besides the likely transport consequences, have the plan considered about the potential negative impact on the publics and neighbourhood surrounding on security, living, medical and education			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								standards i.e., an extension or new establishment for secondary schools, GP healthcare services...? In combination, these deficiencies indicate that the allocation of Black Rock is not justified when measured against national policy requirements, alternative options and the acknowledged sensitivity of these Green Belt and ecologically important locations.			
17699457	Ursula Lucas			No	• Justified	Yes	Yes	Black Rock is in a sensitive location. In my view, NSC has not properly considered the following: Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset. Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Black Rock. The strategic ecological importance of this site in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. The fact that this area was added to the Green Belt in the late 1980s due to its high ecological value. I would argue that national planning policy allows Green Belt changes only in exceptional circumstances — and these have not been demonstrated. In addition: this site cannot provide safe or suitable access and development would create unacceptable transport impacts, failing national soundness tests.			
62913889	Ian Manley							I'm emailing to express my concerns over the possible development of the two sites of Black Rock and Tower Farm. My prime concern is on the ecological affects on Weston Big Big Wood ,ancient woodland, of which only 5% of UK woodland is classed as ancient.This woodland is a significant part of our ecological heritage and will be irreversibly damaged should the ajoining green belt fields currently acting as a buffer zone be used for housing purposes. Current land, is green belt, and should only be used in exceptional circumstances. Any development is not an exceptional circumstance and has not been demonstrated as such. Blocks in the 'green corridor' through the Gordano Valley and it's other SSI sites. Increased foot traffic through the woods.The damage of increased traffic has been demonstrated by the increased footfall during the covid 19 pandemic. My secondary concerns are yet more pressure on the existing infrastructure,services and amenities in Portishead e.g schools ,GP's, roads etc. Any proposed housing will almost certainly be the usual bland low quality thrown up in the usual identikit housing schemes as we have already seen in Portishead .They won't be affordable to many actual local residents. Impact of increased traffic ,presumably going past High Down School for access. Consideration should be given to alternate brownfield sites within North Somerset. Policy should be directed at property speculators both national and international treating the market as a game of monopoly and hoarding assets that prevent our children's generation from ever owning property and being forever paying sky high rents to the already wealthy .			
58492065	Susan Martin			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Not Justified – Unsuitable location requiring off-site ecological mitigation The allocation of approximately 100 dwellings at Black Rock is not justified because the Council itself acknowledges that key environmental and ecological requirements cannot be met on-site, and must instead be located “off-site on land to the south-west”. I do not support the North Somerset Plan 2041 for the Black Rock location.			
57964929	Jane Mather			No	Effective	Unsure	Unsure	NSC has not considered the ecological impact of the Tower Farm site in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. Both areas were added to the Green Belt in the late 1980's due to their high ecological value. National planning policy allows Green Belt only in exceptional circumstances - and these have not been demonstrated.	Find alternative brownfield or greenfield sites with far lower ecological impact in both Portishead across North Somerset.	None	
58448865	Avon Wildlife Trust		Avon Wildlife Trust	Yes		No	Yes	Both Tower and Black Rock allocation sites will result in the loss of Green Belt land and significantly reduce the buffer area around Weston Big Wood SSSI, considered to be one of the most important biodiversity sites in North Somerset. The ancient woodlands at Weston Big Wood have developed over centuries and are now amongst the most fragile and rare of all landscapes in the country. Once damaged they cannot be restored. Under DP35 of this draft Plan (Nature Conservation), it is clearly stated that "development within or in proximity to a Site of Special Scientific Interest (SSSI) or National Nature Reserve that is likely to have a direct or indirect adverse effect on its biodiversity or geological interest will not normally be permitted". The SSSI is currently in unfavourable declining condition, due to the existing level of footfall, with biodiversity in the wood land and surrounding area already having been significantly reduced. Weston Big Wood is an integral part of the Gordano Vally nature reserve stretching from the Severn estuary, through Portbury Wharf Nature reserve, along the Gordano Valley to the Somerset Levels and Mendips and is of national strategic environmental importance. Degrading it further by additional development will result in the loss of a key part of the Gordano Valley environment and impact negatively on the wildlife, flora and ecology of the whole Gordano Valley. The wood requires a substantial buffer zone and a wildlife corridor in and out of the site in order to survive and regenerate. Any allocations in the area should be planned to take account of the integrated nature and value of the Gordano valley as a whole. In conclusion NPPF Section 15, para 192 states that plans should safeguard the components of local wildlife-rich habitats and wider ecological networks, including the hierarchy of international, national and locally designated sites of importance for biodiversity wildlife corridors and stepping stones that connect them as well as promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species. At present there are elements of the plan as outlined above that threaten

Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								existing ecological networks, including the loss of Green Belt, and through damaging connections between international, national and locally designated sites and significant loss of the corridors and stepping stones that connect these sites. Specific proposals also undermine the North Somerset Local Nature Recovery Strategy (LNRS) which sets out priorities and actions to drive nature's recovery, as well as identifying specific locations where nature's recovery should be prioritised. The current proposal for this allocation breaches sections 124, 188, and 192 of the NPPF and Section 40 of Natural Environment and Rural Communities Act 2006.			
58043905	C Miles			Yes		Yes	Yes			Portishead desperately needs additional housing particularly starter homes, small 2-3bed family homes and affordable housing to meet the needs of families.	
62810977	Claire Miller			No	• Positively prepared	No	No	NSC has not properly considered: Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset. Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm and Black Rock. The strategic ecological importance of these sites in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. The fact that both areas were added to the Green Belt in the late 1980s due to their high ecological value. 4113729	Portishead Town Council		Portishead Town Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Black Rock NPPF S147 states that before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development. This will be assessed through the examination of its strategic policies, which will take into account the preceding paragraph and whether the strategy: a) makes as much use as possible of suitable brownfield sites and underutilised land; b) optimises the density of development in line with the policies in chapter 11 of this Framework, including whether policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport... Formal List of Objections in relation to NPPF S147 1. Failure to Optimise Density on Brownfield Sites Across North Somerset 1.1 The increase in density at Wyndham Way (from 485 to 785 homes) between the initial draft and this one, as suggested by Portishead Town Council, demonstrates that substantial additional capacity exists on brownfield land when properly assessed. 1.2 No comparable density uplift has been applied to other major sites. NSC provides no credible evidence that densities have been systematically reviewed, contrary to NPPF 147 and its own Green Belt Review claims. 1.3 At least 23 other brownfield sites in North Somerset could accommodate higher densities, reducing the need to release Green Belt land. 2. Under-Utilisation of Key Brownfield Sites 2.1 Castlewood, Clevedon (4.5 ha and Council-owned) is allocated only 120 homes, despite being a highly sustainable site with excellent public transport. National density guidelines indicate potential for 400–800 homes. 2.2 Optimising Castlewood alone would reduce pressure on ecologically sensitive locations such as Black Rock and help correct the severe imbalance in housing numbers across settlements (e.g., Clevedon: 258 vs Weston: 6,084 vs. Portishead: 1,347 vs. Backwell 1,683. 2.3 NSC also has a duty to maximise the value of sites it owns—something it has failed to do at Castlewood.	Removal of Land at Black Rock, north of Clevedon Road as housing allocations from the NS Local Plan 2026-2041		Black Rock reformatted 20251209.docx Gordano Valley The future of Wildlife.pdf gordano-valley-ecological-development-strategy-report.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								3. Omission of Viable Brownfield Sites in Portishead 3.1 At least two deliverable brownfield sites are missing from the Plan: • Land between Wyndham Way and Cheviot Meadow (previous permissions for 33 homes; currently for sale) (17/P/1229/FUL) • Land adjacent to The Poacher (c. 8 homes) 3.2 NSC must identify all such sites before proposing Green Belt release. 4. Misclassification and Missed Opportunity at Wyndham Way 4.1 The so-called "1.1 ha green field" within Wyndham Way is in reality derelict land long earmarked for commercial use but never viable. 4.2 Reclassifying it for mixed residential and commercial development would support the Town Centre/Wyndham Way regeneration vision, deliver jobs, and make full use of its proximity to the 2028 railway station. 4.3 Doing so would reduce pressure to build adjacent to the SSSI from development at Black Rock. 5. Removal of a Sustainable Greenfield Site in Portishead Without Clear Justification 5.1 Land South of Clevedon Road (HE20488) was dropped following an Environment Agency flood plain reclassification, despite being on higher ground than much of modern Portishead. 5.2 The 2023 proposal for this site focused on executive homes, contradicting the AECOM's Housing Needs Assessment commissioned by the Portishead Neighbourhood Plan, which identifies need primarily for 2–3 bedroom affordable homes and no need at all for any more 4 bedroom houses. 5.3 Using national density guidance, this 2.67 ha site could accommodate 250–500 dwellings, avoiding the need for more damaging options such as Black Rock. 6. Incorrect Assessment of Black Rock and Green Belt Harm 6.1 Black Rock lies within Green Belt designated in 1988 specifically to protect the ecological integrity of the Strategic Gordano Valley Green Corridor. 6.2 NSC's Green Belt assessment fails to reflect these unique circumstances, treating Black Rock as ordinary Green Belt when it is exceptional in ecological and strategic significance. 7. NSC Has Not Met the NPPF Requirement to Exhaust All Reasonable Alternatives 7.1 NSC has not demonstrated that all brownfield and sustainable urban/ suburban opportunities have been fully explored. 7.2 CPRE analysis confirms there is sufficient brownfield capacity nationally to meet housing targets—reinforcing that Green Belt release is not inevitable. 7.3 NSC therefore fails the test set out in NPPF 147, which requires exhausting all reasonable non-Green Belt options before altering Green Belt boundaries. NPPF S156 states that where major development involving the provision of housing is proposed on land released from the Green Belt through plan preparation or review, or on sites in the Green Belt subject to a planning application, the following contributions ('Golden Rules') should be made: b) necessary improvements to local or national infrastructure; and the provision of new, or improvements to existing, green spaces that are accessible to the public. New residents should be able to access good quality green spaces within a short walk of their home, whether through onsite provision or through access to offsite spaces Formal list of objections in relation to NPPFS156 1.0 There is nothing in the Draft Infrastructure Delivery Plan Schedule document in Portishead other than: a cycle lane to Clevedon; the railway line that has been used to justify every development in the town for the past 30 years so can't be described as "necessary improvements to local or national infrastructure" in response to the proposed loss of Green Belt land; and something vague about possibly building a new school. 2.0 There is also no "provision of new, or improvements to existing, green spaces" in the NSC Plan. 3.0 This version of the Local Plan is developer led rather than community led and this has led to too much focus on "easy to develop" green belt sites at the expense of a full and proper consideration of "more difficult to develop" brown field and lower environment impact and more sustainable green field sites. It can therefore not be demonstrated that the Golden Rule for releasing land from the Green Belt for the provision of housing of "necessary improvements to local or national infrastructure; and the provision of new, or improvements			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								to existing, green spaces that are accessible to the public" will be met, contrary to NPPF S156. NPPF S187 1. Planning policies and decisions should contribute to and enhance the natural and local environment by: a) protecting and enhancing valued landscapes, sites of biodiversity or geological value and soils (in a manner commensurate with their statutory status or identified quality in the development plan); b)recognising the intrinsic character and beauty of the countryside, and the wider benefits from natural capital and ecosystem services – including the economic and other benefits of the best and most versatile agricultural land, and of trees and woodland; c) minimising impacts on and providing net gains for biodiversity, including by establishing coherent ecological networks that are more resilient to current and future pressures and incorporating features which support priority or threatened species such as swifts, bats and hedgehogs; … Background: The site for the proposed Black Rock development lies immediately beside Weston Big Wood, an ancient woodland SSSI recognised as one of North Somerset's richest biodiversity sites, and close to the geological and ecological interest of Nightingale Valley SSSI. Open fields used for grazing or maize cultivation run directly to the boundary of Weston Big Wood (SSSI). The surrounding unimproved grassland, hedgerows and shelterbelts form vital wildlife corridors linking the wood to the wider Gordano Valley. Weston Big Wood itself is a rare remnant of Ice-Age woodland, dominated by oak, hazel, ash and elm and supporting uncommon tree species such as small-leaved lime, wild service tree and rock whitebeam. Its exceptionally rich ground flora includes bluebells, wild garlic, violets, wood anemone and herb paris, alongside notable fungi. The woodland provides habitat for birds of prey including buzzards, red kites and peregrine falcons, as well as owls, roosting bats, deer and badgers, while its expanding woodland fringe supports red-listed species such as linnet. The wider Gordano Valley contains a mosaic of habitats—rhynes, saltmarsh, woodland, unimproved grassland, orchards, hedgerows, quarries and limestone outcrops—that together sustain butterflies, dragonflies, bats, wetland birds and diverse flora. Decades of ecological studies by WWF, Avon Wildlife Trust and Portishead Town Council emphasise that this is an interconnected ecological system whose species and habitats depend on maintaining uninterrupted wildlife corridors. Recent assessments show Weston Big Wood to be in unfavourable and declining condition, with increasing pressure from recreation and habitat fragmentation, and note high bat activity around Tower Farm and Black Rock. Geological features similar to those that underpin Nightingale Valley's SSSI designation are also likely to be present at Black Rock, further underscoring the area's ecological and conservation importance. In addition to Weston Big Wood, Black Rock is also in close proximity to Nightingale Valley SSSI. In all likelihood the location shares the geological features that Nightingale Valley's citation protects, and perhaps should be protected itself for the same reasons. Sources: World Wildlife Fund and Avon Wildlife Trust Biodiversity study PhD https://www.portishead.gov.uk/uploads/gordano-valley-ecological-study.pdf?v=1763999384; (1988) ; Portishead Town Council Commissioned update report: https://www.portishead.gov.uk/uploads/gordano-valley-ecological-development-strategy-report.pdf?v=1741102465 (2023) Formal list of objections in relation to NPPF S187 1. Proposals conflict with national planning policy (NPPF) and failure to protect designated sites 1.1 Conflict with NPPF requirement to avoid harm to SSSIs and irreplaceable habitats o Development would cause adverse impacts to Weston Big Wood (SSSI and ancient woodland), which the NPPF states should not normally be permitted unless wholly exceptional reasons exist (none do). o Building up to the woodland boundary with only a small buffer fails to safeguard the site and its ecosystem. 1.2 Failure to avoid, mitigate or compensate for biodiversity harm (NPPF) 1.3 The Biodiversity Net Gain (BNG) report's proposed habitats (new woodland, species-rich grassland, orchards, swales, pond, etc.) are located on existing semi-natural land and do not mitigate damage to the ancient woodland ecosystem and nature corridors. 1.4 Significant long-term biodiversity loss is inevitable 1.5 No mitigation or BNG credits can replace an ancient woodland and SSSI, which are irreplaceable. 1.6 Ancient woodland once damaged "is gone forever" (Woodland Trust; Avon Wildlife Trust). Please see this link: avon-wildlife-trust-draft-response-to-north-somerset-local-plan-2041.pdf In their response to this consultation, AWT highlights that "Under DP35 of this draft Plan (Nature Conservation), it is clearly stated that "development			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								within or in proximity to a Site of Special Scientific Interest (SSSI) or National Nature Reserve that is likely to have a direct or indirect adverse effect on its biodiversity or geological interest will not normally be permitted” 1.7 Failure to protect wider ecological networks (NPPF para 179, S187, S192) 1.8 Black Rock forms part of a wildlife corridor linking Weston Big Wood, Gordano Valley, Walton Common and other SSSIs. 1.9 Development would fragment this network and undermine nature recovery goals. 2. Concerns about agricultural land quality 2.1 Incorrect or misleading agricultural land classification o NSC’s background paper labels the site as Grade 3, but Natural England / DEFRA maps show part of the site is Grade 1 (Best and Most Versatile land). (see below) o NPPF footnote 65 requires development to avoid high-quality (Grades 1, 2, 3a) agricultural land where possible. Source: https://naturalengland-defra.opendata.arcgis.com/datasets/provisional-agricultural-land-classification-alc-england/explore?location=51.470936%2C-2.780582%2C16.00 3. Landscape sensitivity and character 3.1 The plans for Black Rock conflict with NSC Landscape Sensitivity Assessment (https://n-somerset.gov.uk/sites/default/files/2023-06/Landscape%20Sensitivity%20Assessment%20%28March%202018%29-acc.pdf which notes: “Visual impact of unsympathetic urban edges of Portishead and Clevedon and urban fringe influences within the immediately adjacent landscapes” as a threat to the Portishead Ridges and Combes, an area that includes the Black Rock site. It also stated that “The landscape strategy for Portishead Ridges and Combes is to conserve the elements of strong character, the woodland, open grassland and pasture, the ancient hilltop sites and stone built settlement while enhancing area of declining condition and weaker character such as the urban edges and the gappy hedgerows”. It provided Landscape Guidelines including “Conserve the peaceful and secluded nature of the wooded landscape” and “Minimise the impact of the urban edge and the encroachment of visually intrusive land uses…”. o Land south-west of Portishead is identified as high sensitivity due to rural character, visibility, and proximity to Nightingale Valley SSSI and Middle Hill Common LNR. Development would damage this sensitive landscape. o The Assessment identifies threats from urban edge encroachment and calls for conservation of woodland, pasture, and peaceful landscape character. In contrast the proposed development would intensify intrusive urban edges and degrade woodland character. 4. Conflict with Portishead Neighbourhood Plan (PEN4) 4.1 Non-compliance with Policy PEN4 (biodiversity and ecological networks) o The scheme does not: ◇ Provide genuine BNG (biodiversity net gain) ◇ Protect or enhance ecological corridors ◇ Provide adequate buffers ◇ Address indirect impacts such as noise, light pollution, and disturbance to habitats o It fragments the Gordano Valley ecological network. 5. Objections relating to NPPF S192 (biodiversity and geodiversity) 5.1 Failure to safeguard mapped wildlife-rich habitats and ecological networks o Black Rock is identified as key connective habitat between several SSSIs. o Development undermines land identified for habitat protection, restoration, and enhancement. 5.2 Failure to promote conservation and recovery of priority habitats and species o Reliance on off-site mitigation and a narrow buffer is reactive, not preventative. o Conflicts with the Avon Wildlife Trust 2030 Strategy: restoring 30% of land for nature and strengthening Gordano Valley landscape connectivity. 6. Objections relating to NPPF S193 (decision-making principles) 6.1 Significant harm cannot be avoided, mitigated or compensated (S193a) o Alternative locations exist with far less ecological harm. o Light, noise and pet disturbance (especially predation by cats) are unavoidable. 6.2 Adverse effects on an SSSI should not be permitted (S193b) 6.3 The development’s claimed benefits do not outweigh impacts on Weston Big Wood SSSI. 6.4 The site is not a sustainable location. 6.5 Loss or deterioration of irreplaceable habitats (S193c)		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								6.6 Development threatens ancient woodland already struggling to regenerate. • No wholly exceptional reasons justify this. 7. The presence of multiple SSSIs and geological conservation 7.1 Black Rock lies adjacent to a cluster of SSSIs forming a critical nature corridor (see map). The area includes: Weston Big Wood, Weston in Gordano, Nightingale Valley, Gordano Valley, Walton Common, Court Hill. Development would fragment this high-value corridor 7.2 The site likely shares geological features with Weston in Gordano SSSI and may warrant protection itself. 8. Ecological expert opinion 8.1 Avon Wildlife Trust's explicit objection o They state no development should occur at or near Weston Big Wood. o Ancient woodland here is among the "most fragile and rare" and irrecoverable once damaged. avon-wildlife-trust-draft-response-to-north-somerset-local-plan-2041.pdf 8.2 Local independent naturalist expert, Chris Sperring MBE disputes the developer's claims and states " Footfall pressure on Weston Big Wood is happening now and is already fragmenting the wood. The Wood will simply be unable to function without the current buffer of surrounding fields. Where will human beings go to feel good if there is nowhere green to go, to immerse themselves in trees and bird song?" The developer proposals will stop the wood functioning and accelerate the loss of species in the wider Gordano Valley strategic green corridor. These losses have been witnessed and recorded by Chris and many others over the past half century 9. Objections regarding Green Belt considerations 9.1 Green Belt removal here is inappropriate o This is one of the most ecologically sensitive locations in North Somerset. o The Green Belt Assessment undervalues its landscape and ecological significance. 10. Deficiencies in the developer's Biodiversity Net Gain report 10.1 BNG claims are misleading and do not reflect actual ecosystem damage o Proposed habitat creation is on existing semi-natural land and does not offset the loss of irreplaceable habitats. o Construction close to the ancient woodland boundary undermines the validity of claimed net gains. o Building 100 homes cannot logically "enhance nature corridors." 11. Objection proposing an alternative use 11.1 Black Rock is more appropriate as a designated BNG site rather than a development site. This would allow ecological restoration of degradation accumulated over the past 50 years. 12. Objection in relation to the site being an Unsustainable Location 10.1 The site is not sustainably located and brings no benefits that outweigh the significant ecological and environmental harms. 10.2 Development pressure here would exacerbate recreational and ecological stress already documented in Weston Big Wood during recent years. A recent report https://www.theguardian.com/environment/2025/jul/10/britain-ancient-woodlands-failing-regenerate-forests-climate-drought-heat-disease-deer-hope-aoe has found that British ancient woodland is struggling to regenerate and is under threat. We should therefore not be allowing any development that threatens the health of Weston Big Wood, which this proposal does, and it "should be refused". There are also not "wholly exceptional reasons" not to refuse development here. Conclusion The Black Rock proposal causes unavoidable and significant ecological, landscape and policy harm. It conflicts with national and local planning policy, fails statutory biodiversity protections, threatens irreplaceable habitats and undermines decades of environmental stewardship across the Gordano Valley. It will reduce the quality of life for human beings living in the area. The Black Rock site should be removed from the Local Plan. NPPF S110 ... Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health...			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								List of Objections 1. Location is isolated and unsustainable o Black Rock lies on the extreme southern edge of Portishead with no shops, services, or employment within comfortable walking distance. o Many residents would be unable to walk or cycle to the town centre due to the long distances involved (e.g., 28–38 minutes to key amenities). 2. Inadequate access to essential facilities o Long walking times to the High Street, supermarkets, leisure centre, and future station indicate the site does not support active travel for daily needs. 3. Poor access to Bristol-bound public transport o Nearby bus stops only serve the X5 route, not the X4 or X10 which are the only buses to Bristol. The nearest Bristol-bound X4 stop is a 27-minute walk away. o Taking two buses would mean two fares, discouraging public transport use and encouraging driving. 4. Limited and unreliable bus service o The X5 timetable is very limited: last weekday buses around 7.35 pm (towards Portishead) and 8.10 pm (from Portishead), worse on Saturdays, and no service at all on Sundays or bank holidays. o This would lead to a significant increase in car journeys, congestion, emissions, and poorer air quality. 5. Developer contributions do not address the real issue o Contributions are required for bus stop upgrades, but no improvements to the bus service itself are proposed. o With Government BSIP funding ending next year and the X5 already subsidised, the future viability of the service is uncertain. 6. Gordano Greenway delivery is uncertain o The cycle link relies on resolving complex land ownership and funding issues, making deliverability doubtful. o The developer's proposed 50 m cycleway would feed directly onto a busy, unsafe road. o A further 2+ miles of high-quality cycle infrastructure would be needed for a safe connection to Clevedon. 7. Cycle/footway link to the new station is unrealistic o A direct link to the new rail station is not achievable due to the station's location on the opposite side of town and existing built-up areas. 8. Far better sites exist elsewhere in Portishead o More sustainable and better-connected locations (e.g., Old Mill Road / Wyndham Way) are available and much closer to existing and new public transport links. 9. Lack of a Transport Sustainability and Access Strategy o There is no evidence of an assessment of the development's likely impact on local or town-wide traffic. 10. Rail reopening offers no meaningful benefit for this site o The new station is nearly two miles away (38-minute walk), so residents would have to drive or pay for two separate bus and train fares, undermining any sustainable transport benefits. 11. The site does not meet NPPF sustainability requirements o Despite lying within the Portishead boundary, Black Rock cannot be considered a sustainable development location. o It does not support limiting the need to travel nor provide a genuine choice of transport modes, contrary to NPPF S110. NPPF S115 In assessing sites that may be allocated for development in plans, or specific applications for development, it should be ensured that: a) sustainable transport modes are prioritised…; b) … and any significant impacts from the development on the transport network (in terms of capacity and congestion), or on highway safety, can be cost effectively mitigated to an acceptable degree through a vision-led approach. List of Objections 1. NPPF S110 concerns still apply o The development fails to meet the sustainability and transport criteria already identified under NPPF S110, and these issues remain unresolved. 2. Railway reopening cannot justify further development o The reopening of the Portishead rail line has been repeatedly used for decades to justify thousands of new homes (Vale, Village Quarter, Marina developments), despite the station still not being operational. o Using it again as a justification is not credible or sustainable. 3. Black Rock residents would not have practical access to the station o The distance makes walking or cycling to the station impractical for many residents, undermining the claim that rail access supports sustainable transport for this site.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								4. Cumulative housing numbers will overload local road infrastructure o The Local Plan proposes 100 dwellings at Black Rock, plus 1274 in Portishead and 1100 in Pill, creating a large cumulative traffic impact. o This would place significant additional strain on M5 Junction 19, which is already congested and hazardous at peak times. 5. No planned mitigation for M5 Junction 19 o Despite acknowledging the scale of planned development, no mitigation measures are proposed to address worsening congestion or safety risks at Junction 19. 6. Fails to meet NPPF S115 requirements o Sustainable transport modes are not prioritised. o Safe and suitable access for all users cannot be achieved. o Significant impacts on the transport network cannot be mitigated cost-effectively. o Therefore, the proposal is contrary to NPPF S115.			
62683009	Julie Moon							I ask you to please remove Tower Farm and Black Rock, Portishead from the Local Plan for the following reasons: These areas are vital to supporting the ecologically important West Big Wood. They form a wildlife corridor and habitat. Deer, buzzards, many birds of prey and a huge range of song birds use the land for habitat, access and food. Both these areas were added to the Green Belt in the 1980s because of their high ecological value. National planning policy allows Green Belt changes only in exceptional circumstances and there are none in this case. Portishead traffic is very congested and the roads in and out of town and within the town are not coping at present. 500 more houses with an extra 1,000 or more cars will not be feasible or safe. The Clevedon Road B3124 which would be most impacted by building on Black Rock and Tower Farm is already constantly busy. There is often flooding near Gordano school which creates traffic queues and any M5 congestion creates severe traffic problems on this road. More traffic will add to this. The transport impacts would fail national soundness tests. Other brownfield sites with far lower impact are available within Portishead and across North Somerset. There is room within existing developments to increase housing density negating the need for developing Tower Farm and Black Rock. Portishead facilities e.g. schools, GP surgeries, sports facilities, parking in town will not cope with potentially 2,000 or more new residents. This green space is very important to the mental and physical health of current residents. These precious areas are essential to wildlife and the people of Portishead. Please protect them.			
62658433	Sheila Morris			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Not Justified – Unsuitable location requiring off-site ecological mitigation The location lies immediately beside Weston Big Wood — an ancient woodland and Site of Nature Conservation Interest (SNCI) managed by Woodland Trust and supported by Avon Wildlife Trust. The woodland forms part of the Gordano Valley ecological network and a nationally important habitat mosaic of open grassland, wetland and woodland. It was added to the Green Belt in the late 1980s precisely because of its high ecological value. The allocation of approximately 100 dwellings at Black Rock is not justified because the Council itself acknowledges that key environmental and ecological requirements cannot be met on-site, and must instead be located off-site on a separate plot on the other side of the Nursery. This approach directly conflicts with NPPF paragraph 180(a), which requires avoidance of impact before remediation or off-site compensation is considered. The need for offset land demonstrates the inherent unsuitability of the site for development. There is no published evidence of less sensitive alternative sites being considered and discounted. For example, the density of housing proposed at the brownfield site at Wyndam Way could be increased to allow a further 100 dwellings there without any adverse ecological impact. This location is a valued local green space which adds to community wellbeing and is already accessible via existing public footpaths. Not Consistent with National Policy – Failure to protect and enhance biodiversity The approach of relying on off-site mitigation and a “suitable ecological buffer” illustrates a reactive rather than preventative approach to biodiversity protection. NPPF paragraphs 180–182 require Local Plans to conserve habitats, prevent deterioration of irreplaceable habitat, and deliver net gains for biodiversity. The allocation fails this by offloading its ecological burden onto land nearby, without, as yet, securing long-term management or legal protection for compensatory habitats. It also conflicts with the Avon Wildlife Trust’s 2030 Strategy, which emphasises restoration of 30 per cent of land for nature and enhancing landscape connectivity in the Gordano Valley. Not Positively Prepared – Unsustainable pattern of growth The site lies on the western approach to Portishead along Clevedon Road,	No modification would make this allocation at Black Rock acceptable and sustainable. The need for off-site mitigation and multiple infrastructure dependencies shows the site is environmentally and logistically unsuitable for housing. The allocation should be removed entirely from Schedule 1. Instead, the land should remain open countryside, contributing to biodiversity and landscape value, in line with the Avon Wildlife Trust’s 2030 Strategy, Woodland Trust guidance and national biodiversity objectives. However, should the application be granted, the Biodiversity Net Gain Units required to be created by Bloor Homes need to be legally registered with the Government to ensure at least 30 years maintenance. The frequency of bus services should be increased. There is no need to relocate the bus stop and no benefit from doing so. The suggested crossing should be positioned on a straight section of the B3124 opposite the Nursery for safety.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								where public transport is limited and local services are minimal. It is more than a 30-minute walk to the proposed railway station. Residents would be heavily reliant on private vehicles to access schools, healthcare and employment. The fact that footways and new bus stop contributions are required underlines existing infrastructure inadequacy. This car-dependent pattern of development conflicts with the sustainable transport objectives of NPPF paragraphs 104–106. As an existing resident I can tell the Council that Bloor Homes offer to relocate the bus stop at Black Rock Villas is not welcomed. It is highly convenient where it is and there is a bus stop not far away at Hollis Avenue, which could also serve any new residents. What is needed, to improve the bus service and reduce car use, is more frequent buses which there is no funding for. The proposed crossing of the B3124 at Black Rock Villas is highly unsuitable as it is on a bend. Any crossing would be better placed at the end of the pavement on the south side of the road, where the road is straight and visibility much better. Also, the site of the proposed crossing would not connect directly to the Gordano Round as incorrectly illustrated on the map, because the entrance to the Gordano Round has been relocated to the main entrance to How Ham Farm. The Council must be aware that planning permission has recently been granted for a second (agricultural) entrance to How Ham Farm (25/P/0495/FUL), which is opposite to the Nursery. There are already multiple entrances onto this short stretch of road and road safety is an issue to consider before adding yet another one. Not Effective – Unclear delivery and infrastructure dependencies The site depends on multiple off-site and third-party mitigations including ecological offset on the other side of the Nursery, new footway construction, bus service contributions, and delivery of a section of the Gordano Greenway. No clear funding mechanism, responsible delivery body, or phasing plan is identified in the Plan. Consequently, the allocation lacks deliverability and fails the effectiveness test under NPPF paragraph 35(c). Landscape & Setting The site lies within open countryside forming part of the rural setting of Portishead and the Gordano Valley. The expansion westwards into this part of the countryside would diminish the settlement edge, reduce landscape openness, and risk urbanising what should remain a transitional zone between town and countryside. Bloor Homes suggest that the development is not in a location that is highly visible to many people. I disagree with this statement. It is highly visible to anyone passing on the B3124 and from the footpaths on the Gordano Round up to Clapton Manor. Hence it would not enhance the landscape. Agriculture & Soils The farmland in question is likely to be of best and most versatile quality (Grade 2/3a) and its loss for housing is not justified when less sensitive land could be used. The Plan does not robustly demonstrate why this agricultural land must be released. Hydrology & Ecology Development on this edge farmland may affect surface-water drainage, soil compaction and wildlife connectivity into the adjoining woodlands and wetland systems associated with the Gordano Valley. The cumulative effect of development pressure in the area further stresses the ecological network. I do not support the North Somerset Local Plan 2041 for the Black Rock location.			
62716257	Sylvia Morris							Having attended the recent Portishead Town Councils meeting which outlined the proposed development scheme near Weston Bigwood. I was completely shocked that this plan could possibly be considered. This area is of crucial importance and is an ancient Iron Age site. The rare plants are of the utmost significance and the wild life too. The Red Kites and Peregrines are very rare and need protecting. Weston Bigwood is a necessary habitat to maintain this balance. Green Belt Land should never be considered for development and in particular Weston Bigwood. There are Brown Field sites around Wyndham Way that are appropriate- this to me would meet the government's quota. Other issues are the access roads. This area has issues already and is very difficult to drive through, due to the school traffic!!! Parking is absolutely impossible at time. Buses have difficulty in driving through the heavy traffic. It's totally illogical to even consider this plan. Having lived in Portishead for over 45 years I'm devastated about this proposal. Please consider the future of this important site for future generations.			
62765889	Frances Morris			No	Consistent with national policy	No	No	It is not compliant with the governments Environmental Improvement Plan (EIP) 2025 Published 1 December 2025. It does not help the local community, and will obviously cause huge traffic issues. Having this increase with also obviously put a strain on all local doctors			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								surgeries, dentists, pharmacies, and schools to mention the primary ones. Environmental issues such as endangering the wildlife there foxes, hedgehogs, small mammals, badgers, many many types of birds inc red kites. Drainage issues will inevitably become an issue - I'm unsure of you're aware of this, but trees and grasslands tend to absorb moisture and heaving rain much better than concrete. Just don't do it, it goes against public opinion.			
58586721	T Nguyen			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	North Somerset Council (NSC) has not adequately considered the following matters in bringing forward these allocations: Reasonable alternatives: There appears to be insufficient assessment of alternative brownfield and/or less sensitive greenfield sites with materially lower ecological impacts, both within Portishead and across North Somerset. Optimising brownfield capacity: The opportunity to increase housing density on the proposed brownfield sites does not appear to have been fully explored. A robust "brownfield-first and optimise" approach could remove the need to allocate Tower Farm and Black Rock. Strategic ecological function: The strategic role of these sites in safeguarding the wider ecological network — including the protection of Weston Big Wood (SSSI) and the Gordano Valley green corridor — has not been properly evidenced or weighed in the site selection process. Green Belt purpose and history: Both areas were added to the Green Belt in the late 1980s, reflecting their high ecological value and contribution to the Green Belt's purposes. This context appears underplayed in the justification for release. Policy tests for Green Belt change: National policy permits Green Belt alterations only in exceptional circumstances. On the evidence presented, such circumstances have not been clearly demonstrated through a proportionate assessment of need, alternatives, and harm. In addition: Access constraints: Neither site appears capable of providing safe, suitable, and deliverable access without unacceptable impacts. Transport impacts and plan soundness: The likely cumulative transport effects are significant and, as presented, would be difficult to reconcile with national policy and the plan soundness tests. Without a clearer mitigation strategy and evidence base, these allocations risk being unsound on transport and deliverability grounds. Taken together, the above points suggest that the case for allocating Tower Farm and Black Rock has not been robustly made, particularly given the sensitivity of these Green Belt and ecologically strategic locations.			
62718689	GR Norman			No	• Justified • Consistent with national policy	No	No	Portishead is a small village that has expanded as the number of residents has increased, but the infrastructure (roads, schools, dr surgeries, NHS dentists) has not been delivered. Any accident on the M5 or A369 means there instant traffic chaos and gridlock, with the B-roads unable to cope with the volume of traffic that is much greater than when the B-roads were built to cope with. This proposal for new homes will remove key scientific and ecological landscape, dramatically affecting wildlife that depends on the site. Nature is under threat in North Somerset and this proposal threatens the future of critically important sites for nature, including Weston Big Wood SSSI. This development threatens existing ecological networks, including the loss of Green Belt, by damaging the critical connections between international, national and locally designated sites, and through significant loss of the corridors and stepping stones that connect these sites. Key Reasons to oppose: Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm and Black Rock. • The strategic ecological importance of these sites in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. • The fact that both areas were added to the Green Belt in the late 1980s due to their high ecological value. • National planning policy allows Green Belt changes only in exceptional circumstances — and these have not been demonstrated. In addition: • Neither site can provide safe or suitable access. • Development would create unacceptable transport impacts, failing national soundness tests. For these reasons, Tower Farm and Black Rock should be removed from the Local Plan. I do not support this proposal	Opportunities to increase housing density on proposed brownfield sites, which would remove the need to develop Tower Farm and Black Rock. Build a new town in North Somerset that has infrastructure build in from the start as opposed to adding on to places		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 58602721	S Oram			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	No	No	It is not Justified The allocation of approximately 100 dwellings at Black Rock is not justified because the Council itself acknowledges that key environmental and ecological requirements cannot be met on-site, and must instead be located “off-site on land to the south-west”. This approach directly conflicts with NPPF paragraph 180(a), which requires avoidance of impact before remediation or off-site compensation is considered. The need for offset land demonstrates the inherent unsuitability of the site for development. There is no published evidence of less sensitive alternative sites being considered and discounted It is not Consistent with National Policy The approach of relying on off-site mitigation and a “suitable ecological buffer” illustrates a reactive rather than preventative approach to biodiversity protection. NPPF paragraphs 180–182 require Local Plans to conserve habitats, prevent deterioration of irreplaceable habitat, and deliver net gains for biodiversity. The allocation fails this by offloading its ecological burden onto unspecified land, without securing long-term management or legal protection for compensatory habitats. It also conflicts with the Avon Wildlife Trust’s 2030 Strategy, which emphasises restoration of 30 per cent of land for nature and enhancing landscape connectivity in the Gordano Valley. It is not positively prepared The site lies on the western approach to Portishead along Clevedon Road, where public transport is limited and local services are minimal. Residents would be heavily reliant on private vehicles to access schools, health care and employment. The fact that footways and new bus stop contributions are required underlines existing infrastructure inadequacy. This car-dependent pattern of development conflicts with the sustainable transport objectives of NPPF paragraphs 104–106. As a local resident I am particularly concerned about the increase in private vehicle usage and pollution. It is already extremely difficult to exit junctions e.g. Clifton Street, George Street, Hollis Avenue during commuting hours and additional housing adjacent would worsen this. Not Effective The site depends on multiple off-site and third-party mitigations including ecological offset land, new footway construction, bus service contributions and delivery of a section of the Gordano Greenway. No clear funding mechanism, responsible delivery body, or phasing plan is identified in the Plan. Consequently, the allocation lacks deliverability and fails the effectiveness test under NPPF paragraph 35(c). The site lies within open countryside forming part of the rural setting of Portishead and the Gordano Valley. The expansion westwards into this part of the countryside would diminish the settlement edge, reduce landscape openness, and risk urbanising what should remain a transitional zone between town and countryside. The loss of this farmland for housing is not justified when less sensitive land could be used. The Plan does not robustly demonstrate why this agricultural land must be released. Development on this edge farmland may affect surface-water drainage, soil compaction and wildlife connectivity into the adjoining woodlands and wetland systems associated with the Gordano Valley. The cumulative effect of development pressure in the area further stresses the ecological network. With heavy rainfall, there is already flooding in Clifton Street opposite the proposed development. Any development is likely to exacerbate this. Combined with the Tower Farm allocation and other nearby proposals, the Black Rock site would add to cumulative ecological, transport and infrastructure burdens around Portishead I do not support the the North Somerset Local Plan 2041 for the Black Rock location.	No modification would make this allocation acceptable. The need for off-site mitigation and multiple infrastructure dependencies shows the site is environmentally and logistically unsuitable for housing. The allocation should be removed entirely from Schedule 1. Instead, the land should remain open countryside, contributing to biodiversity and landscape value, in line with the Avon Wildlife Trust’s 2030 Strategy, Woodland Trust guidance and national biodiversity objectives.		
58628705	James Oram			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	No	No	I am concerned about the proposed developments on Black Rock. Both sites form an essential part of the Gordano Valley green corridor, which includes Weston Big Wood. They were added to the green belt because of their ecological value, containing ancient woodland and a wide variety of plant and animal species. I can see no exceptional circumstances that would justify reversing this designation. As a resident of North Weston, one of the proposed sites would be directly across from my home. It is already extremely difficult to exit Clifton Street during commuting hours, and additional housing opposite would worsen this, with the increased number of cars creating a bottleneck on Clevedon Road. In my opinion, this access would be unsafe, and I believe the resulting traffic could fail national sound-level tests. There are far more suitable locations across North Somerset to meet the need for new housing. One such area is the ‘Old Mill’ site near Sainsbury’s. Its central position and future access to the new train line make it ideal for development, particularly for flats aimed at first-time buyers. In addition, many other brownfield sites are available across the region.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								I feel that the interest in these sites is driven more by financial potential than by their suitability for housing. No modification would make this allocation acceptable. The need for off-site mitigation and multiple infrastructure dependencies shows the site is environmentally and logistically unsuitable for housing. The allocation should be removed entirely from Schedule 1. Instead, the land should remain open countryside, contributing to biodiversity and landscape value, in line with the Avon Wildlife Trust's 2030 Strategy, Woodland Trust guidance and national biodiversity objectives. I do not support the the North Somerset Local Plan 2041 for the Black Rock location.			
30660673	Kelly Packham			No	' Justified	Unsure	No	The plans to build on Tower Farm and Black Rock should not be considered whilst brownfield sites remain undeveloped. The infrastructure of Portishead will not cope with the intended number of extra vehicles. The NHS services are already pushed to their limit of providing safe healthcare.	Brownfield sites used first. Consider the Castlewood site in Clevedon as an alternative to Portishead since there has been very little expansion in Clevedon.		
58342593	Agnieszka Parry			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	No	No	This development would have a severely negative impact on an area of ancient woodland and an SNCI because of the loss of an appropriate sized ecological buffer, as well as degradation of the woodland because of an increase footfall. There is no-site biodiversity mitigation, which contradicts NPPF paragraphs 180-182 and is against Avon Wildlife Trust's 2030 strategy. This will be a car dependent development because of a lack of public transport, which conflicts with the sustainable transport objectives of NPFF paragraphs 104-106. The loss of agricultural land is not justified. There are no modifications that would make this part of the plan compliant. I do not support the plan for the Black Rock location.			
62814273	J Partridge			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	No	No	Not Positively Prepared The site lies on the western approach to Portishead along the Clevedon Road, where public transport is limited and local services are minimal. Residents would be heavily reliant on private vehicles to access schools, health care and employment. The fact that footways and new bus stop contributions are required underlines existing infrastructure inadequacy. This car dependent pattern of development conflicts with the sustainable transport objectives of NPPF paragraphs 104-106. Not Justified - Unsuitable location requiring off site ecological mitigation The allocation of approximately 100 dwellings sat Black Rock is not justified because the Council itself acknowledged that key environmental and ecological requirements cannot be met on site, and must instead be located off site on land to the south west. This approach directly conflicts with NPPF paragraph 180a, which requires avoidance of impact before remediation or off site compensation is considered. The need for offset land demonstrates the inherent unsuitability of the site for development. There is no published evidence of less sensitive alternative sites being considered and discounted. Not Effective -Unclear delivery and infrastructure dependencies The site depends on multiple off site and third party mitigations, including ecological offset land, new footway construction, bus service contributions and delivery of a section of the Gordano Greenway. No clear funding mechanism, responsible delivery body, or phasing plan is identified in the Plan. Consequently the allocation lacks deliverability and fails the effectiveness test under NPPF paragraph 35c. Not Consistent with National Policy-failure to protect and enhance biodiversity. The approach of relying on off site mitigation and a suitable ecological buffer illustrates a reactive rather than preventative approach to biodiversity protection. NPPF paragraphs 180-182 require Local Plans to conserve habitats, prevent deterioration of irreplaceable habitats and deliver net gains for biodiversity. The allocation fails this by offloading its ecological burden onto unspecified land, without securing long term management or legal protection for compensatory habitats. it also conflicts with the Avon Wildlife Trusts 2030 Strategy, which emphasises restoration of 30% of land for nature and enhancing connectivity in the Gordano Valley. Landscape & Setting The site lies within open countryside forming part of the rural setting of Portishead and the Gordano Valley. The expansion westwards into this part of the countryside would diminish the settlement edge, reduce landscape openness, and risk urbanising what should remain a transitional zone between town and countryside. Agriculture and Soils

Not Positively Prepared Unsustainable pattern of growth The site lies on the western approach to Portishead along Clevedon Road, where public transport is limited and local services are minimal. Residents would be heavily reliant on private vehicles to access schools, health care and employment. The fact4 – Not Effective – Unclear delivery and infrastructure dependencies The site depends on multiple off-site and third-party mitigations including ecological offset land, new footway construction, bus service contributions and delivery of a section of the Gordano Greenway. No clear funding mechanism, responsible delivery body, or phasing plan is identified in the Plan. Consequently, the allocation lacks deliverability and fails the effectiveness test under NPPF paragraph 35(c that footways and new bus stop contributions are required underlines existing infrastructure inadequacy. This car-dependent pattern of development conflicts with the sustainable transport objectives of NPPF paragraphs 104–106. Landscape & Setting The site lies within open countryside forming part of the rural setting of Portishead and the Gordano Valley. The expansion westwards into this part of the countryside would diminish the settlement edge, reduce landscape openness, and risk urbanising what should remain a transitional zone between town and countryside. Agriculture & Soils The farmland in question is likely to be of best and most versatile quality (Grade 2/3a) and its loss for housing is not justified when less sensitive land could be used. The Plan does not robustly demonstrate why this agricultural land must be released. Hydrology & Ecology Development on this edge farmland may affect surface-water drainage, soil compaction and wildlife connectivity into the adjoining woodlands and wetland systems associated with the Gordano Valley. The cumulative effect of			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								development pressure in the area further stresses the ecological network. Cumulative Impact Combined with the Tower Farm allocation and other nearby proposals, the Black Rock site would add to cumulative ecological, transport and infrastructure burdens around Portishead – contrary to the Council's stated nature-recovery and sustainable growth objectives. No modification would make this allocation acceptable. The need for off-site mitigation and multiple infrastructure dependencies shows the site is environmentally and logistically unsuitable for housing. The allocation should be removed entirely from Schedule 1. Instead, the land should remain open countryside, contributing to biodiversity and landscape value, in line with the Avon Wildlife Trust's 2030 Strategy, Woodland Trust guidance and national biodiversity objectives I do not support the the North Somerset Local Plan 2041 for the Black Rock location			
62863105	Robert Potton				' Positively prepared ' Justified ' Effective	No	Unsure	NSC has not properly considered: Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm and Black Rock The strategic ecological importance of these sites in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. The fact that both areas were added to the Green Belt in the late 1980s due to their high ecological value National planning policy allows Green Belt changes only in exceptional circumstances – and these have not been demonstrated. In addition: Neither site can provide safe or suitable access Development would create unacceptable transport impacts, failing national soundness tests.			
62854817	Quin-Jones			No	' Justified	No	No	NSC has not properly considered: Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset.Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm and Black Rock.The strategic ecological importance of these sites in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor.The fact that both areas were added to the Green Belt in the late 1980s due to their high ecological value.National planning policy allows Green Belt changes only in exceptional circumstances — and these have not been demonstrated. In addition: Neither site can provide safe or suitable access.Development would create unacceptable transport impacts, failing national soundness tests. For these reasons, Tower Farm and Black Rock should be removed from the Local Plan.			
58522177	Michael Rees			No	' Positively prepared ' Justified ' Consistent with national policy	Unsure		In Choices For the Future Nov 20 NSC commits to retain the Green Belt; and Weston Big Wood (SSI) and the Gordano Valley green corridor were added to the Green Belt in the 1980's. No exceptional reasons in accordance with actional government requirements has demonstrated that these areas should be classed otherwise. Indeed in recent years various strategies and reports have merely reaffirmed the environmental importance of these areas to wildlife, trees and fauna in their own right and as part of larger connected geographical areas.	Remove the proposed Tower Farm and Black Rock housing developments; and focus on other site such as the Wyndham Way, Portishead and Castlewood, Clevedon locations. Indeed in responses to the feedback from last response 300 units have been added to the former site.		
30659873	Penelope Riley			No	' Positively prepared ' Justified ' Effective	No	No	Legal compliance and Duty to Cooperate As explained in response to policies SP7 and SP8 Portishead Town Council (PTC) consider that the draft local plan has not been informed by full and effective cross border discussions regarding housing need and the sustainable location of new development. PTC has reviewed the duty to cooperate statement and considers that the relationship with Bristol and Bath to be unclear in terms of meeting housing needs. The statement explains that the plan area is strongly influenced by the adjacent larger urban areas and whilst it states that each authority agreed to meet their own housing need within their own boundaries, it is unclear how each strategy and approach to housing interacts. Soundness To be considered 'sound' the North Somerset Local Plan (NSLP) must be positively prepared, justified, effective and consistent with national policy. PTC consider that policy LP5 is not sound for the following reasons:			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Positively prepared To meet this requirement, the NSLP should be prepared based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, consistent with achieving sustainable development. This assessment should also be informed by agreements with other authorities, so that unmet needs from neighbouring areas are accommodated where it is practical to do so and consistent with achieving sustainable development. Page 32 of the draft NSLP explains that the minimum number of new dwellings that the council is required to plan for over the plan period is 23,700, however the plan proposes 24,495. This is in excess of the level identified by the Government. PTC acknowledges that there is a requirement for significant levels of housing to be planned for. However, the strategy must be consistent with achieving sustainable development. It is considered that the proposed approach, to distribute 7% of the housing supply within Portishead would not deliver sustainable development. Justified To meet this requirement, the NSLP should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate, robust and credible evidence. Given the above, Portishead Town Council contends that two specific sites in Portishead “Tower Farm” and “Black Rock, north of Clevedon Road” do not conform to an approach that is the most appropriate strategy. PTC consider that these sites are not justified as the most appropriate locations for housing development. The key concerns relate to the environmental impact of the site on the adjacent Weston Big Wood Site of Special Scientific Interest and Gordano Valley Strategic Green Corridor, landscape impacts, sustainability of the site, access, and highway safety There are other sites available in Portishead such as Wyndham Way (brown field) and HE20488 Land South of Clevedon Road which are within Portishead that have much better access to the full set of retail and community services in and around Portishead High Street, and where development would do far less damage to the environment. These alternative sites are much more sustainable being substantially closer to the new Portishead Railway station and an easy walking distance over flat terrain to bus services . There are at least 23 brownfield sites across North Somerset that could accommodate higher densities and are more sustainable locations with less environmental constraints.			
62758049	Brynley Robbins							With Regard To The Above Subject I am - along with very many others Deeply Concerned with the proposed development of the area of Tower Farm - Portishead Down - Black Rock & Weston Big Wood North Somerset Council Has Not Properly Considered the implications of this ill-conceived project & Avoided or Ignored the opportunity to increase housing density on areas which would have Less Ecological Impact The Unwanted Increase In Traffic in the surrounding area will add even more to the current Heavily Congested Roads we have to deal with on a Daily Basis along with the potential to Further Damage our residents & our children’s Health Also not considered - These areas were added in the 1980’s to the Green Belt because of the High Ecological Value & this should only be altered in the Most Exceptional Circumstances - these not having yet been demonstrated - Neither site can provide safe or suitable access - these woodlands are Our Planets Lungs - don’t deprive us of that The damage to the The Biodiversity Of Our Wildlife is likely to be No Less Than Catastrophic There is a current wide spread desire for more community facilities & amenities which would be further stretched by the impact of this project & it would also impact heavily on the already thin infrastructure with its lack of Healthcare - Schools - Retail Outlets & The Other Associated Facilities we lack - a Strange & Somewhat Unfathomable Use of the Recreational Space at Merlin Park only beggars belief - Why suggest The Addition of Pointless Allotments & Extra Football Pitches ? When there are just Absolutely No Facilities for Parking - Toilets or Changing Rooms for that potential number of up to One Hundred people & cars in an already crowded Small & Narrow Circular Road - What about the other folk who regularly use this space - children happily playing - the dog walkers - the exercise enthusiasts - Are their access rights taken away ? This has not been thought through very carefully at all It is also considered a Major Concern & The Potential For Flood Risk to the Lower Portishead & Gordano Valley Areas by Promoting or Undertaking even more Heavy Construction Work in the Tower Farm - Portishead Down - Black Rock & Big Wood Areas along with the inevitable Climate Change & Those Altered Weather Patterns that we will have no protection against This Proposed Development Is A Time Bomb Waiting To Be Released Upon An Unsuspecting Audience - It Must Be Reconsidered

62771169	Pamela Robbins							With Regards To The Above Subject I am - along with very many others Extremely Concerned with the proposed development of this area of Tower Farm Portishead Down - Black Rock & Weston Big Wood North Somerset Council is not Properly Considering the implications of this ill-conceived project & have Avoided or Ignored the opportunity to increase housing density on areas which would have less ecological impact. The Unwanted Increase In Traffic in the surrounding area will add even more to the current Heavily Congested Roads we have to deal with on a Daily Basis along with the potential to Further Damage our residents & our children's Health Also not considered - These areas were added in the 1980's to the Green Belt because of the High Ecological Value & this should only be altered in the Most Exceptional Circumstances - these not having yet been demonstrated - Neither site can provide safe or suitable access - these woodlands are Our Planets Lungs - don't deprive us of that The damage to the The Biodiversity Of Our Wildlife is likely to be No Less Than Catastrophic There is a current wide spread desire for more community facilities & amenities which would be further stretched by the impact of this project & it would also impact heavily on the already thin infrastructure with its lack of healthcare - schools - retail outlets & the other associated facilities we lack - a Strange & Somewhat Unfathomable Use of the Recreational Space at Merlin Park only beggars belief - Why suggest The Addition of Pointless Allotments & Extra Football Pitches ? When there are just Absolutely No Facilities for Parking - Toilets or Changing Rooms for that potential number of up to One Hundred people & cars in an already crowded Small & Narrow Circular Road - What about the other folk who regularly use this space - what about the dog walkers - what about those who use the area for exercise. With the increase in traffic taking up parking spaces making the estate more congested than it already is my fear is how would any emergency vehicals gain access. This has not been thought through very carefully at all It is also considered a Major Concern & The Potential For Flood Risk to the Lower Portishead & Gordano Valley to Promote or Undertake even more Heavy Construction Work in the Portishead Down - Black Rock & Big Wood Areas along with the inevitable Climate Change & Those Altered Weather Patterns that we will have no protection against This Proposed Development Is A Time Bomb Waiting To Be Released Upon An Unsuspecting Audience - It Must Be Reconsidered			
62684673	Amanda Roberts							I have lived in Portishead (near Highdown Schools) for nearly 9 years. I would like to add my support to the concerns about the development of Tower Farm and Black Rock in Portishead. I understand that these 2 areas are part of the proposed NSC draft local plan. I would like these 2 areas removed from the plan because I feel that: we need to preserve the wildlife in the Weston Big Wood extended area and the beautiful Gordano Valley the local infrastructure cannot support additional building of homes in this green belt area. Portishead is big enough. There has been extensive building over the past 30 years.			
62819713	Pauline Robertson			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	NSC has not properly considered: Alternative brown and green field sites with much less ecological impact both in Portishead and across North Somerset. The opportunity to increase housing density on proposed brown field sites across North Somerset which would mean Black Rock is not needed to meet NSC housing targets. The need to protect Weston Big Wood (SSSI) and the Gordano Valley strategic green corridor. We have lived here all our lives. When the Council houses were built in the 1970's the field behind us going up to Weston Big Wood were left alone to protect nature. We have lived alongside nature in harmony since then. Please don't ruin the woods so that for people , animals and all the wonderful plant life can still live together. The fact that these sites were specifically added to the Green Belt in the late 1980's because of their high ecological value. For the above reasons, the Local Plan is unsound because National Planning Policy states that sites can only be removed from Green Belt for development under exceptional circumstances and these exceptional circumstances are definitely not proven.	No modifications short of removing the allocation completely is appropriate for this site. The land should be retained as undeveloped green space and potentially used for biodiversity net gain purposes. North Somerset Council should instead increase housing density on already known and new brown field sites in Portishead and North Somerset and look to develop on other green field sites in Portishead and the rest of the district which will have much less ecological impact.		
62865889	Lee Robertson			No	• Justified • Effective	No	No	Destroying greenbelt and wildlife losing their habitats when it's a SSSI. Portishead does not have the infrastructure, the roads and the facilities and immunities to cover this level of new housing.			
62559521	Ian Roebuck			No	• Justified	Unsure	Unsure	According to Portishead Town Council, there are brown field sites elsewhere in the town with sufficient capacity to make this green belt development unnecessary.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								There would be no space for a suitable ecological buffer to Weston Big Wood to the north of the site. Avon Wildlife Trust should be consulted over this.			
62677057	Stephen Rogers			No	• Positively prepared • Justified • Effective	No	No	LP7 Blackrock and Tower Farm Portishead. I don't believe that this land falls in to the category of exceptional circumstances for building. Weston Big Wood is adjacent to these sites, it is an ancient woodland and should be protected, the councils vision states "Valued areas will be protected" this development will have an adverse effect on the woodland and the habitat which does not comply with the stated vision. The council aims to reduce pollution and noise. Building more houses on green belt land in an already congested area without any regard to the current road infrastructure is hardly going to achieve this aim. By building on these sites it will deprive this generation and all future generations of the right to walk freely in open countryside on the legally protected footpaths traversing this land, obstructing them is illegal. There are several brown field sites in Portishead, Clevedon and other areas in North Somerset that should be built on before development on any green field sites are contemplated. Builders are delaying building on land which they have already obtained planning permission for, all existing sites should be developed fully before any new sites are considered and started.			
58634753	Kerry Ross		None	No	• Justified • Effective • Consistent with national policy	No	Unsure	In the same way that the propose Tower Farm development with impact the fragile ecosystem of Weston Big Wood, Black Rock bring development close to the boundary of the Wood and impact the 'green corridor' which makes up the Gordano Valley. Its only redeeming feature seems to be that is it not on a flood plain, but this just looks like and gradual encroachment around Weston Big Wood into the Valley. The proposal by Bloor Homes does not take into the account the proposal for development at Tower Farm (and similarly, the Tower Farm development is considered 'standalone' with no consideration for the impact of the proposed development at BlackRock). Both these developments 'squeeze' the SSSI of Weston Big Wood which is already acknowledged to be 'fragile' town - being relatively close to the local secondary School is the only point in its favour. Also, as with the development at Tower Farm, the development is at the fringes of the As detailed by Portishead Town Council, this proposed change to the Green Belt seems to contravene In summary the proposal seems to contravene S110, S115, S147, S156, S187, S192 & S193 sections of the NPPF	Identify brownfield sites that have yet to be developed (e.g. Wyndham Way), and sites closer to the town centre and public transport.		
62656577	J Roxby			No		Unsure	Unsure	The plan identifies an area Black Rock as suitable for housing because it is adjacent to the town of Portishead and its amenities. However it fails to take into account the effect of rainfall on the site which is currently agricultural . Very little rainfall is needed before the field becomes waterlogged with run off from Black Rock and the Clevedon road is often flooded during 9 months of the year. This would presumably be exacerbated by the hardcore and impervious nature of a housing development .	Withdraw the proposed site.		
62791105	Michele Rundle							As a local resident of Portishead living near the proposed housing developments in Tower Farm and Black Rock, I would like to make the following comments. North Somerset Council needs to explore alternative Brownfield sites for both areas. I.T.V. West did a Feature on this on the 2nd of Dec, and it seems there are many more possibilities in this part of the world that can be utilised. By increasing housing density on Brownfield sites the need to develop Tower Farm and Black Rock would be eliminated. It is my understanding that these areas were added to the green belt in the 1980's due to their high ecological value. If the developments go ahead, the green "buffer" corridors will not be preserved, and there will be environmental damage to a unique habitat. National planning allows Green Belt changes only in exceptional circumstances and these have not been demonstrated. The proposed housing developments will significantly increase traffic in an already congested road system. Public transport, particularly towards North Weston on the Clevedon road is extremely poor. The current network of roads around existing schools i.e. Gordano and High Down will not be able to accommodate the increased volume of traffic or pupils. I envisage much of the area being grid locked, particularly with the added possibility of increased traffic on the Clevedon road if there are any issues with the MS, and cars trying to access the tip. The Clevedon road is also prone to flooding and this will be compounded if the flood plan is built on. Portishead needs a better plan to enhance its current infrastructure before any more housing is built. New schools will need to be addressed, along with doctor's surgeries, dentists and chemists, and a much improved bus service. Lots of areas in Portishead do not have easy access to regular public transport. When these priority issues are resolved, then a meaningful discussion can be had about where appropriate housing should be built. The			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								council needs to meet the needs of the current residents, before adding to the problems. Neither of the proposed sites provides safe or suitable access.For these reasons, in my opinion, Tower Farm and Black Rock should be removed from the local plan.			
62860417	Victoria Sale		none	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Not Justified The allocation of around 100 homes at Black Rock is unjustified, as environmental needs cannot be met on-site and require off-site mitigation. This contradicts NPPF paragraph 180(a), which prioritizes impact avoidance over remediation or compensation. The need for offset land highlights the site's unsuitability, and there is no evidence that less sensitive alternatives have been considered. Not Consistent with National Policy The reliance on off-site mitigation and an unspecified "ecological buffer" indicates a reactive approach to biodiversity, rather than a preventative one. This allocation does not meet NPPF paragraphs 180–182, as it fails to secure habitat conservation, protection, or long-term management. It also conflicts with the Avon Wildlife Trust's 2030 Strategy, which prioritises restoring land for nature and improving landscape connectivity in the Gordano Valley. Not Positively Prepared Unsustainable pattern of growth The site lies on the western approach to Portishead along Clevedon Road, where public transport is limited and local services are minimal. Residents would be heavily reliant on private vehicles to access schools, health care and employment. The fact that footways and new bus stop contributions are required underlines existing infrastructure inadequacy. This car-dependent pattern of development conflicts with the sustainable transport objectives of NPPF paragraphs 104–106. The site is located on Clevedon Road on the western approach to Portishead, with limited public transport and few local services. Residents would rely heavily on cars for schools, healthcare, and jobs, highlighting insufficient infrastructure. This car-dependent growth contradicts NPPF sustainable transport goals in paragraphs 104–106. Not Effective - Unclear delivery and infrastructure dependencies The site relies on various off-site and third-party actions—such as land offsets, new pedestrian paths, bus services, and part of the Gordano Greenway—without a clear funding source, responsible entity, or phasing plan. This undermines deliverability and fails NPPF paragraph 35(c). Landscape & Setting The site is open countryside, serving as a rural buffer for Portishead and the Gordano Valley. Expanding west would erode this transition zone, reduce openness, and lead to urban sprawl. Agriculture & Soils The farmland is likely high-quality (Grade 2/3a), and its conversion to housing isn't justified when less sensitive areas are available. The Plan does not convincingly justify releasing this land. Hydrology & Ecology Development may disrupt drainage, compact soils, and fragment wildlife corridors tied to the Gordano Valley's woodlands and wetlands. Ongoing development threatens the ecological network. Cumulative Impact Alongside other developments like Tower Farm, Black Rock would further strain local ecology, transport, and infrastructure, clashing with the Council's goals for nature recovery and sustainable growth. No modification could be made apart from removing the allocation entirely. The Tower Farm and Black Rock sites are inappropriate for development. The immediate proximity of the ancient woodland means that its inevitable decline caused by any development here would be permanent and cannot be adequately mitigated. The land should be preserved and protected as undeveloped green space, actively managed to support biodiversity and facilitate sustainable public access, consistent with the Avon Wildlife Trust's 2030 Strategy and national "30 by 30" nature recovery goals. I do not support the the North Somerset Local Plan 2041 for the Black Rock location.			
51423809	Denise saunders			Yes	• Positively prepared • Justified • Consistent with national policy	Yes	Yes			iam writing to express my support for the construction of 100 dwelling on the blackrock site i under stand the sensitivity asscociated with development formerley on green belt Now i belive is grey belt land however i belive this project meets the criteria for very special	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 										circumstances and offers tanagble benefits for the new home owners ie near to countryside not high rise flats, not a concrete jungle, affordable homes with gardens the design of the proposed dwelling has been carfully developed to ensure it preserves the green /grey balt charter there is a need for quality housing low inpack homes without placing pressure on the local infrastructure,helping to meet demand while respecting the rural charter of the area	
62846401	Christine Suanders							I am emailing to object to the plan to build more houses on Tower Farm and Black Rock because this is a greenbelt area. Further developments in this area will impact on transport, school, GP surgeries, pharmacies and more. I object to this development and wish to protect the local environment.			
30736993	Kath Scargill									I support housing here, affordable and also to meet the needs of our young people	
62784417	Keith Shepherd			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	These points have not been considered: Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset. Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Black Rock. The strategic ecological importance of this site in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. The fact that this area was added to the Green Belt in the late 1980s due to its high ecological value. National planning policy allows Green Belt changes only in exceptional circumstances — and these have not been demonstrated. This car dependent site would add to cumulative ecological, transport and infrastructure burdens around Portishead. I do not support the the North Somerset Local Plan 2041 for the Black Rock location.			
62855137	Rosemary Shepherd			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The ecological importance of Weston Big Wood as part of the Gordano Valley green corridor is a fact. The negative impact on the wood by increased pollution from light, noise and air cannot be overstated, plus the additional numbers of people who would use the wood as their recreation space would have a deleterious effect. There are alternative suitable sites within Portishead and North Somerset that can be used for housing, thus protecting the integrity of the wood and its SSSI status. Access from the site would be on to Clevedon Road, an already very busy main road. The distance to the nearest primary school would be a 30 minute walk for children, and even further to shops, doctors etc meaning that cars would be the preferred mode of transport. The High Street is already at a standstill at certain times of day and this would not be improved by large numbers of additional cars. The new station, when it opens, will be even further away. Clevedon Road already suffers from flooding due to run off from the fields on that side of the road. Building on that site will surely only make that worse.			
62954785	Stephen Stoklosa							The Family has lived in Portishead for since 1977. I have enjoyed walking across those fields to Gordano School. Please do not develop an area which has been designated as ‘Green Belt’ since I have lived here. The development of the ‘Green Belt Land' will lead to 'upsetting the balance of nature in Weston Big Wood’ and 'overtime its demise’. This is the choice that has to be made. Destroy Nature with Development or Keep It? I believe the planning should be looking at the development of ‘Brown Field Sites’. Portishead has already had a lot of expansion. Dr Liam Fox, MP at the time, has given a previous presentation in Parliament describing exactly, ‘Why the development of this land doesn’t work and I believe His arguments hold true’. This presentation is available on ‘You tube’. This development is not within 'walking distance’ of the ‘Centre of Portishead’. We already have ‘morning traffic’. The Railway was removed in 1964 and is due back. This will enhance the ability of the already expanded Population to be able to live and work in Bristol. I am just ‘one little voice in the wilderness’. I wish to see ‘Brown Field Sites’ developed and ‘current run down housing repaired and restored with technology upgrade for insulation and lower carbon footprint’. Climate is changing and We really shouldn’t be removing nature. 'Nature is Our Future Families Lifeline’. Our current 'World Human Activity', is slowly crawling to ‘Destruction of the Environment’ and at some point, Our Future

								Families will look back and say, 'Why did they do that?'. Some of Us forget, Time is beating us all up, We won't be around to see the 'result of Our Decisions', but Our Children Will. I will sign off whilst Listening to 'Bird Chorus'. Not a Christmas Reading Psalm 65:- God Bess - Psalm 65 - Verse 12 - 'The Grasslands of Wilderness overflow' - verse 13 - The meadows are covered with flocks and the valleys are mantled with grain; they shout for joy and sing.			
20454017	Ian Slatter		Mr	No	• Consistent with national policy	No	Unsure	I believe that in respect of the Black Rock development site proposal North Somerset Council's Plan is in breach of seven sections of the NPPF (S110, S115, S147, S156, S187, S192 & S193), and the site should therefore be removed. Focusing on three of those sections: S187 1. Planning policies and decisions should contribute to and enhance the natural and local environment by: a) protecting and enhancing valued landscapes, sites of biodiversity… S192 2. To protect and enhance biodiversity and geodiversity, plans should: a) Identify, map and safeguard components of local wildlife-rich habitats and wider ecological networks, including the hierarchy of international, national and locally designated sites of importance for biodiversity; wildlife corridors and stepping stones that connect them; and areas identified by national and local partnerships for habitat management, enhancement, restoration or creation S193 "When determining planning applications, local planning authorities should apply the following principles: a) if significant harm to biodiversity resulting from a development cannot be avoided (through locating on an alternative site with less harmful impacts), adequately mitigated, or, as a last resort, compensated for, then planning permission should be refused; b) development on land within or outside a Site of Special Scientific Interest, and which is likely to have an adverse effect on it (either individually or in combination with other developments), should not normally be permitted. The Black Rock site is immediately adjacent to Weston Big Wood SSSI, an incredibly important site for flora and fauna and a crucial part of the wider ecosystem incorporating other SSSIs such as Gordano Valley and Walton Common. The land around it, including the Black Rock site, is vital as a nature corridor, and evidence provided by Avon Wildlife Trust and other environmental experts shows how allowing development close to Weston Big Wood would inevitably cause it significant harm. Development there will have an adverse impact on an SSSI, and therefore should not be permitted. Furthermore, S187 states that "Planning policies and decisions should contribute to and enhance the natural and local environment by… recognising… the wider benefits from natural capital and ecosystem services – including the economic and other benefits of the best and most versatile agricultural land." NSC has listed the Black Rock site as Grade 3 agricultural land, but about 50% of the site (the southern part) is in fact Grade 1, according to the Natural England / DEFRA map. NPPF footnote 65 states "Where significant development of agricultural land is demonstrated to be necessary, areas of poorer quality land should be preferred to those of higher quality." "Best and most versatile agricultural land" is defined as "Land in grades 1, 2 and 3a of the Agricultural Land Classification." Building on this higher quality, grade 1 land should therefore be avoided, as this is not the sort of land that should be redesignated grey belt. Portishead Neighbourhood Plan PEN5 states that "A minimum of 15m and preferably up to 50m buffer should be maintained between any development and the Ancient Woodland of the SSSI Weston Big Wood… in order to avoid adverse impacts on this irreplaceable habitat, unless the applicant can demonstrate very clearly how a smaller buffer would be acceptable." 50 metres should be the very bare minimum required, as environmentalists will confirm that the distance should be greater than this. Therefore, a buffer of at least 50 metres and preferably more should be kept to the north of the site, and the southern part of the site should be protected as grade 1 agricultural land. This would leave, at the most, only a small portion of land in the middle, impossible to access and unsuitable for development. Please also see the attached document - Response to North Somerset Local Plan 2041 - Black Rock.	Remove the Black Rock site from the Plan.		Response to North Somerset Local Plan 2041 - Black Rock.docx
62727745	D Smart			No	• Positively	No	No	Not Justified – Unsuitable location requiring off-site ecological mitigation The allocation of approximately 100 dwellings at Black Rock is not justified	No modification would make this allocation acceptable. The need for off-site mitigation and multiple infrastructure dependencies shows the site is

					' prepared ' Justified ' Effective ' Consistent with national policy			because the Council itself acknowledges that key environmental and ecological requirements cannot be met on-site, and must instead be located “off-site on land to the south-west”. This approach directly conflicts with NPPF paragraph 180(a), which requires avoidance of impact before remediation or off-site compensation is considered. The need for offset land demonstrates the inherent unsuitability of the site for development. There is no published evidence of less sensitive alternative sites being considered and discounted. Not Consistent with National Policy – Failure to protect and enhance biodiversity The approach of relying on off-site mitigation and a “suitable ecological buffer” illustrates a reactive rather than preventative approach to biodiversity protection. NPPF paragraphs 180–182 require Local Plans to conserve habitats, prevent deterioration of irreplaceable habitat, and deliver net gains for biodiversity. The allocation fails this by offloading its ecological burden onto unspecified land, without securing long-term management or legal protection for compensatory habitats. It also conflicts with the Avon Wildlife Trust’s 2030 Strategy, which emphasises restoration of 30 per cent of land for nature and enhancing landscape connectivity in the Gordano Valley. Not Positively Prepared – Unsustainable pattern of growth The site lies on the western approach to Portishead along Clevedon Road, where public transport is limited and local services are minimal. Residents would be heavily reliant on private vehicles to access schools, health care and employment. The fact that footways and new bus stop contributions are required underlines existing infrastructure inadequacy. This car-dependent pattern of development conflicts with the sustainable transport objectives of NPPF paragraphs 104–106. Not Effective – Unclear delivery and infrastructure dependencies The site depends on multiple off-site and third-party mitigations including ecological offset land, new footway construction, bus service contributions and delivery of a section of the Gordano Greenway. No clear funding mechanism, responsible delivery body, or phasing plan is identified in the Plan. Consequently, the allocation lacks deliverability and fails the effectiveness test under NPPF paragraph 35(c). Landscape & Setting The site lies within open countryside forming part of the rural setting of Portishead and the Gordano Valley. The expansion westwards into this part of the countryside would diminish the settlement edge, reduce landscape openness, and risk urbanising what should remain a transitional zone between town and countryside. Agriculture & Soils The farmland in question is likely to be of best and most versatile quality (Grade 2/3a) and its loss for housing is not justified when less sensitive land could be used. The Plan does not robustly demonstrate why this agricultural land must be released. Hydrology & Ecology Development on this edge farmland may affect surface-water drainage, soil compaction and wildlife connectivity into the adjoining woodlands and wetland systems associated with the Gordano Valley. The cumulative effect of development pressure in the area further stresses the ecological network. Cumulative Impact Combined with the Tower Farm allocation and other nearby proposals, the Black Rock site would add to cumulative ecological, transport and infrastructure burdens around Portishead – contrary to the Council’s stated nature-recovery and sustainable growth objectives. I do not support the the North Somerset Local Plan 2041 for the Black Rock location.	environmentally and logistically unsuitable for housing. The allocation should be removed entirely from Schedule 1. Instead, the land should remain open countryside, contributing to biodiversity and landscape value, in line with the Avon Wildlife Trust’s 2030 Strategy, Woodland Trust guidance and national biodiversity objectives.		
39209857	Rebecca Smith			No	' Justified	Unsure	Unsure	While there is a legal requirement to build more houses and North Somerset are required to have an allocation of these, Portishead has seen more than its fair share of development over the last few decades. The infrastructure has not matched the development, with doctor's surgeries being at capacity and roads becoming ever more congested. Therefore I do not feel it justified to build any more houses in Portishead as there simply isn't room. With reference specifically to Black Rock and 100 houses being built there, I strongly object to this. This green space is a vital resource and provides much benefit for mental wellbeing. Removing this would be a huge loss. Additionally, removing any green space will always affect wildlife as it would be removing a natural habitat for many creatures, upsetting the existing balance. The proximity to Weston Big Woods is also a concern. 100 houses means 200 new cars in this space. We are already way too congested with vehicles in Portishead. We do not need more concrete in Portishead, rather we should be preserving our lovely green spaces and protecting them for wildlife and recreation. Therefore I strongly object to this development.

62861761	Sarah Sprason			No	' Justified ' Consistent with national policy	Unsure	No	As I understand it the local plan should support the views of residents and make sure that as far as possible the needs of the environment are also highly regarded. Locally, the inclusion of Tower Hill Farm and Black Rock for future housing does not do either of those things. With regard to housing brownfield and sustainable sites should be explored before allowing building on green spaces, particularly where local towns have been already been swamped with housing and grown exponentially over recent years.			
58520865	Giacomo Squintani			No	' Positively prepared ' Justified	Unsure	Unsure	You state: "By 2041 there will be a transformation in the way we live which reflects a more responsible attitude to climate change and the use of resources. New homes, buildings and communities will be highly sustainable, accessible and attractive places with higher quality standards. There will be more diversity in terms of the form and type of new development to increase variety and choice to better meet the needs of all, create jobs and to tackle inequality. Regeneration will transform and breathe new life into existing towns and valued areas will be protected. People's well-being, a strong sense of community, opportunity and fairness will be at the heart of all development in North Somerset." I am wholeheartedly in agreement. Which is why I strongly urge North Somerset Council to work with the local Portishead Council to identify sites that are better suited to deliver on this vision. In particular, at a time when a railway appears to be on its way, "highly sustainable" must surely mean affordable housing within walking distance of the new railway station? I have read comments about the site near Weston Big Wood being earmarked because it is within "cycling distance" of the new railway station. On medical grounds (epilepsy) I neither drive nor cycle, but have run to Bristol Temple Meads, Bristol Parkway, Bristol International Airport and Bristol Bus and Coach Station - so I have first-hand experience of runcommuting and indeed, from further back, cycle-commuting. It tends to require showering and changing facilities, and most people who might be willing to cycle to work will be put off, understandably, by unclement weather, not least when carrying electronics. These are generic points: specifically to Weston Big Wood, the ease with which the gradient has been dismissed, with the focus placed solely on the distance treating a steep climb the same way one would treat a flat stretch, is naive at best and insulting at worst. I am a father of two teenagers. Teenagers who may ultimately find employment in Bristol and wish to commute there by train. Should they ever leave home, they will not be looking at the type of properties most new developments deliver. Should they wish to either get on the housing ladder or even just rent, they will be looking for flats. Affordable, sustainable housing is what is needed: and that means easy access not just to the train station but also bus routes and shops. It means proximity to the new railway station, for example in the area near Old Mill Road which I believe has not yet received the attention it deserves. On a final point: I live on top of the hill, opposite the Merlin Park field which features a ditch that tends to fill up at times of heavy rain. I have had visitors who have expressed surprise when it has not been full, as they believed "the lake" to be a permanent fixture. Whilst I appreciate draining would be considered, the notion of housing at the bottom of this field, but with significant sections covered in tarmac to enable access and allow for two football pitches, sounds utterly unappealing. I moved to Portishead in 1999 and recall houses near the High Street being hit by mild flooding in my first winter here: indeed, it is one of the reasons that made buying at the top of the hill appealing, not least as I was able to drive back then and a railway station was being mooted. Twenty-six years later, the lack of discussion around the risk of flooding in new areas or compounding the risk in areas which already feature housing is concerning.	I believe it necessary to liaise with the Portishead Town Council to identify more suitable sites, prioritising the Old Mill Road area and spaces closer to the proposed railway station site. Anything beyond a ten-minute walk is going to result in unsatisfactory walking / cycling commuting rates.		
62716801	Bryan Stokes							Tower Farm and Black Rock - proposals I object to both of these sites for the following reasons: They will have a serious detrimental impact on the Weston Big Wood SSSI site. - A significant border around the woodland is essential for the ecology of the woodland species. - These areas are in the Green Belt and were added as late as the 1980s as essential protection. - Removing their Green Belt status is not sufficiently justified. There are other areas of brownfield sites in Portishead that have not been sufficiently investigated to provide housing that would be a more suitable alternative to the above mentioned sites. Access to sites around Weston Big Wood will have a major impact on the existing residents in an already congested area around the vicinity of Highdown school. Undoubtedly the majority of newcomers to these sites would have an occupation needed to fund their ownership, that required them to travel in the direction of Bristol or the M5 Motorway or even to the new railway connection by motor car.			
62907425	Maggie Storey							I am very concerned about the ecological impact that the proposals for the development of Tower Farm and Black Rock would have and believe there are alternative brownfield sites or greenfield sites with lower ecological impact, both in Portishead and across North Somerset. I also believe that there are			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								opportunities to increase the housing density on proposed brownfield sites, which could reduce the need to develop these two sites. Both these areas were added to the Green Belt in the 1980s due to their high ecological importance. The strategic ecological importance of both these sites in relation to Weston Big Wood (designated a SSSI) and the Gordano Valley green corridor needs to be taken into consideration. In addition, there has been no demonstration of the exceptional circumstances for using these Green Belt sites for development. For these reasons, Tower Farm and Black Rock should be removed from the Local Plan and alternative proposals considered as mentioned above.			
62915169	John Storey							Please reconsider the plans for the above development. The ecological impact that the proposals for the development of Tower Farm and Black Rock will be devastating There are alternative brownfield sites already approved for development, or greenfield sites with lower ecological impact The strategic ecological importance of both these sites in relation to Weston Big Wood (designated a SSSI) and the Gordano Valley green corridor do not appear to have been taken into consideration There has been no demonstration of the exceptional circumstances for using these Green Belt sites for development. For these reasons, Tower Farm and Black Rock should be removed from the Local Plan and alternative proposals considered as mentioned above.			
62831617	Stephen Tanner		Retired	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	NSC has not properly considered: Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset. Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Black Rock (and Tower Farm as mentioned separately). The strategic ecological importance of this site (and Tower Farm as mentioned separately) in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. The fact that this area (and Tower Farm) were added to the Green Belt in the late 1980s due to their high ecological value. National planning policy allows Green Belt changes only in exceptional circumstances — and these have not been demonstrated. For these extremely important reasons, Black Rock (and Tower Farm as mentioned separately) should be removed from the Local Plan. No modification short of removing the allocation entirely would make this site appropriate. Given its direct adjacency to ancient woodland, its loss would be irreversible and cannot be mitigated sufficiently. The land should instead be retained as undeveloped green space, managed to enhance biodiversity and provide sustainable public access, in line with the Avon Wildlife Trust’s 2030 Strategy and National Nature Recovery goals			
63024481	Mark Taylor							I have visited the North Somerset local plan 2041 site and would like to comment on particular developments proposed around Portishead, in particular the sites at Tower Farm and Black Rock. I have lived in North Weston since 2000 and I have seen a huge development of Portishead from a small town into what it is today. The developments on the Vale and on and around the Marina has saturated a small community with massive infrastructure issues, such as road networks, schools and general facilities. A railway link has been promised for many years in the area and funding has continually been withdrawn. Now the government is insisting on more houses to be built then there is now funding promised. This is nothing new, as this was always part of a plan when the previous developments were put forward. As always the developments get completed and then the funding for the infrastructure is withdrawn. I believe the government requires affordable housing. If you look at the average house prices in and around Portishead these are not affordable to the people that want to get on the housing ladder. Four- and Five-bedroom houses are not required. What is required is good old fashioned two- and three-bedroom houses that can be starter homes or council owned rented accommodation. Developing the above sites will never filter down sufficiently to get people onto the housing ladder. The above sites were deemed green belt sites in the 1980’s and a green corridor created from the marina area of Portishead to Clevedon to protect the surrounding wildlife. The government have relaxed the rules to allow green belt to be recategorized so development of housing can take place in EXCEPTIONAL CIRCUMSTANCES. I believe there are no exceptional circumstances that exist for the development of these sites. There are plenty of alternative brown sites that can be developed without massively disrupting and in part destroying the local wildlife infrastructure. The ecological impact that housing development would case Weston Big Wood would be			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								catastrophic. There is a need to protect the Weston Big Wood SSSI and the Gordano Valley green corridor, for today and future generations. I side point about protecting green corridors is the fact that during the Covid pandemic time, the government pushed and promoted that people should get out and enjoy the green spaces as part of their own well being and mental health. Why has this policy changed? The mental health capacity within the NHS is under massive strain already without removing valuable areas where people can help themselves at no real cost and keep their mental health in check. We have a cost-of-living crisis so free spaces such as Weston Big Wood should not be put under threat. One such brown site is around the Old Mill area. It is mentioned that to build would mean lose of jobs. I disagree. There could be suitable development where workspace is development at ground level and smaller one or two bedroomed homes could be built above. These would be affordable and jobs would not be lost. This would be forward thinking and rejuvenate an area that would benefit from re-development. Both the proposed sites above would struggle to provide safe and suitable access into the communities surrounding them. The Clevedon Road area in particular is already busy with the traffic travelling through most of the day, but specifically early morning, between 0630hrs and 0930hrs and evening times, from about 1430hrs until 1800hrs. Police headquarters employs a large number of people who mainly travel to the site in a vehicle. There are two schools, St Josephs and Gordano Comprehensive, that again have a huge amount of children attending, who also create traffic issues on the Bristol Road and Clevedon Road and surrounding areas. Finally, there are the commuters who need to travel out of Portishead to Bristol or return home. As I mentioned at the beginning Portishead is already saturated with people and the road network is already under pressure. No train, with two carriages and leaving once an hour is going to solve this problem that already exists. Further development meaning, more cars and people, would bring Portishead to a standstill. In addition to the access and movement of vehicles and people, in, out and around Portishead is the additional issue of when the M5 motorway closes. This happens regularly due to accidents and repairs work. It also raises traffic levels during school holiday times when vehicles use Clevedon Road as a way of avoiding the inevitable car park that is the M5 during the summer months, when people head to Devon and Cornwall. Large HGV's on strict delivery times come hurtling through North Weston at all times of the day and night when this happens. My questions are simple. Is this safe? Is this sustainable? Is this not creating more of a problem? Does this meet the national soundness tests? I believe not and I believe this has not properly been considered when these plans have been proposed to develop the areas above. There is one more point I would like to make in respect of the impact of the traffic. Police headquarters and the fire service run out of Blackrock and Valley Road. Operational staff regularly travel at high speed with their appropriate sirens and lights displayed as they rush to an emergency. Again, these vehicles travel along Clevedon Road, past two schools and the main road out to the motorway network. Placing more vehicles in this already crowded space would only increase the possibility of further accidents or delay for them to reach the emergency they are attending. In submission I do not believe these areas should be developed. There is no sustainable infrastructure. It is unsafe to the residents with the amount of traffic it would bring. It would destroy and well needed green corridor for both the wildlife and the residents of Portishead. For these and the above reasons I believe the Tower Farm or Black Rock areas should be removed from the local Plan.			
63078209	Debbie Taylor							I have lived in North Weston for 27 years and have walked the big wood nearly every day . The idea of houses being built up so close to those woods is absolutely catastrophic. Every day I see so much wildlife in both the fields and inside the quarry and woods. The value of this open green space for human beings and their well being there is the fact that it is an ancient woodland housing hundreds of different species should never be put at risk. this space should be protected and preserved for many generations to come especially as it's a sssi. The green belt should only be changed in EXCEPTIONAL circumstances and as they are adequate other brown sites I can't believe this is correct. The houses that are being proposed will not be affordable housing which is what is needed and also the main roads surrounding this are also already saturated with police headquarters traffic, 2 schools at the bottom and one at the top all of which are bursting at the seams , adding into that any issues on the motorway which is regular lead to gridlock on the road running from portishead to clevedon with massive hgvs thundering through at 60/70 mph. The bus service is poor particularly after 7pm when you have to walk at least a mile to get back to north Weston and the route to Bristol does not exist at any time unless you again walk a mile. There are no local facilities to these areas unless you own a car which again is adding to the problem. I believe this is just about money and the parties involved are not thinking			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								about the future of our beautiful countryside. This decision once made to these sites can never be reversed and will be catastrophic. This needs to be stopped and alternative land used. I do not agree with these plans.			
63084993	Zack Taylor							I am writing to object to the proposed allocation of Tower Farm and Black Rock for housing development in the emerging North Somerset Local Plan 2041 (Pre-submission, Regulation 19). These sites lie in the Green Belt on the edges of Portishead and should be removed from the plan for the following reasons: Unsuitable Location and Lack of Sustainable Infrastructure Portishead has experienced significant housing growth in recent decades with limited corresponding improvements to transport and community infrastructure. Road networks — especially Clevedon Road and Bristol Road — already struggle during peak times due to school traffic, commuters to Bristol, and vehicles accessing the M5. Introducing hundreds of additional homes at Tower Farm and Black Rock would exacerbate congestion, increase journey times, and reduce road safety, failing the Local Plan's soundness requirements on transport and accessibility. The promised railway link has repeatedly been delayed or lost funding, so it cannot be relied upon to mitigate such impacts. Green Belt, Environmental and Ecological Harm Both sites were designated as Green Belt in the 1980s to protect landscape openness and natural habitats. National planning policy allows Green Belt removal only where exceptional circumstances are demonstrated — and no such circumstances have been properly justified here. The planned developments would sever vital parts of the Gordano Valley green corridor and harm Weston Big Wood, a Site of Special Scientific Interest (SSSI) and ancient woodland. Expert evidence and local environmental advocates have highlighted risks to biodiversity, including rare flora and fauna, and the need for buffer zones around protected sites. Recent consultation feedback makes clear that ecological impacts have not been adequately addressed. Affordability and Housing Mix Concerns While there is a clear need for new housing in North Somerset, the current proposals at Tower Farm and Black Rock focus largely on larger dwellings that do not meet the urgent local need for genuinely affordable two- and three-bedroom homes. Building high-value homes on these Green Belt sites will do little to help local people get onto the housing ladder. Instead, the plan should prioritise brownfield sites and mixed-use development, such as around the Old Mill area, where smaller homes could be delivered alongside workspace without destroying valued green space. Health, Well-Being and Loss of Public Access to Green Space Access to open countryside and woodland around Portishead has significant value for residents' physical and mental health. During the Covid-19 pandemic, public policy emphasised the importance of green spaces for well-being — a priority that seems to have been overlooked in these proposals. Threatening access to popular natural spaces like Weston Big Wood undermines resident well-being, especially at a time of ongoing pressure on NHS mental health services. Safety Risks and Emergency Services Additional traffic from new housing would add pressure to already busy local roads. The police headquarters and fire service on Black Rock and Valley Road depend on these routes for rapid response. Increased congestion raises the risk of delays for emergency responders attending urgent calls, particularly during peak travel times. Inadequate Consideration of Alternatives There are alternative brownfield and lower-impact sites within Portishead and North Somerset that have not been fully explored or maximised in the housing strategy. The council has not demonstrated that these alternatives could not meet housing needs without the environmental and infrastructure costs associated with undermining the Green Belt. Conclusion For the above reasons — including unsustainable transport impacts, unacceptable greenbelt and ecological harm, failure to address housing affordability, negative effects on community well-being, and poor consideration of alternatives — I strongly object to the allocation of Tower Farm and Black Rock in the North Somerset Local Plan 2041. I urge the council to remove these sites from the plan and instead focus development on genuinely sustainable locations.			
58597377	Anthony Thompson			No	' Justified	No	No	Portishead has had more than 15000 homes build in 20 years building on this gren belt with sssi site is un moral and other brown sites first please .			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
58572449	E Thomspon			No	• Justified	No	No	This is greenbelt land that was specifically put in place to support wildlife using the Gordano Valley as a corridor to access Weston Big Wood which is an SSSI & nature reserve and changes to greenebelt should only be made in exceptional circumstances and there has been no discussion or consultation regarding this. The area directly below this frequently floods which impacts the roads. There are no transport links, this will add additional pressure on the schools especially Gordano and decrease the catchment area meaning children currently within the catchment will be pushed to attend schools outside of the town. The government has a Environmental Improvement Plan to rewild corridors of Britain, reduce air pollution and boost biodiversity. Weston Big Wood and its surrounding areas already provide these benefits and developing next to it will supresss the woods and the wildlife within that use the surrounding area irrevocably. Local residents use this area for their mental health and there are very few green areas left within Portishead.	please consider other areas of North Somerset that are not green belt, have better road/transport links and access to jobs. Where the infrastructure isn't already at breaking point and has the potential to further increase the risk of flooding. Consider maximising capacity on brownfield sites as exceptional circumstance has not been demonstrated to develop greenbelt which will impact the SSSI which has additional protections.		
30664385	Toby Thurlow			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Not Justified The analysis for releasing this land from the green belt is not more compelling than other land not released. Almost all were rated medium or weak for impact. https://n-somerset.gov.uk/sites/default/files/2025-11/stage%202%20green%20belt%20assessment%20-%20October%202025.pdf Not Consistent with National Policy This land provides both a buffer to the impact of humans , and provides ecosystem services to the Woodland. Building on this land would have indirect impacts as laid out in the Government Guidance on Ancient woodland, ancient trees and veteran trees: advice for making planning decisions. https://www.gov.uk/guidance/ancient-woodland-ancient-trees-and-veteran-trees-advice-for-making-planning-decisions. Proposal to mitigate damage are suggested to be off site. This is at the bottom of the mitigations in the guidance. Nor other mitigations in line with teh guidance have been considered. The removal of this parcel would create a deeper 'finger' of development into the remaining greenbelt. This is inconsistent with the policy around determining the impact of removal. Not Effective There are insufficient proposals to protect the Eco-systems services provided by this land. In addition the analysis, and developer proposals considered a larger parcel of land than that contained in this plan. This means that this analysis is now void. Not Positively Prepared Proposals for local services (e.g. school, shops, health) to support the large number of dwellings are not developed enough. This would lead to an excessive pressure on the local services, causing new residents to drive further afield.			
58368129	Paul Tregedeon			No	• Justified	Unsure	Unsure	NSC has not properly considered: Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset. Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm and Black Rock. The strategic ecological importance of these sites in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. The fact that both areas were added to the Green Belt in the late 1980s due to their high ecological value. National planning policy allows Green Belt changes only in exceptional circumstances — and these have not been demonstrated. In addition: Neither site can provide safe or suitable access.Development would create unacceptable transport impacts, failing national soundness tests. For these reasons, Tower Farm and Black Rock should be removed from the Local Plan.			
62700225	Martin Van Eker			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	Unsure	I feel that before including the Black Rock sites in the local plan, the council has not properly considered alternative brown and greenfield sites, both within Portishead and in the wider North Somerset County, with significantly less ecological impact. The council could consider increasing the density of housing on proposed brown field sites across the county when would mean they could meet their housing targets and thus avoiding building on this unique and precious environment. The unique and strategic ecological contribution to the Black Rock site is protecting the unique environment of the Weston Big Wood (SSSI) and the wider Gordano Valley green corridor. If we lose this valuable field, it will have a significant impact on Weston Big Wood as a whole. Black Rock and Tower	I believe that no modification short of removing the allocation entirely would make this site appropriate. Given its direct adjacency to ancient woodland, its loss would be irreversible and cannot be mitigated sufficiently. The land should instead be retained as undeveloped green space, managed to enhance biodiversity and provide sustainable public access, in line with the Avon Wildlife Trust's 2030 Strategy and national "30 by 30" nature recovery goals.

Therefore, the Tower farm and Black Rock sites should be removed from the Local Plan	I believe that no modification short of removing the allocation entirely would make this site appropriate. Given its direct adjacency to ancient woodland, its loss would be irreversible and cannot be mitigated sufficiently. The land should instead be retained as undeveloped green space, managed to enhance biodiversity and provide sustainable public access, in line with the Avon Wildlife Trust's 2030 Strategy and national "30 by 30" nature recovery goals.		
62862689	Marie Villis			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	This area NSC are considering other brownfield or greenfield sites that would have a far lower ecological impact in Portishead or across NSomerset. The strategic ecological importance of this site as a SSI protecting Weston Big Wood and the green corridor of the Gordano Valley. Both areas were added to the Green belt in the late 1980's due to the importance of the high ecological value . National planning policy only allowed Green belt changes in exceptional circumstances! These have not been demonstrated ! Therefore this site can not provide safe and suitable access. Any development of this site would create unacceptable transport impacts, failing national soundnesstests For these reasons the site should be immediately removed from the Local plan			
62863841	Lauren Walker			No	• Justified			Both proposed sites have been poorly thought out - other sites have not been considered, there are major issues when building to close to Weston Big Wood (as identifies by local wildlife groups) and the infrastructure is already massively under pressure. There is inadequate access.	I understand that the council are under pressure from the national government - how much have you pushed back against the unrealistic targets? Other locations should be considered that have less impact on important areas for wildlife. Neither site has safe or suitable access. Traffic is already a nightmare - the lovely idea of a train link has yet to		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									come into fruition and its effectiveness unproven. The greenbelt needs protecting - exceptional circumstances have not been proven.		
62865985	T Walker			No	• Justified	Yes	Yes	The development of tower farm and black rock are not appropriate sites. They are both green belt sites and have been designated as such since the late 1980s due to their much ecological value. National planning policy only allows for de-designation in exceptional circumstances. These circumstances have not been demonstrated. Weston big wood is a SSSI and these developments will undoubtedly negatively affect the site through the course of the development and the change to the drainage characteristics of the site. In addition, there is far from adequate transport infrastructure planning to support the increased population of the are once the development was complete.			
62471329	Environment Agency		Environment Agency						This site includes Flood Zones 2 and 3 opposite Clevedon Road (outside of site allocation). Sequential approach for future risk of flooding.		
58493633	J Wills			No	• Effective	Unsure	Unsure	The site at Tower road and Black rock would have substantial impact on local transport routes. The proposed road comes out on to a fast and dangerous road which could cause accidents. The other road will increase traffic on an already busy junction.	Do not build these houses.		
58572641	C Willis			No	• Positively prepared	No	No	No infrastructure to support the new housing. One road in, one out Portishead-Bristol causing horrendous traffic chaos Impact greatly on GP surgeries, Dentists and schools which are already struggling to meet present Portishead residents needs	I can think of none. The areas allocated in Portishead will cause absolute chaos for present residents		
62700673	Peter Willis		Lequin Ltd	No	• Effective • Consistent with national policy	No	No	I am objecting to the current draft of the North Somerset Local Plan on the grounds that it is not sound and not consistent with national policy, for the following reasons: 1. Conflict with the National Planning Policy Framework (NPPF) The draft plan allocates over a quarter of its total housing capacity to Green Belt land, contrary to NPPF requirements that Green Belt release must be a last resort and only justified in exceptional circumstances. No such justification has been demonstrated. 2. Harm to a designated SSSI and its legally required buffer zones The proposed 500-home development adjacent to Weston Big Wood (SSSI) encroaches into protective buffer zones and will increase footfall, disturbance and fragmentation. The SSSI is already in “unfavourable declining” condition; further recreational pressure would cause irreversible damage. 3. Failure to maintain ecological networks as required by law Under Section 40 of the Natural Environment and Rural Communities Act (2006), the Council has a statutory duty to maintain the coherence and resilience of ecological networks. The current allocations undermine key wildlife corridors across the Gordano Valley, reducing connectivity between internationally, nationally and locally important sites. 4. Inconsistency with the Local Nature Recovery Strategy (LNRS) The proposals directly undermine the principles and mapped priorities of the LNRS, as required under the Environment Act 2021. The plan neither protects nor enhances the identified strategic ecological network. 5. Lack of cumulative impact assessment The draft plan does not demonstrate that cumulative ecological effects of multiple developments have been properly assessed. This is a core component of justified and effective spatial planning. 6. Absence of reasonable alternative options The plan appears to rely heavily on Green Belt release without transparent assessment of brownfield capacity, redevelopment opportunities, or alternative spatial strategies. This fails the “justified” test of soundness.	1. Remove or significantly amend allocations that threaten Weston Big Wood SSSI and its buffer zones Delete or relocate the proposed 500-home allocation that encroaches into the established protective buffer zones of Weston Big Wood. Ensure any remaining development is supported by a legally robust Habitats Regulations Assessment. Reason: The Council has a statutory duty under the NERC Act (2006) to maintain ecological networks, and must protect designated sites from increased recreational pressure. The current allocation conflicts with these duties and with NPPF requirements to safeguard SSSIs. 2. Reinstate protection of strategic ecological corridors across the Gordano Valley Redesign the spatial strategy to avoid fragmentation of the Gordano Valley ecological network, which connects the Severn Estuary, Portbury Wharf, Weston Big Wood, and the Somerset Levels. Introduce policy wording requiring habitat buffers, wildlife corridors, and net-gain designs aligned with the Local Nature Recovery Strategy (LNRS). Reason: The Plan currently undermines the LNRS and the NERC Act duty to secure resilient ecological networks. 3. Reduce reliance on Green Belt land and demonstrate genuine exceptional circumstances where release is proposed Reassess housing distribution to reduce the amount allocated to Green Belt. Prioritise brownfield land, urban intensification, and sustainable settlement extensions. Where Green Belt release is still proposed, provide a transparent, evidence-based justification establishing “exceptional circumstances” in line with national policy. Reason: The current Green Belt strategy is not justified or consistent with the NPPF. 4. Produce a comprehensive cumulative ecological impact assessment Update the Strategic Environmental Assessment (SEA) and Habitats Regulations Assessment (HRA) to consider the combined impact of all allocations on designated sites and ecological networks. Include modelling of visitor pressure, recreational impacts, hydrology changes, and species disturbance. Reason: The absence of cumulative assessment means the plan is not legally compliant, not justified, and not effective. 5. Demonstrate meaningful cross-boundary cooperation on strategic environmental issues Provide evidence of Duty to Cooperate agreements with Bristol, South Gloucestershire, Somerset, Natural England, and Avon Wildlife Trust regarding Green Belt strategy and nature recovery networks. Incorporate any jointly agreed ecological priorities into the plan. Reason: The Duty to Cooperate has not been demonstrated in relation to nature recovery and Green Belt strategy. 6. Align all ecological and spatial policies with the Local Nature Recovery Strategy (LNRS)		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									Amend policies to explicitly protect LNRS priority areas and map these within the plan. Require all major developments to demonstrate how they contribute to LNRS delivery. Reason: The Environment Act 2021 requires Local Plans to support nature recovery priorities, which the draft plan currently contradicts. 7. Strengthen biodiversity, landscape, and recreation policies to avoid harm to sensitive sites Introduce a requirement for visitor management plans, green infrastructure networks, and off-site mitigation where development borders sensitive habitats. Ensure biodiversity net gain is meaningful and locally relevant (e.g., supporting woodland, wetlands, and species corridors). Reason: This ensures the plan is effective, deliverable, and compliant with environmental duties. These modifications are essential for the Plan to: -Comply with statutory duties (NERC Act, LNRS obligations, SEA/HRA requirements), - Meet NPPF tests for Green Belt protection and environmental safeguarding, satisfy the Duty to Cooperate, and - Become sound (positively prepared, justified, effective, and consistent with national policy).		
62793857	Clive Wilson		Resident					LP 7 Concerns – relating to the Tower Farm and Black Rock development. The impact to Weston Big Wood (area of SSSI) this ancient woodland is currently protected by greenbelt status to ensure the sustainability of wildlife and the prevention of ecological disaster. Both developments appear to encroach the required ecological boundaries required to sustain the Woodland. Site access to both the proposed Tower Farm and Black Rock are of major concern as the existing roads are already continually busy, in the case of Tower Farm school drop off / pickup times see Down Road frequently in a state of gridlock. In the case of Black Rock the B3124 Clevedon Road is a busy road with a 50mph limit which will require traffic calming measures. The existing estates by the proposed Tower Farm development will be greatly impacted by the increases in traffic from the development particularly if access to the development proposes the use of existing estate roads as these are already congested with parked cars and not suitable for through traffic. The current poor state of the road surface along Down Road, despite being relatively recently resurfaced, Is indicative of how busy this road is and question its ability to cope with more traffic. Valley Road is already dangerous due to the presence of the Civic Amenity site opposite the Avon & Somerset facility situated on a blind bend which sees stationary traffic queuing for the amenity site to Open. This road currently is derestricted. Please reconsider the placement of some 400 homes at Tower Farm and 100 at Black Rock.			
62772961	Tim Withers							I am writing to register real concern about the proposed developments for the following reasons: The erosion of the green margins of Portishead, with impact on the mental health of children and adults A query over, planning for the longer term, so much development is needed; consider the falling rates of children on roll in N Somerset schools and fact that many schools are changing structure to accommodate this (ask Lighthouse Schools Partnership!) I don't feel alternative green and grey field alternatives have been properly considered Britain is already a nature-depleted country; adding to this is potentially disastrous. Once gone, green spaces are rarely returned to green, and never as they were The infrastructure of the town cannot accommodate further growth; Portishead has grown so much already - for example, it's secondary school is the second largest in the SW			
28744929	Anthony Woolf							The proposal to build on greenfield sites Tower Farm and Black Rock is an ecological disaster. Both of these sites were added to the Green Belt in the 1980s to protect Weston Big Wood(SSSI) and retain a green corridor in the Gordano valley. If building any closer to Weson big Wood were to go ahead the woods would become "sterile" as per Eastwood in Portishead. Access to Tower Road and The Downs is already difficult, unsafe and over utilised due to the proximity of Highdown School. I am not convinced that enough effort has been made to adopt brown field

Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
1190177	Churchill Parish Council		Churchill Parish Council	Yes		Yes	Yes		North Somerset Local Plan 2041 (Pre-submission Plan, pp 301-302) lists housing site allocations for 191 houses within the areas of Ladymead, Jubilee and Pudding Pie lanes yet there is scant detail on how the area will be made safer for active travel particularly to and from schools. Please also consider the proposed new SEND school in Ladymead Lane. Pavements and crossing points do not exist along many stretches of these narrow lanes. Ladymead Lane provides the key north-south link to A38 yet it has no pavements, it is very narrow and a 30-mph speed limit. The proposal states sites should be “master planned together and consider cumulative traffic impacts and access arrangements particularly in relation to Ladymead Lane” but the aspirations seem vague and lack detail. Cumulative traffic impacts from recent developments (300+ houses which have doubled the size of the two villages of Churchill and Langford) in the wider area have rendered these lanes too dangerous for active travel at many times of the day and action is required. There is an urgent need for a comprehensive review of road safety for active travel and for safety measures to be implemented before any further housing development commences at these locations.		
58516641	Rubix Land Ltd.	OG Group Ltd	Rubix Land Ltd.	No	Justified	Yes	Yes	1. Whilst Rubix Land fully supports these proposed allocations, they should be combined into a single allocation for up to 75 dwellings (named “Land East of Ladymead Lane” – see below). This is consistent with the outline planning application no: 24/P/1901/OUT, currently being determined by the local planning authority. 2. With regard to the site requirements and criterion 1, Rubix Land does not consider that these allocations need to be masterplanned together. The framework parameter plan and illustrative masterplan submitted with the above outline planning application (Ref: RL101B and RL101/120J respectively – see attached) have been designed for vehicular and pedestrian connections to the adjoining allocations to the east, should that be required at a later date. This is in line with site requirements criterion 2. 3. The above application has been discussed in detail with the Council’s Urban Design and Highways officers, who have agreed that the proposal is acceptable subject to detailed design to be agreed at Reserved Matter Stage.	The boundary of “Land east of Ladymead Lane” should be combined with the proposed adjoining allocation at “Land south of Jubilee Lane” to form a single allocation within Schedule 1 of the emerging Local Plan for residential development of up to 75 dwellings in total, as indicated in Figure 1 below (red-line area): Figure 1: Ladymead Lane/Pudding Pie Lane – correct allocation boundaries. In addition, Criterion 1 within the Site requirements section for all three allocations should either be removed or altered to read: “Proposals for land east of Ladymead lane, Land north of Pudding Pie Lane and Pudding Pie Lane (West) should ensure provision of vehicle and pedestrian connections between the sites where possible/necessary, in line with highway requirements and to maximise accessibility and connectivity.”		North Somerset Local Plan Pre-submission Plan - Representation form Part B Rubix Land.pdf North Somerset Local Plan Pre-submission Plan - Representation form Part A Rubix Land.pdf RL101 120J Illustrative Masterplan.pdf RL101 Rev.B Framework Parameter Plan.pdf

Woodhill Nurseries

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
29337633	M7 Planning Ltd	OG Group		No	' Justified	Yes	No	On behalf of our client, M7 Planning Ltd (“M7”), we wish to fully support the proposed allocation at Woodhill Nurseries, Congresbury. However, reference is made within the “site requirements” list to the following: “Wider setting of Cadbury Hill Fort scheduled monument to be considered, and mitigations agreed, including green spaces to ensure views of the development are softened.” We have commissioned Landgage consultants to consider this issue in more detail; they have produced a Heritage Technical Note (HTN) that relates primarily to the undeveloped plot immediately adjoining Wood Hill. The note is attached with these representations. Landgage recommends that the northern area of this site specifically (as indicated on Plate 4, page 10 of the HTN) be kept free of housing to maintain an open area across the northern area of the study site. Such a recommendation will be taken into account within a revised site layout, to be submitted with a planning application for development of the site in due course. With regard to archaeology, the HTN advises that, based on the available evidence, any archaeological remains on the study site would be of local significance only. Archaeological remains of local significance can be adequately mitigated by a staged programme of archaeological works, involving geophysical survey, trial trenching and excavation/recording of archaeological remains (if necessary).	Amend the criterion referred to above to read: “Wider setting of Cadbury Hill Fort scheduled monument to be considered, and mitigation agreed, primarily involving the provision of green spaces adjoining Wood Hill, to ensure views of the development are softened.”		Heritage Technical Note.pdf
58528577	Mrs Mary Theresa Kingston		Ms Mary Kingston	No	' Effective	Unsure	Yes	Building 100 houses at Woodhill Nurseries would not conserve priority habitats and the recovery of protected species., nor enhance bat habitats and foraging opportunities for our horseshoe bats. Woodhill is an important, dark commuting corridor for bats and placing so many houses here - despite efforts to minimise lightspill will disturb them. It will be impossible to replicate the current level of darkness with so many houses . Bats are out on warm evenings at the moment and will the council ensure that all these new houses are not swamped with Christmas Lights, for example? This development would also have a detrimental impact on Cadbury Hill Fort and its setting. Not just from the ground, but historic views from this ancient monument across the landscape will be replaced with rooftops and sprawl. This development at the foot of Cadbury Hill would detract from the historic environment and distinctive character of this part of Congresbury			
39179649	Adrian Mealing			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Yes	Yes	The Woodhill Nurseries allocation is the most problematic of the three Congresbury sites. It poses severe issues relating to: flood risk drainage ecology and SAC impacts hedgerow and landscape loss highway safety pedestrian safety lack of infrastructure lack of evidence and deliverability This single site contributes over half of the proposed 183 dwellings, and yet it is allocated with no evidence base whatsoever. CRITICAL NEW POINT – NO OUTLINE CONSENT OR TECHNICAL EVIDENCE EXISTS Unlike the Pineapple Farm allocation (22/P/0459/OUT), Woodhill Nurseries has: no outline planning permission no submitted technical assessments no Flood Risk Assessment no Sequential Test no SuDS or drainage modelling	Remove Woodhill Nurseries from the Local Plan, or reduce capacity drastically, until the following EXIST: A full Sequential Test and flood modelling A Congresbury-wide drainage and SuDS strategy Site-specific HRA and SAC mitigation Bat corridor and hedgerow/tree protection mapping A safe access and active travel feasibility plan A deliverable infrastructure schedule A masterplan and design code A Congresbury Green Infrastructure Strategy A cumulative impact assessment (all 183 homes) Until then, Woodhill Nurseries is not deliverable, not justified, and not consistent with national policy.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								no ecological surveys no HRA screening no bat flightline mapping no lighting strategy no access feasibility study no active travel feasibility work no landscape or heritage assessment This means the allocation is based entirely on unproven assumptions, not evidence. Under the NPPF, site allocations must be supported by evidence showing that: the site is deliverable, mitigation is possible, infrastructure can be provided, environmental harm can be avoided or reduced, and impacts can be addressed realistically. Woodhill meets none of these requirements. This alone renders the allocation unsound and unjustified. KEY OBJECTIONS 1. Flood Risk – Sequential Test NOT demonstrated (DP9, DP10) The Council itself states the site requires the Sequential Test, yet the Plan provides no evidence it can pass it. Without: modelling, hazard mapping, drainage capacity assessments, climate-change allowances, cumulative drainage analysis… …the allocation is not lawful under the NPPF flood risk hierarchy. 2. Severe ecological harm (DP35, DP36, DP37) Woodhill Nurseries lies within: greater horseshoe bat sustenance zone lesser horseshoe foraging zone dark corridor network key hedgerows used as commuting routes connective habitat to the Congresbury Yeo Yet: no HRA exists no flightline mapping no mitigation strategy no lighting controls (<1 lux) no BNG baseline no hedgerow retention plan This risks irreversible damage to internationally protected species and may breach the Habitats Regulations. 3. Transport and access impossible to deliver safely (DP15, DP16, DP17) Woodhill relies entirely on: the A370, the unsafe Smallway junction, no crossings, no cycle lanes,			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								no continuous pavements, no safe school route, poor bus services. None of the required off-site works are: designed, costed, funded, or deliverable. This makes the site car-dependent, unsafe and undeliverable. 4. Landscape + heritage harm (DP34, DP37, SP8) The site sits on the rural western edge of Congresbury. Development here: erodes rural character, contributes to settlement sprawl, impacts views toward Cadbury Hill Fort (Scheduled Monument), removes tree and hedgerow structure. No LVIA or heritage assessment exists. 5. No supporting infrastructure (DP50, DP63) There is: no school capacity no GP capacity no drainage upgrades no public transport improvements no footway or cycleway schemes no green infrastructure funding no play or community facilities no projects for Congresbury in the Infrastructure Delivery Plan This makes the allocation undeliverable and unsafe.			
12476353	Historic England (R Torkildsen)		Historic England					The proposed allocation site is directly to the south of the Cadbury Hillfort, a scheduled monument that was originally designed to be seen and to have surveillance over a wide area meaning that views to and from it in all directions are important. The site falls within the setting of the monument and contributes to its significance. The Plan does not however indicate whether and if so how 100 new homes could be delivered here within the setting of the monument without causing considerable harm. For the allocation to be justified and consistent with national policy further evidence needs to be presented and clear associated policy advice included.	The Plan does not however indicate whether and if so how 100 new homes could be delivered here within the setting of the monument without causing considerable harm. 62471329	Environment Agency		Environment Agency						This site is Flood Zone 1. Site requirements mention sequential approach to avoid areas at greater risk of flooding.		

Land south of Station Road

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
39179649	Adrian Mealing			No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	The Station Road site is small in numbers, but significant in harm. It contributes directly to: unsafe pedestrian conditions, fragmentation of ecological corridors, landscape erosion, drainage risk, car dependency, and cumulative pressure from the 183 Congresbury homes in the plan. Crucially, there is NO outline permission, no technical evidence, no flood assessment, no access design, and no ecology analysis. This means the allocation is based on assumption, not evidence, and fails the soundness tests of the NPPF. NEW CRITICAL POINT — NO EVIDENCE OF DELIVERABILITY Unlike Pineapple Farm (70 homes), which at least has outline consent and reserved	Remove Land South of Station Road from the Local Plan, or defer and reduce significantly until all of the following exist: A safe, continuous pedestrian route on Station Road A deliverable access strategy A Congresbury-wide active travel plan A site-level ecology, hedgerow and bat corridor map SuDS, drainage and flood modelling A landscape and village-edge assessment School and GP capacity mitigation Inclusion of Congresbury infrastructure projects in the IDP A cumulative impact assessment (all 183 homes) Until these fundamental matters are resolved, the allocation is not justified, not effective, and not consistent with national policy.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								matters problems, Land South of Station Road has: no outline application no reserved matters no technical evidence no access feasibility no footway design no ecological survey no drainage modelling no heritage/landscape assessment no BNG baseline no bat corridor mapping no utilities assessment The Council has allocated a site with zero evidence showing that: safe access is possible, ecology can be protected, drainage can be managed, the landscape can accommodate development, a safe pedestrian route exists, or any mitigation is achievable. This directly fails the NPPF tests of: deliverability, justification, effectiveness, and consistency with national policy. KEY OBJECTIONS (UPDATED AND EXPANDED) 1. Pedestrian Safety and Active Travel Failures (DP15, DP16) Station Road is narrow, lacks pavements, and has: no continuous footway on either side, blind bends, vehicle pinch points, no safe walking route to the primary school, no safe route to the village centre, no cycle provision whatsoever. This site would force new residents — including children — to walk in the road on a route already known to be unsafe. There are zero funded active travel improvements in the Infrastructure Delivery Plan. 2. Public Transport Failures (DP17) The nearest bus stops are: poorly connected, require walking along unlit, pavement-less sections of Station Road, served by infrequent, unreliable services. No accessibility audit exists. No bus improvements are funded or proposed. The site is entirely car-dependent. 3. Ecological Harm: Hedgerows, Trees & Bat Corridors (DP35, DP36, DP37) This site contains: important hedgerows, linear tree lines, bat commuting routes linked to the North Somerset & Mendip Bats SAC, dark habitat corridors, foraging habitat adjacent to the Congresbury Yeo corridor. Yet:		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								no ecological surveys exist, no flightline mapping exists, no HRA mitigation exists, no <1 lux lighting strategy exists, no hedgerow retention plan exists, no BNG baseline exists. Ecological harm is unavoidable without proper assessment, which has not been done. 4. Landscape & Village-Edge Harm (DP1, DP29, DP34) Development here would: extend the built form into the rural edge, erode the character of the Station Road approach, remove or urbanise hedgerows and tree lines, increase visual intrusion into the countryside. No LVIA or rural-edge assessment exists. 5. Drainage and Surface Water Failures (DP9, DP10) The site lies on land with: poor drainage, higher runoff risk, slope toward Station Road and existing houses, rhyne systems nearby that already face capacity pressures. There is: no SuDS design no infiltration testing no climate change rainfall modelling no cumulative drainage assessment no hydrological modelling no flood exceedance routing plan This fails NPPF flood and drainage requirements. 6. No Supporting Infrastructure (DP50, DP63) Like Woodhill and Pineapple Farm, this site suffers from: no school capacity no GP capacity no public transport improvements no drainage improvements no active travel no green infrastructure no play provision no IDP funding for Congresbury at all Even 13 homes add cumulative pressure on these services, and there is zero mitigation in the IDP. 7. Cumulative Impact with Woodhill + Pineapple Farm (183 Homes Total) The Local Plan fails to assess or mitigate: cumulative transport impacts, cumulative ecological impacts, cumulative drainage impacts, cumulative landscape harm, cumulative community facility demand.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? Pineapple Farm, land north of Mulberry Road

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
39179649	Adrian Mealing			No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	The allocation of 70 homes at Pineapple Farm / Land North of Mulberry Road is unsound, undeliverable, and inconsistent with the Council's own evidence and policy framework. The site has been the subject of outline planning permission 22/P/0459/OUT, and the emerging Reserved Matters issues have exposed multiple critical failures that show the Local Plan allocation cannot be delivered safely or sustainably. This site: cannot be accessed safely, cannot provide active travel, cannot manage surface water safely, cannot protect ecological corridors, cannot provide required amenity, is not supported by any infrastructure, and has already proven problematic through the reserved matters process. RESERVED MATTERS ISSUES (linked to 22/P/0459/OUT) WHICH SHOW THE ALLOCATION IS UNSOUND The outline permission 22/P/0459/OUT has already encountered substantial problems at Reserved Matters stage that directly demonstrate the site is not suitable for allocation in the Local Plan. These include: 1. Access and Highway Safety Failures Reserved matters submissions have highlighted: Mulberry Road is too narrow for additional residential traffic. No suitable second access exists. Refuse vehicles cannot turn safely. Emergency vehicle access is constrained. The proposed access visibility splays cannot be delivered without land not in the applicant's control. Traffic flow modelling conflicts with lived reality and resident evidence. These issues contradict DP15, DP16, DP17, and NPPF 110–111. 2. Footway and Pedestrian Safety Failures The reserved matters process confirmed: There is no safe pedestrian route between the site and village services. Footways are discontinuous, narrow, or absent. No safe crossing exists at the A370. The Council cannot secure off-site land required for active travel improvements. This makes the development 100% car-dependent, contrary to national policy. 3. Drainage and Flooding Concerns Not Resolved At reserved matters, the LLFA (Lead Local Flood Authority) and drainage consultees raised concerns: Surface water cannot be safely discharged. The fall of the land directs runoff towards existing homes. Attenuation basins proposed are undermined by groundwater issues. Climate-change allowances have not been modelled. No cumulative drainage modelling has been done alongside Woodhill. This conflicts with DP9, DP10 and the NPPF flood risk hierarchy. 4. Ecology, Hedgerow and SAC Impact Concerns	Remove or significantly reduce the Pineapple Farm allocation until: Reserved Matters issues are resolved, Safe access is proven deliverable, A370 walking and cycling access is funded, Drainage modelling is completed and acceptable, SAC mitigation strategy is prepared, Hedgerow/tree retention plans are secured, Infrastructure is included in the IDP, A Congresbury-wide masterplan exists. At present, the site allocation is not sound, not justified, and not deliverable.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The reserved matters submissions highlighted that: Key hedgerows are Important Hedgerows under the Hedgerow Regulations 1997, but the developer proposed partial removal. No dark corridor modelling exists despite SAC proximity. Lighting plans fail to protect bat flightlines (<1 lux required). No compensation or buffer zones were included. Foraging habitat loss has not been mitigated. This contradicts DP35, DP36, DP37 and potentially the Habitats Regulations 2017. 5. Amenity and Layout Problems Reserved matters raised issues regarding: Overlooking and overshadowing of existing homes Excessive density relative to village character Insufficient private amenity space Lack of play space or green space Poor parking layout causing overflow into Mulberry Road This conflicts with DP1, DP2, DP3, DP4. 6. Lack of Supporting Infrastructure (confirmed again during reserved matters) During consultations on reserved matters, it became clear that: No school places are available No GP capacity No drainage upgrades No public transport improvements No active travel infrastructure No GI or BNG delivery strategy The IDP contains nothing for Congresbury This mirrors the failures identified under DP50 and DP63. How Reserved Matters Confirms the Local Plan Allocation is Unsound The National Planning Policy Framework requires that Local Plan allocations be: Deliverable Supported by evidence Based on realistic assumptions, and Not dependent on unachievable mitigation The fact that the outline permission has stalled and remains unresolved due to problems identified at reserved matters stage proves: ✔ The site is not deliverable ✔ Mitigation is not achievable ✔ Access cannot be made safe ✔ Drainage cannot be resolved ✔ Ecological impacts cannot be mitigated ✔ Infrastructure is not available ✔ Planning conditions cannot overcome fundamental defects This provides clear evidence that the allocation should not remain in the Local Plan. GENERAL OBJECTIONS (summary of ALL previous objections) To maintain completeness, the allocation also: • Fails flood risk and drainage requirements (DP9, DP10) • Fails ecology and SAC requirements (DP35, DP36, DP37) • Fails active travel + public transport (DP15, DP16, DP17) • Fails design, amenity and layout (DP1–DP4) • Fails green infrastructure protection (DP34) • Lacks any supporting infrastructure (DP50, DP63) • Contributes significantly to cumulative impact from all 183 houses

	Homes Ltd (multiple sites)	Stokes Homes						We act for Woodstock Homes who strongly support the allocation of the Oxford Plasma Technology site for residential development in the Local Plan. This site represents a sustainable and strategic opportunity for housing delivery in Yatton for several reasons: • Previously Developed Land: The site is a brownfield location formerly occupied by Oxford Instruments, within Yatton's settlement boundary and close to local amenities and public transport links, including the railway station and bus routes. Redevelopment aligns with NPPF objectives to make effective use of previously developed land. • Established Planning History: Outline permission for up to 55 dwellings was granted in 2006 and extended in 2011. The site was allocated in the Replacement Local Plan (Site H86) and carried forward in subsequent policy documents, confirming its suitability for housing. • Affordable Housing Delivery: The proposed scheme will deliver 58 dwellings, now confirmed as 100% affordable housing through partnership with Alliance Homes, responding to acute local need and supported by grant funding. This exceeds policy requirements and contributes significantly to meeting housing targets in North Somerset. • Economic and Social Benefits: Redevelopment will regenerate a redundant industrial site, support local construction jobs, and provide high-quality, energy-efficient homes. It enables families to remain in the community and promotes social sustainability. • Design and Infrastructure: The scheme will incorporate landscaping, biodiversity enhancements, and public open space, complementing Yatton's character while addressing modern housing needs. Recommendation:	plan to ensure delivery of much-needed affordable housing and sustainable growth in Yatton.

Construction will wreck local wild life. The Miners Close development in Long Ashton resulted in massive reductions is snakes, lizards, wild flowers, bird life ... etc.			

Land north of Colliter's Way, Long Ashton

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
51556641	Barratt Bristol (Land at Colliters Way)	Oneleven Property	Barrett Bristol	No • Positively prepared • Justified • Effective • Consistent with national policy				The identification of Land north of Colliters Way, Long Ashton (as defined on the policies map) for 215 new dwellings is supported. The site adjoins the proposed allocation of land at Elsbert Drive within the Bristol City Council administrative area on land also released from the Green Belt. Earlier representations to the 2024 PsP highlighted that the site assessment through the Council's Sustainability Appraisal (SA) appeared to have significantly under-valued the site. A copy of our clients site specific assessment is attached at Appendix 3 for reference. Whether or not this is the case there is clear justification for the site's proposed allocation which lies in a highly sustainable location. The site specific reference for the site which appears at page 310 of the PsP refers to the need for coordinated masterplanning and delivery. This is consistent with Policy DS11 (see extract at Appendix 4) of the Bristol Local Plan which requires: "Development at Elsbert Drive should be in accordance with a detailed cross-boundary development framework or master plan prepared in consultation with the local community which addresses the layout and form of development, access and the relationship with surrounding areas." This is a logical policy requirement which will ensure that design and technical considerations can achieve a coordinated approach to housing	The reference to "No vehicular access off Colliters Way." Should be deleted.		Local Plan Representations North Somerset December 2025 Final 12.12.25 with appendices.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								delivery at the site. As highlighted earlier in these representations Taylor Wimpey has submitted an outline planning application on their land at Elsbert Way which fails to address these policy aspirations and could either limit the dwelling yield from the site or frustrate development altogether. Our client is committed to pursuing an integrated approach to bringing forward the land at Colliters Way. A preliminary draft Masterplan has been prepared and is enclosed in Appendix 5 of the attached document. This shows how the wider scheme can come forward in an integrated manner. Our client intends to undertake pre-application engagement with both North Somerset and Bristol simultaneously in anticipation of a formal planning submission, to ensure appropriate cross-boundary engagement to inform the final submission detail, which would again be subject of consultation with both authorities. The site criteria for land at Colliters Way states that there shall be no vehicular access off Colliters Way. However, it is unclear why this requirement is necessary or justified or what technical highways/transport evidence has led to this approach. A hybrid planning application (23/P/2185/FU2) for a new office campus to the southwest of Long Ashton Park & Ride was approved by North Somerset Council on the 6th March 2025 and included improved accesses from Colliters Way at both the Gurney Roundabout and Brook Gate junction together with a new access directly from Colliters Way at the south-western side of the site. The principle of providing new vehicular access directly onto Colliters Way has therefore already been accepted. In addition the local plan evidence base does not appear to provide any justification for ruling out a similar approach on our client's land, subject to appropriate modelling and technical design. The provision of a connection onto Colliters Way would increase choice and convenience for users, disperse traffic more effectively and, in the event that our client's should come forward for development ahead of neighbouring parcels, avert unnecessary delays in the delivery of the draft allocation. In relation to this our client supports the second and third site requirement of providing "Active travel links to all local roads and public rights of way" and "Active travel provision improvements to link into local facilities" respectively. It is anticipate that an emerging detailed scheme will be capable of providing appropriate active travel links, including to Colliters Way, the local Public

								Rights of Way network, and adjoining parcels as part of a comprehensive active travel strategy.			
62888897	Taylor Wimpey (Elsbert Drive)	Savills		Yes		Yes	Unsure			These representations relate only to Taylor Wimpey's land interests at Land West of Elsbert Drive, Bristol (the "site"), and follow on from earlier representations made to the Preferred Options Plan, published in 2022 and the previous Reg. 19 consultation, published in 2023. The Site and Surroundings: The site comprises approximately 3.6 hectares of land to the west and north west of Elsbert Drive on the south western edge of Bristol. It is currently used for grazing / equestrian with vehicle / pedestrian access from the south west corner of Elsbert Drive. The site sits outside of but directly adjacent to the administrative area of NSC, falling within Bristol City Council's (BCC) administrative area. A Site Plan is submitted at Appendix A. The site is within the Green Belt, however, it is not subject to any other designations. It does not fall within or directly adjacent to a conservation area and it does not contain any listed buildings. None of the land is identified as falling within Flood Zone 2 or 3. Taylor Wimpey have been promoting the site for release from the Green Belt as a residential allocation dating back to 2016, and the site is the subject of a draft allocation for circa 150 dwellings as part of draft Policy DS11 (Development Allocations – South West Bristol) within the emerging Bristol Local Plan. A Statement of Common Ground (SoCG) between BCC, NSC and Taylor Wimpey has been signed as part of the Examination process, relating to matters of access and deliverability. The site is now the subject of a live outline planning application (BCC ref. 25/14175/P) for up to 100 dwellings. Turning to the current NSC consultation document, land to the west and north of the site in NSC's administrative area is under the control of Barratt Homes and Wring. Collectively known as 'Land north of Colliter's Way', the consultation document, across draft Policy LP9 (Extent of the Green Belt) and Schedule 1 (Large Sites for Residential Development), proposes to remove the land from the Green Belt and allocate it for circa 215 dwellings. A plan showing the approximate extent of the land ownerships and administrative boundaries is attached at Appendix B. The "site requirements" of the allocation, as listed in Schedule 1 of the consultation document are: • "No vehicular access off Colliters Way. • Active travel links to all local roads and public rights of way. • Active travel provision improvements to link into local facilities. • To coordinate development including the design, master	Elsbert Drive, Bristol - Appendix B - Land Ownership and Authority Plan.pdf Elsbert Drive, Bristol -Representations - Redacted.pdf Elsbert Drive, Bristol - Appendix A - Site Plan.pdf Elsbert Drive, Bristol - Appendix C - Access Technical Note.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 										planning, approach to vehicular access and delivery across the entire allocation, including that part proposed for residential development on adjoining land off Elsbert Drive within the Bristol City Council administrative area, to facilitate a comprehensive development with land in Bristol City. • Development must follow a heritage and landscape-led masterplan which preserves key views from heritage assets, taking account of recommendations in the Historic Environment Assessment (HEA). • Landscaped rural buffer required at edge of site to mitigate impact upon the wider borrowed landscape of Ashton Court and screen the development from wider viewpoints. • The design and layout must reflect the rural edge location and its historic character, with building heights not exceeding three storeys to minimise any impacts on wider landscape views and with the layout respecting key views out of the development such as to Ashton Court and St Michael Church in Dundry. • Design to incorporate features from the character of the local surrounding architecture and the non-designated heritage assets in the southwest corner of the site. A green landscape buffer will be required in this corner to protect the wider setting of these assets, as shown in the HEA.” Comments to Consultation Document The purpose of these representations is two-fold. Firstly, setting administrative boundaries aside, Taylor Wimpey wish to reiterate their support for the principle of the release of Green Belt land on the south western edge of Bristol as a means of facilitating housing development to meet the housing need of the West of England. As set out in representations previously submitted to the Joint Spatial Plan, emerging BCC policy and emerging NSC policy, Taylor Wimpey believe that exceptional circumstances exist to merit Green Belt release, with land in this location making limited contribution to the purposes of the Green Belt, in what is a highly sustainable and accessible location for residential development. Secondly, Taylor Wimpey wish to comment on selected “site requirements” of the proposed Land north of Colliter’s Way allocation. 1. “No vehicular access off Colliters Way.” Taylor Wimpey support this principle. As part of bringing their site forward, Taylor Wimpey are proposing an upgraded vehicular access from Elsbert Drive (highway) into their land. A note prepared by TPA (see Appendix C), which has also been the subject of secondary peer review from SLR, confirms that this would be an appropriate access point for servicing the site	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										in isolation, or as a primary access serving the BCC and NSC draft allocations. As part of previous representations to the emerging BCC and NSC Local Plans and as part of their live outline planning application, Taylor Wimpey have committed to safeguarding land for access to the proposed NSC allocation, such that no vehicular access off Colliter's Way is required. 2. "To coordinate development including the design, master planning, approach to vehicular access and delivery across the entire allocation, including that part proposed for residential development on adjoining land off Elsbert Drive within the Bristol City Council administrative area, to facilitate a comprehensive development with land in Bristol City." Both emerging Plans' allocations make reference to a need for cross boundary coordination. Although it may be subject to further changes, the current wording of the BCC allocation states "Development at Elsbert Drive should have regard to a detailed cross-boundary development framework or master plan prepared in consultation with the local community which addresses the layout and form of development, access and the relationship with surrounding areas." It is important to note that neither of the emerging Plans requires or even infers that the process of coordination needs to be a formal one or indeed that it should be a Council-led exercise. Even if it did, this would not now be practical given that the BCC Plan is much further progressed than the NSC one, and Taylor Wimpey have now submitted an outline planning application. As a means of satisfying the draft Policy requirement, prior to the submission of their outline planning application, Taylor Wimpey produced a cross boundary framework masterplan for their land and the emerging draft allocation in North Somerset. This has had regard to masterplanning undertaken by Barratt and Wring, as well as feedback from Natural England and other consultees. Taylor Wimpey have also undertaken public consultation. Within the SoCG produced for Elsbert Drive, Taylor Wimpey confirm that they are "in control of all land necessary to bring their land forward" and BCC confirmed that Elsbert Drive "is suitable to come forward independently and/or in advance of adjacent development in North Somerset, as 'Land adjacent to Elsbert Drive' allocation is not reliant on land within North Somerset to be deliverable." Within the same statement NSC confirmed that "the NSC allocation is not dependent upon the Bristol site coming forward, and vice versa".	
31084001	The Wring Family Trust	Blue Fox Planning	The Wring Family Trust	No	' Effective	Yes	Yes		The Trust particularly supports the requirement in the emerging North Somerset Local Plan that there can be "No vehicular access of Colliters Way". (page 309 of the Pre◈submission Plan). This position is entirely appropriate and, indeed, necessary in order to maintain the role and function of Colliters Way. However, the Trust is concerned that whilst the emerging Plan states where vehicular access should CANNOT be achieved off, it does not state where access CAN be achieved. In that regard, The Trust demonstrates in this representation that: a). Elsbert Drive is unsuitable as a vehicular access for the entire allocation; and	This representation on the Pre-Submission version North Somerset Local Plan 2021 has been prepared on behalf of The Wring Family Trust. The Trust owns part	251211 20.0009 BPF obo WFT NS Reg 19 fv.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									b). An appropriate vehicular access can be delivered from the A38 Bridgwater Road Therefore, whilst fully supporting the entire allocation, the Trust strongly believes that stating that the vehicular access should be taken from the A38 Bridgwater Road would ensure that the Plan is positively prepared, effective and justified. As explained above, the Trust owns part of land identified in Schedule 1 (pages 309 and 310) of the Pre-submission Plan as “Land North Of Colliter’s Way, Long Ashton”. Specifically, the Trust owns land in the northern part of that allocation immediately adjoining the A38 Bridgwater Road as shown in the below figure. The Pre-submission Plan allocates this site for residential development giving an “indicative capacity” of 215 dwellings. This proposed allocation is fully accepted and, acknowledging that the true capacity of the site will be established through detailed master planning and the development management process, the use of an indicative” figure at this stage is also supported. Schedule 1 sets out a number of “Site Requirements” for the allocation as follows: “No vehicular access off Colliters Way. Active travel links to all local roads and public rights of way. Active travel provision improvements to link into local facilities. To coordinate development including the design, master planning, approach to vehicular access and delivery across the entire allocation, including that part proposed for residential development on adjoining land off Elsbert Drive within the Bristol City Council administrative area, to facilitate a comprehensive development with land in Bristol City. Development must follow a heritage and landscape-led masterplan which preserves key views from heritage assets, taking account of recommendations in the Historic Environment Assessment (HEA). Landscaped rural buffer required at edge of site to mitigate impact upon the wider borrowed landscape of Ashton Court and screen the development from wider viewpoints. The design and layout must reflect the rural edge location and its historic character, with building heights not exceeding three storeys to minimise any impacts on wider landscape views and with the layout respecting key views out of the development such as to Ashton Court and St Michael Church in Dundry. Design to incorporate features from the character of the local surrounding architecture and the non-designated heritage assets in the southwest corner of the site. A green landscape buffer will be required in this corner to protect the wider setting of these assets, as shown in the HEA. Design to incorporate features from the character of the local surrounding architecture and the non-designated heritage assets in the southwest corner of the site. A green landscape buffer will be required in this corner to protect the wider setting of these assets, as shown in the HEA.” The Trust is pleased to support the site requirements and would comment specifically on some of the requirements as follows. “No vehicular access off Colliters Way” The Trust fully supports this requirement and commends the Local Planning Authority for consistently holding this position which is vital in ensuring that Colliter’s Way continues to function as intended. Notwithstanding its support for not allowing access off Colliter’s Way, the Trust believes that the site requirements would benefit greatly from definitively stating how vehicular access should be achieved for the allocation to further demonstrate its deliverability. At the time of writing, Taylor Wimpey has submitted an outline planning application (reference 25/14175/P) concerning part of the wider allocated area that is within Bristol. This is an outline application for “up to 100 dwellings” with all matters reserved except for access which is proposed off Elsbert Drive. The Trust has an in-principal objection to this application because it ignores the aspiration of both emerging Bristol and North Somerset Local Plans to achieve comprehensive development. More fundamentally, the Trust does not believe that Elsbert Drive is appropriate to deliver vehicular access for up to 100 dwellings. Accordingly, the Trust has submitted an objection to this application which is attached as Appendix 1 of this representation. That objection includes detailed comments on Highways and Transportation matters prepared by Neil Brant Consulting, a professional highway engineering and transport planning consultancy, which conclude that Elsbert Drive is not appropriate to serve the level of development proposed. It is fully recognised that North Somerset are not the determining authority for the Taylor Wimpy application, however, even if planning permission is granted by Bristol City it is clear from the Neil Brant Consulting report that Elsbert Drive is wholly inappropriate to deliver the wider allocation; that is to say the circa 215 dwellings in North Somerset. The Trust has commissioned work, through Neil Brant Consulting, to demonstrate that an appropriate vehicular access can be delivered from the A38 Bridgwater Road through its land to deliver the proposed allocation. Given that there is to be no access off Colliter’s Way and the unsuitability of Elsbert Drive, this must be the favoured and only point of access and this should be stated in the Site Requirements set out in the emerging Local Plan. Doing so would ensure that Plan is positively prepared, effective and justified. Importantly, stating that the main vehicular access should be taken from the A38 Bridgwater Road would also be entirely consistent with the fourth “site requirement” which is: “To coordinate development including the design, master planning, approach to vehicular access and delivery across the entire allocation, including that part proposed for residential development on adjoining land off Elsbert Drive within the Bristol City Council administrative area, to facilitate a comprehensive development with land in Bristol City.” Historic Environment Assessment (HEA) Several of the site requirements reference the HEA including in respect of the development adopting a heritage and landscape led approach to master planning and the provision of a green landscape buffer in the south west corner of the allocation to protect the setting of non-designated heritage assets. The Trust has reviewed the HEA (dated September 2025) within which the land north of Colliter’s Way is referenced as site “HEA 2”. The Trust broadly welcomes the findings of the HEA and fully supports the conclusion that the land in its ownership forms a significant part of area that is “Least Sensitive to Development” as set out in Figure 7 of that document In order to improve the soundness of the emerging North Somerset Local Plan 2041, the Wring Family Trust respectfully ask that a further “Site Requirement” is included in respect of Land North of Colliter’s Way, Long Ashton as follows: “Site requirements: No vehicular access off Colliters Way. Principal vehicular access to be taken off the A38 Bridgwater Road. Active travel links to all local roads and public rights of way. Active travel provision improvements to link into local facilities. To coordinate development including the design, master planning, approach to vehicular access and delivery across the entire allocation, including that part proposed for residential development on adjoining land off Elsbert Drive within the Bristol City Council administrative area, to facilitate a comprehensive development with land in Bristol City….”	of land known in the Plan as “Land North Of Colliter’s Way, Long Ashton”. Specifically, the Trust owns land in the northern part of that allocation immediately adjoining the A38 Bridgwater Road as shown in the below figure. The Trust therefore supports the principal of the wider cross boundary allocation and can confirm that land in its ownership is available, achievable and deliverable for development.	
58448865	Avon Wildlife Trust		Avon Wildlife Trust	Yes		No	Yes	This Green belt land currently provides connectivity between a number of SNCIs including Barrow Tanks, Hanging Hill Wood and Dawsons Walk and Lye Brook SNCIs. Several watercourse corridors crossing the allocation site, as well as land to the north, south and west of the allocation have been identified as focus areas for natures recovery within the LNRS. We believe connectivity between these sites and wider areas of undeveloped land will be threatened by development in this location and the overarching objective of the LNRS in this area will be undermined should this allocation be taken forward. The current proposal for this allocation breaches sections 124, 188, and 192 of the NPPF.

58654113	David Glynn							Rural development: It is appreciated that further development around most of the rural villages has been resisted, which is very sensible. If not, this would create a range of potentially serious issues which could impact on village and rural life generally. There are already issues related to public services, including road use and access, which would be further impacted by more housing or other built development. To illustrate the potential issues related to rural housing development the following comment is offered on Gatcombe Farm, Wrington. See 'Schedule 1 - Large Sites for Residential Locations'. On page 311 this is shown as a 'new allocation' with an indicative capacity of 37 dwellings. In fact, planning permission was granted in December 2021 for 38 dwellings, together with a small employment unit, see application no. 21/P/0019/OUT, with construction now underway. While some of the new houses have been completed, this is a relatively isolated site, well outside the village settlement boundary, and it seems that it is not attracting new residents as building operations appear to have been slowed. It is unfortunate that previous applications for fewer houses on this site were refused, with these far more appropriately designed. This development will certainly result in more private car use and impacts, and probably in poorly considered environmental issues, including with drainage and sewage disposal. This is highlighted here as an essential point is that new rural housing developments need to be carefully considered in relation to their setting and connection with the neighbouring land and its use, the nearby roads, pedestrian access and, importantly, public services. Inadequate public transport obviously results in more private car use on sometimes poor roads, especially when essential access is needed to facilities such as medical services, education, training and employment sites.

62848961	Henry Andrew Bullock			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No				
62819649	G McCall			Unsure		Unsure	Unsure	1. I fully agree that the 2 fields exceptionally warrant LGS designation and that they have exceptional importance to the setting of the grade 1 listed St Andrews Church and public access. My comments below are only in support of protecting the fields from any future development. 2. The nearby roads to these fields are country lanes, many with blind corners and would simply break down if any further housing was entertained in this proximity. 3. Backwell has already been allocated a higher number of houses than any other village in north somerset and even a higher growth percentage than towns. Backwell should not be expected to take 7% of the district's housing allocation compared to Clevedon's 2%. 4. Backwell already has 800 new houses approved, a 40% increase for the village. The 2 fields in question must be protected at all costs as the area could not take any further development. 5. Commuter traffic is already becoming a disaster. No businesses are in the area so all traffic runs through the area. Commuting to Bristol City Centre or Clifton can take over an hour in peak times already (for only 8 miles of driving). 6. There is a severe short supply of green space following the latest round of developments. Following Farleigh fields and the dark lane development, it is imperative we retain the T shaped green space. Further development in these fields would destroy wildlife habitats and further harm biodiversity. 7. The access routes provided by these 2 green fields allows people to navigate the area on foot (saving traffic congestion and keeps dog walking safely off roads). 8. The character of the area would be substantially destroyed without the preservation of this green space, the church is iconic with the green fields behind and Backwell would lose its identity without this vignette. 9. Any further development on these fields would be destabilising, demoralising for longstanding residents who love the area, unsustainable and completely unjustified. 10. Schools, surgeries, railway station would all be overrun by yet more housing in this area.		I fully agree that the 2 fields exceptionally warrant LGS designation and that they have exceptional importance to the setting of the grade 1 listed St Andrews Church and public access. My comments above are only in support of protecting the fields from any future development.	
58577601	Ruth Revell			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I don't know where to add this comment. For Backwell only 3 areas of local green space have been identified. We have other areas which are widely used for recreation which have no protection and are not registered. North Somerset council have failed to consult the community about local green spaces or to consider if more sites should be allocated. There are sites within the area which could be allocated. If all of the additional housing is built there will be many residents not within a 5 minutes walk. Why have North Somerset not allowed us to suggest additional sites?			
30361825	K Riches			Yes		Unsure	Unsure			I support the inclusion of this LGS area.	
62852353	Kate Rose			No	• Justified • Effective • Consistent	No	No	I moved to Backwell from central Bristol 3 years ago for the health benefits: a reduction in smog and increase of green space. What is happening now is horrific! Moving somewhere surrounded by green belt was a choice that cost me hugely financially but also emotionally-I feel betrayed and robbed by this government. this arbitrary plan is a non-sensical numbers game. The houses on the market here sit unmoved - why? There isn't the demand for the small numbers, let alone the exodus proposed. The proposal represents an unjustifiable and unsustainable level of development in Backwell and is contrary to the principles of sound	To be placed in areas of actual employment and infrastructure such as Weston, Clevedon, Portishead.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					with national policy			planning, sustainable growth, environmental protection, and infrastructure capacity. My specific concerns are outlined below. 1. Overdevelopment and Disproportionate Housing Targets Backwell already has 800 new homes approved, representing a 40% increase in the size of the village. The addition of a further 1,000 dwellings would constitute complete overdevelopment and fundamentally alter the character of Backwell. Backwell is being asked to accommodate an unprecedented 7% of North Somerset's entire housing allocation, a higher proportion than any other village and even surpassing some towns such as Clevedon (2%). This scale of growth is disproportionate, unjustified, and inconsistent with the principle of balanced distribution. 2. Transport Failures and Impracticality of Proposed Road The proposed relief road would not alleviate existing congestion on Station Road, Backwell Common, or Chapel Hill nor serve Nailsea's traffic effectively. Serious concerns remain over the feasibility of taking the road either under or over the railway line—an engineering challenge that would be extremely costly, complex, and possibly unachievable. Without a guaranteed and deliverable solution, the transport case is fundamentally flawed. 3. Severe Infrastructure Deficit Backwell already faces insufficient school places, and there is no investment planned for health services or leisure facilities. The current infrastructure cannot support the already-approved growth, let alone the addition of another 1,000 households. There are no guarantees, funding commitments, or realistic timescales for the supporting infrastructure required. 4. Lack of Needs and Viability Assessments No genuine assessment has been provided to demonstrate the need, market demand, or economic viability of an additional 1,000 homes in Backwell. The absence of evidence-based justification undermines the credibility of the proposal. 5. Unsustainable Commuter Village Expansion Backwell is not an employment centre. Most residents commute to Bristol or further afield, meaning additional housing would increase car dependency and congestion, contrary to sustainable transport policy. 6. No Social Cohesion Impact Assessment No assessment has been provided on the social impacts or how such rapid and large-scale growth would affect the existing community, cohesion, and service demand. This breaches fundamental planning principles requiring an understanding of community impact. 7. Loss of Grade 1 Agricultural Land The site includes Grade 1 Agricultural Land, currently used for food crops and grazing. Only 7% of North Somerset's land falls into this highest-quality classification. Government policy expressly states that the UK must "protect our best and most versatile land" to ensure food security. Building on this land is contrary to national policy and is not justified. 8. Biodiversity Harm and Threat to Protected Species The proposals threaten valuable habitats in one of the world's most nature-depleted countries. The site is essential feeding ground for Lesser and Greater Horseshoe Bats, linked to the Brockley Maternity Roost and SSSI, both of which are highly sensitive and protected. The ecological harm would be profound and irreversible. 9. Flood Risk and Unsuitable Location Backwell Common and surrounding areas are already highly prone to flooding, including land around Backwell Lake (Reservoir) and adjacent fields earmarked for development. Increasing hard surfacing and housing on a floodplain would significantly worsen local flood risk and contradict national guidance directing development away from areas susceptible to flooding. 10. Lack of Infrastructure Delivery Plan Credibility The Infrastructure Delivery Plan (IDP) lacks detailed analysis, realistic costings, and—critically—any guarantee of funding for the new road or essential services. A development of this magnitude cannot proceed without clear, secured, and deliverable infrastructure. 11. Green Belt and Character Impacts The proposal contributes to the erosion of the Green Belt and would irreversibly damage the rural character of Backwell. Government policy requires 50% affordable housing on Green Belt sites, which would in turn reduce developer contributions, further undermining the funding of critical infrastructure. 12. Unsustainable Timeline and Undeliverable Growth The sheer volume of housing, combined with the massive infrastructure required, over such a short period is destabilising, unsustainable, and unrealistic. There is no evidence that the proposed road or supporting services can be funded or built in time to accommodate this growth. 13. Inadequate Transport Hub Backwell railway station is not fit for purpose as a transport hub. It remains inaccessible to people with mobility needs, and no funded, deliverable plan exists to upgrade it. Relying on it to justify major growth is flawed. Conclusion For the reasons above—overdevelopment, lack of infrastructure, environmental harm, severe flooding risk, loss of Grade 1 agricultural land, and the absence of viable transport or funding plans—the proposal is unsound, unsustainable, and contrary to national and local planning policy. I therefore urge North Somerset Council to reject the application in full.	For other towns to take a fairer proportion not us with the 80% increase		

Backwell Lake

I therefore urge North Somerset Council to reject the application in full.			
50931073	Andrew Rowland			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The plan to build a new road next to the lake does not comply with Government protection of the green belt. No infrastructure plan has been adaquately provided. North Somerset Council has identified this area as a high flood risk in a flood risk assessment extract attached. I therefore strongly object to the proposed development.	North S. C must comply with Government policy on the green belt and must provide adaquate funding details for infrastructure.		IMG_5973.png

62741249	Nicholas Rossiter			No	• Positively prepared • Justified • Effective	Unsure	Unsure	I am writing as a resident of nailsea to lodge a formal and strong objection to the above-referenced planning application. This proposal is fundamentally flawed and, if approved, would cause catastrophic and irreversible damage to the existing community, primarily due to the complete lack of necessary supporting infrastructure and community facilities. The proposed scale of development is wholly disproportionate to the capacity of nailsea and amounts to a destruction of the town’s character and viability, rendering it unsustainable for both new and existing residents. 1. Inadequate Physical Infrastructure and Utility Capacity The current infrastructure of nailsea already under strain and is entirely incapable of supporting the significant increase in demand that this development would create: Road Network & Traffic: The local road network, consisting primarily of narrow B-roads, and already busy main roads is inadequate for the projected increase in traffic. This will lead to severe and dangerous congestion, impacting emergency service access and daily commutes. The current proposal lacks credible plans for necessary road widening, new junctions, or robust traffic calming measures that are proportionate to the development size. Drainage and Flooding: The existing drainage and sewage systems are aging and frequently struggle during heavy rainfall. Adding hundreds of new properties will overwhelm these systems, significantly increasing the risk of flooding and environmental damage in the area. Utilities: There has been no compelling evidence provided that the utility providers (water, gas, electricity) have confirmed the capacity to serve this development without causing service disruption, pressure drops, or voltage issues for existing properties. 2. Overburdening of Essential Public Services and Facilities The proposal fails to account for the impact on essential public services, which are already operating at or beyond maximum capacity: Healthcare Services (GPs and Clinics): Access to local healthcare is already a critical issue, with waiting times for routine GP appointments currently exceeding [e.g., two weeks]. The influx of hundreds of new residents will immediately collapse the existing healthcare provision, making access to basic medical care impossible for the entire community.

14666145	Reis Braganza		Nailsea Action Group	No	• Positively prepared • Justified	Unsure	Unsure	This is related to the junction between Morgans Hill local green space and the development of Youngwood lane which is already under construction. The land south of the Nailsea football ground is designated both as the local green space and part of the Youngwood lane development site. This piece of land should be entirely in Morgans Hill local green space and should not be built on. It sits on the junction of three footpaths, along the top, bottom and middle of Morgans hill. If this land was taken away it would destroy the footpath / trails structure. These footpaths get waterlogged at various times of the year, but not necessarily at the same times, so it is currently possible to structure a walk circuit at most times. Nailsea residents have lost a lot of green space with the construction of the development just south of the Uplands and this would further restrict the recreation space available to residents.	Adjust the boundaries of Morgans hill, so that the footpaths are within the Morgans Hill local open space.

41035649	Ann Parker			No	• Justified • Effective	Unsure	Unsure	I do not believe land outside the established village settlement boundaries should be included in the proposed development allocation. These boundaries exist to manage growth responsibly. SP6 clearly states that residential development outside settlement boundaries “will be restricted to replacement dwellings, subdivision of existing dwellings, residential conversion of rural buildings where alternative economic use is inappropriate or unfeasible, dwellings for essential rural workers or the redevelopment of previously developed land in suitable locations”. Extending development beyond the settlement boundaries would undermine these planning principles, increase pressure on infrastructure and set a harmful precedent for further outward expansion.	We need to see where the new school and the new doctor’s surgery will be never mind the new dentist! How are you proposing that the A369 will cope with all the new houses? It is already impossible to cross during the rush hours.		
62783745	J Stanley				• Positively prepared	No	No	Full consultation within the village has not been held since Pill became a strategic centre following the agreement of the new railway coming through to Portishead. Information to residents has been sparse and time constrained. There has been two exhibitions but none since Pill was made a strategic centre.	As per comment above, no it is not legally compliant as residents have not had sufficient opportunity to express their views and opinions. The Council has enabled this plan to become Developer led and therefore not giving the people of Pill and District the chance to comment.

32616705	Natalie Matthews			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Plan is NOT JUSTIFIED: No “Exceptional Circumstances” to build on the Green Belt. The council can only build on the Green Belt in “exceptional circumstances”. They have failed to prove this. They should be: Building on Brownfield Sites First: Prioritising derelict or previously used land across North Somerset before destroying our green fields. Building More Densely in Towns: Increasing the number of homes in urban centres like Weston-super-Mare, not sprawling into villages. Working with Neighbours: They have not demonstrated that they have properly asked neighbouring councils including Bristol to take their fair share of housing. 2. The Plan is NOT POSITIVELY PREPARED: It’s unfair and ignores local democracy. Disproportionate and Unfair: Our village has 2.3% of North Somerset’s population but is being forced to take 4.6% of the new housing. This is double our fair share. Ignores Our Neighbourhood Plan: 81% of us voted for a Neighbourhood Plan that limits new housing to 150-200 homes. The council is ignoring this democratic vote. 3. The Plan is NOT EFFECTIVE: Our infrastructure cannot cope.Traffic Gridlock: The M5 junction and the A369 are already at a standstill. Adding over 1,500 extra cars from these developments is unsustainable and dangerous. Overwhelmed Services: Our GP surgeries and schools are already full. There is no concrete plan to increase capacity for 2,650 new residents. 4. The Plan is NOT CONSISTENT WITH NATIONAL POLICY: It fails to protect the Green Belt. Destroying Village Character: The plan will merge our villages and turn them into a suburb of Bristol, destroying the open countryside that makes our community special. Harm to Nature: Building on these green fields will cause irreversible harm to local wildlife and landscapes. I object to the North Somerset Local Plan because it is unsound. I am writing as a long term resident of Pill who has watched this community grow and thrive, since moving to the village in 2005, and immediately fell in love with its character, its sense of community, and the beautiful green spaces that surround us. We are now raising our two children - a 14-year-old son and an 11-year-old daughter - who are growing up with the same freedoms and connections to nature that I enjoyed as a child. The proposed allocation of 1,060 homes on our Green Belt threatens to destroy everything that makes this village special. This plan fails all four tests of soundness required by the National Planning Policy Framework. 1. The Plan is NOT JUSTIFIED: No "Exceptional Circumstances" to Build on the Green Belt The council can only build on the Green Belt in "exceptional circumstances". They have failed to prove this. They should be: Building on Brownfield Sites First - Prioritising derelict or previously used land across North Somerset before destroying our green fields. Where is the complete Brownfield Land Register? Why are these sites not being developed first? Building More Densely in Towns - Increasing the number of homes in urban centres like Weston-super-Mare, Clevedon, and Portishead - not sprawling into villages. There is no evidence the Council has maximised density in sustainable urban locations. Working with Neighbours - They have nott shown that they've properly asked neighbouring councils including Bristol, South Gloucestershire, and Bath & North East Somerset to take their fair share of housing. Where are the Statements of Common Ground proving genuine cooperation? The sites are not "grey belt": The government's grey belt policy is for derelict land and car parks, not pristine countryside. Pill Green is 45 hectares of undeveloped fields that strongly prevent urban sprawl from Bristol. Under the official guidance, if land strongly contributes to even one Green Belt purpose, it cannot be grey belt. Without this evidence, there are no exceptional circumstances. The Plan is NOT justified. 1,500 extra cars from these developments is unsustainable and dangerous.

Building More Densely in Towns - Increasing the number of homes in urban centres like Weston-super-Mare, Clevedon, and Portishead - not sprawling into villages. There is no evidence the Council has maximised density in sustainable urban locations. Working with Neighbours - They have nott shown that they've properly asked neighbouring councils including Bristol, South Gloucestershire, and Bath & North East Somerset to take their fair share of housing. Where are the Statements of Common Ground proving genuine cooperation? The sites are not "grey belt": The government's grey belt policy is for derelict land and car parks, not pristine countryside. Pill Green is 45 hectares of undeveloped fields that strongly prevent urban sprawl from Bristol. Under the official guidance, if land strongly contributes to even one Green Belt purpose, it cannot be grey belt. Without this evidence, there are no exceptional circumstances. The Plan is NOT justified. 2. The Plan is NOT POSITIVELY PREPARED: It's Unfair and Ignores Local Democracy Disproportionate and Unfair Our village has 2.3% of North Somerset's population but is being forced to take 4.6% of the new housing. This is double our fair share. Why should our small community bear this disproportionate burden while larger towns are not asked to take theirs? Ignores Our Neighbourhood Plan 81% of us voted for a Neighbourhood Plan that limits new housing to 150-200 homes. The council is proposing 1,060 homes - more than five times this limit. This is a betrayal of local democracy and the community's expressed wishes. A plan that is fundamentally unfair and ignores the democratic will of residents is NOT positively prepared. 3. The Plan is NOT EFFECTIVE: Our Infrastructure Cannot Cope This is where the plan completely fails. The infrastructure simply does not exist to support this development. Traffic Gridlock: The M5 Junction 19 and the A369 are already at a standstill every day. I experience this personally - what should be a 5-minute journey to the motorway regularly takes 20-30 minutes during peak hours. Adding over 1,500 extra cars from these developments, plus the 11,300 additional vehicles from Long Ashton and South West Bristol developments, will create complete gridlock. My son will be learning to drive in the next couple of years, and I fear for his safety on roads that are already dangerous and overcrowded. Where is the evidence that National Highways has approved this level of growth? Where is the funded scheme to upgrade Junction 19? It does not exist. Overwhelmed Services: Our GP surgeries and schools are already full. I already wait weeks for a GP appointment for my family. The Heywood Practice serves 6,700 patients and will face a 39% increase with 2,650 new residents. There is no concrete, funded plan to expand healthcare capacity. The plan mentions a new primary school but doesn't state where it will be located, when it will be delivered, or what will happen to the children who arrive before it is built. What about St Katherine's School - can it accommodate 200-300 additional secondary pupils? Vague promises of "co-ordinated infrastructure delivery" are meaningless without a detailed Infrastructure Delivery Plan showing costs, funding, and timescales. This does not exist. The Railway Line is Not a Solution The Portishead-Pill-Bristol railway line is not yet delivered, and even when it is, it will be a single-track branch line with limited service frequency. The proposed station is not easily accessible from the development sites. This does not make Pill a sustainable location for 1,060 homes. A plan that promises houses but cannot deliver the infrastructure is NOT effective. 4. The Plan is NOT CONSISTENT WITH NATIONAL POLICY: It Fails to Protect the Green Belt Destroying Village Character The plan will merge our villages and turn them into a suburb of Bristol, destroying the open countryside that makes our community special. My daughter loves to walk our dog on the footpaths that cross Pill Green. If this development goes ahead, those fields - the green lung of our village - will be buried under 600 houses. Where will she walk then? The Green Belt exists to prevent urban sprawl, to stop towns merging, and to protect the character of historic communities like ours. This plan does the exact opposite. Harm to Nature Building on these green fields will cause irreversible harm to precious local wildlife and landscapes. These are not derelict brownfield sites - they are living, breathing countryside that should be protected for future generations. The plan breaches the fundamental purposes of the Green Belt and is NOT consistent with national policy. My Request to the Planning Inspector For the reasons outlined above, I respectfully request that the Planning Inspector: 1. Finds the North Somerset Local Plan 2041 unsound due to failure of all four tests of soundness 2. Recommends the deletion of sites HE2015, HE206, HE20491, HE201097, and HE201065 from the Plan 3. Requires the Council to publish a robust Green Belt assessment proving these sites are grey belt (which they cannot do) 4. Requires the Council to publish a detailed Infrastructure Delivery Plan with costs, funding, and timescales before any Green Belt sites are allocated 5. Requires the Council to demonstrate genuine cooperation with neighbouring authorities through proper Statements of Common Ground 6. Requires the Council to respect the democratically adopted Neighbourhood Plan and limit growth to 150-200 dwellings I am not against all development. I have seen sensitive, small-scale growth in this village that has brought new families and new life to Pill. But this is not that. This is a plan to increase the size of our community by 40% in one go, with no regard for the infrastructure, the environment, or the people who already live here. This is not nimbyism. This is about protecting a way of life, a sense of place, and a community that has existed for generations. I want my children to grow up in the same village I did - not in a sprawling suburb of Bristol with gridlocked roads and overwhelmed services. The plan is unsound.

58514049	Louise Osment			No	• Effective	No	Unsure	We want the council to consider building on Brown Belt land instead of building on Green Belt land on the Merlin Park and North Weston sites. The Gordano Valley is a beautiful area and to build on it especially near (or tear up parts of) Weston Big Wood which may I remind you, has rare plants and wildlife and to destroy their habitat is a travisty, (and is also an area of Special Scientific Intrest).	Build on Brown Belt land, and leave green belt areas alone, also this planning application should be rejected because lack of inferstructure in Portishead, the roads in and out of Portishead get very congested and more houses and cars will add to that problem, (and the new railway, if it should ever be built) schools/dentists/doctors are all ready struggling to cope with newcomers to the town, so no, I object strongly on the development on both these sites earmarked. Keep Gordano Valley free of houses, and cars and keep Weston Big Wood as it is, so more vegitation and animals can thrive.

58577601	Ruth Revell			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	This site is a green space well used by local walkers and residents for recreation. There are public footpaths running through the fields and informal unregistered footpaths. Any development of this site for playing fields could risk public access- a recent case of Stoke Lodge playing fields where public access was lost due to safeguarding as an example. For many residents this is the closest open space to where they live (Being in line with the 400m government policy) If access to this was reduced or lost this would impact of wellbeing of residents. There are also informal footpaths into the woodland which is also used for recreation, these are not registered public footpaths, but access could be lost if playing fields are added. Playing fields would have an impact of noise and light pollution to local residents. There is a large volume of wildlife in the woodland, likely to be door mice, but also horseshoe bats. The field was farmed up until recently which would have produced things for wildlife to feed form. Concerned the fields are being run down to then be less desirable to wildlife. This field, and this area of Backwell in general, falls within consultation zone B (with the fields to the left being in Zone A) for the North Somerset and Mendip Bats Special Area of Conservation, should the site be turned into playing fields it would mean the grass would be regularly cut, therefore reducing insects and potentially impacting on the bat population.	Take this site out of the plan as school playing fields and consult on it being registered as a local green space. If registered as a local green space it could be managed for wildlife and still used by the school form more informal recreation such as forest school or wildlife groups.

63213025	BackwellPC NailseaTC Flax BourtonPC BrockleyPC BackwellRA Nailsea Action Group	Lucy White Planning Limited	BackwellPC NailseaTC Flax BourtonPC BrockleyPC BackwellRA Nailsea Action Group	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	BPC object to the proposed amendments to the settlement boundary of Backwell, which are vastly extended to include the strategic allocations of Grove Farm and Land East of Backwell, but which also incorporate other undeveloped land which lies between those allocations and the existing built-up areas of the village. This approach is contrary to the methodology for settlement boundary review1 The inclusion of these extra parcels of land could place additional pressure on undeveloped land for further residential development, which would result in denser development, a loss of important open spaces, visual breaks and recreational amenity spaces, to the detriment of the rural character of the village. Notwithstanding the concerns regarding the proposed limits of the settlement boundary, BPC strongly support the categorisation of Backwell as a Village under Policy SP6 and broadly support the wording of Policy SP6 to limit new development to land within the settlement boundary, subject to compliance with all policy criteria. The limitations imposed on development outside the settlement boundary are also supported to control the settlement from further outward expansion.	Amendment Sought – Settlement boundary for Backwell to be amended to include site allocations (if found sound) but exclude any adjoining land which is not currently within the settlement boundary.		251118 Local Plan Reg 19 2025 reps FINAL.pdf
51426593	Alistair Ireland		Swindon Borough Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The area in Backwell that is marked as being changed in the Village Boundary section should not be included in the changes. This site is not suitable for development due to several very important reasons. The land slopes downward from Backwell Hill towards Hilldale Road and Oakleigh Close and is currently Farmland. The farmland acts as a natural sponge and reduces flood risk to the houses on Dark Lane and also those on Hilldale Road, Karen Drive, and downwards towards Church Lane, and the houses It is accepted that Climate Change means that there will be more frequent severe downpours, so any increase in runoff is not acceptable. Even the best attenuation and Sustainable Drainage cannot reduce the increase in runoff. It should be noted that there are houses and flats on Summerlands off Dark Lane for residents over 55 years of age, many of whom are elderly and vulnerable. They would be impacted by an increase in water flowing from the roads and land above it. Building on the land off Dark Lane and Church Lane, combined with the housing planned for Farleigh Fields would all increase flood risk. The land proposed to be moved within the settlement boundary currently accepts a lot of water, and without this flood risk would increase substantially, and with the land inclining downwards towards the rest of the village and the A370, could cause very widespead effects to housing and transport. There is a very large Bristol Water pipe running through the Field in question, and close to the land that is being proposed as being included in the Village Boundary and building within 5 Metres either side is prohibited, thus meaning that much of the site cannot be developed. The Land is Green Belt, and cannot be regarded as "Grey Belt", is farmland and thus should not be developed. With Climate Change affecting food production across the World it is not sensible to build on good farmland.			
51431169	Jessica King			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I do not consider the plan sound, and have specifically and precisely commented on this elsewhere. In relation to the settlement boundary, I want to emphasise the importance of the green space and fields by the recycling centre. These have been identified as outside the village boundary, which I agree with. This is very well used green space.	This green belt space just outside the boundary of the village, to the south, should be protected and secured as a community asset.		
22638625	Councillor Bridget Petty			Unsure		Unsure	Unsure		.	I support the village boundary that should remain protected between Backwell HWRC and Oakleigh Close. It is the perimeter to the village that is South East,and created a village boundary and then has Green Belt which delivers openness, green space and wildlife areas. As well as farming land. I agree that the Railway line makes a suitable village boundary for Backwell. I agree to the boundary edge around Grove Farm site so no further creep takes place, this site has already been given permission.	
62810017	Guy Stone			No	• Positively prepared • Justified • Effective • Consistent with	No	No	Filling in 90% of the greenspace existing within the settlement boundary is hardly sustainable or desirable for local residents.	Insufficient focus has been made on the development of brownfield and previously developed land. I'm not clear how doubling the size of the village is meant to benefit local residents who North Somerset Council are supposed to represent, but clearly don't.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
58542145	Jean Howard		Retired	No	Justified	Unsure	Unsure	I can only comment on our local area of Bleadon, and Hillcote (that has been part of Bleadon for many years). The housing map shows Hillcote not in Bleadon, but in Weston-super-Mare and the proposed housing development bridging the gap between Bleadon (Hillcote) and Weston-super-Mare. As previously submitted, this area is totally unsuitable for any housing development.	I am not qualified to comment on legality of any part of the plan, but would suggest boundaries should not be randomly changed to suit this particular unsuitable housing infill, merging Bleadon with Weston-super-Mare. Original village/town boundaries should be maintained and the maps to reflect that. Again I can only comment on this area known to me. The whole Plan, put together as one, is too overwhelming and not easy to negotiate.		

Dundry

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
31003713	Holger Laux, Dundry		Dundry Parish Council	Yes		Yes	No	I am writing to you with regards to a specific element in your plan that has only come to my knowledge now. Perhaps I should have seen it earlier but it did not catch my attention in the wealth of documents supporting the plan. I also feel that I should have been contacted about this issue because it affects me personally and I therefore would like to contest it under the "Meet the Duty to Cooperate" test. This is with regards to the 2022 Settlement Boundary Review, now part of Schedule 5. I live in the village of Dundry within the southern settlement area. I note that two of my neighbours are potentially going to benefit from an adjustment to the boundary that will in the future include their large back gardens (marked on your map as "6"). The justification is that this is for "Inclusion of dwellings and curtilages" and apparently it was assessed in particular that the following part of the rules: "Where large gardens on the edge of settlements are currently part of the Green Belt they will be excluded from the settlement if potential development would harm openness and the purposes of the Green Belt" does not apply to their properties. I own the triangular piece of land to the east of this extension. Up to now, I fully accepted that it is part of the Green Belt and I had no intention of building on it. This is also the reason why this change did not catch my attention. However, with the proposed extension over my neighbours' properties, my piece of land will then form an odd "wedge" of Green Belt into the settlement area. Moreover, it is not really part of the Green Belt openness as it is fenced and walled in from all sides. It is also close enough to my home to be considered part of my garden. At the moment, it looks not much different from my neighbours' plots. If such a change in the boundary is being considered, it would make much more sense to draw a straight line from the south eastern corner of Lakedene towards the back of Crabtree Close (see map attached). The dry stone wall and field gate along this line form a very obvious and visible boundary, if - for instance - you were taking the public footpath coming towards us over the fields from the east. I also own the access lane to my and my neighbours' properties, coming from Crabtree/Winford Lane in the north. It has very specific and limited rights of way. If my neighbours ever decided to build houses in their now included gardens, I will come under pressure to grant additional access rights and would have to accept an increased amount of traffic and need for maintenance. I feel it would be unfair (and perhaps in respect of your criteria for soundness "not justified") being expected to help them and watch them build houses on their land while I would be specifically prevented from doing the same on mine. I would therefore like to request a further adjustment to the boundary to include my piece of land. I realise this comes rather late in your planning process. I do not know whether you contacted my neighbours about the proposed change, but if you did, you should certainly have spoken to me as well. Hence my complaint about meeting the duty to co-operate. If somebody does find the time to come out to Dundry and look at the situation on the ground, I will be more than happy to meet you.	I would therefore like to request a further adjustment to the settlement boundary at Dundry to include my piece of land.		Schedule 5 - Dundry Settlement Boundary - Proposed Change to item 6.jpg View from the open field.jpg
58593857	Clive JA Pulteney	Kit Stokes		Unsure	Effective Consistent with national policy	Unsure	Unsure	Objection to Schedule 5: Settlements with Settlement Boundaries – LP & Dundry We object to the exclusion of the promoted land at next to Andruss Drive, Dundry from the proposed settlement boundary. This site should be included as it represents a sustainable and logical extension to the existing settlement, supporting the Local Plan's objectives for growth and housing delivery. The settlement boundary has been too tightly drawn and exclude potential small scale development sites which are important for organic sustainable settlement growth and local builders. The land has been promoted since 1994 and was included in the settlement boundary for the village of Dundry in the 1993 and 1999 Woodspring (pre NSC) Local Plan. Importance of Small Sites and SME Developers Small sites such as Andruss Drive are vital for meeting housing needs and maintaining a diverse development market. They are particularly important for small and medium-sized enterprises (SMEs), which often lack the resources to compete for large strategic allocations. By providing opportunities for SMEs, the Local Plan can help ensure a more resilient and competitive housing sector, avoiding over-reliance on major developers and accelerating delivery. Alignment with National Planning Policy Framework (NPPF) The NPPF (2023) places strong emphasis on the role of small sites and SME builders in boosting housing supply. Paragraph 69 states that "small and medium-sized sites can make an important contribution to meeting the housing requirement of an area and are often built out relatively quickly." It also requires local planning authorities to identify land to accommodate at least 10% of their housing requirement on sites no larger than one hectare. Andruss Drive is precisely the type of site envisaged by this policy—small, deliverable, and capable of supporting local builders. Sustainability and Accessibility The site is well-related to the built form of Dundry and offers good access to local services and transport links, reducing car dependency and supporting sustainable development principles. Its inclusion would provide flexibility to meet housing targets and respond to future demand without compromising environmental or landscape considerations. Development can be delivered sensitively, maintaining the character of Dundry while contributing positively to the community.	Requested Change Amend Schedule 5 to include the promoted land at Andruss Drive, Dundry within the settlement boundary. This will ensure the Local Plan remains consistent with national policy, supports SME developers, and delivers a balanced approach to growth.		Andruss Drive Upload.pdf

Easton-in-Gordano/Pill

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
30802721	Jerry Evans		Southpoint	No	• Consistent with national policy	Yes	Yes	Specifically this relates to the Green Belt designation and the settlement boundary as shown on the proposed Policies Map of an area to the southeast of the village of Pill. The narrow northern projection of Green Belt designation to the east of Markham Brook and to the rear of numbers 24 – 44 Ham Green is anomalous. The land is largely hidden from public view, visible only from a single location in Brookside. There are no public footpaths or other rights of way crossing this area. Designating this area as Green Belt does not serve any one of the specific five purposes of the Green Belt which are stated in paragraph 138 of the National Planning Policy Framework as follows: “a) to check the unrestricted sprawl of large built-up areas; b) to prevent neighbouring towns merging into one another; c) to assist in safeguarding the countryside from encroachment; d) to preserve the setting and special character of historic towns; and e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.” The area in question has two distinct characters. 1. The larger, eastern part of this area consists of long established domestic gardens. Normal planning and development management policies are adequate to protect the character and amenity of this area. 2. The smaller, western part of this area comprises the floodplain and banks of Markham Brook, which are currently designated as a Wildlife Site. Markham Brook itself is designated a “Main River” by the Environment Agency and the valley bottom is in Flood Zone 3. These designations render the Green Belt designation redundant. To the south of this narrow northern projection of Green Belt the extent of the Green Belt widens considerably and here it does serve the purpose of safeguarding the country from encroachment. In addition, the line of the settlement boundary includes some gardens and excludes others which is inconsistent and should be amended. Summary of recommendations: The Green Belt designation should be removed from part of the garden to 40 Ham Green, consistent with its proposed removal from part of the gardens of numbers to numbers 34 – 38 Ham Green and following the same line. The Green Belt designation should be removed from the floodplain and banks of Markham Brook below numbers 24 – 44 Ham Green, which currently have special designation. The settlement boundary should include part of the garden to number 40 Ham Green and continue to exclude the banks and floodplain of Markham Brook. The status of this long established garden was confirmed in the Certificate of Lawful Development reference 16/P/0891/LDE dated 8 June 2016. This is consistent with the proposed removal of part of the lower garden to numbers 34 – 38 Ham Green which is shown on the 2038 Local Plan Proposals Map. These changes would ensure that the settlement boundary is consistent with the established extent of settlement and that Green Belt designation is applied to areas where this special designation is needed to safeguarding the countryside from encroachment. Neither of these changes would undermine the planning controls which exist to protect character and amenity nor would they prevent sustainable development where this is acceptable against ordinary and long established planning policies Please see attached files	The Green Belt designation should be removed from part of the garden to 40 Ham Green, consistent with its proposed removal from part of the gardens of numbers to numbers 34 – 38 Ham Green and following the same line. The Green Belt designation should be removed from the floodplain and banks of Markham Brook below numbers 24 – 44 Ham Green, which currently have special designation. Portishead

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
62877633	Avon and Somerset Constabulary	Lucy White Planning Limited	Avon and Somerset Constabulary	No	• Effective • Consistent with national policy	Unsure	Unsure	ASP welcomes the terms of Policy SP1 (Sustainable Development) which requires new development to contribute towards the creation of healthy, safe and cohesive communities, tackling inequalities and the Spatial Strategy (Policy SP3) to give priority to directing growth in the most sustainable locations with a focus at the towns and urban areas, maximising the use of previously developed land. However, the plan does not go far enough to meet the requirements of paragraph 101 of the National Planning Policy Framework to work proactively with statutory bodies to plan for required facilities. Significant weight should be placed on the importance of new, expanded or upgraded public service infrastructure. Policy LP7 – Settlement Boundaries and Policy LP9 – Extent of Green Belt (and associated Appendix 5 and Policies Map): The Council has sought to remove land from the Green Belt at the most sustainable locations to meet housing needs (page 20), however, it has not sought to revise the Green Belt boundaries to support the expansion of Avon and Somerset Police Headquarters at Portishead, as illustrated by the accompanying Policies Map (see attached document). With an anticipated population growth across North Somerset of around 55,000 people over the plan period, it is vital that ASP has sufficient space within its Headquarters to develop new facilities to resource policing of the expanded population. The Police Headquarters lies largely within the settlement boundary of Portishead, however two fields to the south of the estate are washed over by the Green Belt. The Green Belt extends further south and protects the Gordano valley. These fields lie outside the defined settlement boundary of Portishead. For clarity, the fields are identified in the attached document by the red boundary line. The Green Belt status of these land parcels, combined with their location outside the settlement boundary, limits their purpose within the headquarters estate. As a result, ASP already rent additional accommodation off-site to accommodate some facilities which could otherwise be delivered at the headquarters. Avon and Somerset Police objects to the extent of Green Belt retained through Policy LP9 and the associated failure to amend the settlement boundary under Policy LP7. Removal of the full extent of the headquarters from the Green Belt and inclusion within the settlement boundary of Portishead would enable the headquarters estate to be used more efficiently and effectively to meet the operational needs of the police service, to consolidate key policing functions, which are currently accommodated elsewhere, to enable colocation of facilities, where appropriate, and to accommodate other related regional and national functions in response to government policy in a central police facility in a sustainable, accessible location. Retention of the Green Belt across the southern portion of the Headquarters presents significant limitations on the future development and operation of the Headquarters. The existing facilities within the Headquarters require upgrading to meet current and anticipated operational needs. A significant amount of the existing building floorspace is used for storage of evidence and seized goods. However, there remains insufficient space within the permanent buildings and there are numerous shipping containers on-site, occupying areas of hardstanding, which provide further storage facilities for seized goods. This is suboptimal and should be replaced with permanent, purpose-built facilities.	Appendix 5 should be amended to accompany Policy LP7, referring to amendments to the settlement boundary at Portishead around Portishead Police Headquarters. The wording of Policy LP9 should be amended to refer to removal of land from the Green Belt at the Avon and Somerset Police Headquarters at Portishead. The Policies Map should be amended accordingly to identify the full extent of the Headquarters within the settlement boundary and outside the Green Belt. The southern boundary of the Headquarters is clearly defined by mature tree planting and demarcates a clear boundary between the built form of the police estate and the open fields beyond. This boundary provides a clear and defensible boundary for the revised Green Belt.		251118 Local Plan Reg 19 reps FINAL.pdf Representation form Part B Appendix 5.docx Representation form Part B Policies Map.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Due to the nature of the police operations, there is a high demand for car parking at the HQ. Although current provision is adequate, it limits scope for further development on the land within the settlement boundary as any new development would likely involve the loss of car parking and/or a need for further car parking provision within the estate to meet the needs of additional officers and staff. There is a network of ecologically sensitive sites within the estate which are identified in the Adopted Local Plan. Whilst these designations are removed from the emerging Local Plan, the land is likely to have a relatively high ecological value which may prove to be prohibitive to new development or at least limit the extent to which this land can be developed. In addition, these areas of open space are a valuable wellbeing resource for officers and staff, who can be faced with traumatising, distressing situations in their work and need quiet space, in nature, to decompress. As a result, the loss of these areas is unlikely to be compatible with the Constabulary's pastoral care responsibilities to its people. As a result, the existing areas of hardstanding within the HQ are likely to be required to enable redevelopment of existing buildings and development of permanent facilities to replace existing temporary storage units. The existing green spaces, due to their ecological value are likely to have limited scope for development. Accordingly, there is limited capacity within the settlement boundary of the HQ to accommodate new development beyond the replacement and enhancement of the existing facilities. In the context of the Local Plan serving to meet the development requirements of the area up to 2041, there is unlikely to be sufficient land available to meet the growing operational requirements of the constabulary or any current or future regional or national policing operational needs, unless the full extent of the headquarters estate is removed from the Green Belt and placed within the settlement boundary of Portishead. There are exceptional circumstances to justify the removal of the land from the Green Belt, namely: - the benefits of a colocation of wider policing functions within the Headquarters, such as greater collaboration and more effective joint working across the force and reductions in the need to travel between police facilities. - The intensification of the Headquarters, providing value to the public purse in avoiding the need to purchase land elsewhere or incur other capital and revenue cost, particularly given the funding constraints for public services currently. - Limiting development to the Headquarters outside of the Green Belt, could hamper the ability to benefit from greater consolidation of the crown estate dedicated for criminal justice and policing agencies. In addition, policing continually evolves in response to changes in demand, crime patterns and societal shifts. It operates within a volatile, uncertain, complex and ambiguous environment requiring changes to its model of operation in response. The flexible deployment of the estate assets owned by the Police and Crime Commissioner is a key enabler, alongside coherent strategic planning. The Police Efficiencies and Collaboration Programme launched earlier this year, will bring renewed vigour to achieving efficiencies and savings through business change and transformation, freeing up funds to invest in the Safer Streets initiative. Avon and Somerset is one of the largest forces in the southwest. It is anticipated that over the timeframe of this Local Plan period there will be: 1. opportunities for the Constabulary to release revenue costs from other commercial rental properties which continue to accommodate various policing functions; 2. a potential requirement to address unmet need for operational training facilities, and the need to share, regionalise or merge policing and other public service functions (see above). There will be a continued need for a helicopter landing pad within the estate. This is currently provided on the field in the south-east corner of the estate (within the Green Belt). ASP also own land to the south of the existing Headquarters which might meet this purpose in the future. In addition, sufficient open space will need to be retained for officer and staff wellness, of particular importance given the stresses and strains of policing, operational training including dogs, student police officer training and major incident operations. Removal of the existing HQ site from the Green Belt and inclusion within the settlement boundary will provide maximum flexibility for the Constabulary to develop the estate in a manner which is optimal to meet its operational needs now, and in the future, whilst retaining or creating open spaces to meet a range of needs. The Council accepts that land at Tower Farm, immediately south-east of the Police HQ qualifies as Grey Belt on the basis that the land does not strongly contribute to Green Belt purposes a, b or d, there are no Footnote 7 constraints to provide a strong reason for refusal and the release of the site from the Green Belt would not fundamentally undermine the five purposes of the remaining Green Belt. In light of the Council's conclusions in respect of the extensive tract of Green Belt land at Tower Farm and the commonality between the attributes of the Green Belt on Tower Farm and the Police HQ, it can only be concluded that the Green Belt land in the Police HQ must also be regarded as Grey Belt and that the release of this land would not fundamentally undermine the purposes of the remaining Green Belt. Its location on the edge of Portishead, one of the main towns in the District and its relationship with the established Police Headquarters would promote a sustainable pattern of development in accordance with the Framework. As drafted, Policies LP7 and LP9 and the associated extent of Green Belt and defined settlement boundary shown on the Policies Map at Portishead are unsound and contrary to national planning policy (the Framework). The plan does not provide adequate provisions for development of the Portishead Headquarters to meet the operational needs of the police service to manage an expanded population over the plan period and beyond, contrary to the following provisions of the Framework: 1. Paragraph 96 which requires planning policies to achieve healthy, inclusive and safe places. 2. Section 8 which requires planning policies to achieve healthy, inclusive and safe places, in particular paragraph 101 which requires local planning authorities to work proactively and positively with statutory bodies to plan for required facilities. 3. Significant weight should be placed on the importance of new, expanded or upgraded public service infrastructure when considering proposals for development (paragraph 101). 4. Planning policies should promote public safety and take into account wider security and defence requirements including for operational defence and security purposes (paragraph 102b). 5. Paragraph 135 which requires planning policies to ensure that developments create places that are safe, where crime and disorder and the fear of crime do not undermine the quality of life or community cohesion and resilience. The removal of the Green Belt designation on the Portishead Police Headquarters, coupled with the extension of the Portishead settlement boundary to include the full extent of the Headquarters would enable the plan to comply with the Framework and ensure the police service can meet its operational needs within the existing headquarter estate		

Tickenham

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? Congresbury

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
39179649	Adrian Mealing			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Yes	Yes	This representation provides a comprehensive objection to multiple elements of the North Somerset Local Plan 2041, specifically those affecting Congresbury. My objections relate to: 1. Strategic policies (SP1, SP2, SP8, SP10, SP11) 2. Local policy LP5 (Housing & Employment Allocations) 3. Development Policies DP1–DP17, DP34–DP37, DP50, DP63 4. Three site allocations affecting Congresbury: - Woodhill Nurseries (100 homes) - Pineapple Farm / Land North of Mulberry Road (70 homes) - Land South of Station Road (13 homes) Across all policies and sites, one central theme emerges: The allocation of 183 homes to Congresbury is not evidence-based, not deliverable, not supported by infrastructure, and not consistent with the National Planning Policy Framework (NPPF). SECTION 1 — STRATEGIC POLICY OBJECTIONS SP1 – A Sustainable Future for North Somerset Unsound because Congresbury is a car-dependent village with no rail, infrequent buses, and unsafe walking/cycling routes. SP2 – Spatial Strategy Unsound because no evidence justifies allocating this level of growth to Congresbury. SP5 – Green Belt, Landscape, Environment Unsound due to complete absence of GI planning and protection of ecological corridors. SP8 – Historic Environment Unsound because Woodhill Nurseries affects the wider setting of Cadbury Hill Fort without Heritage Assessment. SP10 / SP11 – Infrastructure & Movement Unsound because the IDP contains no infrastructure for Congresbury. SECTION 2 — LP5 HOUSING ALLOCATION OBJECTION LP5 allocates 183 homes to Congresbury. The allocation is unsound because: - No transport or safety evidence - No ecological or SAC mitigation - No drainage or flood modelling - No landscape, heritage or design evidence - No active travel routes - No public transport improvements - No community infrastructure - No GI/Biodiversity planning - No deliverable infrastructure (IDP blank for Congresbury) SECTION 3 — DEVELOPMENT POLICY OBJECTIONS (SUMMARY) DP1 – No masterplans or design codes DP2 – No evidence layouts meet standards DP3 – No safe or inclusive access DP4 – No amenity assessments DP5 – No climate adaptation evidence DP6 – No net zero/energy feasibility DP7 – No renewable energy deliverability DP8 – Inefficient land use; sprawl DP9 – Sequential Test not applied DP10 – No drainage or SuDS modelling DP15 – No safe walking/cycling routes DP16 – Active Travel Routes unfunded/aspirational DP17 – No bus improvements; car dependency DP34 – No GI network or mapping DP35 – No HRA; SAC mitigation absent DP36 – No Biodiversity Net Gain baseline DP37 – No hedgerow/tree mapping or buffers DP50 – No community facility provision DP63 – No infrastructure delivery plan for Congresbury SECTION 4 — SITE-SPECIFIC OBJECTIONS WOODHILL NURSERIES (100 homes) - No outline consent, no technical evidence - Sequential Test not met - Ecology: SAC impact, no mitigation - Transport: unsafe access, A370 severance - Landscape/Heritage harm - No infrastructure support Request: Remove or reduce allocation until full evidence exists. PINEAPPLE FARM (70 homes) – incl. 22/P/0459/OUT Reserved Matters Failures - Unsafe access via Mulberry Road - No second access; refuse/emergency issues - No walking/cycling routes - Drainage unresolved - Hedgerow and bat corridor impacts - Amenity and layout failures - No infrastructure Request: Remove or reduce; Congresbury-wide masterplan required. LAND SOUTH OF STATION ROAD (13 homes) - No outline consent; no technical evidence - Station Road unsafe for walking - No access strategy - Ecological corridor fragmentation - Drainage risk unaddressed - No infrastructure Request: Remove or defer until safety, ecology, drainage, GI and infrastructure issues addressed. SECTION 5 — CONCLUSION The Local Plan proposes 183 dwellings in Congresbury without: - safe access - active travel - public transport - drainage capacity - flood mitigation - ecological protection - SAC compliance - community facilities - school places - GP capacity - GI planning - design codes - infrastructure delivery - cumulative assessment The Plan is unsound in relation to Congresbury. The allocations must be removed or fundamentally reworked.	Modifications have all been added to the individual policy comments sections.		

Schedule 7: Transport Infrastructure, allocations and safeguarded routes

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
51732129	Gleeson Land	tor&co (Jacqueline Mulliner)	Gleeson Land	No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	No	No	Policy LP11, and the proposals map, refers to a “Potential sustainable transport extension of the reserved transport corridor through the Youngwood Lane site to Station Road, Nailsea.” Schedule 7 reconfirms the ‘reserved transport corridor within consented Youngwood Lane development, Nailsea’ and ‘Station Road to A370, Cross Rail Link, Nailsea and Backwell’ as ‘major transport schemes.’ The Infrastructure Delivery Plan schedule further confirms that this infrastructure is considered to be ‘essential’, and to serve and enable development to the south of Nailsea and at Backwell (TR33 & TR34). The plan clearly anticipates a new road to the south of Nailsea, to create sustainable transport links and serve the allocations across the southern edge of Nailsea. However there is a missing section, from Station road to the Youngwood Lane allocation i.e. across the south Nailsea allocation. This is a glaring omission, given the terms of the policy and the lack of viable/deliverable alternative solution to access the allocated land with road infrastructure that is suitable to perform the necessary strategic function and carry the volume of traffic expected. The associated policy (LP3) asks for access via The Perrings to be investigated, but that access is not deliverable and even if it were the route via The Perrings and other residential roads is unsuitable for a strategic road link (see attached note). The extant outline planning application (Ref: 23/P/1145/OUT), which has all matters reserved except means of access, includes the necessary road link with the formation of a new vehicular access onto Station Road, with pedestrian and cycle access links, to serve the development and which would act to secure improved accessibility to the rail station. The omission fails to represent positive and effective planning and is unsound.Please also See Appendix A of these representations which include specific transport representations by i-Transport supporting the above. The HRA (Aecom, 2025) of the NSLP does not include the proposed Major Transport Schemes set out in Schedule 7 as they have been assessed previously in the HRA (Clearlead, 2019) of the Joint Local Transport Plan (JLTP). The evidence base published with the North Somerset and Mendip Bats Special Area of Conservation (SAC) Supplementary Planning Document Consultation (22 October 2025 - 3 December 2025), namely the ‘Radio-tracking Report’ and ‘Academic Research Paper’, was issued after the completion of the HRA for the JLTP. This evidence supersedes that included for the HRA of the JLTP and is relevant to the baseline referenced in the HRA. Accordingly, the HRA of the JLTP can no longer be considered reliable for the NSLP. This should be recognised in the HRA of the NSLP and effects of the Major Transport Schemes assessed accordingly i.e. included for Screening and Appropriate Assessment. Furthermore, the HRA of the NSLP recognises (Paragraph 5.5) that ‘One proposed scheme (Station Road to A370, Cross Rail Link, Nailsea and Backwell) is not allocated within the JLTP. As noted above, the safeguarding of this land does not lead to likely significant effects, however if this scheme is brought forward, it would require assessment at that time’. This is an unsound approach to HRA. The scheme is a Major Transport Scheme (forming part of the ‘Plan’) under Policy LP11 and should be assessed in the HRA of the NSLP, as required by the Conservation of Habitats and Species Regulations 2017 (as amended).	Add the safeguarded road link across the South Nailsea allocation. The HRA of the NSLP should include an assessment of the Major Transport Schemes set out in LP11 (and Schedule 7), including Station Road to A370, Cross Rail Link, Nailsea and Backwell		North Somerset Reg 19 Reps (2025-12-12) - Gleeson Land (Appendix B).pdf
58582945	Nailsea Action Group		Nailsea Action Group	No	' Positively prepared ' Effective	Unsure	Unsure	Nailsea Action Group’s response is as follows: The existing, already congested out-commuting by car from the Nailsea and Backwell strategic location will increase substantially because the large amount of proposed local house building is not matched by any significant employment provision. Because most employment opportunities will continue to be to the east in Bristol and beyond, most of the new commuting will try to use the same already congested roads to the east. However, there is nothing in the schedule that is likely to alleviate that increased congestion. 1. Schedule 7 lists the Local Plan's infrastructure proposals. The items in the schedule that will have an impact on Nailsea are listed below with response comments: • “Reserved transport corridor within consented Youngwood Lane development” Comment: This proposal is confined within the proposed settlement	- Ensure funding is available and budgeted for the Cross Rail Link - Increase the number of carriages at peak times for travel between Nailsea and Bristol. - Get funding for the extension of the Railway platforms at Naisea		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								boundary and consequently has no effect on commuting congestion beyond the town's settlement boundary • “Station Road to A370, Cross Rail Link, Nailsea and Backwell” Comment: 1) Funding for the cross rail link is uncertain 2) This proposal is confined within the strategic location and consequently has no effect on the wider commuting congestion. • “Platform extension at Nailsea & Backwell railway station” Comment - The abysmal history of railway improvements at the station gives no confidence that that anything will happen. Even if platform improvements were made, they would not improve the passenger carrying capacity of the railway. • “Transport hub at Nailsea & Backwell railway station” Comment - Who would fund this? Presumably not rail • “Strategic cycle link between Nailsea and Clevedon via the Moors” Comment – This would do nothing to relieve commuting congestion to Bristol, which is the main work destination In Summary, there's nothing with any certainty in the schedule that could relieve the increased traffic congestion that would result from the proposed house building 2. Proximity to N&B station will not contribute to sustainable development because the railway is so near capacity that, during rush hours, trains to Bristol often arrive at the station already full and there is no provision in this list to substantially improve the railway's capacity. In the face of the proposed house building in Nailsea an Backwell, a substantial increase to the railway's passenger carrying capacity is the only improvement that would enable the railway to contribute to sustainable travel locally. 3. The schedule includes the following with no text elsewhere in the plan to indicate what a motorway junction buffer is. 'Motorway junction buffers • M5 Junction 19 buffer • M5 Junction 20 buffer • M5 Junction 21 buffer' Is the buffer a) an additional narrow lane to give improved access to motor cycles, b) an additional lane dedicated to providing priority access to emergency services or c) something else?			
58582945	Nailsea Action Group		Nailsea Action Group	No	• Justified • Effective	Unsure	Unsure	The existing, already congested out-commuting by car from the Nailsea and Backwell strategic location will increase substantially because the large amount of proposed local house building is not matched by any significant employment provision. Station Road to A370, Cross Rail Link, Nailsea and Backwell

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
28796449	D A Gray			No	• Justified	Unsure	Unsure	The existing, already congested out-commuting by car from the Nailsea and Backwell strategic location will increase substantially because the large amount of proposed local house building is not matched by any significant employment provision. Because most employment opportunities will continue to be to the east in Bristol and beyond, most of the new commuting will try to use the same already congested roads to the east. However, there is nothing in schedule 7 that is likely to alleviate that increased congestion. Comment specific to the cross rail link is that there's nothing with any certainty in schedule 7 that could relieve the increased traffic congestion that would result from the proposed house building: 1) Funding for the cross rail link is uncertain 2) This cross rail link proposal is confined withing the strategic location and consequently has no effect on the wider commuting congestion.	Schedule 7 needs to include measures to alleviate the increased rush hour congestion on roads between Nailsea and Bristol that will be caused by the unbalanced scale of development in the Nailsea and Backwell strategic location		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
22638625	Councillor Bridget Petty			Unsure		Unsure	Unsure	I have very serious concerns about the funding of this road, if there will be sufficent funding to make it deliverable.			
39195009	David Sheridan			No	' Effective	Yes	Yes	This proposed road to join Nailsea to the A370 in east Backwell is inappropriate and will not work in practice. If a new road is needed for the new housing proposed for Nailsea then this should be built to the west of Backwell from Youngwood to the A370 near Grove Farm. This will take the additional traffic directly to the A370 without increasing traffic levels within the existing Nailsea urban development where the existing roads will not cope. It is also inappropriate to construct a new road across Green Belt land when the suggested alternative exists. There is also the likelihood of further erosion of the Strategic Gap and Green Belt land north of the railway line. This land should be safeguarded.			
39195009	David Sheridan			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Unsure	No	Bristol city Council has previously stated that this proposed road is not required as it will do nothing but to increase traffic flowing into Bristol from Long Ashton By-Pass and that Bristol's roads will not cope and that this scheme will simply discourage use of public transport and active travel while encouraging car use. Has the opinion of Highways England been obtained? They have previously not been in favour when earlier schemes were talked about.	The Major Transport Scheme between Nailsea and Backwell is neither legally compliant nor sound. To be legally compliant, the Plan should be based on up to date evidence of need and effectiveness not a sudden line drawn on a map as has happened here. At least two previous versions of the draft Local Plan did not include this proposed road but proposed instead acceptable and effective improvements to cycling and pedestrian routes from the proposed residential developments to Nailsea and Backwell Railway station. The proposed plan effectively makes car traffic by-pass the railway station. This is outdated thinking and contrary to policies to discourage car use, encourage active travel and promote public transport. This proposed road was not mentioned previously although it was included in plans by developer Rubix in autumn 2025. These plans suggested the land for the road with other "Opportunity Land" (whatever that means) would be given to North Somerset Council although the Council would then be paying for the road construction. It made it clear that the road would be in Phase 2 of the proposed development so after the other residential aspect of the proposal was complete. That same proposal seems to have no benefit for the developer so why propose it? This appears to be laying the ground for further residential development north of the railway line on land NOT included in the draft Local Plan allocations. This could be seen as subterfuge and what amounts to an incentive to the Council to include this road in the current draft Local Plan. A previous planning application by Gleeson for land on the opposite side of Station Road near to Backwell Lake was refused by the same Council now proposing the new road to join up with what would have been the already refused new road by the Lake. The proposed new road is not needed. The evidence for it was not gathered before the draft Plan's publication and this consultation. Since publication, equipment measuring traffic levels has appeared on just about every road in the area. Why was this not done before? My own use and knowledge of Station Road is that it is mostly quiet and with plenty of spare capacity. It is narrow in places but previous proposals have suggested some widening. Again it is possible for pedestrian routes to be taken away from the road to a greater extent especially routes to the secondary school. If public transport is to use the proposed new road then that will mean cars by-pass the railway station (!) but also the centre of Backwell where local amenities and services are based (doctors, dentist, shops, secondary school and so on). In essence, there is no proven need for a new road in the proposed position. The entire idea seems developer led and not based on sound evidence of need and effectiveness. There is a real risk that if allowed this new road will simply pile pressure on the Council for further development north of the railway line despite that not being in this draft plan. The road north of the railway line will be entirely within the existing Green Belt which will be seriously damaged. This is inconsistent with previous proposals from the Council and provides no apparent benefit. It is outdated thinking and contrary to national and local policies. The proposed Link Road should be removed from the Local Plan and replaced with a sensible cycle/pedestrian route immediately to the north of the railway line as the Council previously proposed.		
8052353	Diane Snape			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Unsure	Unsure	I strongly object to the proposal to construct new Cross Rail Link from the south of Nailsea to the east of Backwell, from Station Road near the station, in an easterly direction, to connect with the A370 East of Backwell. Such are the complications and enormous costs associated with such a road that it has previously been struck out of plans as unfeasible. The route would impact many hundreds if not thousands of residents in South & East Nailsea and North Backwell/Backwell Common/Farleigh, with the pollution, noise, light pollution and visual intrusion being magnified by the terrain, which necessitates the siting of the highway in the bottom of the valley (with incumbent flood risk: Flood Zone 3) and most of the properties sitting above it, with no possibility of adequate mitigation. N.B: Impact on residents and environment are missing from the list of considerations on page 26 of the Nailsea and Backwell Local Transport Strategy, and in section 4.7.4, next steps, mitigations for residents (which are critically required but undeliverable) are completely missing. These adverse effects, whilst already substantial for the under-bridge concept (which was previously under consideration but now seems to have been ruled out due to the flood risk which would be very difficult and expensive if not impossible to overcome) would be magnified many times by the overbridge structure which is now contemplated, involving a bridge 12.5m high, with ramps 250m long on either side, as described on page 28 section 8.4.3.12 of the Nailsea and Backwell Local Transport Strategy. Such a structure would also result in significant visual intrusion into the landscape, including sight lines from Tyntesfield, All Saints Church Wraxall and St Andrews Church Backwell. This is underlined by the Landscape Sensitivity Assessment, Nailsea, s.6.2.58 on page 34 which defines the land as high sensitivity: “...and to the south-east of the town is gently sloping and vegetation on field boundaries is generally limited. Consequently, this land is visually prominent. In addition, there is existing visual coalescence between Backwell Common and Nailsea in some locations. Owing to the above, this land is of high sensitivity.” The proposed road would cross sensitive landscape, located in the green belt, consisting of prime agricultural land and would also pass close to Backwell Lake Local Nature Reserve and local green spaces/wildlife habitats ie Backwell Common and Trendlewood Park/Kenn Hedge. It would have a significant impact on the setting of the Listed Heritage Asset of Moorside Farm. Note: the “Low” sensitivity assessment for Moorside Farm in the Heritage Sensitivity Paper, page 13, East Backwell, completely neglects to consider the impact of the proposed road link.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Similarly, the “Low” sensitivity assessments for Dibdens Farm, Cider Farm and Old Farm completely neglect the impact of the proposed road on the setting of these Heritage assets and their surroundings ie Backwell Common. The intersection of the route with Station Road would lead to significant incremental congestion and pollution close to residential properties and the Backwell Lake Nature Reserve due to standing traffic waiting for right of way. The increased traffic, and the need to negotiate the junction, would substantially increase danger to pedestrians and cyclists, particularly students at Backwell primary and secondary schools and Nailsea commuters using the station. It would rapidly become a very busy and congested route, leading to major noise and air pollution. It would increase “rat running” through the area, particularly from M5 Junction 19 to Bristol Airport, an issue which is already problematic. This effect ould be exacerbated by the proposed associated measures to discourage traffic from using Station Road, Backwell. It would also funnel the increased northbound (Nailsea-bound) traffic generated by the proposed East Backwell development into the constriction of Bucklands Batch on the South side of Nailsea. This is a narrow section of road which has already been widened to the extent possible by incorporating a strip of the frontage of each property along its East side, and has been the scene of numerous accidents causing injury to cyclists and pedestrians despite the addtion of a one-way cycleway. There are no firm costings or funding guarantees for the proposed new road in the Infrastructure Delivery Plan. If the East Backwell housing site allocation (to which I am submitting my objections concurrently) is dropped, the option to develop a North Nailsea Link Road should be seriously considered. This option would provide an onward link from Clevedon Road to the B3130 Nailsea to Wraxall road, serving the development sites to the West and North West of Nailsea already allocated within the local plan to 2026 and the industrial estates in the West and North of Nailsea, as well as the proposed allocations in North and West Nailsea, and deflect traffic from the Nailsea developments away from the congested centre of Backwell, avoiding the massive infrastructure complexity, cost and lead time to deliver a new link road. It would also maintain the separate identity and character of Nailsea and Backwell by avoiding the construction of a major link road in the green belt between the settlements. It would improve the routings for fire appliances, ambulances and police vehicles, improving safety and taking this inappropriate traffic away from Nailsea town centre. Such traffic will no doubt be forecast to increase significantly as a result of the new developments.

29066945	Charlie Crooks			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Unsure	Unsure	The Nailsea & Backwell Station car park already fills most of the strategic gap between the two settlements. It is difficult to see how it could be expanded without filling the strategic gap which would remove the independent character of the two settlements, have to be built on the floodplain adjacent to Backwell Lake (reservoir) and disrupt the travel routes of greater and lesser horseshoe bats which feed in the area.			
39402529	Network Rail		Network Rail							We wish to emphasise our support for the development of integrated transport hubs at railway stations, which will enhance connectivity and improve the overall passenger experience.	Network Rail LDP comments.pdf
8052353	Diane Snape			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Unsure	Unsure	I strongly object to the proposed expansion of Nailsea and Backwell railway station on Station Road. It is not suitable for development as a future transport hub. There is insufficient space for increased parking and bus interchange facilities. The current station is very small and basic and there is very limited scope to improve the facilities in its current location. It is inaccessible for people with mobility challenges and is difficult to navigate when travelling with young children. Additionally, any incursion onto the land to the east of Station Road (for additional parking, bus hub, for example) would adversely impact the setting of the listed Moorside Farm A better solution would be to relocate the station from its current, highly constrained location to a new location further west where space is less constricted and it is more feasible to establish a transport hub, with appropriate walking/cycling and bus connections to the Grove Farm and Youngwood Lane developments. This could also provide a new multi-modal railway crossing point west of Nailsea and Backwell, to the west of the Backwell crossroads, which could be delivered as a below ground structure, as described in s 4.3 of the Nailsea and Backwell Local Transport Strategy. It would also facilitate improvement of the rail service by providing longer platforms and lift/ disabled access and extended parking.			

Wick Road to Yeo Bank Lane (Tutshill Ear). Strategic cycle route between Weston-super-Mare and Clevedon.

58654113	David Glynn							There is reference here to a 'Strawberry Line Extension – Congresbury to Blagdon' While this might have been raised, and perhaps should have been flagged, as a preferred route many years ago, it is very unlikely that anything significant could be done about it now. In fact, this has been explored informally in the distant past. Coincidentally, there is a brief report in the December issue of the Mendip Times which comments on the closure of the passenger rail line from Wrington to Blagdon in 1931. The goods service, primarily coal, stopped in November 1950, with the last service to Wrington from further west apparently in 1963. The old line and route weren't protected in any way, and none of the route appears to have been designated as a Right of Way. In the circumstances, it might be unrealistic, and very costly, to progress this now as the land is understood to be in varied private ownership and use. Note that this has been raised from practical perspective. I would certainly have used the route had it been available in the past, and would do in the future if it is ever successfully progressed. Coincidentally, I recently stopped on Ashey Lane to offer a lift to someone walking along the road as it seemed quite unsafe. The individual was very pleased as they had been forced to walk from near Langford to Blagdon, with no public transport service available, which illustrates a practical rural issue.			

Easton-in-Gordano/Pill: Marsh Lane to A369 Motorway Service Area

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 30921569	Lucy Byrne			Unsure	' Positively prepared ' Justified	Unsure	Unsure	There is insufficient detail about this active travel route. It is currently a very poorly maintained foot path. Will it be up graded to a paved dual use cycle route and if so is there any commitment to maintain it? current cyle routes in and around Pill are very poorly maintained with deep pot holes / encroaching vegetation / poor entrance & exits / narrow gaps / over hanging vegetation making them un usable and unattractive . Will there be lighting? to make this safe to walk on at night?	More efforts should be made to engage with local residents about the local active travel needs /best routes and more detail needs to be provided about the routes (surtfaces / maintainance / lighting / width etc.)

					• Effective			It doesn't go the most efficient route to the crossing point on the A369 which is never a good way to plan active travel routes.			

Festival Way Strategic cycle route extention

31078049	Peter Barker			No	• Effective	Unsure	Unsure	Limited cycle developments ignore Failand village. Possible developments include: - Traffic light development at junction of beggar bush lane and clevedon road to be sensitive to bike lights - currently if there are no cars then cyclists have to go through reds as the lights do not recognise cyclists - consideration of cycle lanes over the actively used beggar bush lane so as to better connect Failand to Bristol West and Central. Existing cycle routes through sandy lane are not suitable for commuters. Beggar bush lane is a dangerous road for cyclists who use it at a volume of around 1 cyclist every 2-3 minutes during commuting hours. Requirement to consider given limited public transportation links with failand and Bristol.	Fix Traffic lights as above. Consider studies to unlock potential of beggar bush lane.		

Royal Portbury Dock access under M5

30921569	Lucy Byrne			No	• Positively prepared • Justified • Effective	Unsure	Unsure	How is this an active travel route? it's a path to nowhere with no clear detail about were it goes once it hits the M5?	much more detail is required to show the active travel plans for all areas in and around the settlement of Pill. Proper community consultation needs to take place.		

Pill to Bristol Link along River Avon

30921569	Lucy Byrne			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	I can see no evidence of collaboration with Bristol city council about the necessary improvements to this highly important active travel route connecting not only Pill but the whole of North somerset to Bristol's active travel net work. This path is un surfaced and often impassible in the winter months due to mud and flooding. There are safety issues around steep un fenced in edges and lack of lighting at night. it is very narrow in places and crosses an SSSI I can't find sufficiet details about this Key active travel route that is being overstated in this local plan for it's capcity to deliver residents to and from Bristol. see photos There is no additional economic plan for more employment in Pill. The working age residents of the 44% increase in population will need to leave the village to find work. There will not be enough capacity in this plan for them to do this with public transport and active travel.	Proper local active travel consultations and plans need to be drawn up with proper engaement from local people. Consideration of the hard constraints along this path need to be made and if suitable mittigations cannot be found the housing allocation numbers need to be reconsidered.		Photos-3-001.zip

62471329	Environment Agency		Environment Agency					These two allocations proposed at existing and established site locations (allowed on appeal and temporary permissions granted since). These sites are mostly in Flood Zone 3 (tidal and fluvial). The northern part of Moorland Park, close to the A370 is in Flood Zones 1 and 2. This is a policy objection due to Flood Zone 3.
