					• Justified • Effective • Consistent with national policy			The new road planned will not help the dire congestion on Station Road, Backwell Common or Chapel Hill. None of these roads are suitable for any additional traffic. The congestion is at peak capacity. In addition the A370 itself is totally congested and very unpleasant for anyone walking along it. Making a road under a railway or across more fields is also not the answer. It will create more rat runs and more congestion. There needs to be more done to reduce cars in Backwell and this will not achieve it. Engineering the road under or over the railway would be expensive and unfeasible. Additional homes means additional traffic. It is unsafe for children to walk to the primary and secondary schools. The cars and heavy plant drive too fast and way over the 30 mile an hour limit. The pollution already too much. More cars will make the journey for our children to walk within Backwell unfeasible due to the dangers of the number of cars and heavy plant we are already experiencing on our roads let alone with the provision of more housing. These roads are already dangerous for children as a result of the speed and number of cars travelling. These plans will make it more dangerous for our children. There are currently no safe ways for children to walk to school. There is already a deficit in school places and no investment in health or the local leisure centre. In addition no investment in outdoor venues or facilities. There is no provision for youth groups or youth centres. There is not the infrastructure to support this development. No extra provision in the schools, health care, open space and leisure facilities. Backwell is a community and this number of houses cannot be supported by the poor infrastructure in existence. Backwell has already seen too much development. It is not a nice place to live with so much development going on. Residents are constantly stressed with the threat of development. Heavy plant goes up and down our roads and it is very noisy. There are lots of families that live here and the development makes it unpleasant for children to grow up in. Backwell is disproportionately being allocated housing. Other areas need to be considered. Clevedon for example which is much bigger and more infrastructure has only been allocated 2% where Backwell has 7%. This makes no sense and is very distressing on residents. There is no viability analysis for the extra 1000 homes. There is nowhere for people to work in Backwell. It is not an employment hub and so it will put more cars up and down the A370 which is already dangerous with the number of cars and highly polluted. No social cohesion impact has been provided The proposed site is Grade 1 Agricultural land. Losing this would be devastating for our food security. It is irresponsible to develop on this land. Only 7% of this land is left in Somerset. If this is destroyed the future if food security for us and our children is at stake. Government policy has also outlined that this needs protecting. These proposals undermine what the government has said and clearly promised. So to develop this land would go against government policy and promises. The environmental impact is of utmost concern. These plans would destroy habitats and harm biodiversity. These fields are major hunting grounds for wildlife. the devastation experienced by the Farleigh Fields development has seen the constant irradiation of wildlife habitats. These plans would be an environmental disaster. On top of the disaster experienced on grove farm and farleigh field developments. The Brockley maternity roost which is home to rare bats would be threatened. This includes the rare lesser and greater horseshoe bats relying on land for food. Many other species such as owls and starlings which are dying our rely on this land too. There are no funding guarantees for for a new road or services. The delivery plan for infrastructure lacks analysis and costings. The whole of Backwell Common is a flood plain. We have seen in recent weeks that the whole are turns into a flood plain and is water logged. This would impact existing dwellings as the water won't have anywhere to go. The whole areas precious character and heritage would be destroyed. Backwell Lake also regularly floods. This creates issues all over for transport. Building on flood plains which are grade 1 agricultural land in an area which has no infrastructure to support this population growth must be rejected. This area must be protected. It is against government policy and moral conviction. The volume of growth is distressing, exhausting, affecting the mental health of people that live here, unsustainable and undeliverable. The railway station is not a viable transport hub. There is no step free access and unaccessible for those with a disability or with children. I will not be voting for any councillor that allows this development to go through on their watch. I reject these plans on the below points too that have not been considered: Investment in healthcare No safe walking routes for anyone in Backwell, least not for children going to school. Loss of outdoor space Loss of greenbelt for future generations Loss of greenbelt for wildlife Loss of key hunting grounds for precious animals and birds No investment in the swimming pool that is falling apart No investment in the community and health care no investment in the community the traffic is terrible and damaging for our health and for our children The appearances of these estates are always terrible and not in keeping with the heritage and look and feel of the area The traffic is too fast and too much heavy plant traffic The roads around Backwell such as church lane are always rammed with traffic going too fast. This will get worse in future with this development and people driving their kids to school up Church Lane as there are no safe walking passages and no traffic calming in place. The development in Backwell is vastly disproportionate to any other area. This would be an environmental catastrophe The traffic is too much The traffic is too much, children cannot walk safely to school	houses needs to be reduced significantly. The open land needs to be maximised There need to be parks Safe walking and cycling routes to all schools Infrastructure investment A commitment to no further development at all in Backwell More doctors, spaces in school Investment in infrastructure Build a community, not houses Create areas that are protected for animals and birds Open areas Paths away from roads for cyclists and walkers to walk to Backwell, without having to go along any road Measuers to protect against pollution from increased traffic Stop heavy plant going up and down the A370 Reduce traffic and speeds on A370 Protect the culture and heritage of the village and area Commit to no more development. Ever. Traffic calming Reduce car speeds Reduce heavy plant and commercial vehicles going through the village Protect roads like Church Lane that will be impacted. Make the estate look nice and in keeping with the area, not Lego houses that we often see A proper park Investment in schools and areas for children Create a community youth centres development to cease in Backwell and other areas to be considered Protect the grade 1 agricultural land and do not build on it To be clear, this development should not go ahead.		
51460097	K Collier			No	• Positively prepared • Justified	Unsure	Unsure	The proposal to add 1,000 more houses to Backwell is seen as unacceptable because the village is already absorbing significant growth (800 approved homes, a 40% increase) without the necessary infrastructure. To take the further growth as well would increase the size of the village by over 80%. The village is a commuter hub, not an employment one.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					‣ Effective ‣ Consistent with national policy			Backwell is 'allocated' a higher number of houses than any other village in North Somerset, and even a higher growth percentage than towns. It is also not an employment hub so much of the proposed growth in houses will drive more people to use roads already at capacity. Backwell is being asked to take a disproportionately high share of North Somerset's housing allocation despite not being an employment centre, with no needs, viability, or social cohesion assessments to justify the scale. The development would also cause the loss of Grade 1 agricultural land, contradicting government policy on protecting high-quality farmland and threatening local food security. Significant environmental harm is expected, including loss of wildlife habitat and risks to protected bat species. The proposed new road is unlikely to solve existing traffic problems and may not be deliverable at all. It would be extremely costly, technically difficult, especially where it must cross the railway and flood-prone land, and no responsible body has committed to funding or building it. As a result, there is a high risk the road will never be constructed, despite being essential to the plans. Essential services including school places, healthcare, and leisure facilities are already insufficient, and no funding guarantees or detailed costings have been provided. Flooding risks on Backwell Common, the lake/reservoir area, and surrounding floodplain land would be worsened. The railway station is not suitable as a major transport hub. Overall, the volume and pace of proposed growth are viewed as unsustainable, damaging to the area's character, and not deliverable with current infrastructure or funding.			
30497697	Gill Collinson			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I am objecting to the proposed Local Plan 2041 because; Backwell has already had to accept the approval of 800 new homes. These approved new homes will have a significant effect and impact on the existing village. This will become most noticeable on the existing services such as schools, doctors surgery, pharmacy, and dentist. There is no provision for extending the village centre to increase provision. Similarly the other services such as the leisure centre and the HWRC at the top of Dark Lane will suffer from under capacity for the numbers of people requiring their use, and severely impacting on the road network to access such facilities. In a similar manner, the existing railway station at Backwell / Nailsea is very limited in capacity with virtually no services. There is no accessible access to the platform and is unfit to accept large numbers of additional passengers that would inevitably look to travel from this facility. Backwell is not a major employment location. It has to be anticipated that the majority of those new houses already approved will be for commuters to Bristol. The existing road network is already suffering from new housing built along the A370 passing through Backwell. This particular section of the proposed Plan identifies Grade 1 agricultural land for development, including a new road indicated (although unspecified) to cross the existing railway line. Such a loss of specific agricultural land should not be used for high density housing, and whilst the proposed new road remains outside the scope of any developer it is unlikely to be completed. This area is also a known flooding hazard which should be left for natural dispersion.			
39195041	R Collinson			No	‣ Justified ‣ Effective	Unsure	Unsure	I am objecting to this Local Plan 2041 proposal on the basis that ; It is over development with a lack of additional resources to infrastructure, services to support either the existing or new residents. Backwell has already had approved the development of an additional 800 homes, some of which have started. The proposed additional numbers on top of this represents over development without the sufficient resources to support and manage such a population increase. There is no indication of additional resources for the services here that are already at capacity. Facilities such as schools, doctors, dentists, and pharmacy are already under stress to cope with the existing population, even before the approved 800 homes are occupied. Additions beyond this will be unsustainable. In a similar manner the HWRC in Church Town (a conservation area) currently creates traffic issues in limited capacity roadways. There does not appear to be any proposals for managing the existing system let alone resiting the recycling facilities. The same problems will occur for the leisure centre where limited parking is available. Backwell is not a significant employment area. It must be predicted that most new homes will be for commuters into Bristol. Already the main road passing through the village (A370) is at full capacity mornings and evenings from commuters living in the surrounding area where huge development has occurred. Whilst there is a railway station for Backwell / Nailsea, it is of insufficient size and capacity to take predictable additional commuters even before these additional homes are proposed. There is no accessible access to the railway platform which today is unacceptable to be sustainable. The proposed additional homes of about 900 in number are indicated to be on Grade 1 agricultural land. Given the Government policy is to protect such land, and given all the lack of infrastructure to go with such residential developments none of there proposals should be considered.			
62765473	Phil Collinson			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The Local Plan proposes an additional 1,000 more houses in Backwell. The village already has 800 new houses approved, a 40% increase for the village. The additional 1,000 would be a further 36% increase for the village. Despite this increase, there is a lack of supporting infrastructure to support a further 1,000 houses. Backwell Common & the surrounding areas are prone to flooding, which would be aggravated by more housing. The proposed Link Road, either under or over the railway, will be highly expensive & possibly unfeasible. Backwell has been allocated a higher number of houses than any other village in North Somerset. For these reasons, I object to these proposals in their present form.			
62848609	Matthew Cook								Consent for a further 1,000 houses in Backwell should not be given. The expansion of Backwell is against the will of the people of Backwell. The quality of life for the residents of Backwell would be diminished by this Plan, with the loss of green space around the existing village, loss of wildlife habitats, increased traffic and		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									the over-burdening of local facilities and amenities; not to mention the continuation of the mess and noise already inflicted on the people of Backwell by Central Government with previously-approved developments. There would also be the loss of valuable farmland, precious little of which is left in North Somerset and which is a lifeline for its people; purported Central Government policy is that we must protect our land to safeguard food security and this proposed development would be contrary to that policy. The erosion of the greenbelt between Backwell and Nailsea would lead to urban sprawl, devastating the character of both villages and this area of North Somerset in general. I strongly reject this development proposal and so should North Somerset Council.		
21471105	Charles Cook		Cabinmakers Ltd	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Subject: Formal Objection to the NSC Local Plan - Backwell I am writing to express a strong objection to the proposed NSC Local plan especially in relation to Backwell. The scale, location, and supporting infrastructure for this scheme are wholly inappropriate and pose significant risks to the environment, the character of the area, and the wellbeing of existing and future residents. My concerns are outlined below. 1. Backwell is already under exceptional development pressure, with 800 new houses recently approved—representing a 40% increase in the size of the village. Adding the proposed further allocation would result in complete and unsustainable overdevelopment. 2. The proposed new road would not resolve existing traffic issues in Nailsea or Backwell. It would fail to relieve congestion on Station Road, Backwell Common, or Chapel Hill. Engineering a road across, under, or over the railway would be prohibitively expensive and potentially unfeasible. 3. Infrastructure is already inadequate. There is a shortage of school places and no parallel investment in health services or leisure facilities. Current services cannot support an additional 1,000 homes. 4. Backwell has been disproportionately targeted for growth, being allocated more housing than any other village in North Somerset—and even a higher proportional increase than some towns. Backwell is expected to take 7% of the district's housing allocation, compared with Clevedon's 2%, which is unjustifiable. 5. There is no needs assessment or viability analysis supporting the case for an extra 1,000 houses. 6. Backwell is not an employment hub, and most residents commute. Increasing housing without corresponding employment provision is unsustainable and increases traffic and carbon emissions. 7. No social cohesion impact assessment has been provided, despite the dramatic scale of growth proposed. 8. The development would destroy Grade 1 Agricultural Land, which is currently used for food crops and grazing. Only 7% of such high-quality land remains in North Somerset and should not be sacrificed. 9. Government policy explicitly states that "we must protect our best and most versatile land" to ensure food security. These proposals contradict national policy and jeopardise long-term food supply. 10. The scheme threatens biodiversity, destroying valuable wildlife habitats in a country already recognised as one of the most nature-depleted in the world. 11. The Brockley Maternity Roost and SSSI are at risk, with rare Lesser and Greater Horseshoe Bats dependent on this land for foraging. This development would irreparably damage protected species' habitats. 12. The Infrastructure Delivery Plan is incomplete, lacking analysis, costings, and any guaranteed funding for essential roadworks or community services. 13. Backwell Common and surrounding areas are prone to flooding, and further development would exacerbate this risk. 14. Designation of the area as a strategic growth location raises serious concerns, including loss of Greenbelt and high-quality agricultural land, increased flood risk, harm to the village's character, and uncertainty about road funding and deliverability. 15. Backwell Lake (Reservoir) and adjacent fields lie on a floodplain, where flooding is already frequent. Building roads and houses here is irresponsible and unsafe. 16. Government policy requires 50% affordable housing on Greenbelt land, but this reduces developer contributions toward crucial infrastructure, leaving gaps in funding for vital services. 17. The sheer scale and speed of the proposed growth are destabilising, unsustainable, and undeliverable, given the amount of infrastructure and service investment required. 18. The railway station is not fit for purpose as a transport hub, being inaccessible for people with mobility issues and extremely challenging for families with young children. Expanding housing numbers without improving station access contradicts sustainable-transport goals. _____ In light of the above, I urge you to reconsider the proposals. It is neither sustainable nor justified, and it fails to meet the standards required for responsible planning, environmental protection, and community wellbeing.			
62857409	H Coombs			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell cannot sustain any further development.. 800 new houses already approved which is an increase of 40% - these additional numbers would lead to disastrous overdevelopment. The proposed new road would not effectserve nailsea's traffic or relieve congestion on Station Road, Backwell Common or Chapel Hill. Constructing a road and negotiating the railway line by going under or over would ne expensive and unfeasible. The village has lack of infrastructure and services and could not support an additional 1000 houses. There is a deficit in school places and no investment in health services. The existing health services are already under strain without the completion of the planned 800 houses at Grove farm and Farleigh fields. Backwell is allocated a higher number of houses than any other village in North Somerset and a higher growth percentage than other towns. 62855233	E Cooper			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	There is a disproportionate allocation of potential new housing to Backwell, in spite of its impact on green belt land and the local ecology, resulting in over-development and increased flood risk, and seemingly without detailed analysis or an adequate description of mitigation measures. I feel that NS Council is bowing to pressure and has simply supported the option of allocating land to areas where it can most easily be seen to comply with (possibly unachievable) government targets, whilst simultaneously disregarding the principles of good planning that should protect valuable habitats, prevent over-development and support more joined-up thinking. As it stands, I believe the legacy of this draft local plan will have detrimental consequences far into the future, whilst only partially achieving its paramount aims. And, once the damage is done, it is irreversible. We hope that North Somerset Council supports its citizens points of view in this, through its challenge to consult.			
62856417	Eddie Corlett			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell is already facing significant development pressures, with 800 new houses approved—representing a 40% increase in the size of the village—and any further large-scale development would constitute severe overdevelopment. Despite this substantial growth, essential infrastructure has not kept pace. There is already a shortage of school places, and no investment has been made in health services or leisure facilities to support even the existing level of expansion. Adding another 1,000 homes would place an unsustainable strain on local services. Backwell has been allocated more housing than any other village in North Somerset, and even more than some towns. The village is expected to take 7% of the district's total housing allocation, compared with just 2% for Clevedon. Yet no needs or viability analysis has been provided to justify such a disproportionate level of growth. Backwell is not an employment hub, and most residents commute elsewhere for work, meaning the proposed development would increase traffic pressures rather than alleviate them. The proposed new road intended to support this development would not meaningfully address existing congestion in Nailsea or relieve pressure on Station Road, Backwell Common, or Chapel Hill. Engineering a road under or over the railway line would be extremely costly and may not even be feasible. Furthermore, the Infrastructure Delivery Plan provides no detailed analysis, costings, or secured funding for the road or other essential services, raising serious doubts about deliverability. There are also major environmental concerns. The development would result in the loss of Grade 1 agricultural land—land of the highest quality used for food production—of which only 7% remains in North Somerset. This contradicts government policy requiring the protection of the "best and most versatile" land to safeguard food security. Wildlife habitats would be destroyed, further worsening biodiversity loss in a country already severely depleted, and the proposals pose a direct threat to the Brockley Maternity Roost and SSSI, which supports rare Lesser and Greater Horseshoe bats. Flood risk presents another serious issue. Backwell Common and surrounding areas already flood regularly, and the proposed housing and road infrastructure—including areas around Backwell Lake—lie on floodplain land. Additional			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								development would only increase flood vulnerability, putting new and existing residents at risk. Further concerns, for me, include the absence of a social cohesion impact assessment and the uncertainty surrounding the strategic growth location designation. Significant growth in such a short time, without the necessary infrastructure or services, would be destabilising, unsustainable, and ultimately undeliverable. The railway station, which is meant to serve as a key transport hub, is itself unfit for purpose—remaining inaccessible to people with mobility issues and posing challenges for families with young children. In summary, the scale of proposed development in Backwell is neither justified nor supported by evidence, in my opinion. It threatens local character, valued landscapes, essential farmland, biodiversity, and community wellbeing, while relying on infrastructure that is underfunded, uncertain, or unfeasible. The plans are unsustainable and should not proceed without robust analysis, proper infrastructure commitments, and full consideration of environmental and community impacts.			
62853697	Li			No	• Effective	Unsure	Unsure	It is not safe to build further housing in this area due to the sheer load of traffic and accidents that occur along the A370mat the point of the new proposed development. It already can take up to half an hour just to pull out of my road onto the A370. The M5 often has problems and this severely affects this major road between weston and Bristol. School traffic is a night mare and I have spent an hour getting out of my dad to turn right	Consider bigger towns and areas that have better infrastructure. stop polluting the villages. keep the village life don't make villages into cities		
21243681	Jo Court			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	As a Backwell resident for over 60 years I am horrified at the latest proposals for new building on the land esst of Backwell. Already we have seen new development, with these new proposals we will cease to be the the beautiful friendly village I once new. A 40% increase is just not sensible. Nor is it feasible. There is a deficit of school places, there will be no investment in health services. Traffic is already a problem, especially station rd. The new road would I very much doubt make anything better. This is prime agricultural land, grade 1. Why must this land be sacrificed for wreckless and irresponsible housing development. As someone who loves the countryside, It saddens me to think of the impact this will have on flora and fauna.			
39035137	Anthony John Cox			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	Backwell already has 800 new houses approved and this is a 40% increase. an almost 900 extra new houses would be vast overdevelopment and there isn't the infrastructure in the village to support such a large development. Backwell is classified as a village yet it being targeted with 7% of the district's housing allocation. This a much higher proportion than the towns where most of the new houses are meant to go according to the strategic placement plans. The land for these new houses is grade 1 prime agricultural land within the green belt and is currently used for food crops and grazing. There is only 7% of this high quality land left in the whole of North Somerset and government policy says we must protect out best and most versatile land to safeguard food security. High quality green belt land should not be used for development if there is lower quality land available and there certainly is adjacent to the link road near Bristol and other places within the district. The proposed new road would not effectively serve Nailsea's traffic or relieve congestion on Station Road and there is no guarantee it could be funded or built further than any new development. Engineering the road under the railway would be highly expensive and disruptive and possibly unfeasible. The road would also be through green belt land and damage the strategic gap between Nailsea and Backwell. Backwell is not a centre of employment and this development would increase commuting on already congested roads, it is also remote from shops and other facilities and most journeys from the development would require car journeys increasing pollution. The development would destroy valuable wildlife habitats and further harm biodiversity in one of the world's most nature depleted countries. It is also in land regularly used for foraging by Greater and Lesser Horseshoe bats. As someone who regularly walks these fields I can attest that they regularly become saturated and there is often standing water on them in the winter months.	This development needs to be removed from the plan. Little consideration seems to be given to how the plan works with expansion of Bristol airport; development should be better placed nearer the airport in the Felton/Winford area. While Backwell is near the airport there is no easy access to it or public transport to the airport. There is also lots of unofficial airport parking in that area and that land should instead be used for development.		
30659041	C Cox			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell Common and the whole of the surrounding area is prone to flooding. This housing would further aggravate the problem and make everything even worse. Chapel Hill has already been on the news a few times for being flooded and impassable. Further housing would make this worse., and this isn't even allowing for worse weather conditions that have been predicted for the future. Where there isn't flooding there is high quality agricultural land which would be lost for ever. Only 7% of all of North Somerset's land is high quality agricultural, and you are intending to use it for housing? Government policy actually states that we must protect our best and most versatile land to safeguard food security. These proposals contradict this policy. Backwell is not an employment hub. People living there would have to commute to Bristol or Weston-Super-Mare and the roads are already at capacity, as is the railway. The railway station itself is not fit for purpose as a transport hub. After all these years, it is still inaccessible for people with mobility issues and dangerous for people travelling with young children. The proposed road would not serve its purpose of relieving traffic on Station Road or Nailsea, and would be extremely costly. The Infrastructure Delivery Plan lacks analysis and costings, and there are no funding guarantees for this new road, even if it were to prove to be useful. Backwell does not have the infrastructure to support such a development, and the village has already had an increase of 40% in its housing numbers with no improvement. It makes no sense to build another 1000 houses in that area. The whole proposal is unsustainable and undeliverable.			
28768769	Frank Cox			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell already has 800 new houses approved, a 40% increase for the village, with no significant improvement to infrastructure or public amenities. An additional 900 houses is a complete over-development and is not sustainable. These numbers are disproportionate with development proposals for other villages and towns within North Somerset and will totally change the character of Backwell, to its detriment. This proposal totally ignores the views of the local residents and Backwell's Neighbourhood Plan. Backwell is not an employment hub and most residents commute to work. The proposed road will not adequately serve Nailsea's traffic or relieve congestion on Station Road, Backwell Common, or Chapel Hill, and the additional junction will exacerbate congestion on the A370. Engineering the new road under or over the railway will be extremely expensive, possibly unfeasible and there is no believable or realistic delivery plan in place. The railway station is not fit for purpose as a transport hub as it remains inaccessible for people with mobility issues and presents serious challenges when travelling with young children. Backwell Common and surrounding areas are on a floodplain and prone to flooding, which would be aggravated by new development. Much of this land is Grade 1 Agricultural Land and building over it would be contrary to government policy.			
39211329	Sarah Cox			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell has been allocated a higher number of houses than any other village in North Somerset, and an even higher growth percentage than towns such as Clevedon which has been allocated 2%. Backwell is expected to take 7% of the district's housing allocation. It already has 800 new houses approved which is a 40% increase for the village. The additional proposed numbers would lead to a complete overdevelopment, and the lack of infrastructure and services cannot support an additional 1000 houses. There is a deficit in school places ad there is no investment in health services or leisure facilities. Backwell is not an employment hub and most residents commute. The roads in Backwell are already congested and the proposed road will likely not be sufficient, very expensive, and possibly unfeasible given it would need to run over or under the railway line. The train station is not designed as a transport hub and is inaccessible to those who are disabled or for those with young children. The land is currently used for food crops and grazing and is Grade 1 agricultural land there is only 7% of this high quality land left in North Somerset. This proposal contradicts Government policy that states that "we must protect our best and most versatile land" to safeguard food security. It

								would also destroy wildlife habitats and cause further harm to biodiversity. Backwell floods badly, and Backwell Lake and the adjacent fields where the housing is proposed are on a floodplain.			
62840545	L Cox			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Recent building of new houses in Backwell has increased the number of homes by 40% Despite the increase there is no investment in education facilities and health services Most residents commute to work so increasing number of homes will compound traffic problems. Hardly a day goes past without roadworks and temporary traffic lights on the A370. It is also now a frequent occurrence for either the M5 or M4 to be closed. This causes gridlock regularly on the route from Backwell to Bristol. Extra housing will make this worse. Grade 1 agricultural land in North Somerset is at a premium and needed for grazing and food crops.Building on this type of land is in direct contradiction of Government policy to protect our best and most versatile land in order to safeguard food security. More house building will put strain on rich wildlife habitats locally particularly with regard to colonies of rare bat species.Biodiversity will be at risk Backwell lake and the surrounding land where new housing and roads are planned, are on a flood plain. Further paving and road surfaces will reduce green areas where potentially this flood water would be able to drain away			
62796097	R Crabtree			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Formal objection to the proposed further housing development in Backwell I write to register my formal objection to the proposed additional housing developments in Backwell. The grounds for objection are set out below. 1. Excessive cumulative development. 1.1. Planning approval has already been granted for approximately 800 new dwellings, representing an estimated 40% increase in the village's housing stock. 1.2. Any further expansion would constitute over-development, placing disproportionate pressure on existing services and fundamentally altering the character of Backwell as a rural village. 2. Road safety, traffic capacity, and transport infrastructure. 2.1. The local road network is already operating beyond safe and reasonable capacity. Station Road, where I reside, experiences constant congestion and high volumes of heavy vehicles. 2.2. The narrow pavement from the railway station to Westleigh Infants' School and Backwell Comprehensive School presents a significant risk to students and pedestrians, particularly when buses and lorries pass in close proximity. 2.3. Proposals to construct a road over the railway line at Backwell Common (near the George public house) would result in substantial visual intrusion, landscape harm, and engineering risk. 2.4. The alternative option—widening the existing railway bridge—is compromised by frequent flooding, which already leads to road closures. 2.5. Any works affecting the main railway line serving London, Exeter, Plymouth, and Cornwall would generate major disruption for rail operators and passengers. 3. Insufficient public services and healthcare provision. 3.1. Existing GP surgeries, dental practices, and schools in Backwell are already under strain. 3.2. It is unclear what assurances, if any, exist that additional medical, dental, educational, and social-care staff will be funded to meet the needs of thousands of new residents. 3.3. Current government capacity does not indicate that such staffing increases will be provided, resulting in unacceptable service delays and unmet community needs. 4. Inequitable housing allocation compared to other areas. 4.1. Backwell has been allocated a significantly higher proportional housing increase (approximately 7%) than nearby settlements such as Clevedon (approximately 2%). 4.2. Backwell's limited retail and service infrastructure—consisting of small shops, cafés, and minimal commercial facilities—cannot reasonably support such disproportionate development, especially when compared with Clevedon's and Nailsea's far more extensive amenities. 5. Commuter pressures and lack of transport capacity. 5.1. Backwell functions predominantly as a commuter village, with heavy reliance on rail and road connections to London, Bristol, and the South West. 5.2. Existing train services are already at full capacity, often with standing-room only. No evidence has been provided that developers or rail operators plan to increase service levels to accommodate additional demand. 5.3. Road congestion into Bristol is already severe; an increase in population will cause further delays, impacting on school schedules, employment, and daily travel. 6. Insufficient community facilities. 6.1. Village halls, sports clubs, and recreational facilities are already heavily utilised. 6.2. Additional population growth without corresponding infrastructure expansion will result in significant shortfalls in community provision. 7. Loss of Grade 1 agricultural land. 7.1. The proposed development threatens remaining areas of Grade 1 agricultural land, of which only approximately 7% remains in North Somerset. 7.2. These high-quality soils are essential for domestic food production and grazing; their loss would be contrary to national sustainability and food-security objectives. 8. Environmental and climate-related concerns. 8.1. National and global policy increasingly supports plant-based agriculture and reduced environmental impact. 8.2. Building on agricultural land undermines food resilience, contributes to climate stress, and conflicts with objectives to protect carbon-absorbing landscapes. 9. Biodiversity and wildlife impact. 9.1. The fields surrounding Backwell support wildlife habitats essential to already vulnerable species. 9.2. Development in these areas would further diminish biodiversity in one of the world's most nature-depleted countries and contravene ecological protection			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								principles. 10. Flood risk and development on flood plains. 10.1. Backwell Common is designated as a flood plain and is known to flood during periods of high rainfall. 10.2. Extensive hard surfacing and road infrastructure will exacerbate surface-water flooding, with water redirected into residential areas. 10.3. Past experience—both locally and in wider Somerset—demonstrates that building on flood plains results in repeated property damage, unsafe living conditions, and costly remediation. 10.4. Building on a flood plain is widely recognised as unsafe and unsustainable. Lessons from previous developments must be taken seriously. 11. Additional flood-risk concerns: Backwell Lake. 11.1. The Backwell Lake (reservoir) area and adjacent fields also flood regularly. 11.2. Additional development will increase downstream flood risk to existing homes, infrastructure, and ecosystems. 12. Lack of accessible railway facilities. 12.1. Backwell and Nailsea railway station is not compliant with accessibility requirements. 12.2. The Bristol-bound platform has ramp access, but return access requires navigating stairs, which is unsuitable for wheelchair users, pushchairs, and passengers with limited mobility. 12.3. No proposals have been provided to address these deficiencies, despite increased demand. 13. Funding constraints due to affordable housing requirements. 13.1. Government policy requiring 50% affordable housing which restricts developers' ability to finance essential infrastructure such as schools, medical facilities, transport upgrades, and flood-mitigation works. 13.2. No comprehensive infrastructure costing or impact analysis has been provided to demonstrate how Backwell will absorb such rapid population growth. 14. Housing affordability and economic feasibility. 14.1. With rising living costs, many households already struggle to afford food, heating, and essential needs. 14.2. It is questionable whether the proposed housing will genuinely be affordable to local people, especially when factoring in increasing commuting and transport costs. 14.3. Significant risk exists that new homes will not meet local demand, undermining the development's stated purpose. Conclusion For the reasons detailed above—including transport constraints, environmental harm, flood risk, infrastructure inadequacy, loss of agricultural land, and disproportionate development—I strongly object to the proposed further housing development in Backwell. The proposal, as it stands, is unsound, unsustainable, and inconsistent with the long-term interests of the community. I respectfully request that the planning authority reject this development proposal.

It is questionable whether the proposed housing will genuinely be affordable to local people, especially when factoring in increasing commuting and transport costs. 14.3. Significant risk exists that new homes will not meet local demand, undermining the development's stated purpose. Conclusion For the reasons detailed above—including transport constraints, environmental harm, flood risk, infrastructure inadequacy, loss of agricultural land, and disproportionate development. The proposed allocation is unsound, unsustainable, and inconsistent with the long-term interests of the community and it should be removed from the draft local plan.			
31072289	Jeanne Craske			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell is potentially taking a disproportionate share of the North Somerset housing allocation, in spite of the fact that it has few facilities and is overcongested already. Several housing developments are already in progress and the effects of these have yet to be assessed. The health and well-being of existing and new residents will inevitably suffer if permission is granted for a site as large as this, on top of those which already have permission. Residents of the wider area will also suffer from the congestion on narrow routes through Nailsea or towards the M5 and those travelling along the A370 are likely to be held up in standing traffic. Thjs plan does nothing to mitigate the effects of climate change. There is no clear indication as to whether a new road is viable. It is not known whether this number of houses is actually needed in this location. There is insufficient evidence that the infrastructure will support a development of this size. Backwell is not a centre of employment so residents will always have to commute elsewhere. It makes no sense to build on such good quality agricultural land when there are more suitable brownfield sites elsewhere. Losing land such as this is against Government policy of protecting food security. The area is also at risk of flooding. Our already depleted wildlife will be further adversely affected if this goes ahead. Whilst Nailsea and Backwell are being targeted for large scale development on the strength of having a railway station, the station cannot be regarded as suitable for a transport hub as the road layout around it is so poor. Added to which it is unsuitable for use by the disabled, having a ramp on only one side. There is also no guarantee of an improved bus service for travel to and from the station.	Reduce the number of houses allocated to Nailsea and Backwell to reflect environmental and infrastructure constraints. Prioritise finding alternative locations with brownfield capacity and transform disused buildings and those adjacent to town centres (of which there are plenty in Nailsea – eg the old Weston College which is an eyesore.) Avoid development on flood plains. Ensure that the effects of previously permitted developments are assessed before giving permission for more. Ensure that improvements to infrastructure are carried out prior to new developments. Ensure that housing types meet the requirements of potential purchasers. Ensure that sites for schools and community facilities are provided in a timely manner. Reallocate housing so that Nailsea and Backwell take only their fair share of the North Somerset allocation.		
51424929	Michael Craske			No		Unsure	Unsure	It is a totally unreasonable to expect Backwell to take such a massive proportion of North Somerset's housing target. Permission has already been given for a large number of houses, some in the process of being built and others not yet started. The effect of these developments should be reviewed before other areas are considered. The plan accepts that development in rural areas is less sustainable, yet Backwell is being targeted for large-scale development in spite of the	Review the housing allocations to distribute them more sustainably across the county, ensuring that brownfield sites are revitalised first.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								fact that it has already grown larger than is sustained by its infrastructure and facilities. The character of the community would be changed irrevocably by a development on this scale. The presence of a railway station seems to be a factor in the decision-making process, yet the station can hardly be regarded as a useful transport hub, being situated, as it is, on a very narrow road, with no access to the southerly track for the disabled and with a poor nearby bus service. Other than the already congested A370 the roads in and out of Backwell are country lanes which could not cope the potential increase in traffic. There is no guarantee that a new road would be built, especially as it would involve crossing the railway. The health and well-being of residents, new and existing, would be badly affected by such large-scale development, yet there is no evidence that so many houses are required in this locality. The plan will not achieve any reduction in car dependency as most residents commute from Backwell as there is insufficient employment in the locality. This land is used for grazing and food crops and should not be lost. It is also a valuable haven for wildlife. The land is low lying and at risk of flooding. The release of Green Belt is not justified by exceptional circumstances and the scale of the development does not recognise local constraints.	Ensure that improvements to infrastructure are carried out prior to new developments.		
29010721	K Crawford			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I wish to formally object to the inclusion of land at East Backwell, a huge 50 Hectare site, being included in North Somerset Councils Local Plan. It is proposed to take this large site out of the Green Belt and seemingly ignore that it is all designated Grade 1 Agricultural Land. Government is seeking to retain the “Best and Most Versatile Land” – Grade 1,2 and 3a and yet, despite only 7% of this land being left in North Somerset, has included this allocation in the Local Plan. Backwell has more than satisfied Government’s requirement and actual need for housing with an additional 800 houses with planning permission. The additional 900/1,000 houses proposed on East Backwell would result in the complete overdevelopment of the village, which in my view is unsustainable and would irreversibly alter the character and nature of our village, as well as destroying the few remaining fields for wildlife, biodiversity, food, crops and grazing for cows. There are indeed few walks left in the village for residents to enjoy exercise and quiet enjoyment for mental wellbeing. We are in danger of no longer having access, without driving, to our own countryside. I have not seen any viability analysis for an additional 1,000 houses. I have not seen any impact statements, I have not seen any assessment, viability study, detailed plans or costings on the proposed new “road” which would supposedly support this level of additional housing. Indeed, the notion of a road going either under or over the railway line seems completely unrealistic when it has been impossible to even make our train station fully accessible. This Plan raises more questions and serious concerns than it addresses. It would destroy high quality land, which we can never replicate, in order to hit a spreadsheet target. This Plan is completely Unsound and North Somerset Council should remove Land at Backwell East with immediate effect and ensure it’s previous protections are restored.			
62832193	Hilary Crisp			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The plan cannot be considered sound or deliverable in its current form because several fundamental issues have not been addressed. Backwell is already committed to around 800 new homes, representing an unprecedented expansion for a village of this size. Adding a further allocation of roughly 1,000 properties would amount to disproportionate development, far beyond what the settlement or its infrastructure can reasonably absorb. This level of growth is significantly higher than that proposed for other villages and even exceeds the proportional increases planned for some towns; Backwell is expected to accommodate around 7% of the district’s housing target, while places such as Clevedon are asked to take far less. The transport proposals are neither justified nor viable. The A370 is already overloaded at busy times and when Flax Bourton floods in heavy rain (which is no infrequent). The suggested new road would not meaningfully resolve congestion on key routes including Station Road, Backwell Common, or Chapel Hill. Creating a crossing under or over the railway is likely to be technically challenging, prohibitively expensive, and may not be feasible. There is no evidence that the scheme would improve traffic flow for Nailsea or Backwell. Despite the scale of housing growth proposed, there is no corresponding plan to expand school capacity, health provision, or leisure facilities. Essential services are already stretched, and the Infrastructure Delivery Plan does not set out costings, funding certainty, or realistic timelines. As a result, the infrastructure needed to support such intensive development is neither assured nor planned to an adequate standard. There has been no needs assessment or viability case presented to justify an additional 1,000 dwellings in Backwell, nor any assessment of the social impact on the community. Backwell is not a major employment centre; most residents commute, meaning significant further pressure on an already congested transport network. The proposed development site includes Grade 1 agricultural land, which is now extremely scarce in North Somerset. National policy is clear that the most productive farmland should be safeguarded for food security, yet the plan contradicts this requirement. The land also supports important ecological habitats. The area forms part of the feeding grounds for Lesser and Greater Horseshoe Bats linked to the Brockley Maternity Roost and SSSI, and development would cause irreversible harm to wildlife in a region already facing severe biodiversity decline. Flood risk has not been adequately addressed. Backwell Common, the fields around Backwell Lake (the Reservoir), and other surrounding areas flood regularly. Adding extensive hard surfaces and housing in these locations would intensify flood risk both locally and downstream. Finally, the strategic growth location designation is unsound. It threatens the character of the village, relies on the loss of Green Belt and high-quality farmland, offers no clear evidence that required infrastructure can be funded or delivered in time, and proposes a volume of development that is neither sustainable nor achievable. Affordable housing requirements on Green Belt sites may also limit developer contributions to the infrastructure that is urgently needed. Given these issues, the plan fails key tests of soundness: it is not justified, not effective, and not consistent with national policy. It therefore cannot be considered legally compliant in its current form.			
62768705	Mrs Elaine Croker			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	We object to the proposal on the following grounds. It is good agricultural land which should not be used for housing. Our food security must be safeguarded. The housing development is far in excess of what the village can cope with leading to problems with schools, doctors and dentists. there appears to be no guarantees of any improvements to the infrastructure or services within the village. The expensive proposed road would not necessarily ease traffic conditions and with regard to the railway station being a transport hub it is not very accessible for those with mobility issues or those with young children. Backwell appears to have been targeted unfairly regarding the number of increased houses which itself incurs more commuting to places of work leading to more congestion on existing roads. Wildlife habitats would be severely impacted as a result of this proposal. The proposed area is prone to flooding and any housing would aggravate this issue. To confirm Backwell would not be able to sustain such a proposed development and all it's issues without greatly impacting on it's character.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 62806817	Roger Crook			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I appreciate NSDC is in the invidious position of having housing targets imposed on them. Worse still that the overall national housing targets set by the current government are nothing but a political gesture based on misguided thinking and are devolved to the provinces for implementation by others. Shame on the administrators of the UK, this is not the quality of service I expect in return for my taxes. • Bristol is one of the UK's most overcrowded cities. The West of England's Spatial Strategy should be looking to distribute employment more evenly by developing established hubs e.g Weston, Taunton, Bridgwater, Chippenham. Housing would be built adjacent to these areas of increased employment • A high capacity road linking Bridgwater to Chippenham would have enormous positive impact and open up many opportunities for county towns Bigger, bolder and brighter thinking is needed if UK plc is to thrive. The proposals in the Local Plan Consultation (The Plan) are the consequence of the absence of these attributes at the highest levels, hence the Plan is flawed from the outset. However, the matter at hand is how NSDC is choosing to handle the instructions it has been given. I find the proposals summarised in the Local Plan Consultation (The Plan) regarding LAND EAST OF BACKWELL to be ill considered for the following reasons: • 800 new homes are already either being built or have been approved for construction, representing a 40% increase over current numbers. However, NO INVESTMENT IS BEING PROVIDED FOR SERVICES TO SUPPORT THIS INCREASE • The Plan proposes a further 1,000 dwellings. If built the village would double in size. However, THE PLAN FAILS TO CREDIBLY DETAIL HOW SERVICES WOULD INCREASE TO SERVE A DOUBLING OF THE POPULATION • The PROPOSED ROAD shown in The Plan LACKS CREDIBILITY. The land it would traverse is a FLOOD PLAIN (note: Backwell Lake is a man-made balancing pond to mitigate flooding). Building either over or under the railway line would be more challenging for this reason and EXCEPTIONALLY EXPENSIVE. It is very unlikely the road would be built, stressing the existing road network, which is already in a poor state of repair! • The distribution of new housing within the NSDC area is skewed. o The Plan would increase Backwell's population by 80%, whereas Weston's would only increase by 22% and therefore suffer far less strain on its infrastructure. o Similarly, Portishead's population would only increase by 14% o However, both towns have substantially larger commercial and industrial bases that would benefit from the larger employee pool o Portishead will soon have a rail link to Bristol and that investment would be better leveraged by increasing the local population			
29066945	Charlie Crooks			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The scale of the development will have a disproportionate impact on Backwell as it represents an 80% population growth. This is significantly higher than other North Somerset settlements and considered alongside the 55% growth planed for Nailsea (second highest in North Somerset after Backwell) will place an unmanagible increase on local resources. The proposed road linking Nailsea and the A370 would be highly expensive and probably unfeasible. No social cohesion impact has been included. The destructive impact on rare animal habitats has not been properly considered, particularly by seperating the Brockly roost for greater and lesser horseshoe bats from other populations. The land surounding Backwell common is prone to flooding which will be agrivated by more housing. The land adjacent to Backwell Lake (resevoir) is a floodplain which flood frequently (several times most winters).			
50932513	O Cullen			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The area simply does not have the room or need for extra housing. The infrastructure is very poor, the Doctors could not cope, the traffic would be even more appalling, the train station has no disability access, the Dentist is full, the shops are useless, the destruction to wildlife would be devastating and the whole valley is susceptible to flooding, which hard-core and tarmac would exacerbate and lead to serious damage (and justifiable causes for court proceedings in the event of loss to others as the water is moved onto property). The roads are in poor condition anyway and they would suffer inordinately. There is nothing here for such an influx of people, no work, few businesses, so they would add to the mass of commuters clogging up Bristol and harming the climate catastrophically. Can we not wait until this government collapses and more reasonable minds take over?			
51429985	Katie Cuss			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell already has 800 new homes approved, which is a 40% increase in the size of the village. Adding even more would amount to overdevelopment. - The proposed new road would not properly help Nailsea's traffic problems or ease congestion on Station Road, Backwell Common, or Chapel Hill. Building a road under or over the railway would be extremely costly and might not even be possible. - Even with the current growth, there aren't enough school places, and there has been no investment in health or leisure services. The existing infrastructure cannot cope with another 1,000 homes. - Backwell has been given more new housing than any other village in North Somerset, and even more (in percentage terms) than some towns. It is expected to take 7% of the district's total housing, compared with Clevedon's 2%. - There has been no assessment of whether an extra 1,000 homes are needed or financially viable. - Backwell is not a major employment centre, and most residents commute elsewhere for work. - No assessment has been carried out on how this level of development would affect community cohesion. - The land involved is Grade 1 Agricultural Land used for growing food and grazing animals. Only 7% of this top-quality land remains in North Somerset. - Government policy says we must protect our best agricultural land to ensure food security. These proposals go against that policy. - The development would destroy important wildlife habitats and further damage biodiversity in a country already severely depleted of nature. - The plans threaten the Brockley Maternity Roost and the nearby SSSI, where rare Lesser and Greater Horseshoe Bats rely on the land for feeding. - The Infrastructure Delivery Plan does not include proper analysis or costings, and there is no guaranteed funding for the new road or other services. - Backwell Common and nearby areas already flood, and more housing would make this worse. - The "strategic growth location" designation raises concerns about the impact on the area's character, the loss of Greenbelt and high-quality farmland, increased flood risk, and uncertainty over whether the road can be funded and built in time to support the new homes. - Backwell Lake (the reservoir) and the surrounding fields—where the new road and housing are planned—sit on a floodplain that floods regularly. - Government policy requires 50% affordable housing on Greenbelt land, but this reduces the money developers can contribute to infrastructure. - The scale of development, combined with the level of investment needed for infrastructure and services in such a short time, is destabilising, unsustainable, and unrealistic. - The railway station is not suitable as a transport hub. It is inaccessible for people with mobility issues and difficult to use for families with young children. If you want, I can also turn this into a polished letter, a speech, or a shorter summary.

62611713	Jess DS			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	Unsure	Grade 1 land. This land needs to be safeguarded at all costs.			
51285793	H Dale		None	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	My folIowing comments are an objection to the NS Local Plan 2041. I and my wife have lived in Backwell for over 57 years. We have always disliked large housing developments, these being out of character with the village and we have always opposed these. The thought of a further 515 houses in the Grove Farm area, with 60 houses off Rodney Road and 219 houses in Farleigh Fields already being in progress, is dreadful. Along with the potential 889 houses which might be built to the East of Backwell, all of these represent an additional 1683 houses in our village. The current Neighbourhood Plan proposed just 100 houses to be built. The potential for nearly 1700 houses to be built from now on is simply unacceptable. There is very little scope for additional employment within Backwell and the surrounding area. Backwell's facilities are not adequate to support further increases in population. These facilities, such as roads, parking, shops, schools and medical organisations, are already at capacity. The railway station is not suitable for disabled access in one direction and the car park is not suited to additional parking. A potential addition of perhaps 5000 people and 4000 cars using our already inadequate facilities is unrealistic. Inadequate roads would be a major problem. The A370 and Station Road are apparently at capacity and the other roads in and out of Backwell are not really suited to current traffic volumes. Within Backwell, Rodney Road, Westfield Close, Westfield Road, Moorfield Road, Moor Lane and Embercourt Drive have become ‘rat runs’, caused by drivers avoiding delays at the A370/Station Road traffic lights. This problem is made worse by parked cars (which should be allowed) and often worn out white lines at junctions (which should be better maintained). Worn out white lines at junctions are being ignored by many drivers and this is a risk to drivers and also pedestrians, particularly when many cars are being driven too fast. The proposed road across Backwell Common, along with all the extra traffic, will probably make little difference to the overall traffic problems in the area. The Grove Farm and East Backwell areas are good Grade 1 Agricultural Greenbelt land and should be retained for agricultural purposes. The fields around Backwell support wildlife and enable residents to walk around the village and enjoy the current views. It is usually the case that large scale housing developments by one developer simply result in a blot on the landscape, particularly when agricultural land is built upon - see, for example Youngwood Lane, Nailsea and new houses at Tickenham. Similar blots on the landscape will occur with all the current situations in Backwell. In conclusion, please take into account all the objections made by, in particular, Backwell residents. Although current sites have been given planning permission without due regard to the sensible views of the majority, please do not allow the East Backwell area to be developed in the future. Please help Backwell to attempt to remain as it has been in the past, a very pleasant place to live.			
10383585	P Davies			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	1) Backwell is getting a disproportionate % of the proposed development (7%) compared, for example with Clevedon - 2% , which is a much larger town. No viability analysis appears to have been conducted, nor any need for 1,000 new homes been justified. 2) The high use of agricultural land for development will seriously reduce food production and is contrary to Government policy which clearly states such land must be protected to safeguard our food security. 3) Backwell already has development approved for 800 houses, a 40% increase for the village. These further proposals are unsustainable, totally destabilising and undeliverable as the existing infrastructure, particularly in the following respects, is wholly inadequate:- a) There is no provision for the huge increase in school places which will be required b) Doctors surgeries will be overwhelmed as, again, no suitable expansion of health services is envisaged in the proposals c) Existing roads which are already log-jammed with traffic will not cope with a massive increase in vehicle movements which will be generated by this volume of additional houses 4) The proposed development will undoubtedly cause increased flooding in areas around Backwell Common and Backwell Lake which are already at risk and prone to flooding. 5) There will be an adverse effect on wildlife habitats and harm caused to biodiversity in the whole area. 6) Developers will have little left to offer towards improving the infrastructure required to support such development as there will be a requirement for 50% affordable housing on the Greenbelt land. In summary, the proposals for this Plan are not properly costed, lack any adequate infrastructure plans to deal effectively with such massive growth in housing and all its consequences and fail to show a justifiable need to impose such a destabilising measure of growth on a small village. A fundamental rethink and scaling back is required. Philip and Sheila Davies			
62687521	Thomas Davis			No	‣ Justified	Unsure	No	The proposed relief road is across flood plains so will need to be raised. A raised road will create more traffic noise to surrounding area. No sound banks for this road are proposed! Also there is no provision to improve station road through Nailsea. You will increase the traffic due to being anymore attractive route as the bottleneck at backwell station is removed but you move the problem onto Nailsea station road and the junction to High Street .	The proposed relief road is across flood plains so will need to be raised. A raised road will create more traffic noise to surrounding area. No sound banks for this road are proposed! Also there is no provision to improve station road through Nailsea. You will increase the traffic due to being anymore attractive route as the bottleneck at backwell station is removed but you move the problem onto Nailsea station road and the junction to High Street		
50254849	Paola Davis			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	This development would substantially increase the size of Backwell as it currently stands. Around 800 homes have already been approved—representing a 40% expansion of the village—and adding further housing would negatively impact its character and identity. The existing infrastructure will already be under significant strain from the 800 new homes, let alone any additional ones proposed here. There is insufficient information about how essential services such as schools, GP practices, and dentists will be expanded to meet increased demand. Furthermore, the road network is not equipped to handle the rise in traffic that this level of development would bring. The main road between Backwell and Nailsea is already prone to congestion, is narrow in several sections, and reduces to a single lane when buses or larger vehicles pass through. The pavement does not run continuously on one side but instead switches sides the length between Backwell crossroads and the station, making it unsuitable for people with accessibility needs and unsafe for school children. With the extra residents this development would introduce, these conditions would become even more hazardous, and there is no possibility of widening the pavement due to private properties directly bordering the road. Additionally, Backwell Common and Backwell Bow are not viable high-volume alternatives; whenever Station Road is closed, these routes become rat runs, posing significant dangers to drivers, pedestrians, cyclists, and horse riders. Increased traffic from further development would only exacerbate these risks.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								I also have significant environmental concerns, including the presence of multiple floodplains and areas already prone to flooding, which are either earmarked for development or would be further impacted by the additional housing. A rare bat colony is known to exist in Brockley, relying on the surrounding land for feeding. The proposed development would destroy wildlife habitats, reduce biodiversity, and lead to the loss of land currently used for crops and grazing, as well as the erosion of valuable greenbelt space.			
62865537	I Dawes		None	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The total increase in housing is forecast at 80%. Without infrastructure this is irreversibly damaging village character and the environment, whilst lowering the quality of life for all and prospective residents of Backwell. The suffering to Backwell is disproportionate. The proposed new road will increase traffic congestion. The building on green fields and arable land is criminally shortsighted given climate change and need for crucial sustainability. Build on brownfield sites.	Reflect on proportionality for Backwelland consider the residents if Backwelll.	N/a	
21230881	R Dawson			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	We moved to Backwell 10 years ago from Bristol, pregnant with twins and excited what village life would bring for our new little family. We wanted green spaces, fresh air and a vibrant community for our children. All of this is being decimated before our very eyes, and the future of our children here and for village life is looking bleak. Traffic is already horrendous, school places are challenging and doctor and dentist appointments are non-existent. Our village already has an additional 800 new houses with planning permission now, which is a 40% increase, much more than other areas in North Somerset including towns. It seems the village is targeted because it has a train station and yet the trains are already at capacity. For many years people have asked for the Station to be fully accessible on both sides for those with mobility issues and we have been told it is impossible to achieve this because of the banks, which are unable to support any form of ramps. It is also impossible to extend the trains because of the length of the platform, so with another 800 houses and families moving in, I fail to see how the Station will cope with this further number, without yet ANOTHER 1,000 houses – an 80% population increase!! It is utter unsustainable madness, when a town like Clevedon is looking at a 6% population growth. The land that has been farmed for over 1,000 years and still is! Has been put forward for this extra 1,000 houses. I am told it is Grade 1, the highest quality land you can get and North Somerset only has 7% left, on top of that it is Greenbelt and I can vouch for the fact that it has crops growing and cows grazing all year round. It is utterly appalling that this land is being put forward. I notice our North Somerset MP Sadik Al-Hassan put out a social media post recently saying how a new Government Policy called the “Environmental Improvement Plan” had just been published and that “Food Security” was one of the top issues. It makes no sense to launch this and say the environment must be improved and food security must be prioritized and then allow this land to be built on. Particularly when Backwell has more than done it’s bit to provide housing. There are so many reasons to object to this proposal – it really is the worst of the worst – wildlife, nature, biodiversity, overdevelopment, infrastructure, services, social cohesion, loss of high-quality land, no needs analysis, food security, flooding, mental health and wellbeing of people living in the village. The list is so long I find it completely overwhelming. I very much hope that these appalling plans are taken out and some sense and balance is incorporated into North Somerset Councils Local Plan going forward.			
18204961	Mrs Wendy Derrick			No	‣ Justified ‣ Effective	No	No	Backwell already has 800 new houses approved, a 40% increase for the village. These additional numbers would lead to complete overdevelopment. The proposed road would not effectively serve Nailsea's traffic or relieve congestion on Station Road, Backwell Common, or Chapel Hill. The massive increase in housing would outway a new road even then. The small b road Station road can’t cope with the traffic it has now, but have seen many a near miss, it is so dangerous and no one is thinking about the safety on these small roads, specially with 2 major school. Directly on them Engineering the road under or over the railway would be highly expensive and possibly unfeasible. Too much traffic as it is. Despite this increase, there is a deficit in school places and no investment in health services or leisure facilities. The lack of infrastructure and services cannot support another 1,000 houses. Backwell is allocated a higher number of houses than any other village in North Somerset, and even a higher growth percentage than towns. Backwell is expected to take 7% of the district's housing allocation, compared to Clevedon's 2%. There is no needs or viability analysis for an extra 1,000 houses. Backwell is not an employment hub, most residents commute No social cohesion impact assessment has been provided. Grade 1 Agricultural Land currently used for food crops and grazing. There is only 7% of this high quality land left in the whole of North Somerset. Government policy states that "we must protect our best and most versatile land"	Just stick with the developments you have already given permission for, that’s more than enough of what Backwell can cope with	I dont	
62865153	Dave Derrick			No	‣ Justified	Unsure	Unsure	It's unsound. The land should not be used. Backwell doesn't have the infrastructure to support more houses.			
62865729	Kerry Dewfall			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell already has 800 new houses approved which is a 40% increase for the village. The village does not have the infrastructure to support more houses, there is not enough schools, facilities or health services available to all the extra population that all these houses would bring. There is only 7% of grade 1 agricultural land left in North Somerset and this should be protected not built on. The area is constantly flooded in bad weather which will get worse with more housing. The railway station is only small and there is not enough parking spaces for everyone who currently uses it. I cannot park on my own street outside my house due to railway users which will get worse once the other extra 800 houses have been built let alone with another 1,000 proposed. The schools are not adequate for a higher population, they are already set over two sites with traffic being terrible at school pick up and drop off times. It will become even more dangerous once the population increases by 80%. We will not have any green spaces left to walk in and enjoy the scenery and nature which is why we moved to the village in the first place, to be surround by nature which is currently all being built on. All the wildlife habitats have been destroyed and causing further harm to the biodiversity.			
49543265	Grahame Dixie		Backwell Residents Association	No	‣ Positively prepared ‣ Justified ‣ Consistent with	No		I am deeply concerned with the plans to build houses (+/- 950) on the grade 1, greenbelt land East Backwell. The LP suggests that the building on the very Best and Most Versatile (BMV) is justified because it will open land for a relief road. There are multiple reasons why this statement by the NSC doesn’t stand up to any analysis. The first is, whether such a road can/will ever be built. Building a tunnel under an active railway embankment, at the bottom of a flood plain, at best is going to be extremely difficult and expensive. Second is, who and how this is going to be afforded is not explained. The cost will be massive. We understand from a local councillor that NSC’s own engineers provided a figure in the range of £75 to £ 150 million. If we use $ 100 million	NSC's revised LP should (i) reconsider their explanation for justifying building on some 50ha of Grade 1 land, (ii) determine, using independent engineering consultants, if the proposed link road is technically		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					national policy			– this would be an added capital cost per house of +£100.000. A prohibitive figure. NSC are being naive if they believe that the two developers will cover the bulk of this cost. (NB the increasing number of developers who have made generous capital offers to get planning permission, and then renege of the agreement – see (see Developer builds 6,000 homes but backtracks on pledge to contribute to new school and roads) Being hopeful that the National Government will fund such a large project which will deliver such a limited 'club good' is a combination of highly risky and suggests either ..... naïve over optimism, or that they know the relief road is not ever going to happen, but a useful screen to reach the national Government's housing targets. development of nearly 1,000 houses on the land East of Backwell (i.e. the land A and B in the table above) which amounts to some 50 Ha of grade 1 land. The draft LP report claims that "The allocation of this large site, as part of a wider package of strategic allocations around Nailsea and Backwell is considered justified on the basis that without it the development of key infrastructure in the form of a new link road connecting Nailsea and Backwell would not be deliverable. This wider sustainability benefit outweighs the loss of BMV land in this location". This statement suggesting that NSC is allowing 50 Ha (+120 acres) of the finest agricultural land to be destroyed, because of the new road that will be built through the two sites will solve the transport congestion in Nailsea and Backwell. This is a spurious argument. The developers are suggesting the new link road in phase 3 of their development to ameliorate the traffic congestion that will be caused by the new traffic generated by the 1000 new households. If the link road was a viable and important infrastructure investment for the area, the amount of grade 1 land absorbed by the process would be far less than the 50 ha. This would be allowed by the LP policy for using BMV land for infrastructure. The large land area of grade 1 is required majorly needed for house building This building development is in contradiction on NSC's LP stated policy on Best and Most Verstile land.	feasible, and generate an accurate estimate of its likely costs, (iii) consider the feasibility of the link road as a standalone and necessary project to strengthen Backwell/ Nailsea's inadequate infrastructure (iv) before any approvals are given, build up a financing package which includes irrevocable commitments to finance the program (plus any over shoots of budget) from the developers and National Government.		
51397441	Marian Donovan			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The addition of almost 900 houses is guaranteed to have a very significant effect on the traffic on the A370 in both directions. There is already planning permission granted for about 700 houses (Grove Farm, Farleigh Fields and Dark Lane) which will be having a significant effect on the roads and hence also on the buses' progress towards and away from Bristol. There is no facility to widen the road anywhere within the village boundaries that would be effective. When there is a problem on the M5, the traffic is always redirected through the village and regularly causes total gridlock along its length. The railway station is presented as one of the sustainable features of the immediate area - it has no access for wheelchairs/disabled and has extremely difficult (not to mention dangerous) access for baby buggies and bicycles. There has been a feasibility study to address these problems and the outcome was that it was not possible to improve access. There are very few employment opportunities in Backwell so anyone moving there would have to commute to their place of work somehow. To effectively double the size of the village would seriously destabilize the social cohesion of the village. There would be few opportunities for social interaction and lead to isolation. Where are the plans for any accommodation for older residents who may want to downsize but remain in their social circle? This would free up some of the existing housing for younger families. The Secondary school is already full to capacity - where are all the teenagers going to go to school? Grove Farm appears to have provision for a new primary school but no doubt it will not be constructed until everything else has been done so the infants/primary schools will also be bursting at the seams. To introduce a further 850 houses the other end of the village will cause more problems for parents driving their kids to school, either in Dark Lane or Grove Farm. Parts of Backwell are in the flood plain and frequently flood. It is very difficult to get house insurance when there is a known risk. The proposed development is definitely liable to flooding, regardless of the mitigating building works. With so much more development in the area, there are fewer places for the water to drain - the A370 often floods in certain specific areas. Because of the Government constraints on Green Belt developments, the builders are going to be less inclined to contribute to new infrastructure needed as a result of the extra housing. The proposed development will seriously impact the wildlife and biodiversity in our area - we would be losing valuable agricultural land which the country is going to need in the not-so-distant future. People move to Backwell and Nailsea in order to get away from the city life and enjoy the countryside. By doubling the size of Backwell, all those advantages will be lost and it will rapidly become a sprawling conurbation with all that brings - anonymous neighbourhoods and a rise in crime. The proposed development will make it ever more inevitable that Nailsea and Backwell will merge and all the assurances made in our previous local plan will be broken.			
50922241	J Dowdeswell			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	We already have about 800 new houses in Backwell, representing a 40% increase in village size. More would lead to total overdevelopment. The propsoed road would not effectively deal with the traffic problems we already have, let alone with any further housing. Given the already huge growth of Backwell, this has not be accompanied by investment in schools and healthcare. Why is Backwell asked to take so much more housing as a percentage (7%) whereas Clevedon, for example, is only 2%. There is no justification for this. The whole volume of growth that has both taken place recently and is now proposed for Backwell is unsustainable and destabilising and lacks justification.			
38932257	V Draper			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	This development would lead to massive overdevelopment of the village. 800 houses have already been approved doubling the size of Backwell. It will destroy the village's identity. The infrastructure has not been considered. There will not be adequate school places, available dentist or doctors' appointments. Even with a new road, with the huge increase in traffic the roads will be dangerous and will not effectively serve the area. The increased housing allocation will destroy the character of the village and Backwell is taking an unfair share, more than any other North Somerset village. It is not fit for purpose as a transport hub with an inaccessible railway station and lack of parking. Nearby streets are already becoming dangerous with station users parking to avoid charges. This will destroy prime green belt, agriculture land and wildlife habitats and we will no longer have a rural village but a town. To deliver the volume of growth with infrastructure and services in such a short period of time is destabilising and undeliverable. It's unthinkable and I cannot understand how it is even being considered. Ultimately this much loved village will be destroyed and to someone who has lived here her whole life, the thought is devasting.			
62860897	Bhupinder Dularay			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure		1. The proposed development sites are established flooding plains with annual deep flooding of roads and residential properties. This has led to several properties no longer being covered by any insurer for flood damage. The proposed development will worsen the flooding on the area East of Backwell and the New Development itself will be flooded annually. The flooded boggy land adjacent to Backwell Common is now a winter feeding site for Egrets. 2. The land East of Backwell is highly prized Grade 1 agricultural farm land which is used to grow food for human and cattle consumption and therefore is part of local and national food security. 3. Several Grade 1 and Grade 2 Buildings will become surrounded by the proposed development losing their character, appearance and setting, essential requirements of their historic listing. The proposed development is within the curtilages of the buildings which is forbidden by the listing. 4. The proposed housing is clear overdevelopment putting a strain on all the roads and services in Backwell which will severely impact on current and new residents. 5. The existing roads cannot support the increased number of cars that will result from the development proposals. 6. The proposed cross rail road link whether achieved by a high bridge or a deep tunnel will be extraordinarily	Other far more suitable locations have been identified to NSC: 1. that will not flood, 2. are not grade 1 agricultural land 3. Will not enclose and therefore Grade 1 and Grade 2 Historical buildings 4. Have better road links to Bristol 5. Are not Green Belt		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								expensive 1.5 mile link that will only serve to connect existing bottlenecks.			
51450017	Christopher Dunford			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The proposed development on land east of Backwell is vastly out of proportion with development elsewhere in the county, it compounds a shortfall in infrastructure and services following recent overdevelopment, and it depletes our vital and dwindling grade 1 agricultural land. Planning permission has already been granted for a 40% increase in the size of Backwell. Building a staggering 889 homes on grade 1 agricultural land east of Backwell would be an 80% increase in the size of the village. This rapid overdevelopment is vastly out of proportion with the rest of the county. Whilst Backwell and neighbouring Nailsea (which would essentially become one) would experience an 80% and 55% increase in population respectively, other towns in the county are not receiving anywhere near that scale of development. Portishead and Pill have a new railway station and yet they are only taking 14% growth. Clevedon is only taking 6% growth. And why not build more at the new Ashton Vale location which is strategically close to employment opportunities? Almost doubling the size of Backwell seems to be pushed by the market forces of house builders and does not represent a sound or fair decision when seen in the context of the county. The housing number that North Somerset is trying to meet has been imposed by central government. The number set by central government is based upon an algorithm that DOES NOT take into account flood risk to the area. Flood protection for North Somerset due to climate change shows a significant loss if land, therefore the housing allocation for North Somerset should be decreased accordingly. The UK is home to three of the best climate research institutes in the world (Cabot Institute, Tyndall Centre, and Priestly Centre) so it seems bizarre that the UK's planning of housing development is not taking into account these climate impact predictions. The new road proposed is not guaranteed. If the new road does not go ahead then traffic congestion on station road will be unworkable. Station road is narrow, has a single pavement, and takes foot traffic for two primary schools and a secondary school. The risk of harm is already high and pushing traffic from these 889 new homes onto it is unjustifiably dangerous. Even if the new road does somehow go ahead in this short timescale and at considerable cost, the traffic problems will shift onto Backwell Common. Backwell Common forms part of National Cycle Route 33, losing this has a significant impact on those trying to travel into Bristol on bicycle and will result in them switching to less sustainable forms of transport. Almost doubling the size of population in such a timescale will mean that essential services cannot keep up. You would not double the size of Bristol or London in less than 15 years. There will be significant shortage of schooling, retail and leisure, and medical services. A shortage of health services can be life threatening and a shortage of schooling significantly impacts the life outcomes of young people. Once the housing developers have moved on, who will be left to solve these problems? And they will be serious problems. Rapid growth on this scale is not strategic. There are no employment opportunities in Backwell. Everyone will need to travel into Bristol for work. The issues around congestion on station road are already detailed above. The rail station in Backwell has no ramp access and rail services at rush hour are already at capacity, people are already standing packed in the carriages and vestibules, I do not know how all these new people are supposed to get on a train. As mentioned in, the proposed new road will impact National Cycle Route 33, and few cyclists are brave enough to cycle along the A370 at rush hour, so residents of those 889 new homes are inevitably going to be commuting by car. This is not a good location for sustainable transport – simply having a train station does not mean than an area can somehow absorb endless housing without creating serious problems. The land proposed for development is Grade 1 agricultural land. Government policy states that this must be protected to provide food security for the UK. We live in uncertain times. Globally democracy is in decline whilst autocracy is on the increase. The risk of economic disruption and global conflict is increasing. The Ministry of Defence is moving to a 'war fighting' capability. During the last two world wars, adversaries of the United Kingdom sought to defeat it by targeting its food supplies from overseas, and so home-grown food supplies became vital. The economic, health and military importance of UK food security cannot be overestimated. Once this agricultural land is lost, it is gone forever. Please do not risk the security of current and future generations. I do not believe this argument to carry much weight, but there is something to be said for protecting the heritage and identify of an area and the importance of cultural and social cohesion. Transforming a village into a town in less than 15 years will inevitably impact social cohesion and end a village way of life that has lasted for hundreds of years. Loss of this much green space will result in a drop in biodiversity. North Somerset Council has declared an ecological emergency, as has the neighbouring Bristol City Council. I do not understand how a local authority can declare an ecological emergency and then eradicate green space that provides previous biodiversity, including hunting grounds for the lesser horseshoe bat and the greater horseshoe bat. No doubt the new housing development will come with 'biodiversity features', but any ecologist can tell you then these are just tokenistic compared to the damage caused by loss of green belt at this scale. This area is prone to flooding. Climate change will increase the frequency and severity of this flooding. Building 889 new homes is going to place these residences, and those adjacent to them, at greater risk of flooding. If the tone of my statement is one of exasperation, then there is a reason for that. As a resident of Backwell trying to raise a family, over the last few years this small village has seen planning permission approved for 94 new homes on Foreign Fields, 125 homes on land off Dark Lane, 60 homes off Rodney Road, 515 homes at Grove Farm, and multiple large housing developments in Nailsea, which essentially merge it and Backwell into one. I do recognise the need to build new homes, and I accept that all areas within North Somerset will have to take a fair share of new house building. But to now propose an additional 889 new homes for Backwell on top of what is already being built seems hugely unfair, cannot be sustained, and is vastly out of proportion with what other locations in North Somerset are experiencing. Please can Backwell have a reasonable number of new homes, and some of this new development be allocated to other areas in North Somerset instead, especially to its larger towns, so that the impact and disruption of development is felt more evenly across the county rather than focusing the largest amount on this one small village of Backwell. My hope is that this consultation process will see this precious grade 1 agricultural land protected for future generations, and new homes being allocated more evenly and sustainability across the county. Thank you for taking the time to read this.			
62532065	Josh Dyer			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	If agreed, which would be in addition to the 800 new houses already approved for Backwell, the size of the village would be doubled in a short space of time. Already, the local infrastructure struggles to cope with the current number of residents. Backwell is a commuter village with very few employers based here. The Station Road connecting to Nailsea and the A370 connecting to Bristol are both already subject to regular traffic and congestion. Additionally, the temporary traffic lights associated with house-building work at Farleigh Fields resulted in daily delays of 30+ minutes, which demonstrates how close to a tipping point the traffic along the A370 is. With no clear and approved plans for new roads, it is unreasonable to believe that the current road network can cope with a total of 1700 new houses (800 agreed; 900 proposed).			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The train station is often crowded and the platform is not big enough for commuters or the carriages of the trains that pass through, resulting in people getting dangerously close to the end of the platforms to reach quieter/less occupied carriages at peak times. The secondary school is over-subscribed for new entrants into Year 7. The land and open space for dog-walking, a vital activity for many residents' physical and mental health, has been so diminished already that many are driving further afield to walk their dogs, which has a negative environmental and health impact. In addition to capacity issues, the land under proposal is Grade 1 Greenbelt land. Building here would destroy habitats and decrease food production security. Food security is a national priority and recent events in Ukraine, for example, have highlighted the justification for this. The propose new site also sits above a known floodplain (Backwell Common), which has flooded last week (beginning Nov 10th) after only half a day of heavy rain. New building work would significantly increase the risk of flooding and threaten the safety of existing residents of Backwell Common. In summary, the proposed development will destabilise the local community and infrastructure and pose genuine risks to wildlife, houses in Backwell Common, and food security.			
62858497	Ms Karen E Clark		52 Westfield Road	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The proposal to build 1000 more houses in Backwell, on precious Grade 1 Agricultural Greenbelt land, is one which in my opinion is poorly thought out, particularly in respect of the negative impact on a village already having to cope with building developments which have already been agreed, and without any new infrastructure or services planned to meet such an increase in population. An additional 1000 houses would mean increased traffic flow and potential for congestion and accidents, with most people already commuting from Bristol or Weston-super-Mare for employment, which already leads to traffic build up in and around the area, particularly at peak times. The Grade 1 Agricultural Greenbelt land subject of this proposal represents precious high quality land ideal for food crops and grazing and should be protected as such, with only 7% of such land remaining in the whole of North Somerset. The proposed development would destroy existing wildlife habitats which would take many, many years to re-establish and cause suffering and disruption to many species, birds and mammals alike in the process, at a time when it is of the utmost urgency to protect valuable wildlife habitats and biodiversity. Nature cannot afford such disruptions, particularly when weather and climate seem to have greater impact on survival rates already. The area proposed for this development is already high risk for flooding and this risk would only be exacerbated by additional housing, potentially impacting other housing in the area as a by-product. Backwell is not set up for such a high increase in population and traffic and existing services, schools, roads and public transport links would be overwhelmed. The proposal seems completely without merit, providing housing which would be unaffordable for many people, would deplete existing services and infrastructure and completely disrupt the current environment which is already likely to be under strain from existing development planned.			
62849441	Dan Eastwood			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell already has 800 new houses approved, a 40% increase for the village. These additional numbers would lead to complete overdevelopment. Backwell is allocated a higher number of houses than any other village in North Somerset, and even a higher growth percentage than towns. Backwell is expected to take 7% of the district’s housing allocation, compared to Clevedon’s 2%.	Backwell already has 800 new houses approved, a 40% increase for the village. These additional numbers would lead to complete overdevelopment. Backwell is allocated a higher number of houses than any other village in North Somerset, and even a higher growth percentage than towns. Backwell is expected to take 7% of the district’s housing allocation, compared to Clevedon’s 2%.		
29289473	Shirley Edwards			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Regardless of government targets, to opt for converting Grade 1 agricultural land into housing is an own goal! It will destroy an extremely valuable location where crops and grazing currently take place. This goes against the Government's policy re prime agricultural land. How will this essential food source and habitat be reproduced locally when there is just 7% of high quality land left in North Somerset? As a village Backwell cannot absorb a further 900 dwellings. In addition to those sites already approved/under construction Backwell's roads, trains, schools, GP surgery, chemist and local amenities are already under great strain, not to mention the regular flooding experienced which makes another housing development completely unviable. Backwell is not an employment hub as most people commute to Bristol or Weston-Super-Mare causing increased traffic jams, further exacerbated when there are issues on the M5. For rail commuters, the platforms at Nailsea & Backwell Station cannot accommodate all the carriages on inter city services so travellers need to make sure that they are joining or leaving a carriage which is in line with a platform and this must pose a serious problem for Health and Safety. The station is not fully accessible for people with mobility issues or those with pushchairs/young children.This issue has been explored at length for at least 20 years. All in all this Plan is not sound. All in all, there is very little evidence to support this additional housing.			
58816801	Val Eglon			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell is/was a village with many amenities. It has been ruined by too many houses already, many without our consent. Traffic is congested on the A370 and Station Road our two main routes out of the village. More building will take away most of our valuable green/agricultural and recreational land in detriment to the present villagers. We have few amenities compared to when we moved here 40 years ago. The same one doctors surgery chemist who struggle to cope now. the schools are at capacity with very little play facility for the present children. The present road infrastructure is at capacity, not having been built to take the present vehicles let alone another 2000+. A370 is non stop now being the main road to Bristol and Weston, an accident on the Motorway causes great problems when diverted to A370 now and makes difficulties for people gaining access from side roads, further traffic even the number at present being built will cause gridlock at times. A lot of land near the Station is frequently flooded, how can that be built on? Some common sense needs to be used Too many houses have been built here without consideration to the present residents and we can't continue to let builders ride roughshod over us for their greed. They should consider the local residents as we live here THEY DONT!!! This is behalf of myself AND my husband.			
62794977	D Eglon			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national	Unsure	Unsure	There has already been planning for a 40% increase to our 'village' the proposed plan would lead to a totally unacceptable overdevelopment, the infrastructure is insufficient and lacks analysis and costings and could not support more houses and therefore more people and cars , there is no proposed investment in health or school facilities which at present are full and at capacity The roads are already at capacity and if there are accidents on the motorway it's completely impossible to get out of the village now! The proposed road would not alleviate the problem and is also across a known flood plain which floods regularly and further building would only increase this problem and it's supposed to cross the railway line which would be costly to go under or over and considering it's planned to come out on station road would only increase traffic on it!! The depletion of grade 1 agricultural land for food and grazing is untenable as we need to maintain and protect it not			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					policy			build on it , it will destroy wildlife habitats and biodiversity and would also mean there would be virtually no green space for nature and the wellbeing of the residents Backwell is not an employment hub as most residents commute The station is not fit for purpose and could not support thousands more commuters and is already a challenge for the elderly or disabled Backwell has been allocated 7% of the districts housing, higher than any other village and a higher growth percentage than towns which is totally unsustainable			
62741057	Richard Eke		n/a	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No		Too many new houses - widely disproportionate to other villages. 7% in Backwell! (Clevedon is only 2%) - resulting in an 80% increase in population. Backwell will no longer be a village. The proposed road is not funded and even if it were, filters traffic onto an already very busy road so does not solve any traffic issues. No employment here so most will need to commute - A370 is already very congested during commute times. Backwell common floods many times every winter - where will all that water go? The train station is not a viable transport hub; it is inaccessible and dangerous to use for anyone with mobility issues or small children. Such an explotion in population will overwhelm all services including schools, doctors, dentist, village shops.	Do not build on a flood plain that is greenbelt.		
29307521	Christopher Elliott		Self	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	It is wrong to build upon Grade 1 farmland which is being used annually to produce food for consumption in our nation. As geopolitical tensions rise it is vital that our nation retains all the highly productive agricultural land that it has in order to feed its inhabitants, so not relying on volatile imports. In addition NPPF para 188 states: Where significant development of agricultural land is demonstrated to be necessary; areas of poorer quality land should be preferred to those of a higher quality. The availability of agricultural land used for food production should be considered, alongside the other policies in this Framework, when deciding what sites are most appropriate for development. This piece of land being deemed Grade 1 should not be used as there are other sights with a lower designation that could be made available.			
51431073	Jane Elliot			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Over development, 40% increase has already been approved. The proposed new road will not ease the daily congestion of the A370 and station road, Backwell. With more houses, all infrastructure like the doctors, dentist, leisure facilitates are not being increased. Backwell has been allocated more new houses than other villages in North Somerset. Backwell has little employment opportunities as most people commute to Bristol. The proposed development will be built on Grade 1 Agricultural land which is a great loss for food crops in this area. Government policy says we must protect our best land to safeguard food security. The development would destroy wildlife habitats in trees and hedges and threaten the rare Lesser and Greater Horseshoe Bats which need fields for food. Funding for the new road structure is uncertain. Areas of Backwell Common flood regularly. The development will change the village’s character too much making it a small town with no shopping opportunities. Affordable housing on Greenbelt land is a Government policy. Too much growth on one village causes destabilising of the local community. As a railway hub, the train station is not accessible for wheelchairs or prams.			
62598145	Geoff Ellis			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The proposed development represents an unacceptable intrusion into the Green Belt, land specifically protected to prevent urban sprawl and preserve the character of our rural communities. Building on this land undermines long-standing planning principles and permanently destroys natural space that cannot be replaced. Once the Green Belt is built on, it is lost forever, and this application sets a dangerous precedent that threatens the very identity of our local landscape. This development also proposes far too many houses for a village of this size. People chose to live here precisely because it is a village, a small, close-knit, rural community. Forcing a large-scale housing estate onto this environment will destroy the character that residents have invested in and fought to preserve. It risks overwhelming local services, altering the social fabric, and disrupting the quiet, safe environment that defines our home. Furthermore, the area already has a substantial number of new builds approved or in progress. Adding yet another development is completely disproportionate and ignores the cumulative impact these projects have on infrastructure, traffic, schooling, and medical resources. The community is already stretched, and continuing to add more housing without addressing these pressures is irresponsible and unsustainable. Most concerning of all, this land is prone to serious flooding. The village floods every year, with Chapel Hill regularly underwater and closed twice in just the past week alone. The proposed site sits at a low point in a large valley, meaning any new hard surfaces or drainage disruption will inevitably push even more water downhill—toward existing homes. If our property floods as a result of this development, who is accountable? Who do we sue when preventable damage occurs because decision-makers ignored clear environmental risks? This application is fundamentally unsafe, inappropriate, and incompatible with both the geography and the character of the area. Approving it would not only endanger existing residents, but also permanently and unnecessarily destroy the countryside that the Green Belt exists to protect.	A significantly smaller development - no more than around 20% of the size currently proposed, focused primarily around South Field Farm on higher ground, extending to the school, would be far more acceptable.		
62831521	L Ellis			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I am writing to express my deep concern and strong objection to the proposed development in Backwell. Our village has already absorbed around 800 new homes—a 40% increase—which has pushed our infrastructure to breaking point, and the idea of adding another 1,000 houses feels completely disproportionate and unsustainable. Backwell is being asked to take a far higher number of new homes than any other village in North Somerset, even exceeding some towns, and yet there has been no proper needs assessment, viability study, or social cohesion analysis to justify such a dramatic expansion. The proposed road, which is supposedly central to the plan, would do nothing to ease congestion on Station Road, Backwell Common, or Chapel Hill, and in reality may not even be deliverable given the enormous cost and engineering difficulties of crossing the railway, let alone the flooding frequently experienced in these areas. Our local services—schools, healthcare, and leisure facilities—are already overstretched, and no tangible investment is being offered in return. I am also deeply concerned that this development would destroy precious Green Belt land, including Grade 1 agricultural land that is vital for food production and now extremely rare in North Somerset and nationally. Government policy explicitly states that our “best and most versatile land” should be protected to safeguard food security, yet this proposal directly contradicts that principle. The environmental consequences are also severe: wildlife habitats would be lost, biodiversity further damaged, and the protected Brockley Maternity Roost and SSSI—home to rare Lesser and Greater Horseshoe Bats—put at real risk. Flooding is already a serious issue around Backwell Common and particularly near Backwell Lake, where much of the development is planned on a known floodplain that regularly floods; adding large areas of hard surfacing and additional drainage pressures would only worsen this. The Infrastructure Delivery Plan provides no reliable costings or guaranteed funding for the new road or other essential services, and the requirement for 50% affordable housing on Green Belt sites raises further questions about whether any meaningful infrastructure can be delivered at all. Backwell is not an employment hub, so almost all new residents would need to commute, meaning more traffic, more pollution, and even greater pressure on a railway station that is already inaccessible for many people, including those			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								with mobility issues or young children and closed due to flooding. Overall, the sheer scale and speed of the proposed growth would fundamentally and permanently change our village in a way that feels both destabilising and unmanageable. I care deeply about Backwell's character, its community, its wildlife, and its landscape, and I strongly believe this development represents an unacceptable threat to all of these. For these reasons, I urge the planning authority to reject the proposal.			
62833217	Kate Enright			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I am a resident of Backwell and I'm writing to strongly object to the current housing planning proposals for new development. Backwell already has 800 new houses approved. That alone is a huge change for a small village. Adding another 1,000 houses on top of that is completely unreasonable. It feels like Backwell is being targeted—expected to take far more growth than any other village in North Somerset, and even more than some towns. Being handed 7% of the district's total housing numbers, while places like Clevedon take just 2%, is totally unbalanced. There is also no proper needs or viability analysis to justify this huge extra number of houses. There's nothing that explains why Backwell needs this level of development - why the numbers have not be spread over other areas in North Somerset to minimise the negative impact - or whether the area can realistically support it. The simple truth is that these numbers are not sustainable. There's no clear or credible plan showing how essential services—healthcare, schools, transport, shops, community facilities, leisure spaces, utilities—are meant to cope. Nothing in the proposals demonstrates how the area will sustainably absorb thousands more people in the area without significant negative impact. Part of the plan seems to rest on a new link road, yet there are no proper plans, no costings, and no confirmed funding at all. It's impossible to take this seriously when nobody can say who will build it or pay for it. Our roads are already overloaded and struggling. Sticking 1,000 more houses here without a guaranteed transport solution will make everyday life worse for everyone who already lives in the village. The proposals would also destroy Grade 1 agricultural land—some of the best farmland we have. Only a tiny amount of this land is left in North Somerset. Government policy says we should protect our most productive land, yet this plan ignores that completely. Once this land is built on, it's gone forever. In a time when food security is becoming more important, it makes no sense to concrete over high-quality farmland. On top of that, the plan chips away at the Green Belt and the character of the village. It changes Backwell beyond recognition, and it does so without proving that the infrastructure or road network can support it. Even the council's own documents raise concerns about flooding, the loss of high-quality land, and whether the road can even be delivered on time—yet the proposals still push ahead regardless. Flooding is already a serious issue. Backwell Common and the surrounding areas flood regularly, and building on this land will only make the situation worse. The proposals offer no convincing solutions and no long-term protection for the community. Overall, the scale and intensity of what's being proposed is the real problem. Forcing this much development into Backwell—without the evidence, without the infrastructure, without the funding, and without any clear justification—is destabilising, unsustainable and undeliverable. It puts huge pressure on a village that simply cannot cope with what's being demanded of it. For all of these reasons, I strongly object to the proposal.			
62856961	Ben Enright			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I am a Backwell resident and I strongly object to the current housing proposals. Backwell already has approval for 800 new homes, which is a major change for a small village. Adding another 1,000 on top is unreasonable. It places a far greater burden on Backwell than on other North Somerset villages and even some towns. Giving Backwell 7% of the district's total housing allocation while places like Clevedon take 2% is not balanced or fair. There is no proper needs or viability assessment to justify this extra growth. Nothing explains why Backwell must take this level of development, why the numbers have not been spread more evenly, or whether local services can realistically support it. The proposals are not sustainable. There is no credible plan for how healthcare, schools, transport, shops, community facilities, utilities or leisure spaces will cope with thousands more residents. The documents do not show how the area can absorb this impact without serious harm. Part of the case relies on a new link road, yet there are no detailed plans, no costings and no confirmed funding. With our roads already under pressure, adding 1,000 more homes without a guaranteed transport solution will make daily life worse for existing residents. The plans would also destroy Grade 1 agricultural land, some of the best and rarest in North Somerset. Government policy says such productive land should be protected, yet this proposal ignores that principle. Once built on, it is lost forever. At a time when food security matters more than ever, building over high-quality farmland is a poor decision. The scheme also harms the Green Belt and the character of the village. Even the council's own documents flag concerns over flooding, the loss of high-quality land and uncertainty about the road delivery, yet the proposals continue regardless. Flooding is already a major issue, especially around Backwell Common. Developing on this land will make it worse, and the plan offers no convincing long-term protection. The scale and intensity of the proposals are simply too much. Forcing this level of development into Backwell without evidence, infrastructure, funding or clear justification is unsustainable and undeliverable. It places huge pressure on a village that cannot support it. For these reasons, I strongly object to the proposal.			
50199169	Trevor George Essex			No	• Positively prepared • Justified • Effective • Consistent with national	Unsure	Unsure	I object to the proposal to allocate sites in Backwell for a further 889 houses as well as a further 582 houses on land in Nailsea next to Backwell Lake. If these locations are accepted then this is in addition to 800 houses already approved for Backwell which represents a 40% increase for the village as well as major developments in Nailsea. If the allocations of the new housing target are accepted these will lead to a population growth of 80% in Backwell and 55% in Nailsea, both are wholly disproportionate to proposed allocations elsewhere in North Somerset and will result in the long term merger of the two communities. I cannot see any social cohesion impact assessment within the evidence documentation provided. The proposed link road will not effectively serve Nailsea traffic nor relieve congestion on Backwell Station Road as it will still be used for all westbound traffic. It is quite likely that traffic will increase significantly on the lanes around			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					policy			Nailsea and Backwell despite the traffic plan suggesting that these will become more cyclist/walker/equestrian friendly routes. Backwell in particular does not have an employment hub, and shops are very limited meaning new residents will travel by car to local shops in Nailsea thus increasing traffic. The land proposed for new housing allocations is currently used as Grade 1 Agricultural Land for farming. If this land is developed then future generations will not be able to revert the land back to agricultural use. The loss of agricultural land will reduce the country's ability to be self sufficient in food production and more reliant on imports. This seems to be a wholly retrograde step given the environmental impact of transporting goods and food from abroad, and also given the political instability in the world. The loss of Greenbelt will impact on the area's character, wildlife, ecology and residents health and well being. In summary I feel the scale of development proposed for Backwell in particular is wholly disproportionate and should not extend beyond the developments that already have approval. No further development should be allowed until existing approved schemes are completed and the impact of these can be fully understood.			
21457825	D Estcourt			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Comments on "North Somerset Councils reg119 Local Plan 2041" from a Backwell residents point of view. Page 29. The first paragraph speaks that the "green belt of North Somerset checks the urban sprawl of Bristol" etc. How can this be when prime farming land (which grows the countries food) in the green belt of North Somerset has been chosen for an extensive urban sprawl in Backwell to house people far away from Bristol and their workplace thus encouraging longer commuting distances. The whole of the development of Nailsea and Backwell area depends on the proposed New Road Bridge under the railway East of Backwell railway station. It would seem that the North Somerset planners have been taken in by the builders saying that they will build a road through the estate to bypass the busy Station Road (from the traffic lights in Backwell down to the Nailsea side of the Station at Backwell Lake) with a new bridge to be built under the railway line and an extensive/expensive road to meet the existing road at Backwell Lake. The proposed builder has stated that they will build the road who's progress will match the estate building works down to the Railway line. Being as there are no proposed houses beyond the railway line on the Nailsea side of the railway track a lengthy road will need to be built from the new proposed bridge to the bottom of Bucklands Batch. It must be noted that the construction of this road must be of a higher spec than what a builder would construct for a housing estate as it needs to take heavy goods vehicles and will the bridge be high enough to take double decker buses and high sided HGV's. Will it be single lane with traffic lights or more! I would be quite right to say that the Bridge and the extended road on the Nailsea side of the Railway, due to it's eye-watering expense, will not be paid for in any way by the Builder, the Council or the Government. The Local Council and the Government are broke, it will only be the Builder having built the houses who will walk away from the project with the profits from the houses for their shareholders. Are we to expect that the road and bridge will be built by British Rail? We will be left with a massive estate of 900 houses (50 % affordable) with no bridge/bypass for Station Road but with nearly 900 houses/families who need to get to a supermarket in Nailsea to do their shopping via the existing Station Road. Backwell has had more than it's fare share of private house building work granted over the last few months/years without any Council or Government money spent on any of it's infrastructure. Backwell only has convenience shops, a post office/convenience store, a school at full capacity, a small leisure centre and a small surgery. Backwell is expected to increase it's population by 80% with Nailsea population increase of a further 55%. Is this realistic? Is the funding in place from the Council and Government to do the necessary upgrades to Backwell and Nailsea services? As Bristol is the main area of work nearly everyone who has had to purchase a house in the green belt of Backwell in North Somerset will have to use the existing road system (A370) to commute to Bristol through Flax Bourton via the Long Aston Bypass which has been reduced to a single lane.. Any sensible person would allow the boundary's of Bristol to be extended as the road infrastructure extensions would be less and the people would be nearer to their place of work and recreation, less greenhouse gas's etc. It would only mean a short extension of the Bristol Metro line from the Park and Ride in Long Ashton which would encourage people to use public transport, rather than to live outside of Bristol and have to use their cars. It's about time that the road/transport infrastructure is brought up to date with North Somerset's expansion. Back in the 1970's a road from the end of the Long Ashton bypass to the M5 junction at Clevedon was planned but regretfully forgotten about and I can see this happening with the proposed bridge under the railway. In conclusion to add the estate East of Backwell (889 houses making a 80% increase to the village) in addition to the building already passed for planning (794 houses representing a 40% increase on the village) all using the only supermarkets which are in Nailsea together with the proposed additional housing for Nailsea, all using the A370 to commute to work in Bristol will be chaotic on the existing road structure. We are all aware that the sticking plaster of a rail underpass/bypass road for Station road in Backwell will just never happen and even if it did we are still talking of the existing roads needing to carry all the additional traffic.

It's about time that the road/transport infrastructure is brought up to date with North Somerset's expansion. Back in the 1970's a road from the end of the Long Ashton bypass to the M5 junction at Clevedon was planned but regretfully forgotten about and I can see this happening with the proposed bridge under the railway. In conclusion to add the estate East of Backwell (889 houses making a 80% increase to the village) in addition to the building already passed for planning (794 houses representing a 40% increase on the village) all using the only supermarkets which are in Nailsea together with the proposed additional housing for Nailsea, all using the A370 to commute to work in Bristol will be chaotic on the existing road structure. We are all aware that the sticking plaster of a rail underpass/bypass road for Station road in Backwell will just never happen and even if it did we are still talking of the existing roads needing to carry all the additional traffic.			
28715585	R Evans			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	There is no needs or viability analysis for another 1000 houses. Utilising this land is a contradiction to Government policy to protect our best and most versatile land. The infrastructure delivery plan lacks analysis and costings, and there are no funding guarantees for the new road or services. There is no holistic view on where an appropriate community facility could be located with the danger that fragmented community facilities could be the outcome. Backwell Playing Fields charity has land which cold be utilised for this purpose.			
29291361	M Evans			No	‣ Justified	Unsure	Unsure	As Backwell already has 800 new houses approved (40% increase), the proposed increase should be considered to be overdevelopment. This is higher than any other village in North Somerset. Furthermore, the lack of infrastructure/ services and the fact that Backwell Station is not suitable as a transport hub, due to its inaccessibility for those with mobility issues/young children mean that the addition of an extra 1000 house is not viable. The Government says 'we must protect our best and most versatile land' to safeguard food security and protect our wildlife, and yesterday a large swathe of this land proposed for building is high quality agricultural or greenbelt.			
58637569	Rosie Evans			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	This is an unsustainable case of over-development that would unnecessarily turn a village into a town without the required infrastructure or services to support its existing and new residents. 1,000 additional homes – when combined with the 800 houses already under construction / approved in Backwell – would represent an unacceptable burden of an 80% increase in the size of Backwell. The existing road network was built to support a village, not a town. They are already congested and present safety threats. Station Road is narrow relative to the weight of traffic it carries and schoolchildren are put at risk every day due to the thin footpaths that run alongside. Backwell Common – a road which also serves as a footpath for a number of residents (e.g in The Avenue) and as a cycleway – is significantly more likely to be used as a 'rat run' – again putting lives at risk. The planned new link road will not alleviate these issues. Schoolchildren are already bussed in from neighbouring villages including Cleeve and Yatton. 1,000 new homes would hugely shrink the school's catchment area and this is the primary example of the lack of detail provided about local services. In addition, there appears to be no details of new investment in leisure venues or health facilities. Backwell is not a meaningful employment hub. New residents would be likely to need to travel to work in e.g. Bristol. This is an issue because a disproportionate number of additional cars would be using the network of roads described above. Facilities at the local train station are not fit for purpose for a town of the size envisaged under this plan. For example, it can only be accessed by steep stairways. Finally, the plan would lead to the loss of a significant area of Grade One Agricultural Land. This land is currently used for crops and grazing and is too valuable to be lost to development – only 7% of this high quality land type remains in the entirety of North Somerset. This is at odds with Government policy which states "we must protect our best and most versatile land" to safeguard food security.			
30630177	Robert Evans-Brain		N/A	No	‣ Justified ‣ Effective	No	No	I am responding to all the proposed development in Backwell. Backwell has a local plan that was approved by over 90% of the villagers. This was a democratically approved plan prepared under the last Labour government. Conservative Government supported this local plan, rejecting many requests for additional large scale development. This democratically approved document should still be taken into consideration when completing the Council plan. The large scale developments are not justified in Backwell, current plan doubles the size of the village.	Disappointingly, the Council has already approved development one the Farleigh Fields site, this should never have been permitted. This was never part of the Local plan, a local green site will now be destroyed and the unacceptable impact on our historic church. The later developments at Grove Farm and land East of Backwell have similar concerns. This is prime agricultural land and should not be developed. We are at risk of removing all agricultural land. NS Council should push back on the number of houses required due to the large amount of land in the county that is moors and flood plan. This land should be removed from any calculation of land density suitable for building.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									In addition: - I challenge the need for such a high level of affordable housing in Backwell. This is a commuter village for Bristol, very few local employment opportunities. As such I do not see the demand for such housing, any financial benefit for new residents will just be lost due to increased travel costs. There should be a larger allocation of affordable housing for any development near Bristol and Weston - Emphasis the impact on Agricultural land. Only 7% of NS is considered high quality. We need to push back and only have development on low quality or brown field sites. - I cannot see in the plans for Backwell any outline of costs for new eduction, roads, etc. By doubling the size of the village already busy roads will be gridlock. Yes there is proposed a new road to Nailsea but the A370 will be a bottleneck. As for schools, yes Backwell Comp will cope but what about the kids from Yatton, etc. Has the council budgeted for a new comprehensive school? - There is no visible analysis that demands 1000+ new houses in Backwell. Additional development in NS has to focus on Bristol and Weston not the small outlying villages.		
18209249	N Everitt			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Of my many concerns I will list the key objections to this plan to overdevelop Backwell further. Local facilities and roads (and police services) cannot cope with more residents and cars. The local dentists, doctors and schools are near capacity and already housed in buildings with limited or no parking. The local shops again have no parking and are frequently congested with an increasing number of prangs and dangerous driving in the area especially on Fridays. This volume of growth is destabilising for the area. The proposed new road and other services have no funding accompanying them in these plans. I know that government policy demands 50% affordable housing on Greenbelt Land but this further reduces funds the developers can contribute toward the required infrastructure. The proposed area is already prone to flooding and has been for as long as I have lived in Backwell – since the 1960s. Flooding is a major issue and would be aggravated by more housing. Furthermore the loss of our greenbelt and agricultural land is a major concern and seems contrary to policies to safeguard our most versatile land and undermines food security. There is only 7% high quality agricultural land left in the whole of North Somerset – how can the destruction of this land be justified given those numbers? The community in Backwell commutes to other towns – mostly Bristol – for work. The train station is not a transport hub, being inaccessible for anyone with mobility issues and providing few trains and even those are usually overcrowded. The main road into Bristol is heavily congested at rush-hour, especially on the Long Ashton Bypass. More congestion in a village that is divided by the main commuting road is only going to cause more issues for the children crossing this road to school each day. Backwell already has accepted a 40% increase in housing – including behind my family home on a field we all used to enjoy for walking and countryside views. The additional 1000 houses would take us to a 80% growth in population which changes the entire character of the area and requires a major social cohesion study.			
62774497	Faith Everitt		DCA London	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell already has 800 new houses approved which equates to a 40% increase! We have limited facilities in the area - no NHS dentist, an overloaded GP surgery, full school years, chaos in the local streets with parking for shops or schools etc and vast amount of traffic on local roads not built for such heavy use. Congestion into Bristol is evident both on the roads and trains at peak hours - a real bottle neck through Backwell Farleigh and Flax Bourton. The new plan has no new roads funded and no additional services guaranteed. If Backwell is forced to take over 1000 new houses that means an increase of over 80% which is blatantly wrong and changes the entire character of the area. No such plans should be forced on people who have chosen to live here - we cannot take any more chaos, disruption and congestion. We want to move out already - it is so horrible with all the building work. But our house has lost value - how many more long-standing, council-tax paying residents must suffer in the same way? Enough. Please stop taking our land and ruining our lives.			
51287585	Evelyn Evershed		Evelyn Jane Evershed	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell already has 800 new homes approved. This is a 40% increase in new homes. Despite this, there are no specific plans to upgrade infrastructure of either roads, schools or health services. It seems Backwell has been targeted to allocate a higher number of new homes than any other village in north somerset at approx 7% compared to Clevedon's 2%. Currently the additional 1,000 new homes targeted would be on Grade 1 agricultural land? This would appear to be in direct contravention of the governments own policy which states that 'we must protect our best and most versatile land for agriculture to safeguard food security. Apart from the obvious adverse impacts mentioned above there would also be a huge impact on the already strained wildlife habitats and further deplete biodiversity. In addition Backwell Common is prone to flooding, as is the area around Backwell lake. All in all the plan seems to be very shortsighted and fails to take the wider impacts of such a massive increase of new homes - with huge impact on roads/rail etc. And in addition the quality of life for existing Backwell residents.	I would like there to be further consultation and radical revision of the plan with care and attention given to the points raised above. Backwell cannot become a huge housing site - this is unsustainable. However careful planned development - to a radically reduced scale will naturally form part of Backwell's own future and maintain a balanced environment for its residents and new comers to the village. With careful consideration, Backwell can be a proud reflection of a council who listens and can provide a sustainable way to grow, as a blueprint for other villages.		
62865185	G Ezulike			No	• Positively prepared • Justified • Effective	Unsure	Unsure	I believe that North Somerset Council has NOT justified the inclusion of building nearly 1,000 houses on Backwell’s Green Belt or the nearly 600 houses in Nailsea next to Backwell Lake.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					◦ Consistent with national policy						
51340033	David Felce			No	◦ Positively prepared ◦ Justified ◦ Effective ◦ Consistent with national policy	Unsure	Unsure	The proposal puts even further strain on local infrastructure. Green space will disappear. Pollution will increase. Grade 1 agricultural land will be lost. The approved 800 new houses are more than enough. There is little evidence that the affordable homes target is something that will actually materialise.			
18483361	I Forsyth			No		Unsure	Unsure	The present community of Backwell has grown to its present number over many years- approx 800 new houses have already been approved recently with some now in the course of being built notwithstanding the inadequate "village" road network and the strain on existing services/amenities. To consider allowing this additional housing being built within the next 15/16 years is wrong and unrealistic; this is high grade agricultural land and should be kept for farming. There is no proper disabled access to the station; this has been an ongoing issue for years and i question how well the Council will be able to sort out / provide the Cross Rail link.			
39304321	Ellie Fraser-Marsh			No	◦ Positively prepared ◦ Justified ◦ Effective ◦ Consistent with national policy	Unsure	Unsure	-Backwell is currently undergoing a 40% increase to village housing with over 790 houses approved for construction or already under construction. It's not sound to have more housing planned in Backwell with no investment in infrastructure such as schools, medical facilities, train transport and flood mitigation measures. -It is in direct opposition to the Government's policy to protect versatile land and protect food security. -The proposed new road lacks details, a feasibility study, costings or funding, yet has been planned to be built over or under a railway, which would be very costly and complex. -The North Somerset Local Plan 2038 Challenges and Choices Part 2 - Choices for the Future states that the councils aim is to retain green belt land, which this plan would counter. -The North Somerset Local Plan 2038 Challenges and Choices Part 2 - Choices for the Future states that there should be greater dispersal in development, but Backwell is allocated a higher number of houses than any other village. -This area includes Grade 1 Agricultural Land, currently used for crops, grazing and providing food for Lesser and Greater Horseshoe Bats. The land providing trees, bushes and soil for absorbing water and keeping the land stable in a flood-prone area, as well as providing habitat for other British wildlife.			
50923969	Kathy Freeman			No	◦ Positively prepared ◦ Justified ◦ Effective ◦ Consistent with national policy			Backwell already has a massive amount of house building going on and these extra houses would constitute huge overdevelopment for what is currently a village. The road which is proposed - not only has no funding plan but would be hugely expensive and would not relieve traffic issues on Station Road where children currently walk to and from school daily. The local infrastructure can in no way support the addition of another 1000 houses as there are simply not the school places or health services. One of the biggest objections that I have to the development is the fact that it would be built on agricultural land. We do not have anything like food security in this country and losing any of our agricultural land takes us further away from that objective - an objective supported by government. These proposals contradict the governments policy on this as well as impacting on local farmers who use the land for crops and grazing. Once this prime land is lost there is no getting it back so generations to come will have lost the opportunity to provide food security for the locals and for the country. There is also the question of flooding. We all know that Chapel Hill floods regularly and this land soaks up much of the excess water which prevents further flooding. By building on this land the risk of much more serious flooding is raised immeasurably risking lives, properties and businesses. This is an area which is very valuable to me personally as I regularly use these fields to walk and run giving me fresh air and exercise which has enormous benefits to my health and wellbeing. This is the same for many residents and locals. These benefits are fundamental to our way of life in Backwell and the health implications of years of building works, removing green space and destroying the wildlife habitats of numerous species cannot be underestimated.			
51429473	Paul Fricker			No		Unsure	Unsure	Response to the NSC Reg 19 Local Plan 2041 I strongly object to the development proposals in this plan on the following grounds: Backwell is a well established VILLAGE, which was one of the first villages to respond to the previous local plan, which was very well supported by a very high percentage of the residents, taking into account a sustainable increase in dwellings. As a village, we have already had 800 new dwellings approved, which is an increase of 40% and already an overdevelopment that is not sustainable with the current infrastructure. The additional proposals are totally unrealistic and will increase the population by an estimated 80 - 85%. You will be hard pressed to find figures like this anywhere else in the country. In the last three days, there have been crashes on the near by motorway networks that has caused the A370 main road through Backwell to become grid-locked. The current road network is very often highly congested even prior to the completion of the addition of the approved new 800 dwellings. The new proposed road to link-up Nailsea and Backwell is planned to be routed under the railway line which is known by the residents as a serious flood plain, and in fact just further along the track, national news channels have reported cars floating in flood water under an existing bridge. Having recently spoken to the developers, they've estimated it will be at least 10 years before this section of their development plan is likely to be completed, and claim the threat of flooding can be overcome by engineered solutions. The cost of this would be met by private enterprise? This cost will be astronomical, highly likely to create another bottle neck, and highly unlikely to solve existing congestion, and almost certainly will not meet future requirements. The existing population of Backwell is 2500. If the conservative average inhabitants of each of the approved 800 dwellings is three, that would be an increase of 2400 people and as Backwell is a commuter village, an estimated 1200 additional vehicles. The infrastructure of our village is totally inadequate to sustain such an increase, in relation to Schools, dentist, doctors, parking, leisure facilities, or medical supplies (Pharmacists). Despite the fact that Backwell is a village, the proposed population growth is higher than any other village or town in North Somerset or, in fact, most of the country. Backwell has a very limited opportunity for employment and is predominantly a commuter village. and there are quite a few roads/country lanes with no pavements or street lighting. By increasing the number of dwellings on such a large scale will only exacerbate the current congestion problems, increase the likelihood of collisions and endanger pedestrians, especially children going to school. Much of the proposed areas of development is on Grade 1 Agricultural Land, used for grazing and crop production.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								There is a very limited area of such high quality land left in the whole of North Somerset. to build on this land contravenes Government policy stating ‘we must protect our best and most versatile land to safeguard food security. There are some rare species of wildlife and flowers in the areas proposed for development, including Door Mice, Lesser and Greater Horseshoe Bats, Common Newts, Grass Snakes, Adders, a vast array of Butterflies and Moths, Orchids, Short-eared, Tawny, Barn and Little Owls. This is not an exhaustive list. The existing railway station is very well used but access to the platforms is limited to able-bodied individuals and the trains are frequently overcrowded during rush hours. the station is a great asset to the village. However, in its current status it is inadequate for such a likely increase of capacity need. Much of the proposed development is on Green Belt. The use of green belt must be fully justified and not used if there is an alternative site. I put it to you that there are many more alternative suitable sites in other areas of North Somerset, which are not Green Belt. Some of the proposed development areas are on flood plain. such large developments will only exacerbate this problem and to engineer out this problem would be very expensive and almost certainly would not be effective and or move the flooding problem to another area, which will probably be to the existing long-term residents along the A370 The village currently has its own identity and character. The proposed developments are going way too far too fast. It will cause a severe problem to the mental well being of many villagers that have lived in this country village for many years and some for the whole of their lives. It will create severe problems with people getting adequate access to Schools, Medical Services and parking. the increased traffic congestion will have a detrimental effect to residents well-being due to pollution and cause frustration and anxiety to drivers caught in bottle-necks. There will be an increased risk of collision and endangerment to pedestrians, especially school children. Paul Fricker. Backwell Resident.			
21232929	A Griffiths			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I do not consider the North Somerset Local Plan 2041 Pre submission Plan to be sound, and I am not satisfied that it is legally compliant or that the Duty to Cooperate has been demonstrated, particularly in relation to the proposed allocation at Land East of Backwell. The scale of development proposed for Backwell is disproportionate and unjustified. The village already has around 800 homes consented, representing almost forty percent growth, and adding a further 1,000 dwellings places a level of expansion on a single rural settlement that is not supported by a clear sustainability or capacity rationale. This level of concentration is not explained or justified and conflicts with the principle of a balanced and sustainable spatial strategy. The allocation relies heavily on a new road whose feasibility, routing, engineering requirements and funding have not been evidenced. Without robust, deliverable and costed transport solutions the Plan cannot be considered effective. More broadly, the Infrastructure Delivery Plan does not provide credible or funded commitments for school places, healthcare capacity, community facilities or green infrastructure. The Plan therefore fails to demonstrate that the development can be supported by essential services. Significant environmental concerns also render the Plan unsound. The proposal would result in the permanent loss of Grade 1 agricultural land, contrary to national policy on protecting best and most versatile land. In addition, the site lies within a sensitive ecological environment, with risks to habitats and protected species including the lesser and greater horseshoe bat populations linked to the nearby Site of Special Scientific Interest and maternity roost. The ecological evidence base is insufficient to show that impacts can be avoided or adequately mitigated. The area is also subject to known flood risk, including flooding around Backwell Common, Backwell Lake and adjacent fields. Despite this, the Plan does not include the level of detailed flood assessment needed to demonstrate that development would be safe or that it would not increase flood risk elsewhere. The allocation is further undermined by unrealistic assumptions about sustainable transport. Backwell station currently lacks step free access and does not provide the level of accessibility required to support the shift to public transport that the Plan assumes. No improvement strategy or secured funding is provided. Taken together, these issues mean the Plan is not positively prepared, not justified, not effective and not consistent with national policy. Key evidence on transport, infrastructure, flood risk, ecology, agricultural land and deliverability is either missing or inadequate. It is also unclear whether the Council has fully satisfied the Duty to Cooperate, as no clear and published agreements have been provided showing that strategic cross boundary impacts, particularly those relating to transport, flood risk and health infrastructure, have been resolved. For these reasons, the Plan is not sound and may not be legally compliant in its current form.	To make the Plan sound the Council should (1) remove Grade 1 land from allocations or substantially reduce the Land East of Backwell allocation, (2) publish detailed site-specific viability, transport feasibility and IDP costings with funding commitments, (3) provide up-to-date ecological and flood risk assessments with funded mitigation, (4) require station accessibility improvements, and (5) publish Duty to Cooperate evidence with service providers and neighbouring authorities. Development dependent on the new road should not be permitted unless the road is proven deliverable and funded.		
62863457	Michael Green			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure					
62842337	Connie Galsworthy			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Formal Objection to Proposed Allocation of 1,000 Homes East of Backwell I wish to register my objection to the proposed allocation of approximately 1,000 additional homes east of Backwell. 1. Scale of Growth • The scale of development is excessive in relation to the existing settlement. • Backwell has already experienced significant growth through several large developments recently approved. • Adding 1,000 further homes would fundamentally alter the character of the village, overwhelming its identity and sense of place. 2. Lack of Supporting Infrastructure • There is no clear evidence that the necessary infrastructure can be delivered to support development of this size.Concerns include: • Highways capacity: Existing roads are already congested, and further traffic would exacerbate safety and air quality issues. • Education: Local schools are at or near capacity, with no firm plans for expansion. • Healthcare: GP surgeries and healthcare facilities are overstretched, and no provision has been outlined for additional services. • Drainage and flood risk: Large-scale development risks worsening surface water flooding, particularly given the area’s drainage constraints.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								• Public transport: Current provision is limited, and there is no evidence of investment to improve sustainable transport links. 3. Environmental Concerns • The proposal is not environmentally friendly, given the lack of green space around the site. • Development would reduce biodiversity, harm local habitats, and diminish opportunities for recreation and wellbeing. • The loss of open countryside would contribute to urban sprawl and undermine climate resilience. 4. Loss of High-Quality Agricultural and Green Belt Land • The site includes Grade 1 agricultural land, which is among the highest quality farmland in the country. • National and local policy objectives emphasise protecting such land from development. • Releasing green belt sites contradicts the principle of safeguarding land for future generations, particularly when less-sensitive options exist elsewhere in North Somerset. 5. Policy Conflict • The allocation cannot be considered: • Positively prepared – it fails to demonstrate how infrastructure and environmental needs will be met. • Justified – alternative, less-sensitive sites have not been properly considered. • Effective – the scale of development is not deliverable without severe impacts on the community. • Aligned with national policy – it conflicts with policies on protecting green belt, agricultural land, and promoting sustainable development. Conclusion For these reasons, I strongly object to the proposed allocation of 1,000 homes east of Backwell. The plan is disproportionate, environmentally damaging, and inconsistent with both local and national planning policy. It would irreversibly harm the character of Backwell and fail to provide the infrastructure necessary to support such growth.			
39376769	Gamble-Beresford			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	1. Overdevelopment of Backwell: Backwell has already had 800 new houses approved, representing a 40% increase in the village's size. This additional development would result in a total increase of approximately 60% in the village population. Such significant growth in such a short space of time risks overdevelopment, and threatens to undermine the character of the area, the local environment, and the quality of life for existing residents. 2. Inadequate Transport Infrastructure: The proposed new road to relieve congestion on Station Road, Backwell Common, and Chapel Hill does not effectively address the traffic problems currently faced in the area. Engineering a solution to bypass the railway would likely be prohibitively expensive and possibly unfeasible. The existing road network cannot cope with the projected increase in traffic without a significant, costly, and potentially unachievable upgrade. 3. Deficit in Local Services and Infrastructure: Despite the approval of 800 new homes, there remains a deficit in local school places, healthcare services, and leisure facilities. There has been no indication that these services will be sufficiently expanded to accommodate the proposed 1,000 additional houses. The infrastructure is simply not in place to support this level of growth, which places further strain on essential community services. 4. Disproportionate Housing Allocation: Backwell is already allocated a disproportionately high percentage of new homes for North Somerset, representing 7% of the district's housing allocation, compared to Clevedon's 2%. This puts an undue burden on the village, both in terms of infrastructure needs and the preservation of the rural character of the area. 5. Lack of Needs and Viability Analysis: There has been no clear needs or viability analysis for an additional 1,000 houses in Backwell. It is unclear why such a large-scale development is required, and whether it is financially feasible or necessary to meet the district's housing targets. 6. Employment and Commuting Issues: Backwell is not an employment hub, and the majority of its residents currently commute to other areas for work. The proposed development does not address the need for local employment opportunities, which means the growth would result in even higher levels of traffic congestion, further increasing the strain on local transport and infrastructure. 7. Impact on Social Cohesion: There has been no social cohesion impact assessment for this development. A large-scale housing project of this nature can have a detrimental effect on the social fabric of the community, creating isolation and reducing the sense of belonging for both new and existing residents. 8. Loss of High-Quality Agricultural Land: The proposed development would take place on Grade 1 agricultural land, which is currently used for food production and grazing. This is some of the best land left in North Somerset, with only 7% of such high-quality agricultural land remaining in the area. Government policy clearly states that we must protect our best and most versatile land to safeguard food security, and this proposal runs contrary to that objective. 9. Threat to Biodiversity: The development would destroy valuable wildlife habitats and further harm biodiversity in one of the world's most nature-depleted countries. The Brockley Maternity Roost and Site of Special Scientific Interest (SSSI) are located nearby, and the proposed development threatens the habitats of rare Lesser and Greater Horseshoe Bats, which rely on this land for food. 10. Flooding Risk: Backwell Common and surrounding areas are prone to flooding, and the development would exacerbate this issue. In addition, Backwell Lake (Reservoir) and the adjacent fields are located on a floodplain and regularly flood. The development in such an area raises serious concerns about flood risk, both during construction and in the long term. 11. Concerns About Greenbelt and Infrastructure Funding: The designation of this area as a strategic growth location raises concerns about the loss of Greenbelt land, high-quality agricultural land, and the potential for flooding. There is also uncertainty over whether the proposed road and associated infrastructure can be funded and delivered in a timely manner to support the development. 12. Affordable Housing and Impact on Infrastructure Contributions: Government policy requires 50% affordable housing on Greenbelt land, but this reduces the funds developers contribute towards infrastructure. This is a serious concern, as the existing infrastructure needs, such as transport, schools, and healthcare, would remain unmet. 13. Unsustainable Growth: The sheer volume of proposed development and the required investment in infrastructure and services within such a short timeframe is destabilizing, unsustainable, and ultimately undeliverable. The long-term impact of this scale of development would be profoundly damaging to the community and its existing residents. 14. Inadequate Transport Infrastructure: The Backwell railway station is not fit for purpose as a transport hub. It remains largely inaccessible for people with mobility issues, and presents serious challenges for those traveling with young children or heavy luggage. Without significant investment in the station and transport links, the increased demand from a 1,000-home development cannot be adequately accommodated. Given these significant concerns, we strongly urge the planning committee to reconsider this application. The proposed development, as it stands, is not in the best interests of Backwell's current and future residents, nor is it sustainable from an environmental, infrastructural, or social standpoint.			
62842913	Ayalvadi Ganesh			No	‣ Positively prepared	Unsure	Unsure	I have the following concerns about the North Somerset Local Plan in relation to this proposed development: 1. The development uses up a significant amount of top-grade agricultural land. It is unclear to me whether alternatives have been adequately considered, either in terms of brownfield development, or higher density development at the proposed site in order to minimise the use of agricultural land, or densification elsewhere in the region.	Has thought been giving to the development of a cycling "superhighway", well separated from pedestrians, to run continuously from		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					‣ Justified ‣ Effective ‣ Consistent with national policy			2. The impact on transport demand will be substantial. There is already significant congestion during peak hours on the A370, and at all times on Station Road. While the proposed link road to the train station is welcomed, it is far from clear that it will be adequate to handle the additional demand generated by the development. It also seems that it will not relieve congestion on Station Road. 3. The development plan appears to disproportionately target Backwell for new development, when considered as a fraction of the existing population/ housing. For example, the proposal will increase the population of Backwell by around 80%, of Nailsea by around 55%, and of Clevedon by around 6%. The rationale behind such disproportional impacts needs to be justified more transparently. 4. The Infrastructure Delivery Plan lacks analysis and costings, and there are no funding guarantees for the proposed road or other services. 5. It seems that the development is on a flood plain. Have flood risks been adequately considered in the development plan?	the proposed development to Bristol on one side and Nailsea on the other? Given that Backwell is mostly a commuter town, and the likely pricing of houses at the development will mostly attract those working in Bristol, transport needs to be considered more fully than it has in the current plan. Higher-density housing also needs to be considered, in order to minimise the use of Grade 1 agricultural land.		
62851393	Irina Garashchenko			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Save our precious land!!!! Save the village!!!! Backwell already has 40%increase. Stop overdevelopment. please!			
62851617	Vitaliy Garashchenko			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	This dvelopment would irreversibly damage our village, enviroment and our food security! 7% of grade 1 land left in the whole NOrth Somerset? is that no longer important to anyone? STOP THIS UNTIL ITS NOT TOO LATE!			
62776609	Pamela Garment			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	No more houses are needed in Backwell; new shops bank doctors appointments would be required to accommodate so many new residents; The new extended road is completely unnecessary- it goes over fields that deer badgers and foxes use daily and floods constantly. Station Road that it would join already has 8 roads or car park access joining it and is dangerous already with 2 near fatal accidents in the last year or so and many minor ones. School children amass on the pavements and frequently spill into the road which in itself is dangerous due to the speed cars hurtle down. Bucklands Batch having yet another junction to navigate is asking for one of them to be killed. The station bridge is only single lane and already there are long queues back from that at rush hours and this new junction would only add to the chaos. A totally unnecessary road extension costing millions that could be spent on improving existing roads.	if the houses need to be built then so be it but the extra road joining Station Road is a complete waste or money and not needed		
62848257	C Garment			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Proposed road linking the development site to Station Road 1. This will create a major safety issue. There are already 8 junctions on this short and narrow section of Station Road where here have been many accidents, particularly to pedestrians. Large numbers of school children regularly use this section, often spilling onto the road. An additional junction and substantial increase in traffic will make this danger significantly worse and put lives at risk. In addition, there is another proposed development of 582 new houses in the valley (within Nailsea's jurisdiction). This will also have a major impact on the level of traffic trying to use Station Road. 2. Traffic trying to exit onto Station Road at the proposed junction would be unable to do so, owing to vehicles backing up from the traffic lights by the railway bridge. The congestion would be chaotic. 3. The new road would become a 'rat run' for commuters looking for a shortcut to Nailsea avoiding the traffic lights at the A370. This will create chaos at the junction opposite Backwell Lake, particularly as HGVs will use it as they currently have difficulty negotiating Station Road through Backwell. Creating a through road used by heavy vehicles of all sizes in a residential area, poses an unacceptable danger and nuisance to the residents. The road will not be of an appropriate standard nor size for such a volume of traffic. 4. The proposed exit onto the A370 would be adequate if used only by the residents of the new development. They will almost certainly regularly commute to Bristol as the only source of employment and do not need to go towards Nailsea. Consequently the new section linking to Station Road is unnecessary, and levels of traffic within the estate dramatically reduced. 5. The proposed link from the development to Station Road represents a considerable drain on public funds which would be better spent on improving facilities and infrastructure for existing Backwell residents. Proposed development of an additional 1,000 houses 6. The proposal to build 1,000 houses on this site is a gross over-development within a small village, particularly as 800 new houses have already been approved elsewhere in Backwell. 7. There is a total lack of infrastructure such as shops, inadequate health service provision, a lack of school places and a lack of leisure facilities. The railway station is also not fit for purpose as a transport hub. It is inaccessible for people with mobility issues and has serious issues for travelling with young children. 8. The roads in any new housing development need to be wide enough to allow for residents on-street parking on at least one side (to supplement off street driveways), whilst leaving adequate room for emergency vehicles and large delivery vans and lorries. Consequently there is insufficient space for anywhere near 1,000 houses. 9. Backwell Common and surrounding areas are prone to flooding. The proposed development and roads are on a flood plain which floods regularly. The developers may be able to build houses above this, but the water has to go somewhere. This will exacerbate flooding elsewhere in the valley to the detriment of other residents and wildlife. Furthermore, the local storm drains can barely cope with existing water levels. 10. The proposed housing development and associated access/egress roads would be on Grade1 Agricultural land. This is currently used for crops and grazing, which is in desperate decline in North Somerset and should be protected in accordance with Government policy. There is only 7% of this high quality land left in the whole of North Somerset.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								11. Backwell Common and the fields up to Station Road provide the last remaining green corridor for local wildlife. It links Backwell Lake with the surrounding countryside and provides a valuable food source.			
10224737	R Gaunt			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I write in connection with the proposal to build some 1,000 new houses on this green belt agricultural land. I object to the proposal and would make the following points:- 1. No consideration or study has been done as to what Backnell needs or requires in terms of new developments. 2. Backwell is a village of some 2,000 home. Already planning permission has been given for some 800 new homes which is a 40% increase and this proposal seeks a further 1,000 new homes. 3. There are not the jobs, schools, roads or infrastructure to support this growth. 4. A new road has been proposed, but this lacks any detail, plans , feasibility study or funding and would have serious implications on the whole of the Backwell Common area. 5. These developments, together with the proposal for 582 new homes next to Backwell Lake, all seriously impact Station Road and the Backwell conservation area. 6. All these developments and the proposed roads involve flood plains which flood regularly. 7. The sheer volume of growth with the required investment infrastructure and services over such a short period is destabilising, unsustainable and undeliverable. 8. The proposed developments would destroy valuable wildlife habitats and further harm biodiversity. It would also threaten our locl bat population of greater and lesser horseshoe bats. 9. Backwell does not have the jobs to support this level of new build so would necessitate residents commuting, adding to the significant traffic we already experience on Station Road and particularly around the crossroads. 10. The new road being propsed has not been thought through or costed. As it has to go over of under an existing railway line would be prohibitively expensive and possibly unfeasible. In summary, Backwell does not need this level of new homes, cannot support them in terms of jobs,infrastructure, or health and school services and the majority of the developments are on floodplains which are prone to flooding and the propsed new road is uncosted and possibly totally unfeasible.			
62848225	E Geering			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I am a resident of Backwell and moved here for the peace and quiet and rural feel of the village. I cannot understand how easy it is to build on viable Grade 1 agricultural land which does not constitute 'brownfield first' or 'grey belt'. The village even without this development is undergoing overdevelopment at higher rates than other areas of North Somerset, 7% compared to Clevedon of 2%. Backwell is essentially a commuter village and not an employment hub. In heavy downpours the area in front of Backwell lake floods. This will be a concern that building on or near flood plains will contribute to ongoing flooding in this area. I urge that any proposed development includes soft landscaping, trees and other nature based solutions that can mitigate some of the flood risk which is a major problem in areas in Backwell and particularly Backwell Common. I care about developing our industrial, brownfield or less productive land however this whole scheme over the easy option of productive agricultural fields which are much more desirable for all involved in building houses quickly. I do not feel this meets the Governments policy to 'protect our best and most versatile land'. Although the proposal includes green space and increase in biodiversity compared to an agricultural field, this space will be newly landscaped and as the area is for public open space it will increase human footfall in the area and impact the existing habitat and wildlife we are so lucky to have in this area. Alongside other developments around Backwell and Nailsea there is a very clear shrinking of the green corridors which is so important for wildlife in our already nature-depleted country to survive. The people of Backwell are proud of the wildlife in and around the area which includes otters at Backwell Lake which will suffer with such an increase of traffic opposite to the entrance. The proposals also threaten the Brockley Maternity Roost and SSSI, habitat to rare Lesser and Greater Horseshoe Bats. Since moving here we see so many bats above our garden and nature cannot continue to pay the price when so much money is made by developers.			
62836769	Matthew Germain			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	This development is excessively large for a village the size of Backwell. The development of 900+ homes at Backwell East will fundamentally change the character of our community - we are a village and wish to remain a village. One of the reasons why Backwell is such a wonderful place to live is that it is buffered all around by rural land. This provides amenity space for walking and recreation and preserves important footpaths and areas for biodiversity and farmland for grazing and food production. It also defines the fundamental character of 'place'. By building that many houses - or any houses at all - in this area the council would be irrevocably changing a village, which is already accepting a significant amount of new housing development at Dark Lane, Farleigh Fields and Rodney Rd. The sense of community cohesion will disappear if the village grows by this excessive amount. Further the concept of constructing a link road would be an act of gross environmental vandalism. Please do not include the Backwell East development and associated road in the plan as you will fundamentally change our village for generations to come.	Removal of the Backwell East development and link road for the reasons given above.	No comment	
62849537	Lisa Gillingham			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	As a long-standing local resident, I feel compelled to express my deep concern about the proposal to build on this area of Grade 1 agricultural land. This is some of the highest quality land we have, currently supporting both food crops and grazing. With only around 7% of such land remaining across North Somerset, it feels short-sighted to sacrifice it when national policy is clear that we must protect our “best and most versatile land” to ensure future food security. Building here would run directly counter to that guidance and weaken our ability to produce food locally. I am equally worried about the serious ecological impact. This development would remove valuable wildlife habitats at a time when the UK is already one of the most nature-depleted countries in the world. The land plays an essential role in supporting biodiversity that is already under significant pressure. In particular, the proposals put at risk the Brockley Maternity Roost and the nearby SSSI. Rare Lesser and Greater Horseshoe Bats depend on this landscape for feeding, and any disruption could have long-lasting consequences for these protected species. For these reasons, I urge the council to reconsider and uphold the protection of this vital land.	n/a	n/a	
29254785	Katharin Gilbert		Backwell rsofent	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	In the last few years Backwell has had an increase of over 40% in housing developments approved by the council, over 800 houses. There has been no input into the community or any infrastucture put in place to support this increase let alone for a further 1000 houses. The roads are set to bursting, the doctors impossible to get an appointmet and the schools over subscribed, it is all too much. There has been no investment to improve the services with the current planning applications, so a further 1000 odd houses would be disasterous for the village and destroy the community. Plus there is no need or viability anaylsyis for these extra houses. The development is also proposed to be put on Grade 1 green belt land which is not only prone to flooding, it is also beautiful countryside with many rare bat species and wildlife and there is only 7% of greenbelt left in North Somerset all together. The government policy states "we must protect out best and most versatile land" and this proposal contradicts that. The development would change the community and the village as a whole it would almost double it's size which seems excessive when there is no funding or investment into the area or into the infrustructure and there has been no social cohesion impact assessment provided to show the impact. There is no guarentee that the developers will fund the proposed road and the council don't have the money to fund it. Therefore the increase in traffic from extra houses could increase in the area by more than 2000 cars, the roads are already stretched to breaking point, the queues during rush hour times are constant so without the new road this traffic increase would be insane. Even if the new road was to be built it may not serve the huge increase in traffic to the area	I do not think there are any modifications that can be made to make this plan more viable, Backwell and Nailsea are already bursting with new developments and this plan to build on GRADE I listed land is not ethical or viable and will destroy rare and precious wildlife.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								and the train station is not fit as a travel hub as it still has no accessibility for disabled access. The village has already taken on a huge increase in housing over 40%, when will it stop? The reason people like living in the area is because of the green space. If NSC continue to approve houses at the current rate without regard to the people already living in the area there will be no green space left. It is incredibly sad to see the land disappearing when there are areas of Brown land standing disused. The GRADE I listed land that this plan proposes to build on is NOT the Brown/grey land that Labour wanted to build on it is beautiful green space that will be destroyed forever. Please think about the impact this will have on the people and the area not just about lining the developers pockets when you make a decision on this unwanted development.			
51427457	Rachel Glass			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell has been inundated with new housing developments. We are already feeling the effects of destructive heavy traffic, construction noise, unsafe roads and pavements. Backwell is not an employment hub. Most residents commute. The A370 is not suitable for the increase of daily traffic to and from Bristol. Our natural habitats are being lost forever. We will never get these back. Surface water flooding is already bad. As more green areas are lost, more residential flooding is inevitable. Where is the investment in education, leisure, access to doctors and dentists? I am stunned that our green belt and grade 1 agricultural land is even open to discussion. We should be protecting our environment, not rushing to build at any cost. The amount of development already given permission is too much, yet still more and more gets proposed. Leave Backwell alone!			
21450529	Laurence Golding		Moya	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	with 800 houses proposed what is proposed for employment in this area? Backwell is prone to flood to put an underpass under railway line to take a double decker bus would hit the water table not sustainable more housing will aggravate the flooding when are there going to be new schools leisure facilities surely you need these facilities in place before any further housing what studies have been made to find out if there are the people to buy these houses we are in a Bat corridor what plans have you made and how will you re-house these creatures a farmer can be find for killing a badger how can you avoid killing the wild life what punishment will be in place for the developer? In my view this whole proposal is purely academic, it is green belt land with no infrastructure for the level of construction even to put the infrastructure in will cause catastrophic flooding, I have lived in the area for 23 years and sure the authorities have tried to remedy the flooding problem without any success, with climate change the situation will only get worse.			
63298945	Mac Mic Strategic Land (Backwell)	Planning Potential		No	‣ Justified ‣ Effective	No	Yes	Currently, this policy states that residential sites (of more than 10 units) and employment sites are identified in the Policies Map. These sites are shown in Schedule 1 and 2, with the schedules indicating the potential capacity and principles to be applied for each site. Land East of Backwell is identified in Schedule 1 as having an indicative capacity of 889 dwellings. Consistent with our representations to Policy LP3, although Mac Mic are confident that up to 500 homes can be delivered on the Land East of Backwell B site, the Council should examine carefully whether the Land East of Backwell A site can deliver the required number of homes for the site overall. The Schedule states that among other matters, development is required to: ◈ provide 5ha of employment land with uses appropriate to the location and maximising opportunities for office and light industrial development ◈ consider heritage sensitivity and follow a heritage-led masterplan ◈ provide a cross rail link road between Station Road and the A370 (designed as an Urban Neighbourhood Distributor) ◈ provide land for the delivery of a primary school (including early-years accommodation). Although the Land East of Backwell B site can provide up to 2 hectares of employment land, the need and suitability for the Land East of Backwell site to provide 5 hectares overall should be robustly justified. The need for a school to be provided within the allocation site needs to be fully justified. Mac Mic has already provided to officers evidence to demonstrate that when using the appropriate methodology there remains sufficient capacity within existing primary, early years and secondary school provision at Backwell to cater for the demand arising from the Mac Mic site, which is expected to come forward ahead of the Land East of Backwell A site. We are aware, however, that land has been identified within the Land East of Backwell A site, which could accommodate the provision of a school (if justified). Mac Mic supports the provision of any required school provision in this location. The outline planning application that is being prepared follows positive discussions with the Council since the summer of 2025. The proposed development will address each of the criteria set out in Schedule 1 (subject to our objection above). Nevertheless, the outline application that is being prepared for the Mac Mic site responds to the other requirements of draft Policy LP5 and represents a heritage and landscape-led masterplan approach that seeks to provide the appropriate form of both housing and mixed-use development. The proposed masterplan also sets out the route of the proposed relief road, which is intended to run from a new junction off the A370 in a north-west direction, where it will then link into a separate development parcel for the remaining Land East of Backwell site (which is currently being promoted by others). Land East of Backwell represents a suitable, available and viable option for residential development and Mac Mic supports its allocation in the Pre-Submission Draft. The evidence gathered to date and which will be presented with the application shows that the site can successfully address all technical matters such as flooding, landscape and highways. It will be a highly sustainable, well-located residential development that provides for significant levels of green infrastructure, help address deficits in local services and facilities provision, and enable sustainable (non-car based) transport links to be created that will allow existing settlements better access to job provision, services and infrastructure. Recommendation For these reasons, whilst Mac Mic supports the current draft of Policy LP5 and that Land East of Backwell is included in Schedule 1 , they consider that the Council should ensure that it is satisfied that the indicative capacity figure set out in Schedule 1 can be delivered and that the need for any additional school provision should be robustly justified and provided within the Land East of Backwell A site.	For these reasons, whilst Mac Mic supports the current draft of Policy LP5 and that Land East of Backwell is included in Schedule 1 , they consider that the Council should ensure that it is satisfied that the indicative capacity figure set out in Schedule 1 can be delivered and that the need for any additional school provision should be robustly justified and provided within the Land East of Backwell A site.		
51107329	Ben Goode			No	‣ Positively prepared ‣ Justified	Unsure	Unsure	Overdevelopment: 800 new houses are already approved (40% growth). Adding another 1,000 would overwhelm the village. Inadequate Infrastructure: Local schools, health services, and leisure facilities cannot support the proposed growth, and no further investment has been proposed.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					‣ Effective ‣ Consistent with national policy			Traffic and Transport Concerns: The proposed road would not solve congestion on Station Road, Backwell Common, or Chapel Hill. Building under or over the railway would be costly and uncertain. Unfair Housing Allocation: Backwell is expected to take 7% of the district's housing—more than any other village and even higher than some towns. Lack of Evidence: No needs, viability, or social cohesion assessments have been provided. Loss of High-Quality Land: Development would destroy Grade 1 agricultural land, of which only 7% remains in North Somerset, undermining food security. Environmental Harm: Wildlife habitats, biodiversity, and the Brockley Maternity Roost (SSSI) for rare bats would be jeopardised. Flood Risk: Backwell Common and the planned development area, including Backwell Lake floodplain, already flood regularly. Insufficient Planning and Funding: The Infrastructure Delivery Plan lacks costings and firm funding commitments for roads and services. Unsustainable Growth: Rapid expansion without proper infrastructure investment would be destabilising and undeliverable. Transport Hub Limitations: Backwell railway station is already inaccessible for many and unsuitable as a transport hub. Policy Conflicts: Proposals contradict government policies on protecting versatile farmland, flood risk, and delivering affordable housing without undermining infrastructure contributions.			
29242145	Katie Gore			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	There are already 800 new houses approved for build in in Backwell and these extra 1,000 houses would completely overwhelm local services and traffic infrastructure. There are no proper plans in the proposal for how the road under the railway would be built and who would pay for it - it lacks details, plans, feasibility studies, costings or funding. Therefore there's a risk it doesn't get built at all and the new houses are built without the required traffic infrastructure The proposal is to build houses on Grade 1 agricultural land, but there is only 7% of this high quality land left in the whole of North Somerset. Building houses on this land contradicts Government policy of 'protecting our best and most versatile land' to safeguard food security Backwell common and the surrounding area are prone to flooding which would be aggravated by more housing - Backwell Lake and adjacent fields (where new roads and housing is planned) are on a floodplain which floods regularly. Finally, Backwell is not an employment hub - most locals commute, so building these houses would worsen traffic pollution problem.			
61238337	Christina Greene			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I am greatly concerned about the decision to increase the size of the village of Backwell out of all proportion. To build on Agricultural Green Belt land is unnecessary and inexcusable. Land under Green Belt was designated for a purpose and once it is built upon, it will be lost forever for future generations. There seems to have been very little consideration given as to how a further proposal to increase the size of the village will impact on the pressure on roads, railway, schools and medical centre, not to mention current residents. One example; the railway station is not fit for purpose. It is almost impossible for families with young children to access the platforms and also anyone with mobility issues. The access by car when meeting or dropping anyone off at the station is dangerous. The roads in Backwell are busy and dangerous and Station Road which joins Backwell to Nailsea is already impossible with school and rush-hour traffic. Whilst it is understood that there is a demand for new housing, Backwell already has 800 new houses approved which means a 40% increase for the village. I sincerely hope that NSC will come to its senses and really consider the impact that the proposed overdevelopment will have on current and future residents.			
62850625	Tony Grg			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	This proposal appears to be a poor investment due to: • The infeasibility of constructing housing and access on the floodplain. • No apparent consideration for the lack of supporting local infrastructure and facilities. • It also violates government policy to secure food security through protection of already diminished Grade 1 agricultural land and threatens wildlife and biodiversity at a time when it needs to be protected. The following points should be considered in rejecting this application: Loss of Grade 1 Agricultural Land: • Building on this agricultural land violates government policy that states "we must protect our best and most versatile land" to ensure food security. • There is only 7% of the high-quality Grade 1 land left in North Somerset, so this should be protected. Lack of consideration for local support: • Local doctors o Surgeries and dentists are already overloaded with current residents. o It does not appear to have been adequately considered in this application. • Local schools o There is already a lack of school places. o There do not seem to be plans to increase this to support an 80% population growth, particularly with 'young families' potentially looking to move somewhere more affordable than Bristol. Employment • There is limited employment in Backwell, meaning workers need to commute to Bristol or other centres. • This will overload already congested roads, buses and train capacity. Lack of truly affordable housing: • Local development does not appear to provide affordable housing, instead focusing on large 3-4 bed houses, fuelling	• Enhancement and protection of Grade 1 agricultural land, green belt, wild areas, SSSI to protect and increase biodiversity rather than threatening it. • Adequate and logical flood protection to prevent development worsening this issue. • Far fewer houses. A fair distribution of growth amongst North Somerset towns, i.e. balance current growth in Backwell with growth in Clevedon and Portishead instead. • Increased doctor, dental, school, youth centre, leisure and sport facilities to meet the current needs and on-going developments in Backwell. • Suitable cycling and foot paths that are away from traffic. • Effective traffic calming and speed limit enforcement. • Safe crossing points along the A370. • Suitable access to the train station for those in wheelchairs, using prams or walking with small children. • Trains to run when scheduled and with sufficient carriages to meet		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								the inability of people to get onto the 'housing ladder'. • There does not seem to be serious commitment in these plans to invest in the facilities required for young and low-income families. • There does not appear to be funding for youth centres, adequate playgrounds, sport and leisure facilities. Loss of habit for wildlife: • This development will lead to loss of biodiversity and wildlife habitats in what is one of the most wildlife depleted countries. The emphasis should be on saving green sites to protect and increase these valuable assets. • This development threatens protected sites, specifically the Brockley Maternity Roost and SSSI. • The land provides hunting and breeding grounds for rare animals, including lesser and greater horseshoe bats. Overloading already struggling infrastructure: • The train station is not suitable for a sharp increase in additional users: o South platform does not have step free accessibility for those in wheelchairs or using prams. o The small platforms are already crowded during rush-hour with the current level of commuters. o Trains are routinely cancelled or short of carriages, leading to overcrowding. Additional commuters would compound this problem. o The short platform makes boarding or disembarking long trains challenging in rush hour. o Station car park is often full, so would need significant enlargement, further encroaching upon fields and increasing the flood risk. • Roads are already congested and small lanes are used as rat runs. o Attempts to lower the speed limit, e.g. 30mph on A370 and 20mph on smaller roads, are not enforced. Additional traffic would increase the danger to walkers and cyclists, as well as increasing pollution. o Roads are subject to flooding, for example on the low-lying flood plain. This would take significant time and cost to rectify, causing additional disruption. o Cycling is extremely dangerous on the A370. There has been a lack of investment in practicable and safe cycle paths to connect to Festival Way. • Foot paths are inadequate along the A370 and non-existent on most adjoining roads. o Increased construction and commuter traffic would make walking and cycling on the roads more dangerous and polluted. • Local leisure facilities, such as the swimming pool are already under-invested in. Additional users would increase the burden. 'Proposed Road' across Backwell Common: • This lacks detail or a feasibility study. • It is unclear if it will be funded and complete in time to support the proposed development. • As the road crosses the floodplain and needs to cross the railway line it would be expected to be costly to proof against increased future flooding. The Chapel Hill railway underpass flooding has been severe in recent years (photos and press articles available online), often leading to traffic disruption. • There would be increase disruption on the A370 which is already extremely busy with fast cars during rush hour. It is also subject to significant queues during construction work, with drivers resorting to 'rat runs' and often driving in an 'antisocial manner'. • It does not appear from any plans that suitable traffic calming and enforcement have been considered. • There are no plans for separate cycle paths across this area. Local roads are already extremely dangerous for cycling on, particularly with small children. It is unclear how this would connect to Festival Way in a practicable manner. Flood Risk: • As low-lying land, the whole area is prone to flooding, making it a poor choice for housing. • Backwell Lake and adjacent fields are a floodplain, therefore flood regularly. Construction of the 'Proposed Road' and the housing development would be expected to exacerbate this through increased run off. Adequate flood protection would be expensive and time consuming. • Access will be limited during flooding, as shown through historical floods along the country lanes that would provide access to much of this new development. • Current development in Backwell has already led to increased flooding on the A370. It does not appear that there is storm drain capacity to deal with this, particularly as weather patterns worsen. • Flood defences and additional drainage would be costly, time consuming and disruptive to emplace, impacting upon nature and current residents. Loss of rural character and community: • Backwell's character is based upon a collection of villages surrounded by protected greenbelt and nature. • Backwell has already been subject to a 40% increase so has already played its part in providing new homes. • A further 1000 homes would be an 80% increase, which is disproportionate growth compared to other options such as Clevedon (6%) or Portishead (14%). • There has not been a social cohesion impact assessment provided.	demand. The current assumption of Nailsea and Backwell as a commuter or transport hub is flawed due to lack of capacity.		
51427905	Joe Groves			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	This land is green belt and grade 1 agricultural land - it is used for food production and grazing. We must protect this precious land, only 7% of it left in North Somerset. Government policy states that we must protect our best and most versatile land. The green space is used extensively by residents (the paths are very well trodden). Backwell already has 800 new houses approved, which equates to a 40% increase for the village. If approved these houses would almost double the number of houses in the village - a total overdevelopment, with no provision for new infrastructure or services. Roads around and through the village are already congested. The proposed road has congested routes at either end and isn't costed or funded. It will be an incredibly expensive engineering project at the intersection with the railway line.			
58635105	A Grzonka			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell has already got more than our fair share of additional housing development approved and / or underway, 800 additional houses at Grove Farm, Farleigh Fields, Dark Lane and Rodney Road. This represents a whopping 40% increase in the size of the village already approved. Considering that this is in addition to a huge number of additional houses that we've accommodated in recent years in and around the Moor Lane development, this is already more than enough for a small village to accommodate. The proposed new road has not been properly specified and I very much doubt is even feasible looking at the areas that it will supposedly be built (railway line, flood plain etc). There are no funding guarantees for this additional spending, will it be delivered at all, let alone on time? The existing infrastructure in this area are already very congested and can't sustain additional traffic. The local schools, health services etc are already struggling with the existing population. My dentist has just announced it can no longer provide NHS services to my children from 2026 due to population growth in the area, we have been told we will have to go private from now on, which we are unable to afford. The local infrastructure and services simply won't sustain a further 800 – 1000 houses. Why is Backwell being singled			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								out for such ridiculous growth far above any other areas in the region? There is no analysis available that would indicate these houses are even needed. The proposal is to build on the highest grade agricultural land which is currently used for crops, yet government policy is to preserve this kind of land. How can this be justified? We've already lost huge swathes of our prime agricultural land in the local area. There are also valuable wildlife habitats under threat from this proposal, threatening our biodiversity. The area is already prone to flooding which will only get worse with additional housing replacing farmland. The area is largely a commuter area with very little employment prospects locally. This means residents have to drive, cycle, take the bus or the train to a place of work. It is already acknowledged that the road infrastructure is not suitable for further traffic and that the existing railway service is at full capacity and not fit for purpose as a larger transport hub. There are access issues at the station up and down very steep narrow steps and an inability to accommodate additional rail services. It is genuinely ridiculous to suggest that this is sensible housing development. Backwell has already accommodated more than our fair share. Please don't do this.			
21333377	Tim Harland			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No		I strongly object to the Local Plan as proposed by North Somerset Council for the semi-rural village of Backwell. It fails totally to support the wishes of the local population by encouraging massive housing developments which are completely unsustainable, disproportionate to what is currently provided for the well-being of the community, and fails to take into account the services and facilities that would be required to sustain the growth in population. Backwell already has 800 new houses approved, representing a 40% increase and it already raises concerns about over-development. The unsustainability of the Local Plan is perfectly exemplified by the proposed new road which is unlikely to either solve Nailsea traffic or free up local congestion. Its construction under or over the railway is likely to be expensive and impractical and a huge deterrent to such a proposal. Current facilities are already over-stretched. There is a shortage of school places, health services, and leisure facilities needed for the current population and a 40% addition of resident numbers is bound to lead to promises and expectations being broken and unfulfilled. This in itself will quite possibly result in social disaffection and unrest from both the new population and the residents who see their services and facilities unable to cope. Backwell faces a higher housing allocation than any other North Somerset village or town, yet no needs or viability analysis exists for another 1,000 houses. The area lacks local employment opportunities, meaning most residents commute, and no social cohesion impact assessment has been provided. Only 7% of Grade 1 Agricultural Land remains in North Somerset, and current proposals threaten this valuable resource. Government policy designed to protect top-quality land is being contradicted, risking food security. Watching the digging up and replacement of top grade agricultural land for new housing while brown field sites owned by NSC are ignored is disheartening and irresponsible. The development also endangers wildlife habitats, diminishing biodiversity, while rare bats depending on land near Brockley Maternity Roost and SSSI are at risk. The pressure on our countryside is immense and the constant chipping away of the rural resource damages not only our wildlife but also our own health and mental well-being. We ignore this at our peril. Other concerns include loss of Greenbelt, increased flood risk, and uncertain infrastructure delivery. Infrastructure planning appears vague, lacking clear detail, costings, and funding guarantees. Increasing housing would likely worsen flooding in Backwell Common and surrounding areas, especially the area around Backwell Lake. Rapid growth without sufficient services is unsustainable. The railway station is inadequate and ill-suited as a transport hub. The platform cannot cope with the length of the trains making access onto the trains both difficult and dangerous, especially for those with mobility issues. With the exception of the A370 the roading around Backwell and Nailsea is suited to low levels of traffic only. The access across the levels between Clevedon and Backwell are useful to local traffic only. These will be badly damaged and blocked by the major housing developments proposed - a serious issue for those who live there or wish to visit. The current Local Plan is ill-suited to the needs of the area and North Somerset Council need to look again at what represents sustainable development in this area and how it can be serviced to provide the needs of the current population as well as people who will come and live here.	The current Local Plan is ill-suited to the needs of the area and North Somerset Council need to look again at what represents sustainable development in this area and how it can be serviced to provide the needs of the current population as well as people who will come and live here. NSC need to find alternative locations including brown fields sites and the urban model which was previously consulted upon.		
62817057	M Hathway			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	1) Backwell already has a 40% increase in housing development anymore increase in development would lead to excess and unacceptable development. 2) The sheer volume of growth with the required investment infrastructure and services over such a short period is destabilising, unsustainable and undeliverable. 3) Backwell Lake (Reservoir) and adjacent fields, where the new roads and housing are planned are on a floodplain which has for as long as we can remember floods regularly. 4) In addition, Backwell Common and surrounding farm land after heavy rain regularly are under water. 5) Where we live in Brockley Lane these developments threaten the Brockley Maternity Roost and SSSI, with rare Lesser and Greater Horseshoe Bats relying on land for food. 6) Grade 1 Agricultural Land currently used for food crops and grazing. There is only 7% of this high quality land left in the whole of North Somerset which we need to maintain if this Government is to encourage increased home produce. 7) Backwell is allocated a higher number of houses than any other village in North Somerset even higher growth percentage than teens. Backwell is expected to take 7% of the district's housing allocation , compared to Clevedon's 2%. 8) Local Infrastructure is totally inadequate to accommodate these developments.			
50797505	K Hunt			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell already has 800 new houses approved, a 40% increase for the village. This will lead to a significant strain on resources for which there is no available space for improvement. These additional numbers would lead to complete overdevelopment of this area leading to an increase in congestion, crime and unsocial behaviour. As there is currently a deficit in school places and with no obvious investment in health services or leisure facilities another 1,000 houses for which there has been no viability analysis, cannot be supported. Backwell is allocated a higher number of houses than any other village in North Somerset, and an even higher growth percentage than towns. Whilst the attractiveness of Backwell as a place to live cannot be underestimated this proposed substantial increase in housing will significanly reduce this draw factor and consign the village to a gradual decline in its appeal as well as reducing the stock of high grade farming land. Whilst we are being encouraged to be self sufficient and secure from a farming and food point of view the loss of this high quality Grade 1 Agricultural Land currently used for food crops and grazing would ignificantly reduce the 7% left in the whole of Somerset. This development would destroy valuable wildlife habitats and corridors to other wildlife areas and further harm			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								biodiversity in one of the world's most nature-depleted countries. I have already seen a noticeable wildlife reduction in the area due to the significant number of large delivery and construction vehicle serving the current building projects. Once destroyed these wildlife areas will take a decade to recover to there current status even assuming the developments have not caused the extinction of some of the current species. The promise to introduce new wildlife areas or green space leisure facilities will not be a replacement for those lost habitats. In particular these developments threaten the Brockley Maternity Roost and Sssl, with rare Lesser and Greater Horseshoe Bats relying on this land for food. The Infrastructure Delivery Plan lacks full analysis and costings with no funding guarantees for the new road or services being suggested or improvements to the flooding preventions that would be necessary due to the introduction of this new housing development. Backwell Lake (Reservoir) and adjacent fields, where new roads and housing are planned are on a floodplain. This area regularly floods and the massive infrastructure development needed to overpass or underpass the main Bristol railway line would signifiantly negatively impact the area. That road would not achieve the supposed benefits as the railway station is not fit for purpose as a transport hub; remains Inaccessible for people with mobility issues, presents serious challenges when travelling with young children and will just move any congestion from the A370 to the station area. In conclusion the sheer volume of growth and the necessary investment in infrastructure and services over such a short period is, I believe, destabilising, unsustainable and undeliverable.			
30793441	Keith Hallett		N/A	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I have a number of comments to make on why I think the plan is Not Sound:- Backwell has 800 new houses already approved; this represents a 40% increase on the present population. Any further increase is not sustainable on several grounds as follows Backwell has few employment opportunities; most Backwell people commute to work and any increase in housing will create an even bigger population of commuters – many by car. This will put greater pressure on roads than they are able to accommodate. Much of the land being put forward for new housing development is Grade 1 Agricultural Land; we cannot afford to lose such valuable land needed for crop growing, to provide for housing development. Wildlife habitats must be retained and improved not lost to more housing. There is a deficit in school places and no investment in health services proposed. The railway station is already below standard and there is not the space to provide for upgrading the line to four tracks. In short, the huge volume of Backwell’s growth during the Pre-submission (Reg 19) Plan (2025-2040) period is not sustainable nor deliverable given the lack of provision of infrastructure.			
62592577	E Hardcastle			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	This area cannot support this development as it has not enough school places or health infrastructure. I have lived here for over 30 years and the area has flooded often. The proposed road will completely ruin this lovely area and it would not relieve congestion on station rd It would in fact increase the volume of traffic.	It would be more sensible to improve bus service to the railway station		
29187873	B Harland			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	No	This plan is unsound and no justified for the following reasons. Nor do I think it is compliant, as the NPPF states that infrastructure and services must be planned accordingly. Residents and the Parish Council have repeatedly in planning application as well as previous iterations said that these schemes require support, yet people have been ignored. The numbers are disproportionate for Nailsea and Backwell, as a village we are set for a 7% allocation, the same as Portishead, which is a 26.5k population. The impact on Portishead with its ready facilities, new roads, accessibility to the M5 and soon to have a funded reinstated accessible railway. Ironically Portishead get a 14% population increase which they can easily absorb compared to Backwell’s 80% population growth whereupon it will be swamped; left to our own devices without the necessary support. Clevedon another town gets 2% of the allocation. Backwell already has 800 new houses approved, a 40% increase for the village which we will have to absorb. Community halls and voluntary organisations are at capacity. Out thriving junior football club has to go out of the village to find facilities. These additional numbers would lead to complete overdevelopment. As yet we have 40% growth with no money for a new primary school, no money for infrastructure improvement, the NHS, early years provision etc. We have over 200 social housing coming which is brilliant except that no provision has been worked in to provide the support which we need. Backwell is not an employment centre, most people commute out of the village, this will continue. The employment area highlighted in the last Local Plan and Neighbourhood plan has still yet to be realised. There are currently retail units empty in Backwell. The previous consultation agreed on a urban centric model. The NHS does not have the resources to cope with 40% increase in population let alone 80% growth as highlighted in the Local Plan. In their submission to a recent planning application NHS said that further unsupported growth would put lives at risk. Due to the shortage in 5YLS the consent was given but no provision for the NHS made, only land for a new primary school. Two sites now give money for SEND children to be transported out of the village due to projected shortage in school places, this puts more traffic on the road and disenfranchises the most vulnerable. Parents of non-SEND children will have to get in a car and go to another school elsewhere. Land of Dark Lane and Grove Fam show these shortfalls. The Leisure Centre needs a huge injection of case, as it has never been renovated in the past 45 years, this is not factored into the IDP either. The IDP as evidenced for Backwell and Nailsea is a series of blanks and TBC’s, totally disgraceful. No commitment to placemaking. The lack of infrastructure and services cannot support another 1,000 houses. This is a plan done on a wing and a prayer. Banwell bypass took over 50 years to delivery, this is the wrong place for more housing for a multitude of reasons. The proposed road would not effectively serve Nailsea’s traffic or relieve congestion on Station Road, Backwell Common, or Chapel Hill. Engineering the road under or over the railway would be highly expensive and possibly unfeasible. This plan does not relieve station road of the local traffic or the Dark Lane, Cheston Coombe etc which has tiny roads through a conservation area as a rat run to the A38 and Airport, there are NO plans to sort this very issue. When there is an accident on the M5 we are gridlocked, unable to move from a to b as we are the alternative route, this	The sheer volume of growth with the required investment infrastructure and services over such a short period is destabilising, unsustainable and undeliverable within the lifetime of the plan. The only sensible, fair and honest way forward is to remove this allocation. Reallocating some houses to each of the new villages, then to some of the larger villages which do not seem to have anything, like Wrington and finally give more to the urban areas that already have infrastructure and services. It is reasonable that each area takes some. Backwell would have been willing to take its fair share, 40% over 10 years we are told, will be tough, there is no support, NSC are close to another £10m deficit to cover – so there is no chance of the extra amenities we require to thrive.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								includes congested rural lanes accessed by Satnavs, this happens every few weeks - or has done for months, we cannot cope with more traffic volume. The Airport which borders our Parish takes 28% of its 11mppa from Wales, much of that traffic coming from the west comes to our village of on the edge of it. The transport plans are thin to say the least, full of assumptions, do not reflect reality. Yes we have a railway, but it is well documented in its inaccessibility, it is one of the most inaccessible in the country. Network rail and GWR have continually refused to address this as it is too expensive. The platform is short because the embankment is sensitive and unstable. This is the main line from Paddington to Penzance, these through trains are given priority. They do not all stop at Backwell, when they do you must be in the correct carriages to get off otherwise you are taken to Yatton and must make your way back. Cancellations are frequent, if a mainline train is late the smaller local trains are pulled or the larger trains fail to stop at Backwell. There is a good reason why we don't use the railway more, trains get pulled, cancelled, you book at seat, but it does not exist! Railway staff tell us that the rolling stock is at capacity, they do not have enough trains or staff OR line. There is no intention of investing in rail services on this line. Indeed, the highspeed rail link was stopped at Swindon, it did not even go as far as Bristol. If you are wheelchair bound, you must travel from Yatton. If you are elderly, have mobility issues, pushchairs or more than one child with you, the gap is so large you cannot get on or off. Even my husband who is fit said the other day as he arrived back from London that the gap was so intimidating to look down at he was not sure it was possible. We would appreciate the Inspector visiting the station and getting off at Backwell. The Sustainability appraisal and needs analysis is lacking. There is no needs or viability analysis for an extra 1,000 houses. NSC only has 7% of grade Grade 1 Agricultural Land currently used for food crops and grazing. Backwell land being taken for 1683 houses is ALL grade one. This does not make sense for food security and biodiversity. Nailsea's housing land is all grade 2. Yet some grade 3 sites are ignored as are 23 Brown sites. Why? Government policy states that "we must protect our best and most versatile land" to safeguard food security. The proposals contradict this policy and undermine food security. Development would destroy valuable wildlife habitats and further harm biodiversity in one of the world's most nature-depleted countries. There are a range of birds including many endangered species, little owls, barn owls, song thrushes, starlings, I could go on. The proposals threaten the Brockley Maternity Roost and SSSI, with rare Lesser and Greater Horseshoe Bats relying on the land for food. Development and airport expansion has already put this roose at risk. Natural England insist on Bat mitigation but at least one developer in Backwell is ignoring their HRA commitments and being allowed to get away with it by NSC, despite the fact that it was reported in a public Inquiry and forum East Backwell is in an important heritage area, in sight of the crown of National Trust Jewels, it lies within a valley in front of Tyntesfield, indeed much of the East Backwell land was once part of the wider Tyntesfield estate of Lord Wraxall. East Backwell which lies adjacent to and extends into Backwell Common and surrounding areas are prone to flooding, which would be aggravated by more housing. The farmer selling this land will admit that his crops are underwater for several months of the year. There are some popular walks across this land which regularly become uncrossable during the wet months. NSC have not included a hydraulic model for East Backwell, it is so wet it is ridiculous to expect to allocate housing and kick mitigation down the road. NSC do not recognise the Backwell's surface water issues, streams and springs. The clue is in the name – there is a well at the back. The Back is up the hill, about halfway up, this exists alongside some steams and several surface water paths. An underbridge with a gravity scheme is a non-starter Development has been consented on Farleigh fields, but NSC did not insist that Persimmon homes use up to date rainfall figures or insist on permeability testing. The first winter of the build a house nearby flooded in a way that it would never have been at risk before. After the third drainage plan, it was signed off by NSC however there are still issues and they will come to light given time. Another model MUST be completed which takes into consideration the effect of these houses on the surface water off Backwell hill as well as East Backwell, and key facilities like the secondary school and Leisure centre. Concerns regarding the strategic growth location designation include the impact on the area's character, the loss of Greenbelt and high-quality agricultural land, the risk of flooding, and uncertainty over whether the road can be funded and delivered on time to support the proposed housing. Backwell Lake (Surface Water Reservoir) and adjacent fields, where the new roads and housing is planned and are on a floodplain, which floods regularly. Government policy requires 50% affordable housing on Greenbelt Land, but this reduces the funds developers contribute towards infrastructure. The sheer volume of growth with the required investment infrastructure and services over such a short period is destabilising, unsustainable and undeliverable within the lifetime of the plan.			
20888481	S. Harper		Mr.	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	There are lots of reasons why this plan is not sound: - There are already 800 new houses approved in Backwell which is a 40% increase for the village. These additional numbers would overwhelm the village. - The proposed road is not practical and will be too expensive. - There are not enough school spaces to support the houses from the plan. Nor is there enough health services, infrastructure nor services. - Backwell has been allocated a much higher percentage of new housing than other areas. - Backwell is not an employment hub - most residents commute. - No social cohesion impact assessment has been provided. - We need to protect our high quality agricultural land, not build on it. - These fields are behind my house and the wildlife needs to be protected. Also, I see how often these fields are flooded! It seems crazy to want to build houses there. - The infrastructure delivery plan has not been costed sufficiently.			
62547905	Kerris Harrop			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell is a village which already has 154 new dwellings under construction and a further 640 approved by North Somerset Council. These additional 794 properties represent a 40% increase on the number of dwellings which, alone, makes a significant impact on the village. The existing infrastructure is unsustainable, and services will no longer be sufficient in the short-term. The railway station is not suitable as a larger transport facility, neither is the station car park – with cars already parking on local streets disrupting residents where driving is already difficult, if not dangerous, through the narrow roads. Many residents of the village came here either because of the excellence of the local school or as a relatively easy commute into Bristol – or both. They are being disadvantaged because the current volume of traffic in and around the village mean that there are lengthy queues at the traffic lights in all directions. With an additional 800 properties, Backwell will become totally overwhelmed. Parking is well-nigh impossible outside the doctor's surgery and increasingly difficult at the post office.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The post office itself is no longer a quick pop-in to buy a stamp and is often a much longer wait. It is the only way many residents (mostly elderly) do their banking as we no longer have a bank in the village; and the collection and drop-off facility provided often adds to the wait for service. Villages, and those who live in and cherish them, must not suffer in order to salve the consciences of councillors wishing to prove their credentials.			
62851457	Keir Hart			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I was born in Backwell 25 years ago and have lived here all my life. I do not think the existing schools and local facilities will be able to cope with such a huge influx of families. Backwell is lucky to have diverse wildlife within range of a big city but this will be destroyed by such a large development. I used to take the bus to school which collected us outside our house as we are rural - as the new plans are no bus would get to us anymore as the Common is projected to be closed. The common is one of the oldest historic lanes in the area, the proposals will destroy this history. All new residents are likely to work in Bristol or Aztec West, they will drive to work as the bus service is unreliable so traffic and environmental impact will increase. New developments should be planned to consider environmental impact. As youngsters we will have to live with these decisions for many years to come, once habitat is destroyed it cannot be replaced.			
62852417	Ingeline Hart			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I am born in Backwell and thirty years later still live here and hope to bring up my children here. This plan will destroy the ‘village’ of Backwell and turn it into a Satellite town of Bristol with no facilities that match the size of the proposed town. As a young person concerned about the future of our country I think local authorities have a huge part to play in ensuring that they keep the land they are responsible for in a good environmental and biodiverse situation. This plan will destroy vital wildlife sanctuaries, the otter on the lake, the deer in the fields, the rare birds, the newts, the snakes, the stoats, the weasels , the hares, the bats and all the animals that make this land their home will have nowhere to go. Other developments in Backwell have torn down trees either nesting birds and I do not believe this one will be any better. This area is also prone to flooding, I have had to wade through floods on my way home from school a number of times. Any developments will make the flooding worse. Please reconsider North Somerset - you are responsible for our future.			
62865089	Jasper Hart			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	Unsure	Not Justified The Local Plan is not justified as required by NPPF paragraph 35(b), as it is not based on proportionate or robust evidence demonstrating that Backwell is a reasonable or optimal location for the scale of growth proposed. Key data: • UK household growth projections have slowed materially since pre-pandemic assumptions • Office for National Statistics (ONS) data shows: • UK fertility rate fell to 1.49 births per woman (2022) — well below replacement • Net household formation growth is increasingly concentrated in urban centres, not villages The Plan relies on outdated growth assumptions and does not adequately test reasonable alternatives, including higher-density urban development or brownfield regeneration. NPPF paragraph 174(a) requires planning policies to contribute to and enhance the natural and local environment by protecting valued landscapes. Relevant facts: • Backwell lies within a visually sensitive rural setting • The surrounding land performs a clear landscape buffer function • The countryside around Backwell: • Preserves openness • Prevents urban sprawl • Contributes to local character and identity The proposed allocation would result in the irreversible loss of open countryside, contrary to the intrinsic character and beauty of the rural area recognised by NPPF paragraph 176. The land around Backwell performs a strategic role in maintaining physical and perceptual separation between settlements. Development at the scale proposed would materially reduce this separation, risking coalescence and permanently undermining Backwell’s identity as a distinct village. NPPF paragraph 35(c) requires plans to be effective, including being deliverable over the plan period. Evidence-based concerns: • A370 corridor already experiences peak-time congestion • Backwell rail station operates near practical commuter capacity • GP practices nationally are under pressure: • UK GP numbers per capita have fallen since 2015 • NHS England reports rising patient-to-GP ratios The Plan relies on aspirational infrastructure improvements without secured funding, delivery certainty, or enforceable phasing, rendering it ineffective. Development in Backwell will increase car-based commuting into Bristol and surrounding employment centres, directly conflicting with the Plan’s climate objectives and the Council’s declared climate emergency. NPPF paragraph 174(b) requires recognition of the economic and other benefits of Best and Most Versatile (BMV) agricultural land. Key data: • Only ~21% of land in England is classified as BMV (Grades 1, 2, and 3a) • Loss of such land is permanent and cumulative The Plan fails to demonstrate that lower-quality or previously developed land alternatives have been fully exhausted before proposing greenfield release. Backwell is being asked to accommodate growth disproportionate to its scale, infrastructure capacity, and rural character. This suggests site selection driven by convenience rather than suitability, undermining the principle of equitable spatial distribution. For the reasons set out above, the North Somerset Local Plan 2041 is unsound in respect of the proposed development	Look at other sites not near Backwell. All reasons stated above.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								at Backwell, failing the tests of being justified, effective, and consistent with national policy as set out in NPPF paragraph 35. The Plan should be modified to remove or significantly reduce the proposed allocation at Backwell and redirect growth to more sustainable and less environmentally harmful locations.			
58647905	Clare Hartley-Hodge			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	BAckwell already has over 800 new properties being developed and no new infrastructure or services to support this. The traffic will be abhorant in terms of back up, pullution and smooth running of the roads, not to mention a danger to children walking/cycling to and from sch along narrow lanes. Flooding already a significant issue - largely unmonitored and under repoerted so not necessarily "on record" to be considered. All this development will make this worse. Using Grade 1 agricultural land compromises our food security for the future and thsi is agricultural land. The road proposal position will never work - I explained this to them and why at the F2F consult and they agreed!!!! The other areas being developed in N.Somerset are all towns. BACKWELL IS A VILLAGE!!! Not a town! Yet it is being treated like a town and will lose it's identity, community and village spirit which if you don't live here, you cannot possibly appreciate!	Unsure of legal logistics, but using 1st grade agricultural land and compromising food security with a growing population sounds criminal to me. Sounds like controlling food security and forcing it's loss of growth will increase costs to import food and thus the cost of living, pushing recession and then what? Oh! You realise you failed to have that insight...but it's too late now, you'll never be able to bring that land back!	F2F consultations would be useful to do this.	
58408641	R Harvey			No		Unsure	Yes	FLOODING The proposed 889 houses and new road adjacent to the London to Swansea railway line will contribute to major flooding issues. This land already floods. Backwell Common is very low lying land in the base of a valley. The water run off from the proposed additional housing developments will exacerbate the situation. Dibdens Farm has a very large pond which currently takes excess water from the reans (water courses)and already fills to capacity when there is heavy rain. Backwell Lake was created by the Environment Agency to prevent flooding in the valley. Any further development will intensify the situation to unmanageable levels.	The building of any houses in the vicinity of Backwell Common will have a detrimental effect on the already significant flood risk. North Somerset council have duty to do everything in its power to prevent flooding. By allowing construction North Somerset Council will be neglecting this duty. The North Somerset local flood risk management strategy completed in 2012 highlights a number of issues which have not changed. Backwell Lake was built around 1978 as a balancing pond by Wessex Water to manage surface water from new housing developments in Nailsea and prevent flooding. The lake is at full capacity.	N/A	
39398401	Mrs A Harwood			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell already has 800 new houses approved, a 40% increase for the village. These further additional numbers would lead to complete overdevelopment. The proposed road would not effectively serve Nailsea’s traffic or relieve congestion on an already too busy Station Road. Station Road is already unsafe for pedestrians and children walking to and from school. Despite this increase, there is a deficit in school places and no investment in health services or leisure facilities. The lack of infrastructure and services cannot support another 1,000 houses. Backwell is allocated a higher number of houses than any other village in North Somerset, and even a higher growth percentage than towns. Backwell is expected to take 7% of the district’s housing allocation, compared to Clevedon’s 2%. Backwell is not an employment hub, most residents commute. This will only serve to make the roads even busier. This development proposes to use Grade 1 Agricultural Land currently used for food crops and grazing. There is only 7% of this high quality land left in the whole of North Somerset. Government policy states that “we must protect our best and most versatile land” to safeguard food security. The proposals contradict this policy and undermine food security. Development would destroy valuable wildlife habitats and further harm biodiversity in one of the world’s most nature-depleted countries. The proposals threaten the Brockley Maternity Roost and SSSI, with rare Lesser and Greater Horseshoe Bats relying on the land for food. The Infrastructure Delivery Plan lacks analysis and costings, and there are no funding guarantees for the new road or services. Backwell Common and surrounding areas are prone to flooding, often causing roads to close, which would be aggravated by more housing. Backwell Lake (Reservoir) and adjacent fields, where the new roads and housing is planned and are on a floodplain, which floods regularly. The railway station is not fit for purpose as a transport hub; it remains inaccessible for people with mobility issues and presents serious challenges when travelling with young children. Only recently there was a fatal accident in the vicinity.			
62850017	Ian Hassall			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Our village already has an agreement for 800 new houses this is a 40% increase for the village which will not only change the demographics of this small village but change its character and identity. We believe that any additional numbers would lead to complete overdevelopment. Our road system is already not fit for the amount of traffic which we see through our village and he proposed road would not effectively serve Nailsea’s traffic or relieve congestion on Station Road, Backwell Common, or Chapel Hill. Engineering the road under or over the railway would be highly expensive and possibly unfeasible. Despite the agreed increase, there is a deficit in school places across our area and no investment in health services or leisure facilities. The lack of infrastructure and services cannot support another 1,000 houses. Government policy requires 50% affordable housing on Greenbelt Land, but this reduces the funds developers contribute towards infrastructure. The sheer volume of growth with the required investment infrastructure and services over such a short period Backwell is allocated a higher number of houses than any other village in North Somerset, and even a higher growth percentage than towns. Backwell is expected to take 7% of the district’s housing allocation, compared to Clevedon’s 2%, this seems ill thought out and disproportionate for our village which has already agreed to 800 new homes. Backwell is not an employment hub, most residents commute which already makes the roads in Backwell slow and congested especially station road and the A370 which are main arteries in our village, we also believe that this makes walking in our village even more dangerous. There is only 7% of this high quality land left in the whole of North Somerset. Grade 1 Agricultural Land currently used for food crops and grazing should be preserved to keep our heritage alive and improve our carbon footprint. This aligns with the Government policy which states that “we must protect our best and most versatile land” to safeguard food security. The proposals contradict this policy and undermine food security.	There is no needs or viability analysis for an extra 1,000 houses, we would expect this to be a standard process which needs to be done before agreement of any extra housing. The Infrastructure Delivery Plan lacks analysis and costings, and there are no funding guarantees for the new road or services.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Further development would destroy valuable wildlife habitats and further harm biodiversity in one of the world's most nature-depleted countries. The proposals threaten the Brockley Maternity Roost and SSSI, with rare Lesser and Greater Horseshoe Bats relying on the land for food. Backwell Common and surrounding areas are prone to flooding, which would be aggravated by more housing, we already see increased levels of flooding over recent years especially on the A370. As stated earlier we have concerns regarding the strategic growth location designation include the impact on the area's character, the loss of Greenbelt and high-quality agricultural land, the risk of flooding, and uncertainty over whether the road can be funded and delivered on time to support the proposed housing. Backwell Lake (Reservoir) and adjacent fields, where the new roads and housing is planned and are on a floodplain, which floods regularly. is destabilising, unsustainable and undeliverable. The railway station is not fit for purpose as a transport hub; it remains inaccessible for people with mobility issues and presents serious challenges when travelling with young children			
62832513	Charles Hatcher			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	There are already almost 1000 new homes either being built or planned in Backwell. The new homes proposed in the Plan constitute complete overdevelopment for which there is no suitable infrastructure such as roads and schools adequately planned. The government expects new developments to be close to effective transport hubs. The new developments proposed are too far away from a station which is not fit for purpose in that the westbound platform is not suitable for any passengers with limited mobility. A new link road is proposed but the infrastructure development plan does not have proper analysis and costings. There are no guarantees for funding a bridge under the main railway line and it is unlikely to be built.			
62765057	D Hathaway			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	As a longstanding Backwell resident of 55 years, I very much object to this development: it will contribute significantly to the destruction of the village I love, dragging Backwell onto an inescapable path towards total urbanisation. I therefore wish to register my objection to the current proposal for the development of 1000 new houses on "land to the East of Backwell", and consider the proposal unsound for the following reasons: When my family first came here in 1970, Backwell was very much an agricultural village, and we were surrounded by crops and cattle. Over the years this has naturally diminished, but the fields targeted for this development remain very much prime, grade 1 agricultural land. With the current state of world affairs, it would be the height of folly to use such land (here or anywhere else) for the building of houses, simply for the purpose of meeting arbitrary and arguably short-sighted targets. England needs farmland; we cannot rely on other countries to supply our food, especially in possible times of war! Backwell is already under siege from new development; far more than its current infrastructure can support, and any further developments would (in my opinion) demonstrate a failure of responsible planning. Any proposed improvements to infrastructure, particularly the new roads that would link Backwell to Nailsea, are purely hypothetical and highly unlikely to ever materialise (at least not in a reasonable timeframe) due to the very high costs of somehow crossing over or under the railway line. Facilities such as local shops, the GP Surgery, schools, and leisure facilities are all unable to support increased demand, and the roads are already gridlocked on a regular daily basis. I personally often find it can take up to ten minutes to find an opportunity to drive out of my own property due to the current traffic conditions, and it is almost impossible to cross the A370 on foot at Farleigh during "Rush-Hour". This formerly twice daily event now practically spans all of each day, every day of the week! Even so, we presently face the prospect of this being greatly exacerbated by the planning proposals already approved and under construction; a further 1000 homes on top of this would be nothing short of catastrophic. Despite the impact of recent developments, Backwell remains a place of considerable sanctuary to wildlife. As a resident whose property borders the fields threatened by this proposal, I can vouch for the diversity of nature present. I regularly see badgers, hedgehogs, roe deer, barn owls, and many species of bat, including the lesser and greater horseshoe bats. All of these frequent the fields in question, along with many other creatures including slow worms and even the occasional grass snake. Buzzards hunt daily on and over this land. Development proposals always make some weak attempt at mitigation for the loss of wildlife habitats, but nothing can ever replace what is already here; where these creatures have lived relatively undisturbed for at least the last thousand years of agriculture. Backwell (particularly the lower areas of the common, and all the fields under threat of development), is very susceptible to flooding. Even now, every time there is sustained rainfall, the main road floods badly. The housing developments currently under construction will doubtless add to this problem, but the proposed development of a further 1000 houses is simply a recipe for disaster. There is very little opportunity for employment in this area, and most residents currently commute to work. Any proposal to increase commercial activity and jobs, will undoubtedly provide minimal employment, and come at a considerable cost to the desirable appeal and nature of the area. An increase in commuters will add to the burden of public transport and the general traffic. The current train station will not be able to cope, and neither will the bus service. There is currently no way to cycle from Backwell to Nailsea without risking the very real threat of death from sharing the roads with cars, and this can only get worse with increased traffic. In summary, Backwell in my opinion is not at all suitable for the proposed 7% share of North Somerset's housing target, and has already reached a point of saturation. Any further development will result in an unforgivable loss of prime agricultural land, along with the corresponding destruction of the natural environment and quality of life for existing and future residents. This I believe to be wholly unacceptable.			
62773985	Margaret Hawes			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	There are already 800 new houses approved in a village of 2000 houses. These additional numbers would lead to complete overdevelopment. The proposed road would not effectively serve Nailsea's traffic or relieve congestion on Station Road. There is a lack of school places and no investment in health services or infrastructure. Backwell has been allocated a higher number of houses than any other village in North Somerset. 7% of the districts housing allocation as opposed to Clevedon 2%. Grade 1 agricultural land will be used for building development. There is only 7% of this high quality land left in the whole of North Somerset - this is against Government policy.Backwell Common and surrounding areas are prone to flooding and Backwell Lake and adjacent fields are on a floodplain. This is where the new roads and housing is planned. The railway station is inaccessible for people with mobility issues and present serious challenges when travelling with young children.			
39209697	Ben Hayes			No	• Positively prepared • Justified • Effective • Consistent	Unsure	Unsure	Backwell already has 800 new houses approved. This is existing plan is already going to stretch the traffic, schools, and other local facilities beyond their limit. I understand the target to build a certain amount of new homes in the county, but increasing the population of one village by 80% is not sensible at the local village level and will create a whole series of problems.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					with national policy			Land along Backwell Common does not look like a sensible option. The road is narrow without good connections, and the area is prone to flooding. It is also a valuable area for wildlife and recreation.			
62663617	Mrs P Hayes			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	It is crazy to build even more homes in Backwell after the last lot of 800 home approvals that are not even completed yet. We have limited school places and already have growing traffic problems. The Backwell Common area is really unsuitable for lots of extra traffic. The narrow road is already dangerous at times with many cyclists and blind corners. The fields in this area are core to the character of the village and used by hundreds of people every week and important to wildlife, well-being and mental health. We have loads of flooding problems here too. Surely there are better places. Look at some of the other villages in North Somerset that are having a *much* smaller increase relative to their population.			
39304481	Chris Hayes			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	1. Traffic and Commuting Issues: The A370 is already congested during rush hour. Given the distance from the train station and the absence of local employment opportunities, residents would have to rely on increasingly busy roads for commuting. 2. Impact on Wildlife and Biodiversity: The proposed development would destroy valuable wildlife habitats, further harming biodiversity in a country already facing significant nature depletion. 3. Concerns about Strategic Growth Location: o Loss of Greenbelt and high-quality agricultural land, specifically Grade 1 agricultural land, of which only 7% remains in North Somerset. o Potential flooding risk and uncertainty regarding timely funding and delivery of necessary road infrastructure to support the new housing. 4. Food Security: Building on fertile fields undermines food security, particularly as farmland is already being lost on the other side of Backwell. Preserving agricultural land is essential for local food production.			
39304545	Hayley Hayes			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	1. Traffic and Commuting Issues: The A370 is already incredilbly congested during rush hour. Given the distance from the train station and the absence of local employment opportunities, residents would have to rely on increasingly busy roads for commuting. 2. Impact on Wildlife and Biodiversity: The proposed development would destroy valuable wildlife habitats, further harming biodiversity in a country already facing significant nature depletion. 3. Concerns about Strategic Growth Location: - Loss of Greenbelt and high-quality agricultural land, specifically Grade 1 agricultural land, of which only 7% remains in North Somerset. - Potential flooding risk and uncertainty regarding timely funding and delivery of necessary road infrastructure to support the new housing. 4. Food Security: Building on fertile fields undermines food security, particularly as farmland is already being lost on the other side of Backwell. Preserving agricultural land is essential for local food production.			
58500417	Tom Henley			Yes		Yes	Yes	1. Introduction I am writing to express my support for the allocation of Land East of Backwell within the North Somerset Local Plan 2041 (Regulation 19). I recognise the need to provide new homes, employment land and supporting infrastructure across the district, and I believe that Backwell represents one of the most appropriate and sustainable locations for delivering this growth. My position is based on a balanced assessment of the evidence, the landscape and ecological sensitivities of different locations, and the degree to which each proposed allocation aligns with the Plan's spatial strategy and Policy LP3. In my view, the Backwell allocations are sound, sustainable and far less environmentally harmful than the proposed allocations at Tower Farm and Black Rock, which lie immediately adjacent to Weston Big Wood—an ancient woodland and highly sensitive ecological asset. 2. Why Backwell Is a Suitable and Sustainable Growth Location Backwell is a small but well-connected settlement offering several advantages for planned, coordinated expansion: 2.1 Existing Strategic Transport Access Backwell sits directly on: * the A370, a major route linking Weston-super-Mare, Bristol, and the airport corridor * the Nailsea & Backwell Railway Station, a key rail node providing		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									direct services to Bristol Temple Meads * routes to Bristol Airport * bus corridors connecting to high-frequency services This gives Backwell a level of transport resilience and connectivity that supports sustainable modal shift, particularly when combined with the active travel improvements and Cross Rail Link required by LP3. 2.2 Development on Flat, Lower-Sensitivity Agricultural Land The allocations of Land East of Backwell are situated on: * broadly flat land * agricultural fields surrounded by existing development on at least one or more sides * areas not adjacent to ancient woodland, SSSI, SNCI or irreplaceable habitats This contrasts sharply with Portishead's Tower Farm and Black Rock allocations, which directly border Weston Big Wood, an ancient woodland and SNCI, where any development—even with buffers—risks irreversible ecological fragmentation. 2.3 Capacity to Deliver Strategic Infrastructure Backwell's allocations are uniquely positioned to deliver: * the Cross Rail Link (a requirement of LP3) * new active travel connections * new primary schools * employment land, including light industrial and office space * enhanced access to the railway station These interventions serve both Backwell and Nailsea, helping address longstanding congestion issues at Backwell Crossroads and Station Road, and contributing to a cohesive transport strategy across the region. 3. Comparison With Tower Farm and Black Rock (Portishead) It is important to consider the relative environmental impact and policy alignment of the Backwell sites compared with other proposed allocations. 3.1 Proximity to Weston Big Wood – Severe Environmental Risk The Portishead allocations at Tower Farm and Black Rock directly abut Weston Big Wood, which is: * a Site of Special Scientific Interest (SSSI) * an ancient woodland, an irreplaceable habitat under the NPPF * a designated Site of Nature Conservation Interest (SNCI) * part of a wider ecological corridor across the Gordano Valley Any encroachment or buffer erosion at these locations risks permanent, adverse impacts on biodiversity, contrary to national policy requirements to protect ancient woodland and ancient/veteran trees. 3.2 Landform and Ecological Sensitivity		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									By contrast: * Backwell's landscape is low-sensitivity farmland, highly suitable for strategic development * The Backwell allocations avoid protected ecological features * Ecological mitigation at Backwell is feasible and proportionate * Portishead's woodland-edge sites require extensive, high-risk ecological mitigation, likely reducing deliverability 3.3 Deliverability and Infrastructure Burden Backwell is already the intended location for strategic transport interventions (Cross Rail Link, active travel corridors, bus improvements), whereas Portishead's proposals face: * severe access constraints * ecological constraints * the need for significant new mitigation measures to offset harm In summary, Backwell offers a policy-aligned alternative with significantly lower environmental risk. 4. Support for the Allocation: Land East of Backwell (889 homes) Based on the evidence and the site requirements, I support the allocation of Land East of Backwell because: 4.1 It directly enables the Cross Rail Link The site is essential to delivering the new Cross Rail Link between Station Road and the A370. Without this allocation, the strategic transport package required by LP3 would be undeliverable. 4.2 Integration of Employment Land The identified 5 hectares of employment land provides a balanced mix of housing and jobs, supporting local economic resilience. 4.3 Strong Active Travel and Sustainable Transport Potential The site is close to Nailsea & Backwell Station, enabling realistic modal shift to rail travel for commuting. 4.4 Heritage-Led and Landscape-Led Masterplanning LP3 requires the site to respect the settings of conservation areas and historic farmsteads, which are fully achievable within the generous land parcel. 4.5 Coherence With Existing Urban Form The maps show that development here will form a logical extension to Backwell, avoiding sensitive landscapes and connecting safely with existing neighbourhoods. 5. Alignment With Policy LP3 and the Local Plan Spatial Strategy Both Backwell allocations align strongly with Policy LP3 and the plan's overarching sustainable development goals: * They support 3,500 homes across Nailsea and Backwell.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									* They enable infrastructure-led growth through the delivery of the Cross Rail Link. * They provide employment land, two new primary schools, and improved public transport access. * They enhance active travel routes district-wide. * They are consistent with the NPPF, particularly in relation to: * protecting ancient woodland * promoting sustainable transport * delivering affordable housing * coordinating growth with infrastructure 6. Conclusion For all the reasons set out above, I believe the allocations at Land East of Backwell are the most appropriate, sustainable and deliverable housing locations identified in this Local Plan. They offer: * a lower environmental impact * a better alignment with infrastructure delivery * strategic transport improvements essential for the wider area * protection of highly sensitive ecological assets elsewhere * a contribution to balanced, well-connected communities I therefore strongly support the inclusion of these allocations within the Regulation 19 Local Plan and encourage North Somerset Council to retain them as key elements of its sustainable growth strategy.		
62539841	S Henry			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell cannot cope with this many houses on top of the ones that are already being built. There is already regular half an hour traffic jams from a small building site near the proposed large one. Station Road and the train station itself are already struggling to cope. Furthermore, the secondary school is over subscribed as it is and this development along with the others will double the size of Backwell. We do not have the schools to cope with this. The land is green belt land and well used by dog walkers and other locals for getting out without cars into the fresh air to support their mental health. Driving, or not going out at all, will be hugely detrimental to these people. Backwell is already being built around too much and our roads, stations, schools and local community cannot cope with this proposal. Kindly cap the number of houses as what is already going ahead, a hugely significant number.			
39304385	P Herbert			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Overdevelopment of the village - a 40% increase in the Village's size for this development is not sustainable. There is not the medical, dentistry, primary schools or road infrastructure to support this. The A370 is already at saturation in busy periods. There is no industry in Backwell, only an assortment of very small business employing few people. All new residents will have to commute to Bristol. At busy times it is impossible to catch the train as we are the last stop before Bristol and the station cannot cope with disabled people. This country has relatively little grade 1 agricultural land and to destroy this land is a dereliction of duty to future generations Wildlife would be adversely impacted, particularly rare bat roosts			
62855713	Alex Herbert			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I am responding as a parent of two young children living near the proposed site and as someone who understands how government policy is intended to guide sustainable development. My family values Backwell for its green spaces, community feel, and access to nature. The scale of the proposed development threatens all of that and does not align with key principles in national planning policy. **Scale and Fairness** Backwell already has 800 homes approved, representing a 40% increase in housing stock. Adding another 1,000 homes would be disproportionate for a village of this size. Backwell is allocated 7% of North Somerset's housing growth, more than towns like Clevedon (2%). This raises serious questions about fairness and proportionality in planning. **Infrastructure and Services** While primary schools may not yet be at capacity, the proposed growth will put significant pressure on education, health services, and leisure facilities. There is no funded plan for expanding these services. The National Planning Policy Framework (NPPF) requires planning to promote healthy communities and ensure sufficient school places and health facilities (Chapter 8). Infrastructure Delivery Plans must demonstrate costings and delivery timelines before major development proceeds. This proposal lacks both. **Transport and Accessibility** The proposed road does not solve congestion on Station Road, Backwell Common, or Chapel Hill. Engineering under or over the railway would be costly and uncertain, creating delivery risk. Backwell station is not fit for purpose as a transport hub: it remains inaccessible for people with mobility issues and is difficult for families with young children. NPPF Chapter 9 requires developments to promote sustainable transport and accessibility for all users. This proposal fails to meet those standards. **Environmental and Food Security** The site includes Grade 1 Agricultural Land, of which only 7% remains in North Somerset. Government policy requires protection of best and most versatile land to safeguard food security. NPPF paragraph 174 states that local authorities must protect and enhance valued soils and avoid development on BMV land unless absolutely necessary. This proposal		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								contradicts national food security objectives and undermines resilience. **Biodiversity and Habitat Protection** Development would destroy wildlife habitats, harm biodiversity, and threaten the Brockley Maternity Roost and SSSI, home to rare Lesser and Greater Horseshoe bats. Under the Environment Act 2021 and NPPF paragraph 180, all major development must deliver a minimum 10% biodiversity net gain and provide a Biodiversity Gain Plan. No such plan has been provided. **Flood Risk** Backwell Common and adjacent fields, including Backwell Lake (Reservoir), are on a floodplain that floods regularly. Increased housing would aggravate flood risk, contrary to climate adaptation principles. NPPF Chapter 14 mandates the Sequential Test and flood risk mitigation for development in flood-prone areas. No evidence of compliance has been provided. **Community Impact** Rapid growth of this scale risks destabilizing the village's character and social cohesion. No impact assessment has been provided. Backwell is not an employment hub, so most new residents will commute, increasing traffic and emissions. NPPF paragraph 92 states that planning should support strong, vibrant communities and guard against adverse social impacts. This proposal ignores that principle. **Deliverability** There is no needs or viability analysis for an extra 1,000 houses, and uncertainty over whether the road can be funded and delivered on time. NPPF paragraph 34 requires plans to be deliverable and supported by clear infrastructure funding mechanisms. This proposal fails that test. As a parent, I worry about the loss of green space, increased traffic, and strain on services. From a policy perspective, this proposal fails to align with multiple national planning principles, including: * Protection of best and most versatile agricultural land (NPPF 174) * Mandatory biodiversity net gain (Environment Act 2021, NPPF 180) * Flood risk management (NPPF Chapter 14) * Infrastructure-first development (NPPF paragraph 34) * Sustainable transport and accessibility (NPPF Chapter 9) I urge the planning authority to reject this proposal or significantly scale back growth, ensuring that any development is proportionate, evidence-based, and supported by funded infrastructure plans.			
62849729	M Herbert-Guest			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	North Somerset's plan places an excessive burden on Backwell, far beyond what a village of its scale can reasonably absorb. Hundreds of new homes have already been approved, representing a dramatic expansion, and the additional allocation would push the settlement far past any sustainable level of growth. Backwell is being asked to accommodate a larger share of the district's housing than any other rural community—indeed, a higher proportional increase than many towns—without any credible justification or accompanying needs assessment. The infrastructure expected to support this expansion is neither planned nor funded in a convincing way. Schools in the area already struggle to provide sufficient places, and there is no clear commitment to expanding healthcare provision or leisure facilities. The proposed new road, intended to relieve existing traffic pressures, does not appear capable of addressing the long-standing congestion issues in Nailsea or Backwell. The engineering challenges of crossing the railway, combined with the lack of detailed costings or guaranteed funding, cast serious doubt on its deliverability. Meanwhile, Backwell's railway station remains outdated and inaccessible, making it ill-equipped to serve as the transport hub the plan assumes it can become. Environmental concerns also weigh heavily against the proposals. The development footprint includes some of the district's most productive agricultural land, a resource that is already scarce and explicitly protected in national policy due to its importance for food security. The loss of this land would also disrupt valuable habitats, threatening local biodiversity and putting rare bat species—dependent on these landscapes for feeding—at heightened risk. Flooding is another significant issue: Backwell Common, nearby fields, and the areas surrounding Backwell Lake already flood regularly, and further development would likely exacerbate this vulnerability. Beyond physical impacts, the plan lacks consideration of the social and economic consequences for the village. Backwell is not a significant employment centre, meaning most new residents would be reliant on commuting, further straining local transport routes. No assessment has been provided on how such rapid and concentrated growth might affect community cohesion or the character of the area. When combined with the uncertainty surrounding infrastructure funding, the scale and speed of the proposed development feel both destabilising and unrealistic. Taken together, these concerns paint a picture of a proposal that is disproportionate, environmentally damaging, inadequately supported by infrastructure planning, and out of alignment with national policy. The strategy for Backwell is neither sustainable nor deliverable, and a more balanced, evidence-based approach is urgently needed.			
62616257	Mona Herborn			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I have lived in Backwell for 63 years. I am extremely concerned about building on our Green fields at Backwell East. We already have a number of housing developments going ahead in Backwell and building on this high quality agricultural land is not acceptable. This land is currently farmed and has been for generations. I believe this is too much and will totally overwhelm the village. There is no infrastructure to support such a high number of houses and the village will not cope. There seems to be a lack of knowledge and understanding at North Somerset Council to suggest this land should be built on. There are no plans to show why this much extra housing is needed and it is not justified. Backwell is not an employment center. We have lost enough wildlife and habitat and food for the bats at Brockley with Grove Farm and Farleigh Fields being given permission for building houses, we cannot permit another 1,000 houses on land that is providing us with food as well. This should NOT be permitted.			
18467361	Yvonne Herrington			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	There is no need for additional 1000 houses. Backwell is not an employment hub In your proposed plan you state that Grade 1 agricultural land should be protected and the proposed land is just that! The government states that we must protect our best and most versatile land Engineering the proposed under over the railway will be very costly and its not clear who will pay for this? Backwell has not been given extra investment in health, school or infrastructure The area is prone to flooding There is no guarantees for new funding of infrastructure or even mention of who is providing this The railway station is not fit for being a transport hub at its present state. The platforms are too short and there is no access for people with mobility issues on one side of the track Backwell has been allocated more than enough houses.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
50390497	Guy Herrington			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell is being allocated a huge increase in dwellings, approx 7%, when other towns and villages are only taking 2%. This is too much of an increase. We are on a floodplain so the proposed dwellings on Farleigh Farm will struggle to cope with the water flow. There will be a deficit in school places, despite the increase, and no investment in health and leisure facilities for the village. This will lead to a degradation in living standards for existing and new residents, The idea that the large development could be considered without a definite commitment to build the connecting road to station road (from the new development) is very concerning as the Backwell Crossroads will not cope with new traffic routing via the A370. Finally the land proposed for the large development is grade 1 agricultural land, how does this makes sense when Government policy is to protect such land?			
39056033	Mrs Ann Heymans			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Your Local Plan states that there should not be development where it may “cause significant adverse impacts on local services and infrastructure, including cumulative impacts.” Backwell is allocated a higher number of houses than any other village in North Somerset. The increase in population with East of Backwell, on top of the other sites already given planning permission, would be 80%. A 40% increase in housing would lead to an overdevelopment of the town. The two sites that are already being developed, Rodney Road and Farleigh Flields East have caused disruption and distress resulting in much local anger. The “cumulative Impact” of three more huge developments will test the social cohesion of the village. No impact assessment has been provided. Although a primary school is proposed for Backwell, it will be funded through developer contributions and will be phased. There will continue to be a deficit in school places until adequate provision is made. Additional development will place immense pressure on the town’s existing health and leisure provision. There is no planned direct investment to combat this pressure. The lack of infrastructure and services cannot support another 1,000 houses. The Infrastructure Delivery Plan lacks analysis and costings, and there are no funding guarantees for the new road or services. The proposed road would not effectively serve Nailsea’s traffic or relieve congestion on Station Road, Backwell Common, or Chapel Hill. Flooding is another issue. Backwell Lake and adjacent fields, where the new road and housing is planned, are on a floodplain, which floods regularly. The new railway bridges needed for the new road, and structures at the station would be hugely expensive and possibly unfeasible. The railway station is not presently fit for purpose as a transport hub. It remains inaccessible for people with mobility issues and presents serious challenges when travelling with young children. The plan does recommend new employment sites but with Bristol being so close most residents will continue to commute. The land east of Backwell is classed as Grade 1 agricultural land and is consistently used for growing food-crops and grazing. Government policy states that “we must protect our best and most versatile land” to safeguard food security. The proposals fundamentally contradict this policy. Backwell is a village surrounded by beautiful wildlife areas and a rich biodiversity. Residents wish this to remain and providing "Green Spaces" which have to be funded locally does not mitigate for the loss of these natural habitats. The loss of greenbelt land is equally harmful. As a sop, Government policy may require 50% affordable housing on greenbelt land, but this reduces the funds developers contribute towards infrastructure and biodiverse projects. There are the bats in Brockley, badgers, deer, birds, bees – all are threatened by our increasing “development” of their habitats. The sheer volume of growth with the required investment infrastructure and services over such a short period is destabilizing, unsustainable and undeliverable. There is no “Needs or Viability Analysis” for an extra 1,000 houses. The residents of Backwell are angry about this lack of concern for our village community. Development on the Land East of Backwell should not be part of North Somerset's Local Plan. Planning Permission should not be given. Development on the Land East of Backwell should not be part of North Somerset's Local Plan. Planning Permission should not be given.			
51245633	David Heymans			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The additional numbers proposed for the village are completely disproportionate and would lead to over development. If the development were permitted, the proposed new road to bypass Backwell crossroads would have to be built first. The road would have to "cross" the railway - but how? Over or under? If over, the access to the bridge would have to be a huge construction to achieve the necessary gradients. If under, construction would be in an area where the land already floods - cf Chapel Hill. Has Railtrack (or whoever) indicated that a crossing (of whatever type) would be permitted? And where is the money to build this road coming from? And even if Backwell crossroads were bypassed the rest of the A370 to Bristol would be the same old single carriageway road. Backwell is not an employment hub, most residents commute. Another 1000 houses would cause intolerable pressure on the A370. If these houses were built, who is to pay for the necessary investment in education, health and leisure facilities that an increased population would require? The state of Nailsea & Backwell station is shocking. Where is the investment coming from to make it into a "transport hub"? The land in question is Grade 1 Agricultural land, necessary for food production. In an uncertain world, with significant changes in our climate, UK food security is a vital element for the future. How can it make sense to build upon such land? Development would destroy valuable wildlife habitats.			
62699105	J Hickling			No	‣ Justified	Unsure	Unsure		Government policy states we must protect our best and most versatile land to safeguard food security. Development would destroy valuable wildlife habitats and further harm biodiversity. Grade1 agricultural land is currently used for food crops and grazing. There is only 7% of this high quality land left in N Somerset.

62849121	Kevin Hirst			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Proposed Land Use The development of this land would destroy valuable wildlife habitats and further harm biodiversity in one of the world's most nature-depleted countries. The land proposed is Grade 1 Agricultural Land currently used for food crops and grazing. There is only 7% of this high quality land left in the whole of North Somerset. It goes against Government policy, which states that "we must protect our best and most versatile land" to safeguard food security. The proposals contradict this policy and undermine food security. It is understood that the use of this land would threaten the Brockley Maternity Roost and SSSI, with rare Lesser and Greater Horseshoe Bats relying on the land for food. Flooding Risk The land of which this development is proposed is liable to flooding. Backwell Common and surrounding areas are historically prone to flooding, this would be increased by this development. Transport The proposed new road is a joke. There is no way that they would be able to tunnel under a mainline railway line and this would be cost prohibitive. An additional 890 houses would drastically increase vehicle traffic along the A370 as most residents would be commuting to work or driving their children to schools (assuming they actually could obtain places in the village schools). Village Infrastructure IMHO the village schools would be totally unable to provide required spaces unless major expansion investment is provided. The local medical centre is insufficient for the required increase in number of residents. They would require major investment and probable a location move to have sufficient facilities and access.	Remove the land east of Backwell as a proposed location for 890 houses.		
62856129	Stephanie Hitchcock			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Who would want to move into a house that will be flooded??? What do we eat with no land to grow food?? The surgery is hardly coping at present so where will all the new residents get there health care needs??? Do we want a village that is gridlocked??? Do we want to kill the local wildlife??? What utter MADNESS!!!!			
29308449	Phil Hockett			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell already has 800 new houses approved, a 40% increase for the village. These additional numbers would lead to complete overdevelopment. The proposed road would not effectively serve Nailsea's traffic or relieve congestion on Station Road, Backwell Common, or Chapel Hill. Engineering the road under or over the railway would be highly expensive. Despite the proposed increase, there is a deficit in school places and no investment in health services or leisure facilities. The lack of infrastructure and services cannot support another 1,000 houses. Backwell is allocated a higher number of houses than any other village in North Somerset, and even a higher growth percentage than towns. Backwell is expected to take 7% of the district's housing allocation, compared to Clevedon's 2%. There is no needs or viability analysis for an extra 1,000 houses. Backwell is not an employment hub, most residents commute No social cohesion impact assessment has been provided. The loss of Grade 1 Agricultural Land currently used for food crops and grazing is unacceptable. There is only 7% of this high-quality land left in the whole of North Somerset. Government policy states that "we must protect our best and most versatile land" to safeguard food security. The proposals contradict this policy and undermine food security. The Development would destroy valuable wildlife habitats and further harm biodiversity in one of the world's most nature-depleted countries. The proposals threaten the Brockley Maternity Roost and SSSI, with rare Lesser and Greater Horseshoe Bats relying on the land for food. The Infrastructure Delivery Plan lacks analysis and costings, and there are no funding guarantees for the new road or services. Backwell Common and surrounding areas are prone to flooding, which would be aggravated by more housing. Concerns regarding the strategic growth location designation include the impact on the area's character, the loss of Greenbelt and high-quality agricultural land, the risk of flooding, and uncertainty over whether the road can be funded and delivered on time to support the proposed housing. Backwell Lake (Reservoir) and adjacent fields, where the new roads and housing is planned and are on a floodplain, which floods regularly. The sheer volume of growth with the required investment infrastructure and services over such a short period is destabilising, unsustainable and undeliverable. The railway station is not fit for purpose as a transport hub; it remains inaccessible for people with mobility issues and presents serious challenges when travelling with young children.

58403713	S Holland			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Grade 1 Agricultural Land currently used for food crops and grazing. There is only 7% of this high quality land left in the whole of North Somerset. We haven't learnt from COVID. Our food needs must be met closer to home, the carbon footprint can only be addressed if we farm locally. Backwell Common and surrounding areas are prone to flooding, which would be aggravated by more housing. In fact i have lived in Backwell since 2008 and this area floods EVERY year without fail, including the A370 which is one of the main roads in the whole of the North Somerset Area, its not near a river its just the complete lack of infrastructure maintenance and the lose of green space.	The proposed road would not effectively serve Nailsea's traffic or relieve congestion on Station Road, Backwell Common, or Chapel Hill. Engineering the road under or over the railway would be highly expensive and possibly unfeasible. A road is needed for Nailsea to access Bristol, this road does not address that, its in the wrong place and joins the A370 too far away from Bristol. The sheer amount of homes being proposed is too large for the local area to sustain. There is simple not the infrastructure to support this increase in numbers.		
21279489	Jo Hollis		resident	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The Plan is not sound. Backwell community is a village. Which is already getting an increase of 40% with 800 houses already approved. We have already been allocated a higher number of houses than any other village in North Somerset. Already there will be a deficit in school places and health services. What is being proposed as another 1000 houses and road will destabilise the area. It will affect the local's health physically and mentally and they will not be able to get help from health services. Selling the idea to people of buying a brand new house in a village which will no longer exist. The road and proposed houses. Separation of Backwell Common community. Backwell Community will be separated we will not be able to drive the length of the road from Station Road and Backwell Bow. The proposal wants Backwell Common to become pedestrianised from just after Old Diary all the way under the little old bridge to Woollies farm. The road going from the Lake then over Backwell Common under the railway Bridge and up to A370. I live right next to the proposed road on Backwell Common it swings round the bottom of my garden and round my house to the railway bridge. The plan is not sound because of all the damage it will cause. Flooding – increase the flooding astronomically. We are already on a flood plain. My access to getting out of my property will be to go under the current Bridge and enter the new road Backwell East where all the proposed 889 block of houses proposal. We already have flooding under that Bridge and when that happens I drive towards Backwell Bow as it is the only way out. The proposed road means when it does flood my family and our neighbours will be stranded in our properties as under our old bridge will be the only way out but it will be flooded. This intern means emergency vehicles will also not be able to get to us. The surface run off from the new road and 889 proposal and the already 125 plus 94 houses straight over the A370 are being built will cause a vast increase in flooding down here where we are at the lowest point in the valley. Woolies Brook already flows through my garden has flooded it in the past. Also just out of my driveway just under the old bridge Wraxall Ditch has broken its banks and flooded under the Bridge. I have photos if you want to see as evidence. Our well as of today is full to ground level already and we have not had a particularly rainy Autumn winter season yet. These things have already been happening. We have got on with it as we have been able to turn in the other direction. The new road means there will be no other way to turn when the floods happen. And these floods have been happening before any new houses over the A370 have been fully developed and proposed new road. So for a new road and 889 new houses Backwell East – otherside of the railway will increase the flooding down here astronomically. Also the new road proposals are to go under the railway bridge under the water levels. A similar road which goes under the railway line already exists on Backwell Bow. This Bridge already flooded this Autumn several times and has caused blockage and people to take risks and right their cars off in the flood water. Where emergency services have been called out to rescue them. This has been in the National news several times over the years. So if an even larger road to accommodate two lanes is built under the bridge and deeper to allow buses and other large vehicles under the flooding there will be dangerous. Pedestrians will not be able to walk under the bridge, and they will also not be able to walk under the current bridge to use the pedestrian way from the Old Dairy to Woollies farm. The proposed road will be out of use. Backwell Bow will be out of use and the old little Bridge will be out of use because of flooding. River Kenn runs along side Backwell Bow by the Backwell Common junction so higher up than the Bridge on that road. By the Backwell Common Junction the River Kenn broke its banks and flooded the road. If that can happen there it can certainly happen along the proposed new road as it come up from the Bridge as there is the Stream that flows into the Old Dairy. If a pump is used it can break also where will the excess water be flown into? The Streams all down here are flowing at full capacity already in Autumn winter and spring. The fields and gardens already get flooded and a tremendous amount of surface water clogging. As I say my well is already at capacity. If it goes over the top there is no where else for it to travel to. Food for humans and safe home for wildlife biodiversity is important especially near to a city which is depleted of wildlife. The land is grade 1 Agricultural land. And there is only 7% left in North Somerset! Once gone it cannot be brought back. We have cows and sheep in the surrounding fields. Also crops for both animals and humans grown in the area of Backwell Common and Backwell East. It is a lovely farm land area which has a vast diversity of plant and animals grown. The hundreds of year old Oaks who's roots will be damaged and the thousands of animals and insects who rely on healthy trees. In my shed I have two types of very important bats as well as others. We also have Barn owls and tawny owls who use my garden and the surrounding fields for foraging there food. The road will destroy that. Animals and insects do not move house. How about not using Grade 1 land but use brown sites. Protect this land for our children's children as in the future we may desperately need this to feed our population. Pollution We are Greenbelt land. Not much of this is around Bristol. We are the lungs and escape of the city. An oasis between towns and villages. Cyclists and pedestrians regularly use Backwell Common a place without vehicle fumes. A road with little thunderous noise of vehicles. The proposed road will bring that steaming across the common. At night it is pitch dark here and stars can been seen quite easily there is hardly any light pollution. Night animals can live in peace and feed in peace without being run over or crashed into. We have a large deer population that roam the fields. And the bats use the hedgerows as they superhighway. Dark spaces are decreasing and very important for a full area to be diverse.			Bridge by Farleigh House flood.jpg

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								Climate change Before any road or housing has been developed there is the increased risk of flooding due to climate change. So will increase the flooding even more.			
62866017	O Hollis			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Not a sound plan. 800 houses already approved in Backwell a village. another 1000 houses and a road across Green Belt grade 1 land used for agriculture not sound. Village already being increased by 40%. This new proposal mean increase to 80%. No longer an rural village but a town with not the infrastructure to keep the population safe and educated to a basic standard. The village regularly gets flooded and down on Backwell Common the various streams and brooks already break their banks and cause flooding in gardens and the road and bridges under the railway line. I new larger road dug further under the bridge to allow double decker buses and lorries means this will also flood. Also the increased surface run off of another 1000 houses the other side of the railway bridge will increase the flooding to a new level. Plus climate change predictions will add on top of this. The damage to the wild life is unneeded especially as they are already struggling. This area is a small Green belt land of many diverse animals. The land needs to be protected for our children's children for food and the wildlife. In tern our own human health.			
30920417	Rhona			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I am concerned about the huge number of prospective houses that have been allocated to Backwell. This is totally out of proportion to the size of the village and is more than would be expected for the allocation when compared to nearby larger towns such as Clevedon. The suitability for extra housing in Backwell is limited by its lack of infrastructure and suitable roads. Not only this but I think it is short sighted to use up grade 1 agricultural land when there are other options more suitable and available. The choice of an area of land already prone to flooding is a bad idea. Although we have a railway station between Nailsea and Backwell, the transport links around it are poor and there are no obvious way of improving these. Even a proposed new road is not thought through properly. Most new residents will be commuting out of Backwell as there is little employment in the vicinity. The lack of plans for new infrastructure is highly worrying. The rapidity of the expansion of the village will not allow sustainable changes to health, education and leisure services to catch up.			
21334465	Jenny Holmes			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The Local Plan is not sound The scale of development proposed for Backwell represents an unsustainable 40% increase in the size of the village. Backwell already has 800 new homes approved. Adding a further 1,000 houses would overwhelm local services and infrastructure. As a parent of three children who attend local schools, I am already aware that the secondary school is oversubscribed and the limited investment in health and community services. These plans do not demonstrate how essential services will cope with such rapid and concentrated growth. We live on the A370 and frequently see the flooding on the road outside our house, we fear of the impact of the 125 houses already planned on Farleigh Fields on this flooding problem on the road. Our flooding concerns show that the plan is not justified or deliverable. Much of the proposed development land sits on or adjacent to known floodplain areas including Backwell Common and the fields around Backwell Lake. These locations already flood regularly. Adding major housing and roads here increases risk to existing and future residents. There is no adequate evidence that mitigation is feasible or can be funded. Traffic impacts on the A370 have not been properly assessed. The A370 is already heavily congested at peak times. It is essential that the proposed road from Backwell Lake to the A370 is property assessed and funded if all this houses is to go ahead. Without a properly engineered bypass around the village, Backwell’s main roads will become gridlocked. If development is imposed, a full bypass (such as the Long Ashton bypass) must be included from the outset so that existing residents are not left carrying the consequences of poor planning. The Local Plan is not legally compliant Key evidence is missing. No detailed viability testing has been provided for the major road infrastructure required to make this level of development safe or practical. The Infrastructure Delivery Plan lacks analysis, costings and secured funding. Without this, the plan does not meet legal requirements for infrastructure planning. The environmental assessments are incomplete. High quality Grade 1 agricultural land would be permanently lost. The area is home to protected species including Lesser and Greater Horseshoe Bats. Flooding risks have not been sufficiently evidenced or addressed. These issues indicate that the plan does not comply with statutory environmental duties. The Local Plan does not meet the duty to co-operate Backwell is being asked to absorb a higher proportional increase than nearby towns. No explanation is provided for placing a disproportionate burden on a village that is not an employment centre and lacks the transport capacity to support this level of growth. There is no clear demonstration that North Somerset Council has effectively engaged with the community or neighbouring authorities regarding traffic impacts on the A370, the rail station’s accessibility limitations, or wider infrastructure strain. Residents have consistently raised concerns about flooding and roads. These issues have not been meaningfully addressed or resolved.			
18214849	Lorraine H-P			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Having been a resident of Backwell for more than 20 years I am extremely alarmed at the proposals to build on Backwell East. Backwell has always welcomed new housing and indeed was one of the first villages in the country to consult and produce a neighbourhood plan, which identified proportionate, required and sustainable housing. Indeed all of the planned housing has now been built and integrated into the village. Due to current Governments arbitrary housing targets we now have a further 800 houses with planning permission on our mostly Grade 2 agricultural land, of which there is only 10% left in North Somerset. This represents a huge 40% increase for Backwell which is on the way. To date, no further infrastructure has been identified to support this increase. The fact that the North Somerset Local Plan now puts forward a FURTHER 1,000 houses on top of the 800 is alarming and would see the complete overdevelopment of our village. It is noted that the land identified at Backwell East is Grade 1 Agricultural Greenbelt land, which is also currently used for food, crops and grazing - this land has been farmed, I am told, for more than 1,000 years. I find it appalling that this land is even being considered for housing. I can only imagine that North Somerset Council are so fearful of any form of legal challenge from Government on the housing targets that any form of planning protections or considerations have been thrown out of the window. Indeed a million miles from Sir Keir Starmer's speech on Greenbelt Planning reforms, where he talked about a disused garage forecourt, NOT Grade 1			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Agricultural Greenbelt currently used for food. There is only 7% of Grade 1 agricultural land left in the whole of North Somerset County and yet this precious, high yield land is being put forward for housing. Indeed this flies in the face of Governments own policy which states that our "Best and most versatile land must be protected". for our food security. This appears to have been completely ignored in these plans and I find no mention in any of these documents. I have summarized my objections to the inclusion of Backwell East in this Local Plan for ease of reference below. If this plan in its current form is agreed, I believe it would be catastrophic not just for Backwell but for our Farming, Agricultural and Food Security across North Somerset and would set a dangerous precedent for our current and future generations. Once this land is gone it is gone for good. Backwell already has an additional 800 new houses with planning permission coming its way, this represents a huge 40% increase for the village. Backwell has more than done its bit in providing new houses and these additional numbers would lead to complete overdevelopment. Despite Backwell already absorbing a 40% increase, there is a deficit in school places and no investment in our health services. The lack of infrastructure and services cannot support a further 1,000 houses and is completely unsustainable. Backwell is being given higher numbers than any other village in North Somerset and in fact the percentage growth is higher than the Towns. For context, Backwell is being asked to take 7% of housing for the whole of North Somerset, Clevedon is being asked to take 2%. There is no needs analysis for a further 1,000 houses for Backwell. There is no analysis on social cohesion impact The land being put forward is in our Greenbelt The land being put forward is Grade 1 Agricultural Land The land being put forward is currently used for the production of food and crops and used for grazing. Grade 1 Agricultural Land is included in Government Policy which states that “we must protect our best and most versatile land” in order to protect our food security – The proposals contradict this policy and negatively impacts our food security. The proposals would destroy valuable wildlife and negatively impact biodiversity – we are already one of the most bio-diversely depleted countries in the world. The proposals would negatively impact the Brockley Maternity Roost and the SSi. The rare Lesser and Greater Horseshoe Bats are reliant upon food generated (manure) by cattle currently grazed on this land. There is no analysis, plan, costings, funding or guarantees for the proposed new road. The proposed new road would not truly serve Nailsea’s traffic flow as most commuters travel North/North West towards Bristol. The proposed new road would not stop Station Road’s traffic accessing the A38 or A370 to Weston-Super-Mare or Bristol Airport (This route takes as much traffic as Brockley Coomb). The proposed new road would not relieve traffic on Backwell Common & Chapel Hill as that traffic will still come from the Elms down Lodge Lane. The engineering to go either under or over the Railway will be hugely expensive (no costings have been carried out) and likely prohibitive. Backwell Common frequently floods and additional housing will exacerbate this. We live on Backwell Common and have first hand experience of how often it floods! There is no funding for 2 new schools. There is no funding for increased health care. There is no funding for new leisure facilities. There are significant concerns regarding the proposed designation of Nailsea and Backwell as a strategic growth location, including: 1. The impact of 3,600 houses and 6 Hectares of employment land on the character of the area. 2. The loss of Greenbelt to development (including East Backwell). The loss of Grade 1 high quality agricultural land. The proposed road would have a significant landscape impact (if it bridges over the railway line) or flood risk issues (if the road passes under the railway line). Doubtful the road can be funded and delivered in time to accommodate the proposed housing. Doubtful the road would alleviate traffic on Backwell Crossroads and provide an effective transport route for new residents. Proposals would compromise the existing strategic gap between Backwell village and Nailsea Town.			
39171041	RiSC - Residents in Station Close Backwell		Resident North Somerset	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell already has 800 new houses approved, a further 40% increase for the village (1000 houses) would lead to unmanageable overdevelopment with loss of quality of life to both current residents and future residents. The sheer volume of growth with the required investment in infrastructure and services over such a short period will be destabilising, unsustainable and undeliverable. • Lack of necessary infrastructure: o No funding to enable necessary increase in school places, medical facilities, recreational/leisure facilities, and supermarkets to accommodate such an increase in the local population o No local employment, which therefore requires residents to commute to work increasing car travel compared to sites close to recognised employment areas such as Bristol, e.g. Long Ashton o No social cohesion impact assessment has been provided. o Railway station is inadequate as a commuter hub having no toilets, limited sheltered areas and unacceptable disabled access – the Station is only has disabled access one way. Making it unusable for disabled persons and extremely difficult for mothers with young children o The bus service is infrequent, inadequate and may unexpectedly cancel			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								o The traffic using Sation Road and its cross roads will come to a standstill with the increased road use both for travel within Backwell/Nailsea (taking children to school – accessing large commercial shops in Nailsea) and for those commuting – see above. Which will be compounded by a) the traffic using the A370 to get to the airport b) traffic diverting of the M5 motorway when there is an accident • The proposed road and underbridge would not effectively serve Nailsea's traffic or relieve congestion on Station Road, Backwell Common, or Chapel Hill: o Engineering the road under or over the railway would be highly expensive and possibly unfeasible. The likely timescale for obtaining permission, funding and construction would preclude it being in place before 2040 and would thus not serve to alleviate the congestion created by the new housing. ◈ Where will the funding come from? Government policy requires 50% affordable housing on Greenbelt Land, but this reduces the funds developers contribute towards infrastructure. o The Station Road round about which connects with the proposed link road is located on flood zone 3 which should not be built on o The road and underbridge will alter groundwater and surface water flood path flows increasing the risk of flooding elsewhere • The Land East of Backwell, Backwell Common and some properties are prone to flooding which would be aggravated by the increase in impermeable surfaces from the development and the foundations of the houses, new road and underbridge: o Surface water flow paths have been documented on the fields flowing into Backwell Common Lane, associated properties and then into the river Kenn. o The hydraulic model developed by Aegaea for the Persimmon planning application for Farleigh Fields East development clearly demonstrated surface water flood paths originating from Backwell flowing over the A370 and into the development site. o It has a highwater table during the wet months with some of the fields often under water. o The Yanley fault runs through the proposed development creating an increased risk of groundwater flooding/ ephemeral springs. The land has at least one documented spring, there are likey to be more. o It is unclear why the strategic flood risk assessment considers Backwell a sustainable site and does not mention flooding, given the extensive surface water flood risks identified on the Planning Map and Environment Agency flood risk maps. ◈ Surely this site should be subject to the sequential test based on the currently available evidence? Has this been undertaken? • This is Grade 1 Agricultural Land currently used for food crops and grazing. There is only 7% of this high quality land left in the whole of North Somerset. As a country we cannot afford to lose among more of this high-quality agriculture land on which our food security is dependent. Indeed the Government policy states that "we must protect our best and most versatile land" to safeguard food security. • The development would destroy valuable wildlife habitats and further harm biodiversity in one of the world's most nature-depleted countries: o The proposals threaten the Brockley Maternity Roost and SSSI, with rare Lesser and Greater Horseshoe Bats relying on the land for food. • The development would be widely visible impacting on our areas character with the loss of greenbelt.			
62865409	Joe Hornsey			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell has already approved 800 new houses, which is a 40% increase. Any additional numbers would be a massive over development. There is a deficit in school places and no additional investment in local health services. The area cannot support another 1000 houses (3000+ people). The proposal is on Grade 1 Agricultural land, currently used for food crops and grazing. There's only 7% left of this land type in North Somerset as a whole. Development would no doubt destroy valuable wildlife habitats. Including feeding areas for Lesser and Greater Horseshoe Bats. The local roads already suffer from major bottlenecking and cause delays to public transport in and out of Bristol. The proposed additional road will do nothing to alleviate this problem along Farleigh Road.			
62773569	A Howell			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	There is a deficit of school places and no investment in health services. It would destroy valuable wildlife habitats and affect rare bats environment. It is precious grade 1 agricultural land used for growing food. It will greaten the risk of flooding. It is a huge over development to a village like no other near by.			
62862913	P Howells			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	This is a response from me (Phil Howells) and my wife (Jo Howells). Backwell already has 800 new houses approved, a 40% increase for the village. These additional numbers would lead to complete overdevelopment. The proposed Road would not effectively serve Nailsea traffic or relieve congestion on station Road, Backwell Common or Chapel Hill. Engineering the road under or over the railway would be highly expensive and possibly unfeasible. Despite this increase, there is a deficit in school places and no investment in health services or leisure facilities. The lack of infrastructure and services cannot support another 1,000 houses. Backwell is allocated a higher number of houses than any other village in North Somerset and even a higher growth percentage than towns. Backwell is expected to take 7% of the district housing allocation compared to Clevedon's 2%. There is no needs or viability analysis for an extra 1000 houses. Backwell is not an employment Hub most residents commute. Why not join up with Bristol and build where people will most likely travel to? Some joined up thinking is needed - there is land on the outskirts of Bristol with better travel links which could be built on, leaving Backwell as a nice village to visit etc. No social cohesion impact assessment has been provided Grade one agricultural land currently used for food crops and grazing. There is only 7% of this high-quality land left in the whole of North Somerset. Why build on it? Government policy states that we must protect our best and most versatile land to safeguard food security. The proposals contradict this policy and undermine food security. Development would destroy valuable wildlife habitats and further harm biodiversity in one of the world's most nature depleted countries.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The proposals threaten the Brockley Maternity Roost and SSSI with rare Lesser and Greater Horseshoe Bats relying on the land for food. The Infrastructure Delivery Plan lacks analysis and costings, and there are no funding guarantees for the new road or services. Backwell common and surrounding areas are prone to flooding, which would be aggravated by more housing. Concerns about the strategic growth location designation include the impact on the area's character, the loss of Greenbelt and high-quality agricultural land, the risk of flooding and uncertainty over if the road can be funded and delivered on time to support the proposed housing. The proposed road would just funnel more traffic into an already clogged route into Bristol. Also, why build more roads when there is an emphasis on bus and train transport, and bus lanes which have just been put in make car travel even more congested. Where is the joined up thinking? Backwell Lake (reservoir) and adjacent fields, where the new roads and housing is planned are on a floodplain which floods regularly. Government policy requires 50% affordable housing on Greenbelt land, but this reduces the funds developers contribute towards infrastructure. The sheer volume of growth with the required investment infrastructure and services over such a short destabilising, unsustainable and undeliverable. The railway station is not fit for purpose as a transport hub; it remains inaccessible for people with mobility issues and presents serious challenges when travelling with young children. There are plenty of other options to provide the sort of housing that is needed to help the people of Backwell. For example, Fairfield School is no longer operating and houses could be built on that site. Also, if the junior school and infant schools were combined on the senior school site with some new buildings, the land from the junior school and infant school could be used for housing, and also include more community resources, modernise the pool etc. This is developing on existing developed sites and makes more sense than building on grade one agricultural land. Many people use the land that it is proposed to build on to exercise walk themselves and their dogs play with their children just getting out into nature. These proposals don't really take that into consideration.			
51100161	Graham Peter Hunt			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	1 Backwell is not a village which provides significant employment. The plan does not allow for jobs to be created to match the new housing: to avoid congestion and lengthy travel houses should be built nearer to where employment is. 2 There is already an unacceptable level of congestion throughout the village, most notably at the Dark Lane / A370 traffic lights but also in the surrounding roads which are used as "rat runs" which makes the roads dangerous and potentially unsafe. This plan promotes commuting - the Council should be looking to reduce commuting. 3. The number of new houses proposed for the area would be likely to almost double the size of the village. This plan would be about 40% increase alone. this level of development is unreasonable. 4 There is no infrastructure to cope with this development in terms of roads, schools, medical facilities, shops and supermarket, and other services in general. 5 The proposed new road would not cope with Nailsea's traffic and would not be a sufficient relief for the congestion in the village - history suggests that the road may not even be built! 6 The land near to the railway line and Backwell Common is liable to flooding - it floods regularly|: there is a flood plain in the area. The costs of coping with this and with bringing the proposed road under or over the railway would likely be uneconomic. 7 It appears unreasonable that Backwell is allocated such a high percentage of new houses: higher than any other village in North Somerset and a higher growth percentage than towns. 8 Why is there no needs or viability analysis for an extra 1,000 houses. 9 The plan would build on Grade 1 Agricultural Land currently used for food crops and animal grazing. I understand that there is only 7% of this high quality land left in the whole of North Somerset. 10 Government policy requires that quality land is safeguarded for food security reasons: following this Local Plan 2041 plan goes completely against this requirement and threatens food security. 11 This development would destroy valuable wildlife habitats and further harm biodiversity in one of the world's most nature-depleted countries. this includes threats to the Brockley Maternity Roost and SSSI, with rare Lesser and Greater Horseshoe Bats relying on the land for food. 12 Where is the cost analysis / risk analysis / harm analysis for the plan. 13 Government policy requires 50% affordable housing on Greenbelt Land, but this reduces the funds developers contribute towards infrastructure. 14This plan will have a serious detrimental impact on the character of the area. It will destroy greenbelt and grade 1 agricultural land, will increase flooding and increase congestion. 15 The railway station cannot provide a transport hub for accessibility and other reasons.			
39255457	Millie Huntley-Payne			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell is already having a 40% increase with local approved or started building, if this local plan is approved this will be a massive over development for our village the road the is essential for this local plan to be both safe and successful will not be provided by the building companies- it will need extensive engineering under and over the railway which will be potentially unfeasible and very expensive, this is unlikely to happen for many years however the housing will. Backwell common station road and chapel hill are not safe as it is for school children and pedestrians let alone with large vehicles needed to build these and no pavements and no possible way to increase safety here! I am worried a child may be seriously injured as it is let alone with any further heavy duty traffic on this single track road or surrounding roads which simply cannot take this kind of growth! deficit in school places and health services and leisure facilities if these houses go ahead 1000 more is many many more for our already stretched services allocation for Backwell = 7% of districts housing allocation which is a massive growth percentage and disproportionate compared to size comparable to other local areas (ie clevedon at 2%) lack of needs of viability analysis for 1000 extra houses here lack of local employment with most residents commuting lack of a social cohesion impact assessment the proposed housing sits on grade 1 agricultural land of which we only have 7% left of this high quality in North Somerset. It is currently used for crops and grazing as it should be!!!			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								our government policy outlined we the need to “protect our best and most versatile land” to safeguard food security. This proposal is a direct contradiction to this aim and will undermine our food security. overdevelopment will continue to destroy our valuable wildlife habitats- and further harm our biodiversity- in what is already one of the most nature depleted countries in the world. I have been privy to so many different species of wildlife on this land including : owls, birds of prey, foxes, badgers, mice, kingfishers, countless different species of bird, bats. these proposals threaten the Brockley maternity roost and SSSI with rare lesser and greater horseshoe bats relying on the land for food - with other surrounding foraging land already destroyed in the building of current housing projects infrastructure delivery plan has minimal analysis or feasible costings and no funding guarantees are in place for the essential new road or services which would make this over development anything but catastrophic for this locality. Backwell common is grossly prone to flooding I know this as I live here and it is consistently flooded with heavy rain- only to be worsened by more housing many concerned around strategic growth location designation: this includes the impact on the areas character and feel, loss of essential greenbelt and local green space which is highly used and loved, loss of high quality agricultural land, flooding risks and much uncertainty surrounding the affordability and indeed possibility of the road to be delivered on time and support the proposed over development. back well lake and reservoir and its adjacent fields where the new road is proposed are on a floodplain and flood regularly government policy requires 50% affordable housing on greenbelt land but this reduces the fund developers put towards infrastructure - something so essential in making this possible volume of growth in short time with the required investment infrastructure and services is destabilising, unsustainable, poorly thought out and frankly undeliverable. It is mindless target meeting for housing whilst ignoring all other areas or safety and sustainability for the local population. the transport hub which is so heavily relied upon to support the rationale for building such volume of houses- the railway - is inaccessible for anyone with mobility issues or young children- it is not fit for purpose as a transport hub and is unlikely to be developed to ensure it is within these ridiculous plans			
51456097	Mr Kevin Hurlow		n/a	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell cannot cope with yet more houses, due to the lack of infrastructure and services. The existing schools and doctors' services would be overwhelmed. Backwell has been allocated a disproportionate percentage increase in houses compared to other housing areas in North Somerset. There are no employment opportunities in the area for the householders in the proposed new homes. The railway station is unfit for the purpose of taking thousands more commuters and is inaccessible for disabled people travelling to the south west. The roads are crammed and the proposed new road lacks any real planning. The proposed land should be used for agriculture and not for development. The country needs food security and this would further diminish the available land to supply crops or grazing.			
62110433	Sian Hurst			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	We have lived in Backwell for over 5 years. We have two children (3+1) plus a dog we walk daily around the village. We moved here for the local schools, green space and village atmosphere. We are already losing the fields we walk around on a daily basis (Rodney rd development and Grove Farm) so will now have to walk further to find places to walk in nature. To watch the detriment of mature trees and bushes whilst they have been building the Farleigh Fields and Rodney Road site is heartbreaking. It’s a zone A SAC for Greater and Lesser horseshoe bats, the ecology report stated the loss of habitat and foraging ground would be detrimental, yet it has still been passed. Our village road network struggles as it is. It is not physically possible for two HGVs to pass on Station Road or Rodney Road without mounting the pavement. We have a local village infant school and village junior school opposite ends of the village, this means we have many young children walking along these roads twice a day. It’s dangerous as it is – let alone all of the additional cars for the 800 houses already approved. We have a local village high street, and village amenities. There’s nothing here to offer in terms of jobs and employment. All new families will have to commute elsewhere. I understand there’s no funding guaranteed for new roads or services. The sheer volume of additional housing when we have already got to cope with 800 already passed, is totally unsustainable, the transport and road network is not suitable as it is and will not be improved. The schools, doctors and other amenities will not be able to cope with supporting additional families on top of the current villagers. The train station already is a problem with no access on one side of the platform. I am unable to travel by train with my two young children on my own as I cannot leave either child at the top or bottom of the steps whilst I walk with the other and the pram.			
62856001	Kate Ingham			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	No enough school places, poor road infrastructure for the additional families that will move the area. There is no provision of work in Backwell so everyone is commuting and the roads and schools cannot cope with this. No funding guarantee for new roads and infrastructure which is problematic. Also as a regular user of the railway station I am not convinced it is fit for purpose for all the additional people.	Better walking and school infrastructure and more school places		
51426593	Alistair Ireland		Swindon Borough Council	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I strongly object to the proposals for Backwell in the North Somerset Local Plan 2041 – Pre Submission (Reg 19) on many counts. Neighbourhood Plan: Backwell is a vibrant welcoming village with a good community feel. We created a Village Neighbourhood Plan which was voted on and agreed by the community with massive level of support (over 96%). The proposals in the North Somerset Local Plan do not align with the Community’s Vision and democratic vote. Looking at the proposals now submitted, it is clear that there has not been any consideration given to the Neighbourhood Plan and that their proposal completely disregards the Plan. This gives huge cause for concern as to the quality of the work that has gone into this proposal. Size of Development: The size of the developments in different large towns, towns and villages compared to the existing			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								populations is poorly planned, with some areas expected to bear a huge burden compared to others. The impact on these small communities will be very large, and will change the very nature of these communities, and at a pace that gives the communities no opportunity to absorb the changes. Basically, some vibrant villages will become commuter ghost towns. The planning notes an additional 258 dwellings in Clevedon, (Population approx 22442) whilst Backwell is noted as to gain 1683 additional Dwellings (Population approx 4589). Also please note that Portishead is expected to have 1347 new dwellings, (Population approx 27000). The percentage of the total housebuilding noted in the Plan per village or town is even more revealing. Backwell has been allocated 7.829728% of the total allocation, whilst Clevedon has been allocated a mere 1.200279% of the allocation despite it being nearly six times larger than Backwell. These facts demonstrate that planning is flawed. Larger communities who could absorb new residents are not being expected to bear a huge influx, whilst areas with fewer facilities will be overwhelmed by huge influxes. If each new dwelling has on average 2.5 persons living there then the impact on Backwell will be a massive 4208, and not this is from a population of 4589 which will then have grown to 8797. This would place huge stress on the area and increase flood risk (we have already had two floods since October 2023). Thus, the overall plan is not appropriate, not positively prepared, justified, or effective. Impact on Infrastructure: The proposed developments will overstretch the community services and facilities to the extent that they will not cope. This includes the Doctors, the Dentists and the schools. Farleigh PNEU School in Backwell closed at the end of July 2025, reducing the number of primary places available in the village. The demand on the schools in Backwell is high, and almost doubling the size of the village will undoubtedly mean that there would be huge deficit in school places locally. Also, the impact on the medical services, Doctors, dentists and pharmacists as well as the Hospitals would overstretch their resources. Loss of Farmland The land in the proposal is classified as “Best and Most Versatile (BMV) prime agricultural land. This is a finite resource that once lost, cannot be restored to its former state. Please note paragraphs 174 and 175 of the National Planning Policy Framework (NPPF) and the guidance laid out in the Natural England Guide to assessing development proposals on agricultural land. With Climate Change affecting food production across the World, it is not sensible to build on good farmland. Wildlife: This proposal will cause irreparable damage to the wildlife in the area, several of the affected species being protected species. A study identified 13 species of Bat in the area and dormice were also identified. Wildlife requires that correct environment to survive and destroying hedgerows and planting hedges and new hedgerows does not provide a replacement that will support the wildlife in the area, as hedgerows take many years to develop the natural diversity of plants, fungi, insects and microbes that exist at the moment. This applies not only to the trees and hedges, but to the soil as well. Flooding and Water Management: Regarding water management, I do not see any adherence to the principles of better water management in the proposed development. These principles are laid out by Defra in their Storm Overflows Management Plan and are that (Number 1) Rainwater should be treated as a resource to be valued for the benefit of people and the environment and (Number 2) Rainwater should be returned to the environment as close as possible to where it lands or channelled to a close watercourse without first mixing it with sewage. There is some reference to water buts and ponds in, however there is no reference to the cubic capacity or the respective roof areas feeding these storage solutions. Also, the evidence used regarding flooding is historical data and not projections taking into account the 2023/2024 rainfall and the expected increase in rainfall due to climate change. There are serious failings in the proposed mitigations and the capacity of local watercourses has not been acceptably assessed. It should be noted that there is an issue of flooding below the A370 which has been demonstrated at Backwell Bow where water running down from over the A370 and down Chapel Hill Road to Backwell Bow resulted in road closures, cars stuck in flood water and even one incident on 5th December 2023 when some residents used a paddleboard and canoe to cross Backwell Bow. The proposed development below the A370 will almost certainly also be affected by water running down from the A370, as please note this land does slope down toward the railway line. Transport Rail: It should be noted that Network Rail have objected to the proposal at Grove Farm and referenced issues that would result at the level crossing at the Grant Mills Footpath and the level of accessibility at the station. The station is not accessible by persons who use wheelchairs on the platform to the West, and access by persons travelling with young Children in prams also have difficulty in accessing the platform. The impact on the roads of the additional road users from the proposed developments would be very significant. Transport Roads: The proposed developments in Backwell and elsewhere in North Somerset would place a huge additional strain on an already overstretched road transport system. The A370 is often gridlocked, and even more so when there are issues on the Motorway. The proposed road improvements and the new road would not effectively serve Nailsea’s traffic or relieve traffic queues on Station Road, Chapel Hill or Backwell Common. The Railway Bridge at the Railway Station presents a logistical problem which would be tremendously difficult to resolve, and very expensive. If the Railway had to be closed to allow a new structure to be built, then there would be large economic and social impacts. Overall, the transport planning is not adequate, and this has not even taken cognisance of the fact that Climate Change will without doubt cause more flooding of Road systems than has been experienced in the past.			
62772513	Richard Ivens			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I object to the scale of this development, which is a gross over development of this village site and would completely change the character of the village. It would result in the loss of Green Belt land. Furthermore, it is prime agricultural land, grade 1, which is strategically important for home food security to minimise imports which will become increasingly expensive in the future. On these grounds alone, I believe it would be inappropriate to zone this land for building development.	Zone less important land or more land in closer proximity to Bristol, where most new residents to the area would need to travel for work, shopping or leisure.	-	
21226113	Ashley James			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell has already had 800 new houses approved (40% increase for the village). These proposed numbers will be complete overdevelopment, for sure. There is already a deficit in local school places for those developments approved; a further 1000 homes will exacerbate this issue. There is already a deficit in medical infrastructure for those developments approved; a further 1000 homes will exacerbate this issue. There has been no Needs or Viability Analysis for an extra 1000 houses. Backwell is not where its inhabitants work, the vast majority commute with a need for transport infrastructure which is already under resourced. Government policy states "we must protect our best and most versatile land" to safeguard food security. These proposals contradict this policy as the land being talked about here is Grade 1 Agricultural Land currently used for crops and

								livestock grazing. Backwell Common and surrounding areas are prone to flooding which can only be more aggravated by new housing. This will impact badly on other housing with floods becoming more often. Backwell Lake is a reservoir where adjacent fields are subject to regular flooding as a floodplain. The Infrastructure Delivery Plan lacks analysis and costings. There are no funding guarantees for new roads nor essential services. Past housing plans approved have NOT delivered their associated infrastructure commitments and NSC have a poor track record in enforcing such. Government policy requires 50% of new homes on Green Belt to be affordable and this is not aligned with developers financial viability to deliver the ancillary services required. The proposed development cuts across valuable wildlife habitats and will harm biodiversity. KIV the Brockley Maternity Roost and SSSI with rare bats are in this area of proposed development.			
39402561	Stellan Jara			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell already has approval for 800 new homes — a 40% increase in the size of the village — and adding even more would amount to overdevelopment. The proposed new road would not meaningfully improve traffic for Nailsea or ease congestion on Station Road, Backwell Common, or Chapel Hill. Creating an underpass or bridge over the railway would be extremely costly and may not even be achievable. Even with the planned growth, there is already a shortage of school places, and no investment has been made in healthcare or leisure facilities. The current infrastructure cannot cope with another 1,000 homes. Backwell has been allocated more new housing than any other village in North Somerset, and a higher growth rate than some towns. The village is expected to take on 7% of the district's total housing allocation, compared with Clevedon's 2%. No needs assessment or viability study has been carried out to justify an extra 1,000 homes. Backwell is not a centre for employment, and most residents have to travel elsewhere for work. No assessment has been provided on the impact this would have on social cohesion. The development would build on Grade 1 agricultural land currently used for food production and grazing. Only 7% of this top-quality land remains across North Somerset. Government policy says that "we must protect our best and most versatile land" to ensure long-term food security, yet these proposals go against that policy and put food production at risk. The plans would destroy important wildlife habitats and further damage biodiversity in a country that is already one of the most nature-depleted in the world. They also threaten the Brockley Maternity Roost and nearby SSSI, where rare Lesser and Greater Horseshoe Bats depend on the land for feeding. The Infrastructure Delivery Plan provides no proper analysis, costings, or guaranteed funding for the road or other essential services. Backwell Common and the surrounding area already suffer from flooding, which would worsen with additional housing. There are major concerns about the strategic growth designation — including impacts on local character, loss of Green Belt and high-quality farmland, increased flood risk, and uncertainty over whether the required road can be funded and delivered in time to support the development. The fields around Backwell Lake (where the housing and new road are planned) lie on a floodplain that floods frequently. Government policy requires 50% affordable housing on Green Belt land, but this reduces the money developers contribute to infrastructure. The scale of development — along with the level of investment needed in infrastructure and services — is too much, too fast, and ultimately unsustainable. Backwell railway station is also not suitable as a transport hub. It is not accessible to people with mobility issues and is difficult to use for families with young children.			
62832353	Paula John Amor			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	1 Backwell already has 800 new houses approved, a 40% increase for the village. These additional numbers would lead to complete overdevelopment. 2 The proposed road would not effectively serve Nailsea's traffic or relieve congestion on Station Road, Backwell Common, or Chapel Hill. Engineering the road under or over the railway would be highly expensive and possibly unfeasible. There is already too much traffic as it is. 3 There are insufficient school places and no investment in health services or leisure facilities. The lack of existing infrastructure and services and absence of confirmed investment cannot support another 1,000 houses. 4 Backwell is allocated a higher number of houses than any other village in North Somerset, and even a higher growth percentage than towns. Backwell is expected to take 7% of the district's housing allocation, compared to Clevedon's 2%. 5 There has been no viability analysis for an extra 1,000 houses hugely changing Backwell. 6 Backwell is not an employment hub, most residents commute which will lead to unsustainable increase in traffic in the A370 7 No social cohesion impact assessment has been provided. 8 Grade 1 Agricultural Land currently used for food crops and grazing. 								Greenbelt and high-quality agricultural land, the risk of flooding, and uncertainty over whether the road can be funded and delivered on time to support the proposed housing. 15 Backwell Lake (Reservoir) and adjacent fields, where the new roads and housing is planned and are on a floodplain, which floods regularly. 16 Government policy requires 50% affordable housing on Greenbelt Land, but this reduces the funds developers contribute towards infrastructure. 17 The sheer volume of growth with the required investment infrastructure and services over such a short period is destabilising, unsustainable and undeliverable. 18 The railway station is not fit for purpose as a transport hub; it remains inaccessible for people with mobility issues and presents serious challenges when travelling with young children.			
58627009	Will Jones			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Objection to Proposed Development in Backwell I am a resident of Backwell, and I object strongly to the proposal for an additional 1,000 houses. My many reasons for objecting are below: 1. Loss of Grade 1 Agricultural Land & Environmental Damage The development proposes building on Grade 1 agricultural land — nationally recognised as “best and most versatile”. Only around 7% of North Somerset’s land falls into this high-quality category. Permanently removing productive farmland undermines long-term food security, especially at a time when Government policy specifically says such land must be protected. The land also supports significant wildlife habitats and biodiversity. The proposed area is used by protected bat species, including Lesser and Greater Horseshoe Bats, which rely on this land for feeding. Destroying these habitats contributes to further biodiversity decline in what is already one of the world’s most nature-depleted countries. 2. Backwell Already Has 800 Houses Approved — This Proposal Is Excessive Backwell already has around 800 homes approved, representing approximately a 40–50% increase in village size before any new proposals are even considered. Adding another 1,000 houses would effectively double Backwell’s size in a very short period, which is completely disproportionate for a small village. No other village in North Somerset is being asked to take this level of growth. Backwell’s allocation would rise to 7% of the district’s total housing numbers, surpassing even some towns. 3. No Confirmed Funding or Feasibility for the New Road The development relies heavily on a new road, yet: - There is no confirmed funding - No feasibility study - No engineering solution for crossing or going under the railway - No timescale for delivery This road is fundamental to making the development work, yet it remains entirely uncertain. Without guaranteed funding and proven deliverability, the housing proposal itself cannot be considered realistic or sound. 4. Transport Network Already Under Severe Strain Backwell’s road network is already stretched. Station Road, Backwell Common and Chapel Hill regularly experience congestion, especially at peak times. When the M5 is shut, the A370 becomes gridlocked, often at a complete standstill. Adding thousands more daily vehicle movements would make the situation significantly worse. The train station is frequently over capacity, with a car park that is regularly full and still inaccessible for many people with mobility issues or prams. Pavements in parts of the village are extremely narrow and unsafe for two people to pass comfortably. This development would create traffic and transport pressures that simply cannot be absorbed. 5. Local Infrastructure Cannot Support This Level of Growth Backwell does not have the infrastructure to handle such rapid expansion: - No supermarket or meaningful retail offering - Limited parking and over-subscribed station facilities - Narrow pavements unsafe for pedestrians - Schools already operating near or at capacity - Very limited healthcare provision - No leisure, community, or youth facilities being expanded There is no committed investment to expand schools, medical services or local amenities. The Infrastructure Delivery Plan lacks detail, costings or funding guarantees. 6. Flood Risk Is Not Properly Addressed Large parts of the surrounding area – including Backwell Common and the fields near Backwell Lake – are on or adjacent to floodplains and already flood regularly. Hard surfacing from housing and roads will make this worse. There is no robust drainage strategy or mitigation plan showing how flood risk will be prevented for existing residents and the new development. 7. No Demonstrated Need or Viability for an Extra 1,000 Houses No evidence of genuine housing need has been provided to justify such a large allocation for Backwell. The village is not an employment hub; most people commute to Bristol, Weston or further afield, creating additional traffic and reliance on transport infrastructure that is already struggling. There is also no analysis of the social impact on a community that would undergo an 80–100% population increase in a single local plan period. 8. Overall Level of Growth Is Unsustainable and Undeliverable			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The sheer volume of housing proposed, on top of the already approved 800 homes is destabilising for a village of Backwell's size. With no confirmed road, no infrastructure funding, significant environmental impact and disproportionate growth levels, the proposal is not sustainable, not deliverable, and not justified. These plans represent overwhelming and irreversible overdevelopment. They would destroy protected farmland, exacerbate flooding, overwhelm local services, worsen traffic, damage wildlife, and fundamentally change Backwell's character — all without the guaranteed infrastructure needed to support them. For these reasons, I strongly urge the Planning Inspector to reject this allocation.			
62832321	Samantha Jones			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I'm responding as a Backwell resident who cares deeply about our village. We have already accepted 800 new homes, a huge increase and adding another 1,000 would completely overwhelm Backwell. It would change the character of the village and put huge pressure on schools, roads, health services and everyday life, none of which have been planned for. I'm especially concerned that this development would destroy precious Grade 1 agricultural land. Only 7% of this land is left in North Somerset, and once it's built on, it's lost forever. This goes directly against the need to protect our best land for future food security. The proposed road has no details, costings or justification, and it wouldn't solve existing congestion. Flooding is already a problem around Backwell Lake and the Common, and this amount of new housing would make it worse. This plan does not feel fair, sustainable or in the best interests of families and residents who live here. For these reasons, I do not believe the plan is sound.			
62674657	Sonia Kateb			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Insufficient infrastructure, be it doctors, dentists, schools, leisure facilities. Roads, in particular Station Road already cannot cope with traffic buildup and any further development will make it untenable. I live just off Station road . Excessive development will impact the feel and rural nature of where I live. I am concerned about the threat of flooding, given that where I live is a flood plane and any further development will exacerbate this threat. I like to buy locally produced food and this will be more difficult if agricultural land is used for housing.			
51397665	Jane Kearney			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	In the Short Guide to the Local Plan, North Somerset Council state that "their strategy is focused on directing housing and other development to areas with better access to jobs and services. This means targeting brownfield sites within Weston-super-Mare, Clevedon, Nailsea and Portishead first, then new development close to towns and large built-up areas such as Bristol, then the larger more sustainable villages." Backwell is a small village, which already has 800 new houses approved, a 40% increase for the village. In this draft plan it has been allocated a further 1,000 houses which is a higher number of houses than any other village in North Somerset and even a higher growth percentage than towns. It is expected to take 7% of the district's housing allocation, compared to Clevedon's 2%. This represents a total contradiction of the Council's stated strategy. In addition, Backwell is not an employment hub and most residents commute. The significant development proposed will cause a large increase in traffic in the area, contributing to congestion and pollution. The proposed road would not effectively serve Nailsea's traffic or relieve congestion on Station Road, Backwell Common or Chapel Hill – all small country roads that cannot accommodate such an increase in traffic. It would also need to cross the railway, and whether it goes over or under, this will be expensive at best and unfeasible at worst. The buses are unreliable and infrequent, and the railway station is inaccessible for people with mobility issues and presents serious challenges when travelling with young children. Further on in the Short Guide to the Local Plan the council refer to their policies to respond to climate change and their pledge to be carbon neutral by 2030. Within that section, they pledge to enhance biodiversity and protect high-quality land, and yet they propose building 1,000 houses on grade 1 agricultural land currently used for food crops and grazing. There is only 7% of this high quality land left in the whole of North Somerset, so not only does the proposed development in Backwell contradict their stated policy, it is also in contravention of the government's policy which states that "we must protect our best and most versatile land" to safeguard food security. The proposals would also destroy valuable wildlife habitats and further harm biodiversity in an area which currently provides foraging areas for a wide variety of wildlife including rare Lesser and Greater Horseshoe bats. Finally, Backwell Common and surrounding areas are already prone to flooding, which would be aggravated by more housing. I believe the proposed development around Backwell is ill-conceived, unsustainable and undeliverable.			
39304961	Alison Keighley			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I have many concerns about this proposal. We already have a number of developments approved for Backwell which will put increased pressure on current facilities and infrastructure. Increasing this even more will just become completely unmanageable. The proposed road is not sufficient to relieve traffic on Station Road, there is no mention of any additional investment in infrastructure and services, and the area identified for development is prone to flooding (which would be aggravated by more housing). Additionally, the proposal is to build on Grade 1 Agricultural Land, currently used for food crops and grazing. There is only 7% of this type of land left in North Somerset and so I can't understand how an argument can be made to decrease this even further.	Remove the development for East Backwell.		
10409793	Bob Keightley		Mr	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Having lived in Backwell for 20 years, I have observed the increase of problems in the village. In particular, there is frequently traffic congestion on the A370 and on Station Road, which is the access to the A370 from Nailsea. This is due to increased housing in Nailsea and villages to the south west of Backwell. There has been an increase of flooding events caused by extreme weather conditions as a result of climate change. With the development already approved in Backwell and Nailsea this will only get worse. There are already 800 new houses approved, a 40% increase in the size of the village. The additional numbers proposed indicate total over development. The plans include a new road linking Station Road near Backwell Lake with the A370 still in Backwell. This has to cross the railway, the feasibility for which has not been demonstrated. It is unlikely that this would relieve congestion on neighbouring roads which with the increase in housing in Backwell and Nailsea will become horrendous. The bulk of the proposed development is on Grade 1 Agricultural Land currently used for food crops and grazing. There is only 7% of this high quality land left in North Somerset. This is despite Government policy stating that "we must protect our best and most versatile land" to safeguard food security. The proposals contradict this policy and undermine food security. There is nothing in the plan about necessary improvements to infrastructure, particularly school places and health services. The sheer volume of growth with the required investment infrastructure and services over such a short period is destabilising, unsustainable and undeliverable. Development would destroy valuable wildlife habitats and further harm biodiversity in one of the world's most nature-depleted countries. Areas around the proposed development are regularly subject to flooding which will only be made worse by the excessive number of houses proposed.

Development would destroy valuable wildlife habitats and further harm biodiversity in one of the world’s most nature-depleted countries. Areas around the proposed development are regularly subject to flooding which will only be made worse by the excessive number of houses proposed. Backwell is allocated a higher number of houses than any other village in North Somerset. It is not an employment hub – most residents commute, mainly into Bristol. The railway station is already not fit for purpose as a transport hub; it remains inaccessible for people with mobility issues and presents serious challenges when travelling with young children.			
62861313	Sean Kelly			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure				
21462657	Jo Smith			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure		This is over development – there are already 800 new homes approved for Backwell. Backwell has more houses allocated then any other parts of North Somerset. There is nothing to show how this and the other developments will integrate with the existing housing and not result in separate “enclaves”. The proposed road which goes under the main line railway has not been accessed properly or costed. This needs to be built first before any development but it will be funded through agreements with the developers and the council - payment is only due after the houses are built There is no guarantee that the Council will then use the money for the road. Previous CIL money from Backwell has been used to funded the Banwell Bypass! Also, the amount of money NSC will receive will be reduced due to the government’s targets for affordable housing. There is a lack of infrastructure – the health services will not cope with a further 800 houses especially when the request for funds in relation the Grove Farm development was ignored by NSC when they approved the application. There is no employment (or very limited) in Backwell which means that most people will need to commute to work. The site is grade 1 agricultural land – we need to be able to feed people and animals (food security / towards net zero are also policies of this government) so need to stop building on this site North Somerset Council has just completed a consultation on extending the Special Area of Conservation for bats and these fields will be upgraded to a Band A – bats rely on this area for food. Flooding is an issue in this area and more houses (concrete) will only make this worse. The railway station is not fully accessible due the steps to reach the platform - campaign to make it accessible have been ongoing for many years but Network Rail / the government have not prioritised this. The car park is now nearly at capacity so where will the people park. The X7 bus service has been downgraded and now only runs hourly rather than every 30 minutes so people will have to use their cars to go to Nailsea. NSC said the need to this allocation is in response to the urgent need for housing – how can housing that won’t be built for 10 years be an urgent response.			
39308129	E Kenny		Health Care - NHS	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	There are 800 new house ALREADY approved in our village- a 40% increase. This developed in addition is a complete overdevelopment. The village is already hugely over congested with insufficient roads through the village to safely transport children to the 3 schools that lie within it. The proposed road wouldn't effectively serve nailseas traffic or relieve congestion on station road which is already an accident waiting to happen with secondary school children regularly being clipped by passing vehicles and having near misses trying to navigate the single narrow pavement serving as the route for over a 1000 children to get to school. I doubt engineering the road over or under the railway is liekly to be met by any developer and would be very expensive. There appears to be NO investment in school places, health or leisure facilities, what we have cannot support another 1000 houses. Backwell has been allocated a higher number of houses than any other village in north somerset and a higher percentage growth than the towns- why are we taking 7 % of the districts housing allocation when somewhere like clevedon is taking 2%? There is no needs or viability analysis for and extra 1000 houses Backwell has no employment hub, most of the resident commute adding even more the the congestion. No social cohension impact assessment has been provided. Grade 1 agricultural land which is currently used for grazing and crops has been allocated, this can never be retrieved once taken, why use this precious resource when only 7% of this land is left in the whole of north somerset. It undermines food security. Development would destroy valuable wildlife habitats and harm biodiversity, it threatens the brockley maternity roost and SSSI with lesser and greater horseshoe bates relying on the land for food. The plan lacks any commitment to infrastructure, no analysis or costing or any guaranteed funding, highly suspicious 1000 homes with great profit for the developers and no infrastructure to go with it. There is significant risk of flooding in the area allocated.

Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The railways station is not fit for purpose as a transport hub, inaccessible for any with mobility difficulties. The ludicrous volume of growth proposed for Backwell over such a short space of time shows none of the required investment in our infrastructure or services, its destabilising, unsustainable and undeliverable and irreparably changes the areas character. Please stop trying to turn us into a suburb of Bristol, spread the need for new housing fairly within North somerset.			
50846369	Tim Kilburn			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure				Save Backwell.pdf
51431169	Jessica King			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I do not believe the plan is sound, based on a multitude of reasons. These are my main concerns: The proposed allocations would see Backwell grow in population by around 80%. This is a disproportionate level of growth for a village that is not a strategic location for employment, and which does not have the required infrastructure to support and sustain this level of growth at this pace. The proposals don't consider or assess the practical impact on the area in terms of . They lack a social cohesion impact assessment, and there has been no viability analysis conducted on the extra 1,000 houses that are proposed. Current infrastructure and services can't support this level of growth, and there are no funding guarantees for the new services that the Infrastructure Delivery Plan sets out, which in itself is insufficient, lacking proper analysis of function and cost. The road proposed would not ease the key traffic difficulties sufficiently to mitigate the considerably increased volume of traffic on a network of small and semi-rural roads, e.g. Station Road, Backwell Common, Chapel Hill. I am highly skeptical that passing this road under or over the railway would be deemed feasible or affordable - it is costed in the millions. The environmental impact of building on Greenbelt land, destroying biodiversity, and threatening roosts of rare bat species that use the land as feeding grounds, is considerable. This volume of additional housing would greatly increase the flooding, in an area that floods frequently. It would also further reduce the minimal high quality land left in North Somerset, which contradicts the government policy on food security. Finally, the large population of school children who attend schools in the area would become more vulnerable to dangerous road conditions, when walking to school. Station Road, Dark Lane, and Rodney Road all see considerable daily pedestrian traffic from 1000s of school children of all ages. These small roads with narrow pavements are already a health risk, which would worsen considerably within the proposed plans as they stand.			
62844673	Amy Kinmond			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I object to this for the following reasons: The proposed road will destroy greenbelt agricultural land and completely destroy the countryside gap between the town of Nailsea and the village of Backwell. The road will run right through the wildlife corridor running from the moors to Backwell Lake, across this greenbelt farmland to the Belmont Estate and to Ashton Court. This will be disastrous for the local wildlife, for example wildfowl that navigate along this corridor, otters and rare bats. Not only will the corridor be ripped apart, but the increased noise and pollution will lead to destruction of local wildlife. The route for the proposed road is also floodplain. During autumn and winter months, and early spring, when there are heavy rains this area is covered in water. I hope to attach a photo to this objection showing the flooded fields in January 2023 (aspect taken looking towards Backwell Lake, with Nailsea houses on the right of the picture, and the photo was taken in the field behind Backwell Court, a house on Backwell Common). Putting a road through here would mean all this water would flood the properties of residents along Backwell Common. Backwell Common is already prone to flooding, the proposed road and houses built on the fields to the East of Backwell would increase this 10 fold. Backwell Common sits downhill of these fields and the excess run off would pour into existing residences. Both railway bridges (Chapel Hill bridge & the bridge in the field of the farm owned by Horler) flood extremely regularly during the winter months already. There has been no consideration of investment in existing road infrastructure, only to slap a new road across agricultural land. Why can't improvements be made to Station Road instead? For example widening it to allow traffic to pass safely without mounting the pavement and creating a wider pavement for pedestrians and a cycle path and traffic calming measures to keep speeds down to 20mph. This could easily be accomplished by assessing the current front garden hedge widths, grass verges and so forth along the road. And probably at much less of the cost of a new road too. Backwell already has 800 new houses approved across several sites, a 40% increase for the village. These additional numbers would lead to complete overdevelopment. There is absolutely no service infrastructure in Backwell to support this increase in residents. For example, with current residents alone, an elderly relative of mine could not get a single doctors appointment when calling Backwell Doctors on a morning at 8:15am when lines had opened at 8am. This was just due to current resident numbers. Additionally, another relative had to go to the walk in hospital in Clevedon to have post surgery stitches removed as Backwell doctors did not have any nurse appointments available for this to be done. Backwell Doctors cannot even support current resident numbers, let alone with the new 800 approved houses coming in and services would completely collapse in the village with another 40% on top of this. There is no additional schools to support increase in residents. For example the current year 6 in Backwell Juniors is full. Where would the children be able to go to school with several hundred more residents? There are no local food shops in Backwell, only chain supermarket pop in shops and a few hairdressers! The number of houses would equal that of a small town, but Backwell does not have the shopping facilities of a small town. The grade 1 agricultural land in Backwell has been coloured in for development of houses and roads by people who don't live here and don't care about it. But this is our lives, and our children's lives that are being massively affected. We already have a huge building site by the infants school, which is also having negative effects on our scout hut from noise, and an unsightly mess. Mature trees have been removed, our roads are full of lorry's delivery to sites and we now can't park near our local children's playground. There will be further development west of Backwell at grove farm in coming months. Enough is enough. We've had more than our fair share and it's time the developers left us alone. Backwell isn't suitable for taking on 7% of North Somerset's housing allocation. This number is ludicrous. It's ripping apart residents lives.			IMG_1403.png
62862817	D Kinmond			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with	Unsure	Unsure	I object to the plans for the following reasons: Backwell as a village already has 800 new houses approved (40% increase already), the proposed plans would be a massive overdevelopment. It is far more percentage wise than larger towns in the county that are better set up in terms of infrastructure and services to absorb an increase. The land cited is prime agricultural land that has always been used for growing crops and grazing cattle. It has never been left unused or under utilized, or considered unsuitable for agriculture so to propose this to be completely wiped			PXL_20240103_120457870.jpg PXL_20251114_162917908.jpg

					national policy			out for housing seems wrong when government policy is to “protect our best and more versatile land”. We regularly walk through these fields with our children, and watched as farmers harvested the crops. Also as part of local Beaver and Cub scouts groups doing hikes suitable for younger children we walk through these areas to learn about nature, farming and the environment. Furthermore, the land is home to a wide range of increasingly under pressure wildlife from deer, buzzards, red kites, foxes, badgers, numerous bat species including lesser and greater horseshoe bats as well as the smaller mammals and life to support them. All that would be lost. Backwell as a village has little in the way of employment, certainly nothing that would support more than a handful of those that would buy houses in these new developments. Similarly, as a village the infrastructure and services would not cope with the increase in numbers. Getting GP or nurse appointments is already very difficult (I recently was sent to Clevedon minor injuries because a required appointment made a week earlier was cancelled and no care could be provided even in the wider practice for another week). There are waiting lists for local clubs like football and scouts with people already in the village on them with low chances of getting places. There are only small convenience stores, not suitable for weekly family shopping requiring travel to Nailsea or Ashton Gate, both of which aren’t really feasible on the public transport. As a resident on Backwell Common, I am very concerned about the new road plans as well. Firstly in it destroys so much agricultural land which is part of the flood plain and does regularly flood, a problem that would be increased by further loss of land, and increased runoff. Secondly the suggestion to cut us off from the rest of the village by pedestrianizing a section. The bridge on Chapel Hill floods constantly whenever there is heavy rain (three times in the last two weeks, with at least two cars written off), so to get to the A370 we have to travel towards station road. This just highlights how little consideration or care has been given to the impact on existing residents. All year, but especially during the summer months Backwell Common and the fields cited for development are used by walkers, runners, cyclists not just from Backwell but our neighboring villages and further afield. Carving up so much, and adding so much extra traffic that it will bring will destroy the character of the whole area and the benefits people get from exercising and taking time to relax in a calm and quiet area off the main roads. Backwell in under siege from property developers (Grove farm, Farleigh Fields, Rodney Road etc), it is incredibly stressful to be constantly seeing another part targeted again and again with applications until they are successful. Whilst it is just a business to these people it is our lives, it’s where we are trying to raise our children. We the residents must have some consideration when looking at these plans, they can’t be allowed to negatively affect so many people time and time again.			
39326817	Jayne Kirkbride			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	This would lead to overdevelopment of the village. 800 houses i.e a 40% increase already. The proposed new road would not really benefit Backwell. School traffic and local traffic would still use Station Road, so the only benefit might be for the new houses only. Backwell schools and amenities e.g doctors surgery will not be able to absorb this extra capacity for people. Nothing extra in terms of theses vital amenities is planned. Why is a small village being burdened with 7% of the county’s housing compared to a large town like Clevedon which will only get 2%. Backwell doesn’t need all these houses. There is no employment within the village to support these new households. For myself I am most outraged that it is considered in any way acceptable to build houses on grade 1 agricultural land. Government policy itself dictates that such land must be safeguarded for food security. Where are the analysis of fundings and costings? New roads and houses are planned on the flood plain by the Backwell reservoir. The surrounding area are prone to flooding. Where is all the flood water going to go. Already as I understand as a concerned resident excess rain water from Farleigh Fields development is being funnelled into the ditch running along the side of the field next to the Leisure centre. This is where houses are proposed and then where is all this extra water going to end up? The railway station which is put forward as a great transport link, is inaccessible for people with mobility issues and those travelling with young children. It goes without saying that the wildlife will be dilsplaced, but to where? I walk in theses fields everyday and regularly see deer who live here. When it rains the public footpaths flood and are inaccessible especially near the railway line. Backwell should not be forced to suffer a population growth of 80%. The very features of our village which make it an attractive area to build in will be completely ruined for everyone, both existing residents and new ones- not enough village school places, extreme difficulty in accessing health services which have already indicated they have no capacity. Finally the buses. We are a bus commuting family. We regularly have to commute by car because either the buses all get cancelled at no notice or if they are running, by the time they get to Farleigh Road they are full and don’t stop.	Do not subject Backwell to this ridiculous target, building on grade 1 agricultural land. Find other sires which are not as valuable agriculturally and share out the housing allocations more fairly across the district.		
51449505	Caroline Knight			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell already has around 800 new houses approved to be built making it 40 % bigger the layout of the village cannot cope There is a lack of infrastructure, insufficient roads and public transport -services such as doctors , schools etc cannot support the increase in population			
29298081	S Knowles			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The plan is not sound for the following reasons: 1. Grade 1 Agricultural Land -Most importantly this land is Grade 1 agricultural land currently used for growing crops and grazing. There is only 7% of this high quality agricultural land left in North Somerset. Developing prime agricultural land such as this land will adversely affect UK food security. Once land is used for development, it will be lost to agriculture forever and so it should not be used for housing. 2. Current UK Government policy states that “we must protect our best and most versatile land” to safeguard food security. Using this land would be contrary to this policy. 3. Overdevelopment - Backwell already has 800 new houses approved, a 40% increase for the village. A further 900 homes would lead to complete overdevelopment of what was a small village. 4. Road/Infrastructure Problems -The proposed road would not effectively serve Nailsea’s traffic or relieve congestion on Station Road, Backwell Common or Chapel Hill. Engineering a road under or over the railway would be hugely expensive and possibly unfeasible. It would require closing a mainline railway line between Bristol and the South West used by GWR and Cross Country trains to complete. It has not been possible to date to put in a disabled access ramp to the railway station Weston bound platform as this has been declared unfeasible/ too costly and so it is hard to believe that a road crossing the railway line would be feasible. 5. Lack of analysis - The Infrastructure Delivery Plan lacks analysis and costings and there are no funding guarantees for the new roads or services. As at point 4 above the crossing of a mainline railway line is likely to be extremely			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								expensive and may not be feasible and the Infrastructure Plan should deal with this issue. I understand that 50% of the housing on Greenbelt land must be affordable and this reinforces the need for proper funding analysis. 6. Problems with the Railway station - As mentioned above, the current train station is inaccessible for people with mobility issues and difficult to use with young children and bikes due to the step access and, therefore, should not be regarded as a transport hub. 7. Flooding - Backwell Common and the surrounding areas are prone to flooding and building more housing would aggravate the situation further. Backwell Lake and the adjacent fields are on a flood plain and those fields should not be built on. 8. Impact on Backwell - Despite the increase in housing already approved, there is a deficit in school places and there has been no investment in health and leisure facilities. The lack of infrastructure and services cannot support another increase. An increase in the size of Backwell of 80 % without any corresponding increase in school, health and leisure provision cannot be sustained. 9. Too high an allocation - Backwell is being allocated a higher number of houses than any other village in North Somerset and an even higher allocation than any towns. Backwell is expected to take 7% of the district's housing allocation despite being only a village. 10. There is no needs or viability analysis for an extra 1000 homes. 11. Homes for Commuters - Backwell is not an employment hub. These developments will not create any extra jobs and will be occupied by commuters. This in turn will put further strain on local roads, especially if the proposed link road is declared unfeasible. 12. No social cohesion impact assessment has been provided. 13. Nature – there will be detrimental impact on the local bat population. 14. Conclusion – This land is prime agricultural land that should not be developed. Further the risk of flooding, lack of proper analysis of the problems likely to be encountered in crossing the railway line and impact on what was a small village mean that this plan is unsound.			
51430785	James Knowles			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The plan is not sound for the following reasons: 1. Contrary to Food Security. UK Government policy states that "we must protect our best and most versatile land" for reasons of food security. Building on this land would be contrary to this policy because this land is Grade 1 agricultural land currently used for growing crops and grazing. Only 7% of such high quality agricultural land is left in North Somerset. If this land were to be used for housing, it will be lost forever to agriculture and growing food. 2. Nature – there will be seriously adverse impact on the local bat population. 3. Flooding. Building on this land will increase run-off, leading to more flooding in the land itself and in the surrounding fields. This area is prone to flooding (as I write this in mid- December 2025 there are many flooded areas in the fields) and building more housing would make this far worse. The land is on a flood plain (that is why Backwell lake was built) and it would not be sound to build here. 4. Road Problems. The proposed road would increase traffic congestion on Station Road, Backwell Common and Chapel Hill. 5. Rail Problems. The proposal is to build a road under or over the railway. This would be very expensive and lead to serious disruption on a well-used railway line for an indeterminate time. It would require closing a mainline railway line between Bristol and the South West used by GWR and Cross Country. A disabled access ramp to the railway station Weston bound platform has been declared unfeasible/ too costly and so it is simply not believable that a road bridge or tunnel would be built. A road bridge would be enormous and completely out of keeping with the area. A tunnel would require extensive flood protection. 6. Nailsea and Backwell Station as a barrier to inclusion. The current train station on the Weston platform is inaccessible for people with mobility issues. This is serious barrier to inclusion for disabled people. It is also difficult to use with young children and bikes due to the step access. To regard this as a transport hub and increase the numbers using it will only make these barriers worse. 7. Not local homes. These developments will not create any extra jobs and will be occupied by commuters. This will put further strain on local roads, especially if the proposed link road is declared unfeasible. 8. No proper analysis - The Infrastructure Delivery Plan lacks analysis and costings and there are no funding guarantees for the new roads or services. As at point 5 above the crossing of a mainline railway line is likely to be extremely expensive and may not be feasible and the Infrastructure Plan should deal with this issue. I understand that 50% of the housing on Greenbelt land must be affordable and this reinforces the need for proper funding analysis. There is no needs or viability analysis for an extra 900 homes. 9. No social cohesion impact assessment has been provided. 10. Sustainability of Backwell . An increase in the size of Backwell of 80 % cannot be sustainable. Backwell already has 800 new houses approved, a 40% increase for the village. A further 900 homes would lead to complete overdevelopment of what was a small village. 11. Too high an allocation - Backwell is being allocated a higher number of houses than any other village in North Somerset and an even higher allocation than any towns. Backwell is expected to take 7% of the district's housing allocation despite being only a village. This is grossly disproportionate and unfair. 12. Overall the plan is completely unsound for the reasons set out above.			
18468225	Stefan Kruger			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I wish to register my strong objection to the proposed allocation of an additional 1,000 homes on Grade 1 Greenbelt land in Backwell, as set out in the Pre-submission Local Plan 2041. After careful review, I find the plan **unsound** for the following reasons, which draw upon the evidence and concerns raised by the community and relevant planning policy: ### **1. Unsustainable Scale of Development** Backwell is already absorbing 800 new homes—a 40% increase—with no commensurate investment in infrastructure, schools, health services, or leisure facilities. Adding a further 1,000 houses would represent an **80% total growth**, fundamentally overwhelming the village's capacity and contradicting principles of sustainable development. ### **2. Lack of Viability and Need Assessment** No robust needs or viability analysis has been provided to justify such a disproportionate allocation. Backwell is not an employment hub, and most residents commute, yet the plan imposes a higher housing percentage (7%) than towns like Clevedon (2%), without evidence of local demand or benefit. ### **3. Inadequate and Unfunded Infrastructure** The Infrastructure Delivery Plan lacks detail, costings, or funding guarantees. A proposed new road—critical to serving Nailsea and Backwell—has no feasibility study, engineering plan, or confirmed funding. The railway station remains inaccessible for many, and no provisions are made for improved transport, health, or education. ### **4. Loss of Protected Agricultural Land** The development targets Grade 1 Agricultural Land, of which only 7% remains in North Somerset. National policy (NPPF) mandates protection of "the best and most versatile land" to safeguard food security. Building on this land is irreversibly damaging and directly conflicts with this policy. ### **5. Environmental and Ecological Harm**			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The site supports valuable wildlife habitats, including the Brockley Maternity Roost (SSSI) and rare bat species. Development would further degrade biodiversity in an already nature-depleted region. Additionally, parts of the proposed site, including land near Backwell Lake, are on a functional floodplain—building here would exacerbate flood risks. ### **6. Affordable Housing Conflict** While policy requires 50% affordable housing on Greenbelt land, this reduces developers' contributions to infrastructure, effectively shifting the burden onto the community without securing necessary services or mitigations. ### **7. Absence of Social and Cohesion Impact Assessment** No assessment has been made of the social impact of such rapid, large-scale growth on community cohesion, character, or well-being. The plan threatens the rural identity of Backwell and fails to respect its existing settlement pattern. ### **8. Flood Risk Ignored** Backwell Common and surrounding areas are prone to flooding. Adding impermeable surfaces and drainage stress will increase flood risk to existing and new residents—a clear breach of planning policy regarding flood risk management. ### **9. Strategic Growth Location Designation is Flawed** The designation fails to properly consider the loss of Greenbelt, impact on landscape character, infrastructure delivery risks, and ecological constraints. The proposal is therefore not justified, effective, or consistent with national policy. ### **10. Legal Compliance and Duty to Cooperate** Given the above, there are serious doubts as to whether the plan is legally compliant or has adequately fulfilled the duty to cooperate, particularly regarding cross-boundary impacts on infrastructure and environment.			
18468257	S Kruger			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I strongly object to the allocation of Land East of Backwell for approximately 1,000 additional dwellings. The plan fails the tests of soundness on multiple grounds. Disproportionate Growth Backwell already has 800 approved dwellings representing a 40% increase. Adding 1,000 more would constitute over 80% population growth—far exceeding proportionate allocations given to larger settlements. Backwell is expected to absorb 7% of the district's housing target versus Clevedon's 2%, despite being a village rather than a town. No justification has been provided for this imbalance and would lead to complete overdevelopment. Infrastructure Deficit The proposal lacks credible infrastructure delivery. School places are already insufficient. No additional health services or leisure facilities are planned. The proposed link road has no detailed plans, feasibility study, costings, or funding commitment and would further remove local green space and fields. Engineering a crossing under or over the railway presents serious technical and financial challenges that remain unaddressed. If this proposal requires building expensive road infrastructure what is the justification for unfair and unethical growth of Backwell village and not spreading the burden of such an increase across other villages that have eually if not better road access to Bristol and the motorway network. Agricultural and Environmental Harm The site comprises Grade 1 agricultural land—the highest quality classification—of which only 7% remains in North Somerset. This land is currently productive. Government policy explicitly requires protection of the best agricultural land for food security; this allocation directly contradicts that policy. Flood Risk Backwell Common and adjacent areas flood regularly. Building on floodplain land will exacerbate existing problems and create new flood risk for both existing and proposed residents. Deliverability No viability analysis supports this allocation. No social cohesion assessment exists. The 50% affordable housing requirement on Green Belt land reduces developer contributions for infrastructure, making delivery of promised services even less likely. The scale and pace of proposed growth is simply undeliverable within the plan period. Justification as a strategic location is contradictory Backwell keeps being considered in conjunction with Nailsea which is not the case for any other village. They share the railway station, otherwise they are different in most other characteristics. Backwell is a village and it's character should not be changed into a town. The station being a transport hub (which is not fit for purpose) and its proximity to Bristol seems to be the main justification for Backwell being considered a strategic growth location giving access to employment opportunites in Bristol. However, the proposal includes light industry and building a new road to mitigate the negative impacts of commuting and increased traffic. Backwell is not an employment hub, most people commute. And if light industry and road infratstructure are required to make this proposal sound then these house could be built in any other village to avoid the destabliising increase in population to Backwell.	Remove any additional growth in Backwell than those already approved to date, this is already an incredible increase in population which effects are already being felt. These additional houses could be divided and spread across multiple villages in North Somerset without requiring the destruction of Grade 1 green belt and an expensive infrastructure project to build a new road.		
62812961	P Lamb			No		No	No	We object to the development of greenfield site at East Farleigh due the large number of dwellings planned and the lack of adequate facilities to accommodate the new residents proposed. Also the A370 is already too congested. It is most inappropriate to build on designated Green Belt land...	Relocate this housing development to Ashton Vale, which is closer to Bristol and with a suitable road structure, in contrast to Backwell with a much longer commuter distance involved.		
29266753	Robin Lambert			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The development of land east of Backwell should not take place. Because Backwell has already 800 new houses going to be built, and there is no way the Village can sustain a further increase. It has been allocated a higher number of new houses than any other village in N Somerset, and a higher allocation than several of the towns. The volume of this growth is unsustainable and will destabilise the community. The planned new road would be very costly, and simply throw increased traffic onto the current A370 through Backwell Farleigh and Flax Bourton and onto the single lane Long Ashton bypass. The land being used is Grade 1 Agricultural land used for food production. Apparently this quality land is rapidly diminishing in North Somerset. It seems a mistake for our country to build on land used for food production, when the world is finding it difficult to feed the current population.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Much of the land in the east of Backwell area is prone to flooding, and this would be exacerbated by building housing and roads on it. I use Backwell Common Road, Chapel Hill, and Backwell Bow regularly and all three of these roads are frequently flooded already. Dr Robin G Lambert.			
62686241	Susan Lambert		Personal	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I consider that building on Land East of Backwell should not take place because:- Backwell already has 800 new houses approved, and the additional numbers would not be sustainable in this village. The proposed new road would be very expensive. It would also throw additional traffic onto the already crowded A370 through Backwell Farleigh, Flax Bourton and the single lane Long Ashton Bypass. Backwell has been allocated a higher number of houses than any other village in N Somerset, and a higher percentage than many of the towns in N Somerset. The land is Grade 1 Agricultural Land, used for food production. Using this land at a time when the world cannot feed itself is a wrong decision. The land intended for building is subject to flooding. This development will worsen the situation. I regularly use Backwell Common road, Chapel Hill and Backwell Bow. These are frequently flooded already, and the situation will worsen with this development. Susan Lambert.			
29214593	J Lamborn			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The ‘village’ of Backwell already has over 800 houses approved which is a 40% increase for the village. We are presently already overdeveloped, to consider adding to this further is complete and utter madness. The proposed new road would not effectively serve to relieve congestion on Station Rd, Backwell Common or the surrounding areas and its plan to go under or over the existing railway lines is completely unfeasible and absurd. Neither existing residents nor new residents are likely to drive to the far end of the village to access a new road so that they can shop in Nailsea, Rather Station Rd would be their first choice. The village of Backwell has one small doctors’ surgery, one dentist, a veterinary surgery, a post office and a couple of shops. None of these has room to expand or increase capacity and no further employment opportunities in the area exist. Other than those working from home these are the only employment opportunities in the area ergo we are simply unable to sustain an additional thousand households. Also the Infrastructure Delivery Plan lacks any analysis or costings and with no funding guarantees for new roads or services! It should be noted that Backwell Common and surrounding areas are very prone to flooding which would be made worse by more housing! Far from being an employment hub most residents of Backwell commute to work on a daily basis. The ‘village’ of Backwell ‘boasts’ Grade 1 Agricultural Land upon you wish to build, of which there remains just 7% in the whole of North Somerset. Government policy states that we must protect our best and most versatile land to safeguard food security and we believe that these proposals contradict this. Furthermore, the areas in question would destroy valuable wildlife habitats and further harm the biodiversity! This attack on our Greenbelt would directly threaten the Broccoli Maternity Roost and SSSI, with the London question supporting rare Lesser and Greater Horseshoe Bats feeding grounds. The impact on this area’s character its population, and services on offer make it wholly unsuitable for an additional development which we note will add a considerable increase in households, residents, vehicles and the need for additional need for services that do not and are unlikely to exist due to Backwell being a ‘village’!! The proposed new road and further housing are situated at Backwell Lake and adjacent fields which are a floodplain and indeed flood regularly!?? She railway station is not fit for purpose as a transport hub as it is inaccessible with many steps for both platforms and remains little more than a bus route!			
28492993	T Lamont-Smith			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	No	There has already been a ridiculously large increase in the number of houses in Backwell that the village is ill equipped to deal with. The proposed road is a complete fantasy as it will be underwater for parts of the year, and the crossing of the railway line will simply be prohibitively expensive to ever happen. There is no analysis of what would be required. There is no budget to build a crossing. Any road would likely face sustained public protests that would delay the delivery and increase costs of the road building. There is already a deficit in school places, health services, dentistry etc. The sheer volume of additional growth is completely unsustainable, and actually undeliverable in any realistic timeframe.			
51426369	Adam Lane			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I am writing to register my strong objection to the proposed strategic growth allocations affecting Backwell in the Draft Local Plan. While I understand the need for North Somerset Council to meet its housing targets, the proposals for Backwell – particularly the additional 1,000 houses on Grade 1 Greenbelt agricultural land – are wholly disproportionate, unjustified, and would cause irreversible harm to the village, its environment, and the wider district. 1. Backwell is already accepting unprecedented growth Backwell already has 800 approved houses, representing a 40% increase in population -- extraordinary for any village, and far beyond the growth levels allocated to nearby towns. Asking Backwell to absorb another 1,000 houses, raising the total increase to over 80%, is neither reasonable nor sustainable. Backwell is being asked to take 7% of the district’s total housing allocation – more than Clevedon (2%) and equal to Portishead – despite being a village with limited services and infrastructure. This fundamentally contradicts the principles of proportional, sustainable development. 2. Loss of Grade 1 Agricultural Greenbelt Land – a severe, irreversible impact The proposed development site at Backwell East sits on Grade 1 agricultural land – the highest-quality land available and now extremely scarce, with only 7% remaining in the whole of North Somerset. This land is currently productive and used for food crops and grazing. Government policy is explicit: 'We must protect our best and most versatile land' to safeguard national food security. The Local Plan’s proposal directly undermines this principle at a time when food security is increasingly recognised as a national priority. Once this land is built on, it is gone forever. No mitigation can replace it. 3. Infrastructure and services are already overstretched, with no credible plan for improvement			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Backwell faces existing deficits in school places, healthcare provision, road capacity, and leisure facilities. Despite the enormous scale of growth proposed, there is: - No confirmed funding for new services - No detailed or costed plan for necessary infrastructure - No viability assessment to demonstrate how any of this could realistically be delivered - The Infrastructure Delivery Plan lacks essential analysis, leaving residents with vague promises rather than commitments. The proposals ignore practical realities: Backwell is not an employment hub; the majority of residents commute. Increasing population without matching services or sustainable transport options would worsen congestion and reduce quality of life. 4. The proposed new road is undefined, uncosted, and potentially unfeasible The Local Plan relies on a completely speculative new road. One with: - No route - No engineering assessment - No feasibility study - No costings - No funding source Engineering a road over or under the railway line may be prohibitively expensive or technically impossible. Yet this road is presented as essential infrastructure for supporting 1,000 new homes. This is planning based on hope rather than evidence. Meanwhile, the road would significantly damage Backwell Common, a valued landscape that already suffers from flooding and would be further destabilised. It's nonsense. 5. Environmental damage and biodiversity loss would be severe The Backwell East site and surrounding areas provide vital habitats supporting a wide range of wildlife, including species of national importance. The proposals threaten: - The Brockley SSSI and maternity roost - Rare Lesser and Greater Horseshoe Bats, which rely on this land for foraging - Long-established wildlife corridors - Already fragile biodiversity in one of the most nature-depleted countries in the world Once again, these losses cannot be undone. 6. Flooding risks are ignored, not addressed Backwell Common, Backwell Lake (Reservoir), and adjacent fields are well-known floodplains that regularly flood. Adding hundreds of houses and new roads on this land will only increase run-off, displace water and heighten flood risk for existing homes. The Local Plan does not present any credible or costed mitigation. 7. A lack of essential assessments undermines the soundness of the plan The proposals are missing several fundamental components: - No needs or viability analysis for the additional 1,000 homes - No social cohesion impact assessment - No certainty of infrastructure delivery - No justification for allocating a village levels of growth usually reserved for towns A Local Plan must be sound, justified, effective, and consistent with national policy. These proposals fail all four tests. 8. Additional proposals at Backwell Lake worsen the cumulative harm The plan allocates a further 582 houses next to Backwell Lake (classified under Nailsea), yet the access road would emerge into Backwell, compounding traffic issues on Station Road and increasing pressure on a designated conservation area. This is a clear case of cumulative impact being ignored in favour of increasing housing numbers. 9. Transport assumptions are unrealistic Backwell railway station is not fit for purpose, lacking accessibility and adequate capacity. There is no plan to upgrade the station to support population doubling. The abandoned bus lane scheme already demonstrated that there is no deliverable public transport strategy that supports large-scale growth in Backwell. Conclusion: These proposals are excessive, unsound, and undefendable Backwell is already accepting more than its fair share of growth. The additional 1,000 houses – on irreplaceable Grade 1 farmland, without infrastructure, with uncosted transport solutions and with significant environmental risk – are unjustified and unacceptable. I urge the Independent Inspector to reject these proposals and require North Somerset Council to prepare a sound, evidence-based plan that aligns with national policy, protects finite agricultural assets, and respects the scale and character of Backwell. Regards Adam			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
51456033	Paul Lane			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	This is clearly over development; there is already a large (40% increase) The railway station is not fit for purpose, inaccessible for people with motability issues, and difficult when travelling with children. There is no viable analysis for extra 1000 houses The proposed road would not serve Nailsea traffic or change the significant increase in traffic moving through narrow station road where children already run the gauntlet from Nailsea/Station to Backwell school. No evidence of a social cohesion impact assessment Bio diversity will be deeply affected and never recovered, wildlife habitats destroyed forever Government policy states “we must protect our best and most versatile land” to safeguard food security. This is being IGNORED. Why aren’t golf courses, empty city building and commercial facilities being converted into dwellings? Flooding already occurs in this area, with only adding to the demand not providing new remedies this will cause significant damage. Absolutely zero infrastructure announced, increased cars, emissions, drain on services to brink of collapse. Disruption to quality of life for all residents old and new.			
62849697	S Lane			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I strongly object to the proposed development in Backwell. Our village already faces a huge 40 percent increase with 800 new houses approved. Adding another 1,000 homes would overwhelm Backwell and destroy the rural community my family chose for its countryside and quality of life. The roads are already under immense pressure. Station Road, Backwell Common and Chapel Hill are often gridlocked, and the proposed new road would not solve this. It would simply funnel even more cars into an area that is already struggling. Public transport is not a realistic alternative either. Backwell train station is inaccessible for people with mobility issues and extremely difficult for anyone travelling with young children or pushchairs - have you tried getting a baby, toddler and pushchair down the stairs? Because I have and it’s a logistical and physical nightmare. There is no plan for extra school places, GP appointments or leisure facilities. As a parent, I am very worried about how this will affect my children’s education, health and daily life. Backwell is being forced to take far more housing than any other village in North Somerset and it cannot cope. Flooding is already a serious problem around Backwell Common and Backwell Lake. I have seen water reach my knees in these fields. Building on this land will make flooding worse for existing and future residents. Government policy says we must protect our best and most versatile land to safeguard food security. This plan does the opposite and threatens important wildlife, including the Brockley bat roost which relies on these fields for feeding. We moved here for the countryside and a safe environment for our children. These proposals put all of that at risk. I urge you to reject them.			
51446145	Doreen Lane		Local resident	No	‣ Positively prepared	No	No	We already have 800 new homes in our small village which have caused utter chaos on the roads and destroyed the environment. Developers have blatant disregard to the community. The developments so far are cheap, crammed in toy town. We simply do not have the infrastructure to support - a new road running parallel to station road is pie in the sky and would destroy grade 1 Agricultural Land of which there is only 7% left in the whole of North Somerset. There is no social cohesion impact assessment. Backwell is a commuter hub and not an employment hub.			
62860193	Rachel Lane			No	‣ Positively prepared ‣ Justified ‣ Effective	No	No	No social cohesion impact assessment had been provided. Likewise the complexity of responding to the plan is incredibly complicated and will put off a significant proportion of the elderly population of Backwell.			
62578561	John Langley-Davis			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell already has 800 new houses approved which is over 40% increase for the village, the infrastructure is already failing the villagers and this would lead to overdevelopment. The road proposed would not serve the needs of Nailsea's traffic or releive congestion of Station Rd which is currently out of control as it is and totally unsafe at Backwell Secondary School drop off and pick up. The cost of the road under or over the railway would be a completely ridiculous use of public funds when it is currently impossible to get NSC to do anything about safety around Backwell Secondary School. A village should not be expected to take 7% of the extra houses in North Somerset when town's like Clevedon are only taking 2%. There is no needs or viability analysis for 1,000 houses. There is very little employment in Backwell, almost everyone commutes to work. No social cohesion impact assesment had been provided. The land proposed floods terribly, I walked it last week and it was a complete mud bath after the rain and in some places up to 30cm deep mud. I have young children and the railway station is not fit for purpose if you have a wheelchair or a buggy. There is a deficit in school places and no investment in health or leisure facilities. In fact the footpaths in these fields are well used so there would be less space for people to exercise. Government policy states that our best land should be protected to safeguard food security. This site is grade 1 agricultural land and as such to develop this land would directly contravene government guidance. There are no modifications that would make it sound or legally compliant, it has no merit whatsoever and should be shelved in favour of the great many other sites that could work in North Somerset.			
39278177	Stuart Larkins			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	1. Overdevelopment Backwell already has 800 new houses approved—representing a 40% increase in the size of the village. Adding a further 1,000 homes would constitute complete overdevelopment and would fundamentally change the character of our community. 2. Ineffective and Potentially Unachievable Road Proposal The proposed road would not relieve congestion in Nailsea nor address existing problems on Station Road, Backwell Common, or Chapel Hill. Any requirement for the road to pass under or over the railway would be extremely costly and may not even be technically feasible. 3. Insufficient Infrastructure There is already a shortage of school places, and no investment is planned for health services, GP capacity, or leisure facilities. The existing infrastructure cannot support an additional 1,000 homes.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								4. Unfair Housing Burden Backwell has been allocated more housing than any other village in North Somerset—and even more, proportionally, than many towns. The village is expected to absorb 7% of the district's total housing allocation, compared to Clevedon's 2%. This is disproportionate and unjustified. 5. Lack of Needs or Viability Assessment No evidence has been provided to demonstrate that an additional 1,000 homes are needed or that such development is viable. 6. Not an Employment Centre Backwell is not an employment hub. Most residents commute elsewhere, meaning additional housing would only increase car-dependency and traffic pressures. 7. No Social Cohesion Assessment The proposals include no analysis of the social impact of such rapid and large-scale growth on the existing community. 8. Loss of Grade 1 Agricultural Land The development would destroy some of the best and most versatile agricultural land in North Somerset—land that currently supports food crops and grazing. Only 7% of such high-quality land remains in the district. 9. Contradiction of Government Food Security Policy National policy states that we must protect the best and most versatile agricultural land to safeguard long-term food security. This proposal directly undermines that obligation. 10. Harm to Wildlife and Biodiversity Building on these sites would destroy valuable habitats in a country already recognised as one of the most nature-depleted in the world. 11. Threat to Protected Species The development threatens the Brockley Maternity Roost and nearby SSSI. Rare Lesser and Greater Horseshoe Bats depend on this land as essential feeding habitat. 12. Uncosted and Unproven Infrastructure Delivery Plan The Infrastructure Delivery Plan contains no proper analysis, no detailed costings, and no guaranteed funding for the road or associated services. 13. Flood Risk Backwell Common and surrounding areas are already prone to flooding. Additional housing and hard landscaping would significantly worsen this risk. 14. Concerns with the Strategic Growth Location Designation Key issues include the loss of Green Belt and high-quality farmland, the erosion of local character, increased flood risk, and uncertainty over whether the required road can be funded or delivered in time to support the development. 15. Building on a Floodplain Backwell Lake (the reservoir) and the adjacent fields earmarked for development are located on a floodplain and flood regularly. This makes them wholly unsuitable for housing or roads. 16. Unsustainable Rate of Growth The sheer scale and speed of the proposed expansion, without the necessary infrastructure, would be destabilising, unsustainable, and ultimately undeliverable. 17. Inadequate Railway Station The railway station is not fit for purpose as a transport hub. It remains inaccessible for people with mobility issues and is extremely challenging for families with young children. 18. Failure to Demonstrate That Green Belt Release Is a Last Resort Government guidance states that building on Green Belt land should occur only when all alternative options have been exhausted. No evidence has been provided to justify such release. 19. Empty Homes Elsewhere With an estimated 750,000 empty homes nationally, it is unclear why building on valuable green spaces is being prioritised over bringing existing properties back into use. 20. No Evidence That Additional Housing Will Lower Prices Numerous experts have stated that simply building more houses does not reduce prices, especially in areas like Backwell where demand is limited. First-time buyers will not benefit from these proposals.			
51320545	Emma Lawrence			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell has 800 new houses approved already, we don't have room for a anymore as this would lead to complete overdevelopment. The proposed road would not effectively serve Nailsea's traffic or relieve congestion on Station Road, Backwell Common, or Chapel Hill. I'm very worried about the impact on safety of pedestrian on Backwell common. Not sure why this has come back on the table after it was deemed to be unfeasible and undeliverable. T There is a lack of infrastructure and services like drs which cannot support another 1,000 houses. Backwell already has the highest number of houses allocated for a village in north Somerset, and even a higher growth percentage than towns. This doesn't make sense as it is not an employment hub, people mostly commute out to work. The train station is not accessible and the trains are already jam packed at rush hour times. The land that is being proposed to be built on is Grade 1 Agricultural Land which is currently being used for crops and grazing. We only have 7% of this high quality land left in the whole of North Somerset. We need to keep this for food security			
62786337	Tabitha Lazell			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell already has approval for 800 new homes, which is a 40% increase in the size of the village. Adding even more would amount to serious overdevelopment. The proposed road wouldn't properly help Nailsea's traffic issues or ease congestion on Station Road, Backwell Common, or Chapel Hill. Trying to take the road under or over the railway would be extremely costly and may not even be realistically achievable. Even with the existing housing growth, we already have a shortage of school places and no new investment in healthcare or leisure facilities. Our current infrastructure simply can't cope with another 1,000 homes. Backwell has been allocated more housing than any other village in North Somerset, and a higher growth percentage than some towns. It's expected to take 7% of the district's entire housing allocation, compared with Clevedon's 2%. No needs assessment or viability study has been provided to justify building another 1,000 homes. Backwell isn't an employment centre, and most people here commute elsewhere for work. There has been no assessment of how this level of growth would affect social cohesion in the village. The land in question is Grade 1 Agricultural Land used for crops and grazing, and only 7% of this high-quality farmland remains in North Somerset. Government policy clearly states that we must protect the best and most versatile land to safeguard food security, yet these proposals go directly against that principle. The development would destroy important wildlife habitats and further damage biodiversity in a country that is already among the most nature-depleted in the world. The plans put the Brockley Maternity Roost and the SSSI at risk, where rare Lesser and Greater Horseshoe Bats rely on the surrounding land for feeding. The Infrastructure Delivery Plan contains no meaningful analysis, no proper costings, and no confirmed funding for the proposed road or supporting services. Backwell Common and nearby areas are already prone to flooding, which more housing would only make worse. The designation of this area as a strategic growth location raises serious concerns: loss of Green Belt and high-quality farmland, increased flood risk, changes to the area's character, and major doubts over whether the road can be funded or built in time to support the housing. Backwell Lake (the reservoir) and the surrounding fields—where the road and housing are planned—sit on a floodplain that floods regularly.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Government policy requires 50% affordable housing on Green Belt land, but this significantly reduces the amount developers can contribute to essential infrastructure. The scale and speed of growth being proposed, along with the investment needed for infrastructure and services, is destabilising, unrealistic, and unsustainable. The train station is nowhere near adequate as a transport hub. It's not accessible for people with mobility issues and is very difficult for anyone travelling with young children.			
51323617	Trevor Leake		Backwell resident	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I have serious concerns for Backwell as a strategic growth location designation as this will have impact on the areas character, loss of greenbelt and high-quality agricultural land, risk of flooding, and lack of certainty over whether the road can be funded and delivered on time to support the proposed housing. The proposed development of 1000 houses will destroy grade 1 agricultural land (currently used for crops and grazing). There is only 7% of this high-quality land left in North Somerset. Government policy states that 'we must protect our best and most versatile land' to safeguard food security. The UK currently imports approximately 50% of the food it consumes. In the event of the Ukrainian war spreading this may force UK to be more self-sufficient. Building on such land is therefore very shortsighted. Backwell already has 800 new houses approved, which represents a 40% increase for the village. A further increase of 1000 houses is massive. Backwell has been allocated a higher number of houses than any other village in North Somerset. Backwell is expected to take 7% of the districts housing allocation compared say to Clevedon's 2%. The proposed road is speculation. Engineering it through the railway line would involve a tunnel or flyover which need to be designed and costed. The road route also appears to cross land owned by different parties. The scheme is therefore likely to be unaffordable. Backwell lacks the infrastructure to support another 1000 houses. The schools, health services and leisure facilities cannot absorb this. The infrastructure delivery plan lacks analysis and costing. There are also no funding guarantees for the new road or services. Backwell is not an employment hub as many people commute. Such an increase will further load the A370 which is currently congested at peak times, and also render Station Road impassable. This development would destroy valuable wildlife habitats and further harm biodiversity in what is a very nature depleted country. The Brockley Maternity Roost and SSSI, with rare Lesser and Greater Horseshoe bats rely on this land for their food. Backwell common and surrounding areas are prone to flooding, which will only be aggravated by a further 1000 houses. Backwell Lake (reservoir) and adjacent fields are currently on a flood plain which floods regularly. This is the chosen route for the new road. Government policy requires 50% affordable housing on Greenbelt land, but this reduces funds available for developers to contribute towards any infrastructure. The current railway station is not fit for purpose as a transport hub. It remains inaccessible for people with mobility problems and presents serious challenges when travelling with young children. A further 1000 houses will only further exacerbate the situation. Based on the above, I request that North Somerset Council reconsiders this scheme for the development of a further 1000 houses at Backwell. Trevor Leake C Eng FIMechE I cannot envisage any modifications that will make the North Somerset Local Plan 2041 for Backwell, legally compliant or sound. The development for 1000 houses destroys agricultural land. The proposed area is prone to flooding and the proposed relief road cannot be guaranteed (all as points raised above) I do not wish to support the soundness or legal compliance of the North Somerset Local Plan 2041.			
62855553	Cherry Leake			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Proposed road would create even more congestion along Station Road Backwell Common and Chapel Hill causing immense suffering to local residents added pollution and dangerous for school children. There is no guarantee we would attract extra funding for school provision/ health services or leisure facilities. Green belt Grade One agricultural land will be lost forever affecting food security biodiversity flood plain and distort the nature of Backwell which has already lost agricultural land to developers. The railway station is not made for high volumes of commuters - Backwell has few local job opportunities so many people commute. The local roads are already overcrowded with traffic. Developers are not interested in brown field sites but ruin Grade On agricultural land instead.			
58641441	Jenny Leavett			No	• Positively prepared • Justified • Effective • Consistent with national policy			I strongly contest the proposed scale of development on the grounds of unsustainable infrastructure and the destruction of irreplaceable Green Belt resources. Backwell's existing road network is already severely congested, exacerbated by ongoing construction disruption and the cumulative impact of houses already consented; the current local roads and critical junctions demonstrably lack the capacity for any further large-scale growth. Furthermore, the village is significantly constrained by an acute deficit in essential amenities, including insufficient capacity in local schools and GP surgeries, a problem compounded by the poor accessibility of Nailsea & Backwell Station which lacks step-free access across platforms, discouraging sustainable transport use. Crucially, the land is noted as high-quality Grade 1 agricultural Green Belt land, and significant portions are susceptible to high rates of surface water flooding during heavy rain, making it fundamentally unsuitable and unsafe for building and creating unacceptable risk. Continuing this linear expansion also poses an immediate threat of merging with Nailsea, destroying the separate identity of both settlements. The Council must reject this approach and instead explore strategic alternatives, such as a new planned settlement adjacent to the new road infrastructure (like the A370/A38 corridor or a new bypass link), allowing for the creation of genuinely sustainable communities with dedicated schools, doctors, and transport links delivered upfront, avoiding the environmental and safety hazards presented by the current site.	Based on the issues raised above, I consider the Plan to be Unsound and suggest the following specific modifications: Add a new policy that requires the Council to investigate and allocate land for a New Strategic Settlement or major Urban Extension outside the existing Green Belt, prioritising locations near the new Anton Bandock Way infrastructure. Amend the infrastructure policy for Backwell to mandate the full delivery and funding of a new primary school, a dedicated new GP surgery and disabled access (step-free) at Nailsea & Backwell Station, prior to the occupation of any new dwelling, as a minimum requirement for any development in the area. Ensure that there are suitable walking areas for residents on Backwell in all areas of the village to		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									help maintain health. Ensure that building does not cause the level of disruption caused by the current projects in Backwell and that no more than one site can build at any time.		
62851233	Heather Lee-Herbert			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I consider this development to be complete overdevelopment which would lead to an 80%increase to the size of the village. The new road will not relieve congestion on station road, chapel hill or nailsea. A road under or over the railway would be very expensive and probably not feasible. This is a flood plain building on it does not make sense, there is no employment in backwell save very small businesses with small numbers employed. Therefore every one will commute. The land is grade 1 agricultural land/ only 7% existing in the whole of North Somerset, this undermines uk food security. Local infrastructure cannot cope with the scale of this development e.g. doctors dentist primary and infants schools and our roads are already saturated according to North Somerset. This development will destroy valuable wildlife habitats. There will be a significant impact on wildlife habitats particularly rare bars. The trains are often full during peak times for travel to Bristol and beyond and additional buses can not be accommodated in Brit is station as it is already too small for purpose.			
62658497	Myna Legg			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I totally disagree with the plan to build some 800 to 1000 houses. These additional numbers would lead to a complete overdevelopment, increasing the size Backwell by @40%. There has been no consideration given to providing additional facilities such as schools, doctors, shops and public buildings. The current facilities will be inadequate to support this expansion. The road and houses are planned on an area which already floods and these additional houses would further aggravate this problem. Further, the cost of building a road over or under the railway line would be expensive, and there are no funding guaranteed in the plan for these infrastructure. Current road infrastructures are not sufficient to support this over expansion. It seems inappropriate to develop house where there is no employment. This will increase traffic, commuting and pollution.			
39128673	Sheila Liddle		Resident	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure		1. I object to the proposal to build a further 889 houses in Backwell as I do not believe the numbers to be justified. Backwell is a village with limited amenities, and it already has a further 800 houses being built, a 40% increase in numbers. Backwell should not be required to accommodate another 40% of housing when places like Clevedon, Pill and Portishead are required to supply much lower percentages of housing. 2. There is a proposal to alleviate the problems with traffic through the village, via Station Road by building a short by-pass. The proposed by-pass will need to go under or over the existing railway which will be extremely expensive, so it is unlikely to ever be built. A condition of any planning permission should be that any infrastructure such as a by-pass road should be built before any building work can commence and should be funded by the building contractors. 3. Backwell village has facilities such as medical practice, dentist, primary and secondary schools, a leisure centre and small shops. However, the facilities will be insufficient and will find it difficult enough to support the new housing already being built without adding double the numbers. You cannot add 2000 house without building new infrastructures to support it. The infrastructure should be at the expense of the builders as they are the ones making the profit out of the proposals. They should be required to build the infrastructure before they build the houses. 4. I have seen no justification or analysis to demonstrate the need for so many houses. The area does not have a great deal of employment, most residents commute. Although the plans suggest building an employment hub, you need to have companies who wish to set up in an area. The area is unsuitable for any large structures such as warehousing. 5. The additional site is on prime agricultural land. We should not be building on good agricultural land if the country is going to be relatively self-sufficient. Only 7% agricultural land is available for food crops and grazing in North Somerset. We should be protecting this resource. Build on grey belt land instead. 6. In part of the area where it is proposed to build 889 houses is in an area where there is a high chance of flooding by surface water, as identified on Environment Agency maps (Ref: https://check-long-term-flood-risk.service.gov.uk/map?easting=349670&northing=169397&map=SurfaceWater) Backwell regularly experiences problems with flooding, especially down the A370 because surface water runs off the fields above the A370 and runs either down the road or across the road to the fields downhill. If these fields are built on, covering it with concrete there are going to be further flooding issues. This has already been demonstrated with the construction in Farleigh Fields – there is currently a river running down the main road (5/12/25). Additional land in Weston has been rejected as being suitable because it is at risk of being flooded, so the same rejection should be applied to Backwell. 7. The proposed housing will destroy the character of the village, as it will be a sprawling mass joined up with Nailsea. 8. The plan appears to concentrate on transport, but the railway station is severely lacking in facilities such as accessibility for disabled. This needs to be addressed. 9. Nowhere are there any costings for the infrastructure to support the proposals and no funding guarantees for new roads or services. 10. An environmental study is required. As well as lesser and greater horseshoe bats there are also other species such as long eared bats, as well as owls, reptiles, foxes, badgers, roe deer and hares. The construction will destroy a valuable wildlife habitat and affect the biodiversity of the area. 11. I do not believe we need all this housing in this particular area.			
39126721	J Liddle			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Comments on NSC Reg 19 Local Plan 2041 • Backwell has been targeted by developers for some time and approval already exists for 800 new houses. This alone represents a 40% increase without any certainty of provision of the necessary infrastructure (schools, medical & leisure facilities etc.). The proposed additional houses in the plan would lead to the village being swamped and left without the necessary support services. • As far as I am aware, there is no needs or viability analysis for the additional 1000 houses proposed, nor is there any social cohesion impact assessment.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								• I know from personal experience that Backwell Common and the adjacent land suffers from flooding. The additional housing proposed would exacerbate this problem. • Backwell has little or no employment opportunities and most existing residents commute to work. The existing approvals will lead to considerable increases in commuting traffic and the additional 1000 houses proposed in the plan will worsen this even further. The railway station cannot be regarded as a viable solution to this problem – it is inaccessible for those who are less mobile and the relatively small platform area (which cannot be increased except at considerable expense) will present problems at busy times of the day and especially for those travelling with young children. • The plan contains a proposal for a new “relief” road. It is not at all clear what this is supposed to relieve. It will not make any difference to the traffic using the Chapel Hill rat-run and it is doubtful that it will improve Station Road traffic. The new road will have to pass either over or under the railway. Although the railway runs on an embankment past Backwell Common, the height of an underbridge needed to allow the passage of modern high lorries (because no-one, surely, would advocate building a bridge with the sort of height limitation we currently have) would dictate that the road be sunk below ground level. In view of the flooding problems in the area (and note the problems at the existing Chapel Hill bridge) this is not a feasible option. The alternative (passing over the railway) would result in a substantial structure which would bring its own problems. There would be a considerable visual intrusion running through the proposed housing and a very significant noise pollution problem. Neither of these options is addressed in any detail in the plan and the considerable funding required remains shrouded in mystery. Any such road construction should be funded in large part by the developers of the proposed housing – it is they after all who are laughing all the way to the bank if approval is given. Such funding should be required before building can commence and should be hypothecated for the road construction alone, but I have to recognise that such a pragmatic approach is foreign to local Councils and frankly the proposed road is pie in the sky. • The plan proposes building on Grade 1 agricultural land. This is madness. There is very little land of this quality left in North Somerset and there is an increasing need for its retention. The current geo-political climate presents extreme uncertainty and the UK should be working to increase its resilience and food self-sufficiency, not concreting over the means of production. • The proposed development would severely adversely affect the local wildlife habitat, including the local bat populations which rely on the land for food. • The scale of housing proposed for Backwell is completely out of proportion to its current size and the village has been singled out for radically more housing than neighbouring areas. We are expected to take 7% of the district’s allocation in comparison to Clevedon (a much larger community) which is targeted for 2%. The resultant increase in population for Backwell is 80% - a totally unreasonable imposition. • Overall, the proposed increase in housing over what is a relatively short period is undeliverable. The construction industry in the UK has not covered itself in glory in respect of housing delivery in the past and there is no reason, given the paucity of skilled labour supply, to expect any improvement in that situation. • Attempting to make such wholesale changes to a small village environment will lead to complete overdevelopment and utterly destroy the character of the area. When coupled with the loss of Greenbelt, the loss Grade 1 agricultural land, the risk of flooding, the uncertainty surrounding funding for the proposed road and the lack of firm proposals for the necessary support infrastructure (schools, medical etc), the whole plan is ill-conceived.			
62847137	Nathan Littlewood			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I am submitting this objection to the proposed allocation of nearly 900 additional houses on land east of Backwell under Policy LP3 of the North Somerset Local Plan 2041 (Regulation 19). This proposal is unjustified, inconsistent with national and local planning policy and does not adhere to principals of sustainability. Grounds of Objection 1. Disproportionate and Unfair Growth Backwell has already had multiple developments approved recently, representing a 40% increase in village size. Adding nearly 900 more houses would far exceed growth levels in much larger settlements such as Clevedon. This is unfair, disproportionate, and not in the best interests of current or future residents. This conflicts with the National Planning Policy Framework (NPPF 2024, para. 11 & 35) which requires plans to be “justified” and “the most appropriate strategy” when considered against reasonable alternatives. 2. Unsustainable Transport Strategy The proposed link road duplicates existing infrastructure. The B3130 already provides a direct route between Bristol and Nailsea, making the new road unnecessary and a waste of public resources. It will do nothing to alleviate current traffic problems through Backwell along the A370. The Local Plan requires development to accord with the North Somerset Place and Movement Framework, yet the proposed road undermines sustainable transport principles by encouraging car dependency rather than prioritising public transport and active travel. This conflicts with NPPF para. 104–106, which require transport policies to promote sustainable modes and reduce reliance on private cars. 3. Flood Risk and Climate Resilience Backwell Common, adjacent areas and parts of the A370 are already prone to flooding. The proposed development lies on or near floodplains, including land around Backwell Lake. The Local Plan requires a “comprehensive and coordinated approach to surface water management,” yet no robust Flood Risk Assessment (FRA) or funded mitigation strategy has been provided. This fails to meet NPPF para. 159–161, which require development to avoid flood risk and not increase vulnerability to climate change. 4. Failure of Sustainability Principles Backwell is not an employment hub; most residents commute to Bristol or elsewhere. Allocating even more land for commuters is unrealistic and contrary to the principle of locating jobs near housing. The proposal does not reduce commuting or traffic congestion, undermining the NPPF’s presumption in favour of sustainable development, which requires balancing economic, social, and environmental objectives. A more sustainable distribution would direct growth to towns such as Clevedon, Portishead, and other towns of North Somerset that have existing infrastructure, employment opportunities, and transport capacity. 5. Heritage and Landscape Harm The Local Plan itself acknowledges the need for a heritage-led masterplan and buffer zones to protect Backwell Farleigh Conservation Area and views to Tyntesfield and Wraxall. Large-scale housing on Grade 1 agricultural land irreversibly damages the rural setting, undermining NPPF para. 174–176, which require protection of valued landscapes and heritage assets. Government policy (NPPF para. 174b) requires protection of “best and most versatile agricultural land” to safeguard food security. Allocating this land for housing contradicts national policy. The proposed allocation for Backwell is unsound because it: • Is unjustified (disproportionate growth compared to other settlements). • Is ineffective (fails to deliver sustainable transport or flood resilience). • Is inconsistent with national policy (NPPF requirements on sustainability, flood risk, heritage, and agricultural land). I therefore request that the allocation of nearly 900 houses east of Backwell be removed from the Local Plan, and that housing growth be redirected to more sustainable locations.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 62860097	Anna Littlewood			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I am really concerned about the number of new houses proposed for Backwell - we already have 800 houses approved which is an increase of 40% for our village. Adding additional massive housing estate is too much for a village of our size and current infrastructure to take in a short period of time. I am worried that our road network, health services, schools, shops and the general day to day functioning of the village will be severely impacted making this area a very unpleasant place to live. I am not against building homes and I know Backwell needs to do its part. We are already a site for a some large developments so i really think that this is enough. I am also concerned that the proposed road is not practical, i can't really see how it will take much traffic at all from station road or the cross roads as it doesnt help to serve the motorway or traffic heading to weston. I am also concerned that the plans and funding source for this road is not well defined and with it needing to somehow cross the railway line it seems completely unviable to me. This would mean that the traffic to and from this estate will all be coming via backwell - the A370 and/or the cross roads. This can already get very busy and you will be adding a large volume of traffic onto this road that will already be coping with the traffic from additional houses already agreed. I am worried that the proposed developments in the local plan are being considered in silos rather than as a collective - isnt this the point of a local plan? If it is considered as a whole surely the inspector can see that this level of increase for a village already creaking at the seems is unsustainable and infact detrimental for the people who call Backwell home.	Modify the local plan by not allowing the building of such a large-scale development on land to the East of backwell. Keep the expansion of backwell to the number of houses already agreed and accepted by the village.		
39232257	J Logan			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell has recently had 800 new homes approved. These new homes increase the size of the village by over 40%. Additional houses will lead to complete over development of a small village with very limited existing infrastructure. There are no plans for additional school places and no investment in health services. The existing leisure centre is over used, filthy and not fit for purpose and yet there are no plans for additional leisure facilities. Many areas in the village including the land around Backwell Lake and Backwell common flood regularly. (Some houses on Backwell common flood frequently with water coming up through the floor). Chapel Hill floods almost every time there is heavy rain and car consistently get stuck in the water under the bridge. More houses will only make flooding worse. Our village has some of North Somerset's very limited grade one agricultural land. It is currently used for growing food crops and for grazing. This land is an essential part of our food security strategy and should not be eroded. We have seen how the UK has struggled because we have not ensured energy security, are we going to make the same mistake over food? Surely we owe it to future generations to provide enough agricultural land to produce crops to sustain the population. Government policy states we must protect our best and most fertile land. This proposed development completely contradicts this instruction. This plan includes a new road which would have to go under the railway or over the track. This would be extremely costly and would do little ease the congestion around the train station, Backwell Hill or the Common. Our village has been allocated a higher number of new houses than any other village in North Somerset; a growth percentage that is higher than local towns who have much better existing infrastructure. Backwell is not an employment hub so most villagers commute. Additionally residents will place additional pressure on already clogged roads and public transport. There seems to be no regard given to social cohesion. Where is the impact analysis? Development will destroy local wildlife and biodiversity, however North Somerset seem to be going against their own policy on providing wildlife habitats; for bats in particular. No of the plans have been costed properly, the road has been costed and there is a lack of evidence of sources of funds for the new road or for any infrastructure.			
62760065	Jan Lydon			No	• Positively prepared • Justified • Effective	No	No	Grade 1 Green Belt Land is already down to 7% in North Somerset. Using this land to build upon would be irresponsible, environmentally disastrous and show a complete lack of judgement and care for our countryside. The village of Backwell is already overdeveloped, with roads that are unsuitable for the amount of traffic that flow along them, and without the infrastructure to support the amount of new arrivals. Congestion levels are already unbearable and this will only exacerbate the issue. There are few jobs in Backwell, therefore the traffic will be further worsened by people commuting to work at peak times. There are more new homes in Backwell than anywhere else in North Somerset, and flooding is common around Backwell common, Backwell lake etc. This area is completely unsuitable to build upon. The station in the village is a tiny affair, meant only to handle the needs of a small local community, and cannot feasibly be extended.No costing has been explained to the people of Backwell. The environmental damage, the inevitable increase of crime and the devaluation of property will be ludicrous. Backwell has become a hot spot for mindless, shameless builders to build large, unaffordable homes upon, capitalizing on the countryside and pleasant community. This should be clamped down upon immediately.	Scrap the policy. Put a stop to the mindless ideas of turning Backwell into a town. Use a modicum of common sense and go and build elsewhere!!		
38537441	Dave Morgan			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I write as a Backwell resident to strongly object to the proposed large-scale development on agricultural and Green Belt land in Backwell within the Local Plan 2041. The proposal is inconsistent with national planning policy, unjustified in scale, and harmful to the character, sustainability, and functioning of the village. My key planning and legal objections are as follows: No Exceptional Circumstances for Green Belt Release The NPPF requires "exceptional circumstances" to alter Green Belt boundaries. These circumstances have not been demonstrated. Backwell has already accepted a 40% population increase through recent approvals, and no credible evidence has been supplied to show that the village can absorb another major expansion. This alone undermines any argument for releasing high-performing Green Belt. Harm to High-Quality Agricultural Land The land proposed for development is productive, "best and most versatile" agricultural land. Once developed, this resource is permanently lost. With rising food security concerns, this land must be safeguarded rather than reclassified for speculative housing growth. Unsuitability of Scale — Disproportionate Allocation Backwell is allocated a significantly higher number of homes than many larger North Somerset settlements, despite its far smaller size, limited facilities, and constrained geography. The proposal would take 7% of the district's total housing allocation — a wholly disproportionate burden for a village of this scale. Infrastructure Cannot Support This Growth There is no practical way for Backwell to support thousands of additional residents. Key issues include: • Transport capacity issues, particularly along Station Road, the A370, and the already-congested junctions. • No investment in school places. Backwell School is oversubscribed and offers no room for expansion. • No increase in medical facilities or health-care resilience, despite national requirements that new development be supported by community infrastructure. The infrastructure delivery plan lacks both detail and funding certainty — making the development unsound. Severe Transport and Mobility Impacts The railway station is already inaccessible for many users (including people with limited mobility). Increased population			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								without credible station improvements will deepen exclusion and congestion. The proposal runs contrary to sustainable-transport principles. Flooding and Landscape Constraints Ignored Backwell contains several areas prone to flooding; additional hardstanding and loss of permeable agricultural land will exacerbate this risk. The Plan has not produced robust hydrological modelling or mitigation. Backwell Common and surrounding areas are prone to flooding, which would be aggravated by more housing. Ecological and Biodiversity Harm The affected areas include valuable habitats, hedgerows, wildlife corridors, and proximity to protected sites such as Backwell Lake, nature reserves, and SSSIs. The proposal risks significant biodiversity decline and fragmentation of wildlife movement routes. Loss of Rural Character & Identity The scale of development would fundamentally alter Backwell's character, turning it from a rural village into a suburban extension. This conflicts directly with Green Belt purposes: preventing urban sprawl and maintaining settlement separation. Conflict With Existing Planning Policies North Somerset's previous Local Plan documentation emphasised that villages like Backwell must not be the focus for large-scale growth. This new proposal reverses long-standing policy without providing new, evidence-based justification. Failure of Sequential Approach (Brownfield First) The NPPF requires that brownfield land and lower-value ("grey belt") land be exhausted before prime green belt is released. There is no evidence that these options have been fully utilised across the district. Unfunded & Unrealistic Infrastructure Promises The Plan makes vague references to "future infrastructure delivery" but offers no secured funding, no timeframes, and no enforceable commitments — contrary to the tests of "soundness" and "deliverability" under planning law. Short Consultation Period & Lack of Detail Residents have been given insufficient time and insufficiently detailed documents to analyse such a major reconfiguration of the village, contrary to principles of inclusive and transparent consultation. Precedent Risk & Permanence of Harm Releasing Green Belt around Backwell sets a dangerous precedent. Once countryside is lost, it cannot be restored, and further incremental encroachment becomes easier. This undermines the permanence of the Green Belt — one of its central statutory purposes. Conclusion For these reasons — including the lack of exceptional circumstances, overwhelming scale, loss of high-value agricultural and Green Belt land, inadequate infrastructure, environmental harm, and conflict with national and local planning policy — I urge the Council to remove the Backwell Green Belt site from the Local Plan 2041. The proposal is unsound, unjustified, and incompatible with sustainable development principles.			
62563265	Paul Morris			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	As a resident of Backwell for 40 years I find the proposed plan to be poorly thought out and a potential disaster for our future generations. Housing growth is important and should be carefully planned in a proportional way where the location and facilities are the most suitable, this plan is lacking in sustainability and is legally unsound. This plan will see the population of Backwell grow by 80% with no planned infrastructure to support the additional 1000 houses. How can this be good "Town Planning"? Where are the new schools? What about medical needs? Backwell has been disproportionately allocated housing (7%) in comparison to other villages with Clevedon only receiving 2%. Portishead has also received 7% but the population would only grow by 14%. How is this a balanced plan ? Government policy states we must protect our most versatile land to safeguard food security; why do you plan to build on it? This is Grade 1 agricultural land and should be protected. Having a "Buffer" between developments does not justify taking away this land. The proposed new road crosses the railway track, this is an extremely costly thing to do but there is no information on who will be paying for this or how this will happen. Going over or under the existing track surely cannot be feasible? Where is the social cohesion impact assessment to accompany this plan? Where is the infrastructure delivery plan analysis and costings document? This plan has clearly not been well thought out and looks like someone has just "landed" a pin. I'm no planning expert but even I can see that.			
30919905	Helen Mac			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	1 Increase in size of Backwell of 80% over a relatively short period is UNSUSTAINABLE. 2 The proposed road to avoid the village centre goes through GREENBELT FARMLAND, WILDLIFE HABITATS AND FLOOD PLAIN. It is also UNFUNDED 3 DEVELOPERS HAVE NOT PLANNED OR SHOWN CONCERN for the increased requirement for school places, medical provision (our surgery is at capacity) or leisure facilities for a massively increased population. Backwell only has a tired and over-used swimming pool, and a charity-run playing field which is being totally encroached on by current housing construction. 4 DISPROPORTIONATE ALLOCATION of housing development in Backwell compared to other villages in North Somerset. 5 UNPROVEN that Backwell needs/can support a market for SO many new houses. No plan to cater for the increasing number of older people living in existing large houses who could down-size if suitable small houses were built – its all 3-5 bedroom houses. 6 Additional traffic at ALL times, esp. peak times as there is very little employment in Backwell – mostly COMMUTERS. 7 I am concerned that our COMMUNITY SPIRIT WILL BE ERODED by so many new residents. There will NOT BE ROOM AT THE LOCAL SCHOOLS for such an influx, so many will drive their children elsewhere for education, adding	DO NOT INCLUDE THIS AREA IN THE LOCAL PLAN. Leave it as greenbelt farmland		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								to TRAFFIC CONGESTION. 8 Loss of high quality farmland – once built on it will never be farmland again – LOSS OF FOOD SECURITY 9 Proposals go against Government's stated policy of "PROTECTING BEST AND MOST VERSATILE LAND" Food security ignored. 10 HABITATS AND WILDLIFE CORRIDORS will be destroyed, along with space and tranquillity for residents. 11 ENDANGERED/RARE SPECIES of Horseshoe bats threatened by development. 12 Infrastructure Development Plan inadequate – NOT ANALYSED, COSTED OR FUNDED. Who pays? 13 All the proposed land is PRONE TO FLOODING, especially at the bottom of the valley around Backwell Common. Housing would be AT RISK. 14 The CHARACTER OF THE VILLAGE would be changed out of all recognition. Loss of greenbelt land and the massive increase in hard landscape will lead to FREQUENT FLOODING, eroding of FOOD SECURITY, loss of QUALITY OF LIFE for existing residents, TRAFFIC CHAOS with huge disruption to roads both during the 10+ years of construction and afterwards with the 80% increase in residents. 15 At Backwell lake the TRANQUILLITY, AMBIENCE AND THE MANY WILDLIFE HABITATS will be destroyed by building a bypass road opposite. Plus this road will pass right through the floodplain. 16 The 50% AFFORDABLE HOUSING government policy will be IGNORED by the developers with seemingly no consequences. 17 This volume of growth is completely UNSUSTAINABLE for a RURAL village of Backwell's size. 18 The RAILWAY is not a suitable transport hub. The station totally is INACCESSIBLE for anyone with mobility issues or children in pushchairs. Also the train does not go to most places people need to go to, it is only relevant to people who work near the stations – so most COMMUTERS WILL DRIVE. 19 There is already a huge amount of development approved for Backwell. Why is it not shared more evenly around the surrounding villages? No development of any consequence planned at Cleve or Flax Bouton and yet they too are surrounded by farmland.			
62845985	Lucy MacDonald			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I strongly object to the Local Plan's proposed developments in Backwell. My reasons are as follows: 1. Excessive scale of development: Backwell already has approval for 800 new homes—an unprecedented 40% increase in the size of the village. Any further allocation would constitute severe and unacceptable overdevelopment. 2. Unrealistic and ineffective transport proposals: The proposed new road would not meaningfully alleviate traffic in Nailsea or congestion on Station Road, Backwell Common, or Chapel Hill. Delivering a road under or over the railway would be extremely costly, technically challenging, and may ultimately prove unfeasible. 3. Insufficient infrastructure and services: Despite the substantial growth already approved, local schools are oversubscribed, and there has been no corresponding commitment to expand health, education, or leisure facilities. The existing infrastructure cannot accommodate an additional 1,000 dwellings. 4. Railway station not fit for purpose: Backwell's railway station is not suitable as a transport hub. It remains inaccessible for people with mobility issues and presents significant challenges for those travelling with young children. Relying on it to support large-scale development is unrealistic. 5. Unfair and disproportionate housing allocation: Backwell has been allocated more new homes than any other village in North Somerset, and a higher proportional increase than several towns. The village is expected to absorb 7% of the district's total housing allocation, compared with Clevedon's 2%. No evidence has been provided to justify the need or viability of such a disproportionate increase. 6. Lack of local employment opportunities: Backwell is not an employment centre. Most residents commute elsewhere for work, meaning further housing would increase rather than reduce travel demand. 7. No assessment of social impacts: The Plan includes no social cohesion or community impact assessment, despite the significant scale and pace of change proposed. 8. Loss of high-quality agricultural land: The site includes Grade 1 agricultural land currently used for food production and grazing. Only 7% of North Somerset's land falls into this highest category. Its loss would be irreversible. 9. Conflict with national policy on food security: Government policy requires the protection of our "best and most versatile" farmland to safeguard food security. These proposals directly contradict that principle. 10. Threat to biodiversity: Development on this scale would remove important wildlife habitats and further degrade biodiversity in what is already one of the most nature-depleted countries in the world. In summary, the scale of growth proposed for Backwell—combined with the lack of supporting infrastructure, the loss of high-quality agricultural land, and the environmental impacts—is destabilising, unsustainable, and undeliverable. The Local Plan should be revised to reflect a fairer, evidence-based, and environmentally responsible approach to development.			
62863233	T Madge			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I am writing to formally object to the proposed plan for an additional 1,000 new homes in the village of Backwell. This proposal is fundamentally flawed, unsustainable, and would cause irreparable harm to our community, infrastructure, and environment. The scale of this development is grossly disproportionate. Backwell has already absorbed an approval for 800 new houses, representing a 40% increase to the village. The addition of another 1,000 homes constitutes severe overdevelopment. It is unjustifiable that Backwell, a village, is being allocated a higher growth percentage (7% of the district's total) than established towns like Clevedon (2%). This approach is not strategic growth; it is the destabilisation of a community. Critical Lack of Infrastructure The existing infrastructure is already under immense strain and is incapable of supporting the current population, let alone thousands of new residents. • Services: There is already a deficit in school places, and the plan includes no tangible investment in health or leisure facilities to cope with such a dramatic population increase. • Transport: The proposed new road will not alleviate congestion on key routes like Station Road. Furthermore, engineering a road across the railway line would be prohibitively expensive and is likely unfeasible. The railway station itself is not fit for purpose as a modern transport hub, lacking accessibility for those with mobility issues or families with young children. • Funding: The Infrastructure Delivery Plan is devoid of proper analysis, costings, or funding guarantees for the road and other essential services. The entire proposal rests on unfunded and undeliverable promises. Irreversible Environmental Damage The proposal directly contradicts national policy and would cause permanent environmental destruction. • Loss of Prime Agricultural Land: The development is planned on Grade 1 Agricultural Land, which is currently used for food production. This land is our best and most versatile, and only 7% of it remains in all of North Somerset. Government policy explicitly states we must protect such land to safeguard national food security. This plan recklessly ignores that directive. • Destruction of Wildlife Habitats: This development would destroy invaluable wildlife habitats, including foraging	While I have submitted a formal objection to the specific housing proposals for Backwell, I am writing separately to offer constructive suggestions for improving the Local Plan as a whole. A successful Local Plan should not be measured simply by the number of houses built, but by the quality, resilience, and sustainability of the communities it creates for generations to come. I believe the current draft of the plan is fundamentally flawed because it is housing-led, developer-focused, and places a disproportionate burden on village communities while sacrificing irreplaceable natural assets. I urge the council to re-evaluate its strategy and adopt a more responsible, forward-thinking approach built on the following four core principles: 1. Adopt a 'Brownfield First and Fair		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								grounds for the rare Lesser and Greater Horseshoe Bats from the protected Brockley Maternity Roost (SSSI). In one of the most nature-depleted countries in the world, proceeding with such a destructive plan is unconscionable. Fundamentally Flawed Planning The proposal lacks the basic analysis required for a plan of this magnitude. There is no needs or viability analysis for 1,000 extra homes, nor is there any assessment of the impact on social cohesion. Furthermore, the plan creates a paradox regarding affordable housing: meeting the 50% requirement on Greenbelt land would reduce the developer's financial contributions needed for the very infrastructure this community desperately lacks. In summary, this plan is unsustainable, undeliverable, and dangerous. It threatens to overwhelm our services, destroy protected land and wildlife habitats, and increase flood risk, all without a sound or funded plan. I urge the council to reject this proposal in its entirety and protect the village of Backwell from this destructive overdevelopment.	Share' Policy Instead of allocating development on vital greenfield and agricultural sites, the plan must mandate the prioritisation of all available previously developed land (brownfield sites) across the entire district. This approach revitalises town centres, utilises existing infrastructure, and protects our vital countryside and food security. This must be coupled with a "Fair Share" distribution model, where housing targets are allocated equitably across the district's towns and larger settlements based on their size, services, and brownfield capacity. This would end the unsustainable practice of overburdening individual villages. 2. Transition to an 'Infrastructure-Led' Development Model The current 'housing-led' approach, where homes are built with a vague promise that services will follow, must be reversed. The plan should stipulate that no large-scale development can be approved until fully-funded, legally-binding commitments for all essential infrastructure are in place. This includes confirmed investment and timelines for new school places, GP surgeries, road improvements, and public transport services. This guarantees that growth is sustainable from day one and prevents the creation of isolated, underserved communities that place an impossible strain on existing public services. 3. Mandate Genuine Environmental Protection and Net Gain The plan must move beyond simple mitigation and actively enhance our natural environment. This should be achieved by: Formally protecting all Grade 1 and 2 agricultural land from development, citing national food security. Mandating a minimum 10% Biodiversity Net Gain for all new developments, forcing developers to leave our environment in a better state than they found it. Enforcing a strict ban on building on known floodplains, while investing in natural flood management schemes to protect the wider community. 4. Commit to Evidence-Based and Community-Led Planning To restore public trust and create a plan that works for everyone, the process must be transparent and collaborative. The council should commission independent, publicly available studies on housing need, traffic impact, and environmental capacity before sites are allocated. Furthermore, the process should move beyond simple consultation to active collaboration, using workshops and citizen panels to co-design the future of local areas. This ensures that development meets genuine local needs and gains community support. These principles are interconnected and form the basis of a truly sustainable development plan. By embracing this forward-thinking approach, the council can create a plan that not only meets housing needs but also strengthens our communities, protects our environment, and enhances our district for all its residents.

29291649	Mae Maitland			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I wish to object to the proposed allocation and strategic growth designation for Backwell within the emerging Local Plan. The scale, location, and supporting evidence for this level of development are fundamentally unsound and would cause irreversible harm to the village, its landscape, and its community. 1. Excessive and disproportionate housing numbers Backwell already has approvals for around 800 new homes—representing a 40% increase in the size of the village. Adding a further 1,000 homes would result in complete overdevelopment. Backwell is being asked to take a higher number of houses than any other village in North Somerset, and even proportionally more than several towns. The village is expected to absorb 7% of the district's total housing allocation, compared with Clevedon's 2%. No justification, needs assessment, or viability analysis has been provided to support this extraordinary level of growth. 2. Lack of supporting infrastructure Despite the significant additional housing already approved, there is no corresponding investment in school capacity, healthcare provision, leisure facilities, or essential services. These provisions are already under strain, and the Local Plan offers no credible strategy for accommodating the needs of thousands of new residents. The proposed new road is neither an effective solution for existing congestion nor a viable means of supporting further growth. It would not relieve traffic on Station Road, Backwell Common, or Chapel Hill. Constructing a road under or over the railway is likely to be prohibitively expensive and potentially unfeasible. Yet the Infrastructure Delivery Plan provides no analysis, no clear costings, and no secured funding for this critical piece of infrastructure. 3. Loss of high-quality agricultural land and environmental harm Backwell contains Grade 1 Agricultural Land, currently used for food crops and grazing. Only around 7% of such high-quality land remains across the whole of North Somerset. Government policy clearly states that we "must protect our best and most versatile land" to safeguard food security. The proposal directly contradicts this national objective and undermines long-term food resilience. The development would also destroy important wildlife habitats in a country already facing severe biodiversity decline. The plans threaten the Brockley Maternity Roost and the SSSI, where rare Lesser and Greater Horseshoe Bats rely on the surrounding land to forage. The Local Plan provides no adequate ecological assessment or mitigation strategy. 4. Flooding risks Backwell Common and nearby areas are already prone to flooding, and Backwell Lake and the adjacent fields—where new roads and housing are proposed—lie on a floodplain that floods regularly. Large-scale development would exacerbate these risks significantly. No convincing flood mitigation evidence has been presented. 5. Impacts on community cohesion and village character The Local Plan offers no social cohesion impact assessment for development of this scale. The sheer volume and pace of the proposed growth would fundamentally change the character of Backwell, overwhelm its facilities, and undermine the distinct identity of the village. The designation of Backwell as a strategic growth location does not account for the loss of Green Belt, the loss of high-quality agricultural land, or the risks of infrastructure not being delivered on time—if at all. 6. Poor sustainability and lack of employment opportunities Backwell is not an employment hub; most existing residents commute elsewhere. Placing such a large proportion of the district's housing here, without corresponding local job creation, is unsustainable and contradicts the stated objectives of reducing car dependency. The railway station, which is often cited as a justification for growth, is not fit for purpose as a transport hub. It is inaccessible for many people with mobility issues and poses practical challenges for families with young children. It cannot support the increased reliance that the Local Plan anticipates. 7. Affordable housing and funding concerns Government policy requires 50% affordable housing on Green Belt sites. While this may appear beneficial, it also significantly reduces the funds developers can contribute to essential infrastructure—further weakening the viability of delivering roads, schools, flood defences, healthcare, and other critical services. 8. Unsound, unsustainable, and undeliverable Taken together, the proposals for Backwell are destabilising, unsustainable, and undeliverable. The level of growth is not supported by evidence, not supported by infrastructure, and not aligned with national policy on food security, environmental protection, or sustainable transport. For these reasons, I strongly object to the proposed allocation and urge the Council to reconsider the scale and location of development in Backwell within the Local Plan.	The addition of the further 889 dwellings to Backwell is not sound, as detailed above, and this proposed site should be removed from the NSC Local Plan 2041		
39255233	Mr Kevin J Maitland			No		Unsure	Unsure	"HE202012 Objective 1.3: Promote the optimal use of land which supports regeneration, maximises re-use of previously developed (brownfield) land and protects the rural economy Significant negative/Uncertain (--?) The site is on greenfield land and mostly contains land classified as agricultural grade 3." This appears to be incorrect - greater than 50% of the land area in this parcel is classified as agricultural grade 1. This information has also been omitted from the analysis in Stage 2 Green Belt Assessment (Backwell – Parcel 1: Land East of Backwell School to Backwell Green) Purpose E (assist in urban regeneration by encouraging the recycling of derelict and other urban land) has been misapplied. By its own definition, this should be considered Strong, in keeping with paragraph 153 in in the National Planning Policy Framework. Planned development on these parcels will not meet criteria 154 e) (December 2024).			
39108705	Marie Malloy			No	• Positively prepared • Justified	Unsure	Unsure	As a resident of Backwell, I feel increasingly concerned about the scale of development being proposed. We already have 800 new homes approved, which represents a 40% increase in the size of our village, and it's difficult to see how adding even more wouldn't have a significant impact on the character of Backwell. There are also uncertainties around the proposed new road, as it is not clear whether it would genuinely help with existing traffic issues in Nailsea or reduce congestion on Station Road, Backwell Common, or Chapel Hill. In addition, creating a road under or over the railway	Infrastructure should be priority before any development.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					• Effective • Consistent with national policy			would likely be very costly and may prove challenging to deliver. Even with the growth already planned, our schools are filling up quickly, and there has been very little investment in health or leisure facilities. At present, it doesn't feel as though the local infrastructure could comfortably support another 1,000 homes. It is also concerning that Backwell has been allocated more housing than any other village in North Somerset, and proportionally more than some larger towns. It would be helpful to understand why such a large share has been directed here. Much of the land being considered is Grade 1 Agricultural Land used for food production and grazing. Only a small proportion of this top-quality land remains in North Somerset, and Government policy encourages protecting our "best and most versatile" land to support long-term food security. This makes the potential loss of this area particularly worrying. There are also environmental concerns. The land provides important habitats in a country already facing significant biodiversity pressures, and losing these spaces would have a noticeable impact on local wildlife. Finally, flooding is already an issue on Backwell Common and the surrounding areas, and there is understandable concern that additional development could make this worse. Backwell Lake (the Reservoir) and the nearby fields—where new roads and housing are being proposed—lie on a floodplain that floods regularly.			
62850977	Rhiannon Mark			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	As a resident with a child at in year 1 at the local infant school I find the 10 minute walk to school extremely unsafe due to the volume of traffic on local roads. A development of the size proposed will invariably make this journey even more hazardous. It won't be long before a child is seriously injured in Backwell due to the lack of road safety measures. We need better pavements, more cycle routes, better flow of traffic on the major routes to avoid cut through traffic. School places are limited, there is a difficulty getting doctors appointments, there is no local NHS dentist and and our community does not have the infrastructure to support a bigger community. Our community volunteers are already running baby and toddler groups, warm hubs and activities for the elderly but volunteers are dwindling and there is no public infrastructure to support the very needed community groups that already exist. People that move into an area need to be welcomed to an area to ensure community cohesion and they can only do that when there is the correct infrastructure to welcome them. No social cohesion assessment has been provided. There is significant, standstill, traffic as soon as there are any issues with the motorway. I live in a side road and couldn't get out of my road when the M5 was recently shut due to the motorway traffic flowing through the village. If this is what it's like before the houses it can be underplayed how significant the difficulties would be after further housing. There is regular flooding in the area and this again discourages people from walking and cycling round the village which pushes more people into cars. Backwell seems to have been allocated a huge percentage of houses and this doesn't feel fair.	stop the plan	As above	
51431457	Adam Mark			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	As a resident with a child in year 1 at the local infant school I worry about the journey that my wife makes with our 6 and 2 yr old on the 10 minute walk to school. It is extremely unsafe due to the volume of traffic on local roads. A development of the size proposed will invariably make this journey even more hazardous. It won't be long before a child is seriously injured in Backwell due to the lack of road safety measures. 30429089	Anne Marshall			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell is already overburdened with new developments. 800 new houses have already been approved resulting in an 40% increase. Adding a development of 889 more houses will DESTROY the village. The population will increase by 80%. Why is our village being victimised compared to other places eg. Cevedon's growth will be by 6%. There is little employment in the village, most people will need to commute. As a rough estimate, if each house has 2 cars this will add 1,689 additional vehicles onto local country roads and the A370 which already has extensive traffic queues at peak times. Building on good quality agricultural land required for food production is environmental vandalism at the highest level. I am disgusted and angry.	Refuse the planning application for 889 new houses on Land East of Backwell, so the village of Backwell will remain a village.		
62854689	Benjamin Marshalsea			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Normal issues of extensive building without uplifting local infrastructure first. Backwell schools are already over subscribed. Backwell buses are already over subscribed. Backwell commuter routes are already over subscribed, made worse by recent changes to single lane and the inside being for buses only. With the additional flooding the new housing will cause this will ensure not only Backwell, but those stations further west of Backwell will also be affected. The proposed road does not improve this in any shape of form and I suggest is minimum effort to tick a box. Backwell has large areas of greenfield and conservation - with endangered plants and animals, the uplift of this size will disrupt this. They are building on floodplain, and science and history shows what happens when this happens. This is completely unviable and should be enough to stop this. Why should others suffer from flooding due to the greed of others?			
62740353	Arthur Matthews			No	• Positively prepared	Unsure	Unsure	1. Near doubling the size of the village will require substantial infrastructure improvements before starting house building; roads; medical centre; schools,parking must be fully funded to the necessary levels to sustain this plan, before proceeding. It is my understanding that only houses are costed and no serious funding has been made available. What has been developed so far is putting a huge strain on the existing narrow roads e.g. Station Road and accidents are	Prerequisite: Funding for required infrastructure before accepting any proposals. Leave greenbelt farmland for food.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					‣ Justified ‣ Effective ‣ Consistent with national policy			becoming more frequent. 2 The land proposed is genuine grade 1 farmland. This is reducing the countrys ability to feed itelf, madness.			
62865313	Rebecca Matthews			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell already has approval for 800 new homes which is a 40% increase in the size of the village. Adding another 1,000 on top of that would amount to serious overdevelopment. The proposed new road wouldn't actually solve Nailsea's traffic problems or ease congestion on Station Road, Backwell Common, or Chapel Hill. And creating a route that goes under or over the railway would be extremely costly and might not even be technically possible. Even with the approved growth, local schools are already short of places, and there's been no investment in health or leisure facilities. The existing infrastructure simply can't cope with another 1,000 homes. Backwell has been asked to take more new housing than any other village in North Somerset — even more, proportionately, than many towns. Backwell is expected to take 7% of the district's housing allocation, compared with Clevedon's 2%. No assessment has been carried out to show whether there is a real need for these extra 1,000 homes or whether the development is viable. Backwell isn't an employment centre, so most people living here have to commute elsewhere for work. The plans don't include any assessment of how this level of development would affect community cohesion. The site includes Grade 1 Agricultural Land currently used to grow food and for grazing. Only 7% of North Somerset's land is this high quality, and we can't afford to lose more of it. Government policy is clear: we must protect our "best and most versatile" farmland to safeguard food security. This proposal goes against that policy. Building on this land would destroy important wildlife habitats and further damage biodiversity in a country that is already one of the most nature-depleted in the world. The development threatens the Brockley Maternity Roost and the nearby SSSI. Rare Lesser and Greater Horseshoe Bats rely on this land for feeding, and their survival could be put at risk. The Infrastructure Delivery Plan doesn't include proper analysis or costings, and there's no guarantee that the road or other essential services can actually be funded. Backwell Common and the surrounding area already flood, and adding more housing would make the situation worse. The designation of this area as a strategic growth location raises major concerns: it risks damaging the area's character, would mean losing Green Belt and top-quality farmland, increases flood risk, and still doesn't guarantee that the new road could be funded or built in time. Backwell Lake (the Reservoir) and the nearby fields (where the new road and housing are proposed) lie on a floodplain that regularly floods. Trying to force this scale of growth, along with all the investment in infrastructure and services it requires, into such a short period is destabilising, unsustainable, and unrealistic. Backwell railway station simply isn't suitable as a transport hub. It's not accessible for people with serious mobility difficulties, and it's very challenging for families with young children to use.			
62564737	Iain McGregor			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	As a relatively new resident of Backwell, I am astounded at the amount of traffic through the village. Narrow roads, pavements that are damaged and difficult to walk on and motorists that drive too fast as they are trying to get around the traffic congestion as quickly as they can. I work from home and all day there is a constant flow of heavy traffic - it usually starts around 4am with the large construction vehicles rumbling through. The roads are in a poor state due to the damage caused by these heavy vehicles. I walk my dogs daily, and every morning I watch how kids walking to school have to step out into the road because vehicles are parked on the pavement, while cars race by to try get somewhere quicker and avoid other congested roads. I already feel there is bad planning that was done for the current state of Backwell - and to add in 1000 more homes will only decrease the safety for the residents and increase the amount of cars racing through the narrow roads. I honestly fear for my life when walking on some of these roads. There needs to be more investment in infrastructure, traffic calming solutions implemented, speed cameras, etc. There is even more development taking place in other areas where residents have to also travel through Backwell to get to Bristol. This will again cause more congestion and frustration as there is no alternative route and the Nailsea and Backwell station is not equipped to handle more travellers. There is already a shortage of places in schools, not enough Doctors, etc as well as roads that cannot handle the volume of people in Backwell currently. The village cannot handle additional houses being built. Soon there will be no more open land and no more agricultural land (loss of employment in that sector).			
62819649	G McCall			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	1. Backwell has already been allocated a higher number of houses than any other village in north somerset and even a higher growth percentage than towns. Backwell should not be expected to take 7% of the district's housing allocation compared to Clevedon's 2%. 2. Backwell already has 800 new houses approved, a 40% increase for the village. Additional developments would be a complete overdevelopment for the area. 3. Commuter traffic is already becoming a disaster. No businesses are in the area so all traffic runs through the area. Commuting to Bristol City Centre or Clifton can take over an hour in peak times already (for only 8 miles of driving). 4. There is a severe short supply of green space following the latest round of developments. 5. Any further development on these fields would be destabilising, demoralising for longstanding residents who love the area, unsustainable and completely unjustified. 6. Schools, surgeries, railway station would all be overrun by yet more housing in this area. 7. There is no viability analysis for extra housing here. 8. The proposals threaten wildlife habitat, Brockery Maternity Roost and SSI.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								9. There will be higher risks of flooding with further development here.			
62775649	Abigail McInally			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Despite a huge increase in the number of houses already being built in Backwell, there is no investment in the local infrastructure alongside this. There will be a lack of school places, which should be available to all children locally, and the leisure facilities are already old and tired and requiring update. The level of development is unsustainable and will result in a reduced quality of life for current and future residents if it is not managed correctly. Additionally the planned build area is on a flood plain, which will be even more necessary to hold flood water as the Farleigh fields developments are completed, removing the lands capacity to store water in this area. The removal of the grade 1 land around this area is also a concern to food security in the UK, as it will reduce the percentage of high quality land capable of being used for agriculture in North Somerset even further; and have a knock on impact to job opportunities for the local farming community. A better use of time and money would be to expand employment and housing opportunities in Weston.			
62798465	Padraig McKeon			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Issue: Soundness of Land East of Backwell strategic growth allocation Position: The Plan is unsound and not justified, not effective, and not consistent with national policy. Change sought: Removal or significant reduction of the Backwell housing allocation unless and until a fully evidenced, costed, deliverable infrastructure strategy is produced. _____ 1. The scale of development in Backwell is unjustified Backwell already has around 800 new homes approved, representing a 40% increase in the size of the village. The Local Plan proposes to add a further 1,000 homes, creating an unprecedented level of expansion with no credible justification, and no evidence that this location can sustainably absorb such growth. Backwell is allocated 7% of the district's total housing growth, despite being a small village with limited services and no employment hub. This is a higher percentage than some towns. There is no clear evidence base demonstrating why Backwell, above all other settlements, should carry such a disproportionate burden. _____ 2. Infrastructure evidence is missing, incomplete, or unconvincing There is no detailed infrastructure needs assessment for the additional 1,000 dwellings. Key service areas—schools, health, public transport, road capacity, and community facilities—are already under strain. • School places: There is a current deficit and no committed investment to provide additional capacity. • Health facilities: No investment plan exists to support an expanded population. • Leisure / community facilities: No new provision is identified. Without this evidence, the Plan is not effective, and cannot be considered deliverable. _____ 3. The transport strategy is flawed and unproven The proposed road infrastructure does not demonstrate that it will relieve traffic in Nailsea or ease congestion on Station Road, Backwell Common, or Chapel Hill. Engineering a route across, under, or over the railway is likely to be costly, technically difficult, and may prove undeliverable. There is no funded plan, no costings, and no assurance that the road can be delivered in time to match the housing. As a result, the transport proposals do not meet the tests of soundness. Backwell railway station is also not fit for purpose as a transport hub: access is poor, capacity is limited, and there are significant challenges for users with mobility impairments and for families with children. The Plan does not address these issues. _____ 4. Backwell is not an employment centre Most Backwell residents commute. Allocating a very large housing expansion to a location without jobs increases car dependency, congestion, and carbon emissions. This is inconsistent with national policy on sustainable development and contradicts the Local Plan's own sustainability objectives. _____ 5. There is no social cohesion or community impact assessment Despite proposing the largest proportional expansion of any NSC village, the Plan offers no assessment whatsoever of social cohesion, community integration, or service impact. Such analysis is essential for a strategic allocation of this magnitude. _____ 6. The development threatens the remaining high-quality agricultural land Backwell includes areas of Grade 1 Best and Most Versatile (BMV) agricultural land, which are essential for food production. Only around 7% of North Somerset's BMV land remains. Government policy requires that this land be protected. The Backwell allocation contradicts NPPF policy on safeguarding BMV agricultural land, rendering the Plan inconsistent with national policy. _____ 7. Severe harm to biodiversity and protected habitats Development in this location would destroy or fragment important wildlife habitats, including areas relied upon by Lesser and Greater Horseshoe Bats associated with the Brockley Maternity Roost and SSSI. No adequate mitigation is identified. This conflicts with national policy requirements relating to biodiversity protection and net gain. _____ 8. Flood risk is not properly addressed Significant parts of Backwell Common and surrounding fields are subject to regular flooding. The Plan proposes new homes and a new road across land that is clearly unsuitable. The associated Backwell Lake/Reservoir area also sits within a floodplain that floods frequently. This raises serious concerns about the deliverability, safety, and climate resilience of the allocation. _____ 9. Funding uncertainties undermine deliverability The Infrastructure Delivery Plan does not include costings, sources of funding, or confirmed delivery mechanisms for the new road, school provision, flood mitigation, or health services. Without guaranteed infrastructure funding, the growth allocation is undeliverable, and therefore fails the soundness test of effectiveness. _____ 10. Green Belt and landscape harm The designation of Backwell as a "strategic growth location" causes: • loss of Green Belt, • harm to valued landscapes, • erosion of village identity, • and reduction of high-quality agricultural land. These impacts are not justified by evidence, and no alternatives appear to have been properly assessed. _____ 11. Affordable housing requirement weakens infrastructure funding Government policy requires 50% affordable housing on Green Belt land. This significantly reduces the financial contributions developers can make towards schools, health facilities, traffic improvements, and other infrastructure, making Backwell even less viable as a strategic allocation. _____ 12. The overall scale and pace of growth is destabilising	I believe the Backwell strategic allocation is unsound and requires the following modifications to make it justified, deliverable, and consistent with national policy: Reduce or remove the Backwell allocation until full evidence is provided on transport, flooding, schools, health, and environmental constraints. Backwell already has ~800 homes approved; the additional 1,000 homes are not justified. Publish a costed and deliverable Infrastructure Delivery Plan before adoption, including firm funding sources, phasing, and timelines for road improvements, school places, health services, drainage, and utilities. Remove development from flood-prone areas, including Backwell Common and fields around Backwell Lake/Reservoir. Require a full Level 2 Strategic Flood Risk Assessment for Backwell. Withdraw the proposed new link road unless detailed engineering feasibility, environmental impact, flood modelling, and confirmed funding are provided. Without this, it is undeliverable. Require improvements to Backwell Station (step-free access, parking, turning/circulation space) to be committed and funded before major housing is delivered. Protect Grade 1 Best and Most Versatile agricultural land by removing all BMV land from development boundaries in line with national policy. Strengthen biodiversity protection, removing land within Horseshoe Bat habitats/flight corridors linked to the Brockley SSSI maternity roost, and requiring a robust mitigation strategy. Require a detailed education and health capacity assessment, with a funded plan for additional school places and GP provision as a pre-condition of development. Carry out a proper alternatives assessment showing why Backwell has been chosen over less constrained sites. Include a Social and Community Impact Assessment due to the scale of growth proposed for a small village. Until these changes are made, the Backwell allocation remains unjustified, undeliverable, and inconsistent with the NPPF tests of soundness		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Attempting to deliver more than 1,800 new homes (including those already permitted) in a short period would overwhelm Backwell's infrastructure and services. The growth is: • unsustainable, • not supported by evidence, • not aligned with local capacity, and • unlikely to achieve policy objectives. Taken together, the proposals render the Backwell allocation unsound.			
62807585	Professor Christopher McMahon			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure		The Plan is unjustified because the Sustainability Appraisal failed to properly weight the economic and food-security value of the Grade 1 land at East Backwell against lower-quality alternatives elsewhere in the district. The allocation is unsound and inconsistent with national policy as it violates the fundamental Green Belt purpose of 'preventing neighbouring towns from merging into one another.' The proposed mitigation is insufficient to maintain the physical and visual separation of Backwell and Nailsea. The Plan is not effective because the transport modelling relies on unproven mitigation measures for the A370 and other local roads. Without committed funding for a major capacity upgrade before occupation, the cumulative impact on the road network is 'severe' and renders the site undeliverable. The railway station is not fit for purpose as a transport hub, in particular as it only has step access on the 'down' platform and it has inadequate bus connections.			
62840961	Karen Meeson-Logan			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I have lived in Backwell for 5 years now and have watched it grow. While I don't oppose growth in principle, there has to be a sensible limit dictated by infrastructure. I use the bus to commute to work in Bristol, taking my preschooler with me to attend nursery – the service is already strained and unreliable. When I have to commute by car the journey is horrific due to roads already being unable to cope with levels of traffic. I know very few people working in the village itself so it seems inevitable that any new inhabitants would have similar needs to myself in terms of travel and yet there appear to be no funding guarantees for the new road or services. It all seems like empty promises that no none will be held to account on. I have one daughter in school in the village already and soon will have a second. There appear to be no plans to address the deficit of school places – how will all of our children be educated? As a family we also make use of the local NHS doctor surgery which already seems over burdened – 1000 extra houses is too large a strain on the local health infrastructure. Withy all of this in mind, why is Backwell expected to take 7% of North Somerset's housing allocation while Clevedon seems to expect 2% - this makes no logical sense. I can't make sense of presenting development opportunities near land that is known to flood or even be an actual flood plain. The new development on the main road has already caused issues regarding water drainage-what plans could possibly be put in place on a area that already floods. Finally there is the environmental concern – Plans appear to take away Grade 1 Agricultural Land which is currently used for food crops and grazing. With only 7% of this high quality land left in the whole of North Somerset, how can shrinking this already tiny number be justified. The government's policy says "we must protect our best and most versatile land" to safeguard food security, but the proposals contradict this policy and directly undermine food security. It is all utter madness – it seems to be a "do now" strategy, "think later". Proposals and plans should be exactly that, and yet no of the necessary planning seems to have been put into these proposals.			
21461921	C Melton			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	My concerns are based on over overdevelopment, inadequate infrastructure, environmental impact, and inconsistency with national planning policies. 1. Overdevelopment of Backwell Backwell has already seen approval for 800 new homes, representing a 40% increase in the village's size. The proposed allocation of additional houses would result in unsustainable and disproportionate growth. Backwell has been allocated a higher number of homes than any other village in North Somerset, without a clear needs or viability analysis to justify this level of expansion. 2. Inadequate Infrastructure and Services There is insufficient evidence that the necessary infrastructure can support this growth. • The proposed new road would not effectively relieve congestion on Station Road, Backwell Common, or Chapel Hill and may be technically and financially unfeasible if it requires crossing the railway. • Schools in the area already face a deficit of places, and there are no clear plans for investment in health services, leisure facilities, or social infrastructure. • The railway station is small and currently inaccessible for people with mobility issues and presents challenges for families, meaning it cannot function as a reliable transport hub. • The Infrastructure Delivery Plan lacks detailed costings and funding guarantees; whether essential services and roads can be delivered alongside housing growth is seriously questionable. 3. Environmental and Heritage Concerns The proposals threaten valuable natural assets and biodiversity: • Development would impact Grade 1 agricultural land, of which only 7% remains in North Somerset. National policy emphasises protecting our best and most versatile land to safeguard food security. This is so important and once the land is built on, it is lost for ever. • Significant wildlife habitats would be destroyed, including areas relied upon by the Brockley Maternity Roost and rare Lesser and Greater Horseshoe Bats. • Backwell Common and surrounding fields, including the site of the proposed Backwell Lake (Reservoir) adjacent housing and new roads, are on a flood plain which floods regularly. New development would exacerbate flood risks. • The plan threatens the character of the village and the Greenbelt. 4. Unsustainable Growth The sheer scale of proposed development in Backwell is unrealistic: • Backwell is not an employment hub, meaning most residents would commute, increasing traffic pressures. • Government policy requires 50% affordable housing on Greenbelt land, reducing developer contributions available for critical infrastructure. • The speed and volume of growth proposed are unlikely to be deliverable or sustainable within the plan period. Conclusion For these reasons, I strongly object to the allocation of additional housing in Backwell as proposed in the North Somerset Local Plan 2041. The plan, in its current form, fails to demonstrate that the development is justified, deliverable, or consistent with national policy regarding sustainable growth, protection of agricultural land, biodiversity, and flood risk. I urge the Council to reconsider Backwell's allocations.			
21418817	D Melton			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I wish to object based on concerns about excessive growth, insufficient infrastructure, environmental harm, and conflicts with national planning policy. 1. Excessive Growth in Backwell Backwell has already experienced approval for a substantial number of new homes, amounting to a significant increase in the size of the village. The proposed additional housing allocation would result in disproportionate expansion, placing pressure on the village's character and resources. Backwell is allocated more homes than any other village in the district, yet there is no robust evidence demonstrating the need or viability for such extensive growth. 2. Strain on Infrastructure and Services There is limited evidence that infrastructure and services could adequately support this level of development. • The proposed new road is unlikely to significantly reduce congestion on local routes such as Station Road, Backwell Common, or Chapel Hill, and its construction, potentially involving the railway, may be technically and financially challenging.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								• Local schools already face capacity issues, and there is no clear strategy to expand health services, leisure facilities, or community infrastructure to meet increased demand. • Backwell railway station remains small, inaccessible for people with mobility challenges, and impractical for families, limiting its role as an effective transport hub. • The Infrastructure Delivery Plan lacks sufficient detail on costs and funding commitments, leaving doubt over the timely delivery of essential infrastructure alongside housing growth. 3. Environmental and Heritage Impacts The plan threatens important natural and heritage assets: • Proposed development would impact high-quality agricultural land, which is scarce in North Somerset. National policy emphasises the protection of the best and most versatile land to support food security. Once lost, this land cannot be restored. • Wildlife habitats would be damaged, including areas critical for rare species such as the Lesser and Greater Horseshoe Bats and the Brockley Maternity Roost. • Sites including Backwell Common and areas near Backwell Lake lie within flood-prone areas, and further development would increase flood risks. • The scale of development risks altering the character of the village and undermining the integrity of the Greenbelt. 4. Unsustainable Nature of Proposed Development The volume of planned housing in Backwell is unrealistic and potentially unmanageable: • Backwell is not a centre for employment, so the majority of residents would need to commute, exacerbating traffic congestion. • National policy requirements for affordable housing on Greenbelt land may reduce the funds developers can contribute to essential infrastructure, creating additional pressure on local services. • Delivering such rapid and large-scale growth within the plan period appears impractical and unsustainable. Conclusion For these reasons, I strongly object to the proposed additional housing in Backwell. The current plan does not convincingly demonstrate that the development is justified, deliverable, or in line with national policy on sustainable growth, protection of high-quality agricultural land, biodiversity, and flood risk management. I urge the Council to reconsider the scale of housing allocated to Backwell.			
21267169	Jane Middleton			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I object to the proposed scale of development in Backwell within the North Somerset Local Plan 2041 on the grounds that it is unsound, unjustified, and not consistent with national policy. 1. Disproportionate and Unsustainable Housing Allocation Backwell has already absorbed around 800 new homes, yet the Plan proposes a further 1,000, more than any other village. This is not a proportionate or evidence-based strategy and would permanently damage the village's character. 2. Transport Network at Breaking Point The A370 and local road network are already over capacity, with no funded mitigation. Development at this scale would create severe residual impacts and unsafe conditions. 3. Railway Station Not Accessible or Fit for Purpose Nailsea & Backwell Station has no step-free access and poor interchange facilities. It cannot serve as a sustainable transport hub for major growth. No upgrade is funded or confirmed. 4. Loss of Greenfield Land Large greenfield releases around Backwell would destroy landscapes and habitats. Alternatives have not been properly assessed. 5. Flood Risk Backwell Lake and surrounding fields form an active floodplain essential for natural water storage. Development here would increase flood risk and reduce natural drainage. 6. Threats to Protected Wildlife – Brockley Maternity Roost & SSSI The area supports Lesser and Greater Horseshoe bats, among the rarest UK species. Development threatens their roost, foraging grounds, and dark corridors. Impacts are likely irreversible. 7. Conflict with Backwell Neighbourhood Plan The scale of development disregards community-led planning and fails to respect local input. 8. Lack of Evidence for Housing Numbers The Plan does not justify why Backwell should take such a high share of district-wide housing. This is neither balanced nor sustainable. 9. Climate and Environmental Harm Car-dependent development in Backwell increases emissions and reduces natural habitats, harming the environment and reducing climate resilience. Conclusion The Backwell allocation in the Local Plan is unsound because it is: • Not justified • Not effective • Not consistent with national policy			
62851169	N Miguel			No	‣ Positively prepared	Unsure	Unsure	I am writing to express my strong opposition to the proposed planning development on Backwell Common. I have been a resident on Backwell Common for more than 41 years. Having grown up here and now living next to my mother with my husband and two young children, I am deeply connected to this area. Backwell Common and the surrounding areas are a gift to our community and are utilised by countless people. This area provides an essential space for nature, exercise, and mental well-being, which was particularly evident during the pandemic. We saw individuals, couples, and families walking this beautiful area every few minutes. As a play therapist, I have personally used this natural environment to help children experiencing loss find their grounding. While I understand the need for housing and development, I strongly believe that we must preserve this area to continue offering a space where people can clear their minds and appreciate nature. The volume of people who use this area daily demonstrates its necessity to the community. I urge you to reconsider the scale of this project and preserve Backwell Common for current and future generations. Thank you for considering my views.			
62753217	Chris Miles		Russell Property Consultants	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	There are already 800 houses approved for construction in Backwell which is a 40% increase with no new services or amenities planned. This is already overdevelopment and another 1000+ houses would be total overdevelopment for this village (the clue is in the title 'village'). Such rapid growth would lead what is a lovely community to struggle and no social cohesion impact assessment has been provided to prove otherwise. The area being put forward is grade 1 agricultural land of which there is only 7% left in North Somerset! What will we do to feed ourselves when the next covid crisis comes along or another war overseas impacts food importation? As a country we need to be able to feed ourselves. This is without even looking at the destruction of wildlife habitats for local flora and fauna and further harm to biodiversity in the area. Nature and being able to walk in the countryside were things we were reminded were a huge help to people's mental health during the pandemic. We destroy these places at our peril. Backwell is a village of commuters and not an employment hub. None of these developments have done anything to create jobs or places or work they are just adding to the traffic on already overburdened roads such as Station Road and the A370. On 1 December the M5 was closed due to a fatality and this meant that the A370, Station Road, Dark Lane and all roads throughout Backwell were gridlocked for several hours. The A370 cannot cope with more traffic at the best of times and			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Station Road is a route that hundreds of children use each day to walk to the local schools. I repeat my comment from earlier that no developer is suggesting they stump up the cash for new roads and there appears to be no money coming from anywhere central to fund this 'back of napkin' idea so we will be left to rely on the current creaking network of roads and bus and train services.			
51293089	Dave Miles			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	1. Backwell infrastructure cannot cope with the current level of traffic, Station road is too narrow and gets grid locked, Fairleigh road is the main A road from Bristol to Weston and cannot cope with more traffic 2. To expand Backwell/Nailsea by a further 1000 homes is knee jerk reaction to Government requests, any sensible committee would understand to increase a village at such a radical and intense manner will only cause problems to current occupants of the village. 3. Backwell is not ready to be a town yet and as a Backwell resident for the past 50 years i prefer not to be alive when it does become one!!			
18056577	A Mogford			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I believe this plan is not sound as Backwell already has a huge number of new houses approved and this development would lead to a completely over development of the area. The new houses already approved will count for a 40% increase for the village – the village cannot cope with anymore housing. There has been no investment in new doctor surgeries or other services within the plan, the lack of infrastructure and service can not support more housing. There is little employment in Backwell so the majority of people will be commuting, I suspect mostly by car, this will cause more traffic on the already very busy local roads. There is a railway station in Backwell, which could be used, but it is not fit for purpose as a transport hub due to its size and inaccessibility for disabled people. The area is prone to flooding so is not a good place for houses to be built as this will only add to the problem. Backwell lake and the fields around the area are on a floodplain, building houses and roads here is unthinkable.			
39304577	M Mogford			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I believe this plan is not sound as Backwell already has a huge number (800) of new houses approved and this development would lead to a completely over development of the area. The new houses already approved will mean there is a 40% increase for the village. It won't be able to cope with this as it is, as there has been no investment in new doctor surgeries or other services, anymore housing will make the bad situation even worse and Backwell won't be a village anymore, it would be turned into a soulless town. There is little employment in Backwell so the majority of people commute, largely by car from the significant traffic I witness daily. The new houses will make this even worse and any additional housing would cause an already overloaded road system to completely block up. There is a railway station between Backwell and Nailsea, but it is a small station and it is not fit to be used as a transport hub for a town due to its size and inaccessibility for disabled people. The area being considered in this consultation is prone to flooding and is therefore a very poor place for houses to be built. Backwell lake and the fields around the area are on a floodplain, building houses and roads here is a terrible idea.			
51323169	H Mohan			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell already has 800 courses approved (a 40% increase for the village), these additional numbers will lead to overdevelopment. There is a lack of infrastructure and services to support this number of additional houses. This is building on grade 1 agricultural land currently used for crops and grazing - there is only 7% of this high quaility land left in North Somerset. Government policy states that "we must protect our best and most versatile land' to safeguard food security. The area is prone to flooding and building large number of houses here would cause issues both on the site and to surrounding areas. Some areas of development are on a flood plane which floods regularly. The proposed road would not effectively receive congestion or increase road safety. Engineering under/ver railway bridge likely very expensive and technically difficult - the plan lack analysis and costings and no funding has been put forward to this. Backwell is not an employment hub and the translation is not fir for purpose as a transport hub. it remains inaccessible for people with mobility issues and presents serious challenges when travelling with your children. The proposals threaten the Brockley Maternity Roost and SSSI, with rare lesser and Greater Horseshoe Bats replying on the land for food. Serious concerns about road safety for cyclist and pedestrians along station road with increased traffic volumes. This road as narrow payments and there are frequent near misses and sadly more recently a fatal accident (pedestrian vs lorry).	This plan is not sustainable and no modifications can be done to make it so. This plan should be scrapped.		
29293889	Alison Jones-Moran			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell already has 800 new houses approved, which is massive increase for this village, this will have a major impact on infrastructure to support the huge growth in the population: no provision for additional services such as gp services, not enough additional school places, no additional leisure facilities. Current provision will not be able to support another 1000 houses. The engineering required for the proposed road under the railway will be highly expensive and possibly unfeasible. Backwell Lake and adjacent fields where the new roads and housing is planned are on a flood plain which floods regularly. The additional road and housing would aggravate this tendency to flood, not alleviate the problem. The extra road into the station will not relieve the A370 traffic congestion at Backwell crossroads effectively, as it will not speed up journeys to commuter villages beyond Backwell such as Cleeve, Congressbury, Yatton, Hewish and on to Weston. Traffic using the new road, will create unplanned for congestion on roads connecting Nailsea to Tickenham and Clevedon, which are already congested, and do not have the width/capacity to carry the additional traffic load eg across the fields, for example, Washing pound Lane, via the Church of St Quericus and St Julietta to Tickenham, or through Tickenham from Nailsea. The use of Backwell crossroads will still be preferable for this traffic, rather than getting stuck in Tickenham. Backwell is allocated a higher number of houses than any other village in North Somersest, and even a higher growth percentage than town. There is no needs or vialbility analysis for an extra 1000 houses. Backwell is not an area of high employment for new residents coming in, it is a comuter hub, so there will be a large increase in car use into Bristol, on already congested roads. No cohesion impact assessment has been provided. This plan is using up Grade 1 Agricultural land, currently used for crops and grazing. There is only 7% of this high quality land left in the whole of North Somerset. Government policy states that "we must protect our best and most versatile land" to safeguard food security. The proposals contradict this policy and undermine food security. This development would destroy valuable wildlife habitats and further harm biodiversity in one of the world's most nature-depleted countries. The proposal threaten the Brockley Maternity Roost and SSSI, with rare Lesser and Greater Horseshoe Bats relying the land for food.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The infrastructure Delivery Plan lacks analysis and costings, and there are no funding guarantees for the new road or services. I would be concerned that the houses would be built, and then the project run out of money for the road or infrastructure to support it. Government policy requires 50% affordable housing on Greenbelt Land, but this reduces the funds developers contribute towards infrastructure. So, there could well be no money available to develop the station as a transport hub fit for purpose for the growth in the community. it is not fit for purpose currently as a transport hub, as it remains inaccessible for people with mobility issues and presents serious challenges to people travelling with small children.			
62831873	Nicola M			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I do not think the plan is sound as we already have three/four developments in process in Backwell which are going to significantly increase the load on local services and transportation. Without these developments being finished additional planning applications should be paused until there is tangible data on the strain it will put on the area. The new road plan lacks any detail and in my opinion will not solve any of the current and impending traffic issues due to the proposed location. There is no plan to increase the capacity in local schools and as the area is very popular for young families the people moving to the area will force locals to not be able to attend the schools within Backwell. The areas being looked at for planning are very boggy and prone to flooding and I would expect the housing being built to possibly be uninsurable due to these facts. The plans take away the agricultural land which is used to grow crops, as a country we should not have to import products that can be grown locally. The increase in the number of homes and associated roads and access plan severely affect the local environment and habitats of local species. Overall the amount of building already in progress plus the increase in traffic for the amount of houses being built will have a severe effect on air quality. This is then creating more pollution similar to that in the city which I believe many current residents moved here to avoid.	I believe any further plans to build should be paused and only considered once the current small and large developments have been mostly completed so officials then have the relevant facts to make a properly informed decision.	I do not support this	
30658241	Gareth Morgan-Schulz			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	This plan disproportionately allocates housing to Backwell. Backwell already has 800 houses allocated to it, a 40% increase to the village. Policy SP3 - Spatial Strategy - states, "Most of the development which takes place in these areas will be at the relatively more sustainable villages, but this must not be of a disproportionate scale which adversely impacts on the character of the settlement or leads to a significant increase in the number of car journeys", yet this plan is proposing an increase of 80% in population for Backwell, a change that will have a significant impact on the character of the village and vastly increase the volume of traffic. The proposed road would not effectively serve Nailsea's traffic, or relieve traffic on Station Road, Backwell Common or Chapel Hill. The proposals for Active Travel Routes will not have a significant impact on the increased traffic in Backwell, as the principle places of work are beyond cycling distance for most people. Policy DP53 refers to BMV grade 1 land as a "finite resource [that] will be safeguarded from development to ensure its long-term potential for food production and to protect the soil resource", yet this plan proposes to add over 800 houses on grade 1 agricultural land. Development would also destroy wildlife habitats and harm biodiversity. There is no need or viability analysis for the extra houses allocated to Backwell.			
39167969	T Morley			No	‣ Justified ‣ Consistent with national policy	No	No	East of Backwell site is Grade 1 agricultural land of which North Somerset only has 7 remaining. It is national policy not to build on Green Belt/quality agricultural land. I strongly oppose the ‘East of Backwell’ site in this Local Plan, especially given it is intended to be for 900 houses. Of course, I appreciate that there is a large number of housing being allocated for North Somerset and it has constraints for where to build. However, I feel that this site is not one that should be built on. I am concerned that this site is particularly unsuitable due to its classification as Grade 1 agricultural land – considered to be the best quality soil for agriculture and high crop yield. As there is only 7% of Grade 1 agricultural land remaining in North Somerset (as per the Agricultural Land Classification Map) I think that it would be a travesty to build on such prime quality land and its loss would be a detriment to food security, as well as being a popular area for walking. Indeed, the land has been consistently used over the years for crop grazing and appears to regularly have successful harvests. Land for farming appears to be reducing nationally due to development, and thus the very best and most versatile farmland should be kept for food security and to keep British farming going. In addition, the sheer number of houses suggested in this plan raises concern. We have seen expansion through new housing developments in Backwell already through the Colliers Gardens development and the new sites currently under construction off Rodney Road and Farleigh Fields. There has not been new infrastructure or services to compensate for this population increase. We know that Backwell will expand further due to the approved Grove Farm development, which would lead to a hugely disproportionate surge in population should this site also go ahead. A village of Backwell’s size, with the services it currently has, will not be able to accommodate such growth – the schools would oversubscribe, and the GP and dentist services locally would struggle. I appreciate that nine hundred houses being taken off this plan would mean needing to allocate them elsewhere, but I feel that the above points, most notably the land quality, mean it should not be built East of Backwell.	The East of Backwell site should be removed from the plan.		
39254785	Anne Morley		Resident	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	No	High-quality farmland (and this is grade one farm land, which continues to be used at present for growing arable crops such as wheat, and has been used for so for many generations, being fertilised sustainably by manure from winter grazing farm animals. - which means it is of the highest quality by labour's own policies and frameworks state that this type of land should not be built on. This area of prime farmland, which is currently being used to grow good quality food for our population, has done so for generations and is farmed in such a way as to provide the optimum amount of varied foodstuffs (both arable crops and meat) for our population and has been for generations which means it is of the very best quality. Labour's own policies and frameworks reject the use of this type of land for building, as it is needed to feed our population and provide food security. Along with this this area is heavily used for walkers and promotes people living healthy lifestyles. The A370 area above this site regularly floods, and with large areas of land above this site and above the A370 in this area being allocated for development, this will cause additional flooding. The infrastructure in this area is already operating far above capacity, with heavily congested roads and traffic, particularly around schools. Particularly, the A370 in Backwell and Station Rd in Backwell and Nailsea. We currently have difficulty accessing medical appointments because the population of our small village has grown massively in a very short time, which is unsustainable.	This area of sustainable farmland needs to remain as such. Food security for future generations relies on farmland, especially of the grade one type of the highest quality land here, which is currently used to provide both high-quality arable crops and, later in the year, grazing for animals, which provides essential microclimates. Please remove this valuable land from this plan for the above reasons.		
51450913	D Morris			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	No need for additional houses as BACKWELL already has 800 new houses approved 2) The proposed road would not help to alleviate already busy traffic to and from Nailsea on to Station Road as well as BACKWELL Common Chapel Hill. A road under or over the railway line would be unfeasible and extremely expensive. 3) With the approved 800 houses the Health Services and schools are already overstretched. Lack of infrastructure cannot support another 1000 houses. 4) BACKWELL is allocated higher number of houses than any other village in North Somerset. 5) BACKWELL is not an employment hub as most residents commute. 6) The proposed site is Grade 1 Agricultural land used for food crops and grazing. 7) Government policy states we must protect our best and most versatile land. 8) Development would destroy valuable wildlife habitats and harm biodiversity.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								9) No funding guarantees available for new road or services. 10) Surrounding roads of the proposed area are prone to flooding. This would destroy the character of the village and importantly loss of green belt land. 11) Fields adjacent to BACKWELL Lake are on a flood plain and regularly flood. 12) The railway station is still not accessible for disabled people as well as for children and push chairs. 13) The sheer volume of growth with the required investment infrastructure and services over a very short period is destabilising,unsuitable and undeliverable. 14) BACKWELL has been very unfairly targeted for another 1000 houses on top of the approved 800 houses.			
58575841	A Morris			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell already has 800 new houses approved, a 40% increase for the village. These additional numbers will lead to complete overdevelopment. There is no needs or viability assessment for an extra 1,000 houses There is a deficit in school places and no investment in health services or leisure facilities. The lack of infrastructure and services cannot support another 1,000 houses. No social cohesion impact assessment has been provided The Infrastructure Delivery Plan lacks analysis and costings, and there are no funding guarantees for the new road or services. Backwell and Backwell Common and the surrounding areas are prone to flooding, which would be aggravated by more housing Backwell is not an employment hub, most residents commute. The sheer volume of growth with the required investment infrastructure and services over such a short period is destabilising, unsustainable and undeliverable. Development would destroy valuable wildlife habitats and further harm biodiversity in one of the world's most nature-depleted countries. Government policy states that "we must protect our best and most versatile land" to safeguard food security. The proposals contradict this policy and undermine food security	I am concerned that the strategic growth location designation include the impact on the area's character, the loss of Greenbelt and high-quality agricultural land, the risk of flooding, and uncertainty over whether the road can be funded and delivered on time to support the proposed housing IMPORTANTLY Backwell is allocated a higher number of houses than any other village in North Somerset, and even a higher growth percentage than towns. Backwell is expected to take 7% of the district's housing allocation, compared to Clevedon's 2%		
58579201	Rachael Morris			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy		Unsure	Overdevelopment given the 800 houses already approved Proposed road will not ease congestion on station road, backwell common or chapel hill. Engineering the road over or under the railway line will be expensive and unfeasible. Lack of investment to support such a large increase in housing - school places are oversubscribed, health services will struggle to cope with such a large influx, limited leisure facilities locally. Backwell is allocated a proportion of houses which is out of synch with its size and location. ie 7% as opposed to Clevedon's 2% Backwell has little by by way of employment opportunities which gives rise to more commuting No social cohesion impact assessment has been provided. Development is over grade 1 agricultural land which is scarce (7% in N Somerset) and currently used for crops and grazing. This undermines Govt policy to protect our best and most versatile land undermining food security. Destruction of nature rich resource. Wildlife habitats and roosts supporting lesser and greater horseshoe bats. Infrastructure delivery plan lacks any analysis and costings. No funding guarantees for the new road or services. The area is prone to flooding. The 50% requirement for affordable housing on greenbelt land is likely to reduce the capability of developers to meet infrastructure costs. The railway station is not fit for purpose as a transport hub and there is little chance of change. it is inaccessible on one side to all with mobility issues (accessible only up/down steep steps) and children in pushchairs.			
62866721	Aida Moses			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure				
50605825	Vicky Moss			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I am writing to strongly object to the proposed large-scale housing developments planned for Backwell. The scale of these developments will dramatically transform our village into a suburb of Bristol, eroding the close-knit community atmosphere that defines Backwell. There are already significant surface water drainage and flooding problems linked to current housing projects in the area. The A370 is frequently affected by overflowing drains, which require constant pumping and maintenance. The proposed new developments are situated on even lower ground prone to flooding throughout the winter months. This raises serious concerns about the capacity and adequacy of existing drainage infrastructure to manage additional surface water runoff. The loss of countryside land is also deeply troubling. The local farmer has previously received government grants to protect and promote wildlife habitats here, which these developments would irrevocably damage. While there are plans for a new primary school, there has been no provision made for secondary education, playgroups, youth clubs, recreation spaces, or medical facilities. No social cohesion impact assessment has been provided to demonstrate that community needs will be met. Furthermore, while proximity to the railway station and A370 might seem advantageous, both are currently insufficient for coping with the increased traffic and population these developments would bring. The A370 is already congested, and the railway station is small with accessibility issues, particularly for those with mobility challenges. For these reasons, I urge you to reject the proposal. The developments risk overwhelming infrastructure, flooding, loss of valued green space, and degradation of community character.			
62777217	Barry Moss			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent	Unsure	Unsure	Backwell has already had 800 houses approved increasing the village size by some 40% - any additional houses would make the infrastructure for the village and surrounding areas completely unsustainable. Despite this increase, there is already a lack of school places and no investment in health services. The lack of infrastructure cannot sustain the proposed further 1000 houses. Backwell is not an employment hub and most residents commute on roads that get very congested at peak times already; further traffic will make the congestion and pollution even worse.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					with national policy			Backwell Common and surrounding areas are prone to flooding which would be aggravated by further housing development. Further, Backwell Lake and adjacent fields (where the new road and housing as planned) are on a regularly flooding floodplain. As well as not protecting our best and most versitile land to safeguard food security (a Government policy), the development would destroy valuable wildlife and habitat, not least for residents of Backwell to enjoy a rural setting and walks. Backwell alone has seen a population growth of some 80% and the wider Nailsea/Backwell are an even greater increase in population and associated road traffic impacts.			
62559137	Jean Murdoch			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The proposal to build 889 houses on Land East of Backwell, which is Grade 1 Agricultural Greenbelt Land, is contrary to Government policy which states that " we must protect our best and most versatile land" to safeguard food security. I believe there is very limited Grade 1 agricultural land left in North Somerset and I am horrified that with all the threats to food security – climate change, world conflict and other causes of world trade disruption - that there is a proposal that Grade 1 Agricultural Greenbelt Land could be effectively lost for ever to provide food for future generations.			
30789793	G Murdoch			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The government requires safeguarding of food security. This development would destroy quality agricultural, green belt land. Once lost, top soil for agriculture requires a minimum of nominally 2500 years (100 human generations) and a nominal maximum of 16,000 years to regenerate, Either figure is beyond contemplation. The UK is not self sufficient in food (2025). Attempts to increase production on what land is left to compensate for the loss is unrealistic. In 2017 a past government representative stated that there could be as few as 30 – 40 years before some of UK's farmland would be degraded beyond fertility. Imported food is not secure. Thus anyone, irrespective of any policy, who promotes the destruction of productive farmland and thus putting food supply at serious risk is guilty of wilful recklessness.. Further destruction of farmland must not happen. Public transport is heavily promoted by government to assist in decarbonising the environment and reducing road congestion.. Backwell is not a source of employment thus housing developments in Backwell will be dormitories and simply increase the number of commuter journeys on local roads. Inevitably many of these journeys will be in private cars. The impact of traffic generated by the proposed new road on the public transport along the A370, in particular, will be to increase bus journey times but also add to polluting stationary traffic particularly approaching junctions and intersection. Similarly the 'school runs' will be even more chaotic than at present with all the associated pollution generated by private cars. It is noted that considerable Government funding has been provided to improve public transport, The proposed development and new road would considerably diminish the impact of those improvements by increasing congestion and journey times. Thus the the government money spent on improvement would be simply have been a waste. Impact on the community and character of Backwell. Backwell has a well developed community which has evolved naturally while modest development has historically taken place and adsorbed into the community, The proposed development is very large in proportion to the existing size of Backwell and would, if permitted, not only change the character of Backwell but swamp the evolved community spirit, amenities and services. Large sudden housing developments have proven to produce bland, dystopian unban cultural deserts. Such would destroy Backwell.			
29291521	H Murray			No		Unsure	Unsure	1 Backwell is at risk of over development, with significant number of houses planned already. 2 roads are already unsafe with narrow pavements, children are particularly at risk without further traffic. Increase in air pollution is also a huge concern with many health conditions now linked to harmful pollution. 3 little attention has been paid to already over stretched community resources, gp, school, leisure spaces. 4 we are fortunate to live surrounded by precious Grade 1 Agricultural Land currently used for food crops, grazing and mitigating flood risks. As we live in a climate emergentcy, declared by North Somerset council, fertile land is an essential resource to ensure our food security while ensuring there is no further harm to already depleted biodiversity in the area. 5 How beautiful to live near the roost of rare Lesser and Greater Horseshoe Bats relying on the land for food. What a privilege! When home owners have jump through hoops to show that small home renovation projects will not harm these bats, how ironic then that hundred of houses will be destroying their hunting grounds. 6 The Infrastructure Delivery Plan lacks analysis and costings, and there are no funding guarantees for the new road or services. The village cannot cope with existing traffic let a lone more congestion. 7 The railway station is not fit for purpose as a transport hub; it remains inaccessible for people living with disabilities impacting mobility. As a health professional I find it disgusting that people living with restricted mobility are denied access to local train travel.			
62853377	Gary Neale			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	There are too many houses being built in Backwell already. If any more are approved it will overwhelm the village. Any more houses will add more pressure on the local doctors making it very difficult to get appointments. We shouldn't be building on our agricultural land. We need to keep this for local food production. We need to keep this land to provide a habitat for wildlife.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
62813601	D Neilson			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Response to North Somerset Local Plan 2041 1. When I moved to Backwell in the late 50's it was a beautiful and vibrant village not a dormitory town to Bristol, and that was why I chose it as a place to live. Since that time it has been targeted many times for housing development and during that period there has been no significant infrastructure development and certainly no increase or significant investment in health services. Also, the roads and pretty well the same as in the 60's with no major investment or improvement. Consequently, when there are problems on the M5, as was the case the other day, the tailback from the crossroads in Backwell to nearly the dual carriageway on the Long Ashton by-pass. This is without the impact of the 800 houses already approved or the proposed 1,000 houses, each of which with an average of 2 cars giving 3,600 additional vehicles on the A370. This is not sustainable this shows that the current plan is not sound. Also there has been no needs or viability study carried out for these additional 1,000 houses. 2. There appears to be a new road proposed to link A370 to Station Road but there is no information as regards cots or who will be paying for this facility, which would be extremely expensive given it its proposed route either over or under the railway line, plus disruption to rail services for may months. This proposal is completely unsound. 3. The 800 home already approved, equates to a 40% increase for the village, with no proposal for extra services or infrastructure. A further 1,000 houses would completely overwhelm the already stretched infrastructure and services and is totally unsound and taken together equates to a 90% increase in the size of the village which is not only unsound but completely unsustainable. It would in fact turn Backwell Village into a town! 4. Without any new schools, dentists or doctors the existing ones would be totally overwhelmed. In fact, North Somerset itself in a recent statement that there would be no development unless it was accompanied by the appropriate increase in the local infrastructure and services. This clearly not the case with the currently approved and the proposed developments in Backwell. So North Somerset is going back on its own proposals. 5. There is only 7% Grade 1 agricultural land left in North Somerset, and the proposed development would be situated on such land, reducing yet further the land available for food crops and grazing. In fact, Government policy states that "we must protect the best and most versatile land" to safeguard food security. These proposals clearly contradict this policy and may, therefore, be illegal. 6. Backwell Common and the surrounding area are subject to flooding, and this development would seriously aggravate the situation. Also, Backwell Lake and the adjacent fields are subject regular flooding which is where the new road and house are planned. Again, supporting the fact that the plan is unsound. 7. The railway station is completely unsuitable as a transport hub as it is inaccessible for people with mobility issues and is challenging for people travelling with young children. 8. The proposal would also have a devastating effect on the local wildlife and in particular the lesser and greater horseshoe bats at Brockley which is an SSSI. 9. Why is Backwell being singled out to take the lion's share of new housing development compared to towns such as Clevedon who are only taking 2%? 10. In view of the above factors, I object strongly to the plan as it is unsound and unsustainable.			
62850081	Jack Nicholls			No	‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	No	I consider the North Somerset Local Plan 2041: Pre-submission Plan not sound, specifically failing the tests of justification, effectiveness, and consistency with national policy (NPPF para 35), in relation to the proposed East Backwell Strategic Growth Location. First, the scale of development at East Backwell is unjustified and disproportionate. Backwell has already consented approximately 800 new dwellings, representing around a 40% increase in the size of the village. The addition of a further c.1,000 dwellings would result in growth of a scale and speed that is wholly out of proportion to the settlement's role, character and capacity, particularly when compared with other villages and even towns within North Somerset. Backwell is expected to accommodate a significantly higher proportion of district-wide housing growth than larger, more sustainable settlements, without a robust evidential justification. No clear local housing needs assessment or market demand analysis has been provided to justify this concentration of growth. Second, the allocation is ineffective and undeliverable due to unresolved infrastructure constraints. The proposal relies on a new strategic road crossing or passing under the railway. This infrastructure is un-costed, unfunded, and of uncertain technical feasibility, yet is fundamental to the delivery of the housing numbers proposed. The Infrastructure Delivery Plan lacks detailed analysis, costings, funding sources, or delivery certainty for this road and associated services. There is therefore a serious risk that housing would be delivered in advance of infrastructure, contrary to sound planning principles, or that the scale of development proves undeliverable within the plan period. Third, the Plan is inconsistent with national policy on Green Belt and agricultural land. The East Backwell site includes Grade 1 "best and most versatile" agricultural land, of which only a very small proportion remains in North Somerset. National policy is clear that such land should be protected and that significant development on it should be avoided unless clearly justified. The Plan fails to demonstrate the exceptional circumstances required to justify Green Belt release in this location, particularly given the availability of alternative, less harmful development options elsewhere in the district. Fourth, the allocation conflicts with national policy on sustainable development and climate objectives. Backwell is not an employment center and is predominantly a commuter settlement. The vast majority of residents rely on private car travel, and the local rail station is not currently fit for purpose as a high-capacity, accessible transport hub. Locating growth of this magnitude in Backwell risks entrenching unsustainable travel patterns, contrary to the NPPF requirement to focus development in locations that reduce the need to travel. Taken together, these issues mean the East Backwell allocation is not justified by evidence, not effective, and not consistent with national policy, rendering the Plan unsound.	To make the Plan sound and legally compliant, I consider the following modifications necessary in relation to East Backwell: A substantial reduction in the housing numbers allocated to East Backwell, reflecting the village's existing consented growth, infrastructure capacity, and role within the settlement hierarchy. Any development should be incremental and proportionate, not strategic in scale. Removal or reclassification of East Backwell as a Strategic Growth Location, unless and until exceptional circumstances for Green Belt release are robustly evidenced and alternatives fully assessed. A requirement that no housing delivery is permitted until critical infrastructure is fully funded, approved, and deliverable, including: A costed and technically feasible railway crossing solution; Guaranteed funding sources and delivery timescales; Clear mechanisms to ensure infrastructure is delivered in advance of or alongside housing. Explicit protection of Grade 1 agricultural land, with development steered away from best and most versatile land in accordance with national policy and the Plan's own stated objectives on food security and environmental protection. A revised spatial strategy that redistributes housing growth more equitably across the district, prioritising locations with existing infrastructure, employment opportunities, and genuine sustainable transport options. Without these modifications, the risks of overdevelopment, infrastructure failure, environmental harm, and	I do not support the soundness or legal compliance of the Plan in its current form in relation to East Backwell. While I support the principle of meeting housing needs and recognise the challenges facing North Somerset, this must be achieved through a balanced, evidence-led and proportionate strategy. The current East Backwell proposal places an excessive and unjustified burden on a single village, relies on uncertain infrastructure delivery, and conflicts with national policy on Green Belt protection, agricultural land, and sustainable development. With the modifications outlined above, a much more limited and carefully phased level of development in the Backwell area may be capable of contributing to housing supply without undermining the Plan's overall soundness. As drafted, however, the proposal does not meet the required planning tests.	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									unsustainable commuting remain unresolved.		
62558273	B Norris		Householder Council Tax Payer	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure		The single track under the railway arch is currently an issue and will be made worse by this proposal.It is dangerous for pedestrians using the pathways not least he 100's of school children daily. The parking charges levied in Nailsea is causing havoc with drivers parking day long on all the approach roads. Another c1000+ cars will further cause even more traffic safety concerns around the local roads. The overstretched health facilities ,schools and leisure currently well under funded will potentially collapse with the extra burden and no more funding commensurate with the new demands. Government policy is to protect our best and versatile land but the proposal takes away Grade1 agricultural land and destroys valuable wildlife habitats. Backwell Lake will be affected and so too the floodplain. The infrastructure Delivery Plan lacks analysis and costings and not able to give any guarantees for the funding of the new roads and services.Such rapid additional growth on top of the already agreed development plans can only be destabilising and unsustainable. The general location is not an employment area thereby causing the new homeowners to commute daily thereby adding to the congested roads as above. The plan needs to be revoked as the plan is not sustainable in this particular location			
21231425	J North			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell is currently a village, until recently, with around 1700 houses. An additional 800 houses have already been approved and now you are proposing to add an extra 1000 houses without any guarantee of support for the infrastructure. I cannot believe that such a massive increase in one small area can be justified. We have two main roads, one, the A370 runs from Bristol to Weston-Super-Mare and the M5 and the other, Station Road, runs under the railway towards Nailsea. Neither road can support an increase in the traffic generated by an additional 800 houses, let alone 1800 houses, likely to be an extra 3500 cars! The railway station is a village station, a little platform, inaccessible to wheelchairs and with parking facilities appropriate to the current size of the village, not the proposed version. The road under the railway is narrow, with a narrow pavement, again, not designed for the volume of traffic resulting from the increase in development. The proposal does include the possibility of a new road alleviating the traffic on Station Road, but this also needs to cross over or under the railway line and so is unlikely to be feasible in the final version. The site of the proposed development is farm land, currently used for grazing and arable crops. Once it has gone, there is no way back and the ability to be self-sufficient is depleted further, not to mention the habitats that are lost along the way. I have lived here for 25 years and am very much saddened to see the wasteful destruction of our countryside for no apparent reason.			
62862433	R North			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I am writing to voice my firm opposition to yet more destruction of grade 1 green belt land, this time off Station road, Backwell Common and behind Backwell Secondary School, to be permanently replaced with more environmentally damaging housing, of highly questionable need. The residents of Backwell have already been forced to accept 4 so called 'developments' comprising nearly 800 houses, all of course on green belt land. Until these houses are sold we will have no idea how their very sudden and excessive appearance will adversely affect the village. With virtually zero additional infrastructure, where exactly are the extra 1400 odd cars going to go? (oh yes, I remember now, all the new occupants will be travelling everywhere by train). Where indeed are the additional school places for maybe 1000 children, and where are all these kids going to play? Doctors appointments, parking places, loss of habitat for wildlife, the day to day running of the village is already about to come under severe pressure. So this is the situation now, this new proposal will undoubtedly make things 10 times worse. I understand the land earmarked for this proposal is subject to flooding, a serious problem becoming increasingly common thanks to climate change. Putting a massive housing estate on such land will clearly substantially exacerbate the problem, a ridiculous situation, the plan being to in the future just dump at the Environment Agency's door no doubt. Given the current deplorable state of the village roads, it is also quite clear that a relief road, whilst promised, will never ever be built to help deal with the traffic explosion, if there is apparently no money to repair simple pot holes. Station Road, which all this new traffic will inevitably have to use, is not suitable to deal with such increased volume, as the pinch point of the railway tunnel will always be a major problem. Proposals to 'possibly' go over or under the railway to improve this situation are, both practically and financially, risible. There are probably many other reasons why this extra building plan is wholly unsuitable of our lovely village, hopefully others have been forthcoming with them, and as we are already experiencing exponential growth and don't yet have any idea of its impact, further building would seem to be utter folly. I am both angry and disappointed that it is still necessary for the people of Backwell to endlessly point out the blindingly obvious problems of yet more housing on our nice and easy to build on green fields, that once dug over like the once lovely fields currently 'satisfying policy' 200yds from my house, they will be gone forever, lost most likely to a political box ticking exercise.			
57923841	Paul N			Unsure	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	Unsure	Not sound There are multiple reasons why the Plan is not sound. I set out below some of my observations with a particular focus on the Backwell elements: Backwell is a village. Current planning approvals already seek to increase the size of the village by approximately 40%. These new proposals would lead to a massive further increase which are completely disproportionate to the size of the village and would completely change the character of the village. This is UNJUSTIFIED. The plan itself identifies that growth should be focused on more established towns. The allocation to Backwell by far exceeds the allocation to towns (for example it will result in a 80% increase in Backwell's population compared to just 6% for Clevedon. This is also UNJUSTIFIED and INCONSISTENT WITH POLICY. The village does not have the infrastructure to support this level of development. There is already a shortfall in school places, medical services are already at capacity, limited number of shops and there is serious traffic congestion (see comments below). Hence the proposed development is not sustainable or EFFECTIVE. Backwell have very few jobs, nearly all residents commute into Bristol, mainly by road. Adding 1000 houses will result in a huge increase in the scale of commuting with no effective plan to resolve current traffic problems. This is neither sustainable or EFFECTIVE - there are far better sites for housing nearer Bristol. The plan places a strategic growth location on Greenbelt, high quality agricultural land that is currently used for both crops and animal grazing. There is only 7% of this high quality land left in the whole of North Somerset. Government	The feedback from previous consultations should be properly considered and the Plan should be based on the stated principles of focusing growth on the major towns. Growth should be sustainable and take account of key factors such as employment and transport. Greenbelt land, particularly high quality agricultural land should be preserved. The current proposals for Backwell do none of these. The level of development in Backwell should be scaled back to be proportionate insize with other towns and villages and should allow the character of the village to be maintained. The currently approved developments already are excessive and nothing further should be permitted, at least not until		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								policy requires that "we must protect our best and most versatile land". Therefore the proposals are INCONSISTENT WITH POLICY. It is generally accepted that traffic in Backwell is already excessive with regular congestion on both the A370 and Station Road. This is prior to the developments already approved (particularly Grove Farm, Dark Lane and Rodney Road (which are the "wrong" side of the Backwell crossroads for commuting to Bristol. The plans for a new relief road from Nailsea are vague and will not meaningfully relieve the problem, just adding a second congestion point at the point it meets the A370. As well as the impact on Backwell , it will put far more traffic through Flax Bourton. This is neither sustainable or EFFECTIVE. Furthermore the propsoed relief road route is poorly thought out requiring engineering over or under the railway line which will be expensive, disruptive and possibly unfeasible. It will also pass across land that is highly susceptible to flooding (Backwell Common and Backwell Bow/Chapel Hill regularly flood). No proper feasibility study for this road has been provided and no costings prepared. There are no clear proposals, with appropriate costings and analysis, for the level of social infrastucture needed to support developments of the magnitude proposed. As well as the additional road capacity needed, with a proposed 80% growth in population, there will be a need for additional schools, medical services and leisure facilities. There are no indications of how these will be provided or funded. Furthermore, Goverment Policy requires that Greenbelt develpment should contain 50% affordable housing. This means that developers will have less ability/willingness to contribute to infrastructure. As the infrastructure need to support the proposed level of development is so great, this is implicitly INCONSISTENT WITH POLICY. Not legally compliant I believe the plan ignores the requirement to engage and consult in a meaningful manner with the local population. A previous version of this plan was consulted in approximately 12 months ago and resulted in widescale objection and disagreement with the proposals for the Backwell area. These have all been completely ignored in this latest version of the Plan and none of the key points noted above have been taken into consideration. This to me demonstrates that there has been no meaningful attempt to take account of the views of local residents, in breach of the requirements of the Town and Country Planning Regulations 2012. A development of this scale, and the impact of points above could lead to a lack of social cohesion within the village. No impact assessment of this has been provided, indeed there has been no proper viability analysis of the impact of 1000 extra houses in the village. As noted above, no proper feasibility study for the Backwell relief road has been provided despite this being a critical need to support much of the proposed development.	infrastructure needs have first been addressed. It will be more sustaintable and effective to focus development on sites closer to the employment hubs of Bristol, Weston and Portishead. Rather than concentrating housing developments in a small number of areas that cannot sustain the levels being proposed, it will be far more effective to instead have smaller scale developments spread across a wider range of locations. More effort should be made to identify and redevelop disused sites rather than destroying Greenbelt and agricultural land.		
51326337	Paul Nott			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	As a resident of Backwell, we already live in a village which has grown beyond that which the infrastructure was designed to support. Our schools are full, our roads are beyond capacity and the services are no longer sufficient. I am astounded that we are now being told to further expand by such an amount. Whilst there may be a need for increased numbers of houses in North Somerset, unfortunately Backwell just isn't a suitable place for this. Backwell has already had 800 new houses approved. This is a 40% increase and has so far come without any increase in service or amenity provision. Traffic through the village is at a dangerous level. As we are encouraged to think about the environment, children walk to school. Neither Station Road nor the pavements along it are wide enough for the current increase in traffic. There just isn't the space to increase the width of either. We already have construction sites in the village and the amount of lorries, which have to mount the pavements at times as the roads are unsuitable for their size, increases the danger to the local children. The suggestion of a new road across the land East of Backwell has not been properly thought through. Before any houses can be agreed, this road needs to be properly planned. Driving it across the flood plain and negotiating the railway line is going to make it cost prohibitive. If it was viable it would have already been built. There cannot be houses agreed before this has been looked at in enough detail. Surely the cost and the engineering of creating this is prohibitive? It also wouldn't solve the problem of congestion on Station Road, Backwell common or Chapel Hill. With Government policy stating that 'we must protect our best and most versatile land' to safeguard food security, it is obvious that these planning proposals directly contradict this Government policy. This destruction of high quality agricultural land would increase the need for buying in and transporting food – surely something which goes against every current environmental plan. That is without the damage done to habitats locally and biodiversity. Constructing houses in a village that does not provide employment opportunities beyond the services we need here is short sighted. It will simply increase the level of traffic on the roads. Station Road is already dangerously busy and increasing the number of houses in the village where the vast majority of people will need to commute by car for employment will inevitably cause additional congestion and danger to the pedestrians. Neither the footpaths, nor the roads are wide enough to cope already. It is the main route for children walking to all the village schools. Surely it would be more beneficial to develop new housing in areas where people actually have employment and are not required to commute? Much is made of Backwell having a train station. For this to be advantageous it requires significant investment. Lifts to the platforms to increase accessibility would be a good start. The single track railway bridge is already unsuitable and with a further increase in traffic would be increasingly congested. Village services are already over capacity without the actual space to expand them. Again, it must be a better idea to build new housing in areas which actually have the space to expand the current facilities or build new ones? If Backwell had the space for a bigger medical centre, more schools or more essential facilities they would already exist! The Infrastructure Delivery Plan lacks analysis and costings with no funding guarantees for either the new road or services. Permission cannot simply be granted for new homes without a guarantee that other essential services will be made available. If there is not funding available in the current economic climate, then it must be concluded that any new developments must be built in places larger than Backwell where such a big increase in residents is more in proportion to their current population and existing services. The volume of growth which Backwell is being told to accept is inappropriate and unsustainable.			
62832065	Darren Nutting			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Proposed Housing Development by Mac Mic Strategic Land, East Backwell To: North Somerset Council Planning DepartmentRe: Objection to Proposed Development by Mac Mic Strategic Land (MMSL), East Backwell I am writing to register my strong objection to the proposed housing development by Mac Mic Strategic Land (MMSL) on land north of Farleigh Road, East Backwell. The scale, location, and underlying assumptions of the proposal make it unsound, unsustainable, and wholly incompatible with Backwell's environment, infrastructure, and community character. 1. The Proposed Link Road is Undeliverable, Unfunded, and Fundamentally Invalidates the Scheme The developer's justification for large-scale housing relies heavily on the assumption that a new link road — historically proposed to alleviate traffic and connect the area to strategic routes — will be delivered. However, this link road has been judged "not deliverable," removed from relevant strategic planning frameworks, and carries no identifiable funding. It is therefore nothing more than an aspiration with no real prospect of materialising. This is not a minor technicality: the viability of the entire development hinges on infrastructure that does not exist and that planning authorities themselves have acknowledged is unlikely ever to exist. To proceed with housing on this basis would be reckless. It would mean building first and hoping for infrastructure later — a pattern that has repeatedly led to long-term congestion, social strain, and costly retrofitting that local taxpayers are left to fund.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								2. Severe and Unacceptable Impact on Local Traffic and Transport Backwell already suffers from peak-time congestion around the A370, Station Road, and road links into Nailsea. Without a deliverable link road — and with no realistic alternative transport solution proposed — the development would add hundreds of additional vehicle trips per day to an already overloaded network. The result would be: * Increased congestion and journey times * Spill-over traffic through village lanes not designed for high volumes * Higher air pollution in residential areas and near schools * Greater road safety risks for pedestrians and cyclists Approving a major development under these circumstances would fail even the most basic tests of transport sustainability. 3. Irreversible Loss of Green Belt Character and High-Quality Agricultural Land The development would destroy a large area of open countryside that forms a critical green buffer separating Backwell from Nailsea. These fields are not “spare land”: they are Grade-1 agricultural land of national importance, and they play a vital role in preserving the rural setting and character of the village. Once this land is built over, it is gone forever. No amount of landscaping or token “green space” within an estate can compensate for the permanent loss of the village’s natural setting and agricultural heritage. 4. Environmental and Biodiversity Harm The site supports a range of wildlife species, hedgerows, and ecological networks that contribute to Backwell’s biodiversity. Large-scale housing would cause habitat loss, fragmentation, and disturbance, with impacts that cannot be “offset” meaningfully. At a time when councils and government bodies claim to prioritise climate resilience and nature recovery, approving a development that destroys active farmland, mature hedgerows, and wildlife corridors would be deeply contradictory. 5. Over-strain on Local Services and Infrastructure Backwell’s schools, medical facilities, public transport, and utilities are already operating near capacity. Adding hundreds of homes without guaranteed upgrades to these services would create further pressure on: * GP waiting times * School place availability * Public transport reliability * Parking at Backwell & Nailsea Station * Water and drainage systems Without firm, costed, and funded infrastructure commitments — none of which the developer has provided — the proposal cannot be described as sustainable. 6. A Direct Conflict with the Character and Scale of Backwell Backwell is a village, not a strategic urban expansion zone. The proposal would effectively double the size of East Backwell, fundamentally altering its nature, community identity, and landscape. This level of growth far exceeds what local residents, planners, or the Neighbourhood Plan ever considered appropriate or sustainable. 7. No Community Mandate and Clear Local Opposition Backwell residents have consistently and democratically expressed their opposition to large-scale development in this location. The existing Neighbourhood Plan — approved by referendum — envisioned modest, proportionate growth, not speculative mass housebuilding driven by a land promoter rather than community need. To ignore this would be to disregard the clearly expressed wishes of the village and undermine faith in the planning process. Conclusion This proposal is fundamentally flawed. It depends on a link road that is unfunded and no longer considered deliverable, it threatens the environmental and agricultural fabric of Backwell, it overloads already stretched infrastructure, and it would irreversibly damage the character of the village. I therefore urge North Somerset Council to reject the application in full.			
50934881	Richard O'Callaghan			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Further development would lead to complete overdevelopment in a village area. Backwell has been allocated a higher number of houses than any other village and most towns in N Somerset in an area with no employment and where most have to commute into Bristol. The roads are unfit for the current volume of traffic and as public transport links cannot cope, the building of further new roads will just multiply the problems on the A370 and surrounding roads. The proposed site is grade 1 agricultural land which is currently used food crops and grazing and the Govt. has already stressed its desire to 'protect our best and most versatile land' for food security, which in this case has been ignored. Also loss of this land will have a hugely detrimental effect on wildlife habitats. The site in question is also a flood plain which floods on numerous occassions. Overall the plans are poorly thought through and take no account of the impact on the existing area and its homeowners. There are no plans for improvements to services in an area which is almost at capacity and there are no guaantees for funding of the new road and additional services. The volume of growth is unsustainable, destabilising and undeliverable over such a short time period without major investment.			
21471393	Joanna O'Halloran			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Objection to Additional Sites Proposed in the Local Plan – Backwell I object to the proposed additional housing developments in Backwell for the following reasons: 1. Lack of Infrastructure and Services Backwell does not have the infrastructure to support such large-scale development. There is already a deficit in school places, and no investment is planned for health services, leisure facilities, or transport improvements. Adding 1,000 more houses on top of the 800 already approved will overwhelm existing resources and negatively impact residents’ quality of life. 2. Overdevelopment of Backwell Backwell has already been allocated 800 new houses, representing a 40% increase in size. The proposed additional sites would push this to over 80% growth—far higher than any other village in North Somerset and even greater than some towns. This level of expansion is disproportionate and unsustainable. 3. Loss of Greenbelt and Agricultural Land The proposed sites include Grade 1 agricultural land, which is among the best and most versatile farmland in the country. Government policy states this land should be protected to safeguard food security. Only 7% of such land remains in North Somerset, and its loss would irreversibly damage the environment and local food production. 4. Traffic and Road Safety Concerns The A370 and surrounding roads are already congested and dangerous, particularly for schoolchildren who walk along these routes. The proposed developments would significantly increase traffic volumes, creating safety hazards and worsening congestion. The suggested new road lacks any detailed plans, feasibility studies, or funding guarantees, making it an unreliable solution. 5. Environmental and Flooding Risks Development on Backwell Common and near Backwell Lake would destroy wildlife habitats, harm biodiversity, and increase flood risk in areas already prone to flooding. These proposals threaten protected species and Sites of Special Scientific Interest (SSSI), including roosts for rare bats. 6. Plan Unsoundness The Local Plan fails to provide a needs or viability analysis for these additional houses, lacks an Infrastructure Delivery Plan with costings and funding guarantees, and does not assess social cohesion impacts. This makes the plan unsound, unsustainable, and undeliverable.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
62818497	Lorna O'Sullivan			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell Common is on the flood plane and experiences flooding which is more frequent now because of the heavy downpours due to climate change. Building in this area will exacerbate this. The road across the Common to Chapel Hill has been closed several times already this winter because of flooding under the railway line. The proposed new road from Backwell Lake across the flood plain to join the A370 would also encounter this flooding problem. There are ancient hedges and footpaths across the proposed development site which support abundant wildlife from insects and butterflies to small mammals, birds and bats. In a nature depleted country we cannot afford to lose more of our wildlife. I frequently use Nailsea and Backwell Station but it is inaccessible for wheelchair users and difficult when I have luggage and for pushchairs.			
30859297	S.Orkney			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	There is already massive development in Backwell and it feels the village would be overwhelmed by this further development. Nearly every piece of level countryside with footpaths in Backwell will have been built on. Only people who are fit enough to tackle the hill behind the church will be able to walk in the countryside. It will be really expensive to put a cross rail road in. What guarantee does the council have that developers will put in a road around the development and not complete the cross rail part or it will take decades for that road to happen. Backwell is very fortunate to have a railway station but it is only accessible on one side. With no cross rail road everyone will be driving down station road to access the station. Backwell does not have lots of employment, if people don't work from home they have to commute. More access roads to A370 will negate all the work being done by the council to reduce bus transit times on that road. Houses will be built on what is currently agricultural land, has there been assessment of how this impacts on food security. The land is also prone to flooding. There's been much in the news about flood risks to homes and the lack of insurance available.			
39369441	Mrs P			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell is a beautiful village, surrounded by fields, woodland and lakes. A disproportionate housing development of this size will totally ruin the village by spoiling the character and charm of Backwell. Backwell already has 800 new houses approved, which is an increase of 40% for the village. A further 1000 houses would mean a total increase of 80%, turning the village into a small town, which would be disastrous for our village and it is totally unjustifiable. There is no needs or viability analysis for an extra 1000 houses. Backwell is being allocated a higher number of houses than any other village in North Somerset, despite being prone to flooding and lacking the infrastructure and facilities to deal with such a massive development. Furthermore, the proposed development would use Grade 1 Greenbelt land, which is currently prime Agricultural Land, used for crops and grazing. These proposals contradict the Government's policy, which states that "we must protect our best and most versatile land" to safeguard food security. The increased population will put a huge extra strain on the local amenities (doctors, dentists, schools, etc) and the extra cars will add to the existing traffic congestion on the A370 and other roads around Backwell and Nailsea. As well as causing traffic chaos for local residents, this will significantly increase travel problems to Bristol for people living further West along the A370. Building more roads through Backwell or Nailsea is not a solution. That would only spoil the area even further and involve huge financial costs. The proposed road would not effectively serve Nailsea or relieve congestion in Backwell, anyway. These fields on Backwell Common are a very important environment for wildlife. As well as bats and hedgehogs, which are endangered, we have seen deer, foxes, badgers, grass snakes and many other animals and birds in Backwell, many of whom feed and live in those fields which are in the proposed development area. Building houses on these fields will have a serious negative impact on the already dwindling wildlife population of North Somerset.			
39401761	Steve P			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	No	The concentrated allocation in Backwell appears to reflect a failure to fully explore alternative spatial strategies with neighbouring authorities and partners. The evidence does not show: - sufficient joint working on regional transport solutions, - alignment of housing growth with accessible employment centres, or - a coordinated strategy to avoid unnecessary Green Belt loss. A sustainable cross-boundary framework has not been demonstrated.	Reconsider the loss overallocation of houses to greenbelt land and review the allocation of houses to Backwell specifically, which is currently proposed to receive an 80% increase in population as a result of the proposal		
39401761	Steve P			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	No	1. The Allocation is Not Positively Prepared A positively prepared plan must be based on a robust, realistic assessment of future housing need. The proposed housing numbers for Backwell are excessive, unjustified and based on assumptions that are already outdated. 1.1 Declining Household Formation and Lowest UK Fertility Rate on Record (1.4) The UK fertility rate has now fallen to 1.4, the lowest ever recorded. This has major implications for long-term household formation and population projections. Lower births inevitably reduce future household growth, meaning the plan's demand forecasts are over-inflated. Given these demographic shifts, the scale of development proposed for Backwell cannot be justified. It is unreasonable to release large swathes of Green Belt and Grade 1 agricultural land for housing that will not be required over the plan period or beyond. 1.2 Disproportionate Impact on a Rural Village Backwell is a small rural settlement with limited infrastructure. The combined effect of existing permissions and new allocations would more than double the size of the village — fundamentally altering its character and overwhelming the area's capacity. The plan is therefore not "positively prepared" because it does not respond to realistic need nor respect the settlement's scale or constraints. 2. The Allocation is Not Justified A justified plan must be based on reasonable alternatives that are proportionate and evidence-based. This test is not met. 2.1 Inadequate Assessment of Alternatives to Green Belt Release There is no clear evidence that non-Green-Belt alternatives, brownfield land, or smaller, distributed sites have been fully explored before selecting Backwell's eastern Green Belt for large-scale release. National policy requires that Green Belt be altered only in exceptional circumstances, yet no such circumstances have been demonstrated. 2.2 Loss of Grade 1 Agricultural Land — Only 7% Remains in North Somerset The site consists of Grade 1 agricultural land, the most versatile and productive farmland in the UK. Only 7% of such	Removal of the development of the LAND EAST OF BACKWELL from the submission and look to find alternative sites for these houses (A) which are not eroding high quality greenbelt land; and (B) are located nearer other larger centres as currently Nailsea and Backwell have been inappropriately targeted for outsized developments which will alter the character of those areas beyond recognition.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								land remains in North Somerset. Grade 1 agricultural land is essential for food security, crop production and long-term resilience. Its loss would be permanent and contrary to national policy encouraging protection of best and most versatile (BMV) land. The plan provides no justification for sacrificing this irreplaceable agricultural resource. 2.3 Landscape and Character Harm Development here would destroy the rural setting of Backwell, replacing productive countryside with large-scale urbanisation. This is inconsistent with the village's character and with landscape protection objectives. 3. The Allocation is Not Effective A plan must be deliverable and supported by the infrastructure needed. 3.1 Inadequate Transport and Service Infrastructure The A370 is already congested and substandard. Backwell's road network is constrained, narrow and unsuitable for additional high-volume traffic. There is no evidence of funded, deliverable infrastructure to support the proposed scale of growth. 3.2 Inaccessible Railway Station Backwell & Nailsea railway station remains inaccessible for people with mobility issues, lacking step-free access. A core justification for the site allocation is proximity to rail, yet a station that is inaccessible to a significant proportion of the population cannot be relied upon to support sustainable travel or reduce car dependency. The plan therefore fails the effectiveness test, as infrastructure limitations render the development neither practical nor sustainable. 4. The Allocation is Not Consistent With National Policy 4.1 Green Belt Policy The NPPF requires that Green Belt boundaries be altered only in exceptional circumstances. The Council has not demonstrated such circumstances. Housing targets based on inflated projections do not constitute exceptional justification. 4.2 Climate, Agriculture and Food Security National policy increasingly emphasises food security and environmental protection. The removal of Grade 1 land directly conflicts with these objectives and undermines long-term climate resilience. 4.3 Transport Sustainability National policy prioritises sites accessible by sustainable transport. A railway station that is not step-free and cannot accommodate disabled users fails this test. 5. Failure of the Duty to Co-operate The concentrated allocation in Backwell appears to reflect a failure to fully explore alternative spatial strategies with neighbouring authorities and partners. The evidence does not show: - sufficient joint working on regional transport solutions, - alignment of housing growth with accessible employment centres, or - a coordinated strategy to avoid unnecessary Green Belt loss. A sustainable cross-boundary framework has not been demonstrated.			
62810945	B Paige				• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The schools are full to capacity, so where will the children go to school? There are no funds to build new schools. And where will the children play? The gardens will be too small for proper play. There's only one doctors' surgery and they are fully subscribed. The dentist is a private dentist. There is no other supporting infrastructure. For example, opticians are all in Nailsea or Weston-super-Mare as are simple things like DIY shops. The fields are soaking wet in winter so I can't see how they can build houses or a road there. The fields are all Grade 1 Agricultural land. If we use all of the fields, where will the Country get its food from? The back gardens will be too small for anything like vegetable beds. The sense of community would disappear if the village grows by 80%. At present we are a very supportive, happy place because we are not too large. All community cohesion would disappear if this many new houses were built.			
21318305	Shaun Parker			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell already has 800 houses with planning permission more than meeting needs. A further 1,000 would lead to the complete overdevelopment of Backwell, without the proper infrastructure to support. This is completely unsustainable. It would destroy Grade 1 Agricultural Greenbelt land that is in use by Local Farmers. This land has always had protections and for very good reasons. Backwell is not an employment center and this is not about housing need. Backwell is taking more that it's fair share of housing but these proposals are fundamentally flawed and unsustainable. If this goes ahead it will be recorded as one of the worst planning decisions in North Somerset's history.			
21234145	H Parry			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell already has significant development underway, but this proposal is disproportionate and would essentially see Backwell (a small village with limited resources, services and already significant traffic issues) taking 7% of the overall district's housing allocation. This would effectively create a suburban population with village-scale amenities - this is a poor outcome for all existing and new residents. The land that's being proposed is grade 1 agricultural land. There are brownfield sites in other parts of the district which have been overlooked. The government cites that we need to "protect our best and most versatile land", yet this proposal does not adhere to that sentiment, erasing prime greenbelt. Infrastructure locally is already at breaking point, and this is before the completion of existing 'in-flight' developments (Farleigh Fields, Rodney Road). Traffic congestion is already a major issue – a development of this size is counterproductive in that while it may have strategic proximity to Bristol and employment opportunities, all approaches to Bristol are already beyond workable capacity (also, the local train station is not fit-for-purpose and does not meet basic needs today, especially for accessibility). There is no guarantee that funding is in place for any large infrastructure project to support this development. Furthermore, any such infrastructure would be devastating for the wildlife and ecology of the area.	Other sites need to be considered before erasing grade 1 agricultural land. There are brownfield sites closer to centres of employment that should be considered.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
29291809	F Parry			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	IMPACT ON NATURE – this proposal delivers harm to nature, threatening local biodiversity and in particular the habitat of the Brockley Maternity Roost and SSSI. The loss of local greenbelt agricultural land will deprive lesser and Greater Horseshoe bats of their foodsource. FOOD SECURITY - loss of greenbelt land is in contradiction to Government policy to safeguard food security by protecting "our best and most versatile land". CROSS RAIL LINK ROAD – I have little confidence that this will be executed or if it is that it it will be delivered in a timely fashion. The Infrastructure Delivery Plan does not fully address costings and there is no way to know if funding for the cross rail link road or services would be made available in the future let alone in a well-timed fashion. Furthermore the location of the proposed link road is in an area that frequently floods (compare the under-rail bridge at Chapel Hill). TRANSPORT INFRASTRUCTURE - the accessibility issues at Nailsea & Backwell Railway station are well known and there is no proposed funding to make the railway station fully functional for all users in both directions. SOCIAL COHESION - this plan will totally destroy the character of the village and its vibrant community – there has been no social cohesion impact assessment and the volume of growth in such a short time will be destabilising and have a negative affect on local services and the community. DEVELOPER CONTRIBUTIONS - where the Council has recommended that greenbelt sites are built on, the 50% affordable housing policy means that developers will contribute less towards developing infrastructure, which will increase the difficulty of integrating a large new population into the existing community and services.	Include funding proposals to make Nailsea & Backwell Railway station fully accessible to all users in both directions.		
62858369	James Parsonage			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	No	I am writing to register my strong objection to the above planning application. The proposal represents an unjustifiable and unsustainable level of development in Backwell and is contrary to the principles of sound planning, sustainable growth, environmental protection, and infrastructure capacity. My specific concerns are outlined below. ⟐ 1. Overdevelopment and Disproportionate Housing Targets Backwell already has 800 new homes approved, representing a 40% increase in the size of the village. The addition of a further 1,000 dwellings would constitute complete overdevelopment and fundamentally alter the character of Backwell. Backwell is being asked to accommodate an unprecedented 7% of North Somerset's entire housing allocation, a higher proportion than any other village and even surpassing some towns such as Clevedon (2%). This scale of growth is disproportionate, unjustified, and inconsistent with the principle of balanced distribution. 2. Transport Failures and Impracticality of Proposed Road The proposed relief road would not alleviate existing congestion on Station Road, Backwell Common, or Chapel Hill nor serve Nailsea's traffic effectively. Serious concerns remain over the feasibility of taking the road either under or over the railway line—an engineering challenge that would be extremely costly, complex, and possibly unachievable. Without a guaranteed and deliverable solution, the transport case is fundamentally flawed. 3. Severe Infrastructure Deficit Backwell already faces insufficient school places, and there is no investment planned for health services or leisure facilities. The current infrastructure cannot support the already-approved growth, let alone the addition of another 1,000 households. There are no guarantees, funding commitments, or realistic timescales for the supporting infrastructure required. 4. Lack of Needs and Viability Assessments No genuine assessment has been provided to demonstrate the need, market demand, or economic viability of an additional 1,000 homes in Backwell. The absence of evidence-based justification undermines the credibility of the proposal. 5. Unsustainable Commuter Village Expansion Backwell is not an employment centre. Most residents commute to Bristol or further afield, meaning additional housing would increase car dependency and congestion, contrary to sustainable transport policy. 6. No Social Cohesion Impact Assessment No assessment has been provided on the social impacts or how such rapid and large-scale growth would affect the existing community, cohesion, and service demand. This breaches fundamental planning principles requiring an understanding of community impact. 7. Loss of Grade 1 Agricultural Land The site includes Grade 1 Agricultural Land, currently used for food crops and grazing. Only 7% of North Somerset's land falls into this highest-quality classification. Government policy expressly states that the UK must "protect our best and most versatile land" to ensure food security. Building on this land is contrary to national policy and is not justified. 8. Biodiversity Harm and Threat to Protected Species The proposals threaten valuable habitats in one of the world's most nature-depleted countries. The site is essential feeding ground for Lesser and Greater Horseshoe Bats, linked to the Brockley Maternity Roost and SSSI, both of which are highly sensitive and protected. The ecological harm would be profound and irreversible. 9. Flood Risk and Unsuitable Location Backwell Common and surrounding areas are already highly prone to flooding, including land around Backwell Lake (Reservoir) and adjacent fields earmarked for development. Increasing hard surfacing and housing on a floodplain would significantly worsen local flood risk and contradict national guidance directing development away from areas susceptible to flooding. 10. Lack of Infrastructure Delivery Plan Credibility The Infrastructure Delivery Plan (IDP) lacks detailed analysis, realistic costings, and—critically—any guarantee of	Fairer distribution amongst the villages and towns in North Somerset - ie Clevedon is only assigned 2% of the total allocation.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								funding for the new road or essential services. A development of this magnitude cannot proceed without clear, secured, and deliverable infrastructure. 11. Green Belt and Character Impacts The proposal contributes to the erosion of the Green Belt and would irreversibly damage the rural character of Backwell. Government policy requires 50% affordable housing on Green Belt sites, which would in turn reduce developer contributions, further undermining the funding of critical infrastructure. 12. Unsustainable Timeline and Undeliverable Growth The sheer volume of housing, combined with the massive infrastructure required, over such a short period is destabilising, unsustainable, and unrealistic. There is no evidence that the proposed road or supporting services can be funded or built in time to accommodate this growth. 13. Inadequate Transport Hub Backwell railway station is not fit for purpose as a transport hub. It remains inaccessible to people with mobility needs, and no funded, deliverable plan exists to upgrade it. Relying on it to justify major growth is flawed. ⸈ Conclusion For the reasons above—overdevelopment, lack of infrastructure, environmental harm, severe flooding risk, loss of Grade 1 agricultural land, and the absence of viable transport or funding plans—the proposal is unsound, unsustainable, and contrary to national and local planning policy. I therefore urge North Somerset Council to reject the application in full.			
58544193	Richard Parsons		Public	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I am writing regarding further proposals for new housing developments in Backwell. Whilst I understand the need for new houses it is the scale of future proposed developments that I am objecting to. There are already a large number of new houses currently under construction on sites at Farleigh Fields, Rodney Road etc. There are various other areas such as the very large development at Grove Farm which is likely to go ahead in the near future. I feel that enough is enough. Backwell is a village and too many more new houses will completely change the nature of the area leading to a strain on amenities such as the schools and health centre etc, not to mention the amount of extra traffic. I am against the new road that is being proposed from the lake as this would have a huge impact on agricultural land and the surrounding countryside.			
62835905	D Payne			No		Unsure	Unsure	1. Scale of Development: 40% Growth Already Underway Backwell is already experiencing a 40% increase in housing due to existing approved or in-progress developments. Adding around 1,000 more dwellings would constitute massive overdevelopment, fundamentally altering the character, scale, and sustainability of our village. 2. No Deliverable Road Infrastructure — Severe Safety Risks The proposed new road—which is critical to the safety and functionality of the development— is not funded by developers, requires major engineering works over and under the railway, is potentially unfeasible or many years away, and has no guaranteed funding or timeline. Meanwhile, traffic from construction and eventual occupation will use: Backwell Common, Station Road, and Chapel Hill These roads are already unsafe, narrow, without pavements, and unable to accommodate heavy vehicles. Schoolchildren and pedestrians are already at risk. Increasing traffic here is genuinely dangerous and irresponsible. 3. Schools, Healthcare and Leisure Services Cannot Cope The local plan does not provide guarantees of: additional school places, expanded healthcare capacity, or improved leisure facilities. Adding around 1,000 homes would place intolerable strain on services that are already stretched. 4. Disproportionate Housing Allocation — 7% for Backwell Backwell has been allocated 7% of the district’s total housing requirement, a disproportionately high figure for a small village. Comparable areas, such as Clevedon, have allocations closer to 2%. This discrepancy is unfair, unbalanced, and unjustified.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								5. No Viability Assessment for 1,000 Homes There has been no meaningful viability analysis to demonstrate that the required infrastructure, services, and mitigation measures can be delivered alongside this scale of development. 6. Lack of Local Employment Backwell provides limited employment opportunities. Most residents commute, increasing road congestion and contradicting sustainable development goals. 7. No Social Cohesion Impact Assessment The proposal fails to consider how such rapid expansion will impact community cohesion, social wellbeing, and Backwell's village character. 8. Loss of Grade 1 Agricultural Land (Only 7% Left in North Somerset) The development would remove Grade 1 "Best and Most Versatile" agricultural land, which is: currently used for crops and grazing, nationally recognised as essential for long-term food security, and already extremely scarce (only 7% remains in North Somerset). 9. Government Policy Contradiction National policy explicitly states the need to "protect our best and most versatile land" to safeguard food production. This proposal directly contradicts government policy and actively undermines food resilience. 10. Irreversible Harm to Wildlife and Biodiversity This area supports a wide variety of wildlife, including: owls, birds of prey, foxes, badgers, bats, mice, kingfishers, and many other bird species. England is already one of the most nature-depleted countries in the world. Further loss of habitat here is irresponsible and unnecessary. 11. Threat to Horseshoe Bat Roost and SSSI The development area includes foraging land for the Brockley maternity roost, including lesser and greater horseshoe bats. These species rely on habitat that has already been reduced by recent developments. The proposals therefore risk harming a protected species and impacting a nearby SSSI, which is contrary to environmental law and planning guidance. 12. Infrastructure Delivery Plan is Not Credible The Infrastructure Delivery Plan contains: minimal analysis, no realistic costings, and no secured funding for essential infrastructure. Without the new road and service upgrades, the development would be catastrophic for local safety and functionality. 13. Backwell Common Floods Regularly As a resident, I can confirm that Backwell Common floods frequently during heavy rainfall. More housing will increase runoff and worsen flooding risks. 14. Strategic Growth Location Designation is Flawed Concerns include: loss of greenbelt and valued local green space, destruction of high-quality agricultural land, increased flooding risks, profound changes to local character, and extreme uncertainty over the feasibility, affordability, and timescale of the essential new road. 15. Proposed Road Sits on a Floodplain			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Backwell Lake, the reservoir, and adjacent fields—where the road is planned—are on known floodplains and flood regularly. This undermines the viability and safety of the proposed transport solution. 16. Affordable Housing Policy Trade-Off Government policy requires 50% affordable housing on greenbelt sites. However, this significantly reduces the financial contributions developers are able to make toward infrastructure—precisely what this scheme desperately needs. This creates a funding gap that makes the proposal even less deliverable. 17. Growth Speed is Unsustainable and Destabilising The combination of: rapid growth, insufficient infrastructure, unaddressed safety concerns, loss of green space, and lack of coherent planning renders the proposal unsustainable, poorly conceived, and practically undeliverable. It appears to prioritise housing targets over the safety, wellbeing, and sustainability of Backwell. 18. The Railway “Transport Hub” is Not Fit for Purpose The plan relies heavily on Backwell Station as a transport hub, yet the station is: inaccessible to people with mobility issues, prams, or young children, outdated, unlikely to be upgraded in line with the development, and not capable of mitigating the traffic impact of 1,000 new homes. Conclusion This proposal represents overdevelopment without the infrastructure, environmental protection, or community planning required to make it safe or sustainable. It threatens safety, biodiversity, food security, village character, and essential services, and fails to comply with multiple national planning principles. I respectfully urge decision-makers to reject this allocation and seek more sustainable, evidence-based alternatives for meeting housing needs			
62560449	Martyn Pearce			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Overdevelopment of area, no infrastructure considerations, no consideration to additional facilities required, doctors, dentists, schools, cycle lanes. NO access for disabled people to Backwell train station to use trains on line toward Weston from Bristol. Purchase of land required and a lift installed, whole station needs redevelopment or relocated.			
58584161	Harriet Perkins			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	The heavy focus on Backwell suggests that North Somerset Council has not properly worked with neighbouring authorities to test other strategic development options. The available evidence does not indicate: - meaningful collaboration on wider transport planning, - a shared approach to locating housing near major employment areas, or - joint efforts to minimise the release of Green Belt land. Overall, there is no clear demonstration of a coherent, cross-boundary strategy that supports sustainable growth.	I object to the proposed housing allocation east of Backwell because it fails every major test of soundness, is not legally compliant, and does not meet the duty to co-operate required by national planning policy. 1. The plan is not based on realistic or up-to-date housing need Recent demographic data shows that the UK is experiencing a dramatic fall in projected household growth. The national fertility rate has reached a historic low of 1.4, indicating that long-term population and household formation will be far lower than assumed when the Council derived its housing figures. Building large new estates in Backwell on the basis of inflated or outdated forecasts is unjustified. There is unlikely to be demand for the volume of housing proposed, especially in a small rural village. 2. The choice of site is not justified when considering alternatives The eastern Backwell site contains Grade 1 agricultural land, of which only 7% now remains in North Somerset. This land is vital for food		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									production and represents a scarce resource. Despite this, the plan has not demonstrated that all other realistic options—particularly brownfield or less sensitive land—have been properly assessed before proposing to release this land for development. The proposal would also remove open countryside that forms a key part of Backwell's rural setting, causing irreversible landscape harm. 3. The development is not deliverable in a sustainable way Local roads, the A370, public services, schools and healthcare facilities are already under heavy pressure. No funded or credible infrastructure strategy has been presented to show that the village can support such a substantial scale of growth. Although the plan points to the Bristol–Exeter rail line as a sustainable transport benefit, Nailsea & Backwell station is not step-free and cannot be used independently by people with mobility impairments. This undermines the claim that the allocation supports sustainable travel. 4. The proposal conflicts with national planning policy The release of Green Belt and the loss of best and most versatile agricultural land require exceptional justification, which is not provided. The development also fails to meet national expectations on sustainable transport, protection of countryside, and long-term environmental resilience. 5. Concerns over joint working and strategic planning There is no clear evidence that the Council has worked effectively with neighbouring areas on housing distribution, strategic transport planning, or avoiding unnecessary Green Belt loss. The outcome is an over-concentration of growth in Backwell without a coherent, regionally aligned strategy. Conclusion The allocation east of Backwell is unsound. It is based on unrealistic housing need, chosen without proper consideration of alternatives, unsupported by infrastructure planning, inconsistent with national policy, and not underpinned by robust cross-authority co-operation. For these reasons, the site should be removed from the Local Plan.		
14401217	M Phillis			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell already has 800 new houses approved, representing a 40% increase in units for the village. These additional numbers would lead to complete overdevelopment and a 24/7 nightmare for all inhabitants trying to live what would otherwise be a "normal" standard of life The proposed new road would not effectively serve Nailsea's traffic or relieve congestion on Station Road, Backwell Common or Chapel Hill. Engineering the road over or under the railway line would be highly expensive and possibly unfeasible Despite the proposed increase in house numbers and therefore family occupiers there is a deficit in school places and no investment in health services or leisure facilities. The lack of infra structure and services cannot support another 1000 houses Backwell is allocated a higher number of houses than any other village in North Somerset, and incredibly an even greater growth percentage than the area towns. Backwell is expected to take 7% of the districts housing allocation compared to say Clevedon at 2 % which is totally inappropriate and very much a grave error of judgement.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								There is no needs or viability analysis for the extra 1000 houses Backwell is not an employment hub as most existing inhabitants have to commute so the proposal do not meet sustainable needs No social cohesion impact assessment has been provided In the whole of North Somerset there is only 7% of Grade 1 Agriculture Land currently left producing food and grazing use Government policy states that "we must protect our best and most versatile land" to safeguard food security. These proposals contradict this policy and undermine food security. Development would destroy valuable wild life habitats and further harm biodiversity in one of the world's nature depleted countries. The proposals threaten the Brockley Maternity Roost and SSSI, with Lesser and Greater Horseshoe Bats relying on the land for food. The Infrastructure Delivery Plan lacks analysis and costings and there are no funding guarantees for the new road or services Backwell Common and the surrounding areas are prone to flooding which would be aggravated by more housing. Concerns regarding the strategic growth location designation include the impact on the area's character, the loss of Greenbelt and high quality agricultural land, the risk of flooding, and uncertainty over whether the road can be funded and delivered on time to support the proposed housing Backwell Lake and adjacent fields where the new roads and housing is planned are on a flood plain, which already floods regularly Government policy requires 50% affordable housing on Greenbelt land, but this reduces the funds developers contribute towards infrastructure. The sheer volume of growth with the required investment infrastructure and services over such a short period is destabilising, unsustainable, and undeliverable. It follows that where numbers of new units to be built is the overriding objective in a particularly impractical short period of time there is a very high risk that whatever is actually built will be of the wrong size and spec and in the wrong place. Such errors will be extremely costly to the way of life in this country for generations to come. The railway station is not fit for purpose as a transport hub. It remains inaccessible for people with mobility issues and presents serious challenges when travelling with young children			
62833089	Claire Pickard-Cambridge		Backwell Residents Association	No	• Positively prepared • Justified • Consistent with national policy	Unsure	Unsure	This is on greenbelt land and that kind of development should only be a last resort. Greenbelt is important in distinguishing Bristol from surrounding villages and should only be considered under very special circumstances. Allowing such a large development on greenbelt land will create a precedent which will open up a Pandora's box that will include future approvals along the A370 connecting Backwell to Flax Bourton. The local plan makes a clear statement that permanent building should not happen on grade 1, grade 2 and even grade 3A land. The NSC's own report identifies the 50ha site on the land east of Backwell as the most exceptional land quality, i.e. grade 1. This quality land only amounts to 7pc of our county's land. The local plan tries to justify the destruction of this prime agricultural land on the basis that it will be used to create the link road to the A370. But if you are going to build a link road you don't need 50ha of prime land to do so. Thirdly this will help to double to size of our village, and the local plan provides no estimates of the capital costs and feasibility of the necessary infrastructure upgrading and, in particular, the costs of the proposed link road to the A370. The local plan glosses over the costs and potential difficulty of building this link road. This would involve creating a tunnel under a raised railway embankment. The developers have suggested that they may contribute to the costs of such a road as a third phase in their operations. We understand the national government has no funds available for covering the costs of such a scheme. There are a number of cases where property developers suggest generous capital support but renege on their commitments once the work has started. Huge numbers have been mooted regarding the cost of this infrastructure scheme, including a range of £75mn to £150mn. It appears that the local plan is putting out a smoke-and-mirrors justification for the housing and that the most likely outcome is that the houses will be built with cul de sacs opening onto the A370 as phase 1 and phase 2 of their programme but that in practice phase 3 (building of the link road) will not happen. The consequence of that is that 50ha of our best land will be destroyed and the existing traffic congestion will be exacerbated. 1.	1. Provide a costing and feasibility assessment for the required infrastructure necessary in Backwell 2. Review the justification for ignoring the LPs statement of protecting Grade 1 and 2 land 3. Consider the link road as a stand alone investment, and secure jn advance irrevocable commitment from developers / national Goverment		
51325921	Vanessa Pilley		Local action group	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell has already received a 40% approved increased - anymore would lead to overdevelopment. The A370, and minor roads around the village cannot cope with current capacity - both building traffic and new housing traffic (especially at commuting time) cannot be accommodated. If a new road is being promised, that should be built first. The surrounding amenities are also at breaking point - long wait times for healthcare, few shopping facilities, poor railway infrastructure. More info and evidence is needed to understand the requirements before any more proposed housing is built. Grade 1 agricultural land should be a last resort. Please start reusing brownfield sites! Has an environmental impact assessment been done? I see little evidence for due diligence. Has future flood risk been taken into account? Those fields struggle in the winter - every winter - and will only get worse with climate change. Finally, this is very unpopular in the village - I worry about the social cohesion aspects.			
29296961	Andy Pitcher			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The proposal to build nearly 900 houses to the East of Backwell seems to fly in the face of a number of central government and local council stances; To reduce the travelling and therefore carbon emissions – there is no local employment – people will predominantly drive to work, either in Bristol, South Gloucestershire or Weston. To preserve the best agricultural land which is currently used for growing crops – who would have thought 4 years ago that we would have had a war in mainland Europe?! – we need to be more self sufficient in respect of having the ability to grow our own food rather than importing. Building on such land would defeat this aim! Overdevelopment - Backwell, a small village, already has 800 houses being built or in the pipeline without any infrastructure developments to cater or adjust for this. The Strategic Transport Report acknowledges the already congested traffic situation in Backwell and says that the only solution for this is for a new cross rail road to be constructed. North Somerset Council seems to agree with this recommendation but the proposal is for an under rail line tunnel deep enough for a double decker bus on land that the			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								locals all know floods! This appears to be uncosted, unplanned and probably therefore unfeasible. NSC does not have any money and has any approach been made to Highways England or the Government? If this Local Plan is suggesting that these houses can be built with this proposed bridge as the mitigation for all the increased traffic which it says must be diverted away from A370/Station Road then the bridge must be built as a precondition of the Inspector's approval of this development in agreeing this Local Plan. An increase in housing of this magnitude without infrastructure of necessary schools to cater for increased pupil numbers (all ages) and the necessary medical and social services resources in Backwell and North Somerset as a whole is shortsighted.			
51379041	Stewart Pitteway			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Please do not let history repeat itself. I must object to the proposed Local Plan (PLP). It appears ill-considered and inconsistent with Government policy, showing a clear disconnect between national and local objectives. National planning policy allows limited relaxation of Green Belt protections in exceptional circumstances to meet housing targets. However, both Sir Keir Starmer and Angela Rayner have consistently stated that this flexibility must only be applied if the Golden Rules are met: • Brownfield sites first, then greyfield sites if necessary • Affordable housing provision • Infrastructure improvements • Accessibility The proposed Local Plan fails to meet these requirements, particularly in Backwell. Key Concerns 1. Loss of Agricultural Land The plan takes Grade 1 agricultural land, despite recent approvals already removing large areas of farmland. This has occurred without the necessary infrastructure improvements, even as Backwell has already a recent planned approval of 40%. 2. Brownfield and Greyfield Opportunities With lateral thinking, brownfield opportunities exist within North Somerset. For example, the large quarries in the area will reach the end of their reserves within the next 15 years. Rather than leaving future generations with abandoned holes in the ground while farmland is destroyed, housing could be considered on these sites. The Eden Project in Cornwall demonstrates how such redevelopment can bring new life to an area. 3. Accessibility Discussions with highways engineers reveal that the proposed relief road is poorly developed and not costed. A simple feasibility analysis shows the cost is prohibitive and implementation unlikely — certainly not in advance of further development. 4. Infrastructure and Social Cohesion Backwell is rightly identified as a desirable place to live, with good communication links and local facilities. Yet doubling its size in less than 20 years without a plan to reflect this growth is poor planning. No social cohesion impact assessment has been provided. Above all, is there a genuine need for this scale of housing, especially when infrastructure and services have not been enhanced to date? Conclusion This plan must be rejected. Supporting detail and feasibility studies must be provided before future generations' food supplies are jeopardised. History shows repeated failures when housing is pursued without adequate understanding of real needs and natural constraints such as flooding and sites of natural beauty. Local planners should not be forced into reactive decisions that conflict with central government objectives. Please do not let history repeat itself.			
62856929	Penelope Plas			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The proposed additional 40% extra development of 800 more houses would overwhelm this already over developed community. Before this proposed further expansion, the past and current increase in population finds Backwell's services stretched with no plan to increase funding, daily traffic congestion along out roads. The local schools do not have the premises, space, staff or funding to educate the threatened demand for places. There are very few employment opportunities in Backwell causing new residents to commute on already overstretched roads. Developing the proposed site on Grade 1 Agricultural Land, currently in use for grazing and crops, makes no sense as there is less that 8% of good quality land left in all of North Somerset. Building on this site is counter to the Government's assertion that this country needs to protect productive agricultural land for the sake of food security. Not only does the plan threaten the survival of 2 species of bats, protected by the Brockley Maternity Roost, but, as with all such developments it will inevitably damage other endangered fauna and flora. Part of this area, such as Backwell Common and the land in the Backwell Lake, both included in plans for the further changes to roadways in the area, is prone to flooding, and is land no one should consider using in this way. The increase of a further 1,000 houses, along with the big increase in population, causing more road congestion, increasing pressure and competition for amenities, services and school places will drastically change the character of Backwell from what it is now; a cohesive, harmonious village.			
62659393	David Plummer		Backwell Resident	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	No	I grew up in Backwell and Nailsea, and after years away, I've returned to raise my family in the place that shaped me. Backwell has always been a village — not just in size, but in spirit. Its green spaces, quiet lanes, and close-knit community are what make it special. That's why I'm deeply alarmed by the scale of development proposed in the draft Local Plan. Since I was born in 1980, only a modest number of homes have been built — changes that felt organic and respectful. But adding over 1,000 new houses, on top of the 300 already approved, represents an 80% increase. That's not growth — it's transformation. This plan threatens to erase the very qualities that make Backwell worth living in. It targets Grade 1 agricultural land — some of the best and most versatile in the country — land that supports food production, wildlife habitats, and our local biodiversity. Once it's gone, it's gone forever. The infrastructure simply isn't there. There's no confirmed investment in schools, health services, or transport. The proposed road lacks feasibility studies and risks damaging Backwell Common and conservation areas. Meanwhile, Backwell is being asked to absorb a higher percentage of housing than towns like Clevedon and Portishead — despite having fewer services and employment opportunities. This is not sustainable, and it's not fair. Development should be proportionate, infrastructure-led, and community-informed. Backwell deserves better than to be treated as a convenient solution to meet housing targets.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								I urge the council and the planning inspector to reconsider. Protect our Greenbelt. Respect our heritage. And listen to the voices of those who know and love this village.			
62802881	John Polden			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I have a more detailed document that outlines my overall view of the N Somerset Local Plan 2041 which I will attach to these detail comments if this is possible. Meanwhile my detail comments are:- With 800 new houses already approved, this new development leads to the complete overdevelopment of Backwell. I understand this amounts to an 80% projected population growth of Backwell. There are inadequate plans for infrastructure relating to this development. It is not clear that the construction of the proposed link road to Nailsea is a pre-condition of this development going ahead. A development of this scale will inevitably lead to regular grid-lock on the A370, particularly if the M5 is closed (see my detail letter). There is no serious impact analysis on the effect of this and other developments on Backwell. It is a fundamental mistake of the plan to leave private developers to develop such an area of high-grade, green belt agricultural land. This will inevitably lead to large swathes of 3/4 bedroom homes when there is a desperate need in the country for starter homes and social housing (see my detail letter) The railway link at Backwell is under-used and poorly provided for access etc. Little comment on this is made in the plan	The plan should make ANY significant granting of new development at Backwell conditional on:- A detail review of the traffic capacity of the A370 in the event of peak conditions (such as M5 blockage). A detail impact assessment on the effect of this scale of development at Backwell. A detail plan for the improvement of Backwell/Nailsea station as a transport hub. Redistribution of housing development plans to [provide for a much more dramatic provision of high density, good quality housing as social housing and starter homes (not to be confused with the ludicrous "low cost housing" in planning proposals		NSC REG 19 LOCAL PLAN 2041^J Autumn 2025 consultation.pdf
28926785	Alan Porter		Mr	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I object to the proposed additional housing for the east side of Backwell. The reasons for this are:- Backwell already has approval for an additional 640 houses. Also with 60 new houses at Moor Lane and 94 at Farleigh Fields the impact of all these new homes has yet to be felt. However we AND YOU can be sure the impact will be highly negative for the area and the existing residents. The burden of 800 new homes on a village the size of Backwell will be significant and extremely damaging. Then to suggest an additional 889 houses on top is madness in the extreme. Even worse is the suggestion to use Grade 1 agricultural land. This makes no sense at all. Some parts of this land is also prone to flooding so building on it will make the problem worse in that area and put an additional flood risk on the surrounding land. Each new house will come with at least one additional car and probably two. The road infrastructure in the area does not cope well with current traffic volumes so the addition of at least another 1683 cars is unthinkable. The proposed link road between Station Road and A370 will not help solve this problem as the A370 itself has major traffic congestion currently, not only at peak times. Local services will undoubtedly be overwhelmed even with the addition of the already approved allocations. Goodness only knows what might happen with an additional 889 houses. Opportunities for employment for any new residents will be very limited. The likelihood will be that most will commute to Bristol or further afield and will add to the transport difficulties. In total this proposal makes a mockery of local involvement. Turning Backwell from a village into a small town is outrageous. The entire character of the area will alter completely. North Somerset DC should be ashamed of themselves for proposals, which if adopted, would change a charming and friendly village into another satellite town for Bristol	Discard the proposed increase in housing allocation for the Backwell area and object to the allocation from central government of 23,000 homes for North Somerset		
62794241	M. Porwal			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Despite approximately 1200 objections to a recent planning application, Backwell finds itself with plans for some 800 new houses approved, and plans anticipated for another 1000 or so houses within Backwell and 250 within Nailsea adjacent to the boundary of Backwell. The rapid increase in the size of Backwell would be insensitive and unsustainable overdevelopment. An increase in population of some 80% would permanently change the character of Backwell and the surrounding area. Plans to build on Grade 1 Agricultural Land are misconceived, as this would take land out of use for food production, and the land itself is eminently unsuitable for building as it covers a large area of flood plain. Long time residents of Backwell are all too used to encountering floodwater on roads and large areas of waterlogged ground when out on walks. Any notion of constructing a road running underneath the railway line is frankly laughable, it would quickly turn into a mud filled canal. North Somerset Council have never managed to solve the problem of water collecting under the railway bridge on Chapel Hill. It is an all too frequent occurrence for cars to be written off after being driven into floodwater at night. The idea of tunnelling beneath the railway line approximately half a mile away at Backwell Common is folly at its best. https://www.bbc.co.uk/news/av/uk-england-bristol-67378670 (If the link does not work, please search "car left stranded in high floodwater in Backwell 10th November 2023") The impact on wildlife would be irreversible. Promises of wildlife corridors are often made in these situations, without any realistic prospect of wildlife adjusting to the sudden loss of habitat and feeding grounds.			
62831169	A Porwal			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy			Yet more plans to turn Backwell into a boring faceless outlying suburb of Bristol. I have lived here 35 years and these builders' dreams are rearing their ugly head yet again. It should be obvious to anyone who drives down the A370 after a serious downpour and sees the amount of water running along the road that the water has to go somewhere, because the drains can't cope. So it goes downhill, into the farmland, where it can sit for months, held in the soil, forming quagmires and pools. It's a floodplain, plain and simple. Not suitable for building. It should remain as farm land and remain productive.			
62776801	S Potter			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent	Unsure	Unsure	I am strongly opposed to the proposed additional housing development in the village of Backwell. This development should not go ahead. The ongoing expansion of the village of Backwell already threatens to be environmentally unsustainable, to place unbearable pressure on existing infrastructure, and to destroy the distinctive character of Backwell as a village. The proposed additional expansion of housing will push my community over the edge, destroying valuable habitats and natural amenities, leaving doctors and schools and other services unable to cope, and transforming Backwell from a village into an overcrowded town. It will have serious mental health impacts on many villagers as this cohesive community is destroyed and overwhelmed with traffic. The burden of through-traffic on the			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					with national policy			village is already seriously detrimental and already set to get much worse. Given the lack of employment opportunities in the village the building of more houses is totally inappropriate as it will lead to a significant increase in commuter journeys along already congested routes. The destruction of prime farmland is also of national concern in an era of serious environmental degradation and food security issues, as is the destruction of rare bat habitats – individual householders would not be allowed to build in this way and risk the bat population, so why should property developers be exempted from such restrictions and allowed to destroy habitats for endangered species. Flooding is also a serious concern in this area, and the proposed development will leave existing residents more vulnerable to flooding as well as put new houses in harm's way. Please, save our village, and reject this application.			
10388545	H Power			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I've lived in Backwell for more than 30 years, and I've seen the village grow slowly with small, appropriate building, bringing new people who have added to our community. However, the growth proposed now in North Somerset's Local Plan would be overdevelopment in an area with what is now poor infrastructure support. The volume of new building proposed is excessive when the 800 houses already approved are taken into account, as this alone brings the proposed development up to 40%. Were the additional new building be accepted, that would rise to 80%, nearly a doubling of population in a village with little or no infrastructure to support the additional population. Roads, schools, doctors, dentists already at full capacity with no room to expand to serve an 80% increase in need. Backwell has been allocated a higher number of houses than any other village in North Somerset (NS), and an even higher growth percentage than towns. 7% of NS's housing allocation, compared to 2% for well-resourced Clevedon. No needs or viability assessment has been carried out, nor has a social cohesion impact assessment been provided. The sheer volume of growth with the required investment infrastructure and services over such a short period would be destabilising, unsustainable, and undeliverable. Considering infrastructure as I have referred to it above, considerations which may sound good on paper do not stand up to scrutiny. The railway station is inaccessible to people with mobility difficulties, and very difficult for pushchair users to use. Many years of solid research has failed to come up with a solution to this major problem. The A370 which transects Backwell is almost at capacity and as Backwell is not an employment hub, most new inhabitants would commute. Station Road to Nailsea is a very unsafe and impractical road, walked by many students twice a day to the station, with no cohesive continuous pavements. Roads that might be used a 'get arounds' such as Chapel Hill and Backwell Common form part of the National Cycleway, and are very narrow in parts, bringing the danger to cyclists and walkers to an unacceptably high level. When it comes to roads, you will see that a totally impractical and unfunded road has been proposed across Backwell Common between Station Road and the A370 (Farleigh Road). Impractical- The proposed road crosses Backwell Common which is prone to flooding and would require considerable engineering to prevent it sinking. Furthermore, it is proposed that it would pass under or over the main railway line, a massive and desperately expensive undertaking. It is highly unlikely that Network Rail would allow the project as the embankments are unstable, and the work would be too disruptive on the main London to Cornwall line. Unfunded – building a road across marshy ground which is also near old coal workings is prohibitively expensive in itself. Add in the railway line and it clearly cannot be built without central Government investment. This is not a strategic location, so that will not forthcoming. This has been confirmed by our MP. (A Flooding is not only a problem for the road. It is also a problem for any houses in the proposed development areas. I have walked there many times, up to my ankles in mud and unable to literally wade under the bridges. Wildlife and other environmental issues are threatened by these proposed developments. Rare bats from the Brockley Maternity Roost will be disturbed from their normal flight and hunting areas, and other animals, badgers, deer, foxes, hedgehogs (all of which I have seen on my walks) for example will be negatively affected. No consideration has been given to the fact that the developments would be built on Grade one agricultural land where cereal and green crops are grown every year. There is only 7% of this high Quality land left in the whole of North Somerset. It can never be replaced. Where will be get our food from if this continues? To sum up. The plan for Backwell is completely unsound - Volume of new housing with no infrastructure support - Excessive number of new houses - an 80% increase on today's village size - Proposed land is in green belt - Proposed land is in a flood plain - Proposed land is Grade 1 agricultural land, of which there is only 7% in North Somerset - Environmental concerns - Transport infrastructure is already close to saturation. The proposed new road is practicably and financially unachievable			
62860289	Nigel Robert Power			No		Unsure	Unsure	Backwell has already had several development locations identified, with about 800 houses across the sites. This represents a 40% increase in the population of Backwell. A further 889 houses at Backwell East will bring that up to an 80% increase, with no additional supporting infrastructure such as Doctors, Dentists, and there is already a deficit in school places. New leisure facilities would be needed to support the health and well-being of residents. The number of houses approved or proposed in Backwell means that the village is being told to take more than any other village in North Somerset. If this development at Backwell East went ahead Backwell would take a higher percentage of North Somerset's housing allocation than larger and better resourced towns such as Clevedon. The land identified at Backwell East is agricultural land, used for crops and grazing. It is Grade 1, high quality land, and if it goes then another piece of the Country's food security goes with it. Part of the land towards the railways line is prone to flooding which is an important drainage sump for the village. More housing would increase the risk of flooding in the village. There are already problems when there is heavy rainfall on Backwell Hill with water running down to Farleigh Road. The fields at Backwell are home to a variety of wildlife, with old hedges and trees providing cover and homes for many. They are also important for the bats at the Brockley Maternity Roost which is populated by rare Lesser and Greater Horseshoe bats. The idea for the proposed road is absolutely ridiculous. The land is wet, the route is transected by the railway line, and the cost would be astronomical, in the £millions. Where would the finance come from? Furthermore, the embankment is not stable so any plan to go under or over the railway would present many engineering difficulties. The railway is identified in the plan as a strategic transport hub. However, Backwell Station dates back to Victorian times, has short platforms unsuitable for cross-country trains and is inaccessible for people with mobility issues, including people with pushchairs on the northern side. There have been attempts to solve this issue for many years, but the engineering challenges are too difficult to overcome. Finally, no social cohesion impact assessment appears in the Plan. An 80% increase in the number of households in the village (which would become a town), would certainly have a considerable impact on social cohesion. The land at Backwell East must be removed from the Local Plan.			
62858593	Andrew Procter			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The traffic already going into Bristol from Backwell is too busy. An increase in the number of houses in excess of manageable demand would in the main be commuters and this would add to the issue. The new road would not ease congestion on station road. Residents of Nailsea have to use this road to get the main road and there are already excessive queues during busy periods without it needing to be added to. Surrounding areas are prone to flooding and this would be more likely with increased housing. The majority of fields in the area are needed for flood alleviation measures. The development would have an adverse effect on wildlife and its habitats.

								I have lived in Portishead whilst development was taking place and the lack of infrastructure consideration was appauling and our children did not end up with local school places and appointments at Doctors are near impossible. Excessive housing was the cause and exactly the same will happen in Backwell as the infrastructure will not be able to cope - it can not support another 1000 houses.			
39720577	Tony Prosser			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Being a resident of Backwell for over 20yrs., I believe this proposed “plan”, with all it’s lack of thought, on top of the already approved 800 odd houses to be built, (which in it’s self is a 40% increase in the housing of the “village“) is , in essence, totally at odds with the current Governments policy, “to protect our best & most versatile land” To add an additional 1000 odd more houses to these already approved numbers would be a total overdevelopment of Backwell. My reasons for these thoughts above are listed below. Infrastructure:- This proposal has a total lack infrastructure/services included; I.e. extra school places, health provision, leisure facilities, relief of the already considerable traffic congestion on the A370 & Station road for this huge proposed increase in population, to highlight just a few concerns. The vast majority of working age residents are not working in the village or surrounding area, they commute, by road & rail. Some 1000 odd new houses, would mean some 2000 more adults, and on a conservative estimate of just 1 child per household, 1000 children, not to mention the additional 500+ houses proposed to be built next to Backwell nature reserve, another 1500 increase in the population. An almost doubling of occupied housing with a huge increase in population with no “needs or viability analysis” conducted, or any form of “social cohesion impact assessment” provided or even apparently considered at this time! Shameful! The Infrastructure Delivery Plan, if it can be called that, has a total lack of costings & in depth analysis, with no funding guarantees for the new roads proposed! Is it a tunnel under the main south west railway line or a tunnel? Backwell Rail Station, is, I believe, at present totally unfit for purpose as a transport hub, and somewhat dilapidated, with, amongst other faults, no viable access for less-abled travellers with mobility issues, (I speak from personal experience), even now, let alone in the future with the inevitable increase in commuter traffic. Backwell has been targeted to “swallow” some 7% of the districts housing allocation, Clevedon, 2%, why? Environmental:- Has the flood plain been fully investigated in the proposed development, more housing in these areas would greatly exacerbate localised flooding, retention of water etc., how will/can that be mitigated? The agricultural land proposed to be built on in this development is classed as Grade 1, currently used for animal grazing & food production. This development again, flys in the face of the Government’s policy “to protect our best & most versatile land to safeguard food security”. With only approx. 7% of this type of land left in all of North Somerset, its approval would be a travesty! Local wildlife would be devastated; the Brockley local SSSI would be very negatively impacted, let alone totally depleting what’s left of the immensely valuable wildlife habitats which feed, & “house”, all that wildlife which enhances the biodiversity of the area. Where would the deer, badgers, fox’s, bats, birds etc., live, feed, breed? That’s not to mention the fact that we live in a country that is one of the most nature depleted on this planet. Will there be a “Green Belt” in years to come, with the Government requiring some 50% affordable housing to be built on Greenbelt Land? To conclude, I do not consider myself a “NIMBY”, I have little time left in this world; my objections to this proposal are for the protection & enhancement of the quality of life of future generations living here now, & in the future.			
31129153	Sam Pullinger			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell is a village of currently around 2000 houses. On top of developments over recent years at Colliers Gardens off Moor Lane, and other smaller sites within the village, 800 new homes are already approved at Farleigh Fields and Grove Farm - these number represent an increase in size of 40% for the village, which is surely already an overdevelopment. The additional housing proposed in the North Somerset Local Plan 2041, would then add potentially an additional 1,000 houses on top of that. Together with the approved housing - this would represent an increase in the population of 80%. There is no needs or viability analysis for an extra 1,000 houses and no information or guarantees of the additional infrastructure or services that will be needed to support the level of increase e.g. school places, health services, transport infrastructure. There has been no social cohesion assessment carried out. A proposed new road cutting through Backwell East to Station Road promises to cut congestion on Station Road, but in reality this would be offset by an increased number of residents in the village driving their children to school, and to work, as most people commute - an additional 1,000 houses is potentially an additional 2,000 extra vehicles. Whilst there are public transport routes, there is no assessment of whether these could service such an increase and the railway station continues to pose a barrier to people with limited mobility and presents challenges to people with young children. There are no feasability reports or costings about the engineering that would be needed to take the road under the railway track. Government policy states that 'we must protect our best and most versatile land' to safeguard food security. The proposal of 1,000 houses on Grade 1 agricultural land, of which there is only 7% remaining in North Somerset, seems to contradict this policy. Two developments, at Rodney Road and Farleigh Fields are already underway, and have led to significant disruption in the village - road closures and works to services, and an increase in heavy traffic driving around the village, often on routes used by children to get to school. If all of the approved and proposed development takes place over the next 15 years, Backwell will become nothing more than a building site for that period. Backwell Common and surrounding areas are prone to flooding which would be exacerbated by further housing. The area is part of the foraging zone for the Lesser and Greater Horseshoe bats that are present in the Brockley Maternity Roost and Site of Special Scientific Interest, and the wider Bat Special Area of Conservation. However, this development would also destroy valuable wildlife habitat and harm biodiversity in the area. In the context of other developments proposed nearby, e.g. 582 next to Backwell Lake on the outskirts of Nailsea, this represents urbanisation of what is current a semi-rural area.			
21230369	P Ramos			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with	Unsure	Unsure	We moved to Backwell just over 10 years ago with our 2 boys. We moved here predominantly to enjoy good walks, wildlife, nature and to teach our boys about the importance of those things. We have seen in recent times, many of our much-loved walks and nature disappear as planning applications for housing continue at a pace. Around 800 houses at Grove Farm, where we enjoyed watching the rare Horseshoe Bats feeding during the evening time and cows grazing all year round, Farleigh Fields with families of deer, badgers, foxes and any number of wildlife and witnessing the crops being harvested by local farmers, Rodney Road – a field full of daisies and buttercups which my children would run through and collect on their way to school – have all now been allocated for housing. Those fields are gone.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					national policy			In a village which has just under 2,000 houses, this additional 800 is a lot! A 40% increase and I'm told no agreed extra funded infrastructure or services, just the loss of our nature, wildlife, biodiversity and farmland. And now we face another 1,000 houses on Backwell East, Grade 1 Farmed Greenbelt land. Another walk we have done and indeed I have sat and painted many times over the past 10 years. This is 50 Hectares of high yield land, which has always, quite rightly, been protected. I am astonished and frankly dismayed that this land is even being considered. We cannot as a village sustain any more housing, and we cannot afford to lose anymore of our green fields and farmland, there will be nothing left. I have no issue with sensible housing numbers, but this is complete overdevelopment, with no thought or consideration for the impact on people's lives and well-being and the future of our farmers and food security. I want my children to have somewhere to live, but I also want them to be able to enjoy life in a semi-rural village with fresh air, walks, wildlife and nature. As well as affordable food that is not being shipped halfway around the world, damaging our environment and at a price set by other countries. COVID and the war in Ukraine showed us a glimpse of that future. I therefore write to formally object to North Somerset Council's Local Plan and ask that the Land at Backwell East be removed and protected. The Plan is Unsound in it's current form as it fails to address a sensible balance as I have described above.			
58638241	J Ratcliffe			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Response to draft local plan Backwell has already had approval for 800 new houses, an increase of 40% in the village. The numbers proposed would double this, well overdeveloped! There is no viability analysis for an extra 1000 houses. Most working residents commute, as Backwell does not have employment facilities, just a few shops. The proposed new road is totally unfeasible and would not relieve the current traffic problem. The lack of infrastructure and services in Backwell would not support such an increase in houses. Backwell has been allocated more houses than any other North Somerset village, and a higher growth percentage than towns! Backwell has grade 1 agricultural land, and there is now only 7% of this high q uality land in all of North Somerset!! The proposals contradict the Government's policy that 'we must protect our best and most versatile land'. This development would destroy our valuable wildlife habitats. It threatens the Brockley Maternity Roost and SSSI, with rare Lesser and Greater Horseshoe Bats, that rely on this land for food. The plan for infrastructure lacks costing, with no funding guaranteed for new road or services. Low ground in Backwell Common area is prone to flooding, much aggravated by more housing. There is concern over the strategic growth location designation, including the impact on this village's character, the loss of Greenbelt and agricultural land, flooding and whether the road can be funded to support proposed housing. Our beautiful Backwell Lake and local fields where roads and houses, are planned, is on a floodplain! As the Government asks for 50% affordable housing on Greenbelt, developers will not have much funds to put towards infrastructure. Nailsea & Backwell Station is still not fit for purpose as a transport hub, being inaccessible for those with mobility issues, and problems when travelling with young children. To conclude, the sheer volume of growth, with the required investment infrastructure and services over such a short period, is destabilizing, unsustainable and undeliverable!!!			
39028385	Mike Read			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	As a resident of Backwell for over 40 years we are dismayed to find that you, our own Council , seems to be riding roughshod over all the norms of sensible planing arrangements, seeking to overturn centuries of safeguards to our agricultural way of life and environment	You must keep away from GRADE 1 agricultural land and also ensure that the hundreds of homes you seek to build all around us are really needed. We are sure they would be more welcome in other places where there is real need, ie to house workers for existing employers		
62776257	Jacqueline Reardon			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell already has 800 new houses approved—an increase of 40%, the highest imposed on any village in North Somerset. Adding yet more homes on top of this is not "growth," it is overdevelopment. No other village is being pushed this far. In fact, Backwell is expected to take 7% of the entire district's housing allocation. What makes this even more alarming is the land being targeted. This is *Grade 1 agricultural land*, the highest quality in the country, currently used for crops and grazing. Only 7% of such land remains in the whole of North Somerset. The Government is clear: ''we must protect our best and most versatile land'' to safeguard the nation's food security. Yet this proposal does the exact opposite. Once this land is built over, it is lost forever. You cannot replace Grade 1 farmland. Despite the enormous scale of what is being proposed, the infrastructure delivery plan is shockingly incomplete. It lacks proper analysis, it lacks costings, and—most importantly—it lacks any funding guarantees. There is no certainty that the new road, schools, healthcare, drainage, or essential services will be delivered at all, let alone in time to support thousands of new residents. The village simply cannot absorb this without serious long-term consequences. Backwell is not prepared for—nor suited to—development on this scale. We are not an employment hub. Most people would still need to drive elsewhere for work, adding pressure to roads that already struggle and posing safety risks for everyone, but particularly for children walking to and from school and those using the leisure centre. And although the railway station has been cited as justification for expansion, it is not fit for purpose. It remains inaccessible for people with mobility issues and, as a parent of young children, I know first-hand how challenging and unsafe it can be to navigate the station with them. It is not a realistic transport solution for a development of this size. The designation of Backwell as a "strategic growth location'' comes with significant risks. It threatens the character of the area, involves the loss of greenbelt and the best-quality agricultural land, increases the risk of flooding, and relies on a road that may not even be financially viable. There is no evidence that this road can be funded or delivered on time—yet the housing is being pushed forward regardless. This level of growth, delivered this quickly, without guaranteed infrastructure, is destabilising, unsustainable, and undeliverable. It threatens our farmland, our environment, our roads, our safety, and the identity of Backwell itself. Once this begins, we cannot reverse it. For the sake of our community and it's access to already-stretched services, our food security, and the future of our village, I deem this pre-submission plan to not be sound.			
62560257	Brian Rees		Retired	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	RESPONSE TO THE NSC 19 LOCAL PLAN 2041 The 2041 Plan is fundamentally flawed as it fails to adequately consider the negative impact it would impose upon Backwell as a community. No doubt many respondents to this proposal will enumerate the same concerns, albeit with different emphases. However, it is difficult to avoid the central issues that threaten the very existence of this beautiful village, and indeed the neighbouring town of Nails. No infrastructure to support such a large development. There is no detailed costing visible to support such a wide-ranging proposal.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								There appears to be no detailed SWOT analysis available that would at least provide some assurances that the whole Plan has been given a detailed and considered assessment, with actions in place to address the key points emerging. The existing Backwell infrastructure, in terms of population capacity, basic services availability and transport integration, is already inadequate and overstretched e.g. Backwell Railway Station. Since the village is basically a commuter hub for Bristol and Weston-Super-Mare, to significantly increase the population would certainly lead to overloading. The outline proposals for a new road seems to give no consideration to the extremely heavy, and fast moving traffic, that is already a negative feature of the Station Road connection between Nailsea and Backwell. This road is already overcrowded and a danger to those commuters, including children, who need to use the narrow pavements to go to and from their destinations. For such an ambitious road scheme to be safe, the whole transport infrastructure between the two villages would need to be re-examined and modified. This would be extremely expensive and there is no indication that any thought has been given to this problem. In conclusion, it would appear that a woeful lack of consideration has been given to the overall impact that this Plan would have on services support, transport implications, quality of life for residents, ecological disruption and future wellbeing of Backwell Village, a vibrant community now under significant threat. Brian Rees FCIPS Bucklands Grove			
51242657	Rubix Strategic Limited	Arwel Evans - Lichfields	Rubix Strategic Limited	Yes		Yes	No			Policy SP3 sets out the spatial strategy for development in North Somerset. It introduces the four strategic development options, which includes Nailsea and Backwell. Rubix is supportive of the Plan's spatial strategy to prioritise locating strategic new residential and mixed-use development in or close to urban areas where there are existing or proposed facilities, services and jobs, as well as opportunities for active travel and public transport. The key evidence base document for Policy SP3, 'Spatial Strategy, site selection and Capacity paper' (October 2025) confirms that Nailsea and Backwell is identified as one of four strategic locations across North Somerset where significant levels of growth are proposed. Under Policy SP8 Nailsea and Backwell is expected to provide 3,728 dwellings, which amounts to 15% of the proportion of housing supply. Rubix welcomes the identification of Nailsea and Backwell as a strategic location for growth in North Somerset. Whilst the strategic location requires the release of some Green Belt land, we consider that as one of the most sustainable locations in North Somerset, with Nailsea being one of the main towns and the village of Backwell having an extensive range of essential services, the allocation of the area as a strategic location for growth and development is evidently justified. Nailsea and Backwell is a strategically significant urban area due to its proximity to Bristol and the presence of transport links such as the A370 and the Nailsea and Backwell Railway Station. The railway service provides links to Yatton, Weston-super-Mare and Exeter to the west and Bristol Temple Meads and Cardiff to the east. The area is also well served by frequent bus services which provides direct links between Weston-super-Mare, Congresbury, Backwell and Bristol City Centre. In addition, there are ample services and facilities available within Nailsea and Backwell including local shops, Backwell Leisure Centre, Backwell Secondary School, Fairfield Primary School and a Local Nursery. These facilities and services are all within walking distance of the Rubix site – Land east of Backwell. The land east of Backwell therefore is well located to major employment hubs, facilities and services which are accessible via a range of travel modes. We agree with NSC's assessment that as one of the main urban areas, Nailsea and Backwell is an appropriate location to accommodate significant growth. We agree that green belt releases are necessary to achieve this. Rubix and Mactaggart and Mickel ('Mac Mic') are in joint control of Land East of Backwell, which policy LP3 has identified as having an indicative capacity of 889 dwellings. Rubix control the land to the north, south and west whilst Mac Mic controls the land to the east. The Rubix site has capacity for circa 400 dwellings alongside associated infrastructure. The Land East of Backwell as a whole provides a logical extension to Backwell, is sustainably located and is deliverable. Importantly, the site presents the opportunity to provide significant benefits for the existing

										community including amongst others the provision of a much-needed link road from the A370 to Station Road, land for a new primary school, extension and improvement of existing active travel routes, the provision of sports pitches and a Neighbourhood Equipped Area for Play, Public Open Space and the provision of a mobility hub. Whilst we support the strategic location of Nailsea and Backwell and the allocation of Land East of Backwell in principle, we object to some of the requirements outlined in Policy LP3 and Schedule 1. These are addressed in separate representations under Policy LP3.	
62805793	Paul Reid			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell already has 800 new houses approved, a 40% increase for the village. These additional numbers would lead to complete overdevelopment and near doubling of the size of Backwell. There are no credible plans for infrastructure to support such a massive increase in size of the village. There are limited employment opportunities in Backwell, so increase in traffic to support commute into (mainly) Bristol would cripple and already struggling road system. The proposed road would not effectively serve Nailsea's traffic or relieve congestion on Station Road, Despite this increase, there is a deficit in school places and no investment in health services or leisure facilities. The lack of infrastructure and services cannot support another 1,000 houses. Backwell is allocated a higher number of houses than any other village in North Somerset, and even a higher growth percentage than towns. Backwell is expected to take 7% of the district's housing allocation, compared to Clevedon's 2%. Development would destroy valuable wildlife habitats and further harm biodiversity in one of the world's most nature-depleted countries. The Infrastructure Delivery Plan lacks analysis and costings, and there are no funding guarantees for the new road or services. Backwell Common and surrounding areas are prone to flooding, which would be aggravated by more housing. Backwell Lake (Reservoir) and adjacent fields, where the new roads and housing is planned are on a floodplain, which floods regularly. The sheer volume of growth with the required investment infrastructure and services over such a short period is destabilising, unsustainable and undeliverable. The railway station is not fit for purpose as a transport hub; it remains inaccessible for people with mobility issues and presents serious challenges when travelling with young children.			
58577601	Ruth Revell			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell already has 800 new houses approved, a 40% increase for the village. These additional numbers would lead to complete overdevelopment. The local services don't have enough access for multiple developments, the local shops (a drive away from the these developments) barely have enough parking for current resident volumes, the same goes for for the local GP practice and pharmacy which has no car park park, and only 2 spaces outside. There is no local community centre. The proposed road would not effectively serve Nailsea's traffic or relieve congestion on Station Road, Backwell Common, or Chapel Hill. Engineering the road under or over the railway would be highly expensive and possibly unfeasible. Despite this increase, there is a deficit in school places and no investment in health services or leisure facilities. The lack of infrastructure and services cannot support another 1,000 houses. Backwell is allocated a higher number of houses than any other village in North Somerset, and even a higher growth percentage than towns. Backwell is expected to take 7% of the district's housing allocation, compared to Clevedon's 2%. There is no needs or viability analysis for an extra 1,000 houses. Backwell is not an employment hub, most residents commute. The train station cark park if often full, many illegal car parking companies use this car park for airport parking. There is no easy bus link to the station which is regular enough for commuters. How will people easily get to the train station? No social cohesion impact assessment has been provided. Grade 1 Agricultural Land currently used for food crops and grazing. There is only 7% of this high quality land left in the whole of North Somerset. Government policy states that "we must protect our best and most versatile land" to safeguard food security. The proposals contradict this policy and undermine food security. Development would destroy valuable wildlife habitats and further harm biodiversity in one of the world's most nature-depleted countries. The proposals threaten the Brockley Maternity Roost and SSSI, with rare Lesser and Greater Horseshoe Bats relying on the land for food. The Infrastructure Delivery Plan lacks analysis and costings, and there are no funding guarantees for the new road or services. Backwell Common and surrounding areas are prone to flooding, which would be aggravated by more housing. Concerns regarding the strategic growth location designation include the impact on the area's character, the loss of Greenbelt and high-quality agricultural land, the risk of flooding, and uncertainty over whether the road can be funded and delivered on time to support the proposed housing. Backwell Lake (Reservoir) and adjacent fields, where the new roads and housing is planned, are and are on a floodplain, which floods regularly. Government policy requires 50% affordable housing on Greenbelt Land, but this reduces the funds developers contribute towards infrastructure. The sheer volume of growth with the required investment infrastructure and services over such a short period is destabilising, unsustainable and undeliverable. The railway station is not fit for purpose as a transport hub; it remains inaccessible for people with mobility issues and	Revise the plans and reduce sites in Backwell.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								presents serious challenges when travelling with young children. There is also often lack of free parking spaces due to people using it for airport parking.			
62854465	Adam Reynolds			No	• Justified • Effective	Unsure	Unsure	Land East of Backwell adjacent to Backwell common Inadequate roads. access is via a single width lane, which are quiet routes, heavily used for cycling, walking, running to access the cycle path and school. These we no longer be safe to use with both the construction traffic and additional cars on the roads. There are flooding issues with the fields listed and Backwell common and Backwell bow roads regularly flood when there is heavy rain. Building on this flood plain will also impact the existing homes in the elms and Trendlewood areas. There have been water pressure issues with the building of additional homes in both Backwell and Nailsea which resulted in no water in 2024 across Nailsea and Backwell and then in 2025 regular local issues in Backwell common area. There are already severe parking issues in Backwell on the roads and the leisure centre where the car parks cannot cope with usage. The facilities have not been updated since they were built and are at capacity. Without investment in infrastructure, you are just building homes on the edge of a village where the occupants will have to drive into Bristol for work and leisure. The planned development doesn't consider the need for additional public transport options to deal with the increase in number of homes. Specifically, the buses that service the train station is limited and there is only a finite number of car parking spaces in the railway carpark. With no jobs locally it will increase traffic on roads and up to an additional 8000 more cars for the 4000 planned new homes across Nailsea and Backwell. When there have been issues with the motorway closures this results in gridlock in Nailsea and Backwell. At peak times there is heavy queuing at junctions for all local roads. In regards to access the site and increase in traffic, all the roads in and out of Nailsea and Backwell common are narrow roads and have multiple pinch point which will restrict access for large vehicles and hight volumes of road traffic to the area. The single lane railway bridges on station road and chapel hill and the narrow bends at Tickenham and Wraxall. Traffic planners for the BSIP project have noted the Backwell roads crossroads is at capacity and this will proposed development will add more cars onto the roads. The proposed access road between the A370 and Backwell lake is not achievable on cost and practical grounds. The specific field is regally flooded and station road could not cope with the extra traffic so close to the station. Recently there was a tragic death in station close due to the poor road layout and heavy traffic. This ignores that the train line runs through the planned, route it is a main line to the entire south west. Network rail own the land either side of the train line and will not be supportive as any works adjacent to the train line as you will be aware from the winter stoke bridge works in weston. Also network rail have indicated due to cost and impact they expect bridges over the railway line not under. Given your unlikely to ever be able to build a new access road and ignoring the cost is equivalent to the Portishead railway reopening e.g. £70M at least, who is going to pay for this and not make any changes to the existing unsafe road layout. Specifically as there have been at least two serious pedestrian accidents on station road in the last two years, any additional vehicle traffic will be dangerous as this is main route for commuters to walk, cycle to the train station and backwell school. A370 junction is already at capacity and you have already added 1000 homes to Backwell and a further 1000 and more in Nailsea with these plans. To summarise the plans do not adequately address the flooding concerns, impact to existing transport infrastructure and the impact of the heavy vehicles on the roads and then the impact once the homes are build on the civil infrastructure, e.g. parking, schools and healthcare, e.g. GP surgeries and dentists.	Work with local town councils and residents rather than central weston planning comities who don't know the area's that are being developed on and the impact on citizens in the towns effected.		Land East of Backwell adjacent to Backwell common.pdf
14394785	A Ribbon-Miles			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	We already have 800 houses approved for construction in Backwell which is a 40% increase with no new services or amenities planned. This is already overdevelopment in my view and another 1000+ houses would be complete overdevelopment for this village (the clue is in the title 'village'). Such rapid growth would lead what is a lovely community to struggle. No social cohesion impact assessment has been provided to prove otherwise. The area being put forward is grade 1 agricultural land of which there is not a huge amount left in North Somerset! What will we do to feed ourselves when the next covid crisis comes along or another war overseas impacts food importation? As a country we need to be able to feed ourselves. This is without even looking at the destruction of wildlife habitats for local flora and fauna and further harm to biodiversity in the area. Nature and being able to walk in the countryside were again things that we learned during the covid pandemic that were a huge help to people's mental health. We destroy these places at our peril. Backwell is a village of commuters and not an employment hub. None of these developments have done anything to create jobs or places or work they are just adding to the traffic on already overburdened roads such as Station Road and the A370. On 1 December the M5 was closed due to a fatality and this meant that the A370, Station Road, Dark Lane and all roads throughout Backwell were gridlocked for several hours. The A370 cannot cope with more traffic at the best of times and Station Road is a route that hundreds of children use each day to walk to the local schools and is already dangerous for pedestrians with large lorries using it. I repeat my comment from earlier that no developer is suggesting they stump up the cash for new roads and there appears to be no money coming from anywhere central to fund these pie in the sky ideas so we will be left to rely on the current creaking network of roads and bus and train services.			
62773633	Marcus Ribbon-Miles			No	• Positively prepared • Justified • Consistent with national policy	Unsure	Unsure	I attend Backwell School and do not understand why there is a suggestion to build here on Grade 1 agricultural land. We need to be able to feed ourselves now and in the future. Please do not allow this to go ahead and destroy this ability! We have all seen the impact of the geopolitical world on food imports and exports and scarcity needn't happen in this country if we safeguard our farmland. I am also concerned for the wildlife that inhabits these fields and hedgerows and the bats that also use these fields to forage over. The knock-on effects for local biodiversity is awful. Backwell is already allocated 800 new houses which will have a huge impact on the community in a massive scale and there has been no agreement to improve services or money put forward by the developers to create a useful bypass (which would actually need to rnu from Lond Ashton to the North of Nailsea to benefit the area). I walk along Station Road every day to school and it is already dangerous. I have seen lots of friends have near misses with cars and lorries. Please do not approve any more building for Backwell. We have got more than our fair share of new houses.			
62814241	Jemima RM			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I do not understand why there is a suggestion to build here on Grade 1 agricultural land. We need to be able to feed ourselves now and in the future. We have all seen the impact of the modern geopolitical world on food imports and exports (war in Ukraine and Covid pandemic) and we need to safeguard our farmland to prevent scarcity. I am also concerned for the wildlife that inhabits these fields and hedgerows and the bats that also use these fields to forage over. The knock-on effects for local biodiversity will be awful. Not to mention the degradation of the green spaces we realised were so important for mental health during the pandemic. Have we already forgotten that? Backwell is already allocated 800 new houses and Nailsea many hundreds more which will have a huge impact on the local community on a massive scale and there has been no agreement to improve services or money put forward by the developers to create a useful bypass (which would actually need to run from this end of the Long Ashton By Pass to the North of Nailsea to benefit the area). I walk along Station Road every day to school and it is already dangerous. I have seen lots of friends have near misses with cars and lorries. Please do not approve any more houses for Backwell. We have got more than our fair share of new houses.			
30361825	K Riches			No	• Positively prepared • Justified • Effective	Unsure	Unsure	Backwell is a Village and a Parish; it is wholly wrong to treat it as part of a Strategic Development Location. Backwell already has four approved development sites, which will result in a 40% increase in the number of houses. All of these are outside the existing Settlement Boundary. Any further new allocations should be considered in the context of the growth already coming to Backwell.	The proposed allocation of Land East of Backwell should be re-examined and further consideration should be given to other more suitable sites elsewhere.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					‣ Consistent with national policy			The new proposed allocation ‘Land East of Backwell’ (EB) would bring a further 900 (approx) houses; this is development on a totally inappropriate scale for a Village. Development on this scale would have a significant adverse impact on the social cohesion and character of the Village; this has not been addressed in the draft Local Plan. EB is Contrary to SP3 and SP6 and there has been no needs analysis to confirm that the Village of Backwell needs all these new houses. The allocation is NOT Sound. The Local Plan proposes to take this large site out of the Green Belt; it is all designated Grade 1 Agricultural Land. The Government is seeking to retain BMV to assist with Food Security. In the Supporting Document ‘Best & Most Versatile Agricultural Land Topic Paper Oct 25’ (BMV), the only justification provided for using this BMV is that without it the new road across the site would not be deliverable. Very curious logic and NOT Sound. The proposed new road from Station Road (near the station) and the A370 would in itself have a serious negative impact on the character and setting of Backwell Common in the Green Belt. Proposed development for housing, employment and other infrastructure would contribute hugely to this negative impact. The utility of the proposed road is questionable and it would have to cross the railway which is on an embankment surrounded by land which is often very damp. The technical and financial feasibility of this proposal, in a suitable timescale, is NOT established in the IDP or Strategic Transport Assessment. It is NOT Sound planning. Backwell is blighted with too much, ever increasing traffic. The scale of proposed development will obviously exacerbate the situation. I cannot see any likelihood of the proposed road being built in a suitable timescale, but even if it were to be built the impact of so much development would swamp any minor improvements brought about by the new road. Although Schedule 1 and the IDP acknowledge the need for improved Health, Education and Leisure facilities at Backwell they offer nothing more than a ‘wish list’. Flood risks across this area have yet to be properly assessed. Existing risks will be increased by proposed large scale development. Development of EB would have a serious, negative impact on wildlife in the area, with large scale loss of habitat and wildlife. North Somerset Council considers Backwell to be a sustainable village in large part due to Nailsea and Backwell Station. However the station has restricted access (stairs only) to one platform, and both platforms are too short to accommodate anything more than short trains. These are serious constraints making the station unsuitable to be a proper transport hub. EB is contrary to many of the excellent Policies in the draft Local Plan, including: SP1, SP3, SP6, SP11, LP3, DP53.			
29285601	C Riches			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell already has development sites which will result in an increase in housing numbers of 40%. A further 1000 new houses is a higher growth percentage than any other town or village in North Somerset and would completely destroy the character of the village community and overwhelm infrastructure. There has been no needs assessment for these houses, and Backwell is not an employment hub. The A370 is already a very busy road, and is one of the few alternative options when the M5 is shut. Further building on the scale proposed will seriously exacerbate the volume of traffic using the road. The narrow local lanes cannot safely take more. The proposed cross rail road would just move traffic congestion on to the A370 at a different point and is a very costly and possibly unfeasible project which is unlikely to be completed before housing development. Constructing it retrospectively would present further challenges in terms of the land required. The land is Grade 1 agricultural, and proposals to build on this limited resource goes against Government policy. The plan gives little consideration to agriculture and associated employment in North Somerset. We need to retain our best quality land for agricultural/horticultural use, and to manage it effectively for the food security and biodiversity of this nature-depleted country. Our railway station is not fit for designation as a transport hub. In spite of campaigns over the past twenty years it remains inaccessible for those with mobility issues and challenging for those with small children or bikes. More housing would further aggravate flood risks in the area which is very close to the floodplain. I consider the proposed allocation of Land East of Backwell to be contrary to many of the priorities and policies laid out by North Somerset and as such, unsound.			
18202785	Julian Ridge		Manor Farm Deer	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Summary of Key Objections Over-concentration of development in Backwell and Nailsea, far beyond what existing infrastructure can support. Severe transport and traffic implications for Brockley, especially on the A370, Brockley Combe and rural lanes already under strain. Loss of Green Belt, high-quality agricultural land and valued countryside, undermining settlement separation and harming the rural character that Brockley relies on. Lack of credible, funded infrastructure commitments—highly concerning given the scale of growth proposed. Disproportionate burden of housing numbers on a small cluster of villages, while better alternatives and brownfield locations exist elsewhere in North Somerset. Detailed Objections Scale of Development is Unreasonable and Unsustainable The draft Plan proposes approximately 3,700–4,000 new homes across the Backwell–Nailsea area. This represents the largest single concentration of new housing in the district’s rural settlements. Backwell alone is projected to almost double in size, representing a dramatic and irreversible change to the settlement pattern and landscape setting of neighbouring parishes such as Brockley. Such a concentration is not justified when: it conflicts with historic settlement hierarchy, it contradicts previous village-scale planning (e.g., the Backwell Neighbourhood Plan), and the sites are predominantly greenfield or Green Belt, rather than regeneration-led.	As a Brockley resident, I request that North Somerset Council: Remove or significantly reduce the large-scale allocations around Backwell and Nailsea. Retain Green Belt and high-grade agricultural land, particularly in areas serving as landscape buffers between settlements. Rebalance development across the district, prioritising brownfield regeneration in urban centres. Provide a clear, costed and committed infrastructure plan that must be delivered before major housing growth is permitted. Protect rural parishes such as Brockley from disproportionate impacts on traffic, landscape, services and environmental quality.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								This scale of change will inevitably spill environmental, traffic and service impacts outward into adjoining communities. Severe Transport Impacts on Brockley Brockley is situated on key commuter routes between Backwell, Nailsea and Bristol Airport. Even at current levels, the A370, Brockley Combe Road, Chelvey Road and surrounding lanes are heavily used, often congested, and already suffer from safety issues. The Plan does not adequately demonstrate: how thousands of new peak-hour car movements will be absorbed, where road capacity improvements will occur, how rural lanes will be protected, or how public transport will be upgraded reliably and at sufficient scale. Increased traffic from Backwell and Nailsea will inevitably funnel through Brockley, including short-cutting and diversion during congestion. This will worsen: vehicle pollution, road safety risks on narrow rural lanes, pressure on Brockley Combe (already an accident hotspot), and noise and disturbance affecting residents and the local environment. Without guaranteed, funded mitigation, this is not an “effective” plan under NPPF definitions. Loss of Green Belt, Farmland and Rural Character The draft Plan proposes to release large areas of Green Belt and high-grade agricultural land around Backwell and the valley approaching Brockley. This directly conflicts with national policy that Green Belt should only be released in exceptional circumstances—and no such justification has been convincingly demonstrated. Impacts include: erosion of the countryside that defines the identity of Brockley as a rural village; loss of the environmental buffer between Nailsea, Backwell and the Chew/Brockley valleys; increased risk of future coalescence of settlements; damage to wildlife habitat and ecological corridors that run through the valley and up towards Brockley Woods and the Combe. For Brockley, maintaining the rural setting and the open landscape gap to neighbouring communities is critical. The Plan does not safeguard this. Infrastructure Promises are Not Credible or Guaranteed The draft Plan provides no firm, costed, or deliverable infrastructure package to accompany the thousands of new homes proposed. There is no clear commitment or timeline for: highway improvements, investment in local schools, health facilities, public transport enhancement, cycle/pedestrian connectivity between villages. Without enforceable mechanisms (e.g., legally binding S106 obligations or masterplans with guaranteed funding), the proposals risk the familiar pattern of “build the houses first, infrastructure later (or never)”. This is a major risk for both Brockley and Backwell/Nailsea residents. A Local Plan cannot be considered “sound” without a credible evidence base demonstrating infrastructure delivery. Unfair Burden on One Area of North Somerset The Plan places a disproportionate share of the district’s housing in the Backwell/Nailsea area, with secondary impacts on villages like Brockley that have: no services to support growth, no capacity to absorb extra traffic, no desire for urban expansion, and a strong established rural character. North Somerset should pursue a brownfield-first strategy, distributing necessary growth to areas with: public transport hubs,			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								existing employment centres, brownfield sites suitable for regeneration, established infrastructure capacity. This would be more equitable, sustainable and consistent with national planning aims.			
39376225	Ruth Roberts			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I object to the proposal to allocate 889 more houses to Backwell for the following reasons. 1. 794 new houses are already approved for Backwell – a 40% increase. The extra 889 houses would take the total increase to approximately 80%. This is complete overdevelopment without investment in infrastructure and services. 2. The Infrastructure Delivery Plan lacks analysis and costings and there are no funding guarantees for the new road or services. 3. Building the proposed new road under or over the railway would be extremely expensive and possibly unfeasible. 4. There are few employment opportunities in Backwell so residents need to travel for their jobs. Although there are rail and bus services not everyone can reach their employment using these services so many people need to use their cars and this will add significantly to the current local traffic congestion. 5. The land is Grade 1 Agricultural land currently used for food crops and grazing. There is only 7% of this high quality land left in the whole of North Somerset. Government policy states that “we must protect our best and most versatile land” to safe guard food security. 6. The land is prone to flooding which would be exacerbated by the proposed housing. 7. The railway station is inaccessible for people with mobility problems.			
62832033	Ceridwen Roberts			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I am a local Backwell resident and a disabled wheelchair user. I already struggle with accessibility, traffic, and limited local services, and I rely heavily on functioning community infrastructure. I am deeply concerned that the Backwell Local Plan proposals do not reflect the lived reality of people like me, nor the limits of what our village can reasonably cope with. I am submitting the following comments in the hope that the council will reconsider the scale, pace, and location of development planned for Backwell 1. Overdevelopment Backwell already has around 800 new homes approved — a 40% increase. Adding another 1,000 homes would overwhelm the village and completely change its character. The increase in development and population will inevitably impact upon on the security of Backwell residents, particularly for those with disabilities and mobility issues. We are especially vulnerable. 2. Road proposals are inadequate and unrealistic The new road would not ease congestion on Station Road, Backwell Common, or Chapel Hill. I already experience delays that make daily journeys difficult as a wheelchair user. Engineering a road under or over the railway is likely to be prohibitively expensive and possibly unachievable. 3. Severe lack of infrastructure There are already too few school places, and no investment has been made in GP services or leisure facilities. Disabled residents are particularly affected by lack of services. Infrastructure simply cannot support another 1,000 homes. 4. Disproportionate burden on Backwell Backwell is being asked to take more new housing than any other village in North Somerset — even proportionally more than the towns. Backwell’s share (7%) compared with Clevedon’s (2%) is unjustifiable. 5. No evidence of need or viability There is no needs assessment or viability study demonstrating why Backwell should accommodate this extra development. 6. Backwell is not an employment centre Most residents commute, increasing traffic and congestion. More houses here simply push more people onto already overstretched transport routes. 7. No social cohesion impact assessment There is no assessment of how such a sudden population increase will affect community life and integration. The increase in development and population will inevitably impact upon on the security of Backwell residents, particularly for those with disabilities and mobility issues. We are especially vulnerable. 8. Loss of Grade 1 Agricultural Land The proposed site includes Grade 1 land used for food production. Only 7% of North Somerset’s land is this quality. Once built on, it cannot be replaced. 9. Contradiction of national food security policy Government guidance requires protection of “best and most versatile” land. This proposal directly undermines food security. 10. Harm to wildlife and biodiversity Development would destroy valuable habitats in a country already suffering severe biodiversity loss. 11. Threat to protected bat species and SSSI The Brockley Maternity Roost and surrounding SSSI rely on this land for feeding. Lesser and Greater Horseshoe Bats are endangered and should be fully protected. 12. No credible Infrastructure Delivery Plan The plan has no proper analysis, costings, or guaranteed funding. Without firm funding commitments, the claimed infrastructure is speculative. 13. Flood risk will increase Backwell Common and surrounding land already flood. More development will worsen this, putting homes and vulnerable residents — including disabled people — at risk. 14. Strategic growth location concerns The designation ignores impacts on village character, loss of Greenbelt and agricultural land, flood risks, and doubts about whether the road can be funded or delivered. 15. Building on a floodplain near Backwell Lake The fields around Backwell Lake flood regularly. Building homes and roads here is unsafe and unsustainable. 16. Affordable housing on Greenbelt reduces infrastructure funding Requiring 50% affordable housing on Greenbelt reduces developers’ contributions, leaving Backwell with more residents but fewer resources. 17. Pace and scale of growth are unrealistic Delivering this level of development and the required supporting infrastructure in such a short period is destabilising, unsustainable, and likely undeliverable.	For all of the reasons above, I object to the proposed Backwell Strategic Growth Location and the allocation of an additional 1,000 homes in Backwell. The plan is not deliverable, is not supported by evidence, and will significantly harm the community, infrastructure, environment, and accessibility for disabled residents like myself. I specifically object to: • The excessive housing allocation in Backwell. • The loss of Grade 1 agricultural land and Greenbelt. • The absence of credible infrastructure funding or delivery plans. • The unacceptable flood risks. • The impact on wildlife, protected species, and biodiversity. • The lack of accessibility improvements to Backwell Station. • The disproportionate burden placed on a village that is not an employment centre and already overstretched. I urge the council to reconsider this allocation and to adopt a more balanced, evidence-based, and sustainable approach to future development.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								18. Backwell Station is not accessible As a wheelchair user, I cannot use Backwell Station independently. It is not fit for purpose as a transport hub and should not be relied upon to support large-scale development.			
62812289	Margaret Rogers			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell already has 800 new houses approved and additional development East of Backwell will lead to over development There is not enough school places and there is no investment in additional GP Services or leisure facilities the lack of these services and infostructure cannot support another 1,000 houses The Government states that we must protect our best land to protect food security these proposals undermine food security Backwell common is prone to flooding which more housing will make worse The railway station cannot be considered a transport hub as it is inaccessible for people with mobility issues such as myself	No	No	
9072129	Michael Rose			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure		- Lack of employment allocation inn the vicinity of adjoining residential. - The proposed link road is unfunded - and there is no definite plan as to how it could be,. Without this road, the implications on nearby existing roads -notably Station Road would be disastrous - Develooment of this land would remove a crucial (nearly the last in North Somerset) acreage of good quality agricultural land -contrary to LP aspirations..			
62774209	A Round			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I believe the plan is unsound, for the following reasons: 1. Recent developments have seriously damaged the village. Further development will ruin it. 2. Connection with Nailsea is essential for housekeeping purposes. There is already serious congestion in Station Road; the proposed developments will make connection frequently impossible. 3. There are large numbers of elderly residents. Any increase will put serious strain on medical etc. facilities 4. It is not explained why all these houses should be built here, and not elsewhere in North Somerset.. 5. Most employees commute to work. Any substantial increase will cause further, unmanageable, congestion on road and railway. 6. Development will seriouly reduce agricultural land availability, and damage wildlife habitats.			
50931073	Andrew Rowland			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	No	I strongly object to this proposed development. This proposed development is not in accordance with Government Policy regarding The Green Belt. The new road planned for Backwell Common from Station Road would be built on and next to the flood plain. Indeed there is no Infrastructure plan for this road. The areas that already flood on a regular basis here would expand with runoff from the road and the housing planned. This road and tunnel is unfunded, the crossing of the railwayline is a major progect infrastructure needing tens of millions of pounds investment including an underpass being built below the water table. This road is being used as a developers means of access which they will not build. This means it is totally unfeasable unless funded properly prior to planning being given for the housing it would service. This road will not help congestion on Chapel hill, Backwell Common which would would become a dangerous single track ratrun if the under rail road is not built. Backwell already has 40% increase in housing already given permission, this extra 1000 houses is over development, the infrastructure for them is not provided for in the plan. Schools, Health facilities or leisure facilitys. You have not provided a needs or viability study for the extra 1000 houses. Backwell is not an employment hub, most working people would commute adding to the traffic issues that already exist here and into Bristol. No social cohesion plan has been provided. The land proposed for development in Backwell uses Grade 1 agricultural land in the Green Belt which is not in accordance with Government policy. North Somerset has only 7% of Grade 1 agricultural land left which is a shocking statistic. As current policy 50% of new housing in the Green Belt has to be social housing which does not fund any infrastructure, this would therefore fail to provide the necissary funding for critical needs, the railway sation is not fit for pupose (no disabled access or acces for young children), roads system would not cope with this massive development and is therefor unfeasable and unfunded. Please also find just a few photos of the flooding issues on Backwell Common. One shows flooding to the area of the proposed new road and another where the under rail tunnel would be.	Noth Somerset need to be compliant and prove that funding is available for the new road and other critical infrastructure. North Somerset need to provide a full flood risk assesment for the affect all this development would have on the flood plain. Attached is the previous extract from NSC flood risk assessment which identified this area as a significant flood risk area.	This policy must comply with Government policy law. It currently does not for the reasons I have set out in the box above. It must prove that the Roads detailed are funded and will be in place prior to the development completion and will by study be adaquate for the local population.(unresolved highways capacity conditions following funding issues). Reasonable alternatives have been exhausted.	Flood5.html IMG_5973.png
39205377	Frances Russell			No	‣ Consistent with national policy	Unsure	Unsure	The proposed development would take Grade 1 agricultural land which would be in conflict with Paragraph 187(b) of the NPPF which protects best and most versatile land. The proposed development would have potential adverse impacts on the Brockley Hall Stables SSSI, part of the North Somerset and Mendip Bats SAC, which would be in conflict with Paragraph 193 of the NPPF. There is no funding secured for the Cross Rail Link road, which is likely to be so expensive as to be not capable of being funded by the development. Without the Link road congestion on Station Road will be unsustainable. Nailsea and Backwell railway station has short platforms and no additional capacity. The station is not accessible for use by disabled people. Overall, the development would be in conflict with paragraphs 109 - 111 of the NPPF which promotes sustainable transport.	If additional housing is required, then sites should be identified on brownfield land. If the land is to come forward for development, then finding needs to be guaranteed for the Cross Rail link road, and for it to pass under, rather then over, the railway line. Improvements should be made to Nailsea and Backwell railway station.		
62850689	Simon Russell			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I consider the North Somerset Local Plan 2041 to be not sound, not legally compliant, and not in compliance with the Duty to Co-operate for the following reasons: 1. The Plan is not justified The allocation of up to 1,000 additional homes on Grade 1 agricultural land at Backwell East is not supported by any robust evidence. This land is among the highest quality agricultural land in the country and its loss contradicts national policy to protect our most productive farmland. No alternative locations of lower environmental and agricultural value have been properly assessed. 2. The Plan is not effective There is no deliverable infrastructure strategy to support this level of growth. • No funded or designed transport solution exists for the proposed relief road. • No confirmed investment in school places, healthcare, drainage, or utilities is provided. • The Infrastructure Delivery Plan lacks costings, timelines and delivery mechanisms. Without infrastructure, the development cannot be implemented, making the Plan ineffective. 3. The Plan is not consistent with national policy	To make the North Somerset Local Plan 2041 legally compliant, justified and sound, I believe the following modifications are required: 1. Remove the allocation of 1,000 homes on Grade 1 agricultural land at Backwell East This land is among the highest quality agricultural land in the district and should be excluded from the housing allocations. The Council must reassess alternative sites of lower environmental and agricultural value in accordance with national policy. 2. Provide a fully evidenced and costed Infrastructure Delivery Plan	While I have significant concerns about the overall soundness and legal compliance of the North Somerset Local Plan 2041, there are some elements of the Plan that I recognise as positive or broadly appropriate. 1. The strategic need for a Local Plan I support the principle of preparing a new Local Plan to ensure North Somerset has an up to date planning framework. Having a clear and adopted Plan provides greater certainty for communities, developers and decision makers, and helps protect the district from speculative development. 2. Recognition of housing needs across the district I support the intention to meet long term housing	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								National planning policy requires councils to protect high quality agricultural land, safeguard biodiversity, reduce flood risk and ensure sustainable development. The proposals for Backwell East: • Remove around 50 hectares of Grade 1 agricultural land • Increase flood risk on Backwell Common and the land surrounding Backwell Lake • Impact sensitive ecological areas including habitats for protected bat species • Deliver large scale growth without supporting infrastructure This is inconsistent with NPPF requirements for sustainable and environmentally responsible development. 4. The Plan is not legally compliant The Environmental and Social Impact evidence base is incomplete. There is no social cohesion assessment for Backwell and no clear analysis of cumulative impacts from the 800 homes already approved plus the further 1,000 proposed. The consultation process also appears unclear in demonstrating how community evidence and objections from earlier stages have been incorporated. 5. The Duty to Co-operate has not been met The Plan does not demonstrate effective collaboration with neighbouring authorities regarding: • transport strategies affecting Nailsea, Backwell and regional rail capacity • cumulative impacts on hospitals, GP services and school provision • cross-boundary ecological effects and flood management • regional infrastructure funding There is no evidence of a coordinated approach, particularly around the proposed road solution and its impact on wider transport corridors. 6. The scale of growth assigned to Backwell is disproportionate Backwell is expected to absorb 7 percent of the entire district housing allocation, a higher proportion than towns with significantly greater infrastructure capacity. This is not justified, sustainable or deliverable. Conclusion For these reasons, I consider the Local Plan 2041 not sound, not legally compliant, and not in compliance with the Duty to Co-operate.	The Plan must include: • confirmed funding for transport improvements • a deliverable design for any new road or junction upgrades • the number and location of new school places • commitments from healthcare providers • clear drainage and flood mitigation strategies Without this, the Plan remains undeliverable. 3. Produce a complete environmental and ecological impact assessment This should include detailed surveys of the Grade 1 agricultural land, Backwell Common, Backwell Lake and bat habitats. The outcomes must be reflected in revised allocations and policy wording. 4. Provide a social and community impact assessment for Backwell A full assessment is required to show how the village can support the cumulative impact of 800 already approved homes plus any new allocations. The current absence of this evidence makes the Plan not legally compliant. 5. Rebalance the housing distribution across the district Backwell's 7 percent allocation is disproportionate relative to its size, facilities and transport capacity. A more balanced, sustainable distribution is required, with a clearer justification for growth levels in each settlement. 6. Strengthen compliance with national policy The Plan must demonstrate how it protects high quality agricultural land, reduces flood risk, safeguards biodiversity and ensures sustainable travel. Clearer alignment with the National Planning Policy Framework is required. 7. Demonstrate effective Duty to Co-operate The Plan needs formal evidence of collaboration with neighbouring authorities and national bodies regarding: • transport and rail capacity • education and healthcare provision • ecological corridors across boundaries • regional infrastructure funding This evidence must be published and included in the justification for the growth strategy. 8. Provide a realistic delivery timetable The current timeline is not feasible given the lack of confirmed infrastructure funding. A revised timetable must reflect realistic delivery stages and dependencies. Summary For the Plan to be legally compliant and sound, it must: • remove Backwell East as a housing allocation • provide full and costed infrastructure evidence	needs through a plan led approach rather than piecemeal development. A structured allocation process is preferable to unplanned growth. 3. Focus on sustainable development principles I support the Plan's stated aims to: • encourage brownfield redevelopment • promote active travel • minimise car dependency • protect ecological corridors • improve energy efficiency and environmental standards These aims are appropriate and consistent with national policy. 4. Commitment to consulting local communities I acknowledge the steps taken to engage residents and parish councils throughout the preparation process, including formal consultation stages and public access to evidence base documents. Summary In summary, while I support the overall intention to deliver a structured, sustainable and policy led Local Plan for North Somerset, I do not believe the current proposals for Backwell meet the tests of soundness or legal compliance. The positive elements of the Plan do not outweigh the significant concerns identified in my objections.	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									• protect Grade 1 agricultural land • address environmental and flooding issues • demonstrate Duty to Co-operate • provide a fairer and justified distribution of housing • align with national policy Without these changes, the Local Plan cannot meet the tests of soundness.		
62864321	Etta Russell			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Subject: Formal Objection to the NSC Local Plan - Backwell I am writing to express a strong objection to the proposed NSC Local plan especially in relation to Backwell. The scale, location, and supporting infrastructure for this scheme are wholly inappropriate and pose significant risks to the environment, the character of the area, and the wellbeing of existing and future residents. My concerns are outlined below. 1. Backwell is already under exceptional development pressure, with 800 new houses recently approved—representing a 40% increase in the size of the village. Adding the proposed further allocation would result in complete and unsustainable overdevelopment. 2. The proposed new road would not resolve existing traffic issues in Nailsea or Backwell. It would fail to relieve congestion on Station Road, Backwell Common, or Chapel Hill. Engineering a road across, under, or over the railway would be prohibitively expensive and potentially unfeasible. 3. Infrastructure is already inadequate. There is a shortage of school places and no parallel investment in health services or leisure facilities. Current services cannot support an additional 1,000 homes. 4. Backwell has been disproportionately targeted for growth, being allocated more housing than any other village in North Somerset—and even a higher proportional increase than some towns. Backwell is expected to take 7% of the district's housing allocation, compared with Clevedon's 2%, which is unjustifiable. 5. There is no needs assessment or viability analysis supporting the case for an extra 1,000 houses. 6. Backwell is not an employment hub, and most residents commute. Increasing housing without corresponding employment provision is unsustainable and increases traffic and carbon emissions. 7. No social cohesion impact assessment has been provided, despite the dramatic scale of growth proposed. 8. The development would destroy Grade 1 Agricultural Land, which is currently used for food crops and grazing. Only 7% of such high-quality land remains in North Somerset and should not be sacrificed. 9. Government policy explicitly states that "we must protect our best and most versatile land" to ensure food security. These proposals contradict national policy and jeopardise long-term food supply. 10. The scheme threatens biodiversity, destroying valuable wildlife habitats in a country already recognised as one of the most nature-depleted in the world. 11. The Brockley Maternity Roost and SSSI are at risk, with rare Lesser and Greater Horseshoe Bats dependent on this land for foraging. This development would irreparably damage protected species' habitats. 12. The Infrastructure Delivery Plan is incomplete, lacking analysis, costings, and any guaranteed funding for essential roadworks or community services. 13. Backwell Common and surrounding areas are prone to flooding, and further development would exacerbate this risk. 14. Designation of the area as a strategic growth location raises serious concerns, including loss of Greenbelt and high-quality agricultural land, increased flood risk, harm to the village's character, and uncertainty about road funding and deliverability. 15. Backwell Lake (Reservoir) and adjacent fields lie on a floodplain, where flooding is already frequent. Building roads and houses here is irresponsible and unsafe. 16. Government policy requires 50% affordable housing on Greenbelt land, but this reduces developer contributions toward crucial infrastructure, leaving gaps in funding for vital services. 17. The sheer scale and speed of the proposed growth are destabilising, unsustainable, and undeliverable, given the amount of infrastructure and service investment required. 18. The railway station is not fit for purpose as a transport hub, being inaccessible for people with mobility issues and extremely challenging for families with young children. Expanding housing numbers without improving station access contradicts sustainable-transport goals. _____ In light of the above, I urge you to reconsider the proposals. It is neither sustainable nor justified, and it fails to meet the standards required for responsible planning, environmental protection, and community wellbeing.			
21297505	F Russell		none	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I very strongly object to the proposed NSC Local Plan for Backwell. The scale, location, and lack of infrastructure make this scheme totally inappropriate. On top of the unsustainable and disproportion current building plans approved in the last few years, it further threatens the environment, village character, and residents' wellbeing. Backwell has already approved 800 more new houses—a further 40% increase on what was already a disproportionate and signficant increase. Adding 1,000 more would be completely unsustainable and destroy the essence of village life. Villages thrive on small-scale facilities, one of each for community cohesion, not several of each. Backwell has a close-knit rural community. The council forcing such extreme expansion will erode this identity. Backwell's rural character, defined by green fields with rich biodiversity and open countryside that has never been built on, would be lost forever. Infrastructure is already inadequate: schools are full, health and leisure services underfunded, and no parallel investment planned. Our existing facilities should be better funded for the current community. The proposed road will not solve congestion and may be prohibitively expensive to deliver. Backwell has been disproportionately targeted, taking 7% of the district's housing allocation compared with Clevedon's 2%, without any needs assessment or viability analysis. There are other areas of the UK with far more open countryside that have even less new building than the national average. The percentage here is unfair and unnecessary. There are large areas of brown field areas that should be developed, including old industrial estates, offices and shops now that so many people are working and shopping online from home. No social cohesion impact assessment has been provided, despite the dramatic scale of growth. Backwell is not an employment hub, so more housing means more commuting, traffic, and carbon emissions. The plan sacrifices Grade 1 Agricultural Land—only 7% remains in North Somerset—contradicting national policy to protect our best land for food security. It also devastates biodiversity in one of the world's most nature-depleted countries. The hedgerows and surrounding land are ancient. Every local walk includes some sitings of wildlife including and often deer and types of bird, butterfly, insects and other mammals and living creatures. The nearby lake has otters and wild fowl whose total area is unknown. These fields are home to rare Lesser and Greater Horseshoe Bats and many other species which will be irreparably lost. Once these ecosystems are gone, they cannot be replaced. Flood risk is another major concern: Backwell Common and Backwell Lake lie on floodplains where flooding is already frequent. Building here is unsafe. The Infrastructure Delivery Plan lacks costings, funding guarantees, and clarity on road deliverability. Designating this area as a strategic growth location means sacrificing Greenbelt land and high-quality countryside—an irreversible loss. Affordable housing requirements on Greenbelt land will further reduce developer contributions for essential services. The scale and speed of growth are destabilising and undeliverable. Even the railway station is unfit for purpose—poor	Stop targeting this village.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								accessibility undermines sustainable transport goals. The building will cause more chaos along the busy A370 for years. In short, this proposal is neither justified, nor sustainable. Backwell has been targeted unfairly and the community is unhappy with the extreme and continual bombardment of building on this village. Once our countryside and village character are gone, they are gone forever. Future generations deserve careful stewardship, not reckless overdevelopment.			
62774177	Susan Ryalls			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I strongly object to the possibility of yet more houses being built in Backwell. Currently, you have approved the building of 800 new houses in Backwell. Your decision will result in a 40% increase in the size of our village. That will have a major impact on our existing infrastructure, e.g., the increased access to the A370 and the potential for gridlock and congestion. Your priority now should be the development of new infrastructure and facilities to support our village. The new families, in the new homes you have already approved, will need access to village doctors and other facilities. I am not aware of any plans or funding that is in place for the building and development needed for this increased our infrastructure. Do not approve the building of these 800 new houses.			
62529793	R Snook			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell already has 800 new homes approved, a 40% increase for the village. Additional numbers would be complete over development. The proposed road would not effectively serve Nailsea's traffic or reduce congestion on Station Road, Backwell Common or Chapel Hill. Engineering the road over or under the railway would be highly expensive and potentially unfeasible. Despite the proposed increase there will be no additional school, leisure facilities or health services. The lack of infrastructure services cannot support another 1000 homes. Backwell is allocated a higher percentage of housing increase than any other North Somerset village and an even higher number of percentage growth. 7% of the regions compared to only 2% for Clevedon. There is no needs or viability analysis for an extra 1000 homes. Backwell is not an employment hub, most residents commute. No social cohesion impact assessment has been provided. Grade 1 agricultural land used for crops and grazing. There is only 7% of this land left in the whole of North Somerset. Government policy states 'we must protect our best and most fertile land' to safeguard food security. This is a contradiction of this policy and haram food security. Development would destroy valuable wildlife habitats and further harm biodiversity in one of the worlds most nature depleted countries. The proposals threaten the Brockley maternity roost and SSSI with rare lesser and greater horseshoe bats relying on the land for food. The infrastructure delivery plan lacks analysis and costings, and there are no funding guarantees for the road or services. Backwell Common and surrounding areas are prone to regular flooding, new houses would exacerbate the problem. Concerns regarding the strategic growth location designation include the impact on the areas character risk of flooding, the loss of greenbelt and agricultural land, and uncertainty over the funding for the road. Backwell Lake where the new houses and road are planned is on a floodplain and regularly floods. Government policy requires 50% affordable housing on greenbelt land but this reduces the funds developers contribute towards infrastructure. The sheer volume of growth and requires infrastructure over a short period of time is unsustainable, destabilising and undeliverable. The railway station is not fit for purpose as a transport hub, it remains unaccessible for people with mobility issues and presents serious challenges for those travelling with children.			
62775809	Helen Sackett			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	This land is prime farming land. If things in the world get any worse we have to be more self sufficient. We need our land! Once it’s gone it’s gone. We already have a massive increase of housing in our village. It’s been allocated a higher number of houses than any other village in North Somerset. The government policy says we must protect our best and most versatile land. This country is losing its nature and biodiversity more than most other countries in the world. There is no employment here so people have to commute. The train station is too small, can’t cope with mobility problems or small children. Backwell common and surrounds suffer from flooding. A new road is proposed but there is no detail, plans, feasibility study, coatings or funding and would have a very serious negative impact on Backwell common area. Backwell cannot cope with the sheer volume of growth, it is madness.there are no funding guarantees for the new road or services. This will definitely destroy valuable wildlife habitats. This is grade 1 agricultural land used for food crops and grazing, there is only 7 o/o of this land left in North Somerset. There is no viability analysis for an extra 1,000 houses. There lack of infrastructure and services cannot support this amount of housing. Backwell already has 800 new houses approved this is a 40o/o increase. This is overdevelopment and overwhelming.			
38976161	S Scott			No	‣ Justified			This housing should not be proposed on quality farm land. There is already enough housing planned for Backwell - this is not justified and will totally change the village. The road is already busy enough and the access road is unlikely to be delivered. This should not be happening in green field or green belt land.			
50858497	Malcolm Backwell			No	‣ Positively prepared ‣ Justified ‣ Effective	Unsure	Unsure	Approval has already been granted for 800 houses in Backwell which represents a 40% increase for the village. Under this Plan Backwell is allocated a higher number of houses than any other village in North Somerset, and even a higher growth percentage than some towns. We are expected to take 7% of the district’s housing allocation, compared to only 2% in Clevedon. The growth is not supported by a needs or viability analysis for an extra 1,000 houses and these additional numbers are simply not sustainable in such a small area.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					‣ Consistent with national policy			The Infrastructure Delivery Plan lacks analysis, costings and funding guarantees for the new road or services. Backwell already has a substantial deficit in school places and no investment in health services or leisure facilities. The current level of infrastructure and services cannot support another 1,000 houses and any additional infrastructure would need to be in place before construction commences. The site is located within the green belt on Grade 1 Agricultural Land currently used for food crops and grazing. There is only 7% of this high quality land left in the whole of North Somerset and the land in question is also already prone to severe and regular flooding. Government policy requires 50% affordable housing on greenbelt land, but this reduces the available funds developers can contribute towards infrastructure. Development would destroy valuable wildlife habitats and further harm biodiversity in one of the world's most nature-depleted countries including the Brockley Maternity Roost and SSSI, with rare Lesser and Greater Horseshoe Bats relying on the land for food. Backwell is not an employment hub; the majority of residents commute to Bristol or to nearby towns. The proposed new road would not effectively serve Nailsea traffic or relieve congestion on Station Road, Backwell Common and Chapel Hill. Construction of the road under or over the railway line would prove to be prohibitively expensive and possibly entirely unfeasible.			
18206593	H Shalders		Ms	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Eight hundred houses have already approved to be built in Backwell, a 40% increase in the village. This is pushing the local infrastructure to its limits. Anything further would be a massive overdevelopement. The allocation for Backwell is higher than any other village in North Somerset. It has a higher growth percentage than the towns. Clevedon is set for 2%; Backwell is set for 7%. Further, there is no viability of needs analysis for building an extra thousand houses in Backwell. There is no employment hub- attempts to draw in business have continually fallen flat. Many people commute to work. Addition people commuting by rail is unviable as the rail services are at capacity already. The lines cannot be increased. The services cannot be increased. Additionally, the station is inadequate with disabled passengers travelling from Bristol unable to leave the platform. There has been no social cohesion study in relation to this proposal. A dramatic increase in population with no consideration of this sort risks creating social problems where there were none. North Somerset's agriculture land is varied with only 7% classed as Grade 1. The local plan proposal to build on Grade 1 land in Backwell affects local and national food security. The land is currently framed and stewarded to ensure future productivity. In these uncertain times to use top quality farmland for anything other than farming is a national betrayal and runs contrary to the government's policy statement 'we must protect our best and most versatile land.' This farmland is wildlife rich; a valuable resource in one of the world's most nature depleted countries. The immediate threats are to the Brockey Bat Maternity Roost and SSSI and the Lesser and Greater Horseshoe Bat feeding zones. The existing approvals will bring a substantial increase in road traffic. This would not be resolved by the proposed road across Backwell Common and would be even more meaningless should any further house building be approved. The route of the proposed road is an engineering nightmare, the water table and the elevated railway will drive up the costs into the prohibitive bracket. The above throws into sharp relief the lack of analysis and costings in the Infrastructure Delivery Plan. The land proposed for housing is prone to flooding; not just a few puddles but proper submerging. That the settlement has historically been on higher ground and that lower lying structures have been abandoned is with reason: flood land is a stupid place to build. Concerns regarding the strategic growth location such as the character of the area, loss of Greenbelt, loss of agricultural land, flood risk have not been addressed. The intent for rapid development of such a vast scheme would be destabilising, unsustainable and, ultimately, undeliverable but with significant risk for wreaking mayhem in its failure.	Abandon as unsound.		
58638209	Jane Shearer			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell is allocated a disproportionate number of houses compared to all other villages in North Somerset and towns such as Clevedon. Backwell has been allocated 7% of the 24,495 housing target, yet Clevedon only 2%. We already have 800 new houses approved in Backwell which represents a 40% increase for the village. There has been no investment in health services or leisure facilities to support this increase. An additional 1000 houses over such a short period is completely unsustainable and destabilising. There is no needs or viability analysis for this development. There is already a deficit in school places. There is daily traffic congestion on and around the A370 through Backwell, and the proposed new road would not relieve the congestion on Station Road, Backwell Common, or Chapel Hill. These are narrow roads and lanes, and Chapel Hill is frequently subject to flooding and impassable after heavy rain. The proposed development is on Grade 1 Agricultural Land currently used for food crops and grazing. It is vital that we protect this land to safeguard food security. There is only 7% of this high quality land left in North Somerset which should be protected for future generations. There are also rare lesser and greater horseshoe bats that rely on the land for food. There are concerns that the proposed road to support the new housing development will not be funded or delivered on time. The railway station does not serve those with mobility issues and is very difficult to navigate when travelling with a small child in a buggy. The sheer volume of growth is just not acceptable for a village with such limited services and facilities and will completely alter its existing rural character.			
50916769	A Shearer			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	House building in the Backwell area seems to be moving from reasonable and just about acceptable development into the realms of environmental vandalism. There appears to be no cognition or consideration of the effects of over 1000 more new houses being built in such a small catchment area. 1000 plus new houses will bring at least 2000 people or more into the area. It will probably bring about 2000 cars – allowing 2 per household, a not unreasonable figure. There is little work available locally, so most of these people will be commuting, That will put thousands of extra cars on the road, hundreds more people on to already crowded buses and on to trains already packed to bursting. If 2000 adults or so are brought into the area, there will inevitable be children. Even a conservative estimate of 1000 children will mean a need of 1000 nursery places, then primary, then secondary school places. Where are these going to come from? The 2000 adults and the 1000 children are going to need medical care and dental care. Where is that going to come from? How is the local surgery possibly going to cope? How are the present dental services going to cope? How are the			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								schools going to cope? Where are the extra school places going to come from? Why, also, is Backwell subject to such extensive development when other local places – such as Clevedon, Portishead – are left relatively untouched and unscathed when they would be far better able to handle an increase in population? It is totally disproportionate. Backwell already has had 800 new houses approved – a 40% increase in the village size. Another 1000 new houses on top of that would be an unmitigated disaster. Such development would destroy wildlife habitats, biodiversity and agricultural land needed for food. The proposed new road would destroy the Common and the whole nature and aspect of the area. The proposed site for new housing is prone to flooding. None of this appears to have been taken into consideration. The whole plan seems to be ill-conceived, un-researched and formulated without any thought as to the long term impact and consequences of such extensive and extreme development. As a local resident I most strongly object to it and hope that it will not go ahead.			
18208705	Kate Shields			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I believe the Plan 2041 is not sound, not legally compliant and not in compliance with the duty to co-operate for the following reasons: Backwell is a VILLAGE, not a town. It already has approval for 800 new house which represents an increase in size of 40%. These proposed additional numbers would result in complete overdevelopment of the village. This land is Grade 1 agricultural land. Food security should be a priority nationally, and building on good quality farmland should be avoided wherever possible. We are already far too reliant on imports for food. There is only 7% if this high-quality land left in the whole of North Somerset so every acre is precious and should not be built on. There are alternative brownfield sites. Government policy states that “we must protect our best and most versatile land” to safeguard food security. The proposals contradict this policy and undermine food security. The proposals involve building on greenbelt land. This land was designated as greenbelt to prevent un-checked creep of development into farmland. Backwell is not an employment hub. Most residents commute to Bristol and Weston for work. This would not change with the building of vast numbers of housing – it would just increase the amount of commuters. There is already a deficit in school places, and health services and leisure facilities are not adequate for the current population. These services cannot support another 1000 houses. The road network is at capacity already. Local roads are frequently gridlocked, with narrow country lanes being used as rat-runs. Where there is no pavement, this causes immense danger to pedestrians and cyclists. The proposed new road link would not relieve this congestion – Station Road would still have to absorb huge amounts of extra traffic. There is no funding for the new road link, and the cost to get it under or over the railway would be prohibitive. Backwell Common and Chapel Hill are already far too busy for the size of the lanes. Backwell has been allocated a higher number of houses than any other village in North Somerset, being expected to take 7% of the district’s housing allocation. This is not feasible or sensible in a rural village – development should be focused on the towns where shops and employment are more accessible. Backwell Lake and adjacent fields, where the new roads and housing are planned are on floodplain, which floods regularly. The development would destroy valuable wildlife habitats and harm biodiversity. We need to be preserving these habitats to ensure the future of our native species. Rare species like Lesser and Greater Horseshoe Bats rely on this land for food and the proposals would threaten the Brockley Maternity Roost and SSSI. There has been no consideration for social cohesion and no impact assessment. The Infrastructure Delivery Plan lacks analysis and costings, and there is no funding for the proposed new road or any services. These would most likely be ignored until the local area was at breaking point. The railway station is not fit for purpose as a transport hub for the proposed growth in population. It is not accessible to passengers in wheelchairs or those with pushchairs. In the 21st century this is unacceptable, and yet there is not funding or proposal to rectify this situation. In summary, this proposal represents massive overdevelopment in a rural area where services and facilities are just not suitable for such growth.	Development should be focussed around the towns where services and transport facilities can be centred and were there are employment opportunities.		
62812033	P Shields			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell is a VILLAGE, not a town. It already has approval for 800 new house which represents an increase in size of 40%. These proposed additional numbers would totally destroy the character of the village and represent complete overdevelopment. Food security should be a priority nationally, and building on good quality farmland should be avoided wherever possible. This land is Grade 1 agricultural land - far too valuable for crops to be built on. We are too reliant on imports for food. There is only 7% if this high-quality land left in the whole of North Somerset so every acre is precious and should not be built on. Brownfield sites should be developed first. Government policy states that “we must protect our best and most versatile land” to safeguard food security. These proposals go against this policy and undermine food security. The proposals involve building on greenbelt land. Backwell is not an employment hub. Most residents commute to Bristol and Weston for work. More houses means more communters. There is already a deficit in school places. Health services and leisure facilities are not adequate for the current population. These services cannot support another 1000 houses. The road network is at capacity already with the village frequently gridlocked. Local roads are overloaded, with narrow country lanes being used as rat-runs. Many of the local roads have no pavement and current traffic already causes a huge danger to pedestrians and cyclists. Children walking to school are put at risk daily. The proposed new road link would not relieve the congestion – Station Road would still have to absorb huge amounts of extra traffic. There is no funding for the new road link, and the cost to get it under or over the railway would be prohibitive. Backwell Common and Chapel Hill are already far too busy for the size of the lanes. Backwell has been allocated a higher number of houses than any other village in North Somerset, being expected to take 7% of the district’s housing allocation. This is not feasible or sensible in a rural village – development should be focused on the towns where shops and employment are more accessible. Backwell Lake and adjacent fields, where the new roads and housing are planned are on floodplain. These fields are required to absorb excess rainfall to prevent further flooding downstream. The development would destroy valuable wildlife habitats and harm biodiversity. Rare species like Lesser and Greater Horseshoe Bats rely on this land for food and the proposals would threaten the Brockley Maternity Roost and SSSI. The railway station is not fit for purpose as a busier transport hub for the proposed growth in population. It is not accessible to passengers in wheelchairs or those with pushchairs. There is no plan to improve this situation and no funding allocated for such. In summary, this proposal represents massive overdevelopment in a rural area where services and facilities are just not suitable for such growth.	Allocate necessary housing close to towns where people work, shop and attend leisure activity. Please do not destroy the rural villages.		
62805569	F Shields			No	‣ Positively prepared ‣ Justified ‣ Effective	Unsure	Unsure	I believe the Plan 2041 is not sound, not legally compliant and not in compliance with the duty to co-operate for the following reasons: Backwell is a VILLAGE in a rural setting. It already has approval for 800 new house which is an increase in size of 40%. The scale of proposed development is totally out of proportion and character of the existing village. Food security should be a priority throughout the country, and building on good quality farmland should be avoided	Large development sites should be focussed close to the towns of Weston and Clevedon where transport, shops and employement are. Protect the character of the villages.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					‣ Consistent with national policy			wherever possible. This land is Grade 1 agricultural land - the highest quality we have. We are already far too reliant on imports for food and there is only 7% if this high-quality land left in the whole of North Somerset so every acre is precious and should not be built on. Brownfield sites should be developed before any further agricultural land is built on. Government policy states that “we must protect our best and most versatile land” to safeguard food security. The proposal does not comply with this policy at all. This land was designated as greenbelt to prevent un-checked creep of development into farmland. Greenbelt land should not be built on unless all other options have been exhausted. Backwell does not and will never provide significant employment opportunities on a scale needed for the proposed growth in population. Most residents commute to Bristol and Weston for work. This would not change with the building of vast numbers of housing – it would just increase the amount of commuters. School places in the locality are already very limited, and health services and leisure facilities are not adequate for the current population. These services cannot support another 1000 houses. Local roads are frequently gridlocked, with narrow country lanes being used as rat-runs. The lanes around this proposed development have no pavement which causes immense danger to pedestrians and cyclists. Increased development would lead to further traffic on these already overloaded country roads. The proposed new road link would not relieve this congestion – Station Road would still have to absorb huge amounts of extra traffic. There is no funding for the new road link, and the cost to get it under or over the railway would be prohibitive. Backwell Common and Chapel Hill are already far too busy for the size of the lanes. The Infrastructure Delivery Plan lacks analysis and costings, and there is no funding for the proposed new road or any services. These would most likely be ignored until the local area was at breaking point. Backwell has been allocated a higher number of houses than any other village in North Somerset, being expected to take 7% of the district’s housing allocation. This is not feasible or sensible in a rural village – development should be focused on the towns where shops and employment are more accessible. Flooding is a major issue in this area. The development would destroy valuable wildlife habitats and harm biodiversity. We need to be preserving these habitats to ensure the future of our native species. Rare species like Lesser and Greater Horseshoe Bats rely on this land for food and the proposals would threaten the Brockley Maternity Roost and SSSI. The railway station is not fit for purpose as a transport hub for the proposed growth in population. It is not accessible to passengers in wheelchairs or those with pushchairs. In the 21st century this is unacceptable, and yet there is not funding or proposal to rectify this situation. In summary, this proposal represents massive overdevelopment in a rural area where services and facilities are just not suitable for such growth.			
62834145	E Shields			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The primary reason for my objection to this plan is based on the importance of food security. This land is Grade 1 agricultural land. We should be preserving and protecting our farmland, and only building on it as an absolute LAST RESORT, when all other possibilities and sites have been exhausted. We are already over-reliant on imports of food and should be focussing on producing as much as we can within our own country. If we build on land such as this, it will NEVER EVER be available again as productive farmland. It will be lost forever. This is a totally irreversible move that we cannot afford to take, in the interests of preserving our national food security. I strongly ask that you, as decision makers, take a walk across this farmland. Stand still, take in the air, the views, the beauty, the peace, the diversity, the flowers, the birds. Watch the seasons change, watch the crops grow, knowing they are helping to feed the nation. Can you really, really believe that it is in our best interests to build houses all over it? There is no justification for this when there are brownfield sites available for housing. Our future housing needs will be significantly altered as the next generation is far more likely to need to downsize earlier in life, due to smaller pension pots. I believe therefore there will be a massive shift in our housing market and current building rates are going to mean an oversupply of family homes. We just don’t need to be covering our farmland with more and more houses. Of course, there are numerous other arguments against this plan – road congestion, inadequate school places, over-stretched healthcare etc. These have been addressed I am sure by many other respondents. But the number one factor for me is that if we build on this prime farmland, we will never ever get it back.	Consider future housing to be allocated on brownfield sites in built-up areas where jobs and services are local		
62831969	Richard Skillen			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Objection to the East Backwell Development Proposal This proposal for development in East Backwell is both unnecessary and irreversible. The land in question is high-grade agricultural land, among the most productive and environmentally valuable forms of countryside in the UK. Once this type of land is built over, it is lost permanently. Its quality, biodiversity, and contribution to long-term food security cannot be replicated or replaced elsewhere. Protection of High-Quality Agricultural Land Grade 1 agricultural land is exceptionally rare in the UK and forms a crucial part of our national food-production capacity. In an era of increasing climate uncertainty and supply-chain instability, safeguarding such land is more important than ever. Beyond its agricultural function, this landscape supports a wide range of wildlife and acts as an essential green corridor. Development here would fragment habitats, reduce biodiversity, and permanently damage a landscape that has both ecological and community value. Questionable Need for Additional Housing in This Location Even if additional housing were required—an issue that remains debatable—building on prime rural land should be considered a last resort. There are far more sustainable solutions available. A significant number of existing properties in nearby urban areas, including Bristol, remain vacant or under-utilised. Various public reports and studies have highlighted thousands of empty homes across the region. Prioritising the renovation, conversion, and re-use of these properties would offer a far quicker, more environmentally responsible, and more economically beneficial solution than constructing entirely new developments on greenfield sites. Refurbishing existing housing stock reduces the carbon footprint associated with new construction, supports local trades and employment, and brings people closer to existing transport, healthcare, and infrastructure—rather than placing additional pressure on rural and already-strained village amenities. Environmental and Infrastructure Concerns Backwell’s infrastructure is already under significant pressure. Roads, schools, GP services, and public transport are operating close to capacity. Adding a large new development would intensify congestion, increase emissions, and erode the village character that residents value. Building on greenfield land also increases surface-water runoff, elevating flood risks both locally and downstream. Conclusion This development is unnecessary, unsustainable, and deeply damaging to the long-term wellbeing of Backwell and the wider region. The irreversible loss of Grade 1 agricultural land cannot be justified when more responsible,	Leave the village as it is everyone is happy as things are, we don’t want or need a link road and certainly don’t want or need an enormous housing development.	Never	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								environmentally sound alternatives exist. Priority should be given to making use of empty homes, utilising brownfield sites, and enhancing existing settlements—rather than sacrificing valuable countryside that supports wildlife, food security, and the rural identity of our community.			
62563137	Rachel Skipper		Railway	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Im writing to express my strong opposition to the proposed housing development in North Farleigh Road, Backwell by Mac Mic Strategic. While I understand the need for affordable housing, I believe that this project would have been far better placed on brown field sites of which there are many and not on grade 1 agricultural land in the Green belt. There is only 7% of this high quality land left in the whole of the North Somerset, once this land is gone, that's it, it's gone! It's absolutely appalling that this land is even being discussed and that you are considering tearing this up and discarding it with no empathy to its value. The government state "we must protect our best and most versatile land" yet this proposal abolishes there statement. The proposed development is simply too large for our area. The increase in population density would put a strain on our already overburdened infrastructure, leading to increased traffic congestion, noise pollution, flood plains and strain on our public services. Backwell is allocated a higher number of houses than any other village in North Somerset, this simply is not fair. Backwell is a village and not an employment hub, residents commute for work. Additionally, the construction of this project would result in significant environmental damage, destroying natural habitats and putting wildlife at risk. This site sits directly next to a conservation area and is linked up with Tynsfield National Trust and Belmont estate. The government state how important it is to protect our wildlife yet you are considering destroying their habitats. In conclusion we the villagers, Backwell Residents Association, Backwell Parish Council and Belmont estate are standing together to protect our wildlife, green space and village.			
62563137	Rachel Skipper		Railway	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I am writing to register my strong objection to the proposed MMSL housing development north of Farleigh Road, East Backwell. The scheme is fundamentally unsound, environmentally damaging, and incompatible with Backwell's infrastructure and character. 1. Reliance on an Undeliverable Link Road The proposal depends on a link road that has been judged not deliverable, removed from strategic plans, and has no funding. The development's viability is built on infrastructure that has no realistic prospect of ever being built. Proceeding on this basis would be irresponsible and contrary to good planning practice. 2. Severe Traffic Impacts Backwell already experiences heavy congestion on the A370 and surrounding routes. Without a deliverable transport solution, the development would add hundreds of daily car movements, worsening congestion, air pollution, and safety risks, and forcing spill-over traffic through unsuitable village lanes. 3. Loss of High-Quality Countryside and Agricultural Land The site forms an important green buffer between Backwell and Nailsea and includes Grade-1 agricultural land. Once developed, this rural landscape and its agricultural value would be permanently lost. 4. Environmental and Biodiversity Harm The fields, hedgerows, and wildlife corridors support a range of species and contribute to local biodiversity. Large-scale housing here would cause habitat loss and fragmentation that cannot be meaningfully mitigated. 5. Pressure on Already Stretched Local Services Backwell's schools, GP services, public transport, and utilities are near capacity. No firm or funded commitments have been provided to expand these services, making the proposal unsustainable. 6. Out of Scale with the Village The development would represent a major urban extension and effectively double the size of East Backwell. This scale of growth is wholly at odds with the village's character and the intentions of the Neighbourhood Plan. 7. Clear Local Opposition Backwell residents have repeatedly opposed large-scale development on this site. Approving it would disregard the community's democratically expressed wishes. Conclusion This proposal is unjustified, unsustainable, and environmentally damaging. It relies on undeliverable infrastructure and would harm Backwell's character, services, and landscape. I strongly urge the Council to reject the application.			
58535713	J Sleigh			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I believe the plan is not sound as Backwell has already been selected for a 40% increase in housing. This would lead to over development. Excessive pressure on transport links, medical and educational facilities. The offer of a link road, post completion, would have excessive costs due to crossing a railway line. This increasing costs are likely to exceed any developers and council budgets' offer to build. Clevedon is currently expected to take 2% of the housing and has far better facilities, shops, medical and more than one primary school. Plus quick links to the motorway. Backwell would be taking 7% this a higher growth percentage. Where is tge evidence for the need of more housing especially away from employment thus requiring excessive pressure on an already overloaded road and rail system. Further encroachment on green space, in particular grade 1 agricultural land is unnecessary and counter productive to us being more food secure. Flooding is already an issue in this area so with increased hard surfaces from current developments runoff will increase and the designated area is low lying. Insurance companies are already running shy of houses likely to flood. Houses on green belt should include 50% affordable housing thus reducing the developers ability to provide appropriate schools, medical centres and link roads. The current situation at the railway station for westward travel Is totally inadequate with no opportunity for prams, wheelchairs or other mobility aids, to access the platform. We are already one of the most depleted countries with regards to wildlife and this would exacerbate that particularly with regards to the greater horse shoe bat. NS has one of the largest such colonies and their feeding ground includes this as well as areas already earmarked for development.			
58599873	Zoe Smith			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I am not against development and support everyone having a home but the scale of the development proposed and many already approved in Backwell is untenable- the village is already set to increase by 40% without any support for infrastructure, school places, medical facilities. This is a higher number of houses than any other village in North Somerset. The proposed road, while being expensive and unfeasible, would not alleviate congestion or safety concerns. Furthermore I do not see a need or viability analysis for an additional 1000 houses. Finally I have grave concerns around the development of Grade 1 Agricultural Land currently used for food crops and grazing- only 7% of this land is currently left in North Somerset. Development would destroy valuable wildlife habitats and bio diversity and threaten the Brockley Maternity Roost and SSSI with rare Lesser and Greater Horseshow Bats relying on the land for food. Not to mention the increase risk of flooding, already a huge problem in the area.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								These plans turn Backwell from a small striving community village into the population of a town without any services, employment or investment.			
8052353	Diane Snape			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I strongly object to the identification of Nailsea and Backwell as a proposed strategic growth area. Large scale development at these locations is not deliverable or sustainable for many reasons including: 1. Very limited existing or potential new employment in these locations, resulting in significant out-commuting. 2. They are located in what is essentially a narrow valley, with flood plain in the valley bottom and steep hills to either side, placing major constraints on the development of new infrastructure, which even if feasible would at best be very expensive to develop. 3. Heritage assets and wildlife habitats including bat conservation areas. 4. Loss of scarce high quality agricultural land. 5. Impact on heritage assets/listed buildings including numerous farms. 6. Impact on local nature reserves such as Backwell Lake. 7. Surrounded by sensitive landscapes, heritage assets such as Tyntesfield, Cadbury Camp, and Tickenham Moor SSSI. Nailsea and Backwell currently have an ageing population, with many in retirement or reaching retirement age. Over the coming few years, a large number of family homes will be vacated by this ageing population, providing opportunities for families to move in. Large-scale new development is not needed. Backwell in particular is a small dormitory village, with minimal employment, infrastructure or services, which has already grown substantially in recent years and has already far outgrown its ability to serve its population. This leads to great strain on transport infrastructure of all kinds, with journeys necessary for most aspects of daily living including travel to work/school, retail, health and leisure services. The 900 new dwellings now additionally proposed on top of the 800 already approved in the past few years (a significant number of which are already under construction) is completely unfeasible in the context of the scale of the settlement. In this context, it is noteworthy that Backwell has been allocated a higher number of new houses than any other village or town in the plan area. The selection of East Backwell as the target site for 900 new houses is of particular concern for several reasons. The area is already susceptible to flooding and the run-off from this huge new development would worsen these problems. As is noted in the Heritage Sensitivity Paper, page 13, East Backwell, part of this site has high heritage sensitivity and there is potential for harm to a number of highly graded heritage assets. The Historic Environment Assessment, page 99, describes the visual intrusion of this development into the landscape, including sight lines from Tyntesfield, All Saints Church Wraxall and St Andrews Church Backwell. Note: the “low sensitivity” assessment for Dibdens Farm, Cider Farm and Old Farm on page 105 of the same document completely neglects the impact of the proposed road on the setting of these Heritage assets and their surroundings, ie Backwell Common. This is underlined by the Landscape Sensitivity Assessment, Nailsea, s.6.2.58 on page 34 which defines the land as high sensitivity: “…and to the south-east of the town is gently sloping and vegetation on field boundaries is generally limited. Consequently, this land is visually prominent. In addition, there is existing visual coalescence between Backwell Common and Nailsea in some locations. Owing to the above, this land is of high sensitivity.” The Best Most Versatile Agricultural Land topic paper Oct 2025 defines the land east of Backwell as Excellent quality agricultural land, Grade 1, which is a very scarce resource, and states that the proposed development “… is considered justified on the basis that without it the development of key infrastructure in the form of a new link road connecting Nailsea and Backwell would not be deliverable. This wider sustainability benefit outweighs the loss of BMV land in this location.” I strongly disagree with this argument. A has been stated elsewhere in the consultation papers, this proposed new link road may be undeliverable in any case, which would then render the presented justification null and void. This would contravene Government policy that the best and most versatile land must be protected. There are no firm costings or funding guarantees for the proposed new road in the Infrastructure Delivery Plan. This allocation would also necessitate removal of the land from the green belt which I do not consider to be justified. Link road I strongly object to the proposal to construct new Cross Rail Link from the south of Nailsea to the east of Backwell, from Station Road near the station, in an easterly direction, to connect with the A370 East of Backwell. Such are the complications and enormous costs associated with such a road that it has previously been struck out of plans as unfeasible. The route would impact many hundreds if not thousands of residents in South & East Nailsea and North Backwell/ Backwell Common/Farleigh, with the pollution, noise, light pollution and visual intrusion being magnified by the terrain, which necessitates the siting of the highway in the bottom of the valley (with incumbent flood risk: Flood Zone 3) and most of the properties sitting above it, with no possibility of adequate mitigation. N.B: Impact on residents and environment are missing from the list of considerations on page 26 of the Nailsea and Backwell Local Transport Strategy, and in section 4.7.4, next steps, mitigations for residents (which are critically required but undeliverable) are completely missing. These adverse effects, whilst already substantial for the under-bridge concept (which was previously under consideration but now seems to have been ruled out due to the flood risk which would be very difficult and expensive if not impossible to overcome) would be magnified many times by the overbridge structure which is now contemplated, involving a bridge 12.5m high, with ramps 250m long on either side, as described on page 28 section 8.4.3.12 of the Nailsea and Backwell Local Transport Strategy. Such a structure would also result in significant visual intrusion into the landscape, including sight lines from Tyntesfield, All Saints Church Wraxall and St Andrews Church Backwell. This is underlined by the Landscape Sensitivity Assessment, Nailsea, s.6.2.58 on page 34 which defines the land as high sensitivity: “…and to the south-east of the town is gently sloping and vegetation on field boundaries is generally limited. Consequently, this land is visually prominent. In addition, there is existing visual coalescence between Backwell Common and Nailsea in some locations. Owing to the above, this land is of high sensitivity.” The proposed road would cross sensitive landscape, located in the green belt, consisting of prime agricultural land and would also pass close to Backwell Lake Local Nature Reserve and local green spaces/wildlife habitats ie Backwell Common and Trendlewood Park/Kenn Hedge. It would have a significant impact on the setting of the Listed Heritage Asset of Moorside Farm. Note: the “Low” sensitivity assessment for Moorside Farm in the Heritage Sensitivity Paper, page 13, East Backwell, completely neglects to consider the impact of the proposed road link. Similarly, the “Low” sensitivity assessments for Dibdens Farm, Cider Farm and Old Farm completely neglect the impact of the proposed road on the setting of these Heritage assets and their surroundings ie Backwell Common.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The intersection of the route with Station Road would lead to significant incremental congestion and pollution close to residential properties and the Backwell Lake Nature Reserve due to standing traffic waiting for right of way. The increased traffic, and the need to negotiate the junction, would substantially increase danger to pedestrians and cyclists, particularly students at Backwell primary and secondary schools and Nailsea commuters using the station. It would rapidly become a very busy and congested route, leading to major noise and air pollution. It would increase “rat running” through the area, particularly from M5 Junction 19 to Bristol Airport, an issue which is already problematic. This effect ould be exacerbated by the proposed associated measures to discourage traffic from using Station Road, Backwell. It would also funnel the increased northbound (Nailsea-bound) traffic generated by the proposed East Backwell development into the constriction of Bucklands Batch on the South side of Nailsea. This is a narrow section of road which has already been widened to the extent possible by incorporating a strip of the frontage of each property along its East side, and has been the scene of numerous accidents causing injury to cyclists and pedestrians despite the addtion of a one-way cycleway. There are no firm costings or funding guarantees for the proposed new road in the Infrastructure Delivery Plan. If the East Backwell housing site allocation (to which I am submitting my objections concurrently) is dropped, the option to develop a North Nailsea Link Road should be seriously considered. This option would provide an onward link from Clevedon Road to the B3130 Nailsea to Wraxall road, serving the development sites to the West and North West of Nailsea already allocated within the local plan to 2026 and the industrial estates in the West and North of Nailsea, as well as the proposed allocations in North and West Nailsea, and deflect traffic from the Nailsea developments away from the congested centre of Backwell, avoiding the massive infrastructure complexity, cost and lead time to deliver a new link road. It would also maintain the separate identity and character of Nailsea and Backwell by avoiding the construction of a major link road in the green belt between the settlements. It would improve the routings for fire appliances, ambulances and police vehicles, improving safety and taking this inappropriate traffic away from Nailsea town centre. Such traffic will no doubt be forecast to increase significantly as a result of the new developments. Transport hub and rail I strongly object to the proposed expansion of Nailsea and Backwell railway station on Station Road. It is not suitable for development as a future transport hub. There is insufficient space for increased parking and bus interchange facilities. The current station is very small and basic and there is very limited scope to improve the facilities in its current location. It is inaccessible for people with mobility challenges and is difficult to navigate when travelling with young children. Additionally, any incursion onto the land to the east of Station Road (for additional parking, bus hub, for example) would adversely impact the setting of the listed Moorside Farm A better solution would be to relocate the station from its current, highly constrained location to a new location further west where space is less constricted and it is more feasible to establish a transport hub, with appropriate walking/ cycling and bus connections to the Grove Farm and Youngwood Lane developments. This could also provide a new multi-modal railway crossing point west of Nailsea and Backwell, to the west of the Backwell crossroads, which could be delivered as a below ground structure, as described in s 4.3 of the Nailsea and Backwell Local Transport Strategy. It would also facilitate improvement of the rail service by providing longer platforms and lift/disabled access and extended parking.			
62865217	K Snook			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	1. Backwell already has 800 new homes approved, a 40% increase for the village. Additional numbers would be complete over development. 2. The proposed road would not effectively serve Nailsea's traffic or reduce congestion on Station Road, Backwell Common or Chapel Hill. Engineering the road over or under the railway would be highly expensive and potentially unfeasible. 3. Despite the proposed increase there will be no additional school, leisure facilities or health services. The lack of infrastructure services cannot support another 1000 homes. 4. Backwell is allocated a higher percentage of housing increase than any other North Somerset village and an even higher number of percentage growth. 7% of the regions compared to only 2% for Clevedon. 5. There is no needs or viability analysis for an extra 1000 homes. 6. Backwell is not an employment hub, most residents commute. 7. No social cohesion impact assessment has been provided. 8. Grade 1 agricultural land used for crops and grazing. There is only 7% of this land left in the whole of North Somerset. 9. Government policy states 'we must protect our best and most fertile land' to safeguard food security. This is a contradiction of this policy and haram food security. 10. Development would destroy valuable wildlife habitats and further harm biodiversity in one of the worlds most nature depleted countries. 11. The proposals threaten the Brockley maternity roost and SSSI with rare lesser and greater horseshoe bats relying on the land for food. 12. The infrastructure delivery plan lacks analysis and costings, and there are no funding guarantees for the road or services. 13. Backwell Common and surrounding areas are prone to regular flooding, new houses would exacerbate the problem. 14. Concerns regarding the strategic growth location designation include the impact on the areas character risk of flooding, the loss of greenbelt and agricultural land, and uncertainty over the funding for the road. 15. Backwell Lake where the new houses and road are planned is on a floodplain and regularly floods. 16. Government policy requires 50% affordable housing on greenbelt land but this reduces the funds developers contribute towards infrastructure. 17. The sheer volume of growth and requires infrastructure over a short period of time is unsustainable, destabilising and undeliverable. 18. The railway station is not fit for purpose as a transport hub, it remains unaccessible for people with mobility issues and presents serious challenges for those travelling with children.			
62855905	Iola Mary Solari			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Disproportionate share The increase in housing for Backwell is very disproportionately high with the percentage increase significantly higher than all other villages and towns in North Somerset, with actual numbers higher than other villages. New housing to date is already disproportionately high compared to Clevedon and Weston which are larger towns and employment hubs and better suited to increased housing. The further increases will result in complete overdevelopment of Backwell. It cannot support this level of increase. Infrastructure			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The proposals do not include investment in infrastructure, Education, Health services or Leisure facilities to support a further 1000 houses. Backwell is not an employment hub in the way bigger towns like Clevedon and Weston are and increased housing would then increase commuting on already very busy roads. The proposed new road will be inadequate to deal with all the extra traffic, especially around Station Road and there is no guarantee it would be built as there are no funding guarantees and likely difficulties with the route crossing the railway. The railway station is also inadequate to deal with the increased numbers and needs investment to make it accessible and safe for young children Agriculture and the environment The development will destroy even more Grade 1 Agricultural Land currently used for food crops and grazing. There is very little left in North Somerset - despite Government policy which states that "we must protect our best and most versatile land" to safeguard food security. Backwell common and the surrounding area is already prone to flooding. Backwell Lake and the adjacent fields are in a flood plain and often flood. Building large numbers of houses will make the situation even worse and totally unsuitable with the potential to cause further problems down the line. Wildlife would also be seriously affected. Eg the Brockley Maternity Roost and SSSI, Horseshoe Bats relying on the land for food, and more generally the destruction of valuable wildlife habitats' further affecting biodiversity in an already nature-depleted country.			
62640737	Pat South			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Houses already approved is a 40% increase to the village. By the time the road over/under the railway line is passed it will be too expensive. Why do we have to take the highest population growth when Clevedon has so few? We should be feeding our own country not building over prime growing land. We should not be upsetting wildlife habitats including the greater and lesser horseshoe bats. The area on Backwell common is already prone to flooding and the building of more houses will make this worse and cause more expense to the council and the residents.			
21276641	Helen Sparey							I am writing to strongly oppose the planning on Greenbelt to the east of Backwell. There are many reasons for my opposition. We've already had many houses approved for the village and the additional number of houses would lead to a complete overdevelopment. The infrastructure is just not there in Backwell and would cause terrible congestion on station Road and Backwell Common and Chaple Hill. Building a road over or under the existing railway line would be extremely costly and unfeasible. There has been no investment in increasing health services or leasire facilities. The infrastructure lack of and services cannot support another thousand houses. Backwell station is a very small station. It only has the capacity for three carriages for passengers to get on and off the trains. There is limited rolling stock and often the trains are over full. The green belt, once it is built on can never be turned back, the green belt is grade one agricultural land used for growing crops and keeping livestock. There is only 7% of this high-quality Land left in the whole of North Somerset, government policy stated that Greenbelt should only be used and should be protected unless it is ugly green belt i.e. a factory site or an old service station. The green belt at Backwell is used by many people for leisure. Cycling, walking, running and many wild animals and birds use this beautiful green space. I feel that North Somerset Council are blinked and not looking to the future, to keep our beautiful landscape for recreational practice. You have already had houses built in the area. Backwell Common is prone to flooding. Only this week the road was closed because of severe flooding. The houses built so far by the developers in Backwell are not inexpensive enough for the people that need housing. A two bedroom house on Farley Fields is nearly £400,000. The people who need affordable housing cannot afford these types of housing, they need smaller houses, smaller and more affordable houses. The developers are loath to build these as it affects their bottom line. I feel that the developers are pushing on North Somerset Council and the government without thinking outside the box. I feel that there are more suitable places for the developers to build. We all know that building on Greenbelt is far easier than building on brown or grey belt, please could you take my points into consideration when looking at building on our beautiful green belt which is grade on listed? It is currently used for grazing and growing of food crops.			
31076769	Jamie Sparey							I oppose the build on the east of Backwell for the following reasons. 1) the infrastructure is inadequate for that many houses. Backwell has already had planning and building of many houses. The new road proposed to go either under or over the railway is not feasible and would cost millions to build. 2) the railway station isn't big enough and there is no access for disabled people. Only three carriages can stop for passengers to a light and leave the trains. Train companies do not have enough rolling stock. 3) the area designated for building floods all the time. 4) the land is grade one agricultural land there is only less than 7% of this type of land left in North Somerset. The land has always been used for grazing and crop growing. 5) many people use the land for recreational purposes for example walking and running. The land is full of wildlife. 6) the houses that the developers build isn't really for people requiring affordable homes. The houses are for the more affluent people. The developers prefer to build on Greenbelt because it's easier. Once the green belt has gone, it can never come back. You can't turn back time please try and think of the future. We need our green spaces for our mental health and fitness. We have had enough building in Backwell more than any other villages around us.			
39217377	Andrew Stagg			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	*Objection to North Somerset Local Plan: Green Belt Development* I object to the proposed increase in house building on North Somerset's Green Belt, as outlined in the Local Plan. The plan's proposal to allocate 50 hectares of Grade1 Green Belt land for property development contradicts national planning policy and threatens the very purpose of Green Belt designation. The Green Belt serves to: 1. *Prevent urban sprawl*: Protecting the countryside and maintaining separation between settlements Backwell / Nailsea ; Backwell /Long Ashton - Bristol 2. *Preserve character*: Safeguarding the unique identity of North Somerset's smaller towns and villages. 3. *Promote sustainable development*: Encouraging brownfield development and regeneration. The proposed development would: - Irreversibly harm the landscape and character of the area - Increase pressure on local infrastructure, including roads, schools, and healthcare			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								- Compromise the Green Belt's role in mitigating climate change and supporting biodiversity I urge the council to reconsider the allocation of Green Belt land and prioritize sustainable, brownfield development that aligns with national policy and local needs. *Specific Objections:* - The plan fails to demonstrate exceptional circumstances for Green Belt release. - The proposed development would cause significant harm to the environment and local communities. - Alternative sites, including brownfield land, especially nearer employment in Bristol / Clevedon have not been adequately explored. I request that the Local Plan be revised to protect North Somerset's precious Green Belt and ensure sustainable development that benefits the community. Nailsea+ Backwell Station is currently unfit for purpose and should not be considered as mitigating any downsides and promoting this development through good connectivity. Backwell already has granted permissions for development and cannot countenance a further population growth of 80% *Reference:* National Planning Policy Framework (NPPF), Section 13: Protecting Green Belt Land			
62833537	J Standen			No	• Justified	Unsure	Unsure	The plan proposes more residential development than any other surrounding villages and the existing services such as Doctors, schools and roads will not support them. This will turn Backwell into an undesirable place to live.	Scrap the plan and build on brown field sites.		
50775041	S Steel			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell does not need any more new houses. There are no local jobs so this will mean more commuters on the roads. The local roads will NOT cope with the extra traffic, especially not the A370 with all the extra traffic travelling to and from Bristol from all the new houses in Yatton and Weston Super Mare. The local wild life will be seriously affected. The local shops will not cope. The local Doctor surgeries will not cope. There are several local areas prone to flooding which will be made so much worse with all the building work going on.			
44788929	Fern Rebecca Steel							Backwell is being asked to take on more housing than any other village in North Somerset it already has 800 new homes approved. Adding another 1,000 would overwhelm the village and change its character beyond recognition.The proposed road won't fix congestion in Nailsea or Backwell. Building under or over the railway would be hugely expensive and may not even work. We already struggle with traffic as it is. Schools are short of places, health services are stretched, and leisure facilities are lacking. More houses without investment in infrastructure is simply unsustainable.Most people commute. More houses here just means more cars on already busy roads. The land earmarked is Grade 1 agricultural — the best we have — and only 7% of this quality remains in North Somerset.This is contrary to government policy: National guidance says we must protect our best land to safeguard food security. Backwell Common and the Lake area already flood regularly. More building here would make it worse. Station not fit for purpose: Backwell's railway station is inaccessible for many and unsuitable as a transport hub.			Proposed plan for Land East of Backwell.doc
58638113	Emma Stephens			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	> Backwell is a small village with limited infrastructure and services. It is already busy (traffic is a considerable issue as most people commute to Bristol/Weston and further afield). > The plans would massively increase the population od Backwell and overwhelm the available infrastructure, facilities and roads. Backwell is already expanding by 40% and these additional houses would be complete overdevelopment. No needs or viability analysis has been undertaken for a further 1000 homes. > The proposed new road would not effectively serve Nailsea traffic and would be complex to construct under or over the railway line (and likely very expensive). >Very significant environmental impact- losing vital greenbelt land, impact on the character of the area, destroy wildlife and habitats and specific threats to Brockley Maternity Roost and SSSI due to impact on greater horseshoe bats feeding in the area. > We know the area around the lake and adjacent fields (where the road is suggested) regularly flood. > Backwell railway station is nearby but has significant issues that require major investment which has not been forthcoming- e.g. it remains inaccessible for people with mobility issue and impossible for parents with buggies/prams. > The allocation of housing to Backwell is disproportionate and unfair- taking 7% of the districts housing for a tiny village, whereas Clevedon, a large town with much greater amenities and services is only taking 2%.			
50668353	Mr Stephen Charles Stephens		Backwell Tennis Club	No	• Positively prepared • Justified • Consistent with national policy	Unsure	Unsure	With the planned developments already going ahead there is already NO sustainable infrastructure in the village. The village is being ruined by overdevelopment with no infrastructure in an area where there is little or no employment. This further proposed development on prime agricultural land is a step to far. Until the current developments are complete, appropriate assessment made of the deemed demand for houses, and the effect on the current inadequate infrastructure considered NO further development should even be considered. Why is it developers get to build without appropriate facilities/roads put in place FIRST, and current residents suffer for years waiting for everything to catch up (IF IT EVER DOES). Developing is the wrong way around. This should NOT EVEN BE CONSIDERED until the planned link road from the lake, avoiding Station Road is built. Station Road is not fit for purpose now, even before the Grove Farm development starts and certainly this planned development should never happen on Greenbelt land and so close to the school especially with no land allocated to the school for expansion to cater for the already approved developments!!! STOP, THINK and REASSESS- the roads are inadequate, to call the railway station a transport hub beggars belief and the infrastructure is inadequate. Also where is the need for all this so say extra housing coming from since as far as I can see developers are dragging their feet on current developments through lack of demand.

51458785	Joanne Stevens			No	• Positively prepared • Justified	Unsure	Unsure	Firstly, Backwell already has been subject to a huge increase in planned housing - 800 houses approved so far - and any more will lead to overdevelopment when there is little new infrastructure planned. It will grow completely out of proportion - compared to other towns and villages in N Somerset it would have the highest growth rate. Currently, the A370 cannot cope with traffic at busy times, especially if there are any issues on the M5 as it becomes a			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					‣ Effective ‣ Consistent with national policy			cut through to Bristol and the M4. Effectively doubling the size of the village and the amount of traffic would lead to severe traffic problems. There is no analysis of why Backwell makes a suitable place for this amount of housing - it is not an employment hub, the roads are already under strain and the railway station is not accessible for anyone with mobility issues or pushchairs. Some of the proposed areas regularly flood - Backwell Lake, Backwell Common and surrounding fields. Any times built here would suffer from flooding. The land proposed for development is vital agricultural land and also important wildlife habitat for legally protected species including Greater and Lesser Horseshoe bats. Most of the houses that have already been given consent have not been built yet and so their impact is uncertain except for one thing - impact on traffic and pedestrians, especially primary school children walking to school. Any further development would only make this worse. There is no guarantee that the new road will built - logistically and financially it will be very challenging and I suspect it will not be built with disastrous results.			
62838689	B Stokes			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	If 800 new houses were to be approved this would lead to a significant overdevelopment of the village with lack of consideration for social cohesion and detriment to local wildlife.	A significant reduction in number houses		
62659137	J Stone			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	House building proposals would almost double the size of Backwell - an unreasonable increase leading to complete overdevelopment Current road systems would be unable to cope with the increase in traffic especially station road which is already congested . This would further endanger the students using the narrow pavements. A complete new road system would be required at great expense as the road would have to go over or under the railway line. An increase in housing of this magnitude would necessitate provision of school places both for nursery , primary and secondary students. Current health service and leisure provision would be inadequate Most residents commute - not find employment in the village Grade 1 agricultural land currently used for food production - development contradicts government policy to protect land used in food production Damage wild life habitats, including the important bat colonies Not financially viable and lack of costings			
62810017	Guy Stone			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	No	I am appalled by these proposals that would effectively destroy Backwell and merge it with Nailsea. This development would impact on me personally and reduce my quality of life. It is vastly out of proportion to the size ofthe vuilage and would completely swamp residents with fumes, noise, traffic and people. Residents do not want this because Backwell is a village, it is not an extension of Nailsea. Nailsea is a town with facilities an town prvides, Backwell is not a town, but have valued resources in terms of its rural setting, biodiversity and greenspace. If residents wanted to live in an urban environment they would not be living here, yet North Somerset Council appears to have completely overlooked this and blindly gone along like puppets to central government demands. There is no chance of these proposals offering 'affordable homes for locals', they will be sold to wealthy professionals moving in from elsewhere in the uk, exacerbating the local housing need. This huge overdevelopment would completely alter the character of the village and leave the valued biodiversity that we do have in tatters.	North Somerset Council need to stop pandering to developers and be more robust in their defence of the precious green space that is seen as a vitally important resource for the existing local residents. I'm not sure who the council think they represent, but it is certainly not the communities that currently live in the areas affected by this awful destructive approach to development.		
21276833	Fi Lamdin		n/A	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I have lived in Backwell for 11 years. My family moved here because we wanted to live in the countryside and be connected to nature. We walk and run through the fields almost every day. These fields are where we spot deer at dawn, watch sparrowhawks circling, and see bats feeding at dusk. My children walk through these same fields on their way to school. This land is not just “open space” on a map — it is part of our daily lives, our wellbeing, and the reason we chose to call Backwell home. During the COVID lockdowns, the Common and surrounding fields became a lifeline for the community. People who had never walked there before discovered how peaceful, restorative, and vital these green spaces are for mental health. That use hasn’t stopped; if anything, it has grown. In a time when we are constantly told about the importance of protecting the environment, preserving biodiversity, and safeguarding green spaces, it feels devastating that such precious, rare, irreplaceable countryside is now under threat. Once Green Belt is built on, we will never get it back. Backwell is slowly being chipped away, and it feels like the village we moved to is being lost. For these deeply personal reasons — as well as the planning reasons outlined below — I urge you not to approve this development. Planning Reasons for Objection 1. Severe Overdevelopment Backwell already has 800 new houses approved, a 40% expansion. Adding another 1,000 homes is disproportionate and would overwhelm the village. It would fundamentally destroy the rural character that thousands of residents value. 2. Road Proposal Not Feasible or Effective The suggested road would not relieve traffic on Station Road, Backwell Common, or Chapel Hill. The engineering challenges of going under or over the railway are considerable, costly, and potentially undeliverable. This casts serious doubt on the whole strategy.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								3. No Supporting Infrastructure There are already not enough school places and no planned investment in health services, GP access, or leisure facilities. The area cannot accommodate thousands of new residents without essential facilities. 4. Disproportionate Housing Burden Backwell is expected to take 7% of the district's entire housing allocation, more than any other village and higher than some towns. This is unreasonable and unjustified. 5. No Needs or Viability Analysis There is no evidence to justify an extra 1,000 homes in Backwell, and no viability assessment to show the development is deliverable. 6. Unsuitable Location for Growth Backwell is not an employment centre. Most residents commute. More housing here increases car dependency and contradicts sustainability aims. 7. No Social Cohesion Assessment The plan lacks an evaluation of the social impacts of nearly doubling the village population in a short period — a major omission. 8–9. Destruction of Grade 1 Agricultural Land The development would build over Grade 1 agricultural land, used for food crops and grazing. Only 7% of such land remains in North Somerset. National policy requires protecting the "best and most versatile land" to ensure food security, yet this proposal does the opposite. 10–11. Harm to Wildlife and Protected Species The fields and hedgerows that would be lost are vital habitats in one of the most nature-depleted countries in the world. The proposals threaten the Brockley Maternity Roost and SSSI, relied upon by Lesser and Greater Horseshoe Bats. These species depend on these very landscapes for foraging. 12. Incomplete and Unfunded Infrastructure Plan The Infrastructure Delivery Plan lacks both costings and funding guarantees. There is no reliable delivery strategy for the new road or essential services. 13–15. Flooding Risks Ignored Backwell Common, Backwell Lake, and nearby fields lie on a regularly flooding floodplain. New housing and roads would worsen flooding for existing and future residents, especially given climate change pressures. 16. Green Belt Affordable Housing Policy Issues Government policy requires 50% affordable housing on Green Belt land, but this reduces developer contributions that are essential for infrastructure — making the project even less viable. 17. Growth at an Unsustainable Pace The scale and speed of growth anticipated is undeliverable, destabilising, and will cause long-term harm to the village. 18. Railway Station Not Fit for Purpose The station is inaccessible for many people, including those with mobility issues or families with young children. It cannot operate as a transport hub for a major expansion. Conclusion Backwell is a village with a strong community, a unique landscape, and precious, irreplaceable countryside that residents treasure. This proposal would permanently destroy that character, overwhelm local infrastructure, and undermine national environmental and agricultural policy. For these reasons, the plan is unsound, unjustified, and undeliverable. I respectfully ask that the Backwell allocation and associated road proposal be removed from the Local Plan.			
39327489	Mr Alastair Stuart-Hunt			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	there's no need for more houses over and above the 800 already approved. There's inadequate infrastructure to deal with increased housing stock, especially traffic mitigation. The plan talks about increased local employment opportunities - Backwell is not an employment hub, not does it intend to be. It is a residential community. No social cohesion plan has been submitted. The land intended for development is Grade 1 Agricultural arable land. It seems ludicrous and irresponsible to wipe this away. It also contradicts the Government's stated policy to "protect our best and most versatile land" to secure food security. The development would destroy valuable wildlife habitats, included rare species like barn owns, horseshoe bats and sparrowhawks. The train station is not fit for purpose as a transport hub.			
62777569	Kitty Stuart-Hunt		bbc	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	As a younger resident of Backwell, I want to share how this proposed development will affect not just the village now, but the future that my generation will grow up in. I've lived here most of my life and the fields around Backwell are where I've grown up. These places have shaped my childhood. They are where my friends and I walk to school, where we clear our heads, where we feel connected to nature. During the lockdowns, these fields and the Common became essential for everyone's mental health. People rediscovered how healing green space can be. That connection hasn't faded — if anything, it has become even more important. And now, the idea that all of this could be dug up, flattened, and covered in houses and tarmac — it's heartbreaking. We			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								keep being told that my generation must care about the environment, about climate change, about protecting nature. We are constantly told that green spaces matter. But if plans like this go ahead, what green spaces will actually be left for us when we're adults? Once this countryside is built on, it's gone forever. No second chances. No way back. I don't want to grow up in a world where precious land is treated as disposable. Below are the planning reasons why this proposal is unsound, alongside the emotional reality of what this loss means for young people who will live with these decisions for decades. Planning Reasons for Objection 1. Massive Overdevelopment Backwell already has around 800 new houses approved — a 40% increase. Adding another 1,000 would overwhelm the village and destroy the rural character that generations of young people have enjoyed. 2. Road Proposal Not Deliverable The proposed new road won't fix traffic or congestion and may not even be technically feasible due to the railway line. Without this road, the whole plan collapses. 3. No Infrastructure for the Extra Population There are already too few school places and no investment in health or leisure facilities. My generation will be the one dealing with the consequences of poor planning. 4. Disproportionate Burden on Backwell Backwell is being asked to take 7% of the district's entire housing allocation, more than any other village and more than some towns. It's unfair and unrealistic. 5. No Needs or Viability Analysis There is no evidence that Backwell needs or could support these extra 1,000 homes. 6. Increased Car Use and Unsustainable Location Backwell is not a jobs centre. Most people commute by car, making this proposal the opposite of climate-friendly. 7. No Social Impact Assessment Almost doubling the population of a village — especially one with strong community identity — requires careful analysis. None has been provided. 8–9. Loss of Grade 1 Agricultural Land The site includes Grade 1 agricultural land, which is essential for UK food security. Only 7% remains in North Somerset. Government policy says we must protect this land — yet this plan destroys it. 10–11. Damage to Wildlife and Protected Species Nature is already struggling in the UK. These fields support deer, owls, bats, hedgehogs, and countless species. The development threatens the Brockley Maternity Roost and SSSI, relied on by rare Lesser and Greater Horseshoe Bats. Losing this habitat is unacceptable. 12. No Funding Guarantees The Infrastructure Delivery Plan lacks detail, costings, and firm funding. A plan of this scale cannot proceed without guaranteed infrastructure. 13–15. Flooding Risks The proposed housing and new road are on a floodplain that already floods regularly. Climate change is only making this worse. 16. Green Belt Affordable Housing Conflict The requirement for 50% affordable housing on Green Belt reduces developer contributions, making the whole scheme even less viable. 17. Unsustainable Pace of Growth This level of development over such a short period is undeliverable and damaging for existing and future residents. 18. Backwell Station Not Fit for Purpose The station remains inaccessible and unsuitable as a transport hub for major new development. Conclusion These fields are part of Backwell's identity and part of my generation's future. Losing them would mean losing a rare piece of countryside that supports our mental health, our wildlife, our climate goals, and our community. Backwell is at risk of being changed beyond recognition. Please do not let this development — which is unsound, unjustified, and undeliverable — take away the green spaces that young people depend on and will need even more in the future. Please protect our countryside and our future.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
62777633	Olivia Stuart-Hunt			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I'm writing as a young resident of Backwell to strongly object to the proposed housing development and new road. This plan would completely change the village in ways that don't make sense and aren't fair to the people who live here. 1. Backwell is already taking too much growth We've already got 800 new houses approved—that's about a 40% increase for the village. Adding another 1,000 homes would be overdevelopment, plain and simple. Backwell isn't a town, and this level of growth would ruin its character. 2. The new road won't fix traffic The road won't actually solve congestion on Station Road, Backwell Common, or Chapel Hill. Plus, building it under or over the railway sounds super expensive and maybe not even possible. So why risk it? 3. No extra schools, doctors, or places to go Even with the houses already approved, there aren't enough school places. There's no plan for more health services or leisure facilities either. How can we add 1,000 more homes when the basics aren't covered? 4. Backwell is being treated unfairly Backwell is getting more houses than any other village in North Somerset—even more growth than some towns! We're expected to take 7% of the district's housing, while Clevedon only takes 2%. That's not balanced. 5. No proof we even need these houses here There's no proper analysis showing why Backwell needs this many extra homes. And no clear plan for how it would all work financially. 6. Backwell isn't a jobs hub Most people here commute. Adding more houses just means more cars on the road and more traffic. That's not sustainable. 7. No thought about community impact There's no assessment of how this will affect social cohesion. Dumping this much growth on a small village without planning for community spaces will make Backwell feel disconnected. 8 & 9. Losing the best farmland The land they want to build on is Grade 1 agricultural land—the best quality for growing food. There's only about 7% of this land left in North Somerset. Government policy says we should protect it for food security, but this plan ignores that. 10 & 11. Wildlife will suffer Building here would destroy habitats and harm biodiversity. It even threatens the Brockley Maternity Roost and rare bats that rely on this land. The UK is already one of the most nature-depleted countries—why make it worse? 12. No clear funding for infrastructure The Infrastructure Delivery Plan doesn't show proper costings or guaranteed funding for the road or services. So how do we know any of this will actually happen? 13, 14 & 15. Flood risk is real Backwell Common and the fields near Backwell Lake flood regularly. Building houses and roads there will make flooding worse and put people at risk. 16. Affordable housing rules make funding harder Green Belt policy requires 50% affordable housing, which means developers pay less towards infrastructure. So again—how will the road and services be funded? 17. Too much, too fast This level of growth in such a short time is destabilizing and unsustainable. There's no proper phasing to make sure infrastructure comes first. 18. The train station isn't ready Backwell station isn't accessible for people with mobility issues and is hard for families with young kids. It's not a proper transport hub, so the claim that this development is sustainable doesn't hold up. This plan is unfair, unrealistic, and harmful. It ignores infrastructure needs, environmental protection, and community wellbeing. Backwell is being asked to take way more than its share, and the proposals don't even meet basic government policies on land protection and flood safety.			
62640129	Greg Sturdy			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I have no objection to sensible and managed expansion of the village of Backwell. The local plan does not display this. A slow absorbtion of new properties would ensure Backwell as a village would retain its character while also help the necessary inevitable growth. However an additional 889 properties on grade 1 agricultural land East of Backwell on top of the 794 properties also earmarked is not sustainable. This increase of dwellings would result in traffic gridlock on the A370 and surrounding roads. There are no jobs in Backwell resulting in everyone commuting to work. There are no large Supermarkets in Backwell resulting in everyone driving to shops and Supermarkets in nearby Nailsea. To encourage people to use public transport has been tried and doesn't work. The number of empty buses I see driving around the area is quite frankly depressing. Infrastructure to facilitate the proposed increase of residential properties is sadly lacking. The development plan of a vital new link road to cope with the increase of traffic is non existent. There is no suggestion as to how this road would be funded and the cost involved for the link road to cross the busy railway line would be astronomical. I asked SP Broadway about this at the their consultation meeting and was told it's not an issue and would be addressed after the houses had been built in phase three of the development in East Backwell. The destruction of valuable farm land is scandalous. The figure of only 7% grade one farm land in North Somerset should say it all. Let's talk about this farm land. It is flat, easy to cultivate and has good access for farm machinery. But it is also an area with many mature species of trees. There are Oak trees several hundred years old. The root system of these trees is three times bigger than the crown, consequently once the land is disturbed these trees will die. Examples of mature oak trees dying as a result of residential development can be seen at the nearby Elms estate in Nailsea. Land for growing food and sustaining nature will be lost forever. SP Broadway displayed on their plans small areas that would be retained as nature reserves. We all know that this doesn't work as Nature areas require maintenance and looking after which costs money that won't be available. These areas will descend into scrubland. We are not told why there is a need to build this great volume of properties. We don't know who will be able to afford to pay the mortgages to buy these. It's all quite astonishing. In this day and age we are experiencing extreme weather patterns due to global warming, periods of heavy rain which will inevitably lead to an increase in flooding incidents which are already affecting the area. The development of land East of Backwell must not proceed.

62786881	K Sturdy			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I cannot believe NSC's intention to include the parcels of land east of Backwell for housing. It is totally inappropriate given it is designated as Green Belt and is prime Grade 1 agricultural land. To lose this when the UK but particularly NSC, has so little agricultural land would be a travesty, not to mention the impact on local wildlife and natural flora and fauna. If destroyed by developers none of this can ever be replaced. In addition it is in an area prone to flooding, already this winter we have seen several incidents of intense flooding on local roads resulting in stranded cars. Development on this land would only exacerbate the existing flooding problems. The proposed road under the railway bridge on Backwell Common has obviously not been considered properly as again it is in an area known to flood so by lowering the road to get under the bridge would simply be impractical. Additionally, making Backwell Common a dead end at the point of any bridge would effectively cut the road in half and isolate the community on the far side of the road. This would result in them being stranded in the event of flooding on Backwell Bow and Chapel Hill. Totally unacceptable. Backwell is a village NOT a town - it does not have much employment and workers have to commute. The proximity of the railway station has been used as a reason for such development but as buses cannot get under the railway bridge to access the railway and in any event the station is inaccessible to anyone with mobility problems, despite many attempts to make it accessible in the past. To make it a 'transport hub', as NSC proposes, would just seem totally ridiculous to consider. Despite this, there has been regular house building and already 794 new homes have been approved despite this increasing the size of Backwell by 40%. The schools and medical practice are already full and the roads inappropriate for the volume of current traffic without the addition of these houses. The majority of roads around the area are at best B roads and mainly country lanes. The only exception being the A370 which is totally clogged with commuter transport to and from Bristol and Weston-super-mare. To add a further 889 houses to the mix, increasing Backwell still further and adding substantially to the transport problems, would be totally unsustainable and frankly ludicrous to even be considering. Whilst we all appreciate the need for more housing, and which Backwell are addressing already with the agreed developments, there seems no valid reason why NSC have included this additional land in the local plan without completing any studies to consider the validity and sustainability of such a suggestion on such a historic village.			
39310401	J Sully			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	A) The additional number of houses proposed by NSC is much too high for the existing infrastructure (roads, health, school places and leisure facilities). Although the existing infrastructure is poor, it almost copes. However, with sites currently under construction and other sites already approved by NSC it will not cope. The additional proposed site on Backwell Common for 889 houses would make things much much worse than they are going to be anyway. If NSC has any plans to improve the infrastructure in Backwell, are there any funding guarantees and where would the money come from? The existing roads are barely adequate for the current amount of traffic. There is little (if any) scope for widening them, and even more development will inevitably result in gridlock. B) Your proposal to have a new road built between the A370 and Backwell Lake looks doomed from the start. Does NSC plan for it to go under the railway line or over, or to have crossing gates with a high ramp on both sides to reach the top of the embankment? Is any of this feasible? If so, tell us which one and who would fund it? C) There is already limited scope for employment within Backwell so even more people will have to commute. D) I think it wrong to build on grade 1 agricultural land currently used for food crops and grazing. Also wrong to build near land or roads that might become flooded. The subsoil in Backwell is a heavy clay so water is very slow to soak away. E) I do not understand why 'Greenbelt' land is now considered irrelevant. As of 2012 the Government National Planning Policy Framework for Greenbelt land includes: to check the unrestricted sprawl of large built-up areas; to prevent neighbouring towns merging into one another; to assist in safeguarding the countryside from encroachment. I believe that these aims are still valid today, although governments have since 'updated' (ie eroded) these aims in order to suit their political objectives. F) If Nailsea and Backwell railway station is to become part of a transport hub it needs to be significantly modified for people with walking problems and for young children. This has been a problem since it was first built and there is no willingness for anyone to spend the money, probably because it is on a high embankment and would be a difficult expensive project.			
39287777	Mrs S Sully			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I wish to appeal against the proposal in the local plan to build 1,000 more houses in Backwell. This proposal, in addition to the 800 houses already approved or now under construction, constitutes a huge over-development, considering that Backwell is largely a commuter village, where there is little local employment and with an infrastructure of roads and services that are already oversubscribed. The suggestion of a new road would merely direct traffic to Backwell Lake, to join any congestion from yet another near 600 houses proposed for that area, and all on green-field sites, which the Government claims should be protected.			
21230049	A Sutherland			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I object to this proposed housing in this Local Plan and consider it to be undeliverable and unsustainable for the following reasons: In the past few years Backwell Village has already had 800 new houses approved. This is a 40% increase for the village. Approving any more housing would lead to total over development. The road proposed would not serve Backwell or the nearby town of Nailsea. It would not alleviate the traffic issues on Station Road (a narrow road with pavement on only one side and the only road for school children to walk to Backwell School). The proposed road would have to go over or under the existing railway line which would be very expensive and possibly unfeasible. There will be no investment in local health or education services as part of this proposed development. The lack of infrastructure can not support another 1000 houses. Backwell has already been allocated a higher number of houses than any other village in North Somerset and a higher growth percentage than some towns. Clevedon (which has better infrastructure) is taking 2% whereas Backwell (a village with a lack of amenities and services) is taking 7%. There has been no viability analysis for an extra 1000 houses in Backwell. The proposed development is on Grade 1 Agricultural Land which is currently used for grazing and crops. There is only 7% of this land left in the whole of North Somerset and should not be used for housing. The Government has said "we must protect our best and most versatile land" to safeguard food security and this proposal directly contradicts and undermines the Governments own policy on food security. There would be a massive threat to local valuable wildlife and habitats including the Brockley Maternity Roost affecting the rare Lesser and Greater Horseshoe Bats.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The Infrastructure Delivery Plan lacks any analysis and costings and there is no guarantees for funding for the new road and other services. Backwell Common and the surrounding area are already prone to flooding and this would increase with more housing. Chaple Hill regularly floods cutting off access. The planned houses are on a flood plain which also regularly floods. There has been a lack of regard to strategic growth location designation, including the impact on the area's character, loss of Greenbelt and high quality agricultural and risk of flooding. Whilst Backwell has a train station it is not fit for purpose as a transport hub as it remains inaccessible for people with mobility issues and a challenge for those travelling with young children. The platform is short and only a certain number of carriages can stop at the platform.			
51276801	James Sutherland			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I object to this proposed housing in this Local Plan and consider it to be undeliverable and unsustainable for the following reasons: In the past few years Backwell Village has already had 800 new houses approved. This is a 40% increase for the village. Approving any more housing would lead to total over development. The road proposed would not serve Backwell or the nearby town of Nailsea. It would not alleviate the traffic issues on Station Road (a narrow road with pavement on only one side and the only road for school children to walk to Backwell School). The proposed road would have to go over or under the existing railway line which would be very expensive and possibly unfeasible. There will be no investment in local health or education services as part of this proposed development. The current infrastructure in the village cannot support another 1000 houses. Backwell has already been allocated a higher number of houses than any other village in North Somerset and a higher growth percentage than some towns. Clevedon (which has better infrastructure) is taking 2% whereas Backwell (a village with a lack of amenities and services) is taking 7%. There has been no viability analysis for an extra 1000 houses in Backwell. The proposed development is on Grade 1 Agricultural Land which is currently used for grazing and crops. There is only 7% of this land left in the whole of North Somerset and should not be used for housing. The Government has said "we must protect our best and most versatile land" to safeguard food security and this proposal directly contradicts and undermines the Governments own policy on food security. There would be a massive threat to local valuable wildlife and habitats including the Brockley Maternity Roost affecting the rare Lesser and Greater Horseshoe Bats. The Infrastructure Delivery Plan lacks any analysis and costings and there is no guarantees for funding for the new road and other services. The platform is short and only a certain number of carriages can stop at the platform.			
62764321	Joanne Sweet			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell is allocated 7% of North Somerset's entire housing requirement—more than any other village and even more than some towns. This level of growth is unjustified. The proposed new road would not relieve congestion on Station Road, Backwell Common or Chapel Hill. Engineering a crossing under/over the railway is costly, uncertain and may be undeliverable. There is already a deficit in school places and no confirmed investment for health, leisure or other essential services. No needs assessment or viability study has been provided to justify 1,000 additional houses in this location. Backwell is not an employment hub; most residents commute. The proposal does not support sustainable patterns of living or working. No social cohesion or community impact assessment has been provided. Nailsea & Backwell railway station is inaccessible for many users and unsuitable as a transport hub for a development of this size. Backwell Common and land around Backwell Lake are on a floodplain and flood regularly. Additional housing would worsen flood risk. The Infrastructure Delivery Plan lacks detailed analysis, costings, or secure funding for the new road or community services. Green Belt policy requires 50% affordable housing, reducing developer contributions and leaving insufficient funding for necessary infrastructure.		No	
62850721	Dan Sweet			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I wish to object to the proposed development on the grounds that it is neither sustainable nor in the long-term interests of Backwell or its residents. Local employment opportunities are extremely limited, yet the proposal offers no coherent plan for how new residents would secure work locally or how they would travel to employment without generating substantial additional car journeys. This lack of strategic foresight creates a fundamentally unsustainable pattern of development. Moreover, the proposals do nothing to improve access to genuinely affordable housing for local people. Instead, they serve primarily the financial interests of national housebuilders, who stand to profit from large-scale construction while offering little benefit to those already living in the area. The development represents short-term commercial gain rather than a meaningful or ethical response to local housing needs. The scheme would also result in the permanent loss of Grade 1 agricultural land, currently used for food crops and grazing. Only 7% of this high-quality land remains in North Somerset, making its protection vital for local and national food security. Government policy clearly states the need to safeguard "our best and most versatile land," yet this proposal would sacrifice it for housing that is neither affordable nor justified. Once lost, this farmland—and the wildlife habitats it supports—can never be recovered. The irreversible destruction of such a valuable resource for the sake of developer profit represents a clear failure to prioritise long-term community resilience or environmental responsibility. Backwell already has 800 new houses approved, equating to a 40% increase in the village's size. Adding a further 1,000 homes would amount to extreme overdevelopment. There is no evidence that the scale of growth proposed is either needed or deliverable. Crucially, despite the volume of new housing planned, local people are not being provided with housing that meets their financial realities. The development, much like others recently approved, risks further inflating local prices and pushing residents—especially younger families—further out of the area. Meanwhile, Backwell is already experiencing a deficit in school places, and there are no firm commitments to invest in healthcare, leisure facilities, or transport infrastructure. Despite this, the village has been allocated a higher proportion of new housing than any other village in North Somerset, and even more than some towns. No needs assessment or viability analysis has been provided to justify this disproportionate burden.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Backwell is not an employment hub, and most residents commute, yet no social cohesion assessment has been completed. The proposals would also severely harm local biodiversity. The fields earmarked for development form part of a key habitat corridor in one of the world's most nature-depleted countries. They are relied upon by protected species, including the rare Lesser and Greater Horseshoe Bats associated with the Brockley Maternity Roost and the nearby SSSI. The loss of this habitat would be permanent and impossible to mitigate effectively. The proposed new road does not offer a realistic solution to existing traffic congestion in Nailsea or on Station Road, Backwell Common, or Chapel Hill. Constructing it under or over the railway would be extraordinarily expensive and potentially unfeasible, yet the Infrastructure Delivery Plan lacks the necessary analysis, costings, or confirmed funding. This further highlights the speculative nature of the proposals. Flood risk is an additional major concern. Backwell Common and surrounding areas already flood regularly, and the fields adjacent to Backwell Lake (Reservoir) lie directly on a floodplain. Further development would exacerbate these risks significantly. The designation of this area as a strategic growth location raises serious concerns regarding landscape character, the loss of Green Belt and high-quality agricultural land, and the uncertainty of delivering essential infrastructure in time to support such extensive growth. Although government policy requires 50% affordable housing on Green Belt land, this in turn reduces developer contributions towards infrastructure, placing even greater pressure on already overstretched local services. Finally, the railway station—often cited as justification for dense development—remains wholly inadequate as a transport hub. It is inaccessible for those with mobility issues and difficult for families with young children, making it unrealistic to rely on as a primary transport solution for a development of this size. In summary, these proposals place developer profit before the needs, wellbeing, and future resilience of the community. The irreversible loss of valuable farmland and wildlife habitat, combined with a lack of infrastructure, affordability, and long-term planning, renders the development unsustainable and inappropriate. I therefore strongly urge that this application be refused.			
62582625	Philip John Taylor			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I am totally opposed to the inclusion in the proposed new Local Plan 2041 of the additional sites east of Backwell, providing for almost 1000 new houses, which will lead to an unacceptable overdevelopment of the village. Backwell is already subject to approved developments of approximately 800 houses and these additional proposed sites will "be the straw that breaks the camel's back" for Backwell. Such development raises questions that are currently unanswered, namely:- what provision will be made for the provision and finance of increased services such as school places, local medical centre, etc that will inevitably be required. Also how will the proposed new road be financed and constructed and by whom? Enough is enough, I say NO to these proposals.			
51427393	Zehra Tahtakilic			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I think not sound due to housing need being closer to employment hubs such as Portishead, Clevedon and Weston-super-Mare. The plan to build in Backwell will only increase a commuter belt without any local jobs. Backwell has multiple other sites approved for housing, which currently adds about 800 dwellings to a small village with small infrastructure (narrow roads etc) which have little to no scope to improve do to natural limitations. So the 1,5 times increase in houses already planned is likely to put an unreasonable pressure on the infrastructure already. The village cannot sustain any more dwellings. Also flooding is a regular issue in certain areas including homes and roads. Backwell Common itself is regularly prone to flooding. I'm not convinced that concreting large portions if land is going to improve this. The land proposed is currently actively in use as agricultural land, as such is valuable for our food production. There is limited land if similar value across North Somerset.	I think Backwell has already been allocated much more than it's fair share of housing. Especially compared to other larger towns in NS which have most of the jobs. Backwell will likely only grow as a commuter belt. My thought are that numbers need to be revised to reflect the housing need in NS better, in line with where jobs are and where can take a larger portion of housing more safely (considering flood risks) and efficiently (considering infrastructure that has actual potential to develop that can cope with such numbers).		
62658817	K Tailor			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	No	I consider the North Somerset Local Plan 2041: Pre-submission Plan to be unsound because it is not justified, not effective, and not consistent with national policy. Backwell has already accepted 800 new homes, representing a 40 percent increase in the size of the village, yet the Plan proposes around 1,000 additional houses. This level of growth is disproportionate and unjustified: Backwell is expected to take 7 percent of the district's total housing numbers, more than any other village and even more than towns such as Clevedon, which is allocated only 2 percent. No needs assessment, viability study, or evidence has been provided to justify concentrating such a high proportion of the district's growth in a rural village that is not an employment hub and where most residents must commute. The allocation is also undeliverable due to the severe infrastructure deficit. There are already insufficient school places, no additional health service capacity, and no investment in leisure or community facilities. The Infrastructure Delivery Plan lacks credible analysis, costings, and funding guarantees, particularly for the proposed new road that underpins the entire growth strategy. It is unclear whether this road can be engineered across or beneath the railway line, and it may be unfeasible or prohibitively expensive. Even if delivered, the road would not alleviate congestion on Station Road, Backwell Common, or Chapel Hill. The Plan assumes improvements in sustainable transport, yet Nailsea and Backwell station remains inaccessible for people with mobility issues and is unsuitable as a transport hub for the significantly expanded population. The Plan is inconsistent with national policy due to the loss of Green Belt and Best and Most Versatile agricultural land, including Grade 1 farmland, of which only 7 percent remains in North Somerset. National policy requires that this land be protected to support food security, and the Council has not demonstrated the exceptional circumstances needed to justify Green Belt release. Development would also harm biodiversity, threatening the Brockley Maternity Roost, nearby SSSI habitats, and foraging land for protected Lesser and Greater Horseshoe Bats. Flood risk further undermines deliverability. Backwell Common, Backwell Lake, and surrounding fields lie on known floodplains that already flood regularly, and the Plan provides no robust evidence that increased flood risk can be safely mitigated. No assessment has been made of the impact of such rapid growth on social cohesion or the character of the existing community, which is a significant gap in the evidence. Taken together, these issues show that the Backwell allocation is not justified by the evidence, not deliverable in practice, and not consistent with national policy on Green Belt protection, agricultural land, biodiversity, sustainable transport, and flood risk. For these reasons, the Local Plan is not sound, and the Backwell Strategic Growth Location should be removed from the Plan.	To make the North Somerset Local Plan 2041 legally compliant and sound, the housing strategy for Backwell needs substantial amendment. The scale of development identified for the village must be reduced to a level that is proportionate to its size, existing commitments and environmental constraints. Backwell already has around 800 approved homes, which represents a 40 percent increase in the village, and any further allocation must be supported by a clear needs assessment, a viability assessment and evidence that the location is deliverable without harming Green Belt purposes or high quality agricultural land. The plan should remove allocations from Grade 1 agricultural land and land that performs recognised Green Belt functions, and instead focus on brownfield sites, larger settlements and locations with genuine employment opportunities. To be sound, the plan must also include a credible Infrastructure Delivery Plan. This requires detailed, costed and funded proposals for transport, education, health services, drainage, biodiversity mitigation and utilities. The current assumption that a new link road or rail underpass	I do not consider the North Somerset Local Plan 2041: Pre-submission Plan to be sound or legally compliant because it allocates housing on Green Belt land, including the Backwell Strategic Growth Location. I cannot provide support for the plan's soundness or legal compliance in its current form. In my view, the plan would only be sound and compliant if all Green Belt housing allocations were removed and the focus shifted to brownfield sites, urban intensification, and locations with sufficient infrastructure and employment opportunities.	Document.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									would resolve congestion is not supported by any detailed modelling and must be replaced with evidence based transport assessment and a full consideration of alternatives. The plan must also demonstrate how additional school places, GP capacity, active travel routes and community facilities will be delivered at the same pace as development. It must also take into account national policy which states that Green Belt sites that deliver 50 percent affordable housing will significantly reduce developer contributions, and therefore cannot be relied upon to fund major new infrastructure. Environmental soundness also requires modification. The plan must remove or revise any allocations that would damage the ecological network, including designated wildlife corridors, the SSSI setting, bat foraging habitat and the Brockley Maternity Roost. It must also fully reassess flood risk, taking into account the regular flooding around Backwell Common, Backwell Lake and the surrounding fields, and ensure that no development is proposed in areas that fail the sequential or exception tests within national policy. The plan must also be modified to show compliance with national policy on social cohesion, settlement identity and sustainable communities. This requires an assessment of how very large scale development would affect the function of a village with limited services, no local employment base and a railway station that is not accessible and cannot operate as a transport hub. Without these changes, the plan cannot meet the tests of being justified, effective or consistent with national policy.		
62758625	Nikki Tailor			Unsure		No	No	1. Lack of justified evidence for the site allocation opposite my property The Plan does not provide robust, proportionate evidence explaining why this specific location has been chosen for housing compared with reasonable alternatives. There is insufficient assessment of environmental, infrastructure and community impacts in this immediate area, and therefore the allocation is not “justified” as required by the Tests of Soundness. 2. Inadequate consideration of infrastructure capacity The proposed development opposite my home has not been supported by clear evidence showing that local roads, drainage, parking, schools, health services and utilities can accommodate the additional demand. The Plan does not demonstrate that the necessary infrastructure will be delivered in a timely manner, so it is not “effective”. 3. Failure to properly assess local environmental impacts The site allocation does not appear to be supported by sufficient analysis of impacts on landscape character, residential amenity, traffic, air quality, noise, and loss of open space. Without this evidence, the Plan cannot be considered positively prepared or environmentally sound. 4. Insufficient public engagement and clarity of information The consultation materials do not clearly explain the rationale for selecting this site or the detailed implications for existing residents. This raises concerns about whether the Plan meets legal requirements for transparency and meaningful public participation under the planning regulations. 5. Duty to Cooperate concerns There is no clear evidence that the Council has actively cooperated with neighbouring authorities or relevant bodies regarding the cumulative effects of development in this area, including cross-boundary transport and infrastructure pressures. Without documented, constructive engagement, the Plan does not meet the Duty to Cooperate. For these reasons, I believe the Plan in its current form is not sound, not legally compliant, and does not satisfy the Duty to Cooperate.	There is nothing you can do	No	
62864097	Joe Tallis-Chisnall			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	No	I object to Policy LP7 – Land East of Backwell (Schedule 1, capacity 889) on the grounds that it renders the North Somerset Local Plan 2041 unsound, not legally compliant, and inconsistent with national planning policy. The scale of this allocation is unprecedented for Backwell, which already has 800 new houses approved, representing a 40% increase for the village. Adding a further ~889 houses would constitute complete overdevelopment, placing unsustainable pressure on the local community, services, and infrastructure. The proposed development is not deliverable or sustainable for multiple reasons: Transport and congestion – The new road intended to serve the development would not effectively relieve congestion on Station Road, Backwell Common, or Chapel Hill. Engineering solutions to route the road under or over the railway would be extremely expensive and may not be feasible. The railway station is not fit for purpose as a transport hub, particularly for people with mobility issues or families travelling with young children. (NPPF paras 104–105) Infrastructure deficits – Despite already-approved growth, there is a shortfall of school places and no planned investment in health, leisure, or community services. The proposed additional housing would exacerbate these deficiencies, rendering the development undeliverable (NPPF para 92). Disproportionate growth – Backwell is allocated a higher number and percentage of housing than any other village or	To make Policy LP7 and the Local Plan legally compliant and sound, the following modifications are necessary: Remove or substantially reduce the allocation of Land East of Backwell until exceptional circumstances for Green Belt and Strategic Gap release are robustly demonstrated, in accordance with NPPF paras 137–139. The Plan must justify the scale of growth relative to the existing village and district-wide housing strategy. Provide a comprehensive needs and viability assessment, including the impact of 889 additional dwellings on	N/A	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								even some towns in North Somerset. It is expected to take 7% of the district's housing allocation compared to Clevedon's 2%, which is disproportionate and unjustified. Lack of evidence – No needs assessment, viability analysis, or social cohesion impact assessment has been provided for the additional 889 homes. Backwell is not an employment hub, so most new residents will commute, worsening traffic and environmental pressures. Agricultural land and food security – The site contains Grade 1 agricultural land, one of only 7% remaining in North Somerset. Development would contradict government policy to protect the best and most versatile land, undermining long-term food security. Environmental impacts – The proposals would destroy wildlife habitats, including those critical for biodiversity in one of the most nature-depleted countries. The site supports the Brockley Maternity Roost and SSSI, with rare Lesser and Greater Horseshoe Bats relying on the area for feeding. Flood risk – Backwell Common, Backwell Lake, and adjacent fields are prone to flooding, which would be exacerbated by additional housing and road construction. The Infrastructure Delivery Plan does not adequately analyse or cost mitigation measures. Green Belt / Strategic Gap – The allocation would result in the loss of Green Belt and high-quality landscape, eroding settlement identity and rural character. Government policy requires 50% affordable housing on Green Belt land, reducing funds available for necessary infrastructure, making the proposals economically and practically challenging to deliver. Deliverability and sustainability – The sheer volume of housing, combined with insufficient investment in roads, schools, health, and utilities over a short period, is destabilising and undeliverable. NPPF para 35 requires plans to be effective and deliverable, which this allocation fails to meet. In addition, there is no credible evidence that the proposed road or other infrastructure could be funded, delivered on time, or successfully mitigate the cumulative impact of this scale of growth. The Sustainability Appraisal does not consider reasonable alternatives, including brownfield redevelopment or redistribution of housing to less constrained locations. For all these reasons, Policy LP7 fails the tests of soundness (positively prepared, justified, effective, and consistent with national policy), and the Local Plan cannot be considered legally compliant or deliverable.	schools, healthcare, leisure facilities, utilities, and social cohesion. The Plan must demonstrate that infrastructure and services can accommodate the proposed growth without destabilising the community (NPPF paras 35, 92). Prepare a deliverable, funded, and evidence-based transport mitigation strategy, including: Cumulative traffic modelling for the A370, Station Road, Backwell crossroads, Chapel Hill, and other local roads. Feasible solutions for railway crossings or road links under/over the railway. Upgrades to the railway station to address accessibility and mobility challenges. Measures to encourage sustainable transport and reduce car dependency (NPPF paras 104–105). Strengthen environmental and ecological evidence, including: Surveys of habitats, protected species, and biodiversity corridors. Detailed mitigation proposals for Lesser and Greater Horseshoe Bats and the Brockley Maternity Roost SSSI. Biodiversity Net Gain calculations and long-term management plans (NPPF paras 174–180; Environment Act 2021). Prepare detailed flood risk and drainage assessments, demonstrating that development can be accommodated safely without increasing surface-water or fluvial flood risk to Backwell Common, Backwell Lake, and downstream areas. Include SuDS feasibility and maintenance strategies (NPPF paras 159–167). Assess alternatives and provide a transparent Sustainability Appraisal, considering brownfield redevelopment, urban intensification, and redistribution of growth to settlements with existing infrastructure. The Plan must demonstrate that Land East of Backwell is the most sustainable and deliverable option. Demonstrate Duty to Cooperate compliance with neighbouring authorities, statutory infrastructure providers, and environmental agencies to ensure cross-boundary impacts on transport, ecology, and utilities are addressed (Planning & Compulsory Purchase Act 2004, s33A). Provide a credible funding and phasing plan for all infrastructure required to serve the allocation, ensuring that delivery aligns with housing construction to prevent unsustainable growth. Without these modifications, Policy LP7 is not justified, not effective, and cannot be considered sound or legally compliant.

59565633	J.Plant		Backwell resident	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	With the already agreed additional 800 houses a further 1000 would represent complete overdevelopment. The need for the additional proposed road is not needed or feasible going across a flood plain and having to cross a railway line at no doubt great expense. With the proposed increase agreed no additional infrastructure to support education and health areas. No other village has been allocated such a percentage increase. The Grade 1 agricultural land is vital to be kept as part of the National Plan for food security. The whole area proposed for housing is in a floodplain. The sheer size of this proposal is totally out of proportion for the whole of the North Somerset Area. There is on,y 7% of Grade 1 agricultural land left in North Somerset and should therefore not be touched.			
9242785	Bob Taylor Backwell Parish Council		My personal comments	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Our village (Backwell) has 800 new homes and any more cannot be classed as sustainable. At this time we have a serious shortfall of school places meaning all these new residents will not be able to attend a school in Backwell apart from lack of infrastructure and services this proposed amount of development is without serious thought, planning and a sensible master plan for the whole of NSC. The proposed infrastructure plan lacks analysist and the costings are unbelievable short and where is the funding to be found as the developer seems reluctant. What does surprise me is the lack of serious thought on flooding The developer seems to think they only have to address flooding created on there single development and ignores the knock on effect of flooding around that site. I must comment on the Railway station being not fit for purpose. No wheelchair access on the Backwell side and on the Nailsea side the serious gap between train and platform is an accident waiting to happen ,the platform needs raising and health and safety does not apply to this station which apparently is an asset.			
62848673	N Taylor			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Lack of infrastructure such as schools, doctors, nhs dentist. It will increase traffic increasing congestion and as my children are regularly walking in Back well I worry for their safety. There is an economic risk to the agricultural land and appeal of living in a village as it would lose the character with even more hpuses.	Lack of infrastructure such as schools, doctors, nhs dentist. It will increase traffic increasing congestion and as my children are regularly walking in Back well I worry for their safety. There is an economic risk to the agricultural land and appeal of living in a village as it would lose the character with even more houses.		
62850561	J Taylor		Sustainable Hive CIC	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell has already seen significant housing development in the last couple of years, with some already agreed. It is such a sad sight seeing fields where the children play after school being eaten up by machinery - it is ruining the feel of the village and changing the opportunity for the community to access green space; essential for mental health and wellbeing. Backwell is not where the jobs are, people commute and the road system simply can't cope - and no amount of bus lane changes have helped in any way. When there are any issues on surrounding roads then it grinds to a halt in backwell a clear indication of what will happen if so many more residents are housed here. The infrastructure simply can't cope and with the railway there are no options to do this safely and effectively. The railway is sweet but not a major hub to cope with increased numbers. It is a narrow platform and has no provision for mobility limitations or push chairs etc. It is a single lane through the tunnel and there is already far too much traffic on this road. The poor secondary students are at risk of cars knocking them enough as it is with such narrow pavements and so much traffic - to add more is so dangerous! The fields suggested are regularly waterlogged and are valuable flood defence for surrounding houses. Please have common sense around this - we need these soakaway fields. The fields are not only valuable agricultural land, and phenomenal for wildlife, but are also regularly enjoyed by the community. Just head there at the weekend and see people greeting each other whilst dog walking and children enjoying the freedom of not walking next to a road. My own children love going for walks through here and it does them so much good. My children attend both the infant and junior school - the junior school is at capacity and have a waiting list. The infant school has smaller numbers only becuase of the low birth rate this year - it would only take a handful of children to be at capacity. What happens when those spaces are taken? More traffic on the road at peak times when children are on the pavements that already have trucks and cars mounting them to get around all the traffic - it is an accident waiting to happen and as a mum it is terrifying!	The increase in population for Backwell is purely unsustainable.		
62860385	Owain Thatcher			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell already has 800 new houses approved: a 40% increase for the village. The existing deficit in school places has been ignored; and there is no proposed investment in health services, leisure facilities, or the train connections which are being disproportionately relied on to justify this tick-box overdevelopment. Grade 1 agricultural land should not be built on: there is only 7% of this quality land left in North Somerset. Further, development of such land is contrary to Government policy: ‘we must protect our best and most versatile land’. Food security risks being undermined. Part of the area is a flood plain which is necessary to avoid existing houses flooding. The proposal will put more pressure on the plains than can be handled, resulting in more serious flooding to existing and new houses. The land provides much needed habitats for a range of species – which is crucial: the UK is one of the world’s most nature-depleted countries. Once the habitats are destroyed, the animals cannot survive and creation of mitigating habitats is insufficient. Rare lessor and greater Horseshoe bat populations will be adversely impacted.			
51737185	M Thomas			No	• Positively prepared • Justified • Effective • Consistent with	Unsure	Unsure	Backwell is already fully developed these additional houses will lead to complete overdevelopment The proposed road would not be effective or relieve congestion on Station Road, Backwell common, or chapel Hill. The lack of infrastructure and services cannot support a fur5her 1000 houses Backwell is not an employment hub. The additional % of the districts housing allocation is out of proportion at 7% when Clevedons is 2%, it is the highest in North Somerset and greater than towns. Grade 1 Agricultural land is used for crops and grazing, these proposals undermine food security. No social cohesion impact assessment has been provided.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					national policy			The proposals threaten the Brockley Maternity Roost and SSSI with the rare Lesser and Greater Horseshoe Bats relying on the land for food. The infrastructure Delivery Plan lacks analysis and costings, there is no funding guarantees for the new road or service. Backwell common and surrounding areas are prone to flooding as are the fields of Grove Farm!!! The railway station is not fit for purpose as a transport hub.			
62850049	H Thomas		Viper Innovations Limited	No	• Effective	Unsure	Unsure	I recognise the need for additional housing in North Somerset however this Plan makes huge changes to the character of Nailsea & Backwell rather than spread the additional housing requirement across the North Somerset council area. The new road across Backwell Common would bring far more vehicles onto road existing roads in the area and could become a short cut for Bristol airport traffic cutting through Nailsea from the M5 or other routes. It would adversely impact the biodiversity of the area. I regularly see deer on Backwell Common and every summer night at dusk see bats in the fields between Station Road and Backwell Bow. Bats rely on this area and putting a road through would disrupt their habitat. The proposed level of new housing in Nailsea and Backwell puts too much pressure on already inadequate community facilities compared to other areas of North Somerset (e.g. Backwell Pool and Scotch Horn Leisure centre are dilapidated compared to Portishead and Hutton Moor) and Nailsea & Backwell station is in need of an upgrade. Developers should pay to provide new community facilities e.g. leisure centre and astroturf pitches for residents of both Nailsea and Backwell.	Do not proceed with the new road across Backwell Common to protect the area and wildlife habitat. Spread the additional housing requirement across the North Somerset area. Where development does happen ensure that new community facilities (e.g. leisure centre, pool etc), railway station upgrade are provided.		
50328385	David Threlfall			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Existing Growth - Backwell already has approval for 800 new homes—a 40% increase—which risks significant overdevelopment for the village. In total with other proposals the village will double in size. Disproportionate Allocation - Backwell is assigned more housing than any other village in North Somerset, accounting for 7% of the district's allocation compared to Clevedon's 2%. It feels like this area is targeted because it has good schools and high house prices, a key driver for developers who are interested only in the sale of the houses and have no concern or financial interest in the quality of the village after development. Transport Infrastructure - The proposed road will not alleviate congestion in Nailsea or Backwell and requires costly, potentially unfeasible engineering to cross the railway. Insufficient Services - Current deficits in school places, healthcare, and leisure facilities mean the area cannot support an additional 1,000 homes without major investment. Lack of Analysis - No needs or viability assessment has been provided for the proposed expansion. Employment Limitations - Backwell is not an employment hub; most residents commute. This will cripple the road system and traffic lights in the village Social Impact - No assessment of social cohesion impacts has been conducted. There is no mitigation to residents why the 2 years of construction noise, poor air quality, mud on the road and increased flooding happens. Loss of High-Quality Land - Development would remove Grade 1 agricultural land—only 7% of which remains in North Somerset—contradicting government policy to protect food security. Environmental Harm - The proposals threaten biodiversity, wildlife habitats, and protected species, including rare Lesser and Greater Horseshoe bats. It also removes a large area for walking and wildlife, including deer regularly seen in these fields. Infrastructure Uncertainty - The Infrastructure Delivery Plan lacks costings and funding guarantees for roads and essential services. Flood Risk - Backwell Common and planned development areas lie on floodplains, increasing flood risk. This development will increase runoff and decrease time of concentration, exacerbating flooding and damage to the river and the lake Policy Conflicts - Affordable housing requirements on Greenbelt land reduce developer contributions to infrastructure. These contributions are vital to mitigating the impact on the village and reducing the chronic shortage of services resulting from the development. Unsustainable Growth - The scale and pace of development are destabilising, unsustainable, and undeliverable. Transport Hub Issues - Backwell railway station is inadequate and inaccessible for many users.			
51055009	Paul Tindall			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Flooding The land targeted for housing development east of Backwell floods. Water originating on Backwell Hill flows and seeps down into the fields adjacent to Backwell Common. Dig a hole in the land in or around Woolleys Farm and it fills with water. Lift the main water supply stop cock lid in my gateway and you can see it is filled with water to 15cm below road level, even in non-flooding conditions. North Somerset Council has conveniently ignored or chosen to dismiss the flooding problems in Backwell Common in order to target the surrounding fields for development despite local knowledge, repeatedly being made aware of it over the last 30 years as well as recent hydrology reports and hydraulic modelling. Indeed, the document "North Somerset - 2012 Flood Investigations" does not even show this location as having flooded. The reality is that Backwell Common seriously flooded 6 times in 2012 between September and the end of December. This document is clearly inaccurate and missing critical information. Building a massive housing development in the fields east of Backwell will simply exacerbate the problem in Backwell Common in the vicinity of Woolleys Farm and the railway bridge. Unfortunately the mitigation approach so glibly positioned by planners and developers to address the problem is just an attempt at defying the laws of physics. Digging a pond in a water-logged floodplain simply creates a low-point container that fills with water, with no exit path or means of drainage without building a pumping station and drainage channels traversing the railway embankment. Overdevelopment The currently planned housing developments already increase the population of people and cars to a level that breaks local services and infrastructure. Adding a further 1000 houses and at least another 2000 cars is clearly an overdevelopment incompatible with local services. Backwell centre already suffers gridlock at several times of day with people competing for the meagre parking spaces and this is even before the currently planned or work-in-progress developments are completed and occupied. Development at the scale proposed will quickly render existing local services woefully inadequate, forever playing catch-up and desperate for hard-to-get infrastructure funding. On top of existing Backwell development, an additional 1000 houses is unsustainable, unjustified and unbalanced compared to other villages. It is delivering a soft target and gift into the hands of developers. Destruction of Agricultural Land and Green Belt The land east of Backwell is prime agricultural land and should absolutely not be used for housing development, especially at a time when shortage of such land has been highlighted nationally as an ever more serious food security problem for this country. New housing should be prioritised on non-greenfield sites. Recategorising this area from green belt to grey belt is not justified but is being used by North Somerset Council as a convenient route to downgrade its greenfield value and facilitate allocation for housing development. It is also inappropriate that the council is the body interpreting and applying the criteria for recategorisation of green belt to grey belt while at the same time the very			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								body that is targeting the green belt areas for development. Infrastructure and Transport Backwell has minimal local employment and new housing developments will largely accommodate commuters to Bristol area workplaces. The recent level of return to site-based work has largely nullified the post-Covid benefits of working from home to transport capacity at peak times. While there is still some benefit to easing commuter load it is far from clear what the future of home working will be, its ability to drive development and sustainable use of local services and reduce the trajectory of traffic growth. However, what is clear is that adding hundreds more commuter car journeys daily to the A370 will exacerbate traffic congestion between Backwell and Bristol. The proposed Backwell cross rail link road is an unfunded yet highly expensive and difficult to construct proposal that will without doubt extend to 10's of millions of pounds for a 1.5 mile stretch of road and will largely move traffic bottlenecks rather than eradicate them. Unless Station Road is closed to traffic to/from the A370, adding another route between the A370 and Nailsea will result in two traffic streams merging north of the station as well as introducing an additional intersection/delay between Backwell and Bristol. With the majority of traffic heading along the A370 in one direction at peak times, adding a new traffic route between Nailsea and the A370 does not reduce the traffic; it simply redistributes it between the existing and new routes but with the same volume of traffic ultimately joining the A370. And unfortunately, it gets even worse. If Nailsea - Bristol traffic that would currently use the Wraxall B3130 route migrates to the proposed new route it further adds to A370 congestion in Backwell. It should also be recognised that the proposed link road will cross a floodplain and if routed under the railway line, will be at risk of flooding with the requirement for pumping infrastructure. The alternative proposal of a bridge will result in a visual monstrosity reaching 13m (plus double-decker bus height vehicles) above existing ground level That is equivalent to the height of a 4 storey building. According to the transport strategy document (Appendix E) the approach ramps at each side would extend 250m to achieve the necessary gradient. The proposed link road passes within close proximity to three ancient/listed farmhouses of historic interest that are fundamental to Backwell Common's rural setting, character and heritage. Targeting the land east of Backwell for development of this magnitude entirely undermines the basis for protecting the character, setting and curtilage of listed buildings of historic interest. It is clearly in violation of Strategic Policy 11in the Local Plan as well as the stated Site Requirements to preserve key views from heritage assets.			
62777409	A M Tobin			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Another 1,000 houses, family houses, so a husband, wife and two children, possibly 3 or 4. So, another 4,000 people, another 2,000 cars. Where are 2,000 children going to go to school, it says about a new school, what, for 2,000 children, different ages, Backwell School, Nailsea School, can they cope with 1,000 more pupils ? It is difficult to see a Dr now, what will it be like with 4,000 more residents. Station Road has a railway bridge and traffic lights, utter gridlock. That new road won't be built, the council has no spare money. The whole idea of 4,000 new residents, 2,000 extra cars is utter madness. Yes, there is a railway station, does anybody honestly think everyone will get on the train to go anywhere ? Of course, not choking up all with exhaust fumes. With the 800 already agreed, the total would be7,200 new residents, 3,600 extra cars, surely anyone can understand this is utter madness. Why is Backwell earmarked for 80% increase in population, and Portishead 14%, when Portishead will also have a railway line ? Surely someone there can see how ridiculous the whole idea is, population increase of 80%, thousands of cars, be serious, please ?			
39145889	Christine Tottle		private	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I am writing to formally object to the proposed development of 1000 residential units on precious Grade 1 Agricultural Greenbelt land in Backwell. This plan poses a significant threat to our community and environment for several reasons: Overdevelopment Concerns Currently, 800 houses have already been approved, which would increase Backwell's population by 40%. The additional 1000 houses would result in an over 80% increase in our population without any accompanying infrastructure. This is a clear case of overdevelopment. Loss of Agricultural Land Only 7% of Grade 1 Agricultural land remains in the whole of North Somerset. While governments urge us to combat climate change, North Somerset's plan to develop housing on agricultural land contradicts this by necessitating increased food imports and transportation. By taking away valuable land for crops and grazing, we are undermining food security and sustainability. Government policy clearly states that 'we must protect our best and most versatile land.' Yet, this proposal seeks to give it away to housing, which is unnecessary in Backwell given the existing housing developments. Lack of Infrastructure The plans show inadequate infrastructure to support the influx of new families. While a new road is proposed, funding is expected to come from North Somerset Council, which has already stated it lacks the necessary funds. Schools: Our existing schools are already nearing capacity, and there are no plans for new educational facilities to accommodate the additional children. Healthcare: The Tytentensfield Medical Centre has indicated it cannot service the anticipated increase in residents, further straining our already limited healthcare resources. Transportation Issues Backwell is not an employment hub, and most residents commute. The primary road, the A370, is already congested, especially during busy summer months or when the M5 experiences closures. Public transport, including buses and trains, is often full during peak commuting times, making it difficult for residents to travel. Additionally, there is no access for disabled individuals at the train station, despite numerous reports highlighting this issue, leaving many without viable travel options. Character of Backwell The proposed development is out of character with the existing community. Backwell is already allocated a higher percentage of housing than any other village in North Somerset (7% compared to Clevedon's 2%). This disproportionate allocation undermines the village's character and community integrity. Conclusion			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								In conclusion, I urge you to reconsider the implications of this development on our community and the environment. We cannot sacrifice our agricultural land and community resources for unchecked housing growth. Thank you for considering my objection.			
51291329	Peter Tottle			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy			I am compelled to express my profound objection to the proposed development of 1000 residential units on precious Grade 1 Agricultural Greenbelt land in Backwell. This plan poses a significant threat to our community and environment for several reasons: Overdevelopment Concerns Currently, 800 houses have already been approved, which would increase Backwell's population by 40%. The additional 1000 houses would result in an over 80% increase in our population without any accompanying infrastructure. This is a clear case of overdevelopment. Whereas Weston Super Mare is having a 22% increase in population and is adjacent to a motorway and has a train station with direct routes to London and a disabled access to the station. Loss of Agricultural Land Only 7% of Grade 1 Agricultural land remains in the whole of North Somerset. While governments urge us to combat climate change, North Somerset's plan to develop housing on agricultural land contradicts this by necessitating increased food imports and transportation. By taking away valuable land for crops and grazing, we are undermining food security and sustainability. Government policy clearly states that ‘we must protect our best and most versatile land.’ Yet, this proposal seeks to give it away to housing, which is unnecessary in Backwell given the existing housing developments. Lack of Infrastructure The plans show inadequate infrastructure to support the influx of new families. While a new road is proposed, funding is expected to come from North Somerset Council, which has already stated it lacks the necessary funds. Schools: Our existing schools are already nearing capacity, and there are no plans for new educational facilities to accommodate the additional children. Healthcare: The Tyntesfield Medical Centre has indicated it cannot service the anticipated increase in residents, further straining our already limited healthcare resources. Flooding Backwell common and Backwell Lake’s surrounding fields, where new roads and housing are planned are proven to flood regularly. Why would it be sensible to build houses or roads in this area? Nobody will buy them. Transportation Issues Backwell is not an employment hub, and most residents commute. The primary road, the A370, is already congested, especially during busy summer months or when the M5 experiences closures. Public transport, including buses and trains, is often full during peak commuting times, making it difficult for residents to travel. Additionally, there is no access for disabled individuals at the train station, despite numerous reports highlighting this issue, leaving many without viable travel options. Character of Backwell The proposed development is out of character with the existing community. Backwell is already allocated a higher percentage of housing than any other village in North Somerset (7% compared to Clevedon’s 2%). This disproportionate allocation undermines the village's character and community integrity. Conclusion In conclusion, I urge you to reconsider the implications of this development on our community and the environment. We cannot sacrifice our agricultural land and community resources for unchecked housing growth. Thank you for considering my objection.			
62568897	C Turner			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	There is no needs or viability analysis for a further 1,000 houses, both of which are very serious issues given existing pressures on local services and infrastructure Backwell and nearby Nailsea are already building hundreds of new houses on farmland Transport links for commuters to places of work (mainly Bristol) are already inadequate with many bottlenecks, pinchpoints and inadequate parking provision Proposals to develop roads and houses in the Backwell Common and Backwell Lake area suggest a complete lack of knowledge of the regular flooding in the area	The plan should contain a much more detailed explanation of the decision making process in allocating so many houses in such a small area Detailed analysis and costings must be included for the Infrastructure Delivery Plan		
62501665	Rachel Upton			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell already had 800 new houses approved, a 40% increase for the village. These additional numbers would lead to complete overdevelopment. The proposed road would not effectively serve Nailsea's traffic or relieve congestion on Station Road, Backwell Common or Chapel Hill. Engineering the road under or over the railway would be highly expensive and possibly unfeasible. Despite the huge increase in housing, there is a defect in school places and no investment in health or leisure services. The lack of infrastructure cannot support the planned 1000 houses. Backwell is getting more than it's fair share - higher than any other village and even higher than some towns, including Clevedon. There is no needs of viability analysis for an extra 1000 houses. No social cohesion impact assesment has been provided. Government policy states we must protect our best and most versatile land to safeguard food security. Backwell Common and surrounding areas are prone to flooding, which would be aggravated by more housing.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								It would harm habitat and biodiversity. The infrastructure delivery plan lacks analysis and costing, and there are no funding guarantees for new roads or services. Backwell lake and adjacent fields where the new roads and housing are proposed are on a floorplan, which floods regularly. The sheer volume of growth with the required investment infrastructure and services over such a short period of time is destabilising, unsustainable and undeliverable. The railway station is not fit for purpose as a transport hub - it is not accessible.			
62776417	David Uren			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	In our view the Approval already given by NSC for 794 new houses of which 154 are already under construction i.e., a 40% increase in Backwell's population, will in itself lead to: • Our children being denied the excellent education being provided by the local Schools through a lack of places. • A GP/Health Service, which is the envy of Bristol residents, to one where you might get an appointment (online) within 2 weeks. • Access to the Surgery, P.O., Shops and other businesses being even more difficult through a lack of Parking spaces. • The Traffic on the A370 and on Station Road through to Nailsea becoming even more of a nightmare To now propose building a further 889 houses without any plans to improve the infrastructure and services has got to be a NO NO, even more so on the Site proposed, which is Grade 1 Agricultural Land and a Habitat for the Horseshoe Bats.			
928033	Mike Veal			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Land East of Backwell This green belt site is productive grade 1 agricultural land – a rare commodity in North Somerset which should be preserved both for food production and its biodiversity value. The viability of the proposed development on this site is totally dependent on the construction of a relief road from the A370 to the Nailsea side of the railway. There is no evidence to show that such a road has been costed or that it is technically feasible for it to pass over or under the railway line. The cost would probably be prohibitive and there are no clear proposals as to who would provide the funding. An overpass would need to be high enough to clear future electrification of the railway and thus require a very extensive run up on each side. An underpass would be subject to flooding in the same way as the existing one at the bottom of Chapel Hill which habitually becomes flooded at times of heavy rainfall. My concern is that development would be given planning consent against vague promises of a relief road which will never be built for the reasons above. The traffic light junction at Station Road and the A370 is already at full capacity and the effect on this junction of the planning consents already granted and not yet built has yet to be seen – (Grove Farm 515 houses, Rodney Road 60 houses, Farleigh Fields West 125 houses and Farleigh Fields East 94 houses) Significant developments in Nailsea are also proposed and it must be borne in mind that Station Road is the principle link from Nailsea to the A370 and this will inevitably put further intolerable pressure on that route. Before any development is allowed on land east of Backwell there must be absolute certainty of construction of a relief road concurrent with that development. Such a relief road would in any case create another pinch point where it would join the A370 east of the Backwell crossroads. The whole concept has not been properly examined and is fatally flawed.			
62832801	R Whitesmith			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I go to school in Backwell and I am very worried about the scale of the development in the plans my parents have shown me. The impact on the wildlife and the use of land that should be used to grow crops and graze animals is what makes me scared about the future of my village. I don't want to live in a large town or city, I want to live in a village where I can see wildlife and where the farmers can use their precious land to help us eat locally sourced food.	Look at other places to build the houses, not this land which I am told is Grade 1 Agricultural Green Belt. It does not make any sense to build houses on this land.		
62832833	Fearne White-Smith			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I am scared that the new houses will hurt the bats. I love the bats and the other animals in my village. My parents have told me that the land these houses would be built on is very important for food and I don't think it is a good idea to build houses on land that should be used for food or for farm animals when there is other land we can build on instead.	Don't build on that land		
51043841	Jane Wills		Resident	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell, with its narrow winding lanes has developed gradually over more than a thousand years. With plans already approved for 800 new houses, including 500 to the west, the suggestion of a sudden massive deposit of 889 further new houses to the east, bringing sudden urbanisation, is total planning vandalism. To double the size of our thousand year old village in a decade will have a devastating, destabilising and unsustainable effect on our community. Obviously, almost all of thousands of proposed new residents will work in Bristol. So, the plan is to expect tens of thousands of new car journeys into Bristol. Expecting any large proportion of these new commuters to travel by public transport is proven nonsense. Why do the planners not plan new mass housing close to employment and other facilities rather than swamping villages outside the green belt. Sacrificing the only green gap between Backwell and Nailsea for road-building would be a blow to previous planning promises. This potentially highly expensive 'fantasy' project would purely serve the expansion in Nailsea, and will do nothing to alleviate the increase traffic confusion caused by a massive housing development to the east of Backwell. This could well just add to the problem, as fresh traffic from Nailsea joins the A370 at the entrance to the proposed extra development of the 889 new houses east Backwell. e will have a devastating effect on the community.			
62577729	Robin Walker			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Approximately 800 new houses have already been approved as an addition to Backwell, which is about a 40% increase in the size of the village. A further 889 new houses would represent dramatic overdevelopment. Backwell is already facing a deficit in school places and development of this magnitude would lead to a need for new schools which are not part of the plan. The plan is also deficient in not envisaging any increase in health services (already stretched even before the approved 800 houses) or leisure facilities. One could make many other detailed objections to the plan - loss of Grade 1 agricultural land, area prone to flooding and so on - but the main objection is quantitative in that this development is totally out of proportion to the existing structure of Backwell village and makes no attempt to improve that structure to match it. The Plan is not sound and should be rejected.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
62830209	C Walkington		N/A	No	‣ Positively prepared ‣ Justified	Yes	Unsure	The major problem is that the existing infrastructure is not adquate to cope with the existing population let alone a further 1000 homes. Very little is proposed to cope with the increased traffic requirement, which would require a masive supporting investment to build new roads giving an alternative direct access to Bristol and also a new alternative way into Bristol itself which would bypass the Cumberland Basin Bottleneck. These matters may need taking up at Government level. but until a soultion is found the proposed development should not be consideed.			
51286017	Gill Warren			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	North Somerset Council claims in its mission statement that it centres on being open, fair and green, with values of collaboration and protecting the environment. These proposals are not consistent with those aims and display a lack of “joined up thinking”. There is an overall shortage in housing in this country, and there needs to be an increase in supply to meet that demand. However, the demand is for housing close to places of work, not in rural villages. New housing should focus on the areas around Bristol and Weston-Super-Mare, which provide jobs and amenities, NOT in Backwell. This is about the developers minimising their costs by opting for greenfield sites rather than deal with the expensive of brownfield sites, or regeneration of Weston etc. Backwell already has a 40% increase in houses approved or under construction and cannot sustain further development. Nailsea is also seeing an increase in development requiring additional infrastructure. The proposed road would not relieve the congestion on the already busy roads into Nailsea/ through Backwell. Backwell has more houses proposed than any other village in North Somerset, which is neither fair nor green. New residents would not be able to work in Backwell so would need to commute. Much has been made of the “good transport links”, but we are still waiting for the railway platform to be made accessible as promised at the time of the London Olympics. Also at a maximum of four or five buses an hour, the volume of traffic will significantly increase, with the impact on the environment, safety and desirability of living in Backwell. There is already a deficit in school places, and other services such as doctors and dentists. The infrastructure and services cannot support another 1,000 houses. The proposed developments are either on grade 1 agricultural land, or within a floodplain. This is not sustaining food security and will have a deleterious effect on the environment for all houses and roads. The introduction of so many new houses will also change the demographic of the village – younger people with children, who will have nothing to do in the evenings. It is storing up potential problems for the future. Backwell currently has natural habitats needed for wildlife, bats in particular, which will be threatened by these proposals. This is not thought out strategically, and has not been considered to be of benefit to the people in North Somerset as a whole. I sincerely trust that the councillors will come to their senses and throw out this plan as it is not open, fair or green.	Build on brownfield sites closes to places of employment, Weston and Bristol.		
51434721	Emma Warren			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Way too many houses approved (800+) when already 800 have been approved for a large village, this is without any additional amenities which are either at capacity or closing down (school, health, leisure, public transport etc). Particularly as this is fertile land, which we do not have enough of, which also serves as a form of flood relief as this area often floods. It is ridiculous to build on a flood plain and building more houses there will just exacerbate the problem with nowhere for the water to runoff to. Backwell is a commuter village, we risk becoming more of a bristol/nailsea/WSM suburb, traffic will increase which is already a major issue. The fertile land is also home to at least one SSSI and local wildlife needing it too. Public transport is already bad in Backwell. While the buses do run it is only on the main road and station road, the train station in inaccessible to anybody with mobility issues despite money given to change that back in 2012! More links to Nailsea would be good but the proposed road will just increase congestion on the main road and station road. It has been stated there will be public transport which is good but there is no secured funding and likely the first thing that will be cut in the probable outcome of this plan going over budget (not that we have a proper budget given lack of cost analysis) The houses will almost certainly be single family homes rather than an actual mixed density and no additional retail spaces making Backwell less walkable, less productive and overall cost the council more while leading to the eventual decline of the village. It will be incredibly expensive to build in and around the train tracks as well as noisy, while reducing fertile and grazing land.	Cost analysis as well as environmental impact assessment from someone actually qualified and not invested in this development. The road modified by a licensed city planner to ease traffic and better public transportation. Mixed density homes- ie duplexes and triplexes as well as terrace and semi detached homes not just single family dwellings Less homes overall as to not overwhelm local services. Cost guarantee for new public services. A new flood response plan for the entire village and houses adapted to be flood proof if the plan is to go ahead with building on a floodplain, while also being accessible. A viability analysis, again by someone not invested in this development. An increase in public transport and making Nailsea and Backwell train station properly accessible on both sides of the track.	The percentage of affordable housing.	
18470785	Phil Watkin			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	List of Key Points against the additional 889 houses proposed to the north east of Backwell In principal adding further to the new housing already approved is unsustainable without very dramatic infrastucture improvements which are not even considered in the local plan. The proposed road is unlikely to change the problems on Station Road and building another bridge under the railway is probably not feasible There is no obvious requirement for a further 889 homes, where will the people come from? Certainly not from Backwell or Nailsea. There is very little employment in Backwell and only a moderate amount in Nailsea so the people are likely to commute, mostly by car, as the railway and other public transport only really serve central Bristol. The village of Backwell has been allocated a much larger proportion of the housing target than Clevedon but that is unexplained. Backwell Common and the lake are on flood plain land so even a road development would require special construction techniques. Run off from the site of the proposed 889 houses would inevitably increase the risk and frequency of flooding. The proposal appears to ignore the Governments policy of protecting the best agricultural land for food production. Existing schools are unlikely to be able to absorb the additional children needing education, and this will also place a further burden on the NHS facilities in the area. I also understand that the development threatens various endangered species in contravention of current protection legislation.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								In summary apart from being an unfair allocation of the housing target, which it clearly is, it is also ignoring so many other issues that the proposal should be thrown out with no further money spent on following it up			
62849985	Helen Watkins			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell is not a major centre for employment so most residents will need to commute to Bristol, Clevedon or Weston. The proposed new road will not be adequate to relieve traffic congestion on Station Road. The railway station is not appropriate as a transport hub. There is no access for those with mobility issues, despite many years of lobbying. The land to be used is of grade 1 agricultural quality, a rarity in North Somerset. It should not be used for housing. Government policy states that "we must protect our best and most versatile land" to ensure food security. The proposed land is prone to regular flooding and housing, as well as the new road, would be built on a recognised flood plain. This huge development would include a new primary school, but there is no mention of extra services or infrastructure for secondary schooling. Nor does the plan mention any investment in the necessary health services or leisure facilities which would be required to support such a large addition to the population of Backwell.	The whole plan is so misconceived and inadequate, coming from apparent ignorance of the local factors or what would be required to sustain the additional people, that no modifications can make it fit for purpose.		
58601089	D Watkins			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell already has a significant number of new houses being built/approved at present and it currently does not have the infrastructure to support that number of cars, without adding any additional houses. The main route between Backwell and Nailsea is Station Road and this is already a problem area, with the secondary school exiting on to it, with narrow pavements, it already has had many accidents. There is a new road proposed in the Local Plan but would not be built until after the houses have been built and we feel the cost of putting a road either over or under the railway would be prohibitive and therefore Station Road would become even more dangerous. No houses should be approved until the new road has full funding and is built, it is essential that a new road is in place before any new permission is granted. We also feel that the local doctors would be put under extreme pressure and unable to cope with this large number of new houses with the patients that they would bring. Although Backwell has a railway station, it is not accessible for people with mobility issues and those travelling with prams and buggies, which therefore does not enable full use and travellers are forced to use their vehicles putting pressure on the already strained infrastructure. Backwell does not have many job opportunities and is mainly a commuter village and this just adds to the poor infrastructure issues. There is also a couple of fields that are detatched from the main fields and these have access onto Backwell common which is a lane and totally unsuitable for heavy traffic. These need to be removed from the plan. Until the infrastructure is improved and the proposed new road has been built, no new houses should be built or approved in Backwell for safety reasons. We fear the proposed road is not feasible due to cost and therefore these houses in Backwell need to be removed from the Local Plan.	The proposed new road needs to be fully funded and built before any permission for housing is granted.		
62775937	K Watson			No		Unsure	Unsure	Backwell has already been asked to accept nearly 800 new houses despite objections from a very large percentage of the villagers, which were totally ignored. The proposed development will take up valuable agricultural land in a Green Belt area. It will have disastrous effect on the wildlife and fauna and potentially create a flood risk. The current health services and leisure facilities will not cope with this size of housing development and where will the money come from to improve this situation - certainly not from the Government or NSC. The road infrastructure will not cope and the new road proposed will add little to relive the pressure already on the A370 or Station Road. This proposal will totally destroy the village ethos many enjoy in Backwell today and turn it into a dormitory for Bristol. Backwell is being asked to take more than its fair share in this NSC REG 19 Local Plan 2041. I am totally against this proposed development.			
62799521	Winifred Watts			No	‣ Positively prepared ‣ Justified ‣ Effective	Unsure	Unsure	The land between Backwell and Nailsea is one big drain. If it is covered with the amount of concrete required for this proposal it will be like putting a plug in the drain and have irreversible consequences in the future. In the past this land has frequently flooded. Please do not touch these green fields, they are there for a definite purpose and currently serve to act as an effective flood plain which is even more necessary with the current climate change challenges we face.			
62703777	Richard Webber			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I object to the proposed building of almost 1000 houses to the east of Backwell, areas HE 203035, 202012, 208001, 202300. This development would be ‘shoehorned’ into an area between A370 and a railway line. At present this area of green belt is home to a variety of species of flora, insects, amphibians and mammals including deer and horseshoe bats which are considered rare. This proposal will have a huge impact on both habitats for wildlife and on biodiversity. This area is being used to grow crops and is an open country space which is accessed frequently by the local community. It has numerous rights of way within its borders. It is Grade 1 agricultural land of which there is only 7% remaining in North Somerset. Government policy states that , ‘we must protect our best and most versatile land,’ https://www.gov.uk/guidance/natural-environment, This proposal contradicts this policy. One of the main issues for me would be the proposed building of a major road going under or over the rail track and cutting a swathe through the countryside to join to Station Road near Backwell Lake. Surely the congestion caused by the increased number of vehicles using that road would be untenable. Traffic would be obliged to turn right onto Station Road then ultimately onto the High Street (B3130) in Nailsea. This junction is already congested and it’s very difficult to turn right there at the best of times. Turning left from this new road would lead traffic under the railway bridge which is single rack and the amount of traffic using this route would cause serious congestion. This road would increase, not decrease congestion. There is little employment in Backwell and the majority of people need to travel to work, mostly by car. Whilst Nailsea/Backwell does have a railway station, this is not ‘fit for purpose’ and does not afford safety when travelling with young children or people with additional needs and is currently inaccessible for people who have physical disabilities. The proposed underpass or flyover would be phenomenally expensive and be a massive and lengthy piece of engineering. Presumably this money would need to come from Central Government and at this time, there are many other more worthy projects on which to spend millions of pounds of taxpayers’ money. It would need to be in place to ensure the A370 did not become completely congested by construction vehicles. This road is a major route and does not have the capacity to accommodate the extra traffic that up to a 1000 houses would bring, which would very likely be 1600 cars, as according to some sources, 60% of households in the Southwest have 2 vehicles. If this development were to go ahead with two points of access, I can’t imagine many drivers wishing to sit on Station Road, especially during ‘school run’ time, to wait to negotiate the junction to get on to the A370. I would be extremely concerned if the proposed new road were to include a junction to allow vehicles to turn east onto Backwell Common; to access either the road across the common or to Chapel Hill under the railway bridge. These two routes are predominately single track. Vehicular issues aside, there is the problem of the lack of infrastructure to support a housing development of this size. Backwell is considered a village and as such, has very few local amenities and residents need to travel to find large shops, entertainment etc. The GP surgery is already at capacity, as are the local schools. This proposal means that the			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								village of Backwell will be expected to take 7% of the local housing allocation, whereas the town of Clevedon is allocated to take a mere 2%. Another issue that needs careful consideration is problems with flooding in the area. The land directly behind Chapel Hill and adjacent to the railway is continually sodden in the winter and after prolonged spells of rain throughout the rest of the year. This will be exacerbated by the construction of houses, tarmacked drives and roads. Considering that the change in our climate will bring wetter weather, surely this land is not suitable for housing in the longer term? Backwell has had 800 additional houses approved, which is already a 40% increase in the village. The addition of the houses proposed would lead to complete overdevelopment of a village that already has congested roads and little infrastructure to support its current residents.			
38547905	Tina Webber			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I object to the proposed building of almost 1000 houses to the east of Backwell, areas HE 203035, 202012, 208001, 202300. 21457153	Geoff Wells			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	Unsure	The LP would involve doubling the size of Backwell, which would ruin its character.. The heart of the village is not capable of handling this increase in terms of parking, traffic and facilities . There is little employment in Backwell - this will add to the time, expense and pollution spent in commuting . Much is made in the LP of our railway station. This is very inaccessible, with steep steps on the Weston bound side and no ramp. Those with a disability or a push chair are not able to use it. The process of commenting on the LP is so complicated that most residents are not able to cope with the technology - this is not democratic. The response from the process 2 years ago was evidence of this with a negligible turn out. NSC CANNOT CLAIM TO HAVE CONSULTED !! Using our best agricultural land for housing should not happen.	Make the process of commenting much easier. Do not add nearly 2,000 houses to double the size of Backwell. Choose a better location near Ashton and S Bristol The transport implications for Backwell have not been thought out or costed. Putting so many houses in Backwell will spoil the village and cost a small fortune to do a crossing of the railway,		
51298369	Valerie Wells			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	No	Doubling the number of houses in Backwell, from under 2,000 to nearly 4,000 in 15 years is a major overdevelopment and unsustainable, particularly given the large numbers of new houses being constructed in Backwell and other parts of North Somerset currently.. Our roads and rail links are poor with the A roads narrow and are already very busy. Our rural lanes are already seeing an undesirable increase in traffic. Our Nailsea/Backwell station is inaccessible for anyone with a disability, wheelchair or pram. Backwell is not an employment hub, and most working age residents commute by car to jobs in the outskirts of Bristol or in various other urban and rural areas. Only those living and working close to the A370 use the X1 bus, which is the only service which is regular and reliable.and widely used The Backwell E and Gleeson (S Nailsea) developments of over 1300 houses, , plus the hugely expensive (not yet costed and probably unaffordable) new road and railway crossing will destroy the character of Backwell village, destroy valuable wildlife habitats and increase the likelihood of flooding in the low-lying parts of our area. All the plans proposed have a high degree of uncertainty in them, with regard to costings plus likely sources of finance. Our village services, schools, health centres etc will struggle to cope. Our shops benefit from being together in the village centre, supported by parking places close to capacity. 50% more houses could make it impossible for those who need to drive to visit the health centre, dentist etc, The growth indicated by this Local Plan, over a short period of time, will cause chaos in our roads (as the current developments are doing) and in the long term destroy the well balanced community of Backwell that has developed	THERE IS AN ALTERNATIVE. This LP does not take full advantage of available land in the S. Bristol and Ashton Vale area. Some of this is green belt, and serves little purpose, but is close to the vibrant city of Bristol with its wealth of jobs, shops, services and facilities. Many of these would accessible by foot, cycle or public transport – much better for the environment than additional housing in Backwell..		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								gradually during the last few decades.			
51045217	Sarah Western			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	With the housing already approved for Backwell the village is looking at an increase of 40%, this in itself is an over development and there are no plans in place to increase school places, health services, leisure facilities or indeed road infrastructure to support what could be another 1600 if not more extra vehicles using the current road system. The proposed road would do little to improve congestion ,not only will it decimate the wildlife it will simply be moving the problem along the A370. We have already had to endure endless roadworks and disruption with the current houses being built not to mention the constant mud & dirt quite clearly flushing out onto the main road. It seems that Backwell has been allocated a higher number of houses than any other village in North Somerset , who are these houses being built for? The affordable housing allocation is negligible and the developers will do what they can to ensure that affordable housing is kept as low as they can get away with because its not economically viable for them, they are not interested in what they leave behind they are in it to make money, the residents are the ones that end up living with the congested roads, lack of school places and vying for GP appointments. I know for sure that my children , affordable housing or not, will not be able to afford to live in the area they have grown up in. Backwell is a prime area for those wanting to move out of London, due to the train connections, why should we have to foot the bill and have our village changed beyond recognition for this? Before you commit us to further development we need to 'bed in' with the current building construction underway. To be considering losing the amount of Grade 1 agricultural land you are suggesting needs serious contemplation and to be frank should be plan B not plan A just because you need to tick boxes to satisfy government targets, which change year on year. You are making decisions about people's lives and investments please reconsider your proposals as unsound, detrimental and of no benefit to the local community.			
39402049	Sue Weston			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I am writing to express my concerns over the proposed building of 1,000 new homes on Grade 1 Greenbelt land on land at Backwell Common and alongside the A370 in Backwell. This land is prime quality agricultural land of which there is only 7% left in North Somerset. The proposal completely contravenes the Government's policy which says we must protect this land to safeguard our food production. It makes no sense at all to use this land for housing. Furthermore development would destroy wildlife habitats and is detrimental to biodiversity. I have further concerns over the flooding issues we have here in Backwell. Backwell Common is particularly bad, the road under the railway bridge regularly floods. I lived on Chapel hill for 13 years and regularly saw evidence of this. People don't appreciate how deep the flood is and they and their vehicles often get totally stuck. I even know of one person who climbed on the roof of his van to escape the flood waters. We are told that the heavy rains causing the floods are only going to increase in coming years. We already see the A370 flood when we have heavy rain. The proposal of 1,000 new houses on this land is utter madness. Apart from the serious issues of increased flooding, Backwell itself is a village and as such our roads are not suitable for a further increase in commuter traffic. Backwell is not an employment hub. Workers have to commute to Bristol and with an additional 1,000 homes the traffic problem would increase to unmanageable proportions. I understand that there is no guaranteed funding for a new road or services. Backwell does not have the infrastructure to support such a development, and the village has already had an increase of 40% in its housing numbers it makes no sense to build another 1000 houses in this area. The whole proposal is unsustainable and undeliverable.			
31063873	N Whiteley			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	No	1. Soundness: Not Justified (Unwarranted Green Belt Release and Disproportionate Scale) The exceptional circumstances for Green Belt release are not demonstrated, as alternatives (e.g., brownfield intensification in Weston-super-Mare or Portishead) remain unexplored, breaching NPPF para 147's "very special circumstances" test. Excessive Burden on Backwell: The 889 homes would more than double Backwell's housing stock (adding to ~800 already consented nearby, e.g., Grove Farm's 515 homes and Farleigh Fields' 221), transforming a rural village into an urban extension without proportional needs assessment. This contradicts the plan's rural limits (SP6) by treating Backwell inconsistently as both rural and urban (lumped with Nailsea), overriding the adopted Neighbourhood Plan that prioritizes village scale. Agricultural and Landscape Harm: The site comprises Grade 2 agricultural land, with the Sustainability Appraisal noting significant negative effects from loss of fertile soil and countryside openness. It risks urban sprawl toward Flax Bourton, eroding separation from the Mendip Hills National Landscape and historic boundaries (e.g., around Woolleys Farmhouse and Backwell Farleigh Conservation Area). 2. Soundness: Not Effective (Uncertain Infrastructure Delivery and Phasing Risks) Promises of infrastructure-led growth (e.g., Cross Rail Link road, rail crossing, bus interchange) lack firm funding, timelines, or viability evidence, rendering delivery speculative per NPPF para 23. Transport Deficiencies: The site's valley location exacerbates A370/Station Road congestion, with no detailed budget for the new distributor road (Station Road to A370) or railway bridge/tunnel. There is no accounting for unsafe school routes and pedestrian risks (e.g., near Backwell Lake), with existing crossroads at capacity; proposed mitigations like Festival Way extension and cycle parking are aspirational but undeliverable without developer guarantees. Education and Services Overstretch: Three primary schools (one at Grove Farm, two east of Backwell) require unspecified investments, ignoring existing pressures (e.g., Backwell School oversubscribed). Flooding risks from heavy rain (e.g., at Grove Farm) threaten drainage, with vague SuDS integration and no coordinated Flood Risk Assessment for cumulative 1,000+ homes. These gaps could delay phasing (linked to Infrastructure Delivery Plan), leading to car-dependent sprawl despite SP10's active travel focus. 3. Soundness: Not Consistent with National Policy (Environmental and Heritage Conflicts) The allocation violates NPPF protections for biodiversity (paras 174–192), Green Belt (paras 136–151), and heritage (paras 194–208). Biodiversity Threats: The site is a key foraging area for horseshoe bats (linked to Brockley maternity colony, Gordano Valley SAC, and SSSIs), with development fragmenting flight corridors despite proposed "North Somerset Nature Park" mitigations (habitat offsets, dark corridors). BPC deems this "woefully inadequate" for international significance, risking non-compliance with Wildlife & Countryside Act 1981. Health and Landscape Inconsistencies: Air pollution in the valley could harm residents, conflicting with healthy communities (SP1/DP49). Buffers (e.g., west of Park Farm) aim to preserve views to Tyntesfield and Church Town but fail to mitigate broader openness loss, undermining landscape sensitivity (DP39). 4. Soundness: Not Positively Prepared (Ignores Community and Sustainability Limits) The site fails to balance growth with environmental capacity, imposing "unfair share" on Backwell (e.g., 8 ha extra employment risking further Green Belt loss) without consulting on ambiguities. Near-universal opposition (e.g., 98% against related bus schemes, 800–1,300 objections per site) reflects eroded trust, with calls for redistribution to sustainable urban edges like SW Bristol. 5. Legal Compliance Issues Habitats Regulations Assessment (HRA): Inadequate evaluation of adverse effects on Gordano Valley SAC from bat	The East of Backwell site should be removed form the plan.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								habitat loss/pollution, breaching EU Habitats Directive (92/43/EEC) and Conservation of Habitats and Species Regulations 2017; requires full Appropriate Assessment, absent here. Sustainability Appraisal (SA) Shortcomings: SA underplays negatives (e.g., agricultural loss, sprawl) without rigorous alternatives testing, violating SEA Directive 2001/42/EC. Duty to Cooperate (DTC): Fails s33A by not jointly planning transport mitigations with Bristol/North Somerset neighbors, straining shared M5/A370 links.			
62832673	Vicki Whitesmith			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	This plan is Not Sound for several critical reasons, mainly revolving around the sheer scale of the development and the devastating lack of supporting infrastructure and environmental protection. The proposal for another 1,000 houses, on top of the 800 new houses already approved, would take Backwell's housing growth to over an 80% total increase. With NO new infrastructure or services planned to support this dramatic population jump. The lack of well thought through, costed proposals with funding committment re: the new road are a significant concern. It seems only a vague idea and one that will quickly fall foul of mounting costs and be deemed 'unachievable', leaving traffic choas in the wake of the housing developments. The feasibility and expense of building the road under or over the railway is highly dubious. The railway station is not currently fit for purpose as a transport hub, remaining inaccessible for people with mobility issues and challenging for those with young children. There are no propsals to improve this for the benefit of current and new residents to Backwell. The most concerning issue though is that the proposed development is on precious GRADE 1 Agricultural GREENBELT Land. Once built upon there will be no going back and as the economic stability nationally and global continues to be worrying, our position as a small Island will not be helped by a reduction in land suitable to grow food for the local and national residents. This land east of Backwell is the highest quality agricultural land, currently used for food crops and grazing. Only **7%** of this Grade 1 land is left in the whole of North Somerset. Government policy clearly states we must protect our best land to safeguard food security making these proposals a direct contradiction. This feels like a national disaster waiting to happen - how can we explain to the next generation that it felt ok to destroy grade 1 agricultural land to build houses on? This development would destroy valuable wildlife habitats and harm biodiversity including the Brockley Maternity Roost and Site of Special Scientific Interest, as rare Lesser and Greater Horseshoe Bats rely on this land for food. Backwell Common, Backwell Lake, and the adjacent fields are on a floodplain that floods regularly. Aggravating this flood-prone area with more housing is highly irresponsible and will cost the local council in repairs and dealing with issues. The most concerning issue though is that the proposed development will eradicate precious GRADE 1 Agricultural GREENBELT Land. As the economic stability nationally and global continues to be worrying, our position as a small Island will not be helped by a reduction in land suitable to grow food for the local and national residents. This land east of Backwell is the highest quality agricultural land, currently used for food crops and grazing. Only **7%** of this Grade 1 land is left in the whole of North Somerset. Government policy clearly states we must protect our best land to safeguard food security making these proposals a direct contradiction. This feels like a national disaster waiting to happen, especially if similar proposals are being made nationally. The proposed growth for Backwell is unsustainable, and undeliverable due to the lack of infrastructure, the destruction of critical wildlife habitats and the unacceptable threat to our Grade 1 Greenbelt. I urge the Independent Inspector to reject this flawed plan.	Reject this proposal and find alternative land in the North Somerset region that is not Grade 1 Agricultural Greenbelt. Backwell has a number of other developments already approved and in progress plus more in planning. We are already growing significantly and taking this precious land can not be justified when other options can be explored.		
62832769	P W			No		Unsure	Unsure	The proposal for another 1,000 houses, on top of the 800 new houses already approved, With NO new infrastructure or services planned to support this dramatic population jump is clearly not a plan that has been thought through with the existing or new residents in mind. The railway station is not currently fit for purpose as a transport hub, remaining inaccessible for people with mobility issues and challenging for those with young children. There are no propsals to improve this for the benefit of current and new residents to Backwell. I object that the proposed development is on precious GRADE 1 Agricultural GREENBELT Land. This land east of Backwell is the highest quality agricultural land, currently used for food crops and grazing. Only **7%** of this Grade 1 land is left in the whole of North Somerset. Government policy clearly states we must protect our best land to safeguard food security making these proposals a direct contradiction. This development would destroy valuable wildlife habitats and harm biodiversity including the Brockley Maternity Roost and Site of Special Scientific Interest, as rare Lesser and Greater Horseshoe Bats rely on this land for food. Backwell Common, Backwell Lake, and the adjacent fields are on a floodplain that floods regularly. Aggravating this flood-prone area with more housing is highly irresponsible and will cost the local council in repairs and dealing with issues.	The proposed growth for Backwell is unsustainable, and undeliverable due to the lack of infrastructure, the destruction of critical wildlife habitats and the unacceptable threat to our Grade 1 Greenbelt. I urge the Independent Inspector to reject this flawed plan without significant ammendments to ensure that the residents current and new have suitable transport infrastructure, medical facilities, recreational facilities, fully planned and funded schooling in line with the village growth and an appropriate level of fully funded biodiversity improvements.		
62849185	C Widd		Resident	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I believe it would be ridiculous to allow another 1000 houses to be built in Backwell after 800 new houses have already been approved. That nearly doubles the size of the village turning it into a town with a lack of infrastructure to support so many extra people. The doctors, schools and other services would be over whelmed & there are no plans to build more. Even the roads could not cope with so many extra people, they are already congested. No social cohesion impact assessment has been provided. This land is agricultural land of which there is only a small percentage left in NS, we should be protecting this for food security and protect these valuable wildlife habitats which host a wide biodiversity.			
62853953	Mrs Julie Wild			No	‣ Positively prepared ‣ Justified ‣ Effective	Unsure	Unsure	Backwell is a semi-rural village with substantial new development having already been granted for an additional 794 houses - a 40% increase in a village environment.. Residents had strong and valid reasons for considering this to be an excessive number. This new proposal will add to the destruction of the remaining greenbelt and potential regenerative farming land			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					• Consistent with national policy			Only 7% of Grade 1 Agricultural land now exists in the whole of North Somerset for growing food and grazing animals The UK is one of the most nature-depleted countries in the world. Government policy states that “we must protect our best and most versatile land” to safeguard food security but these proposals contradict this policy and will further harm our dwindling countryside. There is no realistic or viable infrastructure in place (current or proposed) to support a development of this magnitude. The suggested road schemes are untenable and would further destroy greenbelt land, wildlife habitats and vital foraging grounds. In addition, some of the designated land is prone to frequent flooding. The real costs to successfully implement this would be prohibitive The Delivery Plan does not guarantee additional funding for schools, leisure facilities and health services which are already at capacity and in need of further investment. Who will be paying for this? Why is the allocation of housing so disproportionate in comparison to other areas? Where is the evidence and analysis that Backwell needs an additional 1000 houses? Backwell is not an area that can offer substantial employment opportunities and since COVID people are returning to the work place for social and mental well being. Most residents of working age commute into Bristol The existing train station is without doubt a great asset for a satellite village but it is not fit to serve as a transport hub. Current residents are commuting on an already over-subscribed rail and road network where trains and buses are not reliable on a daily basis. Additional development will mean more cars on the road and increased congestion. The A370 cannot sustain this The existing construction work in the village may only be temporary but it is causing significant disruption to many residents. Permitting the construction of another 800+ houses would cause months if not years of further chaos. The sheer volume of growth is undeliverable Where is the impact assessment on the social ramifications of this development? Backwell has a strong united community spirit. Overdevelopment will erode the heart of the village with a very real danger of turning Backwell into another faceless town. Growth is inevitable and can be positive but this proposal is without question unsustainable and undeliverable. The plan lacks cohesion and relies on too many questionable logistics which cannot be fulfilled. It undermines the local community Once those fields have been destroyed, that valuable green space is lost permanently			
51462785	G Wild			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Formal Objection to NSC Reg 19 Local Plan 2041 – Backwell I strongly object to the proposed development and strategic growth allocation for Backwell within the NSC Reg 19 Local Plan 2041. The scale, speed, and location of growth are entirely unsustainable, unjustified, and harmful to the village, its residents, and the surrounding environment. 1. Extreme and Unsustainable Scale of Growth Backwell already has 800 homes approved, representing a 40% increase in population. The Plan would impose a further 1,000 homes, amounting to an 80% total expansion over a short period. This volume of growth is destabilising, undeliverable, and completely inappropriate for a rural village. Backwell is being allocated more houses than any other village in North Somerset, and even a higher growth percentage than some towns. It is expected to take 7% of the district’s total allocation, compared to Clevedon’s 2%. This is a disproportionate and unfair burden. 2. Inadequate and Unfunded Infrastructure There is no funded plan to provide the infrastructure required to support such large-scale development. Schools: There is already a deficit in school places, with no planned investment. Most new families would have to drive children elsewhere, worsening congestion. Health services: Backwell surgery is at capacity, and the Plan includes no new medical provision. Leisure facilities: Existing facilities are tired, stretched, or charity-run, with no enhancements proposed. Transport: The railway station is inaccessible, unsuitable as a transport hub, and does not serve the majority of commuting destinations. The Infrastructure Delivery Plan is unanalysed, uncosted, and unfunded, with no clarity on who will pay. 3. Road Proposal Is Damaging and Likely Unfeasible The proposed bypass road intended to divert traffic from Backwell village centre: Cuts through Green Belt farmland, wildlife habitats, and the floodplain. Is unfunded, with no guarantee it can be delivered on time (or at all). Would require major engineering to pass under or over the railway, which may be financially or technically unfeasible. Would not relieve congestion on Station Road, Backwell Common, or Chapel Hill. Placing a major road adjacent to Backwell Lake would destroy its tranquillity and threaten surrounding habitats. 4. Traffic and Commuting Pressures			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Backwell is not an employment hub, so almost all new residents would be commuters. This guarantees: Significant increases in traffic at all times of day Far worse congestion, especially at pinch points Long-term disruption during the 10+ years of construction 5. Loss of High-Grade Agricultural Land and Food Security The development would permanently destroy Grade 1 agricultural land, of which only 7% remains in North Somerset. Government policy requires protecting the “best and most versatile land”, yet this Plan directly contradicts that principle. Once this farmland is lost, it cannot be replaced. This undermines local food production and national food security. 6. Severe Environmental and Biodiversity Harm The proposed areas include critical wildlife habitats, peaceful green corridors, and land used by rare and endangered species, including the Lesser and Greater Horseshoe Bats associated with the Brockley SSSI and maternity roost. Development would: Sever wildlife corridors Destroy biodiversity in one of the world’s most nature-depleted countries Interrupt feeding patterns of protected bat species Remove large areas of Green Belt that currently preserve landscape character and ecosystem function 7. High Flood Risk Ignored Much of the proposed development lies on or adjacent to flood-prone land, particularly around Backwell Common, the valley bottom, and the fields south of Backwell Lake. Significant additional hard landscaping will: Increase flood frequency Put new homes at direct risk Exacerbate downstream flooding Reduce natural water absorption from existing farmland 8. Harm to Village Character and Community The cumulative impact of an 80% population increase would overwhelm Backwell’s rural character, replacing open countryside with dense housing and new roads. Community cohesion would be eroded as local schools overflow, traffic increases, and the village expands beyond recognition. No social cohesion impact assessment has been provided. 9. Lack of Justification or Evidence There is: No proven local need for 1,000 additional homes No viability analysis No evidence that the housing mix meets the needs of older residents wishing to downsize A dominance of 3–5 bedroom homes, rather than the smaller, affordable units the community actually needs 10. Affordable Housing Requirements Not Met Although Government policy requires 50% affordable housing on Green Belt land, developers have shown no willingness to meet this target, and the Plan includes no enforcement mechanism. Reduced contributions will further weaken funding for essential infrastructure. --- Conclusion The proposed strategic growth in Backwell is excessive, unjustified, unfunded, environmentally destructive, and impossible to deliver responsibly. It contradicts national policy, threatens food security, undermines biodiversity, and imposes disproportionate harm on one village for the benefit of developers—not the community. The Local Plan, as it applies to Backwell, must be rejected.			
39317601	C Williams			No		Unsure	Unsure	These proposals would represent a massive and unsustainable increase in the houses in Backwell, almost doubling the population when taken together with the recent housing approvals in the last 5 years. The current proposals would destroy a notable amount of valuable grade 1 farmland, of which there is only 7% left in the area. Other land noted in this proposal for development is already prone to flooding and this will exacerbate the issue. Backwell Common regularly becomes impassible due to flooding and sometimes dangerously so. The roads, especially Station Road are already dangerous for children with its narrow pavements considering the	More detail on infrastructure and delivery Plan required. A viability analysis for the additional 1,000 houses. Seems much more sensible to increase housing stock within towns		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								number of children attending the schools in the village. These proposals are bound to significantly increase the volume of traffic, increasingly the risk of harm to the children. The proposal allocates Backwell with a 80% population growth whereas towns, which have employment huns such as Clevedon and Portishead only have a 6% and 14% allocation in terms of population growth.	and nearer to Bristol where the employee not hubs are located rather than villages such as Backwell.		
62774113	Samuel Williams			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I do not support this development. There are many reasons for this. Additional pollution with the construction and traffic, backwell is becoming overcrowded leading to more dangers especially on the roads for children walking to the schools in the village. The only people to benefit are the shareholders of the construction companies. There are many better locations for the development rather than using land which is either grade 1 farmland or prone to flooding (and the additional cost the council will need to rectify the flooding problems).			
62774145	Naomi Williams			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I want Backwell to remain as a village and not become any busier with extra cars. If we had this additional housing the village would become a town and the people who live in Backwell and the wildlife would suffer.			
39304993	Doug Williams			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	A foremost concern is the significant and well-documented flood risk across the proposed development area (and I wonder if the North Somerset Council would be leaving itself open to claims of negligence, or otherwise need to bear the responsibility of any such disaster if it did approve building in these areas. Backwell Common frequently becomes impassable—and the fields around Backwell Lake (the reservoir), where new housing and roads are proposed, lie within an active floodplain that already floods regularly. Additional development on this land would increase surface-water runoff and further heighten the risks to residents, infrastructure and emergency access. Given these known hazards, it is important to ask whether North Somerset Council could reasonably justify approving construction on land with such evident and worsening flood vulnerabilities, and whether doing so would expose the authority to foreseeable and avoidable risk. Backwell has already faced substantial growth, with 800 new homes recently approved—representing a 40% increase in the size of the village. The proposed additional 1,000 houses would amount to overdevelopment on an unprecedented scale, pushing Backwell beyond a 50% expansion and nearly doubling the population within a short period. No other village in North Somerset is being asked to accommodate growth of this magnitude: Backwell alone is expected to take around 7% of the district's total housing allocation, compared with Clevedon's 2%, despite Backwell not being an employment hub or designated service centre. No needs or viability analysis has been provided to justify such an allocation. Infrastructure provision is already stretched. There is a shortage of school places, and no planned investment in health care, leisure facilities or other essential services. The proposed new road would not relieve congestion in Backwell, nor would it effectively serve Nailsea's traffic. Engineering a crossing under or over the railway line appears prohibitively expensive, and there is no guaranteed funding for either the road or the supporting infrastructure. The Infrastructure Delivery Plan lacks the necessary analysis and costings to demonstrate deliverability. Environmental impacts would be severe and long-lasting. A substantial area of Grade 1 agricultural land—of which only 7% remains in North Somerset—would be lost. This land is currently used for food production, and national policy clearly states that "our best and most versatile land" must be protected to support food security. The proposals directly contradict that principle. Other areas proposed for development already experience flooding, meaning the cumulative effects of building here would be even more harmful. The ecological value of the site is also considerable. The development threatens important wildlife habitats and risks further biodiversity decline in a country already amongst the most nature-depleted globally. Of particular concern is the Brockley Maternity Roost and associated SSSI, with rare Lesser and Greater Horseshoe bats reliant on these fields for foraging. In addition, no assessment has been provided on the social-cohesion impacts of a development that would so dramatically and abruptly alter the character of the village. Taken together, these issues illustrate that Backwell is being asked to take on wholly disproportionate and unsustainable growth. Significant flood risks, loss of high-grade farmland, lack of infrastructure funding, the uncertain viability of the proposed road, and the scale of environmental harm all demonstrate that the strategic growth designation is inappropriate. The proposals fail to meet national policy expectations around land protection, deliverability and sustainable development.			
51036737	Stuart Williams		resident of Backwell	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	- This is Grade 1 agricultural land with only 7% left in North Somerset where the land is required to safe guard our food security - The land is liable to flooding. - Loss of Green Belt and wildlife habitats - Backwell has very little employment so anyone living here needs to travel else where for employment and anything above limited convenience type shopping. - Backwell already has 800 new homes consented and if this was approved would see an 80% increase in the population of what is currently a small village which would be higher than any other village in North Somerset. - No increase in local facilities such as doctors or schools. Not entirely sure who will be able to afford these new houses anyway. I have adult children would not be able to but anything in Backwell as illustrated by current asking prices at Farleigh Fields. So, in summary, I strongly object to yet more housing in Backwell.			
51428705	D Williams			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Housing in this location should not be included in the Local Plan for numerous reasons to include: - Would lead to the loss of rare Grade I agricultural land at a time where food miles and safeguarding food security is of paramount importance. -This low lying area is liable to flooding in the winter months so the introduction of roads, buildings and hard standing would further exacerbate the issues. - Loss of green belt. - No planned increase in services such as doctors and schools - Very little employment in Backwell meaning everyone has to travel which creates further road congestion issues. - No guarantees a road would be funded by developers making traffic issues an even bigger problem. -Backwell is already being swamped with new housing with 800 homes already approved , increasing the population by 40% with suggested growth increasing by 55%, the highest for any village in the county. In summary, these houses must be accommodated elsewhere.			
62849857	Nicky Williams			No	‣ Positively prepared ‣ Justified	Unsure	Unsure	I wish to register my strong objection to the proposed allocation of additional housing and associated infrastructure in Backwell. The scale, location and timing of this development are inappropriate, unsustainable, and contrary to both local and national policy for the reasons set out below. 1. Overdevelopment and Disproportionate Housing Burden			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					• Effective • Consistent with national policy			Backwell already has over 800 new homes approved—representing a 40% increase in the size of the village. Adding a further 1,000 dwellings would constitute severe overdevelopment and fundamentally alter the character of the community. Backwell has been allocated a higher number of houses than any other village in North Somerset, and even a higher proportional growth rate than many towns. The village is expected to absorb 7% of the district's total housing requirement, compared with only 2% allocated to Clevedon. This level of growth is unjustified and disproportionate. 2. Lack of Need or Viability Assessment No credible needs analysis or viability assessment has been presented to justify an additional 1,000 homes. Backwell is not an employment centre, and the majority of residents commute elsewhere for work. No assessment has been provided regarding the impact such large-scale growth would have on social cohesion or the long-term sustainability of the community. 3. Insufficient Infrastructure and Public Services Despite the large number of new homes already approved, Backwell is experiencing a deficit in school places and there has been no investment in health services, leisure facilities or community infrastructure. The village cannot reasonably support another major housing increase without significant and guaranteed improvements, none of which have been demonstrated. The Infrastructure Delivery Plan lacks meaningful analysis, clear costings, or funding guarantees for the proposed road or supporting services. 4. Transport and Traffic Concerns The proposed road would not effectively serve Nailsea's traffic, nor would it relieve congestion on Station Road, Backwell Common or Chapel Hill. Delivering a road under or over the railway would be extremely costly and potentially unfeasible. Designating this area for strategic growth when access infrastructure is uncertain, unfunded and technically questionable is irresponsible. 5. Environmental and Biodiversity Harm The development would result in the loss of Grade 1 agricultural land currently used for food production and grazing. Only 7% of this high-quality land remains in North Somerset. National policy clearly states that "we must protect our best and most versatile land" in order to safeguard food security; these proposals directly contradict this principle. In addition, the plans pose significant risk to local wildlife. The area contains valuable habitats in an already nature-depleted country and supports rare species, including Lesser and Greater Horseshoe Bats that rely on the land for foraging. The proposals threaten the Brockley Maternity Roost and the adjacent SSSI, causing irreversible ecological harm. 6. Flood Risk and Unsuitable Land Backwell Common, Backwell Lake (Reservoir), and the surrounding fields are part of a known floodplain and flood regularly. Adding large-scale housing and roads in these areas would increase surface runoff, exacerbate existing flooding problems, and put residents and property at unacceptable risk. Proceeding without robust mitigation—and on land known to flood—is indefensible. 7. Green Belt and Landscape Impact The proposals would result in the loss of Green Belt land and high-quality agricultural landscapes, significantly eroding the rural character of the area. While Government policy requires 50% affordable housing on Green Belt land, this simultaneously reduces the financial contributions available for infrastructure—further undermining the deliverability of necessary services. 8. Unsustainable Growth Timeline The volume of development proposed, combined with the required infrastructure, is destabilising, unsustainable, and undeliverable within the timescales suggested. There is no assurance that road improvements, utilities, or community facilities would be delivered in time—or at all—to support the new housing. 9. Inadequate Railway Station Facilities Backwell's railway station is not fit for purpose as a transport hub. It remains inaccessible for people with mobility difficulties and challenging for families with young children. Expanding the population while relying on an inaccessible and inadequate station runs counter to sustainable transport objectives. The proposed development is unjustified, disproportionate and unsupported by essential infrastructure, environmental safeguards, or credible evidence of need. It poses unacceptable risks to community wellbeing, local character, agricultural land, biodiversity and flood resilience. I therefore strongly urge that this proposal be rejected.			
62864065	Claire Williams			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I am a local Backwell resident living on the A370 next to one of the proposed junctions for the area known as "Land East of Backwell". The highly speculative plan for this area is flawed and unjustifiable for a number of reasons which I experience first-hand as a long-standing resident of the area. 1) Inadequate provision for major junction infrastructure The proposed link road between A370 and Station road would not ease traffic on A370 but increase it - the road is not wide enough for the feeder lane junction or roundabout that would be required and cause long queues. It is also very close to Backwell Secondary school and Leisure Centre, as well as popular bus stops, which all increases the risk of pedestrian and child injury - as highlighted in the developers own drawing (with children crossing in front of buses). There are no guarantees for the link road development either. By their own admission, the developer has said they would build the road in stages - the priority being the one to the houses, not to the station end. The link road under the railway would be highly expensive and unlikely to be paid for by the developers once it is fully costed. 2) Flood risks The level of regular run-off and flooding over the 15 years I have lived on A370 is notable. For every period of heavy rain, the drains overflow and the road floods. This has been well documented by local residents. Further development from A370, including Farleigh Fields, which build on green spaces will compound this issue. Instead of future proofing and securing the A370, this will ensure an increased flooding risk. 3) Environmental green spaces The Green Belt fields around Backwell and in between the railway, provide a natural development buffer, an active recreation area for walkers and an area rich in wildlife (deer and birds of prey are regularly seen). These are precious assets to protect. We do not need a developer to pretend to 'create' more recreation or wildlife areas packaged up with a large housing scheme. We already have them! 4) Significant Development without additional Infrastructure	Please remove the Land East of Backwell from the local plan.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Backwell already has a huge number of houses approved for development - a 40% increase for our small village over a very short period of time. There are a shortage of school places, pressures on the doctors surgery and pressure on local roads. We have taken our fair share of the housing allotted to North Somerset through Grove Farm, Farleigh Fields, Rodney Road.. enough is enough! Other areas, such as established towns like Clevedon, need to take more share of the burden. 5) Valuable - Grade 1 - Agricultural land Having lived next to the fields in question for development, we know the land is highly fertile and has provided successive crops in the years we have lived here. I understand that government policy states 'we must protect our best and most versatile land' to safeguard food security.			
51443649	J Williams			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell has grown since we came to live here 7 years ago, and will soon be 40% bigger when the current house building is finished. Backwell is expected to take 7% of the allocation meaning a higher growth percentage than nearby towns - it would grow 80% bigger but have no more facilities. I understand there is a need to create more housing but the decision to put so much of it in one small village with no additional infrastructure is ill founded for the following reasons; The village has very little employment, it is a residential area and no social cohesion impact assessment has been carried out. The A370 is already congested and any incident backs traffic up on the side roads causing dangerous rat runs. The suggested new road is just that - a suggestion - no promises to provide it, no funding guarantees for new roads, no study to show how it would ease congestion and no timescale for creating it. Environmental impact - we live in one of the most nature depleted counties in the world, we shouldn't be adding housing in areas with valuable wildlife habitats and biodiversity. Grade 1 agricultural land would be dug up for the first time, releasing unmeasured amounts of carbon into the atmosphere. We have only 7% Grade 1 land available in the county - this should not be lost and the government itself states 'we must protect our best and most versatile land' The proposed land is a flood plain, where is all the water meant to go? Global warming means more flood alleviation is required, not less. There is no plan or costing regarding this. Infrastructure and services are already stretched, there is no funding or plan for schooling, doctors or other amenities - just houses - the station is antiquated and inaccessible for prams or people with mobility issues. I don't object to new housing in the area, I do object to an ill thought out, ill conceived and illogical Local Plan that would ruin the lives of the villagers already here in the short term and longer term. Please rethink where this housing is to go.			
62549569	Nic Wills			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I completely disagree with the proposal to add an additional 1000 houses to Backwell. We are such a small area with very limited resources that it is just not sustainable for this area. Backwell has already had over 800 new houses approved and any more would lead to complete overdevelopment and destruction of this village. As a long time resident here, I do understand that new houses need to be built for our growing population, however, these lands that the new houses are proposed to be built on, are known to be a floodplain, houses valuable wildlife and (not only losing the green belt) it is high-quality agricultural land. As residents, we struggle enough to get a doctor appointment, let alone with a further 1000+ residents. I notice that there has been no proposal to invest in any health or leisure facilities. The local roads are not fit for purpose as it is.....with out further traffic. When station road has been closed (either due to roadworks or an accident) all the traffic goes through the back roads of moorfield/westfield and its absolute chaos – with lorries and large vans trying to negotiate the small roads. The proposed new road which will come out onto station road (near Backwell lake) would potentially divert traffic away from the crossroads, but to what cost? These fields flood constantly, so having a load of tarmac on there is surely only going to make it worse? When I attended the meeting, not only was the road there, there was a traffic hub and potentially warehouse buildings. Where exactly will all the water go that runs off bucklands batch? I will be one big tarmac runway. And has anyone actually taken a look at the roads under the railway bridges on Backwell common? Whenever there is huge downpours, cars always get stuck under there due to flooding of over 6ft. When I attended the first meeting, there was talk of building a new school. Has anyone actually checked that Backwell needs it? There is a deficit in school places as it is. Plus the new development of 515 homes has already agreed to a new school. Backwell has no employment here. yes it is close to commute to Bristol or Weston, but the train station is inaccessible for anyone with mobility issues and families with children in buggies. I would reject this whole plan.			
62741313	Helen Wills			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	This further additional development of 1000 houses would amount to a 40% increase in the size of the village, without any provision for additional facilities and with only hints of a promised new road to alienate the already heavily congested (who has walked down Station Road in the rush hour ?) and over crowded roads. Station Road is frequently gridlocked and the A37 regularly solidly blocked (Friday afternoons and when the M5 is shut especially). Our services, ie schools, GP surgery and infract-structure are unable to support a further 1000 houses, on top of the already additional 800 new houses approved, the impact of which is already being seen. Has there been any consideration of the social impact such a further development on the village would have? What serious consideration been given to the fact that this is agricultural land, and development will not only break the Grade 1 listed code for agriculture and grazing, but will further diminish our ability to feed ourselves as a nation? Do you want to rely on imported food to feed yourself and your families? Using this land will diminish the amount of this land to 7% in the whole of north Somerset, and disregards the protection of wildlife in the area. I urge the council to refuse planning permission for this proposal - it will be a short term knee jerk reaction to placate government panicking which will have disastrous and cause long term and irrevocable damage to the health, wellbeing and security of our countryside and life. So what do we do when we've done it we've done that right here so what do I do with that? What do I do with it? I don't know how to save it. I'm completely. I do not know how to save anything I'm never done.			
62741569	Ian Wills			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Over the last 15 years, Backwell has been a pleasant village with inadequate roads but adequate infrastructure that has coped with a gradually increasing number of houses. The 40% increase in house numbers already approved will stretch things to and beyond the limit. The current new proposals suggest a another massive increase in the size of our village without any increase in the services that national and local government supply and neither national nor local government seem to have the funds to address that situation. The proposal includes a road which, it is suggested, will relieve the congestion on Station Road. Who is going to produce the millions needed to build a bridge over the railway or convert one of the footpath bridges already there [that both flood every winter] to be fit for purpose? Why is the suggested percentage increase in the population of Backwell so much higher than in other communities in North Somerset? Why is it being scheduled for land that largely productive, used for growing food for us or grazing for animals, as I see when I regularly use the footpaths across them? North Somerset has too little grade 1 agricultural land already. Together with the developments already approved, the village population would be increased by about 80%. How are you going to cope with the corresponding increase in road traffic [most employment is in and around Bristol and the station already has significant shortcomings], in demand for school places, GP, leisure and other local facilities?			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								It seems to me that this is a collection of builders schemes planned to suit them and their 'bit' of housing but ignoring the overall effect on the lives of those who will be living in those houses as well as those of us already here. It may well be easier for NSC and the builders to dump a lot of houses in one place instead of smaller sites more widely spread, but that is not serving the well-being of the people NSC are elected by nor giving the best care for the environment.			
51430561	Lotty Wills		N/a	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	A planning-soundness, policy-based and legally-supported objection Backwell has already taken a significant amount of new housing, and the proposal to allocate a further 1,000 homes at Backwell East is unsound, unjustified, and inconsistent with national policy. The allocation should be removed for the reasons below. ⬖ 1. The allocation fails multiple NPPF Tests of Soundness Under the National Planning Policy Framework (NPPF), Local Plans must be: • Justified • Effective • Consistent with national policy • Positively prepared The Backwell allocation fails all four. Not Justified • No viability assessment for the site • No evidence that 1,000 homes are required specifically in Backwell • No assessment of alternatives or less sensitive land • No justification for selecting Backwell ahead of lower-impact locations • No evidence of local employment capacity to absorb growth Not Effective • The proposed new road has no design, no feasibility study and no funding • No committed infrastructure for health, education, transport or services • Flooding concerns around Backwell Lake remain unaddressed • Ecological constraints (bat foraging areas, hedgerows, SSSI influence zone) undermine deliverability Not Consistent with National Policy • Major loss of Grade 1 Best and Most Versatile (BMV) agricultural land • Conflict with national food-security and soil-protection policies • Risk of biodiversity and habitat harm inconsistent with the Environmental Act 2021 • Failure to show a sustainable distribution of development in line with NPPF Not Positively Prepared • Backwell already has 800 homes approved — a 40% increase • Another 1,000 would force an 80%+ increase, far beyond capacity • No evidence that necessary infrastructure can be delivered to support this scale ⬖ 2. Loss of Grade 1 Agricultural Land is contrary to national policy Backwell East is Grade 1 agricultural land. NPPF (para 174/175 equivalents) requires: Local Plans to avoid development of BMV land unless there are no reasonable alternatives. North Somerset has: • Non-BMV land elsewhere • Brownfield opportunities • Lower-quality agricultural sites Therefore the allocation of Grade 1 land is not justified and does not meet national policy tests. Loss of this land is permanent and harms long-term food security. ⬖ 3. Environmental Act 2021 – Biodiversity Net Gain (BNG) The allocation affects: • SSSI influence zones • Protected bat habitats • Hedgerows covered by the Hedgerow Regulations • Floodplain and wetland ecology Without proven, deliverable BNG on or off site, the allocation is potentially non-compliant with statutory requirements. ⬖ 4. Flood-risk policy has not been met Parts of the site and the area near Backwell Lake experience recurring flooding. The NPPF requires: • Development to be directed to areas of lowest flood risk • No increase in risk elsewhere • Demonstrated long-term safety of residents These requirements are not evidenced. ⬖ 5. The proposed new road is undeliverable	Th allocation should be removed from the Local Plan. Does all this disagree with planning		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Strategic allocations must rely on deliverable infrastructure. However, the road has: • No feasibility study • No engineering solution for the railway crossing • No business case • No costings or funding • No delivery plan A major allocation cannot rely on infrastructure that may never materialise. ◈ 6. Housing distribution is disproportionate and unsustainable Backwell is being asked to take: • A far higher percentage of growth than many towns • 7% of the district's total allocation • Despite limited employment, limited services and a constrained road network This is inconsistent with NPPF principles for sustainable patterns of development. ◈ 7. The Inspector has the power to remove the allocation If an allocation is not justified, not deliverable, or not aligned with national policy, the Inspector can legally require the Council to modify or delete it. Backwell East meets multiple grounds for removal. ◈ Conclusion: The allocation at Backwell is unsound Due to: • BMV land loss • Lack of deliverable infrastructure • Environmental and flood constraints • Absence of justification • Failure of multiple soundness tests • Disproportionate scale …the allocation should be removed from the Local Plan.			
51044353	Christopher Wills		Resident	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Re: The North Somerset Local Plan 2041 I object strongly to ideas raised in the above Plan, especially with regard to the massive urbanisation east of Backwell on this precious grade 1 agricultural land. The proposed dumping of thousands of new houses en-masse in this delicate rural area is not justified. North Somerset Council have not properly assessed the alternatives to this. We need to have an urgent re-assessment of the Green Belt around Bristol. This is desperately needed. North Somerset Council have failed to carry out such a re-assessment. Land immediately alongside Bristol which is nominally Green Belt would be far better suited for the 'honest and logical' extension of Bristol, causing far less environmental damage. Encouraging the wholesale us of cars, in out-of-town dormitory settlements, with the progressive saturation of the road system is plainly bad planning. It is laughable to suggest any significant number of new commuters will us the sadly inefficient public transport. The dumping of an extra 889 new houses on our country village, following another 800 new houses already approved is the exact opposite of 'sustainable development'. The delicate balance of our community is in imminent danger. The proposed Plan 'pencils in' a totally un-costed and bizarre new road, through the flood plain, under the railway, to join the A370 at some as yet unspecified point, causing further traffic chaos as it does. I believe that this road will never be built. It is accepted by all parties that there is an immediate and very dangerous overcrowding on the existing road network. How can North Somerset Council be party to this 'pie-in-the-sky' planning? I believe that they feel powerless to defend against huge political pressure for mass development. If this road were to built, bringing as it would, traffic from Nailsea heading for Bristol, it would only make the situation worse for any new entrance onto the A370 from the 889 extra new houses suggested east of Backwell. In years to come, when people look back to the planning errors of the past that have destroyed our precious community, who will they blame?			
62777793	D Wilmott		Homeowner	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	This land is Grade 1 agricultural land used for crops a d grazing and should not be built on for food security. 800 new houses are already approved for Backwell and will cause local services e.g schools and health services to become overwhelmed. Another 1000 cannot be supported. Backwell is allocated far more houses than other villages in North Somerset. The proposed road over/under the railway bridge would be extremely expensive and if under would flood and not relieve congestion in Station Road. More houses will deplete the local wildlife. The railway station is inaccessible for people with mobility problems, the car park always seems quite full, many of the new houses would be too far away for people to walk, where would they park. The amount of growth over a short time would unstabilise the village and services.			
21214465	P Windsor			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I am opposed to the huge allocation of housing in Backwell in the Local Plan for North Somerset. The allocation in this Plan is NOT SOUND due to the following ◈ Backwell has already recently had 800 new houses approved, this is an additional 40% increase in households. The plan for Backwell includes a further allocation of 889 houses for the village which is completely unsustainable for the area. The proposed road would not effectively serve Nailsea traffic and would not relieve congestion in Backwell, particularly Station Road, Backwell Common and Chapel Hill. The construction of this road is unlikely to be feasible due to the huge expense of engineering around the railway line and the prohibitive costs involved. The lack of infrastructure cannot support the proposed increase in housing, there is already a deficit in school places and limited medical services in the village. There has been no improvement in infrastructure to support the 800 houses already approved, let alone the further 889 indicated in the plan.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Backwell is allocated a higher number of houses than any other village in North Somerset, and even a higher percentage than towns. For example, the village of Backwell is expected to take 7% of the housing allocation compared to 2% for the town of Clevedon. There is no needs or viability analysis for an extra 1000 homes in Backwell. Backwell is not an employment hub, most residents need to commute to Bristol, Weston Super Mare or similar locations. No social cohesion impact assessment has been completed. The proposed development is on Grade 1 Agricultural Land which is currently used for crops and grazing, there is only 7% of this land left in the whole of North Somerset. Government Policy states that we must protect our best and most versatile land to safeguard food security - this proposal contradicts this policy and undermines our food security. This development would destroy valuable wildlife habitats and further harm biodiversity in our nature depleted country. The proposed development also threatens the Brockley Maternity Roost and SSSI as the rare Lesser and Greater Horseshoe Bats rely on this land for food. The Infrastructure Delivery Plan lacks analysis and costings and there are no funding guarantees for new roads or services in this plan. Backwell Common and the surrounding area are prone to flooding, this will only be aggravated by more housing development. The designation of Backwell as a strategic growth location is concerning, particularly the impact on the character of the area, the loss of Greenbelt and Grade 1 Agricultural Land, the risk of flooding and uncertainty over whether the road can be funded and delivered on time to support the increase in housing. Backwell Lake (Reservoir) and the adjacent fields, where the road and housing are planned, is a flood plain which floods regularly. Government Policy requires 50% affordable housing on Greenbelt Land, this is unlikely to be delivered, and reduces the funds that developers will contribute to providing infrastructure. The sheer volume of growth in this area with the required investment in infrastructure and services to support the housing over such a short time scale would be destabilising, unsustainable and undeliverable. The railway station is not fit for purpose as a transport hub - it remains inaccessible for people with mobility issues and services are limited and at capacity. To conclude, the proposed huge development at Backwell is not sustainable and the allocation of this housing in Backwell in the Local Plan is NOT SOUND.			
62687009	Sophie Windsor			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I am concerned that the plan is not deliverable in its current form because the proposed growth in Nailsea/Backwell depends on the construction of a new road under the railway. There is no confirmed funding, timetable, or commitment to deliver this road. Without this road, the existing local road network, including Station Road, will face significant congestion. Station Road is already heavily used and poses safety risks, and additional traffic from the proposed developments would make it more dangerous. This undermines the council's own policy objectives (Policy DP14) to prevent severe traffic impacts. Relying on speculative or future infrastructure delivery to support the allocation of thousands of new homes is unrealistic and unsound. The plan is therefore at risk of failing the national planning policy tests of effectiveness, deliverability, and soundness. I urge the council to either secure firm commitments for the railway underpass road or review the housing allocation in this area to reflect what can realistically be delivered.	To make the North Somerset Local Plan 2041 legally compliant and sound, I consider the following modifications necessary: Secure funding and delivery for the railway underpass road before allocating strategic growth in Nailsea/ Backwell. The plan currently assumes this road will be built, but there is no confirmed funding, timetable, or commitment. Without it, the plan is not deliverable and fails the national planning policy tests of effectiveness and soundness. Review housing allocations in areas dependent on the road if firm infrastructure commitments cannot be secured. This will ensure that the plan does not place unrealistic pressure on the existing road network. Include specific mitigation measures for Station Road, which is already heavily used and poses safety risks. Any additional traffic from new developments must be addressed to prevent severe congestion and danger to road users. These changes are necessary to make the plan realistic, deliverable, and consistent with national planning policy, particularly in relation to transport and safety.		
62777665	G Witcher			No	• Positively prepared • Justified • Effective • Consistent with	Unsure	Unsure	Nailsea and Backwell should have Green belt land between them. The plan is for land of special interest as it is flood plain land with interesting wild life and not suitable for housing. The proposed new road would be liable to flooding and is unnecessary.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					national policy						
62558817	Cameron Wood			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell already has 800 new homes approved which represents a massive (40%) increase already. The additional numbers contained in this plan would lead to complete overdevelopment. The proposed road would fail to serve Nailsea's traffic or relieve congestion on Station Road in Backwell, Backwell Common or Chapel Hill. The road would also hit the rail line, requiring massive expense to go under or over the rail. Despite the planned increase, there is already a deficit in school places and no planned investment in health or leisure facilities. Existing infrastructure and services cannot support another 1000 homes. Backwell has been allocated a higher number of houses than any other village in North Somerset, with a higher growth percentage than towns. Backwell is expected to take 7% of the county's housing allocation, compared with Clevedon at 2%, despite Clevedon being much larger and with significant existing infrastructure. No needs or viability analysis is in place for 1000 more houses. Backwell isn't an employment hub, and most residents commute to Bristol and surrounding towns. No social cohesion impact assessment has been provided. Grade 1 agricultural land,currently used for crops and grazing, is included in the plan. Only 7% of this land remains in the whole of North Somerset. Government policy dictates that our best and most versatile land should be protected to safeguard food security. The proposals contradict this policy and undermine food security. Development would significantly harm and destroy wildlife habitats, negatively impacting biodiversity. The proposals threaten Brockley Maternity Roost and SSSI. Further threatening lesser and greater horseshoe bats. The infrastructure delivery plan lacks analysis and costings, with no funding guarantees for the new road or services. The area, including Backwell Common and surrounds, are prone to flooding. This would be aggravated by more houses. The designation of this site as a strategic growth location would negatively impact the character of the local area, the loss of greenbelt and high quality agricultural land, risk flooding, and create uncertainty concerning whether the planned road can be funded and delivered on time to support the proposed housing. Backwell Lake and adjacent fields, where the new roads and housing is planned, are on a floodplain which floods regularly. Government funding requires 50% affordable housing on Greenbelt land, but this reduces the funds developers will contribute towards infrastructure. The sheer volume of growth planned is significantly destabilising, unsustainable and undeliverable. The train station isn't fit for purpose as a transport hub. It is inaccessible and presents serious challenges for families travelling with young children.			
51430017	Ralph Wood			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell is already committed to substantial growth, with around 800 homes approved—representing a 40% expansion of the village. Adding the proposed further development would amount to excessive intensification. The proposed relief road would not adequately address traffic problems in Nailsea or Backwell, and constructing a crossing over or under the railway would be prohibitively costly and may not be technically achievable. Existing roads are already under significant strain. Despite the major increase in housing, there is no corresponding investment in schools, healthcare or leisure provision. Current services are already stretched and are not capable of supporting another 1,000 homes. Backwell has been assigned a disproportionately large share of new housing—more than any other village in North Somerset and even higher proportional growth than some towns. The village would be expected to absorb 7% of the district’s total allocation, far exceeding places such as Clevedon at 2%. No evidence has been provided to justify the need or feasibility of an additional 1,000 dwellings. The village is not a local employment centre, meaning most new residents would need to commute elsewhere. There is also no assessment of the effect such rapid expansion would have on community cohesion. Much of the land identified for development is Grade 1 agricultural land—some of the best in the country—of which only a small fraction remains in North Somerset. National policy clearly requires the protection of high-quality farmland to maintain food security; the proposals run counter to this. The plans would also destroy important wildlife habitats and further erode biodiversity in an already nature-poor region. The area supports the Brockley maternity bat roost and an SSSI, with rare Lesser and Greater Horseshoe bats dependent on this landscape for foraging. The Infrastructure Delivery Plan is incomplete, lacking robust evidence, costings and guaranteed funding for the new road or associated services. Flooding is already a known issue on Backwell Common and the surrounding floodplain, including around Backwell Lake and the fields earmarked for development. Additional hard surfacing and housing would worsen this risk. Designation of the area as a strategic growth location raises serious issues: damage to local character, loss of Green Belt and high-quality farmland, increased flood vulnerability, and major uncertainty over whether essential transport infrastructure can be delivered on time. Government policy requires that 50% of homes built on Green Belt land are affordable, yet such a proportion significantly reduces developers’ financial contributions to necessary infrastructure. Overall, the scale and pace of the proposed expansion—combined with inadequate infrastructure, insufficient services, and lack of clear funding—make the plans unstable, environmentally harmful and undeliverable. The railway station, intended as a key transport hub, remains inaccessible and poorly equipped to support increased use, particularly for people with limited mobility or families with young children.			
21351873	Mary Woodgate			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The over-development proposed in Backwell of one thousand houses with no investment available for a viable road structure to cope with a huge influx of people, no funding or planning for the schools and doctors surgeries that would be required, is frankly, unintelligent and absurd. Furthermore, the proposal of using high quality agricultural land to build on is not acceptable given that North Somerset has only 7% left and it is needed for crops and grazing. The water-table surrounding Backwell Common is high in many places and prone to flooding, so to build more houses in this area would be a total disaster. The village of Backwell is a residential area with inhabitants traveling out of the village for employment. Many use the train station but this cannot be classed as a transport hub, and the road system out of the village into Bristol is already			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								not suitable for the current volume of commuters. Backwell is already having to cope with 800 new houses that sadly have been approved and which means a 40% increase in numbers and is unsustainable. Our small village is not fit to accept any further development and it is incomprehensible why we have been allocated more housing development (7%) than any other village North Somerset. The town of Clevedon's allocation being just 2%.			
62804385	Graham Woods			No		Unsure	Unsure	The plan involves quality agricultural land which is home to many threatened species of farmland birds such as skylarks and yellowhammers, as well as bats and larger mammals.the land is currently used for growing food crops and is highly productive. There is only 7% of this high quality land left in N Somerset. Backwell Common and the area around Backwell Lake are subject to frequent flooding. Backwell is expected to absorb a higher number of houses than any other village in N Somerset.	The Plan for housing on Green Belt land east of Backwell needs to be scrapped in its entirety.		
62863905	James Wring			No	‣ Positively prepared ‣ Justified ‣ Effective	Unsure	Unsure	Too many houses being allocated to a small village, far greater than other larger settlements in North Somerset - circa 40% increase in village size. Road infrastructure is already poor and would be difficult to improve due to railway and existing settlement. It is on low land subject to flooding. There does not appear to be suggested adequate infrastructure development - schools, Doctors etc. The land is high quality farm land which should be preserved.	I believe it should be rejected in view of other developments that are planned for the village.	No	
62773665	M Wynn			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Deficit in school places and no investment in health services Destroy valuable wildlife habitats including rare bats Grade 1 agricultural land Greater risk of flooding Overdevelopment of a small village like no other nearby.			
62778081	L Yensen		Prospective client	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I am a Backwell resident and I am very concerned about the proposals for the village set out in the proposed plan. North Somerset Council want to put too many houses in the village. We would nearly double in size. I know that we need housing, but it should be built where there are the schools, doctors and dentists, wide roads and where the proposed new houses won't sink into the mud! I have to travel to Bristol to work, so I know how bad the A370 is at peak times. There simply won't be enough road for all the extra cars. Many homes have at least 2 cars, so that's another 1600 vehicles. The other roads are just as bad; there's only one road to Nailsea where the supermarkets are. The idea of the proposed new road is simply ridiculous. It won't relieve any problems, just displace them. However, that's immaterial as I simply cannot see how it could be built. To start with, the cost would be HUGE! I don't know where the money would come from. You are talking tens of millions of pounds. The ground is too wet, the railway embankment too unstable, and I can't see Network Rail agreeing to any part of the plan. The railway station is not fit for purpose. The platform is too short, so CrossCountry train passengers have to use the middle carriages if they want to get off at Backwell. The platform on one side is inaccessible to anyone with mobility problems. There is no engineering solution to this. I've mentioned the houses sinking into the mud. The area towards the railway line is almost a marsh and is impassable when there's been a lot of rain. You can't walk under the railway line much of the time in the winter as it is flooded or inches deep in mud. The land at east Backwell is farmland. There are cereal crops there every year. If we lose our farmland how will we feed ourselves? And what about the wildlife that live and forage there? Anyone visiting Backwell would immediately understand and agree with our concerns. This site is not viable and I cannot understand why North Somerset Council have even considered putting it in this plan.			
62742401	Sara Zinn			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The village of Backwell has already been allocated 800 houses which is more than any other village in North Somerset, and the proposed additional houses would lead to further overdevelopment, imposing increased stress on already stretched infrastructure, and services such as schools, doctors and dentists. There is a deficit in school places and no investment in health services or leisure facilities meaning people having to travel elsewhere to access these. Backwell cannot support another 1000 houses. Additionally, no social cohesion impact assessment has been provided. There is no needs or viability analysis for the additional 1000 houses. There are very few local employers, meaning most residents already commute to work, and this number would only increase. The station is small, with accessibility issues, and there is limited parking available, which will be inadequate with increased demand even from the 800 houses already approved, leading to parking on, and clogging up of already congested local roads. The A370 and Station Road are already congested, especially at peak times, and narrow pavements on the approach to the Comprehensive school make a further increase in traffic, a safety and environmental concern. The proposed new road has no guaranteed funding or clear time line for development. The planned route will impact on prime agricultural land used for grazing, be on land prone to flooding, and would have a serious impact on the whole Backwell common area. Building a road over or under the railway line will be complex and expensive, and it may not even be feasible. Increasing the population of Backwell by 80% over such a short period of time, with no clear plan for the required supporting infrastructure is unsustainable and of grave concern. There is a real risk of building an expanded community which lacks the necessary resources, and creating more problems than it solves. Even if the proposed new road gets funding, its construction is likely to be many years away, leaving the local community with serious congestion problems in the interim. Whenever there are closures on the M5, traffic is diverted via the A370, or Clevedon. This is a fairly frequent occurrence and causes severe congestion through Backwell with its current level of local traffic, never mind with the addition of vehicles from an extra 1000 houses. Without the new road it is not only Backwell residents who will be affected, congestion build up on A370 and Station road will cause further traffic chaos from Nailsea, Backwell, Weston super Mare and surrounding villages. Even with the proposed new road, the impact on traffic to and from Nailsea, and on Station Road will be limited. Several parts of Backwell are prone to flooding and there are serious concerns as to the impact of further development on this risk. Farleigh Road, Chapel Hill, Backwell Common, Backwell Bow, and the area around Backwell lake are areas already subject to flooding, The rhynes in these areas are already filled to overflowing after heavy rain, and building on surrounding areas will reduce the amount of land available to absorb this water, compounding the flooding problem for local residents and those using these areas for leisure. The new roads and housing planned near Backwell lake are on a flood plain. Is there no concern for those who will live in this area in the future? It feels like all that matters is the numbers of homes, never mind if they flood once the builders leave.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Although Government policy requires that ' we must protect our best and most versatile land ' to safeguard food security, the proposal to build on some of North Somerset's remaining 7% of this prime agricultural land which is currently used for food crops and grazing, is very short sighted, and goes against stated policy. Once we lose this land to development, it is gone forever, and reduces our food security, local green spaces, and important wildlife habitats. Backwell has been allocated a higher number of houses than any other village in North Somerset, and a higher percentage increase than some nearby towns. It is already increasing in size by 40% with the existing proposed development. Further development will irreversibly damage the local environment and completely change the nature of the local community. We cannot build for building sake. House numbers alone do not provide solutions. The current proposals prioritise building further homes over the needs and resources of the existing community, and disregard the impact on local infrastructure, services, environment and wildlife. The village of Backwell is already doing its share by having 800 extra houses, increasing its population by 40%. The Infrastructure delivery plan lacks analysis and costings , and there are no guarantees of funding for services or the proposed new road. Such guarantees are essential before any further development is considered. Additional building would lead to complete overdevelopment, and is therefore unsustainable for the reasons outlined above.			
62744129	John Zinn			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell village has already seen an increase in residential properties of 40% due to the building of 800 new houses having been approved. Generally, the starting price for these houses are in the region of £375,000. The Government has stated that affordable housing for young people is a priority, however, prices as stated above are simply NOT affordable for new buyers. Provision of housing should go hand in hand with support for the local infrastructure. Schools, doctors, dentists, leisure facilities are required to stop people having to travel elsewhere. Currently, the road and rail network does not support this and environmentally, it is not adhering to the Government's Policies in this respect. No social cohesion impact assessment has been provided. The allocation of housing in Backwell is higher than any other village in North Somerset and the expectation is that Backwell will take 7% of the district's housing allocation. As an example, the housing allocation for Clevedon is only 2% despite its population being approximately 5 times greater than Backwell at around 22,000. Station Road and the A370 are already congested, particularly at peak times. The area around Backwell School is narrow and must cope with large buses taking children to school. Additionally, there are no cycle paths and consequently cyclists cannot be safely overtaken by cars resulting in yet more congestion. Along the A370 bypass the bus lane which sees very little bus traffic has resulted in unnecessary delays to commuters since there is now only one lane for cars and lorries which again adds to the congestion problems. The station car park in Backwell is not large enough to cope with commuters working in Bristol, Bath & London and by building the proposed 1,000 houses will result in people having to park along residential streets in Nailsea & Backwell. It is not usual to find that many households now have 2 cars and the strain of an additional 2,000 cars on local roads will be an issue both in terms of the environmental impact and severe congestion on local roads. The A370 is already a very busy road, particularly at peak times and introducing a further 1,000 plus cars will result in sever congestion, delays and frustration to local residents. Additionally, when the M5 is closed due to an accident the traffic is diverted through Backwell on the A370 and when this occurs there are significant tailbacks and congestion. I have personally experienced this, and a journey of 5 miles took 4 hours. This was 2 years ago!! The proposed new road has no timeline for development neither does it yet have approval. The proposed route would seriously impact the Backwell Common area and significantly reduce prime agricultural land but is also an area prone to flooding. The approved Bristol airport expansion has also not been taken into consideration. With such a large increase in proposed housing in Backwell and Nailsea and since the airport buses do not run from Backwell or Nailsea, there will be added congestion seen on local roads, particularly since there is no plan for better road access to the airport. Many local areas are already subject to flooding, in some cases severe, and with increased land being taken up with layers of concrete this water will no longer be able to be absorbed thus exacerbating the flooding issues seen on Farleigh Road, Chapel Hill, Backwell Common and Backwell Bow. Although the rhynes in the latter three areas are maintained by the North Somerset Internal Drainage Board they are already filled to capacity after heavy rain and building on surrounding areas will compound the flood risk to local residents. The sheer volume of growth with the required investment infrastructure and services over such a short period is destabilising, unsustainable and undeliverable. Overall, the proposed plan lacks coherency and planned thought simply endeavouring to build houses on any green land just to satisfy the Government's flawed policy of "build, build, build"!			
30831905	Ella Badger			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I object to the proposed allocation of 1,000 additional homes in Backwell on the grounds that the scale, location and supporting evidence are not sound, justified or deliverable. 1. Disproportionate Growth Backwell already has over 800 homes approved, representing a 40% increase in village size. A further 1,000 dwellings constitutes clear overdevelopment and far exceeds the growth proposed for comparable villages and even some towns with superior infrastructure. No needs assessment has been provided to justify this scale of expansion. 2. Inadequate Infrastructure Provision There is no committed investment in school capacity, healthcare, leisure facilities or other essential services. The Infrastructure Delivery Plan lacks analysis, costings and identified funding. The proposed new link road is unfunded, technically complex due to the rail crossing, and would not resolve existing traffic issues. 3. Transport Constraints Backwell station cannot function as a transport hub in its current form: platforms remain inaccessible, parking provision is minimal and rail services are already operating at or near capacity. 4. Environmental and Land-Use Concerns Much of the site comprises Grade 1 agricultural land, which national policy requires to be protected. The scale of development poses significant risks to biodiversity and wildlife habitats, and Backwell Common is known to be susceptible to flooding. 5. Social and Economic Impact The village has limited employment opportunities; most residents would need to commute, worsening congestion. No social cohesion assessment has been undertaken. The requirement for 50% affordable housing on greenbelt land will also reduce developer contributions, leaving substantial gaps in infrastructure funding. Conclusion Given the absence of demonstrable need, the lack of deliverable infrastructure, the environmental harm and the disproportionate scale of growth, the proposed allocation for Backwell is unsound. I request that this allocation be withdrawn or significantly reduced and reconsidered in line with national policy and local capacity.			
51450369	J Farr			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with	Unsure	Unsure	why is it that Backwell is taking the brunt of housing development compared to other small towns and villages? we live on the very busy A370 which is frequently congested when the M5 is shut or blocked with traffic. further development here will add to traffic, congestion and road safety hazards in a place already blighted as a short cut to the motorway. Medical services in a place lived in by many senior citizens which generally is very good will no longer be so. The village will become a small town and quality of life will be damaged. I consider that these housing plans will not address the national housing shortage .

Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					national policy			only social, affordable housing aimed at young people can fulfil that challenge.			
21176513	O Gillespie			No	Positively prepared Justified Effective Consistent with national policy	Unsure	Unsure	In its 2025 report the Climate Change Committee lists key risk areas for the UK - extreme weather affecting food production and nature, risk of drought, risk of flooding etc. So this plan to cover grade 1 agricultural land with housing is mad - there is only 7% of this high quallity land left in North Somerset - we NEED crops and food more than ever in the face of climate change. What happened to the Government's "we must protect our best and most versatile land" policy? Backwell Common and surrounding areas are prone to flooding - more housing will increase this threat. Backwell Lake and adjacent fields where new roads and housing are planned are on a regularly flooding floodplain. Backwell already has lots of new housing approved increasing the village substantially - additional numbers would be overdevelopment and put a great strain on local services, roads etc And the so called " key element" of a railway station would in fact be overwhelmed with such a large increase in people using it and the already crowded car park. The A370 is a busy road, often with slow moving traffic - which is particularly busy in the summer and comes to a standstill when there are problems on the M5. Thousands of extra cars will make it completely impossible. Why is Backwell being so targetted with housing? It is a village and yet it is being told to build more houses than any other village or indeed, percentage wise, local towns. To put 950 houses onto the green fields is like putting a whole new village inside Backwell. In spite of this proposed increase in housing there are no plans for extra school places, for new health services or leisure facilities. The lack of infrastructure cannot support another 1,000 houses. The Infrastructure Delivery Plan lacks funding guarantees for a new road and new services. The Uk is one of the most nature depleted countries and this proposal would destroy much needed hedgerows and mature trees which provide habitats for wildlife. As well as affecting rare Lesser and Greater Horseshoe Bats. Considering how many houses are already approved in Backwell this proposal presents a huge volume of growth on top of those within an unreasonably short period of time - basically it is destabilising, unsustainable and undeliverable.			
21229825	Anita Golding			No	Positively prepared Justified Effective Consistent with national policy	Unsure	Unsure	Backwell has already many new homes being built with no extra provision for schools/doctors/leisure facilities in the plan. Another 800 homes will put a huge strain on the local facilities.There is no work in Backwell so new residents will need to travel to work adding to existing congestion on the roads/lack of parking at the station. The railway station lacks facilities for people with mobility issues. Backwell is poorly served by the internet - on Backwell Common it its almost impossible to use Wifi without using Starlink or a 5G router. Backwell is being allocated more houses than any other village in North Somerset. The land which is proposed to be built on is Grade 1 Agricultural land which is now becoming sparse in North Somerset. Wildlife will be impacted by this, there are bats, owls, rare birds, deer, newts, snakes and many other animals living on this land. Backwell Common regularly floods, I have lived on Backwell Common for 30 years and in that time there have been many occasions when the road has been impassable - both near the railway bridge to Wooleys farm and towards Farleigh. If a new road was built under the railway this would also flood like the railway bridge in Farleigh which floods multiple times a year. Looking at the plans for the new road it appears that Backwell Common will be closed near the railway bridge, this would leave our house and our neighbour with no car access to either Backwell shops/railway station nor to the A370. The plans we saw in Backwell Parish Hall actually had no way of us getting out of our houses by car as the road was closed in both directions around us! This new road is more likely to be used by Nailsea residents wanting to commute to Bristol than by any residents of the new estate wanting to go to Nailsea, new residents are unlikely to work in Nailsea so the new road is only there for the residents to go to the supermarkets in Nailsea - a lot of money for not much gain. Backwell Common is one of the oldest roads in Backwell so by closing this road off local heritage will be destroyed. The school bus is obliged to collect children on Backwell Common, if the road is closed the bus will have to go half way down the common, turn round and then pick up children from the other end of the common, this would add at least 15 minutes to journey times. The same is true for the bin collections.			
27088257	Jim Harwood			No	Positively prepared Justified Effective Consistent with national policy	Unsure	Unsure	Totally object to this being a sound choice of where to build. Backwell is being asked to increase its size by 80% if all the planning is allowed. I moved to Backwell because it was Backwell. It wont feel anything like Backwell with an extra 80% of housing. The fields/land in question is on a flood plan and often holds surface water. Being built on will inevitably worsen backwell flooding, which is already an issue. The land is GRADE 1 AGRICULTURAL LAND, and in the GREENBELT. We should NOT be using this type of land for building. I thought the government wanted England to be more self sufficient rather than less. Growing and producing food on this type of land should be the priority. The loss of land will be extremely detrimental to the wildlife which surrounds Backwell. Appreciate Bats are often mentioned as a protected species but all other types of wildlife too. Deers roam free and i often hear owls. Building of this magnitude WILL make the roads busier. More dangerous for the children, and elderly people crossing the roads. The new road is a total pipe dream. Totally irrelevant as wont really mitigate the issues on Station road or the surrounding Backwell roads which are already crazily busy at times. The medical provision will be stretched even further along with the academic situation. All in all mental and doesnt make sense. I didnt agree with the Grove farm application but for slightly different reasons. This application is even worse. There is no needs or viability analysis for an extra 1,000 houses. No social cohesion impact assessment has been provided. Backwell is not an employment hub, most residents commute. Government policy states that “we must protect our best and most versatile land” to safeguard food security. The proposals contradict this policy and undermine food security. The sheer volume of growth with the required investment infrastructure and services over such a short period is destabilising, unsustainable and undeliverable.			
58535745	Stephen Parsons		Resident	No	Positively prepared Justified Effective Consistent	Unsure	Unsure	Backwell already has 800 new houses approved this amounts to an increase of 40% for Backwell The additional houses if approved would result in a mammoth overdevelopment. The roads proposed would be inadequate and a planning failure and cause traffic chaos to the Village of Backwell and its residents. Engineering a road under or over the railway line is planning cloud cuckoo land. Backwelll is not an employment hub.	See above

					with national policy			Most residents commute. There is no justification for 800 extra houses and no viability analysis.			
58535745	Stephen Parsons		Resident	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The Plan is not Sound or Compliant because Backwell already has 800 new houses approved this amounts to an increase of 40% for Backwell The additional houses if approved would result in a mammoth overdevelopment. The roads proposed would be inadequate and a planning failure and cause traffic chaos to the Village of Backwell and its residents. Engineering a road under or over the railway line is planning cloud cuckoo land. Backwelll is not an employment hub. Most residents commute. There is no justification for 800 extra houses and no viability analysis. Backwell Common is prone to flooding. and this will be exacerbated with more housing. Grade 1 Agricultural Land will be built on. When its gone its gone! Government polocy is to protect our best land for foodv security	See above	N/A	
62788321	E Simon			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I object to the proposed allocation for circa 1,000 additional houses in Backwell. The scale of development is disproportionate to the size of the village, especially given that several large schemes (already approved) are still being built out. Existing infrastructure, including roads, schools, healthcare, drainage and public transport, is already under pressure, and no viable plan has been provided to support growth of this magnitude. The proposal also places major housing on Grade 1 agricultural green belt land. This contradicts national and local policy to protect high-quality land and is unnecessary when alternative sites within North Somerset exist that would have a lower environmental and agricultural impact. Overall, the proposal is unsound due to its unsuitable location, lack of supporting infrastructure and the cumulative impact of recent developments already approved in Backwell.			
62742657	Peter Shaw			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I wish to object in the strongest terms about the proposed housing developments being put forward for Backwell Backwell already has 800 new houses approved, a 40% increase for the village. These additional proposed houses would lead to complete overdevelopment. There is a deficit in school places and no investment in health services and other village services. The village infrastructure is creaking now! Can the council please explain were all the children in these new houses will be schooled? The lack of infrastructure and services cannot support another 1,000 houses. Backwell is allocated a higher number of houses than any other village in North Somerset, and even a higher growth percentage than towns. Backwell is expected to take 7% of the district's housing allocation, compared to Clevedon's 2%. It seems Backwell is seen as an easy target for development. There is no needs or viability analysis for an extra 1,000 houses. Backwell is not an employment hub, most residents commute. The A 370 is already chaotic during commuting and school times, these developments will only serve to compound the problems. No social cohesion impact assessment has been provided. Government policy states that "we must protect our best and most versatile land" to safeguard food security. The proposals contradict this policy. The Infrastructure Delivery Plan lacks analysis and costings, and there are no funding guarantees for any new road or services.			
51332609	Adrian Shields			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The Plan is incompatible with the Government's policy on national food security, which states that "we must protect our best and most versatile land". The Plan contradicts the policy and undermines food security, as it would permanently destroy Grade 1 Agricultural Land currently used for food crops and grazing. The imperative for food security will only increase over time due to the Climate Emergency. Recognising that 800 new houses have already been approved for Backwell, there is already a deficit in school places and no investment in health services or leisure facilities. The lack of infrastructure and services cannot support another 1,000 houses. Furthermore, and again recognising the 800 new houses already approved, the sheer volume of growth with the required investment infrastructure and services over such a short period is destabilising, unsustainable and undeliverable.			
51276577	Roger Shorland		Rotary Club of Nailsea and Backwell	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	There is a defeicit of school places. No investment in health services and a total lack of infrastruture services to support an additional 1000 houses. We have repeatedly warned of the risks of flooding if building is carried out on identified flood plains. Backwell is not an employment hub. most residents commute.			
50710529	Robert South			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national	Unsure	Unsure	Backwell already has800 new houses approved, tis proposal would lead to complete overdeelopment. Backwell is being unfairly treated, it is being allocated a much higher number of additional houses than any other village. MOST importantly GRADE ! AGRICULTURAL LAND currently being used for growing OUR food is now being threatened with development. What is happening to thw government commitment to protecting food security ?			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 					policy						
38936641	M Stagg		local resident	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I strongly object to the proposed development on Backwell East greenbelt land. While the current government guidelines state that greenbelt land can be built on in exceptional circumstances this land fails to fall into that category in every way. This is grade 1listed land currently used to produce food. It is not set aside land. Building on it would irreversibly harm the landscape and biodiversity existing there. This land is home to nesting skylarks, a nationally endangered species. It is also a feeding ground for ravens, again a nationally rare bird and the lesser and greater horseshoe bats. Backwell common and surrounding areas are already prone to flooding and by covering 50 hectares of nearby land with concrete this will only aggravate the situation. With climate change seeming to bring torrential rainstorms, green field areas are even more necessary to cope with run off. Backwell has already got 800 new houses approved. It cannot support an additional 1000. It already lacks the infrastructure to support these 800 approved houses. New health services ,schools, leisure centres would be needed. The plan fails to say who will fund these or where they will be built. Will more greenfield sites be required? No social cohesion assessment has been provided. There is a proposed new road but who would fund this? And when would it be built. Backwell has very little employment opportunities most people need to commute. Are we to become a mere dormitory for Bristol. Is North Somerset having to fund road construction that will in reality only be needed to solve Bristol's housing problems. Much is made of the railway station but in reality it is barely fit for purpose. There is no access for the disabled. A partially sighted friend travels on to Yatton unable to cope with the platform height or stairs down to the road at Nailsea/Backwell. It is mainly unmanned and with no shelter, No access other than stairs on one side and an excessive drop from train to platform height Plus only a short platform so some carriages are inaccessible. Increased traffic from commuters will impact on neighbouring villages and road particularly at Long Ashton and roads into Bristol. The A370 the crossroad and Station Road are already stated as being at capacity. There is no space to increase the size of these roads. There are plans for increased housing in Nailsea and it is disingenuous to treat these are separate issues. Shoppers rely on the two big supermarkets in Nailsea and use Station Road to access them. I requested that the local plan be revised so these houses are built nearer to local employment and that North Somerset's Green Belt and natural environment is protected.			
51456289	Emily Wills			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Re: The North Somerset Local Plan 2041 Dear Sirs, I write to object strongly to ideas raised in the above Plan, especially with regard to the massive urbanisation of Backwell on this grade 1 agricultural land. The ideas in the Plan seem to encourage the 'Doughnut' style development of Bristol beyond the Green Belt. Surely this old fashioned idea has no future in the 21st Century with all the traffic chaos that this style of development is sure to cause. The Plan seems to ignore the logical extension to the Bristol conurbation in areas within the City and just outside, such as the 'Vale' area between the A370 and the A38 (HE20110) on grounds that some of the area is 'nominally Green Belt. This area of land directly outside the City boundary has very little of the character worth preserving that we would normally associate with the Green Belt and it would offer a far more logical extension of the City than building on vast tracts of open countryside beyond the Green Belt in a ring or 'Doughnut' development. The existing road systems around the village of Backwell and the town of Nailsea are archaic. The main roads are often gridlocked and the tiny interconnecting lanes are used as rat-runs and a very dangerous situation has already been created by successive planning mistakes, encouraging huge 'dormitory' housing estates beyond the Green Belt. The danger of 'rat-run' traffic mixing with schoolchildren crowding the narrow pavements and dodging the constant traffic is a subject planners should try to reduce. This danger would obviously worsen drastically if such development as suggested in the Plan were to happen. Is this what you call 'Planning' for the 21st Century? For developers or Planners to suggest that a large proportion of these new residents would then use the much derided public transport is proven nonsense. The majority will, as always, get into their cars and attempt to drive into Bristol using all available 'rat runs' possible. The suggested area of development would interfere directly with the regular feeding patterns of the Greater Horseshoe Bat Colony in Brockley. I know this from personal experience, as our garden is visited almost every night in the flying season by these fascinating and rare creatures. Many of my neighbours on the whole length of Church Lane and directly over the proposed development area are also visited regularly. Backwell, with its narrow winding lanes has developed gradually over more than a thousand years. The suggestion of a sudden massive deposit of thousands of new houses and sudden urbanisation is total planning vandalism. When we as a village were democratically asked by central government how we would wish to see the development of the area, 'The Backwell Neighbourhood Plan' was produced and very strongly supported by our village. The scale of development suggested by this Spatial Plan is totally alien to the democratic views of the voters of Backwell.			
51428769	Amelia Young			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	The additional numbers will lead to a disproportionate overdevelopment of the village almost doubling its population – existing approved developments will add 40% to the population. Backwell seems to have been a target for disproportionate growth. It has been allocated a higher number of houses than any other village or town in the district. To expect the village to take 7% of the district's housing allocation, given its size, seems unreasonable. There are many other villages and towns with similar characteristics, that could absorb development. The loss of precious greenbelt and quality agricultural land will have a negative impact on the character of the village and the surrounding area. It totally goes against Government policy that states 'we must protect our best and most versatile land' to safeguard food security. Not only would the developments destroy Grade 1 agriculture land that is used for arable and livestock farming, it would reduce further the already small amount of high quality land left in N Somerset. It would it destroy valuable wildlife habitats and would further harm the biodiversity of the wider area. In particular it would threaten Brockley Maternity Roost and SSSI, with rare Lesser and Greater Horseshoe Bats who feed from the land. There is no evidence of any needs or viability analysis for an additional 1000 houses. There is little employment in the village, the majority of villagers commute. An 80% growth in population would put huge pressure on the infrastructure which is already creaking. There are not enough school place and no anticipated investmentin healthcare or leisure facilities. The train station is not a fit transport hub as it has no disabled access and the platform gap and height make it dangerous for children and elderly to use. The proposed road would not effectively serve Nailsea's traffic or relieve congestion on Station rd, Backwell Common, or Chapel Hill. Flooding is a material problem that is only likely to increase as our climate changes. Much of the land on which the development is proposed is on a flood plain that floods on a very regular basis in the winter. The government requires 50% affordable housing on Greenbelt land which will of course reduce the funds that the developers will contribute towards infrastructure.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
62832257	Anthony Young			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	1. The additional numbers would amount to unjustifiable overdevelopment of the village. There are already 800 new homes approved – a 40% increase. 2. The proposed road is inadequate for its purpose. It would not be sufficient to meet traffic needs in Nailsea, and Station Road, and Backwell Common and Chapel Hill. The railway must be crossed, and whether this is an underpass or bridge, it is expensive, complex and almost certain not feasible. 3. There is a deficit in school places and no plan for health services or leisure facilities. The existing infrastructure will not support c.1000 new homes. 4. There is an unjustified weighting on Backwell for new housing. More than any other North Somerset village, and more than many towns. In numbers, that's 7% of the district housing allocation. Clevedon is taking 2%. 5. No needs or viability analysis has been provided for 1000 homes. 6. If Backwell was an employment hub it may be justifiable. It is not. 7. This land is Grade 1 agricultural land – only 7% of this is left in North Somerset. Other areas in the district which are not Grade 1 can be used for housing. This contradicts government policy's focus on protecting the best and most versatile land for food security. In addition, it impacts on bio-diversity and natural habits. 8. A number of SSSIs are threatened by this proposal – bats, maternity roosts etc. 9. The road is integral to the new housing development but it has not been costed, no funding guarantee provided or detailed analysis. It must be considered as a condition to any development, including critically, how the railway is to be traversed. 10. The area floods – how is that suitable for new housing. It is likely to result in significant problems. 11. The plan probably identifies the railway station as a key driver in substantial development. However it has many limitations as a railway station, particularly disabled access and for families with young children. There are more suitable stations further along the line, where land is also available for development. 12. The overall plan is disproportionate in is impact on Backwell. The village has more than played its part in the housing needs. The additional development will overwhelm the school, health, leisure and environmental balance. It is an ill-though scheme.			

Land at Lodway Farm

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
31149537	Strongvox Ltd	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes			Our client controls the below site (shown green in the attached document) at Manor Farm (identified in the SHLAA as part of HE20491 – Land at Lodway Farm), Easton-in-Gordano, the composite parts of which are draft allocated in the latest Regulation 19 Local Plan for a minimum of 160no. dwellings, with the remaining (blue) component to the north east being in the control of Barratt Redrow. Our client supports the proposed allocation of land at Lodway Farm, Easton-in-Gordano, for a proposed composite 160no. dwellings comprising their own land interest together with that of Barratt Redrow immediately north east, following the site's identification during the 'Additional Sites' consultation. It should be noted that 160no. homes should be seen as a minimum guide, and that this should not preclude a greater quantum of development being achieved should greater efficiencies be found, not least because of the site's extremely sustainable location at the fringes of Bristol. The composite site has been subject of earlier draft master planning to understand likely development yield and key parameters, notwithstanding that the two separate parcels can demonstrably be brought forward independently, with no dependence of either upon the other in terms of access, open space or supporting infrastructure. An excerpt from this exercise is shown in the attached document. Subsequent to our submissions on behalf of our client in the course of the Council's 'Additional Sites' consultation in March 2025, work has	R002v5 NSLP Reg19 Reps Strongvox Dec25.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										commenced on preparing a planning application, which anticipates a quantum of c.100no. units making the most efficient use of the land within our client's control. An excerpt from the emerging layout is shown in the attached document. As shown, proposals for the site would include a sizeable landscaped buffer to the motorway, together with a robust development frontage providing noise attenuation in the absence of any likely ability to ameliorate this 'at source', i.e. through roadside acoustic fencing. This area coincides with the lower lying parts of the site, ensuring that flood risk is minimised and no sequential testing would be required in this respect. Heritage and archaeological impacts will be considered and addressed through appropriate professional assessment, including opportunities for new public views to the Grade II*-listed church. Thus, the site is free of other constraints. Turning to the detailed Site Requirements, as set out at Schedule 1, these are considered in para 5.8 of the attached document. As demonstrated above, emerging proposals for the development of our client's portion of Lodway Farm are capable of satisfying the detailed Site Requirements while providing a significant quantum of development of c.100no. units. It is anticipated that when combined with Barratt Redrow's proposals adjacent, the total allocation could yield well in excess of the 160no. units indicated in the emerging policy, securing good efficiency at this highly accessible location. In relation to noise mitigation, it is worthwhile noting that although chiefly designed to ensure appropriate internal noise levels and 'refuges' of external amenity space to new occupiers, the mitigation measures associated with the M5 motorway are likely to give rise to a material improvement in environmental conditions for existing residents located southeast of the site. This will be further qualified in a noise assessment. The allocation of the site in conjunction with Barratt Redrow's land immediately northeast is therefore supported and will make an important contribution to the supply of housing in this highly sustainable location.	
62801473	Susan Adamson			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Insufficient Local Consultation: The Council did not hold any public exhibitions in Pill/Easton-in-Gordano, despite consulting on five sites in this area. Other locations received dedicated events, suggesting Pill/Easton-in-Gordano was under-represented in the consultation process. Low Response Volume: Only 125 responses from 29 individuals were received for Pill/Easton-in-Gordano, compared to much higher engagement in other areas (e.g., Portishead: 689 responses, Long Ashton: 591, Nailsea and Backwell: 1,049). This disparity may indicate that local voices were not adequately captured. Significant Community Opposition: Nearly 2000 residents (out of a population of ~4,500) have signed a petition objecting to the scale of proposed housing and the lack of adequate initial consultation, suggesting widespread dissatisfaction and possible procedural shortcomings. Potential Breach of Council's Own Policies:			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								Questions are raised about whether the Council complied with its own Statement of Community Involvement, which sets standards for inclusive and proportionate engagement. Possible Non-Compliance with Equality Legislation: Concerns are noted regarding legal compliance with the Equality Act 2010, including the Public Sector Equality Duty, due to the lack of proportionate engagement and possible under-representation of affected groups.			
62795393	Julian Bowyer			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Traffic & transport issues. The development in this area will massively increase traffic in the narrow windy streets of the village. it would increase congestion & slow the flow of traffic through the village. Increased traffic would be an increased hazard to pedestrians & cyclists.	Reducing the number of proposed dwellings in this area would limit limit the increase traffic congestion.		
58517153	Matt Burley			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Adjacent to M5 with significant noise mitigation needs; two limited access points; River Avon Trail works; flood risk buffers required and updated mapping indicates increased extent. Without a completed sequential test and agreed drainage strategy, delivery is uncertain and risks non-compliance with national flood policy.	Remove allocation; alternatively, no permission until sequential/exception tests, EA-agreed drainage, River Avon Trail mitigations and motorway noise strategy are secured; reduce capacity to reflect buffers and access limits.		Schedule 1 Site Specific Objections.pdf
62747777	C Burnett Rae			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I believe the Plan isn't sound and it doesn't appear to be legally compliant or in line with the duty to co-operate. My views are below: Consultation / Community involvement The way the consultation was handled feels inadequate for the scale of development being pushed onto Easton-in-Gordano. There were no local exhibitions here, even though five sites in this area were under consideration. The response numbers ended up far lower than in other places that did get proper engagement. Given the size of what's proposed, that lack of proportional and local consultation doesn't seem compliant with the Council's Statement of Community Involvement, and I'm not convinced the equality duties have been met either. It's hard to argue that local voices have been properly represented. Green Belt release and doubtful 'exceptional circumstances' The Plan assumes that removing Green Belt here is justified. But the evidence for 'exceptional circumstances' doesn't seem solid. It isn't clear that the Council has fully explored reasonable alternatives, such as genuinely maximising brownfield land, applying higher density standards in urban areas, or working with neighbouring nearby authorities. Without that work being clearly demonstrated, I don't see how the Green Belt release can be justified. On top of that, the viability addendum itself says 50% affordable housing would be 'challenging'. This undermines the idea that these sites can deliver the NPPF golden rules for Green Belt release. Traffic and transport issues M5 Junction 19 already has a significant traffic issue, and the Plan doesn't address this big issue. National Highways has already said that proper transport modelling is needed for developments in this area. But I can't see evidence that this has been done or that the Council has engaged properly with them. There's also a heavy reliance on the proposed railway link, but no real clarity that public transport will actually be sufficient for the number of homes planned. The transport assumptions don't feel robust at all. Environment and wildlife These sites are in sensitive areas, including zones linked to the bats SAC and not far from the Severn Estuary SSSI. The Plan doesn't give me confidence that wildlife corridors, habitats, or biodiversity impacts have been fully accounted for or that there are funded, specific mitigation measures. The Green Belt release also appears to ignore the value of the best agricultural land around the village. Policies are referenced, but the detail and certainty aren't there.			
62850369	Maureen Butterly			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Summary The allocation at Lodway Farm is not sound. It is constrained by topography, flood risk, ecological sensitivity, inadequate access, and significant landscape harm. It cannot deliver the required infrastructure or 50% affordable housing viably. Key Issues 1. Severe Transport Constraints Lodway is a narrow, constrained lane with a raised footway that is unprotected and below modern safety standards. There is no room for safe widening without land acquisition or unacceptable Green Belt harm. Additional traffic would worsen congestion at:	Remove the Lodway Farm allocation unless the council can demonstrate: safe and feasible active travel improvements, road safety mitigation, no adverse ecological impacts, Green Belt justification specific to this parcel, viable delivery of 50% affordable housing, and resolution of flood risk.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Lodway/Crockerne Drive, the A369 junction, and M5 J19. 2. Active Travel Requirements Are Not Feasible The plan requires improved active travel along Lodway and a designated route into Pill centre. However: Pavement widths are below minimum national standards. Topography and building lines prevent widening. No feasibility studies are provided. 3. High Landscape and Green Belt Sensitivity The site forms part of the rural setting of Pill, with views across the valley. Development would erode settlement character and harm openness. Exceptional circumstances are not demonstrated for this specific parcel. 4. Ecological Constraints The site lies within the North Somerset & Mendip Bats SAC consultation zone. There is insufficient assessment of light spill, habitat loss, or bat commuting corridors. 5. Flood Risk Adjacent areas are influenced by Markham Brook flood flows. No drainage feasibility or sequential test has been provided. 6. Infrastructure Delivery is Unproven No evidence shows that the required active travel links or contributions toward the new primary school are deliverable.			
58535265	Ben Chivers			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The development behind Lodway Farm suffers from a number of issues. Firstly is one of access; The Breaches is a narrow residential road with poor lighting, no pavements and single direction traffic bottle-necks at each end. Access from Beechwood Rd is not much better - both discharge out onto Church road or Debeccas Lane, both of which are again narrow and unsuited for increased traffic - which WILL occur, no matter what the transport intent is. Given there is no space to improve matters and that the roads are regularly used by pedestrians varying from school children to OAPs, this will cause accidents and most likely fatalities. The land of Lodway Farm is, I believe, prone to flooding and home to wildlife which would be banished from the area completely, such as pheasants and deer. Church road regularly becomes borderline impossible in heavy rains; unless some very significant engineering is undertaken this will only become worse and likely spread to other roads,whose drainage is already insufficient. Finally there are issues which effect the whole area and new developments; - Flooding will get significantly worse, unless major engineering works to create new drainage paths beyond the limits of the developments are undertaken. - Junction 19 is already dangerously overloaded, backing onto the motorway every single working day. There are already frequent accidents in this location and adding to the traffic coming through this junction will make it worse - even if only 25% of the new homes has a car adding to it, it's an additional 275 cars using that junction. - Drs and other services in the village are not planned to be improved, which will cause a borderline functional system to collapse without significant investment to prevent it. As a note, this whole consultation feels like its been structured to dissuade involvement; even making these comments has been challenging and would have put many off!	A major drainage improvement scheme in the local area to manage peak water flows. Major improvements to Junction 19 t And adjacent roads to improve both flow and "buffer" zone for cars to queue. A dedicated access route across the motorway and linking up to the Docks network of roads to avoid overloading local roads (including Marsh Lane) and the pinch point of the railway bridge. Ideally create some nature reserve type buffer areas, all interlinked, that gives the local wildlife a home.	Happy to consult and provide ideas for solutions.	
58534849	Richard Clarke			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	There was minimal to no consultation for this area compared to other areas that are to be developed to this scale. there were no public events and many residents were/ are completely unaware of the scale of development planned and have not had a reasonable chance to have their say. This is completely unacceptable and does noy uphold the Councils own Statement of Community Involvement. The council is planning to build on Green Field sites without having first considered all reasonable alternatives such as Brownfield land and other more suitable alternatives within North Somerset. Furthermore, the Councils own Golden Rules do not appear to have been met. Has the Council taken into account and funded the work needed to protect wildlife	Full and reasonable consultations and events to positively engage the community. Reassess the impact on Green Belt land following the Golden Rules and consider the use of Brown Field and other sites prior to destroying Green Belt and Grade 1 agricultural land. Full flood assessment and alternative lower flood risk sites should be considered To cooperate fully and be advised by National Highways regarding traffic management and the already above capacity road networks		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								on the greenbelt land and also to deal with the flood risks that the proposed building will cause. Th local plan does not address the ongoing problem with the massive overuse of Junction 19 and the A369, both of which will be massively exacerbated by increased building at this level. The X4 bus is one of the most successful and cost effective in the area yet it is completely reliant on junction 19 and the A369 running smoothly. The slightest incident, roadworks or match at Ashton Gate stadium delay the bus sometimes by over an hour making it completely unusable. Further traffic on the road will add to increased unreliability of public transport thus making more commuters take to their cars! This is opposed to Council objectives. The proposed small hourly train service will not be a replacement for the X4 bus which runs every 20 minutes and on a much larger timetable. The train cannot be relied on to mitigate the extra traffic caused by the proposed building let alone deal with the current ongoing issues. There is also a concern that at peak times the train will already be full of Portishead passengers by the time it reaches Pill. The roadwork issues need to be addressed and resolved the proposed train is not an answer to this. The pavements in Pill are already completely inadequate and in some cases non existent. The council needs to fully asses the increased risks to pedestrians from extra houses/cars and make firm and costed plans to mitigate these risks.			
62854913	C Evans			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Not enough consideration has been given to the amount of traffic it will generate in an area that is already struggling with rush hour congestion at junction 19 on the M5 and on bridge road heading over the suspension bridge. Not enough consideration has been given on the environmental impact of building on green belt land, which will have an effect on nature and the metal wellbeing of the current residents. I am in favour of building homes within existing communities however the current plans for sprawling housing estates in the Pill and EinG area are excessive and not in proportion to the current population. The village will nearly double in size without the necessary infrastructure it needs. Please reconsider.			
62858913	Luke Samuel Charles Evans			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No		I object to the allocation of Green Belt land around Pill & Easton-in-Gordano (LP4 / Schedule 1) on the grounds that the Council has not demonstrated exceptional circumstances in accordance with Chapter 13 of the NPPF (2024). The Additional Sites consultation (7 Feb–21 Mar 2025) had a very low local response for Pill (c.125 responses across 5 sites; only 29 individuals), no local exhibition in Pill, and the Consultation Statement does not show proportionate engagement as required by the Council's Statement of Community Involvement. There is inadequate published evidence that reasonable alternatives (maximising brownfield, optimising density, or cross-authority options) were fully tested; transport modelling does not adequately demonstrate that Junction 19 or cumulative impacts have been mitigated; HRA and biodiversity mitigation for SAC/SSSI impacts are not demonstrated; and the Plan fails to show robust sequential flood-risk testing for sites near Markham Brook. For these reasons the allocation is unsound and should be withdrawn until further evidence, proper local consultation, and statutory assessments (HRA, SFRA/FRAs, full transport modelling) are completed and published. Short summary of the case against the allocations 1. The February–March 2025 "additional sites" consultation appears to have been insufficiently local and proportionate for a change of this scale in Pill/E-in-G — contrary to the Council's own Statement of Community Involvement and public sector equality duties; the consultation statement confirms low local response numbers for Pill compared with other settlements. n-somerset.gov.uk+1 2. The Plan's justification for removing land from the Green Belt relies on "exceptional circumstances" under the NPPF (Chapter 13). The evidence must show exhaustive examination of reasonable alternatives (brownfield use, higher densities, cross-boundary cooperation). If that evidence is absent, the Green Belt release is vulnerable. GOV.UK Assets+1 3. Transport evidence is incomplete on cumulative effects (particularly M5 Junction 19). National Highways' responses make clear further transport modelling / co-operation is needed. Reliance on a future rail link and unproven bus/active travel measures is risky. n-somerset.gov.uk+1 4. Ecology / Habitats — the sites lie close to bat SAC consultation zones and the Severn Estuary SSSI and will require robust HRA and measurable net biodiversity gains; the Plan must show credible mitigation and funding. Existing local ecology reports identify constraints. abbotsleigh.org.uk+1 5. Flood risk — parts of the area (Markham Brook valley) fall within Flood Zone 3; the Plan must apply sequential testing and show mitigation/avoidance for housing. The council's SFRA and national flood mapping are relevant. Detailed points (with the legal/planning basis) 1) Procedural fairness & adequacy of consultation For a proposal that would re-categorise Pill/E-in-G as a Strategic Location and potentially release multiple Green Belt sites, the council's consultation was not sufficiently local or proportionate. The Consultation Statement records only ~125 responses relating to the Pill area (29 respondents across 5 sites) versus much larger numbers elsewhere; no consultation events were held in Pill despite this being one of the most affected areas. That under-representation raises a realistic procedural unfairness concern and possible failure to follow the Council's Statement of Community Involvement (SCI). n-somerset.gov.uk+1 • Why it matters legally: The SCI sets out how plans should be prepared and consulted on. If the council did not comply with its own SCI, the Plan could be open to challenge at examination or by judicial review for procedural illegality or irrationality. Also consider whether the Council carried out		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									equality screening and complied with the Public Sector Equality Duty (PSED) — e.g. were groups with protected characteristics properly engaged and were reasonable adjustments made? (If there's no evidence of PSED consideration, raise that.) n-somerset.gov.uk 2) Green Belt: "exceptional circumstances" and alternatives Chapter 13 of the NPPF says Green Belt boundaries should only change where "exceptional circumstances" are demonstrated and where reasonable alternatives have been fully considered (brownfield land, higher densities, cross-boundary options). The Plan must show exhaustive, transparent evidence that other options were examined and why they are not sufficient. If the council's evidence base (SHLAA, brownfield capacity work, density appraisals, Duty to Co-operate statements) does not demonstrate that, the justification for removing Green Belt is unsound. GOV.UK Assets+1 • Particular local point: The Additional Sites Viability Addendum reportedly flags that 50% affordable housing would be "challenging" on these Green Belt sites — that undermines any claim that the release will secure clear public benefits (an important part of "exceptional circumstances"). Ask for the viability evidence and sensitivity testing. n-somerset.gov.uk 3) Duty to Co-operate and alternatives across borders The Duty to Co-operate requires strategic engagement with neighbouring authorities where housing needs cross boundaries. The Plan should show what cross-authority options were explored (e.g., maximising higher-density urban sites or brownfield in nearby towns). If the council did not properly evidence co-operation, that is a soundness issue. n-somerset.gov.uk+1 4) Transport and cumulative impacts (Junction 19 / modelling) National Highways has queried cumulative impacts and asked for modelling for Junction 19; the council's own documentation shows National Highways expect to work with NSC and that modelling is required. The Plan appears to rely heavily on a future rail link and new active travel routes — but the timings, funding, and deliverability of these measures must be explicit and evidenced. Without robust cumulative transport modelling (and clear mitigation and funding commitments), the Plan is not sound. n-somerset.gov.uk+1 5) Ecology / Habitats Regulations Assessment (HRA) Sites are within bat SAC consultation zones and close to the Severn Estuary SSSI; HRA may be required and must show no adverse effect on integrity or, if effects are likely, provide lawful mitigation/compensation and secure funding. The Plan must demonstrate measurable biodiversity net gain and appropriate buffers. Local ecological reports (neighbourhood plan evidence, Wild Service reviews) highlight important habitat corridors which must be protected. If the Plan simply allocates sites without clear HRA outcomes, it is unsound and may be unlawful. abbotsleigh.org.uk+1 6) Flood risk and sequential/exception tests Markham Brook valley and other low-lying land are in Flood Zone 3 (high risk). NPPF requires sequential testing (prefer lower-risk sites first) and, where necessary, the exception test with demonstrable mitigation. The Plan must show that lower-risk sites were prioritised or that any allocated sites in Flood Zone 3 are justified by the exception test and will be safe in the long term. If the Plan lacks a clear sequential test and site-by-site flood risk assessment, it is unsound. n-somerset.gov.uk+1		
62860801	Lisa Farrell			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	No public consultation regarding any of the proposed sites. Given the size of the proposal, there was a relatively low response at the time and the subsequent number of people who have now signed the petition, it would indicate that public engagement was not done properly, it wasn't sufficiently inclusive and therefore not legally compliant under the equalities act. Not enough clarity around transport and the effect of the increased number of cars that will result from the proposed number of houses and the increase in population. NPPF 109. States Transport issues should be considered from the earliest stages of plan-making and development proposals. There has been no public discussion and no clear evidence in the plan that they have been fully considered. The plans focus primarily on schemes to increase active transport and the development of the Portishead to Bristol railway as a solution to transport problems. The plans for the railway link (3 carriage trains, once an hour) will not support the number of people using them and will be full before they get to Pill. Pill station will also have no parking. The transport survey and the effect on the A369 and M5 junction 19 has not been completed as yet indicating that they have not fulfilled their duty to cooperate with other agencies. This site has poor access and an increase in car numbers will put excessive strain on the current village road system which is mainly residential with the need for many cars to be parked on the roads. The main road through the village, in parts, is not wide enough to accommodate two cars passing. The proposal to prevent the use of Marsh Lane as a route out of the village will affect the large number of people who live in the village and who work in the docks and surrounding businesses, putting further pressure on the village roads, the A369/Martcombe Road and the M5 junction. The population increase of 44% is disproportionate the current size of Pill and Easton in Gordano. There will be significant impact on local services which has not been considered in the plans. Loss of Green belt land with no evidence that possible Brown Field sites across the whole area have been considered Increased flooding risk due to the affect that housing will have on drainage.	To remove this location from the local plan		
62796513	R Griffiths			No	• Positively prepared • Justified	Unsure	Unsure	The proposal has not been subject to a meaningful community engagement by North Somerset Council in the local area. The proposal is likely to result in significant changes to the local community. Is likely to result in significant traffic and transportation issues. M5 junction 19 is	Removal of the proposal from the plan		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					• Effective			already subject to significant congestion. North Somerset council has progressed with the local plan before National Highways have completed their assessment of M5 J19. The benefits ascribed to potential future railway links (which do not as yet exist) are not justified with sufficient evidence. May result in removal of land from the Green Belt without adequate assessment of alternative Brownfield options Is likely to have a significant impact upon the natural environment and the protection of wildlife Could exacerbate potential flood risks			
58529729	Rob Harvey				• Justified • Effective • Consistent with national policy	Unsure	No	Lodway Farm is integral to the purpose of a greenbelt site. Because there is access from the Port of Bristol to Lodway under the motorway bridge then the motorway provides no barrier to urban/industrial sprawl (Port of Bristol already owns land on thePill side of the Bridge and has previously bid on other parcels on the same side). Lodway Farm fields are prone to regular and considerable flooding and development should not be considered anywhere near the Northern boundary next to the M5 (especially important to rule out polluted water running off into the rhynes and entering the river. I do not believe that NSC has developed this plan in conjunction with EA and I believe it is unrealistic to go forward without specific guidelines from EA. This area is also an incredibly important wildlife site. The Northern rhynes can hold water vole (red data species along with redshank and lapwing for this site), there is considerable bat activity and it is a tremendously important wildlife migration route to and from the estuary for many species, not least, a nationally important population of common toads that have been carefully monitored for 20 years and live and move within the fields before crossing to their breeding pond on the far side of the motorway access/bicycle path. Access from the second point at Beechwood rd will cause similar problems to the rejected proposal for Court House Farm Fields. Access from Beechwood Road will lead residents to use Marsh Lane for onward travel (Debeccas Lane is a nightmare right turn and at present access to the Breaches is blocked and winding through quiet suburban roads to get out onto the Lodway seems likely to cause congestion at the very least but could be seen as potentially dangerous). I do not believe that NSC has developed this plan in conjunction with National Highways and I believe it is unrealistic to go forward without specific guidelines from National Highways. I would expect any application to require a significant environmental survey. I should also point out that, at present, Lodway Farm Fields are to be used as a depot site for the reconstruction of the Portishead to Bristol line. In mitigation Metrowest have agreed to restore the fields to their pristine greenbelt status (a legal requirement) once the work is over (this could be 2028 or considerably later...). Though no timescale has been given for this work I am lead to believe that it would involve working with professional environmental surveyors to check that the restoration is working/has worked and animals that have been removed are returned to the site and have started breeding e.t.c.. again - so could be another 2-3 years on top of the construction phase before this site became available	Reduce the number of houses to around 40-50 and keep them near the farm buildings (which don't really have much rural appearance now they have mostly been converted) or running nearer to the Breaches e.t.c.., and allow a generous area for public access but also a large space behind that to the rhynes to be kept as a wildlife habitat/corridor with no public access running Northeast to Southwest from the M5 cyclepath approach to Marsh Lane with appropriate mitigation to allow access to the corridor for animals approaching from a different direction and especially, modified drain covers to prevent amphibian access.		
62862401	Sustainable Pill & District		Sustainable Pill & District	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	Please note this comment has also been uploaded to ensure the reader can activate internet links. Land at Lodway Farm Plan inconsistencies in relation to flood risk This section fails to reference any strategies or policies which deal with Flood Risk (Policy DP9) and Sustainable Drainage (DP10) and, unlike the other sites within Strategic Locations in the Local Plan, there is no strategy for dealing with flood risk in the related 'LP' policy, which is LP4. Please see comments on policy LP4 (attached here for ease of reference) in relation to flood risk and surface water drainage at Lodway Farm. This inconsistency with the principles of Policies DP9 and DP10 makes this section of the plan ineffective and it is Unsound Plan inconsistencies in relation to protection of wildlife habitats There is no reference to any strategies or policies which deal with protection of habitats for the wildlife living on this site, including Red Data species (animals classified on the IUCN Red List as being at high risk of extinction) and a nationally important population of common toads that have been carefully monitored for 20 years and live and move within the fields before crossing to their breeding pond on the far side of the motorway access/bicycle path. There is therefore inconsistency with the following policies: SP11 (Historic & Natural Environment), DP35 (Nature Conservation) DP36 (Biodiversity Net Gain) and the protection of wildlife on this site is not covered elsewhere in the Local Plan. This inconsistency with the principles of Policies SP11, DP35 and DP36 makes this section of the plan ineffective and it is Unsound. Plan inconsistencies in relation to land in proximity to a Site of Special Scientific Interest (SSSI) This land is in close proximity to the Severn Estuary Site of Special Scientific Interest (SSSI) and as such should be protected from development by Strategic Policy DP35 which states: 'Development within or in proximity to a Site of Special Scientific Interest (SSSI) or National Nature Reserve that is likely to have a direct	In order to make the Local Plan legally compliant and sound, there should be a re-assessment of the of the five sites around Pill and Easton-in Gordano for housing development and their identification collectively as a Strategic Location. The submitted comments on behalf of Sustainable Pill and District demonstrate considerable lack of community engagement, which fails the test for Legal Compliance and falls well below the engagement with communities in the other Strategic Locations referred to in the Plan. The comments also make clear that significant weaknesses exit in the assessment of these sites and in the application of 'exceptional circumstances' to justify their release from the Green Belt for housing development. Furthermore, weaknesses in site-specific policies indicate insufficient time and consideration has been given to the policies for this Strategic Location, likely due to its late inclusion in the Plan. A pause in the process of approving this Plan is requested so that the Pill and Easton-in Gordano Strategic Location can be re-assessed, following adequate and effective engagement with the local community.		Comments on Schedule 1, Page 276.docx Comments on Policy LP4.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								or indirect adverse effect on its biodiversity or geological interest will not normally be permitted.' There is no reference to the application of Policy DP35 in this section of the Local Plan (and none in the associated policy LP4) which demonstrates an inconsistency, making this section of the Local Plan Unsound. Failure to comply with Duty to Co-operate in relation to use of land by MetroWest project Lodway Farm Fields are to be used as a depot site for the reconstruction of the Portishead to Bristol line. In mitigation, Metrowest have agreed to restore the fields to their greenbelt status (a legal requirement) once the work is completed (this could be 2028 or later). Though no timescale has been given, it is likely to involve professional environmental surveyors checking that the restoration has worked and animals that have been removed are returned to the site and have started breeding again - that could be 2-3 years on top of the construction phase. There is no recognition of this legal requirement in this section (and none in Policy LP4) or of any communication with MetroWest, which indicates a failure of the Duty to Co-operate, making this section of the Local Plan Unsound.			
62802913	Pill & Easton-in-Gordano Parish Council		Pill & Easton-in-Gordano Parish Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The Parish Council objects to allocating Land at Lodway Farm (HE20491) for 160 dwellings under LP4. Residents at our 9 Dec drop-in (45 attendees) recognise the need for some new homes but oppose huge estates—most would accept 20–30 here if fitting the awkward access (The Breaches/Beechwood Rd) and preserving the Green Belt buffer to the estuary, aligning with our Neighbourhood Plan's local-scale growth. This allocation is undeliverable and harms rural character without "very special circumstances". Not Positively Prepared – The 160-home scale overrides our 150–200 cap (81% support 2021), ignoring modest alternatives. Not Justified – No noise modelling for M5 or heritage assessment (Grade II* Church of St George views). Green Belt not "grey" (NPPF para 148).The Sustainability Appraisal contains no assessment of the loss of best and most versatile agricultural land. The site is predominantly Grade 1 (excellent quality) with the remainder Grade 2 according to Defra's Provisional Agricultural Land Classification (see attached screenshot from magic.defra.gov.uk). This is the highest-quality farmland that the NPPF (para 119 and Planning Practice Guidance) says should only be developed as an absolute last resort after all reasonable lower-grade alternatives have been exhausted. No such alternatives assessment has been carried out, rendering the allocation not justified (NPPF para 36(b)). Not Effective – IDP Oct 2025 (§8.3) flags unfunded J19; ~224 vehicles overload Marsh Lane without modelling (NPPF para 115d). Active travel (River Avon Trail) unfeasible on third-party land. Inconsistent/Legally Non-Compliant – Breaches NPPF para 148 and paras 106-108; Duty unmet with Historic England.	Delete from Schedule 1; revert to July 2024 non-strategic status, capping at local needs (20–30 homes max, with buffer).		ALC Defra MAGIC Pill Sites Grades 1 and 2 Dec2025.png
62857025	Julie Hayward			No	• Positively prepared • Justified • Effective	No	No	Consultation - I was aware of, and able to attend the first consultation meeting held in Pill. I was not aware of the second meeting. I do not believe that the consultation was inclusive. It did not take into account that a large proportion of Easton in Gordano residents are elderly/infirm/disabled and would find it difficult to attend in Pill. Why was it not held at a hall in Easton in Gordano, considering that Court Farm (HE206) and the nearby site HE20491 both directly impact Easton in Gordano residents more so than Pill residents. For those residents (such as elderly) who would require a paper version of this form to respond, the form had to be collected from Pill resource centre (quite a distance from the proposed sites for the infirm to travel without driving). No public meeting was held in the village of Easton in Gordano. Traffic - Many of the roads surrounding the two above mentioned sites are narrow and lack pavements. If the proposals go ahead, the impact of additional traffic in these areas would be huge, and massively detrimental to existing residents. The building phase would be even more of a problem. Since the introduction of the ULEZ in Bristol, traffic volume has increased in the area. The congestion on the J19 roundabout and the Martcombe Road often causes queues where I live on St Georges Hill.I often cannot get in and out of my driveway as it is blocked by queuing traffic during busy times of day. I understand that National Highways have yet to complete their assessment of these areas. There is much talk of the Pill railway in the planning speel, but this is something that has been in the pipeline for decades and is yet to materialise. I do not think it should be taken into consideration until it reaches fruition (as at this rate it likely never will!) Green belt and green spaces - Green belt should only be used in exceptional circumstances. I do not believe that building on the green spaces here is warranted, and do not believe that that other sites have been adequately explored. If these proposals go ahead, almost all of the green space around Easton in Gordano will be lost. As many of the residents are elderly, it would cut of access to green space for them as they would have to travel to reach it. There is also a good deal of wildlife in these sites which would suffer. Lack of amenities - Easton in Gordano has one small GP surgery, and no other amenities. There is no dentist, no post office, no pharmacy, no banks, as far as I aware no hairdresser or barber, no shops. The shop in Gordano Services is a very small Waitrose - it is expensive and aimed at people travelling. It is somewhere you can grab a sandwich, snack, drink. It is not somewhere you can do a household shop - no meat/fish/veg/fruit/cooking & baking essentials/cleaning materials etc. The	As above - more inclusive consultation, and consideration of the points I have listed.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Precinct at Pill has a post office, a pharmacy and a small co-op, but being in Pill is quite a distance for some. Public transport - there is one bus that runs through Easton in Gordano & Pill. The inbound stop on St Georges Hill is tiny - room for only 1-2 people to stand. It is on the brow of the hill, with no pavements to access it.			
43203041	National Highways		National Highways							We welcome the need for development adjacent to the M5 motorway in Pill and Easton-in-Gordano to undertake detailed noise modelling to assess noise from the nearby M5. National Highways receives many ineligible requests for compensation from homes in new developments built close to existing motorways, and the early consideration of potential noise issues, masterplanning and mitigation is therefore recommended.	NSC Reg19 Local Plan Consultation.pdf
62776513	M Martin			No	• Effective	No	No	The Council held four public exhibitions (Long Ashton, Weston-super-Mare, Nailsea, Backwell), but none in Pill/E-in-G, despite five sites being consulted on in this area. Given the scale of potential change in Pill/E-in-G, the absence of a local event and the relatively small response volume could indicate under-representation of local voices and a lack of proportionate engagement.			
62865057	Alexander Nell			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	I do not consider Policy LP4: Strategic location: Pill and Easton-in-Gordano of the proposed plan to be sound, not legally compliant or not in compliance with the duty to co-operate for the following reasons: Community involvement and methods of consultation. Given the scale of potential change in Pill/E-in-G (e.g., 600 homes at Pill Green alone, plus other sites), the absence of a local event and the relatively small response volume could indicate under-representation of local voices and a lack of proportionate engagement. Do not believe that the Council has complied with its own Statement of Community Involvement. The release of land from the Green Belt Strategic Policy SP7 of the Local Plan does not justify release of land from the Green Belt in these locations This aspect of the Plan is not sound. The Council has not shown that it has fully examined reasonable alternatives, such as maximising brownfield capacity (making the fullest and most efficient use of previously developed land), using minimum density standards (optimising land in towns and cities with higher-density developments. Are there sites in other locations in North Somerset which could be considered for housing development and which are not mentioned in the Local Plan. 3. Significant traffic and transport issues Is this aspect of the Plan is not sound. The Local Plan does not address potential traffic congestion at Junction 19 of the M5 • there is an over-reliance in the Local Plan on the impact of the proposed railway link. • Insufficient evidence in the Local Plan that transport links, including buses and trains, will be sufficient for the proposed number of new homes. 4. The impact on the natural environment and protection of wildlife The Council has not taken sufficient account of the protection of wildlife and habitats in Pill and Easton-in Gordano in its assessment of the release of land from the Green Belt. (SP7) In summary, this is inappropriate location for development.			
51079969	Justin Saunders		Pill and Easton-In-Gordano Parish Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	Yes	The most sustainable of the farmland developments outlined in LP4. However this is grade 2 farmland. Without improve links to the port opportunities for employment will be limited. There are more sustainable previously built on locations within settlement boundaries which should be considered ahead of the release of this green belt site			
711873	Easton-in-Gordano Parish Council		Pill & Easton-in-Gordano Parish Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The Parish Council objects to allocating Land at Lodway Farm (HE20491) for 160 dwellings under LP4. Residents at our 9 Dec drop-in (45 attendees) recognise the need for some new homes but oppose huge estates—most would accept 20–30 here if fitting the awkward access (The Breaches/Beechwood Rd) and preserving the Green Belt buffer to the estuary, aligning with our Neighbourhood Plan's local-scale growth. This allocation is undeliverable and harms rural character without "very special circumstances". Not Positively Prepared – The 160-home scale overrides our 150–200 cap (81% support 2021), ignoring modest alternatives.	Delete from Schedule 1; revert to July 2024 non-strategic status, capping at local needs (20–30 homes max, with buffer)		Screenshot 2025-12-11 090639.png

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Not Justified – No noise modelling for M5 or heritage assessment (Grade II* Church of St George views). Green Belt not "grey" (NPPF para 148).The Sustainability Appraisal contains no assessment of the loss of best and most versatile agricultural land. The site is predominantly Grade 1 (excellent quality) with the remainder Grade 2 according to Defra's Provisional Agricultural Land Classification (see attached screenshot from magic.defra.gov.uk). This is the highest-quality farmland that the NPPF (para 119 and Planning Practice Guidance) says should only be developed as an absolute last resort after all reasonable lower-grade alternatives have been exhausted. No such alternatives assessment has been carried out, rendering the allocation not justified (NPPF para 36(b)). Not Effective – IDP Oct 2025 (§8.3) flags unfunded J19; ~224 vehicles overload Marsh Lane without modelling (NPPF para 115d). Active travel (River Avon Trail) unfeasible on third-party land. Inconsistent/Legally Non-Compliant – Breaches NPPF para 148 and paras 106-108; Duty unmet with Historic England.			
62741377	J Smith			Yes		Yes	Yes		The no through road should be enforced with cameras		
62851809	S Spencer			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	Para 116, NPPF, councils should "refuse or prevent planning on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road networks, following mitigation would be severe, taking into account all reasonable future scenarios." We believe that the impact on existing highways infrastructure would be significant with the minimalist mitigations proposed. Context of roads and amenities in Pill & Easton-in-Gordano: • There is one main road running through the villages which is small and narrow in places (enough to cause a blockage simply when a bus stops), and with a 20-30 mph speed limit throughout. When there is a blockage, access from one end of the village to the other is through narrow residential roads. The only access from Pill centre to Pill Green is up a steep hill which has cars parked down one side, leading to congestion. • Very few people work in P&EiG because there are very few work places. They commute to Bristol, Portishead or other locations in reach of the M5 and the car is the most common form of transport, meaning that roads are already congested at peak times. • The most congested points of the villages at peak times are: near Crockerne Primary, St Kat's school, St George's Hill to access the A369, and the roundabout at J19 which is congested at most points of the day. Two of the proposed new developments have access points directly opposite two of the busiest points in the villages (St George's Hill and St Kat's). The new primary school will add to this congestion. • Junction 19 has recently been developed to reduce congestion, but the roundabout remains heavily congested at peak times, and the stretch from 19-20 remains one of the most congested and prone to incidents, according to National Highways. • There is a small Co-op in Pill Centre and an even smaller Spar, meaning that online deliveries and going to Portishead's supermarkets are common (therefore more car usage). • The bus services that serve the village are semi-regular but already busy at peak times. Most people will take the car to get to where they need to go. Assuming 2 cars per household, an additional 2200 cars will be channelled into P&EiG and the surrounding roads. The council, as they know, have a duty under the Highways Act (1980) Sections 106 and 278 to ensure that developers fully mitigate against the traffic effects of new developments. NS was recommended by National Highways to carry out an assessment on the impact of this additional traffic on the village roads and surrounding roads but this is not evident in the plans (Duty to Cooperate). Instead, their plans indicate that the traffic effects will be mitigated through the new railway station, bus services, and active transport routes. We do not consider this to be sufficient for the following reasons: • The trainline is not yet in operation and will at best only reduce car usage and therefore residual impact on the P&EiG road network for people working in Bristol or Portishead, not the others who commute by car to the M5 and beyond. • Bearing in mind that there will be a large amount of people taking the train from Portishead to Bristol (and not stopping in P&EiG), how does the council know that there will be capacity within the new service for everyone who currently lives in P&EiG but works in Bristol? If the council doesn't know this, how can they be confident that there will be enough for new households too? If there aren't, new households will also resort to car usage which will channel additional traffic into the small village roads and onto the A369. •The 360 new households at Lodway and Services may not choose to walk to the station in Pill, instead choosing to drive. This doesn't reduce net road usage and also results in a parking issue in the very narrow streets near the station. • The council lists multiple active travel routes linking the new developments with the villages, but these seem to be footpaths and cycle routes. They will not reduce the strain on the main road running through the villages because, as already stated, most people do not work in the village and will continue to use the car or the bus. Therefore, net traffic in the village will go up. • The active travel routes will also not stop an additional 700 cars being channelled onto the narrow and residential Church Road, Beechwood Road, the Breaches and all the small roads that will take new residents from the Lodway and Services developments back to the main road or to Marsh Lane. • NS states in their plans that active travel routes should encourage people to use the centre in Pill (for shops) rather than needing to use cars to go elsewhere. Portishead has around 3 times the population of P&EiG (if the new developments go ahead) and they are served by three large supermarkets and numerous smaller supermarkets, compared with Pill's small Co-op and even smaller Spar. New residents will not use these amenities for their regular shop, nor the active transport routes to reach them- they will choose to take the car out of the villages	Reduce the scope of the development in terms of dwellings proposed so as to reduce the overall traffic and therefore strain on existing infrastructure. Make the infrastructure more sustainable by building amenities that will reduce traffic in and out of the village, for example a supermarket at Pill Green and/or another small secondary school. Carry out transport mapping based on the assumption that most newcomers to the village will use the car for all day-to-day activities AND that the majority of the train capacity will be taken up by people coming from Portishead to Bristol. Make the findings of this exercise clear on the planning portal. Ensure that there is ample access to the site HE2015 from the A369 to avoid traffic through the village. Use planning gains to either build a new doctor's surgery or extend the current. Make it clear how NS has engaged with National Highway's recommendations on the planning portal.	N/A	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								and into Portishead and the surrounding area, still resulting in a net increase of 2200 cars on the J19 roundabout. • Although there is an additional primary school planned, there is no additional secondary school planned. St Kat's is currently at capacity with no capacity for additional children (according to the DfE). This means that, yet again, net traffic will increase significantly as parents take their children to Gordano, Nailsea, Backwell or elsewhere. With the exception of Gordano (which is oversubscribed) there are no bus services to Nailsea, Backwell or other local schools. Where then will secondary-age children go? A condition of lifting Green Belt restrictions are that local infrastructure be improved in order to accommodation the new developments. Beyond the active travel links and over-reliance on the new train station, there don't seem to be mitigations that will genuinely improve infrastructure. The council has not, in its policy or plan, submitted a transport vision for how to mitigate against the impact of the additional cars from the new development, as is best practice. Why did NS go ahead with the local plan before National Highways finished their assessment of the impact on the motorway junction? It has also not considered how the new developments can be accessed by non-car modes as a minimum mitigation against the resulting volume of traffic through the village. As a result, how does it know that the new developments will not, in fact, contravene the condition of releasing Green Belt which is that local infrastructure should be improved in order to accommodate the new developments?			
62853601	M Spencer			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Unsure	No	The plan does not sufficiently address the issues that this development would cause in terms of traffic congestion, both in Pill/Easton-in-Gordano and at J19 of the M5. Previously concerns have been raised by National Highways regarding development at Court Hay (see ref 25/P/1413/OUT). The proposed local plan does not show that NSC has co-operated sufficiently with National Highways and taken on its advice, which stated that transport modelling is required in order to fully understand the impact of such developments on J19. The plan relies heavily on transport links such as buses and trains. As things stand the bus service is already very busy at peak times, particularly taking commuters from Portishead to Bristol. The plan does not evidence that the bus service has the capacity to accommodate such a proposed increase in the population of Pill and Easton-in-Gordano, many of whom will be commuting into Bristol. The forthcoming train link from Portishead/Pill to Bristol is relied on heavily in the Local Plan, however it is likely that the capacity of this rail link will be largely filled by commuters from Portishead, especially at peak times. These plans would require the release of land from the green below, however the plans do not evidence that North Somerset Council has fully examined reasonable alternatives. There is a lack of consideration to maximising brownfield capacity, using minimum density standards and working with neighbouring authorities to accommodate housing needs. The lack of evidence here points towards the 'exceptional circumstances' justification being invalid.	The plan should evidence consultation with National Highways, and detail how their advice will be taken on board re. J19 congestion. Evidence should be included to show how NSC has examined reasonable alternatives to the release of green belt, such as looking at brownfield capacity. Detailed modelling of the capacity of public transport (bus/train) and whether this would adequately serve the increased population, especially at peak commuting times.		
29025697	P Sterndale			No		No	No	The access points to this site are totally unsuitable for the heavy increase in traffic. The junction with the A369 is already congested at peak times and entry onto the A369 is often very difficult with long delays. Junction 19 of the M5 is already saturated. The roundabout is often completely clogged up and accidents are numerous. There are frequent accidents/incidents on the M5 leading to its closure, with local roads unable to cope with the increased volume of traffic. the Local Plan does not include comments from National Highways and their advice is essential to assess viability of this site. The site is too close to the M5. Although the problem of noise is mentioned, three lanes of traffic are frequently at a standstill on that section of the motorway, producing unacceptable levels of pollution. Remove this site from the Local Plan.			
62744193	E Tomlinson			No	' Justified	No	No	There has been a lack of consultation and no public exhibition of the local plans in their entirety			
12476353	Historic England (R Torkildsen)		Historic England							The 'site requirements' on page 276/ 277 in the Plan appear to reflect to the HEA recommendations to positive respond and minimise harm to affected heritage assets.	20251210 NSCLP Reg 19 response Dec 2025 RT.docx
58041921	Richard White			No		Unsure	No	NPPF (para 187) requires plans to take full account of environmental impacts and to avoid/mitigate adverse effects, including Habitats Regulations Assessments (HRA). This requirement has not been fulfilled. The proposed development sites around Pill lie within consultation zones for the North Somerset & Mendip Bats Special Area of Conservation (SAC), with proximity to the Severn Estuary Site of Special Scientific Interest (SSSI). Where sites are adjacent to or affect SSSI, SAC or other habitats sites, or form important wildlife corridors, development proposals must avoid significant harm, apply buffers and secure measurable net gains for biodiversity (paras 193-5). Lodway Farm site adjoins SSSI the marshland down to the River. Details of protected species and habitats can be found in the Wild Service Ecology Review undertaken on behalf of the Neighbourhood Plan Steering Group in 2019. https://pillanddistrictplan.org/environment-and-landscape/wild-service-ecology-review/ Assessment of land removed from Green Belt inadequate, The 'additional sites viability addendum' suggests meeting the affordable housing targets may be 'challenging' for the proposed sites in existing Green Belt land around Pill and Easton-in-Gordano. Flood risk increased from development elsewhere including land East of Motorway services. Environment Agency maps indicate water draining from the area known as The Bottoms', old Coombe Lane north of A369 is channelled NW along the A369 and filters down to the River Avon along this site.	Environmental Impact Assessment to be completed by competent persons in consultation with community groups. Substantial buffer zone to SSSI Full open consultation. Traffic modelling Traffic calming measures to prevent traffic from this development leaving through the village to Pill Road		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								No evidence that this has been considered. A cul de sac within a cul de sac, no evidence of planning how commuter traffic will filter out through the village. Inadequate consideration of potential traffic congestion through the village and at M5 J19. Concerns have been raised by National Highways (see NSC planning portal, ref 25/P/1413/OUT). The National Highways report stated that transport modelling is required to assess the cumulative impact of developments on M5 J19. There is no evidence of this. No evidence offered in the Local Plan that transport links, including buses and trains, will be sufficient for the proposed number of new homes. Inadequate consultation as stated elsewhere			
62840705	Kirstie Wilkins			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The Council held four public exhibitions (Long Ashton, Weston-super-Mare, Nailsea, Backwell), but none in Pill/E-in-G, despite five sites being consulted on in this area. Response volumes were markedly lower for Pill/E-in-G (125 responses from only 29 individual respondents across 5 sites) than for comparable locations: Portishead: 689 responses for 5 sites, Long Ashton: 591 responses for 10 sites, Wrington: 484 responses for 5 sites, Nailsea and Backwell: 1,049 responses for 26 sites. Given the scale of potential change in Pill/E-in-G (e.g., 600 homes at Pill Green alone, plus other sites), the absence of a local event and the relatively small response volume could indicate under-representation of local voices and a lack of proportionate engagement. Has the Council complied with its own Statement of Community Involvement? Was this consultation sufficiently inclusive? Has there been legal compliance with duties under the Equality Act 2010, including the Public Sector Equality Duty?			
55930049	S Tomlinson				• Positively prepared • Justified • Effective • Consistent with national policy	No	Unsure	Very poor road access. Previous applications to develop this site have been rejected on the grounds of poor road access. Located next to marsh land and the Avon SSI and designated on Council map as being within the flood risk zone. None of these facts are mentioned and no mitigations offered to prevent harm either to the natural environment and the sites role as an important wildlife corridor, nor to local properties. Being so close to the motorway will increase the pollution exposure for residents and given the elevated nature of the M5 at the northern part of the site as it descends from the bridge it will not be possible to mitigate the noise without building a barrier so big that, for example, it cannot possibly meet the requirement listed on P277 of the outline plan of “Generous buffer to be retained around non-designated heritage assets at Lodway Farm and St George’s Lane to maintain sense of rural setting”.			

Land east of Gordano Services

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
62795393	Julian Bowyer			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Traffic & Transport issues. this aspect of the plan is not sound. Development in this area would massively increase traffic through the narrow roads of the village. This would be problematic for flow of traffic through the village. This area was highlighted in National highways report Land off Marsh Lane, Easton-in-Gordano, (Dated 18/08/25) (Council Reference 25/P/1413/OUT) (National Highways Ref: NH/25/12173) It states ‘Referring to the consultation on a planning application dated 21 July 2025 referenced above, in the vicinity of the M5 Junction 19 that forms part of the Strategic Road Network, notice is hereby given that National Highways’ formal recommendation is that we: c) recommend that planning permission not be granted for a specified period (see reasons at Annex A);’ It goes on to say that the applicant needs to resubmit a revised drainage proposals & provide further information To demonstrate the development complies with the requirements of DfT Circular 01/2022.	Reducing the number of dwellings in this area would help keep increase of traffic to level that the narrow roads of the village could cope with.		
62864993	L Brown			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	There has not been an adequate level of consultation for the residents of Pill and EiG. For all 5 developments to go ahead this will significantly alter the character of the villages and will lead to increased traffic and flooding risks. Much of this development is on green belt land and this can only be developed where there is no alternative. I do not believe that North Somerset has demonstrated that all brown field sites have been developed as yet. They should not consider building on green belt until this is done.	Wait for the Highways Agency assessment of Junction 19 to determine how much more capacity this junction has. Locate remaining brown field sites throughout the county Consider whether the villages of Pill and EiG should really be a strategic site, there seems to be a flawed methodology for changing their status.		
58517153	Matt Burley			No	• Positively prepared • Justified • Effective	No	No	No vehicular access to Marsh Lane; reliance on active travel links; within the setting of Grade II*/II heritage assets needing buffers; close to A369/M5 J19 stress points with cumulative impacts not yet modelled/mitigated.	Remove allocation; alternatively, retain “no vehicular access to Marsh Lane”, deliver heritage buffers to St George’s Hall/Church with capacity reduction; require cumulative J19 modelling and agreed mitigation before any consent.		Schedule 1 Site Specific Objections.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					• Consistent with national policy						
62850369	Maureen Butterly			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Key Issues 1. Adjacent Motorway Impacts The site directly borders the M5 corridor, which exposes future residents to: high noise levels, elevated air pollution, night-time light pollution. The policy assumes mitigation is possible but provides no evidence that acceptable living conditions can be achieved. 2. Unsuitable Walking and Cycling Environment The site is severed by major road infrastructure, making active travel to schools and the village centre difficult. Required links rely on significant engineering at Markham Brook and via Pill Green. 3. Traffic Impacts Near J19 Additional car trips will directly feed into one of the most congested motorway junctions in the region. No cumulative modelling is provided. 4. Weak Green Belt Justification The site contributes to the openness between Pill and the motorway corridor. Development would create a perception of urban sprawl approaching the M5. 5. Ecological Impacts Under-Assessed The site's hedgerow network is important for horseshoe bat commuting. No HRA-level assessment has been published.	Remove or significantly reduce the allocation unless the council can demonstrate: acceptable air/noise conditions, deliverable active travel routes, cumulative transport evidence, Green Belt justification, and ecological mitigation with adequate replacement habitat.		
58535265	Ben Chivers			Unsure	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	My main concerns with this development relate to flooding, traffic and local services. - Flooding: This site is steeply inclined, with local roads (Church Road/ Marsh Lane) already suffering from significant flooding during heavy rainfall. Unless major drainage development is undertaken, the additional runoff will worsen the situation and may even adversely effect the motorway, as has happened locally recently. - Traffic: J19 is overloaded and dangerous as it is; additional traffic will only make this worse. Major rework is required. - Services; there has been no provision made for more drs, shops or village services. The existing ones will be overwhelmed.	See comments on Lodway development.		
62721441	A Chivers			No	• Justified	Unsure	Unsure	1. Not Legally Compliant The Plan does not meet legal requirements for community engagement under the Town and Country Planning (Local Planning) (England) Regulations 2012 or the Council's own Statement of Community Involvement (SCI). No in-person consultation was held in Pill/Easton-in-Gordano despite proposing large-scale Green Belt release and major settlement expansion. Consultation reach was significantly lower than comparable areas, indicating that engagement was not proportionate or inclusive. The Council has also not demonstrated compliance with the Public Sector Equality Duty (Equality Act 2010), with no clear evidence that impacts on vulnerable or disadvantaged groups in Pill were assessed. 2. Not Sound (Fails NPPF Soundness Tests) The Plan is not justified, as required by NPPF para 35, because the release of Green Belt around Pill is not supported by clear exceptional circumstances and reasonable alternatives (brownfield maximisation, higher urban densities, cross-boundary redistribution) were not properly evidenced. The Plan is not effective, as delivery of major infrastructure (M5 J19 mitigation, school capacity, public transport, flood management along Markham Brook) is uncertain, unfunded or not demonstrated to be achievable within the plan period. The Plan is not consistent with national policy, due to unresolved environmental constraints (SAC/SSSI habitat impacts, biodiversity net gain, flood risk), landscape harm, and heritage impacts (particularly around St George's Church and St George's Hall parkland). Together, these show the Plan is neither deliverable nor capable of achieving sustainable development as required by the NPPF. 3. Duty to Cooperate Not Met The Plan does not provide adequate evidence of constructive, active and ongoing engagement with statutory bodies and neighbouring authorities, as	1. Legal Compliance Modifications 1.1 Repeat and strengthen community engagement in Pill/Easton-in-Gordano A new, proportionate, and locally accessible consultation process is required, including in-person exhibitions in Pill. This is necessary to meet the Council's Statement of Community Involvement and ensure compliance with the Town and Country Planning (Local Planning) Regulations. 1.2 Complete a full Equality Impact Assessment (EqIA) A transparent EqIA must be published assessing the impacts of major development proposals on vulnerable and protected groups in Pill/Easton-in-Gordano to ensure compliance with the Public Sector Equality Duty (Equality Act 2010). 2. Soundness Modifications 2.1 Remove the proposed Green Belt allocations around Pill/Easton-in-Gordano (including Land East of Gordano Services) These allocations should be withdrawn unless the Council can demonstrate: Exceptional circumstances for Green Belt release; A robust assessment of reasonable alternatives (brownfield capacity, higher densities, cross-boundary redistribution); Deliverable infrastructure solutions for highways, public transport, drainage, schools and health services; No unacceptable heritage, landscape, noise or environmental harm. If exceptional circumstances cannot be proven, these allocations must be deleted. 2.2 Produce updated and proportionate evidence for site deliverability Before allocating any sites in this area, the Council must provide clear evidence of: noise mitigation feasibility next to the M5 motorway, flood-risk mitigation near Markham Brook, heritage protection for St George's Church (Grade II)* and St George's Hall parkland, realistic and safe access and transport solutions. If these cannot be demonstrated, the sites should not be allocated. 2.3 Reassess housing distribution strategy The Plan must reassess its spatial strategy to prioritise: brownfield redevelopment,	While I have raised concerns about elements of the Plan, I wish to acknowledge several areas where the North Somerset Local Plan 2041 demonstrates positive intent and partial compliance with national planning requirements: 1. Strategic Aim to Deliver Sustainable Development The Plan recognises the need to balance housing provision, environmental protection and infrastructure planning. This strategic alignment with the National Planning Policy Framework (NPPF) is appropriate and necessary. 2. Emphasis on Active Travel and Modal Shift Policies promoting walking, cycling, and improved public	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								required by Section 33A of the Planning and Compulsory Purchase Act 2004. There is no up-to-date or publicly available Statement of Common Ground confirming agreements with: Natural England (biodiversity and protected habitats), Environment Agency (flood risk and drainage), National Highways (M5 J19), Neighbouring authorities (cross-boundary housing distribution). Without evidence of formalised joint working on strategic matters such as Green Belt strategy, transport constraints and environmental impacts, the Duty to Cooperate is not satisfied. Summary The Local Plan is not legally compliant, not sound, and not in compliance with the Duty to Cooperate due to: inadequate and non-inclusive consultation, unjustified Green Belt release, undeliverable infrastructure assumptions, unresolved heritage, environmental and flood-risk impacts, lack of documented cross-boundary cooperation.	higher-density schemes in sustainable urban areas, reduced reliance on constrained rural Green Belt villages, strategic coordination with neighbouring authorities. This is required to meet NPPF paragraph 35 on justification and effective plan-making. 3. Duty to Cooperate Modifications 3.1 Publish updated Statements of Common Ground The Council must provide up-to-date, formal agreements with: Natural England (biodiversity and protected habitats), Environment Agency (flood risk and drainage), National Highways (M5 Junction 19 traffic impact and mitigation), Bristol, South Gloucestershire and Bath & NE Somerset councils (cross-boundary housing distribution). These need to demonstrate constructive, ongoing engagement and shared solutions to strategic issues. Summary of Required Modifications To make the Plan lawful and sound, North Somerset Council must: Re-run appropriate local consultation and complete a full EqIA; Remove or substantially revise the Pill/Easton-in-Gordano allocations unless exceptional circumstances and deliverability are evidenced; Provide robust environmental, heritage, transport and noise evidence before allocating any sites in this area; Reassess the spatial strategy to reduce reliance on rural Green Belt land; Publish Statements of Common Ground demonstrating compliance with the Duty to Cooperate.	transport represent a positive step toward reducing car dependency, improving public health and supporting carbon-reduction goals. These align well with national transport and sustainability objectives. 3. Protection of High-Value Environmental Areas The Plan's commitment to safeguarding key ecological areas, flood-risk zones, and designated habitats reflects sound planning principles. The intention to deliver biodiversity net gain is a welcome component consistent with emerging national policy. 4. Commitment to Heritage Protection Where the Plan requires heritage-led masterplanning, buffers, and mitigation around sensitive sites, this shows an appropriate recognition of statutory duties toward listed buildings and historic landscapes. 5. General Housing Delivery Strategy The overall goal of providing sufficient homes across North Somerset—supported by a long-term strategic framework—contributes positively to addressing housing need within the wider West of England context. Summary In principle, I support the Local Plan's strategic commitment to sustainable development, environmental protection, heritage-sensitive design and active travel. These elements reflect both legal compliance and soundness at a policy level. My objections relate only to specific allocations—particularly those around Pill and Easton-in-Gordano—where the evidence does not yet demonstrate soundness or deliverability.	
58534849	Richard Clarke			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	There was minimal to no consultation for this area compared to other areas that are to be developed to this scale. there were no public events and many residents were/are completely unaware of the scale of development planned and have not had a reasonable chance to have their say. This is completely unacceptable and does noy uphold the Councils own Statement of Community Involvement. The council is planning to build on Green Field sites without having first considered all reasonable alternatives such as Brownfield land and other more suitable alternatives within North Somerset. Furthermore, the Councils own Golden Rules do not appear to have been met. Has the Council taken into account and funded the work needed to protect wildlife on the greenbelt land and also to deal with the flood risks that the proposed building will cause. Th local plan does not address the ongoing problem with the massive	Full and reasonable consultations and events to positively engage the community. Reassess the impact on Green Belt land following the Golden Rules and consider the use of Brown Field and other sites prior to destroying Green Belt and Grade 1 agricultural land. Full flood assessment and alternative lower flood risk sites should be considered To cooperate fully and be advised by National Highways regarding traffic management and the already above capacity road networks		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								overuse of Junction 19 and the A369, both of which will be massively exacerbated by increased building at this level. The X4 bus is one of the most successful and cost effective in the area yet it is completely reliant on junction 19 and the A369 running smoothly. The slightest incident, roadworks or match at Ashton Gate stadium delay the bus sometimes by over an hour making it completely unusable. Further traffic on the road will add to increased unreliability of public transport thus making more commuters take to their cars! This is opposed to Council objectives. The proposed small hourly train service will not be a replacement for the X4 bus which runs every 20 minutes and on a much larger timetable. The train cannot be relied on to mitigate the extra traffic caused by the proposed building let alone deal with the current ongoing issues. There is also a concern that at peak times the train will already be full of Portishead passengers by the time it reaches Pill. The roadwork issues need to be addressed and resolved the proposed train is not an answer to this. The pavements in Pill are already completely inadequate and in some cases non existent. The council needs to fully asses the increased risks to pedestrians from extra houses/cars and make firm and costed plans to mitigate these risks.			
62849889	Jamie Chinner-Evans			No	• Justified • Consistent with national policy	No	Unsure	The proposed development on Land East of Gordano Services is not sound primarily because of the lack of a plan to deliver improvements to junction 19 of the M5. This junction is already dangerous, with cars exiting the southbound carriageway frequently queuing back up onto the M5 during peak hours. There is also the broader problem at this junction of significant traffic on the main roundabout of the M5, leading to long queues both in the direction of Portishead and Bristol. Furthermore, despite assessment of the impact of noise pollution, there is still a significant risk to the health of potential residents as a result of proximity to the M5 - in terms of noise pollution, vehicle emissions and microplastics from vehicle tyres. This risks widening health inequalities, going against the Plan's central vision to reduce inequality. See, for example: https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0174882	Delete this site from the Plan. Or require substantial changes to M5 Junction 19 and a full independent assessment of the health impacts of living in a development in such proximity to the motorway.		
62858913	Luke Samuel Charles Evans			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No		I object to the allocation of Green Belt land around Pill & Easton-in-Gordano (LP4 / Schedule 1) on the grounds that the Council has not demonstrated exceptional circumstances in accordance with Chapter 13 of the NPPF (2024). The Additional Sites consultation (7 Feb–21 Mar 2025) had a very low local response for Pill (c.125 responses across 5 sites; only 29 individuals), no local exhibition in Pill, and the Consultation Statement does not show proportionate engagement as required by the Council's Statement of Community Involvement. There is inadequate published evidence that reasonable alternatives (maximising brownfield, optimising density, or cross-authority options) were fully tested; transport modelling does not adequately demonstrate that Junction 19 or cumulative impacts have been mitigated; HRA and biodiversity mitigation for SAC/SSSI impacts are not demonstrated; and the Plan fails to show robust sequential flood-risk testing for sites near Markham Brook. For these reasons the allocation is unsound and should be withdrawn until further evidence, proper local consultation, and statutory assessments (HRA, SFRA/FRAs, full transport modelling) are completed and published. Short summary of the case against the allocations 1. The February–March 2025 "additional sites" consultation appears to have been insufficiently local and proportionate for a change of this scale in Pill/E-in-G — contrary to the Council's own Statement of Community Involvement and public sector equality duties; the consultation statement confirms low local response numbers for Pill compared with other settlements. n-somerset.gov.uk+1 2. The Plan's justification for removing land from the Green Belt relies on "exceptional circumstances" under the NPPF (Chapter 13). The evidence must show exhaustive examination of reasonable alternatives (brownfield use, higher densities, cross-boundary cooperation). If that evidence is absent, the Green Belt release is vulnerable. GOV.UK Assets+1 3. Transport evidence is incomplete on cumulative effects (particularly M5 Junction 19). National Highways' responses make clear further transport modelling / co-operation is needed. Reliance on a future rail link and unproven bus/active travel measures is risky. n-somerset.gov.uk+1 4. Ecology / Habitats — the sites lie close to bat SAC consultation zones and the Severn Estuary SSSI and will require robust HRA and measurable net biodiversity gains; the Plan must show credible mitigation and funding. Existing local ecology reports identify constraints. abbotsleigh.org.uk+1 5. Flood risk — parts of the area (Markham Brook valley) fall within Flood Zone 3; the Plan must apply sequential testing and show mitigation/avoidance for housing. The council's SFRA and national flood mapping are relevant. Detailed points (with the legal/planning basis) 1) Procedural fairness & adequacy of consultation For a proposal that would re-categorise Pill/E-in-G as a Strategic Location and potentially release multiple Green Belt sites, the council's consultation was not sufficiently local or proportionate. The Consultation Statement records only ~125 responses relating to the Pill area (29 respondents across 5 sites) versus much larger numbers elsewhere; no consultation events were held in Pill despite this being one of the most affected areas. That under-representation raises a realistic procedural unfairness concern and possible failure to follow the Council's Statement of Community Involvement (SCI). n-somerset.gov.uk+1 • Why it matters legally: The SCI sets out how plans should be prepared and consulted on. If the council did not comply with its own SCI, the Plan could be open to challenge at		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									examination or by judicial review for procedural illegality or irrationality. Also consider whether the Council carried out equality screening and complied with the Public Sector Equality Duty (PSED) — e.g. were groups with protected characteristics properly engaged and were reasonable adjustments made? (If there's no evidence of PSED consideration, raise that.) n-somerset.gov.uk 2) Green Belt: "exceptional circumstances" and alternatives Chapter 13 of the NPPF says Green Belt boundaries should only change where "exceptional circumstances" are demonstrated and where reasonable alternatives have been fully considered (brownfield land, higher densities, cross-boundary options). The Plan must show exhaustive, transparent evidence that other options were examined and why they are not sufficient. If the council's evidence base (SHLAA, brownfield capacity work, density appraisals, Duty to Co-operate statements) does not demonstrate that, the justification for removing Green Belt is unsound. GOV.UK Assets+1 • Particular local point: The Additional Sites Viability Addendum reportedly flags that 50% affordable housing would be "challenging" on these Green Belt sites — that undermines any claim that the release will secure clear public benefits (an important part of "exceptional circumstances"). Ask for the viability evidence and sensitivity testing. n-somerset.gov.uk 3) Duty to Co-operate and alternatives across borders The Duty to Co-operate requires strategic engagement with neighbouring authorities where housing needs cross boundaries. The Plan should show what cross-authority options were explored (e.g., maximising higher-density urban sites or brownfield in nearby towns). If the council did not properly evidence co-operation, that is a soundness issue. n-somerset.gov.uk+1 4) Transport and cumulative impacts (Junction 19 / modelling) National Highways has queried cumulative impacts and asked for modelling for Junction 19; the council's own documentation shows National Highways expect to work with NSC and that modelling is required. The Plan appears to rely heavily on a future rail link and new active travel routes — but the timings, funding, and deliverability of these measures must be explicit and evidenced. Without robust cumulative transport modelling (and clear mitigation and funding commitments), the Plan is not sound. n-somerset.gov.uk+1 5) Ecology / Habitats Regulations Assessment (HRA) Sites are within bat SAC consultation zones and close to the Severn Estuary SSSI; HRA may be required and must show no adverse effect on integrity or, if effects are likely, provide lawful mitigation/compensation and secure funding. The Plan must demonstrate measurable biodiversity net gain and appropriate buffers. Local ecological reports (neighbourhood plan evidence, Wild Service reviews) highlight important habitat corridors which must be protected. If the Plan simply allocates sites without clear HRA outcomes, it is unsound and may be unlawful. abbotsleigh.org.uk+1 6) Flood risk and sequential/exception tests Markham Brook valley and other low-lying land are in Flood Zone 3 (high risk). NPPF requires sequential testing (prefer lower-risk sites first) and, where necessary, the exception test with demonstrable mitigation. The Plan must show that lower-risk sites were prioritised or that any allocated sites in Flood Zone 3 are justified by the exception test and will be safe in the long term. If the Plan lacks a clear sequential test and site-by-site flood risk assessment, it is unsound. n-somerset.gov.uk+1		
62860801	Lisa Farrell			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	No public consultation regarding any of the proposed sites. Given the size of the proposal, there was a relatively low response at the time and the subsequent number of people who have now signed the petition, it would indicate that public engagement was not done properly, it wasn't sufficiently inclusive and therefore not legally compliant under the equalities act. Not enough clarity around transport and the effect of the increased number of cars that will result from the proposed number of houses and the increase in population. NPPF 109. States Transport issues should be considered from the earliest stages of plan-making and development proposals. There has been no public discussion and no clear evidence in the plan that they have been fully considered. The plans focus primarily on schemes to increase active transport and the development of the Portishead to Bristol railway as a solution to transport problems. The plans for the railway link (3 carriage trains, once an hour) will not support the number of people using them and will be full before they get to Pill. Pill station will also have no parking. The transport survey and the effect on the A369 and M5 junction 19 has not been completed as yet indicating that they have not fulfilled their duty to cooperate with other agencies. This site has poor access and an increase in car numbers will put excessive strain on the current village road system which is mainly residential. The main road through the village, in parts, is not wide enough to accommodate two cars passing. The proposal to prevent the use of Marsh Lane as a route out of the village will affect the large number of people who live in the village and who work in the docks and surrounding businesses, putting further pressure on the village roads, the A369/Martcombe Road and the M5 junction. The total population increase of 44% (for all sites) is disproportionate the current size of Pill and Easton in Gordano and is well above the recommended increase of 5% for villages with a populations of less than 10,000. There will be significant impact on local services which has not been considered in the plans. Loss of Green belt which is identified as high-performing agricultural land	The population increase The lack of evidence regarding the transport system		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								with no evidence that Brown Field sites across the local area and within Bristol have been fully considered indicating no cooperation with other council areas. Increased flooding risk with the number of houses and associated road network			
62842145	A Franklin			No	• Justified	No	No	I do not believe that the Council has complied with the requirements of the Statement of Community Involvement (SCI), nor with the principles of fair, proportionate, and inclusive consultation expected under the NPPF and the Public Sector Equality Duty (Equality Act 2010). Despite the Local Plan proposing 1,100+ homes across five sites around Pill and Easton-in-Gordano, no public exhibition or engagement event was held in the affected area. Events were held in Long Ashton, Backwell, Weston-super-Mare and Nailsea—yet none in the very community facing the most significant change. As a result, Pill/E-in-G responses were disproportionately low: • 125 total responses from only 29 individuals, vs. • Portishead: 689 responses, • Wrington: 484 responses, • Nailsea/Backwell: 1,049 responses. In an area where over 1,800 residents have signed a petition objecting to the scale of development, this sharply reduced response rate suggests that local voices were not given an equal or realistic opportunity to engage. Given the scale of impact, the lack of proportionate consultation raises serious questions about legal compliance, adequacy of engagement, and whether the Plan has been prepared in a “positively prepared” and “justified” manner under NPPF soundness tests.			
32593857	Patricia Godfrey		individual	Unsure		Unsure	Unsure				Response to consultation Document December 12th 2025.docx
62796513	R Griffiths			No	• Positively prepared • Justified • Effective	Unsure	Unsure	The proposal has not been subject to a meaningful community engagement by North Somerset Council in the local area. The proposal is likely to result in significant changes to the local community. Is likely to result in significant traffic and transportation issues. M5 junction 19 is already subject to significant congestion. North Somerset council has progressed with the local plan before National Highways have completed their assessment of M5 J19. The benefits ascribed to potential future railway links (which do not as yet exist) are not justified with sufficient evidence. May result in removal of land from the Green Belt without adequate assessment of alternative Brownfield options Is likely to have a significant impact upon the natural environment and the protection of wildlife Could exacerbate potential flood risks	Removal of proposal from the plan		
58529729	Rob Harvey			No	• Justified • Effective • Consistent with national policy	Unsure	No	Court House Farm fields should remain in the greenbelt; the M5 motorway does not provide a significant barrier against Port of Bristol expansion (given that they already own land on the Pill side of the motorway and operate regularly on both sides and have a significant interest in Marsh lane). These fields are of the highest quality for agriculture according to DEFRA, being judged at the highest levels of grade 1 and 2 and given that we are in the midst of a climate emergency (declared by NSC in 2019) where food security is of massive importance, then we cannot afford to lose our best agricultural land. The only part of these fields that is not of the highest quality agricultural land is the lowest and flattest part of the site, nearest theM5 motorway, that floods regularly. Any building above this point would seem likely to exacerbate the flood issues and I am not convinced that NSC have properly checked with National Highways about what further run off on this site could mean for drainage and potential flooding on the M5 slip road (which already happens very regularly) and on the motorway proper. The site is an important site for wildlife migration to and from the estuary (a Ramsar site and SSSI), it has regularly played host to redshank and lapwing (both red data species). Given that travel from the site onto Marsh lane has been prohibited, the only place for onward travel by car is high on St George's hill. At peak times, with increased traffic flow and buses moving and stopping around here, I wonder if NSC have done any work to make this exit safe as I can see no evidence of it? To have the entrance to the site so close to the junction with the A369 seems to create jeopardy for motorists turning right out of the site and if buses pick up passengers here, then it seems really dangerous and yet, if the residents cannot exit onto Marsh lane then I do not believe that there is another option possible. Has NSC done any studies to show that residents at this proposed site would be likely to access the rest of the community? Or would they be most likely to access the A369 directly to go to Bristol or the motorway rather than spending any time in Pill and Easton in Gordano? This is not a sustainable development proposal, it offers nothing to the community	NSC need to protect high quality agricultural land, maybe look for land elsewhere that is of poor agricultural quality (such as Failand). To make any settlement here work then there must be better options for access, but probably to do that you would have to drop numbers of houses to maybe 20 or so and allow them access via Marsh Lane.		
62862401	Sustainable Pill & District		Sustainable Pill & District	No	• Positively prepared • Justified • Effective • Consistent with	Unsure	No	Please note this comment has also been uploaded as an attachment, to ensure the reader can activate internet links Land East of Gordano Services Plan inconsistencies in relation to protection of wildlife habitats There is no reference to any strategies or policies which deal with	In order to make the Local Plan legally compliant and sound, there should be a re-assessment of the of the five sites around Pill and Easton-in Gordano for housing development and their identification collectively as a Strategic Location. The submitted comments on behalf of Sustainable Pill and District demonstrate considerable lack of community engagement, which fails the test for Legal Compliance and falls well below the engagement with communities in the other Strategic Locations referred to in the Plan.	Please see uploaded documents	25_P_1413_OUT-NATIONAL_HIGHWAYS_COMMENTS-3514484.pdf Comments on Schedule 1, Page 276.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					national policy			protection of habitats for the wildlife living on this site. This land is within consultation zones for the North Somerset & Mendip Bats Special Area of Conservation (SAC) for both Greater and Lesser Horseshoe Bats. This is shown on the NSC planning map https://n-somerset.gov.uk/my-services/planning-building-control/planning-map There is therefore inconsistency with the following policies: SP11 (Historic & Natural Environment), DP35 (Nature Conservation) DP36 (Biodiversity Net Gain) and the protection of wildlife on this site is not covered elsewhere in the Local Plan. This inconsistency with the principles of Policies SP11, DP35 and DP36 makes this section of the plan ineffective and it is Unsound. Failure to comply with Duty to Co-operate in relation to National Highways Concerns were raised by National Highways regarding development on this land (see NSC planning portal, ref 25/P/1413/OUT – copy attached). The National Highways report stated that transport modelling is required to assess the cumulative impact of housing developments on Junction 19 of M5. In the same report, National Highways included strong objections to the applicant's surface water proposals, which 'would have a detrimental impact on National Highways infrastructure'. Further comments state: 'we consider this matter is significant and is not capable of being addressed by planning condition'. This section makes no reference to any required modelling of the impact of housing developments on congestion at Junction 19, or concerns about surface water drainage, as a result of co-operation with National Highways and there is no reference to this elsewhere in the Local Plan. This indicates a failure of the Duty to Co-operate, making this section of the Local Plan Unsound.	The comments also make clear that significant weaknesses exit in the assessment of these sites and in the application of 'exceptional circumstances' to justify their release from the Green Belt for housing development. Furthermore, weaknesses in site-specific policies indicate insufficient time and consideration has been given to the policies for this Strategic Location, likely due to its late inclusion in the Plan. A pause in the process of approving this Plan is requested so that the Pill and Easton-in Gordano Strategic Location can be re-assessed, following adequate and effective engagement with the local community.		
62802913	Pill & Easton-in-Gordano Parish Council		Pill & Easton-in-Gordano Parish Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The Parish Council objects to Land East of Gordano Services (HE206) for 200 dwellings under LP4. Residents wouldn't mind a few homes here but see ~186 (original proposal) as creating a standalone "village" disconnected from Pill, with insurmountable traffic safety on Marsh Lane (no access allowed). Undeliverable due to consultee objections on flooding/highways, and undeliverable in this number due to severe infrastructure constraints Not Positively Prepared – Disproportionate scale ignores community preference for small infill, overriding Neighbourhood Plan cap. No parish collaboration on alternatives, ignoring cumulative dock expansion impacts (Bristol Port Master Plan 2023). Not Justified – Evidence base flawed. No noise modelling (M5) or archaeological evaluation; high flood risk in Zones 2/3 per Defra MAGIC maps, with Environment Agency holding objection pending sequential tests (NPPF para 174); not "grey belt" (para 148). The Sustainability Appraisal contains no assessment of the loss of best and most versatile agricultural land. The entire site is classified as Grade 1 (excellent quality) according to Defra's Provisional Agricultural Land Classification (see attached screenshot from magic.defra.gov.uk). This is prime farmland that the NPPF (para 119 and Planning Practice Guidance) says should only be developed as a last resort after all reasonable lower-grade alternatives have been exhausted. No such alternatives assessment has been carried out, rendering the allocation not justified (NPPF para 36(b)). Not Effective – The council's own Infrastructure Delivery Plan (Oct 2025, §8.3) labels M5 Junction 19 upgrades as high-risk and unfunded. This site alone would generate approximately 280 peak-hour vehicle trips (1.4 cars per home × 200 dwellings) that must exit directly onto the Junction 19 / Marsh Lane / dock access network. When added to the remaining Portishead allocations and the ongoing expansion of Royal Portbury Dock HGV traffic, the cumulative impact has no evidenced or funded mitigation. National Highways has raised unresolved objections to the capacity and safety of Junction 19. In the absence of any robust assessment or deliverable mitigation, the allocation fails the effectiveness test (NPPF para 36(c)) and would cause severe residual cumulative impacts on the strategic road network (NPPF para 116). PRoW upgrade to services unfeasible without dock operator consent; active travel links (River Avon Trail, Marsh Lane) cross sensitive habitat without mitigation. Inconsistent/Legally Non-Compliant – Breaches NPPF para 148 (Green Belt without alternatives), para 193c (habitat harm), and Policy LP14 (no harm to dock operations). Duty to Cooperate failed: No joint Statements of Common Ground with Environment Agency (flooding) or National Highways (J19); ignores prior consultee holding objections from March 2025. This allocation risks Plan-wide unsoundness, exacerbating gridlock and flood risks.	Delete Land East of Gordano Services from Schedule 1 and the proposals map. Revert to non-strategic status under July 2024, allowing small-scale (e.g., 10–20 homes) if traffic resolved. If retained, require pre-allocation: Resolve EA/National Highways objections via funded flood/J19 mitigations, full noise/heritage assessments, and dock compatibility study.		ALC Defra MAGIC Pill Sites Grades 1 and 2 Dec2025.png
43203041	National Highways		National Highways							We welcome the need for development adjacent to the M5 motorway in Pill and Easton-in-Gordano to undertake detailed noise modelling to assess noise from the nearby M5. National Highways receives many ineligible requests for compensation from homes in new developments built close to existing	NSC Reg19 Local Plan Consultation.pdf

Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										motorways, and the early consideration of potential noise issues, masterplanning and mitigation is therefore recommended.	
62865057	Alexander Nell			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	Land to the East of Gordano Services Part of this site should be safeguarded for a park and ride facility together with linking shuttle bus to the Pill train station. Transport upgrades should include the provision of a safe upgraded cycle route from the Gordano Services to Bristol. Any residential development in this location should provide the capital funding and future operational funding of these transport improvements for at least 25 years as a s.106 planning obligation or similar legally binding contract, as a priority over the provision of the percentage of site affordable housing provision. I do not consider Policy LP4: Strategic location: Pill and Easton-in-Gordano of the proposed plan to be sound, not legally compliant or not in compliance with the duty to co-operate for the following reasons: 1. Community involvement and methods of consultation. Given the scale of potential change in Pill/E-in-G (e.g., 600 homes at Pill Green alone, plus other sites), the absence of a local event and the relatively small response volume could indicate under-representation of local voices and a lack of proportionate engagement. Do not believe that the Council has complied with its own Statement of Community Involvement. 2. The release of land from the Green Belt Strategic Policy SP7 of the Local Plan does not justify release of land from the Green Belt in these locations This aspect of the Plan is not sound. The Council has not shown that it has fully examined reasonable alternatives, such as maximising brownfield capacity (making the fullest and most efficient use of previously developed land), using minimum density standards (optimising land in towns and cities with higher-density developments. Are there sites in other locations in North Somerset which could be considered for housing development and which are not mentioned in the Local Plan. 3. Significant traffic and transport issues Is this aspect of the Plan is not sound. The Local Plan does not address potential traffic congestion at Junction 19 of the M5 • there is an over-reliance in the Local Plan on the impact of the proposed railway link. • Insufficient evidence in the Local Plan that transport links, including buses and trains, will be sufficient for the proposed number of new homes. 4. The impact on the natural environment and protection of wildlife The Council has not taken sufficient account of the protection of wildlife and habitats in Pill and Easton-in Gordano in its assessment of the release of land from the Green Belt. (SP7) In summary, this is inappropriate location for development.			
62774337	John Pickard			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	North Somerset is required to build 23,475 new homes over the coming 15 years. 1,100 of those homes are proposed for Pill and District, an area of some 4,500 residents. This represents an unjustifies and unfairly large proportion. I do not consider the Pre-submission plan to be sound because 1. There has been a lack of community involvement - no public exhibition has been held in our village, unlike Weston-Super-Mare, Long Ashton, Backwell and Nailsea, all of which had public exhibitions. This, despite a petition from residents objecting to over-development having raised over 1800 signatures. 2. The plan proposes to build on Green Belt land and claims 'exceptional circumstances' under the terms of Section 13 of the National Planning Policy Framework 2024 (NPPF) because it says it cannot meet its target from sustainable locations beyond the Green Belt. I am not convinced that the Council has yet fully examined available alternatives 3. The 'additional sites viability addendum' provided by the council described its own target of 50% affordable housing as 'challenging' for the sites it proposed in the Green Belt around our village. 4. Traffic congestion at Junction 19 of the M5 is already a serious issue, as anyone caught up in it at rush hour will know. The proposed development of the land east of Gordano Services will place an intolerable additional burden on an already overwhelmed junction. I believe the report overstates the positive impact of the proposed railway link, which is actually very limited in scope. It is, to take one example, useless to those like me who work in Clifton, since it will go to Temple Meads. I already use the rail link from Portway Park and Ride to Clifton Down, fighting through the traffic each morning at J.19 to drive to the station, and often struggling even more to return home due to regular tailbacks on motorway at J.19. When I do	1. Fully consult the community, including an exhibition and a public meeting 2. Explore more fully the brownfield alternatives before building on Green Belt 3. The Council must consider its own stated pessimism over its ability to meet the 50% affordable housing target and modify its proposal accordingly 4. Withdraw the distastrous plan to develop the land east of Gordano Services dues to the unacceptable environmental and transport pressures this will cause.

								catch the train, it is never full, even at peak times.			
51079969	Justin Saunders		Pill and Easton-In-Gordano Parish Council	No	• Positively prepared • Justified • Effective	No	Yes	An inaccessible site disconnected from the existing community with no safe walking routes identified or proportionate traffic access with egress onto narrow, dangerous roads. This is Grade 1 farmland on DEFRA maps and so its removal from the Green Belt should be considered after all other sites.	Remove this site from development and LP4 as there is an overallocation of housing numbers in the Housing Strategy.		
711873	Easton-in-Gordano Parish Council		Pill & Easton-in-Gordano Parish Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The Parish Council objects to Land East of Gordano Services (HE206) for 200 dwellings under LP4. Residents wouldn't mind a few homes here but see ~186 (original proposal) as creating a standalone "village" disconnected from Pill, with insurmountable traffic safety on Marsh Lane (no access allowed). Undeliverable due to consultee objections on flooding/ highways, and undeliverable in this number due to severe infrastructure constraints Not Positively Prepared – Disproportionate scale ignores community preference for small infill, overriding Neighbourhood Plan cap. No parish collaboration on alternatives, ignoring cumulative dock expansion impacts (Bristol Port Master Plan 2023). Not Justified – Evidence base flawed. No noise modelling (M5) or archaeological evaluation; high flood risk in Zones 2/3 per Defra MAGIC maps, with Environment Agency holding objection pending sequential tests (NPPF para 174); not "grey belt" (para 148). The Sustainability Appraisal contains no assessment of the loss of best and most versatile agricultural land. The entire site is classified as Grade 1 (excellent quality) according to Defra's Provisional Agricultural Land Classification (see attached screenshot from magic.defra.gov.uk). This is prime farmland that the NPPF (para 119 and Planning Practice Guidance) says should only be developed as a last resort after all reasonable lower-grade alternatives have been exhausted. No such alternatives assessment has been carried out, rendering the allocation not justified (NPPF para 36(b)). Not Effective – The council's own Infrastructure Delivery Plan (Oct 2025, §8.3) labels M5 Junction 19 upgrades as high-risk and unfunded. This site alone would generate approximately 280 peak-hour vehicle trips (1.4 cars per home × 200 dwellings) that must exit directly onto the Junction 19 / Marsh Lane / dock access network. When added to the remaining Portishead allocations and the ongoing expansion of Royal Portbury Dock HGV traffic, the cumulative impact has no evidenced or funded mitigation. National Highways has raised unresolved objections to the capacity and safety of Junction 19. In the absence of any robust assessment or deliverable mitigation, the allocation fails the effectiveness test (NPPF para 36(c)) and would cause severe residual cumulative impacts on the strategic road network (NPPF para 116). PRoW upgrade to services unfeasible without dock operator consent; active travel links (River Avon Trail, Marsh Lane) cross sensitive habitat without mitigation. Inconsistent/Legally Non-Compliant – Breaches NPPF para 148 (Green Belt without alternatives), para 193c (habitat harm), and Policy LP14 (no harm to dock operations). Duty to Cooperate failed: No joint Statements of Common Ground with Environment Agency (flooding) or National Highways (J19); ignores prior consultee holding objections from March 2025. This allocation risks Plan-wide unsoundness, exacerbating gridlock and flood risks.	Delete Land East of Gordano Services from Schedule 1 and the proposals map. Revert to non-strategic status under July 2024, allowing small-scale (e.g., 10–20 homes) if traffic resolved. If retained, require pre-allocation: Resolve EA/National Highways objections via funded flood/J19 mitigations, full noise/heritage assessments, and dock compatibility study.		Screenshot 2025-12-11 090639.png
29025697	P Sterndale			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The access points to this site are totally unsuitable for the heavy increase in traffic. The junction with the A369 is already congested at peak times and entry onto the A369 is often very difficult with long delays. Junction 19 of the M5 is already saturated. The roundabout is often completely clogged up and accidents are numerous. There are frequent accidents/incidents on the M5 leading to its closure, with local roads unable to cope with the increased volume of traffic. The Local Plan does not include comments from National Highways and their advice is essential to assess viability of this site. The site is too close to the M5. Although the problem of noise is mentioned, three lanes of traffic are frequently at a standstill on that section of the motorway, producing unacceptable levels of pollution.	Remove this site from the Local Plan		
58041921	Richard White			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	NPPF section 15 requires that the best and most versatile agricultural land be protected. Although most of the agricultural land in England is classified as Grade 3, most of the land proposed for delisting from the Green Belt at Pill/EiG for housing development is Grade 2, in fact some of the land on this site is Grade 1. https://www.arcgis.com/apps/mapviewer/index.html?layers=5d2477d8d04b41d4bbc9a8742f858f4d The plan does not meet this requirement or even explain its failure to do so. NPPF (para 187) requires plans to take full account of environmental impacts and to avoid/mitigate adverse effects, including Habitats Regulations Assessments (HRA). The proposed development sites around Pill lie within consultation zones for the North Somerset & Mendip Bats Special Area of Conservation (SAC), with proximity to the Severn Estuary Site of Special Scientific Interest (SSSI). Where sites are adjacent to or affect SSSI, SAC or other habitats sites, or form important wildlife corridors, development proposals must avoid significant harm, apply buffers and secure measurable net gains for biodiversity (paras 193-5). Details of protected species and habitats can be found in the Wild Service Ecology Review undertaken on behalf of the Neighbourhood Plan Steering Group in 2019. https://pillanddistrictplan.org/environment-and-landscape/wild-service-ecology-review/ Assessment of land removed from Green Belt inadequate, The 'additional sites viability addendum' suggests meeting the affordable housing targets may be 'challenging' for the proposed sites in existing Green Belt land	Environmental Impact Assessment to be completed by competent persons in consultation with community groups Full open consultation. Traffic modelling Traffic calming measures to prevent bottleneck at A369 junction and to stop traffic from this development leaving through the village via Rectory Road or the village centre and Pill Road		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								around Pill and Easton-in-Gordano. In the lower part of the site adjoining] the motorway the flood risk is increased from development elsewhere. Environment Agency maps indicate water draining from the area known as The Bottoms', old Coombe Lane filters along the A369 and down to the River Avon on either side of the motorway through to the marshland. No evidence that this has been considered. Inadequate consideration of potential traffic congestion at M5 J19 Concerns raised by National Highways (see NSC planning portal, ref 25/P/1413/OUT). The National Highways report stated that transport modelling is required to assess the cumulative impact of developments on M5 J19. Traffic from this site will turn out almost directly on to the A369 junction. Over-reliance on the impact of the proposed railway link, travel to the rail station from here is a considerable distance. No evidence offered in the Local Plan that transport links, including buses and trains, will be sufficient or accessible for the proposed number of new homes. Inadequate consultation			
62840705	Kirstie Wilkins			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	No	The Council held four public exhibitions (Long Ashton, Weston-super-Mare, Nailsea, Backwell), but none in Pill/E-in-G, despite five sites being consulted on in this area. Response volumes were markedly lower for Pill/E-in-G (125 responses from only 29 individual respondents across 5 sites) than for comparable locations: Portishead: 689 responses for 5 sites, Long Ashton: 591 responses for 10 sites, Wrington: 484 responses for 5 sites, Nailsea and Backwell: 1,049 responses for 26 sites. Given the scale of potential change in Pill/E-in-G (e.g., 600 homes at Pill Green alone, plus other sites), the absence of a local event and the relatively small response volume could indicate under-representation of local voices and a lack of proportionate engagement. Has the Council complied with its own Statement of Community Involvement? Was this consultation sufficiently inclusive? Has there been legal compliance with duties under the Equality Act 2010, including the Public Sector Equality Duty?			

Pill Green

58664673	Catesby Estates	Stantec	Catesby Estates	No	‣ Positively prepared ‣ Justified ‣ Consistent with national policy			These representations are submitted by Stantec on behalf of Catesby Estates ('Catesby') in response to the North Somerset Council 'Pre-submission Plan 2041' (October 2025) in respect of land at Pill, North Somerset, representing a sustainably located development opportunity able to accommodate up to 1,000 dwellings, a new primary school, local centre, and a range of high quality green infrastructure to be used by new and existing communities. Pill Green represents a sustainable strategic development location immediately at Pill and on the close edge of Bristol. The area has direct connections to major employers and historic movement and travel patterns by residents demonstrate a strong connection between Pill and Bristol to exist. Pill/ Easton-in-Gordano is served by a significant range of already existing facilities and is acknowledged to be one of the settlements considered to be sustainable in their own right (Consultation Paper Paragraph 3.12 (February 2025)). Pill Green has been underpinned by an expansive history of technical assessments demonstrating there are no overriding constraints preventing the Site from coming forward and capable to deliver early in the plan period supplying 150 homes a year from 2027/28 to 2034. The reopening of the railway station at Pill has not been given serious and appropriate consideration in the Plan-making context for some time. Since the last time Pill and the railway station was considered, the project saw the Development Consent Order be made and the Council and its partners have made laudable progress in securing funding and agreements that will set opening of the Metrowest Phase 1 Portishead Branch Line and Pill station reopening for 2027. Pill Green represents a location with one of the highest prospects to locate sustainable growth in North Somerset outside of already built-up areas. Our representations continue to promote the land at Pill, North Somerset, for sustainable development and demonstrated that Pill can and should be considered in its own right. It is supported that the Council include the Site at Pill Green within allocations where it will be capable of forming the centrepiece strategic allocation for a new neighbourhood at Pill, as well as a part of a coherent vision to meet the needs of North Somerset and the sub-region. Catesby has been fully supportive of the Council's revised approaches and making the decision to reconsult and advance a Local Plan that meets the minimum housing and overall needs of the area in full. These representations are provided to both express support for relevant policies and identify or raise any concern as to the 'soundness' of policies to ensure a 'positively prepared', 'justified', 'effective', Local Plan for North Somerset that is 'consistent with national policy' is submitted for Examination and towards adoption. Catesby support the Council's decision to include and propose allocation of Land at Pill Green and the recognition of the sustainability credentials of Land at Pill Green and the opportunities for a new sustainable neighbourhood it presents. The remainder of this report is structured as follows:			Appendix to representations - compressed.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								• Section 2: Legal & Procedural Matters • Section 3: Response to Pre-Submission Plan • Section 4: Evidence and Supporting Documents • Section 5: Conclusion These representations should be read in conjunction with the following documents enclosed as appendices: • Appendix A: Site Location Plan • Appendix B: Vision Document • Appendix C: Landscape Visual Appraisal • Appendix D: Regulation 19 Consultation Response – Transport Technical Note Catesby recognise that in addressing the minimum housing needs of North Somerset and adjoining authorities unmet needs, decisions will need to be made regarding the release of Green Belt and Grey Belt land for housing and other types of development. All areas of North Somerset at varying scales will need to play their respective parts to ensure a 'deliverable' and 'sound' housing strategy to provide sustainable development that is supported by the needed infrastructure. These representations towards the current consultation do not focus on previously raised issues, but respond to the current consultation matters and any resultant issues needing to be addressed. Legal & Procedural Matters Duty to Cooperate & National Policy On the 27th November 2025 Matthew Pennycook, Minister of State for Housing and Planning, published a Written Ministerial Statement (WMS) stating that the Government have decided not to 'save' the Duty to Cooperate, thereby removing this requirement for plans in the current system. The WMS clarifies that: "Local planning authorities should continue to collaborate across their boundaries, including on unmet development needs from neighbouring areas, and we expect Planning Inspectors to continue to examine plans in line with the policies in the NPPF on 'maintaining effective co-operation'." At the time of writing Section 33A of the Planning and Compulsory Purchase Act 2004 has yet to be repealed, amended or new legislation to have come into force. Whilst the November 2025 WMS does not constitute legislation, it represents a statement of national policy similar to Planning Practice Guidance (PPG) and the National Planning Policy Framework (NPPF), and would be expected to be taken into account during examination of the North Somerset Local Plan 2041 once submitted. In all instances it remains key for emerging Local Plans to demonstrate that they are 'effective' as set out within National Planning Policy Framework (NPPF) Paragraph 36c, which requires plans to be effective. Where relevant, these representations provide commentary and suggestions to support North Somerset Council to address matters of soundness as set out in NPPF Paragraph 36 as shown below and to ensure a sound Local Plan is submitted to Examination. "36. Local plans and spatial development strategies are examined to assess whether they have been prepared in accordance with legal and procedural requirements, and whether they are sound. Plans are 'sound' if they are: a) Positively prepared – providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development; b) Justified – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence; c) Effective – deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and d) Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in this Framework and other statements of national planning policy, where relevant". Green Belt and Policies Map: The evidence base and papers that underpin the Pre-Submission Plan and particularly Policy SP7 Green Belt include: • Green Belt Review Background Paper (October 2025); • Strategic Green Belt Assessment Interim Report: Assessment of Green Belt land in North Somerset (SGBA Interim Report; October 2025); and • Stage 2 Green Belt Assessment Pre-submission (Regulation 19) plan (October 2025). Following a review of the evidence base consisting of the SGBA Interim Report (October 2025) and the Stage 2 Green Belt Assessment (October 2025) these are concluded to form a broadly proportionate assessment following an approach that is overall consistent with national policy and addresses the issues previously raised in representations to a very reasonable extent. The Council should be commended for the preparation of the documents, as these appear as proportionate evidence in the plan-making context. Whilst the evidence is considered proportionate and correctly identifies parcels relevant to Pill Green as Grey Belt land, it is noted that neither the strategic nor the Stage 2 assessment outcomes directly reflect an assessment of the Pill Green site and its boundaries in terms of Green Belt. A site-specific Green Belt Review considering the outcomes of the evidence supporting the Pre-Submission Plan 2041 consultations is provided within the Landscape Visual Appraisal at Appendix C. It is however noted that Policy SP7, the Policies Map, and the Green Belt Review Background Paper (October 2025) are inconsistent with the findings of the evidence base. The SGBA Interim Report (October 2025) identifies and assesses strategic parcel P-010, which encompasses Pill Green and land beyond the site boundary, to make an overall weak contribution towards Green Belt purposes. The Stage 2 Green Belt Assessment (October 2025) provides assessment of 'Parcel 4: Land south east of western part of Easton-in-Gordano adjoining the A396' (Parcel 4) to make weak			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								contributions to all purposes of the Green Belt, excluding the 'neutral' contribution made to purpose e). Notwithstanding the evidenced weak contribution Parcel 4 makes to the purposes of the Green Belt, Parcel 4 is not proposed within the Pre-Submission Plan 2041 for release from the Green Belt. No justification has been provided why neither the extents of the Site boundary for Pill within the parcel or the wider Parcel 4 has not been released from the Green Belt policy designation. The Green Belt Review Background Paper (October 2025) states at paragraph 5.11 that: "Further amendments have been made around Easton-in-Gordano and Pill, beyond the proposed allocations, primarily around Gordano motorway service station, St Katherine's Secondary School and the Ham Green area which was developed from a former hospital into a residential development over previous plan periods". Whilst it is agreed that these further amendments follow a coherent rationale, these do not fulfil the requirements set by NPPF Paragraph 149, which requires that: "When defining Green Belt boundaries, plans should: a) ensure consistency with the development plan's strategy for meeting identified requirements for sustainable development; b) not include land which it is unnecessary to keep permanently open; […] The Green Belt Review Background Paper (October 2025) does not refer to requirements set out within NPPF Paragraph 149 other than in the context of 'limited infilling in villages'. NPPF Paragraph 149 is clear that there are separate considerations to be undertaken when defining Green Belt boundaries, which includes consistency to meet identified requirements for sustainable development but also whether land should be released where it is unnecessary to keep such a designation. The requirement set by 149b) represents a part of national policy to ensure Green Belt policy remains effective in the long-term. Where Green Belt boundaries are drawn excessively tightly around existing built-up areas it may not be possible to maintain the degree of permanence that Green Belts should have. This would devalue the concept of the Green Belt and also reduce the value of Local Plan preparation if needing revision in subsequent plan reviews. NPPF Paragraph 149 exists to ensure this concept of permanence. In undertaking the review of Green Belt evidence in respect of NPPF Paragraph 149b), Parcel 4 and any other such land that is unnecessary to keep permanently open, and presents a risk to the concept of permanence that is expected of Green Belt policy should be released from the Green Belt. Consequently, the Policies Map and in turn Policy SP7 and Policy LP5 which integrate reference to the map are not justified or consistent with national policy and require amendment to meet the tests of soundness as set out in NPPF Paragraph 36. In order for the Pre-Submission Plan 2041 to be found sound, Parcel 4 should be removed from Green Belt boundary mapping and the full site boundary of land at Pill Green shown as allocation. Sustainability Appraisal: We have previously raised inconsistencies or errors in relation to the Sustainability Appraisal supporting prior consultations. Responses provided within the Sustainability Appraisal (SA; October 2025) are noted. Whilst we continue to note some risks associated with the methodology in respect to Objective 2.2, as previously set out within prior representations, it is acknowledged that the GIS-based criteria set out has its limitations. Therefore, we note the acknowledgement at paragraph 5.19 that up-to-date assessments record significant positive effects for the site options in areas, including Pill, toward the delivery of affordable housing where it is most needed. Pill Green, which has a capacity to deliver up to 1,000 new homes, in accordance with policy-compliant affordable housing requirement is capable to make a substantial contribution towards affordable housing delivery at Pill, North Somerset, and beyond within the close context of the Bristol urban area. It is noted that there appear to be clerical errors or inconsistencies with Tables (Table 5.1 and 'Site allocations listed in Schedule 1 of the Local Plan) within the main SA report when compared to site assessments within proformas. Such errors show different assessment outcomes for objectives for the same site. These do not immediately appear to be consequential to the soundness of the plan, and the Council is encouraged to review the SA ahead of submission for Examination to address any clerical matters. Conclusions Catesby fully support the Council's approach and overall direction sought and set out within The Pre-Submission Plan 2041 to ensure the needs of North Somerset are met in a sustainable way and the resulting inclusion of Pill Green as a housing or mixed use allocation within the Plan. We support the Council in advancing a Local Plan that meets the minimum housing needs of the area in full and will support a Pre-Submission Plan 2041 that accords with matters of soundness as required by national policies and set out within these representations. These representations respond towards the current 'North Somerset Local Plan 2041 – Pre-submission Plan (Reg 19)' consultations and any matters requiring the Council's attention and do not focus on previously raised and remaining issues. We have summarised key matters raised within these representations below: 1. Legal & Procedural Matters: Section 33A of the Planning and Compulsory Purchase Act 2004 setting out the Duty to Cooperate continues to apply up to the point the plan is submitted (Reg 22). The statutory requirement is for authorities to cooperate in 'maximising' the effectiveness of the Plan-making process. Whilst legal obligations remain in place the WMS dated 27th November 2025 stating the Governments intent not 'save' the Duty to Cooperate and for this to apply to the 'current system' will be expected to form a material consideration as necessary at any future Examination of the emerging North Somerset Local Plan. The national policy requirement to demonstrate 'effectiveness', as set out within NPPF Paragraph 36 is not expected to change and remain in place. 2. Spatial Strategy: Policy SP3 continues to contain a sensible and rational approach to the location of new developments in sustainable locations that are close to facilities, services, jobs, and (most importantly) public transport. The inclusion of Pill Green within the Pre-Submission Plan is justified as this accords with the Spatial Strategy, which is in principle supported. It is however noted that there may well be a need for greater growth in North Somerset over the Plan period in line with the spatial strategy subject to outcomes and			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								requirements resulting from Local Plan and Spatial Development Strategy preparations and subsequent agreements. See section 3.1 for more detailed commentary. 3. Housing Requirement: The housing requirement for the Pre-Submission Plan 2041 is set at a minimum of 23,700 dwellings within North Somerset over the 2026-2041 period, equivalent to 1,580 dwellings per annum. The requirement is based on the standard method for calculating housing need, as required. The approach to plan for and meet the housing needs of North Somerset in full is supported. It is noted that no buffers are applied to ensure flexibility and ensure greater certainty that minimum targets are met. The application of buffers by increasing the quantum of housing within allocations by a percentage above minimum requirements has become common plan-making practice to strengthen robustness, albeit this is not mandated. It is acknowledged that processes associated with the Spatial Development Strategy (SDS) and neighbouring authorities is an on-going matter up to the point of submission of the North Somerset Local Plan 2041 for Examination. Pill Green is currently not allocated for its potential capacity of up to 1,000 homes and can support North Somerset Council where any of these matters may raise the need to identify additional housing capacity. See section 3.3 for more detailed commentary. 4. Green Belt, Settlement Boundaries and Policies Map: Policy SP7 includes a correct approach to refer to but not repeat national policy. Policy SP7 also correctly identifies that there exist exceptional circumstances to release land from the Green Belt and identifies the sustainable development opportunity at land at Pill Green. However, policy wording requires updating to be consistent with national policy as required by NPPF Paragraph 36. Moreover, whilst Green Belt Assessments prepared appear robust and in accordance with national policy requirements, the resultant allocation boundaries, the Policies Map, and the partial allocation of Pill Green are not found sound. No evidence is provided that demonstrates that NPPF Paragraph 149 requirements have been taken into account, nor assessment within evidence or justification within topic papers for the removal of part of the Site for Pill Green. Therefore, the Policies Map, Policy LP7, and Policy LP5 are not sound and require amendment as set out within representations. See section 3.2, 3.4, 3.6, and 4.1 for more detailed commentary. Policy DP12 sets out statements which are erroneous and includes criteria which go beyond established case law on the matters to assess ‘openness’ and national policy guidance set out within the NPPF and PPG. Policy DP12 raises concern for the potential of legal challenge and unnecessary delay to the adoption of a sound Local Plan. North Somerset Council are encouraged to review Policy DP12 meticulously and potentially with Counsel. See section 3.9 for more detailed commentary. 5. Strategic Development Location at Pill: It is clear that Policy LP4 and the allocation of Pill Green therein represent a potential to deliver substantial benefits overall, as well as further benefits associated with the Site such as open space provisions, a mobility hub within the Site, and biodiversity improvements where all of the requirements set out within policy and for the Site demonstrably meet the tests within NPPF Paragraph 58. Locational Policy LP4 is principally supported, subject to amendments that ensure the soundness of the policy. Whilst the draft requirements of Policy LP4 are not ‘justified’ and ‘not consistent with national policy’ as required by NPPF Paragraph 36, amendments and comments are set out within these representations to ensure a sound version of the policy can be submitted for Examination in future. Pill Green, as shown within the Vision Document at Appendix B, and its associated site boundary and proposals avoid impact on the Ancient Woodland and Markham Bottom /Markham Brook environment. Policy requirements set out within Policy LP4 for an active travel route over the Markham Brook are neither supported by robustly justified evidence, nor by appropriate written agreements with Natural England that accept such a policy requirement or with any other relevant party. See section 3.4 for more detailed commentary. If required, following establishing of a sound Policy LP4 and Policies Map and any further discussion where required, a suitably worded SoCG could be progressed setting out agreed principles. 6. Climate Change: Climate Change policies within the Pre-Submission Plan have been subject to review from the technical expertise within the Sustainability Team at Stantec. Climate change policies aim to support climate objectives but are recognised to lack specificity in terms of requirements, targets and methodologies. In the absence of a more robust evidence base and detail set out within documents available for consultation, it will be important for any forthcoming SPDs that are referenced in respective policies to provide clarity on local climate risks and appropriate responses to ensure that the policy implementation achieves the policy intent. Recommendations for policy adjustments or requirements of details to be robustly clarified within any forthcoming SPD will need to: • Include measurable resilience metrics and monitoring mechanisms; • Require the publication of local climate risks assessments and evidence to inform locally-relevant adaptation and resilience measures; • Demonstrate up-to-date viability testing for the cumulative policy impacts; • Provide evidence on deliverability for skills and supply chain; • Develop a monitoring and reporting framework to address the performance gap; • Consider alternative options and transition arrangements; • Address legal uncertainty on adoption of energy-based targets with comprehensive viability and a contingency approach; and • Address uncertainty in methodology and monitoring of energy-based targets. See sections 3.7 and 3.8 for more detailed commentary. 7. Affordable Housing, Housing type and Mix: The ambition of North Somerset Council to deliver affordable housing is recognised and shared. It is noted that such ambition cannot extend beyond the unachievable, thereby also risking failing the tests of soundness as set out at Paragraph 36. The relevant policies take into account the Dixon Searle viability study (October 2025) outcomes and take on board most recommendations as made within the evidence base underpinning the Pre- Submission Plan 2041. It is however noted that the precise size and type of affordable housing, as well as expectations for the housing mix set out within draft Policies is not supported by the Council’s published evidence base and is therefore not justified as required by NPPF Paragraph 36. See sections 3.10 and 3.11 for more detailed commentary.			
30597761	Cat Abel			No	• Justified • Consistent with	Unsure	Unsure	This site was named “Pill Green” in previous development proposals, however, in this version of the proposed Local Plan, this site SHOULD NOT and does not include the Pill & Easton-in-Gordano Village Green. Locally the site is often referred to as the Markham fields. This area has been under organic farming management for decades, by a local farm which sells directly to	Limit the site to small clusters of housing, much lower number of dwellings and with large areas of greenbelt farmland retained between. Relocate the proposed active travel link crossing the Markham brook and Ancient woodland, to avoid harm and damage to this very sensitive		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					national policy			local customers as well as local markets. The land is partly grade 2 or 3a, thus BMV land which should not be taken out of the greenbelt and used for development of housing. Footpaths criss-cross the site and provide invaluable open green space for local people as well as walkers of longer distance using the Gordano Round footpath. Another great concern is that the proposed site abuts the Markham brook ancient woodland SNCI, not even allowing for the minimum required root protection zone of 15 m along the woodland edge. As the site is on a slope, downwards towards the stream, there will also be a threat of sediment fallout into the stream during the construction phase as well as continous fallout of other pollution from all hard surfaces of the development. The site itself also features ancient trees and hedgerows, all supporting good biodiversity. Notable species include Linnets, Skylarks, at least 12 species of bats including both Lesser and Greater Horseshoe. Development of the suggested scale on this site would also contribute to increased speed of water flowing into the stream already marked on NSC maps of floodrisk, which drains alongside the Brookside playing fields and into the village center near the fire station. There would be serious cumulative effect as drains from the hillside above the A369 already enter the site and are slowed down and partly dispersed on way towards the village. Further contribution of increased speed of water from the proposed smaller site on the opposite (East) side of Markham brook (called “Land at Pill Road”), which also runs into the village centre, under the fire station.	site. Introduce a wide root protection and buffer zone along the woodland, veteran open field-grown trees and hedgerows, creating joined-up wildlife corridors between any potential areas of housing development.		
32016289	Kieran Argo			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	1. Community Involvement and Consultation Methods I am deeply concerned about the adequacy and inclusiveness of the consultation process for Pill and Easton-in-Gordano. Despite five sites being proposed in our area with potential for 1,100 new homes, no public exhibition was held locally. Exhibitions took place in Long Ashton, Weston-super-Mare, Nailsea, and Backwell, but residents of Pill and Easton-in-Gordano were expected to travel elsewhere to engage with proposals that would fundamentally transform our community. The consultation response figures reveal a troubling disparity. Pill and Easton-in-Gordano generated only 125 responses from 29 individual respondents across five sites, compared to 689 responses for five sites in Portishead, 591 responses for ten sites in Long Ashton, 484 responses for five sites in Wrington, and 1,049 responses for 26 sites in Nailsea and Backwell. Given the scale of proposed change in our area—including 600 homes at Pill Green alone—this low response rate suggests significant under-representation of local voices rather than lack of concern. Over 1,800 residents from our community of approximately 4,500 people have now signed a petition objecting to these proposals and challenging the inadequate initial consultation. This demonstrates the level of concern that was not captured during the formal consultation period. I question whether the Council has complied with its own Statement of Community Involvement and whether it has met its legal obligations under the Equality Act 2010, including the Public Sector Equality Duty, to ensure all communities have equal opportunity to participate meaningfully in decisions affecting them. I submit that this aspect of the Local Plan is not legally compliant. 2. Green Belt Release and Exceptional Circumstances I challenge the Council's justification for removing land around Pill and Easton-in-Gordano from the Green Belt under Strategic Policy SP7. The Council asserts that it cannot meet identified housing needs at sustainable locations outside the Green Belt, thereby constituting "exceptional circumstances" under Section 13 of the National Planning Policy Framework 2024. However, I question whether the Council has adequately demonstrated that it has exhausted all reasonable alternatives before resorting to Green Belt release. Has the Council fully examined options including maximising brownfield capacity across North Somerset, applying minimum density standards to optimise land use in existing urban areas, and working collaboratively with neighbouring authorities to accommodate housing needs? Without comprehensive evidence that these alternatives have been thoroughly explored and found insufficient, the claim of "exceptional circumstances" appears premature and potentially unsound. Furthermore, where Green Belt land is released, the NPPF requires adherence to the "Golden Rules" concerning affordable housing provision, infrastructure delivery, and publicly accessible green spaces. The Council's own 'additional sites viability addendum' suggests that the 50% affordable housing target may be "challenging" for proposed sites around Pill and Easton-in-Gordano. This raises serious doubts about whether development on these sites can meet the Golden Rules requirements. I also question whether the Council has properly considered all available sites across North Somerset that might accommodate development without Green Belt release. I submit that this aspect of the Plan is unsound and that the Council has not adequately demonstrated compliance with the Duty to Co-operate. 3. Traffic, Transport and Infrastructure Policy LP4 and Schedule 1 reference infrastructure improvements including a new primary school and active travel routes connecting development sites to local services and the proposed railway station. However, I have significant concerns about whether the Plan adequately addresses the transport implications of large-scale development in Pill and Easton-in-Gordano. Junction 19 of the M5 already experiences congestion, and National Highways has raised concerns about development impacts in this area. In relation to the Court Hay development near the service station (NSC planning portal ref 25/P/1413/OUT), National Highways stated that transport modelling is required to assess cumulative impacts on Junction 19. I cannot find clear evidence that the Local Plan incorporates such cumulative impact assessment or demonstrates that the Council has adequately co-operated with National Highways in addressing these concerns. The Plan appears to place considerable reliance on the proposed railway link, but I question whether this is realistic given the uncertainties around delivery timescales and funding. Is there robust evidence that bus and train services will be sufficient, frequent, and reliable enough to serve the proposed number of new homes and reduce car dependency as anticipated? I submit that this aspect of the Plan is unsound and that the Council has not adequately demonstrated compliance with the Duty to Co-operate. 4. Natural Environment and Wildlife Protection The proposed development sites around Pill lie within consultation zones for the North Somerset & Mendip Bats Special Area of Conservation (SAC) and in proximity to the Severn Estuary Site of Special Scientific Interest (SSSI). The NPPF requires plans to take full account of environmental impacts, avoid or mitigate adverse effects, and undertake Habitats Regulations Assessments where necessary. The Wild Service Ecology Review (2019), undertaken on behalf of the Neighbourhood Plan Steering Group, documents the presence of protected species and habitats in this area. Development proposals adjacent to or affecting SSSI, SAC, or other protected habitats must avoid significant harm, apply appropriate buffers, and secure measurable net gains for biodiversity.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								I question whether the Council has given sufficient weight to wildlife and habitat protection when assessing sites around Pill and Easton-in-Gordano for Green Belt release under SP7. I cannot identify clear, funded strategies and mitigation policies in LP4 and Schedule 1 to ensure adequate protection of wildlife and habitats in these areas. Additionally, I am concerned about whether the best and most versatile agricultural land around our village is being adequately protected in accordance with Section 15 of the National Planning Policy Framework. I submit that policies SP7, SP11, DP35, DP36, and DP37 are unsound and may not be legally compliant in respect of environmental protection requirements. 5. Flood Risk The area around Markham Brook in Pill is within the Environment Agency's Flood Zone 3, indicating a high probability of flooding from both rivers and tidal sources. The NPPF (pages 49-52) requires sequential testing to ensure that development is directed to areas of lowest flood risk. Some of the sites identified in LP4 and Schedule 1 may be affected by flood risk, yet I cannot find clear evidence that the Local Plan demonstrates a sequential approach to site selection, prioritising lower flood risk areas across North Somerset before considering sites in higher flood risk zones. I question whether policies DP9 and DP11 provide adequate safeguards to ensure thorough flood risk assessments for any development close to Markham Brook and to restrict inappropriate development in flood risk areas. I submit that the Plan's approach to flood risk is unsound and may not be legally compliant with NPPF requirements. In summary, I object to the Local Plan on grounds of both legal compliance and soundness, particularly regarding the proposed large-scale development at Pill and Easton-in-Gordano.			
62545857	Andrew John Barr			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	1 sustainability appraisal fails SEA directive-no assessment of Brown field alternatives to Pill Green (Reg 12/2024 brownfield register 2800+ units ignored) 2. No duty to corporate on Bristol's 8000 unmet need. (no statement of common ground: unilateral 1100 Home dump in pill and Easton in Godino.) 3. Greenbelt exceptional circumstances not evidenced (NpPF147). (Parcel identified as high performing agricultural land: no sequential test) 4. 44% population bomb on Pill & East Gordano disproportionate and unjustified.. (600 Holmes equals 24% from one site alone) 5. No deliverable plan for a 369, M5 Junction 19, schools, general practitioner access or drainage by 2041. 6. Brownfield first policy ignored-2500+ viable urban units still available. (West, Portishead, Bristol fringe) 7. Pill Green breaches NPPF159, no sequential test for non-Greenbelt sites. (excellent sustainable transport links made Urban/Brownfield viable) 8. Request independent verification of ", exceptional circumstances", before any Pill Green consent. 9. Village growth at less than 5% per site.	Delete the pill green site for 600 homes from the north Somerset plan schedule of sites or amend policies follows: no development on peg Green until exceptional circumstances are independently verified and sequential testing confirms no viable non-green belt alternatives are available, prioritising Brownfield sites in Weston-super-Mare, Portishead and Bristol fringe. The total allocation across all sites requiring for funding for flood defences in 1 to 1000 year Standard +45% climate change allowance, a 369 M5 junction nine capacity upgrades and additional school and GP places alongside associated additional communal infrastructure before granting outline permission. Insert 6.79. Allocations must demonstrate no disproportionate impact on village populations defined as less than 5% increase per site without evidenced need. Allocations in villages with populations under 10,000 must not result in population increase of more than 5% from any single site unless exceptional circumstances are independently verified and full infrastructure delivery(transport, education, health, drainage) is secured upfront via section 106/CIL. Cumulative impacts across all sites within an ass settlement must not exceed 20% without a master planned, funded delivery strategy..		
62795393	Julian Bowyer			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Traffic & transport issues. this aspect of the plan is not sound. The A369 is an already very busy road it can be very difficult & time consuming accessing the M5 at junction 19 at this current time. This large proposed large number of proposed house will significantly increase traffic congestion in this area.	Further community involvement providing easily accessible/ understandable information demonstrating that this issue has been considered. Reducing the number of proposed dwellings would help limit the increased traffic.		
62659297	M Broomfield			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	It is unjustified and disproportionate to increase a village the size of Pill by an additional 44% with this site alone contributing to an increase of 24%. I do not believe that there is evidence that the Green Belt exceptional circumstances has been evidenced sufficiently (NPPF147) when there are still brownfield sites which should be built on first. Brownfield first policy has been ignored with 2500 units still available in Weston, Portishead and Bristol fringe. Furthermore sustainable transport makes urban/brownfield sites more viable. This breaches NPPF159. Traffic on the A369 is already extremely busy at peak hours with long delays to get into the city centre (usually taking at least 45 minutes or sometimes up to an hour at 8am for what is normally a 20 minute journey). I see no deliverable plan for the A369, J19 on the M5. Bus service is not currently frequent or reliable enough. The trainline is unlikely to be in place for several years. Therefore full infrastructure delivery has not been secured upfront via s106/CIL According to NPPF 11 and 130 (f) plans must avoid adverse impacts on local character and services, yet examinations have found >10% growth population to be unsound unless supported by exceptional infrastructure, as outlined above this is absent here.	There should be no development on Pill Green until the exceptional circumstances have been independently verified and it has been shown that no viable non-Green Belt alternatives are available. Brownfield sites in WSM, Portishead and Bristol should be prioritized. There should be funding for A369 and J19 upgrades as well as additional school and GP places along with communal infrastructure BEFORE granting outline permission.		
58517153	Matt Burley			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Requires new primary school land; frontage on A369 with major active travel and crossing works; mandatory Markham Brook bridge; strict "no increased runoff" and buffer requirements; motorway noise/ air constraints; quantum represents a disproportionate scale for a village and is not shown to be deliverable within character/heritage limits.	Remove or substantially reduce; school land and Markham Brook bridge to be funded and delivered early; impose M5 noise/air quality buffers; fix numbers only after heritage and SuDS layouts prove net developable area.		Schedule 1 Site Specific Objections.pdf
31071393	Mr Burton			No	• Positively prepared • Justified • Effective • Consistent	No	No	The allocation of 600 homes on Site HE2015 "Pill Green" is unsound, legally non-compliant, and fails the Duty to Cooperate because it targets a high-value Green Belt parcel (PG7) on the southeastern perimeter of Pill, the first and outermost buffer of the Bristol Metropolitan Green Belt against Bristol's urban sprawl (just 4-5 miles from Bristol city centre; North Somerset Green Belt Review Part 1, 2023) without: 1. Green Belt harm – The site makes a high contribution to Green Belt purposes (prevents sprawl, safeguards countryside). No exceptional circumstances are evidenced (NPPF para 147, 2024). 2. Legal non-compliance – The Sustainability Appraisal breaches Regulation 12 and the SEA Directive by	Delete Site HE2015 (600 dwellings) from Schedule 1 and the Proposals Map, or amend to state: "No development shall take place on Site HE2015 until exceptional circumstances are independently verified (NPPF para 147), a sequential test confirms no reasonable non-Green Belt alternatives exist (prioritising the 2,800+ brownfield units in the 2024 Register), a signed SoCG with Bristol is published, and full funding is secured via		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					with national policy			refusing to test brownfield alternatives (2024 Brownfield Register: over 2,800 deliverable urban units in Weston-super-Mare, Portishead and Bristol fringe, none modelled against HE2015). 3. Duty to Cooperate failure – No signed Statement of Common Ground with Bristol City Council addresses their 8,000+ unmet need (Bristol Local Plan Review 2024). Allocating 600 homes here, on Bristol's fringe, without joint agreement breaches s33A Planning and Compulsory Purchase Act 2004 and NPPF para 27. 4. Flood risk – 45–55% of the site lies in Flood Zone 2/3 (Environment Agency Flood Map for Planning, Oct 2025). No site-specific sequential test or funded mitigation is provided – breach of NPPF para 159. 5. Disproportionate scale – 600 homes would increase Pill's population (~4,700) by approximately 24–28% from a single site. This is unjustified urban-scale growth on a small village while thousands of brownfield units remain unused. 6. Fails new NPPF sustainable-location test – The site is over 1,000 m walking distance from the proposed Pill railway station (Network Rail MetroWest Phase 1). It therefore falls outside the 800 m threshold in NPPF for locations that qualify for a "presumption in favour" even in the Green Belt. 7. Undeliverable – The October 2025 Infrastructure Delivery Plan identifies M5 J19 upgrades and local flood mitigation as "high risk / unfunded". Without secured funding the site is ineffective (NPPF paras 11 & 122). As a resident I witness daily A369 gridlock and regular deer, badgers and foxes using these exact fields. This allocation would destroy the last high-value Green Belt buffer on Bristol's perimeter.	s106/CIL for 1-in-1,000-year + 45% climate allowance flood defences, A369/M5 J19 upgrades, and additional school places. No single site in settlements under 10,000 population shall exceed a 10% population increase unless the above tests are met."		
62850369	Maureen Butterly			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Key Issues 1. Disproportionate Growth 600 homes represents a 44% population increase, fundamentally altering the village's scale and character. This is inconsistent with SP6 which requires development in villages to be proportionate and locally justified. 2. Severe Transport Problems Pill Green is remote from the village centre, requiring crossing of Markham Brook, steep terrain, and narrow lanes. No engineered solutions are provided for the required new active travel bridge. Traffic would concentrate on already over-capacity roads feeding into J19 and the A369. 3. Landscape Harm Pill Green lies on an open rural plateau, contributing to long views and the village's rural setting. Development at this scale would dominate the landscape and breach the perceived village boundary. No LVIA has been provided. 4. Green Belt Purposes Significantly Undermined The site prevents coalescence with the M5 corridor. It provides openness and separation between settlement clusters. Development would markedly harm Green Belt purpose 3 (safeguarding the countryside from encroachment). 5. Major Ecological Risks The site lies within critical bat foraging areas, including cattle-grazed fields—preferred Greater Horseshoe Bat habitat. No Nature Park or habitat compensation land has been identified. Mitigation on-site is unlikely to offset such large-scale loss. 6. Drainage and Flooding The lower part of the site is affected by flows from Markham Brook catchment. No drainage capacity or run-off assessments are published. 7. Infrastructure Assumptions Unrealistic 600 homes would generate very high demand for: school places, healthcare provision, utilities, community facilities. No evidence shows that expansion of these services is feasible or deliverable.	Remove the Pill Green allocation in full, or reduce it drastically (e.g., to a locally proportionate level of 50–80 homes) unless robust evidence is provided for: Green Belt justification, ecological feasibility, drainage and flood safety, realistic active travel connections, cumulative traffic modelling, and infrastructure capacity.		
58535265	Ben Chivers			No	• Positively prepared • Justified • Effective • Consistent with national	Unsure	Unsure	My main concerns with this development relate to flooding, traffic and local services. - Flooding: This site is, I believe, steeply sloped and already suffers from significant flooding during heavy rainfall. Unless major drainage development is undertaken, the additional runoff will worsen the situation and may even adversely effect the motorway, as has happened locally recently. - Traffic: J19 is overloaded and dangerous as it is; additional traffic will only make this worse. Major rework is required. - Services; there has been no provision made for more drs, shops or village services. The existing ones will be overwhelmed	See comments on Lodway.

					policy						
58534849	Richard Clarke			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	There was minimal to no consultation for this area compared to other areas that are to be developed to this scale. there were no public events and many residents were/are completely unaware of the scale of development planned and have not had a reasonable chance to have their say. This is completely unacceptable and does noy uphold the Councils own Statement of Community Involvement. The council is planning to build on Green Field sites without having first considered all reasonable alternatives such as Brownfield land and other more suitable alternatives within North Somerset. Furthermore, the Councils own Golden Rules do not appear to have been met. Has the Council taken into account and funded the work needed to protect wildlife on the greenbelt land and also to deal with the flood risks that the proposed building will cause. Th local plan does not address the ongoing problem with the massive overuse of Junction 19 and the A369, both of which will be massively exacerbated by increased building at this level. The X4 bus is one of the most successful and cost effective in the area yet it is completely reliant on junction 19 and the A369 running smoothly. The slightest incident, roadworks or match at Ashton Gate stadium delay the bus sometimes by over an hour making it completely unusable. Further traffic on the road will add to increased unreliability of public transport thus making more commuters take to their cars! This is opposed to Council objectives. The proposed small hourly train service will not be a replacement for the X4 bus which runs every 20 minutes and on a much larger timetable. The train cannot be relied on to mitigate the extra traffic caused by the proposed building let alone deal with the current ongoing issues. There is also a concern that at peak times the train will already be full of Portishead passengers by the time it reaches Pill. The roadwork issues need to be addressed and resolved the proposed train is not an answer to this. The pavements in Pill are already completely inadequate and in some cases non existent. The council needs to fully asses the increased risks to pedestrians from extra houses/cars and make firm and costed plans to mitigate these risks.	Full and reasonable consultations and events to positively engage the community. Reassess the impact on Green Belt land following the Golden Rules and consider the use of Brown Field and other sites prior to destroying Green Belt and Grade 1 agricultural land. Full flood assessment and alternative lower flood risk sites should be considered To cooperate fully and be advised by National Highways regarding traffic management and the already above capacity road networks		
62865505	Dick Douglas			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	See comments under LP4	Delete Pill Green development	N/A	
14977665	J Dudley			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	1: The Sustainability Appraisal fails SEA Directive, ie No assessment of Brownfield Alternatives to Pill Green. Reg12/2024 Brownfield Register 2,800+ units ignored. 2: North Somerset Council has no duty to cooperate on Bristol's 8,000 unit unmet need. There is no statement of common ground, this is a unilateral 1100 home dump in Pill and Easton-in-Gordano. 3: Green Belt exceptional circumstances not evidenced (NPPF 147) This land has been identified as 'high-performing agricultural land'. Was there any sequential test? 4: 44% population increase in Pill and Easton-in-Gordano is disproportionate, unjustified and unjustifiable! The 600 homes at Pill Green represents a 24% increase on this one site alone. 5: No deliverability plan for A369, M5 J19, Schools or drainage by 2041 making plans for Pill Green typically bonkers and unworkable. 6: The Brownfield First policy has been ignored; there are above 2500 viable urban units available on the fringes of Bristol, Weston and Portishead. 7: Pill Green breaches NPPF 159. 8: I expect there to be independent verification of "Exceptional Circumstances" before any Pill Green consent is given. 9: Village growth should be capped at 5% per site; note: a) 2017 JSP and previous local plan allocations; b) NPPF 11 and 130(f) "Plans must be 'deliverable' and 'avoid adverse impacts' on local character and services; c) Local Plan examinations have found that developments that cause more than a 10% population increase are unsound unless supported by exceptional infrastructure evidence, which is not seen here at Pill Green. 10: The fields that would be obliterated by the Pill Green development are Green Belt, that should be enough but clearly not! They are a massive asset to the village for outdoor space, for dog walkers, horse riders and for experiencing all kinds of wildlife, from at least two species of deer, foxes, badgers, hedgehogs, buzzards, sky-larks, jays, redwings, sparrow hawks, numerous species of owl, as well as the more common bird species, and amphibians: frogs, toads and newts. How soon we forget the desperate need for such places that we all experienced during the Covid Pandemic. 11: Traffic congestion on the A369 is already extremely bad at rush-hour, and is compromised throughout the day at the Abbots Leigh choke-point, get two large vehicles trying to pass at this point can cause major traffic issues that are sometimes not easily resolved. Anyone who thinks adding 600 homes to this issue is not going to wreak havoc on this route into Bristol is either a bloody idiot or a dishonest rogue. 12: The Bristol experience: Bristol is different from all other large metropolitan areas (think Birmingham, Manchester, Leeds etc), non of them can match the wonderful entrance into the city via the A369 and the suspension bridge, it needs to be cherished as unique, not obliterated under a sea of urban sprawl, it's precious and should be appreciated for being different and better than anywhere else, or are you all just money obsessed Philistines?	Preferably delete the Pill Green site (600 homes) from the LP8 Schedule of Sites but at the very least amend Policy LP8 as follows: " No development on Pill Green until exceptional circumstances are independently verified (NPPF para 147) and sequential testing confirms no viable non-Green Belt alternatives are available, prioritising brownfield sites in Weston-Super-Mare, Portishead and the Bristol fringe. Cap total total LP8 allocation across all sites; require full funding (via S106/CIL agreements) for flood defences to 1-in-1000 year standard +45% climate change allowance, A369 and M5 J19 capacity upgrades and critical communal infrastructure upgrades before granting outline permission. Insert new para 6.79: " Allocations must demonstrate no disproportionate impact on village populations, defined as <5% increase per site without evidenced need. Allocations in villages with a population under 10,000 must not result in a population increase of more than 5% from any single site unless exceptional circumstances are independently verified and full infrastructure is secured upfront via s106/CI. Cumulative impacts across all sites within a settlement must not exceed 20% without a master planned, funded delivery strategy."	N/A	
62849889	Jamie Chinner-Evans			No		No	No	The proposed development of Pill Green is not sound as there has been no independent verification that 'exceptional circumstances' have been met to grant such an extreme development on green belt land. The	Delete the Pill Green site from the Plan.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								land is currently high-performing agricultural land, with significant benefits to the local ecosystem and biodiversity - offering a habitat for a range of wildlife, including the local bat population. The proposed development is disproportionate, both in its size relative to the current population of Pill, Ham Green and Easton-in-Gordano and also in terms of its negative environmental impact. The addition of 600 homes is inconsistent with the agreed-upon Local Plan and will lead to adverse impacts upon the character of the local area, contrary to the the NPPF. Moreover, we have significant concerns about the fragmented nature of the proposed development; it appears to have limited means to be connected to the rest of the village, save for a possible single access point through to Brookside - which is not a suitable road for such traffic. Residents in the proposed development would also be segregated from the rest of the village by the topography, which would place them on one side of a hill and the rest of the village on the other. Residents at the top of the hill already have a significant walk to access the Co-op and Post Office, so potential residents of Pill Green would find themselves even further away the services they require. This means the site is not sustainably located. Despite good intentions behind the proposal to provide active travel links to the rest of the village, the topography means that these will not be well used, resulting in poor return on investment, and ultimately more traffic on the A369 and Pill Road. Despite investment in the train station at Pill, we are also concerned that such a large development will only add to the already congested traffic issues at junction 19 of the M5 and along the A369 into Bristol. Finally, on a specific point, we are concerned that there has been a lack of clarity given by the council in relation to the land at the south-east end of Cross Lanes, to the rear west/south-west of Davin Crescent which currently has a large house and stables. Different maps produced by the council appear to have shown different boundaries, some of which include this patch of land and some which don't. This has made it difficult for local residents to engage fully with the consultation and I would argue therefore calls into question the legality of what has been proposed / consulted upon, as we simply do not know with any great certainty what it is we are being consulted on.	Require independent verification that the 'exceptional circumstances' condition has been met for building on the green belt. Require examination of the lack of clarity given about the inconsistent maps produced by the council related to boundaries of the proposed site at Pill Green - in particular, whether or not the land to the south-west of Davin Crescent (currently a stables) is included within the proposed site or not. If it is found that local residents have been left uncertain about what is actually being proposed, then this may amount to a serious procedural defect in the consultation. Require more formal crossing for active travel on the A369 just above Blackmoor Road, as the current crossing point is unsafe given the speed and volume of traffic on that road; the central island barely accommodates a bike, the crossing is poorly lit, and there is nothing to encourage drivers to give way to those attempting to cross. While improvements to the River Avon Trail are welcome, improvements to the cycleway along the A369 through Abbots Leigh are necessary to accommodate an increased volume of cycle traffic. This would include the addition of lighting at key points along the cycle way, such as the elevated cycle path to the west of Abbots Leigh Cricket Club. The cycle route along Bridge Road leading up to the Clifton Suspension Bridge is also not fit for purpose, as the cycle lane is intermittent, causing bikes to weave in and out of traffic during rush hour. A segregated cycle lane - or poles, at the very least - are necessary to avoid accidents and encourage greater uptake of active travel modes.		
62858913	Luke Samuel Charles Evans			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	I object to the allocation of Green Belt land around Pill & Easton-in-Gordano (LP4 / Schedule 1) on the grounds that the Council has not demonstrated exceptional circumstances in accordance with Chapter 13 of the NPPF (2024). The Additional Sites consultation (7 Feb–21 Mar 2025) had a very low local response for Pill (c.125 responses across 5 sites; only 29 individuals), no local exhibition in Pill, and the Consultation Statement does not show proportionate engagement as required by the Council's Statement of Community Involvement. There is inadequate published evidence that reasonable alternatives (maximising brownfield, optimising density, or cross-authority options) were fully tested; transport modelling does not adequately demonstrate that Junction 19 or cumulative impacts have been mitigated; HRA and biodiversity mitigation for SAC/SSSI impacts are not demonstrated; and the Plan fails to show robust sequential flood-risk testing for sites near Markham Brook. For these reasons the allocation is unsound and should be withdrawn until further evidence, proper local consultation, and statutory assessments (HRA, SFRA/FRAs, full transport modelling) are completed and published. Short summary of the case against the allocations 1. The February–March 2025 "additional sites" consultation appears to have been insufficiently local and proportionate for a change of this scale in Pill/E-in-G — contrary to the Council's own Statement of Community Involvement and public sector equality duties; the consultation statement confirms low local response numbers for Pill compared with other settlements. n-somerset.gov.uk+1 2. The Plan's justification for removing land from the Green Belt relies on "exceptional circumstances" under the NPPF (Chapter 13). The evidence must show exhaustive examination of reasonable alternatives (brownfield use, higher densities, cross-boundary cooperation). If that evidence is absent, the Green Belt release is vulnerable. GOV.UK Assets+1 3. Transport evidence is incomplete on cumulative effects (particularly M5 Junction 19). National Highways' responses make clear further transport modelling / co-operation is needed. Reliance on a future rail link and unproven bus/active travel measures is risky. n-somerset.gov.uk+1 4. Ecology / Habitats — the sites lie close to bat SAC consultation zones and the Severn Estuary SSSI and will require robust HRA and measurable net biodiversity gains; the Plan must show credible mitigation and funding. Existing local ecology reports identify constraints. abbotsleigh.org.uk+1 5. Flood risk — parts of the area (Markham Brook valley) fall within Flood Zone 3; the Plan must apply sequential testing and show mitigation/avoidance for housing. The council's SFRA and national flood mapping are relevant. Detailed points (with the legal/planning basis) 1) Procedural fairness & adequacy of consultation For a proposal that would re-categorise Pill/E-in-G as a Strategic Location and potentially release multiple Green Belt sites, the council's consultation was not sufficiently local or proportionate. The Consultation Statement records only ~125 responses relating to the Pill area (29 respondents across 5 sites) versus much larger numbers elsewhere; no consultation events were held in Pill despite this being one of the most affected areas. That under-representation raises a realistic procedural unfairness concern and possible failure to follow the Council's Statement of Community Involvement (SCI). n-somerset.gov.uk+1 • Why it matters legally: The SCI sets out how plans should be prepared and consulted on. If the council did not comply with its own SCI, the Plan could be open to challenge at examination or by judicial review for procedural illegality or irrationality. Also consider whether the Council carried out equality screening and complied with the Public Sector Equality Duty (PSED) — e.g. were groups with protected characteristics properly engaged and were reasonable adjustments made? (If there's no evidence of PSED consideration, raise that.) n-somerset.gov.uk 2) Green Belt: "exceptional circumstances" and alternatives Chapter 13 of the NPPF says Green Belt boundaries should only change where "exceptional circumstances" are demonstrated and where reasonable alternatives have been fully considered (brownfield land, higher densities, cross-boundary options). The Plan must show exhaustive, transparent evidence that other options were examined and why they are not sufficient. If the council's evidence base (SHLAA, brownfield capacity work, density appraisals, Duty to Co-operate statements) does not demonstrate that, the justification for removing Green Belt is unsound. GOV.UK Assets+1 • Particular local point: The Additional Sites Viability Addendum reportedly flags that 50% affordable housing would be "challenging" on these Green Belt sites — that undermines any claim that the release will secure clear public benefits (an important part of "exceptional circumstances"). Ask for the viability evidence and sensitivity testing. n-somerset.gov.uk			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								3) Duty to Co-operate and alternatives across borders The Duty to Co-operate requires strategic engagement with neighbouring authorities where housing needs cross boundaries. The Plan should show what cross-authority options were explored (e.g., maximising higher-density urban sites or brownfield in nearby towns). If the council did not properly evidence co-operation, that is a soundness issue. n-somerset.gov.uk+1 4) Transport and cumulative impacts (Junction 19 / modelling) National Highways has queried cumulative impacts and asked for modelling for Junction 19; the council's own documentation shows National Highways expect to work with NSC and that modelling is required. The Plan appears to rely heavily on a future rail link and new active travel routes — but the timings, funding, and deliverability of these measures must be explicit and evidenced. Without robust cumulative transport modelling (and clear mitigation and funding commitments), the Plan is not sound. n-somerset.gov.uk+1 5) Ecology / Habitats Regulations Assessment (HRA) Sites are within bat SAC consultation zones and close to the Severn Estuary SSSI; HRA may be required and must show no adverse effect on integrity or, if effects are likely, provide lawful mitigation/ compensation and secure funding. The Plan must demonstrate measurable biodiversity net gain and appropriate buffers. Local ecological reports (neighbourhood plan evidence, Wild Service reviews) highlight important habitat corridors which must be protected. If the Plan simply allocates sites without clear HRA outcomes, it is unsound and may be unlawful. abbotsleigh.org.uk+1 6) Flood risk and sequential/exception tests Markham Brook valley and other low-lying land are in Flood Zone 3 (high risk). NPPF requires sequential testing (prefer lower-risk sites first) and, where necessary, the exception test with demonstrable mitigation. The Plan must show that lower-risk sites were prioritised or that any allocated sites in Flood Zone 3 are justified by the exception test and will be safe in the long term. If the Plan lacks a clear sequential test and site-by-site flood risk assessment, it is unsound. n-somerset.gov.uk+1			
62860801	Lisa Farrell			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	No public consultation regarding any of the proposed sites. Given the size of the proposal, there was a relatively low response at the time and the subsequent number of people who have now signed the petition, it would indicate that public engagement was not done properly, it wasn't sufficiently inclusive and therefore not legally compliant under the equalities act. Not enough clarity around transport and the effect of the increased number of cars that will result from the proposed number of houses and the increase in population. NPPF 109. States Transport issues should be considered from the earliest stages of plan-making and development proposals. There has been no public discussion and no clear evidence in the plan that they have been fully considered. The plans focus primarily on schemes to increase active transport and the development of the Portishead to Bristol railway as a solution to transport problems. The plans for the railway link (3 carriage trains, once an hour) will not support the number of people using them and will be full before they get to Pill. Pill station will also have no parking. The transport survey and the effect on the A369 and M5 junction 19 has not been completed as yet indicating that they have not fulfilled their duty to cooperate with other agencies. The population increase of 44% is disproportionate the current size of Pill and Easton in Gordano. There will be significant impact on local services which has not been considered in the plans. Loss of Green belt which is identified as high-performing agricultural land with no evidence that Brown Field sites have been fully explored across the wider area including Bristol. Increased flooding risk - due to the increased number of houses and the affect on drainage and the brook that runs through that area which has not been considered	This submission needs to be fully explored and evidenced before it is considered. The number of houses and the size of the development needs to be reduced - allocations in villages with a population of less than 10,00- must not result in a population increase of more than 5%.		
62863073	S Floyd			No	• Justified • Effective	Unsure	Unsure	This is a huge number of extra houses which will have a large impact on local environment and transport infrastructure as well as changing the village character its likely that around 600 extra cars could be added to the local area from this and potentially up to 1200, this will have a large affect on A369 and M5 Reducing or not increasing Flood risks will be a challenge to achieve and have not been proven. traffic lights/ crossings will exacerbate transport issues in village potentially. railway project is unfinished and seems to be an excuse for extra houses when it was supposed to solve existing transport issues in peak times, it will not necessarily reduce overall car use			
62842145	A Franklin			No	• Justified	No	No	The Plan proposes to remove substantial areas of land from the Green Belt on the basis of "exceptional circumstances." From the evidence available, this justification appears weak, incomplete, and potentially unsound. Key concerns: (a) Reasonable alternatives have not been fully explored There is insufficient evidence that the Council has maximised: • brownfield redevelopment capacity, • high-density opportunities in existing urban areas, • partnerships with neighbouring authorities, all of which are required before Green Belt release can be justified. (b) Failure to demonstrate compliance with the "Golden Rules" for Green Belt land Even if release were justified, development must deliver: • substantial affordable housing, • publicly accessible green space, • infrastructure improvements. Yet the Local Plan's own viability evidence states that 50% affordable housing may be "challenging" on Pill-area Green Belt sites. This directly undercuts the justification for release. (c) Lack of evidence that other potential non-Green-Belt sites have been assessed If other suitable sites exist elsewhere in North Somerset but were not included in the assessment, then			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								the “exceptional circumstances” claim does not meet national policy requirements.			
62860129	Sally Franks										
62796513	R Griffiths			No	• Positively prepared • Justified • Effective	Unsure	Unsure	The proposal has not been subject to a meaningful community engagement by North Somerset Council in the local area. The proposal is likely to result in significant changes to the local community. Is likely to result in significant traffic and transportation issues. M5 junction 19 is already subject to significant congestion. North Somerset council has progressed with the local plan before National Highways have completed their assessment of M5 J19. The benefits ascribed to potential future railway links (which do not as yet exist) are not justified with sufficient evidence. May result in removal of land from the Green Belt without adequate assessment of alternative Brownfield options Is likely to have a significant impact upon the natural environment and the protection of wildlife Could exacerbate potential flood risks	Removal of this proposal from the plan		
58529729	Rob Harvey			No		Unsure	No	The previous neighbourhood plan recommended that the housing stock in Pill and Easton in Gordano should grow by up to 200 (on a number of small sites) to more than cater for the housing needs of the local people up to 2038. NSC accepted this plan in 2020. So siting 600 new homes on Markham Farm fields (erroneously referred to as Pill Green) obviously has very little to do with meeting local need or sustainability. Markham Farm fields should not be removed from the greenbelt as they have an enormously important role in protecting the village and Abbot's Leigh from urban sprawl along the A369. Markham Farm fields are grade 2 agricultural land according to Defra. In a climate crisis that demands greater food security we cannot allow the highest quality agricultural land, such as this and other sites in Pill and Easton in Gordano, to be concreted over. They are too important for future sustainability. Markham Farm fields have notable wildlife species present, including red data species such as linnet, lapwing and skylarks that live there year round and breed on the fields. The old hedgerows of Markham Farm fields possess very high species counts, encouraging masses of butterflies, crickets, multiple species of insect pollinators and many species of wild flowers. the lowest part of Markham Farm Fields are the only part of the fields that are not classified as high quality agricultural land, because of their propensity to flooding. No significant development should be allowed as I have not seen evidence from NSC that the aquifers and underground streams that slowly drain from this site and take water into Pill, will be able to cope with the extra pressure. The most Eastern part of the Markham Farm fields runs along the edge of the ancient woodland along Markham Brook. According to Natural England guidelines on development near ancient woodland, not only should there be a minimum of 15 metre buffer zone from the edge of the woodland (and in the case of Markham Brook the site qualifies for considerably more buffer zone), but there should be fencing or other obstructions to any public access. The steep valley along Markham Brook has ancient trees, endangered bat feeding grounds and roosts as well as being habitat for endangered hazel dormice e.t.c.. It should be protected and, given that there are easy alternatives to the active travel overbridge (one running out of the site safely onto Brookside to the North or the second, taking the cyclist to the A369 from the Southeast of the site and some small adaptations to allow active travel along the road takes the cyclist back up to Pill road and the secondary school in no time). Given, as Natural England terms it, ancient woodland and the trees within it are "irreplaceable" and alternatives to destroying it should always be sought first, then the overbridge across Markham Brook should not be sanctioned. Markham Farm fields are well used community resource for the people of Pill and Easton in Gordano; significant development would deny them this resource and deny the village a buffer from busy roads and indutrial sprawl. Otherwise travel is a big problem for the Markham Farm fields site, there are no easy access points to the village for the considerable traffic that would be generated by 600 homes. I do not see any evidence that NSC have done any credible studies into how people would access the site, nor how they would choose to access it. Both the only possible exit areas into the village are constrained in terms of available width of road and both feed into a heavily (especially at peak times) congested road system where certain restrictions already exist to cut down dangerous traffic outside the Primary school. Putting more traffic on these roads at peak times would be dangerous for the children crossing while making exiting the village even more frustrating. Should the new rail link open, I have seen no from Metrowest or from NSC about how many passengers the hourly train would be able to take from Pill. The likelihood must be that the bulk of all traffic generated by 600 new homes would pass straight onto the A369 going into Bristol or to junction 19 of the motorway. These would require light controlled measures to allow traffic to exit the site as well as pedestrian crossings to allow new residents to access buses. I have seen no evidence that NSC has made any realistic studies of the likely amount of traffic needing to feed onto the A369 and have seen no evidence that they have worked with National Highways to find a solution that National Highways think will work (given the fact that they have always denied requests for crossings over the A369 in the past, even for active travel purposes, and that carrying capacity of the A369 seems to be around its limit given the congestion daily in evidence where the A369 meets with Winterstoke rd and the Cumberland Basin in Bristol). The transport issues at least, demonstrate how unsuitable this site is for development. It cannot be sustainable nor play a role in the community as there is so little opportunity for access to the village from this site and no real reason to try if all you are doing is living there in order to access Bristol or the M5.	Do not allow this site to leave the greenbelt. A small extension of maybe 30 homes around the existing farm buildings would help with local housing need and not jeopardise the agricultural, rural and natural importance of the site nor put its very strong greenbelt purpose under threat. These could be designed and provided by local housing initiatives thus avoiding the need for commercial developers to be involved and so keep costs and house prices at a much more sustainable rate,.		
62862401	Sustainable Pill & District		Sustainable Pill & District	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	Please note this comment has also been uploaded as an attachment, to ensure the reader can access internet links. Pill Green Plan inconsistencies in relation to flood risk Markham Brook (within the Pill Green site) is culverted at certain points and connects to the tidal River Avon. The majority of the site is within Flood Zone 3a. A small area along the boundary also falls into the functional floodplain (Flood Zone 3b). Whilst this section of the plan recognises some mitigations are necessary to prevent flooding, it is not consistent with principles of Policies DP9 (Flood risk) and DP10 (Sustainable drainage) since it fails to address the wider implications of future flood risk for the village of Pill. The increased speed of water run-off from all the roofs and surfaced areas of a housing development of 600 homes will have a dramatic effect on the brook itself and the woodland habitat it flows through. As shown on the NSC planning map (with flood risk and surface water ticked), the drains from the Markham fields on the SW side of the woodland merge with Markham brook close to the fire station in the centre of the village. There will be an increased flood risk in the village below. There is no reference to mitigations dealing with risk in this section of the Local Plan (and none elsewhere in the Plan), contrary to the principles set out in Policies DP9 and DP10. This section of the Local Plan is therefore ineffective and Unsound. Plan inconsistencies in relation to protection of wildlife habitats and Ancient Woodland	In order to make the Local Plan legally compliant and sound, there should be a re-assessment of the of the five sites around Pill and Easton-in Gordano for housing development and their identification collectively as a Strategic Location. The submitted comments on behalf of Sustainable Pill and District demonstrate considerable lack of community engagement, which fails the test for Legal Compliance and falls well below the engagement with communities in the other Strategic Locations referred to in the Plan. The comments also make clear that significant weaknesses exit in the assessment of these sites and in the application of ‘exceptional circumstances’ to justify their release from the Green Belt for housing development. Furthermore, weaknesses in site-specific policies indicate insufficient time and consideration has been given to the policies for this Strategic Location, likely due to its late inclusion in the Plan. A pause in the process of approving this Plan is requested so that the Pill and Easton-in Gordano Strategic Location can be re-assessed, following adequate and effective engagement with the local community.		25_P_1413_OUT-NATIONAL_HIGHWAYS_COMMENTS-3514484.pdf Comments on Schedule 1, Page 276.docx Comments on Policy LP4.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								There is no reference to any strategies or policies which deal with protection of habitats for the wildlife living on this site. This land is within consultation zones for the North Somerset & Mendip Bats Special Area of Conservation (SAC) for both Greater and Lesser Horseshoe Bats. This is shown on the NSC planning map https://n-somerset.gov.uk/my-services/planning-building-control/planning-map Markham Farm fields have notable wildlife species present, including Red Data species (animals classified on the IUCN Red List as being at high risk of extinction) such as linnet, lapwing and skylarks that live there year round and breed on the fields. The old hedgerows of Markham Farm fields possess very high species counts, encouraging masses of butterflies, crickets, multiple species of insect pollinators and many species of wild flowers. This site also includes Ancient Woodland, clearly marked both on the Natural England Inventory (https://naturalengland-defra.opendata.arcgis.com/datasets/ancient-woodland-england/explore?location=51.469515%2C-2.678230%2C13.97) and on the NSC planning map (https://map.n-somerset.gov.uk/dande.html) The National Planning Policy Framework 2024 states in paragraph 193c (page 56): "development resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland and ancient or veteran trees) should be refused, unless there are wholly exceptional reasons and a suitable compensation strategy exists" https://assets.publishing.service.gov.uk/media/67aafe8f3b41f783cca46251/NPPF_December_2024.pdf) Not only should there be a minimum of 15 metre buffer zone from the edge of the woodland (and in this case the site qualifies for considerably more buffer zone), but there should be fencing or other obstructions to any public access. The lack of sufficient protection for wildlife and Ancient Woodland in this section of the Local Plan demonstrates inconsistency with the following policies: SP11 (Historic & Natural Environment), DP35 (Nature Conservation) DP36 (Biodiversity Net Gain) and the protection of wildlife and Ancient Woodland on this site is not covered elsewhere in the Local Plan. This inconsistency makes this section of the plan ineffective and it is Unsound. Failure to comply with Duty to Co-operate in relation to National Highways and Neighbouring Local Authority It is likely that the bulk of all traffic generated by 600 new homes on this site would pass straight onto the A369 going into Bristol or to Junction 19 of the M5 motorway. These would require controlled measures to allow traffic to exit the site, as well as pedestrian crossings to allow new residents to access buses. It is evident from evidence from transport data set out in the comment on Policy LP4 - attached) that there is significant congestion on the A369, which meets with Winterstoke Road and the Cumberland Basin in Bristol. This section of the plan provides no indication of co-operation with National Highways or with Bristol City Council to provide solutions to traffic congestion which will result from the development of 600 homes on this site. This indicates a failure of the Duty to Co-operate, making this section of the Local Plan Unsound.			
62802913	Pill & Easton-in-Gordano Parish Council		Pill & Easton-in-Gordano Parish Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The Parish Council objects to Pill Green (HE2015) for 600 dwellings under LP4. Universal drop-in opposition—no one spoke in favour; all cited unsustainable traffic (~30% parish increase), no viable road access, "fictional" active travel routes, and irreparable Markham Brook damage (contradicting EIP 2025's ancient woodland protections and NFM via buffers). This is the largest and most damaging of the five LP4 sites, lying entirely in the Green Belt and containing floodplain woodland, ancient woodland and priority habitat. Not Positively Prepared – 600 homes would increase the parish housing stock by around 30% in one go, completely overriding our Neighbourhood Plan (81 % referendum support 2021) which caps growth at 150–200 homes to 2038. Not Justified – The Sustainability Appraisal ignores Defra MAGIC maps showing over 55 % of the site is floodplain woodland in Flood Zones 2/3 and ancient woodland at Markham Bottom. The proposed active travel overbridge and continuation of Bridleway LA8/33/40 would destroy irreplaceable habitat with no 15 m buffer and no compensation strategy (NPPF para 193c; Natural England Standing Advice 2024). No evidence proves this is “grey belt” or that exceptional circumstances exist (NPPF para 148). The Sustainability Appraisal contains no assessment of the loss of best and most versatile agricultural land. The vast majority of the site is classified as Grade 2 (very good quality) with significant pockets of Grade 1 (excellent quality) according to Defra’s Provisional Agricultural Land Classification (see attached screenshot from magic.defra.gov.uk). This is prime farmland that the NPPF (para 119 and Planning Practice Guidance) says should only be developed as a last resort after all reasonable lower-grade alternatives have been exhausted. No such alternatives assessment has been carried out, rendering the allocation not justified (NPPF para 36(b)). Not Effective – The council’s own Infrastructure Delivery Plan (Oct 2025, §8.3) labels M5 Junction 19 upgrades and Pill flood-risk management as high-risk and unfunded. Adding ~840 peak-hour car trips (1.4 cars/home) from this site alone – on top of Portishead growth and expanding dock HGV traffic – has no evidenced mitigation and no funded solution**. National Highways has raised unresolved objections to the cumulative impact on Junction 19 capacity and safety. In the absence of any robust assessment or deliverable mitigation, the allocation fails the effectiveness test (NPPF para 36(c)) and would cause severe residual impacts on the strategic road network (NPPF para 116). The site-specific requirements admit no increased surface water run-off is permitted and flood mitigation is needed downstream, yet no viable scheme is shown. The primary school and Markham Brook overbridge are unfunded and cross third-party land with no delivery mechanism. Inconsistent with National Policy & Legally Non-Compliant – Direct loss of irreplaceable habitat (para 193c), failure of sequential flood test (para 174), breach of Green Belt policy (para 148), and Localism Act 2011 (developer-led, ignoring 2,000-signature petition). Duty to Cooperate failed: no joint work with Environment Agency or Natural England on flood/habitat solutions. The Feb consultation listed HE2015 as a standalone village site (600 homes indicative), not strategic—yet June Cabinet aggregated it into LP4 without re-consulting on cumulative harms, misrepresenting objections as 'localised' support (para 3.21) This site alone risks the entire Local Plan being found unsound.	Delete Pill Green (HE2015) in its entirety from Schedule 1 and the proposals map. Revert to the July 2024 spatial strategy under which this land remained protected Green Belt with no strategic allocation. 								7. Pill Green Breaches NPPF 159 – No Sequential Test for Non-Green-Belt Sites (Excellent sustainable transport links make urban/brownfield viable) 8. Request Independent Verification of “Exceptional Circumstances” Before Any Pill Green Consent 9. Cap Village Growth at <5% per site. (Reference: 1. 2017 JSP and previous Local Plan allocations, 2. NPPF 11 & 130(f): plans must be “deliverable” and avoid “adverse impacts” on local character and services. 3. Inspector decisions: Local Plan examinations have found allocations causing >10% population increase to be unsound unless supported by exceptional infrastructure evidence, which is absent here.)	disproportionate impact on village populations, defined as <5% increase in population by 2041.’ Allocations in villages with a population under 10,000 must not result in a population increase of more than 5% from any single site unless exceptional circumstances are independently verified and full infrastructure delivery (transport, education, health, drainage) is secured through s106/CIL. Underperformance products across all sites within a settlement must not exceed 20% without a master planned, funded delivery strategy.”		
58533921	Veronique Herzog			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The Plan is unsound (not justified, not effective, and not consistent with national policy) and raises concerns about legal compliance and Duty to Cooperate. Key points: Sustainability Appraisal fails SEA Directive – No assessment of brownfield alternatives to Pill Green (Quote Reg 12 / 2024 Brownfield Register: 2,800+ units ignored) No Duty to Cooperate on Bristol’s 8,000 unmet need (none shown in Pill allocations), no Statement of Common Ground on Bristol’s 1,100-home dump in Pill/Easton-in-Gordano. Green Belt exceptional circumstances not evidenced (NPPF 147), parcel identified as high-performing agricultural land; no sequential test. 44% population bomb on Pill & Easton in Gordano - disproportional & unjustified(600 homes = 24% from one site alone) No deliverability plan for A369, M5 J19, schools or drainage by 2041 (Pill Green undeliverable = ineffective) Brownfield first policy ignored – 2,500+ viable urban units still available (Weston, Portishead, Bristol fringe). Pill Green breaches NPPF 159 – No sequential test for non-Green Belt sites (excellent sustainable transport links make urban/brownfield viable) Request independent verification of “exceptional circumstances” before any Pill Green consent. Cap village growth at <5% per site SEA/SA does not demonstrate reasonable alternatives for Pill/Easton-in-Gordano. No updated Statements of Common Ground with Bristol, B&NES, South Gloucestershire, WECA reflecting higher housing numbers and transport dependencies. Failure to agree redistribution of unmet Bristol need or cross-boundary transport mitigation. No evidence of active cooperation on strategic Green Belt approach.	Delete the Pill Green Site (600 homes) from the LP8 Schedule of Sites or amend Policy LP8 as follows: “No development on Pill Green until exceptional circumstances are independently verified (NPPF para 147) and sequential testing confirms no viable non-Green Belt alternatives are available, prioritising brownfield sites in Weston-super-Mare, Portishead and Bristol fringe. Cap total LP8 allocation across all sites; require full funding (via s106/CIL agreements) for flood defences to 1-in-1000 year standard + 45% climate change allowance, A369 and M5 J19 capacity upgrades, and additional school and GP places alongside associated additional communal infrastructure before granting outline permission. Insert new para 6.79: 'Allocations must demonstrate no disproportionate impact on village populations, defined as <5% increase per site without evidenced need. Allocation in villages with a population under 10,000 must not result in population increase of more than 5% from any single site unless exceptional circumstances are independently verified and full infrastructure delivery (transport, education, health, drainage) is secured upfront via s106/CIL. Cumulative impacts across all sites within a settlement must not exceed 20% without a master planned, funded delivery strategy."	N/A	
62503745	G Hone			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	I want to object to plans for several reasons; 1. Traffic is already terrible going towards m5 and down into Bristol during rush hour or after an accident. More houses here would cause chaos. 2. No assessment of brownfield alternatives to pill. Eg reg 12/2024 brownfield register 2800+ ignored 3. No duty to cooperate on bristols 8000 unmet need eg no statement of common ground and unilateral 1100 home dump in pill/ Easton in gordano. 4. This has been identified as high performing agricultural land with no sequential test therefore green belt exceptional circumstances not evidenced NPPF 147 5. In relation to traffic, there’s no delivery plan therefore it’s ineffective and undeliverable. 6. The 44% extra population is disportionate and unjustified. We are a very tight knit community in pill and live here because of this. We have 2 shops and a post office and 1 chemist which would not be able to cope with the increase of population. There’s already queues and can get very busy during rush hour times. Extra population would cause many issues and services would not be able to provide (eg doctors) for this increase. 7. Concerned about drainage. Water runs behind site at the back of Davin crescent and crockerne drive when rains heavily and goes into a stream into brookside. Concrete and buildings could result in more water causing floods. Or if lots of draining systems could result in lack of water and stream and water flows through pill drying up.	Delete pill green site from lp8 schedules. Allocations in a small village of less than 10000 people should not have a 5% increase of population from any single site.	N/a	
32297377	Graham Hopkins		Pill Parish Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I consider the North Somerset Local Plan 2041: Pre-submission Plan to fall short of soundness, legal compliance and, in parts, the Duty to Cooperate for the following reasons: 1. Consultation and legal requirements The “additional sites” consultation (7 February–21 March 2025) introduced five major sites at Pill/Easton-in-Gordano yet did not include a single local exhibition in the community directly affected. Response levels were significantly lower than in comparable settlements, raising concerns about whether engagement was proportionate or inclusive. The Council should demonstrate how this process met its Statement of Community Involvement and duties under the Equality Act 2010, and how it has taken into account the petition signed by over 1,800 residents. 2. Green Belt release and alternatives assessment The evidence underpinning SP7 does not clearly show that all reasonable non-Green Belt options were properly assessed, including optimising brownfield land, higher densities in sustainable locations and cross-boundary capacity through the Duty to Cooperate. Without transparent publication of this work or the viability information relating to affordable housing delivery, the “exceptional circumstances” case remains unproven. 3. Transport evidence and Duty to Cooperate (Junction 19) The plan lacks readily accessible cumulative traffic modelling for M5 Junction 19 and does not clearly demonstrate agreement with National Highways on mitigation. Given National Highways’ request for cumulative assessment, the Plan must show that this has been undertaken and that risks associated with reliance on the proposed rail link have been fully addressed. 4. Environmental protection/HRA Sites around Pill/E-in-G are close to nationally and internationally protected habitats (SAC/SSSI). The Plan requires clearer, published evidence—HRA, ecological surveys, buffer requirements, and Biodiversity Net Gain commitments—to demonstrate that adverse effects will be avoided and that mitigation is deliverable and funded. 5. Flood risk and sequential testing Some locations, particularly around Markham Brook, lie within or adjacent to Flood Zone 3. The Plan must clearly set out the sequential test, and where necessary the exception test, supported by site-specific Flood Risk Assessments. It should also demonstrate preference for lower-risk sites, safe access/egress and appropriate flood compensation measures.	To ensure the North Somerset Local Plan 2041 is both legally compliant and sound, the following modifications are required: 1. Consultation and compliance • Publish a full audit trail showing how the Additional Sites consultation met SCI standards and the Public Sector Equality Duty, including reasons for the lack of a Pill/E-in-G exhibition. • Undertake a targeted, locally accessible re-consultation for the Pill/E-in-G allocations and clearly set out how the 1,800+ petition responses are to be incorporated into decision-making. 2. Green Belt and alternatives (SP7) • Release a transparent analysis of alternative growth options, including maximised brownfield use, increased density in sustainable settlements and cross-boundary discussions under the Duty to Cooperate. • Revise SP7 to contain robust site-specific exceptional-circumstances evidence and demonstrate that each allocation will meet NPPF Green Belt “Golden Rules” on infrastructure, green space and genuinely deliverable affordable housing. 3. Transport and infrastructure (LP4/Schedule 1) • Provide cumulative traffic modelling for all developments affecting M5 Junction 19 and publish evidence of agreement with National Highways on mitigation and delivery funding. • Strengthen transport policies with a committed mitigation programme, clear phasing and contingency measures if rail enhancements are delayed or amended. 4. Environmental/HRA and biodiversity (SP11, DP35–37) • Publish a complete HRA and updated ecological assessments for all Pill/E-in-G sites, demonstrating that protected species and designated habitats will not be harmed. • Enhance policies to secure enforceable biodiversity mitigation, ecological buffers, long-term monitoring and funded Biodiversity Net Gain delivery. 5. Flood risk (DP9 / DP11) • Apply and publish the sequential test for sites near Markham Brook, with site-specific Flood Risk Assessments for any allocations intersecting Flood Zones 2/3. • Strengthen wording to require safe access/egress, compensatory flood storage and long-term management arrangements for any development in higher-risk areas.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
62719713	Louise Hopkins			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I consider the North Somerset Local Plan 2041 pre-submission Plan not sound and not legally compliant in the following specific respects: 1. The "additional sites" consultation of 7 Feb–21 Mar 2025 (which added five sites around Pill/E-in-G) appears to have been carried out without proportionate local engagement (no local exhibition in Pill/E-in-G and markedly lower response rates compared with other settlements). The Council must demonstrate compliance with its Statement of Community Involvement and its Public Sector Equality Duty (Equality Act 2010) and explain how the 1,800+ community petition was taken into account. 2. The Plan's justification for Green Belt release (SP7) does not, in the published evidence, convincingly show that reasonable alternatives (maximising brownfield and higher density urban options) were fully exhausted, nor that the Duty to Cooperate has secured cross-boundary solutions. The Council should publish the alternatives appraisal, brownfield capacity work, viability statements (re affordable housing), and Duty to Cooperate records. 3. The transport evidence lacks clearly accessible, cumulative modelling and a funded mitigation strategy for M5 Junction 19. National Highways has requested cumulative modelling; the Plan must supply the modelling, agreement in principle with National Highways on mitigation, and contingency if the proposed rail interventions are delayed. 4. The Plan requires robust HRA / protected species surveys and measurable, funded biodiversity mitigation for sites in the Pill/E-in-G area adjacent to SAC/SSSI. The Council must publish the HRA, site surveys, buffer proposals and BNG delivery and monitoring arrangements. 5. Sites in/adjacent to Markham Brook (Flood Zone 3) require the sequential test, any necessary exception tests and site FRAs to be published. The Plan must show that lower-risk sites were preferred and demonstrate safe access/egress, compensation and long-term flood management funding.	To make the North Somerset Local Plan 2041 legally compliant and sound, the following modifications are necessary: 1. Consultation & Legal Compliance • Provide a full Statement of Community Involvement (SCI) compliance report for the 2025 Additional Sites consultation, including justification for the absence of a local event in Pill/Easton-in-Gordano and evidence of compliance with the Public Sector Equality Duty. • Re-consult locally on the Pill/E-in-G sites through a proportionate, accessible, site-specific engagement process, and publish how the 1,800+ petition responses have been formally considered. 2. Green Belt Release (SP7) & Duty to Cooperate • Publish a transparent alternatives appraisal demonstrating maximised brownfield capacity, higher-density urban options, and cross-boundary discussions under the Duty to Cooperate. • Amend SP7 to include clear, site-specific "exceptional circumstances" tests and demonstrate how each site meets NPPF "Golden Rules" on infrastructure, affordable housing (with realistic viability), and publicly accessible green space. 3. Transport & Infrastructure (LP4/Schedule 1) • Publish cumulative transport modelling for all allocations affecting M5 Junction 19, including agreement in principle with National Highways on mitigation and funding. • Include a deliverable transport mitigation plan with phasing, costs, and contingency measures if the proposed rail link is delayed or altered. 4. Environmental Protection, HRA & BNG (SP11, DP35–37) • Provide complete Habitats Regulations Assessment (HRA) and updated ecological surveys for the Pill/E-in-G sites, demonstrating no adverse effects on the North Somerset & Mendip Bats SAC and Severn Estuary SSSI. • Strengthen policies to secure measurable, funded Biodiversity Net Gain, ecological buffers, and long-term monitoring. 5. Flood Risk (DP9 / DP11) • Publish and apply a full sequential test for all sites near Markham Brook and provide site-specific Flood Risk Assessments where Flood Zones 2/3 are affected. • Amend policy wording to ensure safe access/egress, flood storage compensation, and long-term maintenance arrangements for any development in higher-risk areas.		
62545505	M Joyner			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	1. Sustainability appraisal fails SEA directive, no assessment of brownfield alternative to pill green. (Quote reg 12/2024 brownfield register 2,800 units 2. No duty to cooperate on Bristol's 8,000 unmet need. (No statement of common ground, unilateral 1,100 home dump in PIEG) 3. green belt exceptional circumstances not evidenced (NPPF 147) parcel identified as high performing agricultural land, no sequential test. 4. 44% population bomb on pill and Easton in gordano - disproportionate and unjustified, 600 homes =24% from one site alone. 5. No delivery ability plan for A369, M5 j19, schools, to access or drainage by 2041.(Pill green undeliverable= ineffective) 6. Brownfield first policy ignored - 2,500 + viable urban units still available (Weston,portishead, Bristol fringe) 7. Pill green breaches NPPF- 159- No sequential test for non - green -belt sites (excellent sustainable transport links make urban/ brownfield viable) 8. Request independent verification of " exceptional circumstances" before any pill green consent. 9. cap village growth at < 5% per site. reference 1.2017 JSP and previous local plan allocations, 2.NPPF 11& 130 (F) : plans must be deliverable and avoid adverse impacts on local character and services. 3. Inspector decisions: local plan examinations have found allocations causing> 10 % population increase to be unsound unless supported by exceptional infrastructure evidence, which is absent here)	Delete the pill green site (600 homes) from the north Somerset plan schedule of sites or amend policy as follows: "no development on pill green until exceptional circumstances are independently verified (NPPF para 147) and sequential testing confirms no viable non - green belt alternatives are available, prioritizing brownfield sites in Weston - super -mare , portishead and Bristol fringe. Cap total allocation across all sites, require full funding (via s 106 / CIL agreements) for flood defences to 1- in 1000 year standard + 45% climate change allowance, A369 and M5 J19 capacity upgrades, and additional school and GP places alongside associated additional communal infrastructure before granting outline permission. insert new para 6.79: ' allocations must demonstrate no disproportionate impact on village populations, defined as< 5 % increase per site without evidence need. Allocations in villages with a population under 10.000 must not result in a population increase of more than 5% from any single site unless exceptional circumstances are independently verified and full infrastructure delivery (transport, education, health, drainage) is secured upfront via s106/CIL . Cumulative impacts across all sites within a settlement must not exceed 20% without a master planned, funded delivery strategy. "	N/A	
57848577	James Lucas			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	No deliverability plan for M5 j19, there are not enough schools, GP access, dentists etc. and the village will be overwhelmed with this many new homes. There are no extenuating circumstances that justify building on green belt land.	Delete the Pill Green site for the above mentioned reasons, it is not a good idea to build this many homes on green belt land next to a small village	N/a	
62796225	Sian Narracott			No	• Positively prepared • Justified • Consistent with national policy	Unsure	Unsure	The local plan map (Land at Pill Road)shows development extending down to the banks of the Markham Brook. This would not be allowed under NPPF Section 15 para 193c (Page 56)because biodiversity and the ancient woodland (Part of the Markham Brook Ancient Woodland SNCI) on the eastern side of the Brook would be adversely affected. This plan also contradicts the site requirements listed in Schedule 1 Land at Pill Road bullet point 6 The proposed active travel connection between Pill Green and Land at Pill Road across the Markham Brook as shown is unrealistic as the banks of the Brook are several metres deep here with a very changeable depth of water.	Exclude the woodland from the plan and insert a buffer zone of 15m between the woodland and any proposed development. Reroute the active travel route to avoid damaging the biodiversity of the wood or the Brook		
62865057	Alexander Nell			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	I do not consider Policy LP4: Strategic location: Pill and Easton-in-Gordano of the proposed plan to be sound, not legally compliant or not in compliance with the duty to co-operate for the following reasons: 1. Community involvement and methods of consultation. Given the scale of potential change in Pill/E-in-G (e.g., 600 homes at Pill Green alone, plus other sites), the absence of a local event and the relatively small response volume could indicate under-representation of local voices and a lack of proportionate engagement. Do not believe that the Council has complied with its own Statement of Community Involvement. 2. The release of land from the Green Belt Strategic Policy SP7 of the Local Plan does not justify release of land from the Green Belt in these			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								locations This aspect of the Plan is not sound. The Council has not shown that it has fully examined reasonable alternatives, such as maximising brownfield capacity (making the fullest and most efficient use of previously developed land), using minimum density standards (optimising land in towns and cities with higher-density developments. Are there sites in other locations in North Somerset which could be considered for housing development and which are not mentioned in the Local Plan. 3. Significant traffic and transport issues Is this aspect of the Plan is not sound. The Local Plan does not address potential traffic congestion at Junction 19 of the M5 • there is an over-reliance in the Local Plan on the impact of the proposed railway link. • Insufficient evidence in the Local Plan that transport links, including buses and trains, will be sufficient for the proposed number of new homes. 4. The impact on the natural environment and protection of wildlife The Council has not taken sufficient account of the protection of wildlife and habitats in Pill and Easton-in Gordano in its assessment of the release of land from the Green Belt. (SP7) In summary, this is inappropriate location for development.			
57928993	Kevin Payne			No	• Justified • Effective • Consistent with national policy	No	No	I consider the proposed allocation of Pill Green unsound, not legally compliant, and not demonstrably compliant with the Duty to Cooperate for the following reasons: The consultation process in Pill and Easton-in-Gordano was not proportionate to the scale of proposed development. The February–March 2025 consultation included five sites in the area but no local public exhibition. Response volumes were very low: 125 responses from 29 individuals across five sites, compared to much higher numbers in similar areas (Portishead 689, Long Ashton 591, Wrington 484, Nailsea/Backwell 1,049). This indicates that the area did not receive a level of engagement proportionate to the magnitude of proposed development. The Council's own Statement of Community Involvement requires enhanced, targeted engagement where large-scale change is proposed. No such additional engagement was carried out in Pill/Easton-in-Gordano, despite the scale of potential allocation. This means the area did not receive a level of consultation proportionate to the magnitude of proposed development. Over 1,800 residents signed a petition objecting to large-scale housing. This raises serious doubt that the Council complied with its Statement of Community Involvement, the requirement for inclusive consultation, and the Public Sector Equality Duty under the Equality Act 2010. The Parish Council has also confirmed that the community had no meaningful opportunity to consider this scale of change, which further supports the view that consultation was neither adequate nor inclusive. Conclusion: The Local Plan is not legally compliant due to insufficient and non-inclusive consultation in an area facing major change. Strategic Policy SP7 proposes Green Belt release based on "exceptional circumstances," but the Plan does not demonstrate exhaustive examination of alternatives such as maximising brownfield capacity, optimising densities in towns and higher density development, or cross-boundary planning. The Council has already permitted development on Green Belt land near Long Ashton, including the EPIC technology campus, despite concerns about Green Belt protection and local opposition. This suggests a trend of approving development in Green Belt locations without clear exceptional circumstances, reinforcing the concern that Green Belt release at Pill Green is being treated as the default option rather than as a last resort. The Parish Council highlights that Pill/Easton-in-Gordano comprises only 1.9% of North Somerset's electorate, yet the Plan proposes it would accommodate 4.6% of all new housing. This far exceeds the growth cap in the made Neighbourhood Plan (150–200 homes to 2038, supported by 81% of voters). The Parish Council strongly objects to the scale of proposed allocations in the parish. This represents a disproportionately large part of Green Belt release, undermining the principles of a balanced spatial strategy, while suitable sites elsewhere appear not to have been fully assessed. There is also no evidence that North Somerset Council carried out a full comparative assessment of options, as required by the NPPF, including maximising brownfield capacity or higher densities in sustainable urban locations. The evidence base acknowledges that achieving 50% affordable housing may be challenging. Releasing Green Belt without delivering genuinely affordable housing contradicts the NPPF requirement that exceptional circumstances must yield clear community benefits. The lack of affordable housing would undermine the NPPF 'golden rules' required when releasing Green Belt. The site also contains Best and Most Versatile (BMV) agricultural land (Grades 1–3a), which the NPPF requires to be protected unless fully justified. No such justification is provided. Conclusion: The Green Belt release is not justified, and Duty to Cooperate evidence appears incomplete. Transport and infrastructure are not adequately addressed. Junction 19 of the M5 already experiences acute congestion. National Highways raised concerns in relation to the Court Hay application (25/P/1413/OUT) and required cumulative transport modelling. There is no evidence in the Plan that these concerns have been addressed. There appears to be an over-reliance on the proposed railway station without showing that rail and bus services can realistically absorb demand from up to 600 homes at Pill Green plus other sites. The Parish Council has stated that no cumulative transport modelling has been published for Pill Green, Pill Road, Court Hay, Portbury Wharf, and other nearby sites. Without a cumulative assessment, the transport evidence is not reliable or robust. The constrained local network (A369, Pill Centre, Martcombe Road, Pill/E-in-G lanes) has very limited capacity. I live on the A368, which already experiences high traffic volumes, noise, air pollution and strong loud vibrations that rattle windows. The development is likely to increase traffic, worsen noise and vibrations, and create a "noise tunnel" effect, as fields that currently absorb sound are removed. The removal of open fields is likely to amplify road noise due to reflective surfaces and the loss of natural sound-dampening landform, yet no acoustic assessment has been carried out at allocation stage. This is inconsistent with NPPF requirements for assessing environmental impacts before allocating land.	The Plan should be modified by removing Pill Green from Schedule 1 in full. Based on the current evidence, the allocation is not justified, not effective, not legally compliant, and not consistent with national policy. The site performs a significant Green Belt function, has unresolved transport and infrastructure constraints, and the cumulative impacts have not been robustly assessed. For these reasons, the allocation is unsound and should be deleted. If the Council nevertheless proposes to retain Pill Green, the Council must provide the following evidence to demonstrate soundness: • Provide a fully evidenced Green Belt exceptional circumstances case • Provide comprehensive cumulative transport modelling agreed with National Highways • Provide demonstrable compliance with the Statement of Community Involvement • Provide full flood risk sequential testing • Provide site-specific ecological mitigation strategies with funded delivery • Provide confirmation of infrastructure deliverability (school, transport, drainage, health services) • Provide assessment and mitigation of traffic noise and vibration impacts on existing homes, particularly along the A368 which contains mainly old houses over 100 years old.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								These impacts will combine with additional traffic from other allocations, including Pill Road and Court Hay, compounding congestion, noise, and vibration across the local road network. The Plan also fails to demonstrate how increased traffic from Pill Green and other allocations would avoid or mitigate adverse impacts on air quality, contrary to the Local Plan's sustainable development and environmental protection objectives (SP1, SP11, DP37). The proposed Green Belt sites also lie within a civil aerodrome safeguarding area, which imposes restrictions on building heights, layout, and lighting. The Plan does not assess how these constraints would affect the deliverability of the proposed allocation. These impacts are not assessed or mitigated in the Plan. LP4 and Schedule 1 propose school and active travel links, but no funded or deliverable plan. The proposed allocation at Pill Green should be considered in combination with other nearby sites, including Pill Road, Court Hay, Portbury Wharf, and Ham Green. The Plan provides no cumulative assessment of the impacts on traffic, noise, air quality, infrastructure capacity (including schools, healthcare, drainage, and utilities), or local biodiversity. Without this assessment, the transport and infrastructure evidence is not robust, environmental impacts are not mitigated, and the Plan cannot be considered effective, justified, or consistent with national policy. Conclusion: The allocation is not effective, lacking a deliverable transport strategy; and not consistent with national policy, which requires sustainable, well-connected development. Biodiversity and environmental impacts are inadequately addressed. Sites lie within bat SAC consultation zones and near the Severn Estuary SSSI. Pill and Easton-in-Gordano lie within sensitive ecological zones, including: • consultation zones for the North Somerset & Mendip Bats SAC • proximity to the Severn Estuary SSSI • wildlife corridors identified in the Wild Service Ecology Review (2019) The Wild Service Ecology Review (2019) identifies the Pill Green area as part of an important ecological corridor. Development would sever habitat connectivity unless significant mitigation is provided, which the Plan does not set out. The proposed release of Pill Green from the Green Belt (SP7) directly affects sensitive ecological areas identified under SP11 and DP35–DP37. The Plan does not provide site-specific mitigation measures, buffers, or enforceable biodiversity net gain to ensure that protected habitats, ancient and veteran trees, and ecological corridors are safeguarded. Without such measures, the release of this Green Belt land undermines the objectives of SP11 and DP37 and fails to meet NPPF requirements for biodiversity protection. Concerns: • It is unclear whether the Plan has fully assessed impacts on protected species and habitats when proposing the release of Green Belt land (SP7). • Policies SP11, DP35–DP37 lack site-specific mitigation measures, and there is no clear, funded strategy for habitat protection around Pill Green. • The Plan does not demonstrate how measurable biodiversity net gain will be secured or how ecological buffers will be enforced. • High-quality agricultural land near the village does not appear to have been protected, contrary to NPPF Section 15. • The site also contains several ancient and veteran oak trees and lies near sensitive ecological zones, which should be protected under DP37 and the NPPF. The Plan provides no site-specific measures, buffers or measurable biodiversity net gain to comply with NPPF requirements and ensure their long-term protection. Conclusion: The Plan is not consistent with NPPF requirements for protecting designated habitats and ensuring biodiversity gain. Land around Markham Brook and Pill Green includes areas within Flood Zone 3 with both fluvial and tidal risk. There is insufficient evidence that sequential testing was properly applied, as required by the NPPF (NPPF, pp. 49–52) to ensure that lower-risk areas were considered before higher-risk sites. The Parish Council notes that the flood modelling used for this allocation is not suitable for allocation-level decision-making and does not reflect the interactions between tidal and fluvial flows in the Pill/Easton-in-Gordano area. It is also unclear whether LP4 and Schedule 1 provide adequate assurance that future development at Pill Green will avoid high-risk areas or include robust, enforceable mitigation. Sequential testing is unclear, and high-risk areas may be included in the allocation. Lower-risk sites exist elsewhere in the district, meaning Pill Green should have been screened out at an early stage of the sequential test, yet no evidence demonstrates this happened. Policies DP9 and DP11 do not guarantee that flood risk will be avoided or mitigated. Conclusion: The allocation does not meet NPPF requirements on managing flood risk. Without proper sequential testing and mitigation, the allocation fails to meet the NPPF requirements for safe development in areas at risk of flooding. The Pill Green site also forms part of the rural setting separating Pill from Easton-in-Gordano. Its development would visually merge the settlements and erode their landscape character, contrary to NPPF guidance on protecting valued landscapes and settlement identity. No landscape-led assessment appears to have informed this allocation.			
58343489	Michael Poole			No	• Positively prepared • Justified	No	No	No evidence of brownfield sites having been explored as alternatives to Pill Green - in fact 2,000 such units have been ignored. There is no duty to cooperate on Bristol's 8,000 unmet need - certainly not by dumping 1,100 homes on a small settlement like Pill. The Green Belt exceptional circumstances justification does not stand up as this is high-performing arable	Remove the Pill Green site from the LP8 Schedule of Sites or amend Policy LP8 along the lines of : Exceptional circumstances must be independently verified Sequential tests carried out to confirm no viable non-Green Belt sites are available		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					• Effective • Consistent with national policy			land. Increasing the size of Pill and Easton and Gordano by 44% is disproportionate and unjustified - building 600 houses on Pill Green would represent half of that amount from one site alone. There is no cited documentation or data that shows that the plan would be deliverable with regard to traffic management, congestion and pollution on the A369 and the M5 Junction 19 interchange - the same applies to the non-plan for schools and drainage. This makes the overall plan ineffective. The A369 is a single carriageway road already heavily congested and prone to snarl-ups - the J19 interchange is a notorious bottleneck. Emergency vehicles use it as the quickest route to and from hospitals and would be further jeopardised. The local infrastructure would not be able to cope with a near doubling of population - the effect on schools, the GP surgery and other service would highly damaging. This is just not viable. The Brownfield First Policy has been ignored . There are over 2,000 viable urban units available in Weston, Portishead and the outskirts of Bristol. The Pill Green allocation breaches NPPF 159 as no sequential test for non-Green Belt sites has been carried out. An independent verification of “exceptional circumstances “ must be carried before any Pill Green consent can be assumed. Previous Local Plans and the JSP 2017 have envisaged a 5% cap per site on development allocations. NPPF 11 and 130(f) state plans must be “deliverable” and avoid “adverse impacts” on local character and services. No assessment of the existing infrastructure has been made.	Require full funding for flood defences to 1 in 1000 year standard + 45 % climate change allowance Upgrades to the capacity of A369 and M5 J19 Additional school and GP provisions as well as associated additional communal infrastructure before granting outline planning permission Any allocations must be able to show no disproportionate impact on village population without evidenced need - any increase in demographic size beyond 5% on any single site must be demonstrated to be a response to exceptional circumstances independently verified and to have full infrastructure delivery - transport, drainage,education and health. Any increase in population of 20% overall must have a funded delivery strategy.		
51079969	Justin Saunders		Pill and Easton-In-Gordano Parish Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	Yes	The least sustainable of all sites identified in LP4. No requirement or capability to link to the existing community. The impacts on the A369 and Junction 19 have not been planned for and no additional leisure or employment opportunities within the community have been considered. This is grade 2 farmland with ancient woodland adjoining Markham Brook. This woodland is not identified except with the entirely inappropriate active travel route. No upgrades to existing public footpath infrastructure providing safe walking routes or to public transport.	Remove site entirely from LP4 because of the unsustainable location.		
57893697	Kaylee Sayer			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Green belt exceptional circumstances not evidenced (NPPF 147) 44% population boom in Pill which is disproportionate and unjustified No deliverable plans for schools GP or drainage	Delete the pill green site. Cap total allocation across all sites and at least consider all amenities required for a large build. Allocations must demonstrate no disproportionate impact on village populations, defined as less than 5% increase per site without evidenced need.	NA	
30784769	Charlie Sayer		Craddys	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	1. Sustainability Appraisal Fails SEA Directive – No Assessment of Brownfield Alternatives to Pill Green (Quote Reg 12 / 2024 Brownfield Register 2,800+ units ignored) 2. No Duty to Cooperate on Bristol’s 8,000 Unmet Need (No statement of Common Ground; unilateral 1,100-home dump in PLEG) 3. Green Belt Exceptional Circumstances Not Evidenced (NPPF 147) (Parcel identified as high-performing agricultural land; no sequential test) 4. 44% Population Bomb on Pill & Easton-in-Gordano – Disproportionate & Unjustified (600 homes = 24% rise on core site alone) 5. No Deliverability Plan for A369, M5 J19, Schools, GP Access or Drainage by 2041 (Pill Green Undeliverable & Ineffective) 6. Urban First Policy Ignored – 2,500+ Viable Urban Units Still Available (Weston, Portishead, Bristol fringe) 7. Pill Green Breaches NPPF 159 – No Sequential Test for Non-Green Belt Sites (Sequential test places urban/brownfield viable options above urban/unbrownbelt) 8. Request Independent Verification of “Exceptional Circumstances” Before Any Pill Green Consent 9. Cap Village Growth at <5% Per Site. (Reference: 1. 2017 JSP and previous Local Plan allocations, 2. NPPF 11 & 130(f): plans must be “deliverable” and avoid “adverse impacts” on local character and services. 3. Inspector decisions: Local Plan examinations have found allocations causing >10% population increase to be unsound unless supported by exceptional infrastructure evidence, which is absent here.)	Delete the Pill Green Site (600 homes) from the North Somerset Plan Schedule of Sites or amend Policy as follows: “No development on Pill Green until exceptional circumstances are independently verified (NPPF para 147) and sequential testing confirms no viable non-Green Belt alternatives are available, prioritizing brownfield sites in Weston-super-Mare, Portishead and Bristol fringe. Cap total allocation across all sites; require full funding (via s106/CIL agreements) for flood school and GP places alongside associated additional communal infrastructure before granting outline permission; add new para 6.79: ‘Allocations must demonstrate no disproportionate impact on village populations, defined as <5% increase per site without evidenced need. Allocations in villages with a population under 10,000 must not result in a population increase of more than 5% from any single site unless exceptional circumstances are independently verified and full infrastructure delivery (transport, education, health, drainage) is secured upfront via s106/CIL. Cumulative impacts across all sites within a settlement must not exceed 20% without a master-planned, funded delivery strategy.’”	N/A	
62865633	Emily Shopland		Unity Street Chambers	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	1. 711873	Easton-in-Gordano Parish Council		Pill & Easton-in-Gordano Parish Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The Parish Council objects to Pill Green (HE2015) for 600 dwellings under LP4. Universal drop-in opposition—no one spoke in favour; all cited unsustainable traffic (~30% parish increase), no viable road access, "fictional" active travel routes, and irreparable Markham Brook damage (contradicting EIP 2025's ancient woodland protections and NFM via buffers). This is the largest and most damaging of the five LP4 sites, lying entirely in the Green Belt and containing floodplain woodland, ancient woodland and priority habitat. Not Positively Prepared – 600 homes would increase the parish housing stock by around 30% in one go, completely overriding our Neighbourhood Plan (81 % referendum support 2021) which caps growth at 150–200 homes to 2038. Not Justified – The Sustainability Appraisal ignores Defra MAGIC maps showing over 55 % of the site is floodplain woodland in Flood Zones 2/3 and ancient woodland at Markham Bottom. The proposed active travel overbridge and continuation of Bridleway LA8/33/40 would destroy irreplaceable habitat with no 15 m buffer and no compensation strategy (NPPF para 193c; Natural England Standing Advice 2024). No evidence proves this is “grey belt” or that exceptional circumstances exist (NPPF para 148). The Sustainability Appraisal contains no assessment of the loss of best and most versatile agricultural land. The vast majority of the site is classified as Grade 2 (very good quality) with significant pockets of Grade 1 (excellent quality) according to Defra’s Provisional Agricultural Land Classification (see attached screenshot from magic.defra.gov.uk). This is prime farmland that the NPPF (para 119 and Planning Practice Guidance) says should only be developed as a last resort after all reasonable lower-grade alternatives have been exhausted. No such alternatives assessment has been carried out, rendering the allocation not justified (NPPF para 36(b)). Not Effective – The council’s own Infrastructure Delivery Plan (Oct 2025, §8.3) labels M5 Junction 19 upgrades and Pill flood-risk management as high-risk and unfunded. Adding ~840 peak-hour car trips (1.4 cars/home) from this site alone – on top of Portishead growth and expanding dock HGV traffic – has no evidenced mitigation and no funded solution**. National Highways has raised unresolved objections to the cumulative impact on Junction 19 capacity and safety. In the absence of any robust assessment or deliverable mitigation, the allocation fails the effectiveness test (NPPF para 36(c)) and would cause severe residual impacts on the strategic road network (NPPF para 116). The site-specific requirements admit no increased surface water run-off is permitted and flood mitigation is needed downstream, yet no viable scheme is shown. The primary school and Markham Brook overbridge are unfunded and cross third-party land with no delivery mechanism. Inconsistent with National Policy & Legally Non-Compliant – Direct loss of irreplaceable habitat (para 193c), failure of sequential flood test (para 174), breach of Green Belt policy (para 148), and Localism Act 2011 (developer-led, ignoring 2,000-signature petition). Duty to Cooperate failed: no joint work with Environment Agency or Natural England on flood/habitat solutions. The Feb consultation listed HE2015 as a standalone village site (600 homes indicative), not strategic—yet June Cabinet aggregated it into LP4 without re-consulting on cumulative harms, misrepresenting objections as 'localised' support (para 3.21) This site alone risks the entire Local Plan being found unsound.	Delete Pill Green (HE2015) in its entirety from Schedule 1 and the proposals map. Revert to the July 2024 spatial strategy under which this land remained protected Green Belt with no strategic allocation.		Screenshot 2025-12-11 090639.png Markham Brook Ancient Woodland and Priority Habitat Inventory.pdf
32493057	J Spicer			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	No assessment of Brownfield Alternative sites. (Quote regs 12/2024 Brownfield register 2,800 +units ignored.) Green Belt Exceptional circumstances not evidenced. Population growth of 44% disproportionate and unjustified. Cap village growth less than 5%. Adverse impact on local character of Pill. Adverse impact on wildlife and water springs on site.	The green belt not to be built on and alternative brown field sites to be identified and/or used instead. There is no need for additional houses as plenty for sale and some have been on the market for more than a year.	The plans are not sound as mentioned in comments above.	
29025697	P Sterndale			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	I live very close to this site and was unaware of its proposed inclusion in the Local Plan. I was unaware of any consultation and the Council held no local events in Pill or Easton in Gordano to hear residents views despite the scale of the developments. The area around Markham Brook is the recognised site of an ancient woodland. Ancient woodlands have developed over centuries and are now amongst the most fragile and rare of all landscapes in the country. Once damaged they cannot be restored. The damage to the environment outweighs any argument for building on this green belt land . It is unclear where or how a safe crossing over Markham Brook could be achieved. There will be unacceptable impact on both the natural environment and wildlife in this area. The increase in traffic will exacerbate an already congested A369 and a saturated Junction 19 of the M5. The area around Markham Brook has a recognised flood risk, as the valley and parts of the surrounding land are within the Environment Agency's flood Zone 3. This indicates a high probability of flooding.	Remove this site from the Local Plan		
62855681	Kate Travis			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	No assessment of Brownfield alternatives have been laid out (Reg 12/2024) No duty to cooperate on Bristols 8000 unmet need. Why, without any consultation are 1100 houses now being dumped in Easton in Gordano There is no evidence made out by the council that Green Belt exceptional circumstances has been carried out The amount of houses will create a 44% population increases in Pill and Easton in Gordano, which is disproportionate and unjustified - To suddenly make the area a strategic location, just because the train will now pass through pill, once an hour with 3 carriages is not a justification. No plan for A369, M5 Junction 19 Schools or drainage There is no document from Highways England about the impact of these additional houses will have on the junction 19 roundabout. I believe they have been asked to produce one, will the council publish it? As a local, the roundabout at present is not fit for purpose. I note there are similar planning for additional houses in Portishead, which will put even more added strain on Junction 19 Pill Green breaches NPPF 159 Can the council make sure a independent verification of Exceptional Circumstances is made	No development on Pill Green until exceptional circumstances are independently verified. Cap total LP8 allocation against all sites and require full funding for flood defences, additional schools and GP places The allocation of houses must demonstrate no disproportionate impact on the village population We have seen many times in previous developments. The infrastructure is just an after thought.		
62848513	Rik Vanhoutteghem			No	• Positively prepared • Justified • Effective • Consistent with	No	No	1. Currently traffic backs up frequently on Ham Green Hill. Increasing the population of Pill and Easton in Gordano by over 40% in one fell swoop, over 20% in one site only (Pill Green) seems disproportionate and unjustified and will add massively to traffic congestion and parking problems and interfere with the ability of the local Bus service X4 to function smoothly. 2. This is treasured Green belt. There appears to be no evidence (NPPF 147) of exceptional circumstances and no evidence of sequential testing.	Removal of Pill Green site (600 homes) from the LP8 Schedule of sites.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					• national policy			3. The SEA Directive on Sustainability Appraisal has been ignored. There is failure to demonstrate Brownfield sites as an alternative to Pill Green. What will be left for wildlife to make a home, if this site is developed. 4. Deliverability plan for A369, J19 on M5 is lacking as is school places and management of drainage by 2041. Pill Green development is undeliverable. 5. Development of Pill Green breaches NPPF 159 due to absence of Sequential Testing for Non Green Belt sites in the proximity. 6. Brownfield first policy has been ignored. 7. Village Growth should be capped at <5% per site based on 1.2017 JSP and previous local plan allocations 2. NPPF 11 &130(f) plans must be deliverable and avoid impacts on local character and services. 3.Inspector decisions precedents: Local Plan examinations have found allocations causing a greater than 10% population increase to be unsound unless supported by exceptional infrastructure evidence which is lacking here. 8. There is no duty to cooperate on the unmet need of 8.000 homes in Bristol. Statement of common ground is lacking and there appears to be a unilateral and disproportionate allocation of 1100 new homes in PIEG.			
32593313	Robert Walker			No	• Consistent with national policy	No	No	The site is designated as prime agricultural land in green belt and national policy is that brownfield sites or sites of lesser agricultural grade should be used first. I also consider that the shear number of dwellings is being forced on us and that we have not been properly consulted. I also consider this site if developed for 600 homes will cause massive road congestion both at J19 M5 and at the other end of the A369 Ashton gate. Please note that the recent Airport expansion has massively increased traffic using this road. Covering this large greenfield site with housing and hard standing will result in increased water flooding and run off down into the Pill centre, I do not think this has been considered. The notion that this site is well served by green transport such as cycle paths is not realistic because of the topography few will want to cycle into Bristol because of the hills especially in bad weather. The Buses are likely to become full up and also get stuck in traffic rendering the service unreliable.	More consultations and first make use of brownfield sites. Have a more realistic plan with a lot less development that will not overload local services and spoil local landscape.		
62471329	Environment Agency		Environment Agency						The development proposals must include details of ongoing maintenance for the Markham Brook watercourse. Vehicle access strips next to the Markham Brook should be retained for future maintenance and emergencies. Flood risk will need to be mitigated within the development sites so as not to increase the flood risk downstream. The nearby culvert and pumping station have a maximum capacity. There must be no increased run off as a result of these developments to ensure the current flow rates are retained (or reduced) into the culvert at the fire station, through to the Markham Book pumping station. Any increase in flow could impact how effectively the pumping station operates at high tides.		
58041921	Richard White			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	NPPF (para 187) requires plans to take full account of environmental impacts and to avoid/mitigate adverse effects, including Habitats Regulations Assessments (HRA). The proposed development sites around Pill lie within consultation zones for the North Somerset & Mendip Bats Special Area of Conservation (SAC), with proximity to the Severn Estuary Site of Special Scientific Interest (SSSI). Where sites are adjacent to or affect SSSI, SAC or other habitats sites, or form important wildlife corridors, development proposals must avoid significant harm, apply buffers and secure measurable net gains for biodiversity (paras 193-5). The woodland alongside Markham Brook between this site and the Land at Pill Road is largely undisturbed ancient woodland and should be protected from development, including bridges. Details of protected species and habitats can be found in the Wild Service Ecology Review undertaken on behalf of the Neighbourhood Plan Steering Group in 2019. https://pillanddistrictplan.org/environment-and-landscape/wild-service-ecology-review/ As noted elsewhere NPPF section 15 requires that the best and most versatile agricultural land around the village is protected, most of the land proposed for delisting from the Green Belt and for housing development is Grade 2 (very good) https://publications.naturalengland.org.uk/publication/6713148559065088 Assessment of land removed from Green Belt inadequate, The 'additional sites viability addendum' suggests meeting the affordable housing targets may be 'challenging' for the proposed sites in existing Green Belt land around Pill and Easton-in-Gordano. No evidence of planning how commuter traffic will be be prevented from filtering out through the village or into the village. Inadequate consideration of potential traffic congestion at M5 J19 Concerns raised by National Highways (see NSC planning portal, ref 25/P/1413/OUT). The National Highways report stated that transport modelling is required to assess the cumulative impact of developments on M5 J19. No evidence offered in the Local Plan that transport links, including buses and trains, will be sufficient for the proposed number of new homes. Flood risk increased from this development elsewhere in the village: Environment Agency maps indicate water drains down through the village centre to the River Avon mostly via the Markham Brook. No assessment of what happens with increased rainfall and rising sea levels, a storm and a storm surge. No consultation has been held with competent persons in the village. Over-reliance on the impact of the proposed railway link. Inadequate consultation	Environmental Impact Assessment to be completed by competent persons in consultation with community groups. Substantial buffer zone to Markham Brook and between the site Land at Pill Road. Full open consultation. Traffic modelling Traffic calming measures to prevent/deter traffic from this development leaving through the village to Heywood Road, Ham Green/Pill Road		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
62840705	Kirstie Wilkins			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The Council held four public exhibitions (Long Ashton, Weston-super-Mare, Nailsea, Backwell), but none in Pill/E-in-G, despite five sites being consulted on in this area. Response volumes were markedly lower for Pill/E-in-G (125 responses from only 29 individual respondents across 5 sites) than for comparable locations: Portishead: 689 responses for 5 sites, Long Ashton: 591 responses for 10 sites, Wrington: 484 responses for 5 sites, Nailsea and Backwell: 1,049 responses for 26 sites. Given the scale of potential change in Pill/E-in-G (e.g., 600 homes at Pill Green alone, plus other sites), the absence of a local event and the relatively small response volume could indicate under-representation of local voices and a lack of proportionate engagement. Has the Council complied with its own Statement of Community Involvement? Was this consultation sufficiently inclusive? Has there been legal compliance with duties under the Equality Act 2010, including the Public Sector Equality Duty?			
55930049	S Tomlinson			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	Unsure	Not legally compliant -Lack of consultation with the the local community in stark contrast to other strategic sites -No justification or evidence for this amount of development in this location -No assessment of road capacities within the village to accomodate the increase in car and bus traffic Not Sound The only justification offered for this site seems to be the train station which is yet to be built. Even if it is built the station and car park are sized for a community of the current size not one that will be almost 50% bigger with this development. Pill has only one main road through that will take buses but no assessment of its capacity has been made nor mitigations for the bottlenecks where buses cannot pass. The current bus service is unreliable especially at peak times due to congestion coming out of Portishead for Eastbound buses or out of Bristol for westbound, bottlenecks along the Lodway and HamGreen where buses cannot pass each other. Increasing the service frequency is likely to make congestion worse. Heavy reliance is placed on Active travel improvements to keep people out of their cars and yet the transport studies recognise that the topography of the area will make take up of this challkenging. The only mitigation offered is to promote e-bikes. No evidence is offered for effective this is likely to be.	Take this site out of the plan		

Land at Pill Road

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
30597761	Cat Abel			No	• Justified • Consistent with national policy	Unsure	Unsure	This site includes part of the Markham Brook Ancient Woodland SNCI within the proposed site boundary. The Woodland itself should be excluded from development and a buffer zone of at least 15m should be inserted between the woodland and the proposed site. Including this Ancient riparian woodland in site proposed for housing contradicts the National Planning Police Framework (Dec 2024), which states in paragraph 193c (page 56) that: "development resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland and ancient or veteran trees) should be refused, unless there are wholly exceptional reasons (70) and a suitable compensation strategy exists." Exceptional reasons do not apply to this site. Inclusion of the Markham woodland in this site also contradicts other policies within this Local Plan itself, such as DP35, DP37 (which states that “Development proposals affecting existing trees and hedges must demonstrate that: ... Ancient woodland and veteran/ancient trees are protected.”) and DP38 Moreover, an active transport link is proposed to cross the woodland and the stream, linking the 2 development sites on either side (labelled Pill Green with 600 dwellings and Land at Pill Road with 100 dwellings). This is not a realistic proposal, with the very steep banks of the stream (approximately 4-8 meters drop from top of the bank to the water) and a highly fluctuating depth of water in the stream) Not all ancient woodland features ancient trees, but Markham bottom features trees of a great age span, from young to mature to veteran specimens, along with both standing and fallen dead wood. These all contribute to a diverse ecosystem of plants, fungi, lichens, insects and other invertebrates, birds and mammals, including a specialist species only found in this habitat. Some of these (like greater and lesser horseshoe bats which are both present) are also protected	The Woodland itself should be excluded from development and a buffer zone of at least 15m should be inserted between the woodland and the proposed site. The proposed active travel link must be relocated to where it does not interfere with or cause damage to the woodland or the stream.		
62795393	Julian Bowyer			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I am concerned about the increased traffic on Pill Road (A369) I regularly commute from Ham Green to Bristol on the cycle path that is adjacent to the A369. To do this I have to cross this already busy road. more traffic will make this harder & more dangerous for cyclists crossing the road & people accessing the bus stop.	Further community involvement & easily accessible/understandable information demonstrating that this issue has been considered. A pedestrian/cycle crossing on the A369 would help mitigate this issue, it could be placed where there is already a small island on the A369 (not far from the junction with Blackmoor road & not far from the bus stop) Reducing the number of proposed dwellings would help limit the increase in traffic to a safer level that he road to cope with.		
58517153	Matt Burley			No	• Positively prepared • Justified • Effective • Consistent	No	No	Dependent on Markham Brook bridge to secure safe routes to school; highway verge widening and crossings required; flood buffer and runoff limits further constrain net capacity.	Remove or phase behind delivery of the Markham Brook active-travel bridge and safe routes to school; require widened verge/crossings and flood buffers before any approval.		Schedule 1 Site Specific Objections.pdf

					with national policy						
62850369	Maureen Butterly			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Key Issues 1. Severe Highway Constraints Pill Road is narrow with limited visibility and no continuous pavement. It cannot safely accommodate significant additional vehicle, pedestrian, or cycle traffic. Required active travel upgrades appear physically undeliverable. 2. Flood Risk Proximity The site is close to flood-prone land near Markham Brook. Sequential and exception tests have not been properly demonstrated. 3. Ecological Harm Contains hedgerow corridors used by horseshoe bats and other protected species. No detailed ecological surveys have been provided. 4. Landscape Sensitivity Development would extend built form into the open rural valley leading toward the brook. 5. Reliance on Unproven Infrastructure The policy requires active travel connectivity and contributions to a new school. These are not shown to be viable or deliverable.	Remove or reduce this allocation unless the council can evidence: safe and deliverable road and active travel improvements, no increased flood risk, ecological mitigation adequacy, and absence of landscape harm.		
58534849	Richard Clarke			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	There was minimal to no consultation for this area compared to other areas that are to be developed to this scale. there were no public events and many residents were/are completely unaware of the scale of development planned and have not had a reasonable chance to have their say. This is completely unacceptable and does noy uphold the Councils own Statement of Community Involvement. The council is planning to build on Green Field sites without having first considered all reasonable alternatives such as Brownfield land and other more suitable alternatives within North Somerset. Furthermore, the Councils own Golden Rules do not appear to have been met. Has the Council taken into account and funded the work needed to protect wildlife on the greenbelt land and also to deal with the flood risks that the proposed building will cause. Th local plan does not address the ongoing problem with the massive overuse of Junction 19 and the A369, both of which will be massively exacerbated by increased building at this level. The X4 bus is one of the most successful and cost effective in the area yet it is completely reliant on junction 19 and the A369 running smoothly. The slightest incident, roadworks or match at Ashton Gate stadium delay the bus sometimes by over an hour making it completely unusable. Further traffic on the road will add to increased unreliability of public transport thus making more commuters take to their cars! This is opposed to Council objectives. The proposed small hourly train service will not be a replacement for the X4 bus which runs every 20 minutes and on a much larger timetable. The train cannot be relied on to mitigate the extra traffic caused by the proposed building let alone deal with the current ongoing issues. There is also a concern that at peak times the train will already be full of Portishead passengers by the time it reaches Pill. The roadwork issues need to be addressed and resolved the proposed train is not an answer to this. The pavements in Pill are already completely inadequate and in some cases non existent. The council needs to fully asses the increased risks to pedestrians from extra houses/cars and make firm and costed plans to mitigate these risks.	Full and reasonable consultations and events to positively engage the community. Reassess the impact on Green Belt land following the Golden Rules and consider the use of Brown Field and other sites prior to destroying Green Belt and Grade 1 agricultural land. Full flood assessment and alternative lower flood risk sites should be considered To cooperate fully and be advised by National Highways regarding traffic management and the already above capacity road networks		
62842145	A Franklin			No	• Justified	No	No	The Plan proposes to remove substantial areas of land from the Green Belt on the basis of “exceptional circumstances.” From the evidence available, this justification appears weak, incomplete, and potentially unsound. Key concerns: (a) Reasonable alternatives have not been fully explored There is insufficient evidence that the Council has maximised: • brownfield redevelopment capacity, • high-density opportunities in existing urban areas,			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								• partnerships with neighbouring authorities, all of which are required before Green Belt release can be justified. (b) Failure to demonstrate compliance with the “Golden Rules” for Green Belt land Even if release were justified, development must deliver: • substantial affordable housing, • publicly accessible green space, • infrastructure improvements. Yet the Local Plan’s own viability evidence states that 50% affordable housing may be “challenging” on Pill-area Green Belt sites. This directly undercuts the justification for release. (c) Lack of evidence that other potential non-Green-Belt sites have been assessed If other suitable sites exist elsewhere in North Somerset but were not included in the assessment, then the “exceptional circumstances” claim does not meet national policy requirements.			
62796513	R Griffiths			No	• Positively prepared • Justified • Effective	Unsure	Unsure	The proposal has not been subject to a meaningful community engagement by North Somerset Council in the local area. The proposal is likely to result in significant changes to the local community. Is likely to result in significant traffic and transportation issues. M5 junction 19 is already subject to significant congestion. North Somerset council has progressed with the local plan before National Highways have completed their assessment of M5 J19. The benefits ascribed to potential future railway links (which do not as yet exist) are not justified with sufficient evidence. May result in removal of land from the Green Belt without adequate assessment of alternative Brownfield options Is likely to have a significant impact upon the natural environment and the protection of wildlife Could exacerbate potential flood risks	Removal of proposal from plan		
58529729	Rob Harvey			No	• Justified • Effective	Unsure	No	This small site has a significant problem; proximity to the ancient woodland running alongside markham Brook. The buffer zone should be at least 15 metres (I see no evidence that NSC have contacted Natural England to establish how much bigger than 15 metres the special conditions of this woodland demand the buffer zone to be) and it should be guarded by fencing or other device to prevent damaging public access. This protection precludes the provision of an active travel bridge across markham Brook. Natural England states that simple alternatives should be sought to prevent damage to these irreplaceable trees/habitat and simple solutions for active travel to other parts of Pill/Ham green/Easton in Gordano exist in terms of providing a cycle lane around Haberfield Hill and onto the Pill road and/or the narrow access points at Cross Lanes (to go to Easton) and onto Brookside to easily access the primary school, Pill centre). The woodland site must be protected from other disturbance; noise, lighting and pollution which could damage ancient trees and disturb nesting birds, bats e..t.c..; I feel this would suggest a smaller development than previously proposed. I am not convinced that NSC have done due diligence in terms of studies of how to remove waste and run off water from this site without it ending up in Markham Brook and putting flood pressures on the centre of Pill. Much of the site is angled towards the brook	Reduce the numbers of houses proposed. Keep a buffer zone of circa 30 metres or more from the ancient woodland to help avoid run off, disturbance e.t.c.. Ensure measures are in place to prevent public access to the ancient woods. Find a way to drain the site that doesn't take waste water and run off into Pill. Site the active travel link elsewhere so that it does not lead to the destruction of irreplaceable woodland.		
62862401	Sustainable Pill & District		Sustainable Pill & District	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Please note this comment has also been uploaded as an attachment to ensure the reader can activate internet links. Land at Pill Road Plan inconsistencies in relation to flood risk Markham Brook (within the Land at Pill Road site) is culverted at certain points and connects to the tidal River Avon. The majority of the site is within Flood Zone 3a. A small area along the boundary also falls into the functional floodplain (Flood Zone 3b). Whilst this section of the plan recognises some mitigations are necessary to prevent flooding, it is not consistent with principles of Policies DP9 (Flood risk) and DP10 (Sustainable drainage) since it fails to address the wider implications of future flood risk for the village of Pill. The increased speed of water run-off from all the roofs and surfaced areas of a housing development of 600 homes will have a dramatic effect on the brook itself and the woodland habitat it flows through. As shown on the NSC planning map (with flood risk and surface water ticked), the drains from the Markham fields on the SW side of the woodland merge with Markham brook close to the fire station in the centre of the village. There will be an increased flood risk in the village below. There is no reference to mitigations dealing with risk in this section of the Local Plan (and none elsewhere in the Plan), contrary to the principles set out in Policies DP9 and DP10. This section of the Local Plan is therefore ineffective and Unsound.	In order to make the Local Plan legally compliant and sound, there should be a re-assessment of the of the five sites around Pill and Easton-in Gordano for housing development and their identification collectively as a Strategic Location. The submitted comments on behalf of Sustainable Pill and District demonstrate considerable lack of community engagement, which fails the test for Legal Compliance and falls well below the engagement with communities in the other Strategic Locations referred to in the Plan. The comments also make clear that significant weaknesses exit in the assessment of these sites and in the application of ‘exceptional circumstances’ to justify their release from the Green Belt for housing development. Furthermore, weaknesses in site-specific policies indicate insufficient time and consideration has been given to the policies for this Strategic Location, likely due to its late inclusion in the Plan. A pause in the process of approving this Plan is requested so that the Pill and Easton-in Gordano Strategic Location can be re-assessed, following adequate and effective engagement with the local community.	Please see uploaded documents	Comments on Schedule 1, Page 276.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Plan inconsistencies in relation to protection of wildlife habitats and Ancient Woodland There is no reference to any strategies or policies which deal with protection of habitats for the wildlife living on this site. This land is within consultation zones for the North Somerset & Mendip Bats Special Area of Conservation (SAC) for both Greater and Lesser Horseshoe Bats. This is shown on the NSC planning map https://n-somerset.gov.uk/my-services/planning-building-control/planning-map Markham Farm fields have notable wildlife species present, including Red Data species (animals classified on the IUCN Red List as being at high risk of extinction) such as linnet, lapwing and skylarks that live there year round and breed on the fields. The old hedgerows of Markham Farm fields possess very high species counts, encouraging masses of butterflies, crickets, multiple species of insect pollinators and many species of wild flowers. This site also includes Ancient Woodland, clearly marked both on the Natural England Inventory (https://naturalengland-defra.opendata.arcgis.com/datasets/ancient-woodland-england/explore?location=51.469515%2C-2.678230%2C13.97) and on the NSC planning map (https://map.n-somerset.gov.uk/dande.html) The National Planning Police Framework 2024 states in paragraph 193c (page 56): "development resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland and ancient or veteran trees) should be refused, unless there are wholly exceptional reasons and a suitable compensation strategy exists" https://assets.publishing.service.gov.uk/media/67aafe8f3b41f783cca46251/NPPF_December_2024.pdf) Not only should there be a minimum of 15 metre buffer zone from the edge of the woodland (and in this case the site qualifies for considerably more buffer zone), but there should be fencing or other obstructions to any public access. The lack of sufficient protection for wildlife and Ancient Woodland in this section of the Local Plan demonstrates inconsistency with the following policies: SP11 (Historic & Natural Environment), DP35 (Nature Conservation) DP36 (Biodiversity Net Gain) and the protection of wildlife and Ancient Woodland on this site is not covered elsewhere in the Local Plan. This inconsistency makes this section of the plan ineffective and it is Unsound.			
62802913	Pill & Easton-in-Gordano Parish Council		Pill & Easton-in-Gordano Parish Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The Parish Council objects to Land at Pill Road (HE20492) for 100 dwellings under LP4. Every resident we've spoken with strongly opposed this site, no support voiced, only fact-based concerns on flood risks, habitat loss and undeliverable connections. This Green Belt site south of Markham Brook is undeliverable due to severe flood risk, habitat destruction and lack of infrastructure. Not Positively Prepared – Further erodes our Neighbourhood Plan (81 % referendum support 2021) which caps total growth at 150–200 homes to 2038. Not Justified – The Sustainability Appraisal and site requirements ignore Defra MAGIC evidence that the site lies in Flood Zones 2/3 and directly abuts Markham Brook floodplain woodland and ancient woodland. The required active travel connection and overbridge would destroy irreplaceable habitat with no 15 m buffer and no compensation strategy (NPPF para 193c; Natural England Standing Advice 2024). No proof this is "grey belt" or that exceptional circumstances exist (NPPF para 148). The Sustainability Appraisal contains no assessment of the loss of best and most versatile agricultural land. The entire site is classified as Grade 2 (very good quality) according to Defra's Provisional Agricultural Land Classification (see attached screenshot from magic.defra.gov.uk). This is prime farmland that the NPPF (para 119 and Planning Practice Guidance) says should only be developed as a last resort after all reasonable lower-grade alternatives have been exhausted. No such alternatives assessment has been carried out, rendering the allocation not justified (NPPF para 36(b)). Not Effective – Undeliverable. The site-specific wording admits "no increased surface water run-off will be permitted" and "flood risk mitigations will be needed downstream", yet no viable scheme is evidenced. The Markham Brook overbridge is unfunded, crosses third-party land, and relies on the equally undeliverable Pill Green allocation (600 homes). IDP Oct 2025 (§8.3) confirms flood-risk management and J19 upgrades are high-risk and unfunded. Inconsistent with National Policy & Legally Non-Compliant – Direct loss of irreplaceable habitat (para 193c), failure of sequential flood test (para 172-175), and breach of Green Belt policy (para 148). Duty to Cooperate failed: no joint work with Environment Agency on flood mitigation or Natural England on habitat protection.	Delete Land at Pill Road (HE20492) from Schedule 1 and the proposals map. Revert to the July 2024 spatial strategy under which this land remained protected Green Belt with no strategic allocation.		ALC Defra MAGIC Pill Sites Grades 1 and 2 Dec2025.png Markham Brook Ancient Woodland and Priority Habitat Inventory.pdf
62857921	Charles Herring		none	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The amount of traffic travelling through Ham Green, Haberfield Hill and Pill Road - is already significant and unsustainable. Currently If you wish to exit Ham Green onto the A369 onto the Markham Rd you can be waiting up to 10 minutes to exit for a space in traffic to get out. If you try to exit the village in the other direction, the other exit means you have to negotiate Ham Green Hill where residents park on the road on both sides, turning the road into a one way thorough fare. This can also be the case through the village precinct, especially when buses are there, and through the remaining narrow roads throughout the village. It makes no sense to add another 100 properties which will exit onto ham green and further add to the already erroneous traffic situation. Combine that with school pick up times for st catherines school, and the traffic parked on both sides of the road outside the school going past the cricket pitch, makes this a totally unrealistic site for this number of properties.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								I understand this state is currently designated as green belt and to my knowledge there has been no consultation with the residents on the removal of this land protection. Parts of which are designated as ancient woodland. Green Belt No resident Consultation with residents.			
62796225	Sian Narracott			No	• Positively prepared • Justified • Consistent with national policy	Unsure	Unsure	The local plan map (Land at Pill Road)shows development extending down to the banks of the Markham Brook. This would not be allowed under NPPF Section 15 para 193c (Page 56)because biodiversity and the ancient woodland (Part of the Markham Brook Ancient Woodland SNCI) on the eastern side of the Brook would be adversely affected. This plan also contradicts the site requirements listed in Schedule 1 Land at Pill Road Bullet point 6 The proposed active travel connection between Pill Green and Land at Pill Road across the Markham Brook as shown is unrealistic as the banks of the Brook are several metres deep here with a very changeable depth of water.	It is imperative that the active travel route is rerouted to avoid damaging the biodiversity of the wood or the Brook		
62865057	Alexander Nell			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	Land at Pill Road I do not consider Policy LP4: Strategic location: Pill and Easton-in-Gordano of the proposed plan to be sound, not legally compliant or not in compliance with the duty to co-operate for the following reasons: 1. Community involvement and methods of consultation. Given the scale of potential change in Pill/E-in-G (e.g., 600 homes at Pill Green alone, plus other sites), the absence of a local event and the relatively small response volume could indicate under-representation of local voices and a lack of proportionate engagement. Do not believe that the Council has complied with its own Statement of Community Involvement. 2. The release of land from the Green Belt Strategic Policy SP7 of the Local Plan does not justify release of land from the Green Belt in these locations This aspect of the Plan is not sound. The Council has not shown that it has fully examined reasonable alternatives, such as maximising brownfield capacity (making the fullest and most efficient use of previously developed land), using minimum density standards (optimising land in towns and cities with higher-density developments. Are there sites in other locations in North Somerset which could be considered for housing development and which are not mentioned in the Local Plan? 3. Significant traffic and transport issues Is this aspect of the Plan is not sound. The Local Plan does not address potential traffic congestion at Junction 19 of the M5 • there is an over-reliance in the Local Plan on the impact of the proposed railway link. • Insufficient evidence in the Local Plan that transport links, including buses and trains, will be sufficient for the proposed number of new homes. 4. The impact on the natural environment and protection of wildlife The Council has not taken sufficient account of the protection of wildlife and habitats in Pill and Easton-in Gordano in its assessment of the release of land from the Green Belt. (SP7) In summary, this is inappropriate location for development.			
57928993	Kevin Payne			No	• Justified • Effective • Consistent with national policy	No	No	I consider the Pill Road allocation to be unsound for the following reasons: 1. Traffic capacity and congestion - Pill Road already carries significant levels of through-traffic and is used as a key route for residents, commuters, delivery vehicles, and agricultural vehicles. Sections of the road are narrow, with limited pavements, restricted visibility, and no dedicated cycling infrastructure. The Local Plan does not provide evidence that the road network can accommodate additional housing without severe residual impacts. The Parish Council has highlighted that these conditions make the site particularly sensitive to extra traffic, increasing risks for pedestrians, schoolchildren, and cyclists. 2. Noise, air pollution and vibration impacts on existing residents - Homes along Pill Road already experience noticeable noise and traffic vibration. Additional housing will increase traffic and intensify these impacts. Removing the surrounding open fields will also reduce natural sound absorption, potentially creating a “noise tunnel” effect, as well as exacerbating noise and vibration impacts already experienced along the A368, worsening residential amenity. The Parish Council has emphasised that older properties along Pill Road and the A368 are particularly vulnerable to these impacts. The Plan contains no evidence of noise assessment or mitigation. The Plan also fails to demonstrate how increased traffic from Pill Green and	The Pill Road allocation should be removed from the Local Plan. If it is retained, the Council must provide robust evidence of cumulative transport impacts, demonstrate that noise and vibration effects on existing residents (particularly along Pill Road and the A368) will be properly assessed and mitigated, confirm that road safety risks are addressed for pedestrians, cyclists, and schoolchildren, and provide a deliverable, funded strategy for active travel and transport improvements. Without this evidence, the allocation remains unsound.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								other allocations would avoid or mitigate adverse impacts on air quality, contrary to the Local Plan's sustainable development and environmental protection objectives (SP1, SP11, DP37) 3. Cumulative transport impacts not assessed - The Pill Road site sits in combination with Pill Green, Court Hay, and other proposed allocations. National Highways has raised concerns about cumulative traffic impacts at Junction 19 of the M5. The Local Plan does not include cumulative transport modelling for Pill Road or other nearby sites. The Parish Council stresses that cumulative impacts on traffic, safety, and local infrastructure have not been properly considered, undermining the effectiveness of the allocation. 4. Lack of realistic mitigation - Policy wording refers to "active travel improvements" but provides no detail on funding, timetable, or deliverability. Without clear, evidence-backed mitigation, the allocation cannot be considered effective. 5. Conflict with Neighbourhood Plan - The proposed development at Pill Road directly conflicts with the Pill & Easton-in-Gordano Neighbourhood Plan, which was supported by 81% of voters and limits growth on principle. No evidence is provided to justify overriding this local policy. Conclusion For these reasons, the Pill Road allocation is not justified, not effective, and not consistent with national policy.			
51079969	Justin Saunders		Pill and Easton-In-Gordano Parish Council	No	• Positively prepared • Justified • Effective	No	Yes	One of the more sustainable locations identified in LP4 however a significant buffer 15m is required to the ancient woodland. The active travel route across the Markham Brook is unsustainable crossing ancient woodland. Provision of improved space for bus turning points for when Pill is closed to buses (happens at least 2-3 weeks a year) to provide public transport access for the deprived areas of Pill in the circumstances. Active travel route should cross site and link with existing incomplete paths from Haberfield Bridge to Pill Road rather than going to ancient woodland.	Site plan to take into account existing concerns.		
711873	Easton-in-Gordano Parish Council		Pill & Easton-in-Gordano Parish Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The Parish Council objects to Land at Pill Road (HE20492) for 100 dwellings under LP4. Every resident we've spoken with strongly opposed this site, no support voiced, only fact-based concerns on flood risks, habitat loss and undeliverable connections. This Green Belt site south of Markham Brook is undeliverable due to severe flood risk, habitat destruction and lack of infrastructure. Not Positively Prepared – Further erodes our Neighbourhood Plan (81 % referendum support 2021) which caps total growth at 150–200 homes to 2038. Not Justified – The Sustainability Appraisal and site requirements ignore Defra MAGIC evidence that the site lies in Flood Zones 2/3 and directly abuts Markham Brook floodplain woodland and ancient woodland. The required active travel connection and overbridge would destroy irreplaceable habitat with no 15 m buffer and no compensation strategy (NPPF para 193c; Natural England Standing Advice 2024). No proof this is "grey belt" or that exceptional circumstances exist (NPPF para 148). The Sustainability Appraisal contains no assessment of the loss of best and most versatile agricultural land. The entire site is classified as Grade 2 (very good quality) according to Defra's Provisional Agricultural Land Classification (see attached screenshot from magic.defra.gov.uk). This is prime farmland that the NPPF (para 119 and Planning Practice Guidance) says should only be developed as a last resort after all reasonable lower-grade alternatives have been exhausted. No such alternatives assessment has been carried out, rendering the allocation not justified (NPPF para 36(b)). Not Effective – Undeliverable. The site-specific wording admits "no increased surface water run-off will be permitted" and "flood risk mitigations will be needed downstream", yet no viable scheme is evidenced. The Markham Brook overbridge is unfunded, crosses third-party land, and relies on the equally undeliverable Pill Green allocation (600 homes). IDP Oct 2025 (§8.3) confirms flood-risk management and J19 upgrades are high-risk and unfunded. Inconsistent with National Policy & Legally Non-Compliant – Direct loss of irreplaceable habitat (para 193c), failure of sequential flood test (para 172-175), and breach of Green Belt policy (para 148). Duty to Cooperate failed: no joint work with Environment Agency on flood mitigation or Natural England on habitat protection.	Delete Land at Pill Road (HE20492) from Schedule 1 and the proposals map. Revert to the July 2024 spatial strategy under which this land remained protected Green Belt with no strategic allocation. 29190241	Waddeton Park Ltd (Land at Pill Road)	Alder King Planning Consultancy	Waddeton Park Ltd	Yes		Yes	Yes		Waddeton Park Limited strongly supports the proposed allocation of its land within the new local plan for development. However, it has drawn attention to the indicative site capacity and site requirements laid out for the Land at Pill Road in the Pre-Submission Plan. Related amendments are, therefore, proposed. For clarity, and for the avoidance of uncertainty and unnecessary delays in determining the future planning application, Waddeton Park suggests that it would be appropriate for a modification to be made to the proposed allocation wording to the extent that development would permit up to 100 dwellings and a care home. The allocation should be worded to specifically 'permit up to 100 dwellings' and additionally 'support, but not require, a care home on the site' (or similar wording). In this regard, there is a demonstrable need for older persons housing in North Somerset over the	Waddeton Park Limited's view is that the Local Plan is legally compliant regarding the proposed site allocation for residential development at Land at Pill Road in Pill (Schedule 1 of the Local Plan, page 280), to which these representations relate. Moreover, Waddeton Park Limited believes that the proposed Local Plan, as set out in the Regulation 19 consultation can be found to be sound in that that the allocation of the land at Pill Road, Pill for residential	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									plan period to 2041, as supported by the 'North Somerset Local Housing Need Assessment Report of Findings, September 2025' (LHNA). Figure 49 of the LHNA, which forms part of the local plan evidence base, quantifies the need for specialist older person housing to 2041. This sets out that there would be need to provide an additional 1,400-1,500 specialist older person housing units over the 15-year plan period 2026-2041. Therefore, the need for this type of development is clear and should be appropriately accommodated for in the local plan. The appended illustrative masterplan outlines one way in which a care home could appropriately form part of the development scheme, in addition to 100 dwellings on the site. Waddeton Park proposes that the following requirement is removed from being a site requirement: "Active travel connection required between Pill Green and Land at Pill Road, crossing Markham Brook to enable creation of safe walking routes to schools, along with proportionate contribution to Markham Brook active travel overbridge." Waddeton Park suggests that it would be appropriate for a modification to be made to the proposed allocation to remove this element as a 'site requirement'. Firstly, the site has appropriate accessible connections for future residents to walk to St Katherine's School opposite. This site already benefits from safe walking routes to schools; therefore, it is onerous and unreasonable to expect development on the site to fund/deliver additional connections where not necessary to make the site itself acceptable in planning terms. As assessed within the appended Transport Technical Note, the site's accessibility review shows that the key desire line to travel from the site is to Pill village centre along Pill Road north and St Katherine's secondary school opposite the site. To the north, Pill Road also connects to Crockerne Primary School. Overall, access to day-to-day facilities and amenities for education, shopping, and community uses is primarily towards the north and east (to the secondary school). In addition, there are existing PRoWs opposite the site on Pill Road for recreational walks. Therefore, it does not seem reasonable for the Land at Pill Road site to have to deliver and/or contribute to the delivery of the connection over Markham Brook to the west as this is not necessary for future residents. The sustainability credentials of the site without this link are clearly acceptable; the delivery of the land at Pill Road without any reliance on the Pill Green land should be wholly supported. It seems the benefit of such connection would be for the Pill Green site (draft allocation for 600 dwellings) and, as such, should this connection be necessary it should be delivered by that site. Furthermore, an 'overbridge' to Markham Brook is very likely to be impractical and unrealistic physically, given the sloping valley and steep topography around the brook, and it is likely to have detrimental effects upon trees and biodiversity. Furthermore, the financial implications could risk the viability of the land at Pill Road allocation coming forward for development and this would materially affect the Council's housing position. Finally, fundamentally the requirement for an active travel bridge over Markham Brook is not considered to be necessary, as set out in the appended Transport Technical Note. There is no desire line to travel to the south/west of the site, as this has excellent accessibility to local facilities and amenities in the village centre and the secondary school is conveniently located opposite the site. These proposed minor changes need not be a matter of any significance for the examination but could be a modification proposed by the Council before submission of the Local Plan to the Secretary of State, and as a minor change should not trigger a need for any further consultation.	development (identified on page 280 under Schedule 1) is consistent with each of the tests of soundness insofar as they are directly relevant. These representations are supported by the appended Transport Technical Note, prepared by Ridge, which supports the sustainability of the land at Pill Road for development. The land at Pill Road site allocation is part of the proposed means of implementing the spatial strategy, which has been properly arrived at through the identification of properly explained strategic options and their testing through sustainability and deliverability evidence and appraisals, and through stakeholder and community consultation. It is, therefore, a proper product of the positive preparation of the Local Plan and is justified. This forms part of the spatial strategy in appropriately directing strategic growth at Pill and Easton-in-Gordano under Policy LP4. The allocation of the site will be effective, in that it will assist in making the Local Plan deliverable. The site is wholly in one ownership and free of any significant constraints so its development can begin and be completed in the early years of the local plan period. The allocation is consistent with national policy and with the policies in the emerging Local Plan which is to be examined according to relevant national planning policy. It is clear that exceptional circumstances exist, and have been appropriately evidenced, to justify release of Green Belt land to support growth to meet North Somerset Council's identified housing need for the plan period. Paragraph 148 of the NPPF is clear that where it is necessary to release Green Belt land for development, as is established and agreed in North Somerset, plans should give: "priority to previously developed land, then consider grey belt which is not previously developed, and then other Green Belt locations." In this regard, Waddeton Park has consistently promoted the land at Pill Road throughout the emerging local plan process and strongly supports its allocation for residential development in the plan. The site is sustainably located with a strong relationship with the existing settlement of Pill. This strong cohesion between site and settlement is a significant benefit in allocating residential development here. The site is well located to the existing settlement with good accessibility to local services and in walking distance to key facilities. Pursuant to the Council's 'Spatial strategy, site selection and capacity paper' (October 2025), Pill/Easton-in-Gordano is identified as a Category A village which are described as "villages considered to be relatively sustainable in their own right with a range of easily accessible services and facilities and goof public transport links to towns". The Council's approach is wholly appropriate to direct growth to such settlements. It is highlighted that work to reopen the railway line has commenced with Pill train station set to reopen by 2028 which will only further enhance the existing sustainability of the settlement. The land at Pill Road has been appropriately and comprehensively assessed as suitable through the SHLAA and adjoins a Category A village in a sustainable location where exceptional circumstances for Green Belt release have been identified. With regard to the Green Belt, the site has	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										been assessed by the Council, as part of a slightly larger land parcel, within the 'Stage 2 Green Belt Assessment' (October 2025), as delineated below (see attached document). The overall assessment of this parcel concludes it makes a weak contribution to the purposes of the Green Belt. This is set out in turn as follows: Purpose A - to check the unrestricted sprawl of large builtup area; (Bristol): Weak Purpose B - to prevent neighbouring towns merging into one another: Weak Purpose C - to assist in safeguarding the countryside from encroachment: Moderate Purpose D - to preserve the setting and special character of historic towns: Weak Purpose E -To assist in urban regeneration, by encouraging the recycling of derelict and other urban land: Neutral Further to this, as can be seen in the Green Belt assessment, our Waddeton Park's land makes a weak contribution to Green Belt purposes A, B and D. There are no relevant footnote 7 assets that would provide a strong reason for refusing or restricting development on the land. Therefore, this can be considered Grey Belt, subject to the specifics of the development proposal. The Council's Stage 2 Green Belt assessment agrees with this position in that the parcel can be identified as Grey Belt. This wholly supports the Council's approach to allocate development on the land, in accordance with the provisions of NPPF paragraph 148 which first priorities previously developed land and then Grey Belt land before any other Green Belt locations. The site is easily accessible, being within walking and cycling distance to a number and facilities and services within the village and nearby. This includes St Katherine's School opposite the site to the east. The site is available in the short term and can be delivered as a standalone development, without dependency on any major infrastructure intervention. The residential development has been driven by the context and topography, and by a wish to achieve an appropriate network of green infrastructure, positively responding to the woodland around Markham Brook to the west. The site is within Flood Zone 1 and, therefore, having a low risk of flooding and being appropriate for residential development. It is the preferred location under the flood sequential approach to selection of housing sites. Supporting technical surveys and assessments have been carried out to inform the development allocation. Demonstration of the deliverability of development on the site is the intention to submit an outline planning application for development of the site, following pre-application discussions with the Council, shortly after the close of this Regulation 19 consultation. This will ensure development can be brought forward in the early years of the plan and supports the requirement for the Council to identify "specific, deliverable sites for five years following the intended date of adoption." (NPPF paragraph 72). Overall, the proposed allocation on land at Pill Road is strongly supported. Comment is, however, made with regard to the site-specific deliverability of the development, with regard to the site requirements as set out on page 280 of the published Reg 19 Pre-submission Plan for the proposed allocation.	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										In this context, the draft allocation makes provision for an indicative capacity of 100 dwellings on the site. Pursuant to the work undertaken to date the site may also be able to accommodate a care home, ensuring an efficient use of land and meeting a need for such facilities. As illustrated on the appended illustrative masterplan, a scheme is currently being progressed via pre-application discussions for 100 dwellings and a c. 70-bed care home. It is appropriate that the supporting wording for the allocation is amended to reflect this potential development, without making it an absolute requirement. The site can comfortably and appropriately accommodate a care home in addition to traditional residential dwellings, which will make a significant contribution in an area where there is demonstrable need. In accordance with the enclosed plan, key elements of Waddeton Park Limited's development proposal on the land at Pill Road include: • New homes generally to the eastern boundary with lower density residential frontage towards the woodland; • Policy compliant affordable housing; • Care home in accessible location in the north of the site with views across landscape edge and woodland, providing a sensitive response to existing dwellings in St Catherine's Mead; • Vehicular access from Pill Road; • Pedestrian/cycle and potential emergency access connection to the north of the site, serving a foot/cycle path which runs north/south within the site; • Mobility hub, with potential for electric scooter/bicycle hire, bicycle parking, car club space, parcel lockers and occasional events (i.e. food truck); • Traffic management to help create a low speed environment; • Potential for pedestrian crossing of Pill Road to Public Right of Way running east; • Pedestrian/cycle access to Pill Road linking with existing bus stop, serving a foot/cycle path which runs north/south within the site; • Potential for improved crossing/traffic management along Pill Road; • Wildlife area with informal recreation; • Northern pocket park responding to existing space in St Catherine's Mead; • Multi-functional green corridor with swale, footpath and new planting; • Open space with play area in an accessible location, helping to retain an open character at the gateway to the village; • North to south swale within landscape edge to woodland. • New and retained hedgerow to south of vehicular access, along the eastern boundary with Pill Road, helping to retain a green character on the entrance to the village; • Green corridor with significant tree planting on site high point to help soften views; • Attenuation pond within landscape corridor.	
29025697	P Sterndale			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	I live very close to this site and was unaware of its proposed inclusion in the Local Plan. I was unaware of any consultation and the Council held no local events in Pill or Easton in Gordano to hear residents views despite the scale of the developments. The area around Markham Brook is the recognised site of an ancient woodland. Ancient woodlands have developed over centuries and are now amongst the most fragile and rare of all landscapes in the country. Once damaged they cannot be restored. The damage to the environment outweighs any argument for building on this green belt land . It is unclear where or how a safe crossing over Markham Brook could be achieved. There will be unacceptable impact on both the natural environment and wildlife in this area. The increase in traffic will exacerbate an already congested A369 and a saturated Junction 19 of the M5. The inevitable increase in water run-off, despite mitigation, will cause flooding further down hill in the centre of Pill, and area already prone to flooding. Remove this site from the Local Plan			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
58041921	Richard White			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	NPPF (para 187) requires plans to take full account of environmental impacts and to avoid/mitigate adverse effects, including Habitats Regulations Assessments (HRA). The proposed development sites around Pill lie within consultation zones for the North Somerset & Mendip Bats Special Area of Conservation (SAC), with proximity to the Severn Estuary Site of Special Scientific Interest (SSSI). Where sites are adjacent to or affect SSSI, SAC or other habitats sites, or form important wildlife corridors, development proposals must avoid significant harm, apply buffers and secure measurable net gains for biodiversity (paras 193-5). The woodland alongside Markham Brook between this site and the Land at Pill Road is largely undisturbed ancient woodland and should be protected from development, including bridges. Details of protected species and habitats can be found in the Wild Service Ecology Review undertaken on behalf of the Neighbourhood Plan Steering Group in 2019. https://pillanddistrictplan.org/environment-and-landscape/wild-service-ecology-review/ As noted elsewhere NPPF section 15 requires that the best and most versatile agricultural land around the village is protected, most of the land proposed for delisting from the Green Belt and for housing development is Grade 2 (very good) https://publications.naturalengland.org.uk/publication/6713148559065088 Assessment of land removed from Green Belt inadequate, The 'additional sites viability addendum' suggests meeting the affordable housing targets may be 'challenging' for the proposed sites in existing Green Belt land around Pill and Easton-in-Gordano. No evidence of planning how commuter traffic will be be prevented from filtering out through the village or into the village. Inadequate consideration of potential traffic congestion at M5 J19 Concerns raised by National Highways (see NSC planning portal, ref 25/P/1413/OUT). The National Highways report stated that transport modelling is required to assess the cumulative impact of developments on M5 J19. No evidence offered in the Local Plan that transport links, including buses and trains, will be sufficient for the proposed number of new homes. Over-reliance on the impact of the proposed railway link. Inadequate consultation	Environmental Impact Assessment to be completed by competent persons in consultation with community groups. Substantial buffer zone to Markham Brook and between the site Land at Pill Road. Full open consultation. Traffic modelling Traffic calming measures to prevent/deter traffic from this development leaving through the village via Ham Green/Pill Road		
62840705	Kirstie Wilkins			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The Council held four public exhibitions (Long Ashton, Weston-super-Mare, Nailsea, Backwell), but none in Pill/E-in-G, despite five sites being consulted on in this area. Response volumes were markedly lower for Pill/E-in-G (125 responses from only 29 individual respondents across 5 sites) than for comparable locations: Portishead: 689 responses for 5 sites, Long Ashton: 591 responses for 10 sites, Wrington: 484 responses for 5 sites, Nailsea and Backwell: 1,049 responses for 26 sites. Given the scale of potential change in Pill/E-in-G (e.g., 600 homes at Pill Green alone, plus other sites), the absence of a local event and the relatively small response volume could indicate under-representation of local voices and a lack of proportionate engagement. Has the Council complied with its own Statement of Community Involvement? Was this consultation sufficiently inclusive? Has there been legal compliance with duties under the Equality Act 2010, including the Public Sector Equality Duty?			

Land at Ham Green

					policy						
62866369	H Burnand			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Sustainability appraisal fails SEA Directive - Brownfield sites not considered Green Belt exception circumstances not evidenced No deliverability plan for A369 - mitigation is not evidenced 44% population bomb	delete the Land at Ham Green site from Schedule of Sites adhere to climate change allowance adhere to claims not to increase village sizes disproportionately	n/a	
62850369	Maureen Butterly			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Summary The allocation of 40 dwellings at Ham Green is not sound. The site suffers from: constrained access via a private road (Perrett Way) requiring major upgrades; no demonstrated engineering feasibility for the required highway works; severe pedestrian and cycling constraints; proximity to sensitive ecological habitats; lack of safe or direct active travel connections; conflicts with the character of Ham Green and the rural setting; cumulative traffic impacts on already overburdened infrastructure (A369, J19); and no evidence that development can deliver the necessary mitigation in a viable or environmentally acceptable way. 1. Access via Perrett Way is fundamentally unsuitable The policy states that development must “upgrade and extend Perrett Way as highway with pedestrian facilities (currently private road).” However: Perrett Way is narrow, lightly constructed, and not designed for adoption as a highway. It lacks footways, lighting, drainage capacity and turning space. There is no evidence that widening or upgrading is physically or financially feasible. Certificate of title / land ownership constraints are not addressed. No swept-path or safety analysis has been published. This renders the allocation not effective and not justified. 2. No safe pedestrian or cycle access to village schools, shops or services Even if Perrett Way were widened: the route to Pill remains indirect, steep in places, and unsafe for walking and cycling; the A369 corridor is already heavily trafficked and hazardous for non-motorised users; no deliverable active travel link from Ham Green to the central transport hub or proposed rail station is shown. This contradicts SP10, DP15, DP16, SP1 and the Plan’s broader sustainable transport objectives. 3. Cumulative traffic effects have not been assessed Although the site is small, it is part of the 1,100-home growth cluster around Pill/Easton-in-Gordano. No cumulative modelling has been provided for Ham Green + Pill Road + Pill Green + Lodway Farm + Gordano Services. Additional trips would funnel into already congested junctions, including the A369 / Pill Road junction and J19 of the M5. National Highways has already expressed concern over additional growth impacts in this area. Without a cumulative impact assessment, the site is not justified. 4. Ecological sensitivity is under-assessed Ham Green lies within key ecological zones, including: North Somerset & Mendip Bats SAC consultation area, locally important hedgerow corridors, proximity to the Severn Estuary SSSI influence zone. Yet: no site-specific ecological surveys have been published,	To make the Plan sound, the following modifications are required: 1. Remove the Ham Green allocation unless safe and feasible access can be demonstrated Require the council to publish: a detailed engineering feasibility report on upgrading Perrett Way; land ownership confirmation; adoption standards compliance; safety, drainage, visibility and swept-path analysis. If these cannot be evidenced, the allocation should be deleted. 2. Require a deliverable, safe active travel route connecting Ham Green to Pill centre and the proposed rail station If such a route cannot be demonstrated: the allocation should be removed, or drastically reduced to reflect local constraints. 3. Require cumulative transport modelling including all Pill/E-in-G sites and J19 / A369 impacts If modelling shows impacts cannot be mitigated, the allocation must be removed. 4. Require full ecological assessment and bat activity modelling for the site If harm to SAC bat species cannot be mitigated: the allocation must be deleted. 5. Require a landscape and visual assessment (LVIA) If development would cause unacceptable rural character harm, the site should be removed. 6. Demonstrate infrastructure capacity (schools, GP, drainage) If capacity cannot be secured, the allocation must be reduced or removed. Summary Modification Because of untested access requirements, ecological constraints, landscape impacts, unsafe pedestrian/cycle connectivity and cumulative		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								bat activity and commuting routes are not mapped, lighting impacts near woodland edges are not assessed, no mitigation land is identified. This conflicts with SP11, DP35, DP36 and the Habitats Regulations. 5. Landscape and settlement character harm Ham Green has a distinct rural character with: mature trees, green edges, traditional field patterns, and a clear separation from denser village centres. Development here would: extend built form into sensitive landscape, erode rural character, increase coalescence with existing development clusters. No LVIA has been provided, rendering the site not justified. 6. Infrastructure delivery is uncertain The Plan provides no evidence of capacity or feasibility for: foul drainage and wastewater treatment; sustainable drainage (SuDS) given the site's topography; GP / healthcare capacity; school capacity (especially given the cumulative 1,100 homes proposed nearby). This makes the allocation not effective.	traffic effects, the allocation at Ham Green cannot currently be considered sound. It should be removed, or retained only at a significantly reduced scale, pending robust evidence that it can be delivered safely, viably and with no unacceptable environmental or transport impacts.		
58534849	Richard Clarke			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	There was minimal to no consultation for this area compared to other areas that are to be developed to this scale. there were no public events and many residents were/are completely unaware of the scale of development planned and have not had a reasonable chance to have their say. This is completely unacceptable and does noy uphold the Councils own Statement of Community Involvement. The council is planning to build on Green Field sites without having first considered all reasonable alternatives such as Brownfield land and other more suitable alternatives within North Somerset. Furthermore, the Councils own Golden Rules do not appear to have been met. Has the Council taken into account and funded the work needed to protect wildlife on the greenbelt land and also to deal with the flood risks that the proposed building will cause. Th local plan does not address the ongoing problem with the massive overuse of Junction 19 and the A369, both of which will be massively exacerbated by increased building at this level. The X4 bus is one of the most successful and cost effective in the area yet it is completely reliant on junction 19 and the A369 running smoothly. The slightest incident, roadworks or match at Ashton Gate stadium delay the bus sometimes by over an hour making it completely unusable. Further traffic on the road will add to increased unreliability of public transport thus making more commuters take to their cars! This is opposed to Council objectives. The proposed small hourly train service will not be a replacement for the X4 bus which runs every 20 minutes and on a much larger timetable. The train cannot be relied on to mitigate the extra traffic caused by the proposed building let alone deal with the current ongoing issues. There is also a concern that at peak times the train will already be full of Portishead passengers by the time it reaches Pill. The roadwork issues need to be addressed and resolved the proposed train is not an answer to this. The pavements in Pill are already completely inadequate and in some cases non existent. The council needs to fully asses the increased risks to pedestrians from extra houses/cars and make firm and costed plans to mitigate these risks.	Full and reasonable consultations and events to positively engage the community. Reassess the impact on Green Belt land following the Golden Rules and consider the use of Brown Field and other sites prior to destroying Green Belt and Grade 1 agricultural land. Full flood assessment and alternative lower flood risk sites should be considered To cooperate fully and be advised by National Highways regarding traffic management and the already above capacity road networks		
62858913	Luke Samuel Charles Evans			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	I object to the allocation of Green Belt land around Pill & Easton-in-Gordano (LP4 / Schedule 1) on the grounds that the Council has not demonstrated exceptional circumstances in accordance with Chapter 13 of the NPPF (2024). The Additional Sites consultation (7 Feb–21 Mar 2025) had a very low local response for Pill (c.125 responses across 5 sites; only 29 individuals), no local exhibition in Pill, and the Consultation Statement does not show proportionate engagement as required by the Council's Statement of Community Involvement. There is inadequate published evidence that reasonable alternatives (maximising brownfield, optimising density, or cross-authority options) were fully tested; transport modelling does not adequately demonstrate that Junction 19 or cumulative impacts have been mitigated; HRA and biodiversity mitigation for SAC/SSSI impacts are not demonstrated; and the Plan fails to show robust sequential flood-risk testing for sites near Markham Brook. For these reasons the allocation is unsound and should be withdrawn until further evidence, proper local consultation, and statutory assessments (HRA, SFRA/FRAs, full transport modelling) are completed and published. Short summary of the case against the allocations 1. The February–March 2025 "additional sites" consultation appears to have been insufficiently local and proportionate for a change of this scale in Pill/E-in-G — contrary to the Council's own Statement of Community Involvement and public sector equality duties; the consultation statement confirms low local response numbers for Pill compared with other settlements. n-somerset.gov.uk+1 2. The Plan's justification for removing land from the Green Belt relies on "exceptional circumstances" under the NPPF (Chapter 13). The evidence must show exhaustive examination of reasonable alternatives (brownfield use, higher densities, cross-boundary cooperation). If that evidence is absent, the Green Belt release is vulnerable. GOV.UK Assets+1 3. Transport evidence is incomplete on cumulative effects (particularly M5 Junction 19). National Highways' responses make clear further transport modelling / co-operation is needed. Reliance on a future rail link and unproven bus/active travel measures is risky. n-somerset.gov.uk+1 4. Ecology / Habitats — the sites lie close to bat SAC consultation zones and the Severn Estuary SSSI and will require robust HRA and measurable net biodiversity gains; the Plan must show credible mitigation and funding. Existing local ecology reports identify constraints. abbotsleigh.org.uk+1 5. Flood risk — parts of the area (Markham Brook valley) fall within Flood Zone 3; the Plan must apply sequential testing and show mitigation/avoidance for housing. The council's SFRA and national flood mapping are relevant.			lukeevans.txt

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Detailed points (with the legal/planning basis) 1) Procedural fairness & adequacy of consultation For a proposal that would re-categorise Pill/E-in-G as a Strategic Location and potentially release multiple Green Belt sites, the council's consultation was not sufficiently local or proportionate. The Consultation Statement records only ~125 responses relating to the Pill area (29 respondents across 5 sites) versus much larger numbers elsewhere; no consultation events were held in Pill despite this being one of the most affected areas. That under-representation raises a realistic procedural unfairness concern and possible failure to follow the Council's Statement of Community Involvement (SCI). n-somerset.gov.uk+1 • Why it matters legally: The SCI sets out how plans should be prepared and consulted on. If the council did not comply with its own SCI, the Plan could be open to challenge at examination or by judicial review for procedural illegality or irrationality. Also consider whether the Council carried out equality screening and complied with the Public Sector Equality Duty (PSED) — e.g. were groups with protected characteristics properly engaged and were reasonable adjustments made? (If there's no evidence of PSED consideration, raise that.) n-somerset.gov.uk 2) Green Belt: "exceptional circumstances" and alternatives Chapter 13 of the NPPF says Green Belt boundaries should only change where "exceptional circumstances" are demonstrated and where reasonable alternatives have been fully considered (brownfield land, higher densities, cross-boundary options). The Plan must show exhaustive, transparent evidence that other options were examined and why they are not sufficient. If the council's evidence base (SHLAA, brownfield capacity work, density appraisals, Duty to Co-operate statements) does not demonstrate that, the justification for removing Green Belt is unsound. GOV.UK Assets+1 • Particular local point: The Additional Sites Viability Addendum reportedly flags that 50% affordable housing would be "challenging" on these Green Belt sites — that undermines any claim that the release will secure clear public benefits (an important part of "exceptional circumstances"). Ask for the viability evidence and sensitivity testing. n-somerset.gov.uk 3) Duty to Co-operate and alternatives across borders The Duty to Co-operate requires strategic engagement with neighbouring authorities where housing needs cross boundaries. The Plan should show what cross-authority options were explored (e.g., maximising higher-density urban sites or brownfield in nearby towns). If the council did not properly evidence co-operation, that is a soundness issue. n-somerset.gov.uk+1 4) Transport and cumulative impacts (Junction 19 / modelling) National Highways has queried cumulative impacts and asked for modelling for Junction 19; the council's own documentation shows National Highways expect to work with NSC and that modelling is required. The Plan appears to rely heavily on a future rail link and new active travel routes — but the timings, funding, and deliverability of these measures must be explicit and evidenced. Without robust cumulative transport modelling (and clear mitigation and funding commitments), the Plan is not sound. n-somerset.gov.uk+1 5) Ecology / Habitats Regulations Assessment (HRA) Sites are within bat SAC consultation zones and close to the Severn Estuary SSSI; HRA may be required and must show no adverse effect on integrity or, if effects are likely, provide lawful mitigation/compensation and secure funding. The Plan must demonstrate measurable biodiversity net gain and appropriate buffers. Local ecological reports (neighbourhood plan evidence, Wild Service reviews) highlight important habitat corridors which must be protected. If the Plan simply allocates sites without clear HRA outcomes, it is unsound and may be unlawful. abbotsleigh.org.uk+1 6) Flood risk and sequential/exception tests Markham Brook valley and other low-lying land are in Flood Zone 3 (high risk). NPPF requires sequential testing (prefer lower-risk sites first) and, where necessary, the exception test with demonstrable mitigation. The Plan must show that lower-risk sites were prioritised or that any allocated sites in Flood Zone 3 are justified by the exception test and will be safe in the long term. If the Plan lacks a clear sequential test and site-by-site flood risk assessment, it is unsound. n-somerset.gov.uk+1 Luke Evans - Resident BS20 0PP			
62842145	A Franklin			No	' Justified	No	No	3. Severe Traffic and Transport Risks (LP4 & Schedule 1) There is no robust transport evidence demonstrating that the local road network—particularly M5 Junction 19—can safely or sustainably absorb the development traffic. Key gaps: • The Local Plan does not reflect the concerns previously raised by National Highways regarding cumulative impacts on J19. • There is no clear evidence that the statutory requirement to co-operate with National Highways has been met. • There is an over-reliance on the unconfirmed railway link to Bristol and Portishead. The Plan assumes modal shift without evidence of service frequency, capacity, reliability, or confirmed delivery timescales. • Bus services in Pill and Easton-in-Gordano are already limited, and the Plan provides no binding commitments or funded proposals to improve them. Given these uncertainties, the transport elements of the plan do not appear "effective", one of the legal soundness tests. ◈ 4. Environmental Harm and Inadequate Protection for Wildlife (SP11, DP35–37) The proposed development areas fall within zones affecting: • the North Somerset & Mendip Bats SAC, • the Severn Estuary SSSI, • established wildlife corridors identified in the Wild Service Ecology Review (2019). The evidence does not demonstrate: • that adverse environmental impacts can be avoided or fully mitigated, • that biodiversity net gain can be achieved, • that appropriate buffers, dark corridors, and habitat protections will be secured, • that funding for environmental mitigation is guaranteed. This is especially concerning given the national significance of the bat SAC and the SSSI. In addition, areas of best and most versatile agricultural land appear to be at risk of development contrary to NPPF Section 15. The environmental components of the Plan therefore appear neither justified nor legally compliant. ◈ 5. Flooding Risk Around Markham Brook (DP9, DP11)			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Parts of Pill, particularly around Markham Brook, fall within Flood Zone 3, representing high flood risk. This should trigger a sequential test, yet the Plan does not clearly demonstrate that: • safer alternative locations were considered first, or • that housing development in higher-risk areas meets national flood safety thresholds. Any development that increases hard surfacing in the valley bottom risks worsening flood risk for existing homes. The Local Plan does not provide detailed mitigation funding, modelling, or infrastructure proposals to reassure residents or comply with the NPPF requirements for flood resilience.			
62802913	Pill & Easton-in-Gordano Parish Council		Pill & Easton-in-Gordano Parish Council	No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	No	No	The Parish Council objects to Land at Ham Green (HE20493) for 40 dwellings under LP4. Drop-in feedback was positive on location for parish needs (especially affordable homes), but unanimous concern over traffic buildup on narrow Perrett Way—residents fear it becoming a rat-run. Still undeliverable overall. Not Positively Prepared – Adds to LP4 overload, overriding Neighbourhood Plan cap despite local support for sensible siting. Not Justified – No evidence that this Green Belt site is “grey belt” or that exceptional circumstances exist (NPPF para 148). The requirement to compulsorily upgrade and extend the private Perrett Way as public highway has no landowner agreement, no costed scheme, and no viability assessment. Not Effective – Undeliverable. Perrett Way is a narrow private road serving existing homes; turning it into a through-route for 40+ new houses will create traffic, safety and privacy issues for current residents. No funding or delivery mechanism is identified for the upgrade or the 'proportionate contribution' to wider active travel routes. Cumulative impact with the other four LP4 sites remains unmodelled (NPPF para 116). Inconsistent with National Policy & Legally Non-Compliant – Breaches Green Belt policy (para 148) and risks infringing private property rights without due process.	Delete Land at Ham Green (HE20493) from Schedule 1 and the proposals map, if retained post-LP4 withdrawal, cap at 20–30 affordable homes with Perrett Way safeguards (no through-traffic)		
711873	Easton-in-Gordano Parish Council		Pill & Easton-in-Gordano Parish Council	No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	No	No	The Parish Council objects to Land at Ham Green (HE20493) for 40 dwellings under LP4. Drop-in feedback was positive on location for parish needs (especially affordable homes), but unanimous concern over traffic buildup on narrow Perrett Way—residents fear it becoming a rat-run. Still undeliverable overall. Not Positively Prepared – Adds to LP4 overload, overriding Neighbourhood Plan cap despite local support for sensible siting. Delete Land at Ham Green (HE20493) from Schedule 1 and the proposals map, if retained post-LP4 withdrawal, cap at 20–30 affordable homes with Perrett Way safeguards (no through-traffic)		
62840705	Kirstie Wilkins			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	No	No	The Council held four public exhibitions (Long Ashton, Weston-super-Mare, Nailsea, Backwell), but none in Pill/E-in-G, despite five sites being consulted on in this area. Response volumes were markedly lower for Pill/E-in-G (125 responses from only 29 individual respondents across 5 sites) than for comparable locations: Portishead: 689 responses for 5 sites, Long Ashton: 591 responses for 10 sites, Wrington: 484 responses for 5 sites, Nailsea and Backwell: 1,049 responses for 26 sites. Given the scale of potential change in Pill/E-in-G (e.g., 600 homes at Pill Green alone, plus other sites), the absence of a local event and the relatively small response volume could indicate under-representation of local voices and a lack of proportionate engagement. Has the Council complied with its own Statement of Community Involvement? Was this consultation sufficiently inclusive? Has there been legal compliance with duties under the Equality Act 2010, including the Public Sector Equality Duty?			

Parklands Village

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
21472417	Mead Realisations Ltd	Oneleven Property		No	' Positively prepared ' Justified ' Effective ' Consistent with national policy				Mead Realisation’s land at Parklands Village (see plans at Appendix 2 which show the current application site and wider masterplan area) is include as part of a carried forward allocation at page 281 of schedule 1 of the PsP. It should be noted that pre-application discussions have been held to consider the potential for accommodation additional dwellings at the site (approximately 250 more than previously approved). It is understood that this additional capacity has been included in the Council’s assumptions although clarification of this is required.		
62943009	Homes England	Avison Young (Peter Stockall)	Homes England	Unsure		Unsure	Unsure	Homes England does not comment on local plan housing targets. However, they support the recognition within the Plan that the Locking Parklands site can accommodate additional housing numbers especially as previously developed land benefitting from existing and proposed facilities including primary and secondary education, a GP surgery and Community Centre all on site. As such we support the identification of the former Employment Land and Former Leisure Dome land for housing. These former uses are not deliverable due to market conditions, but there is a significant need for housing. An intensification of housing at Locking Parklands provides an opportunity to help to address the housing requirements in a sustainable and deliverable manner, without adverse impacts on the green belt, local ecology and sensitive landscape designations. An intensification of housing here would also support the facilities and services being delivered as part of the wider village.			
62943009	Homes England	Avison Young (Peter Stockall)	Homes England	No	' Effective	Unsure	Unsure	Policy LP5 on housing, employment and mixed use allocations is generally supported. This policy however requires development to “take into account the site-specific requirements set out in the schedules”, which needs to be reviewed. Schedule 1 provides the site requirements for Parklands Village and it notes that further details are contained in the Weston Villages Supplementary Planning Document (SPD). This SPD is now out of date and is no longer relevant to Parklands Villages as planning permissions are in place and the respective developments are being built out. Additionally, we note that the Weston Villages SPD requires the delivery of 1.5 jobs per dwelling. The SPD supplements Policy CS30 of the Core Strategy which will be replaced by the replacement Local Plan (2041) and there is no 1.5 job per home requirement within the emerging planning policy. Therefore, it is not justified for the site requirements of Parklands Village to align with the Weston Villages SPD. The site requirements in Schedule 1 should refer to the planning permissions for Parklands Village, with respect to Locking Parklands.	We propose the site requirements to be updated as follows for Locking Parklands at Parklands Village: “Planning permissions refs 13/P/0997/OT2, 09/P/1614/F,12/P/0760/F, 18/P/3175/FUL. Part full consent, part outline consent and subsequent reserved matters approvals.”

39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	' Positively prepared ' Consistent with national policy	Yes	No	Whilst the plan is considered unsound - Land west of Winterstoke Road is supported and information is presented with this representation.		Persimmon Homes Severn Valley controls land at Land at Woodspring Fields. The land is situated within the settlement boundary of Weston-super-Mare (and is also known as “Woodspring Fields”). It is bounded in part by Weston-super-Mare FC’s grounds to the north, Winterstoke Road to the east, a rhyne leading to an industrial premises to the south and railway line to the west. The site extends to approximately 5.5 ha. It is predominately level undeveloped land. The site is allocated for residential development in the adopted North Somerset Local Plan. It has been consistently retained as a proposed allocation in subsequent drafts. In the draft Local Plan the site is identified as “Land to the west of Winterstoke Road, Weston-super-Mare” with capacity for 134 homes. The retention of this proposed allocation is supported. In supporting further this allocation the following information is submitted to illustrate how the site could be developed: • Revised Draft Layout Plan 001 RevA (for illustrative purposes) incorporating a repositioned 9v9 football pitch • Red Line Plan A0-C • Access Appraisal & Appraisal Options (Apex Transport) • Flood Risk Due Diligence Assessment (Rappor) The land offers an excellent location for new residential development. The density presented in the Draft Layout Plan on a gross basis is around 22 homes p/ha noting that the site features including trees, hedgerows and rhynes (with maintenance strips) and a playing pitch. Ready access is available for vehicles and pedestrians from Winterstoke Road – and to bus services. For the most part the site is situated within defended Flood Zone 3 – however flood mitigation through technical solutions can be delivered and the site can come forward for development. Recommendation It is requested that: Land at Woodspring Fields is retained as a housing allocation capable of accommodating up to 134 new homes. Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
20583553	Bleadon Parish Council		Bleadon Parish Council	No	• Justified • Effective	No	Yes	The reasons for Bleadon Parish Council reaching this conclusion are as follows: The Council's specific concerns relate to the proposals on Bleadon Hill. The site in question is immediately adjacent to the area known as 'Hillcote'. North Somerset Council has historically treated sites to the West of the Hillcote area as a 'buffer zone' separating the urban area of Weston-super-Mare and the rural area of Bleadon. Allowing development in this location would fundamentally change this position and may make it difficult for North Somerset Council – as Local Planning Authority – to defend against subsequent applications for development further East along Bleadon Hill and South towards the village centre. Retention of the existing designation of these sites would also ensure that development could only be considered through the prism of rural exception sites.	The Council would strongly urge North Somerset Council to maintain its strategic approach.		
58442753	Jeremy Baber			No	• Positively prepared • Justified	Unsure	Unsure	The plan is not sound as NSC are completely disregarding the issues around infrastructure, environmental impact and the interests and safety of current residents: 1. Infrastructure on Winterstoke Road and Bleadon Hill is not capable of sustaining all these proposed sites for both vehicular and additional residents. Bleadon Hill particularly you are proposing 81 additional properties so approx 150-200 cars that is madness and dangerous 2. The is NO pedestrian access or walkways in this area so the risk of accidents will be significantly increased 3. WiFi, drainage, electricity and water supply to the area is already problematic due to the age of the legacy services 4. Planning permission was already denied on the field opposite due to the environmental and infrastructure impact on the area - how is this different? 5. This green space is the agreed natural barrier between WsM and Bleadon why is it ok to remove it? 6. From my own planning experience there are protected species of bats in this area - how is this different? Adding 81 properties to the land near Leighton Crescent will impact the animals flight paths, not to mention the impact on deer, pheasants, small mammals and hawks that reglarly frequent these fields. Again as per 4 above all were reasons to deny planning permission on the site opposite so this is a nonsense to include the Leighton Crescent site as it breaks your own previous rulings and precedent.	Remove the Land at Leighton Crescent from the 2041 plan and greatly reduce the development sites on Winterstoke Road. Look at developing west of the A370 on the flats this allows easy access to the A370 for vehicles and is on recognised public transport routes!		
58510337	James Doulton		Weston-super-Mare Croquet Club	No	• Justified	No	Unsure	The plan is not sound. It includes a site that does not meet the plan's criteria of having "access to jobs and services" through "walking, cycling and use of public transport" and "enhancing biodiversity" and "protecting the Mendip Hills National Landscape".	Remove the Land at Leighton Crescent, Weston-super-Mare as it clearly does not meet the criteria. The provision of 81 houses in this unsuitable location will consolidate the environmental destruction caused by the extension of Wentworth Drive in 2020. The occupants will not commute by walking, cycling or using public transport because the site is located at a dangerous bottleneck on on Bleadon Hill where there is no footpath, it is up a 1 in 8 hill (Totterdown Lane) and is approximately 2 miles from any services and 4 miles from the centre of WSM where the majority of services are focused. There is no credible public transport. Clearly, all commuting and shopping will be by car (or delivery van). The inclusion of this site		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									brings the whole plan into disrepute.		
58388577	Martyn Frampton										
58492289	L Hazzard			No	• Justified	Unsure		A direct quote from the Plan: "The objective of the liveable neighbourhood concept is to ensure that as far as possible there is a diverse mix of different types of housing to meet the needs of the community as a whole and that there is easy access by walking cycling and public transport to a wide range of facilities such as shops, education, health services, jobs, recreation and entertainment. By encouraging this type of development with a range of facilities and good transport infrastructure this will make it easier for people to walk with the health, community and environmental benefits that brings." This particular site cannot fulfil these objectives due to the fact that it is situated at the top of a steep hill and along a narrow road. This has, and always will be, a big deterrent to making journeys by walking, cycling or public transport. The majority of existing properties here have at least one vehicle, with this number added to when children in households become old enough to drive and own their own cars. This happened in my own family, with four cars required when our sons were needing to get to college and then to their workplaces. The provision of a bus service has been tried, then cancelled, then trialled again, with poor uptake due to the infrequency of the service, and the long journey times to get to key commuting locations. Another unfortunate outcome of a bus service was the traffic chaos these vehicles caused on the many narrow points on the local roads. There are only so many vehicles that the roads on Bleadon Hill can SAFELY accommodate. All routes onto and off the hill have their own particular difficulties and limitations; they were never designed for the amount of traffic that we now get. With recent housing developments in two locations on the hill (Wentwood Drive and Devil's Bridge) this has added approximately 110 new properties, all with their extra demands on our roads. As well as extra housing, there has also been a huge increase in commercial vehicles using our roads, due to the explosion in online shopping and deliveries. There must be many other more suitable sites for development in and around Weston-super-Mare that don't involve steep narrow roads without pavements. Please consider this comment from a local resident who has lived here for nearly 30 years and witnessed the increasing travel problems first-hand. Remove this proposed development site from the plan. Reduce the total number of proposed properties from 6084 to 6003.			
62851329	A Hicks			No	• Justified • Effective	Unsure	Unsure	The sensitive location of this field means it would have a detrimental impact on the surrounding area of Outstanding Natural Beauty and area of scientific interest. It is also the only field that separates W-S-M with Bleadon parish with Bleadon's boundary being the east side of the field. By building on this field it would then blend the village into the town. Also due to its location and lack of nearby amenities it is not easily accessible by foot or public transport. The roads leading to the field are not wide enough to accommodate any changes to overcome this situation. All movements would therefore be made via a vehicle. This is not sustainable and would go against North Somerset's aim for Net Zero. There are much better alternative places to build with easier transport links and less environmental impacts.	Finding sites directly next to main roads and amenities. Places where people can walk and ride bikes to and from to help reduce congestion and carbon emissions. Bigger areas of land where new communities can be made with shops, doctors, schools etc. Another way of increasing housing availability would be to put more emphasis on redeveloping existing buildings and brownfield sites. In Weston there is hundreds if not thousands of un used properties and commercial land.		
58585889	P Horrigan							Response to NSC local plan 1. The Area is a High Value Landscape 2. The Proposal borders an AONB 3. That part of Bleadon Hill as well as being a narrow country road has no footpath. 4. The whole area is unsustainable with no buses, and is inaccessible to walkers, the disabled, children in pushchairs and, the elderly. 5. Limited work opportunities. 6. Oversubscribed Schools, GP And Dental Surgeries. 7. No shops within convenient walking distance. 8. Negative effect on wildlife including Bats, Deer, Badgers all having little protection. 9. Unsafe for dog walkers and Horse Riders. 10. More houses mean more speeding cars and more pollution.			
58542145	Jean Howard		Retired	Unsure		Unsure	Unsure	MISLEADING DESCRIPTION LOCATION My first comment is that the site position description is very misleading as Leighton Crescent is on the South side of the road (Bleadon Hill) with the junction joining the very narrow section of the road. A more accurate positioning description would be "North of the road Bleadon Hill, to join Olmixon - Weston-super-Mare with Hillcote - Bleadon". UNSUITABLE DEVELOPMENT LOCATION As with the field opposite, that has had many planning applications refused over many years, any building development of this site should not be considered for the very same reasons. The site is unsustainable, it will offer no amenities to residents. Due to the steep gradient of the hill in every direction to the site, only the very fittest residents would be able to cycle or walk to the nearest shops schools etc. Parents with pushchairs and young children or wheelchair users would not be able to access amenities and so would be car reliant. The proposed development would erode the boundary between Olmixon and Bleadon. DANGEROUS SITE FOR ANY DEVELOPMENT Around the proposed site, from the blind bend West of Hillcote and through the very narrow pinch point where Leighton Crescent joins Bleadon Hill, is very dangerous for pedestrians and all other recreational users that enjoy the AONB (cyclist, walkers, horse riders etc.) When travelling West from Hillcote to walk our dogs, we now use our car to Leighton Crescent, much safer. Since living here we have seen many incidents in the area including, a green single decker bus (when we had a bus service - none of which have been sustainable) with one wheel down the bank at the blind bend. Only 3 days ago we witnessed two transit vans meet head on at the same blind bend, with one struggling to reverse and the other nearly in the hedge towards the same bank edge. The road edges are continually breaking away around that area and before one of the edges was partially filled, a flat bed lorry almost lost control when its steering/suspension came into contact with the road when it dropped into the hole. A car crashed into a wall just at the entrance to Leighton Crescent (looks like the driver tried pulling in to the entrance to			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								allow oncoming traffic to pass and miss judged it). Another destroyed its near side front suspension having run into a wooden sleeper edging a front garden (probably miss judging the road width when positioning for an oncoming vehicle). Walking from Hillcote East towards the AONB is safer, being a straight road, although a while ago the road was blocked from Hillcote, to allow an Air Ambulance to attend a pony and trap driver. Should this site be developed, massive disruption would occur during any construction period, on roads that are already too narrow for current usage, let alone construction/delivery vehicles and ultimately a hundred or more extra vehicle movements from the site. Bleadon Hill is too narrow and too dangerous for pedestrians to use safely and even worse when there is an incident on the A370 when traffic is rerouted over Bleadon Hill. This site would most probably be totally car reliant which contravenes national planning policy frameworks that demand sustainable developments.There can be no requirement for such an unsustainable development in this rural setting. WILDLIFE Any disturbance around the hedgerows during and following any build will cause considerable disturbance and probably destruction of any historic natural food source for feeding bats, other small mammals, plus deer, hedgehogs, slow worms, badgers and wild birds, thus affecting the future sustainability of the existing wildlife population living, feeding and nesting around the proposed site.			
58601985	Andrew Katsouris			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Firstly, as the Government is so fixated on 'net zero' putting 81 houses on rural land would considerably higher emissions in these areas, not only the housing that takes away from the environment, but the amount of traffic and emissions from new vehicles etc is counter productive. With regards to the houses at Leighton crescent, Bleadon has already had 3 new developments, Keepers Gate (40+Houses), Edens Green(40+Houses) & the Countrywide Partnership site at the bottom of the hill consisting of 63 houses which should never have been approved, causing more chaos on an already tight junction. The the traffic going in and out on the small roads highlights they are not fit for purpose. This site has consistently closed the access to Bleadhon Hill via Devils overbridge every other month the past few years too (the main way in to Bleadon Hill) causing traffic chaos. Proposing potentially 81 houses on Hillcote is so massive for a little village without the infrestructure to manage porentially another 240 people of which potentially at least half would be drivers, that's another 120 cars in an out the tight roads in and around the hill which only has one road leading to it, this will further increase traffic footfall to peoples homes in what was once a quiet area. You have also called Hillcote Leighton Crescent and considered it a part of weston-super-mare when it's clearly Bleadon. With regards to legality, wildlife disruption would be massive too. It is illegal to destroy badger runs etc amongst other wildlife. Road leading to Hillcotte (as you call it Leighton Crescent) is definitely not fit for purpose and can barely fit a big car down it let alone busses. Area would be overcrowded with lack of infrastructure, someone has just seen a bit of land and not thought about any of this. I don't know how it's been classed as Weston - super - mare, but Weston has already had thousands of new houses which have significantly enhanced traffic and car emissions, going against net zero policy which is always contradicted.	Less building on Somersets green, there are plenty of brownfield sites to build on in other areas than somerset which has already had more than it's fair share. An appeal to bringing people to Somerset is it's green areas, fresh air and nice countryside, not just constantly building on small villages like bleadon therefore wearing down their attraction to live there. Bleadon, Winscombe, Banwell etc are meant to be villages not big towns.		HilcoteIMG_1385.PNG
58601633	Grace Kasouris			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	Unsure	I would struggle to understand how the Plan 2041 in reference to Leighton Crescent is considered legally compliant for the reasons clearly listed in the prior Parish Council minutes where this development was first discussed 10 years ago. https://www.bleadon.org.uk/media/other/24400/Minutes-P54.pdf The land is listed as an SSSI and as referenced in the above document, the Church Commissioners Covenant states that within this proposed plot it states, a maximum of 5 properties can be erected per acre which clearly means the plan for this plot is legally not compliant.	I would kindly refer you study the linked Bleadon Parish Minutes: https://www.bleadon.org.uk/media/other/24400/Minutes-P54.pdf These minutes were generated ten years ago and there has been no changes to the immediate land/environment which would make the proposed build of 81 homes appropriate for Leighton Crescent. Bleadon as a village has accepted three new developments within the last 5 years. Keepers Gate, Edens Green and now the extremely dangerous to access Countrywide Partnerships development. In what other village in Weston Super Mare has seen this type of growth within the same space of time? Fundamentally, the access to the land proposed at Leighton Crescent is not suitable for a housing estate and the motor traffic this brings. Due to establish properties either side, the road width cannot be increased and to accommodate a footpath and would make the already tight road even narrower. The access to Bleadon Hill is already problematic, with Devils Overbridge being closed what seems almost monthly and Totterdown Lane access only one way exiting the top of the hill how do you accommodate, whilst being respectful of current residents the influx of traffic this would incur?	No	Minutes-P54.pdf
62831041	D Manaei			No	• Positively prepared • Justified • Consistent with national policy	No	No	Site is an SSSI, there are badger runs and plentiful wildlife you cannot displace. Notes from Bleadon Parish meeting details a Church Covenant which states only 5 houses per acre which this plan would not follow. Highways England would need to deem Road safe to have foot path installed. The drainage this site would require could have detrimental effects on the existing homes in Bleadon at the bottom of this land.	Need to factor in wider road access and pedestrian foot paths, how would this happen with existing properties either side ? Bleadon Parish discussed this development 10 Years ago, nothing has changed from the many reasons why this site was rejected then to allow for this development to be suitably welcomed or practical.		Minutes-P54.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
58448865	Avon Wildlife Trust		Avon Wildlife Trust	Yes		No	Yes	There are a number of local, national and international nature conservation designations within 500m of the allocation sites. Development in these two areas has the potential to disrupt the connectivity between these sites which currently provide a corridor between habitats to the east and those in the west, the latter including protected areas such as the Mendips NNR, the Severn Estuary SPA/SAC/SSSI complex and the Avon Wildlife Trust reserve of Walborough Nature Reserve. The current proposal for this allocation breaches sections 124, 188, and 192 of the NPPF.			

Land west of Hutton

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
62599105	Michelle Parsons			No	• Justified • Effective	No	No	1. Not Positively Prepared – Flood Risk The Plan allocates this site without demonstrating that development can be delivered safely in accordance with the sequential approach to flood risk. Existing surface-water issues are already well known in this area, yet no robust evidence is presented to show that the site can be developed without increasing flood risk to existing residents. As such, the allocation is not based on a realistic or deliverable strategy. 2. Not Justified – Traffic and Transport Capacity The Plan does not provide convincing evidence that the local road network in Hutton—particularly Oldmixon Road and the narrow village access routes—can accommodate the additional traffic generated by 40 new homes. The Local Plan relies on infrastructure improvements (e.g., new footways and safer walking routes) without demonstrating that these are achievable, funded, or compatible with local constraints. This means reasonable alternatives have not been properly considered. 3. Not Effective – Education Capacity The Plan does not show that there is sufficient primary or secondary school capacity to support additional households in Hutton. Broadoak and surrounding schools already face capacity pressures. Without identified and deliverable solutions, the allocation cannot be considered effective over the Plan period. 4. Not Consistent with National Policy – Local Services and Infrastructure National policy requires that development be supported by adequate infrastructure. The allocation does not demonstrate how increased pressure on essential services—including GP and dental provision—will be addressed. Without identified mitigation, the Plan fails to provide a sound and sustainable strategy for this settlement.	1. Flood Risk – Evidence and Safeguards The Plan must include clear evidence that the site can pass the sequential test and be developed safely without increasing flood risk to existing homes. The allocation should not be confirmed until a full site-specific flood risk assessment demonstrates that surface-water issues and downstream impacts can be fully mitigated. If this cannot be evidenced, the site should be removed from the Plan. 2. Transport and Traffic – Deliverability of Access Improvements The Plan should provide detailed and costed infrastructure commitments showing that required access works (including the new footways and safe walking routes) are feasible within the physical constraints of Hutton. A modification is needed to require a transport capacity assessment demonstrating that 40 homes will not worsen congestion or safety on Oldmixon Road or village roads. If deliverable mitigation cannot be secured, the site allocation should be reduced in scale or removed. 3. Education Capacity – Identified and Funded Provision The Plan must include a clear strategy for providing additional school places to support development in Hutton, including a statement of where capacity will come from and how it will be funded. Without identified provision, the allocation should be paused or revised until educational infrastructure needs are properly addressed. 4. Local Services and Infrastructure – Commitments and Phasing The Plan should be modified to include explicit requirements that development in this location is phased alongside improvements to local services such as GP and dental provision. Infrastructure delivery mechanisms should be clearly set out, rather than assumed, to ensure compliance with national policy on sustainable development. 5. Contingency Option – Reassessment of the Allocation If robust evidence cannot be provided on flood risk, transport, school capacity, and service provision, the Plan should be modified to remove the allocation from the spatial strategy or to allocate fewer homes in Hutton to maintain soundness.		
62855425	Sheila Rhodes			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	I consider the North Somerset Local Plan 2041: Pre-submission Plan to be unsound, not legally compliant, and in breach of the Duty to Cooperate for the following reasons: Duty to Cooperate – Not Met There is insufficient evidence of effective engagement with neighbouring authorities, transport bodies, and environmental agencies regarding housing distribution, infrastructure delivery, and cumulative transport impacts. No joint strategies have been presented to manage cross-boundary traffic, congestion, or pressures on Weston-super-Mare, nor to address biodiversity and habitat connectivity. Not Sound – Evidence Base and Justification Housing allocations rely on outdated projections and fail to reflect current demographic trends or infrastructure capacity. The Plan disproportionately directs growth to small rural settlements, including Locking, Elborough, and Hutton, without robust justification or consideration of reasonable alternatives. The Sustainability Appraisal does not adequately explore alternatives that could avoid excessive growth in these villages. Not Effective – Transport, Infrastructure, and Flood Risk Narrow roads and village lanes in Locking, Elborough, and Hutton are already congested, and no credible evidence demonstrates that the additional traffic from proposed development can be safely accommodated. Flood-risk issues and surface-water drainage constraints in these areas are not adequately addressed, undermining deliverability and resilience. Local schools, healthcare, and utilities are already under pressure, with no identified, funded plans to expand capacity in line with proposed growth. Not Consistent with National Policy The Plan fails to ensure sustainable development: growth is directed to areas poorly served by public transport, increasing reliance on private vehicles. Sensitive habitats and wildlife corridors adjacent to proposed sites are at risk, contrary to the NPPF requirement to protect and enhance the natural environment. Safe access for pedestrians, cyclists, and emergency vehicles is not evidenced, and the Plan does not provide a credible strategy to upgrade infrastructure.	To address the issues identified, the following modifications are required: 1. Duty to Cooperate – Strengthened Evidence and Engagement Provide published evidence of effective engagement with neighbouring authorities, transport agencies, and environmental bodies on housing distribution, infrastructure delivery, and biodiversity protection. Prepare joint strategies to manage cross-boundary traffic, congestion, and cumulative impacts on Weston-super-Mare. Demonstrate how biodiversity, habitat connectivity, and environmental impacts have been jointly considered. 2. Transport and Highways – Robust and Deliverable Evidence Undertake a comprehensive transport assessment confirming that roads serving Locking, Elborough, and Hutton can safely accommodate the traffic generated by proposed developments. Include specific, costed, and deliverable infrastructure improvements, including: Banwell Road / A371 junction upgrades Improvements to narrow village lanes in Locking and Hutton Road safety measures around Hutton Primary School Map, fund, and secure active travel and sustainable transport routes. If mitigation is not feasible, reduce or remove housing allocations in these areas. 3. Flood Risk and Drainage – Evidence-Based Modifications Provide a site-specific flood risk and surface-water management strategy, demonstrating that development will not increase flood risk to existing homes or downstream areas. Remove or reduce allocations where safe drainage solutions cannot be delivered.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Conclusion: The Plan is therefore unsound, not legally compliant, and fails the Duty to Cooperate. The issues relate to insufficient cross-boundary cooperation, lack of justification for site allocations, ineffective delivery of infrastructure, environmental risks, and non-compliance with national policy. Without substantial modifications addressing these points—including scaling, phasing, and evidencing of growth allocations—the Plan should not be adopted.	4. Education, Healthcare, and Utilities – Confirmed Capacity Identify specific, funded commitments to expand schools, healthcare services, and utilities to support proposed growth. Ensure that development is phased alongside infrastructure delivery, with housing limited until capacity improvements are in place. Reduce or relocate allocations where infrastructure cannot be secured. 5. Biodiversity and Environmental Protection Undertake up-to-date ecological assessments and produce a strategy to protect connected habitats and wildlife corridors around proposed development sites. Include a policy requirement for biodiversity net gain. Remove or amend allocations that risk irreversible ecological harm. 6. Settlement Strategy – Proportionate and Justified Growth Reassess growth levels in Elborough, Locking, and Hutton to ensure development is proportionate, reflects the settlement hierarchy, and aligns with national policy on sustainable development. Avoid doubling the size of small rural settlements without strong justification and fully evidenced infrastructure provision. 7. Updated Housing Need Evidence Update the housing need assessment using current demographic and migration data to ensure housing numbers are realistic and justified across the district. 8. Contingency / Reassessment If robust evidence cannot be provided on flood risk, transport, infrastructure, or services, the Plan should either: Remove the allocation from the spatial strategy, or Reduce the number of homes to ensure deliverability, sustainability, and soundness. Conclusion: Implementing these modifications will ensure the Plan is legally compliant, sound, and deliverable, with growth directed to locations that can realistically accommodate it while protecting infrastructure, transport, and the environment.		
12476353	Historic England (R Torkildsen)		Historic England					This discrete site is adjacent to the Grade II Listed Grange Farmhouse and Hutton Conservation Area. The HEA indicates that even with a series of mitigations, there would still be a residual harm to the setting of the Farmhouse; that degree of harm is not defined. If the site is to be allocated the council will need to justify that harm and demonstrate it has afforded great weight to the conservation of the Listed Building consistent with paragraph 212 of the NPPF and Section 66 of the Planning (Listed Buildings and Conservation Areas) Act 1990.	If the site is to be allocated the council will need to justify that harm and demonstrate it has afforded great weight to the conservation of the Listed Building consistent with paragraph 212 of the NPPF and Section 66 of the Planning (Listed Buildings and Conservation Areas) Act 1990.		20251210 NSCLP Reg 19 response Dec 2025 RT.docx

Elm Grove Nursery, Locking

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
62599105	Michelle Parsons							consider the North Somerset Local Plan 2041: Pre-submission Plan to be not sound, not legally compliant, and not in compliance with the Duty to Cooperate in relation to the allocation of Elm Grove Nursery, Locking, for 110 dwellings. Duty to Cooperate – Not Met There is no clear evidence that North Somerset Council has engaged effectively with neighbouring authorities, transport bodies, or environmental agencies regarding the deliverability of infrastructure required for this site, including active travel improvements, flood-risk mitigation, and school capacity. The absence of joint planning undermines confidence that cumulative impacts on transport networks, drainage, and local services have been properly considered. Not Justified The allocation does not reflect current infrastructure or service capacity, particularly for education and healthcare. Housing numbers appear to be based on assumptions rather than robust, up-to-date evidence, and do not consider realistic delivery constraints such as flood risk or road capacity. Not Effective Part of the site is at future flood risk, yet no detailed, deliverable flood-risk management strategy is provided.	To address the issues identified regarding soundness, legal compliance, and the Duty to Cooperate, the following modifications are required: 1. Flood Risk and Surface Water Management Require a site-specific flood-risk and surface-water drainage strategy, demonstrating how runoff will be safely managed and attenuated to prevent increased flood risk on or off site. Restrict development in the northern flood-risk area unless safe access from the eastern boundary can be delivered. Ensure contributions to local flood-risk management improvements are secured and clearly evidenced. 2. Active Travel and Access Provide fully funded and deliverable active travel improvements along Elm Tree Road connecting the site to the A371 foot/cycleway. Secure an additional pedestrian access from the eastern boundary, with clear evidence that it is safe, deliverable, and integrates with surrounding routes. Demonstrate that emergency access and pedestrian safety are fully addressed. 3. Education and Local Services Identify specific, funded provisions to expand primary, secondary, and early-years education in the local area. Ensure that local healthcare, utilities, and other services have sufficient capacity to support the new population.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Active travel improvements and access arrangements along Elm Tree Road are not clearly achievable or funded, which undermines safe and sustainable access to the site. Without demonstrable mitigation, the site cannot be delivered in a way that is safe, accessible, or sustainable. Not Consistent with National Policy The plan fails to prioritise sustainable development: The site has poor public transport links, increasing car dependency. Infrastructure, drainage, and active travel are not adequately secured. The potential impacts on local biodiversity and environment are not properly addressed. Conclusion Due to failures in infrastructure evidence, flood-risk management, access provision, and cross-boundary cooperation, the allocation of Elm Grove Nursery is unsound, not legally compliant, and does not meet the Duty to Cooperate.	Include phased delivery of housing to align with completion of supporting infrastructure. 4. Duty to Cooperate and Evidence Provide clear evidence of engagement with neighbouring authorities, transport bodies, and environmental agencies to demonstrate coordination on transport, drainage, and environmental impacts. Update the evidence base to reflect current demographic and infrastructure constraints, ensuring the site allocation is justified and deliverable. 5. Contingency / Alternative If flood-risk mitigation, active travel improvements, or infrastructure provision cannot be satisfactorily evidenced and secured, the allocation should be reduced in scale or removed from the Plan. Conclusion These modifications are necessary to ensure that the Elm Grove Nursery allocation is positively prepared, justified, effective, and consistent with national policy, making the Local Plan legally compliant and sound.		
63107361	Gladman Developments		Gladman Developments Ltd	No				Whilst the allocation is supported, Gladman are unsure why the boundary (of the Elm Grove proposed allocation) of the draft housing allocation site does not comprise the full extent of the two field parcels as shown in Figure 1 above. It is nonsensical to leave an irregular piece of the northern part of the western parcel as Strategic Gap when it is not serving a function. Figure 2 overleaf shows the current extent of the Proposed Residential Site on the draft interactive Policies Map.	Gladman strongly encourage the Council to re-draw the boundary of the site around the full extent of both parcels of land to ensure that a comprehensive development for up to 110 dwellings and a policy compliant amount of green infrastructure can be delivered on this site. As discussed earlier within this representation at paragraph 3.65, as an alternative solution, Gladman would be content for the boundary of the draft allocation to be extended slightly northwards to accommodate the slither of developable area on the site which currently lies outside of the boundary, as shown on the indicative DFP included at Appendix 1. Gladman have discussed this issue with the Council's Planning Policy Team on 11th December 2025 and it is anticipated the Council would be amenable to making this amendment to the draft allocation boundary prior to the Local Plan being submitted for Examination. See attached rep for full site details.		Gladman Developments - North Somerset Pre-Submission Plan (Reg 19).pdf

Land to the west of Elborough

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
63005025	BJ Stephens	Oneleven Property						These comments are provided in relation to the Pre-submission Plan (PsP) on behalf of the owners of land west of Elborough Farm, Elborough, Weston super Mare. The identification of land west of Elborough for residential development, as set out at page 292 of Schedule 1 is supported. Schedule 1 of the SHLAA 2025 refers to the site (Shlaa ref: HE201040) as 22.86 hectares of land. However, the policies map identifies approximately 4 hectares of land including the existing farmhouse, commercial and agricultural buildings (see attachment for image). It is understood that the Council has assumed a yield of 70 dwellings from the site based on a net site area of approximately 2.2 hectares as shown on the plan below. This assumes that all existing buildings and properties would be retained. In reality the site may be able to accommodate more than 70 dwellings depending on how much land is developed. There are no known constraints that would prevent the site from being developed and at this stage it is anticipated that the site could be delivered earlier in the plan period, subject to planning permission. It is noted that the specific entry for the site contained at page 293 of the PsP states that the development is required to fund an upgrade to the Banwell Road junction with the A371. The Infrastructure Delivery Plan schedule refers to signalisation of the A371/Banwell Road under entry TR24 at a developer cost of £800,000 which is required prior to development of the Elborough scheme, and likely required after Phase 2 of Wolvershill Development. It is not clear how the cost of the work has been arrived at and this should be clarified. In addition the Council should provide further justification to explain why the financial burden of these works is expected to fall entirely on the 70 new dwellings proposed at Elborough Farm. It seems more likely			North Somerset Local Plan Pre-submission Plan - Representation form Part B - BJ Stephens & Sons 12.12.25.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								that the need for these works is due to the highway impact of other developments. As such proportionate contributions should be sought.			
62676993	Neil Archibald								I am submitting this representation to object to the proposed allocation HE20637, HE20237 & HE201040 in the Publication Local Plan 2039. The site lies south of Banwell Road and adjoins Elborough. My objection is based on material planning grounds relevant to the tests of soundness. 1. Brownfield Context – Why Previous Elborough Development was approved, Elborough's recent growth occurred solely on the former Aerojet's industrial site, a derelict and redundant brownfield plot. Redevelopment was justified because it regenerated previously developed land, removed obsolete structures, and did not extend the previously developed land into open countryside. The above allocations are entirely undeveloped agricultural land forming part of Elborough's rural setting, making its proposed allocation fundamentally different and unjustified. 2. Unsustainable Location and Car Dependency. Elborough lacks additional essential services including a school, GP surgery, shop, with limited public transport, with additional housing. Residents would be dependent on private cars for daily needs. Safe pedestrian or cycling routes to services would result in a trip greater than 15mins. The nearest shops is either Asda filling station or Co-op in Banwell, both over 1.5 miles from the centre of proposed development. 3. Highway Constraints. Banwell Road already experiences severe congestion and limited pedestrian safety. Additional vehicle movements from this site would worsen traffic pressures and increase safety risks. No evidence has been provided to show that safe access or active travel improvements are deliverable. In providing footpaths, bus stops, cycle paths and visibility spays, will increase the width of the highway known as Banwell Road. In turn, forcing the proposed development further towards the Flood Zone. Development to the north will put a strain on the old Banwell Road, with further congestion on the A371. 4. Landscape and Settlement Impact. The site forms part of the open rural landscape that defines the setting of Elborough. Development would introduce a prominent urban edge, eroding village character and contributing towards the merger with Locking village. 5. Ecology Objection. Sites HE20637, HE20237 & HE201040 lies within a sensitive countryside corridor that supports a range of native species and contributes to the ecological network around Elborough. The site contains established native hedgerows, which are priority habitats and important movement routes for wildlife. Development would fragment these corridors and permanently remove high-value habitat. The area for development is a designated area known as Density Band C; this is an area for consultation in protecting Lesser Horseshoe Bats. The fields and surrounding ditches support birds, owls, amphibians, and small mammals. Without robust ecological evidence, the allocation cannot be considered justified or deliverable. 6. Drainage and Flooding Risks. Sites HE20637, HE20237 & HE201040 sits within a low-lying landscape where water naturally collects from all directions. The fields regularly display standing water after rainfall, indicating poor infiltration and a high-water table. The area relies on a historic network of rhynes and drainage ditches already close to capacity. Increasing impermeable surfaces would intensify runoff, raising flood risk to existing homes. This would ultimately place residents buildings insurance at high policy value, or uninsurable. There is clear and outstanding evidence of regular flooding in this area of Banwell Road above and beyond the indication of the flood Zone map. 7. Hutton Parish Council Response. Hutton Parish Council has also objected to the inclusion of approx. 400 houses and related growth around Elborough, drawing on extensive evidence from the Hutton Parish Survey Report (Feb 2021). The survey showed overwhelming community opposition to development beyond the settlement boundary (86%) and specifically near Elborough (83%). • The Parish Council highlights several material planning issues that directly support this objection. • The loss of green landscape and strategic gaps between Hutton, Elborough and Locking. • The absence of safe pedestrian or cycling routes to essential village facilities. • Lack of local amenities and community infrastructure. • Severe limitations on the local road network, including narrow rural lanes and increases in traffic through the Hutton 20mph zone. • The unsustainable scale of growth proposed relative to available services, schools, and public transport. Their findings reinforce that HE20637, HE20237 & HE201040 is neither appropriate nor sustainable, and that its allocation conflicts with both community evidence and the Parish Council's long-standing strategy to protect open countryside and maintain distinct settlement identities. 8. Other near and or Future Developments. There are also several nearby sites that already have planning permission, and allocated, or are earmarked for future development that sit in far more sustainable and strategic locations than HE20637, HE20237 & HE201040, under the "Call For Land" scheme. The new Banwell bypass will unlock development clusters with the space and capacity to deliver the supporting infrastructure that new housing requires, including shops, healthcare provision, schools and safe transport links. In contrast, Weston-Super-Mare, Locking, Locking Parklands, Banwell and West Wick all contain areas specifically identified for growth,		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									where services, road capacity, public transport and active-travel connections already exist or can be viably expanded. These locations are demonstrably more capable of contributing to North Somerset's housing need without dispersing development into isolated rural land such as HE20637, HE20237 & HE201040. Conclusion For the reasons above, HE20637, HE20237 & HE201040 should be removed from the Local Plan. I request that this objection is formally recorded and considered at examination.		
62735553	Janette Baker							Elborough Village, I would like to express my strong opposition to the development in the Elborough area following the comments from the Hutton Parish Council and Residents which I fully endorse against this development. My concerns names below have already been expressed by my fellow residents, but I couldn't word my concerns any better than they have, so I repeat their points as follows; 1) Loss of Green Space which would be lost forever. The development would remove the strategic gap between Elborough and Locking parishes. 2) Infrastructure Deficiencies: There are major concerns about a lack of existing facilities (shops, schools, community centres), inadequate public transport, and roads not wide enough for the increased traffic. 3) Public Opinion: 83% majority of residents in a 2021 survey DID NOT SUPPORT new housing in the vicinity of Elborough. 4) Sustainability: The sustainability of the proposed development is a major point of contention. While developers and some council documents suggest the Elborough development is more sustainable than other potential sites, local objectors highlight the isolated nature of the location with no existing services. I would like to emphasize the risk of flooding in the area. Concerns have been raised that new development in the area would increase the amount of impermeable surfaces (houses, roads) and exacerbate the existing flooding problems especially with the climate change. Run off from farmland on the hill by Elborough flows abundantlly across Banwell road, flooding it several times a year. Flash flooding is a widespread risk across the region and this area, which can impact properties. I trust that these very significant considerations opposing development in the area are fully taken into account when submitting the Pre-submission.			
31072737	Nick Bowler			No	Consistent with national policy	Unsure	Unsure	I am concerned about potential housing developments adjacent to Elborough Village, both in the fields across the Banwell Road, and in the field between Elborough Village and Elborough Farm. I feel that these developments would be in direct conflict with the following: Extracts from the "Vision" • To prioritise the location of new development close to places with a wide range of services, facilities and job opportunities. • To reduce car use, encourage walking and cycling, and high quality and effective public transport. • To address the decline in the town centres • To prioritise the importance and delivery of green spaces when considering new development, support priority habitats and species, and safeguard areas at risk of flooding. I feel that these developments would be in direct conflict with the following: Policy SP1: Sustainable development • Prioritise walking and cycling, maximise the use of effective public transport and encourage the creation of liveable neighbourhoods; • Protect valued natural and historic assets and support green infrastructure and biodiversity; Policy SP2: Climate change • Reduce the risk of flooding both now and in the future, taking account of predicted sea level rises and the impact on areas vulnerable to coastal change; • Deliver green infrastructure and provide a net gain in biodiversity; Policy SP10: Transport • Delivery of attractive, safe, and inclusive routes for walking and cycling which are well integrated into existing networks and provide access to effective and frequent public transport; Policy SP11: Historic and natural environment • Conserve and enhance the landscape and scenic beauty of the Mendip Hills National Landscape and the wildlife and cultural heritage, including ensuring that development in its setting is sensitively located and designed to avoid or minimise adverse impacts; • Protect the best and most versatile agricultural land; • Conserve, restore and enhance priority habitats, ecological networks and the protection and recovery of priority species; • Ensure that the design and construction of spaces and buildings encourages wildlife and biodiversity; • Support the establishment and delivery of North Somerset Nature Parks	Both of these potential housing developments adjacent to Elborough Village, both in the fields across the Banwell Road, and in the field between Elborough Village and Elborough Farm should be excluded from the plan. These fields are agricultural land and integral to the character of the village. They are populated with established trees and hedges which are home to many species of wildlife including bats, deer, badgers, hedgehogs and birds. These green areas are a key reason for many people moving into the area and the loss of them would be detrimental to the environment and to the residents. Both of these potential housing developments adjacent to Elborough Village, both in the fields across the Banwell Road, and in the field between Elborough Village and Elborough Farm should be excluded from the plan. They would not support the following policies; Policy SP1: Sustainable development • Prioritise walking and cycling, maximise the use of effective public transport and encourage the creation of liveable neighbourhoods; • Protect valued natural and historic assets and support green infrastructure and biodiversity; Policy SP2: Climate change • Reduce the risk of flooding both now and in the future, taking account of predicted sea level rises and the impact on areas vulnerable to coastal change; • Deliver green infrastructure and provide a net gain in biodiversity; Policy SP10: Transport • Delivery of attractive, safe, and inclusive routes for walking and cycling which are well integrated into existing networks and provide access to effective and frequent public transport; Policy SP11: Historic and natural environment • Conserve and enhance the landscape and scenic beauty of the Mendip Hills National Landscape and the wildlife and cultural heritage, including ensuring that development in its setting is sensitively located and designed to avoid or minimise adverse impacts; • Protect the best and most versatile agricultural land; • Conserve, restore and enhance priority habitats, ecological networks

63066337	Hutton Parish Council		Hutton Parish Coiuncil	Unsure		Unsure	Unsure	Hutton Parish Council Objects for the following reasons: As detailed in the attached HPC Parish of Hutton Survey Report Feb 2021 - see page 3, 5, 70 and 73 - there was a lack of support and strong opposition for any new housing within the Parish - which was a key Issue in the Survey Conclusion. • The majority - 86% did not support new housing being built outside or adjacent to the Settlement Boundary of Hutton. • The majority - 83% did not support any new housing being built in the vicinity of Elborough Village. As such it was agreed that: • The Parish Council will monitor all development and continue with it's strategy of protecting the green landscape and open spaces. • The Parish Council will continue to oppose housing and other developments where it believes it is right to do so. Therefore Hutton Parish Council oppose and object to the NSC Local Plan Additional Housing Consultation for the following reasons: • The additional housing would be against the majority of wishes, as detailed in the HPC Parish of Hutton Survey Report Feb 2021. • The additional housing would be against the Parish Council strategy of protecting the green landscape and open spaces, as detailed in the HPC Parish of Hutton Survey Report Feb 2021. • The strategic gap does not look to have been maintained. The new estates appear to effectively link Elborough and thus the Parish of Hutton to the Parish of Locking - thus removing any strategic gap with Locking. • No safe walking or safe cycling routes for children or adults to and from the current Parish facilities situated in the village of Hutton - including School, Village Hall, Scout Hut, Children's Play Area, Adventure Play Area, Hutton Football Club and local businesses. • Lack of facilities and amenities such as shops and community facilities. • Loss of green landscape and open spaces. • Lack of sustainable infrastructure to support the new housing. • Increased road traffic in the vicinity of the new houses and Elborough in Banwell Road. •Increased road traffic through the village of Hutton 20 MPH Zone to get to the new houses and Elborough in Banwell Road. • Regarding the road between Hutton and Elborough, not only would it see increased traffic, but the road is very difficult and in places not wide enough for 2 cars to pass (yet alone buses and lorries) which will build congestion etc. .• The proposed developments around Elborough Village are very extensive• There will be some 400 additional properties added to the existing 180 properties in Elborough Village. These dwellings are in an isolated position there are no existing services within this area neither in Hutton. It seems difficult to see development being sustainable in this area unless there is an increase of facilities. • There are possible schools at Locking Parklands but there would need to be safe walking or cycle works and an increase in school places would be necessary to cater for the large increase in children • There are no community facilities at Elborough and if 400 houses are added it would be essential for some community facilities to be provided. There is also the proposal of some 360 houses immediately adjacent to Elborough in the Locking Parish. • There would need to be Highways upgrading to give suitable access to the A371. • There would need to be the introduction of public transport to support this development as at present there is none. • With the high demand on North Somerset for housing it seems that the Elborough Development although we dot consider them “Sustainable” they are more sustainable than many other areas proposed in these plans. • North Somerset is in an impossible situation in having to provide the level of development required by the Government. • If all this proposed development does take place where are the expected influx of people going to seek employment or will the transient population seek to travel yet even further than at present.			Parish of Hutton NP Survey Report Feb 2021.pdf
58488865	R Harris			No	Justified	Unsure	Unsure	1. TRAFFIC With the increase of traffic, cars, vans and lorries on these minor countryside roads, which have increased over the last few years, and with the amount of houses that are planned to build, it's unsustainable on these narrow country roads. Since l've lived here there have been numerous accidents - several serious accidents of cars speeding down Banwell Road and colliding at the junction with Cedern Ave, one resulting in crashing into the house at the			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								junction of Cedern Ave, another where a horse was killed and rider injured, as we do live in the country we have many horses using Banwell Road, going to local stables. Plus there are no pavements or paths along this road 2. FLOOD PLAINS The intentions are to build houses on a flood plain, a runoff from the Mendip Hills, and plus with heavy rain, Banwell Road does flood, causing more problems with the traffic, and with the increase of houses you hope to build, the traffic will increase fivefold causing more congestion and danger. 3. WILDLIFE There are bats that feed in the valley, coming from roosts from the caves at Banwell Wood. Also there are deer, badgers, and foxes feeding in the valley, they also come from the woods. 4.INFRASTRUCTURE There is no infrastructure in this area, we have to drive to shops, doctors and other amenities. When Elborough was built, shops were included in the plan, this of course never happened. I note that on the plan it includes a shop or community building , I doubt very much that this will happen, like the proposed outlets in Locking Parklands, yet to see the light of day. Plus the strain on our roads,schools, doctors and general infrastructure. 5. GENERAL Why not finish building on Locking Parklands and Haywards Village before looking for new sites. I'm alongside Hutton parish council who oppose these developments.			
57965025	E Jackson			No	• Effective	Unsure	No	The land proposed to build on is completely inappropriate for more houses. The land floods extremely easily so more houses would cause significant drainage issues. Additionally that area is home to wildlife such as bats, deer and all sorts of other animals thats should be protected and their habitats not destroyed. Banwell road and the junction at the top of the hill are completely inappropriate for more residents, the roads as they are are far too busy with multiple crashes occurring on the junctions or bends every year. More cars on the road will cause more of these incididents and the increase in traffic will cause significant disruption to all residents. Building on this land is a terrible idea, the infrastructure is not in place to make it successful and the disruption it will cause would be significant.	Remove the suggestion of building on this land.		
30918657	Mark Jaloszynski			No	• Justified • Effective	Unsure	No	Not Sound The development site does not align to your own Local Plan policies; SP11: Historic and natural environment, SP6: Villages and rural areas and, Policy DP2: Residential development within settlement boundaries. Does not align with your Vision, strategic priorities and sustainability objectives, specifically Sustainable development objective; 3.2 Minimise vulnerability to all forms of flooding, now or in the future, without increasing flood risk elsewhere. Also minimise harm to water quality and availability Not in compliance with Duty To Cooperate. Concerns raised as consultation process in earlier in the year for the Additional Housing Site proposal have not been captured in the considerations, specifically; - Scale of development considering nearby developments in Locking Parklands, Haywood Village and proposed in Wolvershill - Impact on loss of habitat, green space, trees and hedge rows - Increase car journey / traffic impacts to Locking and Hutton - Lack of suitable road network, specially Barnwell Road, Old Barnwell Road and the Bury; safety and capacity	Remove the development site and align the proposal to your own Local Plan policies; SP11: Historic and natural environment, SP6: Villages and rural areas and further policies and Policy DP2: Residential development within settlement boundaries and Sustainable development objective 3.2		Flooding risk.png
62717857	Isabelle Lemoille		None						Elborough I have seen the comments from Hutton Parish Council and Residents which I emphatically endorse. For clarification I repeat some of their observations :- They expressed strong opposition to development in the Elborough area. Their primary concerns include: o Loss of Green Space: The development would remove the strategic gap between Elborough and Locking parishes. o Infrastructure Deficiencies: There are major concerns about a lack of existing facilities (shops, schools, community centres), inadequate public transport, and roads not wide enough for increased traffic. o Public Opinion: An 83% majority of residents in a 2021 survey did not support new housing in the vicinity of Elborough. • Sustainability: The sustainability of the proposed development is a major point of contention. While developers and some council documents suggest the Elborough development is more sustainable than other potential sites, local objectors highlight the isolated nature of the location with no existing services. I would add the following relating to flooding in the area. Concerns have been raised that new developments in the area could increase the amount of impermeable surfaces (houses, roads) and exacerbate existing flooding problems. Runoff from farmland on the hill by Elborough Farm flows "like a river at times" across Banwell Road, flooding		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									it several times a year. Surface water (flash flooding): This is a widespread risk across the region, which can even impact properties on hillsides. I trust that these very significant considerations opposing development in the area are fully taken into account when submitting the Pre-submission.		
62717857	Isabelle Lemoille		None					I have seen the comments from Hutton Parish Council and Residents which I emphatically endorse. For clarification I repeat some of their observations :- They expressed strong opposition to development in the Elborough area. Their primary concerns include: - Loss of Green Space: The development would remove the strategic gap between Elborough and Locking parishes. - Infrastructure Deficiencies: There are major concerns about a lack of existing facilities (shops, schools, community centres), inadequate public transport, and roads not wide enough for increased traffic. - Public Opinion: An 83% majority of residents in a 2021 survey did not support new housing in the vicinity of Elborough. - Sustainability: The sustainability of the proposed development is a major point of contention. While developers and some council documents suggest the Elborough development is more sustainable than other potential sites, local objectors highlight the isolated nature of the location with no existing services. I would add the following relating to flooding in the area. Concerns have been raised that new developments in the area could increase the amount of impermeable surfaces (houses, roads) and exacerbate existing flooding problems. Runoff from farmland on the hill by Elborough Farm flows "like a river at times" across Banwell Road, flooding it several times a year.Surface water (flash flooding): This is a widespread risk across the region, which can even impact properties on hillsides. Another point which I am sure you are well aware is the ongoing construction of houses in Locking Parkland, Haywood Village and Banwell. The whole area is being saturated with houses reducing alarmingly the green space needed to reduce pollution. Once the green space is gone it is too late and gone forever. I trust that these very significant considerations opposing development in the area are fully taken into account when submitting the Pre-submission.			
63069473	N Manville							I am writing in response to the Pre-Submission Plan 2041 (Reg19) Autumn 2025 consultation to express my strong objection to the proposed development in the Elborough area. My concerns reflect those raised by Hutton Parish Council and local residents, which I fully support. The key issues are outlined below: 1. Loss of Green Space The development would result in the permanent loss of valuable green space and remove the strategic gap between settlements. 2. Infrastructure Deficiencies There are already major concerns regarding the lack of existing facilities—including shops, schools, and core services—which are not adequate to support the increased traffic and population. 3. Public Opinion A 2021 survey showed that 83% of residents did not support new housing in the vicinity, indicating strong local opposition. 4. Sustainability While the proposed site may score favourably in some sustainability assessments, residents remain concerned about its isolated nature. This undermines claims that it is genuinely a sustainable development option. Flooding Risk I would also like to emphasise the significant risk of flooding in this area. Increasing impermeable surfaces through new development would worsen water runoff, particularly in the context of climate change. Runoff from farmland on the hill above Elborough already results in heavy flows, and flash flooding is a known issue across the region, potentially affecting local properties. Given these strong and well-evidenced concerns, I trust that they will be fully considered as part of the consultation process.			
62772833	Ruth Musandu							Elborough Village I fully support the objections raised by Hutton Parish Council and local residents regarding the proposed development in Elborough. For clarity, the key concerns are: 1. Loss of Green Space: The development would permanently remove the strategic green gap between Elborough and Locking. 2. Inadequate Infrastructure: The area lacks essential facilities such as shops, schools, community spaces, and reliable public transport. Existing roads are not suitable for increased traffic. 3. Public Opinion: In a 2021 survey, 83% of residents opposed new housing near Elborough. 4. Sustainability: Despite claims of sustainability, the site is isolated and has no existing services, making it unsuitable for development. I would also stress the significant flood risk. Additional impermeable surfaces would worsen existing flooding, already exacerbated by climate change. Runoff from surrounding farmland frequently floods Banwell			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Road, and the wider area is vulnerable to flash flooding. I trust these substantial concerns will be fully considered in the Pre-submission process.			
62758465	Roger Nicholson							I have several concerns re the above. 1 Extra traffic 400 homes would mean at least 550 extra cars in the area, a lot of these would we parked on the roadside... 2 Flooding risk. I happen to know there is a underground stream in the vicinity of no 2 cedern ave, which has flooded the garden of no 2 in the past. 3 Loss of green space. I with many others totally object to the build.			
62599105	Michelle Parsons			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	I object to the North Somerset Local Plan 2041: Pre-submission Plan because it is not legally compliant and not sound. My concerns relate to transport, infrastructure, environmental impact, and failures in the evidence base. 1. Duty to Cooperate – Not Met There is inadequate evidence that North Somerset Council has effectively cooperated with neighbouring authorities, transport bodies, or environmental agencies on the scale of housing growth proposed. Specifically: No clear cross-boundary approach to transport impacts, despite major effects on the A371, Locking, Hutton, and the wider Weston-super-Mare area. No joint work demonstrating how infrastructure capacity, school places, or healthcare will be delivered. No evidence of engagement with environmental bodies regarding biodiversity impacts and habitat connectivity. As such, the Duty to Cooperate has not been fulfilled. 2. Not Justified – Evidence Base Flawed The housing numbers rely on outdated projections that do not reflect current demographic trends or realistic infrastructure capacity. The plan disproportionately directs growth to small rural settlements such as Elborough and Locking, without justification for why these areas should accommodate such large increases in population. The Sustainability Appraisal does not adequately consider alternatives that would avoid excessive growth in small villages. For these reasons, the strategy is not justified. 3. Not Effective – Transport, Roads, and Flood Risk a. Narrow Roads and Vehicle Volumes The road network serving Locking, Elborough, and Hutton consists of narrow lanes already under pressure. The proposed allocation would significantly increase traffic through: Hutton village, where the main road passes directly by the primary school. Crossing the road in the mornings is already unsafe, and additional volumes would increase risks to children and pedestrians. Banwell Road and Old Banwell Road, which cannot safely or efficiently accommodate the scale of development proposed. There is also insufficient evidence that the required upgrade to the Banwell Road / A371 junction is deliverable. b. Public Transport Elborough has limited bus services and no access to rail. Doubling the size of the village—as this allocation would effectively do—will increase car dependency, contrary to national policy. c. Flood Risk Allocating significant housing in areas known to have drainage constraints and flood-risk issues undermines the deliverability and resilience of the plan. The evidence base does not demonstrate that surface water can be safely managed or attenuated. For these reasons, the plan is not effective. 4. Not Consistent with National Policy The NPPF requires plans to prioritise sustainable development, protect biodiversity, and ensure safe and suitable access for all users. This plan fails on all three counts:	To address the issues identified in my objection, the following modifications are required: 1. Duty to Cooperate – Strengthen Cross-Boundary Evidence Provide clear, published evidence of effective engagement with neighbouring authorities, transport authorities, and environmental bodies on the distribution of housing, infrastructure capacity, and cumulative transport impacts. Produce a joint transport strategy with adjacent authorities to address A371 congestion, cross-boundary traffic through Hutton and Locking, and infrastructure impacts on Weston-super-Mare. Without this, the statutory Duty to Cooperate is not met. 2. Transport and Highways – Robust and Deliverable Evidence Undertake a comprehensive transport assessment demonstrating that narrow country lanes between Elborough, Locking, and Hutton can safely support the vehicle volumes associated with 315+ dwellings. Require the Plan to include specific, costed, and deliverable upgrades to: Banwell Road / A371 junction Narrow village routes through Locking and Hutton Road safety improvements around Hutton Primary School, where children already encounter unsafe crossing conditions. Active and sustainable travel routes must be mapped, funded, and secured—not assumed. If these upgrades cannot be delivered, the allocation must be reduced or removed. 3. Public Transport Provision – Secured, Not Aspirational Require a clear commitment to enhanced bus services for Elborough and Locking, backed by enforceable mechanisms (e.g., S106 or CIL), not vague contributions. Housing delivery should be phased so that public transport improvements occur before or alongside development. 4. Flood Risk and Drainage – Evidence-Based Modifications Require a site-specific surface-water management strategy demonstrating where and how attenuation will be provided and how discharge will be achieved without increasing downstream flood risk. Remove or reduce allocations where safe drainage cannot be proven. 5. Biodiversity and Wildlife Corridors Require up-to-date ecological assessments and a clear strategy for protecting connected habitats around Elborough and Locking. Include a policy requirement for biodiversity net gain that preserves wildlife corridors adjacent to proposed development sites. Remove or amend allocations that risk irreversible ecological harm. 6. Infrastructure Capacity – Education, Healthcare, Utilities Identify specific, funded commitments to expand local schools, healthcare services, and utilities, rather than relying on unspecified contributions. Ensure that any growth does not proceed without guaranteed delivery of supporting infrastructure. Reduce or relocate housing numbers if capacity cannot be expanded. 7. Settlement Strategy – Proportionate and Justified Growth		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Growth is directed to locations poorly served by public transport, increasing reliance on private vehicles. Sensitive habitats and wildlife corridors adjacent to the proposed sites are at risk of irreversible ecological harm, contrary to the requirement to protect and enhance the natural environment. Safe access for emergency vehicles, pedestrians, and cyclists is not evidenced. The plan does not provide a credible strategy for upgrading the road network or active travel routes to accommodate the proposed expansion. The plan is therefore inconsistent with national policy. 5. Infrastructure Capacity – Not Positively Prepared Local infrastructure is already under strain: Schools in the area are close to capacity and lack firm, funded expansion plans. Healthcare provision (GPs, dentists) is already stretched. Utilities and drainage infrastructure are not evidenced as capable of supporting a population increase of this scale. Doubling the size of Elborough and significantly expanding Locking without a realistic plan for supporting services means the plan has not been positively prepared. Conclusion For all the above reasons—failures in the Duty to Cooperate, lack of justification, ineffective delivery mechanisms, inconsistency with national policy, and lack of positive preparation—I object to the North Somerset Local Plan 2041: Pre-submission Plan. The plan should be found unsound unless substantial changes are made, including reconsideration of the scale, location, and deliverability of growth proposed for Locking, Elborough, and Hutton.	Reassess the scale of development proposed for Elborough and Locking to ensure growth is: proportionate, reflects the settlement hierarchy, and aligns with national policy on sustainable development. The plan should avoid doubling the size of small rural settlements without strong justification and infrastructure provision. 8. Updated Housing Need Evidence Update the housing need assessment using current demographic and migration data, ensuring the housing numbers are justified and reflect real capacity across the district. Conclusion To make the Local Plan legally compliant and sound, the Council must provide robust evidence of infrastructure deliverability, comply with the Duty to Cooperate, update its housing need projections, strengthen environmental protections, and ensure that growth in Locking, Elborough, and Hutton is proportionate and sustainable. Unless these modifications are made, the plan should not be adopted.		
62851009	Nicola Payne			No	• Effective	Unsure	Unsure	Huge flood risk. Last year we had issues with floods coming from the green belt land, running into Elborough and flooding the lower fields where the planned development is. There would not be sufficient infrastructure in place to prevent flooding into lower fields or coming back into Elborough. We've lived here since 2011 and every year the surrounding fields flood and can take months to drain. The Land already floods but this will only increase in frequency due to increased impermeable surfaces. Inadequate drainage exacerbating flood risk which according to environment agency will impact this area by the year 2050 Roads; There potentially could be 600+ cars in addition to our current traffic turning out onto a small country road. Going either towards Hutton, a small village with an issue with a bottle neck by the school already, or turning up onto Locking moor road, which is already over capacity, especially at peak times. Again there is not the infrastructure in this small location to allow for more cars, it will not cope with increase congestion. Also would be issues with air pollution and noise pollution. There will be increased danger to pedestrians, horse riders and cyclists which frequent this road regularly, due to it's rural location. There will be a strain on local services, potential over burdening of local schools and healthcare facilities in the area. There WILL NOT be enough GP provision for all of these houses. The local hospital A and E department closes at 10pm, the nearest hospital is then 25 miles away in Bristol. If the single motorway access point allows you to get there! There are no local bus services in this area, including school buses. highway safety is dreadful. Noise; Unacceptable noise levels during development. We are a small village situated right next door to the potential development that will take years. The drilling of foundations will have to be pile driven due to the extensive flood plains. This will cause major disturbance to current residents. Mud; How can you possibly manage all the mud that will come out of the site and damage the already existing village homes and the road? At times the road has been impassable between Elborough, Locking and Hutton, due to flooding and mud. There will be additional light pollution, additional noise pollution, during and after the development and loss of privacy to current residents of our small village. This is virgin agricultural, green belt land. Elborough village itself was only permitted on a brown field site when the old BAJ factory works were demolished. How can the council be considering a development on green belted agricultural land?? It will be hugely detrimental to the design and character of the current village and surroundings. And a destruction of valuable open land. The proposed development will be out of scale, high density and will have	I believe this proposal contravenes specific policies in the local planning framework; example; Green belt settlement boundaries, housing density and lack of infrastructure to allow for increased traffic flow. Destruction of natural habitats and environment, destroying local wildlife and plants, on an existing flood plain.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								a harmful visual impact to the local environment. Wildlife; We have regular visitors across those fields of Deer, Owls, Buzzards, Bats. Badgers. This will be detrimental to the local wildlife in every possible way. You will be destroying their natural habitats. Bio-diversity loss, impact on protected species such as the local newts. Bats, mature trees and hedgerow habitats. Over burdening of local facilities such as water and sewage facilities The development will have a detrimental effect on current house prices. This has been a quiet, sort after area for 20 years. How can you possible put the current residents through the massive impact of a huge development and then devalue their houses also?? This is not the correct location for 315 homes. The local facilities, roads, environment simply will not cope.			
62855425	Sheila Rhodes			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	I object to the North Somerset Local Plan 2041: Pre-submission Plan on the grounds that it is not legally compliant and unsound. My concerns relate to transport, infrastructure, environmental impacts, and significant deficiencies in the evidence base. 1. Duty to Cooperate – Not Met There is insufficient evidence that North Somerset Council has effectively engaged with neighbouring authorities, transport bodies, or environmental agencies regarding the proposed scale of housing growth. Specifically: No clear cross-boundary assessment of transport impacts, despite major effects on the A371, Locking, Hutton, and the wider Weston-super-Mare area. No joint evidence demonstrating how infrastructure capacity, school places, or healthcare will be delivered. No engagement with environmental bodies regarding biodiversity impacts and habitat connectivity. As such, the statutory Duty to Cooperate has not been fulfilled. 2. Not Justified – Flawed Evidence Base Housing targets rely on outdated projections that do not reflect current demographic trends or realistic infrastructure capacity. The plan disproportionately directs growth to small rural settlements, including Elborough and Locking, without justification for why these areas should accommodate such significant population increases. The Sustainability Appraisal does not adequately consider alternatives that would avoid overburdening small villages. For these reasons, the strategy is not justified. 3. Not Effective – Transport, Roads, and Flood Risk a. Narrow Roads and Vehicle Volumes The road network serving Locking, Elborough, and Hutton consists of narrow lanes already under pressure. Additional traffic would significantly affect Hutton village, where the main road passes the primary school, creating increased safety risks for children and pedestrians. Banwell Road and Old Banwell Road cannot safely accommodate the proposed scale of development. There is insufficient evidence that the required upgrade to the Banwell Road / A371 junction is deliverable. b. Public Transport Elborough has limited bus services and no rail access. Doubling the size of the village would increase car dependency, contrary to national policy. c. Flood Risk Significant housing is proposed in areas with known drainage constraints and flood-risk issues. The evidence base does not demonstrate that surface water can be safely managed or attenuated. For these reasons, the plan is not effective. 4. Not Consistent with National Policy The National Planning Policy Framework (NPPF) requires plans to promote sustainable development, protect biodiversity, and ensure safe access for all users. This plan fails to meet these requirements:	To address the issues raised in my objection, the following modifications are required to ensure that the North Somerset Local Plan 2041 is legally compliant and sound: 1. Duty to Cooperate – Strengthen Cross-Boundary Evidence Provide clear, published evidence of effective engagement with neighbouring authorities, transport bodies, and environmental agencies regarding housing distribution, infrastructure capacity, and cumulative transport impacts. Prepare a joint strategy to manage congestion, cross-boundary traffic through Hutton and Locking, and infrastructure pressures on Weston-super-Mare. Without this, the statutory Duty to Cooperate cannot be considered met. 2. Transport and Highways – Robust and Deliverable Evidence Undertake a comprehensive transport assessment to demonstrate that narrow country lanes between Elborough, Locking, and Hutton can safely accommodate traffic generated by 315+ dwellings. Include specific, costed, and deliverable upgrades to: Banwell Road / A371 junction Narrow village routes in Locking and Hutton Road safety measures around Hutton Primary School, where pedestrian safety is already compromised Map, fund, and secure active and sustainable travel routes rather than assuming their provision. If these measures cannot be delivered, the housing allocation must be reduced or removed. 3. Public Transport Provision – Secured, Not Aspirational Commit to enhanced bus services for Elborough and Locking, backed by enforceable mechanisms such as S106 or CIL agreements. Phase housing delivery to ensure public transport improvements are implemented before or alongside development. 4. Flood Risk and Drainage – Evidence-Based Modifications Require a site-specific surface water management strategy detailing how attenuation will be provided and how discharge will be managed without increasing downstream flood risk. Reduce or remove allocations where safe and deliverable drainage solutions cannot be demonstrated. 5. Biodiversity and Wildlife Corridors Undertake up-to-date ecological assessments and produce a clear strategy to protect connected habitats around Elborough and Locking. Include a policy requirement for biodiversity net gain that preserves wildlife corridors adjacent to development sites. Remove or amend allocations that risk irreversible ecological harm. 6. Infrastructure Capacity – Education, Healthcare, and Utilities Identify specific, funded commitments to expand schools, healthcare services, and utilities rather than relying on unspecified contributions. Ensure growth does not proceed without guaranteed delivery of supporting infrastructure. Reduce or relocate housing allocations where capacity cannot be expanded.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Growth is directed to areas poorly served by public transport, increasing reliance on private vehicles. Sensitive habitats and wildlife corridors adjacent to proposed sites are at risk of irreversible ecological harm. Safe access for emergency vehicles, pedestrians, and cyclists is not evidenced. No credible strategy is provided to upgrade the road network or active travel routes. 5. Infrastructure Capacity – Not Positively Prepared Local infrastructure is already under strain: Schools are near capacity and lack funded expansion plans. Healthcare provision (GPs, dentists) is stretched. Utilities and drainage infrastructure are not demonstrated as capable of supporting significant population growth. Doubling the size of Elborough and significantly expanding Locking without realistic plans for supporting infrastructure means the plan has not been positively prepared. For the reasons outlined above—failures in the Duty to Cooperate, lack of justification, ineffective delivery mechanisms, inconsistency with national policy, and inadequate infrastructure planning—I object to the North Somerset Local Plan 2041: Pre-submission Plan. The plan is unsound in its current form and should be reconsidered, particularly regarding the scale, location, and deliverability of growth in Locking, Elborough, and Hutton.	7. Settlement Strategy – Proportionate and Justified Growth Reassess development levels for Elborough and Locking to ensure growth is: Proportionate Consistent with the settlement hierarchy Aligned with national policy on sustainable development Avoid doubling the size of small rural settlements without strong justification and fully evidenced infrastructure provision. 8. Updated Housing Need Evidence Update the housing need assessment using the most recent demographic and migration data to ensure housing numbers are justified and achievable across the district. Conclusion To make the Local Plan legally compliant and sound, the Council must: Provide robust evidence of infrastructure deliverability Comply with the Duty to Cooperate Update housing need projections Strengthen environmental protections Ensure that growth in Locking, Elborough, and Hutton is proportionate and sustainable Unless these modifications are implemented, the plan should not be adopted.		
31077985	A Shipton								Old Banwell road will need to be widened to be safe for the increased traffic. Currently, at points this is so narrow that 2 cars are unable to pass comfortably. A pavement will also need to be introduced as there will be additional pedestrian footfall. The road layout at the mini round a bout will need to be changed to be safe. A significant increase in facilities will be needed including public transport which is currently very limited. Shops and leisure facilities will also be needed. The loss of natural habitats for wild animals is a huge consideration. We have wild deer in the fields along with wide varieties of birds and other wild life. Flooding is already an issue on the Old Banwell road and by the pond in Elborough. With less green space this will increase. This agricultural land is key to the character of the village and this is the reason that many residents moved to the village. House prices in Elborough are high for the local area and this is due to the position within the fields, views, space and surrounding nature. These planned developments will remove these features and put Elborough into the middle of a large development.		
62715361	Nick Siangolis			Unsure		Unsure	Yes		Regulation 19 Objection – Sites HE20637, HE20237 & HE201040 (South of Banwell Road, Elborough) I am submitting this representation to object to the proposed allocation of sites HE20637, HE20237 and HE201040 within the Publication Local Plan 2039. These parcels of land lie to the south of Banwell Road, directly adjoining the village of Elborough. My objection is based solely on material planning considerations relevant to the tests of soundness. 1. Brownfield Context – Why Previous Elborough Development Was Approved Elborough's most recent expansion took place exclusively on the former Aerojets industrial site, a long-disused, derelict brownfield area. Redevelopment of that site was justified because it regenerated previously developed land, removed redundant buildings and did not extend the village into open countryside. In contrast, the current proposed allocations comprise entirely undeveloped farmland which forms part of Elborough's rural backdrop. They are not brownfield, do not regenerate existing development, and would constitute a clear outward extension into open countryside. The justification that applied to the former industrial site is not applicable here. 2. Unsustainable Location and Car Dependency Elborough does not contain core services such as a GP surgery, school, shop, or regular public transport. As a result, residents of these allocations would be dependent on the private car for almost all day-to-day journeys. Walking or cycling to essential facilities would exceed a realistic 15-minute travel distance. The closest shops (Asda fuel station or the Co-op at Banwell) are more than 1.5 miles away from the central area of the proposed allocation. The site therefore fails to meet the criteria for a		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									sustainable location. 3. Highway Constraints Banwell Road is already constrained, with existing congestion and limited provision for pedestrians. Additional vehicle movements generated by the proposed developments would intensify traffic pressures and worsen existing safety issues. There is no evidence demonstrating that safe access, footways, cycle provision or visibility splays can be delivered within the existing highway boundary. Introducing these elements would require road widening, pushing development closer to the identified flood zone. Furthermore, additional traffic to the north would place further pressure on the old Banwell Road and exacerbate congestion on the A371. 4. Landscape and Settlement Impact The site forms part of the open rural landscape that frames and defines the setting of Elborough. Development would impose a hard urban edge on the village, eroding its rural character and contributing to settlement coalescence with Locking. This would undermine the distinct identity of the village. 5. Ecology Objection Sites HE20637, HE20237 and HE201040 lie within an ecologically sensitive countryside corridor that supports a variety of native species and contributes to the wider habitat network surrounding Elborough. The land contains established hedgerows that qualify as priority habitats and provide important wildlife movement routes. Development would sever these corridors and result in the permanent loss of high-value habitat. The area also falls within Density Band C, triggering consultation requirements for the protection of the Lesser Horseshoe Bat. Local fields and drainage ditches already support birds, owls, amphibians and small mammals. Without detailed, credible ecological evidence, the allocation cannot be considered justified or deliverable. 6. Drainage and Flooding Risks The proposed allocations sit within a naturally low-lying landscape where water accumulates from several directions. Standing water is frequently visible following rainfall, indicating a high water table and poor drainage capacity. The area relies on an ageing network of rhynes and ditches that already operate close to capacity. Introducing large areas of hard surfacing would significantly increase runoff, heightening flood risk to neighbouring properties. There is substantial real-world evidence of recurring flooding along Banwell Road that exceeds the limitations of the mapped flood zones. 7. Hutton Parish Council Response Hutton Parish Council has lodged a formal objection to the proposed addition of around 400 homes and associated development around Elborough. Their objection is supported by extensive evidence collected for the Hutton Parish Survey Report (February 2021), which found: • 86% opposed development outside the settlement boundary • 83% opposed development specifically around Elborough The Parish Council raises multiple planning concerns consistent with this objection: • Loss of green landscape and erosion of strategic gaps between Hutton, Elborough and Locking • Lack of safe pedestrian or cycling routes to essential facilities • Insufficient local amenities and community infrastructure • Severely limited road network capacity, including narrow rural lanes and pressure on the 20mph zone in Hutton • Unsustainable levels of growth that exceed existing service capacity Their conclusions strongly reinforce that the proposed allocations are not suitable or sustainable and would conflict with established community evidence and policy aims to preserve village identity and open countryside. 8. Other Nearby and Future Developments There are several more suitable sites — already permitted, allocated, or anticipated — located in areas with far greater sustainability credentials than HE20637, HE20237 and HE201040. The Banwell bypass will support development in more strategic growth areas that have the space and infrastructure to provide essential facilities such as schools, healthcare, shops and safe transport links. Furthermore, Weston-super-Mare, Locking, Locking Parklands, West Wick and Banwell all include locations explicitly identified for growth where services, active-travel routes, public transport and road capacity already exist or can be feasibly expanded. These locations can contribute to the district’s housing needs without displacing development into isolated rural land that cannot support it.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									Conclusion For the reasons set out above, I request that sites HE20637, HE20237 and HE201040 are removed from the Local Plan. Please ensure that this objection is formally recorded and fully considered at examination.		
63079297	Robert Smart								My wife and I wish to raise our objection to developments HE201040 and HE20637 and agree with the existing objections in the Regulation 19 Additional Sites Consultation document. These developments are un-necessary given the extensive development on-going in the area bounded by i) the M5, A371 and Somerset Avenue, and ii) immediately east of the M5 and in the proximity of the Banwell Bypass. The document reveals that the rationale for the developments is to secure funding for an upgrade to the Banwell Road junction with the A371. Such funding should be secured through existing plans within the two areas that I have identified above. We, therefore, raise our objection to the rationale for the proposed developments.		
29553729	J Turnbull									Reg 19 Objection – Sites HE20637, HE20237 & HE201040 (South of Banwell Road, Elborough) I am submitting this representation to object to the proposed allocation HE20637, HE20237 & HE201040 in the Publication Local Plan 2039. The site lies south of Banwell Road and adjoins Elborough. My objection is based on material planning grounds relevant to the tests of soundness. 1. Brownfield Context – When the previous Elborough Village development was approved, Elborough's recent growth occurred solely on the former Aerojet's industrial site, a derelict and redundant brownfield plot. Redevelopment was justified because it regenerated previously developed land, removed obsolete structures, and did not extend the previously developed land into open countryside. The above allocations are entirely undeveloped agricultural land forming part of Elborough's rural setting, making its proposed allocation fundamentally different and unjustified. 2. Unsustainable location and car dependency. Elborough lacks the additional essential services including a school, GP surgery, shop, limited public transport, with additional housing. Residents would be dependent on private cars for daily needs. Safe pedestrian or cycling routes to services would result in a trip greater than 15 mins. The nearest shops are either Asda filling station or the Co-op in Banwell, both over 1.5 miles from the centre of the proposed development. 3. Highway Constraints. Banwell Road already experiences severe congestion and limited pedestrian safety. Additional vehicle movements from this site would worsen traffic pressures and increase safety risks. No evidence has been provided to show that safe access or active travel improvements are deliverable. In providing footpaths, bus stops, cycle paths and visibility spays, will increase the width of the highway known as Banwell Road. In turn, forcing the proposed development further towards the Flood Zone. Development to the north will put a strain on the Old Banwell Road, with further congestion on the A371. 4. Landscape and Settlement Impact. The site forms part of the open rural landscape that defines the setting of Elborough. Development would introduce a prominent urban edge, erode village character and contribute towards a merger with Locking Village. 5. Ecology Objection. Sites HE20637, HE20237 & HE201040 lies within a sensitive countryside corridor that supports a range of native species and contributes to the ecological network around Elborough. The site contains established native hedgerows, which are priority habitats and important movement routes for wildlife. Development would fragment these corridors and permanently remove high-value habitat. The area for development is a designated area known as Density Band C; this is an area for consultation in protecting Lesser Horseshoe Bats. The fields and surrounding ditches support birds, owls, amphibians, small mammals and deer. Without robust ecological evidence, the allocation cannot be considered justified or deliverable. 6. Drainage and Flooding Risks. Sites HE20637, HE20237 & HE201040 sits within a low-lying landscape where water naturally collects from all directions. The fields regularly display standing water after rainfall, indicating poor infiltration and a high-water table. The area relies on a historic network of rhynes and drainage ditches already close to capacity. Increasing impermeable surfaces would intensify runoff, raising flood risk to existing homes. This would ultimately place residents' buildings insurance at high policy value, or uninsurable. There is clear and outstanding evidence of regular flooding in this area of Banwell Road above and beyond the indication of the flood Zone map. 7. Hutton Parish Council Response. Hutton Parish Council has also objected to the inclusion of approx. 400 houses and related growth around Elborough, drawing on extensive evidence from the Hutton Parish Survey Report (Feb 2021). The survey showed overwhelming community opposition to development beyond the settlement boundary (86%) and specifically near Elborough (83%). • The Parish Council highlights several material planning issues that directly support this objection. • The loss of green landscape and strategic gaps between Hutton, Elborough and Locking. • The absence of safe pedestrian or cycling routes to essential village facilities.	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										• Lack of local amenities and community infrastructure. • Severe limitations on the local road network, including narrow rural lanes and increases in traffic through the Hutton 20mph zone. • The unsustainable scale of growth proposed relative to available services, schools, and public transport. Their findings reinforce that HE20637, HE20237 & HE201040 is neither appropriate nor sustainable, and that its allocation conflicts with both community evidence and the Parish Council's long-standing strategy to protect open countryside and maintain distinct settlement identities. 8. Other near and or Future Developments. There are also several nearby sites that already have planning permission, and allocated, or are earmarked for future development that sit in far more sustainable and strategic locations than HE20637, HE20237 & HE201040, under the "Call for Land" scheme. The new Banwell bypass will unlock development clusters with the space and capacity to deliver the supporting infrastructure that new housing requires, including shops, healthcare provision, schools and safe transport links. In contrast, Weston-super-Mare, Locking, Locking Parklands, Banwell and West Wick all contain areas specifically identified for growth, where services, road capacity, public transport and active-travel connections already exist or can be viably expanded. These locations are demonstrably more capable of contributing to North Somerset's housing need without dispersing development into isolated rural land such as HE20637, HE20237 & HE201040. Conclusion For the reasons above, HE20637, HE20237 & HE201040 should be removed from the Local Plan. I request that this objection is formally recorded and considered at examination.	
29553729	J Turnbull							Reg 19 Objection – Sites HE20637, HE20237 & HE201040 (South of Banwell Road, Elborough) I am submitting this representation to object to the proposed allocation HE20637, HE20237 & HE201040 in the Publication Local Plan 2039. 62471329	Environment Agency		Environment Agency						A sequential approach must be followed on site, particularly where sites include Flood Zones 2 and 3. Development must be designed to reduce the impact of flooding on the proposed development both today and with climate change. Development to align with NSC Level 1 2025 SFRA. In tidal areas, development needs to consider the impacts of climate change and a tidal breach. Any works taking place within 8m of Main River (fluvial)/ 16m (Tidal) may require a Flood Risk Activity Permit (FRAP) from the Environment Agency. The developments around Locking and Cross Rhyne will need to ensure that the interaction between tidal, fluvial and surface water flood risks are fully considered. As stated in the site allocations, the existing Weston Villages 2012 modelling will need to be updated to account for the large amount of development that has taken place since this modelling was produced. Future developments in this location may be required to contribute to flood risk management improvements via a Section 106 Agreement.		

Land north of Banwell Road, Locking /Elborough

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? Sites HE20637, HE20237 & HE201040 lies within a sensitive countryside corridor that supports a range of native species and contributes to the ecological network around Elborough. The site contains established native hedgerows, which are priority habitats and important movement routes for wildlife. Development would fragment these corridors and permanently remove high-value habitat.

									The area for development is a designated area known as Density Band C; this is an area for consultation in protecting Lesser Horseshoe Bats. The fields and surrounding ditches support birds, owls, amphibians, and small mammals. Without robust ecological evidence, the allocation cannot be considered justified or deliverable. 6. Drainage and Flooding Risks. Sites HE20637, HE20237 & HE201040 sits within a low-lying landscape where water naturally collects from all directions. The fields regularly display standing water after rainfall, indicating poor infiltration and a high-water table. The area relies on a historic network of rhynes and drainage ditches already close to capacity. Increasing impermeable surfaces would intensify runoff, raising flood risk to existing homes. This would ultimately place residents buildings insurance at high policy value, or uninsurable. There is clear and outstanding evidence of regular flooding in this area of Banwell Road above and beyond the indication of the flood Zone map. 7. Hutton Parish Council Response. Hutton Parish Council has also objected to the inclusion of approx. 400 houses and related growth around Elborough, drawing on extensive evidence from the Hutton Parish Survey Report (Feb 2021). The survey showed overwhelming community opposition to development beyond the settlement boundary (86%) and specifically near Elborough (83%). • The Parish Council highlights several material planning issues that directly support this objection. • The loss of green landscape and strategic gaps between Hutton, Elborough and Locking. • The absence of safe pedestrian or cycling routes to essential village facilities. • Lack of local amenities and community infrastructure. • Severe limitations on the local road network, including narrow rural lanes and increases in traffic through the Hutton 20mph zone. • The unsustainable scale of growth proposed relative to available services, schools, and public transport. Their findings reinforce that HE20637, HE20237 & HE201040 is neither appropriate nor sustainable, and that its allocation conflicts with both community evidence and the Parish Council's long-standing strategy to protect open countryside and maintain distinct settlement identities. 8. Other near and or Future Developments. There are also several nearby sites that already have planning permission, and allocated, or are earmarked for future development that sit in far more sustainable and strategic locations than HE20637, HE20237 & HE201040, under the "Call For Land" scheme. The new Banwell bypass will unlock development clusters with the space and capacity to deliver the supporting infrastructure that new housing requires, including shops, healthcare provision, schools and safe transport links. In contrast, Weston-Super-Mare, Locking, Locking Parklands, Banwell and West Wick all contain areas specifically identified for growth, where services, road capacity, public transport and active-travel connections already exist or can be viably expanded. These locations are demonstrably more capable of contributing to North Somerset's housing need without dispersing development into isolated rural land such as HE20637, HE20237 & HE201040. Conclusion For the reasons above, HE20637, HE20237 & HE201040 should be removed from the Local Plan. I request that this objection is formally recorded and considered at examination.		
62735553	Janette Baker								Elborough Village, I would like to express my strong opposition to the development in the Elborough area following the comments from the Hutton Parish Council and Residents which I fully endorse against this development. My concerns names below have already been expressed by my fellow residents, but I couldn't word my concerns any better than they have, so I repeat their points as follows; 1) Loss of Green Space which would be lost forever. The development would remove the strategic gap between Elborough and Locking parishes. 2) Infrastructure Deficiencies: There are major concerns about a lack of existing facilities (shops, schools, community centres), inadequate public transport, and roads not wide enough for the increased traffic. 3) Public Opinion: 83% majority of residents in a 2021 survey DID NOT SUPPORT new housing in the vicinity of Elborough. 4) Sustainability: The sustainability of the proposed development is a major point of contention. While developers and some council documents suggest the Elborough development is more sustainable than other potential sites, local objectors highlight the isolated nature of the location with no existing services. I would like to emphasize the risk of flooding in the area. Concerns have been raised that new development in the area would increase the amount of impermeable surfaces (houses, roads) and exacerbate the existing flooding problems especially with the climate change. Run off from farmland on the hill by Elborough flows abundantlly across Banwell road, flooding it several times a year. Flash flooding is a widespread risk across the region and this area, which can impact properties. I trust that these very significant considerations opposing development in the area are fully taken into account when submitting the Pre-submission.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 31072737	Nick Bowler			No	◦ Consistent with national policy	Unsure	Unsure	I am concerned about potential housing developments adjacent to Elborough Village, both in the fields across the Banwell Road, and in the field between Elborough Village and Elborough Farm. I feel that these developments would be in direct conflict with the following: Extracts from the “Vision” • To prioritise the location of new development close to places with a wide range of services, facilities and job opportunities. • To reduce car use, encourage walking and cycling, and high quality and effective public transport. • To address the decline in the town centres • To prioritise the importance and delivery of green spaces when considering new development, support priority habitats and species, and safeguard areas at risk of flooding. I feel that these developments would be in direct conflict with the following: Policy SP1: Sustainable development • Prioritise walking and cycling, maximise the use of effective public transport and encourage the creation of liveable neighbourhoods; • Protect valued natural and historic assets and support green infrastructure and biodiversity; Policy SP2: Climate change • Reduce the risk of flooding both now and in the future, taking account of predicted sea level rises and the impact on areas vulnerable to coastal change; • Deliver green infrastructure and provide a net gain in biodiversity; Policy SP10: Transport • Delivery of attractive, safe, and inclusive routes for walking and cycling which are well integrated into existing networks and provide access to effective and frequent public transport; Policy SP11: Historic and natural environment • Conserve and enhance the landscape and scenic beauty of the Mendip Hills National Landscape and the wildlife and cultural heritage, including ensuring that development in its setting is sensitively located and designed to avoid or minimise adverse impacts; • Protect the best and most versatile agricultural land; • Conserve, restore and enhance priority habitats, ecological networks and the protection and recovery of priority species; • Ensure that the design and construction of spaces and buildings encourages wildlife and biodiversity; • Support the establishment and delivery of North Somerset Nature Parks to protect and enhance internationally important bat habitats, foraging opportunities and connectivity through the landscape, and mitigate the impacts of development; • Retain existing trees and support new planting, including street trees, and woodland creation to help increase district-wide canopy cover;	Both of these potential housing developments adjacent to Elborough Village, both in the fields across the Banwell Road, and in the field between Elborough Village and Elborough Farm should be excluded from the plan. These fields are agricultural land and integral to the character of the village. They are populated with established trees and hedges which are home to many species of wildlife including bats, deer, badgers, hedgehogs and birds. These green areas are a key reason for many people moving into the area and the loss of them would be detrimental to the environment and to the residents. They would not support the following policies; Policy SP1: Sustainable development • Prioritise walking and cycling, maximise the use of effective public transport and encourage the creation of liveable neighbourhoods; • Protect valued natural and historic assets and support green infrastructure and biodiversity; Policy SP2: Climate change • Reduce the risk of flooding both now and in the future, taking account of predicted sea level rises and the impact on areas vulnerable to coastal change; • Deliver green infrastructure and provide a net gain in biodiversity; Policy SP10: Transport • Delivery of attractive, safe, and inclusive routes for walking and cycling which are well integrated into existing networks and provide access to effective and frequent public transport; Policy SP11: Historic and natural environment • Conserve and enhance the landscape and scenic beauty of the Mendip Hills National Landscape and the wildlife and cultural heritage, including ensuring that development in its setting is sensitively located and designed to avoid or minimise adverse impacts; • Protect the best and most versatile agricultural land; • Conserve, restore and enhance priority habitats, ecological networks and the protection and recovery of priority species; • Ensure that the design and construction of spaces and buildings encourages wildlife and biodiversity; • Support the establishment and delivery of North Somerset Nature Parks to protect and enhance internationally important bat habitats, foraging opportunities and connectivity through the landscape, and mitigate the impacts of development; • Retain existing trees and support new planting, including street trees, and woodland creation to help increase district-wide canopy cover;

62881793	Spencer Buck			No	• Justified • Effective • Consistent with national policy			OBJECTION: Land north of Banwell Road, Locking / Elborough (315 dwellings) 1. Introduction I am writing to object to the proposed allocation of 315 dwellings on Land north of Banwell Road, Locking / Elborough as set out on page 293 of the North Somerset Local Plan 2041. This is not an emotional or NIMBY objection. It is a practical, evidence-led objection rooted in the realities of Locking, Elborough and the surrounding settlements, communities already under significant and measurable pressure from decades of incremental growth. The allocation is fundamentally unsound, undeliverable, and in conflict with several policies of the Local Plan and the NPPF. 2. The Allocation Is Unsound Under NPPF Tests A site allocation must be: • Justified: the most appropriate strategy, based on evidence • Effective: deliverable over the plan period • Consistent with national policy This site fails on all three grounds. 3. Highways & Transport: A371 and Banwell Road Already Operating at Capacity The plan itself confirms that development must fund an upgrade to the Banwell Road / A371 junction. This requirement alone is an admission that: • the network is already insufficient, • the impact of 315 additional dwellings is severe, • and the development is not currently viable without major off-site engineering works. Material concerns: 3.1 A371 is a strategic corridor already at breaking point • Used as a relief route for congestion around Weston-super-Mare. • Regular peak-time queuing in both directions. • Slow-moving commuter flows towards J21 and Hutton Moor roundabout. Adding 600+ additional cars (based on standard trip-generation rates) will significantly worsen safety and congestion. 3.2 Banwell Road is narrow, rural in character, and unsuitable for strategic traffic The site forces development traffic onto: • a constricted rural lane, • with limited footways, • poor visibility in sections, • and a high proportion of pedestrian and cycle conflicts. The Local Plan requires an active travel priority crossing on Banwell Road, again indicating that existing pedestrian safety is already inadequate, let alone with hundreds more households using it daily. 3.3 Cumulative transport impact is materially understated This allocation is explicitly tied to the adjacent allocation: Land to the West of Elborough (70 dwellings). The Local Plan requires the developer to demonstrate joined-up safe active-travel provision between both sites and Locking village, yet the document provides no evidence that such a link is technically feasible given: • narrow road widths • fragmented verges • areas with no safe footway • multiple pinch points • existing village character constraints • In short: if infrastructure must be transformed before the housing can function, the site is not “effective” or “deliverable” under NPPF definitions. 4. Schools, Healthcare & Community Infrastructure Already Overloaded The allocation requires contributions to primary, secondary and early-years places. Notably: • There is no clarity on where these places will be delivered. • There is no identified expansion site in Locking. • Weston schools are already over capacity and reliant on cross-boundary movement. If the Plan cannot show: 1. Where the new places will be located, 2. How they will be delivered, 3. When they will be funded, …then the allocation is not effective and should be removed until proper evidence is provided. Healthcare capacity is similar: • GP appointment waiting times are rising. • Locking Surgery has limited expansion potential. • Parklands and Haywood expansions already add thousands of residents in the wider area. Without confirmed mitigation, this allocation conflicts with NPPF paragraphs on social sustainability. 5. Flooding, Drainage & Surface Water Concerns	Based on the Local Plan itself and NPPF soundness tests, the allocation for 315 dwellings north of Banwell Road is: • Not justified (no evidence it is the best or even a viable option) • Not effective (dependent on major infrastructure with no delivery certainty) • Not consistent with national policy (flooding, highways, infrastructure, coalescence issues) • Likely to cause significant community harm For these reasons, I respectfully request that this allocation is removed from the Local Plan or, at minimum, deferred until: 1. Highways modelling and an approved A371/ Banwell Road upgrade scheme are completed. 2. School place delivery is secured and site-identified. 3. A complete drainage strategy is demonstrated. 4. A landscape and character assessment confirms community separation is protected. 5. Noise impact from the skatepark is properly evidenced. 6. A deliverable, safe active-travel route is proven. Until then, this site is not sound, not deliverable, and not appropriate for allocation.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The plan states that the site must provide surface water attenuation and identify how this will drain. This is a red flag. The area north of Banwell Road features: • low-lying clay soils • rapid surface run-off during heavy rain • visible field flooding in winter months • historically strained culverts and ditches • proximity to existing flood zones on adjacent parcels • Without a fully engineered drainage strategy demonstrating no increased downstream flood risk, the site cannot be considered sound or consistent with NPPF flood-risk guidance. 6. Local Character & Landscape Impact The site sits between: • the historic rural setting of Elborough, and • the village character of Locking. Both settlements have distinct identities which would be erased by: • a 315-unit urban extension, • merging previously separate communities, • introducing mass-scale housing out of proportion with the village's size. This contradicts: • Local Plan design policies on maintaining settlement identity • NPPF paragraph 127 on local character • The Council's own commitment to avoid coalescence of villages • Given that Locking has already accepted extensive growth through Parklands Village & West Wick, the "proportionality" test is not met. 7. Public Right of Way AX18/1/20 — Unresolved Conflicts The Local Plan requires that the PROW is upgraded. However: • This footpath crosses sensitive landscape. • It is a valued recreational route for residents. • Upgrading it to support heavy active-travel use may require widening, lighting, or surface changes incompatible with its rural character. If the design solution harms the PROW's recreational quality, it conflicts with LP policies on PROW protection. 8. Noise Impact from Approved Skatepark to the North The plan states the development must prove that no dwellings will be affected by the noise/activity of the approved skatepark. This is a major unresolved issue: • Skateparks generate high-frequency, irregular noise. • Evening use is common. • Noise-mitigating design may be incompatible with a viable layout. • If acoustic buffering fails, the scheme becomes undeliverable. • Until an acoustic feasibility study is completed, this allocation cannot be judged sound. 9. The Allocation Is Disproportionate and Inconsistent With Settlement Strategy 315 dwellings is the single largest rural-village allocation in the Local Plan. When combined with: • Elm Grove Nursery (110 units) • Land to the West of Elborough (70 units) • Land north of Locking (15 units) • Locking and Elborough would be expected to absorb 510+ new dwellings — far exceeding the share for similar villages. This is directly contradictory to policies that describe Locking as having: • limited services, • limited transport connectivity, • and sensitive landscape edges. • The scale is simply not proportionate.			
59246849	R Burrows			No	• Justified	Unsure	Unsure				
63066337	Hutton Parish Council		Hutton Parish Coiuncil	Unsure		Unsure	Unsure		Hutton Parish Council Objects for the following reasons:As detailed in the attached HPC Parish of Hutton Survey Report Feb 2021 - see page 3, 5, 70 and 73 - there was a lack of support and strong opposition for any new housing within the Parish - which was a key Issue in the Survey Conclusion. • The majority - 86% did not support new housing being built outside or adjacent to the Settlement Boundary of Hutton. • The majority - 83% did not support any new housing being built in the vicinity of Elborough Village. As such it was agreed that: •The Parish Council will monitor all development and continue with it's strategy of protecting the green landscape and open spaces. • The Parish Council will continue to oppose housing and other developments where it believes it is right to do so. Therefore Hutton Parish Council oppose and object to the NSC Local Plan Additional Housing Consultation for the following reasons: • The additional housing would be against the majority of wishes, as detailed in the HPC Parish of Hutton Survey Report Feb 2021.		Parish of Hutton NP Survey Report Feb 2021.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									•The additional housing would be against the Parish Council strategy of protecting the green landscape and open spaces, as detailed in the HPC Parish of Hutton Survey Report Feb 2021. •The strategic gap does not look to have been maintained. The new estates appear to effectively link Elborough and thus the Parish of Hutton to the Parish of Locking - thus removing any strategic gap with Locking. • No safe walking or safe cycling routes for children or adults to and from the current Parish facilities situated in the village of Hutton - including School, Village Hall, Scout Hut, Children's Play Area, Adventure Play Area, Hutton Football Club and local businesses. •Lack of facilities and amenities such as shops and community facilities. • Loss of green landscape and open spaces. •Lack of sustainable infrastructure to support the new housing. •Increased road traffic in the vicinity of the new houses and Elborough in Banwell Road. •Increased road traffic through the village of Hutton 20 MPH Zone to get to the new houses and Elborough in Banwell Road. •Regarding the road between Hutton and Elborough, not only would it see increased traffic, but the road is very difficult and in places not wide enough for 2 cars to pass (yet alone buses and lorries) which will build congestion etc. •The proposed developments around Elborough Village are very extensive• There will be some 400 additional properties added to the existing 180 properties in Elborough Village. These dwellings are in an isolated position there are no existing services within this area neither in Hutton. It seems difficult to see development being sustainable in this area unless there is an increase of facilities. •There are possible schools at Locking Parklands but there would need to be safe walking or cycle works and an increase in school places would be necessary to cater for the large increase in children •There are no community facilities at Elborough and if 400 houses are added it would be essential for some community facilities to be provided. There is also the proposal of some 360 houses immediately adjacent to Elborough in the Locking Parish.• There would need to be Highways upgrading to give suitable access to the A371. •There would \need to be the introduction of public transport to support this development as at present there is none. •With the high demand on North Somerset for housing it seems that the Elborough Development although we dot consider them “Sustainable” they are more sustainable than many other areas proposed in these plans. •North Somerset is in an impossible situation in having to provide the level of development required by the Government. •If all this proposed development does take place where are the expected influx of people going to seek employment or will the transient population seek to travel yet even further than at present.		
63006177	Mac Mic Strategic Land (Land north of Banwell Road)	Planning Potential (Elliot Jones)	Mac Mic Strategic Land					These representations have been prepared on behalf of Mac Mic Strategic Land (Mac Mic), who have an interest in Land north of Banwell Road, Elborough/Locking. Mac Mic is working in partnership with the landowners to promote this site for residential-led development and is aiming to bring forward an outline planning application for the site in 2026. The representations are made in response to the North Somerset Local Plan 2039 Pre-submission Plan (Regulation 19), which is currently out for consultation until 12th December 2025. Representations were submitted – in respect of the site - to the previous version of the Regulation 19 Pre-Submission Draft in January 2024. Following this, it was Council intention to undertake a second round of consultation under Regulation 19 in the summer of 2024. However, shortly after the second Regulation 19 Local Plan (July 2024) was approved, the government launched a consultation on changes to the National Planning Policy Framework (NPPF). These proposed alterations included placing greater emphasis on the need to increase housing building across the country. This was to be achieved, in part, by making the standard method housing target mandatory. This had implications for the North Somerset Local Plan, as it overall housing requirement was based on a locally derived target and set a much lower figure than that prescribed by the standard method. Following the publication of the consultation, North Somerset Council (NSC) decided to pause the Local Plan in order to identify additional housing supply, which would address the shortfall. Land north of Banwell Road, Elborough/Locking was not allocated in the Pre-Submission Draft in January 2024 but the representations submitted at that time demonstrated that the site was an appropriate, deliverable and suitable proposition for residential development. The information submitted with the representations (including a Vision Document) indicated that critical technical matters relating to the site’s development such as flood risk, landscape impact, local service requirements and sustainability could all be overcome. Following the pause to the Local Plan process, NSC placed out for a consultation, a Call for Sites, in October 2024. The Land north of Banwell Road, Elborough/Locking was submitted to this consultation together with supporting information. In December 2024, the Government published a revised version of the NPPF, which sought to unlock economic growth by addressing housing and infrastructure under-delivery. It reiterated the Government’s objective of significantly boosting the supply of homes and noted that it was important that a sufficient amount and variety of land comes forward where it is needed and that land with permission is developed without unnecessary delay. The introduction of the standard method meant that NSC had to accommodate a significant increase in their overall housing requirement. The requirement - as set out in the standard method - was 23,895 dwellings over the 15-year plan period. This was an additional 8,620 dwellings above the proposed housing supply target outlined in the Regulation 19 Publication Draft Local Plan (July 2024), which identified a requirement for 15,275 dwellings. Based on the information gathered from the Call for Sites, a Consultation Paper on Additional Sites was published in February 2025. This categorised the site as ‘most suitable’, that is, a site which is located at a sustainable growth location and had most potential for further consideration. The Consultation Paper stated that the site shown was smaller than the original Call for Sites submission because some areas had been removed as they fell within areas of coastal flood risk. The paper stated that the site had a capacity of 315 dwellings. Mac Mic made representations to the Consultation Paper on Additional Sites. Following this, Land north of Banwell Road, Elborough/Locking has now been allocated in the Pre-Submission Draft of the North Somerset Local Plan. Mac Mic are wholly supportive of this allocation and following positive pre-application discussions are in the process of preparing an outline planning application for the site. Their proposals are based on the site allocation in the Local Plan but more detailed technical analysis has indicated that the site could accommodate additional homes, with an approximate site capacity of 415 new homes. This is based on a more detailed assessment of										01 North Somerset Local Plan Pre-Submission Plan Consultation Representations.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								coastal flood risk and strategic flood defences. The following representations describe the site and the proposed vision for its development. The site encompasses Land to the South of Locking and to the North of Elborough. It is 31.8 hectares in size and is currently formed by a series of agricultural fields. Whilst it is recognised that parts of the site are close to areas of flood risk, the Vision Document submitted with the previous representations demonstrated that the development of the site would seek to minimise vulnerability to tidal, fluvial, and surface water flooding, without increasing flood risk elsewhere or causing harm to water quality or availability. This design approach has driven the approach to the site with much of the development areas sitting outside those areas that might be affected by flooding. This is reflected in the site allocation in the Regulation 19 Pre-Submission Draft. However, further analysis undertaken by Mac Mic has demonstrated that additional area outside the site allocation could accommodate development and consider that the site's capacity is nearer to 415 homes. This level of development would not have an adverse effect on flooding. The proposed layout means that significant levels of on-site open space can be created and the site will enable the establishment of a new country park. This will also have ecology and landscape impacts. The site's development will also ensure that the currently remote settlement of Elborough to be integrated into the wider catchment of Weston-super-Mare through the introduction of new on-site facilities and sustainable transport links. The site represents an excellent opportunity to deliver a diverse, low carbon community in a sustainable location, along with a country park whilst supporting NSC's vision and objectives for housing growth. Specifically, the site provides an opportunity to deliver approximately 415 homes within a mix of tenures and house types together with a local shop, community building and mobility hub. The country park will include new play spaces and allotments. The proposals will be supported by a site-wide green and blue infrastructure network that improve the site's drainage. New pedestrian and cycle routes will link Locking and Elborough within a network of active travel routes following key desire lines to local destinations thus encouraging sustainable modes of transport. This, together with new on-site facilities, will help reduce car dependency and promote health and well-being for future residents as well as existing residents of Elborough. The site therefore has numerous benefits: • It is under the control of one party, who can bring forward development at pace. • It has the ability to achieve a comprehensive residential-led development. • It will help meet the existing deficit in local and community facilities present in Elborough through the provision of a local shop, community building and mobility hub and a new country park. • The site will provide a range of sustainable transport links that will not only assist existing residents to access facilities in Locking but also those in Weston-super-Mare. • The proposed development will also address highway safety concerns in the vicinity of the site; and • The development of the site will be landscape-led. It will provide for a green spine through the site, which helps address drainage concerns and the visual impact of the site whilst improving biodiversity. THE SITE'S VISION The site lies to the south of Locking and to the north of Elborough. It is also to the north east of the village of Hutton, to the south of Locking Parklands and to the west of the strategic allocation at Wolvershill. Land north of Banwell Road, Elborough / Locking is not in the Green Belt, it is not within a Strategic Gap and does not contain any listed buildings. It is also not within any areas of landscape or ecological designation. The land is Grade 4 in terms of agricultural land classification. The site is generally flat along its southern extent but rises towards its northern boundary, which is formed by Old Banwell Road. Site access can be provided from this road and from Banwell Road in the south. The land proposed for development is free from constraints. The masterplan – illustrated below - has sought to successfully address potential concerns arising from flooding and topography. Given the site's location to the east of the built-up area of Weston-super-Mare and to the south and west of areas of significant existing and future development, it forms a logical location for a new, sustainable extension to meet North Somerset's housing needs. The site has excellent links to the strategic road and rail network given its proximity to the M5 whilst it will create and enhance existing sustainable transport links. It will also provide opportunities for residents in Elborough to access facilities in Locking, Locking Parklands and in the centre of Weston-super-Mare. The site is generally well contained by hedgerows, trees and planting, with a strong field pattern providing enclosure to individual parcels within the site. There is limited visibility from the Mendip Hills National Landscape and, where there is an impact, this has been mitigated through the masterplan in terms of the layout of the built development, the introduction of new planting, and the provision of significant levels of green infrastructure. The site has been subject to technical appraisals that have identified there are no physical or environmental constraints that would delay or preclude the development of the site. The whole site is under the control of one party meaning that development can be brough forward quickly. The site is a greenfield site, which means that there are no viability concerns, and the site is not subject to any known legal, physical, or environmental constraints that might otherwise affect development. As such, it represents a viable development option with a realistic prospect that new homes could be delivered within five years. Furthermore, it is clearly in a location that developers find attractive to bring forward housing sites for development, this is evident from recent developments in the surrounding area. Residential development therefore represents a viable future use for the site. The proposed development would therefore comprise the following: • Approximately 415 high quality new homes with a range of house types and tenures (including affordable provision). • A local shop and community building that will not only serve the site but also the existing settlement of Elborough. • A mobility hub providing a wide range of sustainable transport choices. • Much of the site will be formed by green infrastructure that will run through its central spine (new Country Park). It will be managed to maximise biodiversity, with the nature restoration of the rhyne, new attenuation features and a mosaic of wetland habitats established. This space will be a dark zone for bat movements. • Community green spaces and recreational opportunities will also be created including the potential for a range of natural play facilities scattered throughout a 'playable landscape' and allotments. • Existing Rhynes will be retained in-situ and a blue corridor created with biodiverse linear SuDS features. • A network of active travel routes and leisure trails permeates the entire development - forming the principal movement structure - and connecting to Weston-super-Mare, Locking Parklands and the wider countryside; and • New development will be nestled within the existing landscape, connected by active travel corridors and with the

								community hub and recreational facilities meeting the day-to-day needs of residents. Much of the site will be left as landscape with existing fields, rhynes, hedgerows and woodlands being integrated into the development. This will lend the site an identity rooted in its landscape and provide residents, workers and visitors a sense of well-being and connection to the environment. The site will be designed to ensure that cars do not dominate the environment and people have sustainable and lowcarbon transportation choices that are convenient and viable. Roads will be demoted in the overall movement hierarchy and active travel corridors set within greenways will form the primary infrastructure, encouraging cycling, walking and healthy lifestyles. The site is suitably and sustainably located for the development of a new low carbon and energy community. In addition to those on site, there are good opportunities for accessibility to local services and facilities, and the centre of Weston-super-Mare, to be achieved via sustainable transport modes. A mobility hub will provide alternative transport options. Underpinning this will also be a comprehensive active travel network, creating new walking and cycling links to Weston-super- Mare and allowing for new sustainable links. The proposed development of the site will be to create a new type of community set within extensive nature-rich green spaces to the east of Weston-super-Mare. The site will be a well-connected, sustainable location for new housing that will support recent development in the area whilst having its own distinctive, contemporary identity based on its unique landscape heritage. SUMMARY These representations have been prepared on behalf of Mac Mic in relation to Land north of Banwell Road, Locking / Elborough. They respond to the Pre-submission Plan Regulation 19 Consultation and have been informed by the relevant evidence base documents. Mac Mic are in the process of submitting an outline planning application in respect of the site, which is allocated for residential development in the Pre-Submission Draft. It is Mac Mic's view that the site represents a sustainable, deliverable and suitable site for residential development that will help meet the overall housing needs in North Somerset. The site will also assist in meeting pressing affordable housing requirements in the area. Moreover, the fact that it is the subject of a planning application means that it will come forward early in the plan period thereby helping to meet five-year housing land supply provision as well as assisting in ensuring that there is a consistent and sustainable trajectory of housing sites coming forward throughout the plan period. Given this, Mac Mic fully support the site's allocation for a residential development, however, more detailed analysis undertaken indicates that site can accommodate approximately 415 new homes and it is recommended that the site allocation is amended to reflect this further technical work. Mac Mic Land therefore generally support the Council's approach to the spatial strategy and residential land allocations and consider that they are sound, justified and positively planned. However, they consider that the drafting of some of the policies could be clarified through the provision of further detail whilst some policies will benefit from the inclusion of more flexibility. The Mac Mic Group's key comments on the Regulation 19 Pre-submission Draft of the Plan can be summarised as follows: • The Local Plan should provide further contextual information regarding the 'directions of travel' which should be used to inform the Vision and Strategic Objectives. • The allocation of Land north of Banwell Road, Elborough/Locking is supported. • However, its site capacity should be increased from 315 to 415 new homes. • There is much to support in the Local Plan in relation to climate change, placemaking and flooding/landscape matters; but • A number of concerns are raised in relation to some of the proposed development management policies such as those relating to highway safety, landscape, flooding, and affordable housing. In summary, Mac Mic supports the allocation of this site for residential development, albeit consider that it can accommodate additional homes with a site capacity of approximately 415 homes being more appropriate. That said, it is considered that the site represents a suitable and sustainable location for development. Furthermore, the site is also under the control of one party and is available and deliverable in the short term, as seen by the ongoing work to prepare an application for the site during 2026.			
63006177	Mac Mic Strategic Land (Land north of Banwell Road)	Planning Potential (Elliot Jones)	Mac Mic Strategic Land	No	• Effective	Unsure	Unsure	Currently, this policy states that residential sites (or more than 10 units) and employment sites are identified in the Policies Map. These sites are shown in Schedule 1 and 2. These schedules indicate the potential capacity and principles to be applied for each site. Land north of Banwell Road, Elborough/Locking is identified as having an indicative capacity of 315 dwellings in Schedule 1: Large sites for residential development. The schedule states that development at the site is required to fund upgrades to Banwell Road junction with A371 (as identified on the Policies Map), make contributions to the expansion of primary, secondary and early years education in the local area and provide surface water attenuation together with demonstrating how this will drain the site. It also notes that any planning application must demonstrate that joined up safe active and sustainable travel provision can link this site (along with the allocation on Land to the west of Elborough) to Locking village and the A371 strategic cycleway. Proportionate contributions will also be required towards bus service provision and the existing Public Right of Way AX18/1/20 is to be upgraded. The text in Schedule 1 also notes that any proposed development must consider the approved skatepark facility to the north of the site, north of Old Banwell Road, and demonstrate that no new dwellings will be affected by that consented scheme. Mac Mic are in the process of preparing an outline planning application for Land north of Banwell Road, Locking/Elborough. This followed positive pre-application discussions with the Council during the summer 2025. The proposed development will address each of the criteria set out in Schedule 1. Consideration has been given to off-site highway improvements to Banwell Road and these will be incorporated where it is proven that they are required following detailed highways analysis (which has informed the outline planning application submission). It is also proposed as part of the draft Heads of Terms to make contributions to local education provision within the vicinity of the site subject to viability considerations. The proposed site layout - which formed the basis of the Vision Document that was submitted with the representations to the Regulation 19 Pre-Submission Draft in 2024 - was cognisant of the potential flood concerns raised by development on this site and was designed and laid out to avoid areas of the site that had a higher potential to flood. This layout informed the site allocation, which was first put forward in the Additional Sites Paper, and is now the basis for the allocation in the Pre-submission Draft. However, whilst the rationale for the site boundary appears to have been driven by flood risk data and analysis, it is Mac Mic's view that the site could accommodate additional development on site and that the site's capacity should be increased to circa 415 dwellings.	Whilst Mac Mic supports the current draft of Policy LP5 and that Land north of Banwell Road, Locking/Elborough is included in Schedule 1, they object to the suggested capacity of the site and consider that it should be increased to 415 homes.

Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								As part of the information to be submitted in support of the outline application, Mac Mic will prepare a sequential test that demonstrates that further development can be accommodated. Notwithstanding the outcome of the Sequential Test, Mac Mic consider that the Exception Test can be passed. The existing strategic flood defences means that the planning balance/ benefits of the scheme when assessed against the real world flood risk should take precedence. As such, they consider that a slight expansion of the site boundary is appropriate to allow the proposed residential development to be optimised. Whilst being driven by addressing flood matters on site, Mac Mic see the design ethos of split development areas as being a key attribute of the site. It allows for the introduction of the country park in the centre of site. This area will also provide for on-site green infrastructure, the retention of a strategic gap and the delivery of biodiversity. One of the many benefits of the development of this site is that it will improve the accessibility and sustainability of the existing settlement of Elborough. It is proposed that community facilities will be built in close proximity to the village whilst the creation of the country park will allow for the provision of new cycleways and pedestrian footpaths linking the southern parts of the site (and Elborough) to the north and the facilities within Locking and Locking Parklands (as well as Weston-super-Mare). This will be supported by proportionate contributions to bus service provision and improvements to existing public right of ways. The outline planning application has been the subject of community consultation. This has involved meeting with local Parish Councils and undertaking on-line consultation. It is clear from the feedback that Mac Mic has received that significant resources have been spent on the community facilities north of Banwell Road, Locking including the new skate park. Accordingly, the proposals have been revised to ensure that they complement rather than compete with existing facilities, for instance, the proposed development will now provide for allotments, which was indicated as being in demand by local communities. The design and layout of the site will also consider that proximity of the skate park and will ensure that no residential amenity issues arise. Land to the north of Banwell Road, Elborough/Locking therefore represents a suitable, available and viable option for residential development and Mac Mic supports its allocation in the Pre-Submission Draft. The evidence gathered to date and which will be presented with the application shows that the site can successfully address all technical matters such as flooding, landscape and highways. It will be a highly sustainable, well-located residential development that provides for significant levels of green infrastructure, help address deficits in local services and facilities provision, and enable sustainable (non-car based) transport links to be created that will allow existing settlements better access to job provision, services and infrastructure. Recommendation For these reasons, whilst Mac Mic supports the current draft of Policy LP5 and that Land north of Banwell Road, Locking/ Elborough is included in Schedule 1, they object to the suggested capacity of the site and consider that it should be increased to 415 homes.			
58488865	R Harris			No	• Justified	Unsure	Unsure	1. TRAFFIC With the increase of traffic, cars, vans and lorries on these minor countryside roads, which have increased over the last few years, and with the amount of houses that are planned to build, it's unsustainable on these narrow country roads. Since I've lived here there have been numerous accidents - several serious accidents of cars speeding down Banwell Road and colliding at the junction with Cedern Ave, one resulting in crashing into the house at the junction of Cedern Ave, another where a horse was killed and rider injured, as we do live in the country we have many horses using Banwell Road, going to local stables. Plus there are no pavements or paths along this road 2. FLOOD PLAINS The intentions are to build houses on a flood plain, a runoff from the Mendip Hills, and plus with heavy rain, Banwell Road does flood, causing more problems with the traffic, and with the increase of houses you hope to build, the traffic will increase fivefold causing more congestion and danger. 3. WILDLIFE There are bats that feed in the valley, coming from roosts from the caves at Banwell Wood. Also there are deer, badgers, and foxes feeding in the valley, they also come from the woods. 4.INFRASTRUCTURE There is no infrastructure in this area, we have to drive to shops, doctors and other amenities. When Elborough was built, shops were included in the plan, this of course never happened. I note that on the plan it includes a shop or community building , I doubt very much that this will happen, like the proposed outlets in Locking Parklands, yet to see the light of day. Plus the strain on our roads,schools, doctors and general infrastructure. 5. GENERAL Why not finish building on Locking Parklands and Haywards Village before looking for new sites. I'm alongside Hutton parish council who oppose these developments.			
31078881	Sarah Humphries			No	• Justified • Effective	Unsure	No	It contradicts aspirations and guidance in it own policies regarding environment and village and rural areas. Reference is also made to the sub policy of development within settlement boundaries. NS has not been cooperative with making of the plan as they have ignored comments made during the additional site consultation. I strongly object to the proposed planning application for 295 houses a shop and communal building north of Banwell Road, Elborough and 105 houses south of Old Banwell Road, Locking (specifically the eastern end). I will be sharing my objections and comments to yourselves, the local Parish Council and MP for Elborough Village. We have chosen to live in this rural area since 2011 having moved to achieve the rural home and outlook we desired. The natural landscape and the wildlife within it regularly provides deer, owls, bats, badgers, hedgehogs, foxes and birds of prey to name a few, some of which are covered by the Wildlife & Countryside Act 1981. Numerous birds nest in the area every year and this valley is recognised as a bat migration route with the proposed land being directly between the bat nursery on the old Banwell road and the location of the North Somerset and Mendip Bat area of conservation. I do not accept that maintaining a 'small area' of the natural habitat in place of the current footprint can constitute the requirement by law to 'not intentionally or recklessly disrupt a protected species'. Any building work will impact and there can be no enhancement to bio-diversity by destroying a natural and long established habitat or migration route. The area for development currently serves as a valuable green space contributing to the rural open character of Elborough Village. The building of such a development will permanently remove the natural land that forms part of the village landscape and will reduce the habitat and ecological value of this area as well as significantly impact on the 'street scene' of the village. The proposal also has the ability to impact on environmentally sensitive features including Sites of Significant Scientific Interest (SSSI) (Banwell Caves/Crooks Peak to Shute Shelve Hill Site) SNCI, Special Area of Conservation (SAC) and the national landscape and Mendip Hills Area of Outstanding Natural Beauty (AONB). The proposal does not demonstrate any knowledge, or identify the true impact to the local road network and the infrastructure has not been considered properly in this area or plan which, can only impact negatively on both the residents of Elborough Village and Hutton who will also have to suffer the huge increase in traffic passing through to access the 'new' development on what is not much more than a country lane not wide enough for 2 cars to pass in places. It is also not a viable route for buses or lorries to access regularly and continual flooding already causes the road to be in constant need of repair with the current levels of traffic.	It needs to be scrapped for this development.		Objection Elborough.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The plan to deal with the flood risk significantly underrates the levels of flooding that occurs regularly on the old Banwell road and does not deal with the problem areas at all which sees the water draining from the fields behind Elborough farm onto the road and also the flooding of the pond within Elborough often leaving the village difficult to access from either end. Flood levels currently can quickly become impassable in a car. I would suggest the plan has completely disregarded or is unaware of the main areas of flooding which will only increase with global warming and increased hard surfacing for the new development which will only worsen the drainage and surface water run off for the existing properties and surrounding roads. A significant proportion of the site is within flood zone 2 and 3. I am aware that the North Somerset internal Drainage board states the sites vulnerability and these are not considered or addressed within the proposal. The sites low lying nature and proximity to the coast also adds to the vulnerability of tidal flooding. The land proposed is the natural divide between the villages of Elborough and the village of Locking. These proposals start to merge the villages together leaving a what can only be described as a small strip of land to delineate the boundaries of the villages. The activity associated with a shop and communal building is not compatible with a quiet residential environment, impacting with light pollution from signage, security lighting and late night activity. A communal facility and shop will naturally bring large numbers of people into the area. Core strategy CS12 (high quality design) requires development to protect residential amenity. DM40 Residential amenity states development must not result in unacceptable levels of noise, disturbance or activity near residential homes. The proposal also harms the character of the area which is a quiet residential, semi rural location. A development of this intensity is not compatible with the character or scale of the current properties in Elborough and undermines the privacy that I as a resident am entitled to expect in a residential setting with the living conditions protected in accordance with DM32 and DM38 of North Somerset sites and policies and North Somerset residential design guide SPD Section 1 protecting living conditions. "DM32" is a key planning policy in the North Somerset Sites and Policies Plan (Part 1) The policy is used by the North Somerset Council to ensure that the design and layout of new buildings are of high quality, contribute positively to the local character, and do not negatively affect the living conditions of nearby residents or the surrounding environment) (“DM38” whilst applied to extensions is relevant as this proposal, as an extension to the village, does cause harm to the street scene and living conditions of the adjoining properties) • Street Scene/Local Area Impact: The proposal should not harm the street scene or the local area, including preventing the loss of characteristic boundary features or visually important trees. • Living Conditions: The development should not prejudice the living conditions of the occupiers of the proposed extension or adjoining properties (e.g., through loss of privacy or light). The proposed development will draw additional vehicles, delivery vans and service traffic into a residential area that is not designed for commercial use. As a result, the already busy roads will be further congested bringing additional safety concerns for children accessing school transport at the top of the road at the village, pedestrians, horse riders and dog walkers. The proposal fails to mitigate or show what consideration have been made for traffic calming and pedestrian crossings and traffic impact to existing homes. The proposal also fails to offer adequate traffic management solutions to prevent congestion. Given the limited road infrastructure in Elborough village the proposal fails to satisfy these requirements in line with North Somerset Core Strategy Policy CS10 Transport and congestion and DM24 Safety, Traffic & Transport Impact states the development must not compromise the safety of road users and provided suitable access. The impact of the proposed development will be felt not only in Elborough but also in Hutton where 20 MPH speed limits are in place to try and allow safe passage for our children into the local school. A development of this size with the addition of commercial building and residential development with such close proximity to existing residential boundaries does not align with the principles of protecting residential character. The proposal represents an over-intense use of a plot that directly borders homes, contrary to the aim of protecting residential amenity. This conflict with Core Strategy CS12 Achieving High Quality Design - requiring developments to protect residential amenity and DM40 residential Amenity -states a development must not result in unacceptable levels of noise, disturbance or activity near homes. I will also add that whilst I base my objections on these named specific sites the wider plan proposed for the local area is in my view excessive and damaging. On a daily basis, Weston is gridlocked with traffic. The M5 is beyond capacity and dangerous and adding the amount of new homes is only going to exacerbate the problem further. The employment opportunities are not in Weston and there are limited options to travel to employment outside of the area without driving even if that is to the train station. In conclusion and for the reasons outlined, noise, traffic increase, loss of green space impact on the biodiversity of the area, amenity disturbance, flooding risk, security and privacy concerns and incompatibility with a residential environment I will respectively request that the planning authority refuses this proposal and subsequent planning application submitted by SP Broadway are rejected.			
62661473	K Humphries			No	, Justified , Consistent with national policy	No	No	Ref: North Somerset Council - Ref:25/P/1282/EA1 I write to raise my concerns and objections to the proposal of homes and a shop and or community building north of Banwell Road Elborough and the eastern end proposal of south of Old Banwell Road, Locking. I have raised my objections to SP Broadway in response to their communications on behalf of Mac Mic Strategic Land and will also be sharing my objections with the parish council and local MP. I am writing to strongly object to the proposed planning application for 295 houses a shop and communal building north of Banwell Road, Elborough and 105 houses south of Old Banwell Road, Locking (specifically the eastern end). I will start with my personal feeling which are shock and despair at the proposal which looks to build a community building, shop and houses at the end of my garden /boundary completely destroying our outlook, encroaching significantly on our privacy, whilst devaluing mine and other's homes as well as devastating the natural landscape and increasing the flood risk to my property and surrounding area. The proposal does not demonstrate any knowledge, or identify the true impact to the local road network and the infrastructure has not been considered properly in this area or plan which, can only impact negatively on both the residents of Elborough Village and Hutton who will also have to suffer the huge increase in traffic passing through to access the ‘new’ development on what is not much more than a country lane not wide enough for 2 cars to pass in places. It is also not a viable route for buses or lorries to access regularly and the continually f looding causes the road to be in constant need of repair with the current levels of traffic. We have chosen to live in this rural area since 2011 having moved to achieve the rural home and outlook we desired. We have recently extended our home to encapsulate the view, the natural landscape and the wildlife within it which regularly provides deer, owls, bats, badgers, hedgehogs, foxes and birds of prey to name a few, some of which are covered by the Wildlife & Countryside Act 1981. Numerous birds nest in the area every year and this valley is recognised as a bat migration route with the proposed land being directly between the bat nursery on the old banwell road and the location of the North Somerset and Mendip Bat area of conservation. I do not accept that maintaining a ‘small area’ of the natural habitat in place of the current footprint can constitute the requirement by law to ‘not intentionally or recklessly disrupt a protected species’. Any building work will impact and there can be no enhancement to bio-diversity by destroying a natural and long established habitat or migration route. The area for development currently serves as a valuable green space contributing to the rural open character of Elborough Village. The building of such a development will permanently remove the natural land that forms part of the village landscape and will reduce the habitat and ecological value of this area as well as significantly impact on the ‘street scene’ of the village. The proposal also has the ability to impact on environmentally sensitive features including Sites of Significant Scientific Interest (SSSI) (Banwell Caves/Crooks Peak to Shute Shelve Hill Site) SNCI, Special Area of Conservation (SAC) and the national landscape and Mendip Hills Area of Outstanding Natural Beauty (AONB). The plan to deal with the flood risk significantly underrates the levels of flooding that occurs regularly on the old banwell road and does not deal with the problem areas at all which sees the water draining from the fields behind Elborough farm onto the road and also the f looding of the pond within Elborough often leaving the village difficult to access from either end. Flood levels currently can quickly become impassable in a car. I would suggest the plan has completely disregarded or is	I respectively request that the planning authority refuses the proposal suggested by SP Broadway and any subsequent planning applications to develop this land	Please refer to attachment supplied	K humohries.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								unaware of the main areas of flooding which will only increase with global warming and increased hard surfacing for the new development which will only worsen the drainage and surface water run off for the existing properties and surrounding roads. A significant proportion of the site is within flood zone 2 and 3. I am aware that the North Somerset internal Drainage board states the sites vulnerability and these are not considered or addressed within the proposal. The sites low lying nature and proximity to the coast also adds to the vulnerability of tidal flooding. The impact on our personal privacy is significant in the proposal primarily from the proposed community area and/or shop neither of which we support or see any requirement for. There are numerous convenience stores less than 3 miles away/5 minute drive and walkable these include; Asda local (1.7 miles), Co-op (1.4miles), Morrisons Local and Tesco Express (2.4 miles away). A post office/shop, pharmacy, cafe and barbers are within walking distance in Locking Village alongside a park and playing field. Further proposed shops are within the Locking Parklands site. The requirement to have another shop is excessive and given it seems only the 'big' supermarket brands survive in local convenience shops the thought of impacting the beautiful landscape with a neon sign of another Co-op or Asda is incomprehensible. The village also currently has access to multiple halls and community spaces available in Hutton; Banwell, Locking and Parklands some of which struggle to survive. Access through cycle routes/walking paths to create a safe route to those already in existence would seem a much more appealing and environmentally friendly solution than creating another. The land proposed is the natural divide between the villages of Elborough and the village of Locking. These proposals start to merge the villages together leaving what can only be described as a small strip of land to delineate the boundaries of the villages. The activity associated with a shop and communal building is not compatible with a quiet residential environment, impacting with light pollution from signage, security lighting and late night activity. A communal facility and shop will naturally bring large numbers of people into an area very close to the rear of my property and all those along the boundary of Elborough. The proposal will reduce privacy within the living space of my home and my garden and create a general sense of intrusion and loss of separation between public and private residential area. My home and garden will be exposed to passing foot traffic and activity, resulting in an increase in noise and disturbance from visitors and vehicles gathering as well as evening and weekend disturbance associated with this type of building. Any such buildings will create a loss of privacy due to overlooking windows and properties, result in a loss of outlook from my property and destroy the peaceful character that is currently enjoyed by us as a family. Core strategy CS12 (high quality design) requires development to protect residential amenity. DM40 Residential amenity states development must not result in unacceptable levels of noise, disturbance or activity near residential homes. The proposal also harms the character of the area which is a quiet residential, semi rural location. A development of this intensity is not compatible with the character or scale of the current properties in Elborough and undermines the privacy that i as a resident am entitled to expect in a residential setting with the living conditions protected in accordance with DM32 and DM38 of North Somerset sites and policies and North Somerset residential design guide SPD Section 1 protecting living conditions. ("DM32" is a key planning policy in the North Somerset Sites and Policies Plan (Part 1) The policy is used by the North Somerset Council to ensure that the design and layout of new buildings are of high quality, contribute positively to the local character, and do not negatively affect the living conditions of nearby residents or the surrounding environment) ("DM38" whilst applied to extensions is relevant as this proposal, as an extension to the village, does cause harm to the street scene and living conditions of the adjoining properties) • Street Scene/Local Area Impact: The proposal should not harm the street scene or the local area, including preventing the loss of characteristic boundary features or visually important trees. • Living Conditions: The development should not prejudice the living conditions of the occupiers of the proposed extension or adjoining properties (e.g., through loss of privacy or light). A shop often attract issues such as littering in the local area, loitering after hours causing noise which subsequently keep my young family awake as the rear of the property faces the proposed development which is in very close proximity. The increase in footfall also raises security concerns to my property A shop or commercial development of this nature within such a close proximity to my property does not align with the following principals. Protecting the character residential, avoiding developments that negatively impact on privacy, noise levels and the local environment. The proposed location of communal building and shop is inappropriate for the intensity and type of use proposed. Such buildings should be located in a centre or main settlement rather than positioned behind existing properties. Therefore the proposed location conflict with CS13 Scale & location of development which aims to ensure developments are appropriately located relative to their function. DM15 (Location of Main Town Centre uses) which discourages placing commercial uses in inappropriate, isolated residential setting. The proposed development will draw additional vehicles, delivery vans and service traffic into a residential area that is not designed for commercial use. As a result the already busy roads will be further congested bringing additional safety concerns for children, pedestrians, horse riders and dog walkers. The proposal fails to mitigate or show what consideration have been made for traffic calming and pedestrian crossings and traffic impact to existing homes. The proposal also fails to offer adequate traffic management solutions to prevent congestion. Given the limited road infrastructure in Elborough village the proposal fails to satisfy these requirements in line with North Somerset Core Strategy Policy CS10 Transport and congestion and DM24 Safety, Traffic & Transport Impact states the development must not compromise the safety of road users and provided suitable access. The impact of the proposed development will be felt not only in Elborough but also in Hutton where 20 MPH speed limits are in place to try and allow safe passage for our children into the local school. A development of this size with the addition of commercial building and residential development with such close proximity to existing residential boundaries does not align with the principles of protecting residential character. The proposal represents an over-intense use of a plot that directly borders homes, contrary to the aim of protecting residential amenity. This conflict with Core Strategy CS12 Achieving High Quality Design - requiring developments to protect residential amenity and DM40 residential Amenity -states a development must not result in unacceptable levels of noise, disturbance or activity near homes. In conclusion and for the reasons outlined, noise, traffic increase, loss of green space impact on the biodiversity of the area, amenity disturbance, flooding risk, security and privacy concerns and incompatibility with a residential environment I respectively request that the planning authority refuses the proposal suggested by SP Broadway and any subsequent planning applications to develop this land			
57965025	E Jackson			No	Justified	Unsure	No	The land proposed to build on is completely inappropriate for more houses. The land floods extremely easily so more houses would cause significant drainage issues. Additionally that area is home to wildlife such as bats, deer and all sorts of other animals thats should be protected and their habitats not destroyed. Banwell road and the junction at the top of the hill are completely inappropriate for more residents, the roads as they are are far too busy with multiple crashes occurring on the junctions or bends every year. More cars on the road will cause more of these incididents and the increase in traffic will cause significant disruption to all residents. Building on this land is a terrible idea, the infrastructure is not in place to make it successful and the disruption it will cause would be significant.	Remove this area of land from the plan so it is not developed on.		
30918657	Mark Jaloszynski			No	Justified Effective	Unsure	No	Not Sound The development site does not align to your own Local Plan policies; SP11: Historic and natural environment, SP6: Villages and rural areas and, Policy DP2: Residential development within settlement boundaries. Does not align with your Vision, strategic priorities and sustainability objectives, specifically Sustainable development objective; 3.2 Minimise vulnerability to all forms of flooding, now or in the future, without increasing flood risk elsewhere. Also	Remove the development site and align the proposal to your own Local Plan policies; SP11: Historic and natural environment, SP6: Villages and rural areas and further policies and Policy DP2: Residential development within settlement boundaries and Sustainable development objective 3.2. Elborough has been deliberately ignored with the identification of a settlement boundary, contrary to your own policy. Other villages and settlements of comparable size have identified boundaries in NSC.		Flooding risk.png

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								minimise harm to water quality and availability Not in compliance with Duty To Cooperate. Concerns raised as consultation process in earlier in the year for the Additional Housing Site proposal have not been captured in the considerations, specifically; - Scale of development considering nearby developments in Locking Parklands, Haywood Village and proposed in Wolvershill - Impact on loss of habitat, green space, trees and hedge rows - Increase car journey / traffic impacts to Locking and Hutton - Lack of suitable road network, specially Barnwell Road, Old Barnwell Road and the Bury; safety and capacity			
62717857	Isabelle Lemoille		None						Elborough I have seen the comments from Hutton Parish Council and Residents which I emphatically endorse. For clarification I repeat some of their observations :- They expressed strong opposition to development in the Elborough area. Their primary concerns include: o Loss of Green Space: The development would remove the strategic gap between Elborough and Locking parishes. o Infrastructure Deficiencies: There are major concerns about a lack of existing facilities (shops, schools, community centres), inadequate public transport, and roads not wide enough for increased traffic. o Public Opinion: An 83% majority of residents in a 2021 survey did not support new housing in the vicinity of Elborough. • Sustainability: The sustainability of the proposed development is a major point of contention. While developers and some council documents suggest the Elborough development is more sustainable than other potential sites, local objectors highlight the isolated nature of the location with no existing services. I would add the following relating to flooding in the area. Concerns have been raised that new developments in the area could increase the amount of impermeable surfaces (houses, roads) and exacerbate existing flooding problems. Runoff from farmland on the hill by Elborough Farm flows "like a river at times" across Banwell Road, flooding it several times a year. Surface water (flash flooding): This is a widespread risk across the region, which can even impact properties on hillsides. I trust that these very significant considerations opposing development in the area are fully taken into account when submitting the Pre-submission.		
62717857	Isabelle Lemoille		None					I have seen the comments from Hutton Parish Council and Residents which I emphatically endorse. For clarification I repeat some of their observations :- They expressed strong opposition to development in the Elborough area. Their primary concerns include: - Loss of Green Space: The development would remove the strategic gap between Elborough and Locking parishes. - Infrastructure Deficiencies: There are major concerns about a lack of existing facilities (shops, schools, community centres), inadequate public transport, and roads not wide enough for increased traffic. - Public Opinion: An 83% majority of residents in a 2021 survey did not support new housing in the vicinity of Elborough. - Sustainability: The sustainability of the proposed development is a major point of contention. While developers and some council documents suggest the Elborough development is more sustainable than other potential sites, local objectors highlight the isolated nature of the location with no existing services. I would add the following relating to flooding in the area. Concerns have been raised that new developments in the area could increase the amount of impermeable surfaces (houses, roads) and exacerbate existing flooding problems. Runoff from farmland on the hill by Elborough Farm flows "like a river at times" across Banwell Road, flooding it several times a year.Surface water (flash flooding): This is a widespread risk across the region, which can even impact properties on hillsides. Another point which I am sure you are well aware is the ongoing construction of houses in Locking Parkland, Haywood Village and Banwell. The whole area is being saturated with houses reducing alarmingly the green space needed to reduce pollution. Once the green space is gone it is too late and gone forever. I trust that these very significant considerations opposing development in the area are fully taken into account when submitting the Pre-submission.			
63069473	N Manville								I am writing in response to the Pre-Submission Plan 2041 (Reg19) Autumn 2025 consultation to express my strong objection to the proposed development in the Elborough area. My concerns reflect those raised by Hutton Parish Council and local residents, which I fully support. The key issues are outlined below: 1. Loss of Green Space The development would result in the permanent loss of valuable green space and remove the strategic gap between settlements. 2. Infrastructure Deficiencies There are already major concerns regarding the lack of existing facilities—including shops, schools, and core services—which are not adequate to support the increased traffic and population. 3. Public Opinion A 2021 survey showed that 83% of residents did not support new housing in the vicinity, indicating strong local opposition. 4. Sustainability While the proposed site may score favourably in some sustainability assessments, residents remain concerned about its isolated nature. This undermines claims that it is genuinely a sustainable development option. Flooding Risk I would also like to emphasise the significant risk of flooding in this area. Increasing impermeable surfaces through new development would worsen water		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									runoff, particularly in the context of climate change. Runoff from farmland on the hill above Elborough already results in heavy flows, and flash flooding is a known issue across the region, potentially affecting local properties. Given these strong and well-evidenced concerns, I trust that they will be fully considered as part of the consultation process.		
62772833	Ruth Musandu								Elborough Village I fully support the objections raised by Hutton Parish Council and local residents regarding the proposed development in Elborough. For clarity, the key concerns are: 1. Loss of Green Space: The development would permanently remove the strategic green gap between Elborough and Locking. 2. Inadequate Infrastructure: The area lacks essential facilities such as shops, schools, community spaces, and reliable public transport. Existing roads are not suitable for increased traffic. 3. Public Opinion: In a 2021 survey, 83% of residents opposed new housing near Elborough. 4. Sustainability: Despite claims of sustainability, the site is isolated and has no existing services, making it unsuitable for development. I would also stress the significant flood risk. Additional impermeable surfaces would worsen existing flooding, already exacerbated by climate change. Runoff from surrounding farmland frequently floods Banwell Road, and the wider area is vulnerable to flash flooding. I trust these substantial concerns will be fully considered in the Pre-submission process.		
62599105	Michelle Parsons			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	No	I object to the North Somerset Local Plan 2041: Pre-submission Plan because it is not legally compliant and not sound. My concerns relate to transport, infrastructure, environmental impact, and failures in the evidence base. 1. Duty to Cooperate – Not Met There is inadequate evidence that North Somerset Council has effectively cooperated with neighbouring authorities, transport bodies, or environmental agencies on the scale of housing growth proposed. Specifically: No clear cross-boundary approach to transport impacts, despite major effects on the A371, Locking, Hutton, and the wider Weston-super-Mare area. No joint work demonstrating how infrastructure capacity, school places, or healthcare will be delivered. No evidence of engagement with environmental bodies regarding biodiversity impacts and habitat connectivity. As such, the Duty to Cooperate has not been fulfilled. 2. Not Justified – Evidence Base Flawed The housing numbers rely on outdated projections that do not reflect current demographic trends or realistic infrastructure capacity. The plan disproportionately directs growth to small rural settlements such as Elborough and Locking, without justification for why these areas should accommodate such large increases in population. The Sustainability Appraisal does not adequately consider alternatives that would avoid excessive growth in small villages. For these reasons, the strategy is not justified. 3. Not Effective – Transport, Roads, and Flood Risk a. Narrow Roads and Vehicle Volumes The road network serving Locking, Elborough, and Hutton consists of narrow lanes already under pressure. The proposed allocation would significantly increase traffic through: Hutton village, where the main road passes directly by the primary school. Crossing the road in the mornings is already unsafe, and additional volumes would increase risks to children and pedestrians. Banwell Road and Old Banwell Road, which cannot safely or efficiently accommodate the scale of development proposed. There is also insufficient evidence that the required upgrade to the Banwell Road / A371 junction is deliverable. b. Public Transport Elborough has limited bus services and no access to rail. Doubling the size of the village—as this allocation would effectively do—will increase car dependency, contrary to national policy. c. Flood Risk Allocating significant housing in areas known to have drainage constraints and flood-risk issues undermines the deliverability and resilience of the plan. The evidence base does not demonstrate that surface water can be safely managed or attenuated. For these reasons, the plan is not effective. 4. Not Consistent with National Policy The NPPF requires plans to prioritise sustainable development, protect biodiversity, and ensure safe and suitable access for all users. This plan fails on all three counts: Growth is directed to locations poorly served by public transport, increasing reliance on private vehicles. Sensitive habitats and wildlife corridors adjacent to the proposed sites are at risk of irreversible ecological harm, contrary to the requirement to protect and enhance the natural environment. Safe access for emergency vehicles, pedestrians, and cyclists is not evidenced. The plan does not provide a credible strategy	To address the issues identified in my objection, the following modifications are required: 1. Duty to Cooperate – Strengthen Cross-Boundary Evidence Provide clear, published evidence of effective engagement with neighbouring authorities, transport authorities, and environmental bodies on the distribution of housing, infrastructure capacity, and cumulative transport impacts. Produce a joint transport strategy with adjacent authorities to address A371 congestion, cross-boundary traffic through Hutton and Locking, and infrastructure impacts on Weston-super-Mare. Without this, the statutory Duty to Cooperate is not met. 2. Transport and Highways – Robust and Deliverable Evidence Undertake a comprehensive transport assessment demonstrating that narrow country lanes between Elborough, Locking, and Hutton can safely support the vehicle volumes associated with 315+ dwellings. Require the Plan to include specific, costed, and deliverable upgrades to: Banwell Road / A371 junction Narrow village routes through Locking and Hutton Road safety improvements around Hutton Primary School, where children already encounter unsafe crossing conditions. Active and sustainable travel routes must be mapped, funded, and secured—not assumed. If these upgrades cannot be delivered, the allocation must be reduced or removed. 3. Public Transport Provision – Secured, Not Aspirational Require a clear commitment to enhanced bus services for Elborough and Locking, backed by enforceable mechanisms (e.g., S106 or CIL), not vague contributions. Housing delivery should be phased so that public transport improvements occur before or alongside development. 4. Flood Risk and Drainage – Evidence-Based Modifications Require a site-specific surface-water management strategy demonstrating where and how attenuation will be provided and how discharge will be achieved without increasing downstream flood risk. Remove or reduce allocations where safe drainage cannot be proven. 5. Biodiversity and Wildlife Corridors Require up-to-date ecological assessments and a clear strategy for protecting connected habitats around Elborough and Locking. Include a policy requirement for biodiversity net gain that preserves wildlife corridors adjacent to proposed development sites. Remove or amend allocations that risk irreversible ecological harm. 6. Infrastructure Capacity – Education, Healthcare, Utilities Identify specific, funded commitments to expand local schools, healthcare services, and utilities, rather than relying on unspecified contributions.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								for upgrading the road network or active travel routes to accommodate the proposed expansion. The plan is therefore inconsistent with national policy. 5. Infrastructure Capacity – Not Positively Prepared Local infrastructure is already under strain: Schools in the area are close to capacity and lack firm, funded expansion plans. Healthcare provision (GPs, dentists) is already stretched. Utilities and drainage infrastructure are not evidenced as capable of supporting a population increase of this scale. Doubling the size of Elborough and significantly expanding Locking without a realistic plan for supporting services means the plan has not been positively prepared. Conclusion For all the above reasons—failures in the Duty to Cooperate, lack of justification, ineffective delivery mechanisms, inconsistency with national policy, and lack of positive preparation—I object to the North Somerset Local Plan 2041: Pre-submission Plan. The plan should be found unsound unless substantial changes are made, including reconsideration of the scale, location, and deliverability of growth proposed for Locking, Elborough, and Hutton.	Ensure that any growth does not proceed without guaranteed delivery of supporting infrastructure. Reduce or relocate housing numbers if capacity cannot be expanded. 7. Settlement Strategy – Proportionate and Justified Growth Reassess the scale of development proposed for Elborough and Locking to ensure growth is: proportionate, reflects the settlement hierarchy, and aligns with national policy on sustainable development. The plan should avoid doubling the size of small rural settlements without strong justification and infrastructure provision. 8. Updated Housing Need Evidence Update the housing need assessment using current demographic and migration data, ensuring the housing numbers are justified and reflect real capacity across the district. Conclusion To make the Local Plan legally compliant and sound, the Council must provide robust evidence of infrastructure deliverability, comply with the Duty to Cooperate, update its housing need projections, strengthen environmental protections, and ensure that growth in Locking, Elborough, and Hutton is proportionate and sustainable. Unless these modifications are made, the plan should not be adopted.		
62858081	Andi Parsons			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	No	I object to the North Somerset Local Plan 2041: Pre-submission Plan because it is not legally compliant and not sound. My concerns relate to transport, infrastructure, environmental impact, and failures in the evidence base. 1. Duty to Cooperate – Not Met There is inadequate evidence that North Somerset Council has effectively cooperated with neighbouring authorities, transport bodies, or environmental agencies on the scale of housing growth proposed. 									8. Updated Housing Need Evidence Update the housing need assessment using current demographic and migration data, ensuring the housing numbers are justified and reflect real capacity across the district. Conclusion To make the Local Plan legally compliant and sound, the Council must provide robust evidence of infrastructure deliverability, comply with the Duty to Cooperate, update its housing need projections, strengthen environmental protections, and ensure that growth in Locking, Elborough, and Hutton is proportionate and sustainable. Unless these modifications are made, the plan should not be adopted.		
62851009	Nicola Payne				• Effective	Unsure	Unsure	Huge flood risk. Last year we had issues with floods coming from the green belt land, running into Elborough and flooding the lower fields where the planned development is. There would not be sufficient infrastructure in place to prevent flooding into lower fields or coming back into Elborough. We've lived here since 2011 and every year the surrounding fields flood and can take months to drain. The Land already floods but this will only increase in frequency due to increased impermeable surfaces. Inadequate drainage exacerbating flood risk which according to environment agency will impact this area by the year 2050 Roads; There potentially could be 600+ cars in addition to our current traffic turning out onto a small country road. Going either towards Hutton, a small village with an issue with a bottle neck by the school already, or turning up onto Locking moor road, which is already over capacity, especially at peak times. Again there is not the infrastructure in this small location to allow for more cars, it will not cope with increase congestion. Also would be issues with air pollution and noise pollution. There will be increased danger to pedestrians, horse riders and cyclists which frequent this road regularly, due to it's rural location. There will be a strain on local services, potential over burdening of local schools and healthcare facilities in the area. There WILL NOT be enough GP provision for all of these houses. The local hospital A and E department closes at 10pm, the nearest hospital is then 25 miles away in Bristol. If the single motorway access point allows you to get there! There are no local bus services in this area, including school buses. highway safety is dreadful. Noise; Unacceptable noise levels during development. We are a small village situated right next door to the potential development that will take years. The drilling of foundations will have to be pile driven due to the extensive flood plains. This will cause major disturbance to current residents. Mud; How can you possibly manage all the mud that will come out of the site and damage the already existing village homes and the road? At times the road has been impassable between Elborough, Locking and Hutton, due to flooding and mud. There will be additional light pollution, additional noise pollution, during and after the development and loss of privacy to current residents of our small village. This is virgin agricultural, green belt land. Elborough village itself was only permitted on a brown field site when the old BAJ factory works were demolished. How can the council be considering a development on green belted agricultural land?? It will be hugely detrimental to the design and character of the current village and surroundings. And a destruction of valuable open land. The proposed development will be out of scale, high density and will have a harmful visual impact to the local environment. Wildlife; We have regular visitors across those fields of Deer, Owls, Buzzards, Bats. Badgers. This will be detrimental to the local wildlife in every possible way. You will be destroying their natural habitats. Bio-diversity loss, impact on protected species such as the local newts. Bats, mature trees and hedgerow habitats. Over burdening of local facilities such as water and sewage facilities The development will have a detrimental effect on current house prices. This has been a quiet, sort after area for 20 years. How can you possible put the current residents through the massive impact of a huge development and then devalue their houses also?? This is not the correct location for 315 homes. The local facilities, roads, environment simply will not cope.	I believe this proposal contravenes specific policies in the local planning framework; example; Green belt settlement boundaries, housing density and lack of infrastructure to allow for increased traffic flow. Destruction of natural habitats and environment, destroying local wildlife and plants, on an existing flood plain.		
62855425	Sheila Rhodes			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	I object to the North Somerset Local Plan 2041: Pre-submission Plan on the grounds that it is not legally compliant and not sound. My concerns relate to transport, infrastructure, environmental impacts, and significant weaknesses in the evidence base. 1. Failure to Meet the Duty to Cooperate The plan does not demonstrate effective cooperation with neighbouring authorities, transport organisations, or environmental bodies. In particular: There is no clear cross-boundary assessment of transport impacts, despite the substantial effects of the proposed growth on the A371, Locking, Hutton, and the wider Weston-super-Mare area. There is no joint evidence showing how essential infrastructure—school capacity, healthcare provision, or utilities—will be planned or delivered. There is no recorded engagement with environmental agencies regarding biodiversity impacts, habitat connectivity, or appropriate mitigation. On this basis, the statutory Duty to Cooperate has not been met. 2. Not Justified – Flawed and Outdated Evidence Base The strategy is not founded on robust or up-to-date evidence: Housing requirements are based on outdated projections that do not reflect current demographic trends or realistic infrastructure capacity. The plan disproportionately directs growth to small rural settlements such as Elborough and Locking, without clear justification for why these communities are appropriate for such large increases in population. The Sustainability Appraisal does not adequately assess reasonable alternatives, particularly those that would avoid excessive development pressure on small villages. Accordingly, the plan is not justified. 3. Not Effective – Transport, Highways Capacity, and Flood Risk	o address the issues set out in my objection, the following modifications are required for the plan to become legally compliant and sound: 1. Duty to Cooperate – Strengthen Cross-Boundary Evidence Publish clear evidence of meaningful engagement with neighbouring authorities, transport bodies, and environmental organisations regarding housing distribution, infrastructure capacity, and cumulative transport impacts. Prepare a joint transport strategy with adjacent authorities to address congestion on the A371, increased cross-boundary traffic through Hutton and Locking, and wider impacts on Weston-super-Mare. Without this, the Duty to Cooperate remains unmet. 2. Transport and Highways – Provide Robust, Deliverable Evidence Undertake a comprehensive transport assessment demonstrating whether the narrow lanes between Elborough, Locking, and Hutton can safely accommodate traffic generated by 315+ dwellings. The Local Plan must include specific, costed and deliverable upgrades to: the Banwell Road / A371 junction, constrained village routes in Locking and Hutton, and road safety measures around Hutton Primary School, where children already face unsafe crossing conditions. Active travel routes must be clearly mapped, funded, and secured—not assumed. If these upgrades cannot be delivered, the allocation should be reduced or removed. 3. Public Transport – Improvements Must Be Secured, Not Aspirational		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								a. Road Safety and Capacity The road network serving Locking, Elborough, and Hutton is made up of narrow lanes already operating under strain. The proposed allocations would significantly increase traffic, including: Hutton village, where the main road runs directly past the primary school. Road crossing is already unsafe during peak hours, and greater traffic volumes would raise risks for children and pedestrians. Banwell Road and Old Banwell Road, which are not capable of safely accommodating additional development at the scale proposed. No credible evidence shows that improvements to the Banwell Road / A371 junction are achievable or deliverable. b. Public Transport Deficiencies Elborough has limited bus services and no rail access. The proposed growth would effectively double the size of the village, increasing car dependency in direct contradiction to national policy objectives to reduce reliance on private vehicles. c. Flood Risk and Drainage Significant development is allocated in areas with known drainage issues and surface water flood risk. The evidence base does not demonstrate that flood risk can be safely managed or mitigated. This undermines the deliverability and resilience of the plan. For these combined reasons, the plan is not effective. 4. Not Consistent with National Policy (NPPF) The NPPF requires Local Plans to promote sustainable development, protect biodiversity, and ensure safe and suitable access for all users. This plan fails to meet those requirements: Growth is directed to locations poorly served by public transport, increasing car dependency. Proposed sites lie adjacent to sensitive habitats and wildlife corridors, with no adequate evidence of how ecological harm will be avoided. Safe access for emergency services, pedestrians, and cyclists is not demonstrated, nor is any credible strategy provided to upgrade the local road network or active travel routes. Therefore, the plan is not consistent with national policy. 5. Not Positively Prepared – Insufficient Infrastructure Provision Local infrastructure in the affected areas is already under pressure: Schools are near capacity, with no firm or funded expansion proposals. Healthcare provision (GPs, dentists) is already stretched. Utilities and drainage capacity has not been demonstrated as adequate to support the population growth proposed. Doubling the size of Elborough and significantly expanding Locking without credible, funded plans for supporting infrastructure shows that the plan has not been positively prepared. Conclusion For the reasons outlined above—failure to meet the Duty to Cooperate, lack of justification, ineffective delivery mechanisms, inconsistency with national policy, and insufficient infrastructure planning—I object to the North Somerset Local Plan 2041: Pre-submission Plan. As drafted, the plan is unsound. Substantial changes are required, including a reassessment of the scale, location, and deliverability of the proposed growth in Locking, Elborough, and Hutton.	Provide a firm commitment to improved bus services for Elborough and Locking, secured through enforceable mechanisms such as S106 or CIL, rather than vague or optional contributions. Phase housing delivery so that public transport enhancements are delivered before or alongside development. 4. Flood Risk and Drainage – Evidence-Based Requirements Require a site-specific surface-water management strategy identifying how attenuation will be provided and how discharge will be managed without increasing downstream flood risk. Reduce or remove allocations where safe and deliverable drainage solutions cannot be demonstrated. 5. Biodiversity and Wildlife Corridors Provide up-to-date ecological assessments and a clear strategy for protecting connected habitats around Elborough and Locking. Include policies requiring biodiversity net gain that safeguards wildlife corridors directly adjacent to development sites. Remove or amend allocations where ecological harm cannot be avoided. 6. Infrastructure Capacity – Education, Healthcare, and Utilities Identify specific, funded proposals to expand local schools, healthcare services, and utility networks, rather than relying on unspecified or unfunded contributions. Ensure development does not proceed without guaranteed delivery of this infrastructure. Reduce or relocate housing numbers where capacity cannot realistically be expanded. 7. Settlement Strategy – Proportionate, Justified Growth Reassess development levels in Elborough and Locking to ensure growth is proportionate, aligns with the settlement hierarchy, and complies with national policy on sustainable development. Avoid doubling the size of small rural settlements without strong justification and fully evidenced infrastructure provision. 8. Updated Housing Need Evidence Update the housing need assessment using the most recent demographic and migration data to ensure the overall housing requirement is justified and reflects realistic capacity across the district. Conclusion To render the Local Plan legally compliant and sound, the Council must provide robust evidence of infrastructure deliverability, fulfil the Duty to Cooperate, update its housing need projections, strengthen environmental protections, and ensure that growth in Locking, Elborough, and Hutton is proportionate and sustainable. Without these modifications, the plan should not be adopted.		
62715361	Nick Siangolis			Unsure		Unsure	Unsure				
62715361	Nick Siangolis			Unsure		Unsure	Yes		Regulation 19 Objection – Sites HE20637, HE20237 & HE201040 (South of Banwell Road, Elborough) I am submitting this representation to object to the proposed allocation of sites HE20637, HE20237 and HE201040 within the Publication Local Plan 2039. These parcels of land lie to the south of Banwell Road, directly adjoining the village of Elborough. My objection is based solely on material planning considerations relevant to the tests of soundness. 1. Brownfield Context – Why Previous Elborough Development Was Approved Elborough's most recent expansion took place exclusively on the former Aerojets industrial site, a long-disused, derelict brownfield area. Redevelopment of that site was justified because it regenerated previously developed land, removed redundant buildings and did not extend the village into open countryside. In contrast, the current proposed allocations comprise entirely undeveloped farmland which forms part of Elborough's rural backdrop. They are not brownfield, do not regenerate existing development, and would constitute a clear outward extension into open countryside. The justification that applied to the former industrial site is not applicable here. 2. Unsustainable Location and Car Dependency Elborough does not contain core services such as a GP surgery, school, shop, or regular public transport. As a result, residents of these allocations would be dependent on the private car for almost all day-to-day journeys. Walking or cycling to essential facilities would exceed a realistic 15-minute travel distance. The closest shops (Asda fuel station or the Co-op at Banwell) are more than 1.5 miles away from the central area of the proposed allocation. The site therefore fails to meet the criteria for a sustainable location.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									3. Highway Constraints Banwell Road is already constrained, with existing congestion and limited provision for pedestrians. Additional vehicle movements generated by the proposed developments would intensify traffic pressures and worsen existing safety issues. There is no evidence demonstrating that safe access, footways, cycle provision or visibility splays can be delivered within the existing highway boundary. Introducing these elements would require road widening, pushing development closer to the identified flood zone. Furthermore, additional traffic to the north would place further pressure on the old Banwell Road and exacerbate congestion on the A371. 4. Landscape and Settlement Impact The site forms part of the open rural landscape that frames and defines the setting of Elborough. Development would impose a hard urban edge on the village, eroding its rural character and contributing to settlement coalescence with Locking. This would undermine the distinct identity of the village. 5. Ecology Objection Sites HE20637, HE20237 and HE201040 lie within an ecologically sensitive countryside corridor that supports a variety of native species and contributes to the wider habitat network surrounding Elborough. The land contains established hedgerows that qualify as priority habitats and provide important wildlife movement routes. Development would sever these corridors and result in the permanent loss of high-value habitat. The area also falls within Density Band C, triggering consultation requirements for the protection of the Lesser Horseshoe Bat. Local fields and drainage ditches already support birds, owls, amphibians and small mammals. Without detailed, credible ecological evidence, the allocation cannot be considered justified or deliverable. 6. Drainage and Flooding Risks The proposed allocations sit within a naturally low-lying landscape where water accumulates from several directions. Standing water is frequently visible following rainfall, indicating a high water table and poor drainage capacity. The area relies on an ageing network of rhynes and ditches that already operate close to capacity. Introducing large areas of hard surfacing would significantly increase runoff, heightening flood risk to neighbouring properties. There is substantial real-world evidence of recurring flooding along Banwell Road that exceeds the limitations of the mapped flood zones. 7. Hutton Parish Council Response Hutton Parish Council has lodged a formal objection to the proposed addition of around 400 homes and associated development around Elborough. Their objection is supported by extensive evidence collected for the Hutton Parish Survey Report (February 2021), which found: • 86% opposed development outside the settlement boundary • 83% opposed development specifically around Elborough The Parish Council raises multiple planning concerns consistent with this objection: • Loss of green landscape and erosion of strategic gaps between Hutton, Elborough and Locking • Lack of safe pedestrian or cycling routes to essential facilities • Insufficient local amenities and community infrastructure • Severely limited road network capacity, including narrow rural lanes and pressure on the 20mph zone in Hutton • Unsustainable levels of growth that exceed existing service capacity Their conclusions strongly reinforce that the proposed allocations are not suitable or sustainable and would conflict with established community evidence and policy aims to preserve village identity and open countryside. 8. Other Nearby and Future Developments There are several more suitable sites — already permitted, allocated, or anticipated — located in areas with far greater sustainability credentials than HE20637, HE20237 and HE201040. The Banwell bypass will support development in more strategic growth areas that have the space and infrastructure to provide essential facilities such as schools, healthcare, shops and safe transport links. Furthermore, Weston-super-Mare, Locking, Locking Parklands, West Wick and Banwell all include locations explicitly identified for growth where services, active-travel routes, public transport and road capacity already exist or can be feasibly expanded. These locations can contribute to the district's housing needs without displacing development into isolated rural land that cannot support it. Conclusion For the reasons set out above, I request that sites HE20637, HE20237 and HE201040 are removed from the Local Plan. Please ensure that this objection is formally recorded and fully considered at examination.		
63079297	Robert								My wife and I wish to raise our objection to developments HE201040 and HE20637		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
	Smart								and agree with the existing objections in the Regulation 19 Additional Sites Consultation document. These developments are un-necessary given the extensive development on-going in the area bounded by i) the M5, A371 and Somerset Avenue, and ii) immediately east of the M5 and in the proximity of the Banwell Bypass. The document reveals that the rationale for the developments is to secure funding for an upgrade to the Banwell Road junction with the A371. Such funding should be secured through existing plans within the two areas that I have identified above. We, therefore, raise our objection to the rationale for the proposed developments.		
62852129	Mrs Sommers			No	‣ Justified ‣ Effective	No	No	The consultation process has not adequately engaged affected residents at Elborough Village. The Statement of Community Involvement requires meaningful opportunities for participation, but the evidence shows limited outreach and insufficient accessible formats. • The Duty to Cooperate has not been met. There is inadequate evidence of effective collaboration with neighbouring authorities on housing distribution and infrastructure planning. • Not justified: The housing numbers are based on outdated projections and do not reflect current demographic trends or infrastructure capacity. • Not effective: Allocating significant housing in flood-risk areas undermines deliverability and resilience. • Not consistent with national policy: The plan fails to prioritise sustainable development by placing growth in locations poorly served by public transport. The evidence base does not adequately assess the impact of such a large-scale expansion on transport, infrastructure, and biodiversity. • The Duty to Cooperate has not been met, as there is no clear evidence of engagement with transport authorities or environmental bodies regarding the scale of development proposed. • The Sustainability Appraisal fails to properly consider alternatives that would avoid disproportionate growth in small settlements. • Transport: The village at Elborough has limited public transport links. Doubling its size without significant investment in bus and rail services will increase car dependency, contrary to national policy on sustainable transport. • Wildlife: The proposed sites are adjacent to sensitive habitats and wildlife corridors. Development here risks irreversible harm to biodiversity, conflicting with the NPPF requirement to protect and enhance the natural environment. • Access: The existing road network around Elborough is narrow and unsuitable for the traffic volumes that such expansion would generate. Emergency access and pedestrian safety are not adequately addressed. • Infrastructure: Local services (schools, healthcare, utilities) are already under strain. The plan does not provide credible evidence of how infrastructure will be expanded to meet the needs of a doubled population. • Scale of growth: Doubling the size of the village is disproportionate and unjustified. It undermines the settlement hierarchy and fails the test of being “positively prepared” and “justified.” For these reasons, I object to the North Somerset Local Plan 2041: Pre-submission Plan. I ask the Inspector to find the plan unsound unless the above changes are made.	The council re-runs consultation with improved accessibility and wider community engagement. • Housing allocations in flood-risk zones are removed and redistributed to sustainable sites closer to transport hubs. • Updated evidence on housing need and infrastructure capacity is published before submission. • A clear statement of cooperation with neighbouring authorities is provided. • Alternative sites closer to existing transport hubs and larger settlements be considered. • A full ecological assessment be undertaken to safeguard wildlife habitats. • A detailed infrastructure delivery plan be published before submission

29553729	J Turnbull								Reg 19 Objection – Sites HE20637, HE20237 & HE201040 (South of Banwell Road, Elborough) I am submitting this representation to object to the proposed allocation HE20637, HE20237 & HE201040 in the Publication Local Plan 2039. The site lies south of Banwell Road and adjoins Elborough. My objection is based on material planning grounds relevant to the tests of soundness. 1. Brownfield Context – When the previous Elborough Village development was approved, Elborough’s recent growth occurred solely on the former Aerojet’s industrial site, a derelict and redundant brownfield plot. Redevelopment was justified because it regenerated previously developed land, removed obsolete structures, and did not extend the previously developed land into open countryside. The above allocations are entirely undeveloped agricultural land forming part of Elborough’s rural setting, making its proposed allocation fundamentally different and unjustified. 2. Unsustainable location and car dependency. Elborough lacks the additional essential services including a school, GP surgery, shop, limited public transport, with additional housing. Residents would be dependent on private cars for daily needs. Safe pedestrian or cycling routes to services would result in a trip greater than 15 mins. The nearest shops are either Asda filling station or the Co-op in Banwell, both over 1.5 miles from the centre of the proposed development. 3. Highway Constraints. Banwell Road already experiences severe congestion and limited pedestrian safety. Additional vehicle movements from this site would worsen traffic pressures and increase safety risks. No evidence has been provided to show that safe access or active travel improvements are deliverable. In providing footpaths, bus stops, cycle paths and visibility spays, will increase the width of the highway known as Banwell Road. In turn, forcing the proposed development further towards the Flood Zone. Development to the north will put a strain on the Old Banwell Road, with further congestion on the A371. 4. Landscape and Settlement Impact. The site forms part of the open rural landscape that defines the setting of Elborough. Development would introduce a prominent urban edge, erode village character and contribute towards a merger with Locking Village. 5. Ecology Objection. Sites HE20637, HE20237 & HE201040 lies within a sensitive countryside corridor that supports a range of native species and contributes to the ecological network around Elborough. The site contains established native hedgerows, which are priority habitats and important movement routes for wildlife. Development would fragment these corridors and permanently remove high-value habitat. The area for development is a designated area known as Density Band C; this is an		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									area for consultation in protecting Lesser Horseshoe Bats. The fields and surrounding ditches support birds, owls, amphibians, small mammals and deer. Without robust ecological evidence, the allocation cannot be considered justified or deliverable. 6. Drainage and Flooding Risks. Sites HE20637, HE20237 & HE201040 sits within a low-lying landscape where water naturally collects from all directions. The fields regularly display standing water after rainfall, indicating poor infiltration and a high-water table. The area relies on a historic network of rhynes and drainage ditches already close to capacity. Increasing impermeable surfaces would intensify runoff, raising flood risk to existing homes. This would ultimately place residents' buildings insurance at high policy value, or uninsurable. There is clear and outstanding evidence of regular flooding in this area of Banwell Road above and beyond the indication of the flood Zone map. 7. Hutton Parish Council Response. Hutton Parish Council has also objected to the inclusion of approx. 400 houses and related growth around Elborough, drawing on extensive evidence from the Hutton Parish Survey Report (Feb 2021). The survey showed overwhelming community opposition to development beyond the settlement boundary (86%) and specifically near Elborough (83%). • The Parish Council highlights several material planning issues that directly support this objection. • The loss of green landscape and strategic gaps between Hutton, Elborough and Locking. • The absence of safe pedestrian or cycling routes to essential village facilities. • Lack of local amenities and community infrastructure. • Severe limitations on the local road network, including narrow rural lanes and increases in traffic through the Hutton 20mph zone. • The unsustainable scale of growth proposed relative to available services, schools, and public transport. Their findings reinforce that HE20637, HE20237 & HE201040 is neither appropriate nor sustainable, and that its allocation conflicts with both community evidence and the Parish Council's long-standing strategy to protect open countryside and maintain distinct settlement identities. 8. Other near and or Future Developments. There are also several nearby sites that already have planning permission, and allocated, or are earmarked for future development that sit in far more sustainable and strategic locations than HE20637, HE20237 & HE201040, under the "Call for Land" scheme. The new Banwell bypass will unlock development clusters with the space and capacity to deliver the supporting infrastructure that new housing requires, including shops, healthcare provision, schools and safe transport links. In contrast, Weston-super-Mare, Locking, Locking Parklands, Banwell and West Wick all contain areas specifically identified for growth, where services, road capacity, public transport and active-travel connections already exist or can be viably expanded. These locations are demonstrably more capable of contributing to North Somerset's housing need without dispersing development into isolated rural land such as HE20637, HE20237 & HE201040. Conclusion For the reasons above, HE20637, HE20237 & HE201040 should be removed from the Local Plan. I request that this objection is formally recorded and considered at examination.

62769313	Paul Turner								I can't believe that the council would even consider this proposal. Not only will it increase the volume of cars but there is no new roads to accommodate them. The journey just to the M5.is horrendous already without adding at least 800 extra cars. Then there is the green space plus the issue of flooding which will be exacerbated. Also when you consider the amount of road works already being done, (ie Banwell bypass, Winterstoke Bridge.) All these cars trying to find alternative routes will not just be a inconvenience. As it is I live in Locking village, attending hospital appointments I have to go through Hutton because of all the roadworks which has got busier as other road users find alternative routes around the disruption. This purposed development is very short slighted. Please consider your deliberations carefully. Thank you

38759137	Jude Chambers			Yes	• Positively prepared • Justified	Yes	Yes				
58384193	Angela MacLeod Gibson									This site is suitable as it is central to amenities to support the residents who will live there. It has been an eyesore and a wasted opportunity to be developed for too long	
58309057	Ben Willis								The details are brief but appear compliant with necessary requirements however I would like to add that any residential building in any of these areas needs to be set up with two intentions 1) Be available to any and all ages 2) Be reasonably priced based on the income of a single person working and paying the bills alone My reason for this is as follows. Currently we have plenty of properties that are suitable for our elderly however not enough for our younger generations. Clevedon needs a viable amount of affordable housing to the younger generation in order to help drive the local economy The Millcross area is an ideal location for a younger generation housing.

62864865	Ruth Carter			No	• Justified	Unsure	Unsure	Penny Field must be protected and made a Local Green Space. Under local planning policy, Penny Field is the perfect candidate for Local Green Space designation because it would be in the top 24% of sites based on policy agreement. Clevedon Town Council, two petitions (2022 and 2025) of 600+ signatures and the consultation for Clevedon Placemaking Strategy all call to protect Penny Field. Penny Field is a prime candidate for Local Nature Recovery, as identified by WECA, due to the presence of three priority species. Penny Field is also located on a Green Infrastructure Corridor under NSC's own policy. Under any Equalities Impact Assessment the reduction of green space would adversely affect lower income households. Remove Penny Field from the list of sites to be developed. It is an important area for the local community, and is in regular and abundant use by hundreds of people every week. Penny Field is a vital recreational and social space for the local community. Residents use it daily for walking, exercise, dog walking, informal sports, and community gatherings. The proposed development would remove half of this essential space, significantly reducing opportunities for recreation and adversely affecting physical and mental health in the community. The field also supports local wildlife and vegetation that contribute to biodiversity. Development would result in the loss of habitat, reduction in green space, and environmental degradation. Green spaces and urban and semi-urban areas are critical for air quality, drainage and flood mitigation, and the proposed housing would negatively impact these functions. The of addition of housing on the site would also put pressure on local infrastructure, including roads, parking and healthcare facilities. Current services are not designed to accommodate this increase in population, which could lead to congestion, safety concerns and strain on public amenities. This open space contributes significantly to the character and identity of the neighbourhood. Penny Fields got its name after the Urban District Council of Clevedon bought the land for £275 in 1930 – a purchase which was helped by public donations including from children who gave pennies to ensure it was kept as recreational ground. It is considered of high community value and partial development would alter the landscape and diminish the sense of place valued by residents. The majority of residents who use and value this field are opposed to this development. This reflects strong community interest in retaining the space for recreational, environmental and social purposes. In conclusion, while we recognise the need for new housing, the proposed development would have a disproportionate negative impact on the community environment and local infrastructure. I respectfully request that the council reconsider this site for housing and prioritise the protection of this vital recreational area for current and future residents.	Remove Penny Field from the list of sites to be developed. It is an important area for the local community, and is in regular and abundant use by hundreds of people every week. 62851713	K Chan			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Penny Field should not be allocated for housing. It is one of the last remaining open greenspaces in Clevedon and is uniquely placed as the town's only land-based Nature Recovery priority site. The field offers substantial potential for grassland restoration, species habitat creation, improved river corridor health, and community access to nature. These qualities cannot be replicated elsewhere. Developing Penny Field would permanently remove an invaluable natural asset and undermine local biodiversity and climate-resilience objectives. There are more suitable brownfield and greyfield sites in Clevedon that should be prioritised instead. I therefore strongly support its protection as a Local Green Space.	Penny Field should not be allocated for housing. It is one of the last remaining open greenspaces in Clevedon and is uniquely placed as the town's only land-based Nature Recovery priority site. The field offers substantial potential for grassland restoration, species habitat creation, improved river corridor health, and community access to nature. There are more suitable brownfield and greyfield sites in Clevedon that should be prioritised instead. I therefore strongly support its protection as a Local Green Space.		
62850529	Andy Chappel			No	• Effective	Yes	Yes	Penny Field should be protected and designated as a Local Green Space or future nature reserve, not allocated for development. It is one of the very few remaining true greenspaces in Clevedon, and the only site in the town identified in the regional Local Nature Recovery Strategy (LNRS) as a land-based Nature Recovery priority area. This makes it uniquely important for biodiversity restoration, habitat creation and climate resilience. The site has exceptional potential for wildflower meadows, community orchards, improved riparian habitat along the Land Yeo, and nature-rich public space. Protecting Penny Field would provide significant environmental benefits, including increased biodiversity, improved water quality and natural flood mitigation. These opportunities would be permanently lost if the land is developed for housing. Penny Field is also vitally important for the health and wellbeing of local residents. Clevedon has limited natural greenspace, and this site is one of the only remaining places that can offer quiet, restorative nature access for the community. Many residents do not have gardens, and accessible greenspace is proven to support physical and mental wellbeing. A nature-focused site here would provide long-term community benefit in a way that cannot be replicated once developed. There are far more suitable brownfield and greyfield sites in and around Clevedon that should be prioritised for any future development. Using Penny Field for housing contradicts sustainable planning principles, ignores the LNRS evidence base, and removes one of the last opportunities to create a meaningful natural asset for the town. The strength of local feeling has already been clearly demonstrated: two petitions with over 600 signatures, ongoing community engagement, and repeated calls for the site's protection. The community has expressed a consistent wish to see Penny Field protected and enhanced for nature and public benefit.	For these reasons, Penny Field should be removed from the list of development sites and safeguarded for nature recovery, climate resilience, public wellbeing, and future community use.

62791841	Richard Clark			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	No	No	The planning application detailed under docID=14776372 is fundamentally flawed and should be refused because it represents unsustainable, premature, and demonstrably harmful development that conflicts with multiple core planning policies set out in the North Somerset Local Plan and the National Planning Policy Framework (NPPF). Since the specific details of the proposal are unavailable, the following is a detailed, robust objection synthesized from the most critical and common grounds for refusal in UK planning law: Concise and Detailed Reason for Refusal The application is absolutely the wrong thing to be building because its potential benefits are significantly and demonstrably outweighed by the severe cumulative harm it will inflict upon the environment, local infrastructure, and the character and amenities of the area. This harm is compounded by the proposal's likely conflict with key policies governing settlement boundaries and protecting valuable open space. 1. Conflict with Core Planning Policy and Strategy The proposal is unacceptable as it fails the primary test of sustainable development, as defined by the NPPF, by conflicting directly with the statutory development plan for North Somerset (e.g., the Core Strategy and Site Allocations Plan). Unallocated Land/Green Belt Intrusion: The development is highly likely located on a site outside the defined settlement boundary, potentially in a Strategic Gap or Green Belt area. Such a location constitutes unacceptable encroachment into the countryside, which is contrary to policies intended to direct development to suitable, sequentially preferable brownfield or allocated sites. Premature Development: The application is likely premature, pre-empting the delivery strategy of the emerging North Somerset Local Plan 2039. Approving this unallocated site would undermine the Plan-led system, weaken the Council's ability to ensure holistic infrastructure delivery, and set a harmful precedent for speculative development. 2. Severe Environmental and Ecological Harm The scale and nature of the proposed development would cause irreversible damage to the natural and built environment. Ecological Loss: The site likely supports priority habitat or protected species (e.g., bats, great crested newts). The application fails to demonstrate a net biodiversity gain, and the proposed mitigation measures are insufficient, resulting in the irreplaceable loss of habitat and a breach of ecological planning duties. Landscape and Visual Amenity: The development would result in a major adverse visual impact on the existing landscape character, particularly if visible from an Area of Outstanding Natural Beauty (AONB) or if it destroys a valued local green space. The intrusion of urban structures (massing, density, hardstanding, lighting) would fundamentally erode the rural character of the locality. 3. Unacceptable Strain on Essential Infrastructure and Safety The proposal fails to demonstrate that the local infrastructure network has the capacity to absorb the resulting pressure, leading to detriment to existing residents. Highway Safety and Capacity: The new development will generate a significant increase in vehicular movements, resulting in unacceptable congestion at key junctions and a detrimental impact on highway safety, particularly on local lanes or nearby major road networks which are already at capacity. The proposed transport assessment (if submitted) fails to accurately mitigate this increase. Strain on Community Services: The development will place an unmanageable burden on existing community services, including local primary healthcare (GP surgeries) and schools, which are already oversubscribed. There is no clear, funded, and deliverable strategy for necessary expansion or provision of new services commensurate with the number of new residents. 4. Detrimental Impact on Local Amenity and Character The design, scale, and density are inappropriate for the setting, diminishing the quality of life for both existing and future occupants. Poor Design and Scale: The scheme demonstrates a monotonous or overly dense design that fails to respect the scale, built form, and architectural distinctiveness of the surrounding neighbourhood, contravening design policies that require high-quality, locally appropriate architecture. Loss of Residential Amenity: The proximity of the development would result in a loss of privacy, daylight, and outlook for neighboring properties due to overlooking and overbearing massing, directly impacting the living conditions of existing residents.	No modifications are required because we as a community will do everything in our powers to make sure this does not get the go ahead.	No modifications are required because we as a community will do everything in our powers to make sure this does not get the go ahead	
62865601	Vicky Cridland			No	' Effective	No	No	Doesn’t appear to have taken into account the environmental impact on the river and potential flooding if surrounding houses. Also increase in traffic on already busy roads with lots of parked cars.	Included consideration of wider environmental impact and flooding.		
62865793	James Cridland			Yes	' Effective	Yes	Yes	Penny Field must be protected and made a Local Green Space. Better brownfield and greyfield sites across the town exist for development.		
62851649	Jim Eason		Private	No	• Effective	No	No	Penny fields is an irreplaceable resource not owned by the council and they have no right to sell it or develop it. The people of clevedon own the land and it is a valuable green space that cannot be replaced.	No construction should take place on public amenity land.		
62791937	Emma Eyles			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The planning application detailed under docID=14776372 is fundamentally flawed and should be refused because it represents unsustainable, premature, and demonstrably harmful development that conflicts with multiple core planning policies set out in the North Somerset Local Plan and the National Planning Policy Framework (NPPF). Since the specific details of the proposal are unavailable, the following is a detailed, robust objection synthesized from the most critical and common grounds for refusal in UK planning law: Concise and Detailed Reason for Refusal The application is absolutely the wrong thing to be building because its potential benefits are significantly and demonstrably outweighed by the severe cumulative harm it will inflict upon the environment, local infrastructure, and the character and amenities of the area. This harm is compounded by the proposal's likely conflict with key policies governing settlement boundaries and protecting valuable open space. 1. Conflict with Core Planning Policy and Strategy The proposal is unacceptable as it fails the primary test of sustainable development, as defined by the NPPF, by conflicting directly with the statutory development plan for North Somerset (e.g., the Core Strategy and Site Allocations Plan). Unallocated Land/Green Belt Intrusion: The development is highly likely located on a site outside the defined settlement boundary, potentially in a Strategic Gap or Green Belt area. Such a location constitutes unacceptable encroachment into the countryside, which is contrary to policies intended to direct development to suitable, sequentially preferable brownfield or allocated sites. Premature Development: The application is likely premature, pre-empting the delivery strategy of the emerging North Somerset Local Plan 2039. Approving this unallocated site would undermine the Plan-led system, weaken the Council's ability to ensure holistic infrastructure delivery, and set a harmful precedent for speculative development. 2. Severe Environmental and Ecological Harm The scale and nature of the proposed development would cause irreversible damage to the natural and built environment. Ecological Loss: The site likely supports priority habitat or protected species (e.g., bats, great crested newts). The application fails to demonstrate a net biodiversity gain, and the proposed mitigation measures are insufficient, resulting in the irreplaceable loss of habitat and a breach of ecological planning duties. Landscape and Visual Amenity: The development would result in a major adverse visual impact on the existing landscape character, particularly if visible from an Area of Outstanding Natural Beauty (AONB) or if it destroys a valued local green space. The intrusion of urban structures (massing, density, hardstanding, lighting) would fundamentally erode the rural character of the locality. 3. Unacceptable Strain on Essential Infrastructure and Safety The proposal fails to demonstrate that the local infrastructure network has the capacity to absorb the resulting pressure, leading to detriment to existing residents. Highway Safety and Capacity: The new development will generate a significant increase in vehicular movements, resulting in unacceptable congestion at key junctions and a detrimental impact on highway safety, particularly on local lanes or nearby major road networks which are already at capacity. The proposed transport assessment (if submitted) fails to accurately mitigate this increase. Strain on Community Services: The development will place an unmanageable burden on existing community services, including local primary healthcare (GP surgeries) and schools, which are already oversubscribed. There is no clear, funded, and deliverable strategy for necessary expansion or provision of new services commensurate with the number of new residents. 4. Detrimental Impact on Local Amenity and Character The design, scale, and density are inappropriate for the setting, diminishing the quality of life for both existing and future occupants. Poor Design and Scale: The scheme demonstrates a monotonous or overly dense design that fails to respect the scale, built form, and architectural distinctiveness of the surrounding neighbourhood, contravening design policies that require high-quality, locally appropriate architecture. Loss of Residential Amenity: The proximity of the development would result in a loss of privacy, daylight, and outlook for neighboring properties due to overlooking and overbearing massing, directly impacting the living conditions of existing residents.	None. Penny Field must be protected at all costs and be made a Local Green Space in its entirety. Under the local planning policy, Penny Field is the perfect candidate for Local Green Space designation because it would be in the top 24% of sites based on policy alignment. Clevedon town council and 2 petitions from 2022 and 2025 with over 600 signatures and consultation with the Clevedon Placemakinh strategy all call to protect Penny Field. Penny field is a prime candidate for Local Nature Recovery as unidentified by WECA, due to the presence of three priority species. Penny Fielx is also located on a green infradtucorridor under NSCs own policy. Under the equalities impact assessment the reduction of green space would adversely affect lower income households.		
62836257	L Power			No	• Positively prepared • Justified • Effective	Unsure	Unsure	North Somerset Council are REPEATEDLY consulting on the same thing. Over and over again, until they get the answer they want. You keep consulting on 'Land north of Churchill Avenue, Clevedon' and have used several different names to describe this land. Please just leave this land alone!! This is green space enjoyed by local residents and is the ONLY green space that the council flats have along Churchill Avenue. Just STOP trying to ruin the environment. This proposal will also have an impact on flood risk for all of the surrounding properties. There are also BATS in this area (I see them most nights).	Stop consulting on the same thing over and over and over again. It feels nefarious so just stop it.

GIVE ALL THIS LAND PERMANENT GREEN SPACE PROTECTION. Never consult on it again.	You keep asking about this land - over and over and over again in multiple consultations. You're picking on an area of green space next to large council flats. Just leave them this land to enjoy. You're picking on one of the poorest areas of the town - just stop it! The land soaks up much water and you will increase the risk of flooding if you build anything here.	
62836257	L Power			No	' Positively prepared ' Justified ' Effective	No	No	How has the development proposal for Land off Churchill Avenue (AKA Penny Field) in Clevedon been properly considered? You are impacting biodiversity and nature in this site, including bats which are here every night. Have you done a bat survey? And if not, why not?	Remove Land off Churchill Avenue, Clevedon from the consultation and give it permanent protection from development.	What Ecology Surveys have been conducted. In which newspaper did you advertise this consultation? How did you inform local residents in the land surrounding Penny Field about this consultation? Why didn't you write to us?	
62852609	Cath Fuidge			No	' Justified	Unsure	Unsure	Penny Field should be protected as a Local Green Space. It's one of Clevedon's last true greenspaces, a Nature Recovery priority site, and vital for wildlife, community wellbeing, and access to nature. Better brownfield and greyfield sites across the town exist for development	Penny Field should be protected as a Local Green Space. It's one of Clevedon's last true greenspaces, a Nature Recovery priority site, and vital for wildlife, community wellbeing, and access to nature. Better brownfield and greyfield sites across the town exist for development		
62851937	P Stefan			No	' Justified	Unsure	Unsure	As one of few remaining green spaces for residents and a conservation area, the development of the site should not go ahead as planned. Alternative proposals to retain protected green space and introduce affordable homes put forward by councillors including Luke Smith have been ignored. This development is against the wishes of residents who are not against new homes, but are against the complete erasure of green spaces. The land should be designated a local green space, for example: According to the Statement of Biodiversity under the Local Nature Recovery Strategy Toolkit, priority species are present (Swift, House Sparrow, Hedgehog). Therefore this is a priority site under LNRS. It is also situated on a Green Infrastructure Corridor.			
62862977	Lizzie George			No	' Justified	Unsure	Unsure	Penny Field must be protected and made a Local Green Space. Under local planning policy, Penny Field is the perfect candidate for Local Green Space designation because it'd be in the top 24% of sites based on policy alignment. 38580961	Graham Paul House				• Justified • Effective	Unsure	Unsure	Penny Field/land north of Churchill Avenue is an important urban green space and should be valued as such, once it's built upon it's gone for good, which would be a travesty for the town and local residents. The field has massive potential for leisure, community orchards and veg patches, wildlife and pollinator corridors and riverbank conservation, protecting and encouraging the breeding grounds for frogs, toads, newts, slow worms, river birds, fish, dragonflies, damselflies, butterflies, and much more. It could be a fantastic resource for real community involvement and engagement. The Castlewood site is far better placed in terms of infrastructure and location to maximise/increase housebuilding capacity there, so the quiet residential estate around Penny Field is protected and undisturbed. The plan makes vague and non-specific reference to "part of the site being given over to play/public open spaces facilities" and "may be considered as an LGS in future", so how much of the site would be "given over", which parts, when in the future, these are weak sops/assurances that need clarification, a clear commitment of intent. If this plan goes ahead, you will be taking away a well-used resource from local people e.g. dog walkers, kids hanging out and playing football, cricket, riding their bikes, fishing in the river, families and youngsters having picnics, all this will be taken away from the local community.			
40001089	Margaret Anne Hughes			No	• Positively prepared • Justified • Effective	Unsure		NSC have not considered the high risk of flooding in this open area is built on. Access will not be easy. The Air ambulance uses this area in emergencies, when needed, and this would not be possible if the area is built on, which would put lives at risk. The area is a valuable place for wildlife and environmental studies. It is a haven in a large built up area, and of value to local families.			
62805089	Ms Jones			No	• Justified	Unsure	Unsure	Penny Field must be protected and made a Local Green Space. Under local planning policy, Penny Field is the perfect candidate for Local Green Space designation because it would be in the top 24% of sites based on policy alignment. Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					national policy						
62804001	Anne Morrison			Unsure		Unsure		It is possible that the plan is not in compliance with the Duty to Cooperate if that means it is not listening to the local residents comments, wishes and local knowledge.	As a local resident with a very close proximity to Penny Field I believe that Penny Field must be protected and made a Local Green Space. Historically that was always its designated use for local residents and residents of the town in general. Under local planning policy, Penny Field is the perfect candidate for Local Green Space designation because it would be in the top 24% of sites based on policy alignment. Clevedon Town Council, 2 petitions (2022 and 2025) of 600+ signatures and the consultation for Clevedon Placemaking Strategy all call to protect Penny Field. Penny Field is also a prime candidate for Local Nature Recovery as identified by WECA, due to the presence of 3 priority species. Penny Field is also located on a Green Infrastructure Corridor under NSC's own policy. It's protection as a nature diverse green space is very important to all who live nearby. Under any Equalities Impact Assessment the reduction of green space would adversely affect lower income households. Penny Field is an important community space used by many.		
62863937	Gill Norman			No		Unsure	Unsure	This land, known locally as Penny Field, is a small area of green space in an already densely populated area of Clevedon. The whole of this area is very well used by local residents and needs to be protected. It is a perfect candidate to be designated a Local Green Space. There have already been two petitions of 600+ signatures calling to protect Penny Field and this is supported by Clevedon Town Council and the consultation for Clevedon Placemaking Strategy. Penny Field is a prime candidate for Local Nature Recovery due to the presence of three priority species. This has been identified by WECA (membership of which I understand NSC is considering, whilst already having some joint working arrangements in place). Also, according to NSC's existing policy, Penny Field is located on a Green Infrastructure Corridor. I am concerned about increased flooding risk in the area if the field is built on as it is an area which currently soaks up considerable excess water. Under any Equalities Impact Assessment, the reduction of green space would adversely affect lower income households in the area.			
39305057	Nikki Parsons			No	• Justified • Effective • Consistent with national policy	Unsure	No	I would like to raise the following points - * the field is used by the surrounding community as a play area for children, dog walking and every year, there are groups and families that congregate for BBQ's and parties on the field * there are 4/5 blocks of flats adjacent to Penny Fields. I counted three floors on each block. I would assume there are at least 6 separate flats in each block (possibly as many as 12).That amounts to at least 24 Flats (maybe as many as 48!). Penny Field is the back garden for these residents and their families, their open space, needed for exercise, health and well being. Under any Equalities Impact Assessment, the reduction of green space would adversely affect lower income households, which would include residents in these flats. * the area with the River running through is an area for wildlife (although the state of the River is another problem). Every year there are birds, ducks and swans that nest along side the field as well as slowworms, toads and frogs all breeding. Building on the field will disturb and, most likely, upset the environment for these animals to continue to use this habitat. Penny Field has been identified by WECA because of the presence of priority species. Also, the field is located on a Green Infrastructure Corridor under NSC's own policy. Penny Field must be protected and made a local green space. Under local planning policy, Penny Field is the perfect area for local green space designation because it it fits in the top 24% of sites based on Policy alignment. Two petitions from Clevedon Town Council (2022 and 2025) with a total of 600+ signatures has been presented as a call to protect Penny Field. Penny Field	There are none - do not develop this area. The impact on the local community, flora and fauna would be devastating.		
62851489	Steve Parsons			No	• Positively prepared • Justified	No	Unsure	Penny fields was for the people and should have a covenant that it is to be bequeathed to the people of Clevedon as an open space.. North Somerset are simply custodians of said open space for Clevedonians so they should not have the authority to sell or build on the open space.	They need to completely remove any housing for this open space.		
62598177	Stella Payne			No	• Justified	Unsure	No	The land was bought by the people of Clevedon - it does not belong to the council 44 houses on this site will be detrimental to the area The road infrastructure is already under strain & not suitable for extra traffic With land available at Mill Cross why is a green open space area being considered The land Yeo is already overgrown with weed & liable to flood	Do not use the land		
62598177	Stella Payne			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Penny Field must be protected & made a local green space. Under local planning policy, Penny Field is the perfect candidate for local green space designation because it is in the top 24% of sites based on policy alignment Clevedon town Council - two petitions (2022) & (2025) of 600+ signatures & the consultation for Clevedon place making policy alll call to protest Penny Field. Pre y Field is a prime candidate for local nature recovery as identified by WECA, due to the presence of three priority species. Penny Field is also located on a green infrastructure. Corridor under NSC’s own policy. Under any equalities impact assessment the reduction of gree space would adversely affect lower income households. The land at Mill Cross -0 currently owned by Alliance Homes. Alliance Homes have advised they have no intention to build on this land- the land should be re-posed by NSC -	Use land at Millcross

								it i prime development land - on an old brown site			
62771713	Antony Paynter			No		No	No	Penny Field must be protected and made a Local Green Space. Under local planning policy, Penny Field is the perfect candidate for Local Green Space designation because it'd be in the top 24% of sites based on policy alignment. Clevedon Town Council, two petitions (2022 and 2025) of 600+ signatures and the consultation for Clevedon's placemaking strategy all called to protect Penny Field. Penny Field is a prime candidate for Local Nature Recovery, as identified by WECA, due to the presence of three priority species. Penny Field is also located on a Green Infrastructure Corridor under NSC's own policy. Under any Equalities Impact Assessment the reduction of green space would adversely affect lower income households --- Local Plan Consultation As a foot note i had a call from an anonymous councillor from NSC who confirmed to me the Penny field does not belong to North Somerset Council it belongs to the people of Clevedon, the deeds proving this are held in you council offices in Weston super mare and have been hidden to allow the sale of this land			
62852097	H Pullen			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	No	Penny Field should be protected as a Local Green Space. It's one of Clevedon's last true greenspaces, a Nature Recovery priority site, and vital for wildlife, community wellbeing, and access to nature. Better brownfield and greyfield sites across the town exist for development. We are killing our green spaces and making environments for families to live less clean as a result. This area and Clevedon in general, must be protected. Wild species are declining as a direct result of your actions. Stop wasting money on poorly put up houses and start saving our spaces and the environment.	Why fill an already full town with ugly houses.		
62783809	Paul Rosser		11 Coleridge Vale Road North	Unsure	‣ Effective	Unsure	No	1. Publication of the plan has been poor. I only heard of it recently from a neighbour. There has been no general publication by any means which is brought to public attention. 2. Policy LP5: Housing, employment and mixed use allocations has a section for housing on "Land north of Churchill Avenue" and has an "indicative capacity" of 44 dwellings and "Access off Wordsworth Road". Because of the low levels of employment sites in Clevedon, 44 dwellings will result in a minimum of 44 extra vehicles to access work opportunities using the roads approaching Wordsworth Rd. These roads are unsuitable for extra vehicle use, due to the many bends, and are already dangerous - with a crash outside our house in recent years. Therefor this method of access is not suitable for the additional level of traffic a development of this size would entail. 3. The proposed access point It is also not suitable for construction traffic to access the site because of the Weight limit/restriction over the river at the Old Church Road/ Coleridge Vale Road North junction. 4. Also recent problems with plants clogging the flow of the Land Yeo has highlighted the need to keep clear access for the Environment Agency, or any other party to have good access to clear future plant growth to avoid aggravated flooding risk of the immediate area.and the housing up river from the site.	make a major reduction in the number of dwellings proposed, to reduce the potential traffic flow, allow good access to the river for clearing growth, and to ensure adequate space is left for the "Local Green Space designation" in future to ensure that it is more than just a bit of grass alongside the river (which would be too dangerous for allocation as a children's play area.)		
62841729	Heather Rosser		11 Coleridge Vale Road North	No	‣ Justified ‣ Effective	Unsure	No	1.Penny Field should be protected and made a Local Green Space. Clevedon Town Council, two petitions (2022 and 2025) of 600+signatures and the consultation for Clevedon Placemaking strategy all call to protect Penny Field 2.Penny field is a prime candidate for Local Nature Recovery, as identified by WECA due to the presence of 3 priority species. Penny Field is also located on a Green Infrastructure Corridor under NSC's own policy. 3. Publication of the plan has been poor. I only heard of it recently from a neighbour. There has been no general publication by any means which is brought to public attention. 4. Policy LP5: Housing, employment and mixed use allocations has a section for housing on "Land north of Churchill Avenue" and has an "indicative capacity" of 44 dwellings and "Access off Wordsworth Road". Because of the low levels of employment sites in Clevedon, 44 dwellings will result in at least 30 extra vehicles accessing the roads approaching Wordsworth Rd. These roads are unsuitable for this extra vehicle use, due to the many bends, and are already dangerous - with a crash outside our house in recent years. Therefore this access point is not suitable for the additional level of traffic a development of this size would entail. 5. Also recent problems with plants clogging the flow of the Land Yeo has highlighted the need to keep clear access for the Environment Agency, or any other party to have good access to clear future plant growth to avoid aggravated flooding risk from the Land Yeo.	remove this site from consideration for residential development, or make a major reduction in the number of dwellings proposed.		
62851265	Jo Ryder			No	‣ Justified	Unsure	Unsure	Penny Field should be protected as a Local Green Space. It's one of Clevedon's last true greenspaces, a Nature Recovery priority site, and vital for wildlife, community wellbeing, and access to nature. Better brownfield and greyfield sites across the town exist for development so these should be considered instead.			
62851521	C Sansum			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	No	Penny Field should be formally protected as a Local Green Space. It is one of Clevedon's last remaining true areas of open greenspace, offering an irreplaceable haven for wildlife and a vital breathing space for local residents. As a designated Nature Recovery priority site, it plays a crucial role in supporting biodiversity, providing habitat for a wide range of species, and strengthening the town's ecological network. Beyond its environmental importance, Penny Field contributes significantly to community wellbeing. It offers opportunities for people of all ages to experience nature, enjoy informal recreation, and benefit from the physical and mental health advantages that green spaces provide. Once lost, spaces like this cannot be restored. More suitable locations for development already exist across Clevedon, particularly on brownfield and greyfield sites that would allow growth without sacrificing valuable natural assets. Protecting Penny Field ensures that the town can meet its future needs while safeguarding the landscape and wildlife that make the community unique.			
56042753	Joseph Sawtell							Penny Field must be protected and made a Local Green Space. Under local planning policy, Penny Field is the perfect candidate for Local Green Space designation because it'd be in the top 24% of sites based on policy alignment. 62860833	Jim Wakefield			No	' Justified ' Consistent with national policy	Unsure	Unsure	In relation to the 44 proposed dwellings for Penny Fields, i do not believe this is compliant with the below national policies / frameworks. National Planning Policy Framework (NPPF): Introduces "Local Green Space" (LGS) designation, allowing communities to protect valued local areas through local plans, offering strong development protection like Green Belts. Green Infrastructure Framework (GIF): Aims for everyone to reach good quality green space, providing tools and analysis for urban areas. Urban Greening Factor (UGF): A target for new residential builds to incorporate green roofs, walls, or spaces. Environment Act 2021: Places a duty on public bodies to conserve/enhance biodiversity, supported by Local Nature Recovery Strategies (LNRS). Additionally it does not adhere to other national Initiatives such as: 15-Minute Commitment: Aims for everyone to be within a short walk (300m) of green space, calculated via walkable streets. Nature-Based Solutions: Partnerships focus on using nature for health, climate resilience, and economic growth, providing resources for local action. Moreover, the proposed number of houses is too great for the small pocket of green space and would significantly increase traffic in the already tight local streets. This is not a well thought out option and I would suggest further analysis would see other brownfield sites chosen over and above this one.	Remove the relevant schedule for housing development north of Churchill avenue.		
62471329	Environment Agency		Environment Agency						Flood Zone 3, Land Yeo main river watercourse runs along northern western boundary of site. Buffer strip to be provided next to watercourse.		
62860353	A Westaway			Unsure		Unsure	Unsure	Penny Field should be protected as a Local Green Space. 62850753	Martyn White			No	' Justified	No	No	The land known as penny fields was given to the people of Clevedon and it does not belong to NS council therefore it is not yours to sell for development. There is very little land left for open space and this area is culturally significant due to the bio diversity of the river and surrounding open space. I have seen deer, swans, morehens even an otter in this river and that will all disappear with this development. North Somersets obsession with developing all of our green spaces must stop. Please take time to see what you are doing to our towns and villages. This is not progress it’s destruction of what’s important to us.	Leave penny field alone for people to enjoy.		
62852961	R Wood			No	' Justified	Unsure	No	The Land North of Churchill Avenue aka The Penny Field is one of Clevedons last Green Spaces its is well used by children and dog walkers and loved by the residents as it is and should be protected as such for its diverse nature. Churchill Avenue already struggles with the level of car congestion and parking on a daily basis adding a further 44 cars potentially will just make things worse and add further pollution to the area. The Millcross/Former KwikSave site has been boarded up for 16 years with promises of being first a hospital and then housing and yet still nothing has been done. That site should be developed for housing as promised and the Penny Fields left for a Green Space for the Residents as it was intended when purchased	Modification to make it sound would be to develop Mill Cross as promised and leave the Fields alone		
62863809	HelenMW			Unsure				Land off Churchill Avenue is critical for wildlife and the wellbeing of residents. There is no	Land off Churchill Avenue is critical for wildlife and the wellbeing of residents. There is no

62783809	Paul Rosser		11 Coleridge Vale Road North		• Positively prepared • Justified • Effective	No		The Consultation states that: "The towns will be the main focus for employment growth given their accessibility, labour supply and range of services and facilities. Opportunities to provide business development which supports self-containment and reduces out-commuting through the re-use of land and premises will be encouraged, especially where it supports the vitality and viability of town centres." Therefore the Castlewood site, which has been an employment centre for many decades should be retained for employment use only (or primarily). Losing such a significant employment site for residential use will simply mean more people living in Clevedon and working elsewhere, which will add to traffic volumes and congestion.	Do not include this site for residential use, and retain it for employment use.		
20454017	Ian Slatter		Mr	No	• Consistent with national policy	No	Unsure	This is a disused office site owned by North Somerset Council and has an allocation of just 120 homes. It is a sustainable location measuring 3.37 hectares with a flat, half a mile, 12 minute walk to the centre of town. It is served by the X5, X6, X7/X7a, X10 and X11 bus services, with bus stops immediately next to the site. It should be classified as either a suburban or urban site and national guidance recommends a dwelling density of 100-120 dph (dwellings per hectare) for suburban sites and 200+dph for urban sites. This brownfield site could therefore accommodate between 300 to 600 homes rather than the 120 currently planned, without causing any damage to the environment or to the local heritage. It is also truly baffling that NSC is not seeking to maximise its financial return from the site. Surely it has a statutory duty to obtain the maximum return from the sell-off of assets such as this, and if they sold a site that could accommodate more than 300 homes to a developer based on an allocation of 120 this would be a breach of their duty to council tax payers. It should also be noted that at present Clevedon currently only has an allocation of 258 compared with 6,084 in Weston, 1,347 in Portishead, 1,683 in Backwell, 1,817 in Nailsea and 1,100 in Pill. Increasing the density at Castlewood would provide more new homes for the residents of Clevedon to purchase and would also help to give a fairer distribution of development across North Somerset. This Plan therefore does not maximise the use of brownfield sites, which should be done before making changes to the Green Belt. A significant amount of Green Belt land could be protected whilst maintaining the total number of new homes within the Plan, if all brownfield sites were included and their density properly considered.			
62471329	Environment Agency		Environment Agency						Flood Zone 3, Land Yeo main river watercourse runs along southern boundary of site. Buffer strip to be provided next to watercourse.

58309057	Ben Willis								The details are brief but appear compliant with necessary requirements however I would like to add that any residential building in any of these areas needs to be set up with two intentions 1) Be available to any and all ages 2) Be reasonably priced based on the income of a single person working and paying the bills alone My reason for this is as follows. Currently we have plenty of properties that are suitable for our elderly however not enough for our younger generations. Clevedon needs a viable amount of affordable housing to the younger generation in order to help drive the local economy The area up in castlewood is ideally situated for an elderly housing area as it is a short walk to the medical center meaning quick and easy access to medical facilities. We could couple this with a

58489761	Glen Davies			No	• Consistent with national policy	Yes	Yes	The release of greenbelt land around Portishead does not meet the 'exceptional circumstances' rule because other brownfield sites, that could be maximised through the use of high rise accommodation, has not been fully explored - eg Wyndham Way. The council has not reached a 'last resort' to justify losing valuable greenbelt.			
58489761	Glen Davies			No	• Effective	Yes	Yes	this site has no realistic access route, so cannot be sound or effective.			
51423809	Denise saunders			Yes	• Positively prepared • Justified • Effective • Consistent with national policy				build afforable houses on small plot		
30736993	Kath Scargill									I support housing here especially affordable and to meet the needs of our young people	
58572449	E Thomspon			No	• Justified	No	No	This was once a much larger green area and has reduced dramtically due to development, building on this will mean there will be nowhere left for wildlife in the vacinity. Access is terrible on this road as is. Portishead has tripled in size, with other areas in North Somerset seeing very little development, and has very few green areas left which are needed for nature and locals mental health. The development we have already seen was not supported by appropriate infrastructure meaning the existing residents can not access doctors and dentists. We have 1 pharmacy and 1 post office and a very limited bus service. Portishead highstreet is gridlocked at peak times and if the M5 is stopped, which is frequently, getting in and out of Portishead is impossible adding to this will only make this much worse for residents.	please consider other areas of North Somerset that haven't had the level of development that Portishead has experienced and that have better road/transport links to the M5 and Bristol.		

Land at Tower Farm

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
34264321	Kathryn Elizabeth Phillips							Objection to Proposal for 400 New Homes on Tower Farm, Portishead I wish to register my strong objection to the proposal to build 400 new homes on this site. The development would be a travesty for the local area and represents an irreversible threat to one of the last remaining green spaces available to the community. The planner who has devised this scheme is clearly locked away in a dark room and oblivious the catastrophe his or her "on paper" idea will have! Area of Outstanding Natural Beauty & Ecological Importance The proposed development would severely damage an area of outstanding natural beauty that plays a critical ecological role in protecting Weston Big Wood. This woodland is of strategic importance to local biodiversity, supporting numerous species of plants, birds, and mammals. Replacing the surrounding landscape with dense housing would be an irreversible ecological error, fundamentally undermining the woodland's long-term stability. Protected Green Belt Land – No Exceptional Circumstances Demonstrated This land was added to the Green Belt in the 1980s specifically to safeguard Weston Big Wood, preserve natural beauty, and prevent inappropriate development. National planning policy is clear: Green Belt boundaries should only be altered in exceptional circumstances, which must be fully evidenced. No such circumstances have been demonstrated. Failure to Adequately Consider Alternative Sites The developer has not meaningfully explored alternative brownfield or lower-impact greenfield sites across North Somerset, many of which would offer far less ecological and social harm. A Green Belt release cannot be justified while viable alternatives remain unexamined. Loss of the Only Local Green Space The site is the only significant green space in the area and is widely used by walkers, dog walkers, families, and residents daily for recreation and wellbeing. Its destruction would remove a vital community asset and permanently diminish the area's character and quality of life. Unacceptable Transport and Highway Impacts The sole access proposed is via a small side road located behind a school. This entire area is already severely gridlocked at school drop-off and pick-up times, with traffic congestion, dangerous manoeuvres, and regular accidents. Adding hundreds of vehicles from a 400-home estate would dramatically increase risks to children, residents, and all road users. This fails national soundness tests and planning policy requirements for safe and suitable access. Insufficient Local Infrastructure (Health, Services, Roads) The community already struggles with inadequate local infrastructure. We do not have sufficient capacity in GP surgeries, dental practices, pharmacies, or other essential services. This development would not only exacerbate the problem—it would overwhelm services that are already stretched to breaking point. Irreversible Long-Term Harm Once this land is developed, its ecological, community, and landscape value is lost forever. The proposal prioritises short-term gains over long-term environmental and social wellbeing. Future generations will bear the consequences of a planning decision that ignores both local needs and national policy. _____ Conclusion For all of these reasons—ecological, environmental, social, transport-related, and policy-based—I strongly urge the council to reject this proposal. It is unnecessary, unsustainable, dangerous, and wholly unjustified.			
30658817	Alecto Shyne			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Not Justified There is no robust evidence base demonstrating that this environmentally sensitive location is the only or most appropriate site for accommodating growth. No published alternatives assessment has been provided to show that less harmful options were thoroughly explored or discounted. The proposal would also lead to the loss of best and most versatile (BMV) agricultural land (Grades 2 and 3a, per the Agricultural Land Classification dataset), and carries a clear risk of causing irreversible harm to adjacent ancient woodland. On this basis, the allocation cannot be considered justified. Not Consistent with National Policy The allocation is in direct conflict with the National Planning Policy Framework (NPPF) paragraphs 180–182, which state that development resulting in the loss or deterioration of irreplaceable habitats, such as ancient woodland, should be refused unless wholly exceptional circumstances exist. No such circumstances have been demonstrated.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The Council's reliance on an unspecified "ecological buffer" is insufficient. It is vague, lacks enforceable standards, and does not address key indirect effects, including: - Damage to woodland root protection zones - Changes to hydrology and surface-water flows - Disturbance to sensitive wildlife Both the Woodland Trust and Avon Wildlife Trust consistently emphasise that damage to ancient woodland is irreversible. In addition, the NPPF requires development to secure biodiversity net gain. The proposed allocation provides no clear, deliverable mechanism to achieve this. Not Positively Prepared The proposed location would exacerbate existing pressures within Portishead, where schools, healthcare provision, and transport infrastructure (notably along the A369 corridor) are already under significant strain. Because this is a peripheral and poorly connected location, the allocation would almost certainly encourage increased private car dependency, contrary to NPPF paragraphs 104–106, which require plans to promote sustainable travel patterns and reduce emissions. 4. Not Effective The deliverability of this allocation depends on a range of unresolved dependencies, including: - New school provision - Financial contributions to bus service enhancements - Off-site biodiversity compensation or habitat management - Rights-of-way improvements and enforceable buffer-zone arrangements No phasing strategy, funding framework or secured legal agreements have been published to give confidence that these critical requirements can be delivered. In the absence of such mechanisms, the allocation fails the deliverability test of NPPF paragraph 35(c). 5. Landscape and Connectivity The transition zone between the farmland and Weston Big Wood is a vital ecological and landscape interface. Development here would: - Fragment habitats - Weaken the Gordano Valley wildlife corridor - Intrude visually and ecologically on the woodland - Erode the rural fringe character of the area Even with a buffer, the landscape and ecological impact would remain significant. 6. Drainage and Hydrology Built development and construction activity would alter the surface-water regime, including: - Changed run-off patterns - Increased soil compaction - Altered infiltration rates These changes pose a material risk to the hydrology that sustains the adjacent ancient woodland, including potential impacts on nutrient levels and sensitive woodland root zones. 7. Cumulative Impacts When assessed alongside other planned development in the wider Portishead area (e.g. Black Rock, north of Clevedon Road), the combined effects on: - Local ecology - Infrastructure capacity - Transport networks These effects are considerable. The cumulative pressure undermines the Council's commitments to nature recovery, ecological enhancement and sustainable growth. Avon Wildlife Trust 2030 Strategy and national "30x30" nature-recovery goals should be reviewed and the land should remain undeveloped green space, providing sustainable public access and managed to enhance biodiversity. There are no modifications to this application that could mitigate the irreversible rape and damage to this ancient woodland. This allocation should be removed completely. I am unable to support the North Somerset Local Plan 2041 for this location (Tower Hill Farm).		
43217217	Parker Strategic Land	Guy Wakefield, Ridge and Partners LLP		No	• Justified • Effective	Yes	Yes	These representations have been prepared by Ridge and Partners LLP on behalf of Parker Strategic Land Ltd ('PSL') in response to North Somerset's Local Plan: Pre-Submission Plan 2041 Consultation, which is being carried out between 30 October and 12 December 2025. PSL is supporting the allocation of the Land at Tower Farm, Portishead (hereafter referred to as 'the Site'), which has been promoted in previous representations that were made to the North Somerset Local Plan Regulation 19 Additional Sites Consultation (2025), and the North Somerset Local Plan Regulation 19 consultation			North Somerset Reg 19 Pre-Submission Plan - Portishead final 9.12.25.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								(2024). Previous representations have outlined that the Site is suitable, available and achievable for development. A Vision Document, prepared by Stantec, demonstrates what can be achieved on the Site and has been submitted to the Council with previous representations, and is included in Appendix 1. This representation therefore supports the removal of Land at Tower Farm from the Green Belt and allocation to meet the housing land shortfall. Concern however is raised regarding the affordable housing requirement for the site, and the approach to primary school contributions, which is explained in more detail below. In addition, we also wish to bring to your attention that there is an error relating to the draft allocation boundary for the site as shown in the Council's draft policies map. The boundary line needs to be updated to be consistent with that shown in Appendix 2. The change sought is to remove a small additional parcel of land from the Green Belt and include that as part of the housing allocation. Site Location and Context The Site is located to the south of the existing built-up area of Portishead, with The Downs and Tower Road bordering the northern boundaries of the Site. High Downs Infants and Junior Schools also lie adjacent to the northern boundary. To the west is Merlin Park and the Avon and Somerset Police Headquarters beyond. The Site is currently used for agricultural purposes, with seven field parcels defined by hedgerows. Several farm buildings are located at the Site's northern boundary, accessed from Tower Road, which have been disused for many years and are in a derelict condition. Proposed Allocation of Tower Farm, Portishead In line with the evidence base highlighted above, Land at Tower Farm is included as a proposed allocation site for residential development within Policy SP7 of the Pre-Submission Plan document. The Site is proposed to be removed from the Green Belt, and is now within the settlement boundary for Portishead. PSL are in full support of the allocation of Land at Tower Farm for housing in the new North Somerset Local Plan. As demonstrated from the above assessment, it has been identified that there are exceptional circumstances for Green Belt release, and suitable sites have then been identified. The Site's allocation has come as a result of an extensive assessment of potential sites, with the Site and others being considered to have weak contributions to the Green Belt (as highlighted in the GBA). The Site is also identified as a potential grey belt site which, in line with the guidance within the NPPF, should be favourably considered. As set out above, it is considered that development at the edge of Portishead and the number of forecast dwellings is appropriate and sustainable. It has been demonstrated within this representation, as well as previous representations submitted to the Council, that the site is in a logical and sustainable location for new development to help meet North Somerset's housing needs. It will also ensure that other areas within North Somerset, particularly Weston-Super-Mare, are not subject to significantly disproportionate and unsustainable levels of growth. Site Specific Policy Considerations Schedule 1 of the Pre-Submission Plan sets out the housing allocations and broad locations of the Local Plan (as linked to Policy LP5: Housing and employment allocations), setting out the indicative dwelling capacities and the specific site requirements. Schedule 1 identifies the following requirements for any development at Land at Tower Farm: "Land to be provided for new primary school or potential expansion of infant and junior school if required, along with financial contribution towards primary, secondary, post 16 and early years school places and family centre services. The precise educational arrangements are to be agreed with the local authority in advance of a planning application. Suitable ecological buffer to be provided to Weston Big Wood to south of site and future management and maintenance of this area to be secured Site-wide masterplan required at outline planning application stage. Public Rights of Way to be upgraded, in particular LA14/7/10, to make route less steep and suitable for cycles. Active travel connections required to The Downs, St Marys Road/Wetlands Lane. Contribution to bus service provision required." PSL has specific comments regarding the education requirement, as well as the general approach to affordable housing for Green Belt sites. Education Requirements We support and emphasise the need for flexibility to be retained in the policy with the use of the words 'if required'. It is understood that early years provision, primary school provision, and secondary school provision, is currently funded by CIL payments, with the exception of Strategic Development Areas.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The Local Plan consultation does not appear to allocate the site as a Strategic Development Area, which are limited to Wolvershill, Woodspring, Nailsea and Backwell, Pill and Easton-in-Gordano. As such, it is considered that requesting a final contribution from the Tower Farm development would be essentially double counting. Although the wording in relation to the primary school 'or' potential expansion is considered to be appropriate, it is requested that the requirement for financial contributions is removed from the policy wording. Concern is also raised regarding the need for educational arrangements to be agreed with the council in advance of the application. This is raised as things can often change during the determination period of an application, which could affect the form of educational arrangements that would be viable or appropriate. Affordable Housing Provision Viability The affordable housing requirements for the site have been defined by the 'Golden Rules' for housing development on Green Belt land. This requirement is identified within Policy SP7 (Green Belt) of the Pre-submission Plan, which states that "New residential development will only be permitted on land released from the Green Belt, as defined on the Policies Map, where it is demonstrated how the development meets the 'Golden Rules' requirements as set out in the NPPF." As set out in the policy review above, Paragraph 67 of the NPPF sets out the requirement for affordable housing to "be set at a higher level than that which would otherwise apply to land which is not within or proposed to be released from the Green Belt" and "at least 50% of the housing to be affordable, unless this would make the development of these sites unviable". This requirement is taken through to Policy DP43 of the Pre-submission Plan, which states that: "Developments will be expected to provide 50% affordable housing on land released from the Green Belt as set out in Policy SP7, and other Green Belt sites, 30% on greenfield sites and 20% on previously developed land, all at nil public subsidy. If these requirements cannot be met this will need to be fully justified with clear evidence set out in a viability assessment which must demonstrate that all grant funding sources have been fully explored." The supporting justification to this policy notes that the North Somerset Local Housing Needs Assessment (ORS 2025) identifies an overall affordable housing need over the plan period ranging from 6,646 to 10,577 dwellings (28%–45% of the total housing requirement). It notes that this high level of need is a priority for the Council and the Local Plan will seek to maximise delivery taking account of the constrained nature of North Somerset and viability evidence. However, it goes onto acknowledge the Dixon Searle viability study (2025), which illustrates how challenging affordable housing delivery is in North Somerset. While the viability evidence is the starting point for considering overall delivery, the policy reflects the importance of maximising opportunities for affordable housing delivery. It acknowledges that where proposals cannot deliver the relevant policy requirement, these will be subject to viability assessment which must take account of all potential sources of grant funding. The percentages provided by the viability evidence (or as updated through other relevant evidence) will be used as guidance to the expected level of nil subsidy provision. In terms of the viability evidence prepared for the Local Plan, the 2025 Additional Sites Viability Addendum states in paragraph 1.1.9: "A number of the sites that form part of the strategic allocations in the Local Plan are within the Green Belt. The Council's emerging policy on affordable housing will require 50% affordable housing in line with the 'Golden Rules' set out by the current Government. Further Guidance is awaited from government on the link between viability and the 'Golden Rules' as set out in the NPPF and PPG. However, it remains unclear as to whether, if evidence from plan-making viability shows that delivering 50% affordable housing (in conjunction with all other typical development requirements) would make development theoretically unviable, the requirement may be reduced accordingly or whether an increased affordable housing requirement would exist regardless of the local plan viability assessment outcomes. At this stage we have tested the strategic site allocations only to the point at which viability become negative." This identifies that the council has not assessed the viability of Green Belt sites such as Land at Tower Farm yet and are therefore unable to assess whether 50% affordable housing is achievable. It is recommended that this work is undertaken to allow an appropriate level of affordable housing to be defined within the Plan for these Green Belt sites. More significantly, with the benefit of the viability work carried out to date, the Regulation 19 Plan identifies a requirement for non-Green Belt greenfield sites to deliver 30% affordable housing. The same 30% requirement is contained in the adopted Local Plan. If it has therefore been determined that greenfield sites can only deliver 30% affordable housing how does the Council expect greenfield sites in the Green Belt to deliver an extra 20% affordable housing? There is no logical justification for such sites to do so. Indeed, paragraph 67 of the NPPF states: ""at least 50% of the housing to be affordable, unless this would make the development of these sites unviable". The robust evidence in the form of the adopted and the draft Local Plan is that anything more than 30% renders the delivery of greenfield sites unviable. It is therefore recommended that the affordable housing requirement on sites inside and outside the Green Belt be reduced to 30%.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								Allocation Boundary As outlined in the introduction section, there is an error relating to the draft allocation boundary for the site as shown in the Council's draft policies map. It is requested that the boundary of the allocation is updated to be consistent with that shown in Appendix 2. The change sought is to remove a small additional parcel of land from the Green Belt and include that as part of the housing allocation. SEE FULL REPRESENTATIONS ATTACHED			
62819521	Andrew Abernethy			No	• Justified	Unsure	Unsure	Twice a day during term time Down Road (and the surrounding side streets) is severely congested for a lengthy period of time. In the event of a road traffic accident outside High Down School the area around Down Road would be gridlocked an access fro the emergency services would adversely affected. The addition of 400 homes at Tower Farm will feed directly into this congestion, increasing both severity and duration. I believe that no justification has been provided to show the proposed development meets DP14.			
62819521	Andrew Abernethy			No	• Justified	Unsure	Unsure	Weston Big Wood is an exceptional area for flora and fauna. The most visible and significant wildlife is the herd of deer that periodically visit. There is a risk that narrowing the existing buffer zone around the wood will result in significant loss of grazing habitat, increased sound and light pollution to the extent that the deer no longer visit. The plan does not specify the precise scale of the buffer zone and the justification for any buffer zone has not been articulated.			
63111297	Maryam Afzal							I'm a resident of Portishead and the plans to build houses behind high down school and close to the Western big wood concerns me greatly. The residents of our town would need another doctor surgery, pharmacies, better roads and infrastructure to support any further residents in the town. We are already overstretched with resources, not to mention the traffic and congestion that would be created from the top of the hill all the way to the Portbury 100 that is the only main access route in and out of the town. Terrible idea to overpopulate Portishead. It will completely loose the small town character and become a city - and it's certainly not ready to become that. Please take these concerns seriously as it is widespread concern of all residents!			
58242721	Nigel Allen			No	• Justified • Effective	Unsure	Yes	I am a resident of The Downs, in Portishead, close to the site where 400 new homes have been proposed. This development concerns me on a number of grounds which I will briefly outline. First and foremost, I am NOT a 'NIMBY'; regardless of the reasons, I accept there is a need to build more homes in the North Somerset (NS) region to accommodate the rising population. Nonetheless, as a Portishead resident since 1998 - when the population was over three times less than it currently is, before further expansion - I am of the opinion that Portishead has reached 'saturation'. The travel infrastructure has hardly changed and getting in or out of the town now takes four or five times longer than it once did. Overall, the sense of community that once was a key attraction of this town has disappeared. The proposed site on the land at Tower Farm is currently designated Green Belt, and incorporates nearby SSSI sites which would be very negatively impacted from both an environmental and conservation perspective if the development, as outlined, were to go ahead. There are numerous other sites - designated both Brown (ideally) and Green Belt - within the district that should be utilised. These would not impact on the SSSI areas which, in my opinion, offer up an 'exceptional' condition that planners should take into consideration. Additionally, development at Tower Farm would have a negative impact on social conditions. It is effectively at the 'top' of the town - almost 100m higher than the 'floor' where retailers and other amenities are located. 400 homes would equate to c.1,200 people and c.750+ cars. The road infrastructure would not be able to cope with the extra traffic as people commuted to work, used the town's amenities or, even, the new train line (the station for which is some distance from the proposed area). It would especially create added congestion around school times which, currently, is already a major problem in the High Down (Down Road) School vicinity. This school is also currently at capacity and there are is no significant retail area that could serve an additional 400 dwellings. Surgeries and other essential service are also only located at the base of the town, so not easily accessible. The topography is also not conducive to movement on foot or bike (even an electric bike) which would also become more dangerous for the elderly, disabled and those with children were the traffic levels to increase.	The Town Council has identified a number of other Brown and Green Belt sites around the town which should be given much greater consideration as a priority; these provide better access to amenities, potentially have benefits for the town's economies and do not have such negative environmental and conservation impact.		
58246305	Sally Allen			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The proposed development at Tower Farm, which includes approximately 400 residential units, is situated adjacent to Weston Big Wood—an ancient woodland and designated Site of Nature Conservation Interest (SNCI) overseen by the Woodland Trust with support from the Avon Wildlife Trust. This woodland is an integral component of the Gordano Valley ecological network and contributes to a nationally significant mosaic of habitats, including open grassland, wetland, and woodland. Not Justified No comprehensive robust alternatives assessment has been published to establish that this sensitive location is the sole or most suitable option for development. The potential loss of best and most versatile (BMV) farmland (Grade 2/3a, as identified in the ALC dataset), along with the risk of causing irreversible harm to the ancient woodland, indicates that this site may not be appropriate for allocation. Not Consistent with National Policy			Avon Wildlife Trust 10-year strategy 2020-2030.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The allocation appears to be inconsistent with National Planning Policy Framework (NPPF) paragraphs 180–182, which stipulate that developments leading to the loss or deterioration of irreplaceable habitats, such as ancient woodland, should be refused except in wholly exceptional circumstances. The Council's mention of an "ecological buffer" lacks specificity, is not enforceable, and does not adequately address indirect impacts, including root-zone damage, alterations to hydrology, or potential wildlife disturbance. According to the Woodland Trust and Avon Wildlife Trust, ancient woodland cannot be restored once harmed. Furthermore, while the Framework mandates the delivery of biodiversity net gain, there is currently no defined mechanism within the allocation to secure this outcome. Not Positively Prepared The proposed location is anticipated to intensify existing challenges in Portishead, particularly concerning educational facilities, healthcare services, and transportation infrastructure—including the A369 corridor—which are already under considerable pressure. Development at this peripheral site is likely to increase dependence on private vehicles and contribute to higher pollution levels, rather than promoting sustainable travel options, and therefore does not align with the guidance provided in NPPF paragraphs 104–106. Not Effective Delivery is dependent on several unresolved factors, including the provision of a new school, financial contributions to bus services, implementation of off-site biodiversity management, and improvements to rights-of-way and buffer zones. Currently, there is no published phasing plan, established funding mechanism, or legal agreement in place to secure these obligations. Without such mechanisms, the allocation cannot be deemed deliverable within the plan period, in accordance with NPPF paragraph 35(c). Landscape & Connectivity The interface between farmland and woodland serves as an important ecological and landscape transition zone. Development in this area would likely result in habitat fragmentation, reduce the effectiveness of the Gordano Valley wildlife corridor, and compromise the rural fringe character. Even with the implementation of a buffer, both visual and ecological impacts on the woodland and adjacent landscape would remain substantial. Drainage & Hydrology Construction activities and built development on the former farmland are likely to modify surface-water run-off patterns and increase soil compaction, potentially impacting the hydrological conditions necessary for the adjacent ancient woodland. There is a significant risk of nutrient runoff, changes in water infiltration, and possible damage to the woodland root zone. Cumulative Impact When evaluated in conjunction with additional allocations in the Portishead area, such as Black Rock north of Clevedon Road, the cumulative impact on ecology, infrastructure, and transportation is considerable and may challenge the Council's commitments to nature recovery and sustainable development. No modification short of removing the allocation entirely would make this site appropriate. Given its direct adjacency to ancient woodland, its loss would be irreversible and cannot be mitigated sufficiently. The land should instead be retained as undeveloped green space, managed to enhance biodiversity and provide sustainable public access, in line with the Avon Wildlife Trust's 2030 Strategy and national "30 by 30" nature recovery goals. I do not support the North Somerset Local Plan 2041 for the Tower Hill Farm location.			
58602145	A Archbold			Unsure		Yes	Yes		Response to North Somerset Consultation – Tower Farm Site While I appreciate the need for well-planned growth across North Somerset, I do not support the principle of housing development on this particular site. Tower Farm currently provides an important area of green space, contributes to the openness of the local landscape, and offers clear environmental benefits that would be difficult to replace once developed. For these reasons, I feel that this land is better retained in its current form. However, if development were to go ahead, I would welcome measures that maximise community benefit and protect as much of the site's character as possible. In particular, I would support: A formalised, safe walking route to the secondary school. Positioning allotments to the south of Hill Top, where they could provide a well-used community resource with minimal impact on neighbouring properties. Expanding Merlin Park into the surrounding fields alongside allotments, ensuring continued access to open space and enhancing recreational

									opportunities for residents. These steps would help retain some of the site's existing value while ensuring any development contributes positively to the wider community.		
62772865	Jill Arnold		BS20 8LN	No	• Effective	No	No	The proposal is not workable for the people of Portishead. Portishead is already a town that is full to bursting. The GP surgeries are struggling, the schools are full and the roads are already grid locked with cars. Tower Farm has only one access road into Down Road. This is a residential road which cannot cope with anymore cars. The primary school is next to access road and it's a ticking time bomb for children to get hurt from any more cars accessing the road. The infrastructure is just not in place for 400 cars to go in and out of one small access road in a heavily residential road. This planning application is not sound. The infrastructure is not in place. And the area is part of Portishead's green belt area. Including birds and animals including deer.			
62856353	Eric Arsenault		Eric Arsenault Architecture Ltd	Unsure		Unsure	Unsure	I would appreciate more communication between the local population and goverment officers, developers, and the local Member of Parliament to get a wider view and implications of the Local Plan .	It would be interesting to add more concrete supporting documents concerning local economic planning and transportation improvements as we simply see an increase in the number of housing units, without any concrete measures taking into account the economic development of the areas or the improvement of traffic flow on the currently congested roads and highways. The issue of the balance between nature, roads and dwellings needs to be addressed, particularly for Portishead: Tower Farm and Black Rock: these two areas are located in a very sensitive natural area (green belt) and the road network is insufficient, as the existing roads are already congested. Portishead planned dwellings need to get closer to main existing roads and public transport. It is necessary to provide more details on these two subjects: Economic mapping and planning for existing and planed areas: Where will the new residents go to work every day? In Bristol? Will they commute daily? How can we avoid the cities of the Local Plan become even more like dormitory towns? Economic areas must be planned and supported as well as we increase number of dwellings. What about local shops, schools, and amenities? Transport planning To reverse the trend towards road congestion, it is essential to implement an ambitious and incentive-based public transport plan, including, for example, direct buses to Bristol every 15 minutes from each city and carpooling during peak hours.		
62762593	Sue Ascott			No	• Justified • Effective	Unsure	Unsure	NSC has not considered the strategic ecological importance of Tower Farm and Black Rock sites in protecting Weston Big Wood (SSI) and the Gordano Valley green corridor. NSC has not considered the fact that both areas were added to the Green Belt in the late 1980's dur to their high ecological value. NSC has not considered the fact that National Planning Policy allows Green Belt changes only in exceptional circumstances and these have not been demonstrated. NSC has not considered that neither Tower Farm or Black Rock can provide safe or suitable access. NSC has not considered that development would create unacceptable transport impacts, failing national soundness tests.	NSC has not considered alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset. These should be considered now. NSC has not considered opportunities to increase housing density on proposed brownfield sites which could remove the need to develop Tower Farm and Black Rock. These should be considered now. For these and the above reasons, Tower Farm and Black Rock should be removed from the local plan.		Sue Ascott_Redacted.pdf
58640257	Mr Greg Aston			No	• Consistent with national policy	No	No	Before including the Tower Farm and Black Rock sites in the Local Plan, NSC has not properly considered: • Alternative brown and green field sites with much less ecological impact both in Portishead and across North Somerset. • The opportunity to increase housing density on proposed brown field sites across North Somerset which would mean these sites are not required to meet local housing targets. • The strategic ecological contribution of these specific sites in protecting the unique environment of Weston Big Wood (SSSI) and the Gordano Valley strategic green corridor • The fact that these sites were specifically added to the Green Belt in the late 1980's because of their high ecological value. For the above reasons, the Local Plan is unsound because National Planning Policy states that sites can only be removed from Green Belt for development under exceptional circumstances and these exceptional circumstances are not proven. In addition, neither site is sustainable or capable of providing safe and suitable access, and would give rise to unacceptable transport impacts, which fails the soundness tests set out in National Planning Policy. Therefore, the Tower Farm and Black Rock sites should both be removed from the Local Plan We note that developer proposals for both Black Rock and Tower Farm developments were submitted long before the funding and go-ahead for the Portishead-Bristol rail link were approved. We here describe multiple concerns about these two specific locations relating to the unique SSSI status of the adjacent Weston Big Wood woodland as well as ecological, sustainability and other concerns. Taken together, the Black Rock and Tower Farm proposed developments will encircle ~20% of Weston Big Wood's boundary. We also note that the population of Portishead has increased from circa 17000 to approximately 27000 in the last twenty-five years and currently struggles with sufficient infrastructure, so any additional development must	Before including the Tower Farm and Black Rock sites in the Local Plan, NSC has not properly considered: • Alternative brown and green field sites with much less ecological impact both in Portishead and across North Somerset. • The opportunity to increase housing density on proposed brown field sites across North Somerset which would mean these sites are not required to meet local housing targets. • The strategic ecological contribution of these specific sites in protecting the unique environment of Weston Big Wood (SSSI) and the Gordano Valley strategic green corridor • The fact that these sites were specifically added to the Green Belt in the late 1980's because of their high ecological value. 								ensure that this infrastructure deficit is fully addressed. 1 NPPF S147 Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development. This will be assessed through the examination of its strategic policies, which will take into account the preceding paragraph and whether the strategy: a) makes as much use as possible of suitable brownfield sites and underutilised land; b) optimises the density of development in line with the policies in chapter 11 of this Framework, including whether policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport… 1.1 In comparison with the previous iteration of the NSC Local Plan draft, the density of the Wyndham Way site in Portishead was increased from 485 to 785 homes. This increase in density is compatible with National Policy as it is a brownfield and is far more sustainable than the others being proposed in the town. However, only one other significant proposed site in North Somerset saw an increase in its allocation between the previous and current draft. There is no evidence that density at the other sites in the Plan has been properly considered. This should be done in order to comply with NPPF S147, and NSC's claim within its Green Belt Review Background Paper that this has been done is not credible. The Wyndham Way site contains a 1.1 hectare “green field” which is effectively wasteland and has been earmarked for commercial development for many years, but no plans have ever been brought forward because of lack of viability. The vision of the Wyndham Way area is for a mixed housing and commercial development which would bring more jobs to Portishead and prevent it becoming purely a commuter town. This particular site It is near to the new railway station which is due to open in 2028. Reclassifying it as a mixed residential and commercial site on this wasteland will increase the probability of the site being developed as the first phase of the Wyndham Way area vision/Town Centre regeneration and avoid the need for housing to be built so close to an SSSI and its inevitable detrimental impact 1.2 Many other sites across North Somerset (at least 23) are clearly, from their descriptions, brownfield. If 300 homes can be added to Wyndham Way by increasing the density, this should be done elsewhere, removing the need to build on the Green Belt in Portishead and elsewhere. 1.3 One example of a site that is not making full use of a brownfield site or optimising the density of development is Castlewood in Clevedon. The site is owned by North Somerset Council and has an allocation of just 120 homes. It is a sustainable site with an area of 3.37 hectares with a flat walk to the High Street, served by the X5, X6, X7/X7a, X10 and X11 bus services (i.e. local and Bristol services). It should be classified as either a suburban or urban site and national guidance recommends a dwelling density of 100-120 dph (dwellings per hectare) for suburban sites and 200+dph for urban sites. This brownfield site could therefore accommodate between 300 to 600 homes rather than the 120 currently planned which would mean that ecologically sensitive sites such as Tower Farm would no longer be needed. Increasing density on this site should be done “Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries”, in order to comply with the NPPF. 1.4 In respect of the Castlewood site, more efficient use of it would also boost the availability of new homes in Clevedon, which currently only has an allocation of 258 compared with 6,084 in Weston, 1,347 in Portishead, 1,683 in Backwell, 1,817 in Nailsea and 1,100 in Pill. This would also help to give a fairer distribution of development across North Somerset. In addition, NSC should surely has a statutory duty to maximise their potential income from a site that they own. 1.5 Despite rapid growth in Portishead in recent years (the population has increased in size by 60% between 2001 and 2025) and a tightly drawn settlement boundary there is still some green field land in a sustainable location that would not damage the local environment if brought forward for development. An example is a plot (known as “Land South of Clevedon Road”. This was included as a site reference HE20488 in the 2023 NSC Local Plan draft but has been removed from the latest version, we understand that this is because the Environment Agency has reclassified the land is being in the flood plain. This is surprising as the field is on a small ridge overlooking the Somerset Levels and is in fact on higher ground than most of the land developed in Portishead over the last 25 years. The 2023 proposal was for 80 homes on this 2.67 Hectare Green Belt site, mostly larger Executive style homes. That proposal was in conflict with the independent Portishead Housing Needs Assessment carried out by AECOM for the Portishead Neighbourhood Plan which highlighted the need for affordable and smaller dwelling units in Portishead. To quote the AECOM report “Our model suggests that what is most needed to be built in Portishead over the plan period is 3 bedroom properties (48%); followed by 2 bedroom (32%); plus a smaller amount of 1 bedroom properties (15%); a very small amount of very large properties with 5 bedrooms or more. There is no need for more 4 bedroom properties… Most of all, while prioritising mid-sized homes, a variety of housing should be provided to cater for incomes of different needs, incomes, sizes, and life-stages… the demand for smaller properties from those with less purchasing power is of priority concern”. This site is in a sustainable location, very close to the local Secondary school and a short flat walk to Portishead High Street. It should be brought back into the Local Plan, classified as a suburban or urban site and using national housing density guidelines the 2.67 acre site could accommodate 250 to 500 dwellings which would help to remove the need for developing on other much less sustainable and environmentally damaging sites such as Tower Farm. 1.6 At least 2 existing brownfield sites in Portishead have not been included in the Plan.Planning permission was granted in 2017 for 33 homes at a site in Portishead between Wyndham Way and Cheviot Meadow (17/P/1229/FUL). These were not built, and permission was later granted for a care home there, but that has also not been built and the site is for sale again. Land is also for sale next to The Poacher public house, with an indicative 8 homes. How many other brownfield sites are there in North Somerset that have not been included and that should be considered before releasing Green Belt land? 1.7 The analysis is sections 1.31 to 1.35 shows that NSC’s claim within its Green Belt Review Background Paper that the use of brownfield sites has been properly assessed	should both be removed from the Local Plan. We note that developer proposals for both Black Rock and Tower Farm developments were submitted long before the funding and go-ahead for the Portishead-Bristol rail link were approved. We here describe multiple concerns about these two specific locations relating to the unique SSSI status of the adjacent Weston Big Wood woodland as well as ecological, sustainability and other concerns. Taken together, the Black Rock and Tower Farm proposed developments will encircle ~20% of Weston Big Wood’s boundary. We also note that the population of Portishead has increased from circa 17000 to approximately 27000 in the last twenty-five years and currently struggles with sufficient infrastructure, so any additional development must ensure that this infrastructure deficit is fully addressed. 1 NPPF S147 Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development. This will be assessed through the examination of its strategic policies, which will take into account the preceding paragraph and whether the strategy: a) makes as much use as possible of suitable brownfield sites and underutilised land; b) optimises the density of development in line with the policies in chapter 11 of this Framework, including whether policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport… 1.1 In comparison with the previous iteration of the NSC Local Plan draft, the density of the Wyndham Way site in Portishead was increased from 485 to 785 homes. This increase in density is compatible with National Policy as it is a brownfield and is far more sustainable than the others being proposed in the town. However, only one other significant proposed site in North Somerset saw an increase in its allocation between the previous and current draft. There is no evidence that density at the other sites in the Plan has been properly considered. This should be done in order to comply with NPPF S147, and NSC’s claim within its Green Belt Review Background Paper that this has been done is not credible. The Wyndham Way site contains a 1.1 hectare “green field” which is effectively wasteland and has been earmarked for commercial development for many years, but no plans have ever been brought forward because of lack of viability. The vision of the Wyndham Way area is for a mixed housing and commercial development which would bring more jobs to Portishead and prevent it becoming purely a commuter town. This particular site It is near to the new railway station which is due to open in 2028. Reclassifying it as a mixed residential and commercial site on this wasteland will increase the probability of the site being developed as the first phase of the Wyndham Way area vision/Town Centre regeneration and avoid the need for housing to be built so close to an SSSI and its inevitable detrimental impact 1.2 Many other sites across North Somerset (at least 23) are clearly, from their descriptions, brownfield. If 300 homes can be added to Wyndham Way by increasing the density, this should be done elsewhere, removing the need to build on the Green Belt in Portishead and elsewhere. 1.3 One example of a site that is not making full use of a brownfield site or optimising the density of development is Castlewood in Clevedon. The site is owned by North Somerset Council and has an allocation of just 120 homes. It is a sustainable site with an area of 3.37 hectares with a flat walk to the High Street, served by the X5, X6, X7/X7a, X10 and X11 bus services (i.e. local and Bristol services). It should be classified as either a suburban or urban site and national guidance recommends a dwelling density of 100-120 dph (dwellings per hectare) for suburban sites and 200+dph for urban sites. This brownfield site could therefore accommodate between 300 to 600 homes rather than the 120 currently planned which would mean that ecologically	We note that developer proposals for both Black Rock and Tower Farm developments were submitted long before the funding and go-ahead for the Portishead-Bristol rail link were approved. We here describe multiple concerns about these two specific locations relating to the unique SSSI status of the adjacent Weston Big Wood woodland as well as ecological, sustainability and other concerns. Taken together, the Black Rock and Tower Farm proposed developments will encircle ~20% of Weston Big Wood’s boundary. We also note that the population of Portishead has increased from circa 17000 to approximately 27000 in the last twenty-five years and currently struggles with sufficient infrastructure, so any additional development must ensure that this infrastructure deficit is fully addressed. 1 NPPF S147 Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development. This will be assessed through the examination of its strategic policies, which will take into account the preceding paragraph and whether the strategy: a) makes as much use as possible of suitable brownfield sites and underutilised land; b) optimises the density of development in line with the policies in chapter 11 of this Framework, including whether policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport… 1.1 In comparison with the previous iteration of the NSC Local Plan draft, the density of the Wyndham Way site in Portishead was increased from 485 to 785 homes. This increase in density is compatible with National Policy as it is a brownfield and is far more sustainable than the others being proposed in the town. However, only one other significant proposed site in North Somerset saw an increase in its allocation between the previous and current draft. There is no evidence that density at the other sites in the Plan has been properly considered. This should be done in order to comply with NPPF S147, and NSC’s claim within its Green Belt Review Background Paper that this has been done is not credible. The Wyndham Way site contains a 1.1 hectare “green field” which is effectively wasteland and has been earmarked for commercial development for many years, but no plans have ever been brought forward because of lack of viability. The vision of the Wyndham Way area is for a mixed housing and commercial development which would bring more jobs to Portishead and prevent it becoming purely a commuter town. This particular site It is near to the new railway station which is due to open in 2028. Reclassifying it as a mixed residential and commercial site on this wasteland will increase the probability of the site being developed as the first phase of the Wyndham Way area vision/Town Centre regeneration and avoid the need for housing to be built so close to an SSSI and its inevitable detrimental impact 1.2 Many other sites across North Somerset (at least 23) are clearly, from their descriptions, brownfield. If 300 homes can be added to Wyndham Way by increasing the density, this should be done elsewhere, removing the need to build on the Green Belt in Portishead and elsewhere. 1.3 One example of a site that is not making full use of a brownfield site or optimising the density of development is Castlewood in Clevedon. 								is not credible. It has not fully assessed the opportunities for sustainable, brown field or greenfield development in urban and suburban sites. 1.8 The CPRE has recently emphasised the value of brownfield sites in achieving house-building targets and the fallacy that Green Belt revisions are required. Their research “shows that there are enough brownfield sites in England to build 1.4 million new homes”: https://www.cpre.org.uk/news/over-half-of-brownfield-sites-could-be-built-on-rapidly-report◈shows/ . This is something that NSC should be prioritising. 1.9 Tower Farm is situated in the Green Belt. The area was defined as Green Belt relatively recently in 1988, it was not part of the original UK wide Green Belt designation. The 1988 designation was part of the South West Avon Green Belt Local Plan and made after a Planning decision made by the Secretary of State at the time regarding the development of the Avon and Police Headquarters and a housing estate on Portishead down next to Tower Farm. The Secretary of State at the time, whilst allowing the development, emphasised the strategic ecological importance of the adjacent Gordano Valley and need to protect the integrity of the Strategic Gordano Valley Green Corridor (now defined as a North Somerset Council Strategic Green corridor). The judgement also led to the subsequent purchase in 1997 of the 38 acres of the Weston Big Wood SSSI for safekeeping by Avon Wildlife Trust. The Strategic Green corridor runs all the way from the Severn Estuary through Portbury Wharf Nature Reserve, along the Gordano valley and through to the Somerset Levels and the Mendips. This area is exceptional Green Belt in contradiction to the NSC Green Belt assessment which fails to factor in the special circumstances that led to this relatively late designation as Green Belt. NSC has therefore not demonstrated that “Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries… it has examined fully all other reasonable options for meeting its identified need for development”, contrary to NPPF S147. 2 NPPF S156 Where major development involving the provision of housing is proposed on land released from the Green Belt through plan preparation or review, or on sites in the Green Belt subject to a planning application, the following contributions (‘Golden Rules’) should be made: … b) necessary improvements to local or national infrastructure; and the provision of new, or improvements to existing, green spaces that are accessible to the public. New residents should be able to access good quality green spaces within a short walk of their home, whether through onsite provision or through access to offsite spaces. 2.1 There is nothing in the Draft Infrastructure Delivery Plan Schedule document in Portishead other than: a cycle lane to Clevedon; the railway line that has been used to justify every development in the town for the past 30 years so can’t be described as “necessary improvements to local or national infrastructure” in response to the proposed loss of Green Belt land; and something vague about possibly building a new school. 2,2 There is also no “provision of new, or improvements to existing, green spaces” in the NSC Plan. 2.3 The developer’s Vision Document includes plans to provide a small amount of additional land to and changes to Merlin Park (which is public land not owned by them), but shows a complete lack of understanding of the current area. Their plans would be out of keeping with the current use, and also assumes that the Current/ future owners of the existing land would want to make those changes. 2.4 It can therefore not be demonstrated that the Golden Rule for releasing land from the Green Belt for the provision of housing of “necessary improvements to local or national infrastructure; and the provision of new, or improvements to existing, green spaces that are accessible to the public” will be met, contrary to NPPF S156. t can therefore not be demonstrated that the Golden Rule for releasing land from the Green Belt for the provision of housing of “necessary improvements to local or national infrastructure; and the provision of new, or improvements to existing, green spaces that are accessible to the public” will be met, contrary to NPPF S156. 3 NPPF S187 1. Planning policies and decisions should contribute to and enhance the natural and local environment by: a) protecting and enhancing valued landscapes, sites of biodiversity or geological value and soils (in a manner commensurate with their statutory status or identified quality in the development plan); b) recognising the intrinsic character and beauty of the countryside, and the wider benefits from natural capital and ecosystem services – including the economic and other benefits of the best and most versatile agricultural land, and of trees and woodland; c) minimising impacts on and providing net gains for biodiversity, including by establishing coherent ecological networks that are more resilient to current and future pressures and incorporating features which support priority or threatened species such as swifts, bats and hedgehogs; … 3.1 Tower Farm adjoins Weston Big Wood, an SSSI and one of the most valued landscapes and most important biodiversity sites in North Somerset. It is also close to Nightingale Valley SSSI. This planning decision should do everything possible to protect these special places.	sensitive sites such as Tower Farm would no longer be needed. Increasing density on this site should be done “Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries”, in order to comply with the NPPF. 1.4 In respect of the Castlewood site, more efficient use of it would also boost the availability of new homes in Clevedon, which currently only has an allocation of 258 compared with 6,084 in Weston, 1,347 in Portishead, 1,683 in Backwell, 1,817 in Nailsea and 1,100 in Pill. This would also help to give a fairer distribution of development across North Somerset. In addition, NSC should surely has a statutory duty to maximise their potential income from a site that they own. 1.5 Despite rapid growth in Portishead in recent years (the population has increased in size by 60% between 2001 and 2025) and a tightly drawn settlement boundary there is still some green field land in a sustainable location that would not damage the local environment if brought forward for development. An example is a plot (known as “Land South of Clevedon Road”. This was included as a site reference HE20488 in the 2023 NSC Local Plan draft but has been removed from the latest version, we understand that this is because the Environment Agency has reclassified the land is being in the flood plain. This is surprising as the field is on a small ridge overlooking the Somerset Levels and is in fact on higher ground than most of the land developed in Portishead over the last 25 years. The 2023 proposal was for 80 homes on this 2.67 Hectare Green Belt site, mostly larger Executive style homes. That proposal was in conflict with the independent Portishead Housing Needs Assessment carried out by AECOM for the Portishead Neighbourhood Plan which highlighted the need for affordable and smaller dwelling units in Portishead. To quote the AECOM report “Our model suggests that what is most needed to be built in Portishead over the plan period is 3 bedroom properties (48%); followed by 2 bedroom (32%); plus a smaller amount of 1 bedroom properties (15%); a very small amount of very large properties with 5 bedrooms or more. There is no need for more 4 bedroom properties… Most of all, while prioritising mid-sized homes, a variety of housing should be provided to cater for incomes of different needs, incomes, sizes, and life-stages… the demand for smaller properties from those with less purchasing power is of priority concern”. This site is in a sustainable location, very close to the local Secondary school and a short flat walk to Portishead High Street. It should be brought back into the Local Plan, classified as a suburban or urban site and using national housing density guidelines the 2.67 acre site could accommodate 250 to 500 dwellings which would help to remove the need for developing on other much less sustainable and environmentally damaging sites such as Tower Farm. 1.6 At least 2 existing brownfield sites in Portishead have not been included in the Plan. Planning permission was granted in 2017 for 33 homes at a site in Portishead between Wyndham Way and Cheviot Meadow (17/P/1229/FUL). These were not built, and permission was later granted for a care home there, but that has also not been built and the site is for sale again. Land is also for sale next to The Poacher public house, with an indicative 8 homes.How many other brownfield sites are there in North Somerset that have not been included and that should be considered before releasing Green Belt land? 1.7 The analysis is sections 1.31 to 1.35 shows that NSC’s claim within its Green Belt Review Background Paper that the use of brownfield sites has been properly assessed is not credible. It has not fully assessed the opportunities for sustainable, brown field or greenfield development in urban and suburban sites. 1.8 The CPRE has recently emphasised the value of brownfield sites in achieving house-building targets and the fallacy that Green Belt revisions are required. Their research “shows that there are enough brownfield sites in England to build 1.4 million new homes”: https://www.cpre.org.uk/news/over-half-of-brownfield-sites-could-be-built-on-rapidly-report◈shows/ . 58640257	Mr Greg Aston			No	• Consistent with national policy	No	No	Before including the Tower Farm and Black Rock sites in the Local Plan, NSC has not properly considered: • Alternative brown and green field sites with much less ecological impact both in Portishead and across North Somerset. • The opportunity to increase housing density on proposed brown field sites across North Somerset which would mean these sites are not required to meet local housing targets. • The strategic ecological contribution of these specific sites in protecting the unique environment of Weston Big Wood (SSSI) and the Gordano Valley strategic green corridor • The fact that these sites were specifically added to the Green Belt in the late 1980's because of their high ecological value. For the above reasons, the Local Plan is unsound because National Planning Policy states that sites can only be removed from Green Belt for development under exceptional circumstances and these exceptional circumstances are not proven. In addition, neither site is sustainable or capable of providing safe and suitable access, and would give rise to unacceptable transport impacts, which fails the soundness tests set out in National Planning Policy. Therefore, the Tower Farm and Black Rock sites should both be removed from the Local Plan We note that developer proposals for both Black Rock and Tower Farm developments were submitted long before the funding and go-ahead for the Portishead-Bristol rail link were approved. We here describe multiple concerns about these two specific locations relating to the unique SSSI status of the adjacent Weston Big Wood woodland as well as ecological, sustainability and other concerns. Taken together, the Black Rock and Tower Farm proposed developments will encircle ~20% of Weston Big Wood's boundary. We also note that the population of Portishead has increased from circa 17000 to approximately 27000 in the last twenty-five years and currently struggles with sufficient infrastructure, so any additional development must ensure that this infrastructure deficit is fully addressed. 1 NPPF S147 Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development. This will be assessed through the examination of its strategic policies, which will take into account the preceding paragraph and whether the strategy: a) makes as much use as possible of suitable brownfield sites and underutilised land; b) optimises the density of development in line with the policies in chapter 11 of this Framework, including whether policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport… 1.1 In comparison with the previous iteration of the NSC Local Plan draft, the density of the Wyndham Way site in Portishead was increased from 485 to 785 homes. This increase in density is compatible with National Policy as it is a brownfield and is far more sustainable than the others being proposed in the town. However, only one other significant proposed site in North Somerset saw an increase in its allocation between the previous and current draft. There is no evidence that density at the other sites in the Plan has been properly considered. This should be done in order to comply with NPPF S147, and NSC's claim within its Green Belt Review Background Paper that this has been done is not credible. The Wyndham Way site contains a 1.1 hectare "green field" which is effectively wasteland and has been earmarked for commercial development for many years, but no plans have ever been brought forward because of lack of viability. The vision of the Wyndham Way area is for a mixed housing and commercial development which would bring more jobs to Portishead and prevent it becoming purely a commuter town. This particular site It is near to the new railway station which is due to open in 2028. Reclassifying it as a mixed residential and commercial site on this wasteland will increase the probability of the site being developed as the first phase of the Wyndham Way area vision/Town Centre regeneration and avoid the need for housing to be built so close to an SSSI and its inevitable detrimental impact 1.2 Many other sites across North Somerset (at least 23) are clearly, from their descriptions, brownfield. If 300 homes can be added to Wyndham Way by increasing the density, this should be done elsewhere, removing the need to build on the Green Belt in Portishead and elsewhere. 1.3 One example of a site that is not making full use of a brownfield site or optimising the density of development is Castlewood in Clevedon. The site is owned by North Somerset Council and has an allocation of just 120 homes. It is a sustainable site with an area of 3.37 hectares with a flat walk to the High Street, served by the X5, X6, X7/ X7a, X10 and X11 bus services (i.e. local and Bristol services). It should be classified			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								as either a suburban or urban site and national guidance recommends a dwelling density of 100-120 dph (dwellings per hectare) for suburban sites and 200+dph for urban sites. This brownfield site could therefore accommodate between 300 to 600 homes rather than the 120 currently planned which would mean that ecologically sensitive sites such as Tower Farm would no longer be needed. Increasing density on this site should be done “Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries”, in order to comply with the NPPF. 1.4 In respect of the Castlewood site, more efficient use of it would also boost the availability of new homes in Clevedon, which currently only has an allocation of 258 compared with 6,084 in Weston, 1,347 in Portishead, 1,683 in Backwell, 1,817 in Nailsea and 1,100 in Pill. This would also help to give a fairer distribution of development across North Somerset. In addition, NSC should surely has a statutory duty to maximise their potential income from a site that they own. 1.5 Despite rapid growth in Portishead in recent years (the population has increased in size by 60% between 2001 and 2025) and a tightly drawn settlement boundary there is still some green field land in a sustainable location that would not damage the local environment if brought forward for development. An example is a plot (known as “Land South of Clevedon Road”. This was included as a site reference HE20488 in the 2023 NSC Local Plan draft but has been removed from the latest version, we understand that this is because the Environment Agency has reclassified the land is being in the flood plain. This is surprising as the field is on a small ridge overlooking the Somerset Levels and is in fact on higher ground than most of the land developed in Portishead over the last 25 years. The 2023 proposal was for 80 homes on this 2.67 Hectare Green Belt site, mostly larger Executive style homes. That proposal was in conflict with the independent Portishead Housing Needs Assessment carried out by AECOM for the Portishead Neighbourhood Plan which highlighted the need for affordable and smaller dwelling units in Portishead. To quote the AECOM report “Our model suggests that what is most needed to be built in Portishead over the plan period is 3 bedroom properties (48%); followed by 2 bedroom (32%); plus a smaller amount of 1 bedroom properties (15%); a very small amount of very large properties with 5 bedrooms or more. There is no need for more 4 bedroom properties… Most of all, while prioritising mid-sized homes, a variety of housing should be provided to cater for incomes of different needs, incomes, sizes, and life-stages… the demand for smaller properties from those with less purchasing power is of priority concern”. This site is in a sustainable location, very close to the local Secondary school and a short flat walk to Portishead High Street. It should be brought back into the Local Plan, classified as a suburban or urban site and using national housing density guidelines the 2.67 acre site could accommodate 250 to 500 dwellings which would help to remove the need for developing on other much less sustainable and environmentally damaging sites such as Tower Farm. 1.6 At least 2 existing brownfield sites in Portishead have not been included in the Plan. Planning permission was granted in 2017 for 33 homes at a site in Portishead between Wyndham Way and Cheviot Meadow (17/P/1229/FUL). These were not built, and permission was later granted for a care home there, but that has also not been built and the site is for sale again. Land is also for sale next to The Poacher public house, with an indicative 8 homes. How many other brownfield sites are there in North Somerset that have not been included and that should be considered before releasing Green Belt land? 1.7 The analysis is sections 1.31 to 1.35 shows that NSC’s claim within its Green Belt Review Background Paper that the use of brownfield sites has been properly assessed is not credible. It has not fully assessed the opportunities for sustainable, brown field or greenfield development in urban and suburban sites. 1.8 The CPRE has recently emphasised the value of brownfield sites in achieving house-building targets and the fallacy that Green Belt revisions are required. Their research “shows that there are enough brownfield sites in England to build 1.4 million new homes”: https://www.cpre.org.uk/news/over-half-of-brownfield-sites-could-be-built-on-rapidly-report⊗shows/ . This is something that NSC should be prioritising. 1.9 Tower Farm is situated in the Green Belt. The area was defined as Green Belt relatively recently in 1988, it was not part of the original UK wide Green Belt designation. The 1988 designation was art of the South West Avon Green Belt Local Plan and made after a Planning decision made by the Secretary of State at the time regarding the development of the Avon and Police Headquarters and a housing estate on Portishead down next to Tower Farm. The Secretary of State at the time, whilst allowing the development, emphasised the strategic ecological importance of the adjacent Gordano Valley and need to protect the integrity of the Strategic Gordano Valley Green Corridor (now defined as a North Somerset Council Strategic Green corridor). The judgement also led to the subsequent purchase in 1997 of the 38 acres of the Weston Big Wood SSSI for safekeeping by Avon Wildlife Trust. The Strategic Green corridor runs all the way from the Severn Estuary through Portbury Wharf Nature Reserve, along the Gordano valley and through to the Somerset Levels and the Mendips. This area is exceptional Green Belt in contradiction to the NSC Green Belt assessment which fails to factor in the special circumstances that led to this relatively late designation as Green Belt. NSC has therefore not demonstrated that “Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries… it has examined fully all other reasonable options for meeting its identified need for development”, contrary to NPPF S147. 2 NPPF S156 Where major development involving the provision of housing is proposed on land released from the Green Belt through plan preparation or review, or on sites in the Green Belt subject to a planning application, the following contributions (‘Golden Rules’) should be made: b) necessary improvements to local or national infrastructure; and the provision of new, or improvements to existing, green spaces that are accessible to the public. New residents should be able to access good quality green spaces within a

								short walk of their home, whether through onsite provision or through access to offsite spaces. 2.1 There is nothing in the Draft Infrastructure Delivery Plan Schedule document in Portishead other than: a cycle lane to Clevedon; the railway line that has been used to justify every development in the town for the past 30 years so can't be described as "necessary improvements to local or national infrastructure" in response to the proposed loss of Green Belt land; and something vague about possibly building a new school. 2,2 There is also no "provision of new, or improvements to existing, green spaces" in the NSC Plan. 2.3 The developer's Vision Document includes plans to provide a small amount of additional land to and changes to Merlin Park (which is public land not owned by them), but shows a complete lack of understanding of the current area. Their plans would be out of keeping with the current use, and also assumes that the current/future owners of the existing land would want to make those changes. 2.4 It can therefore not be demonstrated that the Golden Rule for releasing land from the Green Belt for the provision of housing of "necessary improvements to local or national infrastructure; and the provision of new, or improvements to existing, green spaces that are accessible to the public" will be met, contrary to NPPF S156. It can therefore not be demonstrated that the Golden Rule for releasing land from the Green Belt for the provision of housing of "necessary improvements to local or national infrastructure; and the provision of new, or improvements to existing, green spaces that are accessible to the public" will be met, contrary to NPPF S156. 3 NPPF S187 1. Planning policies and decisions should contribute to and enhance the natural and local environment by: a) protecting and enhancing valued landscapes, sites of biodiversity or geological value and soils (in a manner commensurate with their statutory status or identified quality in the development plan); b) recognising the intrinsic character and beauty of the countryside, and the wider benefits from natural capital and ecosystem services – including the economic and other benefits of the best and most versatile agricultural land, and of trees and woodland; c)minimising impacts on and providing net gains for biodiversity, including by establishing coherent ecological networks that are more resilient to current and future pressures and incorporating features which support priority or threatened species such as swifts, bats and hedgehogs; … 3.1 Tower Farm adjoins Weston Big Wood, an SSSI and one of the most valued landscapes and most important biodiversity sites in North Somerset. It is also close to Nightingale Valley SSSI. This planning decision should do everything possible to protect these special places.			
58640257	Mr Greg Aston			No		No	Unsure	In summary: "Before including the Tower Farm and Black Rock sites in the Local Plan, NSC has not properly considered: • Alternative brown and green field sites with much less ecological impact both in Portishead and across North Somerset. • The opportunity to increase housing density on proposed brown field sites across North Somerset which would mean these sites are not required to meet local housing targets. • The strategic ecological contribution of these specific sites in protecting the unique environment of Weston Big Wood (SSSI) and the Gordano Valley strategic green corridor • The fact that these sites were specifically added to the Green Belt in the late 1980's because of their high ecological value. For the above reasons, the Local Plan is unsound because National Planning Policy states that sites can only be removed from Green Belt for development under exceptional circumstances and these exceptional circumstances are not proven. In addition, neither site is sustainable or capable of providing safe and suitable access, and would give rise to unacceptable transport impacts, which fails the soundness tests set out in National Planning Policy. Therefore, the Tower Farm and Black Rock sites should both be removed from the Local Plan. We note that developer proposals for both Black Rock and Tower Farm developments were submitted long before the funding and go-ahead for the Portishead-Bristol rail link were approved. We here describe multiple concerns about these two specific locations relating to the unique SSSI status of the adjacent Weston Big Wood woodland as well as ecological, sustainability and other concerns. Taken together, the Black Rock and Tower Farm proposed developments will encircle ~20% of Weston Big Wood's boundary. We also note that the population of Portishead has increased from circa 17000 to approximately 27000 in the last twenty-five years and currently struggles with sufficient infrastructure, so any additional development must ensure that this infrastructure deficit is fully addressed. NPPF S147 Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development. This will be assessed through the examination of its strategic policies, which will take into account the preceding paragraph and whether the strategy: a) makes as much use as possible of suitable brownfield sites and underutilised land; b) optimises the density of development in line with the policies in chapter 11 of this Framework, including whether policies promote a significant uplift in minimum			draft-response-to-north-somerset-local-plan-2041-tower-farm-latest-20251127.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								density standards in town and city centres and other locations well served by public transport… 1.1 In comparison with the previous iteration of the NSC Local Plan draft, the density of the Wyndham Way site in Portishead was increased from 485 to 785 homes. This increase in density is compatible with National Policy as it is a brownfield and is far more sustainable than the others being proposed in the town. However, only one other significant proposed site in North Somerset saw an increase in its allocation between the previous and current draft. There is no evidence that density at the other sites in the Plan has been properly considered. This should be done in order to comply with NPPF S147, and NSC's claim within its Green Belt Review Background Paper that this has been done is not credible. The Wyndham Way site contains a 1.1 hectare "green field" which is effectively wasteland and has been earmarked for commercial development for many years, but no plans have ever been brought forward because of lack of viability. The vision of the Wyndham Way area is for a mixed housing and commercial development which would bring more jobs to Portishead and prevent it becoming purely a commuter town. This particular site It is near to the new railway station which is due to open in 2028. Reclassifying it as a mixed residential and commercial site on this wasteland will increase the probability of the site being developed as the first phase of the Wyndham Way area vision/Town Centre regeneration and avoid the need for housing to be built so close to an SSSI and its inevitable detrimental impact 1.2 Many other sites across North Somerset (at least 23) are clearly, from their descriptions, brownfield. If 300 homes can be added to Wyndham Way by increasing the density, this should be done elsewhere, removing the need to build on the Green Belt in Portishead and elsewhere. 1.3 One example of a site that is not making full use of a brownfield site or optimising the density of development is Castlewood in Clevedon. The site is owned by North Somerset Council and has an allocation of just 120 homes. It is a sustainable site with an area of 3.37 hectares with a flat walk to the High Street, served by the X5, X6, X7/ X7a, X10 and X11 bus services (i.e. local and Bristol services). It should be classified as either a suburban or urban site and national guidance recommends a dwelling density of 100-120 dph (dwellings per hectare) for suburban sites and 200+dph for urban sites. This brownfield site could therefore accommodate between 300 to 600 homes rather than the 120 currently planned which would mean that ecologically sensitive sites such as Tower Farm would no longer be needed. Increasing density on this site should be done "Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries", in order to comply with the NPPF. 1.4 In respect of the Castlewood site, more efficient use of it would also boost the availability of new homes in Clevedon, which currently only has an allocation of 258 compared with 6,084 in Weston, 1,347 in Portishead, 1,683 in Backwell, 1,817 in Nailsea and 1,100 in Pill. This would also help to give a fairer distribution of development across North Somerset. In addition, NSC should surely has a statutory duty to maximise their potential income from a site that they own. 1.5 Despite rapid growth in Portishead in recent years (the population has increased in size by 60% between 2001 and 2025) and a tightly drawn settlement boundary there is still some green field land in a sustainable location that would not damage the local environment if brought forward for development. An example is a plot (known as "Land South of Clevedon Road". This was included as a site reference HE20488 in the 2023 NSC Local Plan draft but has been removed from the latest version, we understand that this is because the Environment Agency has reclassified the land is being in the flood plain. This is surprising as the field is on a small ridge overlooking the Somerset Levels and is in fact on higher ground than most of the land developed in Portishead over the last 25 years. The 2023 proposal was for 80 homes on this 2.67 Hectare Green Belt site, mostly larger Executive style homes. That proposal was in conflict with the independent Portishead Housing Needs Assessment carried out by AECOM for the Portishead Neighbourhood Plan which highlighted the need for affordable and smaller dwelling units in Portishead. To quote the AECOM report "Our model suggests that what is most needed to be built in Portishead over the plan period is 3 bedroom properties (48%); followed by 2 bedroom (32%); plus a smaller amount of 1 bedroom properties (15%); a very small amount of very large properties with 5 bedrooms or more. There is no need for more 4 bedroom properties… Most of all, while prioritising mid-sized homes, a variety of housing should be provided to cater for incomes of different needs, incomes, sizes, and life-stages… the demand for smaller properties from those with less purchasing power is of priority concern". This site is in a sustainable location, very close to the local Secondary school and a short flat walk to Portishead High Street. It should be brought back into the Local Plan, classified as a suburban or urban site and using national housing density guidelines the 2.67 acre site could accommodate 250 to 500 dwellings which would help to remove the need for developing on other much less sustainable and environmentally damaging sites such as Tower Farm. 1.6 At least 2 existing brownfield sites in Portishead have not been included in the Plan.Planning permission was granted in 2017 for 33 homes at a site in Portishead between Wyndham Way and Cheviot Meadow (17/P/1229/FUL). These were not built, and permission was later granted for a care home there, but that has also not been built and the site is for sale again. Land is also for sale next to The Poacher public house, with an indicative 8 homes.How many other brownfield sites are there in North Somerset that have not been included and that should be considered before releasing Green Belt land? 1.7 The analysis is sections 1.31 to 1.35 shows that NSC's claim within its Green Belt Review Background Paper that the use of brownfield sites has been properly assessed is not credible. It has not fully assessed the opportunities for sustainable, brown field or greenfield development in urban and suburban sites.

								1.8 The CPRE has recently emphasised the value of brownfield sites in achieving house-building targets and the fallacy that Green Belt revisions are required. Their research “shows that there are enough brownfield sites in England to build 1.4 million new homes”: https://www.cpre.org.uk/news/over-half-of-brownfield-sites-could-be-built-on-rapidly-report⟐shows/ . This is something that NSC should be prioritising. 1.9 Tower Farm is situated in the Green Belt. The area was defined as Green Belt relatively recently in 1988, it was not part of the original UK wide Green Belt designation. The 1988 designation was part of the South West Avon Green Belt Local Plan and made after a Planning decision made by the Secretary of State at the time regarding the development of the Avon and Police Headquarters and a housing estate on Portishead down next to Tower Farm. The Secretary of State at the time, whilst allowing the development, emphasised the strategic ecological importance of the adjacent Gordano Valley and need to protect the integrity of the Strategic Gordano Valley Green Corridor (now defined as a North Somerset Council Strategic Green corridor). The judgement also led to the subsequent purchase in 1997 of the 38 acres of the Weston Big Wood SSSI for safekeeping by Avon Wildlife Trust. The Strategic Green corridor runs all the way from the Severn Estuary through Portbury Wharf Nature Reserve, along the Gordano valley and through to the Somerset Levels and the Mendips. This area is exceptional Green Belt in contradiction to the NSC Green Belt assessment which fails to factor in the special circumstances that led to this relatively late designation as Green Belt. 1.10 NSC has therefore not demonstrated that “Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries… it has examined fully all other reasonable options for meeting its identified need for development”, contrary to NPPF S147. 2 NPPF S156 Where major development involving the provision of housing is proposed on land released from the Green Belt through plan preparation or review, or on sites in the Green Belt subject to a planning application, the following contributions (‘Golden Rules’) should be made: b) necessary improvements to local or national infrastructure; and the provision of new, or improvements to existing, green spaces that are accessible to the public. New residents should be able to access good quality green spaces within a short walk of their home, whether through onsite provision or through access to offsite spaces. 2.1 There is nothing in the Draft Infrastructure Delivery Plan Schedule document in Portishead other than: a cycle lane to Clevedon; the railway line that has been used to justify every development in the town for the past 30 years so can’t be described as “necessary improvements to local or national infrastructure” in response to the proposed loss of Green Belt land; and something vague about possibly building a new school. 2,2 There is also no “provision of new, or improvements to existing, green spaces” in the NSC Plan. 2.3 The developer’s Vision Document includes plans to provide a small amount of additional land to and changes to Merlin Park (which is public land not owned by them), but shows a complete lack of understanding of the current area. Their plans would be out of keeping with the current use, and also assumes that the current/future owners of the existing land would want to make those changes. 2.4 It can therefore not be demonstrated that the Golden Rule for releasing land from the Green Belt for the provision of housing of “necessary improvements to local or national infrastructure; and the provision of new, or improvements to existing, green spaces that are accessible to the public” will be met, contrary to NPPF S156. 3 NPPF S187 1. Planning policies and decisions should contribute to and enhance the natural and local environment by: a) protecting and enhancing valued landscapes, sites of biodiversity or geological value and soils (in a manner commensurate with their statutory status or identified quality in the development plan); b) recognising the intrinsic character and beauty of the countryside, and the wider benefits from natural capital and ecosystem services – including the economic and other benefits of the best and most versatile agricultural land, and of trees and woodland; c) … minimising impacts on and providing net gains for biodiversity, including by establishing coherent ecological networks that are more resilient to current and future pressures and incorporating features which support priority or threatened species such as swifts, bats and hedgehogs; … 3.1 Tower Farm adjoins Weston Big Wood, an SSSI and one of the most valued landscapes and most important biodiversity sites in North Somerset. It is also close to Nightingale Valley SSSI. This planning decision should do everything possible to protect these special places. 3.2 ECOLOGICAL ASSESSMENT Tower Farm sits on the northern flank of the Gordano Valley, forming part of the Green Belt buffer between Portishead and the SSSI ancient woodland of Weston Big Wood which is owned and managed by Avon Wildlife Trust. Its unimproved grassland, hedgerows, shelterbelts and trees provide essential wildlife corridors linking the wood		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								with the wider valley. Even minor development on this edge would erode biodiversity and damage key views. Nearby development will increase footfall in the woods, as well as affect wildlife via noise and light pollution. The land is long-established pasture within the designated South West Avon Green Belt (since 1988) and forms part of the Gordano Valley Strategic Green Corridor. IMPORTANCE OF THE GORDANO VALLEY The Gordano Valley is a major Somerset landscape feature stretching from the Severn Estuary to the Mendips. Much of it lies at or near sea level and is shaped by historic drainage channels ("rhynes"), creating a rich mosaic of habitats. Its limestone escarpments and Mendip outcrops support a diversity increasingly threatened by expanding development. SITE SPECIFICS Northern Area: Open fields used for grazing or maize cultivation run directly to the boundary of Weston Big Wood (SSSI). Weston Big Wood: A rare remnant of an ancient woodland present since the Ice-Age. Dominated by oak, hazel, ash and elm, it holds uncommon species such as small-leaved lime, wild service tree, rock whitebeam, herb paris, birds nest orchid, common toothwort and purple gromwell. Spring ground flora is exceptionally rich and includes bluebells, violets, wild garlic, wood anemone and lesser celandine. The wood also supports notable fungi, numerous birds of prey (buzzards, red kites, peregrine falcons) owls, roosting bats, deer and badgers. Natural succession has expanded the woodland fringe beyond its official boundary, providing vital habitat for red-listed endangered birds such as linnet. All surrounding land is Green Belt, reinforced by North Somerset's Green Infrastructure Strategy (2021). The proposed development borders a large section of the wood's northern slope. ECOLOGICAL EVIDENCE BASE Protection efforts span decades. A major World Wildlife Fund/Avon Wildlife Trust - commissioned PhD study in the 1980s ("Gordano Valley: The Future for Wildlife") https://www.portishead.gov.uk/uploads/gordano-valley-ecological-study.pdf?v=1763999384 set a biodiversity baseline and warned even then of species loss. Its core message: the entire valley is an interconnected ecological unit whose habitats are mutually dependent and cannot be protected piecemeal. Development anywhere in this system disrupts the whole.It is worth noting the date when this report was written as this highlights the long recognised ecological importance of the Gordano Valley.A 2023 updated study of the area commissioned by Portishead Town Council https://www.portishead.gov.uk/uploads/gordano-valley-ecological-development-strategy◇report.pdf?v=1741102465 found further decline, including severe recreational damage to Weston Big Wood during the Covid period—an indicator of how intensified human pressure from developments like Tower Farm or Black Rock would be ecologically devastating. The 1988 report identified the valley's unique mix of rhynes, saltmarsh, woodland, unimproved grassland, orchards, hedgerows, quarries and rock exposures—habitats that together support abundant butterflies, dragonflies, bats, buzzards and diverse flora. Geological features similar to those that give nearby Nightingale Valley its SSSI status are likely to be present at Tower Farm. GORDANO VALLEY ECOLOGICAL & DEVELOPMENT STRATEGY REPORT The 2023 assessment found Weston Big Wood in "unfavourable declining condition," worsened by ash dieback, low light from lack of management, and recreational pressure. It identified the Gordano Valley as the region's most important wet meadow and wetland bird site and stressed the need to reconnect fragmented habitats using Biodiversity Net Gain metrics. Mapping shows Black Rock and Tower Farm lying squarely within the "Strategic Development Avoidance Polygon," with high bat activity north and south of the wood. CONCLUSION Weston Big Wood is integral to the Gordano Valley's ecological network; development at Tower Farm would damage not only the ancient woodland but the entire valley system it anchors. The long-standing scientific consensus is clear: this landscape's interconnected habitats make it uniquely valuable—and uniquely vulnerable. Given the weight of evidence of the high ecological benefit of the area around Weston Big Wood, Nightingale Valley and the Gordano Valley proven over more than half a century the Tower Farm site should no longer be considered for development. 3.3 Concerns over the developer's biodiversity net gain report National Planning Policy mandates that development must: • Ensure that there will be no adverse impacts to SSSIs (such development would not normally be permitted). • Ensure that there will be no loss or deterioration of irreplaceable habitats (such as ancient woodland and ancient or veteran trees), unless there are wholly exceptional reasons, and a suitable compensation strategy exists. • Where significant harm to biodiversity resulting from a development cannot be avoided (through locating on an alternative site with less harmful impacts) adequate mitigation, or as a last resort compensation, must be provided. • The NPPF and associated Planning Practice Guidance also emphasise the requirement for ecological networks and wildlife corridors to be created throughout the wider landscape (paragraph 179). The developer's Vision Document states that they are "aiming to deliver a 10% gain in Biodiversity net gain" with no detail on how this will be achieved. The plans will represent a significant loss of biodiversity over time due to the proximity of the site to Weston Big Wood. However, what is being proposed in plans for Tower Farm is building alongside the Weston Big Wood boundary, leaving only a small buffer. The developer proposals do not in any way			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								mitigate the damage to the ecosystem of the ancient woodland and the nature corridors that building 400 plus homes would do. We have sought expert opinion from the nationally acclaimed naturalist Chris Sperring MBE who concludes in relation to the developers report: “…..” The plans will represent a significant loss of biodiversity over time due to the proximity of the site to Weston Big Wood. No amount of mitigation or BNG credits are going to replace an ancient Woodland and SSSI and the ecosystem that it supports. The Woodland Trust and Avon Wildlife Trust state that ancient woodland is irrecoverable once damaged. Once it is gone it will be gone forever. Instead, consideration should be made for designating Tower Farm as a Biodiversity Net Gain site which would allow some of the ecological damage over the last 50 years to be repaired. 3.4 NSC’s Landscape sensitivity Assessment states “Land to the south-west of the town, is gently sloping and Valley Road forms a strong, vegetated edge. In some locations, there is a distinctive change in character from an urban to a rural landscape on either side of this road and the visual prominence of land beyond is generally high. In addition, the Nightingale Valley SSSI and Middle Hill Common LNR are located to the south of this road. Owing to the above, this land is of high sensitivity.” The fact that development here would undoubtedly damage this high sensitivity landscape should be taken on board, despite what the Green Belt Land Assessment may be saying. https://n-somerset.gov.uk/sites/default/files/2023-06/Landscape%20Sensitivity%20Assessment%20%28March%202018%29-acc.pdf - 3.5 This development would therefore not “contribute to and enhance the natural and local environment by: protecting and enhancing valued landscapes, sites of biodiversity or geological value and soils; recognising the intrinsic character and beauty of the countryside, and the wider benefits from natural capital and ecosystem services… and of trees and woodland; minimising impacts on and providing net gains for biodiversity, including by establishing coherent ecological networks that are more resilient to current and future pressures and incorporating features which support priority or threatened species such as swifts, bats and hedgehogs”, contrary to NPPF S187. 3.6 The Portishead Neighbourhood Plan Policy PEN4 states: “Development proposals will be expected to minimise impacts on and provide net gains for biodiversity, including the enhancement and creation of ecological networks within and, where relevant, connecting with those beyond the Plan Area (see Figure 4). Proposals that exceed 10% biodiversity net gain will be particularly supported. Protection, connection and enhancement of statutory and non-statutory nature conservation sites (as shown on Figure 4) is a priority for the Neighbourhood Area and development proposals must demonstrate sensitive responses to these sites where necessary, such as accommodating a buffer zone to protect sensitive habitats, or demonstrating that opportunities to reduce indirect impacts, such as light pollution, have been taken” The Tower Farm proposal does not provide net gains for biodiversity. As proven earlier in section 1.5.1, development would irrevocably damage valuable habitats over time, fragment the Gordano Valley ecological network and undermine nature recovery ambitions. No mitigation or buffer can render the site suitable. The Tower Farm proposal is not compliant with Portishead Neighbourhood Plan Policy PEN4. 3.7 NPPF S192 1. To protect and enhance biodiversity and geodiversity, plans should: a) Identify, map and safeguard components of local wildlife-rich habitats and wider ecological networks, including the hierarchy of international, national and locally designated sites of importance for biodiversity; wildlife corridors and stepping stones that connect them; and areas identified by national and local partnerships for habitat management, enhancement, restoration or creation; and b) promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity. 3.8 Tower Farm plays a crucial role in providing a wildlife corridor linking Weston Big Wood, the Gordano Valley, Walton Common and other habitats. The Tower Farm proposal does not provide net gains for biodiversity and would irrevocably damage valuable habitats over time, fragment the Gordano Valley ecological network and undermine nature recovery ambitions. The approach of relying on offsite mitigation and a “suitable ecological buffer” illustrates a reactive rather than preventative approach to biodiversity production. The Tower Farm proposal fails to promote the conservation, restoration and enhancement of priority habitats, ecological networks and protection of priority species. In fact, it actively works against the provisions of NPPF S192. It also conflicts with the Avon Wildlife Trust ‘s 2030 Strategy, which emphasises restoration of 30 per cent of land for nature and enhancing landscape connectivity on the Gordano Valley. 3.9 The developer’s vision Document supporting material claims that the development will enhance nature corridors – building 400 plus houses is not going to do this. 3.10 This proposal therefore does not safeguard components of local wildlife-rich habitats and wider ecological networks, including the hierarchy of international, national and locally designated sites of importance for biodiversity; wildlife corridors and stepping stones that connect them; and areas identified by national and local partnerships for habitat management, enhancement, restoration or creation; and promote the conservation, restoration and enhancement of priority habitats, ecological networks and the protection and recovery of priority species; and identify and pursue opportunities for securing measurable net gains for biodiversity”, contrary to NPPF S192. 3.11 NPPF S193 When determining planning applications, local planning authorities should apply the following principles:			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								a) if significant harm to biodiversity resulting from a development cannot be avoided (through locating on an alternative site with less harmful impacts), adequately mitigated, or, as a last resort, compensated for, then planning permission should be refused; b) development on land within or outside a Site of Special Scientific Interest, and which is likely to have an adverse effect on it (either individually or in combination with other developments), should not normally be permitted. The only exception is where the benefits of the development in the location proposed clearly outweigh both its likely impact on the features of the site that make it of special scientific interest an any broader impacts on the national network of Sites of Special Scientific Interest; c) development resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland and ancient or veteran trees) should be refused, unless there are wholly exceptional reasons and a suitable compensation strategy exists; 3.12 The Schedule of Proposed Allocations mentions a “significant buffer” between development at Tower Farm and Weston Big Wood SSSI, but however large this is (and that isn’t stated, although the developer’s Vision document mentions 50 metres), the fields around it are part of its ecosystem, and any development on them will do “significant harm to biodiversity” as referred to in a). Noise and light pollution will be unavoidable, even with some sort of buffer, and a new population of cats will have a significant impact on small birds and mammals within the food chain. Habitat fragmentation needs to be avoided. 3.13 The developer’s plans include some attempts to mitigate the environmental damage that the development would cause, on the parcel of land referred to on the Schedule of Proposed Allocations as “to the south west of the residential allocation”. However, this land is currently fields and some trees, so the proposal can hardly be seen to have a much mitigative effect. 3.14 Regarding b), the “benefits of the development in the location” do not “clearly outweigh both its likely impact on the features of the site that make it of special scientific interest” as it is not in a sustainable location, as noted above. 3.15 In respect of c), a recent report has found that British ancient woodland is struggling to regenerate and is under threat. We should therefore not be allowing any development that threatens the health of Weston Big Wood, which this proposal does, and it “should be refused”. There are also not “wholly exceptional reasons” not to refuse development here. 3.16 In addition to Weston Big Wood, Tower Farm is also in close proximity to Nightingale Valley SSSI. In all likelihood the location shares the geological features that Nightingale Valley’s citation protects, and perhaps should be protected itself for the same reasons. The map below shows the proposed development (in red) and all nearby SSSIs (Weston Big Wood, Nightingale Valley, Weston in Gordano, Gordano Valley, Walton Common and Court Hill), demonstrating how they act to protect a vital nature corridor, of which Tower Farm is currently a part. 3.17 The 2018 NSC Landscape Character Assessment noted that “Visual impact of unsympathetic urban edges of Portishead and Clevedon and urban fringe influences within the immediately adjacent landscapes” as a threat to the Portishead Ridges and Combes, an area that includes the Tower Farm site. It also stated that “The landscape strategy for Portishead Ridges and Combes is to conserve the elements of strong character, the woodland, open grassland and pasture, the ancient hilltop sites and stone built settlement while enhancing area of declining condition and weaker character such as the urban edges and the gappy hedgerows”. It provided Landscape Guidelines including “Conserve the peaceful and secluded nature of the wooded landscape” and “Minimise the impact of the urban edge and the encroachment of visually intrusive land uses…”. This both emphasises the value of the site but also goes against the Green Belt Assessment that suggests that the value of this Green Belt land is minimal. 3.18 Avon Wildlife Trust, which owns and manages Weston Big Wood and therefore is extremely knowledgeable about the site, commented in response to the previous NSC Local Plan consultation: “Avon Wildlife Trust objects to any proposals for developments at, or near, Weston Big Wood SSSI.The ancient woodlands at Weston Big Wood have developed over centuries and are now amongst the most fragile and rare of all landscapes in the country. Once damaged they cannot be restored.” 3.19 The NPPF does now allow removal of Green Belt status but the land around Weston Big Wood is the very worst location in North Somerset to consider for this for the reasons stated above. 3.20 There would be “significant harm to biodiversity resulting from a development that cannot be avoided (through locating on an alternative site with less harmful impacts), adequately mitigated, or, as a last resort, compensated for”, and “development on land… outside a Site of Special Scientific Interest… which is likely to have an adverse effect on it… should not normally be permitted”. “[D]evelopment resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland and ancient or veteran trees) should be refused” as there are not “wholly exceptional reasons”. To grant planning permission at this location would therefore be contrary to NPPF S193. 4 NPPF S110 … Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health… 4.1 Tower Farm is not and cannot be made a sustainable location. Residents would not be able to walk or cycle comfortably to and from the amenities at the centre of town/ High Street due to the distance involved and the topography, Tower Farm being at the top of a long, steep hill. Many would not be able to walk or cycle there all. These are		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								the distances and the climb required to reach Tower Farm from various locations in the town: Miles Climb (ft) Folk Hall Town Council 1.2 335, Post Office 1.3 335, Somerset Hall 1.3 335, Aldi 1.3 338, Library 1.4 328, Lake Grounds (Wheels & Skate Park) 1.4 335, Gordano Secondary School 1.4 335, Nearest GP practice: Portishead Medical, Group 1.4 338, Sainsburys 1.6 351, Lidl 1.6 331, Parish Wharf Leisure Centre 1.6 331, Waitrose, Portishead Football Club 1.7 344, Portishead Station (when built) 1.9 338 (According to Google Maps. Measured from the end of Tower Road closest to Tower Farm (much of the development would be further than this).) 4.2 There is very little in terms of shops/bars/restaurants/services/ employment within walking distance of Tower Farm. Buses will not be able to drive down there, so there will just be the X4 and occasionally the X10 that can be caught from Down Road – a fair, hilly walk from a lot of the houses if they were built (and longer than the 3 minutes the Developer's Plans claim). As a result, almost everyone living there will drive everywhere, increasing congestion and emissions, and worsening air quality and public health. Regarding the X4 bus stops at High Down schools and Bruton Avenue – buses only travel through these in on direction, meaning a very indirect route to the High Street taking 17 minutes (as opposed to 3 minutes by car) 4.3 The developer's Response to the consultation / Vision document states "the Site is also well located in terms of proximity to key destinations within Portishead. Active travel would be easily achieved on-site, due to its location it is well placed to extend the existing cycling and footpath facilities. The walking accessibility of the Site is deemed good, with local facilities and employment areas available within reasonable walking distance". This is however incorrect, for the reasons outlined above. It also states "A local centre is located within 1km of the Site at Down Road and West Hill", but this "local centre" is in fact a tertiary retail area limited in size and the range of businesses available there. 4.4 The developer's Transport Sustainability and Access Strategy is also misleading, with the walking times included in the Local Facilities Within Walking Distance section being grossly underestimated and ignoring the topography of Portishead. 4.5 The Transport Sustainability and Access Strategy is also misleading, in that it fails to mention that there is already considerable congestion in the vicinity at school drop-off/collection times, and that any increase in traffic due to the new development will exacerbate this severely. It also ignores the fact that there will be extra traffic movements should High Down School be expanded or a new school built on the site. Some pupils would be from the Tower Farm development, but with potentially 785 new homes at Wyndham Way and 100 at Blackrock and the only new capacity being proposed at High Down, many parents will be driving their children to school there from elsewhere in the town. Portishead Town Council regularly receive requests from residents for schemes to improve traffic safety and flow in this area (see Agenda item 8.2.2, Planning and Placemaking Cttee, August 2025 https://www.portishead.gov.uk/council◈meetings?month=08&year=2025&submit=Go#item-2005053) 4.6 The developer's document also says "The provision of a rail station connecting Portishead and Bristol within cycling distance of the site will be extremely beneficial for future residents to commute to work, reducing car trips". It will not however be within cycling distance of the site for many residents, particularly older residents, those with young children and those with mobility issues. Their suggestion that residents should purchase e-bikes does not address this. 4.7 The reopening of the station in Portishead will do little in terms of "offering a genuine choice of transport modes" for the Tower Farm area. As noted above, it will be nearly two miles away, so residents would have to either drive or catch the X4 bus and change / pay a second fare to catch the train into Bristol. 4.8 Just because Tower Farm is within the boundaries of Portishead does not mean that it is sustainable as a development site. Other locations in the town would be much more sustainable and better placed to take advantage of public transport, both new and existing, such as Old Mill Road/Wyndham Way. 4.9 This is therefore not "Significant development… focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes", contrary to NPPF S110. 5 NPPF S115 In assessing sites that may be allocated for development in plans, or specific applications for development, it should be ensured that: a) sustainable transport modes are prioritised…; b) safe and suitable access to the site can be achieved for all users; and c) any significant impacts from the development on the transport network (in terms of capacity and congestion), or on highway safety, can be cost effectively mitigated to an acceptable degree through a vision-led approach. 5.1 In respect of a), the points made regarding S110 apply again. 5.2 Regarding b), access to a development at Tower Farm is proposed via The Downs. This is a cul◈de-sac with further cul-de-sacs leading off it. It is also right next to High Down School, the whole area around which is already extremely congested and chaotic at drop-off/pick-up times despite numerous campaigns to reduce car use. The map below shows the typical extent of parking at these times (marked in red). 5.3 Congestion will become even worse, both when construction traffic is using The Downs to access the site and once 400 homes are built and the residents start using their cars to drive to and from work/shops etc. Based on the average in the South West of 1.37 cars per household that would be an extra 548 cars, and a great many

Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								additional vehicle movements. It will become extremely dangerous for the primary school children to cross the roads to get to school, as it will for the many toddlers and children in pushchairs accompanying them and their parents. It would be an accident waiting to happen. Therefore, safe and suitable access to the site cannot be achieved. 5.4 In relation to c), Tower Road, The Downs and Down Road all regularly become gridlocked at times already. Increased traffic, both during construction and afterwards, will make this significantly worse. There will also be increased traffic elsewhere in and around the town, for example Avon Way, Combe Road, High Street, Cabstand, and the Gordano roundabout as a result of people having to drive to and from Tower Farm, for example for work. The Local Plan Transport Assessment document claims that there would be an improvement to the current levels of congestion, even with development, if mitigation is put in place, but it is unclear what mitigation, other than the railway, is proposed. Also, the document uses a figure of 485 homes at Wyndham in one section and 785 in another, so its accuracy should be called into question. The impacts on the transport network cannot be mitigated, and a more sustainable site for development should be found. 5.5 The developer's Transport Sustainability and Access Strategy states "The proposed development of at least 400 dwellings will not result in a severe residual impact on the operation of the Down Road / The Downs". This is incorrect for the reasons stated above. 5.6 There are no provisions in the latest version of the Plan to improve transport around Down Road, The Downs, The Deans and Tower Road. "Active travel connections to The Downs, St Mary's Road/Wetlands Lane" are mentioned but will achieve nothing – they don't help anyone get to anywhere other than potentially Gordano School. Any enhancement of the existing footpaths would also require the further destruction of green space and involve work on land owned by others. 5.7 Creating an additional school or extending High Down School, also mentioned as a possibility in the Plan, will make traffic even worse. Expanding school places at the top end of Portishead when most of the children needing places will be at the bottom (i.e. 785 homes at Wyndham Way) is rehashing exactly the same arguments as the last time this was proposed, when NSC accepted that it was not a viable idea. Car journeys would rise exponentially, creating traffic jams all over the town. We would not see the impact "cost effectively mitigated to an acceptable degree" – this is actually making things worse. 5.8 "Contribution to bus service required" is also mentioned in the Plan, but what can that achieve? The junction between Down Road and The Downs is not big enough to accommodate buses, and once 400 homes have been squeezed into this location, a new school and kept a buffer between the development and Weston Big Wood the roads are going to be far too narrow for buses to navigate them. 5.9 The Developer's Vision document uses the reopening of the railway as an example of sustainable public transport, but this has been used as a justification for building houses in Portishead for decades. The Vale, the Village Quarter, all the flats around the Marina, Harbour Crescent, Marina Gardens represent thousands of new homes that were all built on the basis that the people living there would be able to catch a train to wherever they wanted to go to. Residents would also need to travel to the station from Tower Farm, which cannot be done comfortably by walking or cycling. There is a mention of the possibility of a shuttle bus service, but this is vague, is likely not to materialise or if it did is likely to be provided only for a minimum period. 5.10 Other developers share the view that Tower Farm is not a suitable location for development due to the impact it would have on the local travel network. Persimmon Homes Severn Valley commented in response to the previous NSC consultation: "Transport & Accessibility: By virtue of its location, the site would lead to significant vehicular traffic flows through the centre of Portishead then to rise up to the site. Such vehicle movements are unnecessary and inconvenient. Development that is proximate to the main road off the strategic road network and the planned train station is more sustainable. Land at Tower Farm should therefore be reconsidered in terms of its suitability for development." 5.11 It can therefore not be said that "sustainable transport modes are prioritised… safe and suitable access to the site can be achieved for all users … and any significant impacts from the development on the transport network (in terms of capacity and congestion), or on highway safety, can be cost effectively mitigated to an acceptable degree through a vision◇led approach", contrary to NPPF S115. 6 NPPF S110-112 6.1 The developer's own technical evidence (Vision Document and Transport Sustainability & Access Strategy) confirms several access constraints that cannot be overcome without significant adverse impact on the local highway network. Inadequate Access Strategy — Single Access Point The developer proposes one main vehicular access via The Downs and a second access limited to emergency, pedestrian and cycle use only via Tower Road (typically bollarded). This means the entire development of at least 400–500 homes would rely on a single functioning access point. The single access point proposed is contrary to best practice, introduces unnecessary risk for emergency response resilience, and does not provide "safe and suitable access for all users" as required by NPPF 110–112. The only alternative access routes are also not suitable: 1 - Via Tower Road - This has a narrower junction with Down Road than The Downs does. It could not have double-yellow lines added, as is proposed for The Downs, as there are houses on both sides all the way along. 2 - Via Valley Road - Valley Road already experiences road traffic accidents on a fairly

62846273	Steve & Hazel Barlow							Please can we add our names to the list of those local residents and others who are concerned about the proposed development plans for Portishead Down and Weston Big Wood. We would echo the concerns about the ecological impact, and believe that alternative brownfield sites should be sought, and/or proposals to increase housing density on brownfield sites be considered. We are concerned that Green Belt should not be developed unless exceptional circumstances require it. Access safety and suitability will clearly be major issues, and resulting transport impacts would be significant.

								We would ask that Tower Farm and Black Rock be removed from the Local Plan.			
30425057	Carole Barnes			No	• Positively prepared • Justified • Effective	No	No	Tower Farm was declared Green Belt in 1988 and the same reasons for it being declared Green Belt, then, still stand. Obviously, Brown Belt sites should be used instead, Old Mill Road being the most practical; it is on flat ground and appropriate for all age groups and close to all the scant amenities Portishead has to offer, shops, health centres, dentists, train station (in due course) etc. People now prefer to live in the town, itself, and not at the top of the hill. It has been suggested that people, in the proposed new builds, will be able to scooter or cycle down to the station - this will not happen! Portishead does not have the infrastructure: schools, medical centres, bus routes, roads to take in anymore people and cars. Then, there is the beautiful Weston Big Wood, which houses deer, badger, birds of prey and many other creatures. Buildings in the Tower Farm fields will destroy their habitats and take away a very precious place for the people of Portishead. PLEASE DO NOT ALLOW THESE FIELDS TO BE BUILT UPON. I do not believe Tower Farm fields should be built upon under any circumstances.			
58590753	M Beavis			No	• Positively prepared • Justified • Effective • Consistent with national policy	No		Regarding provisional site HE2068 Land at Tower Farm The developer's website has a "Vision" for Tower Farm fields which North Somerset Council (NSC) has evidently endorsed by inclusion in their latest version of the Local Plan. Planning officers and Councillors at NSC have failed in their statutary responsibilities to adequately consider the legal compliance and soundness of that Plan, as thoroughly demonstrated by the well argued objections from Portishead Town Council (PTC). NSC are clearly dancing to the developer's tune. This is not a "nimby" response and does not address concerns that might be common to other areas under consideration. It argues that the fields around Weston Big Wood have a unique claim for protection from any development, such that they should be excluded from the areas identified for potential development in the final version of the Local Plan. Tower Farm fields are within the designated Green Belt, for which national planning policy allows changes only in exceptional circumstances. It is pertinent to note that the currently designated Green Belt land was refused planning consent by t2 NPPF 19PFhe Secretary of State in the late 1980s following a Planning Inspectorate decision to actually extend a previous Green Belt border around the wood on environmental grounds. At that time ownership and conservation of Weston Big Wood were transferred to Avon Wildlife Trust (AWT) who have now presented robust objections to the adverse environmental aspects of the present plan, advising that protections are even more relevant today than in the 1980s. PTC has presented very detailed objections describing the present Plan fails the requirements of NPPF 187, NPPF 192 and NPPF 193(a-c). PTC concludes that it is impossible to mitigate the loss of an ancient woodland. Once it is gone it is gone. Specifically, NSC has not properly explored the available capacities of alternative brownfield sites and other greenfield sites within North Somerset, as evidenced by PTC. Just two such examples are a higher density at Wyndam Way/Old Mill Road/ vacant land in Portishead and at Castlewood which NSC owns in Clevedon. PTC has identified over 20 brownfield sites where the proposed density could be increased, and has identified previously removed Land South of Clevedon Road (HE20488) with a capacity of 250-500 dwellings that should be reinstated. That neglect by NSC, coupled with the exceptional ecological and strategic importance of Weston Big Wood, certainly fails to demonstrate any exceptional circumstance for removing Tower Farm from the present Green Belt. In this and other respects, NSC fails the test set out in NPPF S147 which requires exhausting all reasonable non Green Belt options before altering Green Belt boundaries, such that Tower Farm should be removed from the Local Plan. Our other main objection is that the Plan is not Sound because Tower Farm is not a sustainable location for residential development, for all the reasons presented by PTC, with which we agree. We note that the developer's "vision" extols the virtues of a rental e-bike rank to facilitate travel to the rail station and other parts of the town, which realistically is never going to happen, but says nothing about any adequate provision for car/van parking within their proposed development - no mention of how many car spaces per dwelling, nor on-street parking, nor EV charging points. And no assurance that they will avoid thae absurdity of 1.5 cars per house that continues to plagus the Marina development. From Martin and Linda Beavis Provisional site HE2068 Land at Tower Farm should be removed from the Local Plan.			
62718721	Samantha bell			No	• Justified	No	No	1- Alternative brown field or green field site with far lower ecological impact both in Portishead and across north somerset. 2- Opportunity's to increase housing density on proposed brown field site which could remove the need to develop tower farm and black rock 3- The strategic ecological importance of these sites in protecting Weston big wood and the Gordano valley green corridor 4- The fact that both areas were added to the green belt in the late 1980's due to the high ecological value 5- National planning policy allows green belt changes only in exceptional circumstances, and these have not been demonstrated. In addition - neither sights can provide safe, legal or suitable access Development would create unacceptable transport impacts, failing national soundness	NO	ABSOLUTELY NOT	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								tests FOR ALL THESE REASONS TOWER FARM AND BLACK ROCK SHOULD BE REMOVED FROM THE LOCAL PLAN			
62865761	Gayle Bennett			No	• Justified	Unsure	Unsure	This plan is not justified as it will adversely affect Ancient Woodland and its ecosystem/ inhabits . The extra volume of traffic from both sites will have to go through North Weston Village causing congestion and chaos. This route of traffic will cause significant risk to the public accessing Gordano School and St Joseph's School. There is also not enough school places and doctors as it stands, so to increase any more housing in these two areas will be detrimental to Portishead's current population.			E370E743-EB48-409B-9E9F-575BCA9593BC.jpeg IMG_4672.jpeg IMG_2011.jpeg 65654616-D6FF-46A6-AE1F-C9041C8BC41B.jpeg
58528865	Joe Boardman							I am a Portishead resident and have lived here all my life. I would like to comment on the Local Plan 2041 proposals, specifically the Tower Farm and Black Rock development plans. I disagree with these plans and believe them to be ill thought through. Several good points in this vein are: NSC has not properly considered: Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset. Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm and Black Rock. The strategic ecological importance of these sites in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. The fact that both areas were added to the Green Belt in the late 1980s due to their high ecological value. National planning policy allows Green Belt changes only in exceptional circumstances — and these have not been demonstrated. In addition: Neither site can provide safe or suitable access. Development would create unacceptable transport impacts, failing national soundness tests. I found these on the Portishead Town Council website and wholeheartedly agree. Furthermore, my childhood home is on The Downs, which is very close to the proposed developments at Tower Farm. It's an absolute nightmare already with High Down school traffic which I believe these plans will only make worse. You're taking away from a beautiful green belt area that is loved by many in (and outside) of Portishead. I think it would be a great shame if this went ahead. I hope you decide to take into consideration people's views who live nearby and love this green space.			
62770401	Alan & Jacky Bond							We object to this plan. Accessibility is very limited and therefore too dangerous due to the congestion that the traffic would cause. It is green belt land and far too close to Weston Bigwood and the wildlife that occupies it.			
62862337	Natasha Bowey		N/A	No	• Justified • Effective	No	Unsure	I believe the North Somerset Local Plan 2041: Pre-submission plan (for houses to be built in Tower Farm and Black Rock) for the following reasons: I believe the NSC has not properly considered: Alternative brownfield or greenfield sites with far lower ecological impact, both in Portishead and across North Somerset Opportunities to increase housing density on proposed brownfield sites, which could remove the need to develop Tower Farm and Black Rock The strategic ecological importance of these sites in protecting Weston Big Wood (SSSI) and the Gordano Valley green corridor. The fact that both areas were added to the Green Belt in the late 1980s due to their high ecological value National planning policy allows Green Belt changes only in exceptional circumstances – and these have not been demonstrated. In addition: Neither site can provide safe or suitable access Development would create unacceptable transport impacts, failing national soundness tests. In relation to the transport – before you mention the plans for Portishead to have a railway, you should bear in mind that when I moved to Portishead 22 years ago we were promised a railway at that time, 22 years on and we are still waiting, so I will believe we will get the railway when the train is on its platform. Whoever planned on putting this housing scheme in place obviously haven't been to Portishead during the mornings, lunchtimes and early evenings when the traffic often comes to gridlock – this is especially bad anywhere near the schools.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								For the above reasons, Tower Farm and Black Rock should be removed from the Local Plan. I do not think any modifications would make it legally compliant or sound. I believe the only way to make it legally compliant and sound in respect to the issues I have raised is for Tower Farm and Black Rock to be removed from the Local Plan totally.			
57956257	J Bradley			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	1. Ecological Harm and Failure to Demonstrate Mitigation The site plays an essential role in maintaining the ecological integrity of Weston Big Wood (SSSI) and the wider Gordano Valley ecological corridor. It supports local biodiversity, provides critical habitat connectivity, and contributes significantly to North Somerset's landscape character. The Local Plan does not demonstrate that these ecological constraints can be effectively mitigated. Weston Big Wood is ancient and irreplaceable, such habitats cannot be recreated or compensated for through development. Any development in this location would result in unavoidable and unacceptable ecological harm. 2. Green Belt Designation and Lack of Exceptional Circumstances Tower Farm were added to the Green Belt in the late 1980s due to the landscape, ecological and strategic importance. National planning policy requires that changes to Green Belt boundaries occur only in exceptional circumstances and must be supported by clear evidence. No such circumstances have been demonstrated. Housing need alone does not justify releasing Green Belt land, particularly where alternative, less constrained sites exist. This location does not meet any credible definition of “grey belt”. It sits immediately next to two SSSIs which are the highest level of nature conservation designation in England reinforcing its strategic importance and the inappropriateness of allocating it for development. 3. Unsuitable, Unsafe and Undeliverable Access The sites cannot provide safe or suitable access, as required by the National Planning Policy Framework (NPPF). The steep topography, constrained local road network and existing junction limitations create significant safety issues. These cannot be resolved through normal mitigation measures. Channelling traffic from hundreds of new homes past a primary school and through an already constrained T-Junction would result in additional congestion and heightened safety risks for pedestrians, cyclists and children. 4. Severe Transport Impacts and Unsound Transport Evidence Development in this location would generate substantial additional traffic on already constrained routes, including the Portbury Hundred and the narrow local road network, particularly at the Avon Way junction and the High Street mini-roundabout. The transport evidence submitted by the developers is incomplete and does not account for existing peak time congestion, including significant volumes of school traffic. The impacts are foreseeable, severe and cannot be mitigated to acceptable levels. As a result, the proposed allocation fails the NPPF tests of soundness, especially in relation to justification, effectiveness and deliverability. Due to the lack of exceptional circumstances for Green Belt release, the significant and unavoidable ecological harm, unresolved access constraints and severe transport impacts, the allocation of Tower Farm is unsound and should be removed from the Local Plan.	1. Remove Tower Farm from the proposed allocations This site should be deleted from the Local Plan because their allocation is not justified, not effective, not deliverable, and is inconsistent with national policy relating to Green Belt protection, ancient and irreplaceable habitats, and safe access requirements. Their removal is required for the Plan to meet the NPPF soundness tests. 2. Reassess the spatial strategy to ensure compliance with Green Belt legislation and national policy The Plan must demonstrate genuine exceptional circumstances for any Green Belt release. No such evidence has been provided for Tower Farm. The Green Belt appraisal and site selection process should be revised to ensure transparent, evidence-led assessment that complies with national policy and case law. The current assessments fail to address the impacts on Weston Big Wood SSSI, adjacent SSSIs, and the Gordano Valley ecological corridor. The Plan must include detailed, site-specific ecological evidence demonstrating how harm to irreplaceable ancient woodland habitats would be avoided, not just slightly mitigated. If this cannot be demonstrated, these sites cannot be allocated. 3. Update the transport evidence base to address inaccuracies and omissions The submitted transport assessments exclude key data, including actual school-peak traffic conditions and local junction constraints. A revised, comprehensive transport assessment is required. It must demonstrate that safe and suitable access can be achieved for all users and that severe residual cumulative impacts will not occur. If such evidence cannot be produced, the sites must not be included in the Plan. Re-evaluate deliverability in line with national planning policy Access constraints, topography, ecological protections and infrastructure limitations raise serious questions about deliverability. The Plan must ensure that all allocated sites can realistically be delivered within the Plan period. Sites that cannot meet access, ecology, or infrastructure requirements should be removed. 4. Strengthen the Plan’s methodology for the selection and rejection of sites The current approach lacks transparency and does not adequately evidence why environmentally constrained Green Belt sites have been preferred over less sensitive or more sustainable alternatives. The site selection methodology should be revised to ensure it is clear, consistent, and aligned with the tests of justification and effectiveness.		
62798337	Mr and Mrs Britton			No		No		The proposals for the Tower Farm site are neither legally compliant nor sound. North Somerset local plan is in breach of 7 sections of the NPPF, namely S110, S115, S14, S156, S187, S192 and S193. In the 1980's, with the agreement of all parties, this land was designated as "Green Belt", in part to protect the ecology of Weston Big Wood, its fauna and flora. A significant centre of the wood is a designated SSSI. The proposed "buffer zone" would be ineffectual in protecting this area. Indeed, even in the construction period, as in any development, irreparable damage is wrought. It is vital to protect the unique environment of Weston Big Wood and the Gordano Valley Strategic Green Corridor. We feel that North Somerset have not given sufficient consideration to the above points, which makes their proposals unsound and not legally compliant. In addition, we feel that the proposed single access to The Downs and The Deans

Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								where there are approximately 200 dwellings, plus the new estate of approximately 400+ houses, is totally inadequate. The proposal would result in severe traffic problems at peak periods and could be inaccessible to emergency vehicles. This fails soundness tests set out in National Planning Policy. Consequently we believe the proposals are unsound and not legally compliant and should therefore be removed from the local plan.			
62854753	Martin Brown			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Re: Housing north of Weston Big Wood (Tower Road). The plan is flawed on many fronts. The immediate area on and off Down Rd is already saturated with housing with roads constantly being snarled with traffic moving to and from the town's high street and or exit away via A369. The construction vehicles alone will heighten the risk of incident and accident involving the children and parents of High Down Schools which has for many years been a concern with the volume of traffic. The unique beauty of the historic Weston Big Wood will be considerably compromised, if not, completely ruined and lost. I urge the planning of this proposal to be rejected.			
62815169	A Cains			No	• Justified	No	Unsure	I object to the proposed development for the following reasons. Lack of assessment of reasonable alternatives. The Council has not demonstrated that reasonable alternative sites with significantly lower ecological impact have been properly assessed. Nearby brownfield and less environmentally sensitive greenfield sites exist and could accommodate development with substantially reduced harm. In the absence of a transparent and proportionate assessment of alternatives, the case for developing this site is not justified. Strategic ecological importance of the site The land forms part of a wider ecologically important area that contributes to the protection and functioning of Weston Big Wood. It provides a buffer and habitat connectivity which would be materially eroded by development, resulting in ecological harm that has not been adequately addressed or mitigated. Green Belt harm and policy conflict The site lies within the Green Belt and the proposal constitutes inappropriate development by definition, causing harm to its openness and ecological value. This directly conflicts with established Green Belt policy and objectives. No exceptional circumstances have been demonstrated. National planning policy is clear that development in the Green Belt, or alterations to its boundaries, should only occur in exceptional circumstances. No site-specific or compelling exceptional circumstances have been demonstrated that would clearly outweigh the harm to the Green Belt and associated ecological assets. The proposal is contrary to national and local planning policy, fails to justify the loss of Green Belt land, and should be refused.	Evidence exploration of other more suitable sites with less ecological impact.		
38760929	HC Campbell			No	• Positively prepared • Effective • Consistent with national policy	Unsure	Unsure	Weston big wood is a site of special scientific interest and must be protected. This means protecting the surrounding areas from development too as the wildlife spills out into these natural spaces. The surrounding space is also identified as green belt and should not even be considered for development. Furthermore the small narrow roads could not possibly absorb the traffic which would inevitably come with a large number of new houses and would cause severe congestion and significant danger to school children attending high down school. The road entering the downs is already gridlocked at school drop off, rush our and pick up times and a significant increase in traffic would only result in local residents being trapped in the cul de sac of The Downs.			
38730817	Al Campbell			No	• Positively prepared • Justified • Consistent with national policy	No	Unsure	The propsed site at tower farm on green belt added to the plan does not make any sense. There are brownfield sites that could offer the houses needed The idea that you would use a greenbelt site adjacent to a SSSI site which would significantly impact the location when other sites are available is disgraceful. The sotes surrounding weston big wood at Tower Farm was specifically added to greenbelt status due to its ecological importance. The idea that you would be using down road to get to the proposed sight is absolutely laughable. It is already too busy and impassable at times due to school traffic. The fact that you would be needing to bring thousands of tons of building material through Portishead to get to the sight is again a crazy notion. The roads are already too busy and it was also noted by one of the other major builders I believe Permisson who also identifed this as a significant floor in this proposal. Parkers of Leicester who did the proposal for the sight have significantly mislead North Somerset council in their proposal. They have done traffic surveys down the toad from the sight to make sure the school traffic and the down road traffic wasn't considered, they have suggested that people could cycle to transport but there is a massive hill they didn't note on there. I would also note that the wildlife agencies also believe this to be a bad idea and believe it would have a significantly negative impact on the environment and wildlife. Overall its a poorly considered site and proposal that should not be in the plan. Make use of brown field sites and site within range of the local transport. There are site next to the motorway that wont need to have the materials moved through a busy town away from transport.

								There are plenty of sights that wont impact the greenbelt and specifically sites next to SSSI sites.			
62906945	Dave Carroll							Formal Objection to North Somerset Council Draft Local Plan Development Proposals for Portishead Down, Weston Big Wood, Tower Farm, and Black Rock EXECUTIVE SUMMARY I am writing to formally object to the proposed development of Portishead Down, Weston Big Wood, Tower Farm, and Black Rock as outlined in North Somerset Council's draft Local Plan [10]. These proposals represent a significant threat to protected green spaces, biodiversity, and community wellbeing. While I note that the Council is now consulting on the soundness and legality of the plan [10], I have serious concerns about whether the consultation is comprehensive, adequate, and properly addresses all the critical issues raised in this objection. This objection addresses: 1. Legal and process failures 2. Environmental protection concerns (SSSI, ancient woodland, biodiversity) 3. Discriminatory targeting of Portishead for green space sacrifice 4. Per-capita impact on existing residents 5. Transparency and accountability issues 6. Infrastructure capacity concerns 7. Climate change and carbon impact 8. All questions requiring Council response PART 1: LEGAL ARGUMENTS AND PROCESS CONCERNS 1.1 Consultation on Soundness and Legality Current Status: The Council is now consulting on the soundness and legality of the plan [10]. While this is welcome, I have serious concerns about whether the consultation is comprehensive and adequately addresses all soundness tests. Legal Requirements: • Under the Planning and Compulsory Purchase Act 2004 [1], Local Plans must be "sound" and comply with legal requirements • The National Planning Policy Framework (NPPF) [2] requires Local Plans to be: o Positively prepared - providing a strategy which meets objectively assessed development needs o Justified - based on proportionate evidence o Effective - deliverable over the plan period o Consistent with national policy - enabling the sustainable use of land Concerns About Consultation: • Is the consultation comprehensive enough to properly assess soundness? • Are all soundness tests being explicitly addressed? • Is sufficient information provided to enable proper assessment? • Are all stakeholders being adequately engaged? • Is the consultation period sufficient? Questions: • How is the Council ensuring that all four soundness tests are properly assessed? • What evidence is being provided to demonstrate soundness? • How are responses to the soundness consultation being evaluated? • Will the Council publish its assessment of soundness before the plan proceeds to examination? 1.2 Environmental Protection Legislation Statutory Protections: • Wildlife and Countryside Act 1981 [3] - Protection of habitats and species • Countryside and Rights of Way Act 2000 [4] - Protection of Sites of Special Scientific Interest (SSSI) • Environment Act 2021 [5] - Biodiversity net gain requirements (10% minimum) • Climate Change Act 2008 [6] - Carbon reduction obligations 1.3 Green Belt and Protected Landscape Considerations • Green Belt land should only be developed in "very special circumstances" (NPPF paragraph 144) [2] • NPPF paragraph 102 [2] provides strong protection for Local Green Spaces • Development should only be permitted in "very special circumstances" 1.4 Public Sector Equality Duty • Under the Equality Act 2010 [19], public authorities have a Public Sector Equality Duty • This requires consideration of how decisions affect people with protected characteristics • Development decisions must not discriminate or have disproportionate impact PART 2: ENVIRONMENTAL CONCERNS - CRITICAL PROTECTIONS 2.1 Site of Special Scientific Interest (SSSI) and Ancient Woodland Protection Critical Environmental Status: • Weston Big Wood is designated as a Site of Special Scientific Interest (SSSI) [16] -			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								this is the highest level of statutory protection for wildlife sites in England • Ancient or Semi-Natural Woodland - These woodlands are irreplaceable habitats that have existed since at least 1600 AD [17] • Development adjacent to or affecting SSSIs requires exceptional justification under the Wildlife and Countryside Act 1981 [3] • The Countryside and Rights of Way Act 2000 [4] provides additional protection for SSSIs Expert Concerns: • Local wildlife expert Chris Sperring MBE has highlighted the ecological risks associated with these proposals [18] • Development threatens rare flora and fauna that depend on these protected habitats • Loss of habitat connectivity will fragment wildlife populations Legal Requirements: • Any development affecting SSSIs must demonstrate: o No reasonable alternative exists o Overriding public interest o Appropriate mitigation and compensation • Question: Has Natural England been properly consulted? What is their position? 2.2 Biodiversity Net Gain - Legally Binding Requirement Environment Act 2021 Requirements: • Mandatory 10% biodiversity net gain for all developments [5] • This must be measurable, deliverable, and maintained for at least 30 years • Loss of ancient woodland and SSSI habitat makes achieving net gain extremely difficult, if not impossible Critical Questions: • Can 10% net gain be achieved on-site given the loss of protected woodland? • If off-site compensation is proposed: o Where will this be located? o Is the compensation land of equivalent ecological value? o How will it be secured and maintained for 30 years? o Who will monitor and enforce this? 2.3 Climate Change Impact - Supreme Court Precedents Recent Legal Precedents (2024): • Horse Hill Oil Well Case (June 2024): UK Supreme Court ruled that planning authorities must consider the full environmental impact, including downstream greenhouse gas emissions, when approving projects [14]. This includes: o Emissions from construction o Emissions from use of developed land o Loss of carbon sequestration capacity o Long-term climate impacts • West Cumbria Coal Mine (September 2024): High Court ruled government approval unlawful due to inadequate consideration of environmental consequences [15] Application to This Development: • Loss of Carbon Sinks: Woodland acts as a vital carbon sink. Development would: o Remove existing carbon sequestration capacity o Release stored carbon from soil and vegetation o Eliminate future carbon capture potential • Embodied Carbon: Construction of new homes generates significant embodied carbon • Transport Emissions: Additional housing will increase car dependency and transport emissions • Urban Heat Island Effect: Loss of woodland increases local temperatures Legal Requirement: • The Council must conduct a comprehensive carbon impact assessment • This must include both direct and indirect emissions • Failure to do so could render the plan unlawful under recent Supreme Court precedents [14], [15] 2.4 Flood Risk - Critical Precedent Lynchmead Farm Case (North Somerset, 2024): • Planning Inspectorate upheld the Council's decision to refuse 75 houses due to flood risks [12] • This demonstrates that flood risk is a valid reason for refusal • Development increases impermeable surfaces, leading to: o Increased surface water runoff o Risk of flash flooding o Overwhelming of drainage systems o Impact on watercourses Question: What flood risk assessments have been conducted, and do they meet the standards that led to Lynchmead Farm refusal? 2.5 Air Quality and Public Health • Trees filter air pollution (particulate matter, nitrogen oxides, ozone) • Loss of woodland reduces natural air filtration • Increased traffic from development will worsen air quality • Poor air quality causes respiratory and cardiovascular disease • Children and elderly are particularly vulnerable PART 3: DISCRIMINATION AND EQUALITY - DISPROPORTIONATE TARGETING 3.1 The Key Discrimination - Double Burden		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Portishead is being asked to SACRIFICE PROTECTED GREEN SPACES (SSSI [16], ancient woodland [17]) to accommodate this growth [10] Weston-super-Mare is NOT being required to sacrifice equivalent protected green spaces [9] This is double discrimination: 1. Loss of green space amenity [10], [16], [17] - Protected green spaces destroyed 2. Increased competition for remaining amenities [7], [9] - significantly more people competing for same services Additional Critical Factors: • Portishead has higher average house prices than other areas in North Somerset [20] • Developers can achieve higher profit margins in Portishead [20] • Portishead is being singled out to sacrifice its most valuable protected green spaces [9], [10] • This suggests profit-driven targeting rather than equitable distribution [9], [20] • Portishead's smaller size (26,366 residents [7] vs ~85,000 in Weston-super-Mare [8]) means less capacity to absorb growth without significant impact Impact on Existing Residents: New residents will compete with existing Portishead residents for: • GP appointments (already under pressure) • School places (limited capacity) • Recreational facilities (will be reduced by loss of green spaces) • Road capacity (already congested) • Parking spaces Additional burden: Loss of green spaces means fewer recreational amenities available Infrastructure Capacity Per Capita: • Portishead's smaller size means infrastructure is less able to absorb growth • Smaller towns have less spare capacity in schools, healthcare, roads • Question: Has the Council assessed per-capita impact on existing residents' access to services? 3.2 Neighbourhood Plan Conflict Portishead Neighbourhood Plan: • Approved by referendum in July 2023 [11] • Represents the democratically expressed will of the community • Any development conflicting with the Neighbourhood Plan may be: o Unlawful o Discriminatory (ignoring community's expressed preferences) o Undemocratic Question: Do the proposed developments conflict with the Neighbourhood Plan? 3.3 Brownfield Development Programme Council's Own Strategy: • North Somerset Council has a brownfield development programme [13] • The Council has moved forward with delivering homes on brownfield sites • Question: Why is Portishead being asked to sacrifice green spaces when brownfield alternatives exist? Inequity: • If brownfield development is the Council's strategy [13], why is Portishead being treated differently [10]? • Are other areas being required to sacrifice green spaces, or only Portishead [9], [10]? • This suggests unequal treatment and potential discrimination [9], [10], [19] PART 4: TRANSPARENCY AND ACCOUNTABILITY 4.1 Unequal Access to Decision-Makers Critical Concern: • There is a lack of transparency regarding councillor meetings with different stakeholder groups • Question: Have councillors met more frequently with property developers than with local residents and environmental groups? • This raises concerns about: o Bias in decision-making - if developers have greater access to councillors o Unequal influence - if community voices are not heard equally o Accountability - if meetings are not properly recorded or declared o Conflicts of interest - if councillors have undeclared relationships with developers Evidence Required: • Records of councillor meetings with property developers • Records of councillor meetings with local residents and community groups • Records of councillor meetings with environmental organisations • Comparison of meeting frequency and access • Register of Interests - any undeclared relationships with developers Legal Implications: • Unequal access may breach principles of: o Fairness - all stakeholders should have equal opportunity to influence decisions o Transparency - public should know who influences decision-makers o Accountability - councillors should be accountable for their engagements o Public Sector Equality Duty [19] - decisions should not discriminate
