								and presents considerable challenges for adults travelling with small children. Greenfield Cresent playing field is not protected under Local Green Space Policy LP15. Land to the north of Nailsea is proposed to be removed from the green belt and will be replaced to the south. Positively, the new section of green belt to the south is a greater size than the area being removed and will replace the strategic gap. The proposed new road would not serve Nailsea's traffic or relieve congestion on Station Road, nor would it help traffic moving from Backwell to the M5.			
32521089	H Kenyon			No	• Justified • Effective	Unsure	Unsure	Lack of evidence and reasoning to justify why Pill Green and Land at Pill Road have been selected for development on Green Belt other than owned by a developer. Lack of information / research into infrastructure, eg GP surgery / schooling for these two sites. Lack of information / research into traffic management including: 1 The A 369 is already at capacity 2 The A369 now frequently is blocked at both ends with substantial queues - J19 to the M4 and at Cumberland Basin into Bristol 3 Traffic forecasts do not even take into account airport expansion and Bristol Clean Air Zone. Often non-compliant vehicles reroute to the A 369 to avoid charges. 4 Traffic noise is already unbearable in Abbots Leigh. The plan talks of the new rail network and station in Pill. Trains of 3 coaches are planned ONE per hour. This will not resolve traffic issues for an additional well over 1000 houses.	Further research needed on the issues mentioned above - site justification for Pill Green and Land at Pill Road sites. Justification needed why this Green Belt is to be allowed for development.		
58528577	Mrs Mary Theresa Kingston		Ms Mary Kingston	No	• Effective	Unsure			The allotments on Woodhill should be included as a Local Green Space. Although the settlement boundary to the north of Congresbury has been significantly extended, there are no allocated Local Green Spaces. Given the current mental health crisis and the disconnect between children and understanding of food and diet, it is vital that this area is preserved for local people to continue their ability to be connected with nature and food production		
58582945	Nailsea Action Group		Nailsea Action Group	No	• Positively prepared • Effective	Unsure	Unsure	A major focus for Nailsea Action Group is the retention of local green space for the use of residents of all ages. It is reassuring that some spaces have been recognized as green space (as listed under Schedule 3: Local Green Space). However, it would be beneficial to Nailsea if some sites were designated as 'Local Green Space' or 'Village Green' to provide more protection from predatory investors (most not local North Somerset residents) who buy up green space, long used by local residents as a recreational facility, and apply for building planning application. Nailsea Action Group is pleased that NSC recognises many areas as green space, but are particularly concerned that the areas below are as well protected as possible: • The Perrings open space • Netcott's Meadow, • The space north of Blakeney Close • All of Trendlewood Park including the land south of Bibery Close. It is noted that Morgans Hill is included as green space. However it does not seem to be correctly drawn on the policies map in that the area south of Nailsea Football ground (in the Grove) is designated both as building land and green space.	NSC has a bad reputation concerning local green space within the settlement boundaries of Nailsea. Nailsea Action Group notes that, historically, spaces such as the site south of the Uplands, long used as open green space, was willingly released for development. NSC should stick to their criteria for local green space and refuse planning permission for any inappropriate application.

18204257	Graham Scott			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The Areas of Local Green Space that the plan currently proposes to protect within Nailsea are grossly inadequate. Small green spaces form part of the fundamental character and green environment of Nailsea and are therefore an important part of why people enjoy and want to live there. Despite this they are becoming increasingly subject to speculative, highly unsuitable and repeated and protracted planning applications such as those that have been rejected for the small green space off Trendlewood Way opposite Avening Close, a remnant of the original open landscape of Nailsea and a designed green space. Despite being local amenity spaces freely used by residents in the decades since they were designed into the development of Nailsea, they are increasingly being inappropriately fenced off by developers who have purchased the land from the developers who designed them as green amenity spaces. Building on these small green spaces does not contribute in any significant or worthwhile way to the housing stock but does impact the quality of life and well-being of local residents, as well as damaging the local environment and ecology. The strength of support of local residents and the Town Council for these green spaces as evidenced through the responses to planning applications amply justifies the creation of more Areas of Local Green Space.	See above. The Plan should provide for the creation of far more Areas of Local Green Space within Nailsea, including but by no means limited to the green space off Trendlewood Road, opposite Avening Close.		
62943009	Homes England	Avison Young (Peter Stockall)	Homes England	No	• Effective	Unsure	Unsure	Policy LP15 is generally accepted. However, the wording of the policy is very restrictive or is tightly defined. Policy LP15 states that "Planning permission will not be granted except in very special circumstances for development which adversely affects a designated Local Green Space as shown on the Policies Map and set out in Schedule 3 which forms part of this policy, particularly regarding the characteristics underpinning its designation such as beauty, historic importance, recreational value, tranquillity or richness of wildlife." Schedule 3 identifies 3 local green spaces for Locking Parklands including South of Cruikshank Grove and McCrae Road, Parklands Village, South of Post Office Road Parklands Village and SE corner of Parklands Village (SE of Bowen Rd, S of Mannock Gardens and S of Farnborough Rd). This policy, however, does not recognise permissions that are in place at Locking Parklands (refs 13/P/0997/OT2, 09/P/1614/F and 12/P/0760/F, 18/P/3175/FUL and RMs) where development could be compatible with the reasons for designation such as NEAPs, LEAPs, earth bunds etc. Recognising the permissions that are in place meets the policy objective set out in Policy DP8 on efficient use of land, which requires "all parts of the site to have a positive purpose." The green space to the south of Farnborough Road will include informal and formal recreation space for passive and active recreation brought forward under the outline permissions or subsequent detailed permissions. The designation should therefore reflect this. In addition, given that there is planning permission covering the land that is proposed to be designated as a local green space under Policy LP15, this will need to be 'consistent with the local planning of sustainable development and complement investment in sufficient homes, jobs and other essential services' in line with NPPF.	We request a modification to Schedule 3 to include a column for site specific requirements or to amend the justification details to "include development in accordance with the established planning permissions. For South of Cruikshank Grove and McCrae Road, Parklands Village, South of Post Office Road Parklands Village and SE corner of Parklands Village (SE of Bowen Rd, S of Mannock Gardens and S of Farnborough Rd) designations these are "refs 13/P/0997/OT2, 09/P/1614/F and 12/P/0760/F. Part full consent, part outline consent and subsequent reserved matters approvals."		

Policy LP16: Preferred Area for mineral working – land at Hyatts Wood Farm, south of Stancombe Quarry

40891777	Breedon Trading Ltd		Breedon Trading Ltd.	Yes		Yes	Yes		The applicant can demonstrate through the submission of a Minerals Assessment that:	The Company is supportive of the policy but feels that the reference to "...the satisfaction of the council..." by the policy is unnecessarily vague. It also notes that although thought the need for a Minerals Assessment to be undertaken in such circumstances is referred to in the explanatory text it is not referred to by the policy itself. It is suggested, therefore, that the reference to the satisfaction of the Council be replaced with a reference to the need to submit a Minerals Assessment.	

Policy LP19: University of Bristol site in Langford

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
39076833	University of Bristol	Alder King Planning Consultancy	University of Bristol	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The University of Bristol's view is that the Local Plan is unsound and not legally compliant with regard to the Woodspring strategic development allocation (Policy LP2). The soundness of the plan in this regard is set out below. Positively Prepared: In accordance with the NPPF, positively prepared is defined as: "providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development." The NPPF is clear that, in calculating housing need under the standard method, this figure is to be treated as a minimum. Therefore, should there be suitable sites available to deliver housing over the local plan period, these should be supported notwithstanding the Council's position that is has reached its requisite 'target' under the standard method. Moreover, owing to the Council's most recent Housing Delivery Test measurement, it is appropriate that a 20% buffer is applied for the first five-years of the plan, in accordance with the NPPF. While stated as a minimum figure, we consider the quantum of housing planned for under Policy SP8 to be negative and insufficient. A number of suitable sites promoted through the local plan process have been unduly discounted by the Council and we consider this to be the antithesis of the plan being positively prepared. One such site comprises the University of Bristol's land south of Long Ashton (HE20139). The site lies adjacent to the settlement boundary, sustainably located in the context of Long Ashton and Bristol, comprising grey belt land which could/should comfortably be brought forward for development in the new local plan. The Council's Spatial Strategy, Site Selection and Capacity Paper (October 2025) identifies Long Ashton as a Category A village, which represents settlements "considered to be relatively sustainable in their own right with a range of easily accessible services and facilities and good public transport links to towns". It is very notable that despite its acknowledged sustainability credentials, and acknowledgement that Green Belt land is required to be released, Long Ashton has all but been ignored for any growth of scale over the plan period. Two small sites are identified within the existing settlement boundary to deliver 42 dwellings. We consider this to be highly irregular for such a sustainable settlement to be consistently overlooked by the Council for accommodating any real growth and raise significant concerns with the Spatial Strategy under Policy SP3 in this context. Planning for a mere 42 homes in Long Ashton to 2041 is not considered to be a positively prepared spatial strategy approach. Additional housing sites which have been consistently promoted to the Council by the University, and consistently overlooked through the emerging local plan process include land to the west of Wyndhurst Road (adjoining the Category A village of Churchill settlement boundary) (site: HE20590) and the nearby land at Stock Lane Farm, Langford (previously developed land) (site: HE203031). The Council's 'Duty to Co-operate Statement of Compliance Regulation 19 Stage' (October 2025) sets out that Bristol City Council (BCC) have requested for neighbouring authorities, including North Somerset Council, to accommodate its unmet housing need. The Council's Duty to Co-operate statement is clear that "North Somerset does not have capacity to meet some of Bristol's needs at this time". We do not agree with that position. We highlight the importance of North Somerset's position in the context of South Gloucestershire Council also making no provision in its Draft Local Plan (plan submitted for examination) to contribute towards Bristol's unmet need. Similarly, through its emerging local plan process, B&NES Council has made no commitment to contributing to Bristol's unmet need owing to it being heavily constrained and having to deal with its own significant housing requirement uplift (approximately double that before the new 2024 standard method). In this regard, it is noted that on 21 November 2025, the inspectors published their final post-hearing advice following examination of the new Bristol Local Plan. The inspectors have requested modifications to the plan from BCC to set out an increased housing need and clearly set out what the level of unmet housing need is. An extract from the inspectors' post-hearing advice is provided below, which reinforces the position that no agreement is in place between BCC and any neighbouring authority, including North Somerset, to accommodate the unmet need. The inspectors set out that they: "acknowledge that there is insufficient capacity to meet the Council's objectively assessed housing need, as calculated by the standard method. Nevertheless, we do not consider the figure of 34,650 dwellings over the Plan period to be positively prepared or justified. Given the significant shortfall in meeting overall needs, and the current lack of agreement between Bristol and any neighbouring authorities to provide assistance, we consider it imperative that the Council seeks to maximise housing delivery. Inherent uncertainties in housing delivery in the longer period do not justify setting a housing requirement substantially below the overall housing capacity figure identified at submission. The evidence submitted since the end of the hearing	The Council's overarching spatial strategy, housing numbers and allocation sites identified should be comprehensively reviewed and revisited as it is clear that. This requires review of suitable residential allocation sites omitted from the draft plan which are, in the first instance outside the Green Belt, and then sites which are agreed to be Grey Belt. We contend that the following sites owned by the University of Bristol represent suitable, available and viable development sites which would positively support sustainable growth over the plan period, including in the early years, and should be allocated for development in the new local plan: • Land at Stock Lane Farm, Langford – HE203031 • Land to the West of Wyndhurst Farm – HE20590 • Land south of Long Ashton – HE20139 The University supports Draft Policy LP19, albeit we consider that minor modifications to the policy wording should be made to acknowledge the sustainability of the location. As present, we consider the policy wording to present an overly negative position of the area which would conflict with the aspirations of the policy to support University development in this area.		NSLP_Pre_Submission_Plan_Representation_Form_Part_B_UOB_LP19.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								sessions has not persuaded us that a lower figure is justified." Therefore, it stands that BCC's significant unmet housing need will continue to go unmet with none of its neighbouring authorities committing to assist. We find this problematic with particular regard to North Somerset as we consider there to be appropriate scope for a greater number of housing sites to be identified in the new Local Plan and delivered through the course of the plan period. The Council's own additional sites consultation in February/March 2025 demonstrated that this was the case. The unmet need for Bristol is significant, cannot be ignored and requires to be addressed within the new North Somerset Local Plan. National guidance within the NPPF is clear that plans should ensure that, inter alia, unmet development needs from neighbouring areas are provided for to ensure effective strategic planning across local planning authority boundaries. It is clear from the Council's own work that North Somerset are in a strong position to be able to identify significant additional housing sites through allocations in the new local plan. This would positively overachieve the Council's housing need target and provide a meaningful contribution to the unmet need of BCC. Pursuant to the Council's emerging local plan process, it carried out consultation on potential additional housing sites to be included as draft allocations in the Reg 19 plan ('Consultation paper on additional sites for the Regulation 19 Plan', February 2025). That identified sites which the Council considered to be 'most suitable', such as that at Yanley Lane South West Bristol (HE20110) in addition to a raft of sites identified as having 'other potential', including sites now identified as draft allocations i.e. around Pill and Easton-in-Gordano and sites now omitted as draft allocations i.e. the University of Bristol's land south of Long Asthon (site: HE20139) and land to the west of Wyndhurst Road, Churchill (site: HE20590). The Council set out within that consultation that sites with 'other potential' comprised: "sites at the towns and larger, more sustainable villages consistent with the spatial strategy". [our emphasis] It stands that the Council rightfully identified suitable residential sites in sustainable locations pursuant to the 'other potential' sites in the 'Consultation paper on additional sites for the Regulation 19 Plan' (February 2025). However, such sites have been unduly disregarded at the Reg 19 plan stage and, in our view insofar as the University of Bristol's land south of Long Asthon (site: HE20139) and land to the west of Wyndhurst Road, Churchill (site: HE20590) wrongfully omitted. The latter lies outside the Green Belt and so should be preferred to the various sites proposed to be released from the Green Belt, as sought be national planning policy guidance. Site HE20139 and HE20590 are available now and deliverable to contribute towards significant positive growth within the plan period and should be supported for allocation. We consider that there is scope for additional appropriate housing sites to deliver over the plan period which are available, suitable and viable. In the Council's own words these disregarded sites are "consistent with the spatial strategy" and yet have been ignored. We contend this is the wrong approach, particularly in the context of the significant identified unmet need for Bristol. We therefore disagree with the Council's position that it cannot accommodate any of the unmet housing need from Bristol in North Somerset. In this context, the North Somerset Local Plan is not considered to be positively prepared, justified, effective or consistent with national policy. Justified: In accordance with the NPPF, to be justified this requires: "an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence." As set out above, it is considered that reasonable alternative sites for housing allocations have been unduly discounted by the Council, in conflict with the evidence base which should otherwise support its approach. Therefore, we do not consider that all draft housing allocations are sufficiently justified which goes to the soundness of the plan. Paragraph 148 of the NPPF is clear that where it is necessary to release Green Belt land for development, as is established and agreed in North Somerset, plans should give: "priority to previously developed land, then consider grey belt which is not previously developed, and then other Green Belt locations." Prior to this, non Green Belt sites should be prioritised for allocation. In this regard, our client has consistently promoted its land south of Long Ashton and at Wyndhurst Farm (site: HE20590) and Stock Lane Farm (site: HE203031) at Churchill/Langford. However, the Council is not supporting a draft housing allocation on any of the three land parcels. We consider this to be contrary to NPPF paragraph 148 and is not a justified approach in plan making terms. Land at Stock Lane Farm, Langford – HE203031: The University's land at Stock Lane Farm comprises previously developed land, outside of the Green Belt. This is sustainably located in relation to Langford and Churchill and has been promoted for development with capacity for up to 64 dwellings. There is a realistic prospect that houses could be delivered on the site within five years. The site was previously identified as a 'less sustainable' site, wrongfully in our view, as part of the Council's Consultation paper on additional sites for the Regulation 19 Plan' (February 2025). The consultation ran to March 2025 to which representations were submitted by the University in relation to all three of its land parcels referenced. In this regard, the site is well related to the settlement and existing facilities and services in Churchill and Langford. Adjacent to the west of the University's land at Stock Lane Farm, planning permission ref: 23/P/0448/OUT was approved by the Council in March 2025 for a mixed-use development comprising up to 120 dwellings, new flexible employment, children's day nursery and café, along with associated car parking, landscaping, tree works, public open space and local equipped area for play, drainage infrastructure, access improvements and connections to the existing footpath network. We note the Council's also identified that land as a 'less sustainable' site in the previous consultation, while granted it planning permission, and now identifying it as a draft allocation. This outlines the inconstancy in the Council's approach to its housing sites			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								in the new local plan. The presence of planning permission 23/P/0448/OUT only further supports development on the University's land adjacent at Stock Lane Farm (HE203031) which critically comprises previously developed land. In this context, the University's land is annotated red on the plan (see attachement) which comprises the adjacent approved development (and now draft allocation). The Council's decision to omit the University's land at Stock Lane farm is not justified in the context of Draft Policies SP3 and SP8. The site is sustainably located, outside of the Green Belt on previously developed land and adjacent to the Monaghan Mushrooms site (Draft Policy LP23), pursuant to planning permission 23/P/0448/OUT. Land to the West of Wyndhurst Farm – HE20590: The University's land west of Wyndhurst Farm Stock Lane Farm comprises greenfield land adjacent to the settlement boundary of Churchill. This is sustainably located and has been promoted for development with capacity for up to 90 dwellings at a density of 29 dwellings per ha. There is a realistic prospect that houses could be delivered on the site within five years. The site was previously identified as a site with 'other potential' as part of the Council's Consultation paper on additional sites for the Regulation 19 Plan' (February 2025). The Council set out within that consultation that sites with 'other potential' comprised: "sites at the towns and larger, more sustainable villages consistent with the spatial strategy". [our emphasis] The Council's published 'North Somerset Strategic Housing Land Availability Assessment Main Report' (October 2025) further sets out that the site was considered by the Council to have "potential for further consideration". Notwithstanding this, the Council's published 'Spatial strategy, site selection and capacity paper' (October 2025) confirms that this site is not a proposed allocation in the draft Local Plan with commentary provided as follows: "The site is outside settlement boundary with a distinctive rural character providing a clearly defined separation between the area of Churchill centred around Bristol Road and Pudding Pie Lane, and the smaller settlement of Lower Langford to the east. Due to the impact on the landscape and potential impact on heritage assets, it is not considered appropriate to take this site forward as a housing allocation." We do not agree with the Council's assessment of the site and its position to omit this as a draft allocation. We note that pre-application discussions with the Council resulted in the suggestion to promote the site at that time through the local plan which has been comprehensively done and so it is disappointing to see this be omitted as a draft allocation. This is particularly the case given the extent of the Council's housing need which should, in the first instance be addressed by appropriate sites such as this outside of the Green Belt before seeking to remove land from the Green Belt. Development on the site would comfortably assimilate with the surrounding built form, providing sustainable development. It is notable that planning permission (ref: 22/P/2908/OUT) was approved in November 2024 for nine dwellings adjacent to the south of the site which only provides further support for development in this location. Different development options have been considered which would address all material considerations for the site, which include a scheme for 24 units and a scheme for up to 90 units in this regard, as illustrated below. The site is wholly sustainable with any associated impacts of development more than capable of being addressed with appropriate mitigation. In this regard, the Council's decision to omit the University's land is not justified in the context of Draft Policies SP3 and SP8. Land south of Long Ashton – HE20139: The University's land south of Long Ashton comprises land within the Green Belt, adjacent to the settlement boundary of Long Ashton. This is sustainably located and has been consistently promoted for a number of years to the emerging local plan, and previous WECA joint spatial plans for development with capacity for up to 1,500 dwellings. The site was previously identified as a site with 'other potential' as part of the Council's Consultation paper on additional sites for the Regulation 19 Plan' (February 2025). The Council's published 'North Somerset Strategic Housing Land Availability Assessment Main Report' (October 2025) further identifies that the site was considered by the Council to have "potential for further consideration". Notwithstanding this, the Council's published 'Spatial strategy, site selection and capacity paper' (October 2025) confirms that this site is not a proposed allocation in the draft Local Plan with commentary provided as follows: "Site not consistent with the spatial strategy as it is detached from the existing built-up area of Long Ashton." We do not agree with the Council's assessment of the site and its position to omit this as a draft allocation. It is clear that the site should accord with an appropriate spatial strategy which directs growth to the most sustainable locations. Therefore, the Council is not following this by omitting the University's land as an allocation. The site is well related to Long Ashton in addition to the city of Bristol. It appears that the Council have unduly set preference to directing growth to the neighbouring Yanley Lane/ Woodspring site (HE20110) (draft allocation for 3,500 dwellings under Policy LP2) at an early stage of the plan making process. This position has not shifted even as the evidence base has been developed which indicates to the contrary. Attention is turned to the Council's Sustainability Appraisal Report (October 2025). This sets out the findings of the assessment of potential allocation sites against the sustainability appraisal objectives. A summary is provided (see attached document) with comparison of our client's land south of Long Ashton, which has been discounted by the Council and the Yanley Lane South West Bristol land, which is proposed to be allocated for development by the Council in the Local Plan. This comparison is provided owing to the proximity and context of both sites, and similarity with regard to scope to provide strategic growth. This sets out the similarities in the Council's assessment of both sites which, when compared, identifies fewer negative effects of development on our client's land than that identified for allocation by the Council at Yanley Lane. The sustainability credentials of our client's land are clear and development of this land			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								should be supported. The Council's Spatial Strategy, Site Selection and Capacity Paper (October 2025) provides commentary on the potential allocation sites. For our client's land south of Long Ashton (HE20139) this states that the site is not proposed for allocation and that the: "Site not consistent with the spatial strategy as it is detached from the existing built-up area of Long Ashton". Whereas for the Yanley Lane site (HE20110), this states that the site is proposed for allocation and that the: "Site [was] previously identified (in smaller form) in Regulation 18 plan". The fact that the Yanley Lane/Woodspring site was preferred by the Council at early stages of the plan, in advance of the supporting evidence base work being carried out, is not sufficient justification for it to be allocated. This is required to be justified and supported by the evidence base, which we do not consider it to be, in the context of the University's land south of Long Ashton. The Council's approach contradicts NPPF paragraph 148 in identifies sites to be removed from the Green Belt for development. The Council's 'Stage 2 Green Belt Assessment' (October 2025) identifies the land south of Long Ashton to make an overall weak contribution to the purposes of the Green Belt. Whereas, the Yanley Lane/Woodspring site is determined to make a greater contribution, set at 'moderate' to the Green Belt purposes. This comparison is provided (see attached document), pursuant to the Council's Stage 2 Green Belt Assessment. In Green Belt terms, it is clear that the University's land south of Long Ashton makes less off a contribution to the Green Belt purposes than the Council's proposed allocation at Yanley Lane/Woodspring. Moreover, our client's land would wholly support sustainable patterns of development in the context of Long Asthon and Bristol, in accordance with NPPF paragraph 148. Further to this, as can be seen in the Green Belt assessment, the University's land makes a weak contribution to Green Belt purposes A, B and D. There are no relevant footnote 7 assets that would provide a strong reason for refusing or restricting development on the land. Therefore, this can be considered Grey Belt, subject to the specifics of the development proposal. The Council's Stage 2 Green Belt assessment agrees with this position however the Pre-Submission (Reg 19) version of the plan still determines not to allocate the land for development which we consider to not be justified. The NPPF is clear that Grey Belt land should be supported for directing development in new local plans (NPPF paragraph 148). In this context with the omission of our client's land for allocation, we dispute the Council's claim at page 30 of the Pre-Submission Plan (Reg 19) that: "A sequential approach to Green Belt release has been taken prioritising previously developed land, followed by grey belt sites and then other Green Belt locations". The omission of the University's land south of Long Ashton seemingly goes against the supporting evidence base and therefore we do not consider the approach to be justified, with particular regard to Draft Policies SP3, SP7, SP8 and LP2. The Council's overall spatial strategy and policies/ allocations to direct housing growth are required to be informed by the evidence base. Effective: In accordance with the NPPF, to be effective means to be: "deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground." As set out above, where we consider the plan to not have been positively prepared, the Council's 'Duty to Co-operate Statement of Compliance Regulation 19 Stage' (October 2025) sets out that BCC have requested for neighbouring authorities, including North Somerset Council, to accommodate its unmet housing need. The Council's Duty to Co-operate statement is clear that "North Somerset does not have capacity to meet some of Bristol's needs at this time". We do not agree with that position on account of suitable sites being omitted for development allocations, particularly where the Council has previously acknowledged the sites to have 'other potential' which, in the Council's words are "sites at the towns and larger, more sustainable villages consistent with the spatial strategy". This is particularly relevant to the University's land south of Long Ashton and at Stock Lane Farm and Wyndhurst Farm in Churchill/Langford which comprise either previously developed land outside the Green Belt, land outside the Green Belt adjacent to the Category A village settlement boundary for Churchill, or Grey Belt land adjacent to the Category A village settlement boundary for Long Ashton. While the Council's housing figure over the plan period (Draft Policy SP8) is prescribes as a minimum, this is a negative approach when considering that additional sites are readily available to deliver above this figure, and should be set out as such in policy. This strongly supports our position that North Somerset is fully capable of accommodating additional growth, thereby contributing towards the unmet need from BCC. However, the Council is unduly deciding not to do this – this is not effective plan making. Moreover, the NPPF is clear that planning policies should identify a supply of specific, deliverable sites for five years following the intended date of adoption, with an appropriate buffer. It is likely that some of the larger strategic development/urban extension areas identified for allocation in the plan will not begin to deliver homes within the first five years and so this means that greater flexibility and contingency is required to be built in to ensure housing delivery is forthcoming in the early years of the plan to meet the minimum requirements. Ensuring early delivery of housing early in the plan period is critical. Consistent with National Policy: In accordance with the NPPF, consistency with national policy should be adhered to: "enabling the delivery of sustainable development in accordance with the policies in this Framework and other statements of national planning policy, where relevant." For the reasons set out within these representations, it is considered that the Council's Reg 19 Pre-Submission Plan is not consistent with national policy with particular regard to the guidance in the NPPF relating to failure under the duty corporate and the approach to accommodate none of BCC's identified unmet housing need. The plan inadequately makes provision for insufficient housing in this context which is not justified owing to the evidence base supporting identification of additional land which could positively		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								support housing growth over the plan period. Moreover, we consider the Council's approach to identifying the draft housing allocation sites is flawed and inconsistent with national policy in overlooking suitable sustainable previously developed land and greenfield sites in the first instance ahead of Green Belt sites; and subsequently overlooking suitable sustainable Grey Belt sites which should be prioritised for development ahead of the remainder of the Green Belt. Conclusions: For the reasons set out above, we consider the plan to be unsound in its current form. Ultimately, the primary reason the plan is not considered to be sound is owing to the approach that the evidence base has followed the Council's overall strategy; rather than the other way around. The evidence base should directly support the approach laid out in the plan and this is not the case. Notwithstanding this position, the University provides support for Draft Policy LP19 for the 'University of Bristol site in Langford' allocation. We welcome the recognition this policy provides for the significant educational and employment benefits made by the University of Bristol's campus in Langford to the local, and wider, area. The University of Bristol support the policy aims of LP19 which recognise the importance of the facility and support the new development opportunities that will enable the university to grow and accommodate necessary expansion in terms of student numbers and staff employment. We consider that Draft Policy LP19 in isolation is sound as this does not relate to the outstanding wider concerns raised which relate to housing in terms of housing growth quantum and spatial approach. Minor modifications are suggested to the wording of Draft Policy LP19, in so far as we consider this to present a negative picture of the existing sustainability credentials of the site. For users of the campus not based locally, this is readily accessible by non-car modes with regular bus services available. This includes the U2 service which the University provides free passes to students of the veterinary school to travel. Therefore, while this draft policy is strongly supported, we would support minor wording changes to the policy which acknowledge its sustainability. Further detail is hereby provided below and appended in relation to the University of Bristol's land at Stock Lane farm and Wyndhurst Farm in Churchill/Langford and land south of Long Ashton. Development on this land, with support from residential allocations should be provided in a new sound North Somerset Local Plan. Land at Stock Lane Farm, Langford – HE203031: Availability: Site HE203031 is in single ownership by the University of Bristol. The land has been identified as surplus to requirements, having previously been used in association with the University's Langford Veterinary Campus for research and academic studies. It is readily available now, able to make a meaningful contribution to the Council's five-year land supply. Suitability: Site HE203031 offers a suitable location for development of housing. There are no development constraints that would prevent allocation of the site for its early development for housing. The site is well related to a 'Category A' village (most sustainable) and so its allocation fits comfortably into the Council's emerging spatial strategy. The site is accessible by a choice of means of transport to local facilities, including employment opportunities, schools, shops and other services. 4 The site, comprising previously developed land, forms part of the existing built form along Stock Lane and is subject to no designations/constraints that would restrict redevelopment of the site for housing. Likely Economic Viability: There are no known extra-over costs associated with the development of this site nor any issues with utilities which would mean that it would be economically unviable. There is a realistic prospect that houses could be delivered on the site within five years. 4.7 The site has capacity for up to 64 dwellings, subject to detailed design and is available, suitable and economically viable. It should be allocated in the local plan to assist North Somerset providing a sufficient supply and mix of sites to meet their minimum required housing need. Land to the West of Wyndhurst Farm – HE20590: Availability: Site HE20590 is in single ownership by the University of Bristol. The land has been identified as surplus to requirements for some years. It is readily available now, able to make a meaningful contribution to the Council's five-year land supply. The site has consistently been promoted for allocation through the local plan process following the advice of the Council during a formal preapplication submission in 2020. Suitability: Site HE20950 offers a suitable location for development of housing. There are no development constraints that would prevent allocation of Site HE20590 for its early development for housing. The site lies adjoining a 'Category A' village (most sustainable) and so its allocation fits comfortably into the Council's emerging spatial strategy. The site is accessible by a choice of means of transport to local facilities, including employment opportunities, schools, shops and other services. The site lies abutting the settlement boundary of Churchill as proposed in the emerging local plan. It has no landscape, heritage or other designation. It is in Flood Zone 1 (low risk) and grade 3 agricultural land. Likely Economic Viability: There are no known extra-over costs associated with the development of this site nor any issues with utilities which would mean that it would be economically unviable. There is a realistic prospect that houses could be delivered on the site within five years. The site has capacity for circa for 90dwellings at a density of 29dwellings per hectare. An example of how the site might be developed for housing is provided below. Site HE20590 is available, suitable and economically viable and should be allocated in the local plan to		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								assist North Somerset providing a sufficient supply and mix of sites to meet their minimum required housing need. Land south of Long Ashton – HE20139: Availability: The site is in single ownership by the University of Bristol. The land has been identified as surplus to requirements for some years. It is readily available now, able to make a significant contribution to the Council's housing need over the plan period. The site would form a natural extension to Long Asthon being contiguous with the existing settlement boundary of to the north and is physically contained between the A370 to the east/south and Wild Country Lane to the west. Allocation of the site for development, and its release from the Green Belt, is supported by NPPF paragraph 148 in that growth here will promote a sustainable pattern of development on Grey Belt land. This is a requirement of the NPPF. Notably, significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes as is the case for this site. Moreover, releasing land from the Green Belt for development are required to ensure that, inter alia, sustainable transport modes are prioritised, safe and suitable access can be achieved and any significant impacts from the development on the transport network, or on highway safety, can be cost effectively mitigated to an acceptable degree through a vison-led approach. The University's land south of Long Ashton fulfils all criteria with its strong relationship with the existing Long Ashton settlement and being in close proximity, and well connected to, Bristol. Suitability: The site offers a suitable location for development of housing on Grey Belt land. There are no development constraints that would prevent allocation of Site HE20139 for its development for housing. This conclusion is informed by a suite of past technical information on the site. The site lies adjoining a 'Category A' village (most sustainable) and so its allocation fits comfortably into the Council's stated spatial strategy. The site is accessible by a choice of means of transport to local facilities, including employment opportunities, schools, shops and other services. Likely Economic Viability: There are no known extra-over costs associated with the development of this site nor any issues with utilities which would mean that it would be economically unviable. There is a realistic prospect that houses could be delivered on the site over the plan period. The site is available, suitable and economically viable and should be allocated in the local plan to assist North Somerset providing a sufficient supply and mix of sites to meet their minimum required housing need. The proposal on the site is informed by the substantial of technical work which has been carried out to date. Key facets of a future development of this site could include: • Up to 1,500 dwellings, including a mix of tenures and affordable housing; • Potential to include a mix of non-residential uses; • New access onto the A370 • Cycle routes and public footpaths; • Green infrastructure, including public open space; • Biodiversity Net Gain. A plan demonstrating how development could be achieved on the site is provided in the attached document.			
51572577	BNSSG ICB		NHS Property Services						We acknowledge that student accommodation and new homes are proposed under Policy LP19 and Policies LP20 and LP23 respectively. BNSSG ICB have not been engaged with by the Council on any of these sites to date, therefore there is concern that primary care infrastructure requirements have not yet been established on those sites. We strongly encourage further dialogue between ourselves and the Council on this matter. It is essential that identified healthcare infrastructure needs are reflected in each of these policies to ensure that the Local Plan has been positively prepared and is effective in capturing and communicating localised infrastructure needs. Policy LP20: Wyndham Way

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
20338913	Aston & Co		Aston and Co UK	Unsure	• Positively prepared • Effective • Consistent with national policy	Unsure	Unsure	Aston & Co is promoting land at Portishead with Bloor and Turleys. We reserve opportunity to participate in relevant specific topic areas. In particular: 1. Green Belt(GB)/Grey Belt - based on The Landmark Practice's Grey Belt report submitted to NSC in March 2025, the Strategic Green Belt Assessment Interim Report: Assessment of Green Belt land in North Somerset, Oct25 by Arup, NPPF24, and PPG, the entire promoted land (Black Rock, north of Clevedon Road, HE20124) is 'grey belt', and the proposed revised GB should therefore be moved west making use of clear defensible barriers in accordance with policy. This land could deliver housing in the near term, or as a minimum should be safeguarded for housing, and other community benefit (Avon Wildlife Trust, education centre & volunteer tool store). 2. The Wyndham Way Study Area should not be treated as an allocation for 785 units when the evidence presented does not support its delivery within the plan period. This is 'aspirational' and is land that could be safeguarded, but that should not be counted for meeting statutory need. Alternative land at Portishead that can be delivered should make up the shortfall. 3. Viability will affect housing delivery under all plans. Increased construction costs	1. Relocate the GB west of Portishead to the west to include the former horticultural nursery making use of clear defensible barriers (Weston Big Wood, the hillside, the B3124, the natural flood plain of the valley). 2. Remove the Wyndham Way housing allocation (785 No), or safeguard this land, and allocate additional deliverable housing land to meet statutory need, such as Black Rock. 3. Viability - important to set appropriate deliverable affordable housing %, affordable housing tenure mix (which affects viability), and test these scenarios fully before baking into a front loaded planning system, or delivery will not be achieved. This includes the need to front load and standardise s106 legal agreements reducing time for a resolution to grant consent to become actionable.	Having attended the Joint Spatial Plan examination in 2019 and followed closely all NPPF, PPG and local plan challenges since that affecting all LPAs, we note the quality of the NSC Reg19 plan and its evidence. We are supportive of the approach, consultation engagement, and the near final product.	2995 Grey Belt Assessment Statement _AJC_EBH_GM_060325_Fv1.pdf

								since Covid and Brexit have created a national delivery issue. This is mentioned in the NSC DSP viability report and has been raised by RICS, HBF, and others, with MHCLG. Getting this right in the replacement plan is essential to achieve delivery, that meets housing need.			
29307745	Phoenix Life Ltd (Fraser Green)	Giulia Bunting	Phoenix Life Limited	No	• Positively prepared • Justified • Effective	Yes	Yes	Support LP20 on the basis that it provides the policy base for bringing forward regeneration proposals for the Wyndham Way Broad Location in a phased manner. The Plan needs to be consistent in its references to Policy LP20 (remove references to LP17 elsewhere in the Reg 19 Local Plan). In terms of the name for the area itself, LP20 should be amended to refer to the Wyndham Way Broad Location rather than the Wyndham Way Development Area. Support the capacity figures in Policy LP20 which are justified via the evidence base. However, the evidence base has not been published in full with the Reg 19 Plan which requires clarification. The evidence base includes the report entitled "Wyndham Way, Portishead Opportunity Area Delivery Testing" which looks at the deliverability of the sites in the Wyndham Way Opportunity Area Framework. This report should be read together with the Allies and Morrison Site Studies Report April 2024, yet this latter report is not included in the evidence base included on the Councils website. Phoenix Life, in earlier informal consultation on the Site Studies Report, did express some concerns regarding practical delivery of some very specific land use and locational proposals, assumptions regarding decanting of existing uses and the provision of common infrastructure, given different ownerships and tenancies across the area. Assuming these studies and reports are to be included in full in the Councils evidence base, it should be clearly stated in Policy LP20 or its supporting text that they include options for practical delivery of Policy LP20 objectives and do not represent definitive proposals. Further the evidence base on the Councils website also includes a further Delivery Testing Report (not the Wyndham Way Area Development Framework as noted on the website) This report notes that it contains commercially sensitive information on site viability and notes of landowner and Member discussions which are for NSCs internal use. Thus, the evidence base on the website does not actually include the Wyndham Way Area Development Framework, which provides the basis for the policy provisions included in Policy LP20. This should be rectified. Policy LP20 refers to the Neighbourhood Plan for Portishead that was made in September 2023. The policy text suggests that it is aligned to the North Somerset Core Strategy strategic policies which will be superseded by the Local Plan, but also contains policies to support the town centre and existing valued employment sites, some of which lie within the Wyndham Way Development Area. Phoenix Life does not support the references in the draft Policy LP20 to the Neighbourhood Plan. There is no policy basis in the adopted Core Strategy to identify the Phoenix Life site at Old Mill Road (which includes the Wyndham Way Retail Park) as a “Valued Employment Site”. Phoenix Life has consistently maintained its view that the Neighbourhood Plan’s approach to the Wyndham Way Development Area is inconsistent with the adopted Core Strategy, and the Neighbourhood Plan provisions in this regard run counter to the positive regeneration approach set out in Policy LP20 in respect of the allocated Wyndham Way Broad Location. If the references to the Neighbourhood Plan approach remain unchanged in draft Local Plan Phoenix Life considers that this would render Policy LP20 in the Local Plan unsound as in this respect it is not positively prepared or justified (founded on a robust and credible evidence base and not the most appropriate strategy when considered against the reasonable alternatives) or effective (deliverable, flexible and able to be monitored).	Phoenix Life does not support the references in the draft Policy LP20 to the Neighbourhood Plan. There is no policy basis in the adopted Core Strategy to identify the Phoenix Life site at Old Mill Road (which includes the Wyndham Way Retail Park) as a “Valued Employment Site”. If the references to the Neighbourhood Plan approach remain unchanged in draft Local Plan Phoenix Life considers that this would render Policy LP20 in the Local Plan unsound as in this respect it is not positively prepared or justified (founded on a robust and credible evidence base and not the most appropriate strategy when considered against the reasonable alternatives) or effective (deliverable, flexible and able to be monitored).		
58043905	C Miles			No	• Justified • Consistent with national policy	No		Housing need must be met and the plan needs to allocate sufficient land that is capable of meeting that need over the plan period. NSC’s report on this aspirational development reinforces the fact that it is highly unlikely to deliver any significant housing within the plan period. Additional land at this important Town should be allocated.	Remove or significantly reduce the Wyndham Way housing allocation. Identify alternative land to make up the shortfall.		
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	• Positively prepared • Justified • Consistent with national policy	Yes	No	To be clear, a Wyndham Way Consultation Plan underwent public consultation in 2022 and comments were made to the consultation by the Company. Both support and concerns were raised as part of the consultation. It was recognised that the town should and can accommodate further development. We consider that development on the periphery of the town at East Portishead is suitable for development. As part of comments to the Wyndham Way Study Area consultation was reference to the document’s status. It was not presented as SPD nor as a Planning/Development Brief. In the consultation document it was said to be part of the evidence base for the Local Plan. This raises questions as to the weight attached to it, levels of reliance and referencing in the Local Plan. Simplified, the allocation provides for high density living – flatted development with, in certain locations, alternative ground floor uses. This approach does not reflect national planning policy which promotes a mixture of home and tenures. That is not to say that flatted development should not form part of a mixed development, however: 1.Delivery will require land assembly - so there must be buy-in by landowners to ensure that the development is appropriately planned 2.The scheme does not appeal to deliver a mixture of house types to meet needs – and so alternative sites should be identified 3.The Policy states that development should “adhere to…. Consideration of the impact on infrastructure such as schools… etc”. Such a statement is not precise as, surely, in	The Local Plan policy and supporting text should be amended to clarify the status of the Wyndham Way Framework Study and therefore its use and the weight attached to it. The Local Plan should also consider whether the number of new homes is realistic and would amount to a mixture of new homes rather than predominantly flatted development.

								allocating the site, due consideration would have been given to these services and facilities and any significant impacts. The same can be said about considering the proposed railway and its impact. Therefore, as it stands the policy does not appear justified in being based upon evidence, nor consistent with national policy.			
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	• Positively prepared • Consistent with national policy	Yes	No	The company objects to the provisions of this proposal in that it is imprecise. It sets out a list of principles that apply to all proposals. The Policy should assist the user advising whether these requirements in part or full relate to both full and outline applications. In both instances, the provisions of the policy are unduly onerous. The Policy should be rewritten explaining that which is relevant to outline and full applications. In being rewritten it would be more effective. The level of detail provided is unduly onerous with policy test requirements relating to all aspects of design. It would be more reasonable for a Design and Access Statement to address the key design and function considerations. Reference too to management plans being "…submitted for the long term maintenance of all shared public and private spaces and facilities including public art, private drainage installations and SuDS and services that the developer intends to provide instead of the council.". Whilst in some cases, indications of potential routes to site and facility management can be provided, given the protracted timescales and evolution post-submission of some development proposals, such accurate management information may not be readily available. A level of flexibility would therefore be a helpful response and should be incorporated into the policy wording.	The Policy should be rewritten to explain fully to which applications it applies.		
30736993	Kath Scargill									I object to the plan as it's unsound on this, it's aspirational, multiple owners, housing won't be delivered on time.

43203041	National Highways		National Highways							The policy supports proposals for a campus style office development between Long Ashton and Bristol in line with planning consents for the site. We note that policy support is linked to the prioritisation of sustainable travel. National Highways is supportive of this position, as the applicant's proposals for sustainable travel and occupier-led travel initiatives was a key factor in National Highways accepting that the Epic development would have limited impact on the SRN.	NSC Reg19 Local Plan Consultation.pdf
39315297	Epic Systems	Ben Larcombe	Epic Systems					This formal representation has been prepared by Rapleys LLP (Rapleys) on behalf of 'Epic Systems Corporation' ('Epic'), a multi-national healthcare software company with a global headquarters based in Verona, Wisconsin, USA. 1.2 It has been prepared in relation to the publication version (Regulation 19) of the North Somerset Local Plan. This is the version that the North Somerset Council (NSC) proposes to submit to the Secretary of State for independent examination under the provisions of the Planning and Compulsory Purchase Act 2004. 1.3 The consultation period commenced on the 30th of October 2025 and concludes on the 12th of December 2025. The emerging plan is planned to cover a 15-year plan period, spanning 2026-2041 and will be a 'composite plan' - including all strategic allocations, Local Plan policies and Development Management Policies. Upon adoption, it will replace the currently adopted Core Strategy and Parts 1 & 2 of the Sites and Policies Plan. It will also supersede the Joint Waste Core Strategy. 1.4 Planning permission for the development of 'Epic Long Ashton' – which will deliver Epic's office campus for UK, European, and beyond operations was granted by North Somerset Council on the 6th of March 2025 (Ref. 23/P/2185/FU2), further to the Council resolving to grant permission on the 15th of January 2025. 1.5 The formal description of development as referenced on the Decision Notice is as follows: Hybrid planning application (full and outline elements) with Environmental Statement for the construction of new office campus (Use (Class E(g)(i)) with associated external and below ground works. Full application (on a phased basis) comprising three office buildings, culinary building, training centre and auditorium. New accesses from the public highway, internal site roads and footpaths, public realm works, site drainage, landscaping, solar PV field, ancillary plant,	In summary, Epic respectfully request that the suggested amendments to Policy LP22 are incorporated within any Schedule of Proposed Modifications when the Local Plan is submitted for Examination in Public pursuant to Regulation 22 of the Town and Country Planning (Local Planning) (England) Regulations 2012 (as amended). Alternatively, if further consultation is undertaken prior to Regulation 22 submission, Epic would respectfully request that the amendments proposed are incorporated within a further Regulation 19 consultation draft.		Regulation 19 Local Plan Pre-submission Representations - Epic Bristol Limited 11.12.25.pdf

								servicing and other associated works. Below ground works including ancillary plant, car and cycle parking and geothermal borefield. Outline application comprising two further office buildings (access, layout, scale and landscaping for approval, appearance to be reserved for subsequent approval). 1.6 It is also worth noting that a Section 73 application was granted on the 10th of October 2025 (Ref. 25/P/1496/FU2). This permission incorporates amendments to the approved Office Building One, both utility buildings, the basement car park, sitewide landscaping, the solar PV field, the borefield and sitewide lighting. 1.7 The development permitted by 23/P/2185/FU2 and as amended via 25/P/1496/FU2 has commenced, further to the discharge of all pre-commencement conditions and planning obligations. It is anticipated that the first office building, as part of Phase One of the development, will be completed and ready for occupation in Q2 of 2028. Local Plan Representations 1.8 This representation focuses both on the land commonly referred to as 'Epic Long Ashton' (as described within the preceding paragraphs) and a further Epic landholding north east of Colliters Way, which extends to an additional 37 acres. The extent of Epic's landholding is detailed within Appendix A; with the 85 acres detailed in red and the 37 acres detailed in blue. 1.9 Epic have prepared representations to support the site's allocation within the Plan during the 2022 Preferred Options Consultation, the 2023 Reg19 consultation, again via the 2024 Call for Sites process, and earlier this year during the Additional Sites Consultation. 1.10 Following the Additional Site Consultation (and in the context of the Council's resolution to grant the Epic permission), 'Epic Long Ashton' has now been expressly allocated/designated for a campus-style office development within the Reg19 Plan; Policy LP22, henceforth referred to as 'Epic employment campus'. 1.11 In this context, Epic support the content of the current draft Local Plan, on the basis that NSC clearly recognises the planning status of the Epic employment campus; a consented and 'live' scheme which will provide very special economic benefits to North Somerset and the wider region. Epic consider that the content of Policy LP22 can be further refined to guide the development of the site across the Plan period to 2041. 1.12 Beyond the specifics of the proposed Policy LP22, Epic provide further comment on various elements of the submission, notably in relation to the findings of the Strategic Green Belt Assessment (SGBA) (2025) – principally seeking the removal of their further landholding from the extent of the Green Belt owing to its overall weak contribution to Green Belt purposes. LP22: Epic employment campus Campus: 2.17 Draft Policy LP22 enacts specific allocation/designation of the Epic employment campus (in line with the boundaries defined by the Policies Map), for a campus-style office development in consideration of the unique opportunity that is presented to deliver a high-quality employment use in North Somerset. It is noted and accepted that the drafting of the policy is specific to Epic-only and such an approach is not objectionable. 2.18 The Epic-specific policy is distinct from the wider proposed employment allocations within the Plan and Epic raises no concern with this approach in noting that the grant of planning permission was contingent upon the evidencing of Very Special Circumstances – whereby it was necessary to evidence that the benefits of the proposal clearly outweighed potential harm to the Green Belt and any other identified harms. 2.19 Notably, the Policy reaffirms that the Epic employment campus will remain within the Green Belt, and that any forthcoming development on the site should accord with a number of specified requirements. Again, this approach is not objectionable. 2.20 The Policy, in general terms, sets out that the development shall be consistent or proportionate to the approved scale, use and intend of the extant permission. Epic fully supports the inclusion of a bespoke policy relating to the campus within the Local Plan; however they do contend that the specifics of the policy can be refined further to best assist with the delivery of this most significant proposal across the Plan period. 2.21 Epic's suggested amendment to Policy LP22 insofar as it relates to the campus is set out below: Policy LP22: Epic employment campus (suggested re-wording): This represents a unique opportunity to deliver high-quality employment use to bring significant economic benefits to the district and wider region. The site is located in the Green Belt and will remain so. Within the boundary of the Epic employment campus, as defined on the Policies Map, proposals for a campus style office development for Epic Systems will be supported where they: • Remain consistent or proportionate to the approved scale, use and intent of the extant permissions; • Maintain or enhance the campus style character with high quality landscaping, open space and a low density built form; • Retain the openness of the Green Wedge to the northern side of the site which will remain void of any above ground development and be accessible to the public; • Demonstrate very high quality design in terms of massing, materials, and layout, ensuring visual integration with the surrounding countryside; • Preserve the openness of the Green Belt; • Deliver an exemplar employment location within the Green Belt; and • Prioritise sustainable travel including the provision of active travel infrastructure, electric vehicle charging and links to public transport.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Justification This policy recognises the planning status of the Epic employment campus which is a consented scheme which will provide significant economic benefits to North Somerset and the wider region. The site is located in the Green Belt between Long Ashton and Bristol and it was deemed that “very special circumstances” existed to allow this scheme in such a location due to its significant contribution to employment opportunities, the wider economic benefits to the local economy and wider sub-region, and the absence of suitable sites outside the Green Belt. It is therefore important to ensure the scheme delivers the benefits which have justified the “very special circumstances” whilst ensuring that any further development remains consistent with Green Belt objectives. The site is therefore expected to function as a high-value employment campus, accommodating software development for the healthcare sector. Given its location within the Green Belt any future proposals must carefully balance development needs with the preservation of openness minimising visual and spatial impact beyond those already deemed acceptable under the current permissions. Land North of Colliters Way: 2.22 Beyond the proposed amendments to the campus related policy, Epic seek an expansion of Policy LP22 so that it also relates to their further landholding north of Colliters Way. 2.23 As addressed within paragraphs 2.1 – 2.12 of this representation, Epic contend that clear and convincing justification exists to justify the removal of both their land, and all further land as identified within SGBA Parcel P-018 that is located within the administrative demise of North Somerset Council. 2.24 Epic seek an expansion of the drafting of Policy LP22 in order to establish both a safeguarding (Epic only) and positive framework for the utilisation of land north of Colliters Way, where it would support Epic’s function and operation of the adjacent campus. 2.25 As such, Epic seek the addition of the following policy test in relation to land north of Colliters Way: Land to the east of A4174 (as delineated on the proposed boundary for the Policies Map) will be reserved for Epic’s use and operation subject to demonstrable need to support the operation of the main campus site. Where need is demonstrated, the development of safeguarded land to the east of the A4174 will be permitted, subject to: • Satisfactory environmental safeguards including mitigation/compensation where appropriate • No significant demonstrable harm to the amenities of nearby residents 2.26 Appendix C to this representation (see attached document) is inclusive of a tracked change version of Policy LP22 and Appendix D provides a clean copy. Both Appendix C and Appendix X detail the amendments sought to both the campus element of Policy LP22 and its sought expansion in relation to Epic’s wider landholding. 3 CONCLUSION 3.1 In conclusion, Epic generally supports the contents of the current draft Local Plan, on the basis that NSC clearly recognises the planning status of the Epic employment campus; a consented scheme which will provide significant economic benefits to North Somerset and the wider region. 3.2 Epic commend the Local Planning Authority for their commitment to their proposal, which has resulted in proposed Policy LP22. Epic consider that the content of Policy LP22, as it relates to campus operation, can be further refined to provide a clear steer as to how development of the campus will be considered and achieved through the Plan period. 3.3 However, Epic feel obligated to highlight the conclusions drawn from the SGBA in respect of assessed Parcel P-018 and in particular to the 37 acres of land it owns to the north of Colliters Way. The SGBA confirms that this parcel of the Green Belt does not perform strongly against any of the five Green Belt purposes, and, ultimately, its weak contribution in respect of purposes (a), (b), and (d) are as such that the SGBA clearly expresses that the parcel should be considered as a grey belt opportunity. 3.4 Epic consider that the evidence base therefore provides clear and convincing evidence to justify the removal of Parcel P-018 from the Green Belt. As a consequence, this provides an opportunity to positively establish a framework that would support the utilisation of this land for purposes associated with the operation of Epic’s campus only. To this extent, Epic have suggested further policy wording, for incorporation within LP22, that would guide any such applications within the Plan period. 3.5 In summary, Epic respectfully request that the suggested amendments to Policy LP22 are incorporated within any Schedule of Proposed Modifications when the Local Plan is submitted for Examination in Public pursuant to Regulation 22 of the Town and Country Planning (Local Planning) (England) Regulations 2012 (as amended). Alternatively, if further consultation is undertaken prior to Regulation 22 submission, Epic would respectfully request that the amendments proposed are incorporated within a further Regulation 19 consultation draft.		
38976161	S Scott			No	• Justified			There is absolutely no way this development is any way justified. It has desecrated valuable agricultural land, which also stores a lot of winter water. Businesses like this should be using city centre office spaces, contributing to the rejuvenation of allied services such as cafes, restaurants and shops, rather than sprawling out over prime land - this might be appropriate in the USA, where space is available, but not in such a space-poor place. It would at least have been justifiable if it were housing, but this inward-looking, greedy, and arrogant development should not be here.			
62471329	Environment Agency		Environment Agency							Flood risk and climate change not mentioned in policy wording (but considered within the existing permission).	

Policy LP23: Monaghan Mushrooms, Stock Lane Langford Broad Location

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
39307969	YACWAG		YACWAG	Unsure	• Positively prepared	Unsure	Unsure		Expansion of development in this area would have an impact on a significant are of woodland. This would be detrimental to the North Somerset and Mendip Bats SAC and would result in an in combination negative impact taken with other approved development on the site and nearby.		
14339745	Paul Watkins			No	• Justified • Effective	No	No	You write 'however more comprehensive improvements will be required to support the full redevelopment of the site, including provision of improved pedestrian connectivity between the site and surrounding areas and highway safety measures. Any future design of the wider site must also incorporate the provision of bus travel into, out of and through the site as well as a substantial financial contribution to local bus services to offer genuine alternatives to travelling by car.' And exactly how would you ensure these took place? As usual NSC will grant planning, and then wonder why the developers are unable/unwilling to fund these critical improvements... we have seen this so many times with NSC, should we be surprised that it will happen again??...and lead to gridlock on Stock Lane.... all courtesy of NSC.. well done to you all!			
62794561	Danbywiske Limited	Christian Fisk	Danbywiske Limited	Yes		Yes	Yes	N/A	Recommended Alterations to Draft Policy LP23 Wording “Land within the Monaghan Mushrooms broad location site boundary as identified on the Policies Map is identified as a potential suitable area to accommodate additional housing growth as a result of redevelopment, some of which is subject to the successful relocation of the existing Mushroom Farm business operations being secured elsewhere within North Somerset.” The suggested change to the draft policy wording above, would allow for this portion of the landholding to come forward for development in advance of the relocation of the existing mushroom farm operation.	Pegasus Group has been instructed on behalf of Danbywiske Limited to make the following representation in relation to Draft Policy LP23 (Monagham Mushrooms, Stock Lane Langford Broad Location) of the North Somerset Local Plan 2041: Pre-submission Plan (Reg 19). Danbywiske Limited are supportive of Draft Policy LP23 (as landowners of this broad site location that comprises Policy LP23 as identified on the Policies Map) and broadly consider it sound when assessed against NPPF Para 36. Outline planning permission (ref. 23/P/0448/OUT) has been secured for 120 dwellinghouses plus non-residential floorspace (including employment uses) on land which is currently surplus to the requirements of the existing operation. This draft non-strategic policy enables the redevelopment of the existing mushroom farm through the outline permission as well as the remaining land holdings in the event that the facility relocates to alternative premises within North Somerset. This is consistent with NPPF Chapter 11 in making efficient use of underutilised and previously developed land. However, in addition to the delivery of the outline planning permission, there is opportunity for some residential development to come forward within the broad location site boundary (as identified on the Policies Map) in advance of the relocation of the existing mushroom farm operations. In particular, there is an existing field within the northeastern portion of the landholding which is not constrained by the ongoing operations of the mushroom farm business (see Figure 1 in the attached document). This land is ‘deliverable’ as defined in NPPF Annex 2 since it is available now and forms part of the wider mushroom farm site allocation identified in Schedule 1 and the Policies Map.	P20-3277 NSC Local Plan Reg 19 Reps.pdf
51572577	BNSSG ICB		NHS Property Services						We acknowledge that student accommodation and new homes are proposed under Policy LP19 and Policies LP20 and LP23 respectively. BNSSG ICB have not been engaged with by the Council on any of these sites to date, therefore there is concern that primary care infrastructure requirements have not yet been established on those sites. We strongly encourage further dialogue between ourselves and the Council on this matter. It is essential that identified healthcare infrastructure needs are reflected in each of these policies to ensure that the Local Plan has been positively prepared and is effective in capturing and communicating localised infrastructure needs. 63186689	Vistry Group	Boyer	Vistry Group	Yes					Vistry considers that the requirements for major development should not be set out in policy, as they should be covered by the formally adopted local list. As Policy DP1 is not consistent with a local list and does not provide sufficient flexibility, raises issues of soundness in respect to the effectiveness of the policy.		North Somerset Local Plan Pre-submission Plan - Representation form Policy LP5.pdf
63191617	Various Taylor Wimpey Crest Nicholson Barratt Redrow Vistry Group	Nick Matthews (Savills)		No	• Effective	Yes	Yes		These representations have been prepared and submitted by Savills on behalf of various clients including Taylor Wimpey, Crest Nicholson, Barratt Redrow, and Vistry Group. This draft policy focuses on the detailed aspects of design and the requirements for different forms of development. Our clients are thoroughly committed to the delivery of high quality design and support a policy framework that helps to achieve that objective. The comments made below and the suggested changes are aimed at enabling both effective decision◈making and high quality design outcomes. As an overarching point, the current draft of the policy is very lengthy. In a number of places it covers matters that are already the subject of other policies or Council documents and therefore do not need to be duplicated here. Below we suggest specific areas where changes could be made to streamline the policy wording, without compromising on the quality of outcomes that it will achieve,		Policy DP1 (High Quality Design) for Various (Dec 25).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									however, we would also be supportive of more comprehensive revisiting of the policy wording with a view to further streamlining and the removal of duplication - suggested changes to policy wording are contained in the attached document.		
51524513	Bellway Homes Ltd	tor&co	Bellway Homes Ltd	No	• Justified • Effective • Consistent with national policy			Bellway is thoroughly committed to delivering schemes demonstrating high-quality design. It has a proven track record of delivering attractive, safe and inclusive schemes. That being said, Bellway suggest that Draft Policy DP1 (High-quality Design) is reviewed to be more concise and focused on the key aspects of successful high-quality design for North Somerset specifically, including referencing other national design guidance or policy as necessary, with further detail placed in supporting text or other supplementary documents. It is important that the policy provides flexibility to ensure that the principles outlined are relevant / applicable to all sites and schemes. This should include provisions such as “as applicable” or “where appropriate”, as well as allowing for innovation that can give unique responses to site conditions rather than a holistic and overly prescriptive approach. It is unnecessary for the policy to address matters better dealt with by other policies (e.g. lighting). Finally, beneath the initial list, the following is stated: “Major development proposals should be accompanied by Design and Access Statements, parameter plans and Community Engagement Statements, providing evidence of effective community involvement in the development of the design. These do not need to be included with policy, as they are already covered within national and local validation requirements. Moreover, parameter plans may not be appropriate for full planning applications.	The policy should be reviewed as outlined to ensure it does not hinder sustainable sites from coming forward, and is justified, effective and consistent with national policy.		20251212 504317 JE - North Somerset Reg 19 (Reps obo Bellway Homes).pdf
63114593	Bloor Homes (North of Pound Lane Nailsea site)	Turley		No	• Positively prepared • Justified • Effective • Consistent with national policy		No	Policy DP1 (High Quality Design) Our comments from representations submitted with the previous Regulation 19 Consultation in January 2024 remain. Policy DP1 has support from national policy and other guidance in respect of supporting high quality design, to ensure that high quality new development is delivered in North Somerset. However, in common with other policies, the wording is lengthy and there are numerous detailed criteria, much of which is likely to be better placed in supporting text, or even other supporting design guidance, rather than an overarching design quality policy for the Local Plan. It is suggested that this policy is reviewed to be more concise and focused on the key aspects of successful high-quality design for North Somerset, including referencing other national design guidance or policy as necessary, with then more detail placed in supporting text or other supplementary documents.	It is suggested that this policy is reviewed to be more concise and focused on the key aspects of successful high-quality design for North Somerset, including referencing other national design guidance or policy as necessary, with then more detail placed in supporting text or other supplementary documents. 21472417	Mead Realisations Ltd	Oneleven Property		No	• Positively prepared • Justified • Effective • Consistent with national policy				Paragraph 131 of the Framework confirms that being clear about design expectations, and how these will be tested, is essential for achieving good design. The use of the words ‘…account will be taken of..’ with Policy DP1 is ambiguous and could cause unnecessary delay at the decision making stage. The policy is also very lengthy and would be better included in a supplementary planning document. management purposes.		Reg 19 Final Representations Mead Realisations 12.12.25 including appendices.pdf
9138657	Home Builders Federation		Home Builders Federation	No	• Consistent with national policy				HBF reiterates its general observations around the problems created by the current format of the Plan. The failure to include paragraph numbers and/or identifying numbers and/or lettering within the policy, and the supporting text, will create problems for plan users when seeking to refer to Plan, particularly for applicants and decision-takers. We note that policies are just written as a list of bullet points with no identifying numbering or lettering. The paragraphs of supporting text are also not numbered. This will make it very difficult for a developer, a planning officer, an elected member, or a member of the public to make specific reference to a particular part of the policy and text when preparing a planning application, writing a report, making a decision or making a representation on a planning application. The policies should be reformatted to improve the usability of the whole Plan, as currently written the Plan will be difficult to use and therefore ineffective, failing the tests of soundness. Policy DP1 is not considered to be sound as it is not consistent with national policy The wording of this policy is seeking to give Local Plan policy status to SPD which is contrary to national guidance. Planning policy must be made through the Local Plan process. This is subject to mandatory requirements for public consultation and independent		North Somerset 2nd Reg 19 Dec 25.docx

63006177	Mac Mic Strategic Land (Land north of Banwell Road)	Planning Potential (Elliot Jones)	Mac Mic Strategic Land	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Mac Mic are supportive of Policy DP1; however, it is noted that the policy requires that management plans should be submitted for the long term maintenance of all shared public and private spaces and facilities including public art, private drainage installations and SuDS, and services that the developer intends to provide instead of the Council. Accordingly, the proposals have been revised to ensure that they complement rather than compete with existing facilities, for instance, the proposed development will now provide for allotments, which was indicated as being in demand by local communities. The design and layout of the site will also consider that proximity of the skate park and will ensure that no residential amenity issues arise. Land to the north of Banwell Road, Elborough/Locking therefore represents a suitable, available and viable option for residential development and Mac Mic supports its allocation in the Pre-Submission Draft. The evidence gathered to date and which will be presented with the application shows that the site can successfully address all technical matters such as flooding, landscape and highways. It will be a highly sustainable, well-located residential development that provides for significant levels of green infrastructure, help address deficits in local services and facilities provision, and enable sustainable (non-car based) transport links to be created that will allow existing settlements better access to job provision, services and infrastructure. Recommendation For these reasons, whilst Mac Mic supports the current draft of Policy LP5 and that Land north of Banwell Road, Locking/ Elborough is included in Schedule 1, they object to the suggested capacity of the site and consider that it should be increased to 415 homes.	Recommendation For these reasons, whilst Mac Mic supports the current draft of Policy LP5 and that Land north of Banwell Road, Locking/Elborough is included in Schedule 1, they object to the suggested capacity of the site and consider that it should be increased to 415 homes.		01 North Somerset Local Plan Pre-Submission Plan Consultation Representations.pdf
63298945	Mac Mic Strategic Land (Backwell)	Planning Potential		No	• Effective	No	Yes	Mac Mic are supportive of Policy DP1 in principle. It is, however, noted that the policy requires that management plans should be submitted for the long term maintenance of all shared public and private spaces and facilities including public art, private drainage installations and SuDS and services that the developer intends to provide instead of the Council. It is agreed that this information should be provided, however, the policy does not specify when this information is required. 								should be made clear in the policy, as it is not considered appropriate to provide this level of detail at the outline planning application stage. This information should only be submitted once the principle of development has been approved, either when a full application or a Reserved Matter submission is made. Recommendation: It is considered that Policy DP1 should clearly specify when a management plan is required to be prepared and submitted in respect of the long term maintenance of shared public and private space, drainage infrastructure, SuDS and other services.			
39179649	Adrian Mealing			No	• Justified • Effective • Consistent with national policy	Yes	Yes	I consider Policy DP1 to be unsound because it is not justified, not effective, and not consistent with national policy. DP1 requires new development to achieve high design quality, reflect local character, integrate into its surroundings, enhance sense of place, protect landscape setting, and create safe, attractive and accessible streets and spaces. However, none of these requirements have been evidenced or secured for the three housing allocations proposed in Congresbury (183 dwellings). The Plan provides no mechanism to ensure that DP1 can actually be applied to these sites. 1. DP1 is not justified DP1 is dependent on robust character assessments, masterplanning, heritage assessment, landscape evidence, and design coding. However, for Congresbury: no village character appraisal exists, no landscape or visual impact assessment (LVIA) has been provided, no heritage setting assessment has been undertaken (particularly relevant to Cadbury Hill Fort), no urban design analysis of the A370 corridor form has been produced, no cumulative impact assessment of three allocations is included. This means DP1 is not justified by an appropriate evidence base. 2. DP1 is not effective DP1 cannot be implemented in Congresbury because: There is no masterplan coordinating the three allocations. No guidance is provided on protecting village identity or preventing coalescence with Yatton. Rural-edge development at Woodhill Nurseries is allocated without any specified design requirements for landscaping, views, massing, or rural transition. The Plan does not set out the infrastructure (active travel, public realm, green infrastructure) required for good design. No design codes or development briefs exist for any of the proposed sites. Without these tools, DP1 cannot lead to the high-quality design outcomes it seeks to secure. 3. DP1 is not consistent with national policy DP1 fails to reflect or deliver several NPPF requirements: NPPF 127–131: securing high-quality design requires character assessments, coding, and contextual analysis — none of which are provided for Congresbury. NPPF 174: protecting valued landscapes — no landscape assessment has been carried out for these allocations. NPPF 72: larger development sites require masterplans — none exist. NPPF 200–202: heritage must be conserved — yet the Woodhill Nurseries site impacts the wider setting of Cadbury Hill Fort without an assessment. Therefore, DP1 is not consistent with national policy for design-led planning.		To make DP1 sound, the Plan must include: A Congresbury-specific masterplan covering all three allocations, including: landscape character protection, rural edge design principles, views and setting of Cadbury Hill Fort, heritage parameters, active travel and movement network, green infrastructure strategy. A village character assessment forming the baseline for design decisions. Mandatory design codes for all Congresbury allocations before any planning applications are submitted. A requirement for full Landscape and Visual Impact Assessments (LVIA) for development on the village edge. A cumulative design and placemaking assessment of the three allocations. Without these modifications, DP1 cannot deliver high-quality, place-specific design and remains unsound.	
8126849	Sport England		Sport England							Support Active Design will help improve health and well-being as well as addressing climate	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										change and promoting active travel – more walking and cycling. This has considerable understanding with the Plan in particular: SP4 Placemaking - Policy and the 'tools' e.g. masterplanning, parameter plans and design codes DP1 High Quality Design DP49 Healthy Places Sport England, working with Active Travel England and the Office for Health Improvement and Disparities, has produced the 3rd version of 'Active Design' (May 2023), a guide to planning new developments that create the right environment to help people get more active, more often in the interests of health and wellbeing. The guidance sets out ten key principles for ensuring new developments incorporate opportunities for people to take part in sport and physical activity. The Active Design principles are aimed at contributing towards the Government's desire for the planning system to promote healthy communities through good urban design. Sport England would commend the use of the guidance in the master planning process for new residential developments. The document can be downloaded via this link Sport England believes that being active should be an intrinsic part of everyone's life pattern. Active Design has a lot of synergy with the TCPA "20 minute neighbourhood" concept. https://www.youtube.com/watch?v=mDaVBh1Bs7Y and https://www.youtube.com/watch?v=oRCJ4JL_LjM&list=TLPQMTIwMTIwMjS3NyOvSTN83A&index=2 The developer's checklist (Appendix 1) has been revised and can also be accessed via www.sportengland.org/activedesign In particular new housing sites as set out in Policies LP1, LP2, LP3, LP4 and LP5. Sport England would encourage development in North Somerset be designed in line with the Active Design principles to secure sustainable design. This could be evidenced by use of the checklist.	
22638625	Councillor Bridget Petty			Yes		Unsure	Unsure		On major developments, proposals for high quality public art will be requested. I think there is little need to justify, it should be clear that community inclusive public art will create better spaces and can be more inclusive for those who have lived in a place and the new residents. It can improve health and well being. It is impoartant it should not be optional. Anything over 100 houses should be participating in a proportionate way.		
39305665	Marcus Plaw Persimmon Homes		Persimmon Severn Valley	No	• Positively prepared • Consistent with national policy	Yes	No	The company objects to the provisions of this proposed policy in that it is imprecise. It sets out a list of principles that apply to all proposals. The Policy should assist the user advising whether these requirements in part or full relate to both full and outline applications. In both instances, the provisions of the policy are unduly onerous. The Policy should be rewritten explaining that which is relevant to outline and full applications. In being rewritten it would be more effective. The level of detail provided is unduly onerous with policy test requirements relating to all aspects of design. It would be more reasonable for a Design and Access Statement to address the key design and function considerations. Reference too to management plans being "…submitted for the long term maintenance of all shared public and private spaces and facilities including public art, private drainage installations and SuDS and services that the developer intends to provide instead of the council.". Whilst in some cases, indications of potential routes to site and facility management can be provided, given the protracted timescales and evolution post-submission of some development proposals, such accurate management information may not be readily available. A level of flexibility would therefore be a helpful response and should be incorporated into the policy wording.	The Policy should be rewritten to explain fully to which applications the principles apply. Reference to management plans being "…submitted for the long term maintenance of all shared public and private spaces and facilities including public art, private drainage installations and SuDS and services that the developer intends to provide instead of the council." requires rethinking. Whilst in some cases, indications of potential routes to site and facility management can be provided, given the protracted timescales and evolution post-submission of some development proposals, such accurate management information may not be readily available. A level of flexibility would therefore be a helpful response and should be incorporated into the policy wording.		
38976161	S Scott			Yes	• Effective			Could this be a bit more specific about how and when it is required and how it should be delivered? A Public Art Producer should be appointed to deliver this on behalf of the developer, via an art strategy that would be submitted as part of the planning application for approval. This would ensure that the work would be delivered appropriately and with the maximum benefit to communities, both local and cultural, within NS.			
31062913	R Storrar		KWAW	Yes		Yes	Yes			It is essential that all developers provide housing that is built to the highest possible specifications, both externally and internally. Visually they need to match the existing housing stock in both style and scale. For too long developers have built houses to a formula, based on the their balance sheets, not what is best for the communities.	
63070401	Emilia Leung			No	• Effective	No	Unsure	The Proposal is overly reliant on inflated national targets and infrastructure that cannot be delivered – whilst at the same time, ignoring local constraints. The Proposal is also inconsistent with national policy. Green Belt boundaries should only be altered in exceptional circumstances – and the review must show no "clear evidence that doing so would fundamentally undermine the purposes…of the remaining Green Belt".			

Policy DP2: Residential development within settlement boundaries

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
51524513	Bellway Homes Ltd	tor&co	Bellway Homes Ltd	No	• Justified • Effective • Consistent with national policy			Draft Policy DP2 (Residential Development within Settlement Boundaries) establishes specific and conditional design requirements for proposals involving new dwellings within predominantly residential areas within settlement boundaries. Whilst Bellway recognise the intention of the policy, its inclusion is considered unnecessary. Draft Policy DP1 already includes a substantial list of design requirements which address the requirements of this policy, resulting in unnecessary duplication of policies, in conflict with the NPPF. Moreover, the requirements are too vague and without quantification, leading to ineffectiveness in interpretation.	The policy should be deleted.		20251212 504317 JE - North Somerset Reg 19 (Reps obo Bellway Homes).pdf
39179649	Adrian Mealing			No	• Justified • Effective • Consistent with national policy	Yes	Yes	For DP2 to be justified, the Plan must demonstrate that the allocated sites can support the required residential standards. However, Congresbury's allocations lack: evidence of adequate internal and external space provision, assessments of noise, air quality, or amenity impacts from proximity to the A370, analysis of safe pedestrian access from housing to services, evidence of capacity for open space, play space, or community amenity, confirmation that layouts can accommodate parking, cycle storage, EV charging, refuse requirements, and accessibility standards, assessments on how higher densities might affect the village's rural character. Without these assessments, DP2 is not supported by the evidence necessary to justify its application. 2. DP2 is not effective DP2 cannot be delivered in Congresbury because the plan fails to provide: a masterplan showing how the three sites can achieve adequate layouts, space standards and amenity, a design code to guarantee DP2 standards across all sites, a strategy for open space and play space, which DP2 requires, confirmation that the village has capacity for the amenity requirements generated by 183 new homes, safe and direct routes for walking and cycling, needed for residential quality of life. The allocations also sit adjacent to a heavily trafficked main road (A370), raising issues around noise exposure and air quality that DP2 requires to be addressed but which the Plan does not evidence. This means DP2 cannot operate effectively for these allocations. 3. DP2 is not consistent with national policy The NPPF requires that: new homes provide a high standard of amenity (NPPF 130), developments create safe, accessible environments, residential layouts encourage sustainable travel, plans consider noise, air quality, and pollution exposure, adequate open space is provided (NPPF 98-100), development achieves well-designed places through design codes and local character assessments. The Congresbury allocations fail to meet these NPPF requirements because: no amenity assessments have been carried out, no design codes exist to enforce space and accessibility standards, walking/cycling infrastructure is missing, the proximity to the A370 raises unresolved pollution and noise concerns, open space provision is undefined and untested. Thus, DP2 is not consistent with the national policy framework.	To make DP2 sound, the Plan must: Provide a Congresbury-wide masterplan demonstrating how residential standards will be met across the three allocations. Produce village-specific design codes setting out requirements for: internal and external space standards, parking and cycle storage, green and open space, play space, accessibility, layout principles, A370 noise mitigation and buffers. Carry out noise and air quality assessments for the A370 corridor. Identify specific open space and play space delivery mechanisms. Provide safe pedestrian and cycle access plans from each allocation to the village centre. Without these modifications, DP2 cannot be implemented or enforced.		
31062913	R Storrar		KWAW	Yes		Yes	Yes			For too long developers have promised to build houses that meet local needs, then over time, alter the layout and composition of the housing estate, either by reducing the number of affordable homes, removing solar panels, car charging ports, reneging on CiL amounts, or reducing off-setting climate change measures. This policy, if properly enforced, will ensure that what is promised is delivered!

Policy DP3: Residential extensions

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
39179649	Adrian Mealing			No	• Justified • Effective • Consistent with national policy	Yes	Yes	I consider DP3 to be unsound because it is not justified, not effective, and not consistent with national policy. DP3 requires new development to be inclusive, accessible, walkable and connected, ensuring that all residents — including those with disabilities, limited mobility, or without access to a private vehicle — can reach services safely and conveniently. However, the three allocations in Congresbury (183 dwellings total) do not have the infrastructure or connectivity to meet DP3's requirements. 1. DP3 is not justified To be justified, the policy must be supported by evidence that the allocated sites can deliver inclusive, accessible development. However: No accessibility assessment has been carried out for Congresbury's housing sites. There is no continuous footpath from the Woodhill Nurseries or Mulberry Road sites to the village centre. The A370 presents a significant barrier to safe pedestrian movement, with no funded crossings. The Plan provides no evidence that people with disabilities or mobility challenges can access key services from the allocations. There is no assessment of walking distances or inclusive access to the school, GP, shops, bus stops, or community facilities. Without this evidence, DP3 is not justified. 2. DP3 is not effective DP3 cannot be delivered in Congresbury because: There is no safe, step-free, continuous walking route between the allocated sites and key village destinations. The Smallway junction crossing required for Woodhill Nurseries is unfunded and not in the Infrastructure Delivery Plan. Congresbury's bus service is intermittent and undependable, making inclusive access to employment and services impossible without a car. No public realm improvements, dropped kerbs, tactile paving, or mobility-friendly upgrades are planned. No inclusive mobility audit has been undertaken to confirm these sites can meet DP3's standards. Therefore, DP3 is not implementable. 3. DP3 is not consistent with national policy The NPPF requires development to: promote inclusive and accessible environments (NPPF 92 & 130), enable safe and suitable access for all users (NPPF 110), reduce barriers for people with disabilities, ensure layouts support walking and cycling, locate development where sustainable access is available. The Congresbury allocations are inconsistent with the NPPF because: They rely on walking routes that do not exist today. They require movement across or along the dangerous A370, which has no safe infrastructure for vulnerable users. The absence of public transport improvements fails NPPF inclusive access expectations. The reliance on cars disadvantages those who cannot drive, directly conflicting with national policy. DP3 therefore fails to align with the NPPF.	To make DP3 sound, the Plan must include: A Congresbury Accessibility Audit, evaluating safe, inclusive access from each allocated site to village services. Delivery of continuous, step-free, well-lit pedestrian routes linking all allocations to: the primary school, GP facilities, shops and services, bus stops, community spaces. A fully funded and designed pedestrian/cycle crossing at Smallway and at other A370 pinch points. Public realm upgrades including dropped kerbs, tactile paving, mobility-friendly surfacing and lighting. A requirement for development proposals to demonstrate car-free internal movement, inclusive design, and pedestrian-focused layouts. Improvements to public transport accessibility and frequency for the village. Without these modifications, DP3 cannot be delivered or enforced.

Policy DP4: Houses in Multiple Occupation and residential subdivision

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
39179649	Adrian Mealing			No	• Justified • Effective • Consistent with national policy	Yes	Yes	I consider Policy DP4 to be unsound because it is not justified, not effective, and not consistent with national policy. DP4 requires new development to ensure a high standard of residential amenity for both existing and future occupants, including protection from noise, air pollution, overlooking, overshadowing, traffic impacts, poor layout, and inadequate open space. However, the three Congresbury allocations (183 dwellings) fail to demonstrate that these amenity requirements can be met.	To make DP4 sound, the Plan must include: A full Amenity Impact Assessment for all Congresbury allocations, including noise, air quality, traffic, overshadowing and overlooking. Noise and air quality modelling for sites bordering the A370, including minimum buffer distances and acoustic		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								My concerns are as follows: 1. DP4 is not justified For DP4 to be justified, the Council must show that the allocations can deliver acceptable amenity conditions for future residents. However: No noise assessment has been carried out for the Woodhill Nurseries or Mulberry Road sites despite immediate proximity to the heavily trafficked A370. No air quality assessment exists to demonstrate the suitability of development near the A370 corridor. No Amenity Impact Assessment has been undertaken for existing residents surrounding the sites. The plan provides no green space strategy, no noise-buffering measures, and no design evidence showing how good amenity can be achieved. No evidence exists that the three sites can accommodate required private amenity space, play space, or community open space. DP4 therefore lacks the evidence base required to justify its application. 2. DP4 is not effective DP4 cannot be implemented effectively in Congresbury because: No site-specific mitigation measures are required for noise, pollution, or traffic impacts. The A370 creates a significant pollution and noise environment, yet the plan does not set out minimum distance buffers, acoustic screening, or layout requirements. No analysis has been undertaken of cumulative amenity harm from developing three adjacent/nearby sites in a village constrained by narrow lanes and limited service capacity. The allocations provide no detailed amenity protection requirements for existing homes bordering the development sites. No safe or continuous walking routes currently exist, reducing residential amenity and quality of life for future occupants. Therefore DP4 cannot be delivered in the form presented and is not effective. 3. DP4 is not consistent with national policy The NPPF requires Local Plans to: secure a high standard of amenity for all current and future users (NPPF 130), avoid exposing residents to unacceptable noise (NPPF 185), ensure layouts protect health and wellbeing, consider air quality, pollution and transport noise, integrate high-quality open spaces (NPPF 98–100). The Congresbury allocations do not comply with these requirements because: There is no evidence that future residents would not be exposed to harmful noise levels from the A370. Air quality exposure has not been assessed. No strategic or site-level open space provision is identified. No analysis is conducted on the amenity impacts on existing local residents. No mechanisms for play space, public open space, or quiet/green amenity areas are provided. As a result, DP4 is not consistent with national policy and is unsound.	mitigation. Clear amenity-based layout and spacing standards for all allocations. A defined open space, play space and green space strategy for Congresbury. A requirement for off-site public realm improvements to support community amenity. A cumulative assessment of amenity impacts from all three allocated sites. Ensuring that development does not significantly reduce the amenity of existing residents. Without these modifications, DP4 cannot be implemented and remains unsound.		
31062913	R Storrar		KWAW	Yes		Yes	Yes			It is necessary to uphold this strategy and thereby prevent the cramped infill that comes from garden developments.

63191617	Various Taylor Wimpey Crest Nicholson Barratt Redrow Vistry Group	Savills		No	• Positively prepared • Effective	Yes	Yes		These representations have been prepared and submitted by Savills on behalf of various clients including Taylor Wimpey, Crest Nicholson, Barratt Redrow, and Vistry Group. This draft policy sets out ways in which development can be designed to demonstrate that the vulnerability to climate change has been taken into consideration. Our clients support the principle of what the draft policy seeks to achieve, i.e. encouraging new development to be resilient to the impacts of climate change. However, they have one detailed objection to this policy.		Policy DP5 (Climate Change) for Various (Dec 25).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									The requirements to 'protect existing ... green and blue infrastructure including peatlands, wetlands and woodlands' (heading 2, bullet point 1 (emphasis added)) and 'protect existing ... biodiversity' (heading 2, bullet point 2) should be removed. The inclusion of the word 'including' suggests that the list that follows is not closed. The effect of the policy is therefore to protect (i.e. retain unchanged) all green and blue infrastructure. As such, these requirements are unnecessarily onerous and imprecise and, thereby, ineffective. Furthermore, they do not take into consideration the quality of existing green/blue infrastructure and biodiversity features or the principle of mitigating e.g. it may be that a higher percentage of biodiversity net gain could be achieved through the removal of existing poor quality habitats and the provision of new high quality habitats. See attached document for emphasis added.		
51524513	Bellway Homes Ltd	tor&co	Bellway Homes Ltd	No	• Justified • Effective • Consistent with national policy			Draft Policy DP5 (Climate Change Adaptation and Resilience) requires all development to address climate adaptation and resilience, ensuring that proposals recognise climate-related risks and vulnerabilities and incorporate measures to reduce these risks. Bellway supports the principle of Draft Policy DP5 and its overall objective and is committed to tackling climate change, supporting the promotion of low carbon ways of living. Nevertheless, there are a few amendments that should be considered to improve the effectiveness and overall soundness of the policy: • Greater clarity on expectations for minor vs major development is required in relation to the climate change adaptation statement and its content. The policy begins that "All developments" should demonstrate compliance through such a statement, yet only sets out detailed expectations for major development, despite several items potentially being relevant to minor schemes. An alternative approach would be to list the requirements applicable to all development, with the caveat "as relevant", and require a specific, standalone climate change adaptation statement only for major development, thereby reducing unnecessary burden on smaller applications. • The opening paragraph could be simplified by removing the phrase "which can form part of the sustainability/energy or the design and access statement." This explanatory detail is better placed within supporting text. Furthermore, we suggest the location this is detailed could be broadened – as it may not be necessary for every application to include a sustainability/energy statement or Design and Access Statement (noting our earlier point that a specific adaptation statement should only be mandatory for major development). The sentence referring to species selection for new trees and green infrastructure – "When incorporating new trees and other green infrastructure into new development, species should be selected which will be suitable in a changing climate." – could be removed to streamline the policy. This guidance would be more appropriately located within Draft Policy DP43, or better still, the proposed Trees and Woodland SPD.	Draft Policy DP5 (Climate Change Adaptation and Resilience) requires all development to address climate adaptation and resilience, ensuring that proposals recognise climate-related risks and vulnerabilities and incorporate measures to reduce these risks. 58664673	Catesby Estates	Stantec	Catesby Estates	No	• Justified			Policy DP5 has been subject to review from the technical expertise within the Sustainability Team at Stantec. • Policy DP5 as proposed within the Pre-Submission Plan 2041 requires evidence of how climate related risks will be addressed and reduced to accompany development and specifically major development, including: o Flooding; o High temperatures; o Water efficiency; o Construction material selection; and o Air quality. The policy also includes provisions for Nature-based solutions to also be demonstrated, for carbon storage and flood resilience benefits. The policy is noted to align with the Council's 2019 climate emergency declaration and 2030 carbon neutrality target. The policy broadly aligns with the NPPF and links to Policy SP2 in the Reg 19 plan. However, the policy lacks clarity that would make evident how a decision maker should react to development proposals, as required by NPPF Paragraph 16d). In the review of Policy DP5, it is concluded that the policy lacks specific metrics or targets for what constitutes adequate resilience. No clear guidance is provided on how 'adaptation' will be measured, enforced or managed over the long term. Supporting evidence on climate projections and water stress assessments for North Somerset is limited or absent and therefore appropriate measures for the locality cannot be identified and requirements are not justified. In the absence thereof, the review of Policy DP5 could not determine that the policy meets the tests of soundness as set out in NPPF Paragraph 36. There is no apparent evidence base document identified as part of the review undertaken that takes into account the cumulative effect of the adaptation and resilience policies. Overall, there is a lack of information and evidence on what might constitute compliance monitoring mechanisms. The policy aims to support climate objectives but lacks specificity in terms of requirements, targets and methodologies. A more robust evidence base should be provided on local climate risks and appropriate responses to ensure that the policy implementation achieves the policy intent – that is, that the measures	In the absence of detailed guidance of implementation, the following policy wording amendment is proposed - see attached document.		Appendix to representations - compressed.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								that applications will seek to deploy are appropriate to the local circumstances and risks. The requirement in respect to nature-based solution is vague, with little or no information about how the expected solutions would be required to demonstrate or monitor achievement of the intended benefits. It is noted in explanatory text that a Supplementary Planning Document (SPD) will be prepared to set out the detail for how these policy requirements will be implemented, and that such clarification would be welcome. However, such guidance will need to be closely aligned with the evidence base and indeed the Local Plan's assumptions on viability or any more robust and up-to-date assessment to be consulted upon alongside a draft SPD. In the absence of detailed guidance of implementation, the following policy wording amendment is proposed - see attached document.			
21472417	Mead Realisations Ltd	Oneleven Property		No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy			Objection is raised to this policy as it is considered far too onerous and inconsistent with national policy.			Reg 19 Final Representations Mead Realisations 12.12.25 including appendices.pdf
30301601	Ainscough Strategic Land	Chris Price	Ainscough Strategic Land	Yes						Policy DP5 requires development to address climate adaptation and resilience, ensuring development recognises climate related risks and incorporates measures to reduce these risks. ASL supports the objectives of Policy DP5, and the requirement to prepare a 'climate change adaptation statement' (or its inclusions in a sustainability/energy or design and access statement) to demonstrate how development aims to deliver long term climate resilience.	61683 - NSC Reg 19 Representations December 2025 2-12-25.pdf
939361	R Burrows		-	No	‣ Positively prepared ‣ Justified ‣ Effective	Unsure	Unsure	There are several inherent conflicts and specific policies that are argued to constrain development, particularly housing delivery. When coupled with other documents outside of the local plan, such SPDs as the proposed enlarged Bat SAC. It is questioned how NSC will deliver windfall sites & small sites at all. The financial burden is already onerous and this will add too much financial burden on small developers & self builders who should be exempt. Coupled with flood risk and the absurdity of designing to an undefended flood situation (rather than breach modelling) an almost impossible scenario where the flood defences are completely removed. To design to the absolute worse case (doomsday) scenario is unrealistic and far from pragmatic. Development Management Policies (DP), particularly those related to climate change, sustainability standards, and flood risk, make the delivery of growth procedurally and economically harder. This is highlighted by the fact that the LPA was found not to have delivered a five-year supply of housing for at least 13 years, suggesting the existing constraints are already impacting deliverability. This will exacerbate the situation & the financial burden of compliance with policies that duplicate existing primary legislation uneccessary.	Policy DP5: Suggested Rewording (Limiting Applicability): The requirement for a climate change adaptation statement should apply only to: "All development for 10 or more dwellings". The cost is onerous on small scale developers, self builders etc.		
62850529	Andy Chappel			No	‣ Justified ‣ Effective ‣ Consistent with national policy	Yes	Yes	Justification – The mechanism for achieving carbon neutrality by 2030 is not fully evidenced. Effectiveness – Monitoring and enforcement of climate measures is unclear. Consistency with national policy – See the National Planning Policy Framework (paras 152–158) which require robust climate-mitigation and adaptation mechanisms.	Require all adaptation statements to include nature-based solutions (woodland, wetlands, shading corridors, natural flood management). - Require assessment of overheating risks. - Require alignment with the Local Nature Recovery Strategy. - Require long term monitoring and updating of adaptation plans for major sites.		
51560705	Dan Clarke-Hall (Gibson Architecture)		Gibson Architecture	No	‣ Effective	Unsure	Unsure	I believe the plan to disproprtionately affect small developers. I am unsure of the validity of the housing allocation, especially the windfall sites which I believe the plan overestimates. Windfall numbers are decreasing and flood, climate policy among others are making North Somerset incredibly unattractive to small to medium developers. The attached document includes all of my opinions on the plan. DP5 – Climate Change Adaptation and Resilience • Issue: Adaptation statement requirement is onerous for small sites.	My proposed modifications are included in the associated representation. DP5 – Climate Change Adaptation and Resilience • Modification: Apply only to developments of 10 or more dwellings.		Dan Clarke Hall.pdf
63299425	Mac Mic Strategic Land Flax Bourton	Planning Potential	Mac Mic Strategic Land	No	‣ Justified	No	Yes		This policy requires all major development to submit a climate change adaptation statement. The purpose of this statement is to provide evidence as to how climate-related risks are to be addressed and reduced, through development proposals. The statement is to demonstrate how areas vulnerable to increased flooding have been avoided, how measures to mitigate high temperatures at building and site level have been incorporated, and to provide evidence to demonstrate how nature-based solutions, which enable carbon storage and provide flood resilience, have been integrated into proposals Mac Mic supports the Council's approach in seeking to ensure that the effects of climate change has been fully taken into account in development proposals. They note, however, that such statements are likely to replicate much of the information that is required to be submitted with major developments such as within Environmental Statements. Mac Mic supports the need for climate change resilience and, as a company, their schemes will seek to ensure that consideration of the impact of climate change is built into proposed development from the start. Measures to address climate change are incorporated at the design stage. It is considered, however, that there are better mechanisms to achieve this goal than the provision of an additional statement or report.		North Somerset Local Plan Pre-Submission Plan - Flax Bourton Representations Final.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 39179649	Adrian Mealing			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Yes	Yes	I consider Policy DP5 to be unsound because it is not positively prepared, not justified, not effective, and not consistent with national policy. DP5 states that development must be resilient to climate change impacts, prioritise adaptation measures, avoid flood risk, integrate sustainable drainage, reduce overheating, manage water resources and protect ecological networks. However, the three Congresbury allocations (183 dwellings) do not demonstrate that they can meet these requirements. There is no evidence or infrastructure in the Plan enabling DP5 to be implemented in Congresbury. 1. DP5 is not positively prepared	To make DP5 sound, the Plan must include: A full flood-risk Sequential Test for the Congresbury allocations, demonstrating whether lower-risk sites exist. Detailed climate-resilience assessments for Congresbury, including: flood modelling (fluvial and surface water), drainage capacity testing, climate-change rainfall allowances, groundwater risk assessment. A village-specific SuDS strategy, identifying: on-site attenuation, watercourse capacity, exceedance routes, long-term maintenance. A heat-resilience strategy for all allocations (tree planting, green corridors, shading design, orientation).		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Congresbury lies in an area already experiencing climate-related risks including surface water flooding, river flooding (Congresbury Yeo), rising groundwater and ecological vulnerability affecting the Bats SAC. Despite this, DP5 does not include any: local climate-risk assessments for Congresbury, drainage infrastructure upgrades, flood mitigation plans for the allocated sites, adaptation strategies for extreme heat, resilience measures tied to development phasing, commitments to bollard-level or street-level SuDS integration. Allocating housing in climate-sensitive areas without adaptation planning is not positive planning. 2. DP5 is not justified. DP5 requires evidence demonstrating that the allocated sites can adapt to climate impacts. However: The Woodhill Nurseries site includes areas requiring the Sequential Test, yet no site-specific flood modelling is provided. No assessment of surface water management capacity exists for any allocation. No climate-change rainfall allowances or future flooding scenarios have been produced for Congresbury's network of rhynes. The cumulative impact of 183 homes on drainage has not been assessed. No ecological or climate resilience appraisal has been undertaken for development within or adjacent to horseshoe bat sustenance zones. Without this evidence, DP5 is not justified. 3. DP5 is not effective. DP5 cannot be delivered in Congresbury because: No SuDS (Sustainable Drainage Systems) strategy has been proposed. There is no plan for upgrading the drainage infrastructure which already struggles during heavy rainfall. No heat-mitigation strategy exists (shade, green infrastructure, orientation, ventilation) No climate-mitigation design principles (e.g., tree canopy cover) are required for the 3 sites. The policy relies on individual planning applications to resolve climate adaptation issues — contrary to the NPPF requirement for plan-level climate resilience. This makes DP5 unimplementable and ineffective. 4. DP5 is not consistent with national policy. The NPPF requires that plans: proactively plan for climate change (NPPF 152), avoid risk from flooding through the Sequential Test (NPPF 159–162), reduce the vulnerability of communities to climate-related hazards (NPPF 153), ensure development is climate-resilient at plan stage, not application stage (NPPF 154). The Congresbury allocations breach these requirements because: the flood-risk Sequential Test has not been evidenced, no climate resilience modelling exists, drainage capacity and future climate risk have not been assessed, ecological corridors (linked to the Bats SAC) are at risk from lighting, urbanisation and loss of permeable surfaces.DP5 therefore fails key national climate-change policies.	A cumulative climate impact assessment for the 183 homes. A climate-appropriate ecological and lighting strategy to protect the North Somerset & Mendip Bats SAC. Without these modifications, DP5 cannot be delivered and remains unsound.		
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	• Positively prepared • Consistent with national policy	Yes	No	The provisions of this policy are unduly onerous and unreasonable. The requirement for a climate change adaptation statement places an unreasonable burden on applicants and also, ultimately, officers the latter who are charged to determine planning applications within their statutory periods. Flood Risk Assessments coupled with Drainage Assessments provide evidence covering the provisions of this policy – and these are documents found normally in the Council's planning application checklist and expected to accompany planning applications as necessary. The Policy also lack precision. It references: - Avoiding areas vulnerable to 'increased' flooding. Such terminology is unclear to the user and so it is assumed only that this means areas that could, in the future, be liable to flooding. Clarification is necessary. - Measures mitigating high temperatures at building and site levels is something that can be achieved say through strategic planting and wider green infrastructure. It is unhelpful for the policy to use 'for example' in its wording – the policy should be drafted with more precision and clarity. - Not impacting air quality. Again this is a matter which matter for a bespoke air quality assessment undertaken as part of a planning application. - Nature-based solutions are again matters best addressed through technical reports on ecology, flood risk and drainage (and other relevant documents including the DAS).	That the Local Plan policy is amended responding to the following: - Avoiding areas vulnerable to 'increased' flooding. Such terminology is unclear to the user and so it is assumed only that this means areas that could, in the future, be liable to flooding. Clarification is necessary. - Measures mitigating high temperatures at building and site levels is something that can be achieved say through strategic planting and wider green infrastructure. It is unhelpful for the policy to use 'for example' in its wording – the policy should be drafted with more precision and clarity. - Not impacting air quality. Again this is a matter which matter for a bespoke air quality assessment undertaken as part of a planning application. - Nature-based solutions are again matters best addressed through technical reports on ecology, flood risk and drainage (and other relevant documents including a DAS).		
62943009	Homes England	Avison Young (Peter Stockall)	Homes England	No	• Effective	Unsure	Unsure		Whilst Homes England are broadly supportive of principle objectives set out within Policy DP5 on climate change adaptation and resilience they have concerns with the potential for unnecessary repetition within other subject focused policies covering elements such as biodiversity, sustainable design, energy and flood risk. They are also concerned that the majority of climate change provisions are also covered through adoption of Part O of building regulations so the policy needs to be worded in such a manner to avoid any areas of potential conflict. We also note a Supplementary Planning Document (SPD) will be prepared to set out the detail for how these policy requirements will be implemented. As currently worded the		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									policy is overarching and vague. Given how this key policy relates to other policy requirements in the Local Plan and is vague, we are concerned that the SPD is likely to introduce requirements that are more stringent than those set out in Policy DP5. We also have a general concern with the number of references to future SPDs within the draft plan defining such future detail which has the potential for future confusion and is not a sound way of plan making. Therefore, Policy DP5 needs to be further refined with a view to reconsidering if the preparation of an SPD is actually required.		
31062913	R Storrar		KWAW	Yes		Yes	Yes			A major concern through this region is flooding. All development needs to show it can withstand substantial periods of rainfall and not within areas of flood risk. What were once one in one hundred year events are rapidly becoming one in 10 year events. This particularly applies to isolated housing estates on agricultural land that border flood risk areas, The developer needs to show that not only will the area not flood or cause extra run off, but that the area itself will not be cut off and prevent emergency services from reaching stranded vulnerable people.	
15430817	Mike Tremlett		Graham Moir Associates						This requires a ‘climate change adaption statement’. What does this look like for smaller or minor developments? Does anybody know or is this just someone’s ‘good idea’ to make the planning application process even more difficult to navigate? Cross reference is made to policy SP1 and the same principals apply regarding building regulation standards so the same wording should be added as follows: All development for 10 or more dwellings.		
62471329	Environment Agency		Environment Agency	Yes						We support this policy and welcome links to other requirements, policies and that a Supplementary Planning Document (SPD) will be prepared.	

Policy DP6: Net zero construction

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
63286689	McCarthy Stone & Churchill Living	The Planning Bureau Ltd						Policy DP6 identifies the requirements that development must be designed to in order to reach net zero including operational, up front and whole life carbon. The policy also confirms that compliance can be demonstrated through Passivhaus Plus Standard accreditation, using the Passivhaus Planning Package. Whilst the Council’s commitment to meeting both its and the UK Government’s target of net zero carbon emissions is commendable, it appears that the Council is going to achieve this through having mandatory carbon and climate standards from adoption of the plan that may go beyond government targets. However, it is our view that any requirement should be ‘stepped’ in line with Government targets and the proposed changes to the building regulations. This approach is confirmed within the Ministerial Statement (statement no : Statement UIN HCWS123 available from Written statements – Written questions, answers and statements – UK Parliament) released on 13th December 2023. The ministerial statement confirms, with respect to the net zero goal that: "The improvement in standards already in force, alongside the ones which are due in 2025, demonstrates the Government’s commitment to ensuring new properties have a much lower impact on the environment in the future. In this context, the Government does not expect plan-makers to set local energy efficiency standards for buildings that go beyond current or planned buildings regulations. The proliferation of multiple, local standards by local authority area can add further costs to building new homes by adding complexity and undermining economies of scale. Any planning policies that propose local energy efficiency standards for buildings that go beyond current or planned buildings regulation should be rejected at examination if they do not have a well-reasoned and robustly costed rationale’ and ‘To be sound, local plans must be consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in the National Planning Policy Framework and other statements of national planning policy, including this one’	The Council should re-consider the policy DP6 to ensure requirements are not going beyond government targets.		2025_MS and CL response to North Somerset submission Local Plan reg 19 - Redacted.pdf
63359201	Nailsea Holdings LVA LLP	Matthew Kendrick	Nailsea Holdings LVA LLP	Unsure	• Justified • Effective • Consistent with national policy	Unsure	Unsure		Policy DP6 introduces a wide range of locally specific energy and carbon requirements that go significantly beyond national Building Regulations. While the principle of supporting sustainable construction is recognised, the policy is not justified by proportionate evidence. It requires developments to achieve “net zero operational energy”, impose ultra-low energy use thresholds, and minimise embodied carbon, but provides no clear viability evidence demonstrating that these expectations can realistically be delivered across all development typologies in North Somerset. The Council’s own viability assessment confirms that achieving the performance standards implied by DP6 will add 4–9% to base build costs for residential development. This uplift sits on top of the recently introduced national Part L		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									2021 requirements, which themselves represent a 31% reduction in energy use ahead of the Future Homes Standard. Importantly, the assessment notes that BCIS data has not yet adjusted to reflect these new national standards, meaning that the additional DP6 cost impacts are likely underestimated at this stage. The assessment also records that the embodied carbon requirement, added late to the policy, was treated as having only a “nominal” viability cost rather than being independently tested or sensitivity modelled. This is material: DP6 now requires embodied carbon assessments for schemes of 50 dwellings or more, setting specific $kgCO_2e/m^2$ thresholds without any robust evidence that such requirements are viable on non-strategic, medium-sized sites. The assessment further acknowledges that the short-term economic context, including high construction inflation, is likely to make viability “challenging in some cases”, particularly outside the strongest value areas. Given these concerns, we consider DP6 is not appropriately justified, effective, or consistent with national policy, particularly as the Government intends the Future Homes Standard to regulate energy performance at a national level. To be sound, the policy requires refinement, and further viability testing, particularly in relation to the deliverability of small and medium-sized sites in sustainable locations.		
31149537	Strongvox Ltd	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	In our client’s previous representations on the Regulation 18 draft policies, it was identified that the proposed approach was contrary to national policy. The Council has not provided any additional evidence since the last consultation to demonstrate exceptional circumstances justifying that this policy is appropriate for inclusion in the draft Local Plan. Therefore, it remains unfeasible to include the policy without further supporting evidence. The Written Ministerial Statement Planning: Local Energy Efficiency Standards - 13th December 2023 informed councils that the government expects examiners to reject local plans that go beyond current national policy and legislative provisions. This has recently been tested in the Court of Appeal, which concluded that local authorities may set higher requirements exceptionally, subject to there being strong justification for such. Thus, there is an implicit evidential bar for doing so. In this instance, there is no clear evidence demonstrating that requirements in excess of the Building Regulations, which establish the standards that central government deems appropriate with respect, inter alia, to energy efficiency and domestic renewable technologies, are reasonably justified. While our client supports in principle the achievement of high levels of energy efficiency an the use of renewables, it is important real-world considerations including ensuring that development remains viable, having regard to other factors in this respect, and the impact on housing supply and affordability remains in accordance with the National Planning Policy Framework. This should be taken into consideration by the Council regarding this specific need, which, without substantive evidence otherwise, should not seek to push local standards beyond those established through Building Regulations.	The policy should contain flexibility to positively receive proposals that improve upon them, but not require new development ordinarily to go beyond the standards set out in the Building Regulations. 63186689	Vistry Group	Boyer	Vistry Group	Yes					There is no mention of the Future Homes Standard within the supporting text and the omission of any reference to FHS brings into question the soundness of the policy in terms of consistency with national policy. The Policy seeks to move away from the carbon reduction methods set out in current Part L of the Building Regulations and instead sets out a net zero operational energy requirement with specifications for space heating demand and operational energy use. Vistry is concerned that these specifications may not be consistent with the final FHS specifications and therefore not consistent with national policy. As such, the Council should ensure Policy DP6 is consistent with FHS and does not go beyond planned building regulations		North Somerset Local Plan Pre-submission Plan - Representation form Policy LP5.pdf
63191617	Various Taylor Wimpey Crest Nicholson Barratt Redrow Vistry Group	Nick Matthews (Savills)		No	Consistent with national policy	Yes	Yes		These representations have been prepared and submitted by Savills on behalf of various clients including Taylor Wimpey, Crest Nicholson, Barratt Redrow, and Vistry Group. Draft Policy DP6 seeks to establish a series of standards for new residential and non-residential buildings relating to embodied carbon, fabric efficiency in new buildings and the generation of on-site renewable energy. Whilst we acknowledge the desire to establish ambitious targets for future development in North Somerset, for the reasons explained below, we do not consider the proposed policy approach to be consistent with national policy and therefore sound. On 13 December 2023 there was a Written Ministerial Statement (WMS) published by the Minister of State for Housing, Lee Rowley, which directly addresses policies such as DP6. The WMS includes a number of statements which are pertinent to the soundness of the draft policy:a) “The improvement in standards already in force, alongside the ones which are due in 2025, demonstrates the Government’s commitment to ensuring new properties have a much lower impact on the environment in the future. In this context, the Government does not expect plan-makers to set local energy efficiency standards for buildings that go beyond current or planned buildings regulations. .b) Any planning policies that propose local energy efficiency standards for buildings that go beyond current or planned buildings regulation should be rejected at examination if they do not have a well◈reasoned and robustly costed rationale that ensures:• That development remains viable, and the impact on housing supply and affordability is considered in accordance with the National Planning Policy Framework.• The additional requirement is expressed as a percentage uplift of a dwelling’s Target Emissions Rate (TER) calculated using a specified version of the Standard Assessment Procedure (SAP) c) Where plan policies go beyond current or planned building regulations, those polices should be applied flexibly to decisions on planning applications and appeals where the applicant can demonstrate that meeting the higher standards is not technically feasible, in relation to the availability of appropriate local energy infrastructure (for example adequate existing and planned grid connections) and access to adequate supply chains.d) To be sound, local plans must be consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in the National Planning Policy Framework and other statements of national planning policy, including this one”. [emphasis added] In June 2024, a legal challenge against the 13 December 2023 WMS was heard in the High Court on three grounds: failure to consider environmental principles under the Environment Act 2021, unlawful constraint of local planning authority powers under the Planning and Energy Act 2008, and misdirection regarding the presumption in favour of the development plan. The challenge was unsuccessful on all counts. In June 2025, an appeal of the above verdict was heard, and the Court of Appeal dismissed the claim and maintained that the 2023 WMS represents a sound interpretation of the legislation by setting the parameters under which the Government expects the legislation to be applied, namely that an LPA is able to set a local standard up to the level of the draft Future Homes Standard. It is clear from the WMS that the Government considers the Building Regulations to be the preferred and primary mechanism to deliver improvements in energy efficiency and reduce the carbon emissions from development. There are a number of reasons why such an approach is supported and considered to be appropriate and sound. First, there is a logical cut off point between the two statutory regimes which it is helpful to remain separate. Planning is concerned with matters such as the location, form and design of new development, and Building Regulations controls matters of detailed design and construction such as building fabric, fire safety, access etc. These two statutory regimes are both equally important but have necessarily separate application and approval processes which reflect the stage at which they are applied to development and the knowledge of building form and fabric which is available at each stage. There is a good logic to maintaining a clear separation between these two regimes. Planning has an extremely important role to play in reducing carbon emissions and tackling the climate emergency but it should seek to achieve this through policies which direct and ‘plan’ for development in a sustainable manner; it should not seek to stray into territory which is better achieved through nationally prescribed Building Regulations. According to Government published statistics from 2021, the largest contributor to greenhouse gas emissions in the UK is transport. Indeed, the movement of people and goods accounts for approximately 26% of emissions, considerably more than residential emissions which account for 16%1. The plan-making process therefore has an extremely important role to play in addressing the NSC declared climate emergency without stepping into and duplicating policy areas which are better addressed at the Building Regulations stage of the development process. Second, as expressed at Policy (c) above, the Government has strategic (i.e. beyond local authority level) concerns over the capacity of the current grid to accommodate additional local energy infrastructure and the availability of supply chains to meet the need for new building technologies that are required to achieve tightening standards. The former is a particular concern for a policy approach such as that proposed in Policy DP6. Draft Policy DP6 proposes that “on-site renewable energy generation is maximised, equivalent to at least the onsite energy demand”. In order to meet this target it is inevitable that off-plot renewable energy will be required as very few buildings have sufficient roof space to accommodate PV panels which would meet the building’s operational energy demands. Any renewable energy generated which is not provided within a build demise would need to have a connection to the grid. This results in a number of complications over ownership of the energy infrastructure, the establishment of energy supply companies, grid connections etc which are highly likely to preclude the technical and financial viability of achieving the draft policy requirement. Third, it is important to consider the policy in the context of the changing national requirements emerging through Building Regulations. The Future Homes Standard is expected to be implemented in England by December 2027, following the final regulations expected to be published at the end of 2025 and becoming 1 https://www.gov.uk/government/statistics/final-uk-greenhouse-gas-emissions-national-statistics-1990-to-2021 law in December 2026. This will necessitate all new homes to achieve the Future Homes Standard and be net zero ready. Then in 2030, the Government is committed to having decarbonised the grid. Consequently, homes built to the Future Homes Standard during the early years of the plan period will operate with very low carbon emissions, meaning that		Policy DP6 (Net Zero) for Various (Dec 25).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 									the difference between national standards and local plan requirements will diminish significantly over time. Conclusion Our clients consider the emerging policy approach to be unsound - it is plainly not consistent with national policy as the requirements of the policy are not expressed as a percentage uplift from the TER as now required by the WMS. The next logical question that follows is whether, in light of the WMS, there is merit in including a policy in the DLP or instead relying upon Building Regulations. For the reasons set out above, our clients consider that there are good reasons to delete draft Policy DP6 rather than modify it. The DLP can then focus on ensuring development is directed towards sustainable locations (a matter covered in more detail in other representations) and leave the Building Regulations regime to control the detailed standards for building fabric and energy generation. Such an approach would be entirely consistent with the Government's expectation for the plan-making process		
29403105	Diverse Partnerships Yatton Ltd	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	In our client's previous representations on the draft policies, it was identified that the proposed approach was contrary to national policy. The Council has not provided any additional evidence since the last consultation to demonstrate exceptional circumstances justifying that this policy is appropriate for inclusion in the draft Local Plan. Therefore, it remains unfeasible to include the policy without further supporting evidence. The Written Ministerial Statement Planning: Local Energy Efficiency Standards - 13th December 2023 informed councils that the government expects examiners to reject local plans that go beyond current national policy and legislative provisions. This has recently been tested in the Court of Appeal, which concluded that local authorities may set higher requirements exceptionally, subject to there being strong justification for such. Thus, there is an implicit evidential bar for doing so. In this instance, there is no clear evidence demonstrating that requirements in excess of the Building Regulations, which establish the standards that central government deems appropriate with respect, inter alia, to energy efficiency and domestic renewable technologies, are reasonably justified. While our client supports in principle the achievement of high levels of energy efficiency an the use of renewables, it is important real-world considerations including ensuring that development remains viable, having regard to other factors in this respect, and the impact on housing supply and affordability remains in accordance with the National Planning Policy Framework. This should be taken into consideration by the Council regarding this specific need, which, without substantive evidence otherwise, should not seek to push local standards beyond those established through Building Regulations.	Modification: The policy should contain flexibility to positively receive proposals that improve upon them, but not require new development ordinarily to go beyond the standards set out in the Building Regulations. 63057537	Hallam Land	David Lock Associates		No	• Justified • Effective • Consistent with national policy	Yes	Yes	Viability of the proposal is a critical factor which is omitted and which could therefore undermine delivery. Furthermore, the decision to apply the 900kg/sqm target to all buildings in excess of 5,000m² will create significant challenges in that average embodied carbon intensities vary substantially across different building types. For example, offices and schools typically have a higher embodied carbon content and this should be considered when developing this policy. The Council need to consider how Policy DP6 would be monitored (having regard to wider construction practices and processes that are outside of the development management process) in order to demonstrate its effectiveness and therefore soundness. It is not appropriate for the Plan to move away from carbon reduction methods as set out in Building Regulations and the energy targets likely to be introduced by the Future Homes Standard in favour of it own assessment of energy use. There is no justification for the policy to push significantly above the requirements set out nationally. There does not appear to be any technical evidence that confirms the commercial and technical viability of these standards. Please set	Hallam Land suggest the policy is amended to require an Energy and Sustainability Statement which looks at the issues and opportunities more widely rather than a prescriptive unevidenced requirement for an Embodied Carbon Assessment.		
51524513	Bellway Homes Ltd	tor&co	Bellway Homes Ltd	No	• Justified • Effective • Consistent with national policy			Draft Policy DP6 (Net Zero Construction) seeks to introduce minimum standards for new residential and non-residential development in respect of embodied carbon, operational energy performance (including both regulated and unregulated energy), on-site and off-site renewable energy generation, water efficiency, overheating and district heating. At a company level, Bellway is committed to ensure the business plays its role in delivering carbon reductions and planning for a sustainable future. Through collaboration and test trials, Bellway is working on a variety of technologies to help reduce carbon emissions from their homes. This includes working with Salford University on the Energy House 2.0 project testing new technology and Future Homes Standard (FHS) conditions with real occupants and are committed to the FHS. However, it is not supportive of meeting standards that	Overall, while Bellway supports the overarching objective of improving environmental performance and reducing carbon emissions, Draft Policy DP6 is not justified, effective and consistent with national policy. Bellway appreciates that local plans are future facing due to their timeframes. However, it is suggested that at least in the interim, current expectations are aligned to the FHS and Written Ministerial Statement and include flexibility and viability considerations in order that it does not hinder the development of suitable sites. Given the strong national direction that Building Regulations are the primary mechanism for delivering energy-efficiency improvements, Bellway consider that DP6 should be deleted. This approach has already been adopted by Bristol City Council, who are relying on the same evidence base as North Somerset.		20251212 504317 JE - North Somerset Reg 19 (Reps obo Bellway Homes).pdf

								exceed the FHS / Part L1 2025.The proliferation of multiple, local standards by local authority area can add further costs to building new homes by adding complexity and undermining economies of scale. The statement also sets out that any planning policies that propose local energy efficiency standards for buildings that go beyond current or planned buildings regulation should be rejected at examination if they do not have a well-reasoned and robustly costed rationale that ensures that development remains viable, and the impact on housing supply and affordability is considered in accordance with the NPPF. It is further noted from the Written Ministerial Statement that any increase on Part L required by local authorities should be expressed as a percentage uplift to the Target Emission Rate, which is not the case in Draft Policy DP6. Therefore, while Bellway understand the importance of these aspirations, it does not consider the policy to be sound. As the Council is no doubt aware, the Government published a Written Ministerial Statement (WMS) in December 2023. The WMS set clear expectations that: • local energy efficiency standards should not normally go beyond current or planned Building Regulations; • any such policies must have a well-reasoned and robustly costed rationale, with impacts on viability, housing supply and affordability assessed; and • any uplift should be expressed as a percentage improvement on the Target Emissions Rate (TER) rather than through separate, absolute performance metrics. The Government has confirmed – through the Future Homes and Building Standard (FHBS) – that Building Regulations will be updated to secure “zero-carbon ready” buildings through a combination of high-quality fabric and low-carbon heat, and that further tightening of fabric standards beyond Part L 2021. This is expected to be installed by the end of 2025. Despite legal judgements in the High Court and Court of Appeal confirming that local planning authorities can legally seek their own standards, they have concurrently concluded that the WMS remains a lawful and weighty statement of national policy and that LPAs should set higher local standards only where they provide a clear, robust, and costed justification. Draft Policy DP6 is not sufficiently justified and does not meet this requirement. It introduces standards that go materially beyond current and planned Building Regulations, adopts metrics which the Government itself has indicated are unsuitable. Problematic issues include: Operational energy: DP6 defines net zero operational energy to include both regulated and unregulated energy. This is neither reasonable nor achievable. Developers can only influence regulated loads; unregulated energy use (appliances, EV charging, refrigeration, process loads) is driven by occupier behaviour and lies outside development control. The FHS/FBS consultation is explicit that metrics including unregulated loads are not suitable, and the RCA judgments do not alter the technical reality that developers cannot design for, or offset, these uses. All references to unregulated energy should therefore be removed, and any operational energy requirement should be aligned with the FHS. Residential performance standards: The policy’s specific targets – 15-20kWh/m²/yr space heating and 35kWh/m²/yr total energy use – derive from voluntary guidance and are significantly more onerous than those put forward in the forthcoming FHBS. The Government has stated that further fabric tightening beyond 2021 levels is not cost-effective, and metrics including unregulated energy are inappropriate. They all represent a departure from the Government’s preferred TER-based approach in the WMS. These targets therefore cannot be considered justified or achievable across a local plan area and should be removed. If the Council wishes to pursue any uplift, it should follow the WMS by expressing it as a % improvement against TER, supported by viability evidence. Embodied carbon: Embodied carbon, the carbon emissions generated from the production and transportation of building materials, construction process and maintenance of a building is			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								currently beyond the scope of the building regulations. The government is proposing to take steps to address this factor and intends to consult on its approach to measuring and reducing embodied carbon in new buildings in due course. Bellway recognise and support the need for development to reduce its carbon emissions, however, rather than placing additional requirements that are considered unnecessary and unjustified, it is considered that the most effective way of achieving this is through strict adherence to building regulations as they are updated. The policy should be amended accordingly. Conclusion Overall, while Bellway supports the overarching objective of improving environmental performance and reducing carbon emissions, Draft Policy DP6 is not justified, effective and consistent with national policy. Bellway appreciates that local plans are future facing due to their timeframes. However, it is suggested that at least in the interim, current expectations are aligned to the FHS and Written Ministerial Statement and include flexibility and viability considerations in order that it does not hinder the development of suitable sites. Given the strong national direction that Building Regulations are the primary mechanism for delivering energy-efficiency improvements, Bellway consider that DP6 should be deleted. This approach has already been adopted by Bristol City Council, who are relying on the same evidence base as North Somerset.		
58664673	Catesby Estates	Stantec	Catesby Estates	No	' Justified			Policy DP6 has been subject to review from the technical expertise within the Sustainability Team at Stantec. Policy DP6 policy requirements are summarised as follows: • new residential development achieves net zero for operational emissions (regulated and unregulated). Energy statements must demonstrate: ■ No onsite use of fossil fuels; ■ Ultra low energy use: – Space heating demand of less than 15-20 kWh/m2/yr; – Overall operational energy use of less than 35 kWh/m2/yr; ■ Onsite renewable energy generation maximised, equivalent to at least the onsite energy demand. • For new non-residential developments, the following must be achieved: ■ No use of onsite fossil fuels; ■ Energy use minimised appropriate to end use; ■ Onsite renewable generation is maximised, equivalent to at least onsite energy demand; and ■ BREEAM ‘Excellent’ level is acceptable as certification, with outstanding level of energy use. • Residual energy demand should be met through generation of onsite renewable energy. If not technically feasible, the requirement may be met elsewhere through offsite renewable energy generation. • Energy use intensity and space heating demand should be prioritised regardless of any district heating connection. All reasonable efforts should be made to meet these requirements prior to connecting to a heat network. • Residential water consumption must comply with the Building Regs Optional standard of 110 litres per person per day. • Embodied carbon (upfront and whole life carbon) for developments of more than 50 dwellings, or more than 5,000m2 non-residential floor space must not exceed 750kg CO2e/m2 supported by an embodied carbon assessment. Operational Energy: The use of energy-based metrics may be prohibitive to deliver at a time when there is considerable ambiguity over energy policy and targets. Building Regulations are expected to be updated in Winter 2025 to the Future Homes Standard, requiring an improvement on Part L 2021. However, the Future Homes Standard is a framework based on largely carbon emissions targets. Energy-based metrics take a different approach, requiring achievement of energy efficiency targets alone. The draft policy does not set a methodology for the Energy Use Intensity (EUI) metric, there is currently no government approved methodology or software and LETI identifies many tools which can be used. This introduces uncertainty in the monitoring of the policy as well as the uncertainty in how the upcoming regulation changes may impact EUI performance. 								A Written Ministerial Statement made in December 2023 required any LPA proposing targets more ambitious than Building Regulations to express the targets in improvements in carbon emissions terms. This requirement would impact the North Somerset draft policies, which express targets in energy terms. There are currently various legal challenges to the WMS and the impact on the draft North Somerset Local Plan is not yet known. The current summary position is that LPAs do retain powers to set policies that exceed Building Regulations standards. However, it is uncertain yet whether it is justified to set these policies based on energy targets rather than carbon emissions targets. It is recognised that any proposed policies that go beyond Building Regulations must be robustly justified by local circumstances and supported by evidence. North Somerset Council within the Pre-Submission Plan supporting documents have made references to studies prepared within the West of England (2021) and a South Gloucestershire Report (2025) as evidence. Indicative costs of achieving net zero buildings are also linked to studies undertaken by Cornwall County Council to support their energy-based policies, with a cost of achieving net zero construction for a range of typologies at a cost uplift of 2 to 4%. North Somerset Council highlight that the increased development costs driven by implementing Policy DP6 are included in the local plan's Viability Assessment. This includes a 4% cost uplift for flats, 9% cost uplift for houses and 7% cost uplift for house/flat mixed developments. The Pre-submission Plan 2041 consultation documents appear to recognise that the cost estimates were provided some time ago and refer to the more recent cost assessments produced for South Gloucestershire Council's emerging policy, which sets the same targets for space heating, energy use intensity and balancing onsite generation with use as the North Somerset policy DP6. The signposted South Gloucestershire Council evidence reports additional costs for 5 house types, all of which would be expected to appear in North Somerset. This evidence shows: • Additional costs of £99 - £138m2 from the Part L 2021 baseline. Percentage cost increases are between 4.5% and 8.5%. • Additional costs of £53 to £76/m2 from the Future Homes Standard Option 1 baseline (used as a baseline as it is due to come into force in 2025. Percentage cost increases are between 2.9% and 4.7%. Detached houses and bungalows are at the higher end of the cost increase, with mid terrace at the lower end. Flats are the most efficient. The percentage cost increases are similar to those reported by Cornwall County Council and included in the evidence base assessments. The report highlights that the uplifts are largely a reflection of differences in base build costs rather than the policy impacts themselves. The analysis highlights that for bungalows and terraced houses, the renewable energy requirement can be met without additional cost uplift. For the Part L 2021 baseline scenario, cost uplifts result from improvements to fabric, systems, and renewable energy generation. For the Future Homes Standard baseline scenario, cost uplifts result from improvements to building fabric (as it is expected that solar PV, waste water heat recovery and mechanical ventilation will form part of the FHS baseline specification). The evidence on cost concludes that the energy-based targets present a proportionate cost uplift consistent with the need to transition to a national net zero standard for buildings. Other evidence bases from Local Planning Authorities progressing with Local Plan preparation have suggested a 5-10% cost uplift to design and construct to operational net zero standards. We would expect the evidence base is ensured to consider a range of development types, including brownfield and greenfield, apartments and houses, strategic sites and smaller sites, and implications for affordable housing and that these fully underpin any version of evidence that is to be submitted for Examination as part of the North Somerset Local Plan 2041. Embodied Carbon: The whole life carbon approach is recognised to be more comprehensive in comparison to other local plans. The embodied carbon limit provides a measurable threshold.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The evidence for embodied carbon is based on the West of England Authorities study authored by WSP in 2021 which provides justification for the policy. This evidence also signposts the use of the 'RICS Professional Standards' as a methodology. Four main building typologies were assessed, including an office, school, and semi-detached house. The report assessed cost uplifts for the achievement of embodied carbon ratings aligned to the LETI Embodied Carbon Target Alignment document (considered industry best practice guidance). Rating E was identified as the average building design, and rating C represented good design. Rating A represented the LETI 2030 exemplary design. The report found that achievement of a C rating was possible without a cost impact – the target is less than 800kg CO2e/m2 for a semi-detached house. It was identified that zero cost uplift was incurred when moving from an E rating to an embodied carbon impact of between 800kg CO2e/m2 (C rating) and 625kg CO2e/m2 (B rating). The C rating is considered to be consistent with good construction practice. For both operational energy and embodied carbon, no evidence has been found on deliverability, including supply chain availability and skills, and timelines for delivery, including any transition arrangements. There is no evidence that alternative options have been considered. There is limited information on methodologies, tools and reporting mechanisms that would be required for applications to demonstrate compliance with the policy requirements, and mechanisms for monitoring the performance gap. It is expected that these would form part of an accompanying Supplementary Planning Document. Similarly, there is limited information on the offsetting process in terms of timescales, pricing and legal mechanisms. Such guidance within a forthcoming SPD will need to be closely aligned with the evidence base and indeed the Local Plan's assumptions on viability or any more robust and up-to-date assessment to be consulted upon alongside a draft SPD. It may be necessary to include reference to suitable evidence base to be required as part of consultations toward such a forthcoming SPD.			
63114593	Bloor Homes (North of Pound Lane Nailsea site)	Turley		No	• Positively prepared • Justified • Effective • Consistent with national policy		No	As noted in great detail in our submission, there are a number of potential issues with the requirements set out in Policy DP6. In the first instance the Government's December 2023 WMS and subsequent legal challenges and opinions note that local policies can be put in place where they are consistent with national policy and are appropriately evidenced. There are a number of other issues with the requirements of Policy DP6 and focus on minimising energy demand which are contrary to the WMS and the evidence set out in the 2023 FHS and FBS consultation and not consistent with the approach set out through National Policy. We also have concerns about how the viability of Policy DP6 has been considered, noting that the costs used do not align with the Government's FHS and FBS consultation. In this context a number of recommendations are set out above and the changes proposed are set out below to ensure that Policy DP6 aligns with national guidance, is deliverable and viable.	A number of recommendations are set out above and the changes proposed are set out below to ensure that Policy DP6 aligns with national guidance, is deliverable and viable. Policy DP6: Net zero construction All development must be designed to minimise its impact on the environment and create high quality internal and external spaces for people to use. Proposals must demonstrate that all resources are used efficiently, as part of the construction and operation of a building. • All development must follow the principles of the energy hierarchy to ensure that the design of a building prioritises energy reduction through highly energy efficient fabric measures, lighting, ventilation, and orientation. Once energy demand is minimised and efficiency design measures are in place, renewable energy technologies will be used to meet residual energy demand. • All new buildings will be required to achieve net zero operational energy compliance in respect of (delete "both") regulated (delete "and unregulated") energy and minimise embodied carbon. • All new development should seek to minimise embodied carbon in respect of both upfront (emissions associated with raw materials, transportation, manufacturing and construction) and whole life carbon. For development of more than 50 dwellings, or in excess of 5,000m² non-residential floorspace, (add "full planning applications, or Reserved Matters applications") (delete "proposals") must be accompanied by an embodied carbon assessment which demonstrate that upfront embodied carbon emissions do not exceed 750kg CO2e/m². • The retention of existing buildings will usually be given preference to their demolition. Retrofitting energy efficiency measures in existing buildings will be supported and significant weight will be given to the benefits of development resulting in considerable improvements to energy efficiency. All proposals must demonstrate high standards of insulation and Passivhaus Enerphit standards are encouraged. Net zero operational energy: residential • In order to demonstrate compliance with the net zero operational energy requirement, all new residential buildings must demonstrate through an energy statement, that the following have been achieved: • No on-site use of fossil fuels; • (add "Meet the requirements of the FHS") • (delete "Ultra low energy use, to be demonstrated through: Space heating demand of less than 15kWh/m²/year ") • (delete "Overall operational energy use of less than 35kWh/m²/year; and") • On-site renewable energy generation is (add "provided in line with the Future Homes Standard"), (delete "maximised, equivalent to at least the onsite energy demand.") • Alternatively, compliance can be demonstrated through Passivhaus Plus Standard accreditation, using the Passivhaus Planning Package. Net zero operational energy: non-residential		BLOA3068 - Nailsea - North Somerset Local Plan Regulation 19 Consultation - Dec 25.pdf

									must demonstrate through an energy statement, that the following have been achieved: ■ No on-site use of fossil fuels; ■ Meet the requirements of the FHS; ■ On-site renewable energy generation is provided in line with the Future Homes Standard ■ Alternatively, compliance can be demonstrated through Passivhaus Plus Standard accreditation, using the Passivhaus Planning Package. Net Zero Operational Energy: Non-Residential In order to demonstrate net zero operational energy, all new non-residential buildings must demonstrate through an energy statement, that the following have been achieved: ■ No use of on-site fossil fuels; ■ Energy use is minimised as far as practical and feasible, appropriate to the end use; ■ On-site renewable energy generation is provided in line with the Future Buildings Standard Alternatively, compliance can be demonstrated by using BREEAM Excellent level accreditation, where feasible targeting an outstanding level for energy use (Credit Ene01). An alternative compliance route may be allowed with prior agreement. Renewable Energy Offsetting Where feasible and viable residual energy demand should be met through the generation of onsite renewable energy, but if this is not technically feasible, the requirement may be met elsewhere by means of offsite renewable energy generation, either through a contribution to the Council's offsetting scheme or via a renewable energy generation scheme approved by the Local Authority. All development must demonstrate measures to minimise potable water use, residential development should aim to achieve an estimated water consumption of no more than 100 litres/person/day, and non-residential development should aim to achieve the equivalent of 2 BREEAM Version 6 Wat 01 Water Efficiency credits. All measures will optimise water use systems and may include rainwater harvesting and other mechanisms for recycling and reusing water on-site. All development will need to demonstrate measures to reduce the risk of the building overheating. Energy use intensity and space heating targets should be prioritised regardless of any district heating connection and all reasonable efforts should be made to meet these requirements prior to buildings connecting to a district heating network. Connection to any district heating network should follow the guidance set out as part of the FHS and FBS to ensure development is connecting to low carbon heat. See attached full representation for proposed modifications to the policy wording.		
30301601	Ainscough Strategic Land	Chris Price	Ainscough Strategic Land	No	Effective Consistent with national policy			ASL supports the Council's focus on sustainability, climate change and net zero. The Council's aims to reduce operational carbon in buildings, reduce embodied carbon and ensure development is resilient to future climate change broadly align with the Government's ambitions to improve building standards over time. However, there are deliverability and viability issues with local energy efficiency standards going beyond and accelerating the Government's net zero transition which is being driven by progressive changes to the Building Regulations. Turley's Note at Appendix 2 reviews the requirements of Policy DP6 against national guidance on setting local energy efficiency standards, namely the December 2023 Written Ministerial Statement (WMS), 'Local Energy Efficiency Standards Update'. This confirms that any policies which go beyond the 2025 Future Homes Standard (FHS) must be demonstrated to be viable, with the impact on housing supply and affordability considered in accordance with the NPPF. Given Policy DP6 goes beyond the requirements of the FHS, it will need to be reviewed, with the Examining Inspectors exercising judgement to determine that policies that depart from the 2023 WMS are consistent with national policy. It is recommended that Policy DP6 is updated to reflect the requirements of the FHS. Further, Policy DP6 states that net zero operational energy covers both regulated and unregulated energy. Whilst ASL supports the delivery of low carbon development, it is considered that any targets should be restricted to regulated energy only. Developers can only influence the regulated energy demand through design and specification of materials and systems and renewable energy technologies. Unregulated energy consumption of a development is ultimately the function of the residents / occupiers use of the building, which cannot be influenced by the developer. Therefore, the requirement of Policy DP6 to offset emissions from unregulated energy is not appropriate and should be removed. The remaining requirements of Policy DP6 are reviewed in full in Turley's Note at Appendix 2, as well as a review of the Viability Assessment for the implementation of the Policy. This concludes that there are some concerns with the requirements	The remaining requirements of Policy DP6 are reviewed in full in Turley's Sustainability Note (Appendix 2). This concludes that there are some concerns with the requirements of Policy DP6 and recommends some proposed changes to the policy wording to ensure it aligns with national guidance and is deliverable and viable. A summary of the wording changes sought is provided in the attached full representations [bold shows additions and strikethrough deletions] with full detail of the reasoning behind this at Appendix 2		61683 - NSC Reg 19 Representations December 2025 2-12-25.pdf

								of Policy DP6 and recommends some proposed changes to the policy wording to ensure it algins with national guidance and is deliverable and viable.			
939361	R Burrows		-	No	‣ Positively prepared ‣ Justified ‣ Effective	Unsure	Unsure	There are several inherent conflicts and specific policies that are argued to constrain development, particularly housing delivery. When coupled with other documents outside of the local plan, such SPDs as the proposed enlarged Bat SAC. It is questioned how NSC will deliver windfall sites & small sites at all. The financial burden is already onerous and this will add too much financial burden on small developers & self builders who should be exempt. Coupled with flood risk and the absurdity of designing to an undefended flood situation (rather than breach modelling) an almost impossible scenario where the flood defences are completely removed. To design to the absolute worse case (doomsday) scenario is unrealistic and far from pragmatic. Development Management Policies (DP), particularly those related to climate change, sustainability standards, and flood risk, make the delivery of growth procedurally and economically harder. This is highlighted by the fact that the LPA was found not to have delivered a five-year supply of housing for at least 13 years, suggesting the existing constraints are already impacting deliverability. This will exacerbate the situation & the financial burden of compliance with policies that duplicate existing primary legislation uneccessary.	Policy DP6: As per SP2 to allow building regulations to control this. The local plan is littered with duplicating primary legislation and should enable development rather than hold it up or render it economically unviable.		
62850529	Andy Chappel			No	‣ Justified ‣ Effective ‣ Consistent with national policy	Yes	Yes	Justification – The mechanism for achieving carbon neutrality by 2030 is not fully evidenced. Effectiveness – Monitoring and enforcement of climate measures is unclear. Consistency with national policy – See the National Planning Policy Framework (paras 152–158) which require robust climate-mitigation and adaptation mechanisms.	Require whole-life and embodied-carbon assessments at the outline stage. - Require circular economy statements prioritising retrofit and material reuse. - Set clear rules preventing climate standards from being reduced on viability grounds. - Require post-construction performance verification to ensure true net zero energy operation. - Require unregulated energy use to be fully included in net-zero calculations.		
51560705	Dan Clarke-Hall (Gibson Architecture)		Gibson Architecture	No	‣ Effective	Unsure	Unsure	I believe the plan to disproprtionately affect small developers. I am unsure of the validity of the housing allocation, especially the windfall sites which I believe the plan overestimates. Windfall numbers are decreasing and flood, climate policy among others are making North Somerset incredibly unattractive to small to medium developers. The attached document includes all of my opinions on the plan. DP6 – Net Zero Construction • Issue: Duplicates Building Regulations and deters developers, especially for small sites where no on-site fossil fuel use is challenging. • Modification: Delete or drastically pare back this policy to allow more flexibility for small developments, recognising practical constraints and viability issues. • Rationale: The requirement for no on-site fossil fuel use can be a significant barrier for small sites due to cost, space, and technical feasibility. A more proportionate approach would support small-scale development viability while maintaining overall energy efficiency and carbon reduction goals.	My proposed modifications are included in the associated representation. DP6 – Net Zero Construction • Modification: Delete or drastically pare back this policy to allow more flexibility for small developments, recognising practical constraints and viability issues.		Dan Clarke Hall.pdf
9138657	Home Builders Federation		Home Builders Federation	No	‣ Justified ‣ Effective ‣ Consistent with national policy				Policy LP6 is not considered to be sound as it is not effective, justified or consistent with national policy It would appear that the Council have sought to move away from the carbon reduction methods set out in Part L of the Building Regulations. HBF supports the Council in seeking to minimise carbon emissions and reduce heat and power demand through energy efficient design. However, the HBF does not consider that the Council setting its own standards is the appropriate method to achieve these outcomes. Whilst the ambitious and aspirational aim to achieve zero carbon is lauded, the HBF is concerned that the Council is adding to the complexity of policy, regulations and standards that housebuilders are already expected to comply with. The key to success is standardisation and avoidance of individual Councils specifying their own policy approach, which undermines economies of scale for product manufacturers, suppliers and developers. The impact of this requirement along with others in this Plan may have considerable viability implication and may lead to the non-delivery homes and needs to be fully considered within the Viability Assessment. HBF would caution against policies that seek to go further and faster than national legislation and policy changes, which would lead to the creation of a patchwork of differing local policies which could inadvertently undermine the delivery of the wider environmental objectives the Council is seeking and create unnecessary delays to much needed new housing. HBF would highlight the latest publication 'Future Homes, One Plan Building a generation of high quality, affordable and sustainable homes and communities, together' https://irp.cdn-website.com/bdbb2d99/files/uploaded/Future%20Homes%20One%20Plan_Future%20Homes%20Hub%20Prospectus-%20FINAL%20WEB.pdf. This was published in Nov 2023 and highlights what actions are needed to support the delivery of sustainable homes. In particular HBF, would highlight 'Issue 9. The Partnership Imperative' on page 15 which states in the Local Government section that "Local planning requirements must align with the overall plan for improving performance standards at national level. For example, avoiding divergence of local energy standards that make it harder to accelerate improvement in standards at national level, and avoiding conflict between local planning conditions and new requirements of building regulations." This policy also states that proposals for major residential development will need to be supported by an Embodied Carbon Assessment that demonstrates a score of less than 750 CO2e/sqm. HBF considers that if the Council is to		North Somerset 2nd Reg 19 Dec 25.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									introduce a policy in relation to embodied carbon it will have to closely consider how it will be monitored and what the implications are for the preparation of any assessment, particularly in relation to how easily accessible any data is, and that it will have to take into consideration that much of the responsibility for emissions will lie in areas outside of the control of the homebuilding industry, including material extraction and transportation, occupation and maintenance, demolition and disposal. The Council will also have to consider how the policy will interact with other policies for example in relation to energy efficiency or resilience to heat, as well as the viability and delivery of development. HBF considers that if this policy were to be introduced then the Council should provide a transitional period to give the industry time to adjust to the requirements and for the supply chain to be updated or amended as required. The Plan also seeks to require development to ensure an estimated water consumption of no more than 110 litres/ person/day. HBF note that the level of customer experience starts to get affected at 100 litres per dwelling and below. Furthermore, there are examples of schemes around the country where once water usage begins to get too low there becomes a secondary issue of odour, air quality and human health as the piped systems aren't getting enough volume to run through and cleanse the system. Pipes need a certain volume of water to flush everything through, otherwise if the effluent is not getting cleared and if 'solids and matter' are just sitting dry in pipes this can cause air quality issues and nuisance to residents. HBF would strongly question the that as Building Regulations already address this issue, there is no need for further policy in the Local Plan on this matter.		
31088129	Bloor Homes South West	Turley		No	' Positively prepared ' Justified ' Effective ' Consistent with national policy		No	Policy DP6 sets out the requirements for development to deliver Net Zero development, minimising embodied carbon and net zero operational emissions, including both regulated and unregulated energy. The policy includes specific targets for embodied carbon and operational energy and space heating for homes. Residual energy demand is to be met through onsite renewable energy generation, or where this is not technically feasible, by means of offsite renewable energy generation. To help tackle climate change and meet the UK's Net Zero target we support the transition to net zero development. However, we would note that there are issues with deliverability and viability with going beyond, and accelerating the Government's net zero transition which is being driven by progressive changes to the Building Regulations. It is noted that Policy DP6 states that net zero operational energy covers both regulated and unregulated energy. While we support the delivery of low carbon development it is considered any targets should be restricted to regulated energy only. Developers only have the ability to influence the regulated energy demand through design and specification of materials and systems and renewable energy technologies. The unregulated energy consumption, (often referred to as 'plug in load') of development is ultimately the function of the residents or occupiers use of the building, which cannot be influenced by the developer and therefore the requirement on the developer to offset emissions from unregulated energy use is not appropriate. For example, post 2025 one of the greatest demands for unregulated energy in new homes will be to charge an electric vehicle. It unreasonable to assume that a developer should effectively meet the cost of mitigating energy and carbon from charging an electric vehicle. Similarly non-residential building uses, including commercial uses can include significant process loads, e.g. refrigeration, it is again unreasonable to assume that a developer should effectively meet the cost of mitigating energy and carbon from these uses. The responsibility of unregulated energy use and emissions therefore should sit with the building residents and occupiers. The Governments Future Homes and Buildings Standard Consultation published in December 20232 states in reference to setting energy intensity targets, 'We consider that metrics which include unregulated loads are not a suitable because designers and housebuilders have little or no control over these end uses of energy.'. In this context it is recommended that the policy is updated to reference operational net zero as regulated energy only. • All new buildings will be required to achieve net zero operational energy compliance in respect of (delete "both") regulated (delete "and unregulated") energy and minimise embodied carbon. The Policy has been updated as part of the update and now requires development to minimise embodied carbon emissions, reducing upfront carbon with a target of 750 kgCO2e compared to 900kg CO2e in the previous version. The Climate change and energy topic paper includes further evidence on embodied carbon, including links to the evidence base prepared for the West of England Plan Net Zero Building Policy. We would note that the evidence base and in particular costs included are based on data from 2021 and should be updated and greater consideration given to supply chain capacity and likely costs. For example enhanced embodied carbon targets may result in increased timber frame	A number of recommendations are set out above and the changes proposed are set out below to ensure that Policy DP6 aligns with national guidance, is deliverable and viable. Policy DP6: Net zero construction All development must be designed to minimise its impact on the environment and create high quality internal and external spaces for people to use. Proposals must demonstrate that all resources are used efficiently, as part of the construction and operation of a building. • All development must follow the principles of the energy hierarchy to ensure that the design of a building prioritises energy reduction through highly energy efficient fabric measures, lighting, ventilation, and orientation. Once energy demand is minimised and efficiency design measures are in place, renewable energy technologies will be used to meet residual energy demand. • All new buildings will be required to achieve net zero operational energy compliance in respect of (delete "both") regulated (delete "and unregulated") energy and minimise embodied carbon. • All new development should seek to minimise embodied carbon in respect of both upfront (emissions associated with raw materials, transportation, manufacturing and construction) and whole life carbon. For development of more than 50 dwellings, or in excess of 5,000m² non-residential floorspace, (add "full planning applications, or Reserved Matters applications") (delete "proposals") must be accompanied by an embodied carbon assessment which demonstrate that upfront embodied carbon emissions do not exceed 750kg CO2e/m². • The retention of existing buildings will usually be given preference to their demolition. Retrofitting energy efficiency measures in existing buildings will be supported and significant weight will be given to the benefits of development resulting in considerable improvements to energy efficiency. All proposals must demonstrate high standards of insulation and Passivhaus Enerphit standards are encouraged. Net zero operational energy: residential • In order to demonstrate compliance with the net zero operational energy requirement, all new residential buildings must demonstrate through an energy statement, that the following have been achieved: • No on-site use of fossil fuels; • (add "Meet the requirements of the FHS") • (delete "Ultra low energy use, to be demonstrated through: Space heating demand of less than 15kWh/m²/year ") • (delete "Overall operational energy use of less than 35kWh/m²/year; and") • On-site renewable energy generation is (add "provided in line with the Future Homes Standard"), (delete "maximised, equivalent to at least the onsite energy demand.") • Alternatively, compliance can be demonstrated through Passivhaus Plus Standard accreditation, using the Passivhaus Planning Package. Net zero operational energy: non-residential In order to demonstrate net zero operational energy, all new non-residential buildings must demonstrate through an energy statement, that the following have been achieved: • No use of on-site fossil fuels; • Energy use is minimised (add "as far as practical and feasible"), appropriate to the end use; • On-site renewable energy generation is (add "provided in line with the Future Buildings Standard") (delete "maximised, equivalent to at least the onsite energy demand; and") • (delete "The end users report their energy use in operation for five years post-completion".) Alternatively, compliance can be demonstrated by using BREEAM Excellent level accreditation, (add "where feasible targeting an") outstanding level for energy use (Credit Ene01). An alternative compliance route may be allowed with prior agreement. Renewable Energy Offsetting (add "Where feasible and viable") residual energy demand should be met through the generation of onsite renewable energy, but if this is not technically feasible, the requirement may be met elsewhere by means of offsite renewable energy generation, (add "either through a contribution to the Council's offsetting scheme or via a renewable energy generation scheme approved by the Local Authority.")	DP6 re Water efficiency for residential homes: The Policy has been updated to require all residential development to achieve an estimated water consumption of no more than 110l/p/d in line with Part G of the Building Regulations. We support the need to reduce water consumption from development and welcome this amendment. We would note that Part G of the Building Regulations is currently under examination and an enhancement to the higher water efficiency target is likely to be forthcoming. 								construction impacting supply chains and costs. We support the need to assess and reduce the embodied carbon of new development, however we would note that the information available to complete that work will likely not be available until the detailed design stage. We therefore recommend the policy text is updated to make reference to full, or reserved matters applications. The target set out in the policy and need for an LCA can be made part of conditions attached to outline applications. • For development of more than 50 dwellings, or in excess of 5,000m² non⟐residential floorspace, (add "full planning applications, or Reserved Matters applications" delete "proposals" must be accompanied by an embodied carbon assessment which demonstrate that upfront embodied carbon emissions do not exceed 750kg CO2e/m². Net zero operational energy: residential This element of the policy sets out a number of requirements which are reviewed below. No on-site use of fossil fuel: The Future Homes Standard consultation confirms that from 2025 homes will no longer be able to use fossil fuel heating systems. The current Part L 2021, while still allowing the use of fossil fuels supports the use of electric heating systems. We support the transition of development away from fossil fuel based systems in favour of low carbon, renewable energy, for example heat pumps. Space heating demand of less than 15kWh/m²/year and Overall operational energy use of less than 35kWh/m²/year. These targets are drawn from guidance including the LETI Design Guide which goes significantly beyond the requirements of the Building Regulations and Government's national strategy for delivering Net Zero. In December 2023 the Government published its response to the to the Levelling-up and Regeneration Bill: reforms to national planning policy consultation. In its response the Government has noted it will proceed with the preparation of a suite of National Development Management Policies, local authorities will be able to address matters of local importance provided they are not inconsistent with or repeat national policy. While not yet finalised it is our expectation that this will include new carbon reduction related guidance to ensure a consistent approach is applied across the country. In December 2023 the Government also published the next stage of consultation for the Future Homes and Buildings Standard (FHS and FBS. The consultation specifically states that the FHS will set, 'the performance requirements at a level which ensures new homes and non-domestic buildings have high fabric standards, use low-carbon heating and are 'zero-carbon ready', setting policies which go beyond this standard are therefore not considered necessary. In setting fabric standards for the FHS the government has decided to keep fabric levels largely the same as those put in place in 2021. With reference to the Council's proposed energy use intensity targets the Government confirms that targets which include both regulated and unregulated energy, i.e. the Overall operational energy use of less than 35kWh/m²/year, are not suitable as housebuilders have little or no control over this energy use, as referenced above. In this context it is recommended that this requirement is removed from the policy. In addition the Government's consultation cites three reasons for not providing further fabric improvements through the FHS, in summary demonstrating that further improvements are not cost-effective. The space heating demand target of 15kWh/m2/year therefore sets a target which may exceed the requirements of the FHS, and contradict national policy. Given the approach set through the FHS to reduce regulated emissions, and Government's stated intent to develop a set out National Development Management Policies to provide consistent policy it is considered that additional targets which relate to unregulated emissions are not appropriate. On-site renewable energy generation is maximised, equivalent to at least the onsite energy demand: This element of the policy requires homes to provide onsite energy generation equivalent to the onsite energy demand, as it currently stand this would cover demand from both regulated and unregulated energy. As noted the future of vehicle transport will likely include a shift to EV charging which will have a significant impact on unregulated energy demand. Furthermore the	All development must demonstrate measures to minimise potable water use (delete "and") , (add "residential development should") aim to achieve an estimated water consumption of no more than 100litres/person/day, (add "and non-residential development should aim to achieve the equivalent of 2 BREEAM Version 6 Wat 01 Water Efficiency credits"). All measures will optimise water use systems and may include rainwater harvesting and other mechanisms for recycling and reusing water on-site. All development will need to demonstrate measures to reduce the risk of the building overheating. Energy use intensity and space heating targets should be prioritised regardless of any district heating connection and all reasonable efforts should be made to meet these requirements prior to buildings connecting to a district heating network. (Add "Connection to any district heating network should follow the guidance set out as part of the FHS and FBS to ensure development is connecting to low carbon heat.")

								Government has stated unregulated loads are not a suitable because designers and housebuilders have little or no control over these end uses of energy. Any requirement for energy generation should therefore only refer to regulated energy. As part of the FHS consultation the Government has indicated that due to grid decarbonisation the benefit of additional energy generation through Solar PV has a diminishing return. In this context the consultation sets out two options for domestic buildings, one option including Solar PV and the other without. While we support the provision of renewable energy as part of new development this should be provided in the context of updated national guidance on setting energy efficiency targets and Building Regulations. We would recommend that this element is amended to align with the FHS. Renewable energy offsetting: This element requires that residual energy demand should be met through the generation of onsite or offsite renewable energy generation. In the first instance, as noted above any residual energy requirement should only relate to regulated energy. As noted in the Government's FHS consultation inclusion of unregulated energy is not appropriate as development have little or no control over this element. Furthermore the Policy does not set a specific cost for offsetting, it is noted this will be set through the preparation of a Supplementary Planning Document. No specific cost is proposed for offsetting any residual energy demand at this stage. Given this would be an additional cost to the development it needs to be considered as part of the viability assessment to be justified. In this context this element needs to be properly justified and considered as part of the viability assessment, and until such time this should be removed. It is common place in setting offsetting targets to include an alternative option to the Council's offset fund to allow developers flexibility in how residual offsetting is met. The Council's summary of evidence to support Policy DP64 notes that offsetting schemes should focus on either developer procured renewable energy supply at the point of planning and/or council collected payments with robust, transparent, and accountable expenditure plans. It is considered that developer procured renewable energy supply could include development of a developers own renewable energy scheme. We would recommend that if retained an allowance is included to allow developers to develop their own renewable energy generation scheme to offset residual energy provided this meets the objectives of additionality and is transparent, subject to approval by the Council. Due to the varying nature of non-residential development this target it not appropriate for non-residential development. We would recommend that a suitable water efficiency target for non-residential development can be drawn from BREEAM and the Wat01 Water Efficiency criteria. For example achieving 2 credits here requires a 25% reduction in water consumption. In this context it is recommended that this section is updated to include separate residential and non-residential requirements, including: (addition:"and non-residential development should aim to achieve the equivalent of 2 BREEAM Version 6 Wat 01 Water Efficiency credits".) Overheating: The policy states that ,'All development will need to demonstrate measures to reduce the risk of the building overheating'. The Building Regulations include requirements for the consideration of overheating. Part O introduced in 2021 sets enhance consideration for residential and occupied spaces to take better account of overheating and climate change. We support the need to consider overheating as this is a key potential effect of climate change. District Heating: The policy references the potential for connection to district heating schemes. The 2025 FHS and FBS consultation notes that connection to a heat network where those buildings are supplied via new or existing low carbon technologies. Connection to systems which are not considered low carbon, e.g. gas fired Combined Heat and Power systems would not be applicable. We would recommend that reference is included to the Government's FHS and FBS requirements for connection to heat networks. Viability The Climate change and energy topic paper provides further details on costs for achieving the net zero requirements set out. We have a number of concerns with regards to the viability of the requirements of Policy DP6.

								- Residential costs – While clarity has been provided as part of the evidence base it is considered that the costs used are not likely to be representative of the requirements put in place by the Policy. -We would recommend that consideration is given to the costs used for assessing Policy DP6 to ensure recent inflation and build cost challenges are included. -With regards to the renewable energy offsetting requirements no cost is set out in the Policy itself, it is noted this will be set through the preparation of a Supplementary Planning Document. Given this would be an additional cost to the development it needs to be considered as part of the viability assessment. We would recommend that wording is considered, and wording added to the policy to note this would be require where feasible and viable. Summary There are a number of potential issues with the requirements set out in Policy DP6. The Government's December 2023 WMS and subsequent legal challenges and opinions note that local policies can be put in place where they are consistent with national policy and are appropriately evidenced. There are a number of other issues with the requirements of Policy DP6 and focus on minimising energy demand which are contrary to the WMS and the evidence set out in the 2023 FHS and FBS consultation and not consistent with the approach set out through National Policy. We also have concerns about how the viability of Policy DP6 has been considered, noting that the costs used do not align with the Government's FHS and FBS consultation.		
63052097	Stephanie Fowler	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes		In our client's previous representations on the Regulation 19 draft policies, it was identified that the proposed approach was contrary to national policy. The Council has not provided any additional evidence since the last consultation to demonstrate exceptional circumstances justifying that this policy is appropriate for inclusion in the draft Local Plan. Therefore, it remains unfeasible to include the policy without further supporting evidence. The Written Ministerial Statement Planning: Local Energy Efficiency Standards - 13th December 2023 informed councils that the government expects examiners to reject local plans that go beyond current national policy and legislative provisions. This has recently been tested in the Court of Appeal (1) which concluded that local authorities may set higher requirements exceptionally, subject to there being strong justification for such. Thus, there is an implicit evidential bar for doing so. (1) R (Rights: Community: Action Ltd) v Secretary of State for Housing, Communities and Local Government [2025] EWVA Civ 990 In this instance, there is no clear evidence demonstrating that requirements in excess of the Building Regulations, which establish the standards that central government deems appropriate with respect, inter alia, to energy efficiency and domestic renewable technologies, are reasonably justified. While our client supports in principle the achievement of high levels of energy efficiency an the use of renewables, it is important real-world considerations including ensuring that development remains viable, having regard to other factors in this respect, and the impact on housing supply and affordability remains in accordance with the National Planning Policy Framework. This should be taken into consideration by the Council regarding this specific need, which, without substantive evidence otherwise, should not seek to push local standards beyond those established through Building Regulations. Modification: The policy should contain flexibility to positively receive proposals that improve upon them, but not require new development ordinarily to go beyond the standards set out in the Building Regulations.		R001v3_NSLP_Reg19_Fowler.Dec25.pdf
63299425	Mac Mic Strategic Land Flax Bourton	Planning Potential	Mac Mic Strategic Land	No	• Justified	No	Yes		This policy, in summary, requires all development to minimise its impact on the environment, ensure that the design of a building prioritises energy reduction and incorporates renewable energy technologies to meet residual energy demand. 4.53. It states that all new buildings will be required to achieve net zero operational energy compliance in respect of both regulated and unregulated energy and minimise embodied carbon. All new development should seek to minimise embodied carbon in respect of both upfront (emissions associated with raw materials, transportation, manufacturing and construction) and whole life carbon. For development of more than 50 dwellings, or in excess of 5,000m2 non-residential floorspace, the policy recognises that proposals must be accompanied by an embodied carbon assessment that demonstrates that upfront embodied carbon emissions do not exceed 750kg CO2 e/m2 . 4.54. Furthermore, all new residential buildings must demonstrate through an energy statement, that the following have been achieved, inter a!ia, no on-site use of fossil fuels, space heating demand of less than 15kWh/m2/year and overall operational energy use of less than 35kWh/m2/year. 4.55. While the objectives and aims of the policy are supported and there is a need to move towards development that minimises its impact on the environment. The current wording of this policy is not consistent with the guidance contained in NPPF (December 2024). In particular, paragraph 164 of the Framework sets out that: "New development should be planned for in ways that: a. avoid increased vulnerability to the range of impacts arising from climate change. When new development is brought forward in areas which are vulnerable, care should be taken to ensure that risks can be managed through suitable adaptation measures, including through incorporating green infrastructure and sustainable drainage systems; and b. help to reduce greenhouse gas emissions, such as through its location, orientation and design. Any local requirements for the sustainability of buildings should reflect the Government's policy for national technical standards. " 4.56. The Government has, for residential development, established a clear road map for achieving zero carbon ready homes. This is set out in the 'Future Homes Standards', which is due to be implemented in 2025. The Future Homes		North Somerset Local Plan Pre-Submission Plan - Flax Bourton Representations Final.pdf

									Standards will require carbon emissions produced by new homes to be 75-80% lower than those built to current standards. Any new homes built under these new Building Regulations standards will therefore need to be zero carbon ready, which means that they will immediately be able to benefit from the decarbonisation of the electricity grid. Recommendation 4.57. Consequently, this policy should be amended to accord with the NPPF. The requirements of the Local Plan policy clearly go over and above those set out in the NPPF, particularly, in relation to new residential development. In order to ensure that the policy aligns with the NPPF, it is considered that this policy should be amended to accord with the Future Homes Standards, which will be mandatory from 2025. This will in time ensure that all new homes will become zero carbon. 4.58. In our opinion, it would be more appropriate for this policy to align with the Future Home Standards and Building Regulations, as additional requirements will have an impact on the viability of applicable scheme and will increase the cost of development. This would make the policy justified and would not raise issues of soundness.		
63006177	Mac Mic Strategic Land (Land north of Banwell Road)	Planning Potential (Elliot Jones)	Mac Mic Strategic Land	No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	No	No	This policy, in summary, requires all development to minimise its impact on the environment, ensure that the design of a building prioritises energy reduction and incorporates renewable energy technologies to meet residual energy demand. It states that all new buildings will be required to achieve net zero operational energy compliance in respect of both regulated and unregulated energy and minimise embodied carbon. All new development should seek to minimise embodied carbon in respect of both upfront (emissions associated with raw materials, transportation, manufacturing and construction) and whole life carbon. For development of more than 50 dwellings, or in excess of 5,000m² non residential floorspace, proposals must be accompanied by an embodied carbon assessment which demonstrate that upfront embodied carbon emissions do not exceed 900kg CO2 e/m². Furthermore, all new residential buildings must demonstrate through an energy statement, that the following have been achieved, inter alia, no on-site use of fossil fuels, space heating demand of less than 15kWh/m²/year and overall operational energy use of less than 35kWh/m²/year. While the objectives and aims of the policy are supported and there is a need to move towards development that minimises its impact on the environment, the current wording of this policy is not consistent with the guidance contained in NPPF (December 2024). In particular, Paragraph 164 of the Framework sets out that: “New development should be planned for in ways that: a. avoid increased vulnerability to the range of impacts arising from climate change. 51732129	Gleeson Land	tor&co (Jacqueline Mulliner)	Gleeson Land	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The aspirations of Policy DP6 are certainly positive and supported. However, whilst the policy is largely supported it is inappropriate to require every development proposal to meet every criterion. Some of the criteria won't apply, whilst the requirements may adversely affect the deliverability of schemes due to the prescriptive requirements that could consequently harm the feasibility of large and major schemes. Together with other requirements the burden may make schemes unviable or adversely reduce the ability to provide other equally positive contributions, such as affordable housing or financial contributions. The NPPF consistently refers to 'low carbon' measures, rather than zero carbon. Where net zero carbon is achieved then the NPPF directs this to be given significant weight in the planning balance.	Policy DP6 should reflect the NPPF in that 'low carbon' measures is achievable whilst acknowledging the aim is to achieve, if possible, net zero		North Somerset Reg 19 Reps (2025-12-12) - Gleeson Land (Appendix B).pdf

58594049	Woodstock Homes (Land west of Butts Batch, Wrington)	Oliver Ansell	Woodstock Homes	No	• Justified • Effective • Consistent with national policy	Unsure	Unsure	Please see representations document Policy DP6 introduces a wide range of locally specific energy and carbon requirements that go significantly beyond national Building Regulations. While the principle of supporting sustainable construction is recognised, the policy is not justified by proportionate evidence. It requires developments to achieve “net zero operational energy”, impose ultra-low energy use thresholds, and minimise embodied carbon, but provides no clear viability evidence demonstrating that these expectations can realistically be delivered across all development typologies in North Somerset. The Council’s own viability assessment confirms that achieving the performance standards implied by DP6 will add 4–9% to base build costs for residential development. This uplift sits on top of the recently introduced national Part L 2021 requirements, which themselves represent a 31% reduction in energy use ahead of the Future Homes Standard. Importantly, the assessment notes that BCIS data has not yet adjusted to reflect these new national standards, meaning that the additional DP6 cost impacts are likely underestimated at this stage. The assessment also records that the embodied carbon requirement, added late to the policy, was treated as having only a “nominal” viability cost rather than being independently tested or sensitivity modelled. This is material: DP6 now requires embodied carbon assessments for schemes of 50 dwellings or more, setting specific $kgCO_2e/m^2$ thresholds without any robust evidence that such requirements are viable on non-strategic, medium-sized sites. The assessment further acknowledges that the short-term economic context, including high construction inflation, is likely to make viability “challenging in some cases”, particularly outside the strongest value areas. For sustainable rural settlements such as Wrington, this is a critical issue. The Local Plan allocates no growth to Wrington and relies instead on small and medium-sized sites to provide early and flexible supply, likely to be provided by SME builders. Yet DP6 introduces additional costs, reporting requirements and design burdens that disproportionately affect exactly these types of sites, which do not benefit from strategic-scale economies. The risk is that DP6 makes smaller, more deliverable sites less viable, thereby undermining the effectiveness of SP8 and the overall deliverability of the Local Plan. Given these concerns, we consider DP6 to be not justified, not effective, and not consistent with national policy, particularly as the Government intends the Future Homes Standard to regulate energy performance at a national level. To be sound, the policy requires refinement, and further viability testing, particularly in relation to the deliverability of small and medium◈sized sites in sustainable locations.	Please see representations document To be sound, the policy requires refinement, and further viability testing, particularly in relation to the deliverability of small and medium sized sites in sustainable locations.		829 A5 OA 111225 Representations to Reg 19 Local Plan.pdf North Somerset Local Plan Pre-submission Plan - Representation form Part B.pdf
39179649	Adrian Mealing			No	• Justified • Effective • Consistent with national policy	Yes	Yes	I consider Policy DP6 to be unsound because it is not justified, not effective, and not consistent with national policy. DP6 requires all new development to achieve high energy efficiency standards, incorporate low-carbon heating, maximise renewable energy generation, and demonstrate a pathway to net-zero operational carbon. However, the three housing allocations in Congresbury (183 dwellings) provide no evidence that these requirements can be met, nor that the village has the infrastructure to support net-zero development. 1. DP6 is not justified For DP6 to be justified, the Council must demonstrate that the allocated sites can support the infrastructure and design measures required for net-zero construction. However: No evidence is provided that the Congresbury allocations can accommodate low-carbon heating systems, heat pumps, or communal energy networks. The plan includes no assessment of grid capacity in Congresbury to support widespread electric heating or EV charging. There is no analysis of energy demand, orientation, shading, or renewable integration potential for the allocated sites. No design codes or masterplans exist requiring layouts that enable passive design or solar gain. Without this evidence base, DP6 is not justified. 2. DP6 is not effective DP6 cannot be implemented effectively because:	To make DP6 sound, the Plan must include: A detailed energy and net-zero feasibility study for all Congresbury allocations, including: heat pump suitability, renewable energy potential, passive solar design feasibility, thermal performance and overheating analysis. A grid capacity assessment identifying required upgrades to support electric heating and EV charging for 183 new homes. A strategic energy plan or village-wide low-carbon energy framework, including potential for: communal heat networks, rooftop solar requirements, battery storage, smart energy systems. Congresbury-specific design codes requiring passive design, energy-efficient layouts, solar-ready roofs and low-carbon heating integration. A requirement that all future planning applications include: whole-life carbon assessments, renewable energy integration strategies, overheating risk modelling,		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The required on-site renewable energy generation (solar PV, heat pumps, battery storage) is not supported by any infrastructure delivery evidence for Congresbury. The electricity grid serving the village is already constrained and the plan does not include: any grid reinforcement, substation upgrades, local network capacity analysis, planned infrastructure to support electrification. The policy relies entirely on developers to deliver net-zero in isolation, without any strategic framework. No whole-life carbon assessment or embodied carbon strategy exists for rural-edge sites. This means DP6 is not deliverable and therefore ineffective. 3. DP6 is not consistent with national policy The NPPF requires that: Local Plans provide a clear, evidence-based framework for delivering low-carbon development (NPPF 152–158), development is directed to locations where infrastructure can support renewable and low-carbon technologies, plans encourage passive design, energy efficiency, and solar optimisation, climate and energy considerations are integrated at plan-making stage, not postponed to planning applications. The Congresbury allocations do not meet these requirements because: No energy or net-zero feasibility work has been undertaken for the sites. No infrastructure upgrades or grid analysis have been carried out. No renewable or low-carbon energy infrastructure is planned for the village. No assessment has been conducted of building orientation, passive design, or overheating risk. There is no evidence that the sites can meet mandatory electric heating and EV charging requirements without overloading the local network. DP6 therefore does not align with national low-carbon policy.	on-site energy generation plans. Without these modifications, DP6 is not implementable.		
51207009	Barratt Bristol	Arwel Evans - Lichfields	Barratt Bristol	No	• Justified • Consistent with national policy	Yes	No	Barratt Homes is committed to achieving net zero by 2040 and to have zero carbon homes from 2030 (subject to future homes standard implementation and grid decarbonisation). However, delivering entirely on-site net zero now (in the absence of grid decarbonisation) results in significant cost increases and pressure on development viability when taking into account a variety of other requirements such as complying with national SUDS guidance, biodiversity net gain, habitat evaluation procedure as well as other costs such as s106/CIL and affordable housing which all need to be considered together. This is especially the case for sites that are to be removed from green belt that will need to provide at least 50% affordable housing (unless this would make the development unviable). A review of the Additional Sites Viability Addendum for North Somerset Local Plan 2041 prepared by Dixton Searle shows (Table 7) that at 50% affordable housing development schemes are unlikely to be viable, taking account of all the costs and policy requirements. “Given the relatively positive results [25% and 35%], further testing was undertaken at 50% affordable housing as requested by NSC. The results indicate poor viability across the values range thought to be typically relevant for the area (in terms of likely new build values) suggesting that a target of 50% affordable housing may be challenging unless higher values can be evidenced. This is notwithstanding our comments regarding the Government’s ‘Golden Rules’ discussed above.” The viability evidence uses a cost assumption of 9% of the base	The policy should be amended to: Ensure consistency with the future homes standard. That the definition of the ‘up front’ stage (in relation to embodied carbon) is made clear so that there is a clear framework for assessment (i.e. BS EN 15978:2011 stages A1-A5). The policy should be updated to reference operational net zero as regulated energy only That the need to achieve an overall operational energy use of less than 35kWh/m2/year should be removed from the Local Plan. During operation, the eliminating fossil fuel use depends on the assumptions within the upcoming Future Homes Standard as well as the decarbonisation of the grid – both of which are out of the control of developers. Policy DP6 should not be setting out requirements that are impossible for the developer to achieve.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								build cost for sustainable design/climate change/carbon reduction. Flats are 4% and a mix of houses and flats 7%. The assumption notes that cost uplift is based on a range of evidence provided by NSC and this then references “evidence based on range of sources including Cornwall Council - Etude with Currie & Brown, 2021”. Whilst we have not been able to have sight of this document it is clear that it is several years old now and may not provide a robust evidence base for the cost assumption. We note that the viability assessment for the South Gloucestershire Local Plan (also undertaken by Dixton Searle) uses an 8% assumption which suggests that North Somerset’s sustainability policies are more onerous. Paragraph 32 of the NPPF requires that the preparation of policies should be underpinned by relevant and up-to-date evidence. Without this we consider that the Local Plan fails test of soundness 36.d) as the evidence base is not up to date as required by paragraph 32 of NPPF and therefore there is inconsistency with the NPPF. The Local Plan also fails the 36.b) test of soundness as the plan is not based on proportionate evidence. This has the potential to have significant ramifications for the Local Plan given that the viability evidence indicates that viability is marginal at 35% and unviable at 50% in Easton-in-Gordano. Written Ministerial Statement (WMS) – December 13th - Local Energy Efficiency Standards Update – In December 2023 the Government released a WMS1 which sets out clarity on the development and application of local energy efficiency standards in the context of advancing national policy. The WMS notes that the introduction of Part L 2021 supersedes the 2015 WMS which set guidance for Local Authorities to not set energy efficiency standards beyond Code for Sustainable Homes Level 4. The WMS goes onto note that the 2025 Future Homes Standard (FHS) will mean, ‘that homes built to that standard will be net zero ready and should need no significant work to ensure that they have zero carbon emissions as the grid continue to decarbonise. Compared to varied local standards, these nationally applied standards provide much-needed clarity and consistency for businesses, large and small, to invest and prepare to build net-zero ready homes’. The WMS goes onto state, ‘the Government does not expect plan-makers to set local energy efficiency standards for buildings that go beyond current or planned buildings regulations. The proliferation of multiple, local standards by local authority area can add further costs to building new homes by adding complexity and undermining economies of scale. Any planning policies that propose local energy efficiency standards for buildings that go beyond current or planned buildings regulation should be rejected at examination if they do not have a well reasoned and robustly costed rationale.’ We query whether the Council’s policy on net zero goes beyond national guidance on setting local energy efficiency targets. We request that the policy is amended to accord with the guidance of the WMS and the forthcoming 2025 Future Homes Standard. If not then the Council should provide adequate evidence to justify that the costs associated with the additional standards can be absorbed by developments. Barratt is of the view that moving to full net zero without the Future Homes standard being in place will place undue pressure on the viability of housing projects and in our view any policy that would create this issue should not be pursued. Embodied Carbon Policy DP6 requires an embodied carbon assessment which demonstrate that up front embodied carbon does not exceed 750kg CO2e/m2. Barratt considers this to be acceptable for up front embodied carbon but would be concerned if further stages were to be added. Barratt request that the definition of the ‘up front’ stage is made clear so that there is a clear framework for assessment (i.e. BS EN 15978:2011 stages A1-A5). We also note that the embodied carbon figure has reduced from 900kg CO2e/m2 to 750kg CO2e/m2 from the previous Reg 19 consultation. We cannot see evidence from the Council as to why this has reduced and the resultant impact on financial viability of schemes. This is especially the case given that building regulations do not set a specific requirement for embodied carbon. Net Zero Operational Developers such as Barratt Homes only have the ability to influence the regulated energy demand through design and specification of materials and systems and renewable energy technologies. The unregulated energy consumption cannot be influenced by the developer because it depends on the			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								resident's use of the building. The Governments Future Homes and Buildings Standard Consultation published in December 2023 states in reference to setting energy intensity targets, 'We consider that metrics which include unregulated loads are not a suitable because designers and housebuilders have little or no control over these end uses of energy.' Whilst we recognise that other LPAs have been progressing similar policies, it is only now where the build specifications of these standards are being delivered in practice that the implications of these policies are being fully realised. This includes, for example: • Upgraded U values for Walls, Floor, Roof with bespoke psi values • Enhanced spec lintels • Triple Glazing • Air tightness below 3 (as close to 1 as achievable) • MVHR • ASHP • Additional PV provision with efficient pv systems Whilst the academic studies underpinning the local plan policies indicated the potential additional costs associated with these variations, it has become clear in practice that these are an under-estimate. In Barratt's experience, delivery of these standards (with the onsite renewable energy generation balance) is between £15,000-£22,000 per plot above current Building Regulations which makes deliverability challenging. In Barratt Homes' aspirations to lead the industry, BDW are currently testing new technologies to meet Future Homes Standard (which is lower than the Council's proposed standards) on sites across the country in partnership with landowners (Homes England and Welsh Government). All evidence to date points to the fact that earlier studies upon which LPAs are relying upon as part of their evidence base have underestimated the cost of these policies by a significant margin. In this context it is recommended that the policy is updated to reference operational net zero as regulated energy only and that the need to achieve an overall operational energy use of less than 35kWh/m2/year should be removed from the Local Plan. No on-site use of fossil fuels Barratt is committed to the transition towards not using fossil fuels. However, pragmatism is required as the industry moves towards phasing out fossil fuels during construction. During operation, the none use of fossil fuels depends on the assumptions within the upcoming Future Homes Standard as well as the decarbonisation of the grid – both of which are out of the control of developers. Policy DP6 should not be setting out requirements that are impossible for the developer to achieve. Barratt considers that Policy DP6 is unsound as it is inconstant with national policy (36.d) as it requires standards that are beyond measures that are to be set out in the Future Homes Standard. This creates a risk in terms of the delivery of the plan given the additional costs that developments will need to absorb in order to meet the standards. As a result, the Local Plan will not be effective (test of soundness 36.c) in delivering if the policy remains as drafted.			
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	• Positively prepared • Justified • Consistent with national policy	Yes	No	Persimmon Homes is fully committed to reducing direct carbon emissions from our construction activities and indirect carbon emissions, from both operational energy use in the homes, and across our value chain. We already have in place near-term (to 2030) carbon reduction targets approved by the Science Based Target Initiative (SBTi), and have set long term NZC targets which are in the process of being approved by the SBTi. Supporting this we have developed our Net Zero Carbon Transition Plan and have a set a timeframe of 2045, with clear actions plans in place. Our vertical integration strategy with advanced timber frame manufacturing capability, and our own concrete brick and tile factory enables us to deliver homes which have lower carbon footprints than traditional builds. We welcome consistent policy direction which is achievable in practice, both in terms of cost benefit analysis and availability of technologies and materials at scale, thereby helping us	We would request that the proposed embodied carbon policy allows companies to undertake upfront embodied carbon assessments on core house types within a development, rather than having to undertake studies on every property and variation. Turning to Net Zero Operational Energy: residential, the policy should just refer to the Building Regulations (Pt.L) otherwise there will be confusion and conflict between the two. We refer to the above concerns relating to the embodied carbon levels.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								deliver much needed high quality affordable homes and build sustainable communities. We are already delivering zero carbon ready homes for customers through replacing gas heating systems with alternative electric technologies such as air source heap pumps, and ensuring a fabric first approach with high levels of thermal efficiency through improved insulation and windows and doors. As the grid decarbonises, these non-gas heated homes will become zero carbon in use, and in addition solar PV roof systems can be installed onto homes to support levels of self-generation. Reducing embodied carbon across the value chain is a complex area and requires system level changes, technology advancements, and extensive collaboration. We have strong relationships with our supply chain and are working collectively on sustainability initiatives and programmes. Specific to the draft policy on embodied carbon, the Company supports the requirement for an embodied carbon assessment to be submitted alongside applications, and for the methodology to be nationally recognised to ensure consistency, such as to the RICS professional standards and guidance - whole life carbon assessment for the built environment. We would not want this information coupled with other information supported by policies to place unduly onerous requirements on applicants. The proposed target: "- For developments of 50 or more dwellings the upfront embodied carbon emissions do not exceed 750kg CO2e/m2" is not fully justified as previously it was set at 900kg CO2e/m2 and should be reset to that. Turning to Net Zero Operational Energy: residential, the policy should just refer to the Building Regulations (Pt.L) otherwise there will be confusion and conflict between the two. Referring to a future SPD that has not been prepared is unreasonable as the content of that document is unknown.		
63026465	South West Housing Association Planning Consortium		South West Housing Association Planning Consortium						The Housing Associations of the SWHAPC recognise the critical role that they play in ensuring that residents have safe, secure and efficient homes that are future proof. Promoting sustainable development is the core objective of the plan system and it is important that all new developments continue to support this aim. However, we ask the Council to be wary of the ways in which such policies could impact development viability which may restrict the provision of affordable housing in North Somerset. At present, draft Policy DP6 applies some stringent and ambitious requirements for applications, particularly the following points: All new residential buildings will be required to achieve net zero operational energy compliance, including no on-site use of fossil fuels and ultra-low energy use (Space heating demand of less than 15-20kWh/m²/year and overall operational energy use of less than 35kWh/m²/year); and • All residential development must demonstrate measures to minimise potable water use and should aim to achieve an estimated water consumption of no more than 110 litres/person/day. The SWHAPC notes that in 2025, the average daily water consumption in Britain was 136.5litres per day1. It would be helpful and reassuring if the Council could clarify whether it has tested the deliverability of these housing requirements and explain how each of the proposed figures has been determined. The SWHAPC considers that these requirements should be introduced alongside robust analysis of their viability, to ensure that the policies do not hinder the delivery of essential affordable housing in North Somerset		1118-35.M5 Local Plan 2041 Pre-submission plan (Reg 19).pdf
51242657	Rubix Strategic Limited	Arwel Evans - Lichfields	Rubix Strategic Limited	No	• Justified • Effective • Consistent with national policy	Yes	No	Rubix object to this policy and consider that NSC's policy on net zero construction goes beyond national guidance on setting local energy efficiency targets. The Written Ministerial Statement (WMS) – December 13th - Local Energy Efficiency Standards Update provides clarity in relation to the development and application of local energy efficiency standards in the context of advancing national policy. The WMS states: 'The Government does not expect plan-makers to set local energy efficiency standards for buildings that go beyond current or planned buildings regulations. The proliferation of multiple, local standards by local authority area can add further costs to building new homes by adding complexity and undermining economies of scale. Any planning policies that propose local energy efficiency standards for buildings that go beyond current or planned buildings regulation should be rejected at examination if they do not have a well reasoned and robustly costed rationale' We object to Policy DP6 and request that the policy be amended to accord with the guidance set out in the WMS and the forthcoming 2025 Future Homes Standard. Alternatively, the Council should provide adequate evidence which justifies the costs associated with these additional standards. Rubix is of the view that this policy places undue pressure on the viability of housing projects. Embodied Carbon	We object to Policy DP6 and request that the policy be amended to accord with the guidance set out in the WMS and the forthcoming 2025 Future Homes Standard. Alternatively, the Council should provide adequate evidence which justifies the costs associated with these additional standards. Rubix is of the view that this policy places undue pressure on the viability of housing projects. As a land promoter, Rubix has no control of the unregulated energy consumption as it depends on the resident's use of the building. Therefore, we recommend that the policy is updated to reference operational net zero as regulated energy only. During operation, the non-use of fossil fuels depends on the assumptions within the upcoming Future Homes Standard as well as the decarbonisation of the grid – both of which are out of the control of land promoters and developers. Policy DP6 should not be setting out requirements that are impossible for the land promoter and developer to achieve.

Therefore, we recommend that the policy is updated to reference operational net zero as regulated energy only. No on-site use of fossil fuels During operation, the non-use of fossil fuels depends on the assumptions within the upcoming Future Homes Standard as well as the decarbonisation of the grid – both of which are out of the control of land promoters and developers. Policy DP6 should not be setting out requirements that are impossible for the land promoter and developer to achieve.			
62943009	Homes England	Avison Young (Peter Stockall)	Homes England	No	• Effective	Unsure	Unsure	Homes England supports the transition to Future Homes and in the future potentially towards net zero over the lifetime of the plan. However that transition to net zero will likely be through further Legislation and Building Regulation changes. Accordingly as per Lee Rowley's Written Ministerial Statement, Written statements - Written questions, answers and statements - UK Parliament explains that Nationally applied standards the appropriate approach for the transition towards net-zero ready homes. Compared to varied local standards, these nationally applied standards provide much-needed clarity and consistency for businesses, large and small, to invest and prepare to build net-zero ready homes The WMS provides that local standards can be prepared, but they should be rejected at examination if they are not well reasoned and robustly costed rational that - Development remains viable, and the impact on housing supply and affordability is considered in accordance with the National Planning Policy Framework. - The additional requirement is expressed as a percentage uplift of a dwelling's Target Emissions Rate (TER) calculated using a specified version of the Standard Assessment Procedure (SAP). Where plan policies go beyond current or planned building regulations, those polices should be applied flexibly to decisions on planning applications and appeals where the applicant can demonstrate that meeting the higher standards is not technically feasible, in relation to the availability of appropriate local energy infrastructure (for example adequate existing and planned grid connections) and access to adequate supply chains. The future plans of Government were recently clarified in response to a published question from Baroness Taylor of Stevenage (25 November 2025), the Government stated: The Government remains committed to meeting its target of net zero emissions by 2050 and recognises the important contribution that the energy efficiency of buildings has to make in meeting it. Through the Building Regulations, the Government sets minimum performance standards for new homes and buildings. In 2021, these standards were strengthened to ensure new homes and buildings are highly energy-efficient, with high-quality insulation and effective ventilation. These changes came into force in June 2022. We intend to introduce further changes to the Building Regulations through the Future Homes and Buildings Standards in the coming months. These standards will ensure new homes and buildings are extremely energy-efficient and use low-carbon heating. On Renewable Energy Offsetting, Policy DP6 states that, "residual energy demand should be met through the generation of onsite renewable energy, but if this is not technically feasible, the requirement may be met elsewhere by means of offsite renewable energy generation." It is unclear in the policy wording whether meeting the requirement 'elsewhere' is a site that is directly linked with the site or 'near-site' or anywhere within North Somerset (or beyond) where there is existing or new or additional renewable energy generation provision that might be connected to. Additionally, there is no consideration for a strategic multi plot	The policy should be deleted but if retained, it should simply require compliance with the latest building regs and provide clarification on the two issues we have raised re legacy sites. We also seek justification on how partially built strategic sites such as Locking Parklands could meet policy DP6. We also request for the word 'elsewhere' in the Renewable Energy Offsetting to be defined further to avoid uncertainty.

								development like Locking Parklands, where off-setting elsewhere could be onerous if it is not technically feasible to generate renewable energy onsite. The Plan could also recognise the difficulty in meeting the carbon neutral objectives on strategic sites such as Locking Parklands which are partially constructed.			
18477217	Kit Stokes	Kit Stokes	StokesMorgan Planning Ltd	Yes	• Effective • Consistent with national policy	No	Unsure	I do not understand why the requirements need to go above and beyond Building Regulations. There are clear implications for viability of building and purchase costs which impact affordable housing delivery.	Delete Net Zero requirements		
31062913	R Storrar		KWAW	Yes		Yes	Yes			The desire to go to net zero is essential and a very sensible policy	
15430817	Mike Tremlett		Graham Moir Associates					The same rules apply as per policies SP1 and DP5. This is what building regulations does so rather than focussing on this, the LPA should focus on delivering houses and let building regulations set the standards. All of the standards are set by building regulations and it is there job to ensure that builds are completed to the required standard. Therefore, this policy should be deleted/removed or drastically paired back. Otherwise, standards such as this will deter developers from the North Somerset area. They will go elsewhere in the Country and build to building regulations and BNG requirements. By doing this, the LPA will once again fall short of their 5 year supply by pushing developers away and again likely failing to deliver required housing for another lengthy number of years – maybe another 13 year stretch? This then takes the onus of checking this to the remit of Building Regulations and lets the planners get on with delivering development

Policy DP7: Large scale renewable and low carbon renewable energy

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
32925633	Bath and North East Somerset Council		Bath and North East Somerset Council							Renewable Energy B&NES is broadly supportive of North Somerset's intention to facilitate renewable energy development within its area through the Local Plan. This is compatible with this council's climate emergency declared in 2019. The plan notes North Somerset Wind Energy and Solar PV Supplementary Planning Documents will be updated to highlight potential locations identified as most technically suitable areas for renewable energy schemes. B&NES would welcome further dialogue on this matter should the approach change and given the sub-regional importance of renewable energy provision within the context of each authority's climate emergency declaration, in addition to the context of the landscape sensitivity/potential.	North Somerset Local Plan Reg 19 Consultation 2025 FINAL.pdf
39179649	Adrian Mealing			No	• Justified • Effective • Consistent with national policy	Yes	Yes	I consider DP7 to be unsound because it is not justified, not effective, and not consistent with national policy. DP7 requires that development should maximise opportunities for renewable and low-carbon energy generation, contribute to a resilient energy grid, support decentralised energy systems, and ensure that energy infrastructure is integrated into new development. However, there is no evidence that the three Congresbury allocations (183 dwellings) can meet these requirements, nor that the necessary energy infrastructure exists to support them. 1. DP7 is not justified DP7 is not justified because the Plan does not provide any evidence that Congresbury is capable of supporting on-site renewable energy at the scale required. Specifically:	To make DP7 sound, the Plan must: Undertake a renewable and low-carbon energy feasibility assessment for all Congresbury allocations, covering: solar PV capacity, heat pump suitability, potential for localised heat networks, battery storage integration.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								No energy feasibility study has been undertaken for the Congresbury sites. No assessment of solar PV capacity, roof orientation or landscape sensitivity has been provided. No analysis exists of the suitability of the village for heat pumps, communal heat networks, or other low-carbon technologies. No evidence has been provided that Congresbury's existing electricity grid capacity can accommodate the additional renewable and low-carbon technologies required by DP7. Without this evidence base, DP7 is not justified. 2. DP7 is not effective DP7 cannot be implemented effectively in Congresbury because: The village's electrical infrastructure is already limited, and the plan does not propose any upgrades to substations or the local distribution network. There is no strategy for how renewable energy infrastructure will be delivered, funded, phased or maintained for new development. No design codes exist to require south-facing roofs, optimal panel angles, or battery storage integration. No landscape assessment has been done to ensure renewable infrastructure does not conflict with the protected rural setting around Congresbury. The cumulative impact of three allocations has not been evaluated with respect to combined renewable energy load or energy resilience. This means DP7 is not deliverable and therefore ineffective. 3. DP7 is not consistent with national policy The NPPF requires that Local Plans: plan proactively for renewable and low-carbon energy infrastructure (NPPF 152–158), identify opportunities for decentralised or low-carbon energy networks, ensure new development is aligned with energy grid capacity, integrate renewable technologies into site design and layout. The Congresbury allocations fail these requirements because: No decentralised energy frameworks or heat network opportunities have been identified. No evidence shows that the village's electricity network can support widespread heat pumps, solar PV, or EV charging. No renewable infrastructure is included in the Infrastructure Delivery Plan. No design or orientation strategy exists to ensure solar gain. Renewable energy feasibility has not been considered at plan level, contrary to NPPF requirements. DP7 therefore does not align with national low-carbon and renewable energy policy.	Provide a local electricity grid capacity study identifying upgrades required to support 183 homes using electric heating and EV charging. Introduce design codes requiring: solar-ready roof orientation and pitches, shading analysis, passive design integration, on-site renewable generation targets. Produce a village-level low-carbon energy plan, ensuring renewable technology can be deployed without landscape or heritage harm. Include energy infrastructure upgrades in the Infrastructure Delivery Plan with committed funding. Without these modifications, DP7 remains unjustified and ineffective.		
62846721	Cleeve Parish Council		Cleeve Parish Council	No	• Positively prepared • Justified • Effective			We do not consider the North Somerset Local Plan 2041: Pre-Submission Plan to be sound. Based on the detailed representations of Cleeve Parish Council, we believe the Plan fails three of the tests of soundness set out in NPPF paragraph 36: Positively Prepared, Justified, and Effective. 1. Positively Prepared The Plan does not adequately address the needs of young people or newly forming households, nor does it ensure that new development will be properly supported by essential infrastructure. The repeated use of discretionary language ("will be expected", "should have regard to") leaves critical requirements—such as drainage, healthcare capacity, active travel connections, affordable housing percentages, biodiversity measures, renewable energy deployment, and sustainable design—insufficiently guaranteed. The Plan also fails to provide a clear and sustainable policy position on future growth at Bristol Airport, or on how Green Belt releases will be compensated or justified. As a result, the Plan does not convincingly meet the district's needs in a sustainable and deliverable way. 2. Justified The policy choices taken in the Plan do not always represent the most appropriate strategy when tested against reasonable alternatives. The evidence base appears inadequate or incomplete in several areas, including: (a) the justification for Green Belt releases at Bristol Airport; (b) the robustness of climate-adaptation measures given the known risks of flooding, sea level rise, extreme heat, and pressure on water resources; (c) the lack of evidence demonstrating that non-mandatory design guidance will achieve sustainable outcomes; (d) the omission of low-rise flats in existing towns as a viable and necessary option for delivering affordable housing for young people; and (e) insufficient assessment of the landscape, safety, environmental and carbon impacts of airport-related growth, including the absence of a cumulative emissions assessment. In each case, reasonable and more sustainable policy alternatives have not been adequately explored. 3. Effective The Plan's delivery mechanisms are weak and do not provide confidence that its policies will be realised. Critical infrastructure (roads, drainage, healthcare, active travel routes, mass transit provision and energy resilience) is not tied to development in a sufficiently enforceable manner. Policies that rely on voluntary interpretation or "expectations" are unlikely to secure required outcomes, particularly in relation to affordable housing percentages, design quality, biodiversity net gain, native woodland expansion, protection of commons, and the safeguarding of Best and Most Versatile agricultural land. Policies concerning Bristol Airport do not demonstrate effective cross-boundary working or credible mitigation strategies, while the approach to flood-risk management does not provide sufficient assurance that developments requiring the Exception Test would be safe, sustainable, or financially deliverable. As drafted, there is insufficient certainty that the Plan can be implemented as intended.	Cleeve Parish Council welcomes the commitment to solar and wind energy generation. Given that a well-positioned solar array of approx. five acres is needed to generate 1 MW at peak, we strongly suggest that the emphasis for solar generation should be moved to retrofitting arrays on existing buildings rather than utilising field space. A further benefit of rooftop solar arrays is that it provides additional resilience at a time when power may be cut – for example when a storm blows a tree onto the power lines.		Submission on behalf of Cleeve Parish Council in respect of Pre.docx

39374913	Tony Harden								Page 131 Policy DP8 explanatory text implies all local centres are accessible locations and there should be a presumption in favour of higher density development there. Wrington is defined as a` Local centre on page 350 but it is not accessible having no safe cycle route to it, no rail station and virtually no bus service. The policy DP8 text should be clarified to make it clear that only in relevant Town/Local centres which have suitable access should development be allowed		comments on Local Plan.pdf
31149537	Strongvox Ltd	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	This policy is unsound as it is not justified or effective. In previous representations on the Regulation 18 draft policy, which also proposed a minimum density of 40 dwellings per hectare, concerns were raised that this approach conflicts with national policy. While the policy states that density should respect and complement the character of the surrounding area, there is limited scope to achieve this given local character, market demand, and site constraints of individual sites across North Somerset. The updated viability assessment indicates that achieving a minimum of 40 dwellings per hectare may be possible on strategic sites. However, this will not always be feasible across the Council's area, and the requirement would create conflicts with other policies.	Greater flexibility is needed within the policy to ensure future developments are built at a density appropriate to local character, site constraints, and market requirements. 21579777	Taylor Wimpey (Youngwood Lane, Nailsea)	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	Policy DP8: Efficient use of land This policy is unsound as it is not justified or effective. In previous representations on the Regulation 19 draft policy, which also proposed a minimum density of 40 dwellings per hectare, concerns were raised that this approach conflicts with national policy. While the policy states that density should respect and complement the character of the surrounding area, there is limited scope to achieve this given local character, market demand, and site constraints of individual sites across North Somerset.	Modifications: Greater flexibility is needed within the policy to ensure future developments are built at a density appropriate to local character, site constraints, and market requirements.		R002v4_NSLP_Reg19_TWBristol.Dec25.pdf
63186689	Vistry Group	Boyer	Vistry Group						Whilst Vistry support the efficient use of land, they maintain that draft Policy DP8 remains too broad and is not supported by sufficient evidence to demonstrate which parts of the district should be subject to higher target densities. Vistry maintain that draft Policy DP8 does not sufficiently account for reasonable alternatives, such as development proposals which improve the accessibility of a location. As such, a specified minimum density figure (40 dwellings per hectare) is not appropriate and flexibility should be maintained according to site suitability. No mention of Future Homes Standard is made within the supporting text and the omission of any reference to FHS brings into question the soundness of the policy in terms of consistency with national policy. The Policy seeks to move away from the carbon reduction methods set out in current Part L of the Building Regulations and instead sets out a net zero operational energy requirement with specifications for space heating demand and operational energy use. Vistry is concerned that these specifications may not be consistent with the final FHS specifications and therefore not consistent with national policy. As such, the Council should ensure Policy DP6 is consistent with FHS and does not go beyond planned building regulations		North Somerset Local Plan Pre-submission Plan - Representation form Policy LP5.pdf
63191617	Various Taylor Wimpey Crest Nicholson Barratt Redrow Vistry Group	Nick Matthews (Savills)		No	• Justified • Consistent with national policy	Yes	Yes		These representations have been prepared and submitted by Savills on behalf of various clients including Taylor Wimpey, Crest Nicholson, Barratt Redrow, and Vistry Group. This draft policy seeks to encourage development on vacant and previously developed land and optimal use of land more generally. The draft policy wording states: 'The minimum target density will be 40 dwellings per ha, but this should be higher at accessible locations. In all cases density should respect and complement the character of the surrounding area.' Whilst our clients support the efficient use of land and the associated benefits it brings, adopting a minimum density target fails to acknowledge site context and constraints. Each and every development opportunity must be considered on its merits and in the context of its surroundings. Two sites that directly adjoin each other could prove to be optimized by very different development densities. Minimum density requirements are a very blunt tool and are incapable of providing the nuanced response to site specific considerations which is necessary to achieve the approach specified in paragraph 130 of the Framework. If the starting point for the authority is an unrealistic density range then there will likely be as many exceptions to the rule as there are schemes which are policy compliant. Notwithstanding, the draft policy wording and Justification text approach density in a different manner, and apply potentially		Policy DP8 (Efficient Use of Land) for Various (Dec 25).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									contradictory standards. The Justification text states:'The NPPF does not specify minimum density targets and considers that density levels should be set by local authorities to reflect local circumstances. Within North Somerset the minimum target net density will be 40 dwellings per hectare within the developable area. However, this is an average and the appropriate density will vary depending on local circumstances. Within accessible locations such as town and local centres and transport hubs there will be a presumption in favour of higher densities as this can help increase vitality and viability in these areas, support public transport and provide different types of accommodation.' [emphasis added] The '40 dwellings per ha' figure is stated to both be a 'minimum' and an 'average'. Since this policy will be used to assess and determine planning applications there must be clarity in how it is to be applied to individual planning applications across the local authority area. Rather than seeking to establish fixed density ranges through the plan, we strongly recommend the authority instead encourage efficient use of land where it is appropriate to do so and in the context of the five considerations specified under paragraph 129 of the Framework		
29403105	Diverse Partnerships Yatton Ltd	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	This policy is unsound as it is not justified or effective. In previous representations on the Regulation 19 draft policy, which also proposed a minimum density of 40 dwellings per hectare, concerns were raised that this approach conflicts with national policy. While the policy states that density should respect and complement the character of the surrounding area, there is limited scope to achieve this given local character, market demand, and site constraints of individual sites across North Somerset. The updated viability assessment indicates that achieving a minimum of 40 dwellings per hectare may be possible on strategic sites. However, this will not always be feasible across the Council's area, and the requirement would create conflicts with other policies.	Modifications: Greater flexibility is needed within the policy to ensure future developments are built at a density appropriate to local character, site constraints, and market requirements. 39179649	Adrian Mealing			No	‣ Justified ‣ Effective ‣ Consistent with national policy	Yes	Yes	I consider Policy DP8 to be unsound because it is not justified, not effective, and not consistent with national policy. DP8 requires that development makes the most efficient use of land by prioritising brownfield sites, optimising densities in sustainable locations, and ensuring development patterns minimise land take. However, the three housing allocations in Congresbury (183 dwellings) fail to demonstrate compliance with these principles. 1. DP8 is not justified DP8 is supposed to be underpinned by evidence that all reasonable alternatives have been evaluated before selecting greenfield land. However, for Congresbury: No brownfield-first analysis has been provided. No evidence is offered that less sensitive land elsewhere in North Somerset was considered instead of greenfield sites on the rural edge of Congresbury. No density analysis has been published for the three allocations. The plan does not show that the chosen sites optimise land use relative to transport accessibility, infrastructure capacity, or environmental constraints. Without a comparative assessment, DP8 is not justified by an adequate evidence base. 2. DP8 is not effective DP8 cannot be effectively implemented in Congresbury because: The three allocations represent dispersed, peripheral greenfield development, rather than efficient land use near services or transport. The allocations increase the village footprint significantly without any masterplan or design codes to guide density or land efficiency.	To make DP8 sound, the Plan must: Provide a full brownfield-first assessment, identifying all alternative redevelopment or infill sites in North Somerset before allocating greenfield land in Congresbury. Produce a density strategy for villages, showing how densities have been determined for each allocation. Require design codes and masterplanning for Congresbury to prevent sprawl and optimise land use. Demonstrate that the chosen greenfield allocations are unavoidable due to brownfield shortages — supported by evidence. Introduce a Strategic Gap or landscape protection measure to avoid coalescence with Yatton. Establish a requirement for sustainable transport connectivity before or alongside development so higher densities (and land efficiency) can be achieved sustainably. Without these modifications, DP8 remains unjustified and ineffective.

								The absence of safe walking/cycling routes means the allocated land cannot be used efficiently for sustainable travel. The sites risk contributing to low-density sprawl along the A370, undermining DP8's goals. DP8 is therefore not implementable and is ineffective in this location. 3. DP8 is not consistent with national policy The NPPF requires Local Plans to: promote efficient use of land (NPPF 119–121), encourage brownfield redevelopment, ensure densities reflect sustainability of location, avoid unnecessary greenfield consumption, prevent settlement sprawl and coalescence, protect landscape character and village identity. The Congresbury allocations contradict these requirements because: They rely exclusively on greenfield land, despite DP8's brownfield-first requirement. They encourage linear sprawl along the A370 corridor. They threaten settlement distinction between Congresbury and Yatton, increasing coalescence risk. The village is car-dependent, meaning higher densities cannot be achieved sustainably — yet low-density sprawl is also inappropriate under DP8. No brownfield or alternative sites were assessed or published. DP8 therefore fails to align with core NPPF principles guiding efficient land use.			
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	‣ Positively prepared ‣ Consistent with national policy	Yes	No	The Company supports the efficient use of land. However, this must be set against placemaking and from a housing delivery perspective, providing new homes to meet the identified needs. It is noted that the higher densities are supported in centres and transport hubs. Such development should not be restricted to close proximity. It is not sensible for development to be restricted by an unjustified or unrealistically short walking distance. That is to say that a person may not walk a distance slightly less than the length of Portishead marina to reach a train station. Greater flexibility should be given the distance from a transport hub, notably a train station, where high density development is encouraged (and a presumption of development is given). The minimum density of development at 40dph would appear reasonable – where balanced against local context which could influence a site's capacity for development in both type and layout. The Local Plan should have regard to emerging national policy.	The Council should consider the benefits of higher density development around train station locations and consider that in the context of those settlements with and are soon to receive train services. This approach should be embraced now as opposed to waiting for a Local Plan Review.		
63107361	Gladman Developments		Gladman Developments Ltd	Yes					Gladman support draft Policy DP8 which sets out that the minimum target density will be 40 dwellings per hectares, however this should be higher at accessible locations. In all cases density should respect and complement the character of the surrounding area. The supporting text notes that 40 dwellings per hectare within the developable area is an average and the appropriate density will vary on local circumstances. For Gladman's draft housing allocation at Land off Elm Grove, Locking, a minimum density of 40 dwellings per hectare would not be in-keeping with the surrounding area, and therefore Gladman are proposing a slightly lower density at 36 dwellings per hectare.	Gladman support draft Policy DP8 which sets out that the minimum target density will be 40 dwellings per hectares, however this should be higher at accessible locations. 					• prepared • Justified • Effective			Prepared, Justified, and Effective. 1. Positively Prepared The Plan does not adequately address the needs of young people or newly forming households, nor does it ensure that new development will be properly supported by essential infrastructure. The repeated use of discretionary language (“will be expected”, “should have regard to”) leaves critical requirements—such as drainage, healthcare capacity, active travel connections, affordable housing percentages, biodiversity measures, renewable energy deployment, and sustainable design—insufficiently guaranteed. The Plan also fails to provide a clear and sustainable policy position on future growth at Bristol Airport, or on how Green Belt releases will be compensated or justified. As a result, the Plan does not convincingly meet the district’s needs in a sustainable and deliverable way. 2. Justified The policy choices taken in the Plan do not always represent the most appropriate strategy when tested against reasonable alternatives. The evidence base appears inadequate or incomplete in several areas, including: (a) the justification for Green Belt releases at Bristol Airport; (b) the robustness of climate-adaptation measures given the known risks of flooding, sea level rise, extreme heat, and pressure on water resources; (c) the lack of evidence demonstrating that non-mandatory design guidance will achieve sustainable outcomes; (d) the omission of low-rise flats in existing towns as a viable and necessary option for delivering affordable housing for young people; and (e) insufficient assessment of the landscape, safety, environmental and carbon impacts of airport-related growth, including the absence of a cumulative emissions assessment. In each case, reasonable and more sustainable policy alternatives have not been adequately explored. 3. Effective The Plan’s delivery mechanisms are weak and do not provide confidence that its policies will be realised. Critical infrastructure (roads, drainage, healthcare, active travel routes, mass transit provision and energy resilience) is not tied to development in a sufficiently enforceable manner. Policies that rely on voluntary interpretation or “expectations” are unlikely to secure required outcomes, particularly in relation to affordable housing percentages, design quality, biodiversity net gain, native woodland expansion, protection of commons, and the safeguarding of Best and Most Versatile agricultural land. Policies concerning Bristol Airport do not demonstrate effective cross-boundary working or credible mitigation strategies, while the approach to flood-risk management does not provide sufficient assurance that developments requiring the Exception Test would be safe, sustainable, or financially deliverable. As drafted, there is insufficient certainty that the Plan can be implemented as intended.	isolated communities with poor facilities.

								assessment demonstrates clearly that the proposed layout, design, and mitigation measures would ensure that occupiers and users would remain safe from current and future surface water flood risk for the lifetime of the development (therefore addressing the risks identified e.g. by Environment Agency flood risk mapping), without increasing flood risk elsewhere, then the sequential test need not be applied." Therefore, the policy is inconsistent with national guidance and unduly restricts opportunities for additional homes in some of the most sustainable locations, regardless of the capacity to ensure these are safe in terms of flood risk and will not exacerbate such risk elsewhere.			
29403105	Diverse Partnerships Yatton Ltd	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	The policy is unsound as it is not justified, positively prepared or consistent with national policy. While our client is supportive of policy that seeks to protect new and existing development from increased probability and severity of flooding, presently this policy presumes in respect of the sequential test that this exercise should inform any proposals to develop land within areas of increased flood risk, regardless of whether that development can demonstrably be made safe in technical terms. This does not align with the September 2025 amendments to the PPG which advise, inter alia, that: "In applying paragraph 175 a proportionate approach should be taken. Where a site-specific flood risk assessment demonstrates clearly that the proposed layout, design, and mitigation measures would ensure that occupiers and users would remain safe from current and future surface water flood risk for the lifetime of the development (therefore addressing the risks identified e.g. by Environment Agency flood risk mapping), without increasing flood risk elsewhere, then the sequential test need not be applied." Therefore, the policy is inconsistent with national guidance and unduly restricts opportunities for additional homes in some of the most sustainable locations, regardless of the capacity to ensure these are safe in terms of flood risk and will not exacerbate such risk elsewhere. In addition, the policy only directs to the Strategic Flood Risk Assessment in identifying flood risk. The PPG however draws this more broadly in describing the content of a Flood Risk Assessment as follows: "You can use this section to describe the risk of flooding to and from the proposed development over its expected lifetime, including appropriate allowances for the impacts of climate change. It would be helpful to include any evidence, such as maps and level surveys of the site, flood data sets (e.g. flood levels, depths and/ or velocities) and any other relevant data (e.g. speed of onset and duration), which can be acquired through consultation with the Environment Agency, the lead local flood authority for the area, or any other relevant flood risk management authority. Alternatively, you may consider undertaking or commissioning your own assessment of flood risk, using methods such as computer flood modelling. a. What is/ are the main source(s) of flood risk to the site? (e.g. tidal/sea, fluvial or rivers, surface water, groundwater, other?). You should consider the flood mapping available from the Environment Agency's Flood Map for Planning, the Strategic Flood Risk Assessment for the area, historic flooding records (e.g. the historic flood map and local authority section 19 flood investigation reports) and any other relevant and available information." It is not uncommon for applicants to conduct topographical surveys for accurate levels data or modelling that may further clarify a site's flood risk. In addition, SFRAs may be superseded by dedicated modelling undertaken by other parties such as the Environment Agency in flood defence management. These circumstances were/are pertinent to our client's site as explored below. The policy must be brought up-to-date to reflect national planning practice guidance with respect to technical flood risk information and the matter of sequential testing. 21472417	Mead Realisations Ltd	Oneleven Property		No	• Positively prepared • Justified • Effective • Consistent with national policy			Objection is raised to this policy which is far too detailed and does not reflect national policy.			Reg 19 Final Representations Mead Realisations 12.12.25 including appendices.pdf
939361	R Burrows		-	No	• Positively prepared • Justified • Effective	Unsure	Unsure	There are several inherent conflicts and specific policies that are argued to constrain development, particularly housing delivery. When coupled with other documents outside of the local plan, such SPDs as the proposed enlarged Bat SAC. It is questioned how NSC will deliver windfall sites & small sites at all. The financial burden is already onerous and this will add too much financial burden on small developers & self builders who should be exempt. Coupled with flood risk and the absurdity of designing to an undefended flood situation (rather than breach modelling) an almost impossible scenario where the flood defences are completely removed. To design to the absolute worse case (doomsday) scenario is unrealistic and far from pragmatic. Development Management Policies (DP), particularly those related to climate change, sustainability standards, and flood risk, make the delivery of growth procedurally and economically harder. This is highlighted by the fact that the LPA was found not to have delivered a five-year supply of housing for at least 13 years, suggesting the existing constraints are already impacting deliverability. This will exacerbate the situation & the financial burden of compliance with policies that duplicate existing primary legislation uneccessary.	Policy DP9: Suggested Rewording (Relaxing Tests for Minor Development): "For potential development sites in flood zone the following should be applied in relation to the Sequential and Exceptions test. In the 4 main towns of WsM, Portishead, Clevedon and Nailsea, sites of 9 or fewer dwellings are not required to pass the sequential test or the exceptions test". Smaller windfall sites could be exempt as deliver has stalled significantly, they are counted as part of the delivery targets but are likely to struggle. Regarding redundant ground floor premises (like those in W-s-M), the policy should be re-worded, or the accompanying Strategic Flood Risk Assessment (SFRA) guidance should be amended to allow the conversion and re-use of redundant ground floor premises with mandatory flood resistant and flood resilient measures. This is based on the argument that future governments and the LPA will provide funding to improve sea defences before flooding reaches a critical point. Deferring to the SFRA will allow that to change more flexibly than the LP.		
62850529	Andy Chappel			No	• Justified • Effective • Consistent with	Yes	Yes	Justification – The mechanism for achieving carbon neutrality by 2030 is not fully evidenced. Effectiveness – Monitoring and enforcement of climate measures is unclear. Consistency with national policy – See the National Planning Policy Framework (paras 152–158) which require robust climate-mitigation and adaptation mechanisms.	Require use of future flood-risk modelling to 2080–2100 for all major development. - Require natural flood-management measures (wetlands, woodland, attenuation landscapes). - Require restoration and buffering of watercourses and springs. - Strengthen integration with GI and BNG deliver

51560705	Dan Clarke-Hall (Gibson Architecture)		Gibson Architecture	No	Effective	Unsure	Unsure	I believe the plan to disproportionately affect small developers. I am unsure of the validity of the housing allocation, especially the windfall sites which I believe the plan overestimates. Windfall numbers are decreasing and flood, climate policy among others are making North Somerset incredibly unattractive to small to medium developers. The attached document includes all of my opinions on the plan. DP9 – Flood Risk Issue: Sequential/Exception Tests required for all sites, even small schemes in defended flood zones. This blocks conversions in town centres where vacant retail frontages could be repurposed.	My proposed modifications are included in the associated representation. DP9 – Flood Risk • Modification: Exempt sites of 9 or fewer dwellings in Weston super Mare, Portishead, Clevedon, and Nailsea from Sequential/Exception Tests. Exempt sites of 4 or fewer dwellings in other settlement boundaries. Require mandatory flood resistant and resilient measures (raised sockets, resilient doors, concrete/tiled floors, CIRIA guidance). Allow conversion of redundant ground floor premises in defended flood zones, subject to resilience measures. Rationale: Flood risk assessments should be based on defended scenarios. Restricting conversions in town centres undermines regeneration, leaving dead frontages and vacant units that weaken vitality and heritage character.		Dan Clarke Hall.pdf
1190177	Churchill Parish Council		Churchill Parish Council	Yes		Yes	Yes		Flooding appears to have low significance in the plan, due to the issues in the county it was expected that it has its own section. North Somerset Council need to acknowledge we are a very low-level lying region, prone to flooding. This needs much more in-depth analysis presented here, mitigation plans developed, and local infrastructure and deployment plans put in place. These mitigation strategies need to form part of each planning application - and not just another capture pond that pushes the problem downstream.		
63052097	Stephanie Fowler	Pegasus Group		No	Positively prepared Justified Effective Consistent with national policy	Yes	Yes	The policy is unsound as it is not justified, positively prepared or consistent with national policy. While our client is supportive of policy that seeks to protect new and existing development from increased probability and severity of flooding, presently this policy presumes in respect of the sequential test that this exercise should inform any proposals to develop land within areas of increased flood risk, regardless of whether that development can demonstrably be made safe in technical terms. This does not align with the September 2025 amendments to the PPG which advise, inter alia, that: “In applying paragraph 175 a proportionate approach should be taken. Where a site-specific flood risk assessment demonstrates clearly that the proposed layout, design, and mitigation measures would ensure that occupiers and users would remain safe from current and future surface water flood risk for the lifetime of the development (therefore addressing the risks identified e.g. by Environment Agency flood risk mapping), without increasing flood risk elsewhere, then the sequential test need not be applied.” Therefore, the policy is inconsistent with national guidance and unduly restricts opportunities for additional homes in some of the most sustainable locations, regardless of the capacity to ensure these are safe in terms of flood risk and will not exacerbate such risk elsewhere.	Modification: The policy must be brought up-to-date to reflect national planning practice guidance with respect to technical flood risk information in the matter of sequential testing.		R001v3_NSLP_Reg19_Fowler.Dec25.pdf
58452161	Julia Gregory			No	Consistent with national policy						
51732129	Gleeson Land	tor&co (Jacqueline Mulliner)	Gleeson Land	No	Positively prepared Justified Effective Consistent with national policy	No	No	Given the characteristic of the District, and lack of sustainable alternatives (compliant with the spatial strategy) that completely avoid flood zones 2 & 3 within their red line it is essential that the approach to the sequential test, as set out in policy DP9, is consistent with national guidance and provides a positive and pragmatic approach. Specifically, it is considered that the policy should make it clear that it expressly allows for a disaggregated approach when considering the need for the sequential test, which would facilitate development sites being brought forward where residential development is not proposed to take place in the areas at risk of flooding but other elements of the development – infrastructure/biodiversity/open space etc may be within the red line of an application). This would reflect a sequential approach and meet the national policy aim of preventing inappropriate development in areas of flood risk	Amend the wording of the Policy DP9 to make it explicit that a disaggregated approach is acceptable.		North Somerset Reg 19 Reps (2025-12-12) - Gleeson Land (Appendix B).pdf
39179649	Adrian Mealing			No	Justified Effective Consistent with national policy	Yes	Yes	I consider DP9 to be unsound because it is not justified, not effective, and not consistent with national policy. DP9 requires development to be steered to areas of lowest flood risk and for the Sequential Test to be applied when any allocated site contains land at risk of flooding. However, the housing allocations for Congresbury directly contradict the intent of DP9. 1. DP9 is not justified The Woodhill Nurseries allocation (100 homes) includes areas specifically identified in the Local Plan text as requiring the Sequential Test due to higher flood risk. Despite this, the site is allocated without:	Proposed modifications to DP9: To make DP9 sound, the Plan must include: A full Sequential Test for the Woodhill Nurseries allocation, demonstrating whether safer alternative sites across North Somerset exist. Detailed flood modelling and hydrological assessment for all Congresbury allocations, including cumulative impact. A drainage and flood mitigation strategy addressing:		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								evidence that lower-risk alternative sites were assessed, hydrological modelling demonstrating the development can be safely accommodated, any justification for allocating a site partly within higher risk zones when safer sites exist elsewhere. This contradicts the NPPF Sequential Test requirement (paras 159–162) and means DP9 is not supported by an adequate evidence base. 2. DP9 is not effective DP9 requires strategic flood risk mitigation at plan level, but the Plan does not provide: any drainage or flood mitigation strategy for Congresbury, analysis of cumulative runoff impacts from three nearby allocations, assessment of effects on the Congresbury Yeo or surrounding rhynes, demonstration that local drainage networks have capacity for new development, consideration of climate change allowances or future rainfall projections. Without these assessments, DP9 cannot effectively prevent future flood risk or ensure long-term resilience. 3. DP9 is not consistent with national policy The NPPF requires: development to be directed to lower-risk areas (Sq. Test), avoidance of increasing flood risk elsewhere, robust evidence of mitigation before allocations are made. Allocating Woodhill Nurseries without providing Sequential Test evidence, flood modelling or a drainage strategy fails these requirements. Furthermore, Congresbury is a known floodplain settlement — policy decisions should be cautious and evidence-led. This allocation is not.	surface water management, capacity of rhynes, runoff rates, climate change allowances. Removal or modification of any part of an allocation lying in higher-risk zones where the Sequential Test cannot be passed. Clear plan-wide policies ensuring no net increase in flood risk to Congresbury village or downstream communities. Without these modifications, DP9 remains unjustified and inconsistent with national flood policy.		
57928993	Kevin Payne			No	• Justified • Effective • Consistent with national policy	No	No	DP9 has not been applied correctly to the allocation at Pill Green. The site contains ancient and veteran oaks, ecologically valuable hedgerows, and lies within key bat foraging and commuting corridors identified by local surveys and referenced in the Parish Council response. The Local Plan does not demonstrate that these constraints were assessed at the earliest stage as required by DP9. Nor does it show that long-term retention and realistic future growth of trees—particularly veteran oaks—has been factored into layout, root protection areas, overshadowing, or conflict with gardens, windows, and infrastructure. DP9 also requires protection of irreplaceable habitats and avoidance of adverse impacts on designated bat SAC zones. The plan's evidence base does not show how these requirements were met for Pill Green.	Reassess Pill Green against the full requirements of DP9, including ancient/veteran tree protection, habitat connectivity, and bat corridor sensitivity. Sites where irreplaceable habitats or veteran trees cannot be realistically retained or protected should be removed from allocation.		
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	• Positively prepared • Consistent with national policy	Yes	No	The wording of this policy is unduly onerous. It should be considered against the outcome of a Judicial Review into the grant of planning permission for the development of up to 19 homes at Yatton - whereby sites can be found to be acceptable in areas of flood risk where mitigation makes them safe for users/occupiers. However, for consideration at this time is that the Policy should align with NPPF and PPG in both being policy. It is considered that it does not meet that soundness test: - A defined area of search should be based on local circumstances and appropriate to the nature and scale of development and so seeking a district-wide site search is unreasonable – and so sensible, informed areas should be agreed between parties. - Suitable sites should be for the same use and deliverable concurrently. - The Policy should be explicit to reflect NPPF para 175 where if a development is shown to be safe and not increase flooding elsewhere – then a sequential assessment is not needed.	The policy should be redrafted to more fully align with PPG and NPPF policy as explained above. The area of search should be more considered, as should the application of sequential testing and matters of deliverability.		
62943009	Homes England	Avison Young (Peter Stockall)	Homes England	No	• Effective	Unsure	Unsure	We welcome the changes made in this iteration of the Plan since our previous representations including the recognition within the supporting text to proposals consistent with the allocated use in the Local Plan not requiring the application of the sequential test (subject to changes in flood levels). We would however suggest that this should also be reflected in the policy wording itself.	We suggest moving the supporting text (penultimate para) within Policy DP9 as a new paragraph 7 (above Flood Risk Assessment subtitle): For proposals consistent with the allocated use in the local plan, the sequential test will not be required if there have been no significant changes to the known level of flood risk to the site, now or in the future, which would have affected the outcome of the test applied at the plan making stage.		Homes England - Representation form Part B. DP9 2025.docx
31062913	R Storrar		KWAW	Yes		Yes	Yes			All developments need to be stringently tested for the risk of flooding. By allowing housing estates to be built on flood prone land, you are subjecting future residents to potentially catastrophic events, where they might lose their lives, or their homes are so damaged they are not repairable.	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										By the time this happens, the developer responsible has long gone and not held to account.	
15430817	Mike Tremlett		Graham Moir Associates					As demonstrated by the map below, large swathes of the LPA are in flood zone – particularly in settlement boundaries: As referred to above in policies SP1 and SP8, single dwellings and minor applications for 9 or fewer dwellings are very few and far between in settlement boundaries. Finding plots for this number of houses is like finding hens teeth. To pass the sequential test in towns or settlement boundaries that are predominantly in flood zone, the following should be included in this policy: For potential development sites in flood zone the following should be applied in relation to the Sequential and Exceptions test. In the 4 main towns of WsM, Portishead, Clevedon and Nailsea, sites of 9 or fewer dwellings are not required to pass the sequential test or the exceptions test. For all other settlement boundaries in the District, sites of 4 or fewer dwellings are not required to pass the sequential test or the exceptions test. However, any new dwellings must have a first floor and not have any bedrooms at ground floor. Single level dwellings will not be allowed unless it can be proven that the finished floor level is above the undefended flood level including climate change. All dwellings in these locations should however be designed with mandatory flood resistant and flood resilient measures and this should be demonstrated in any submitted flood risk assessment. Also, this policy reads as follows: " Within flood zones 2 or 3, proposals including ground floor accommodation created through a change of use, conversion or redevelopment of existing buildings will be required to meet certain requirements set out in the North Somerset Strategic Flood Risk Assessment. Using WsM as an example, the sea wall is currently fit for purpose but WsM may be subject to tidal flooding from Woodspring Bay near St Georges in the next 100 years when climate change kicks in. Recent modelling completed by the Local Lead Flood Authority (LLFA) completed as a result of the updated Strategic Flood Risk Assessment (SFRA) level 1 suggests that in the event of tidal overtopping in the future when taking into account climate change, it will take 12-16 hours for tidal water to reach Weston-super-Mare. It has been explained that once the sea reaches its highest point, it will breach defences and then flow into WsM as a 'bowl'. It does not taken into account the fact that some water will soakaway into the ground. More importantly, based on fact and degree and on the balance of probability, future governments and the LPA will provide funding to improve flood defences before it reaches critical point and over-tops. Why is this? Let's take the Tropicana and Birnbeck Pier as examples. In 2025, Government funding and planning has been granted for development/re-build on these sites equating to literally millions of pounds. These 2 x sites have no sea defences. They are in the sea. So they will flood but that's fine because the funds are to re-develop the area. Why? If the area needs re-development, what is the point if the whole town will be underwater in the future? If that happens, the Town disappears. The LPA lose all of their revenue from Council tax and business rates and WsM ceases to exist. But at least the Tropicana and Birnbeck Pier have been developed! This just does not make sense, hence, based on fact and degree and on the balance of probability, future governments and the LPA will provide funding to improve flood defences before it reaches critical point so the LPA will not flood as a result of sea-over-topping. A pragmatic approach is required here. For this reason, ground floor premises in WsM should be allowed to be converted to self-contained ground floor dwellings, even if they do not have a first floor safe refuge area. Recent advice from the SFRA provides guidance but it is too onerous. Flooding is dependant on the sea over-topping so as long as sea defences are maintained and improved, the sea will not over-top. Therefore, the prediction of sea over-topping taking into account climate change is a smoke screen. This does not mean a relaxed approach – it just means a more cautious approach with very important flood resistant and flood resilient measures. Put simply, if a property has windows, they will invariably be approximately 900mm off of floor level. For this reason, either this section of the policy needs to be re-worded or the SFRA guidance document should be amended to enable the conversion and re-use of redundant ground floor premises with MANDATORY flood resistant and flood resilient measures on the basis that sea defences will be maintained and improved in the future. Entrance doors can be composite floor resilient doors and removable flood barriers can be added as a second line of defence at door entrances. Floors can be concrete and tiled. Walls can be plastered with lime plaster or waterproof plasterboard. Electric sockets can be at 900mm height. Other measures are available and should be considered in accordance with CIRIA guidance. Importantly, this section focuses on Weston-super-Mare but the same principals apply for all other parts of the Authority when it comes to sea over-topping. All of this is on the basis that climate change continues at the same rate and gets worse. Let's be honest, this will not be fixed short term but measures are already in place to redcue the planets carbon footprint and to try to reverse climate change. More electric cars, more renewable energies which then provides less carbon. These measures alone will catch up and the climate change curve will decelerate – maybe not in the next 10-20 years or so but with technological advancements such as AI, it will happen. These factors are considered by the COP across the world and the world is slowly listening and doing things – some countries are doing less than others but things are moving in the right direction so that needs to be a consideration. This is why ground floor accommodation should be allowed in flood zone, subject of course to mandatory flood resistant and resilient measures.			
62846721	Cleeve Parish Council		Cleeve Parish Council	No	• Positively prepared • Justified • Effective			We do not consider the North Somerset Local Plan 2041: Pre-Submission Plan to be sound. Based on the detailed representations of Cleeve Parish Council, we believe the Plan fails three of the tests of soundness set out in NPPF paragraph 36: Positively Prepared, Justified, and Effective. 1. Positively Prepared The Plan does not adequately address the needs of young people or newly forming households, nor does it ensure that new development will be properly supported by essential infrastructure. The repeated use of discretionary language ("will be expected", "should have regard to") leaves critical requirements—such as drainage, healthcare capacity, active travel connections, affordable housing percentages, biodiversity measures, renewable energy deployment, and sustainable design—insufficiently guaranteed. The Plan also fails to provide a clear and sustainable policy position on future growth at Bristol Airport, or on how Green Belt releases will be compensated or justified. As a result, the Plan does not convincingly meet the district's needs in a sustainable and deliverable way. 2. Justified The policy choices taken in the Plan do not always represent the most appropriate strategy when tested against reasonable alternatives. The evidence base appears inadequate or incomplete in several areas, including: (a) the justification for Green Belt releases at Bristol Airport; (b) the robustness of climate-adaptation measures given the known risks of flooding, sea level rise, extreme heat, and pressure on water resources; (c) the lack of evidence demonstrating that non-mandatory design guidance will achieve sustainable outcomes; (d) the omission of low-rise flats in existing towns as a viable and necessary option for delivering affordable housing for young people; and (e) insufficient assessment of the landscape, safety, environmental and carbon impacts of airport-related growth, including the absence of a cumulative emissions	Policy DP9: Flood risk: Cleeve Parish Council notes the high proportion of North Somerset that rated by the Environment Agency as in Flood Zone 2 & 3 and expresses our concern that national policy on housing development creates a pressure that cannot readily be safely met without applying the Exception Test. This in turn has an impact on the cost of development and so undermines the ability to provide low-cost housing to the percentages outlined in DP1. In the light of the triad of flooding pressures (sustained heavy rain causing ground saturation, rising sea levels, increasing low lows during south-western storms) there is widespread concern that recent housing developments in Weston-Super-Mare will become vulnerable to large-scale flooding in the future. It would be prudent to have some element in the local plan which ensures that, where the Exception Test has been applied, there is additional government support for underwriting the additional costs of making such developments more flood resilient.		Submission on behalf of Cleeve Parish Council in respect of Pre.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								assessment. In each case, reasonable and more sustainable policy alternatives have not been adequately explored. 3. Effective The Plan's delivery mechanisms are weak and do not provide confidence that its policies will be realised. Critical infrastructure (roads, drainage, healthcare, active travel routes, mass transit provision and energy resilience) is not tied to development in a sufficiently enforceable manner. Policies that rely on voluntary interpretation or "expectations" are unlikely to secure required outcomes, particularly in relation to affordable housing percentages, design quality, biodiversity net gain, native woodland expansion, protection of commons, and the safeguarding of Best and Most Versatile agricultural land. Policies concerning Bristol Airport do not demonstrate effective cross-boundary working or credible mitigation strategies, while the approach to flood-risk management does not provide sufficient assurance that developments requiring the Exception Test would be safe, sustainable, or financially deliverable. As drafted, there is insufficient certainty that the Plan can be implemented as intended.			
62471329	Environment Agency		Environment Agency	Yes							
63070401	Emilia Leung			No	• Effective	No	Unsure	The Proposal is overly reliant on inflated national targets and infrastructure that cannot be delivered – whilst at the same time, ignoring local constraints. The Proposal is also inconsistent with national policy. Green Belt boundaries should only be altered in exceptional circumstances – and the review must show no "clear evidence that doing so would fundamentally undermine the purposes…of the remaining Green Belt".			

Policy DP10: Sustainable drainage

Consistency with national policy – See the National Planning Policy Framework (paras 152–158) which require robust climate-mitigation and adaptation mechanisms.	Require use of future flood-risk modelling to 2080–2100 for all major development. - Require natural flood-management measures (wetlands, woodland, attenuation landscapes). - Require restoration and buffering of watercourses and springs. - Strengthen integration with GI and BNG deliver		
39179649	Adrian Mealing			No	• Justified • Effective • Consistent with national policy	Yes	Yes	I consider DP10 to be unsound because it is not justified, not effective, and not consistent with national policy. DP10 requires new development to incorporate sustainable drainage systems (SuDS), manage surface water, avoid increasing flood risk, protect watercourses, and demonstrate long-term drainage management. However, the three Congresbury allocations (183 dwellings) do not include the evidence or infrastructure needed to demonstrate that DP10 can be applied. 1. DP10 is not justified The policy is not supported by an adequate evidence base for Congresbury. Specifically: No site-specific SuDS feasibility studies have been provided for any of the three allocations. No hydrological modelling exists for surface water or overland flow paths across these sites. The Plan includes no analysis of rhyne capacity, culvert conditions, or drainage outfall limitations — yet Congresbury relies heavily on these systems. No evidence has been produced demonstrating that the Woodhill Nurseries allocation, partly within higher-risk areas, can be drained safely or sustainably. No cumulative drainage assessment has been carried out for 183 new homes. Without proper drainage evidence, DP10 cannot be considered justified. 2. DP10 is not effective DP10 cannot be implemented effectively in Congresbury because: The Plan does not set out any drainage infrastructure upgrades required to support the proposed growth. Existing village drainage systems already struggle during peak rainfall; the Plan provides no capacity assessment or improvement strategy.	To make DP10 sound, the Plan must: Provide a Congresbury-wide drainage assessment identifying: existing system capacity, bottlenecks and constraints, required upgrades, exceedance routes, climate change allowances, downstream impacts. Produce site-specific SuDS feasibility studies for all three allocated sites. Demonstrate that SuDS can be safely accommodated given site slopes, permeable/impermeable surfaces, and watercourse locations. Include a strategy for SuDS maintenance and adoption, identifying responsible parties and funding mechanisms. Apply the flood risk Sequential Test to the Woodhill Nurseries site and modify or remove allocation where appropriate. Integrate drainage upgrade works into the Infrastructure Delivery Plan, with costing and delivery timescales. Without these modifications, DP10 is not deliverable and remains unsound.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Congresbury's drainage relies on the network of rhynes and ditches, but the Plan does not evaluate whether these can accept increased surface water flows. The Plan includes no strategy for SuDS adoption, maintenance, phasing or management, making long-term performance uncertain. There is no evidence that SuDS can be accommodated on sloping or constrained sites, such as Woodhill Nurseries. Therefore, DP10 is not deliverable. 3. DP10 is not consistent with national policy The NPPF requires that: inappropriate development in areas at risk of flooding is avoided (NPPF 159), sustainable drainage systems are integrated into development designs (NPPF 169), plans must address strategic flood and drainage risks at plan stage, new development should not increase flood risk elsewhere (NPPF 159–162). The Congresbury allocations conflict with these requirements because: No plan-level drainage assessment exists for the three sites. The Sequential Test has not been applied to higher-risk areas at Woodhill Nurseries. There is no demonstration that development will not increase downstream flood risk. No integrated drainage strategy is included in the Infrastructure Delivery Plan. The plan relies solely on future planning applications to resolve drainage issues, contrary to the NPPF's requirement for strategic plan-level assessment. Therefore, DP10 is not consistent with national drainage and flood policy.		
62471329	Environment Agency		Environment Agency	Yes						We support this policy, particularly inclusion of "essential flood prevention works including drainage to be completed prior to first occupation".	
62471329	Environment Agency		Environment Agency						Water Quality We welcome the fact that protecting water quality is a factor across multiple policies within the North Somerset Local Plan. To achieve this, it is important the Local Planning Authority understand how proposed developments can impact wastewater treatment capacity and the quality of the receiving water environment. During adoption of this Local Plan, it should be demonstrated that the sewage and drainage infrastructure is able to meet the demands of development. Wessex Water should be consulted on all proposed development locations to identify any sites that would be connected to sewage treatment works already close to capacity. The LPA is encouraged to consult the latest 25-year statutory WXW Drainage and Wastewater Management Plan (DWMP) to identify infrastructure vulnerabilities, such as sewer collapse risks or ageing assets, so that development proposals can be aligned with current and future capacity. WXW's DWMP is available at: Drainage and Wastewater Management Plan. As addressed in policies D10 and DP13, the use of SuDS will help manage runoff and prevent nutrients entering the watercourse. The Local Planning Authority should prioritise the connection of new housing developments to the public sewerage system, rather than the use of private wastewater treatment works, to further support the prevention of nutrients entering the watercourse. The Local Planning Authority is also recommended to identify whether the proposed site options are in areas vulnerable to storm overflow spills from Combined Sewer Overflows (CSOs). The LPA can consult WXW's business plan to identify sewage infrastructure investment schemes supporting growth. The current WXW business plan is available at: Business plans – Ofwat. Understanding the current sewerage infrastructure and proposed improvements that will support growth, through communications with Wessex Water during the adoption of the North Somerset Local Plan, will help the LPA protect water quality in North Somerset which is a part of the Local Plan policies.		

DP11: Rivers, watercourses and springs

					with national policy			require robust climate-mitigation and adaptation mechanisms.			
63006177	Mac Mic Strategic Land (Land north of Banwell Road)	Planning Potential (Elliot Jones)	Mac Mic Strategic Land	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	While Mac Mic support the principle of protecting rivers, watercourses, and springs, they believe the policy is unsound because it duplicates matters already addressed by other policies and introduces requirements that are inappropriate for a Local Plan policy. The policy requires development proposals to enhance the setting and views of rivers and contribute to preserving and enhancing the physical, natural, historical, and culturally distinctive landscape of the North Somerset Levels and Moors. These matters are already comprehensively addressed by other policies in the Local Plan, including those relating to landscape character, heritage, and design quality. Repeating these requirements in DP11 creates unnecessary duplication, which risks confusion and inconsistency in decision-making. Several criteria within DP11, such as requiring opportunities for re-naturalisation (for example, the removal of culverts) and promoting public access and tourism facilities, go beyond what is reasonable or deliverable through development management. Further, these terms are not defined and provide no measurable criteria for compliance. This lack of clarity risks inconsistent interpretation and creates uncertainty for applicants, contrary to the NPPF requirement for policies to be clear and effective. The policy is also contradictory to other policies within the Plan. Encouraging public access and tourism near sensitive watercourses may increase ecological disturbance and undermine biodiversity objectives. Similarly, promoting culvert removal could increase flood risk in low-lying areas, conflicting with Policy DP9 on flood risk management. Recommendations To make the policy sound, Mac Mic recommends removing requirements that duplicate other policies on landscape, heritage, and design, delete criteria relating to re-naturalisation and public access, as these are not appropriate for development management and limiting the policy to essential matters such as water quality, flood risk, and maintenance access, which are directly relevant to planning decisions.	To make the policy sound, Mac Mic recommends removing requirements that duplicate other policies on landscape, heritage, and design, delete criteria relating to re-naturalisation and public access, as these are not appropriate for development management and limiting the policy to essential matters such as water quality, flood risk, and maintenance access, which are directly relevant to planning decisions.		01 North Somerset Local Plan Pre-Submission Plan Consultation Representations.pdf
57928993	Kevin Payne			No	• Justified • Effective • Consistent with national policy	No	No	The requirements of DP11 have not been properly applied to the Pill Green allocation. The site lies adjacent to Markham Brook and is subject to localised surface-water and fluvial–tidal interaction flood risk. The Parish Council notes that no robust sequential test has been carried out, and there is no evidence of safe access or egress during flood events, nor any assessment of downstream flood displacement. DP11 requires development to avoid areas of flood risk wherever possible and to demonstrate that flood risks can be safely mitigated. The Local Plan evidence does not demonstrate this for Pill Green. The allocation has not been assessed against climate-change-driven increases in rainfall intensity and peak flows, which are particularly relevant in this location given its proximity to Markham Brook and tidal influences. The Plan therefore fails to meet the requirements of DP11 and is not justified or effective.	To make DP11 sound, the Pill Green site must be fully reassessed against the policy requirements, including a robust sequential test, an evaluation of hydraulic impacts on Markham Brook (including fluvial–tidal interactions), and evidence that safe access and egress can be achieved in all flood conditions. If these cannot be demonstrated, the site should be removed from the Plan.		
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	• Positively prepared • Consistent with national policy	Yes	No	The company objects to the provisions of this policy which combine technical and design related matters and which duplicates and/or goes beyond other topic-based policies. Under separate legislation, development is not allowed to adversely affect watercourse water quality. It does not require additional planning policy as presented here. No indication is presented in respect of as to how improvements to watercourse corridors will take place when, for example, such corridors are in third party ownership.	The policy should be amended to recognise that technical reports supporting planning applications will cover the relevant and important issues. Improvements offsite can be challenging due to ownership constraints and so should be carefully referenced in the Local Plan.		
62471329	Environment Agency		Environment Agency	No					We support this policy subject to changes: The policy wording currently states “Active operations also include regular vegetation management by the Environment Agency and Internal Drainage Board to retain open water habitat and volume of water storage that supports the aquatic wildlife in times of drought and reduces risk to properties in times of excess water.” The wording should be changed to include: that riparian owners also responsible for regular vegetation management (Environment Agency powers are permissive). The Flood Risk Activity Permit wording current states “The Environment Agency requires environmental permits for flood risk activities such as erecting structures like culverts in or over main rivers, or building or altering any permanent or temporary structure designed to contain or divert flood waters from a main river.” The wording should be changed to include: a permit is required for works within 8m of a fluvial watercourse and 16m from tidally influenced watercourses.		

Policy DP12: Development in the Green Belt

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 					policy			"This policy augments national policy set out in the NPPF by setting out local definitions and criteria for assessing the appropriateness of any proposal for new building or development within the Green Belt". Policy DP12 includes an assessment criteria that states: "The overall aim of Green Belt policy is to preserve the openness of the Green Belt in terms of both its spatial and visual aspects. When determining the impact on the openness of the Green Belt from proposed development regard will be taken of the form (including bulk, height and floorspace), siting and overall scale of the development on the site, the location, visual character of the site and surroundings. In addition, the effect of the proposal on the open and rural character of the area in general, prominence, visual and physical impact and plot size will need to be taken into account. The impact of lighting schemes can harm openness and schemes should minimise obtrusive light in terms of sky glow, glare and light trespass". Wording and requirements raise significant concern as it replicates and adapts wording from policy that predates and can also be identified to conflict with relevant case law. Policy DP12 erroneously states that the aim of the Green Belt is to preserve the openness of the Green Belt in terms of 'both' its spatial and visual aspects and furthermore that the visual character and visual impact will 'need' to be taken into account. As established in Supreme Court decision on R (on the application of Samuel Smith Old Brewery (Tadcaster) and others) (Respondents) v North Yorkshire County Council (Appellant) [2020] UKSC 3 at Paragraph 22 and as described within the 'Reasons for the Judgement' of the associated judgement's press release: "Openness is the counterpart of urban sprawl and is also linked to the purposes to be served by the Green Belt […] it is not necessarily a statement about the visual qualities of the land, though in some cases this may be an aspect of the planning judgement involved in applying this broad policy concept. Nor does it imply freedom from any form of development". The Supreme Court's decision clearly sets out that the consideration of the visual impact is neither expressly nor impliedly mandated for assessing the 'openness' of Green Belt. None of the criteria listed within Policy DP12 are inherently applicable to or potentially always relevant to the assessment of Green Belt development. Relevant PPG Paragraphs in respect to Green Belt were updated 27th February 2025 taking the broad nature of the policy concept and established case law into account. PPG is clear to set out features as 'illustrative' and matters that could be taken into account, however, this does not mean that these aspects 'need' to be taken into account as a matter of law, policy, or indeed to reach a planning judgement on the 'openness' of Green Belt. Provisions within Policy DP12 are cause for concern and no commentary is provided within the Green Belt Review Background Paper (October 2025) or anywhere else within the evidence base that could demonstrate this policy to be 'justified' and in accordance with case law established to date. Policy DP12, as drafted, presents a risk for legal challenge that would cause unnecessary delay towards the adoption of a sound Local Plan for North Somerset that, in the interest of all, should be avoided. Consequently, the proposed Pre-submission Plan Policy DP12 as worded is not identified as justified and therefore not sound as required by NPPF Paragraph 36 and an appropriate review by North Somerset Council is encouraged before submission for Examination.		
32585025	P Abrahams			No	Consistent with national policy	No	Yes	1) While Policy DP12 is mostly similar to the previous DM12 and previous NPPF where it clarifies the circumstances in which infilling is not regarded as inappropriate development outside of a settlement boundaries in the Green Belt, it does contradict itself twice within the following two statements and thus makes the Local Plan unsound. Page 139 Outside of settlement boundaries and in the smaller settlements and hamlets which do not have a settlement boundary limited infilling is inappropriate development and likely to harm the openness of the Green Belt. Page 142 The remaining smaller settlements and hamlets have been assessed as having an open character which contributes to the openness of the Green Belt. Infilling in these locations would be inappropriate development in the Green Belt. 2) Infilling on previously developed sites in the Green Belt outside of the settlement boundaries is appropriate development provided it meets with certain listed criterion's. 3) Those infill sites will clearly be within the smaller settlements and hamlets and thus the above two statements should include a note to those exceptions which the policy lists on page 140 under the title "Redevelopment and infilling on previously developed sites in the Green Belt outside settlement boundaries'. 4) Without including those exceptions it could be interpreted by planning officers and potential applicants that infilling is inappropriate development in the Green Belt on all types of land classification, which would lead to a reduction in the council's calculated windfall sites, which further makes the Local Plan unsound 5) In those smaller settlements and hamlets new dwellings would be inappropriate on Greenfield land, but not in the case where sites are classed as being Previously Developed Land where infilling is an allowable exception. Ref the High Court Case, Dartford Borough Council v The Secretary of State for Communities and Local Government & Ors [2017] EWCA Civ 141 (14 March 2017) 6) I therefore suggest those two statements are amended to read something like the following: Page 139; Outside of settlement boundaries and in the smaller settlements and hamlets which do not have a settlement boundary, limited infilling is inappropriate development and likely to harm the openness of the Green Belt, unless it meets with one of the NPPF exception's such as Previously Developed or Grey Belt Land. Page 142 The remaining smaller settlements and hamlets have been assessed as having an open character which contributes to the openness of the Green Belt. Infilling in these locations would be inappropriate development in the Green Belt, unless it meets with one of the NPPF exception's such as Previously Developed Land or Grey Belt Land. Substantial harm to the openness 7) The previously 2023 NPPF test, for infill development on previously developed land in the Green Belt at para 149 (g), was that it should; " not have a greater impact on the openness of the Green Belt than the existing development". 8) In 2016 North Somerset had added 3-criterion's within DM12 and carried those forward without change to DP12, two criterion's related to the new dwellings size and position while the third related to sustainability. 9) But the NPPF test was revised within the recent December 2024 version that simplified and broadened the exception. 10) The test within para. 154 (g) is now simply that the development should ; "not cause substantial harm to the openness of the Green Belt".	Policy DP12: Page 139; should be amended to read. Outside of settlement boundaries and in the smaller settlements and hamlets which do not have a settlement boundary, limited infilling is inappropriate development and likely to harm the openness of the Green Belt, unless it meets with one of the NPPF exception's such as Previously Developed or Grey Belt Land. Policy DP12: page 140. Delete the criterions under infilling on previously developed sites and only insert "Infilling should not cause substantial harm to the openness of the Green Belt" so to be consistent with the latest version of the NPPF. Policy DP12: Page 142 should be amended to read. The remaining smaller settlements and hamlets have been assessed as having an open character which contributes to the openness of the Green Belt. Infilling in these locations would be inappropriate development in the Green Belt, unless it meets with one of the NPPF exception's such as Previously Developed Land or Grey Belt Land Policy DP2: on page 117 should be amended to read - "Residential gardens are excluded from the definition of previously developed land. Within Appendix 1: Glossary on page 361 under Previously developed land: "land in built-up areas such as private residential gardens" which its excluded from being previously developed land. Suggest placing a note or reference so to ensure non-built up rural residential gardens can be classed as previously developed due to the the court case, Dartford Borough Council v The Secretary of State for Communities and Local Government & Ors [2017] EWCA Civ 141 (14 March 2017)

								11) This change in the threshold of harm is the only criteria in this NPPF policy, no other safeguards or even measures on its sustainability location were included. 12) The latter I believe is due to those sites being more rural than urban and because there is already an NPPF policy for extra allowances at rural locations that's covered in Section 9. Promoting sustainable transport where on page 31 within para 110 it states; 'However, opportunities to maximise sustainable transport solutions will vary between urban and rural areas, and this should be taken into account in both plan-making and decision-making'. 13)Therefore to be consistent with national policy the new local plan it should firstly include, "should not cause substantial harm to the openness of the Green Belt" 14) And secondly either remove the sustainability criterion or ensure it is worded so to reflect that sites in a rural location would normally have a lesser sustainability criterion when compared to an urban location as per para 110 of the NPPF. 15) Please also consider that the NPPF included a sustainability criterion within the new policy for Grey Belt Land at para 155 (c) where it states "that the development would be in a sustainable location, with particular reference to paragraphs 110 and also 115 of the Framework". 16) Not including a sustainable criterion within the Framework for Green Belt infill but within Grey Belt might also suggest that there's a lower sustainability bar for Previously Developed Land within the Green Belt than within Grey Belt Land! 17) Recent appeal decisions interpreting the 2024 National Planning Policy Framework (NPPF) have established that "sustainable location" for rural dwellings is a proportionate planning judgment rather than a rigid checklist that replicates urban mobility standards. Planning inspectors have found that because opportunities to maximise sustainable transport vary significantly between urban and rural areas, rural sites do not need to meet the same stringent accessibility benchmarks as urban ones. 18) Inspectors have now recognise that it is not appropriate to replicate "metropolitan mobility standards in inherently rural places". 19) Proportionate Judgments: A sustainable location in a rural or "grey belt" context is defined by realistic access to services and transport appropriate to the proposal's scale, rather than a total absence of car dependency. 20) NPPF Paragraph 155 and Transport: The 2024 NPPF revisions (specifically referencing paragraphs 110 and 115) emphasise managing growth to promote sustainable transport while explicitly acknowledging that rural areas have different capacities for this. 21) Flexibility for "Grey Belt" Land: Development on "Grey Belt" land (Green Belt land that does not strongly contribute to core purposes) may be approved even if it only has one "tangible non-car options". 22) Sites that were previously dismissed as inaccessible in rural areas has now be argued successfully where evidence showed realistic non-car options for some trips and negligible traffic impact. 23) To support my above comments I have listed just a few granted applications and appeals. 24) Appeal Ref: APP/V1505/W/24/3347517 Land West of Corner Road, North of Approach Road, Crays Hill, Basildon CM11 2UT - Decision date: 26 June 2025 - Appeal Allowed. While the Council and Inspector adjudged the site not to be infilling due to the loose grain of development and therefore would not meet any of the exceptions set out at paragraph 154 of the Framework, the Inspector when assessing the site for it's Grey Belt credentials stated on page 2. ---------- 8. The Council has not contended that the appeal site is in an unsustainable location, having regard to access to facilities and services. I saw that the roads immediately adjacent to the site are quiet in nature, and although they do not have footpaths or street-lighting, there is no suggestion that pedestrian access would be unsafe. Access by pedestrian means would not always be attractive, particularly in darkness, but these stretches of road are relatively short, and a footway and lighting can be found once London Road is reached. The evidence also indicates that access to public transport can be found in Crays Hill, within reasonable walking distance. 9. For these reasons, I find that the proposal would be in a sustainable location for the purposes of paragraph 155 of the Framework. As criterion (d) of paragraph 155 would not apply in this instance as the proposal would not amount to major development, and having found that the proposal would otherwise meet the relevant criteria for Grey Belt development, I conclude that it would not comprise inappropriate development in the Green Belt. 10. The proposal would accord with paragraphs 153 and 155 of the Framework, and it is not, therefore, necessary for me to consider the effect of the proposal upon the openness of the Green Belt, nor is it necessary for very special circumstances to justify a grant of planning permission to be demonstrated. ---------- 25) Appeal Ref: APP/M3645/W/24/3347328 Woodside House, Copthorne Bank, Copthorne, Surrey RH10 3JD. Proposal to demolish one existing dwelling, garage and outbuildings and construct two detached dwellings and one detached garage. Was judged to be Grey Belt Land and on page 4 the Inspector wrote the following: ------28) This section of Copthorne Bank has a rural character but, due to the presence of existing dwellings in the vicinity of the site, the proposed development would not be in an isolated location. Furthermore, the highway connects the site with nearby settlements including Copthorne with Burstow, Smallfield, and Domewood. -------29) Whilst there are bus stops nearby, Copthorne Bank is subject to a 50mph speed limit and there are no footpaths along this section. Future occupants would therefore be dependent on use of a private car to meet their day-to-day needs. However, paragraph 110 of the Framework recognises that opportunities to maximise sustainable transport solutions will vary between urban and rural areas. --------(30) The proposal would result in a net increase of one dwelling on the site, and therefore the volume of traffic movements associated with the proposed development would be small. The proposed development would utilise the existing vehicular access and there would be space for the parking and turning of vehicles within the site. The local highway authority did not object to the proposal. Therefore, I am content the proposal would not have significant impacts on the capacity of the transport network, congestion, or highway safety. --------(31) Within the context of its rural location, I am satisfied the proposal would be in a sustainable location, as required by criterion (c) of Framework paragraph 155, that fulfils the requirements of paragraphs 110 and 115 of the Framework. ---------- 26) 25/P/1774/TDC Erection of one detached dwelling at Hillview Naish Lane, Barrow Gurney, BS48 3ST was granted by the Case Officer on 7th November 2025. The Case Officer concluded that the proposed dwelling that would be sited within the garden of Hillview was considered to be limited infilling on Previously Developed Land in the Green Belt outside of a settlement boundary. 27) And to show consistency for over the last 5-years both 20/P/0721/FUL and 20/P/2648/FUL each for one new infill dwelling between		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								existing dwellings on Old Weston Road Flax Bourton were both judged to be Previously Developed Land and granted due to the exceptions within the NPPF and DM12. 28) Consequently, the new Local Plan should not be stating on page 139 and 142 that limited infilling is inappropriate development outside of settlement boundaries and in the smaller settlements and hamlets and likely to harm the openness of the Green Belt unless it includes a proviso for the allowable NPPF exceptions, that of 'infilling on Previously Developed Land in the Green Belt outside settlement boundaries' and for the Grey Belt Land exception. 29) Otherwise this would lead to confusion by Planning Officers and in not allowing potential sites to come forward, thus not maximising the full use of previously developed land. 30) This surly makes the Local Plan unsound as it doesn't agree with the NPPF and current DM12 policies and is not just prioritising Greenfield sites over infilling on Previously Developed Land but disallowing them altogether. 31) It's mentioned numerous times that the development of previously developed land is actively encouraged in national and local planning guidance. The National Planning Policy Framework notes: "Planning policies and decisions should encourage the effective use of land by re-using land that has been previously developed (brownfield land), provided that it is not of high environmental value" 32) Windfall figures are homes that become's unexpectedly available for housing that were not specifically identified in a local development plan. Based on past trends from the last five years it is forecasted that a further 1,118 windfall homes will come forward on small sites across villages, smaller settlements and the rural areas. 33) I've highlighted just a few of the many windfall sites that were granted by being classed as infill on PDL in the Green Belt over the last 5-years. Consequently as the new Local Plan could now disallow infilling outside of settlement boundaries, which is clearly contrary to NPPF policy 154 (g) and to their own current policy in DM12 for infilling on previously developed sites in the Green Belt outside settlement boundaries then doesn't those windfall forecasted figures of 1,118 further homes becomes an unsound number!			
1019201	Wrington Parish Council		Wrington Parish Council							We strongly support the emphasis in this Policy to protect the Green Belt whilst giving clear guidance on what is acceptable.	
9138657	Home Builders Federation		Home Builders Federation	No	' Justified ' Effective ' Consistent with national policy				Policy DP10 is not considered to be sound as it is not effective, justified or consistent with national policy HBF reiterates comments we have made elsewhere in our representation that the boundaries of the green belt need revisiting to enable additional housing allocations. We note that if this is done there may also be a need to review the individual settlement boundaries.		North Somerset 2nd Reg 19 Dec 25.docx
58582945	Nailsea Action Group		Nailsea Action Group		' Effective ' Consistent with national policy	Unsure	Unsure	The plan is inconsistent with national policy. The Green Belt release undermines the purposes of the Green Belt, including preventing urban sprawl and safeguarding the countryside. The ecological mitigation measures, such as the proposed Nature Park and wetland creation, are vague, unfunded, and risk failing to meet statutory duties under the Habitats Regulations and biodiversity net gain requirements. In Compton Parish Council v Guildford BC [2019] EWHC 3242 (Admin), the High Court emphasised that Green Belt changes must be supported by clear evidence and lawful reasoning. Similarly, the principle in Tesco Stores Ltd v Dundee City Council [2012] UKSC 13 confirms that policy interpretation is a matter of law, requiring clarity and enforceability. National policy requires clear, enforceable measures to protect biodiversity and deliver net gain, which this plan does not provide. Nailsea Action Group judges the inclusion of the north Nailsea site in SP7 as unsound because it contravenes much of what is expressed in that policy and in DP12: "Inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances," and "Proposals for major development involving the provision of housing in the Green Belt should meet the 'Golden Rules' as set out in the NPPF, relating to affordable housing, necessary improvements to local or national infrastructure, and publicly accessible green spaces." "The NPPF indicates that development in the Green Belt is inappropriate unless specified exceptions apply." With respect to the North Nailsea site, it is not clear that such exceptions are sufficiently strong to merit the appropriateness of the site.	No development in the Green Belt		
8126849	Sport England		Sport England					Sport and Recreation in the Green Belt - SP7 Green Belt / Development in the Green Belt DP12 Comment By virtue of its location adjoining urban areas and comprising essentially open land, the Green Belt makes an ideal location for outdoor sports facilities and can accommodate a wide range of sports close to major centres of population. The NPPF recognises outdoor sport as an appropriate land use in the Green Belt and advises that new buildings which provide essential facilities for outdoor sport, including changing rooms and small spectator accommodation, may be developed. Sport England promotes the development of outdoor sports facilities in the Green Belt including essential ancillary built facilities. In exceptional circumstances Sport England will support the development of indoor or other built facilities associated with outdoor sports, where there is an identified need and no suitable site is available elsewhere in the locality. Sport England will promote policies and practices that: • encourage the provision of outdoor sport facilities in the Green Belt which help to sustain community life; • identify suitable sites for outdoor strategic sports facilities where there is a clearly identified demand for such facilities and where no suitable site exists elsewhere in the locality; • set out criteria against which ancillary built facilities will be considered; and • recognise that there may be circumstances where floodlit facilities are appropriate in the Green Belt subject to satisfactory management arrangements. As pressure increases on open land in urban areas, many sports clubs which have outgrown their current homes are looking to the Green Belt for space to expand. Sports which require extensive areas of land, such as golf, have little chance of finding large enough sites in built up areas. In many parts of England the Green Belt offers the nearest available open land. Outdoor sport can also play a part in keeping the Green Belt open, act as a buffer between urban uses and agricultural land and help to regenerate brownfield land. Whilst there is a general presumption against built development in the Green Belt a special exception is made for essential ancillary facilities. They should be acceptable as long as they are unobtrusive, small in scale and do not conflict with the purposes of including land within the Green Belt. Sport England would encourage a positive for sport approach Local Plan to enable the existing and future users opportunity to take

								part in recreational activities that meet social, health and well being agendas.			
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	• Positively prepared • Consistent with national policy	Yes	No	Reference in the policy's wording should refer to insetting rather than exclusion to align more fully with national planning policy. The wording to the policy referring to development "Outside of settlement boundaries…" should refer to those settlements in the Green Belt – for clarity. Turning to the development outside of settlement boundaries, infilling opportunities should not be so restrictive to prevent reasonable development proposals from coming forward where they relate to the neighbouring built form and, as such would constitute Grey Belt – which is not picked up in the wording. Sensible and sensitively planned rounding off of settlements can be readily achieved without creating incongruous additional development – particularly next to inset villages given that they do not contribute to Green Belt openness. The Council can simply apply design policies to ensure that new development is complementary and not out of place through poor planning and design. The Policy does not consider Grey Belt: its identification and policy considerations. This is a significant omission. The policy (or additional policy) should respond to this – set against the Green Belt Assessment work informing the Local Plan rather than staying silent. Grey Belt opportunities can deliver a number of new homes in sustainable locations and so should be considered fully - and set against a reappraisal of the spatial distribution of sites.	The draft policy should review opportunities on the edge of settlements that are inset in the Green Belt – particularly when set against the Grey Belt tests they are suitable to accommodate development going towards meeting, even in a small way, the Council's housing requirement.		
18477217	Kit Stokes	Kit Stokes	StokesMorgan Planning Ltd	Yes	• Effective • Consistent with national policy	No	Unsure	Objection to Policy DP12 – Redevelopment and infilling on previously developed sites in the Green Belt outside settlement boundaries We object to the provision in DP12 which states: "An extension will not normally be regarded as disproportionate provided it does not exceed 50% of the gross external floor area of the original building and does not impact openness by virtue of its bulk, height and location." This approach does not reflect the NPPF, which adopts a more pragmatic and flexible interpretation of proportionality. The NPPF does not impose a rigid percentage threshold; instead, it requires consideration of context and impact on openness, applying a balanced judgment rather than an arbitrary numerical limit. Furthermore, paragraph 154 of the NPPF sets out eight criteria for assessing development in the Green Belt, one of which applies to extensions. DP12's blanket 50% rule fails to align with this guidance and risks unjustly restricting reasonable extensions that could be acceptable under national policy. We request that DP12 be revised to adopt a context-based approach consistent with the NPPF, allowing proportionate extensions assessed on their individual merits rather than an inflexible percentage cap.	DP12 should be rewritten to reflect the NPPF.		
62715521	Rachel Tadman		Tadman Planning Consultants Ltd	No	• Consistent with national policy	No	Unsure	See attached letter	Policy DP12 and its justification should be amended to accurately reflect current national policy and case law in full.		North Somerset Local Plan Rep 2025.pdf

								designed' transport or active travel plan for Pill. walking and cycling will not become more attractive with these insufficient plans. The RDG referred to in the attached letter from Barrones Taylor has not yet been published and should be followed. This plan shows not enough thought has gone into transport planning around the developments for Pill.			
1190177	Churchill Parish Council		Churchill Parish Council	Yes		Yes	Yes		While Policy DP14, talks about highway safety at a high level, there is no quantifiable impact present. Principally our parish is made up of villages that do not have streetlights, pavements, or traffic calming, and in most cases lacks any maintenance (or investment). NSC need to acknowledge that a development of x houses in a village will result in a y- additional vehicles, and z- additional traffic movements, either in that Parish itself, or impacting a neighbouring Parish, and thus deprecating the quality of life of residents. This needs to form part of the planning application itself. Mitigation for each development must be included in the planning application, and a direct contribution to the Parishes impacted - be this monetary or additional infrastructure.		
63299425	Mac Mic Strategic Land Flax Bourton	Planning Potential	Mac Mic Strategic Land	No	• Positively prepared • Effective	No	Yes		Policy DP14 sets out that development likely to have a severe residual cumulative impact on transport links, traffic congestion, or on the character and function of the surrounding area, will only be permitted where acceptable mitigation measures are delivered. All mitigating infrastructure will need to be delivered within an agreed specific timeframe and prior to the aforementioned impact becoming severe. In some circumstances, planning permission may be granted subject to the applicant entering into an appropriate legal agreement to deliver or fund the improvements required The supporting text notes that developers will need to determine the transport needs arising from their proposals and the means by which any adverse impacts will be mitigated. It continues by stating that the Local Plan approach allows for developers to provide or contribute towards the cost of providing necessary infrastructure, which may be off-site. The supporting text also states that to accommodate the road traffic it unavoidably generates, a development will be required to deliver or fund improvements to boost the attractiveness of walking, cycling and public transport, or traffic management measures, in the relevant corridor(s) sufficient to maintain overall road traffic at the otherwise expected level. Mac Mic object to the approach put forward in Policy DP14 in terms of highway safety and traffic management. The approach adopted is based on out-dated models of assessment - it is very much a 'Predict and Provide' model rather than a 'Vision and Validate' approach. It is apparent that the application of this policy will lead to new development being required to provide for new road space and will lead to increases in commuting traffic. The Vision and Validate approach seeks to set a vision for the long-term goals, objectives, and aspirations for the future of a transportation system, with the validation confirming that the chosen strategies, methods, or technologies align with the defined vision and achieve the desired outcomes and can effectively address the evolving needs of the community. This is the prevailing school of thought in term of transport planning and should be applied to this policy rather than the Provide and Predict model which is unlikely to withstand scrutiny at Examination. As such, the policy should be re-drafted to reflect the 'Vision and Validate' model. We would also comment on two points raised in the supporting text in that it notes that developments may be required to contribute to funding the improvement of rail freight facilities, even where they are no direct benefits. It is considered that this clearly does not meet the tests for planning obligations as set out in NPPF Paragraph 58. Finally, the supporting text notes that proposals that reduce out-commuting from North Somerset will have a beneficial effect on the overall level of congestion by reducing traffic on the M5, which will need to be balanced against any detrimental local effect. Mac Mic note that this can only be achieved in the context of the proposed policy wording if local roads are provided with more highway capacity to ensure no detrimental local effect. This demonstrates the need to revise the policy as this follows the Provide and Predict rather than the Vision and Validate approach. Recommendation The reasoned justification to Policy DP14 should be re-drafted to reflect the Vision and Validate model of highway safety and traffic management. The requirement for development to contribute to the improvement of rail freight facilities even when there is no direct benefit should be removed from the policy, as this requirement does not meet the tests of planning obligations. Reference to out-commuting from North Somerset should also be deleted from the policy as it implies that a Predict and Provide model should be put in place. 63006177	Mac Mic Strategic Land (Land north of Banwell Road)	Planning Potential (Elliot Jones)	Mac Mic Strategic Land	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Policy DP14 sets out that development likely to have a severe residual cumulative impact on transport links, traffic congestion, or on the character and function of the surrounding area, will only be permitted where acceptable mitigation measures are delivered. All mitigating infrastructure will need to be delivered within an agreed specific timeframe and prior to the aforementioned impact becoming severe. In some circumstances, planning permission may be granted subject to the applicant entering into an appropriate legal agreement to deliver or fund the improvements required. The supporting text notes that developers will need to determine the transport needs arising from their proposals and the means by which any adverse impacts will be mitigated. It continues by stating that the Local Plan approach allows for developers to provide or contribute towards the cost of providing necessary infrastructure which may be off-site and to accommodate the road traffic it unavoidably generates, a development will be required to deliver or fund improvements to boost the attractiveness of walking, cycling and public transport, or traffic management measures, in the relevant corridor(s) sufficient to maintain overall road traffic at the otherwise expected level. Mac Mic object to the approach put forward in Policy DP14 in terms of highway safety and traffic management. The approach adopted is based on out-dated models of assessment, that is, it is very much a 'Predict and Provide' model rather than a 'Vision and Validate' approach. It is apparent that the application of this policy will lead to new development being required to provide for new road space and will lead to increases in commuting traffic. The Vision and Validate approach seeks to set a vision for the long-term goals, objectives, and aspirations for the future of a transportation system with the validation confirming that the chosen strategies, methods, or technologies align with the defined vision and achieve the desired outcomes and can effectively address the evolving needs of the community. This is the prevailing school of thought in term of transport planning and should be applied to this policy rather than the Provide and Predict model which is unlikely to withstand scrutiny at Examination. As such, the policy should be re-drafted to reflect the 'Vision and Validate' model. We would also comment on two points raised in the supporting text in that it notes that developments may be required to contribute to funding the improvement of rail freight facilities, even where they are no direct benefits. This raises the question as to how these contributions will be measured or policed, and the level of contributions that are to be made. Whilst this is a laudable aspiration, it is not considered that this can be practically implemented and does not meet the tests for planning obligations as set out in NPPF Paragraph 58, which states obligation should be necessary to make the development acceptable in planning terms, directly related to the development, and fairly and reasonably related in scale and kind to the development. Finally, the supporting text notes that proposals that reduce out-commuting from North Somerset, especially Weston-super-Mare, will have a beneficial effect on the overall level of congestion by reducing traffic on the M5, which will need to be balanced against any detrimental local effect. Mac Mic note that this can only be achieved in the context of the proposed policy wording if local roads are provided with more highway capacity to ensure no detrimental local effect. This demonstrates the need to revise the policy as this follows the Provide and Predict rather than the Vision and Validate approach.	Policy DP14 should be re-drafted to reflect the Vision and Validate model of highway safety and traffic management. The requirement for development to contribute to the improvement of rail freight facilities even when there is no direct benefit should be removed from the policy, as this requirement does not meet the tests of planning obligations. Reference to out-commuting from North Somerset should also be deleted from the policy as it implies that a Predict and Provide model should be put in place.		01 North Somerset Local Plan Pre-Submission Plan Consultation Representations.pdf

7800929	Wraxall and Failand Parish Council		Wraxall and Failand Parish Council	No		Unsure	Yes	The policy is unclear whether the infrastructure is off-site. The justification implies that it is and that developers are to expected to make a contribution to highway infrastructure. For Nailsea & Backwell it is considered that this is unlikely to be sufficient for the strategic rail crossing to proceed and without a contribution from central government. In the current financial climate, government funding is considered to be unlikely. Further information is in the W&F PC Position paper.			Wraxall & Failand Parish Council Position Paper - North Somerset Local Plan 2041 - 11 Dec 2025.pdf
43203041	National Highways		National Highways							This policy states that development likely to have a severe residual cumulative impact on transport routes, traffic congestion or on the character and function of the surrounding area, will only be permitted where acceptable mitigation measures are delivered. Mitigating infrastructure will need to be delivered within an agreed timeframe. National Highways are supportive of the policy, which is broadly in line with SRN policy set out in the DfT Circular 01/2022. We also welcome reference to consulting National Highways on Transport Assessments for development with the potential to adversely affect the safe operation of the M5 motorway. We support the Local Plan approach of identifying and coordinating necessary infrastructure investment. However, for the avoidance of doubt, National Highways is likely to recommend planning conditions to secure transport investment should it be necessary to avoid unacceptable or severe residual impacts associated with any individual or cumulative development proposals.	NSC Reg19 Local Plan Consultation.pdf
62657377	Tim Manther		None	No	• Positively prepared • Effective	Unsure	Unsure	400 hundred houses to be built on the Tower Farm estate Portishead makes the current road layout completely inadequate. There is only one access route through the Downs on to Down Road with only one access route to the town centre along Avon way. A route that already becomes congested. Public transport does work but walking is not really an alternative mode of transport for many because Tower Farm is at the top of a steep hill.	To have an alternative access route built from Tower farm to the bottom of the hill.		
62463649	R Pike			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The information relating to Public Transport is incorrect and out of date. The Stage 7 Transport Assessment paragraph 4.60 wrongly states that “At present, buses either travel along the A369 without diverting into Pill or divert through the centre of Pill via Priory Road, Lodway and Pill Road.” There hasn’t been a bus service along the A369 for several years, indicating that the late inclusion of Pill into the Plan was rushed and ill-prepared. For this reason, the proposed BSIP changes to the A369 multiple occupancy lane will worsen, not improve bus services. This specifically contravenes 4.64 which states it is a key aim that “congestion does not adversely affect road safety, active travel connectivity, and / or public transport journey times and reliability”. Furthermore, 4.66 states that “The cumulative impact of development at Junction 19 is being considered as part of the wider Local Plan Transport Assessment rather than specifically in relation to the Pill development allocation”, even though the 4.63 states “there will inevitably be an increase in vehicle movements associated with the level of development proposed for Pill. It is likely that the two junctions which connect Pill to the A369, namely the Pill Road / A369 junction, and St Georges Hill / A369 junction, will experience increased congestion.” Given the sites’ close proximity to Junction 19, it is flawed to not specifically consider the impact on the Pill public transport journey times and reliability.	Remove the Pill sites entirely from the plan or limit the number of houses to be in proportion with the size of the existing village and its infrastructure, in line with our Neighbourhood Plan 2020-2036.		
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	• Positively prepared • Consistent with	Yes	No	The requirement for highway mitigation infrastructure to be delivered in an agreed timescale is unreasonable given the nature of development and the uncertainty of the planning process including the impact of other development that’s permitted but not developed of under construction. Such a requirement for delivery may be a matter for discussion with the	That the Local Plan references the highways infrastructure reporting confirming that it is robust and sufficient to delivery the housing allocations in a timely manner.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 					national policy			highways authority so need not be referenced in policy. Careful consideration should be given to the highways evidence – given that the strategic road network plays an important role in the deliverability of key development sites. By way of example, Stroud District Council's emerging Local Plan has stalled for years due to the Plan being Examined in advance of robust (agreed) highways infrastructure evidence being presented to inform site selection. Without that being accurately presented the draft Plan's allocations may not be sound.			
62802881	John Polden			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	While my main concern relates to issues local to Backwell where we live, I feel the plan understates the serious issues relating to transport in the area. In particular it is largely silent on the major issues of traffic relating to the frequent closure of the M5 due to accident, incidents and road works. (see my detail letter). Little mention is made on the need to seriously invest in improving the use of the main rail link into Bristol by upgrading service frequency and improving stations (such as Backwell. (see my detail letter)	The plan should include a serious analysis of road traffic levels under various stress conditions. The plan should include proposals for the upgrading of the rail services in the area		NSC REG 19 LOCAL PLAN 2041^J Autumn 2025 consultation.pdf
18477217	Kit Stokes	Kit Stokes	StokesMorgan Planning Ltd	Yes	• Effective • Consistent with national policy			Objection to Policy DP14 – Transport Solutions for Rural Development We object to Policy DP14 because it fails to reflect the need for different transport solutions for small-scale rural developments that are not significant, as required by the National Planning Policy Framework (NPPF). The NPPF (paragraph 110) emphasises that development should provide safe and suitable access for all users, but it also recognises that the scale and nature of development should determine the transport requirements. DP14, as currently drafted, applies a one-size-fits-all approach that is disproportionate for modest rural schemes. Small-scale developments in rural areas should not be burdened with unrealistic transport obligations. Instead, DP14 should be modified to reflect NPPF guidance by allowing flexible, proportionate solutions, such as improved walking and cycling links, shared transport options, and consideration of modern trends like home deliveries, remote working, and electric vehicles powered by renewable energy.	Modification We request that DP14 be revised to align with NPPF paragraph 110.

51524513	Bellway Homes Ltd	tor&co	Bellway Homes Ltd	No	• Justified • Effective			Bellway generally support objectives and requirements of Draft Policy DP15 (Active and sustainable transport), however, it is noted the policy wording includes the following requirement: "Residential development will be expected to ensure that safe and appropriate pedestrian/cycling links to local facilities, including schools, are designed to the required standard. Fully completed active travel infrastructure (providing complete connectivity to the existing settlement and within the new development) and EV charging points are expected to be available prior to first occupation of each development or phase". Whilst understanding the broad basis for this policy provision, the drafting is felt unhelpfully onerous in relation to active travel infrastructure – particularly in relation to development that may form part of a large phase of development. Sites adjacent to a settlement, for example, may not require such a full requirement.	To ensure effectiveness, we suggest greater flexibility be incorporated, whilst not removing the basics of the policy: "[…] Active travel infrastructure which provides appropriate (an existing settlement and/or within the new development) and EV charging points are expected to be available prior to first occupation of each relevant development or phase".		20251212 504317 JE - North Somerset Reg 19 (Reps obo Bellway Homes).pdf

	Highways		Highways							designed and located to minimise the need to travel and support the prioritisation of active travel and public transport. It highlights that development will be expected to contribute to the delivery of sustainable transport strategies to manage the cumulative impacts of growth and is welcomed by National Highways.	Local Plan Consultation.pdf
39179649	Adrian Mealing			No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	I consider DP15 to be unsound because it is not positively prepared, not justified, not effective, and not consistent with national policy. DP15 states that development must prioritise active travel (walking, wheeling, cycling), provide safe and direct connections to key destinations, reduce car dependency, and support modal shift. However, the three Congresbury housing allocations (183 dwellings) rely on active travel infrastructure that does not exist, is not funded, and is not deliverable within the plan period. 1. DP15 is not positively prepared The policy expects development to be supported by active travel networks. Yet: Congresbury currently has no continuous walking routes from the allocation sites to the village centre. There are no segregated cycle routes on or parallel to the A370. The dangerous A370 and Smallway junction have no safe pedestrian/cyclist facilities and no committed improvements. No active-travel schemes for Congresbury are costed or included in the Infrastructure Delivery Plan. The Strawberry Line link through Congresbury is aspirational only, with no funding, alignment, or delivery mechanism. The Plan therefore fails to make realistic provision for sustainable transport. 2. DP15 is not justified DP15 requires evidence that active travel can realistically be delivered in allocated locations. For Congresbury: No walking or cycling feasibility study has been undertaken. No assessment of A370 severance or crossing need has been provided. No Active Travel Zone or Local Walking and Cycling Infrastructure Plan (LCWIP) exists for Congresbury. No safety audit or modelling has been undertaken for pedestrian access from development sites. Without this evidence base, DP15 is not justified at village level. 3. DP15 is not effective DP15 cannot be implemented because the Plan provides no mechanism to deliver the active travel infrastructure required for the Congresbury allocations: There are no funded schemes for crossings, cycleways, or footways. There is no requirement for developers to deliver off-site active-travel infrastructure. Congresbury's narrow pavements, blind bends, and busy A-road will not support increased pedestrian use without major intervention. The plan provides no phasing requirements linking housing delivery to completion of active travel improvements. Without guaranteed, deliverable infrastructure, DP15 is ineffective. 4. DP15 is not consistent with national policy The NPPF requires that: plans give priority to pedestrian and cycle movements (NPPF 110), development should promote sustainable transport modes (NPPF 105), safe and suitable access must be provided for all (NPPF 111), decision-makers should avoid developments that rely on car dependency. The Congresbury allocations breach these requirements because: All travel from the allocated sites is car-dependent today. Walking and cycling to village services is unsafe. No safe crossing exists on the A370, contrary to NPPF safety requirements. The Plan relies on future hypothetical improvements, not deliverable infrastructure. DP15 therefore does not comply with national policy.	To make DP15 sound, the Plan must provide: A Congresbury Active Travel Programme, including: Safe walking routes from each allocation to the village centre, Continuous, segregated cycle routes along or parallel to the A370, A fully designed and funded signalised crossing at Smallway, Wider footways, dropped kerbs and inclusive access improvements. Inclusion of these schemes in the Infrastructure Delivery Plan, with costs and delivery timescales. A requirement that no development is occupied until active travel routes to key village services are complete. A Congresbury-specific LCWIP covering walking and cycling. A cumulative assessment of active-travel needs arising from all 183 homes. Without these modifications, DP15 cannot be delivered and remains unsound.		
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	• Positively prepared • Consistent with national policy	Yes	No	The provisions of this policy are unreasonable. It sets out a hierarchy or sequence which prioritises modes of movement. In the real world, such an approach is too regimented and lacks flexibility. Any requirement to mitigate for existing deficiencies in public transport unrelated to a development scheme should not be pursued through this policy. It is for the Council to prepare a sound Community Infrastructure Levy schedule should funds from development be directed to wider transport infrastructure requirements.	That the policy does not set out a travel hierarchy that is inflexible. Further, that the Policy refers to that which is covered through CIL or S106.

62943009	Homes England	Avison Young (Peter Stockall)	Homes England	No	• Effective	Unsure	Unsure	Homes England supports the objectives and aspirations of this policy (and any changes since the previous iteration) and have sought to bring forward the delivery of a pedestrian and cycle friendly development at Locking Parklands in line with the approved Design Code for the site. However, this has been challenging at times by the approach of Council as Highway Authority in considering planning applications. Firstly, the Highways Design Guide (2020) imposes arbitrary 5.5m standard minimum carriageway widths for local access and minor access roads which further enhances the status of the car above sustainable modes. This is at odds with Manual for Streets 1 and 2. It undermines ability to design for active travel and lower vehicle speeds and prioritises design for bin lorries. Secondly, the Council's Parking Standards Supplementary Planning Document (November 2021) over provides for car parking and sometimes unnecessarily prioritises parking over sound design rationale which is seeking to create a sense of place and limit car parking provision. We do note that proposed policy DP19 Parking does recognise the opportunity for reduced parking provision but this is heavily caveated. The above-mentioned approach of the Highways Authority and the implementation of parking and highways design guidance is therefore at odds with the aspirations of Policy DP15, that of developers seeking to deliver these issues on the ground and Manual for Streets (1 and 2). We therefore continue to seek references within the policy which seek to allow the practical implementation of Policy DP15.	We request references within the policy which seek to allow the practical implementation of Policy DP15 and to also state that where proposals comply with Manual for Streets and evidence through tracking and Road Safety Audits that they are safe, then roads will be adopted by the Council.		
39037377	Barry Stirling			Unsure		Unsure	Unsure	One of the statements above in Policy DP14 states 'In addition, the effect of additional traffic on the surrounding road system must be taken into account such as where development introduces traffic of excessive volume, size or weight into a network of country lanes, or residential areas. Where there is a detrimental impact and no acceptable countermeasures are possible, planning permission will be refused.' Yet: Building on any of the proposed development/building sites would add a large amount additional traffic to Hanham Way and The Causeway as a shortcut/rat-run to and from TIckenham , Clevedon, M5, Portishead. The Causeway to which Hanham Way is linked is subject to the same high volume of traffic. It is narrow, weak, and dangerous. Excessive use is already evident by subsidence, many damaged areas and repairs and visible slip of the road into the rhynes. The ongoing cost of continuous maintenance and repair to NSC must already be huge, yet the road gets progressively worse and towards unrepairable and unusable. The repairs are frequent but do not keep pace with the rate of damaged so the road is always in unsatisfactory condition. The observable rate of subsidence and slip into the rhynes alongside indicate pothole repairs are totally insufficient for a weak road that is being destroyed with its current level of traffic, let alone with additinal traffic. If restrictions are not placed on traffic today to limit use of The Causeway I honestly believe the road will be destroyed and unusable well before 2041 comes around, which in itself renders the plan invalid. What Hanham Way and The Causeway need is less traffic not more that the proposed developments will create. At the public meeting held some 12 months or so ago at the United Reform Church Nailsea the NSC Traffic Officer present stated that there is an intention to try and reduce traffic using The Causeway, but no suggestion or plan as to how that would be achieved now, let alone after further proposed development. So it seems certain that in the absence of any council road building to better serve access to and from Nailsea, particularly from the North, that traffic will be even more excessive, roads even more excessively overloaded, even more damaged and more accidents inevitable. What is needed is a ink road from the A370 (near Brockley to also serve the airport) to link with Junction 20 of the M5 to provide access from North Somerset to/from the M5 bypassing Nailsea and Tickenham. Aspur from this link road into Nailsea West End trading estate would provide access into Nailsea and mean HGVs not having to travel through Nailsea. Why is this not in the plan to ease traffic, noise, pollution, congestion an make neighbourhoods liveable? Hanham Way is a residential road and neighbourhood that has already been made an unliveable neighbourhood by excessive traffic and its associated noise and pollution. The health and mental health and stress impact of this traffic on residents is already severe. Approval of any development that adds additional traffic to this route would show complete disregard or consideration for the welfare and negative impacts on the residents whose lives are already blighted. It would be a case of knowingly and consciously sacrificing the health, welfare, peace and lives of the residents living on and near it just to build more houses. Based on the statement highlighted above from DP14 the inevitable large traffic impact on already busy Hanham Way, The Causeway and Washing Pound Lane will be a large detrimental impact and with no countermeasures planned, planning permission should be be refused. To not refuse it would mean the Council not complying with their own stated policy.

Policy DP16: Active travel routes

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
63191617	Various Taylor Wimpey Crest Nicholson Barratt Redrow Vistry Group	Nick Matthews (Savills)		No	• Justified • Effective				These representations have been prepared and submitted by Savills on behalf of various clients including Taylor Wimpey, Crest Nicholson, Barratt Redrow, and Vistry Group. This draft policy seeks to safeguard and enhance active travel routes and ensure new development provides safe, direct connections to them. The vast majority of the policy is supported by our clients, who recognise the benefits of integrating active travel infrastructure into new development proposals. It is important that the form and type of active travel infrastructure is proportionate to its intended use and the intensity of that use. There can at times be an aspiration on the part of active travel consultees to seek over◈engineered infrastructure which, whilst not itself objectionable, has implications for the width of movement corridors and can result in the less efficient use of land. A balanced approach is therefore required in the implementation of this policy which ensures that infrastructure is both appropriate and justified. Furthermore, the primary focus of new active travel infrastructure should be to replace journeys which would otherwise be made by car with a safe and convenient active alternative. It is with this in mind that we have one specific objection to the draft policy wording. The draft policy states that:'Where a new or improved active travel route is proposed, it shall be designed for use by pedestrians including those who use mobility aids, cyclists and where possible for equestrian users, unless appropriate evidence demonstrates that the route should be limited to specific users.' While our clients support inclusive design, a default position which requires equestrian access in all cases is not appropriate and would likely conflict with the safe and efficient use of the active travel network, particularly in urban or higher-density contexts. Since the use of horses is almost exclusively a leisure activity, this is also not necessary to achieve the primary objective of maximising active travel as an alternative to the car. We therefore recommend that the text "and where possible for		Policy DP16 (Active Travel) for Various (Dec 25).pdf

Effectiveness – Monitoring and enforcement of climate measures is unclear. Consistency with national policy – See the National Planning Policy Framework (paras 152–158) which require robust climate-mitigation and adaptation mechanisms.	Require active travel and public transport infrastructure before the first occupation of major sites. - Require strategic sites to deliver a modal shift plan consistent with carbon neutrality by 2030. - Introduce maximum parking standards to limit car dependency. - Strengthen integration with GI (shaded walking routes, ecological corridors).		
32925633	Bath and North East Somerset Council		Bath and North East Somerset Council							B&NES would welcome the opportunity to work collaboratively on active travel infrastructure, particularly in linking the proposed Strawberry Line extension with B&NES' Active Travel Masterplan. This connection would provide a strategic, high-quality route for walking and cycling between communities, supporting both leisure and utility trips.	North Somerset Local Plan Reg 19 Consultation 2025 FINAL.pdf
31088129	Bloor Homes South West	Turley		No	• Positively prepared • Justified • Effective • Consistent with national policy		No	We support the principle of the policy that active travel routes will be safeguarded, noting that this includes the Gordano Greenway. This is the final section of the active travel route from Brean to Weston, Clevedon, and finally Portishead, linking the coastal towns. The delivery of this route should therefore be prioritised by the Council. We support the principle that, where appropriate, new development proposals will be expected to provide direct, safe and secure links to existing or proposed services, facilities an active travel routes. Indeed, the development of land at Black Rock can help deliver th Gordano Greenway, a key active travel route that the emerging plan acknowledges. We consider the draft policy's requirement to segregate cycle and pedestrian routes is not always necessary and can lead to over-engineered and unattractive solutions. It should therefore be amended to state 'where appropriate'.	The draft policy's requirement to segregate cycle and pedestrian routes is not always necessary and can lead to over-engineered and unattractive solutions. It should therefore be amended to state 'where appropriate'.		BLOA3050 - Portishead Reps - NS Local Plan Regulation 19 - Turley Updated (V2).pdf
39179649	Adrian Mealing			No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	I consider Policy DP16 to be unsound because it is not positively prepared, not justified, not effective, and not consistent with national policy. DP16 identifies a series of "active travel routes" intended to form a strategic network and support walking, wheeling and cycling. However, the routes affecting Congresbury — including those required to support the three allocations (183 dwellings) — are conceptual only, have no secured funding, no agreed alignment, and no delivery mechanism. 1. DP16 is not positively prepared For Congresbury, DP16 relies on: an unfunded and unconfirmed Strawberry Line extension (Congresbury to Blagdon), another unfunded section of the Strawberry Line toward Winscombe, unspecified active travel improvements along the A370 corridor, a future pedestrian/cycle crossing at Smallway that has no funding or design, undefined local walking and cycling links to new development sites. None of these routes are delivered, funded, designed, or committed. Basing major housing allocations on hypothetical infrastructure does not constitute positive planning. 2. DP16 is not justified DP16 requires a robust evidence base showing: feasibility of the proposed active travel routes, delivery constraints, environmental impacts, engineering solutions, costs and funding sources. However: No feasibility work has been published for any Congresbury active travel scheme. No detailed route alignments are provided. No land ownership constraints or engineering assessments have been undertaken. The Strawberry Line extensions are described in the plan itself as aspirational, not strategic commitments. No assessment exists of safe cycle or pedestrian access to the three allocated sites.	To make DP16 sound, the Plan must: Provide a Congresbury Active Travel Delivery Plan, including: fully designed and costed routes, safe walking links from the three allocations to the village centre, a deliverable segregated cycle route along/parallel to the A370, a fully funded and scheduled Smallway crossing, inclusive mobility measures (kerbs, surfacing, lighting, width). Include all Congresbury active travel schemes in the Infrastructure Delivery Plan with timing, cost and funding sources. Require that no new homes are occupied until key active travel infrastructure is completed. Undertake feasibility and safety audits for all proposed routes. Replace aspirational routes (e.g., Strawberry Line extensions) with deliverable infrastructure unless funding and land agreements are secured. Without these modifications, DP16 remains hypothetical and undeliverable.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								DP16 is not supported by evidence and therefore not justified. 3. DP16 is not effective DP16 is ineffective because: The proposed routes do not currently exist and have no clear prospect of delivery within the Plan period. The Infrastructure Delivery Plan does not list any Congresbury active travel projects. No mechanism links development occupation to delivery of active travel improvements. The A370 is a heavily trafficked road with no safe cycleway; DP16 provides no deliverable plan to change this. Without these routes, the 183 Congresbury dwellings will be entirely car-dependent, defeating DP16's purpose. Therefore, DP16 cannot be implemented. 4. DP16 is not consistent with national policy The NPPF requires: safe, high-quality walking and cycling networks (NPPF 104), priority for pedestrians and cyclists (NPPF 110), avoidance of car-dependent development (NPPF 105), realistic, deliverable transport solutions (NPPF 112), planning for sustainable travel at plan-making stage, not left to applications. The Congresbury allocations breach these requirements because: All "active travel routes" are not real infrastructure but aspirational lines on a map. There is no evidence that walking or cycling routes can be made safe or continuous. There are no funded or committed pedestrian crossings of the A370. The reliance on future aspirations is inconsistent with the NPPF's requirement for deliverability. DP16 therefore fails national policy tests.			
62846721	Cleeve Parish Council		Cleeve Parish Council		• Positively prepared • Justified • Effective			We do not consider the North Somerset Local Plan 2041: Pre-Submission Plan to be sound. Based on the detailed representations of Cleeve Parish Council, we believe the Plan fails three of the tests of soundness set out in NPPF paragraph 36: Positively Prepared, Justified, and Effective. Positively Prepared The Plan does not adequately address the needs of young people or newly forming households, nor does it ensure that new development will be properly supported by essential infrastructure. The repeated use of discretionary language ("will be expected", "should have regard to") leaves critical requirements—such as drainage, healthcare capacity, active travel connections, affordable housing percentages, biodiversity measures, renewable energy deployment, and sustainable design—insufficiently guaranteed. The Plan also fails to provide a clear and sustainable policy position on future growth at Bristol Airport, or on how Green Belt releases will be compensated or justified. As a result, the Plan does not convincingly meet the district's needs in a sustainable and deliverable way. Justified The policy choices taken in the Plan do not always represent the most appropriate strategy when tested against reasonable alternatives. The evidence base appears inadequate or incomplete in several areas, including: (a) the justification for Green Belt releases at Bristol Airport; (b) the robustness of climate-adaptation measures given the known risks of flooding, sea level rise, extreme heat, and pressure on water resources; (c) the lack of evidence demonstrating that non-mandatory design guidance will achieve sustainable outcomes; (d) the omission of low-rise flats in existing towns as a viable and necessary option for delivering affordable housing for young people; and (e) insufficient assessment of the landscape, safety, environmental and carbon impacts of airport-related growth, including the absence of a cumulative emissions assessment. In each case, reasonable and more sustainable policy alternatives have not been adequately explored. Effective The Plan's delivery mechanisms are weak and do not provide confidence that its policies will be realised. Critical infrastructure (roads, drainage, healthcare, active travel routes, mass transit provision and energy resilience) is not tied to development in a sufficiently enforceable manner. Policies that rely on voluntary interpretation or "expectations" are unlikely to secure required outcomes, particularly in relation to affordable housing percentages, design quality, biodiversity net gain, native woodland expansion, protection of commons, and the safeguarding of Best and Most Versatile agricultural land. Policies concerning Bristol Airport do not demonstrate effective cross-boundary working or credible mitigation strategies, while the approach to flood-risk management does not provide sufficient assurance that developments requiring the Exception Test would be safe, sustainable, or financially deliverable. As drafted, there is insufficient certainty that the Plan can be implemented as intended.	Policy DP16: Active Travel Routes: Cleeve Parish Council has made representations that there should be an active travel route between Cleeve / Claverham and Backwell, in particular to enable school students to travel to and from school in Backwell. Cleeve Parish Council would like this to be written into Schedule 7 of the Plan.		Submission on behalf of Cleeve Parish Council in respect of Pre.docx
62471329	Environment Agency		Environment Agency						If active travel routes near to watercourses, we require appropriate buffer distances away from these watercourses, to ensure that access is retained to watercourses for maintenance vehicles and emergencies.		

Policy DP17: Public transport accessibility

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 51524513	Bellway Homes Ltd	tor&co	Bellway Homes Ltd	No	• Justified • Effective • Consistent with national policy			Bellway support the aspiration of Draft Policy DP17 (Public transport accessibility), though to make it more effective and responsive to site-specific circumstances, we suggest the guidance in the supporting text that refers to 'reasonable distance' and 'appropriate bus service frequency' should be referred to as 'typical distance' or 'typical bus service frequency' in order to account for the site specific circumstances.	The guidance in the supporting text that refers to 'reasonable distance' and 'appropriate bus service frequency' should be referred to as 'typical distance' or 'typical bus service frequency' in order to account for the site specific circumstances.		20251212 504317 JE - North Somerset Reg 19 (Reps obo Bellway Homes).pdf
62850529	Andy Chappel			No	• Justified • Effective • Consistent with national policy	Yes	Yes	Justification – The mechanism for achieving carbon neutrality by 2030 is not fully evidenced. Effectiveness – Monitoring and enforcement of climate measures is unclear. Consistency with national policy – See the National Planning Policy Framework (paras 152–158) which require robust climate-mitigation and adaptation mechanisms.	Require active travel and public transport infrastructure before the first occupation of major sites. - Require strategic sites to deliver a modal shift plan consistent with carbon neutrality by 2030. - Introduce maximum parking standards to limit car dependency. - Strengthen integration with GI (shaded walking routes, ecological corridors).		
1190177	Churchill Parish Council		Churchill Parish Council	Yes		Yes	Yes		Churchill Parish Council welcomes the aspiration described under DP17 - Public Transport Accessibility - that states "All residential development should be within reasonable distance of a direct and frequent bus service providing access to a good range of facilities, services and jobs via a direct, safe and attractive pedestrian route." Churchill and Langford villages, however, have seen a vast increase in new housing in the past 6 years whilst at the same time public transport has declined. The road network has got busier and some of the main roads have no footpaths so it has become increasingly dangerous for pedestrians. We note that this has led to vulnerable people being less inclined to leave their homes leading to isolation related health issues.The social housing, whilst important, is often allocated to people whose family network is in Weston super mare and so transport to and from there is an issue.These rural villages are not geographically linked in a way that allows for one through service to provide its needs. Churchill now has an hourly service to Bristol and Weston super Mare. While links to Banwell, Winscombe, Wrington, Wells and Weston super Mare are not on regular frequencies. The Rural Link service, Yatton to Bristol Airport requires pre-booking and ceases at 1530 hrs.Churchill Parish has been covered by the Demand Responsive Transport project which provides facilities at what must be a substantial loss to the taxpayer and only satisfies 50 percent of the requests made (Smallwood, 2025). It is suggested the service is unlikely to survive long term as it seems unaffordable. At the same time significant funds are being spent on public transport capital projects such as bus lanes and even in one case a major roundabout enhancement where very few buses operate. Importantly, there are many funds available from different sources which are not coordinated. Sums currently being spent on local bus and health transport should be examined together, to assess whether this can be organised better locally through common budgets. There is the need to ensure that there is a regular frequency of services around the villages and feeding into Bristol, Weston super mare, Wells, the major railway station and main arteries. Smallwood T (2025). Report to Transport Select Committee by Trevor Smallwood OBE, DL (Somerset), past Executive Chairman of Badgerline Group and FirstGroup, OBE in 1994 for services to public transport.		
63299425	Mac Mic Strategic Land Flax Bourton	Planning Potential	Mac Mic Strategic Land	No	• Effective	No	Yes		Policy DP17 states that all residential development should be within a reasonable distance of a direct and frequent bus service providing access to a good range of facilities, services and jobs via a direct, safe and attractive pedestrian route while developments will be expected to encourage the use of public transport and deliver of effective and convenient services. This aspiration is supported by Mac Mic. Mac Mic are, however, concerned with the reference in the justification that in terms of locating development within a 'reasonable distance' this means a maximum of approximately 400 metre walking radius of a bus stop with a suitable service frequency, or 600m in rural areas. This is an out-of-date metric, as public transport accessibility should be based on the level of service and frequency of service sufficient to meet individual needs. It might be the case that greater distances can be applied. Recommendation The wording of this part of the supporting text should be amended accordingly and should also make reference to the prevailing topography as this will also have an impact on accessibility to public transport.		North Somerset Local Plan Pre-Submission Plan - Flax Bourton Representations Final.pdf
63006177	Mac Mic Strategic Land (Land north of Banwell Road)	Planning Potential (Elliot Jones)	Mac Mic Strategic Land	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Policy DP17 states that all residential development should be within a reasonable distance of a direct and frequent bus service providing access to a good range of facilities, services and jobs via a direct, safe and attractive pedestrian route while developments will be expected to encourage the use of public transport and deliver effective and convenient services. Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
39179649	Adrian Mealing			No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	I consider Policy DP17 to be unsound because it is not positively prepared, not justified, not effective, and not consistent with national policy. DP17 requires development to be accessible by public transport, support improved bus services, and reduce dependency on the private car. However, the Congresbury allocations (183 dwellings) are located in a settlement with poor, unreliable, and infrequent public transport, and no improvements are secured or funded in the Local Plan. 1. DP17 is not positively prepared The policy anticipates improvements to bus services and strategic public transport links, yet the Plan contains: no committed public transport upgrades for Congresbury, no increased frequency of existing services, no bus priority measures, no guaranteed long-term funding for any route, no confirmation that services will run evenings/weekends, no infrastructure delivery for bus shelters, real-time information, or accessible stops. This means DP17 is based on assumptions, not actual provision, and is therefore not positively prepared. 2. DP17 is not justified A justified policy must be supported by evidence showing that public transport can realistically serve the allocated sites. However: No public transport accessibility study has been undertaken for Congresbury. No analysis of walking distance or inclusive access to bus stops exists. Bus services through Congresbury are infrequent and unreliable, and this is not addressed. No modelling has been done on increased bus patronage from 183 new homes. No assessment exists of whether existing bus routes could actually support additional demand. DP17 therefore lacks the evidence required to justify its application in Congresbury. 3. DP17 is not effective DP17 cannot be implemented because: There is no mechanism in the Plan to deliver or secure improved bus services. No developer contributions or Section 106 strategies are proposed for bus enhancement. The Infrastructure Delivery Plan lists no public transport schemes for Congresbury. Without improvements, development remains entirely car-dependent, contrary to DP17. Bus stops in Congresbury are not accessible, lacking proper footways, crossings, or inclusive access features. DP17 is therefore not deliverable or effective. 4. DP17 is not consistent with national policy The NPPF requires: significant weight to be given to public transport accessibility (NPPF 104–106), development to provide safe, suitable, and sustainable transport access (NPPF 110), plans to actively reduce car dependency (NPPF 105), avoiding development that relies on inadequate public transport	To make DP17 sound, the Plan must: Provide a Congresbury Public Transport Strategy, including: Increased bus service frequency (hourly or better), Guaranteed long-term funding for service improvements, Bus priority measures where practical, Accessible bus stop upgrades (kerbs, shelters, lighting, real-time information). Include these improvements in the Infrastructure Delivery Plan, with funding, timing, and delivery responsibility. Require Section 106 or CIL contributions from allocated sites to support bus service enhancement. Provide an evidenced walking-accessibility assessment for bus stops, ensuring safe and inclusive access from all allocations. Demonstrate that public transport will be in place before occupation of new dwellings. Without these modifications, DP17 is not deliverable and remains unsound.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								(NPPF 111). The Congresbury allocations fail these requirements because: No public transport improvements are planned or funded. Walking access to bus stops is unsafe due to A370 conditions. Routes are too infrequent to support modal shift. No evidence shows buses will be viable during the plan period. Thus, DP17 fails national policy tests for sustainable transport.			
41396737	Bristol Airport		Bristol Airport Ltd	No	• Justified • Effective		Yes	Whilst the overall objective of this policy to deliver improved public transport accessibility is supported, the precise wording is ambiguous, particularly in relation to the target frequencies based on population size. There is no justification or evidence provided for the target frequencies set, nor how developments should contribute to the achievement of these target frequencies in a way that is proportionate to the scale of the development proposed. How the targets could be applied to a non-residential development such as Bristol Airport, whose transport demands are not linked to the local population, is also unclear.	Justification for the target frequencies should be provided, with the wording of the policy made clearer as to how the targets will be applied in a way that is proportionate to the scale of the development.		North Somerset Local Plan Pre-submission Plan - Representation form Part B1 - DP17 Public Transport Accessibility_submitted 08.1.docx
31022913	Peter Sims			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The policy states that the appropriate bus service frequency should comply with the following principles of frequency based on population size: The inter urban services (for example A370 corridor) should have a minimum frequency of 15 minutes. Minimum frequencies will apply between 7am-7pm Monday to Saturday, with 50% of minimum frequencies outside these times and 30% between 9am- 7pm on Sundays The buses serving Nailsea will never meet the above criteria for two reasons 1 It will be uneconomic for bus companies to supply and man the number of buses required. 2 There is no demand for this number of bus services in Nailsea and Backwell. All the buses will mostly be running empty The Nailsea Transport Hub is shown on the map as being directly situated by the Nailsea and Backwell rail station in the flood plain. The end of the proposed cross rail link road is also in the immediate area. There is no flood mitigation in the plan to protect this hub and road. The Nailsea and Backwell rail station is not suitable for inclusion as a safe and viable active travel route as access to the platforms is extremely poor especially for the less mobile people.'' The Local Plan 2041 is unsound

Policy DP18: Travel Plans

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
43203041	National Highways		National Highways							The policy requires Travel Plans for all development which will generate significant amounts of movements. The policy advises that planning conditions or planning obligations will require adoption of the Travel Plan prior to occupation and its successful implementation post occupation. Whilst we understand that a future Supplementary Planning Document (SPD) will set out more details in respect of the development, implementation and monitoring of Travel Plans, we would suggest that the policy wording could be amended to refer to the requirement to monitor Travel Plan outcomes and implement remedial actions should a Travel Plan fail to achieve its targets. We consider this an important element of the shift to vision-led planning.	NSC Reg19 Local Plan Consultation.pdf

Policy DP19: Parking

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
21472417	Mead Realisations Ltd	Oneleven Property		No	• Positively prepared • Justified • Effective • Consistent with national policy				Objection is raised to this policy as the required parking standards should be included within the text. A mechanism for amending the standards (should that be necessary in the future) should also be included.		Reg 19 Final Representations Mead Realisations 12.12.25 including appendices.pdf
51732129	Gleeson Land	tor&co (Jacqueline Mulliner)	Gleeson Land	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The policy notes support for developments with reduced provision for parking in highly accessible locations, well integrated into the existing settlement with easy and direct access to local facilities via active modes of travel. It notes that such developments must be well served by public transport and should have access to a car club vehicle. The later compulsory requirement of Policy DP19 may be inappropriate in certain circumstances and therefore shouldn't be obligatory.	Remove the compulsory requirement for the provision of a car club vehicle from Policy DP19		North Somerset Reg 19 Reps (2025-12-12) - Gleeson Land (Appendix B).pdf

Policy DP20: Airport related car parking

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
1019201	Wrington Parish Council		Wrington Parish Council					We understand the importance of having this Policy but are disappointed that it appears to anticipate the potential need for offsite airport parking that is not just related to accommodation. The emphasis requires to be on a proper public transport system reducing the need for offsite airport parking. Without this, we will continue to damage our environment and the quality of life for local residents and wider community.			
32925633	Bath and North East Somerset Council		Bath and North East Somerset Council							B&NES strongly supports the principle that airport related parking must not undermine modal shift objectives. We consider that priority should be given to measures that enhance sustainable access such as improved bus and mass transit connectivity and active travel infrastructure for staff rather than expanding car parking provision. Any parking proposals should be conditional on delivering long-term commercially viable improvements to public transport in line with the Airport Surface Access Strategy and the Joint Local Transport Plan. We would welcome robust monitoring and enforceable targets to ensure compliance with these objectives.	North Somerset Local Plan Reg 19 Consultation 2025 FINAL.pdf
43203041	National Highways		National Highways							The policy prioritises the provision of Airport related parking within the Bristol Airport boundary. Airport related parking (including off-site park and ride provision) outside of the Airport boundary will only be permitted where there is a demonstrable need and is consistent with the aims and objectives of the Airport Surface Access Strategy and the Joint Local Transport Plan. We are supportive of the Airports efforts to increase sustainable travel and would not wish for these efforts to be undermined by increased satellite parking facilities which could encourage car-borne travel. We also welcome the requirement that proposals outside of the Airport boundary should not result in severe unmitigated residual cumulative traffic impacts, or create a significant constraint to the delivery of any planned improvements to the transport network or allocated sites.	NSC Reg19 Local Plan Consultation.pdf
41396737	Bristol Airport		Bristol Airport Ltd	No	• Justified • Effective	No	Yes	The following wording of Policy DP20 is ambiguous in so far as it suggests that car parking can deliver improved public transport: "Any car parking provision, within the airport boundary as defined on the Policies Map, should be designed to deliver improved public transport to and from the airport, reducing reliance on private vehicles and will only be permitted where it does not undermine the objectives of the Airport Surface Access Strategy and the Joint Local Transport Plan."	The intent behind the requirement for car parking provision to deliver improved public transport provision should be clarified and amended wording considered.		North Somerset Local Plan Pre-submission Plan - Representation form Part B1 - DP20 Airport related car parking_submitted 08.12.2.docx

Policy DP21: Safeguarding employment sites

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
939361	R Burrows		-	No	• Positively prepared • Justified • Effective	Unsure	Unsure	There are several inherent conflicts and specific policies that are argued to constrain development, particularly housing delivery. When coupled with other documents outside of the local plan, such SPDs as the proposed enlarged Bat SAC. It is questioned how NSC will deliver windfall sites & small sites at all. The financial burden is already onerous and this will add too much financial burden on small developers & self builders who should be exempt. Coupled with flood risk and the absurdity of designing to an undefended flood situation (rather than breach modelling) an almost impossible scenario where the flood defences are completely removed. To design to the absolute worse case (doomsday) scenario is unrealistic and far from pragmatic. Development Management Policies (DP), particularly those related to climate change, sustainability standards, and flood risk, make the delivery of growth procedurally and economically harder. This is highlighted by the fact that the LPA was found not to have delivered a five-year supply of housing for at least 13 years, suggesting the existing constraints are already impacting deliverability. This will exacerbate the situation & the financial burden of compliance with policies that duplicate existing primary legislation uneccessary.	Policy DP21: Suggested Rewording (Exempting Small Sites): "For smaller sites with 2/3 or less B2/B8 units, marketing is not required. For all other sites… marketing is required". (The reason provided is that smaller sites are often remote and deemed unsustainable, making the marketing onerous.) This policy in particular should relate only to allocated employment sites.		
51560705	Dan Clarke-Hall (Gibson Architecture)		Gibson Architecture	No	• Effective	Unsure	Unsure	I believe the plan to disproprtionately affect small developers. I am unsure of the validity of the housing allocation, especially the windfall sites which I believe the plan overestimates. Windfall numbers are decreasing and flood, climate policy among others are making North Somerset incredibly unattractive to small to medium developers. The attached document includes all of my opinions on the plan. DP21 – Safeguarding Employment Sites • Issue: Marketing requirements are onerous for small/remote sites with only 2–3 B2/B8 units. • Modification: Exempt such small sites from marketing requirements.	My proposed modifications are included in the associated representation. DP21 – Safeguarding Employment Sites • Modification: Exempt such small sites from marketing requirements.		Dan Clarke Hall.pdf

Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
15430817	Mike Tremlett		Graham Moir Associates						This is almost a copy and paste exercise from the sites and policies plan part 2. One section should be amended. It currently reads that for all sites, marketing is required. This is understood and reasonable on predominantly dense commercial sites; however, this is an onerous process for sites with single or a small number of B2/B8 units. Therefore, the policy should include: For smaller sites with 2/3 or less B2/B8 units, marketing is not required. For all other sites.....marketing is required. Reason – smaller sites are often legacy sites that are remote so take time to travel to and essentially make them unsustainable.

30921569	Lucy Byrne			No	• Positively prepared • Justified • Effective	Yes	No	This outline for town centre's fails to include for the effectlively 'new towns' the local plan will be creating by adding so much housing to areas like Nailsea and Backwell and Pill. In the case of the village of Pill in particular it is currently barely able to sustain it's existing population with the limmited shops and resources it has, depending in many ways on a currently over stretched and aging volunteer network to run most of it's local activities. In this Local Plan the size of Pill settlement is set to increase by 44%!!!! changing it from a village into a small TOWN. This local plan does not clearly outline the need for more investment in these new towns it is effectively creating. There are no clear references in the economic plans either. The cost of such investments in an area like Pill which has several woefully under resourced services already will be exceptionally high compared to planning a strategy with less housing around Pill and instead locating it closer to the larger towns that already have the infrastructure and services. The residents and local businesses and charitable organisations of Pill have not been consulted with about economic development.	The residents and local businesses and charitable organisations of Pill have should be consulted with about economic development and priorities and strategic plans need to be made with their input. Ideally the unsustainable levels of houing allocated for Pill need to be re-considered. Local communities need to be properly consulted with (a max of 29 respondants of whome around a 3rd had vested interests is not in any way fair or representative to base such impactful decisions on. There need to be several widely advertised local public meetings in Pill where buisnesses, local organisations and residents all share their views. There by highlighting several costly areas of concern which this plan has missed.

29254593	Tarmac Trading	Steve Lamb	Tarmac Trading Limited	Yes		Yes	Yes			This email is sent by Steve Lamb of Quarryplan (GB) Limited acting as agent for Tarmac Trading Limited, the operators of Stancombe Quarry, Stancombe Lane, Flax Bourton, Bristol, BS48 3QD. The email is in response to the current consultation exercise on the Pre-Submission version of the Local Plan. Tarmac Trading Limited believe that the Local Plan is Legally Compliant, Sound and has met the Duty to Cooperate with regard to the minerals related policies in the Plan, namely policies SP12, LP16, LP17, LP18, DP30 and DP31. The policies meet the legal requirements in terms of minerals by virtue of identifying sufficient potential construction aggregate resources during, and at the end of the Plan period and also in the safeguarding of working sites, ancillary operations and appropriate mineral resources. The minerals policies are sound as they have been positively prepared and are consistent with national policy in terms of allocations and safeguarding. The Duty to Cooperate has been met in the provision of crushed rock between North Somerset and South Gloucestershire. Attached to this email is the Local Plan Pre-Submission Representation Form Part A and Part B for each of the minerals policies.	
40891777	Breedon Trading Ltd		Breedon Trading Ltd.	No	• Effective	Yes	Yes	The Company is supportive of the policy as far as it goes, but notes that the policy does not extend to sites identified as Preferred Areas or Preferred Areas of Search identified by the Plan. This is considered to reduce the effectiveness of the Plan as it would be possible for non-mineral development to potentially sterilise these areas. The reach of Policy DP30 should be extended to relate to both Preferred Areas or Preferred Areas of Search.	Proposals for non-mineral development close to (generally within about 500m of the boundary of) carboniferous limestone mineral working sites which are active, recently granted consent for mineral working or identified as Preferred Areas or Preferred Areas of Search by this Plan, including ancillary activities, will not be supported where, due to their nature and location, they would be likely to impair mineral working activities of such sites, unless satisfactory mitigation measures can be identified.

										for each of the minerals policies.	
40891777	Breedon Trading Ltd		Breedon Trading Ltd.	No	• Positively prepared • Consistent with national policy	Yes	Yes	The policy refers to the requirement for applicants for planning permission for the winning and working of minerals to demonstrate a need for the development proposed. The Company considered this requirement not to reflect the overall tenor of guidance or to be positive planning and should be deleted. Nowhere within NPPF does guidance point to applicants needing to justify the need for developments for winning and working of mineral. Paragraph 226 of NPF suggests that minerals planning authorities should plan for a steady and adequate supply of minerals by the consideration of a number of material considerations, including the LAA (a) and landbank considerations (e). These are the metrics that should be material when determining an application, not need as stated.	The first bullet point of the policy should be deleted and replaced with the following: - "Consideration of the development in the context the need to provide for the steady and adequate supply of minerals (see Policy SP12), the LAA and the landbank" The phrase "...supported by adequate evidence that the development is needed and justified..." should be deleted.

51732129	Gleeson Land	tor&co (Jacqueline Mulliner)	Gleeson Land	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The policy notes that the scale and extent required will depend on the nature of the development and the existing quantity and quality of provision in the locality. However, policy DP34 goes on to note that requirements will be higher for large-scale proposals of 10 dwellings or more, particularly where there is a lack of green infrastructure. It is acknowledged and accepted that new developments should make proportionate and related improvements to green infrastructure which is comparable to their scale. However, the policy and its justification text doesn't sufficiently justify the requirement that development should make up for the lack of existing green infrastructure in the area, which the policy due to its wording implies. The policy should be reworded to make it more explicit that large scale developments shouldn't need to make additional provision for existing shortfalls in Green Infrastructure.	Remove the reference to "particularly where there is a lack of green infrastructure" from Policy DP34.		North Somerset Reg 19 Reps (2025-12-12) - Gleeson Land (Appendix B).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
39179649	Adrian Mealing			No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	I consider Policy DP34 to be unsound because it is not positively prepared, not justified, not effective, and not consistent with national policy. DP34 requires the creation, protection and enhancement of green infrastructure networks; safeguarding ecological corridors; delivering multifunctional open space; and protecting landscape character. However, the three Congresbury housing allocations (183 dwellings) are located in highly sensitive rural-edge environments and the Plan provides no evidence or strategy to ensure green infrastructure is protected or enhanced. 1. DP34 is not positively prepared Congresbury has several critical GI assets that the Plan fails to address: North Somerset & Mendip Bats SAC sustenance zones and dark corridors, the Congresbury Yeo corridor, a network of rhynes, ditches and wetland edges, the setting of Cadbury Hill Fort, important hedgerow and tree networks, valued rural landscape forming the village edge. DP34 makes no meaningful provision for maintaining these assets while delivering 183 new homes. There is no GI masterplan, no delivery programme, and no ecological mitigation strategy. This is not positive planning. 2. DP34 is not justified A justified GI policy must be evidence-led. The Plan fails to provide this evidence for Congresbury: No local Green Infrastructure Assessment has been produced for the allocations. No Landscape and Visual Impact Assessment (LVIA) exists for any of the three sites. No ecological connectivity mapping is provided, despite known SAC bat flightlines. No assessment of tree cover, habitat quality, or open space needs has been published. No analysis exists of green infrastructure function at the village edge. Because none of this evidence has been produced, DP34 is not justified. 3. DP34 is not effective DP34 cannot be implemented in Congresbury because: There is no GI framework or masterplan tying the three allocated sites together. No strategic or local green infrastructure improvements are included in the Infrastructure Delivery Plan, meaning nothing is funded or deliverable. No mapping shows GI corridors to be protected or enhanced. No buffer zones are identified for: bats SAC corridors, heritage setting buffers, rhynes and wetland features. No public open space or on-site GI requirements are defined for any allocation. Without these mechanisms, DP34 is not deliverable or effective. 4. DP34 is not consistent with national policy The NPPF requires that Local Plans: identify and secure strategic green infrastructure networks (NPPF 175), protect habitats and species, particularly internationally designated sites (NPPF 180–182), maintain landscape character and avoid settlement sprawl (NPPF 174), provide high-quality, multifunctional open space (NPPF 98–100), safeguard heritage setting (NPPF 200). The Congresbury allocations conflict with these requirements because: No GI network has been identified for the area. SAC ecological corridors are at risk with no mitigation strategy. The Woodhill Nurseries allocation affects the setting of Cadbury Hill Fort (Scheduled Monument). No landscape assessment is provided.	To make DP34 sound, the Plan must: Produce a Congresbury Green Infrastructure Masterplan, identifying: habitat networks, bat flightlines and dark corridors, woodland and hedgerow protection, landscape character zones, open space requirements, buffers to heritage assets including Cadbury Hill Fort. Map and secure strategic green infrastructure corridors, particularly those serving the Bats SAC. Provide GI requirements for each allocation, including: tree planting, habitat enhancement, accessible natural greenspace, on-site open space, ecological buffers around watercourses and rhynes. Add all Congresbury GI projects to the Infrastructure Delivery Plan, with: costings, phasing, delivery partners, funding sources. Carry out a cumulative GI impact assessment of the three Congresbury allocations. Without these modifications, DP34 cannot be delivered and remains unsound.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								No open space strategy exists. DP34 therefore fails to meet national policy expectations.			
62810017	Guy Stone			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	This policy is not specific, there are a lot of 'could be' and 'perhaps' proposals rather than 'will'. There is no indication of how the contribution of developers and landowners will be 'policed' to ensure targets are met. Are North Somerset Council going to send officers to sites to ensure the management prescribed under section 106 agreemets and planning conditions are met? What penalties will apply if developers ignore or only partially apply the mannagement of habitats specified under section 106 agreements and planning conditions?	This policy needs to focus more on delivery and actions. It is too general and could lead to very little action being undertaken. There is insufficient focus on monitoring the measures that will be applied and the actions/penalties that will happen if companies or individuals do not meet planning conditions or section 106 agreements for their developments or go bust/sell land on.		
62810017	Guy Stone			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Where green infrastructure aims to satisfy the needs of biodiversity, through Section 106 agreements or planning conditions, this needs to be monitored and policed . There needs to be a means whereby proof is required to show that appropriate management is taking place and this needs to be followed up by site visits through North Smerset Council and penalties issued where not undertaken.	More focus needs to be placed on developers proving they are applying the management required to hit biodiversity targets. This needs to be followed up by North Somerset Council and there need to be consequences if targets are not met.		
26060801	CJ Waite			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The selection of the proposed Tower Farm development in Portishead is in direct contravention of the aims set out above. By choosing this site it will have a significant negative impact on the Environmental resilience of the area and Weston Big Wood, a SSSI, in particular. The fields are an essential element in the green corridor from the Bristol Chanel to the Mendip Hills. One of the criteria for the proposal to be judged against is ‘does it enhance biodiversity and/or protect high quality land’, in this case ‘high quality’ means beneficial for nature. Clearly this proposed site does not as it will negatively impact on WBW in both constraining the interaction of nature with the surrounding fields and encourage greater footfall to the detriment of the wood. The area under consideration is currently Green Belt, a status achieved in the late 1980’s, it is difficult to see why this has now changed. If it was considered vitally important to protect the area then, why is this not so now? By placing it under Green Belt protection then it preceded the Natural & Environmental and Rural Communities Act of 2006 Section 40 that places a duty on Public Bodies to contribute to the coherence and resilience of valuable ecological networks. It also seems to be in contradiction to the North Somerset Local Nature Recovery Strategy that defines how the Act of 2006 will be met. The revised Planning Regulations allow land to be taken out of Green Belt, however the criteria is that it may only be in exceptional circumstances. The Tower Farm proposal is not an exceptional circumstance,		
62846721	Cleeve Parish Council		Cleeve Parish Council		• Positively prepared • Justified • Effective			We do not consider the North Somerset Local Plan 2041: Pre-Submission Plan to be sound. Based on the detailed representations of Cleeve Parish Council, we believe the Plan fails three of the tests of soundness set out in NPPF paragraph 36: Positively Prepared, Justified, and Effective. Positively Prepared The Plan does not adequately address the needs of young people or newly forming households, nor does it ensure that new development will be properly supported by essential infrastructure. The repeated use of discretionary language (“will be expected”, “should have regard to”) leaves critical requirements—such as drainage, healthcare capacity, active travel connections, affordable housing percentages, biodiversity measures, renewable energy deployment, and sustainable design—insufficiently guaranteed. The Plan also fails to provide a clear and sustainable policy position on future growth at Bristol Airport, or on how Green Belt releases will be compensated or justified. As a result, the Plan does not convincingly meet the district’s needs in a sustainable and deliverable way. Justified The policy choices taken in the Plan do not always represent the most appropriate strategy when tested against reasonable alternatives. The evidence base appears inadequate or incomplete in several areas, including: (a) the justification for Green Belt releases at Bristol Airport; (b) the robustness of climate-adaptation measures given the known risks of flooding, sea level rise, extreme heat, and pressure on water resources; (c) the lack of evidence demonstrating that non-mandatory design guidance will achieve sustainable outcomes; (d) the omission of low-rise flats in existing towns as a viable and necessary option for delivering affordable housing for young people; and (e) insufficient assessment of the landscape, safety, environmental and carbon impacts of airport-related growth, including the absence of a cumulative emissions assessment. In each case, reasonable and more sustainable policy alternatives have not been adequately explored. Effective The Plan’s delivery mechanisms are weak and do not provide confidence that its policies will be realised. Critical infrastructure (roads, drainage, healthcare, active travel routes, mass transit provision and energy resilience) is not tied to development in a sufficiently enforceable manner. Policies that rely on voluntary interpretation or “expectations” are unlikely to secure required outcomes, particularly in relation to affordable housing percentages, design quality, biodiversity net gain, native woodland expansion, protection of commons, and the safeguarding of Best and Most Versatile agricultural land. Policies concerning Bristol Airport do not demonstrate effective cross-boundary working or credible mitigation strategies, while the approach to flood-risk management does not provide sufficient assurance that developments requiring the Exception Test would be safe, sustainable, or financially deliverable. As drafted, there is insufficient certainty that the Plan can be implemented as intended.	Cleeve Parish Council welcomes the commitment to solar and wind energy generation. Given that a well-positioned solar array of approx. five acres is needed to generate 1 MW at peak, we strongly suggest that the emphasis for solar generation should be moved to retrofitting arrays on existing buildings rather than utilising field space. A further benefit of rooftop solar arrays is that it provides additional resilience at a time when power may be cut – for example when a storm blows a tree onto the power lines.		Submission on behalf of Cleeve Parish Council in respect of Pre.docx

We broadly support the approach adopted within this policy, which aims to conserve biodiversity. However, there are aspects of the policy to which we object.		Policy DP35 (Nature Conservation) for Various (Dec 25).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
	Redrow Vistry Group								The first paragraph under the heading 'Sites of International and National Importance' should be amended to reflect the provisions of the Conservation of Habitats and Species Regulations 2017. In particular, the binary test of the first sentence which states 'Development which would have an adverse impact on identified sites of international importance (which include Special Areas of Conservation (SAC), Special Protection Areas (SPA) and Ramsar sites) will not be permitted' (emphasis added) should be removed or amended. This sentence is contrary to the steps undertaken through a Habitat Regulations Assessment, which include an Appropriate Assessment (where mitigation of adverse effects is explored) and Derogation (which allows consideration as to whether proposals that would have an adverse effect on a European site qualify for an exemption). The draft policy wording goes on to state that 'Development within or in proximity to a Site of Special Scientific Interest (SSSI) or National Nature Reserve that is likely to have a direct or indirect adverse effect on its biodiversity or geological interest will not normally be permitted'. This wording is similar to but not the same as Framework Paragraph 193 bullet point b) and importantly omits the exception (being 'where the benefits of the development in the location proposed clearly outweigh both its likely impact on the features of the site that make it of special scientific interest, and any broader impacts on the national network of Sites of Special Scientific Interest'). Local Plan policies must be careful when paraphrasing national planning policy to ensure they accurately reflect the approach set out in the Framework in its entirety. As such, the wording should be amended or removed as appropriate. Additionally, DP35 states that application proposals will be required to demonstrate 'that the principles set out in Building with Nature have been addressed to ensure that developments take advantage of opportunities to enhance the built environment for nature.' Building for Nature is a non-statutory tool developed in a collaboration between Gloucestershire Wildlife Trust and the University of the West of England. It's principles go beyond the mitigation of ecological impacts and seek to secure a biodiversity gain. With the advent of Biodiversity Net Gain and it's enshrinement in national legislation, there is no need to add a further regulatory burden on development by which goes beyond the mitigation of impacts. This aspect of the policy should therefore be deleted See attached document for emphasis added.		
63213025	BackwellPC NailseaTC Flax BourtonPC BrockleyPC BackwellRA Nailsea Action Group	Lucy White Planning Limited	BackwellPC NailseaTC Flax BourtonPC BrockleyPC BackwellRA Nailsea Action Group	No	Positively prepared Justified Effective Consistent with national policy		Unsure	Policy DP35 is intended to ensure development proposals identify appropriate mitigation measures to safeguard or enhance attributes of ecological importance and deliver biodiversity net gain. The policy deals specifically with sites of international and national importance including the Special Areas of Conservation for bats. It states that Nature Parks will be identified to protect and enhance greater and lesser horseshoe bat habitat at the strategic development locations including Nailsea and Backwell. However, the policies map does not identify land for Nature Parks at these locations. The justification for the policy states at page 191 that where a development requires off-site mitigation for horseshoe bats "it is expected that developers will consider the use of the North Somerset Nature Parks strategic mitigation sites as a preferred means of achieving that mitigation." The Habitat Regulations Assessment (AECOM, October 2025) relies upon a commitment to strategic Nature Parks in order to ensure a sufficient policy framework to protect functionally◇linked land associated with North Somerset and Mendip Bats SAC and thus ensure no adverse effect on the integrity of the SAC6. In the absence of a commitment through Policy DP35, with no specific sites identified and no absolute requirement to deliver or contribute towards Nature Parks, applying the precautionary principle, it cannot be concluded that there would be no adverse effect on the integrity of the North Somerset and Mendip Bats SAC. Accordingly, the plan is not legally compliant.	Amendment Sought: Policy DP53 should be amended to provide full details of where the Nature Parks would be delivered, with reference to the Policies Map, how they would be secured, delivered and maintained in perpetuity.		251118 Local Plan Reg 19 2025 reps FINAL.pdf R01 - Transport Statement - Rev 3 FINAL.pdf Hydrology LP3 BPC_NTC Appendix_2.2-compressed.pdf Hydrology LP3 BPC_NTC Appendix_2.1-compressed.pdf Hydrology LP3 BPC_NTC Appendix_9-compressed.pdf Hydrology LP3 BPC_NTC Appendix_7-compressed.pdf Hydrology LP3 Summary BPC_NTC Part 2 (1).pdf Hydrology LP3 Summary BPC_NTC Part 1 (1).pdf

49543265	Grahame Dixie		Backwell Residents Association	No	• Effective	Unsure	Unsure	Summary Conclusions and Actions The total population of GHB in the UK was estimated in 2023 to stand at 10,200 (+/- 3000-4000). At their peak there was an estimated 300,000 GHB in the UK. The overall aim is to raise the numbers to some 62,000. At its peak Brockley Stables housed some 1000 GHB (adults and juveniles) and would then have accounted for about 10% of the UK's population. The latest figures are massively down, i.e. some 180 adults, and 144 juveniles. That is a drop of 2/3. This is deeply concerning. The LP is taking a high risk in exposing this diminished population to multiple new housing developments in Backwell (e.g. Grove Farm, Rodney Road) Farleigh Fields West and East, as well as the Land East of Backwell) These 1800 houses will take up some 125 ha of land in the A grazing zone for GHB. The population is additionally threatened by the proposed developments in Nailsea. The NSC have made heroic efforts to support the local bat populations. But despite this the numbers appear to be falling. The reasons for the fall are not understood. NSC's approach can be strengthened by the SAC adding a more grounded and practical elements to their program.	The refined LP needs to address issues of. Taking a view on the overall population and health of the bat community in NSC's SAC Reducing the number of housing projects in and around Backwell. Showing a greater understanding and developing effective approaches to working with the NSC's farming community, especially cattle farmers. By being able to provide, proven, clear and practical advice that is adapted to the changing farming practices in the area. Building on the experiences of practitioners a body of knowledge on the effective techniques, technologies, locations for creating sustainable, and effective replacement foraging sites for GHB and LHB, (i.e. roosts, corridors, foraging), In view of changes in cattle farming, and research demonstrating that GHB feed on a much more diverse prey spectrum than previously understood (e.g. site management, plant species introduction, creation of diverse habitats) Although encouraging bats to new foraging sites, (e.g. coupled with suitable roosts and flight paths that are not interrupted by strong light) does have some science behind it. There is no guaranteed that new corridors will work. Hence the wisdom of monitoring and providing the bat population with multiple options. Setting out a clear recommendation that when a building development is going to destroy and existing and important foraging site, a replacement site must be set up and shown to be effective, before the main foraging site is destroyed.		Bat comments on SAC in the LP.docx
58452161	Julia Gregory				• Consistent with national policy	Unsure					
51511393	Natural England		Natural England					Habitats Regulations Assessment (AECOM, October 2025) Recreational Pressure and Disturbance - Catchments: We support the recommendation at paragraph 4.15 to use a 7km buffer for potential recreational impacts on the Severn Estuary SAC/SPA. This is supported by recent research, as outlined in the report, and would be consistent with approaches being taken by other authorities around the Severn Estuary. The 7km catchment would capture all the major settlements in the District. A survey bespoke to North Somerset would also inform the details of where mitigation measures would be best targeted to those parts of the SAC/SPA/Ramsar site within the District. We also support the conclusion at paragraph 4.16 that a 7km ZoI for recreational impacts can be considered precautionary for Chew Valley Lake SPA and for Avon Gorge Woodlands SAC. Bat SAC sites and Functionally Linked Land (Paragraph 4.26): The HRA should note the recent update to the Bat SAC Guidance SPD (consultation period just ended at time of writing), which extends the Bat Consultation Zones based on the most recent evidence. Juvenile Sustenance Zones (Band A) are extended to a radius of 5km around maternity sites for Greater Horseshoe bats and to 600m around maternity sites for Lesser Horseshoe bats. Band B is extended to 12km for Greater Horseshoe bats and 2.3km for Lesser Horseshoe bats. Band C is extended to 16km for Greater Horseshoe bats and to 6km for Lesser Horseshoe bats. These figures derive from the most up to date evidence from the North Somerset Greater Horseshoe bat maternity colony. The HRA concludes that an 8km zone is a reasonably precautionary distance for defining the area of greatest importance for a Greater Horseshoe bat colony. We accept this precautionary figure and welcome paragraph 6.61 which notes that both the Wolvershill and Woodspring allocations should be considered from the outset for the importance of the habitat used by Greater Horseshoe bats in these areas. We support the conclusion that 4km is a reasonably precautionary distance for defining the area of greatest importance for a Lesser Horseshoe bat colony. Recreation Management Strategy for the Severn Estuary SPA/Ramsar/SAC: Paragraph 6.15 of the HRA concludes that the North Somerset Local Plan should contain a Recreation Management Strategy …"at least in outline (including a developer charging strategy) when the NSLP [is] submitted for Examination and available for implementation by the time of adoption of the Local Plan. The NSLP would also need a policy identifying the recreation management strategy, the core catchment that would be covered, what the management strategy would broadly entail and the principle behind the developer charging scheme." Paragraph 6.16 contains recommended policy wording allowing for the development of Recreation Management Strategies for the Severn Estuary SPA/Ramsar/SAC site. Paragraph 6.22 concludes that, with the inclusion of the two points above in the Local Plan, there is sufficient policy framework in place to justify a conclusion of no adverse effects on the integrity of the Severn Estuary through recreational pressure. The Regulation 19 Local Plan does not contain the policy wording recommended above. Only the Justification text to Policy DP35 mentions that "there may be a need for mitigation which proposals will have to address." The justification text goes on to state that, "Subject to further investigation, this may require the preparation of recreational management strategies for the Severn Estuary SPA/Ramsar site and Avon Gorge Woodlands SAC, and air quality impacts of increased traffic on the A4 and A369 within	It is therefore our recommendation that the requirement for a Recreation Management Strategy should be clearly set out in policy. Policy LP2: Woodspring does not currently contain this wording and our recommendation is that the wording recommended by the HRA should be incorporated. Our strong recommendation is that the recommended text regarding atmospheric pollution is included in policy in order to highlight the issue and make it clear that development of a model which accounts for the effects of development across local authority areas will require co-operation and adequate time for its development.		Reg 19 Soundness Response Dec 2025.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								200m of Avon Gorge Woodlands SAC, and in both cases working with adjacent local authorities." The HRA has concluded that a Recreation Management Strategy is likely to be a requirement in order to prevent adverse impacts on the Severn Estuary SPA/Ramsar site from recreational pressure arising from development allocated by the Local Plan. It is therefore our recommendation that the requirement for a Recreation Management Strategy should be clearly set out in policy. We will continue to support the Council in the preparation of the evidence base to underpin a Recreation Management Strategy or Strategies, as well as options for specific features of the strategy/ies. It remains our view that visitor surveys will need to be specifically targeted to highly sensitive areas for SPA species, as well as areas of Functionally Linked Land, and that locally focussed management strategies may be most appropriate. Recreational pressure on the Avon Gorge Woodlands SAC: As the Woodspring allocation is the main allocation in the Local Plan delivering residential development within the catchment of the SAC, paragraph 6.32 of the HRA specifically recommends the adoption of similar wording for the Woodspring allocation to that used in the Bristol Local Plan. This wording acknowledges the potential for recreational pressures on the SAC arising from the development of new homes in this location. Policy LP2: Woodspring does not currently contain this wording and our recommendation is that the wording recommended by the HRA should be incorporated. Loss of Functionally Linked Habitat – Horseshoe bats: At paragraph 6.81, the HRA concludes that the Local Plan contains sufficient policy framework to protect Functionally Linked Land associated with the North Somerset and Mendip Bats SAC and thus ensure no adverse effects on the SAC. We support this conclusion, subject to our first point about the importance of grazing, above. Atmospheric Pollution: Paragraph 6.93 recommends specific policy text to set a framework for "down the line" investigation of air quality issues as part of the masterplanning of land use allocations, both for North Somerset and in combination with neighbouring authorities. We note that policy DP35 contains reference to these investigations as part of the HRA process and the justification text for DP35 specifically mentions the A4 and A369 close to Avon Gorge Woodlands SAC. Our strong recommendation is that the recommended text is included in policy in order to highlight the issue and make it clear that development of a model which accounts for the effects of development across local authority areas will require co-operation and adequate time for its development.		
39179649	Adrian Mealing			No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	I consider Policy DP35 to be unsound because it is not positively prepared, not justified, not effective, and not consistent with national policy. DP35 is intended to protect biodiversity, safeguard ecological networks, avoid harm to internationally protected species, and deliver meaningful biodiversity enhancement. However, all three Congresbury allocations (183 dwellings) lie within areas of international ecological sensitivity, and the Plan provides no credible mitigation strategy or evidence base to support these allocations under this policy. 1. DP35 is not positively prepared Congresbury sits within functional zones of the North Somerset & Mendip Bats SAC, including: greater horseshoe bat sustenance zones, lesser horseshoe bat foraging areas, mapped dark corridors, critical hedgerow and commuting routes, important wetland/rhyne edge habitats. Despite this, the Plan provides: no ecological mitigation strategy, no dark corridor protection mapping, no lighting strategy, no hedgerow protection or enhancement requirements, no habitat connectivity strategy, no SAC impact assessment at plan level. Development is allocated first, with biodiversity considerations pushed to planning applications — the opposite of positive planning. 2. DP35 is not justified DP35 requires an evidence base showing that impacts on designated sites and protected species have been assessed. However, the Plan provides no ecological evidence for Congresbury: No Habitat Regulations Assessment (HRA) specific to the allocated sites. No mapping of bat flightlines, sustenance zones or connectivity routes through the village.	To make DP35 sound, the Plan must: Produce a Congresbury Ecological and SAC Mitigation Strategy, including: mapped dark corridors, sustenance zone constraints, bat flightline modelling, habitat buffering requirements, ecological connectivity plans. Provide a site-specific HRA for all three Congresbury allocations, demonstrating no adverse effect on SAC integrity. Establish mandatory lighting restrictions, including: <1 lux limits along bat corridors, downward/hooded luminaires, curfews where appropriate. Require buffer zones around rhynes, hedgerows and flightlines. Include ecological mitigation and enhancement in the Infrastructure Delivery Plan, specifying funding, timing and delivery responsibility. Undertake a cumulative ecological impact assessment for the 183 homes. Demonstrate that reasonable alternative sites with lower ecological impact were considered. Without these modifications, DP35 is not compliant with the Habitats Regulations or the NPPF.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								No ecological surveys or constraints mapping for the three allocations. No cumulative ecological impact assessment of 183 dwellings. No justification for allocating sites known to intersect SAC functionally-linked land. No evidence that alternative, less harmful sites were considered. This means DP35 is not supported by an adequate ecological evidence base. 3. DP35 is not effective DP35 cannot be delivered in Congresbury because: There is no mechanism to secure dark corridor protection. No lighting controls or night-time restrictions are included in the policy. No GI or habitat strategy exists to maintain ecological connectivity. Development on greenfield village-edge locations will introduce lighting, urbanisation, noise, disturbance, and habitat fragmentation. There is no requirement for developers to create compensatory habitats, hedgerow planting, bat foraging enhancements, or buffer zones. Without a defined, funded and enforceable strategy, DP35 is ineffective. 4. DP35 is not consistent with national policy The NPPF requires that: plans protect and enhance ecological networks (NPPF 174), harm to internationally protected species must be avoided (NPPF 180–182), plans must meet the Conservation of Habitats and Species Regulations 2017, HRA must be completed before allocating development, any adverse effect on site integrity is unacceptable. The Congresbury allocations contradict these requirements because: No SAC mitigation strategy exists. No HRA evidence is provided at site level. No dark corridors or FLL (Functionally Linked Land) are mapped or protected. No plan-level ecological mitigation is secured. DP35 relies on future planning applications to fix fundamental problems, contrary to the Habitats Regulations and NPPF requirements. DP35 is therefore inconsistent with national biodiversity policy and unlawful in its current form.			
57928993	Kevin Payne			No	• Justified • Effective • Consistent with national policy	Unsure	Unsure	I object to DP35 because the Plan does not demonstrate that development at Pill Green or Pill Road will adequately protect habitats and protected species. Both sites are near the North Somerset & Mendip Bats SAC, the Severn Estuary SSSI, and key wildlife corridors. The Plan lacks up-to-date habitat surveys and fails to consider ancient woodland, veteran trees, and priority habitat buffers, weakening its biodiversity soundness. Pill Green contains ancient and veteran trees and lies within sensitive ecological zones. The Plan does not provide sufficient site-specific mitigation, buffers, or measurable biodiversity net gain to comply with NPPF requirements. There is insufficient site-specific mitigation, monitoring, or evidence that biodiversity impacts will be avoided, minimized, or compensated. Without this, DP35 is not justified, not effective, and inconsistent with national policy on habitat protection (NPPF 174–180).	To make DP35 sound, the Council should require site-specific mitigation plans, measurable monitoring, and enforceable protections for all habitats and protected species affected by development at Pill Green and Pill Road, ensuring compliance with NPPF paragraphs 174–180.		
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	• Positively prepared • Consistent with national policy	Yes	No	Requirements for maintaining and reasonably enhancing green infrastructure are acceptable but only where they are necessary and relate to the development proposed. The policy should provide further flexibility so that there may be circumstances where alternate or compensatory wildlife features are permissible – and that public rights of way can be diverted or stopped up where compensatory provision is available. Where the policy requests that green infrastructure provision or enhancement be made on site then such a requirement should be provided only where justified by evidence – and this should be added to the policy's wording.	The policy should provide further flexibility so that there may be circumstances where alternate or compensatory wildlife features are permissible – and that public rights of way can be diverted or stopped up where compensatory provision is available. 62808673	Ms Poole				• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The UK Government is currently failing spectacularly on its manifesto commitments to protect nature, and the housing quota for North Somerset is yet another setback and an undoubted challenge for the Council. However, the current proposals ignore the cumulative effects of development in key areas, and the significant net loss of Green Belt, and are in direct contravention of the National Planning Policy Framework For nature to recover and flourish in North Somerset, it is critically important that the connectivity of ecological networks is at least maintained but steps are also taken to improve it. Section 40 of Natural Environment and Rural Communities Act 2006 places a duty on public bodies to contribute to the coherence and resilience of ecological networks. I am concerned that the allocations currently set out in the draft plan will adversely affect this coherence and resilience of valuable ecological networks in North Somerset. I also believe some of the proposals undermine the principles of the North Somerset Local Nature Recovery Strategy (LNRS), which establishes priorities and specific actions to drive nature's recovery and provide wider environmental benefits within the region - requirements set out by Government in the Environment Act 2021. As it stands, the Plan presents a significant threat to the essential connections between international, national, and locally designated sites, and will bring about the irreversible loss of wildlife corridors and stepping stones that connect these sites.			
51429825	Mike Priaulx		Swifts Local Network: Swifts & Planning Group	No	• Effective • Consistent with national policy	Yes	Yes	We support the references in the policy to swift bricks and swift nesting features, but they are not sound, nor effective nor consistent with national policy because they don't include the content of NPPG Natural Environment 2025 paragraph 017 (link: https://www.gov.uk/guidance/natural-environment), with regard to numbers of swift bricks, nor swift bricks being a universal nest brick for a range of small bird species, nor inclusion of the best-practice guidance references.	To make the plan sound, effective and consistent with national policy, please add the text from NPPG Natural Environment 2025 paragraph 017 (link: https://www.gov.uk/guidance/natural-environment), especially with regard to at least one swift brick per dwelling for new developments, swift bricks being a universal nest brick for small bird species, and the sources of best-practice guidance referenced in this paragraph of the NPPG. I copy this key text from the NPPG here for reference: "swifts rely on urban cavities for nesting, and the national loss of suitable nesting sites through building renovation has been part of the reason for the species' decline. Developments should include integrated nest boxes (commonly known as swift bricks) where possible, with the general aim across a development of a minimum of one nest box per unit. Nest boxes can provide important habitat for other species as well as swifts, such as starlings and sparrows. Extensive guidance is available on wildlife friendly features, including the National Design Guide and National Model Design Code which illustrate how well-designed places can support rich and varied biodiversity by facilitating habitats and routes for wildlife. More specific support for the selection and installation of swift bricks can be found in the British Industry Standard BS 42021:2022 the Future Homes Hub Homes for Nature Guidance, and the RSPB's Guide to Nestboxes."		
51242657	Rubix Strategic Limited	Arwel Evans - Lichfields	Rubix Strategic Limited	No	• Justified • Effective • Consistent with national policy	Yes	No	Policy LP3 requires contributions to the delivery of a new Nature Park in order to offset impacts on bat habitats. This requirement is also discussed briefly in draft Policy SP11 and draft Policy DP35. Whilst Rubix does not object to this requirement, it is considered that further clarity is necessary. We note that the proposed location of the Nature Parks are yet to be disclosed and we request their location be included within the emerging Plan in order to provide greater clarity to developers, this is especially important for the developer led Nature Parks which are to be located in the Wolvershill, Woodspring and Nailsea and Backwell strategic locations.	Policy LP3 requires contributions to the delivery of a new Nature Park in order to offset impacts on bat habitats. There is no mitigation in the Plan to ensure the survival of the wild life			
18477217	Kit Stokes	Kit Stokes	StokesMorgan Planning Ltd	No	• Effective • Consistent with national policy	No	No	We object to Policy DP35 because it requires developers to produce their own 'shadow' Habitats Regulations Assessment (HRA) reports for the council to assess. This requirement is inconsistent with the legal framework and the National Planning Policy Framework (NPPF), as the responsibility for screening and undertaking an HRA lies with the competent authority (the decision maker), not the applicant. The Habitats Regulations place the duty on the decision maker to ensure compliance, including screening and appropriate assessment where necessary. While applicants may provide supporting information, mandating a full shadow HRA shifts a statutory responsibility away from the authority and creates unnecessary burden and cost for developers. Additionally, if worst-case mitigation is incorporated into a scheme (such as lighting assessments, HEP calculations, and addressing dark corridors on the boundary), we maintain that it should not be necessary to require a full season of Horseshoe bat surveys, which often force developers to wait up to 12 months to complete. This would save a small scheme upto £10,000 and delays for surveys when the worst case mitigation is provided in any event. We object to the reference to North Somerset Nature Parks Strategic Mitigation Sites because these sites do not exist at present. The Local Plan relies on a mitigation strategy that is not deliverable in practice, as	Remove onerous survey requirements where worst case mitigation is designed into scheme.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								there is no evidence of designated or functioning strategic mitigation sites within North Somerset. This raises serious concerns about the soundness and effectiveness of the plan under the tests set out in the NPPF. Without identified and operational mitigation sites, the policy cannot be implemented and therefore fails to meet the requirement for plans to be justified, effective, and consistent with national policy.			
62810017	Guy Stone			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Where green infrastructure aims to satisfy the needs of biodiversity, through Section 106 agreements or planning conditions, this needs to be monitored and policed. There needs to be a means whereby proof is required to show that appropriate management is taking place and this needs to be followed up by site visits through North Smerset Council and penalties issued where not undertaken.	More focus needs to be placed on developers proving they are applying the management required to hit biodiversity targets. This needs to be followed up by North Somerset Council and there need to be consequences if targets are not met. More emphasis needs to be placed on the needs of biodiversity rather than it being forced into specific areas due to development wrongly being the focus over environmental needs. An example being 'Nature Parks' for horseshoe bats. These are wide ranging species that forage over large areas, primarily using grazed pasture where there is an abndance of chafer beetles. I fail to see how isolated 'Nature Parks' surrounded by vast areas of residential development are going to benefit horseshoe bats in a manner that exceeds the impacts of the excessive development proposed and strongly believe that this is in itself an unmitigated Likely Significant Effect on the North Somerset and Mendip Bats Special Area of Conservation.		
62471329	Environment Agency		Environment Agency	Yes					We welcome North Somerset Council Local Plan Nature Conservation Ambitions and that their commitment in Policy DP35 that “Development which would have an adverse impact on identified sites of international importance (which include Special Areas of Conservation (SAC), Special Protection Areas (SPA) and Ramsar sites) will not be permitted”. To support this, it is strongly recommended that the LPA should consult Natural England (NE) where there may be impacts to designated sites. Also, although the specific information is currently limited, the Local Authority needs to ensure that the adoption of its Local Plan is linked with the Environmental Delivery Plan (EDP) under the Planning and Infrastructure Bill. For information EDP’s will be led by Natural England. We also welcome the commitment in Policy SP1 to “avoid adverse environmental impacts which, on their own or cumulatively, would result in air, water or other pollution or harm to living conditions, health or safety”. It must be ensured that during the adoption of the Local Plan the Local Authority priorities the objectives and requirements of the current River Basin Management Plan (RBMP) Cycle 3 , found at River basin management plans: updated 2022 - GOV.UK so that there is no deterioration in the condition of water bodies from any new development and that Water Framework Directive (WFD) obligations are addressed through spatial planning. To support this, the LPA can refer to the Catchment Data Explorer to access data on the status classification of water bodies in proximity to the proposed housing development, evaluate any potential detrimental impact on water body quality, and develop policies to mitigate these impacts. The Catchment Data Explorer is available at: England | Catchment Data Explorer. Note until CDE is updated with the latest classification in mid-2026 (current update March 2025), it is advised that the LPA should also discuss with the Environment Agency the updated classification, so they are working with the most up to date information. The Environment Agency is taking a more detailed, stakeholder-informed approach within the updated RBMP Cycle 4 to developing body-specific water programmes of measures, aiming to meet legal requirements. These programmes will guide key water management activities and investment decisions. The Draft RBMP Cycle 4 Consultation Launch is in 2026, and the Final RBMP Cycle 4 publication is late 2027. The work is expected to deliver better national environmental outcomes by targeting investment where it's most needed. Regarding climate resilience, we would advise North Somerset Council to obtain a copy of our External Environment Agency Strategic Climate Change Planning Advice Summary Note, developed by the Environment Agency’s National Climate Change team which provides a summary of the Environment Agency’s strategic planning advice through a climate adaptation focus. This is available internally at Summary Note of the Environment Agency’s Strategic Climate Change Planning Advice. The West of England Combined Authority (WECA) was one of the Local Authorities who participated in the Pilot Programme in 2024.		

Policy DP36: Biodiversity Net Gain

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
61656193	Kate Wickens			No	• Justified • Effective	Yes	Yes	Please be as precise as possible. The local plan requires approximately 27% of the new houses be built on Greenbelt, the majority of which is not grey belt and currently undeveloped. The risk to biodiversity and nature degradation is high, as there is great reliance in the plan for developers to contribute to protecting and preserving nature. For example developers are expected to contribute to the delivery of the new Nature Park. There is anecdotal evidence as well as the Lost Nature report, a Wild Justice report, written by researchers at the University of Sheffield, that reveals that housing developers are not keeping legally-binding promises to help wildlife on housing developments. (Report attached to email) The proposed sites in Nailsea and Backwell corresponds with land identified on the Local Nature Recovery strategy map as focus areas of nature recovery.	More provision in enforcing provisions regarding bio diversity and wildlife protections and enhancements.		Wild-Justice-Lost-Nature-Report.pdf
63286689	McCarthy Stone & Churchill Living	The Planning Bureau Ltd						Whilst we welcome the confirmation of the policy that the Council will only seek ‘at least 10% Biodiversity Net Gain we are concerned that the policy attempts to set a local biodiversity net gain hierarchy. This is contrary paragraph: 006 Reference ID: 74-006 20240214 of the PPG on Biodiversity Net gain that states ‘Plan-makers should be aware of the statutory framework for biodiversity net gain, but they do not need to include policies which duplicate the detailed provisions of this statutory framework. It will also be inappropriate for plans or supplementary planning documents to include policies or guidance which are incompatible with this framework, for instance by applying biodiversity net gain to exempt categories of development or encouraging the use of a different biodiversity metric or biodiversity gain	The Council should therefore reconsider this additional wording with regard to BNG to ensure it is consistent with any updated guidance and regulations.		2025_MS and CL response to North Somerset submission Local Plan reg 19 - Redacted.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? It is noted that the draft policy conforms to National Planning Policy Guidance (NPPG) at Paragraph: 006 Reference ID: 74-006-20240214, which confirms that plan-makers should not seek a higher percentage than the statutory 10% for BNG on an area wide or site wide basis unless justified and considering viability and implementation. Our client is supportive of the draft policy's consistency with legal requirements for 10% and agrees with the Council that it would be inappropriate to seek a level of gain higher than this figure, although many developments will exceed it in any event.	Modification: The policy should be tailpieced to account for any subsequent changes in legislation to ensure alignment with legal requirements as they may change over time.		R002v4_NSLP_Reg19_TWBristol.Dec25.pdf
63186689	Vistry Group	Boyer	Vistry Group	Yes					Vistry support draft Policy DP36 Biodiversity Net Gain in the emerging Local Plan and maintain that the approach taken by NSC for this policy is line with NPPF by promoting the for the appropriate provision BNG of at least 10%. As a result of the recently published NPPF (December 2024, amended in February 2025) the second paragraph of the justification under the draft policy wording regarding point (d) will need to be updated. As the recent version of the NPPF refers to improving the area rather than minimising impacts.		North Somerset Local Plan Pre-submission Plan - Representation form Policy LP5.pdf
63191617	Various Taylor Wimpey Crest Nicholson Barratt Redrow Vistry Group	Nick Matthews (Savills)		No	• Effective • Consistent with national policy	Yes	Yes		These representations have been prepared and submitted by Savills on behalf of various clients including Taylor Wimpey, Crest Nicholson, Barratt Redrow, and Vistry Group. Draft Policy DP36 aims to ensure development delivers at least a 10% biodiversity net gain (BNG) by following the biodiversity hierarchy, prioritising on-site habitat retention and enhancement, and using off-site mitigation only where necessary. Whilst we acknowledge the Council's ambition to secure biodiversity improvements, we do not consider the proposed policy approach to be consistent with national policy and therefore sound, for the reasons set out below. Planning Practice Guidance states: 'BNG is an approach to development. It makes sure that habitats for wildlife are left in a measurably better state than they were before the development. In England, BNG is mandatory under Schedule 7A of the Town and Country Planning Act 1990 (as inserted by Schedule 14 of the Environment Act 2021). Developers must deliver a BNG of 10%. This means a development will result in more or better quality natural habitat than there was before development'. Framework Paragraph 16(f) states that Local Plans should avoid 'unnecessary duplication of policies that apply to a particular area'. Since BNG is a statutory requirement and therefore on the same footing as the Local Plan, Policy DP36 represents an unnecessary duplication. PPG (Paragraph 007 Reference ID: 74-007-20240214) reinforces this stating that 'Plan-makers should be aware of the statutory framework for biodiversity net gain, but they do not need to include policies which duplicate the detailed provisions of this statutory framework'. Additionally, Policy DP36 states that 'in all cases, proposals must demonstrate how BNG will be implemented and monitored'. This goes beyond the statutory framework, which requires a Biodiversity Gain Plan and 30-year maintenance secured by legal agreement but does not mandate universal monitoring plans. PPG (Paragraph 007 Reference ID: 74-007-20240214) encourages monitoring as good practice and suggests LPAs may update enforcement plans, but it does not impose a blanket requirement. Making monitoring mandatory for all proposals introduces unnecessary burdens and renders the policy inconsistent with the Framework. To conclude, including this policy would create unnecessary duplication, as BNG is already a statutory requirement. The PPG advises against duplication. Furthermore, if national policy on BNG changes, retaining this policy locally could result in uncertainty and unnecessary complexity. We therefore recommend that this policy is deleted. See attached document for underlined text and emphasis added.		Policy DP36 (BNG) for Various (Dec 25).pdf
29403105	Diverse Partnerships Yatton Ltd	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	The policy complies with the current legal requirements prescribing the need to deliver a minimum of 10% biodiversity net gain on or off-site. It should however be noted that this is expected to be shortly subject to modification at a legislative level, potentially to widen the range of exceptions particularly to support the delivery of small schemes. It is noted that the draft policy conforms to National Planning Policy Guidance (NPPG) at Paragraph: 006 Reference ID: 74-006-20240214, which confirms that plan-makers should not seek a higher percentage than the statutory 10% for BNG on an area wide or site wide basis unless justified and considering viability and implementation. Our client is supportive of the draft policy's consistency with legal requirements for 10% and	Modification: The policy should be tailpieced to account for any subsequent changes in legislation to ensure alignment with legal requirements as they may change over time. 51524513	Bellway Homes Ltd	tor&co	Bellway Homes Ltd	No	• Justified • Effective • Consistent with national policy			Bellway consider that this policy is not required. The requirement to deliver a minimum Biodiversity Net Gain is now statutorily mandated by the Environment Act 2021.	To avoid unnecessary duplication of policy, and ensure the plan is consistent with national policy, we suggest this policy is removed.		20251212 504317 JE - North Somerset Reg 19 (Reps obo Bellway Homes).pdf
62850529	Andy Chappel			No	• Justified • Effective • Consistent with national policy	Yes	Yes	Justification – The mechanism for achieving carbon neutrality by 2030 is not fully evidenced. Effectiveness – Monitoring and enforcement of climate measures is unclear. Consistency with national policy – See the National Planning Policy Framework (paras 152–158) which require robust climate-mitigation and adaptation mechanisms.	Make on-site BNG the default unless clearly unachievable. - Require BNG monitoring reports every five years over the 30-year period. - Require clear integration with Nature Recovery Zones and ecological networks. - Require strategic developments to provide measurable connectivity gains.		
9138657	Home Builders Federation		Home Builders Federation						Policy DP36 is not considered to be sound as it is not consistent with national policy This policy will need reviewing and revising in light of the revised guidance on BNG that is expected to be published soon. The Council will need to review this policy to ensure it fully reflects all the new legislation, national policy and guidance. It is the HBF's opinion that the Council should not deviate from the Government's requirement for 10% biodiversity net gain as set out in the Environment Act. There are significant additional costs associated with biodiversity gain, which will need to be fully accounted for in the Council's viability assessment. It is important that BNG does not prevent, delay or reduce housing delivery. Although the national policies requiring 10% BNG cannot be subject to site specific viability discussions, any policy requirements over 10% can be. Any policy seeking more than 10% BNG needs to reflect this position. It is also important to note that for large and complex sites where the development is phased, the guidance is clear that the 10% must be delivered at the end of the development, and this may not result in 10% BNG on each phase. Additional advice on phased development is still awaited. HBF also suggest particular care is needed in terminology to ensure the BNG policy reflects the national policy and guidance. For example, on-site and off-site biodiversity is referred to as units, and the statutory national credit system of last resort is referred to as credit. Similarly, it will be important to differentiate between the mitigation hierarchy, which seeks to avoid harm and then mitigate it in relation to protected habitats and the BNG hierarchy which prioritises on-site BNG delivery, then off-site units and finally allows for statutory credits. National BNG policy allows for all three of these options, and therefore the Plan should also reference statutory credits. The costs of BNG must also be considered as part of the whole plan viability assessment and should be specified as a single specific item, not combined into a generic s106 costs item. There are significant additional costs associated with biodiversity net gain, which should be fully accounted for in the Council's viability assessment, some of which are unknown at this time. It is important that BNG does not prevent, delay or reduce housing delivery. As this is still an emerging policy area and the market for off-site provision is still developing any figure used for BNG costs will need to be kept under review as BNG implementation progresses and a greater understanding of actual costs become available. The Whole Plan Viability Assessment should clearly set out how it considered the implications of mandatory BNG and how it was arrived at using the most up to date BNG costs information available. HBF suggest that there will also be a need for the North Somerset this policy and supporting text to say more about Local Nature Recovery Strategies. HBF would also encourage the Council to ensure the Local Plan fully considers the new BNG requirements in relation to site allocations. This is likely to require undertaking an assessment of the baseline to support the allocation to enable an understanding the BNG requirements for a site to be allocated and the impact this may have on viability and other policy requirements and considerations. It will be important to understand the BNG costs of mandatory BNG as this is non-negotiable and as such may impact on the viability of the site and its ability to deliver against other policy requirements such as affordable housing or other s106 asks. HBF also notes that there seems to be significant potential for confusion around environmental hierarchy, and suggest particular care is needed to avoid any confusion between the well-established mitigation hierarchy and the new BNG hierarchy. There is need for the policy wording and/or supporting text to be clearer about the differentiation between the mitigation hierarchy (which seeks to avoid harm in the first place, then mitigate and only then compensate it in relation to protected habitats) and the BNG hierarchy (which prioritises on-site BNG delivery, then off-site units and finally allows for statutory credits). There seems to be significant potential for confusion between the two difference hierarchies. HBF therefore suggest that the Reg 19 Plan should do all it can to explain how the two hierarchies work in different ways and that they seek to achieve different aims. We would suggest the use of the term "BNG spatial hierarchy" may help with this issue. At this point in time, reference should also be made within the Plan to the small sites metric. This is intended to be a less complex statutory metric that can be used to set out how 10% BNG will be secured on small sites. It can only be used for on-site BNG delivery. The DEFRA and MHCLG guidance is clear that going beyond the mandatory 10% requires evidence that this will not impact viability. HBF are aware of no such evidence exists to		North Somerset 2nd Reg 19 Dec 25.docx

39179649	Adrian Mealing			Yes	• Positively prepared • Justified • Effective • Consistent with national policy			I consider Policy DP36 to be unsound because it is not positively prepared, not justified, not effective, and not consistent with national policy. DP36 requires that all development deliver a minimum 10% Biodiversity Net Gain, that BNG is measurable, deliverable, maintained for 30 years, and integrated into site design. However, the three Congresbury allocations (183 dwellings) provide no evidence or mechanism to demonstrate BNG can be achieved locally, particularly given the highly constrained ecological landscape. 1. DP36 is not positively prepared Congresbury is located within: internationally sensitive bat sustenance zones, mapped (but unprotected) bat flightlines and dark corridors, a rich network of hedgerows, rhynes, grassland and wetland edges, high-quality rural-edge habitats. Despite this, DP36 includes no BNG strategy for Congresbury and provides: no map of baseline biodiversity units, no assessment of habitat value on the allocated sites, no delivery strategy for on-site or off-site habitat creation, no identification of receptor sites for off-site BNG units, no costing, phasing or funding plan. BNG cannot be "positive" if the Council has no realistic pathway to deliver or secure it. 2. DP36 is not justified A justified BNG policy must be backed by ecological evidence demonstrating that 10% net gain is achievable. The Plan fails to provide: baseline habitat surveys for any Congresbury allocation, no DEFRA metric assessments at plan-making stage, no identification of habitat units on each allocated site, no assessment of whether BNG can be delivered on-site, no identification of off-site habitat banks, no analysis of cumulative impact from all 183 homes. This means the Council does not know whether the allocations can achieve even the legal minimum of 10% BNG. Therefore, DP36 is not justified. 3. DP36 is not effective DP36 is ineffective in Congresbury because: There is no mechanism for BNG delivery — no strategy, no land, no phasing. The Infrastructure Delivery Plan includes no BNG projects or funding. The combined loss of habitat from 183 homes will require substantial compensatory habitats — but the Plan identifies no receptor land. Development near the SAC requires enhanced habitat, but BNG is being left to future planning applications, contrary to Regulations and the NPPF. Without a village-wide ecological strategy, individual-site BNG calculations risk conflict, double-counting, or under-delivery.	To make DP36 sound, the Plan must include: A Congresbury BNG Strategy setting out: baseline biodiversity units for each allocated site, habitat value and constraints, required BNG units for each development, on-site and off-site BNG opportunities. Mapping and protection of: SAC-linked habitats, bat flightlines and dark corridors, hedgerow and woodland networks, rhyne and wetland buffer zones. Identification of specific off-site receptor land locally for BNG delivery, with secured long-term management. Integration of all BNG requirements into the Infrastructure Delivery Plan with funding, phasing, and monitoring. A cumulative BNG assessment covering all 183 homes, not individual plots. A legal requirement for securing BNG habitats for 30 years, as mandated by the Environment Act 2021. Without these modifications, DP36 remains undeliverable and unsound.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								DP36 cannot be implemented effectively in Congresbury. 4. DP36 is not consistent with national policy The NPPF and Environment Act 2021 require: 10% mandatory biodiversity net gain, a clear plan for delivering BNG at plan-making stage, protection of functionally linked land (FLL) for international sites, measurable outcomes using the DEFRA metric, 30-year secured habitat management. The Congresbury allocations breach these requirements because: No DEFRA metric or baseline units have been assessed. No off-site delivery land has been identified. Developing in an SAC sustenance zone makes BNG harder to achieve and requires strict safeguards — none are included in the Plan. No legal mechanism is identified to secure 30-year management of BNG habitats. DP36 therefore contradicts national policy and the requirements of the Environment Act.			
57928993	Kevin Payne			No	• Justified • Effective • Consistent with national policy	Unsure	Unsure	I object to DP36 because the policy does not provide sufficient detail to ensure measurable biodiversity net gain for development at Pill Green and Pill Road. The plan lacks up-to-date habitat surveys and fails to consider ancient woodland and priority habitat buffers, weakening its biodiversity soundness. Pill Green contains ancient trees and lies near sensitive ecological zones. The plan does not provide sufficient site-specific mitigation, buffers, or measurable biodiversity net gain to comply with NPPF requirements. There is no clear mechanism for monitoring or enforcing the required 10% net gain, and it is unclear how off-site mitigation would be applied if on-site gain is not achievable. Without these assurances, DP36 is not justified, not effective, and inconsistent with NPPF biodiversity requirements (174–180).	To make DP36 sound, the Council should require a clear, enforceable biodiversity net gain plan for all allocated sites, with monitoring and reporting mechanisms, and specify how off-site mitigation would be applied if on-site gain is insufficient.		
63107361	Gladman Developments		Gladman Developments Ltd	No				Policy DP36 states that 'proposals must demonstrate at least a 10% net gain accounted for in a biodiversity gain plan. Appropriate provision must be made for its planning and design, taking account of habitats and species affected, relevant local plan policies and planning guidance, and relevant biodiversity metrics'. Gladman support a draft policy which states that all development proposals must achieve 10% BNG over the pre-development site value. However, Gladman do not consider that it is sound to seek a higher percentage of BNG above the statutory 10% on new development proposals. PPG on biodiversity net gain states in paragraph 006 that: 'Plan-makers should not seek a higher percentage than the statutory objective of ten per cent biodiversity net gain, either on an area-wide basis or for specific allocations for development unless justified" 2. It adds: "To justify such policies they will need to be evidenced including as to local need for a higher percentage, local opportunities for a higher percentage and any impacts on viability for development. Therefore any requirements that go beyond 10% BNG need to be clearly justified, and evidence demonstrating the implications of delivering a higher BNG percentage needs to be provided. A higher BNG requirement is likely to require extensive areas of land to be removed from the potential developable area of sites and is not making efficient use of land as a result. Furthermore, the provision of BNG can be incredibly costly and can impact the viability of sites as a result. A 10% BNG ensures that developments leave more biodiversity than was previously the case and is not overly burdensome on developers. Increasing BNG above and beyond the minimum 10% statutory figure could also impact upon the overall viability of each scheme and its ability to deliver the much-needed housing (including affordable housing) and supporting other social/community facilities required.	Do not increase BNG above 10%.		Gladman Developments - North Somerset Pre-Submission Plan (Reg 19).pdf
62810017	Guy Stone			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Where green infrastructure aims to satisfy the needs of biodiversity net gain, through Section 106 agreements or planning conditions, this needs to be monitored and policed. There needs to be a means whereby proof is required to show that appropriate management is taking place and this needs to be followed up by site visits through North Smerset Council and penalties issued where not undertaken.	More focus needs to be placed on developers proving they are applying the management required to hit biodiversity targets. This needs to be followed up by North Somerset Council and there need to be consequences if targets are not met.		
62846721	Cleeve Parish Council		Cleeve Parish Council	No	• Positively prepared • Justified • Effective			We do not consider the North Somerset Local Plan 2041: Pre-Submission Plan to be sound. Based on the detailed representations of Cleeve Parish Council, we believe the Plan fails three of the tests of soundness set out in NPPF paragraph 36: Positively Prepared, Justified, and Effective. Positively Prepared The Plan does not adequately address the needs of young people or newly forming households, nor does it ensure that new development will be properly supported by essential infrastructure. The repeated use of discretionary language ("will be expected", "should have	Policy DP36: Biodiversity net gain: Cleeve Parish Council supports all genuine and well-researched methods of creating biodiversity net gain when developments occur. We note that swifts, swallows and martins, bats and hedgehogs are under severe population pressure and would like to see measures such as swift boxes, protected eave sites, bat access holes and hedgehog access holes made mandatory as part of the development requirements, with the flexibility to increase the type and number of requirements as further research demonstrates benefits for other species under threat.		Submission on behalf of Cleeve Parish Council in respect of Pre.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								regard to") leaves critical requirements—such as drainage, healthcare capacity, active travel connections, affordable housing percentages, biodiversity measures, renewable energy deployment, and sustainable design—insufficiently guaranteed. The Plan also fails to provide a clear and sustainable policy position on future growth at Bristol Airport, or on how Green Belt releases will be compensated or justified. As a result, the Plan does not convincingly meet the district's needs in a sustainable and deliverable way. Justified The policy choices taken in the Plan do not always represent the most appropriate strategy when tested against reasonable alternatives. The evidence base appears inadequate or incomplete in several areas, including: (a) the justification for Green Belt releases at Bristol Airport; (b) the robustness of climate-adaptation measures given the known risks of flooding, sea level rise, extreme heat, and pressure on water resources; (c) the lack of evidence demonstrating that non-mandatory design guidance will achieve sustainable outcomes; (d) the omission of low-rise flats in existing towns as a viable and necessary option for delivering affordable housing for young people; and (e) insufficient assessment of the landscape, safety, environmental and carbon impacts of airport-related growth, including the absence of a cumulative emissions assessment. In each case, reasonable and more sustainable policy alternatives have not been adequately explored. Effective The Plan's delivery mechanisms are weak and do not provide confidence that its policies will be realised. Critical infrastructure (roads, drainage, healthcare, active travel routes, mass transit provision and energy resilience) is not tied to development in a sufficiently enforceable manner. Policies that rely on voluntary interpretation or "expectations" are unlikely to secure required outcomes, particularly in relation to affordable housing percentages, design quality, biodiversity net gain, native woodland expansion, protection of commons, and the safeguarding of Best and Most Versatile agricultural land. Policies concerning Bristol Airport do not demonstrate effective cross-boundary working or credible mitigation strategies, while the approach to flood-risk management does not provide sufficient assurance that developments requiring the Exception Test would be safe, sustainable, or financially deliverable. As drafted, there is insufficient certainty that the Plan can be implemented as intended.			
62471329	Environment Agency		Environment Agency	Yes							EA Response - NSC Reg 19.pdf
63070401	Emilia Leung			No	• Effective	No	Unsure	The Proposal is overly reliant on inflated national targets and infrastructure that cannot be delivered – whilst at the same time, ignoring local constraints. The Proposal is also inconsistent with national policy. Green Belt boundaries should only be altered in exceptional circumstances – and the review must show no "clear evidence that doing so would fundamentally undermine the purposes…of the remaining Green Belt".			

Policy DP37: Trees, Woodlands and Hedges

63286689	McCarthy Stone & Churchill Living	The Planning Bureau Ltd						NPPF para 16. identifies that 'Plans should.....b) be prepared positively, in a way that is aspirational but deliverable'. Para 136 provides guidance specifically associated with trees and states 'Trees make an important contribution to the character and quality of urban environments, and can also help mitigate and adapt to climate change. Planning policies and decisions should ensure that new streets are tree lined, that opportunities are taken to incorporate trees elsewhere in developments (such as parks and community orchards), that appropriate measures are in place to secure the long-term maintenance of newly-planted trees, and that existing trees are retained wherever possible. Applicants and local planning authorities should work with highways officers and tree officers to ensure that the right trees are planted in the right places, and solutions are found that are compatible with highways standards and the needs of different users'. PPG with respect to viability states that "The role for viability assessment is primarily at the plan making stage. Viability assessment should not compromise sustainable development but should be used to ensure that policies are realistic, and that the total cumulative cost of all relevant policies will not undermine deliverability of the plan" (Paragraph: 002 Reference ID: 10-002-20190509). Requiring 1 new trees per new dwelling on site especially for small brownfield sites delivering apartments is not deliverable or realistic and could compromise sustainability development and is therefore contrary to NPPF. The requirement also goes beyond the requirements of the NPPF. Any requirement would also need to be fully evidenced and the requirement incorporated into the viability study. The council should therefore reconsider this element and ensure any such policy approach introduces more flexibility or is deleted. 63191617	Various Taylor Wimpey Crest Nicholson Barratt Redrow Vistry Group	Nick Matthews (Savills)		No	• Justified • Effective	Yes	Yes		These representations have been prepared and submitted by Savills on behalf of various clients including Taylor Wimpey, Crest Nicholson, Barratt Redrow, and Vistry Group. This draft policy covers the protection of existing trees and woodland as well as new planting. Although we support the general principle of what the draft policy seeks to achieve, there are a number of aspects which require further consideration. These are addressed in turn below. A. 'The equivalent of a minimum of one tree per dwelling is planted, to be located in gardens where practical or within community gardens;' - No justification or evidence is offered to underpin this as a formula. It also gives no consideration to site specific characteristics. - Notwithstanding the above, on a point of practicality, we don't believe that encouraging tree planting within gardens 'where practical' is necessarily desirable, for the following reasons:• Planting trees within the demise of dwellings places the responsibility for their maintenance and longevity with individual residents, as opposed to a management company or other party, making it more likely that they are removed.• This takes no account of the specifics of the dwellings and gardens in question, such as topography, residential amenity or practicalities of maintenance.		Policy DP37 (Trees) for Various Dec 25).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									- For the reasons above, we recommend that reference to planting within gardens be removed from the draft policy. B. In exceptional circumstances where loss is unavoidable and fully justified, a suitable compensation strategy for replacement of trees, hedgerows, or to rectify damage (direct or indirect) to woodland is identified' -It is not clear whether this requirement relates to all existing trees or whether it specifically applies to certain trees such as veteran or champion trees. No definition is offered, however, if this requirement is intended to relate to all trees (and hedgerows), it is overly onerous. There are many circumstances where the removal of trees or hedgerows is required in order to facilitate development and/or achieve high quality design and masterplanning. These situations are commonplace and should not be limited to 'exceptional circumstances'. -Furthermore, it is unclear what would be required by a 'suitable compensation strategy'. Is such a strategy intended to secure financial compensation for the loss of trees, in which case any payment must be CIL Regulation 122 test compliant, or alternatively, is the policy seeking on-site compensation through replacement tree planting. If the latter then there are already statutory provisions in the Environment Act to secure BNG, part of the assessment of which requires a net gain in 'hedgerow units'. To secure BNG applicants are already incentivised to retain as much valuable habitat on site as possible and this aspect of Policy DP37 is not therefore considered necessary. C. 'Proposals for off-site provision is made where tree planting is not appropriate or practical on site' 8. This requirement lacks specificity and, therefore, is not appropriate as part of a policy for decision making. If this aspect of the policy is retained, it should be made clear in what circumstances tree planting will be considered to be 'not appropriate or practical on site'		
51524513	Bellway Homes Ltd	tor&co	Bellway Homes Ltd	No	• Justified • Effective			Draft Policy DP37 (Trees, woodlands and hedges) addresses the protection of existing trees and woodland, as well as requirements for new planting. Primarily, it appears this is an unnecessary expansion to Draft Policy DP35 (Nature conservation) with duplicate requirements in relation to the natural environment policies within the draft Local Plan. That being said, Bellway do not object to the principle of what the draft policy seeks to achieve. However, there are a number of aspects that require furtherconsideration: "The equivalent of a minimum of one tree per dwelling is planted, to be located in gardens where practical or within community gardens" - No justification or evidence is provided to support this formula, and it does not take account of site-specific characteristics. In addition, from a practical perspective, we do not consider tree planting within private gardens –"where practical" – to be desirable, for several reasons. - Firstly, locating trees within the curtilage of individual dwellings places responsibility for their maintenance and long-term health on residents rather than a management company or other accountable body, increasing the likelihood that trees will be removed. - Secondly, the requirement does not reflect the particular circumstances of different dwellings and gardens, including factors such as topography, residential amenity, and maintenance constraints. For these reasons, we recommend removing references to planting within private gardens from the draft policy. "In exceptional circumstances where loss is unavoidable and fully justified, a suitable compensation strategy for replacement of trees, hedgerows, or to rectify damage (direct or indirect) to woodland is identified" - It is unclear whether this requirement applies to all existing trees or only to specific categories, such as veteran or champion trees. No definition is provided. If intended to apply to all trees and hedgerows, the requirement would be excessively onerous. There are many routine circumstances in which the removal of trees or hedgerows is necessary for safety and to deliver development and/or secure high-quality design and masterplanning. Such situations are commonplace and should not be constrained to "exceptional circumstances". "Proposals for off-site provision is made where tree planting is not appropriate or practical on site" - This requirement lacks clarity and is therefore unsuitable as a basis for decision-making. The policy should specify the circumstances in which on-site tree planting would be considered "not appropriate or practical".	See above		20251212 504317 JE - North Somerset Reg 19 (Reps obo Bellway Homes).pdf
63114593	Bloor Homes (North of Pound Lane Nailsea site)	Turley		No	• Positively prepared • Justified • Effective • Consistent with national policy		No	DP37 (Trees, woodland and hedges) Our comments from representations submitted with the previous Regulation 19 Consultation in January 2024 remain. In common with other policies, the wording is lengthy and there are numerous detailed criteria, much of which is likely to be better placed in supporting text, or even other supporting design guidance, rather than an overarching design quality policy for the Local Plan. It is suggested that this policy is reviewed to be more concise and focused on the key aspects of successful tree / hedge / woodland provision. This should include referencing other national guidance or policy as necessary, with then more detail placed in supporting text or other supplementary documents	It is suggested that this policy is reviewed to be more concise and focused on the key aspects of successful tree / hedge / woodland provision. 9138657	Home Builders Federation		Home Builders Federation	No	• Effective			Policy DP37 is not considered to be sound as it is not effective The policy seeks the “equivalent of a minimum of one tree per dwelling is planted, to be located in gardens where practical or within a community garden”. HBF is concerned how this policy links into BNG delivery especially as requiring trees in gardens impacts on the working of the BNG Metric which recognises that the management, maintenance and retention of any trees in gardens would fall to householders once properties are sold and occupied.			North Somerset 2nd Reg 19 Dec 25.docx
31088129	Bloor Homes South West	Turley		No	• Positively prepared • Justified • Effective • Consistent with national policy		No	DP37 (Trees, woodland and hedges) Our comments from representations submitted as part of the previous Regulation 19 Consultation in January 2024 remain. In common with other policies, the wording is lengthy and there are numerous detailed criteria, much of which is likely to be better placed in supporting text, or even other supporting design guidance, rather than an overarching design quality policy for the Local Plan. It is suggested that this policy is reviewed to be more concise and focused on the key aspects of successful tree / hedge / woodland provision. This should include referencing other national guidance or policy as necessary, with more detail placed in supporting text or other supplementary documents.	It is suggested that this policy is reviewed to be more concise and focused on the key aspects of successful tree / hedge / woodland provision. This should include referencing other national guidance or policy as necessary, with more detail placed in supporting text or other supplementary documents.		BLOA3050 - Portishead Reps - NS Local Plan Regulation 19 - Turley Updated (V2).pdf
51732129	Gleeson Land	tor&co (Jacqueline Mulliner)	Gleeson Land	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	A perhaps unnecessary expansion to policy DP35 (Nature conservation). There appears to be some potentially duplicate requirements in relation to the natural environment policies within the draft Local Plan, which whilst commendable, results in an unjustified and inappropriately prohibitive approach to achieving ecological enhancement and biodiversity gains	Combine Policy DP37 with Policy DP35 and delete Policy DP37.		
39179649	Adrian Mealing			No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	I consider Policy DP37 to be unsound because it is not positively prepared, not justified, not effective, and not consistent with national policy. DP37 requires development to protect, retain and enhance important trees, woodlands and hedgerows, including ancient woodland, veteran trees, species-rich hedgerows, and important ecological corridors. However, the Local Plan fails to demonstrate how these protections will be delivered for the three Congresbury allocations (183 dwellings), which sit in a highly sensitive hedgerow and tree network linked to the North Somerset & Mendip Bats SAC. 1. DP37 is not positively prepared The Plan provides no tree or hedgerow mapping for Congresbury’s allocated sites, despite the following being present and highly relevant: multiple important hedgerows under the Hedgerow Regulations 1997, field-boundary hedges forming SAC bat commuting routes, tree lines providing navigation and shelter for horseshoe bats, landscape trees forming part of the rural-edge character, hedgerows connecting directly into the Yeo corridor and surrounding GI network. Yet the Plan contains: no hedgerow retention framework, no tree-planting strategy, no mapping of ecological corridors, no buffer zones, no protection of village-edge landscape vegetation, no SAC-related hedgerow/tree safeguards. DP37 therefore lacks positive planning for Congresbury. 2. DP37 is not justified DP37 is not justified because the Council has provided no evidence base showing: which hedgerows and tree lines are “important,” which are SAC commuting routes, which should be protected, enhanced or buffered, which should not be breached by development, how the ecological network functions at village scale. No hedgerow assessments, arboricultural surveys or ecological connectivity studies have been produced. Without this evidence, the policy’s application in Congresbury cannot be justified. 3. DP37 is not effective DP37 cannot be effectively implemented because: None of the three allocated sites include requirements to retain, buffer or enhance hedgerows.	To make DP37 sound, the Plan must: Produce a Congresbury Hedgerow and Tree Protection Strategy, identifying: all “important hedgerows” under the Hedgerow Regulations 1997, SAC bat commuting routes, key tree lines and rural-edge landscape trees, ecological connectivity functions. Provide a site-level hedgerow and tree mapping for each allocation. Require mandatory retention of: hedgerows forming SAC bat flightlines, species-rich hedges and tree belts, rural-edge vegetation framing Congresbury’s landscape setting. Introduce buffer zones (minimum 10–20 metres) along key hedgerows and tree lines. Include a lighting strategy to prevent illumination of hedgerows used by bats (<1 lux). Add GI/tree/hedgerow works to the Infrastructure Delivery Plan with funding, phasing, and responsibility. Carry out a cumulative ecological impact assessment of hedgerow losses or fragmentation across all 183 dwellings. Without these modifications, DP37 is not deliverable and remains unsound.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								There is no Congresbury-specific GI or hedgerow strategy. The Infrastructure Delivery Plan includes no funding or delivery mechanism for tree or hedgerow protection. Development layouts could easily remove hedgerows without adequate mitigation. Lighting from new development could sever bat commuting routes unless strict controls are applied — but the Plan includes none. This means DP37 is undeliverable and ineffective for Congresbury. 4. DP37 is not consistent with national policy The NPPF requires: protection of ancient woodland and veteran trees (NPPF 180), retention and enhancement of hedgerows and ecological networks (NPPF 174), safeguarding habitats of importance to protected species (NPPF 180), ensuring development avoids harm to biodiversity and GI connectivity, applying the Habitats Regulations for SAC species. But the Congresbury allocations: lie within functional zones of the North Somerset & Mendip Bats SAC, contain hedgerows essential for horseshoe bat navigation, include areas where hedgerow removal or lighting would cause severe ecological harm, provide no site-level hedgerow or tree mapping, include no tree/hedgerow protection or enhancement requirements. This is fundamentally inconsistent with national policy and the Habitats Regulations.			
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	• Positively prepared • Consistent with national policy	Yes	No	The provisions of this policy appear onerous and unreasonable. The type of tree pit design is dependent in part on the trees planted and it is reasonable to expect that tree pit designs are provided within an arboricultural report or landscaping report in response to a development scheme. It need not be presented in local plan policy. Turning to the equivalent of a minimum of one tree per dwelling being planted in gardens and community gardens appears excessive and adds further to costs associated with delivering new homes. Home owners have the ability to plant trees in their gardens. The policy requires trees in addition to those planted, say as screening or to bolster and improve existing planted areas – and again this appears excessive and unduly onerous. Tree maintenance and management would normally be dealt with through a management agreement outside of a planning application. This appears onerous – and it would be unreasonable for this to be policy amplified through a Trees and Woodland SPD the content of which is unknown. Further, this and other information requests will make the determination process even more complicated for applicants – and further work for planning officers tasked with determining planning applications within statutory timescales.	The Policy should be amended so that planting of a minimum of one tree per garden is deleted. Tree pit design should not be forced through policy – but simply proposed as part of a planning application. Tree management should also be outside of the application process.		
62846721	Cleeve Parish Council		Cleeve Parish Council	No	• Positively prepared • Justified • Effective			We do not consider the North Somerset Local Plan 2041: Pre-Submission Plan to be sound. Based on the detailed representations of Cleeve Parish Council, we believe the Plan fails three of the tests of soundness set out in NPPF paragraph 36: Positively Prepared, Justified, and Effective. 1. Positively Prepared The Plan does not adequately address the needs of young people or newly forming households, nor does it ensure that new development will be properly supported by essential infrastructure. The repeated use of discretionary language ("will be expected", "should have regard to") leaves critical requirements—such as drainage, healthcare capacity, active travel connections, affordable housing percentages, biodiversity measures, renewable energy deployment, and sustainable design—insufficiently guaranteed. The Plan also fails to provide a clear and sustainable policy position on future growth at Bristol Airport, or on how Green Belt releases will be compensated or justified. As a result, the Plan does not convincingly meet the district's needs in a sustainable and deliverable way. 2. Justified The policy choices taken in the Plan do not always represent the most appropriate strategy when tested against reasonable alternatives. The evidence base appears inadequate or incomplete in several areas, including: (a) the justification for Green Belt releases at Bristol Airport; (b) the robustness of climate-adaptation measures given the known risks of flooding, sea level rise, extreme heat, and pressure on water resources; (c) the lack of evidence demonstrating that non-mandatory design guidance will achieve sustainable outcomes; (d) the omission of low-rise flats in existing towns as a viable and necessary option for delivering affordable housing for young people; and (e) insufficient assessment of the landscape, safety, environmental and carbon impacts of airport-related growth, including the absence of a cumulative emissions assessment. In each case, reasonable and more sustainable policy alternatives have not been adequately explored. 3. Effective The Plan's delivery mechanisms are weak and do not provide confidence that its policies will be realised. Critical infrastructure (roads, drainage, healthcare, active travel routes, mass transit provision and energy resilience) is not tied to development in a sufficiently enforceable manner. Policies that rely on voluntary interpretation or "expectations" are unlikely to secure required outcomes, particularly in relation to affordable housing percentages, design quality, biodiversity net gain, native woodland expansion, protection of commons, and the safeguarding of Best and Most Versatile agricultural land. Policies concerning Bristol Airport do not demonstrate effective cross-boundary working or credible mitigation strategies, while the approach to flood-risk management does not provide sufficient assurance that developments requiring the Exception Test would be safe, sustainable, or financially deliverable. As drafted, there is insufficient certainty that the Plan can be implemented as intended.	Policy DP37: Trees, woodlands and hedges: As per our comment on SP11, there is a striking absence of reference to the importance of the Western Forest in developing a network of linked woodlands. The importance of this development cannot be understated in terms of reversing the long-term losses of biodiversity and extinction of species. Further, it would be appropriate in this section to draw attention to the supplementary planning document on the Bat SAC, which clearly lays down the requirement for the development of new hedge systems containing native species trees.		Submission on behalf of Cleeve Parish Council in respect of Pre.docx
62471329	Environment Agency		Environment Agency						Tree planting should be set away from watercourses, to ensure that access is retained to watercourses for maintenance vehicles and emergencies.		

Policy DP38: Landscape

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
63299425	Mac Mic Strategic Land Flax Bourton	Planning Potential	Mac Mic Strategic Land	No	• Positively prepared • Consistent with national policy	No	Yes		This policy seeks to protect the character, sense of place, distinctiveness, and diversity of North Somerset's landscape. It states that all development proposals should, inter alia, not have an unacceptable adverse impact on the landscape character of the district; be carefully integrated into the natural, built and historic environment, aiming to establish a strong sense of place, respond to local character, and reflect the identity of local surroundings, whilst minimising landscape impact; and respect the tranquillity of an area. It also notes that where some harm to the local landscape character is unavoidable, but a development is otherwise deemed beneficial, then positive mitigation measures should be secured by a landscape condition or planning agreement involving works on or off-site as necessary. The thrust and direction of this policy is supported by Mac Mic but they consider that it would benefit from re-drafting. The nature of development means that there will be an impact on the landscape and its character (in the wider sense). This should, therefore, be more clearly recognised within the policy and it should be drafted such that the Council and applicants will / should work together to achieving wider landscape aims and to ensuring that any impacts arising can be successfully mitigated and have a positive impact on the landscape. The policy therefore needs to be more positively worded. Indeed, the supporting text notes that: 'The policy is intended to ensure that development does not adversely affect landscape character. Development should contribute to the creation of places and spaces which are attractive, respect and enhance the particular local character of the landscape and are designed with the needs of people in mind ' This sentiment should come through more clearly in the main policy. Recommendation Policy DP38 should be revised to ensure it is positively prepared and consistent with national policy by explicitly recognising that development will inevitably result in some landscape change. The policy should focus on achieving high-quality outcomes through collaboration between the Council and applicants, securing mitigation and enhancement measures that contribute to local character and sense of place. Wording should emphasise that proposals should integrate with the natural, built, and historic environment, and where impacts occur, they should be offset through proportionate and deliverable mitigation, agreed via planning conditions or obligations. This approach aligns with NPPF principles of sustainable development and effective implementation.		North Somerset Local Plan Pre-Submission Plan - Flax Bourton Representations Final.pdf

51732129	Gleeson Land	tor&co (Jacqueline Mulliner)	Gleeson Land	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	No	No	A perhaps unnecessary policy with most points detailed in policy DP38 covered by other policies within the draft Local Plan	Combine Policy DP38 with others and delete the policy.		
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	‣ Positively prepared ‣ Consistent with national policy	Yes	No	Factoring in and responding to landscape features is a key consideration in masterplanning. However, the policy should present clear guidance to applicants requesting that development respects the character of historic landscape as opposed to stating it will also “respond through masterplanning to the historic landscape …etc” is a key omission and should be addressed.	The Policy should be amended to include reference to respecting the character of historic landscapes.		

Policy DP39: Mendip Hills Area of Outstanding Natural Beauty

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
51710305	Wain Estates (Wolvershill)	Tetlow King Planning	Wain Estates	No	‣ Effective			Draft Policy DP39 requires that development proposals conserve and enhance the National Landscape and that “Major development within the Mendip Hills National Landscape will not be permitted other than in exceptional circumstances, and where it can be demonstrated that the development is in the public interest.” The draft Policy fails to allow for allocations for development in the Plan including at our site at Wolvershill (north of Banwell) where there will be views of the AONB. Draft Policy LP1 recognises this and states “The development must respect the landscape setting, including minimising any adverse impact on the Mendip Hills National Landscape through sensitive design.”	We recommend that draft Policy DP39 is amended to be consistent with draft Policy LP1, as follows (amendment proposed as follows - see attachment for marked up copy): “Development proposals on sites that are not allocated by Policies LP1 and LP2 of the Plan that affect the Mendip Hills National Landscape must conserve and enhance its landscape and scenic beauty and enhance its wildlife and cultural heritage, taking into account the economic and social well-being of the area. Development proposals on land that is allocated by Policies LP1 and LP2 must respect the landscape setting, including minimising any adverse impact on the Mendip Hills National Landscape through sensitive design. Major development will not be permitted other than in exceptional circumstances, and where it can be demonstrated that the development is in the public interest…”		0707-06.M23 Wain Estates NS Pre Submission Reg 19 Local Plan 12.12.25 with Appendices.pdf
62718401	Ian Bowen		Mendip Hills National Landscape	No	‣ Consistent with national policy	Yes	Yes	The Plan is not consistent with national policy because Policy DP39:(1) does not adequately reflect the LPA’s role in satisfying the statutory duty to ‘seek to further’ the purposes of the conservation and enhancement of the natural beauty of the Mendip Hills National Landscape; and (2) does not make clear, pursuant to NPPF paras 58, 189 and 190(c) in particular (and relevant parts of the PPG), that s106 planning obligations and/or CIL monies may be necessary to address off-site recreational pressures within the Mendip Hills National Landscape, resulting from new development within or near the designated area.	Suggested amendments to Policy DP39 and Justification as follows: DP39 – Mendip Hills National Landscape All Ddevelopment proposals affecting the Mendip Hills National Landscape must conserve and enhance its landscape and scenic beauty and enhance its wildlife and cultural heritage to which great weight will be attached., taking into account the economic and social well-being of the area. Major development within the Mendip Hills National Landscape will not be permitted other than in exceptional circumstances, and where it can be demonstrated that the development is in the public interest. Development which would have an adverse impact on the landscape, setting, tranquility and scenic beauty of the Mendip Hills National Landscape, including views into and out of the National Landscape, will not be permitted unless in exceptional circumstances and where it can be demonstrated that it is in the public interest. In seeking to further the purpose of conserving and enhancing the natural beauty of the area, the Local Planning Authority will require all applications for development to clearly demonstrate through suitable Landscape and Visual Impact Assessment and other relevant assessments how the proposal would conserve and enhance the natural beauty of the area with reference to its Special Qualities as set out in the most up-to-date Mendip Hills National Landscape Management Plan. Where any development would fail to conserve and enhance the natural beauty of the area, applicants must explain the reasons why, and identify and incorporate all reasonable mitigation measures before the Local Planning Authority will consider any countervailing benefits in the overall planning balance. Such measures may include: • Scheme amendments including to the proposed overall scale, size of buildings, layout, appearance/materials and landscaping; and • Appropriate compensatory measures secured through planning conditions or obligations. Development affecting this National Landscape should conserve and enhance its Special Qualities. All development will be controlled, through the use of planning conditions, to ensure it would minimise any detrimental effect to the natural beauty of the National Landscape. Proposals which meet the economic needs of local communities and meet demand for recreation will still need to be consistent with the conservation of that natural beauty. Particular attention will be given to the siting, scale, size, character, design, materials and landscaping of the proposed development, views to and from the National Landscape, as well as conservation of wildlife and cultural heritage.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									Outdoor lighting schemes, including those associated with new development, will not be permitted in the National Landscape or within its setting unless it has been demonstrated through evidence prepared by a suitably qualified lighting professional, that there will be no adverse impact from obtrusive light and cumulative skyglow. Particular care will be taken in those parts of the National Landscape where dark skies are an important feature of the area. The impact of indoor lighting such as roof lights and large windows will also be considered. Any planning development being considered within the National Landscape should also have regard for the public rights of way network. In appropriate cases, developer contributions will be required to mitigate harm to the existing recreational network as a result of increased pressures associated with new development. Wherever possible new roads and major infrastructure proposals should be kept away from the National Landscape and, where they would be likely to affect it, proposals should demonstrate the need for development and that the siting and design would do as little damage to the environment as practicable. The Local Planning Authority will assess whether proposals affecting the Mendip Hills National Landscape further the purpose of conserving and enhancing its natural beauty. Justification Justification National Landscapes are areas of fine landscape quality, of such great variety in character and extent that there is a national interest in protecting them. The primary objective of designation is conservation and enhancement of the natural beauty of the landscape, which Relevant Authorities (including the Local Planning Authority) have a statutory duty to ‘seek to further’ in carrying out their functions. The NPPF states that ‘great weight should be given to conserving and enhancing landscape and scenic beauty in National Parks, the Broads and National Landscapes, which have the highest status of protection in relation to these issues’. The Mendip Hills National Landscape organisation has published 12 13 Special Qualities within its Management Plan 2025 – 2030 which create the Mendip Hills sense of place and identity and combined give rise to the area’s designation as a National Landscape. The Special Qualities include the ‘Sparsely populated and tranquil plateau’ and ‘Views towards and Views out’ of the Mendip Hills. The 12 13 Special Qualities can be viewed on the Mendip Hills National Landscape webpages. In promoting any development within the National Landscape or its setting, applicants will be expected to assess all likely effects with reference to the Special Qualities. Through measures including Landscape and Visual Impact Assessments (to Landscape Institute/IEMA GLVIA3 or successor standards), ecology and lighting assessments, applicants should identify all reasonable measures to conserve and enhance the area and mitigate any harm. The NPPF states that planning policies and decisions should aim to ‘identify and protect tranquil areas which have remained relatively undisturbed by noise and are prized for their recreational and amenity value for this reason’. Tranquility can be defined as areas relatively undisturbed by noise from human sources that undermine the intrinsic character of the area, for example an absence of noise and visual intrusion from major infrastructure such as motorways and A roads, urban areas and airports. The Mendip Hills National Landscape (formerly Area of Outstanding Natural Beauty (AONB)), designated in 1972, covers 198 square kilometres, and is divided between the administrative areas of North Somerset, Bath and North East Somerset and Somerset. National Landscape designation confers additional duties on local authorities. The application of this policy should help to protect and where possible enhance the landscape and natural beauty of the Mendip Hills National Landscape. In addition, off-site developer contributions may be sought, in line with Policy DP63, to address recreational pressures on nature, key routes and destinations within the designated area arising from new development. The council has had regard to the Mendip Hills National Landscape Management Plan 2025-2030, in preparing the policy. That is consistent with the Planning Practice Guidance (PPG) on Natural Environment.		
63006177	Mac Mic Strategic Land (Land north of Banwell Road)	Planning Potential (Elliot Jones)	Mac Mic Strategic Land	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Policy DP39 addresses the impact of the development proposal on the Mendip Hills National Landscape. It states that proposals must conserve and enhance its landscape and scenic beauty and enhance its wildlife and cultural heritage, taking into account the economic and social well-being of the area. It also notes that development which would have an adverse impact on the landscape, setting, tranquillity and scenic beauty of the Mendip Hills National Landscape, including views into and out, will not be permitted unless in exceptional circumstances and where it can be demonstrated that it is in the public interest. In the supporting text, reference is made to the relevant paragraphs in the NPPF. Paragraph 190 in the Framework states: ‘When considering applications for development within National Parks, the Broads and National Landscapes, permission should be refused for major development other than in exceptional circumstances, and where it can be demonstrated that the development is in the public interest. Consideration of such applications should include an assessment of: a) the need for the development, including in terms of any national considerations, and the impact of permitting it, or refusing it, upon the local economy. b) the cost of, and scope for, developing outside the designated area, or meeting the need for it in some other way; and c) any detrimental effect on the environment, the landscape and recreational opportunities, and the extent to which that could be moderated.’ The policy is subject to Footnote 67, which opines that for the purposes of paragraphs 190 and 191, whether a proposal is ‘major development’ is a matter for the decision maker, taking into account its nature, scale and setting, and whether it could have a significant adverse impact on the purposes for which the area has been designated or defined. Mac Mic support the principle of the policy but it is clear that a much greater level of detail is required either within the policy or the supporting text to set out what is considered to be in the public interest. Whilst it is not the purpose of Local Plans to repeat national guidance, it is clear, in this instance, that the policy would benefit from greater clarity in terms of not only what would be considered to be in the public interest but also how major development is determined. This would benefit the reader. In addition, clarification is required in relation to proposed development that sits outside the National Landscape but is located within its setting and will therefore have an impact on its landscape, setting, tranquillity and scenic beauty.	The policy should be re-drafted to differentiate between those sites in the National Landscape and those that sit out outside but are in the setting. The text of the policy should be more in line with NPPF Paragraph 189. Furthermore, the supporting text should reflect NPPF Paragraph 190 and provide more clarity on what development is in the public interest, for example, new residential development whilst also making it clear who determines major development. This additional detail will provide for a much clearer understanding and interpretation of new development proposals that will have an impact on the National Landscape. Further, the policy is not positively prepared as it focuses primarily on preventing harm to landscape character without acknowledging that development will inevitably result in some degree of landscape change. This restrictive approach risks undermining the delivery of sustainable development and does not reflect the NPPF's requirement for policies to enable growth while protecting and enhancing valued landscapes. It also lacks clarity on how unavoidable impacts should be managed beyond mitigation. Policies should be positively worded to encourage enhancement and integration with local character. The current wording does not fully reflect these principles, making it inconsistent with national policy.		01 North Somerset Local Plan Pre-Submission Plan Consultation Representations.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Currently, the policy applies the same test to developments that are in the National Landscape to those that sit outside but would have an impact on its setting. As indicated above, the Framework, in Paragraph 190, only considers development in the National Landscape. This should be recognised in the policy and its should be clarified that the same test should not apply to development sites that sit outside the National Landscape. The wording Policy DP39 should in fact be more in alignment with NPPF Paragraph 189, which states: '... development within their setting should be sensitively located and designed to avoid or minimise adverse impacts on the designated areas.' Recommendation The policy should be re-drafted to differentiate between those sites in the National Landscape and those that sit out outside but are in the setting. The text of the policy should be more in line with NPPF Paragraph 189. Furthermore, the supporting text should reflect NPPF Paragraph 190 and provide more clarity on what development is in the public interest, for example, new residential development whilst also making it clear who determines major development. This additional detail will provide for a much clearer understanding and interpretation of new development proposals that will have an impact on the National Landscape. Further, the policy is not positively prepared as it focuses primarily on preventing harm to landscape character without acknowledging that development will inevitably result in some degree of landscape change. This restrictive approach risks undermining the delivery of sustainable development and does not reflect the NPPF's requirement for policies to enable growth while protecting and enhancing valued landscapes. It also lacks clarity on how unavoidable impacts should be managed beyond mitigation. Policies should be positively worded to encourage enhancement and integration with local character. The current wording does not fully reflect these principles, making it inconsistent with national policy. Accordingly, the policy is considered to be unsound.

63191617	Various Taylor Wimpey Crest Nicholson Barratt Redrow Vistry Group	Nick Matthews (Savills)		No	• Consistent with national policy	Yes	Yes		These representations have been prepared and submitted by Savills on behalf of various clients including Taylor Wimpey, Crest Nicholson, Barratt Redrow, and Vistry Group. Policy DP40 sets out requirements for development proposals that affect conservation areas and listed buildings. Amongst other things it requires that: • 'New development should not cause harm to the existing character and appearance of the Conservation Area and wherever possible positively enhance it'. • 'New development affecting the setting of a Conservation Area or listed building should seek to preserve those elements of the setting that make a positive contribution and, where possible, better reveals the significance of the Conservation Area or listed building'. • 'Development will be expected to preserve and where appropriate enhance the character, appearance and special interest of Conservation Areas and listed buildings and their settings'. All three of these extracts propose a threshold of "no harm" or "preserve" – a binary starting point where no harm is acceptable. The Framework, however, seeks to balance harm against public benefits, even in circumstances where substantial harm will occur. It states that 'when considering the impact of a proposed development on the significance of a designated heritage asset, great weight1 should be given to the asset's conservation (and the more important the asset, the greater the weight should be)' (paragraph 212). 4. It goes on to state that 'any harm to, or loss of, the significance of a designated heritage asset (from its alteration or destruction, or from development within its setting), should require clear and convincing justification' (paragraph 213). 5. Paragraph 214 then explains that if a 'proposed development will lead to substantial harm to … a designated heritage asset, local planning authorities should refuse consent, unless it can be demonstrated that the substantial harm or total loss is necessary to achieve substantial public benefits that outweigh that harm or loss' or all of the criteria outlined apply. 1 Underlining here and throughout the remainder of the response to this draft policy has been added by Savills as emphasis. 6. Paragraph 215 addresses the considerably more common situation where development proposals would result in 'less than substantial harm' to a heritage asset. In such circumstances, it states that 'where a development proposal will lead to less than substantial harm to the significance of a designated heritage asset, this harm should be weighed against the public benefits of the proposal including, where appropriate, securing its optimum viable use'. 7. Whilst we recognise the need to have careful and considered regard to designated heritage assets, the current proposed policy wording is unduly prescriptive and conflicts with the more nuanced / judgement⟡based approach set out in paragraphs 212–215 of the Framework. 8. The Framework offers a clear and well-established methodology for assessing harm and balancing public benefits, ensuring decisions are justified and transparent. Aligning Policy DP40 with this approach will support effective, consistent decision-making and safeguard heritage assets without imposing unrealistic requirements. It will also remedy the current unsoundness of the draft Policy DP40 See attached document for underlined text/emphasis added.		Policy DP40 (Built Heritage) for Various (Dec 25).pdf

	Redrow Vistry Group				' Effective				consideration in the determination of planning applications and it is helpful for developers to have a clear policy approach which establishes the Council's expectations. It is important therefore that the policy establishes a clear, reasonable and proportionate approach to the evaluation of archaeology. As currently drafted we consider the approach lacks clarity and is not therefore effective or sound. Our clients do not object to undertaking archaeological evaluations, however given the potentially substantial costs involved (which can run well into the hundreds of thousands of pounds on a large site) they do want to ensure that an appropriate extent and form of evaluation is undertaken which reflects the particular circumstances of each site, and the likelihood of there being below ground archaeology. On that basis we advocate the following stepped / cascade approach in the policy. First, and for all sites, there should be a desk-based assessment. This assessment will reveal whether there is a reasonable likelihood of the site containing archaeological remains. Second, when deemed appropriate and necessary as an outcome from the desk-based assessment, a geo◈physical survey should be undertaken to establish whether there are any below ground structures or disturbances which require further investigation. Third, if the geo-physical survey does reveal anomalies in the ground which warrant further excavation then a targeted (as opposed to percentage site-wide) archaeological investigation should be undertaken to investigate these further. We consider this stepped approach to be proportionate at the pre-application stage as it is highly likely to identify any archaeology on the site which is of such significant that it requires preservation in situ and ensures that the location of the archaeology informs the planning application proposals. Subsequent archaeological evaluation conducted post-determination as a condition of the permission may identify further areas of interest, however, the likelihood is that this would not require preservation in situ, could therefore be excavated and recorded, and would consequently not impact upon the ability to deliver the planning permission. In the highly unlikely event that post-determination archaeological evaluation does require preservation of remains then this may lead to a change in the proposals as suggested in the fifth paragraph of the policy. The prospects of this is however extremely low and this risk is outweighed by the proportionate approach at the pre-submission stage. We strongly advocate a rewording of the policy to reflect the stepped approach set out above so that there is a clear, proportionate and effective policy requirement. The other aspect of the policy which we consider to be unsound is the third paragraph, and specifically the texted underlined in the extract below. "Development proposals that would affect archaeological remains will be expected to demonstrate, by a thorough understanding of the significance of the asset, how any change proposed would preserve and, where appropriate, enhance their significance. If there is any perceived harm to any heritage asset this harm will need to be fully justified and weighed against any public benefits of the overall development scheme within the final planning balance" (emphasis added) The policy wording as drafted is internally inconsistent. The first sentence requires that an asset is 'preserved'. It is helpful at times to look back to the ordinary meaning of a word, and in this case 'preserve' is defined in the Cambridge Dictionary as: "to keep something as it is, especially in order to prevent it from decaying or being damaged or destroyed". By definition therefore, if something is 'preserved' then it cannot be harmed. Yet, the second sentence of this paragraph in the policy explains the response if harm is expected to occur. These two policy responses cannot coexist, as an asset is either preserved or harmed. To remove this inconsistency requires a change in the emphasis of the third paragraph of the policy as follows: "Development proposals that would affect archaeological remains will be expected to demonstrate, by a thorough understanding of the significance of the asset, how any change proposed would preserve and, where appropriate, enhance impact upon their significance. If there is any perceived harm to any heritage asset this harm will need to be fully justified and weighed against any public benefits of the overall development scheme within the final planning balance". See attached document for underline text/emphasis added.		(Dec 25).pdf

Policy DP42: Historic Parks and Gardens

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
63191617	Various Taylor Wimpey Crest Nicholson Barratt Redrow Vistry Group	Nick Matthews (Savills)		No	' Justified ' Effective ' Consistent with national policy	Yes	Yes		These representations have been prepared and submitted by Savills on behalf of various clients including Taylor Wimpey, Crest Nicholson, Barratt Redrow, and Vistry Group. We have explained in our representations to Policies DP40 and DP41 our objections to the use of the word 'preserve' in relation to heritage assets and we have the same objection to Policy DP42. Indeed, we strongly object to the approach adopted in Policy DP42, which aims to protect the historic character and setting of North Somerset's parks and gardens by requiring development proposals to demonstrate no harm through detailed heritage assessments. There is no expectation or requirement in national policy that development would result in 'no harm' to historic parks and gardens or their setting and, as designated heritage assets, they fall under the ambit of the balanced, judgement-based approach set out in paragraphs 212-215 of the Framework. In that respect, paragraph 214 outlines that if a 'proposed development will lead to substantial harm to … a designated heritage asset, local planning authorities should refuse consent, unless it can be demonstrated that the substantial harm or total loss is necessary to achieve substantial public benefits that outweigh that harm or loss' or all of the criteria outlined apply'. Paragraph 215 adds to the above, stating that 'where a development proposal will lead to less than substantial harm to the significance of a designated heritage asset, this harm should be weighed against the public benefits of the proposal including, where appropriate, securing its optimum viable use'. As is the case with the preceding two policies of the Local Plan, Policy DP42 must be modified to bring the tests in the policy into line with those of the Framework		Policy DP42 (Historic Parks Gardens) for Various (Dec 25).pdf

Policy DP43: Affordable housing (including rural exception schemes)

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
63286689	McCarthy Stone & Churchill Living	The Planning Bureau Ltd						Policy DP43 requires all new housing development to contribute to the provision of affordable housing. Different rates are set for development on green belt land (50%), greenfield land (30%) and previously developed land (20%) This requirement also applies to specialist housing for older people. Some flexibility is provided by the policy. We note that policy DP47 makes it clear that affordable housing will also be required form specialist housing for older people. We note that the policy is supported by the Viability Assessment for North Somerset Local Plan 2039, Final Report, November 2023, Dixon Searle (Viability Assessment). This details the viability work undertaken and confirms, with respect to older persons housing that viability has been assessed for a 30 unit Sheltered housing scheme and a 60-unit extra care housing scheme.	We recommend that the Council and its consultant reconsider the viability assumptions as detailed above for sheltered and extra care housing in line with our recommendations and if sheltered and / or extra care is shown to be not viable or less viable the typology is exempted from affordable housing or an additional typology added to the policy. In particular, the Council should reconsider the assumptions incorporated for typical scheme, assumed unit size, sales periods, empty property costs, marketing costs, profit, external works, sales values and local plan costs.		2025_MS and CL response to North Somerset submission Local Plan reg 19 - Redacted.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Whilst in our previous representation, we welcomed that the policy has a reduced affordable housing requirement for PDL we expressed concerns that older person's housing had not been considered fully within the Viability Assessment using the correct assumptions and as such recommended that separate requirements should have been provided for the older persons typology and that the Viability Assessment should be re-run using the assumptions suggested. Unfortunately, this has not occurred so we repeat our comments below. The Council should note that the viability of specialist older persons' housing is more finely balanced than 'general needs' housing. It cannot be simply regarded as standard housing. Older persons housing differs from a standard model of development or flat as confirmed within the PPG Paragraph: 010 Reference ID: 63 010-20190626. Specialist sheltered and extra care housing schemes for older people tend to be flatted developments, based around communal facilities and community living and delivered on smaller brownfield sites in a single phase before sales can occur. Additional facilities include extensive communal areas, such as space to socialise, a wellbeing centre, a care service with 24-hour access to support services and staff and a bistro where meals are often available. This enables residents to live much more independently than they would otherwise. We would direct the Council towards the Retirement Housing Consortium paper entitled 'A briefing note on viability prepared for Retirement Housing Group by Three Dragons, May 2013 (updated February 2013 ('RHG Briefing Note') available from https://retirementhousinggroup.com/rhg/wp-content/uploads/2017/01/CIL-viabiilty appraisal-issues-RHG-February-2016.pdf. The RHG Briefing Note establishes how sheltered housing and extra care development differs from mainstream housing and looks at the key variables and assumptions that can affect the viability of specialist housing for older people. As such, due to the differences and variables that older person's housing schemes have viability is often more challenging. Given the above characteristics of specialist housing for older persons housing, we have concerns that some of the assumptions and additional costs that developers of older persons housing schemes experience, have not been fully incorporated or incorporated correctly into the Viability Assessment. It is clear when comparing the site that has been modelled within Viability Assessment with that of the RHG Briefing Note, that there are a number of discrepancies that should be amended, and the Viability Assessment should be re-run. If the typical scheme is amended and re- modelled the viability of sheltered and extra-care housing would reduce and not be viable. The key variables not included at the correct level are typical scheme, assumed unit size, sales periods, empty property costs, marketing costs, profit, external works, sales values and local plan costs and are discussed below. In addition, whilst we welcome that the Council have tested sheltered and extra care housing on previously developed land this should also be undertaken on greenfield land. Typical Scheme Size and non-saleable area: We note that Appendix 1 of the Interim Viability Assessment identifies that the following has been modelled with respect to sheltered and extra-care housing: • A Sheltered/retirement scheme of 30 units comprising at a density of 125 dwellings per hectare. • An Extracare scheme of 60 units at a density of 125 dwellings per hectare. It is not clear what dwelling size and mix that has been modelled. We have concerns that the typical scheme modelled with respect to density is not in line with advice within the RHG Briefing Note that identifies that the following type of schemes should be modelled: • Sheltered: 50-60 units at a density of 100-120 dwellings per hectare with communal / non chargeable space of 20-30% • Extra care – 40-50 units at a density of 80-100 dwellings per hectare with communal / non chargeable space of 35-40%. Previously developed land and greenfield: We note that para 3.5.10 of the Viability Assessment confirms that With the Council proposing the differential, it has not been considered necessary or appropriate to put forward recommendations for a further differential treatment of these specialist housing types, which typically come forward on PDL sites.' This make the assumption that older person's housing is largely delivered on previously developed land. Whilst historically this has been the case, McCarthy Stone also in more recent year look to deliver much needed older persons housing on greenfield sites, especially on large urban extensions where important community facilities are also delivered. The delivery of older persons housing on greenfield sites should therefore not be ignored. Unit sizes: We note that the Viability Assessment has used, for extra care housing, assumed unit sizes that are less than that detailed within the RHG Briefing Note. Unit sizes for extra care should therefore be increased to 60 sq. m for a 1 bed extra care and 80 sq. m for a 2 bed. Unit sizes for specialist housing for older people tend to be larger than the minimum standards set out within the Nationally Described Space Standards allowing for additional storage and circulation space to facilitate downsizing from larger family homes and reduced mobility. Sales periods: Older persons housing schemes that typically consist of flatted development of 40 – 60 units cannot be phased and the whole scheme must be fully built and operational from month 1 of sales. Sales periods are typically longer for retirement housing than for general housing with a typical scheme taking around 36 months to sell. The build period takes approximately 12 to 18 months. This longer sales period has not been accounted for within the Viability Assessment for		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								sheltered and extra care housing and would reduce the viability of older persons housing if considered. Empty property costs: Due to the long sales period older persons housing schemes experience higher void costs as schemes take longer to sell than general needs housing. A typical average empty property cost per unit is £5,000 for sheltered and £8,000 for extra care. This covers costs such as Council tax and service charges on unsold units. Although this has been accounted for within the Interim Viability Assessment, this is at a lower rate of £2,000 per unit for sheltered housing and £5,000 per unit for extra care. The Viability Assessment should be re-run using the revised figures. Marketing costs: We note that the Viability Assessment has used marketing and sales costs of 3%. However, given the longer sales period, there is a longer and more supportive marketing / sales programme for specialist retirement housing needed compared to general needs, typical marketing costs are 6%. This was included within the RHG Briefing Note. If a higher percentage for marketing costs was included within the Viability Assessment for Older Peoples housing this would reduce viability of older persons housing. Profit: The NPPG is clear that potential risk is accounted for in the assumed return for development and assumed to be between 15-20% of gross development value for plan making purposes but alternative figures may be appropriate for different development types and typologies (Para 018 Reference ID:10-018-20190509). There are a number of inherent sector specific risks with older person housing which materially differ to that of general needs housing including an inability to phase and allow for risk reappraisal. Older Persons housing must be fully completed and operationally ready before sales commences as older people are less likely to buy 'off plan' without seeing for example the benefit of the communal facilities. The above provides a slower return on investment and a longer period of uncertainty in the market and cost exposure. An acceptable return for risk in respect of retirement living proposals such as this is not less than 20% of gross development value. This is consistent with the Inspector conclusions at Appeal for the McCarthy and Stone proposal at Redditch (Appeal Ref: 3166677), the Churchill Retirement Living proposal at Cheam (Appeal Ref: 3159137) and the Churchill Retirement Living scheme at West Bridgford (Appeal Ref: 3229412) in 2019. It is clear based upon Appeal precedent that 20% return on gross development value represents the minimum acceptable return in respect of housing for older people proposals for the reasons outlined. If a higher percentage for profit was included within the Viability Assessment for Older Peoples housing, than the 18% used, this would reduce viability of older persons housing. External works: Appendix 1, Table 1b of the Viability Assessment identifies that generally a cost of 10% has been applied for flatted development for external work and that a 'reduced rate of 7.5% has been used for sheltered and extra care schemes'. It is unclear why a reduced rate for sheltered and extra care schemes has been used. High quality shared external amenity space is a fundamental part of retirement living. Shared communal space offers visual amenity and usable outdoor provision designed to be linked to the internal communal owners lounge and other communal areas within the main building is important and therefore an allowance of 10% should also be used for sheltered and extra care housing, If a higher percentage of 10% for external works was included within the Viability Assessment for Older Peoples housing rather than the 7.5% used, this would reduce viability of older persons housing further. Sales Values: The Viability Assessment at Appendix IV section 3.6 identifies the Sales Values levels that have been used. This confirms at para 3.6.2 that 'DSP's significant experience of carrying out site-specific viability reviews on numerous schemes together with bespoke research analysis led us to test retirement/sheltered/extra care housing at the same overall upper range of values as used for traditional housing market appraisals (VL6 £4,750 to VL11 £6,000).' And at para 3.6.3 that 'From wider experience, we would generally expect retirement/sheltered housing values to be representative of the upper end of this overall range; even this could be considered conservative in our view'. Table 5 seems to undertake some sales values analysis, but this is not discussed in the text. We have assessed the 'Advertised Asking Price' data put forward within Appendix IV Table 5 of the Viability Assessment and have concerns with regard to the values proposed to be used within the study for sheltered and extra care housing for the following reasons: • Values used are based on advertised asking price not actual sales values. Given difficult market conditions, advertised asking prices are higher than the price that properties are likely to be sold for less and therefore the value is less. • Table 5 uses the RGH methodology for determining sales values of sheltered and extra-care housing and therefore a simple 25% premium has been added to sheltered to gain the sales values of extra care. Although we accept that this 25% premium is in line with the RHG Briefing Note, the Council should note that since the RHG Briefing note was published in 2016 this premium has fallen in recent years and research now finds the premium to be just 10% over comparable retirement living or sheltered schemes. The 25% premium should therefore be reduced to 10%. In addition, we note that para 3.5.11 of the Viability Assessment states, 'Using the assumptions set out including higher new build sales values, as can be seen these schemes appear if anything potentially more viable than general market apartments development'. We would disagree with this assertion and given the concern we have expressed given the cost assumptions described and areas that make older persons housing more expensive to deliver, if the viability is re-run using the correct assumptions this will show that viability of older persons housing is less viable than general market apartments.

								Local Plan costs Biodiversity Net Gain and M4 (3): In addition to typology specific costs, we also have concern as to the limited value that has been used for Biodiversity Net Gain within the Viability Assessment amongst other policy areas especially with regard to BNG costs on PDL that has been set at 0.7% rather than a cost of 2.9% on greenfield. The Council should note that on 27th July 2023 the price of statutory biodiversity credits were published (available from Statutory biodiversity credit prices - GOV.UK (www.gov.uk)). This has enabled it to be determined how much BNG may cost, and it is considered that the costs per dwelling put forward within the Viability Assessment have greatly underestimated the costs. In addition, brownfield site BNG costs are often more substantial than Greenfield, but this very much depends on the site characteristics. As a result of credit prices having been published, the Council should re-run the Viability Assessment that includes a more realistic assessment of BNG costs and if necessary, reduce the BNG and affordable housing requirements accordingly. With respect to M4(3) costs please see our response to DP46. Conclusion: We recommend that the Council and its consultant reconsider the viability assumptions as detailed above for sheltered and extra care housing in line with our recommendations and if sheltered and / or extra care is shown to be not viable or less viable the typology is exempted from affordable housing or an additional typology added to the policy. In particular, the Council should reconsider the assumptions incorporated for typical scheme, assumed unit size, sales periods, empty property costs, marketing costs, profit, external works, sales values and local plan costs.			
63359201	Nailsea Holdings LVA LLP	Matthew Kendrick	Nailsea Holdings LVA LLP	Unsure	• Justified • Effective • Consistent with national policy	Unsure	Unsure	Our only comment on this policy relates to the issue about the reference to 50% affordable housing be required on site's that are to be released from the Green Belt and the prescriptive nature of the tenure split that is defined as needing to be 75% social rent and 25% shared ownership. As set out earlier the plan should be amended to refer to 45% affordable housing on sites released from the Green Belt. In terms of the tenure split while we currently have no issue with the split proposed we must be mindful that needs may change over the plan period, or a specific housing needs survey may indicate a different mix is required. Therefore, we suggest the text be amend to add this flexibility to add a 'unless evidence is available to suggest an alternative tenure split would be appropriate in a specific location'. 31149537	Strongvox Ltd	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	This policy is unsound as it is not effective and unjustified The Council published an addendum to the viability report, which forms part of the Local Plan evidence base, in November 2023. The report concludes that "achieving 25% affordable housing could be challenging with the currently assumed infrastructure costs and therefore there may well need to be flexibility built into policy to allow for any necessary ongoing consideration of this to ensure that development can continue to come forward viably." The updated viability report acknowledges that affordable housing on greenfield sites could be achievable. However, it also notes that policy should allow a degree of flexibility to assess viability on a case-by-case basis. The current policy wording does not provide for this. In respect of housing within the Green Belt, the policy sets an expectation that this should provide 50% on-site affordable housing, however the viability of this proposition is not supported by the accompanying evidence base nor is it clear that 50% can be supported viably on such sites simply because they are in the Green Belt. In reality, this locational factor is highly unlikely to influence development returns particular where 'Grey Belt' sites have no overlapping landscape quality that might yield higher returns. While the importance of affordable housing in major developments to deliver a sustainable mix of homes is recognised, the proposed policy conflicts with national guidance, is ineffective because it risks undermining overall housing delivery and reducing the number of affordable homes provided, and does not reflect the principles of positive planning.	The policy needs to be adjusted to accurately reflect what has been produced in the viability report.		R002v5 NSLP Reg19 Reps Strongvox Dec25.pdf

Modification: The policy needs to be adjusted to accurately reflect what has been produced in the viability report.		NSC Reg 19 Diverse Partnerships Yatton Ltd Reps Dec 25 - Redacted.pdf
51524513	Bellway Homes Ltd	tor&co	Bellway Homes Ltd	No	• Justified • Effective • Consistent with national policy			Draft Policy DP43 (Affordable housing and rural exception schemes) sets out the Council’s policy in respect of affordable housing. In terms of the trigger for affordable housing, the policy text states: “Affordable housing provision will be sought to meet local needs on all developments of 10 dwellings or more (or on sites of 0.5 hectare orabove), and five dwellings or more within the Mendip Hills National Landscape.” As drafted, this is in conflict with Paragraph 65 of the NPPF, which states that: "Provision of affordable housing should not be sought for residential developments that are not major developments, other than in designated rural areas (where policies may set out a lower threshold of 5 units or fewer).” The definition of major development provided in the Town and Country Planning Act (Development Management Procedure) (England) Order 2015 – in relation to the provision of dwellinghouses – states this is where: i. the number of dwellinghouses to be provided is 10 or more; or ii. the development is to be carried out on a site having an area of 0.5 hectares or more and it is not known whether the development falls within sub-paragraph (c)(i); The policy should reflect the wording in planning legislation set out above, or simply just refer to the requirement being applied to ‘major developments’. The policy acknowledges that the precise size and type of affordable housing to be provided on individual sites will be determined through negotiation, guided by available evidence as listed. This approach, which notes that provision will be guided by the Local Housing Needs Assessment, data from the housing needs register and local housing needs surveys, is also supported. It allows flexibility of approach to meet the needs of the particular site, location and market demand. In terms of the tenure split for affordable housing provision, the policy text confirms “the affordable housing mix should be 75% social rented and 25% shared ownership”. However, this departs (without justification or evidence) from the evidence in the Local Housing Needs Assessment (September 2025) – which on pg. 8 (Figure 4) – confirms this to be 59% social rented, 17% affordable rent and 24% affordable home ownership. This should be updated accordingly. Moreover, the policy texts’ reference to “housing mix” is wrong – it should be referred to as “tenure split”, as is already (correctly) referenced in the supporting text. In terms of affordable housing requirement, in the case of greenfield sites, a requirement of 30% is requested on qualifying developments (amongst other values for Green Belt and previously developed sites). Within the Wolvershill strategic allocation under Draft Policy LP1, this is not reflected as %, but instead an equivalent amount (990 of 3,300). Bellway recognise the importance of delivering affordable homes. It also notes that this equivalent target is a reduction from the 35% required under the previous Regulation 19 consultation in December 2023. However, having reviewed the document ‘Additional Sites Viability Addendum for North Somerset Local Plan 2041: Final Report’ (October 2025) prepared by Dixon Searle Partnership, Bellway have concerns whether the 30% figure would be justified / achievable within the strategic Wolvershill allocation. Indeed, the Assessment states (inclusive of an uplift to the level of housing in the allocation from 2,800 to 3,300) that even a 25% AHcontribution would be challenging, largely due to infrastructure costs. The Assessment concludes: “The results of testing representing Wolvershill indicate that achieving 25% affordable housing could be challenging with the currently assumed infrastructure costs and therefore there may well need to be flexibility built into policy to allow for any necessary ongoing consideration of this to ensure that development can continue to come forward viably”. We understand the emerging SPD for Wolvershill will be supported by an Infrastructure Delivery Plan, which would look at S.106 and viability. This will form an integral part of the delivery of the allocation, including associated costs and funding, impacting viability and consequently affordable housing – which should be confirmed and further tested as part of the Examination figure to ensure that this is a robust figure. In more simple terms, we consider the text in Draft Policy LP1 to be too stringent. Whilst the	See main comment.		20251212 504317 JE - North Somerset Reg 19 (Reps obo Bellway Homes).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								allocation is for ‘around 3,330 homes’, the affordable housing requirement is set at 990 dwellings. Therefore, should the amounts be delivered under or over 3,300, 990 may not be viable. We suggest the wording is more flexible, perhaps “around 3,300 dwellings, including an appropriate level of affordable housing”. It is also noted the Council will provide an Affordable Housing SPD to set out further detail, in terms of delivery of the policy. Bellway welcome the opportunity to respond to the consultation on the emerging draft SPD in due course and suggest it would be beneficial for the Council to establish a timeline for this in an updated Local Development Scheme. In light of the evidence above, as drafted, we do not consider the requirements of Draft Policy DP43 to be appropriately justified. Notwithstanding the existing wording on sites that cannot be met, we suggest amendments are required to Policy DP43 to ensure a robust and sufficiently justified affordable housing policy which reflects the site-specific provision required by the evidence base and within the Wolvershill allocation under Draft Policy LP1.			
58664673	Catesby Estates	Stantec	Catesby Estates	No	• Justified • Consistent with national policy			Policy DP43 has been revised to take into account the change in national policy that now, in effect, results in sites that are identified to be released from the Green Belt to often play the biggest contributing factor capable of addressing affordable housing need and delivery within local areas. Explanatory text provided states that: "The Dixon Searle viability study (2025) illustrated how challenging affordable housing delivery is in North Somerset. While the viability evidence is the starting point for considering overall delivery, the policy reflects the importance of maximising opportunities to maximise affordable housing delivery". The ambition of North Somerset Council to deliver affordable housing is recognised and shared. It is noted that such ambition cannot extend beyond the unachievable, thereby also risking failing the tests of soundness as set out at Paragraph 36. The Dixon Searle viability study (2025) sets out the challenges associated with the Council’s ambitions. However, it is considered that policy wording is made suitably clear for what is expected but also appropriate flexibility is made to account for changing circumstances, thereby taking on board most recommendations as made within the evidence base underpinning the Pre-Submission Plan 2041. An evidence based approach is supported. At this stage Catesby do not principally raise issue with Policy DP43 as set out within the Pre-Submission Plan 2041 consultation document. It is however noted that draft Policy DP43 states that: "The precise size and type of affordable housing to be provided on individual sites will be determined through negotiation, guided by the Local Housing Needs Assessment, data from the housing needs register and local housing needs surveys where these are robustly evidenced. This will include provision on appropriate sites for housing to meet specialist needs. The affordable housing mix should be 75% social rented and 25% shared ownership". Provisions within Policy DP43 allow for determination of affordable housing mix to be based on up-to-date evidence at the time of determination. Once again, a robustly informed and evidence based approach is supported. However, requirements for affordable housing mix to be expected to be 75% social rented and 25% shared ownership is not justified or consistent with national policy and therefore does not meet the tests of soundness as set out in NPPF Paragraph 36. The North Somerset Local Housing Needs Assessment (September 2025) referred to within Policy DP43 does not justify the mix set out but instead concludes that for an Affordable Housing need of a total of 10,600 households over the 15-year Local Plan period 2026-2041 this would result in a need for 59% Social Rent, 17% Affordable Rent, and 24% Affordable Home Ownership. It remains unclear how the affordable housing mix presented within DP43 has been justified for the purposes of soundness and it is encouraged Policy DP43 is revised in light of supporting Pre-Submission Local Plan evidence outcomes. 63114593	Bloor Homes (North of Pound Lane Nailsea site)	Turley		No	• Positively prepared • Justified • Effective • Consistent with national policy		No	Policy DP43: Affordable housing (including rural exception schemes) It is considered the viability of providing 50% AH on GB sites should be tested and evidenced as part of the emerging local plan. The viability assessment that supports the emerging Local Plan does not o test this scenario. It tests various levels up to 40% on greenfield sites but not 50%. Given the plan now includes for 30%, on greenfield sites elsewhere, that confirms the position that 40% affordable housing delivery would lead to viability challenges, let alone 50% provision. It’s worth noting that construction costs have increased and market values have reduced. Indeed, respondents to the MHCLG NPPF (published in Dec 2024) consultations including RICS and HBF raised viability concerns, and supplied case studies highlighting that there would be few if any areas where 50% is achievable, highlighting the risk of allocating land and it then not coming forward for housing early in the plan period. It is therefore considered that further evidence is required to appropriately justify the position in line with NPPF	It is considered that further evidence is required to appropriately justify the position in line with NPPF		BLOA3068 - Nailsea - North Somerset Local Plan Regulation 19 Consultation - Dec 25.pdf
21449761	Bloor Homes South West (Wolvershill)	Turley		No	• Positively prepared • Justified • Effective • Consistent with national policy		No	Summary of representation (see attached full document) Additional clarification should be provided via further supplementary Viability Assessment to fully evidence the proposed affordable housing target percentage for major greenfield development sites (including the Wolvershill strategic location), where the current assessment continues to acknowledge the target level (now at 30%) to be ambitiously set (the assessment states that even at 25% viability may be marginal); As part of resolving necessary clarifications in respect of the Wolvershill strategic location policy (LP1) in respect of specific capacity and development requirements, supplementary assessment should confirm that the 30% target for this development is likely to remain viable over the full delivery period of the development, based on the full costs that will arise, including all necessary infrastructure that the Council expects to be delivered. The extent to which site-specific infrastructure delivery has been accounted for at the Wolvershill strategic location should be further clarified and tested (justified), and there should be further consideration of the CIL Schedule for North Somerset, so that this appropriately supports the new Local Plan, including with respect of CIL being charged at the Wolvershill strategic location.	See attached and above.		Reps on Behalf of Bloor Homes to NS LP 2041 Reg 19 Consultation (Wolvershill) merged.pdf

51710305	Wain Estates (Wolvershill)	Tetlow King Planning	Wain Estates	No	• Effective					Draft Policy DP43 states that affordable housing will be required on developments of 10 dwellings or more or with a site area of 0.5 hectares or more and five dwellings or more within the Mendip Hills National Landscape. This is appropriate. The previous version of the draft Policy expected developments to provide 38.5% affordable housing on greenfield sites and 20% on previously developed land. This has now been reduced to 30% and NPPF Golden Rules have also been included in the policy. Wain Estates supports this reduction in line with the latest Housing Needs Assessment. We also welcome that applicants will be able to use Local Housing Needs Assessment, data from the housing needs register and local housing needs surveys to justify the precise size and type of affordable housing to be provided on individual sites. This is a broad and appropriate range of data sources. We are also pleased that draft Policy DP43 sets out a preferred housing mix to provide a starting point for discussions. We welcome the opportunity to respond to consultation on the emerging draft affordable housing SPD.	0707-06.M23 Wain Estates NS Pre Submission Reg 19 Local Plan 12.12.25 with Appendices.pdf
43217217	Parker Strategic Land	Guy Wakefield, Ridge and Partners LLP		No	• Justified • Effective	Yes	Yes	Affordable Housing Provision Viability The affordable housing requirements for the site have been defined by the 'Golden Rules' for housing development on Green Belt land. This requirement is identified within Policy SP7 (Green Belt) of the Pre-submission Plan, which states that "New residential development will only be permitted on land released from the Green Belt, as defined on the Policies Map, where it is demonstrated how the development meets the 'Golden Rules' requirements as set out in the NPPF." As set out in the policy review above, Paragraph 67 of the NPPF sets out the requirement for affordable housing to "be set at a higher level than that which would otherwise apply to land which is not within or proposed to be released from the Green Belt" and "at least 50% of the housing to be affordable, unless this would make the development of these sites unviable". This requirement is taken through to Policy DP43 of the Pre-submission Plan, which states that: "Developments will be expected to provide 50% affordable housing on land released from the Green Belt as set out in Policy SP7, and other Green Belt sites, 30% on greenfield sites and 20% on previously developed land, all at nil public subsidy. If these requirements cannot be met this will need to be fully justified with clear evidence set out in a viability assessment which must demonstrate that all grant funding sources have been fully explored." The supporting justification to this policy notes that the North Somerset Local Housing Needs Assessment (ORS 2025) identifies an overall affordable housing need over the plan period ranging from 6,646 to 10,577 dwellings (28%–45% of the total housing requirement). It notes that this high level of need is a priority for the Council and the Local Plan will seek to maximise delivery taking account of the constrained nature of North Somerset and viability evidence. However, it goes onto acknowledge the Dixon Searle viability study (2025), which illustrates how challenging affordable housing delivery is in North Somerset. While the viability evidence is the starting point for considering overall delivery, the policy reflects the importance of maximising opportunities for affordable housing delivery. It acknowledges that where proposals cannot deliver the relevant policy requirement, these will be subject to viability assessment which must take account of all potential sources of grant funding. The percentages provided by the viability evidence (or as updated through other relevant evidence) will be used as guidance to the expected level of nil subsidy provision. In terms of the viability evidence prepared for the Local Plan, the 2025 Additional Sites Viability Addendum states in paragraph 1.1.9: "A number of the sites that form part of the strategic allocations in the Local Plan are within the Green Belt. The Council's emerging policy on affordable housing will require 50% affordable housing in line with the 'Golden Rules' set out by the current Government. Further Guidance is awaited from government on the link between viability and the 'Golden Rules' as set out in the NPPF and PPG. However, it remains unclear as to whether, if evidence from plan-making viability shows that delivering 50% affordable housing (in conjunction with all other typical development requirements) would make development theoretically unviable, the requirement may be reduced accordingly or whether an increased affordable housing requirement would exist regardless of the local plan viability assessment outcomes. At this stage we have tested the strategic site allocations only to the point at which viability become negative." This identifies that the council has not assessed the viability of Green Belt sites such as Land at Tower Farm yet and are therefore unable to assess whether 50% affordable housing is achievable. It is recommended that this work is undertaken to allow an appropriate level of affordable housing to be defined within the Plan for these Green Belt sites. More significantly, with the benefit of the viability work carried out to date, the Regulation 19 Plan identifies a requirement for non-Green Belt greenfield sites to deliver 30% affordable housing. The same 30% requirement is contained in the adopted Local Plan. If it has therefore been determined that greenfield sites can only deliver 30% affordable housing how does the Council expect greenfield sites in the Green Belt to deliver an extra 20% affordable housing? There is no logical justification for such sites to do so. Indeed, paragraph 67 of the NPPF states: ""at least 50% of the housing to be affordable, unless this would make the development of these			North Somerset Reg 19 Pre-Submission Plan - Portishead final 9.12.25.pdf

								sites unviable". The robust evidence in the form of the adopted and the draft Local Plan is that anything more than 30% renders the delivery of greenfield sites unviable. It is therefore recommended that the affordable housing requirement on sites inside and outside the Green Belt be reduced to 30%.			
30301601	Ainscough Strategic Land	Chris Price	Ainscough Strategic Land	No	• Positively prepared • Justified • Effective	Yes	No	ASL recognises the importance of delivering affordable homes. ASL support the change in Policy LP1 from the previous Reg 19 so that the affordable housing is consistent with Policy DP43 (30% on greenfield sites). However, we would note that a percentage figure would better reflect the fact that the total capacity of the site is not fixed. For example, as currently drafted, should only 3,000 units come forward then this would require 33% of the units to be affordable. As set out in the viability evidence , an affordable housing requirement of more than 30% starts presenting viability issues (the evidence states that even achieving 25% is challenging): "Scenario 2 [3,300 homes] shows slightly stronger results with 25% affordable housing potentially being viable at the mid to higher value part of the tested values range. In any event, it appears that as much as 35% affordable housing is unlikely to be viable (without some form of change to infrastructure / values or cost assumptions and / or significant additional subsidy) in either scenario – although some level of 'additionality' beyond the development funded AH levels / tenure make up should not be ruled out as the LP framework acknowledges." ASL considers that Policy LP1 must be consistent with Policy DP43; at present it is not and raises issues of viability and deliverability.			61683 - NSC Reg 19 Representations December 2025 2-12-25.pdf
51242689	Latimer Developments Limited	Arwel Evans - Lichfields	Latimer Developments Limited	No	• Positively prepared • Justified • Effective	Yes	No	The North Somerset Local Housing Needs Assessment prepared by Opinion Research Services (ORS) (September 2025) considered 2 scenarios with the overall affordable housing need over the plan period ranging from 6,646 (scenario A) to 10,577 (scenario B). Policy DP43 fails to provide an affordable housing target, however, considers Scenario A and Scenario B as a range (28% - 45% of the housing requirement). Should either scenario be taken forward as an affordable housing target, this would constitute a step change compared to the Core Strategy affordable housing target of 150 dwellings per annum, with Scenario A equating to 443 affordable dwellings per annum and Scenario B equating to 705 dwellings per annum. As set out in draft Policy DP43, NSC has opted to release many sites from Green Belt (totalling 6,685 dwellings), which are subject to the Golden Rules which stipulate the need to provide 50% affordable housing on Green Belt sites (subject to viability). The Additional Sites Viability Addendum for North Somerset Local Plan (October 2025), prepared by Dixon Searle Partnership indicates that for all of the strategic locations allocated, a 50% affordable housing target may be challenging to achieve. Therefore, this suggests that meeting the affordable housing need set out in Scenario A or Scenario B will be challenging. In addition, there is an ongoing issue at the moment in the industry where housebuilders are struggling to sell affordable homes to registered providers that have been secured via s106. Some housebuilders are not getting any bids at all. Therefore the Clarion site has an unique opportunity to provide 120 affordable homes with certainty over their deliverability. This could assist the Council in meeting affordable housing needs when affordable housing from other sources (s106) is struggling to be delivered. The land north of Claverham presents an opportunity to deliver 120 100% affordable dwellings in an area that has very little new allocations, has a high housing need and high house prices. The site also presents an excellent opportunity to aid NSC in meeting its high affordable housing target given that other site such as green belt sites are unlikely to be able to deliver the required amount of affordable housing due to viability issues. Whilst Policy DP43 touches upon rural exception schemes for 100% affordable housing, we consider that the policy should go further and make specific allocations for 100% affordable developments which are of a larger scale than a rural exception site given that these sites exist. Given the challenges in relation to achieving the affordable housing target, we consider that it would be beneficial to provide a stand-alone section of the policy for 100% affordable housing schemes, which allocates sites for 100% affordable housing. This would provide greater clarity and certainty to affordable housing developers and provide NSC with a different source of affordable housing. 1 In order to provide greater clarity, we request that the affordable housing target be included within Policy DP43. 2 We request that NSC provide a specific policy for 100% affordable schemes which includes allocations. Lichfields consider that this will aid in meeting the affordable housing need. Without the above we consider that the plan is unsound because it is not (justified (36.b) or effective (36.c)) as there is no effective strategy to deliver the affordable housing target and the target has is not crystallised within the Policy.	In order to provide greater clarity, we request that the affordable housing target be included within Policy DP43. We request that NSC provide a specific policy for 100% affordable schemes which includes allocations. Lichfields consider that this will aid in meeting the affordable housing need. 									HBF information suggests that complying with the current new part L is costing £3500 per plot. The Future Homes Standard Part L in 2025 is anticipated to cost up to £7500+ per plot. There will also be the addition of the Building Safety Levy that is coming in pay for cladding. Other factors that need to be taken into account include increasing costs of materials and labour due to inflation and the costs of mandatory BNG, which are still emerging as the off-site market is yet to be established. HBF members are reporting costs of £20-30k per off-site BNG unit. Although the initial price of statutory credits is now known this national fallback option has been deliberately highly priced to discourage their use. Whilst this intention is understandable, at present the lack of functioning local markets for off-site credits causes viability problems because HBF members experience to date suggests that any scheme that needed to rely on statutory credits would become unviable. There is also a need to consider the costs of delivering the policy of all housing meeting M4(2) and the requirements for accessible and adaptable dwellings policy which references M4(3). A distinction needs to be made between M4(3)a wheelchair adaptable housing and M4(3)b wheelchair accessible housing. The whole plan viability assessment should be explicit in whether it was applying M4(3)a or M4(3)b but as the latter can only be sought on affordable housing where the Council has nominations and can be ten times more expensive than the former. Whole Plan viability testing is an important part of the plan-making process. However, as noted in PPG (ID: 10-003-20180724) assessing the viability of plans does not require individual testing of every site or assurance that individual sites are viable, and therefore flexibility in the amount of affordable housing sought may be needed to deal with site specific issues. As the Plan itself acknowledges “the Dixon Searle viability study (2023) illustrated how challenging affordable housing delivery is in North Somerset.” The failure to include the costs outlines above is evidence that viability will be more challenging that reflected in the current whole Plan viability study. At a very basic level viability can be improved by reducing costs or increasing values. Sometimes, therefore changing the type of affordable housing provided can help to improve viability of a specific site, and the plan should recognise this. In this situation there may be a “deviation” from the detail of the policy- in this example a change of the percentages of different types of affordable housing provided, but the headline figure of how much affordable housing is provided would remain the same. This is another reason why flexibility within the Affordable Housing policy is needed.		
31088129	Bloor Homes South West	Turley		No	• Positively prepared • Justified • Effective • Consistent with national policy		No	It is considered the viability of providing 50% AH on GB sites should be tested and evidenced as part of the emerging local plan. 63052097	Stephanie Fowler	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	This policy is unsound as it is not effective and unjustified. The Council published an addendum to the viability report, which forms part of the Local Plan evidence base, in October 2025. The report concludes in respect of the Nailsea and Backwell Strategic Location that “With 35% affordable housing tested, it is only the upper end of the typical values range that indicates relatively viable scope with viability indicated to become more marginal to poor when relying on values towards the mid to lower range.” The 2023 viability report acknowledges that affordable housing on greenfield sites could be achievable. However, as supported by the above findings, it also notes that policy should allow a degree of flexibility to assess viability on a case-by-case basis. The current policy wording does not provide for this. While the importance of affordable housing in major developments to deliver a sustainable mix of homes is recognised, the proposed policy conflicts with national guidance, is ineffective because it risks undermining overall housing delivery and reducing the number of affordable homes provided, and does not reflect the principles of positive planning.	Modification: The policy needs to be adjusted to accurately reflect what has been produced in the viability report.		R001v3_NSLP_Reg19_Fowler.Dec25.pdf

	north of Banwell Road)	Jones)			• prepared • Justified • Effective • Consistent with national policy			development, ensuring affordability in perpetuity and integration with market housing. It states that to foster balanced and mixed communities, affordable housing will be required on all developments above a certain size. In terms of the Land north of Banwell Road, Elborough/Locking the policy states that 30% of all housing should be for affordable housing purposes. This need is to be met through a mix of social rent (75%) and shared ownership (25%). This approach aligns with national planning policy, which requires local authorities to make sufficient provision for affordable housing in local plans, explaining that plans should set out how developers should contribute to providing such housing, including the amount and types of affordable housing required. These affordable housing contributions should be based on evidenced need and not undermine the deliverability of development. In regard to the last point, it is noted that the policy is supported by local evidence from North Somerset Local Housing Needs Assessment (ORS 2025). In addition, the policy states that if these requirements cannot be met this will need to be fully justified with clear evidence set out in a viability assessment which must demonstrate that all grant funding sources have been fully explored. This is important because in order to achieve the level of affordable housing requirement set out in the policy, it is critical that it can be demonstrated that this level of provision is viable when considered alongside all other contributions sought through the Local Plan. It is essential for the overall soundness of the plan that the proposed affordable housing quantum is subject to robust viability assessment. It should have regard to all other policy requirements for development and ensure that the total policy 'ask' is clearly assessed as part of a robust viability model to inform the plan. It is essential that affordable housing requirement figure is robustly tested prior to Examination in order for the policy to be found sound. At present, there is limited certainty that this level of affordable housing is deliverable, noting that the infrastructure requirements associated with some of the proposed allocations (which are in some instances very extensive) do not appear to have been costed. Evidently, there is a requirement for further assessment, as it would seem likely that the percentage of affordable housing identified is unlikely to be viable at least in association with those proposed allocations where infrastructure is a requisite need. Recommendations Policy DP43, as drafted, is unsound as this will likely undermine the deliverability of the Local Plan, which, in turn, could compromise the ability to deliver the overall housing requirement. This is because it may not be may not be deliverable when considered alongside other policy requirements and infrastructure obligations. This is not consistent with national guidance and does not represent positive planning. The policy should be modified to seek a level of affordable housing which is viable. This in turn is likely to require the delivery of a greater number of homes than identified above to meet affordable housing needs. Mac Mic objects to this policy.	overall housing requirement. This is because it may not be may not be deliverable when considered alongside other policy requirements and infrastructure obligations. This is not consistent with national guidance and does not represent positive planning. The policy should be modified to seek a level of affordable housing which is viable. This in turn is likely to require the delivery of a greater number of homes than identified above to meet affordable housing needs.		
61070593	Chris Hopcraft			No	• Effective	Yes	Yes	There is little or no regards given to Social or shared ownership housing. Affordable housing for a big portion of the local population is not a small discount on expensive housing developments, as they do not have the ability to save for deposits while paying private rents. Social housing estates can work very well, as both my wife and myself grew up in them in the Midlands. These were not sink estates where people were dumped, buy communities of people who respected the opportunity to have a decent home at an affordable price. We also started our married life in a shared ownership property, it gave us the step up to ownership - it worked. The future is quite bleak for the growing number of people growing older, who will have a low level of pension and still having to pay high private rents. I see nothing that addresses this in the plans.	There needs to be much more provision of social housing and proportion of shared ownership in the plans in all North Somerset.		
51732129	Gleeson Land	tor&co (Jacqueline Mulliner)	Gleeson Land	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The policy notes that "the affordable housing mix should be 75% social rented and 25% shared ownership." This is considered to be extremely prescriptive and doesn't not allow sufficient flexibility to take into account site viability and specific local need. Policy DP43 also acknowledges that the precise size and type of affordable housing to be provided on individual sites will be determined through negotiation, guided by available information. This approach, which notes that provision will be guided by the Local Housing Needs Assessment, data from the housing needs register and local housing needs surveys, is supported. It allows flexibility of approach to meet the needs of the particular site, location and timing demands. Enabling the ability to maximise affordable housing delivery whilst taking into account other potential influences at the time.	Policy DP43 should be amended to allow flexibility in relation to the affordable housing mix, as it does with regards to the size and type		
51207009	Barratt Bristol	Arwel Evans - Lichfields	Barratt Bristol	No	• Positively prepared • Justified • Effective	Yes	No	Paragraph 67 of the NPPF sets out that development of sites in the green belt will need to adhere to golden rules as set out in paragraph 157 of the NPPF. This requires at least 50% of the housing to be affordable, unless this would make the development of these sites unviable (when tested in accordance with national planning practice guidance on viability). A review of the Additional Sites Viability Addendum for North Somerset Local Plan 2041 prepared by Dixton Searle shows (Table 7) that at 50% affordable housing development schemes in Easton in Gordano are unlikely to be viable, taking account of all the costs and policy requirements: "Given the relatively positive results [25% and 35%], further testing was undertaken at 50% affordable housing as requested by NSC. The results indicate poor viability across the values range thought to be typically relevant for the area (in terms of likely new build values) suggesting that a target of 50% affordable housing may be challenging unless higher values can be evidenced. This is notwithstanding our comments regarding the Government's 'Golden Rules' discussed above." Dixton Searle also notes that development is only marginally viable at 35% affordable housing, highlighting a fundamental concern in the delivery of these sites in line with the Council's policy aspirations to provide education and transport improvements.	In accordance with the NPPF, the policy approach to affordable housing in the green belt should be evidence based to ensure the delivery of sustainable development in North Somerset as is required as part of Policy SP1, SP3 and SP8. This could mean an affordable housing requirement that is higher than 30% but at a level that can be absorbed by the sites without making them unviable.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Barratt therefore objects to this policy because it is clear through independent viability testing (as is advocated by policy 67 of the NPPF) that all development requiring 50% affordable housing in Easton in Gordano would be unequivocally unviable. This policy is therefore unsound and would fail the 'effective' test of soundness because necessary housing sites to meet the objectively assessed need would not be deliverable over the plan period. Easton-in-Gordano is a key strategic growth area for North Somerset and therefore the inclusion of an unsound policy risks the delivery of this strategic development area which could have wider repercussions on the soundness of the whole plan. This issue is not just specific to Easton-in-Gordano, as the Viability Assessment also notes that 'South West Bristol' is also unviable at 50% and for Nailsea/Backwell the viability assessment hasn't even tested 50% even though 889 dwellings in Nailsea/Backwell is in the green belt and would need to adhere to the golden rules. In accordance with the NPPF, the policy approach to affordable housing in the green belt should be evidence based to ensure the delivery of sustainable development in North Somerset as is required as part of Policy SP1, SP3 and SP8. This could mean an affordable housing requirement that is higher than 30% but at a level that can be absorbed by the sites without making them unviable. Other elements of the golden rules could still be secured. Sites released from green belts total 6,685 dwellings (28.2% of the total supply). Therefore, the non-delivery of these sites on viability grounds, as demonstrated in the evidence base would be highly problematic for the soundness of the Local Plan. Policy SP7 is unsound as the policy conflicts with the Local Plan's evidence base which notes that 50% affordable housing is unviable for development in Easton-in-Gordano. The policy is therefore not effective (test of soundness 36.c) or justified (test of soundness 36.b). In addition, if these sites are undeliverable then that raises a real question as to the deliverability of the plan which means that it is not positively prepared (test of soundness 36.a) as the strategy would not provide for the area's objectively assessed needs.			
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	• Positively prepared • Consistent with national policy	Yes	No	The affordable housing requirements are noted – and it is welcomes that the policy references viability tests where policy compliance may not be achievable. Clearly to meet the need that is identified, the Council should focus on delivering homes – by assisting applicants to achieve speedy decisions. The policy requirements for affordable housing including within the Green Belt should be based upon robust evidence and also reflect Government Policy. The affordable mix of 75% social rented and 25% shared ownership is reasonable - however, the Council should make reference to the types of affordable provision such as first homes, affordable rent and other forms of equity share - and reflect those options in the text of the plan.	The affordable mix of 75% social rented and 25% shared ownership is reasonable - however, the Council should make reference to the types of affordable provision such as first homes, affordable rent and other forms of equity share - and recognise and reflect those options in the text of the plan.		
63026465	South West Housing Association Planning Consortium		South West Housing Association Planning Consortium						Draft Policy DP43 states that affordable housing will be required on developments of 10 dwellings or more or with a site area of 0.5 hectares or more. This is appropriate and in accordance with the NPPF (2024). The SWHAPC welcomes the addition to the draft policy that developments will be expected to provide 50% affordable housing on land released from the Green Belt as set out in Policy SP7, and other Green Belt sites, 30% on greenfield sites and 20% on previously developed land, all at nil public subsidy. The SWHAPC is pleased that the draft policy states that the precise size and type of affordable housing to be provided on individual sites will be determined through negotiation, guided by the 2025 LHNA data from the housing needs register and local housing needs surveys where these are robustly evidenced. Draft Policy DP43 adds that the affordable housing mix should be 75% social rented and 25% shared ownership. Further clarification is sought on the 75% social rent aspect and how this applies to both affordable rented and social rented housing. As currently worded, there is concern that this proposed tenure split does not account for the full range of affordable tenures set out an Annex 2 of the NPPF and therefore that such a tenure split would not provide for the full range of households in need in North Somerset. We recommend that the Council should use this as a starting point for discussions regarding tenure split but that negotiations can take place on a site-by-site basis in line with evidence of up-to-date local need. The justification to the draft policy sets out on page 212 that the North Somerset 2025 LHNA considers two scenarios, with overall affordable housing need over the plan period ranging from 6,646 to 10,577 dwellings (28%–45% of the total housing requirement). Given this high level of need, we are encouraged that the Local Plan will seek to maximise delivery taking account of the constrained nature of North Somerset and viability evidence. The draft document notes that the detailed implementation of the policy will be outlined in a new Affordable Housing SPD, which the SWHAPC welcomes.		1118-35.M5 Local Plan 2041 Pre-submission plan (Reg 19).pdf
51242657	Rubix Strategic Limited	Arwel Evans - Lichfields	Rubix Strategic Limited	No	• Justified • Effective	Yes	No	Paragraph 67 of the NPPF sets out that development of sites in the green belt will need to adhere to golden rules as set out in paragraph 157 of the NPPF. 								The Additional Sites Viability Addendum for North Somerset Local Plan 2041 prepared by Dixon Searle states that “the results suggest that an affordable housing quantum of no more than 30% is likely to be viable at the Nailsea and Backwell strategic location”. Given this, the requirement to provide 50% affordable housing on each site is unequivocally unviable, especially considering the other costly requirements outlined in policy LP3. Rubix therefore object to the requirement to provide 50% affordable housing as stated in draft policy LP3 and object to policy DP43 as it is clear through independent viability testing (as is allowed by policy 67 of the NPPF) that an affordable housing requirement above 30% is likely to be unviable. This policy therefore is unsound and would fail the effective test of soundness because housing sites required to deliver 50% affordable housing would be undeliverable over the plan period. Nailsea and Backwell is a key strategic growth area for North Somerset and therefore the inclusion of an unsound policy risks the delivery of the strategic growth area, which could have wider repercussions on the soundness of the plan as a whole. The Additional Sites Viability Addendum for North Somerset Local Plan suggests that the requirement to provide 50% affordable housing in both the Strategic Locations Easton in Gordano and South West Bristol are also unviable. Again, highlighting that policy DP43 is unsound as these housing sites, required to deliver 50% affordable housing will be unfeasible and undeliverable with this requirement. We consider that the policy approach to affordable housing should be evidence based to ensure the sustainable development of Nailsea and Backwell as is required as part of Policy SP1, SP3 and SP8. This could mean an affordable housing requirement that is higher than 30% but at a level that can be absorbed by the sites without making them unviable. Other elements of the golden rules could still be secured. If the Council are not willing to set a lower percentage, then Policy LP3 should be revised as follows to make it clear that the 50% is subject to viability testing as per paragraph 67 of the NPPF : “Delivery of 50% affordable housing on each site in accordance with Policy DP43: Affordable housing (including rural exception sites) subject to viability.” Policy DP43 should be amended as follows: “Developments will be expected to provide 50% affordable housing on land released from the Green Belt as set out in Policy SP7, and other Green Belt sites (subject to viability as per paragraph 67 of the NPPF), 30% on greenfield sites and 20% on previously developed land, all at nil public subsidy. If these requirements cannot be met this will need to be fully justified with clear evidence set out in a viability assessment which must demonstrate that all grant funding sources have been fully explored.”	higher than 30% but at a level that can be absorbed by the sites without making them unviable. Other elements of the golden rules could still be secured. If the Council are not willing to set a lower percentage, then Policy LP3 should be revised as follows to make it clear that the 50% is subject to viability testing as per paragraph 67 of the NPPF : “Delivery of 50% affordable housing on each site in accordance with Policy DP43: Affordable housing (including rural exception sites) subject to viability.” Policy DP43 should be amended as follows: “Developments will be expected to provide 50% affordable housing on land released from the Green Belt as set out in Policy SP7, and other Green Belt sites (subject to viability as per paragraph 67 of the NPPF), 30% on greenfield sites and 20% on previously developed land, all at nil public subsidy. If these requirements cannot be met this will need to be fully justified with clear evidence set out in a viability assessment which must demonstrate that all grant funding sources have been fully explored.”		
63107361	Gladman Developments		Gladman Developments Ltd	Yes				Policy DP43 determines that all developments of 10 dwellings or more (or on sites of 0.5 hectares or above), are expected to provide at least 30% affordable housing on greenfield sites and 20% on previously developed land. Gladman support the reduction from the Council’s previous position of 38.5% on greenfield sites which wasn’t based on any robust evidence or the latest Local Housing Needs Assessment (2025). Gladman note that the proposed affordable housing mix is now 75% social rented and 25% shared ownership. Gladman support that the Council have adjusted this to align with the most up to date evidence but consider that the policy itself must be worded so that this level of flexibility continues across the course of the plan period and the tenure splits can be adjusted according to changing circumstances. Fundamentally, the provision of affordable housing requires the delivery of market housing. Therefore, to ensure that the necessary level of affordable housing is provided in North Somerset, which is already an unaffordable place to live, the Council must endeavour to meet their housing requirement in full. 62943009	Homes England	Avison Young (Peter Stockall)	Homes England	No	• Effective	Unsure	Unsure	Policy DP43 states that, “30% affordable housing on greenfield sites and 20% on previously developed land, all at nil public subsidy. If these requirements cannot be met this will need to be fully justified with clear evidence set out in a viability assessment which must demonstrate that all grant funding sources have been fully explored.” Homes England welcomes the recognition within this policy for a reduced affordable housing target on sites such as Locking Parklands, which is previously developed land (20%). However, we understand the Local Plan evidence base (2023 Dixon Searle Viability summarised on p212) suggests that on sites such as Locking Parklands (PDL in Outer Weston) that only 10% is viable. By way of context, due to viability considerations, the existing Locking Parklands Section 106 agreement requires a minimum of 13% affordable housing (and up to a maximum of 30% with public subsidy) thereby demonstrating the extent of potential shortfall with such a policy requirement on strategic sites with major Section 106 infrastructure costs (in addition to CIL). We therefore seek further justification for the 20% policy target without grant on the basis of being contrary to the evidence base. Homes England however, at Locking Parklands and elsewhere is the responsible funding body	No modification to the policy is proposed.

								for Affordable Housing. We therefore have a role to play in the provision of grant funding to support viability and future delivery through a range of possible funding options across on this site and across the plan area.			
62846721	Cleeve Parish Council		Cleeve Parish Council					We do not consider the North Somerset Local Plan 2041: Pre-Submission Plan to be sound. Based on the detailed representations of Cleeve Parish Council, we believe the Plan fails three of the tests of soundness set out in NPPF paragraph 36: Positively Prepared, Justified, and Effective. 1. Positively Prepared The Plan does not adequately address the needs of young people or newly forming households, nor does it ensure that new development will be properly supported by essential infrastructure. The repeated use of discretionary language ("will be expected", "should have regard to") leaves critical requirements—such as drainage, healthcare capacity, active travel connections, affordable housing percentages, biodiversity measures, renewable energy deployment, and sustainable design—insufficiently guaranteed. The Plan also fails to provide a clear and sustainable policy position on future growth at Bristol Airport, or on how Green Belt releases will be compensated or justified. As a result, the Plan does not convincingly meet the district's needs in a sustainable and deliverable way. 2. Justified The policy choices taken in the Plan do not always represent the most appropriate strategy when tested against reasonable alternatives. The evidence base appears inadequate or incomplete in several areas, including: (a) the justification for Green Belt releases at Bristol Airport; (b) the robustness of climate-adaptation measures given the known risks of flooding, sea level rise, extreme heat, and pressure on water resources; (c) the lack of evidence demonstrating that non-mandatory design guidance will achieve sustainable outcomes; (d) the omission of low-rise flats in existing towns as a viable and necessary option for delivering affordable housing for young people; and (e) insufficient assessment of the landscape, safety, environmental and carbon impacts of airport-related growth, including the absence of a cumulative emissions assessment. In each case, reasonable and more sustainable policy alternatives have not been adequately explored. 3. Effective The Plan's delivery mechanisms are weak and do not provide confidence that its policies will be realised. Critical infrastructure (roads, drainage, healthcare, active travel routes, mass transit provision and energy resilience) is not tied to development in a sufficiently enforceable manner. Policies that rely on voluntary interpretation or "expectations" are unlikely to secure required outcomes, particularly in relation to affordable housing percentages, design quality, biodiversity net gain, native woodland expansion, protection of commons, and the safeguarding of Best and Most Versatile agricultural land. Policies concerning Bristol Airport do not demonstrate effective cross-boundary working or credible mitigation strategies, while the approach to flood-risk management does not provide sufficient assurance that developments requiring the Exception Test would be safe, sustainable, or financially deliverable. As drafted, there is insufficient certainty that the Plan can be implemented as intended.	Policy DP43: Affordable housing: Cleeve Parish Council welcomes the setting of percentage figures for affordable housing within each development category. However, in the current text the words "will be expected" drastically weakens the likelihood that these percentages will be achieved. Every developer will argue that their plan is unique and will press for an exception in their case. We propose that replacing 'expected' with 'required' makes it clear to developers that these proportions are mandatory.		Submission on behalf of Cleeve Parish Council in respect of Pre.docx
62471329	Environment Agency		Environment Agency						There is no reference to sequential approach and/or location of this type of housing.		EA Response - NSC Reg 19.pdf
58562753	C Wheeler			No	• Justified	Unsure	Unsure	I would like to think that housing will be provided for those in most need. Unfortunately I am not confident that this will be the case. Most developments that I have seen are for people on high incomes and the developments are driven my profits for the developers who rarely fulfil the community benefit requirements. Lip service seems to be generally paid to affordable housing provision.			
63070401	Emilia Leung			No	• Effective	No	Unsure	The Proposal is overly reliant on inflated national targets and infrastructure that cannot be delivered – whilst at the same time, ignoring local constraints. The Proposal is also inconsistent with national policy. Green Belt boundaries should only be altered in exceptional circumstances – and the review must show no "clear evidence that doing so would fundamentally undermine the purposes…of the remaining Green Belt".			

Policy DP44: Gypsies, Travellers and Travelling Showpeople.

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
63005121	Taylor Wimpey (Woodspring)	Nick Matthews (Savills)	Taylor Wimpey	No	• Justified	Yes	Yes	Summary of Representation - Taylor Wimpey objects to Policy DP44's requirement for 18 on-site pitches for Gypsies, Travellers, and Travelling Showpeople at the Woodspring Strategic Allocation, on the basis this is not justified. - Alternative sites put forward through the 'Call for Sites' which are closer to where the need arises were dismissed without sound reason. - The Local Plan should allocate additional sites put forward through the 'Call for Sites' and remove the Woodspring on-site provision requirement. This representation has been submitted by Savills on behalf of Taylor Wimpey. Taylor Wimpey has significant land interests in North Somerset including a majority control of the land proposed for release of land from the Green Belt and allocation as a Strategic Location at Woodspring. Whilst Taylor Wimpey support the principle of the allocation, there are policies of the Local Plan which are not supported and not considered to be sound. One such policy is DP44. In our representation to Policy LP2 we explain why we do not consider that the distribution of the Gypsies, Travellers and Travelling Showpeople (GTTS) pitch provision proposed for North Somerset is sound. Our principal objection is that the requirement for 18 pitches on-site is not justified and that the need is better met close to existing sites on alternative land that has been dismissed without sound justification. In so doing a detailed critique of the evidence base including the Gypsies, Travellers and Travelling Show People Background Paper (October 2025) (GTTSBP) and 'Call for Sites' (2023) process is provided* (see attached document LP2). This leads to the conclusion that the authority appears to have included a requirement for the two large strategic locations to incorporate significant gypsy and traveller pitch provision on site without any regard to the appropriateness of the locations or whether they will meet the identified need. And so doing, it has disregarded land opportunities put forward through the call for sites process for unjustified and spurious reasons. The evidence presented in the GTTSBP is quite clear about the location of the need and demonstrates that deliverable sites have been put forward in the locations where the need exists. Rather than shoehorn the provision of gypsy and	Proposed Revised Policy Wording Specific changes are not proposed to this policy as we consider that the further assessment work is required by the Council to evaluation and allocate the most suitable. The changes required in order to make the policy sound are: • the allocation of additional sites put forward through the 'Call for Sites' to meet the identified need for GTTS pitch provision; • the deletion or adaptation of the third paragraph to remove reference to the provision of sites as part of the delivery within the Woodspring Strategic Location.		DP44.pdf LP2.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								traveller accommodation into a wider strategic allocation, the alternative locations put forward for this use should be allocated to meet the need. We do not repeat this case in full here but it is necessary for consistency to also propose revised wording for Policy DP44 and Schedule 8 of the Local Plan Accordingly. Proposed Revised Policy Wording Specific changes are not proposed to this policy as we consider that the further assessment work is required by the Council to evaluation and allocate the most suitable. The changes required in order to make the policy sound are: • the allocation of additional sites put forward through the 'Call for Sites' to meet the identified need for GTTS pitch provision; • the deletion or adaptation of the third paragraph to remove reference to the provision of sites as part of the delivery within the Woodspring Strategic Location. *critique of the evidence base including the Gypsies, Travellers and Travelling Show People Background Paper (October 2025) (GTTSBP) and 'Call for Sites' (2023) is provided below - from paragraphs 85-97 in attached document LP2 (see attached document for emphasis added): • The policy requires the provision of a minimum of 18 gypsy and traveller pitches within the site or their provision offsite in a form which is financially supported by the development. • The evidence base which purports to support this requirement is contained in the Gypsies, Travellers and Travelling Show People Background Paper (October 2025) (GTTSBP). This Paper explains how the level of need has been calculated and the decisions which have been taken in determining how this need will be accommodated. • Our principal objections are twofold: - First, contrary to the evidence of the GTTSBP, there simply seems to be an assumption that the proposed strategic allocations at Wolvershill and Woodspring are appropriate and desirable locations for gypsy and traveller pitches; and - Second, a number of the site options put forward by landowners to accommodate that need and which are well located according to the GTTSBP have been dismissed for no sound reason. Whether Woodspring is a suitable location for Gypsy and traveller accommodation: The GTTSBP states very clearly at paragraph 4.5 that: - "The provision of gypsy and traveller sites should be in locations which are going to meet the identified need. A large proportion of current and future need arises from the existing Moreland Park site located off the A370 between Congresbury and Hewish. The owner of this site, through the pitch delivery assessment, has indicated that they would be able to expand the existing site onto land to the north to accommodate some of the need arising from the existing site. Additionally, the owners of the existing site at Heathfield Park (which is adjacent to Moreland Park) indicated that they could accommodate the need arriving from this site by expanding to the west." [emphasis added] • The advice in the GTTSBP regarding the location of future pitches is unambiguous and yet it appears to have been disregarded in the emerging policies of the Local Plan. •The existing sites at Heathfield Park and Moreland Park are some distance from the edge of Bristol and the strategic allocation at Woodspring. Furthermore, since the existing sites are where the need arises, it appears to make eminent sense to expand these sites in order to meet future need rather than identify an entirely new and unconnected location for gypsy and traveller pitch provision. Alternative Locations: • Appendix 2 of the GTTSBP contains a schedule which assesses the proposed sites put forward for gypsy and traveller accommodation through the 2023 'call for sites' process. These are sites on which the landowners are proactively seeking to secure an allocation for new pitches to meet the identified need and which it is reasonable to assume are therefore deliverable should an allocation be forthcoming. • The reasons given in the assessment for dismissing a number of those sites put forward are not sound and robust. For example, the site referred to as 'Land adjacent to Heathfield Park, Hewish' is adjacent to the existing Moorland Park site and therefore in precisely the most appropriate location to meet need according to the GTTSBP, however, it has been dismissed on the basis that the site is "too large" to be considered suitable. Even if it was reasonable conclude that a site was "too large", then there is no justification offered for not proposing the allocation of part of the site as opposed to the whole area put forward. • Notwithstanding, part of this land was the subject of a recent planning application (24/P/0143/FUL) for 10 pitches. Whilst the application was refused by the planning committee, this was contrary to the advice of officers who had recommended approval. The application material submitted demonstrates that at least part of this site is therefore suitable for the intended use. • A further site referred to as Badgers Path Stables, Currells Lane, Felton was promoted for 27 pitches and again the assessment of the site concluded that this was "too large" to be considered suitable. Once again, no consideration has been given to whether a part of the site would be appropriate, if indeed 27 pitches is inherently objectionable simply due to its scale. • In addition to the sites assessed, there has been a further planning application submitted for a site known as 'Land Opposite and to the East of the Full Quant, off Bristol Road, Hewish'. This is not one of the sites which was put forward through the call for sites process but bearing in mind the relatively recent application it would have made sense to incorporate it into the assessment. Whilst the application was rejected by the Council, this was again contrary to the advice of officers who had recommended that the application be approved. Conclusion • In conclusion, the authority appears to have included a requirement for the two large strategic locations to incorporate significant gypsy and traveller pitch provision on site without any regard to the appropriateness of the locations or whether they will meet the identified need. And so doing, it has disregarded land opportunities put forward through the call for sites process for unjustified and spurious reasons.

								• The evidence presented in the GTTSBP is quite clear about the location of the need and demonstrates that deliverable sites have been put forward in the locations where the need exists. Rather than shoehorn the provision of gypsy and traveller accommodation into a wider strategic allocation, the alternative locations put forward for this use should be allocated to meet the need.			
51524513	Bellway Homes Ltd	tor&co	Bellway Homes Ltd	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy			Draft Policy DP44 (Gypsies, Travellers and Travelling Showpeople) establishes allocations for Gypsy, Traveller and Travelling Showpeople (GTTS) sites (via Schedule 8), as well as development management requirements for applications including their provision. In addition, the policy wording notably states that need will also be met through provision on the strategic sites at Wolvershill (Draft Policy LP1) and Woodspring (Draft Policy LP2) – equating to a further 36 pitches. The allocation wording for Draft Policy LP1 includes a requirement to provide 18 pitches. At this stage, Bellway must object to inclusion of this requirement, as there is presently no clarity on where / if delivery of GTTP sites is possible within the Wolvershill allocation. Bellway notes the proposed Wolvershill Masterplan Framework SPD which is being prepared for the proposed strategic allocation and is referred to within Draft Policy LP1. Bellway reserve the right to comment on its detail as soon as a draft version can be shared –which should include justifiable evidence that this is the only or best location for G&T sites and/or mechanisms for delivery via financial contribution. Bellway understand the document is due to be considered by Cabinet in February 2026 and as a key stakeholder, would welcome any engagement with the Council prior to its publication.	Provision of evidence and justification for the allocation of 18 GTTS pitches for the Wolvershill allocation. Bellway reserve the right to comment on its detail as soon as a draft version can be shared – which should include justifiable evidence that this is the only or best location for G&T sites and/or mechanisms for delivery via financial contribution. 21449761	Bloor Homes South West (Wolvershill)	Turley		No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy		No	Summary of representation (see attached full document) There is a lack of clarity provided by Policy DP44 (and Policy LP1) in respect of the type and scale of pitch and/or plot provision that is expected to be met overall within the plan period, and specifically the Wolvershill strategic location. The policy is not justified and will not be effective, it is therefore not sound. The inclusion of a requirement for pitch/plot provision within the Wolvershill strategic location allocation is not based on any specific evidence of availability of suitability, and may have implications for both the effective delivery of the wider strategic location development, and for suitable sites that meet the specific needs that arise within the local area. Prior to any identification of a requirement for specific pitch/plot provision as part of the Wolvershill strategic location, the Council should undertake (and evidence) a thorough review of available Council owned assets that may be available to meet the need for additional pitches and plots, as these sites are likely to be the most deliverable options within the local area for this provision. The Council should also review and evidence why sites available as part of the Council's brownfield register are not also available and suitable. As drafted Policy DP44 (and the element of Policy LP1 relating to new sites for Gypsy and Traveller pitches) is not justified and is not sound.	See attached and above.		Reps on Behalf of Bloor Homes to NS LP 2041 Reg 19 Consultation (Wolvershill) merged.pdf
51710305	Wain Estates (Wolvershill)	Tetlow King Planning	Wain Estates	No	‣ Effective			Draft Policy 44 states that according to the latest Gypsy and Traveller Assessment there is an identified need for an additional 129 pitches in the district. It then refers to schedule 8 which identifies sites. It goes on to state "as well as provision of pitches as part of the early phases of development of the Wolvershill and Woodspring Strategic Locations." For reasons already set out in our response to draft Policy LP1 Wain Estates objects to the allocation of pitches at the Wolvershill allocation and suggest the demand is met through contributions with the Council leading on identifying and delivering the pitches. It is therefore suggested that references to pitches being delivered at Wolvershill are deleted.	Wain Estates objects to the allocation of pitches at the Wolvershill allocation and suggest the demand is met through contributions with the Council leading on identifying and delivering the pitches. It is therefore suggested that references to pitches being delivered at Wolvershill are deleted.		0707-06.M23 Wain Estates NS Pre Submission Reg 19 Local Plan 12.12.25 with Appendices.pdf
30301601	Ainscough Strategic Land	Chris Price	Ainscough Strategic Land	No	‣ Justified			ASL objects to Policy DP44, which states that longer term need for sites for gypsies, travellers and travelling show people (GTTS) will be met through the provision of site(s) as part of the Wolvershill and Woodspring Strategic Locations or through the provision of land off-site. As set out previously in these representations, there is a lack of evidence to demonstrate that the Wolvershill Strategic Location is the best or most appropriate available option to meet the longer terms district-wide needs for GTTS provision in North Somerset. The key evidence base document relating to Policy DP44, 'Gypsy, Traveller and Travelling Showpeople Background Paper (October 2025) and Gypsy and traveller accommodation assessment (October 2025), includes an assessment of sites to meet the short- and medium-term need, but no assessment of the most suitable sites in the longer term, including Wolvershill. It is unjustified for this requirement to only fall to the Strategic Allocations. It is critical that all sites are assessed and considered, including Council owned land and assets in the first instance as these are inherently the most deliverable options for this form of development. The provision of GTTS pitches to meet 'longer term' need as part of the new community at Wolvershill will present challenges for masterplanning and could impact the future viability and deliverability of the site. As such, ASL requests that this provision is removed from Policy DP44, or the policy wording amended to clarify that Wolvershill is to provide gypsy and travellers pitches only if they are evidenced to be required, either on-site or through financial contributions to support off-site delivery in accordance with policy LP1.	ASL requests that this provision is removed from Policy DP44, or the policy wording amended to clarify that Wolvershill is to provide gypsy and travellers pitches only if they are evidenced to be required, either on-site or through financial contributions to support off-site delivery in accordance with policy LP1.		61683 - NSC Reg 19 Representations December 2025 2-12-25.pdf
32925633	Bath and North East Somerset Council		Bath and North East Somerset Council							The North Somerset Gypsy and Traveller Accommodation Assessment (GTAA) (2025) identified the need for 129 additional residential pitches for Gypsies and Travellers and four additional plots for Travelling Showpeople within North Somerset up to 2041. The GTAA identifies a need for 80 pitches over the first five years of the plan. The plan identifies a supply of deliverable sites sufficient to provide 80 pitches to meet this locally identified need, as such no request has been made of B&NES Council to respond to any unmet need.	North Somerset Local Plan Reg 19 Consultation 2025 FINAL.pdf
62471329	Environment Agency		Environment Agency						Sequential approach to be followed when allocating new sites. Extensions to existing sites within Flood Zone 3 need to be mindful of suitability of increasing flood risk with climate change. NPPF policy objection remains.		

Policy DP45: Residential space standards

51524513	Bellway Homes Ltd	tor&co	Bellway Homes Ltd	No	• Justified • Consistent with national policy			Draft Policy DP45 (Residential space standards) states all new residential development (including residential conversions) should meet the Nationally Described Space Standards (NDSS). Including NDSS as a mandatory requirement will need to be demonstrated and justified with specific evidence that there is a clear need for such a standard across North Somerset, as set out in PPG (Paragraph: 002 Reference ID: 56-002-20160519).	In accordance with PPG, the provision of specific evidence that such a standard is necessary.		20251212 504317 JE - North Somerset Reg 19 (Reps obo Bellway Homes).pdf
51710305	Wain Estates (Wolvershill)	Tetlow King Planning	Wain Estates	No	• Effective			Draft Policy DP45 states that “Planning applications for new residential development (including residential conversions) should meet the Nationally Described Space Standards (NDSS).” A blanket application of the Nationally Described Space Standards (NDSS) across all residential development could undermine the viability of many development schemes. This will potentially result in fewer homes being delivered as optional technical standards have implications for build costs and sales values, with implications in turn for development viability. It is possible that many eligible households in North Somerset may not desire, or require housing that meets the NDSS, as it may result in for example, higher rental and heating costs. We therefore recommend that meeting the NDSS is not made mandatory unless it can be demonstrated that there is a clear need for such a standard in dwellings in North Somerset.	We therefore recommend that meeting the NDSS is not made mandatory unless it can be demonstrated that there is a clear need for such a standard in dwellings in North Somerset.		0707-06.M23 Wain Estates NS Pre Submission Reg 19 Local Plan 12.12.25 with Appendices.pdf
9138657	Home Builders Federation		Home Builders Federation	No	• Justified • Effective • Consistent with national policy				Policy DP45 is not considered to be sound as it is not effective, justified or consistent with national policy The policy requires all new housing to meet Nationally Described Space Standard (NDSS). HBF does not support the introduction of the optional Nationally Described Space Standard though policies in individual Local Plans. If the Council wanted to do this they would need robust justifiable evidence to introduce the NDSS, as any policy which seeks to apply the optional nationally described space standards (NDSS) to all dwellings should only be done in accordance with the NPPF , which states that “policies may also make use of the NDSS where the need for an internal space standard can be justified”. The NPPF requires that all policies should be underpinned by relevant and up to date evidence, which should be adequate, proportionate and focussed tightly on supporting and justifying the policies concerned. The PPG identifies the type of evidence required to introduce such a policy. It states that ‘where a need for internal space standards is identified, local planning authorities should provide justification for requiring internal space policies. Local planning authorities should take account of the following areas:		North Somerset 2nd Reg 19 Dec 25.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 									• Need – evidence should be provided on the size and type of dwellings currently being built in the area, to ensure the impacts of adopting space standards can be properly assessed, for example, to consider any potential impact on meeting demand for starter homes. • Viability – the impact of adopting the space standard should be considered as part of a plan's viability assessment with account taken of the impact of potentially larger dwellings on land supply. Local planning authorities will also need to consider impacts on affordability where a space standard is to be adopted. • Timing – there may need to be a reasonable transitional period following adoption of a new policy on space standards to enable developers to factor the cost of space standards into future land acquisitions'. HBF also remind the Council that there is a direct relationship between unit size, cost per square metre (sqm), selling price per sqm and affordability. The Council's policy approach should recognise that customers have different budgets and aspirations. An inflexible policy approach to NDSS for all new dwellings will impact on affordability and effect customer choice. Well-designed dwellings below NDSS can provided a good, functional home. Smaller dwellings play a valuable role in meeting specific needs for both open market and affordable home ownership housing. An inflexible policy approach imposing NDSS on all housing removes the most affordable homes and denies lower income households from being able to afford homeownership. The introduction of the NDSS for all dwellings may mean customers purchasing larger homes in floorspace but with bedrooms less suited to their housing needs with the unintended consequences of potentially increasing overcrowding and reducing the quality of their living environment. The Council should focus on good design and usable space to ensure that dwellings are fit for purpose rather than focusing on NDSS. HBF considers that if the Government had expected all properties to be built to NDSS that they would have made these standards mandatory not optional. If the proposed requirement for NDSS is carried forward, then the Council should put forward proposals for transitional arrangements. The land deals underpinning residential sites may have been secured prior to any proposed introduction of the NDSS. These sites should be allowed to move through the planning system before any proposed policy requirements are enforced. The NDSS should not be applied to any reserved matters applications or any outline or detailed approval prior to a specified date.

39374913	Tony Harden								Page 218 Policy DP 46 seeks only to require accessible hoses (bungalows) to MP(3) standard where a development includes 10 or more houses. It is to be expected that perhaps 1000 houses will be built on small plots in settlements and villages over the plan period and few of these will be caught by this policy. Please can this policy be extended in someway to give preference that new housing near or with the centre of such villages (such as Wrington) with at grade footways to the local facilities should all be built to (MP3) standard to encourage more sustainable living in such communities for elderly people and thus release of larger properties back into the market for others		comments on Local Plan.pdf
63286689	McCarthy Stone & Churchill Living	The Planning Bureau Ltd						Policy DP46 requires a minimum of 5% of all new dwellings (market and affordable) in developments of 10 or more dwellings will be required to be designed to meet Building Regulations M4(3) standard ('wheelchair user dwellings'), or a higher proportion where there is evidence of local need. Despite the draft plan requiring 5% of older persons housing to be built for M4(3) and a percentage amount of build costs being included in the viability study to cover this, the council should note that any M4(3) requirement needs to be considered on top of M4(2) and would include additional costs for fixtures and fittings, services and controls and additionally room dimensions and layout which include up to 30% more floorspace and corresponding reduction in density, sales values and affordability of such housing'. While some value may be secured for larger units this is unlikely to mitigate the overall loss of units across the proposal as a result of the	We therefore feel that more flexibility should be built into the policy to allow flexibility of the requirement subject to viability.		2025_MS and CL response to North Somerset submission Local Plan reg 19 - Redacted.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								requirement. In this respect, we would highlight appeal decision 3327682 for a site in Penketh, Warrington that specifically addresses M4(3) housing within retirement living apartments. This considers the provision of Wheelchair dwellings in detail in para 19 to 39, with the Inspector concluding that it was not viable for the scheme to deliver a proportion of M4(3) housing. This specifically states at para 37 that: "37. As I consider that it would be most likely to be necessary to increase the size of the six apartments to enable M4(3) compliance, it follows that the cost of such provision may well be greater than the Council's assessment of £30,000, which did not allow for increases in apartment size. This is because an increase in the size of a number of apartments at the development would reduce the total number of apartments provided and hence may affect the development's overall value". We therefore feel that more flexibility should be built into the policy to allow flexibility of the requirement subject to viability.			
31149537	Strongvox Ltd	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	This policy is unsound as it will not be effective. Our client supports the delivery of diverse, high-quality development. However, the policy's reliance on a specific Housing Needs Assessment—a document often updated after the Local Plan is adopted—could restrict proposals coming forward later in the plan period. It is essential that developments delivered in the later stages can respond to market conditions and the evolving needs of the local community. While our client does not object to any individual criterion, the policy must provide sufficient flexibility to ensure it remains applicable to all sites and schemes. The policy also references accessible housing to align with current Building Regulations. However, this requirement is not adequately justified within the Council's evidence base and runs contrary to the presumption that, in terms of mix, development should be informed by local assessment. Greater flexibility should be incorporated, allowing proposals to be assessed on a site-by-site basis, including the removal of the minimum threshold. This policy requires proposals for major developments to include the level of self-build or custom-build housing identified on the register at the time of application, representing a significant increase from current expectations, albeit with no clarity on how much or how this should be facilitated. The expectation for additional self-build units is neither clear, evidenced nor justified, and it does not address any necessary compliance with national policy. No evidence supports the inclusion of this higher standard. Furthermore, the updated viability assessment provides no additional information confirming that this policy would avoid adverse impacts on viability and, the delivery of new residential settlements. Finally, there is no evidence to suggest that this element of the policy will make a meaningful contribution to housing delivery.	Flexibility to be provided to allow for innovation and enable developments to respond to specific site characteristics, but also to ensure that new schemes are compliant with national policy supported by the appropriate evidence. The mandatory requirement for self-build units within major schemes should be deleted.		R002v5 NSLP Reg19 Reps Strongvox Dec25.pdf

Finally, there is no evidence to suggest that this element of the policy will make a meaningful contribution to housing delivery.			
63186689	Vistry Group	Boyer	Vistry Group	Yes					Whilst Vistry support the high-level costs based on the analysis as described in the 'Raising accessibility standards in new homes' consultation document for housing standard M4(2) they remain concerned the overall deliverability of both M4(2) and M4(3) on large development sites is viable. It is considered that NSC need to monitor the costs of delivering both housing standard M4(2) and M4(3) across the industry and plan making period to ensure the viability of large residential schemes is not compromised and remain deliverable when policy is adopted. Furthermore, the self-build requirement needs to relate to the self-build register for the locality of the site specifically, rather than the register for the district.		North Somerset Local Plan Pre-submission Plan - Representation form Policy LP5.pdf
63191617	Various Taylor Wimpey Crest Nicholson Barratt Redrow Vistry Group	Nick Matthews (Savills)		No	• Justified • Effective • Consistent with national policy	Yes	Yes		These representations have been prepared and submitted by Savills on behalf of various clients including Taylor Wimpey, Crest Nicholson, Barratt Redrow, and Vistry Group. This policy encourages the delivery of a wide choice of homes to meet a range of accommodation needs, seeking residential developments to provide a mix of housing tenures, types and sizes appropriate to the site size, characteristics and location. On the face of it, the intention of the policy is reasonable, however, there are a number of specific aspects which are either not practical, implementable or sound. The second paragraph introduces a threshold of '10 or more dwellings', beyond which proposals will be 'expected to demonstrate that they have taken account of local needs evidence to, where appropriate, make provision for …' a mix of types and sizes of homes (including bungalows, downsizing properties, retirement accommodation, and accessible homes) and an appropriate proportion of self-build and custom build plots. This is an extremely low threshold for such a policy and a significant outlier compared with similar adopted policies in other local plans. The reason that such a threshold hasn't been pursued elsewhere is that it is impractical, inappropriate and in some cases would be unworkable for small-scale developments. Applying these requirements to schemes of this size risks creating unnecessary complexity, design constraints, and viability challenges, without delivering meaningful strategic outcomes. In its place, we recommend that Policy DP46 applies only to sites above 100 dwellings. Furthermore, whilst the policy includes a threshold over which the requirements are applicable, other than in respect of 'accessible and adaptable homes', it refers only to qualifying developments 'making provision for' the listed types of housing. There is no precision in the policy indicating the quantum of each type of home that is required to satisfy the requirements. Accessible and Adaptable Homes The supporting text to the policy states that:'The requirement for all homes to be accessible and adaptable reflects the government's intention to incorporate M4(2) standard into building regulations and ensures more choice, particularly for older people, to live independently for longer which reduces the pressure on the care system'. We have a number of concerns with the blanket application of this requirement to all new homes.		Policy DP46 (Type and Mix) for Various (Dec 25).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									First, national planning guidance in the PPG (Paragraph: 007 Reference ID: 56-007-20150327) advises local planning authorities that 'based on their housing needs assessment and other available datasets it will be for local planning authorities to set out how they intend to approach demonstrating the need for Requirement M4(2) (accessible and adaptable dwellings), and/or M4(3) (wheelchair user dwellings), of the Building Regulations.' While we support improving accessibility, the blanket requirement for all homes to meet M4(2) standards remains disproportionate without robust evidence. The Local Plan should set evidence-based targets informed by the Housing Market Assessment and allow flexibility for site-specific constraints as for some sites it would be extremely difficult to provide some or all of the homes as Part M4(2) compliant. Some of these site-specific factors such as vulnerability to flooding and site topography are mentioned specifically in Paragraph: 008 Reference ID: 56-008-20160519 of the PPG. Furthermore, if the Building Regulations are updated after the plan is adopted, this will supersede the planning policy. It is not appropriate however to make policy on the basis of changes the authority consider may take place in a regime outside of planning. Second, building homes to Policy M4(2) compliance can add significant costs. Not only is there specific arrangements for all dwellings which will increase the size of the building floorplates, but other requirements such as a parking bay will also increase land take. 10. In accordance with the PPG, the authority should use the Housing Market Assessment to determine the appropriate target provision for the number of Part M4(2) compliant homes and to insert this into the policy with a degree of flexibility to take into account site specific circumstances. Self-Build & Custom Build The requirement for self-build and custom-build plots remains unclear in terms of quantum and implementation. Hypothetically, if an application is submitted for 10 dwellings and there are 10 individuals registered on the self-build register, does that mean that the Council will seek all of the new homes to be self-build? We assume not, but there is so little certainty in the way in which the policy is to be applied that it could be one interpretation. A clear requirement is needed in the policy which reflects the number of individuals with a genuine interest in self-build as part of a larger housing development. To provide the necessary clarity, the policy should specify a maximum proportion of self build and custom-build plots that will be sought linked to genuine demand on the register, rather than leaving interpretation open-ended. Clear guidance is needed to avoid uncertainty and ensure practical delivery within larger housing developments

								this policy would avoid adverse impacts on viability and, the delivery of new residential settlements. Finally, there is no evidence to suggest that this element of the policy will make a meaningful contribution to housing delivery.			
51524513	Bellway Homes Ltd	tor&co	Bellway Homes Ltd	No	• Justified • Effective • Consistent with national policy			Draft Policy DP46 (Housing type and mix) takes a generally flexible approach to defining housing type and mix, based on evidence from the Local Housing Needs Assessment (September 2025) and the site size, characteristics and location. This approach is generally justified and supported but should be underpinned by sufficient clarifications and guidance to support positive interpretation at development management stage. Accordingly, we consider certain elements could be strengthened/ clarified: • Clarification has not been provided as to whether the requirements should be applied to developments allocated in the plan, including the site allocation at Wolvershill (north of Banwell) under Draft Policy LP1. Indeed, aspects (such as self-build) are not included in the policy wording of Draft Policy LP1. This should be clarified and if included, justified by the evidence base. • Defining the “self-build and custom built plots” requirement should relate to the self-build register in the locality of the site specifically, as well those with a genuine interest in self-build as part of a larger housing development, rather than the register for the district as a whole. inclusion of the above in the supporting text would strengthen the effectiveness of the policy. Accessible and adaptable homes: The policy text includes the following requirement: “All new dwellings will be required to meet Building Regulations M4(2) standard (‘accessible and adaptable dwellings’) except for those dwellings that are designed to M4(3) standard.” The supporting text to the policy states that: “The requirement for all homes to be accessible and adaptable reflects the government’s intention to incorporate M4(2) standard into building regulations and the level of need identified in the LHNA.” National planning guidance in the PPG (Paragraph: 007 Reference ID: 56-007-20150327) advises local planning authorities that “based on their housing needs assessment and other available datasets it will be for local planning authorities to set out how they intend to approach demonstrating the need for Requirement M4(2) (accessible and adaptable dwellings), and/or M4(3) (wheelchair user dwellings), of the Building Regulations.” There is no evidence provided to support the conclusion that 100% of homes should be Part M4(2) compliant in the LHNA. Indeed, the ‘Local Housing Needs Assessment’ (September 2025) concludes (at Paragraph 5.38) that: “Based on the evidence, it would be appropriate for at least 45% of homes on new developments to comply with Requirement M4(2) Accessible and Adaptable Dwellings and 5% to comply with Requirement M4(3) Wheelchair User Dwellings. However, the LPA could consider a higher target to ensure sufficient choice and flexibility for households, but this would need to be tested in the context of economic viability.” The only justification is that this is likely to come through in a change to Building Regulations. As it stands, the policy requirement is therefore inconsistent with the guidance in the PPG and the evidence base in the LHNA. If the Building Regulations are updated after the plan is adopted, this will supersede the planning policy. It is not appropriate however to make policy on the basis of changes the authority consider may take place in a regime outside of planning. Indeed, there is also a possibility that it could be		20251212 504317 JE - North Somerset Reg 19 (Reps obo Bellway Homes).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								delivered through the introduction of National Development Management policies. There is no need to pre-empt changes to the building regs or the introduction of National DM policies and enshrine/ duplicate the requirement in local policy. Whilst the M4(3) requirement is consistent with the LHNA, further clarification is also sought with regards to the evidence for the intended split of M4(3) in terms of M4(3)a (wheelchair adaptable) and M4(3)b (wheelchair accessible). This percentage should be justified with appropriate evidence and viability work. More generally, it would be extremely difficult for some sites to provide some or all of the homes as Part M4(2) or M4(3) compliant. Some of these site-specific factors such as vulnerability to flooding and site topography are mentioned specifically in Paragraph: 008 Reference ID: 56-008-20160519 of the PPG. The policy needs to consider potential exceptional circumstances which can justify appropriately reduced requirements due to these constraints in accordance with the PPG.			
58664673	Catesby Estates	Stantec	Catesby Estates	No	• Justified • Consistent with national policy			Draft Policy DP46 sets out that all new dwellings will be required to meet Building Regulations M4(2), where these are not included within the minimum of 5% all new dwellings (market and affordable) in developments of 10 or more dwellings that would be required to be designed to meet Building Regulations M4(3) compliance. Whilst the principle of providing a range of house types and sizes is accepted, provisions therein are not identified to be justified and may required amendment to be found sound as required by NPPF paragraph 36. It is noted that Policy DP46 wording is intended to align with the Government's proposed changes to the Building Regulations Part M following the consultation document "Raising Accessibility Standards for New Homes". Assuming the Government decides all new homes need to be M4(2) compliant, then this will be determined through updates to the building regs and these will ultimately supersede local policies. There is also a possibility that it could be delivered through the introduction of National Development Management policies, which will not be available ahead of close of consultation. There is no need to pre-empt changes to the building regulations or the introduction of non-statutory National Development Management policies and enshrine/duplicate the requirement in local policy. There is no evidence that all new dwellings need to be M4(2) compliant, and as set out within the Pre-Submission Plan 2041 with reference to the Dixon Searle Study (October 2025) it is acknowledged that there exist challenges that require flexibility where appropriate and accuracy where necessary. The housing type and mix to be set out within the Local Plan requires support from appropriately robust evidence. The North Somerset Local Housing Need Assessment (September 2025) identifies that: "Based on the evidence, it would be appropriate for at least 45% of homes on new developments to comply with Requirement M4(2) Accessible and Adaptable Dwellings and 5% to comply with Requirement M4(3) Wheelchair User Dwellings. […]" Whilst it is acknowledged that the Assessment prepared on behalf of North Somerset Council notes that percentages could be set higher to ensure flexibility, this would not provide sufficient basis for requirements for M4(2) compliance expectations to be more than doubled when evidence suggests 45% would be appropriate to meet assessed needs over the plan-period. 								properties suitable for downsizing or first time buyers, retirement accommodation and accessible homes. In areas where there is an existing over provision of one housing size new developments should limit the number of those size properties proposed in their schemes to ensure a broader mix • across the area; and • An appropriate proportion of self-build and custom build plots based on the local need identified on the council's self-build register…" Whilst we appreciate that paragraph 63 of the NPPF (December 2024) requires "the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies…" which includes older persons housing and people wishing to commission or build their own homes, the Council has provided limited evidence to justify the qualifying site threshold of only 10 or more dwellings for each of these requirements. It is noted that the threshold has reduced significantly from 100 dwellings in the previous draft Preferred Options Local Plan. This creates uncertainty for developers. The Council should ensure that the Local Plan will result in a wide range of older persons housing and self and custom build housing opportunities. In order to provide homes for older people, the Council should allocate sites for older persons housing. Draft Policy DP46 fails to clarify whether the above requirements should be applied to developments on land allocated by draft Policies LP1, LP2, LP3 and LP4, including at our site at Wolvershill (north of Banwell) strategic location. Draft Policy LP1 does not specify that provision should be made at Wolvershill for older persons housing and self and custom build plots and it does not specify the mix of bedrooms. Draft Policy DP46 should clarify this taking into account viability.			
29557665	Paul Borthwick		The access group	No	• Effective	Unsure	No	Your plans will effect people going into the 22nd century, we need better designed buildings then we have seen over the last 30 years and better designed housing estates then we have seen built in North Somerset in the last 30 years. All you plans do is, massively increase the traffic jams, as you don't seem to have planned for small village models if amenities within walking distance, and each housing estate being self sufficient. Where as what we currently have is endless housing estates, we're people without a car are isolated and incapable of being part of a community. Where there is a lack of public transport to help people to integrate better. Currently we see rural housing estates being built with no connection to existing infrastructure or villages. Farm land has been developed into small housing estates, where everyone has to drive to get to the local village, shops, school, and doctors. An example is the housing estate on the Blagden Aquarium, or at Hewish of the main road. We see currently new housing estates like Mead Fields, lacking Disabled Access, with a massive lack of dropped kerbs and tactile crossing points. If a Disabled Person was to live in a property here, they would not be able to go far, out side. The current plan for 5% Accessible Accommodation M(4)3. Until you give property developers an out. By saying it depends on local demand. We know from consultation with the Disabled Access Group, that you do not know how many people need Accessible Accommodation M4(3). I guess you rely on the local social housing list to see how many Disabled People are on this list. However a lot of Disabled People who need a M4(3),are not currently on the housing list, as they are currently living in what they believe is the best available housing, even if it is Inaccessible. 3% of the General Population are Wheelchair Users, and 1% are, Several Visually Impaired. We would add 1% for Disabled People with complex additional needs that means they also need a M4(3) Accommodation. That's 5% of the General Population or 10,000 people living in substandard unsuitable Accommodation for them. The we add the situation were we now have M4(3)a and b. Which sounds like a cope out, so that property developers can build Accessible Accommodation, but them sell them to those who don't need Accessible Accommodation. This is BS	I would want to see a needs analysis for each urban area you are looking to build on. Looking at the current provision for Accessible Accommodation, remembering that Adaptable Accommodation M4(2) is very unlikely to ever be Accessible. How many Disabled People who have requirement for a fully Accessible M4(3)b. Live in these towns and villages. Whether they currently have Accessible Accommodation that is adequate for there needs. And, then increase the demand for Accessible Accommodation by 10%,to future proof developments for more Disabled People and Elderly People who will become Disabled with age.

								More of the same as we have seen over the last 30 years of homing Development is not going to help an Aging population, in North Somerset, an area that is more and more a commuter area, with most people working in Bristol, Avonmouth, North Filton, and soon Bridgewater. We need to think smarter about where we build, what we build and how we transport people to work and to other activities.			
51242689	Latimer Developments Limited	Arwel Evans - Lichfields	Latimer Developments Limited	No	• Effective	Yes	No	Lichfields consider that policy DP46 requires further clarification in relation to the requirements for 100% affordable housing schemes. It would be unfeasible for 100% affordable schemes to make appropriate provision for self-build and custom build plots for example. As a result we consider that the policy is not effective (test of soundness 36.c).	Further clarification required in relation to how this applies to 100% affordable schemes.		
9138657	Home Builders Federation		Home Builders Federation	No	• Justified • Effective • Consistent with national policy			Policy DP46 is not considered to be sound as it is not effective, justified or consistent with national policy In the section entitled 'Accessible and adaptable homes' policy requires a minimum of 5% of affordable dwellings will be required to meet Building Regulations M4(3) standard ('wheelchair user dwellings'), or a higher proportion where there is evidence of local need." There is a need to differentiate between M(4)3a and M4(3) b. The policy also requires all new development to meet M4(2). HBF note that the requirements to meet Part M4(2) will be superseded by changes to residential Building Regulations. The Government response to 'Raising accessibility standards for new homes' states that the Government proposes to mandate the current M4(2) requirement in Building Regulations as a minimum for all new homes, with M4(1) applying in exceptional circumstances. This will be subject to a further consultation on the technical details and will be implemented in due course through the Building Regulations. There is therefore no need for this element of the proposed new policy. HBF also notes that the PPG states: "What accessibility standards can local planning authorities require from new development? Where a local planning authority adopts a policy to provide enhanced accessibility or adaptability they should do so only by reference to Requirement M4(2) and/or M4(3) of the optional requirements in the Building Regulations and should not impose any additional information requirements (for instance provision of furnished layouts) or seek to determine compliance with these requirements, which is the role of the Building Control Body. They should clearly state in their Local Plan what proportion of new dwellings should comply with the requirements. There may be rare instances where an individual's needs are not met by the wheelchair accessible optional requirement – see paragraph 011 below. Local Plan policies should also take into account site specific factors such as vulnerability to flooding, site topography, and other circumstances which may make a specific site less suitable for M4(2) and M4(3) compliant dwellings, particularly where step free access cannot be achieved or is not viable. Where step-free access is not viable, neither of the Optional Requirements in Part M should be applied." The PPG sets out some of the circumstances where it would be unreasonable to require M4(2) and M4(3) compliant dwellings. Such factors include flooding, typography and other circumstances. HBF suggest that flexibility is needed in the application of these standards to reflect site specific characteristics, and the policy wording should reflect this. HBF do not believe this policy is sound without this flexibility, as it fails to comply with national policy and is not effective or justified. There is also a need to differentiate between Part a) and part b) of M4(3) technical standards. M43a sets out standards for wheelchair adaptable housing, where M43b relates to wheelchair accessible housing which can only be required on affordable housing where the Council has nomination rights. This part of the policy needs to be amended to recognise this distinction. This issue should also be factored into the whole plan viability assessment as both M4(3)a and M4(3)b impact on viability, with M4(3)b being considerably more expensive. 63052097	Stephanie Fowler	Pegasus Group		No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Yes	Yes	This policy is unsound as it will not be effective. 4.8. Our client supports the delivery of diverse, high-quality development. However, the policy's reliance on a specific Housing Needs Assessment—a document often updated after the Local Plan is adopted—could restrict proposals coming forward later in the plan period. It is essential that developments delivered in the later stages can respond to market conditions and the evolving needs of the local community. While our client does not object to any individual criterion, the policy must provide sufficient flexibility to ensure it remains applicable to all sites and schemes. The policy also references accessible housing to align with current Building Regulations. However, this requirement is not adequately justified within the Council's evidence base and runs contrary to the presumption that, in terms of mix, development should be informed by local assessment. Greater flexibility should be incorporated, allowing proposals to be assessed on a site-by-site basis, including the removal of the minimum threshold. This policy requires proposals for major developments to include the level of self-build or custom-build housing identified on the register at the time of application, representing a significant increase from current expectations, albeit with no clarity on how much or how this should be facilitated. The expectation for additional self-build units is neither clear, evidenced nor justified, and it does not address any necessary compliance with national policy. No evidence supports the inclusion of this higher standard. Furthermore, the updated viability assessment provides no additional information confirming that this policy would avoid adverse impacts on viability and, the delivery of new residential settlements. Finally, there is no evidence to suggest that this element of the policy will make a meaningful contribution to housing delivery.	Modification: Flexibility to be provided to allow for innovation and enable developments to respond to specific site characteristics, but also to ensure that new schemes are compliant with national policy supported by the appropriate evidence. The mandatory requirement for self-build units within major schemes should be deleted.		R001v3_NSLP_Reg19_Fowler.Dec25.pdf
63299425	Mac Mic Strategic Land Flax Bourton	Planning Potential	Mac Mic Strategic Land	No	‣ Effective ‣ Consistent with national policy	No	Yes		Policy DP46 requires new residential development to provide a mix of housing tenures, types, and sizes appropriate to site characteristics and location, informed by the latest Local Housing Needs Assessment. For developments of 10 or more dwellings, the policy expects provision for a range of housing types, including bungalows, smaller homes for downsizing or first-time buyers, retirement accommodation, accessible homes, and self-build plots. It also mandates that all new dwellings meet Building Regulations M4(2) standards, with at least 5% meeting M4(3) standards for wheelchair accessibility. While the policy's objectives are understood, its current wording lacks flexibility and risks being inconsistent with national policy. The NPPF requires local plans to be positively prepared, justified, and effective. Policies should enable sustainable development and respond to changing market conditions and viability considerations. Policy DP46, as drafted, imposes prescriptive requirements that may not be appropriate for all sites, particularly strategic allocations or larger developments where design solutions and market dynamics vary significantly. The requirement to limit certain housing sizes where there is perceived over-provision could constrain the ability to respond to actual demand and market signals. Similarly, the mandatory proportion of accessible homes and self-build plots, without clear viability safeguards or recognition of site-specific constraints, risks undermining deliverability. National policy emphasises that local requirements must be evidence-based, proportionate, and not compromise housing delivery. DP46 does not currently provide sufficient flexibility to achieve these objectives. Recommendation Policy DP46 should be modified to introduce flexibility and ensure consistency with national policy. It should recognise that housing mix requirements must be informed by site-specific considerations, viability, and market demand. This means that provision should be made in the policy to allow for negotiation where prescriptive requirements would compromise deliverability and that all requirements will be subject to viability testing and proportionate to the scale and nature of development. 								viability should be considered on a case-by-case basis when considering housing mix – the policy should make reference to this. Self-build and custom build plots Another element of this policy is the requirement to make appropriate provision for self-build and custom build plots. However, we consider that this element of the policy is unprecise and does not meet the test of soundness due to vague evidence for its inclusion and a lack of clarity in terms of what percentage is expected. The North Somerset Local Housing Need Assessment (LHNA) (September 2025) which the policy references does not provide sufficient evidence to justify the need for this element of the policy. Figure 57: Self-build and Custom Housebuilding Register and Plot Provision of the LHNA only provides data up to 2022-23 and fails to provide the data relating to 2023 onwards. Based on the data available, it seems that there is demand for self-build and custom housebuilding and that demand has historically exceeded supply. However, it is clear that the demand, in no way justifies the policy requirement that states that all development proposals for 10 dwellings or more are required to make an appropriate provision for self-build and custom build plots. If all of the allocations in the Local Plan were to provide these types of plots there would be a significant oversupply. In our view it would be better to make specific allocations for self-build and custom build plots rather than requiring all sites to include an unknown proportion. In addition, the register's evidence is insufficient as it does not take into account the location or type of self-build/ custom house required. It would be entirely inappropriate to require developers to provide self-build/ custom house building plots in locations where there is little demand. In our experience self-builders seldom want to be located within a large estate developed by a national house builder. We therefore request that the evidence base for this policy be revisited and if required, the draft policy wording revised so that it is based on more robust and up to date evidence. We also consider that a different approach to self-build provision would be better suited to deliver the Council's aspirations. This is especially true for sites removed from the green belt that are required to provide 50% affordable housing. Providing a proportion of self-build and custom build plots will further harm the viability of these sites, making their delivery more difficult. This should be properly accounted for in the viability evidence so that its impact on viability is fully understood. The policy is unsound as it is based on out-of-date evidence. The policy is therefore not justified (test of soundness 36.b). Accessible and Adaptable Homes We note that the policy in relation to accessible and adaptable homes reflects Building Regulations and therefore we support this policy. However, we would note that requiring accessible homes above this policy target could have ramifications for development viability given that the viability assumptions use £15.50/sqm and £155 sqm as a cost assumption for M4(2) and M4(3) respectively.		
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	• Positively prepared • Consistent with national policy	Yes	No	The policy as drafted places unduly onerous requirements on the delivery of a mixture of new homes and which fails to consider fully the market. Further, in respect of adaptable homes, the quantum required covering a 5% requirement across both market and affordable homes is unreasonable and excessive – restricting the overall availability of homes. It would be more appropriate for the market homes to be required to meet the M4(2) standards only and capable of being subsequently adapted. The concern in providing 5%, homes could end up being unsold should there not be demand in a specific location.	The policy should be amended in response to the comments above. Inasmuch that in respect of adaptable homes, the quantum required covering a 5% requirement across both market and affordable homes is unreasonable and excessive – restricting the overall availability of homes. It would be more appropriate for the market homes to be required to meet the M4(2) standards only and capable of being subsequently adapted. We therefore request that evidence base for this policy be revisited and if required, the draft policy wording revised so that it is based on more robust and up to date evidence. We also consider that a different approach would better deliver the Council’s aspirations. This is especially true for sites removed from the green belt that are required to provide 50% affordable housing. In the case of the Land to the east of Backwell which is also required to deliver a significant amount of costly infrastructure including the provision of the link road, the need to provide a proportion of self-build and custom build plots will further harm the viability of the site, making its delivery more difficult. Accessible and Adaptable Homes We note that the policy in relation to accessible and adaptable homes reflects Building Regulations and therefore we support this policy. However, we would note that requiring accessible homes above this policy target could have ramifications for	We request that evidence base for this policy in relation to self build and custom build plots be revisited and if required, the draft policy wording revised so that it is based on more robust and up to date evidence. We also consider that a different approach would better deliver the Council’s aspirations. This is especially true for sites removed from the green belt that are required to provide 50% affordable housing. In the case of the Land to the east of Backwell which is also required to deliver a significant amount of costly infrastructure including the provision of the link road, the need to provide a proportion of self-build and custom build plots will further harm the viability of the site, making its delivery more difficult.

								development viability.			
63107361	Gladman Developments		Gladman Developments Ltd	No				Policy DP46 as drafted requires all new residential developments to meet M4(2) (Accessible and adaptable dwellings) of Building Regulations and development of 10 or more units to provide 5% of affordable dwellings which meet M4(3) (Wheelchair user dwellings) or a higher proportion where there is evidence of local need. The requirements to meet Part M4(2) will be superseded by changes to residential Building Regulations. The Government response to 'Raising accessibility standards for new homes' states that the Government proposes to mandate the current M4(2) requirement in Building Regulations as a minimum for all new homes, with M4(1) applying in exceptional circumstances. This will be subject to a further consultation on the technical details and will be implemented in due course through the Building Regulations. The requirement to address this issue in planning policy is therefore unnecessary. Gladman are of the view that this matter should be left to Building Regulations, however if a policy were to be needed, the wording needs to differentiate between Part a) and part b) of M4(3) technical standards. M43a sets out standards for wheelchair adaptable housing, where M43b relates to wheelchair accessible housing which can only be required on affordable housing where the Council has nomination rights. Any such requirements would also need to be fully considered from a viability perspective.	Gladman are of the view that this matter should be left to Building Regulations, however if a policy were to be needed, the wording needs to differentiate between Part a) and part b) of M4(3) technical standards. 62943009	Homes England	Avison Young (Peter Stockall)	Homes England	No	• Justified	Unsure	Unsure	Whilst the principle of providing a range of house types and sizes is accepted, the policy as worded is not clear in terms of the expectations placed on developers with regards to the extent of provision of older persons accommodation and self/custom build. The definition of 'local need' needs to be clarified. We note the policy wording is aligning with the Government's previously proposed changes to the Building Regulations Part M following their consultation document "Raising Accessibility Standards for New Homes". There is no evidence that all new dwellings need to be M4(2) compliant, nor that it would be viable to deliver all as such. We accept that some will and this percentage needs to be defined in the Local Plan and supported by appropriate evidence. Assuming the Government decides all new homes need to be M4(2) compliant, then this will be determined through updates to the building regs and these will ultimately supersede local policies. There is also a possibility that it could be delivered through the introduction of National Development Management policies. There is no need to pre-empt changes to the building regs or the introduction of National DM policies and enshrine/duplicate the requirement in local policy. The policy also needs to consider potential exceptional circumstances which can justify appropriately reduced requirements due to site topography e.g. if steep land and requires steps or long ramps or vulnerability due to flooding that could be hazardous to less mobile individuals. From Homes England experience within Parklands Villages further clarification is also sought with regards to the evidence for the intended split of M4(3) in terms of M4(3)a (wheelchair adaptable) and M4(3)b (wheelchair accessible).	The policy should specify an appropriate percentage of homes to be delivered as M4(2) compliant. This percentage should be justified with appropriate evidence and viability work. The requirement for all new homes to be M4(2) compliant should be deleted. Further clarification required on expectations with regards to older persons accommodation and self / custom build and what the term 'where appropriate' means in practice (i.e.does this include where viable).		
47565121	Joe Tristram		North Somerset Council	Yes		Unsure	Yes		Accessbility of new homes. I consider 5% of new homes in developments of over 10 homes to be inadequate and would prefer to see a figure of 10%. This is from discussions with a WECIL access consultant.	In general terms apart from my comment above I congratulate NS planners on an excellent plan after a lot of hard work.	
62810785	Rosanna Tunnadine (Habinteg Housing Association)		Habinteg Housing Association	Yes		Yes	Yes		While the ambition for M4(2) homes is significant in the plan, we believe that the same ambition for M4(3) homes falls short. Habinteg considers Policy DP46: Housing type and mix – accessible and adaptable homes to not go far enough in its ambition to deliver accessible homes for all. The policy states that 'A minimum of 5% of all new dwellings (market and affordable) in developments of 10 or more dwellings will be required to be designed to meet Building Regulations M4(3) standard ('wheelchair user dwellings'), or a higher proportion where there is evidence of local need.' Habinteg recommends that at least 10% of all new homes meet Part M4(3) Standard (wheelchair user dwelling). North Somerset has an opportunity to be more ambitious in supporting older and disabled people. Homes designed to these standards can help reduce hospital discharge delays and prevent falls in the home. Additionally, they foster social participation by ensuring	Habinteg strongly supports Policy DP46: Housing type and mix – accessible and adaptable homes that states 'All new dwellings will be required to meet Building Regulations M4(2) standard ('accessible and adaptable dwellings') except for those dwellings that are designed to M4(3) standard.' M4(2) standard homes have significantly more accessible features and are more realistically liveable as well as truly visitable. For example, the entrance level WC is large enough to be used independently by a wheelchair user, or for an person to receive assistance if needed. The standard also requires step free thresholds to both main and secondary entrance. Under this plan, North Somerset is doing its bit in increasing the availability of accessible homes so that disabled people can secure suitable housing options on an equitable basis.	North Somerset reg 18 response 091225.docx

									that disabled and older people can live with dignity, fully connected with their community and maintaining vital relationships, thereby supporting wellbeing, reducing loneliness and mental ill-health. Homes built to M4(3) standards are more likely to comply with the Equality Act 2010, as they are specifically designed to meet the needs of wheelchair users and those with significant mobility impairments. We recommend increasing the proposed build rate for M4(3) wheelchair-accessible homes on sites of 10 or more units from 5% to 10%. The Local Housing Needs Assessment indicates that around 6% of households include at least one wheelchair user. Raising the requirement to 10% helps ensure that residents in North Somerset can access suitable housing when needed. There is concern that developers often negotiate reductions in these requirements on viability grounds. Ambiguous wording such as “a higher proportion could be built where there is evidence of local need” risks under-delivery. A clear, enforceable target is essential to meet accessibility needs. However, we appreciate that this addition also allows for some flexibility and the ability to act on increasing the supply of wheelchair user housing when the need emerges. We recommend increasing the proposed build rate for M4(3) wheelchair-accessible homes on sites of 10 or more units from 5% to 10%. The Local Housing Needs Assessment indicates that around 6% of households include at least one wheelchair user. Raising the requirement to 10% helps ensure that residents in North Somerset can access suitable housing when needed. There is concern that developers often negotiate reductions in these requirements on viability grounds. Ambiguous wording such as “a higher proportion could be built where there is evidence of local need” risks under-delivery. A clear, enforceable target is essential to meet accessibility needs. However, we appreciate that this addition also allows for some flexibility and the ability to act on increasing the supply of wheelchair user housing when the need emerges. The local plan could also help address disabled people’s housing needs by requiring planning teams to track the number of homes given planning permission to one or other of the higher level accessibility standards. This will help to establish and track delivery which in turn will assist future strategic planning. Accessibility requirements should not be limited to specialist or affordable housing. The need for and potential to benefit from access features is not restricted to the occupants of one type of tenure. Impairments that lead to disability can emerge in any household at any time and nationally we have an ageing population which drives an increasing incidence of age-related disability. M4(2) features benefit everyone by enabling people to remain in their homes longer, supporting families to have healthy, active lives, and improving overall housing quality. M4(3) features may be equally as relevant to the private housing market as the social sector (although disabled people as a demographic group tend to be disproportionately represented within the social sector). Analysis of DFG expenditure shows that the majority of funding is spent adapting homes in the private ownership sector. Therefore, embedding these standards across all tenures, market and affordable, and house types is vital to creating inclusive, adaptable communities that meet current and future needs. Dwelling mix and quality for older people - Considering the wide range of needs experienced by older people the Authority should ensure that the local plan stipulates a proportion of older persons housing, where newly developed, to be designed to fully wheelchair accessible standard. Habinteg also recommends referring would be developers to the recently published ‘Inclusive Housing Design Guide’ which shows how going beyond the requirements of building regulations can produce even higher quality results that includes consideration of the needs of people with sensory or cognitive impairments and neurodiverse people. Location and context of developments - Disabled and older people have told Habinteg about the frustrations and limitations of living in a neighbourhood that offers poor accessibility. This can reduce the benefits gained from having an accessible home. Factors such as the accessibility of transport provision (not just location), the street scape, provision of drop kerbs, pavement parking rules and the accessibility of local shops and amenities are all important to providing places that are truly liveable which enable people participate in their local community. - Consideration should therefore be given in the local plan as to how the Authority wishes to emphasise the importance of accessibility of the local neighbourhood for any new development, not just proximity.	The benefits of M4(2) homes are well understood and have been highlighted by a range of parliamentary and government commissioned inquiries, including the recent Older People’s Housing Task Force and the MHCLG inquiry into Disabled people in the housing sector. Among the benefits noted are: • faster hospital discharges • less costly and speedier adaptations when required • reduced local government expenditure on domiciliary care packages by supporting individual independence within the home • delayed or avoided moves to more expensive residential care settings • providing a better environment for ongoing independence when needs change. Habinteg recommends that all new homes meet Building Regulations M4(2) accessible and adaptable standard as a minimum - to increase the proportion of homes in North Somerset that are capable of meeting the changing needs of disabled and older people. This approach not only supports inclusive communities but also reduces long-term costs which may otherwise fall to the local authority, for example, stairlift installation in an M4(2) home costs significantly less (£2,500–£4,000) than in a home built before the standards came into effect (£9,000–£10,000). While the ambition for M4(2) homes is significant in the plan, we believe that the same ambition for M4(3) homes falls short. Habinteg considers Policy DP46: Housing type and mix – accessible and adaptable homes to not go far enough in its ambition to deliver accessible homes for all. The policy states that ‘A minimum of 5% of all new dwellings (market and affordable) in developments of 10 or more dwellings will be required to be designed to meet Building Regulations M4(3) standard (‘wheelchair user dwellings’), or a higher proportion where there is evidence of local need.’ Habinteg recommends that at least 10% of all new homes meet Part M4(3) Standard (wheelchair user dwelling). North Somerset has an opportunity to be more ambitious in supporting older and disabled people. Homes designed to these standards can help reduce hospital discharge delays and prevent falls in the home. Additionally, they foster social participation by ensuring that disabled and older people can live with dignity, fully connected with their community and maintaining vital relationships, thereby supporting wellbeing, reducing loneliness and mental ill-health. Homes built to M4(3) standards are more likely to comply with the Equality Act 2010, as they are specifically designed to meet the needs of wheelchair users and those with significant mobility impairments. We recommend increasing the proposed build rate for M4(3) wheelchair-accessible homes on sites of 10 or more units from 5% to 10%. The Local Housing Needs Assessment indicates that around 6% of households include at least one wheelchair user. Raising the requirement to 10% helps ensure that residents in North Somerset can access suitable housing when needed. There is concern that developers often negotiate reductions in these requirements on viability grounds. Ambiguous wording such as “a higher proportion could be built where there is evidence of local need” risks under-delivery. A clear, enforceable target is essential to meet accessibility needs. However, we appreciate that this addition also allows for some flexibility and the ability to act on increasing the supply of wheelchair user housing when the need emerges. Habinteg's "Living not existing: The economic & social value of wheelchair user homes" report, conducted with the London School of Economics (LSE) found that over a 10-year period, the benefits of living in a wheelchair-accessible home are valued at approximately £94,000 for a working-age adult, £100,000 for an older adult, and £67,000 for a household with a wheelchair-using child. The long-term economic benefits outlined in the report underline the case for adopting a specific target of at least 10% wheelchair user homes in all new developments, strengthening the soundness and sustainability of North Somerset’s local plan. Moreover, providing more wheelchair user homes helps reduce or eliminate the cost of in-home care assistance, increases individual’s disposable income, lowering reliance on welfare benefits, and enabling greater contributions to tax. The cost-benefit of planning more wheelchair user homes reduces pressure on health and social care services, allowing resources to be redirected to those with the highest, most acute needs. The benefits of M4(3) homes are plentiful, and amongst them, new homes that meet category M4(3) will: • Remove or reduces the cost of care assistance in the home • Improve confidence, independence, and self esteem • Enable greater social inclusion and community participation

										• Reduce trips and falls in the home • Increase economic participation – disabled people of working age who have their access needs met at home are four times more likely to be in employment. We recommend increasing the proposed build rate for M4(3) wheelchair-accessible homes on sites of 10 or more units from 5% to 10%. The Local Housing Needs Assessment indicates that around 6% of households include at least one wheelchair user. Raising the requirement to 10% helps ensure that residents in North Somerset can access suitable housing when needed. 62846721	Cleeve Parish Council		Cleeve Parish Council	No	• Positively prepared • Justified • Effective			We do not consider the North Somerset Local Plan 2041: Pre-Submission Plan to be sound. Based on the detailed representations of Cleeve Parish Council, we believe the Plan fails three of the tests of soundness set out in NPPF paragraph 36: Positively Prepared, Justified, and Effective. 1. Positively Prepared The Plan does not adequately address the needs of young people or newly forming households, nor does it ensure that new development will be properly supported by essential infrastructure. The repeated use of discretionary language (“will be expected”, “should have regard to”) leaves critical requirements—such as drainage, healthcare capacity, active travel connections, affordable housing percentages, biodiversity measures, renewable energy deployment, and sustainable design—insufficiently guaranteed. The Plan also fails to provide a clear and sustainable policy position on future growth at Bristol Airport, or on how Green Belt releases will be compensated or justified. As a result, the Plan does not convincingly meet the	Policy DP46 Housing type and mix: We are dismayed that the only policy referring to flats is Policy DP4: Houses in Multiple Occupation, which portrays a completely negative view of flats. We would like to see an understanding that the development of low-rise new-build flats in existing towns is an appropriate way of providing low-cost housing for single people. We are very concerned that the exclusion of policies to assist in the development of such housing represents both an opportunity missed and undermines the ability to retain young people in the local economy.		Submission on behalf of Cleeve Parish Council in respect of Pre.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								district's needs in a sustainable and deliverable way. 2. Justified The policy choices taken in the Plan do not always represent the most appropriate strategy when tested against reasonable alternatives. The evidence base appears inadequate or incomplete in several areas, including: (a) the justification for Green Belt releases at Bristol Airport; (b) the robustness of climate-adaptation measures given the known risks of flooding, sea level rise, extreme heat, and pressure on water resources; (c) the lack of evidence demonstrating that non-mandatory design guidance will achieve sustainable outcomes; (d) the omission of low-rise flats in existing towns as a viable and necessary option for delivering affordable housing for young people; and (e) insufficient assessment of the landscape, safety, environmental and carbon impacts of airport-related growth, including the absence of a cumulative emissions assessment. In each case, reasonable and more sustainable policy alternatives have not been adequately explored. 3. Effective The Plan's delivery mechanisms are weak and do not provide confidence that its policies will be realised. Critical infrastructure (roads, drainage, healthcare, active travel routes, mass transit provision and energy resilience) is not tied to development in a sufficiently enforceable manner. Policies that rely on voluntary interpretation or "expectations" are unlikely to secure required outcomes, particularly in relation to affordable housing percentages, design quality, biodiversity net gain, native woodland expansion, protection of commons, and the safeguarding of Best and Most Versatile agricultural land. Policies concerning Bristol Airport do not demonstrate effective cross-boundary working or credible mitigation strategies, while the approach to flood-risk management does not provide sufficient assurance that developments requiring the Exception Test would be safe, sustainable, or financially deliverable. As drafted, there is insufficient certainty that the Plan can be implemented as intended.			
63070401	Emilia Leung			No	• Effective	No	Unsure	The Proposal is overly reliant on inflated national targets and infrastructure that cannot be delivered – whilst at the same time, ignoring local constraints. The Proposal is also inconsistent with national policy. Green Belt boundaries should only be altered in exceptional circumstances – and the review must show no "clear evidence that doing so would fundamentally undermine the purposes…of the remaining Green Belt".			

Policy DP47: Older Persons Accommodation

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
63286689	McCarthy Stone & Churchill Living	The Planning Bureau Ltd						Whilst it is positive that the Council acknowledge the need for meeting the housing needs of older people, we have some concerns with respect to some of the requirements of policy DP47. National Policy Context: Government's policy, as set out in the revised NPPF, is to boost significantly, the supply of housing. Paragraph 60 reads: "To support the Government's objective of significantly boosting the supply of homes, it is important that a sufficient amount and variety of land can come forward where it is needed, that the needs of groups with specific housing requirements are addressed and that land with permission is developed without unnecessary delay." The revised NPPF looks at delivering a sufficient supply of homes, paragraph 63 identifies within this context, the size, and type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies including older people. This now includes 'those who require retirement housing, housing-with-care and care homes'. In June 2019 the PPG was updated to include a section on Housing for Older and Disabled People, recognising the need to provide housing for older people. Paragraph 001 Reference ID: 63-001-20190626 identifies that 'The need to provide housing for older people is critical'. The PPG further recognizes the requirement at para Paragraph 003 Reference ID: 63-003-20190626 and paragraph 006 Reference ID: 63-006-20190626 with the latter paragraph setting out that 'plan-making authorities should set clear policies to address the housing needs of groups with particular needs such as older and disabled people. These policies can set out how the plan-making authority will consider proposals for the different types of housing that these groups are likely to require.' Need for Housing for Older People: It is well documented that the UK has an ageing population. Life expectancy is greater than it used to be and as set out above by 2032 the number of people in the UK aged over 80 is set to increase from 3.2 million to 5 million (ONS mid 2018 population estimates). It is generally recognised (for example, within the Homes for Later Living Report September 2019). That there is a need to deliver 30,000 retirement and extra care houses a year in the UK to keep pace with demand. The plan is supported by an older people and specialised housing needs assessment, Housing Lin, 2022. This concludes at para	Developers of older person's housing schemes should not be required to demonstrate need given the significant need identified and the many benefits that such developments bring and point 1 or policy DP47 should be deleted: Delete: Demonstrates that it will contribute towards meeting an identified need within the area and is targeted towards the needs of local residents; Given our comments on Policy DP43 affordable housing the following text should also be deleted: Delete: The council will seek an element of affordable housing provision for older persons as part of appropriate market-led developments for older people. In line with comments made above, the following paragraph should be removed from page 224: Delete: Development that attracts additional care users into the district is likely to have a significant impact on Council resources. The Council will therefore expect development proposals for housing and accommodation for older people to be supported by evidence demonstrating that they are targeted towards and will contribute towards meeting the district's identified needs. The Council will require, as a minimum, that the accommodation is marketed and made available for sale or rent within the district for a period of at least six months before it is marketed more widely.		2025_MS and CL response to North Somerset submission Local Plan reg 19 - Redacted.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								6.02 and 6.03: "Housing for older people (retirement housing for sale and for social/affordable rent38). The estimated net need for housing for older people to 2038 is c.800 units of which c.240 is for social/affordable rent and c.560 is for sale.' And that 'Housing with care (extra care housing). The estimated housing with care net need to 2038 is c.640 units of which c.320 units are for social/affordable rent and c.320 units are for sale'. The plan is also supported by the North Somerset Local Housing Needs Assessment, ORS September 2025 (LHNA). This summarises at para 5.34 that 'On this basis, there would be need to provide an additional 1,400-1,500 specialist older person housing units over the 15-year period 2026-2041 (equivalent to an average of around 100 dwellings per year) of which nearly half (47% in Scenario A; 46% in Scenario B) would need to be provided as Affordable Housing' It is therefore clear there will be a significant increase in older people and corresponding need and the provision of suitable housing and care to meet the needs of this demographic should be supported positively as a priority. Benefits of Housing for Older People: Older Persons' Housing produces a large number of significant benefits which can help to reduce the demands exerted on Health and Social Services and other care facilities – not only in terms of the fact that many of the residents remain in better health, both physically and mentally, but also doctors, physiotherapists, community nurses, hairdressers and other essential practitioners can all attend to visit several occupiers at once. This leads to a far more efficient and effective use of public resources. Economic: A report "'Healthier and Happier' An analysis of the fiscal and wellbeing benefits of building more homes for later living" by WPI Strategy for Homes for Later Living explored the significant savings that Government and individuals could expect to make if more older people in the UK could access this type of housing. The analysis showed that: • Each person living in a home for later living enjoys a reduced risk of health challenges, contributing to fiscal savings to the NHS and social care services of approximately £3,500 per year. • Building 30,000 more retirement housing dwellings every year for the next 10 years would generate fiscal savings across the NHS and social services of £2.1bn per year. • On a selection of national well-being criteria such as happiness and life satisfaction, an average person aged 80 feels as good as someone 10 years younger after moving from mainstream housing to housing specially designed for later living. A further report entitled Silver Saviours for the High Street: How new retirement properties create more local economic value and more local jobs than any other type of residential housing (February 2021) found that retirement properties create more local economic value and more local jobs than any other type of residential development. For an average 45-unit retirement scheme, the residents generate £550,000 of spending a year, £347,000 of which is spent on the high street, directly contributing to keeping local shops open. As recognised by the PPG, Retirement housing releases under-occupied family housing and plays a very important role in recycling of housing stock in general. There is a 'knock-on' effect in terms of the whole housing chain enabling more effective use of existing housing. In the absence of choice, older people will stay put in properties that are often unsuitable for them until such a time as they need expensive residential care. A further Report "Chain Reaction" The positive impact of specialist retirement housing on the generational divide and first-time buyers (Aug 2020)" reveals that about two in every three retirement properties built, releases a home suitable for a first-time buyer. A typical Homes for Later Living development which consists of 40 apartments therefore results in at least 27 first time buyer properties being released onto the market. Social: Retirement housing gives rise to many social benefits: • Specifically designed housing for older people offers significant opportunities to enable residents to be as independent as possible in a safe and warm environment. Older homes are typically in a poorer state of repair, are often colder, damper, have more risk of fire and fall hazards. They lack in adaptions such as handrails, wider internal doors, stair lifts and walk in showers. Without these simple features everyday tasks can become harder and harder • Retirement housing helps to reduce anxieties and worries experienced by many older people living in housing which does not best suit their needs by providing safety, security and reducing management and maintenance concerns. • The Housing for Later Living Report (2019) shows that on a selection of wellbeing criteria such as happiness and life satisfaction, an average person aged 80 feels as good as someone 10 years younger after moving from mainstream housing into housing specifically designed for later living. Environmental: The proposal provides a number of key environmental benefits by: • Making more efficient use of land thereby reducing the need to use limited land resources for housing. • Providing housing in close proximity to services and shops which can be easily accessed on foot thereby reducing the need for travel by means which consume energy and create emissions. • Providing shared facilities for a large number of residents in a single building which makes more efficient use of material and energy resources. Therefore, developers of older person's housing schemes should not be required to demonstrate need given the significant need identified and the many benefits that such developments bring and as such a proposed medication is suggested in our recommendations below. Page 224: We note that the last paragraph on page 191 states 'The Council will require, as a minimum, that the accommodation is marketed and made available for sale or rent within the district for a period of at least six months before it is marketed more widely'. McCarthy Stone can confirm from research we undertake through all of our historical sales that most of McCarthy Stone's customers move from within a 5-mile radius and free-up local family-sized houses. Residents therefore will not, based on our evidence, have a significant impact on the Council's resources as people tend to move locally, indeed older persons housing conversely will benefit the Council's budget with reduction with pressure on social care and the NHS. We therefore feel that the requirement to restrict marketing to the district area for a 6-month period is inflexible and should be removed from the plan.

As the Local Plan progresses and the Council's consideration evolves, further technical and design evidence will be supplied at the appropriate stage of the emerging Plan process. We welcome the opportunity to continue to engage with Officers. *Comments on draft policy DP46 copied below: Draft Policy DP46 seeks: "On developments of 10 or more dwellings proposals will be expected to demonstrate that they have taken account of local needs evidence to, where appropriate, make provision for: • A proportionate and appropriate mix of types and sizes of homes to address local needs and meet the requirements of the population across all stages of their lives. This includes bungalows, smaller properties suitable for downsizing or first time buyers, retirement accommodation and accessible homes. In areas where there is an existing over provision of one housing size new developments should limit the number of those size properties proposed in their schemes to ensure a broader mix • across the area; and • An appropriate proportion of self-build and custom build plots based on the local need identified on the council's self-build register…" Whilst we appreciate that paragraph 63 of the NPPF (December 2024) requires "the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies…" which includes older persons housing and people wishing to commission or build their own homes, the Council has provided limited evidence to justify the qualifying site threshold of only 10 or more dwellings for each of these requirements. It is noted that the threshold has reduced significantly from 100 dwellings in the previous draft Preferred Options Local Plan. This creates uncertainty for developers. The Council should ensure that the Local Plan will result in a wide range of older persons housing and self and custom build housing opportunities. In order to provide homes for older people, the Council should allocate sites for older persons housing. Draft Policy DP46 fails to clarify whether the above requirements should be applied to developments on land allocated by draft Policies LP1, LP2, LP3 and LP4, including at our site at Wolvershill (north of Banwell) strategic location. Draft Policy LP1 does not specify that provision should be made at Wolvershill for older persons housing and self and custom build plots and it does not specify the mix of bedrooms. Draft Policy DP46 should clarify this taking into account viability.			0707-06.M23 Wain Estates NS Pre Submission Reg 19 Local Plan 12.12.25 with Appendices.pdf
9138657	Home Builders Federation		Home Builders Federation	No	• Justified • Effective • Consistent with national policy			Policy DP47 is not considered to be sound as it is not effective, justified or consistent with national policy. The economics of providing older persons housing are different from open-market and affordable housing, for example, due to the need to provide communal spaces. It is for this type housing to be considered separately in the whole plan viability appraisal.			North Somerset 2nd Reg 19 Dec 25.docx
62943009	Homes England	Avison Young (Peter Stockall)	Homes England	No	• Effective	Unsure	Unsure	Homes England are generally supportive of Policy DP47 regarding older persons accommodation, and sites such as Locking Parklands can assist in delivering a mix of accommodation including retirement, assisted living and care provision which will also foster a mixed and balanced community. Whilst we acknowledge that the Council will seek an element of affordable housing provision for older persons as part of appropriate market-led developments for older people; this needs to be defined and also subject to viability. We would also seek further clarification and justification on the intention to seek affordable housing from C2 use developments, especially care home facilities.	We propose an amendment of the policy wording from, "the council will seek an element of affordable housing provision for older persons as part of appropriate market-led developments for older people." To, "the council will seek an element of affordable housing provision for older persons as part of appropriate market-led developments for older people, subject to viability."		
62471329	Environment Agency		Environment Agency						Development must take a sequential approach to flood zones when allocating different housing types, particularly if this includes ground floor sleeping accommodation and single storey dwellings. Development must consider flood risk with climate change.		

Policy DP48: Residential annexes

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
18477217	Kit Stokes	Kit Stokes	StokesMorgan Planning Ltd	No	• Consistent with national policy	Unsure	Unsure	Objection to Policy DP48: Residential Annexes We object to the first criterion of Policy DP48, which restricts annexes from being standalone buildings – requiring sharing of facilities. This approach is unnecessarily rigid and does not reflect modern family needs or national policy objectives. It is out of date, why shouldn't a grandparent live in an outbuilding and be allowed some sense of independence including cooking a meal. Restrictive conditions and 10 year lawfulness periods (now mandatory) can prevent isolated C3 dwellings. Key Points: National Planning Policy Framework (NPPF): Paragraphs 60 and 62 highlight the importance of offering diverse housing options to address the needs of various groups, such as older adults and families. The inclusion of small, self-contained annexes encourages intergenerational living and decreases dependence on institutional care facilities. Planning Practice Guidance (PPG): Housing for Older and Disabled People: Supports adaptable housing that fosters independence and maintains family support networks. Independent annexes located within the boundaries of the primary residence help strengthen family bonds, minimize travel, and utilize land efficiently, in line with NPPF sustainability objectives. Flexible living setups are crucial for building resilience and supporting wellbeing, especially for elderly family members and younger relatives who require assistance (Post-COVID Lessons). The policy restricts annexes in residential gardens when they are a positive addition to the housing stock.	Revise DP48 to allow standalone annexes where they remain ancillary to the main dwelling, subject to size limits, occupancy conditions, and prohibition on separate sale. This pragmatic approach meets housing needs while preventing inappropriate development.

Policy DP49: Healthy Places

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
51524513	Bellway Homes Ltd	tor&co	Bellway Homes Ltd	No	Justified			Draft Policy DP49 (Healthy places) relates to the requirement to produce Health Impact Assessments (HIAs) for developments that exceed certain thresholds. Notably, Bellway observe the threshold has dropped for residential developments from the previous full Regulation 19 consultation – from 200 to 50 dwellings. It is unclear what the justification is for this, particularly noting that neighbouring LPAs have lower thresholds in their emerging Local Plans. For example, the emerging Local Plan for Bristol (currently at Examination) sets the requirement for residential development at 100 dwellings (with no area threshold) under Draft Policy HW2B. The emerging Local Plan for South Gloucestershire (submitted for Examination) is proposing to retain adopted Policy PSP9, which requires a HIA only for 'Very Large Major' applications, which for residential, is considered to be 200 dwellings or sites of 4ha+ (as proposed in the previous Regulation 19 consultation).	The amended policy is not justified and sufficient evidence detailing the reason for the change should be provided.		20251212 504317 JE - North Somerset Reg 19 (Reps obo Bellway Homes).pdf
1019201	Wrington Parish Council		Wrington Parish Council							We support this Policy which we feel is essential in the long-term health and wellbeing of the population.	
8126849	Sport England		Sport England							Support Active Design will help improve health and well-being as well as addressing climate change and promoting active travel – more walking and cycling. This has considerable understanding with the Plan in particular: SP4 Placemaking - Policy and the 'tools' e.g. masterplanning, parameter plans and design codes DP1 High Quality Design DP49 Healthy Places Sport England, working with Active Travel England and the Office for Health Improvement and Disparities, has produced the 3rd version of 'Active Design' (May 2023), a guide to planning new developments that create the right environment to help people get more active, more often in the interests of health and wellbeing. The guidance sets out ten key principles for ensuring new developments incorporate opportunities for people to take part in sport and physical activity. The Active Design principles are aimed at contributing towards the Government's desire for the planning system to promote healthy communities through good urban design. Sport England would commend the use of the guidance in the master planning process for new residential developments. The document can be downloaded via this link Sport England believes that being active should be an intrinsic part of everyone's life pattern. Active Design has a lot of synergy with the TCPA "20 minute neighbourhood" concept. https://www.youtube.com/watch?v=mDaVBh1Bs7Y and https://www.youtube.com/watch?v=oRCJ4JL_LjM&list=TLPQMTIwMTIwMjS3NyOvSTN83A&index=2 The developer's checklist (Appendix 1) has been revised and can also be accessed via www.sportengland.org/activedesign In particular new housing sites as set out in Policies LP1, LP2, LP3, LP4 and LP5. Sport England would encourage development in North Somerset be designed in line with the Active Design principles to secure sustainable design. This could be evidenced by use of the checklist.	
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	Positively prepared Consistent with national policy	Yes	No	The provisions for health impact assessments should be set out in the plan and not left for consultation with the Council. Those discussions will take time and no doubt come with a charge – this is simply unhelpful and lacks clarity.	Health Impact Assessment requirements be set out in the Local Plan.		
51242657	Rubix Strategic Limited	Arwel Evans - Lichfields	Rubix Strategic Limited	No	Effective	Yes	No	We object to policy DP49. We note that the Core Strategy required developments of 200 dwellings or more to submit Health Impact Assessments. However, the Reg 19 Local Plan has now lowered this to 50 dwellings or sites of 1 hectare or more. We query this significant lowering of the threshold given that schemes of this size are unlikely to have significant impacts on the health and wellbeing of the local population or particular groups within it. A site size of 1 hectare is also going to be a very small housing development when taking account of the need to provide BNG and on site SUDS. We therefore object to this policy and consider that the thresholds should be revisited.	The thresholds should be revisited so that they are proportionate.		
51572577	BNSSG ICB		NHS Property Services							We support the requirement in for Health Impact Assessment (HIA) on significant residential developments of 50 units or more. There is a well-established connection between planning and health, and the planning system has an important role in creating healthy communities. The planning system is critical not only to the provision of improved health services and infrastructure by enabling health providers to meet changing healthcare needs, but also to addressing the wider determinants of health. Identifying and addressing the health requirements of existing and new development is a critical way of ensuring the delivery of healthy, safe, and inclusive communities.	NSC Reg 19 Local Plan - NHS BNSSG ICB Response 101225.pdf

Policy DP50: New community facilities, open space and sports pitches

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
39179649	Adrian Mealing			No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes	I consider Policy DP50 to be unsound because it is not positively prepared, not justified, not effective, and not consistent with national policy. DP50 states that new development should provide new community facilities or enhancements to existing ones when required. However, the Plan allocates 183 dwellings in Congresbury without identifying or securing any new community facilities to support this growth. This is a fundamental strategic failure. 1. DP50 is not positively prepared The Congresbury allocations generate clear demand for: additional primary school places, increased GP and healthcare capacity, expanded recreation and play space, youth, sport and community facilities, improved public realm and village-centre resilience. The Plan proposes none of these. There is no new school, no GP expansion, no community hub, no children's play areas, no library improvements, and no new open space proposals. DP50 therefore fails to prepare positively for the needs arising from allocated development. 2. DP50 is not justified A justified policy must be supported by an evidence base showing: the level of community facility demand, capacity constraints in existing services, the type and scale of new facilities required, the locations where such facilities will be delivered. The Plan provides none of this for Congresbury: No assessment of school capacity or shortfall. No evaluation of GP provision or local healthcare pressure. No assessment of demand for youth or community facilities. No appraisal of green space or play space requirements. No evidence of village-centre capacity to absorb 183 new homes. There is no justification whatsoever for omitting new facility requirements. 3. DP50 is not effective The policy cannot be implemented because: There is no mechanism to require community facilities from Congresbury developers. There are no S106 or CIL expectations, no delivery commitments, and no funding sources identified. The Infrastructure Delivery Plan makes no provision for Congresbury community infrastructure. No phasing is linked to occupation, meaning development could proceed with zero mitigation. DP50 is therefore ineffective and unenforceable. 4. DP50 is not consistent with national policy The NPPF requires that: development is supported by community infrastructure (NPPF 8, 20, 93–97), plans identify and meet local needs, growth is supported by facilities for health, education, sport, play, and community use. The Congresbury allocations breach these requirements because: No new school capacity is provided. No GP capacity enhancement is planned.	To make DP50 sound, the Plan must: Provide a Congresbury Community Infrastructure Assessment identifying: school-place shortfalls, GP capacity constraints, facilities needed for youth, sport, play and recreation, demand arising from 183 new dwellings. Add a Congresbury-specific requirement that new development must deliver: expanded primary school places, increased GP/ healthcare capacity, new play areas and open spaces, accessible community facilities, youth and recreation space. Include these facilities in the Infrastructure Delivery Plan, with: funding, delivery mechanisms, triggers linked to planning permissions. Require Section 106 or CIL contributions to fund local facilities. Without these modifications, DP50 is neither enforceable nor deliverable.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								No play areas or green space proposals exist. No youth or community facilities are proposed. No sports or recreation facilities are included. Thus, DP50 is inconsistent with national infrastructure policy.			
8126849	Sport England		Sport England					Policy DP50 New sport land/buildings needs to reflect that technical guidance can change so there is a need to caveat/ future proof that on-site provision reflects current standards at the time of build / implementation.			
51572577	BNSSG ICB		NHS Property Services							We generally support this policy as it promotes the provision of new community facilities within settlement boundaries. We too support policy wording which encourages the co-location of complementary community uses. The ICB considers that this policy is suitably flexible to encourage maximum utilisation of future community assets. In instances where new community facilities are proposed, we welcome further engagement with the Council to ensure that opportunities for additional provision of primary care and wider community and voluntary services provided by both BNSSG ICB and Integrated Care Partnership (ICP) partners can be realised.	NSC Reg 19 Local Plan - NHS BNSSG ICB Response 101225.pdf

Policy DP51: Protection of built community facilities

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
1020641	The Theatres Trust		The Theatres Trust	Yes		Yes	Yes	Although we are supportive of this policy, we consider the length of marketing period referred to should be increased from 6 months to 12 months. This gives consistency with the minimum period in many other plans to help 'guard against unnecessary loss' in line with paragraph 98 of the NPPF (2024). A six month period also makes it challenging for community groups to form and fundraise to enable them to bid for properties.	· Evidence is submitted that demonstrates, to the satisfaction of the Council, that attempts to rent/dispose of the property for community uses have failed. This must include evidence that the facility has been marketed for at least **TWELVE** months at normal market value for such uses. In addition, if the council considers it appropriate, a business plan shall be required identifying the extent and combination of usage and charges necessary to make the facility profitable; or		
51572577	BNSSG ICB		NHS Property Services						We acknowledge that Policy DP51 may allow for existing healthcare uses/facilities to be redeveloped for other uses in instances where it is considered that the “building is genuinely redundant/surplus to requirements for its uses”. Policy DP51 goes on to provide a number of criteria in which a facility may be deemed “genuinely surplus”. The ICB is generally content with this approach, as it enables the NHS to dispose of assets in circumstances where it can be proven that there is no longer a purpose for them. However, in our earlier response to the Regulation 18 Local Plan consultation, we also noted that there may be circumstances whereby the NHS seeks to dispose of an asset where it has been identified as part of an estate strategy or service transformation plan where investment is needed towards modern, fit for purpose infrastructure and facilities. Our current interpretation of Policy DP51 is that the existing policy wording precludes the NHS from disposing of an asset for this reason. Where it can be demonstrated that health facilities are surplus to requirements or will be changed as part of wider NHS estate reorganisation and service transformation programmes, it should be accepted that a facility is neither needed nor viable for its current use, and policies within the Local Plan should support the principle of alternative uses for NHS sites with no requirement for retention of a community facility use on the land. To ensure the Plan is positively prepared and effective, we propose the following modification to Policy DP51:...Where the site or building is genuinely redundant/surplus to requirements for its uses. A site will be deemed genuinely redundant/surplus if any of the following circumstances apply: (insert.... Where healthcare facilities are declared surplus or identified as part of an estate strategy or service transformation plan where investment is needed towards modern, fit for purpose infrastructure and facilities, there will be no requirement to retain any part of the site in an alternative community use.) We consider that the above modification is necessary to ensure that the Local Plan is flexibly worded to ensure that the NHS can deliver its estates transformation programmes across North Somerset. 63005121	Taylor Wimpey (Woodspring)	Nick Matthews (Savills)	Taylor Wimpey	No	• Effective	Yes	Yes	These representations have been prepared and submitted by Savills on behalf of Taylor Wimpey. Taylor Wimpey support the overarching intent of Policy DP52 that aims to protect open spaces and recreational land from development unless it can be demonstrated that the space is surplus to requirements, replaced by equivalent or better provision, or the development delivers alternative recreational benefits that outweigh the loss. However, the policy as currently drafted lacks clarity regarding its scope and application. To ensure internal consistency within the Local Plan, draft Policy DP52 should explicitly state that it applies only to non-allocated sites. Without this clarification, Policy DP52 conflicts with site-specific allocation policies including Policy LP2 for Woodspring (a part of which is currently Woodspring Golf Course), which has been tested and justified through the plan-making process. A simple amendment to Policy DP52 could be made so that its protection does not apply to sites allocated for development in the Local Plan. This can be achieved by adding an explicit exemption clause in Policy DP52 wording: ‘This policy applies to all existing open spaces and recreational areas unless they are specifically allocated for development within this Local Plan.’ By incorporating the proposed exemption into draft Policy DP52, the policy would eliminate any direct conflict with strategic allocations, such as Woodspring. This amendment provides clarity and ensures that the policy does not compromise the delivery of allocated development sites, while continuing to fulfil its overarching purpose of safeguarding non-allocated open spaces and recreational land.	A simple amendment to Policy DP52 could be made so that its protection does not apply to sites allocated for development in the Local Plan. This can be achieved by adding an explicit exemption clause in Policy DP52 wording: ‘This policy applies to all existing open spaces and recreational areas unless they are specifically allocated for development within this Local Plan.’		DP52.pdf
51524513	Bellway Homes Ltd	tor&co	Bellway Homes Ltd	No	• Justified • Effective • Consistent			Whilst Bellway understand the desire to ensure the loss of formal designated open space with community use / importance is sufficiently justified, the policy and supporting text as drafted would result in any green or blue space being subject of this policy / open to interpretation. Outright protection should (and indeed is) already offered by Local Green Space designation. This can be extended, where	To make the policy clear, justified and effective, the Council should: - Publish a specific list of open spaces that the policy would apply in the supporting text; and		20251212 504317 JE - North Somerset Reg 19 (Reps obo Bellway Homes).pdf

Policy DP53: Best and most versatile land

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
63359201	Nailsea Holdings LVA LLP	Matthew Kendrick	Nailsea Holdings LVA LLP	Unsure	• Justified • Effective • Consistent with national policy	Unsure	Unsure	Policy DP53 seeks to safeguard Grades 1, 2 and 3a agricultural land and introduces a strict set of criteria which significantly restrict the potential for development on BMV land. While the protection of BMV land is supported in principle, the approach taken in DP53 goes beyond national policy and risks unnecessarily constraining otherwise sustainable development opportunities. The NPPF requires decision makers to consider the economic and other benefits of BMV land, but also explicitly states at footnote 65 that where significant development of agricultural land is necessary, areas of poorer quality land should be preferred. The NPPF does not impose an absolute bar on development of BMV land, nor require the stringent protection mechanisms set out in DP53. The inflexibility of DP53 is problematic in a district such as North Somerset where the spatial strategy already severely constrains opportunities for growth. Many sustainable settlements are surrounded by a mix of Grades 2, 3a and 3b land. If DP53 is applied rigidly, it will effectively rule out proposals on even small pockets of BMV land, regardless of whether the majority of a site is lower grade, or whether the scheme delivers significant sustainability benefits such as affordable housing, accessible village growth or early delivery of new homes. This contradicts the more balanced approach envisaged by the Framework, which clearly anticipates that some BMV land may be required where necessary to deliver sustainable development. DP53 also fails to acknowledge the practical reality that ALC mapping at a site level often reveals a mosaic of grades, with small and irregular pockets of Grade 3a occurring within wider areas of Grade 3b or lower. The approach taken in DP53 would treat such sites as if they were entirely BMV, meaning that minor inclusions of 3a land could preclude development entirely or severely constrain masterplanning. This is directly at odds with national policy and risks undermining good place-making by forcing layouts to “work around” small fragments of higher-grade soil, regardless of whether these areas are functionally or visually significant. DP53 should therefore be amended to provide greater flexibility, consistent with the NPPF. The policy should distinguish between significant areas of BMV land and small inclusions, and should recognise that sustainable development proposals may justify the loss of limited areas of 3a land where wider benefits clearly outweigh the harm, as set out in footnote 58 of the Framework. Without such modifications, DP53 is not justified, not effective, and not consistent with national policy	DP53 should therefore be amended to provide greater flexibility, consistent with the NPPF. The policy should distinguish between significant areas of BMV land and small inclusions, and should recognise that sustainable development proposals may justify the loss of limited areas of 3a land where wider benefits clearly outweigh the harm, as set out in footnote 58 of the Framework. 63191617	Various Taylor Wimpey Crest Nicholson Barratt Redrow Vistry Group	Nick Matthews (Savills)		No	• Justified • Effective • Consistent with national policy	Yes	Yes	These representations have been prepared and submitted by Savills on behalf of various clients including Taylor Wimpey, Crest Nicholson, Barratt Redrow, and Vistry Group. 2. This policy seeks to protect best and most versatile agricultural land (Grades 1, 2 and 3a of the Agricultural Land Classification, 'BMV land') from "significant, inappropriate and unsustainable proposals". 3. The policy states Grade 1 and 2 BMV land will be safeguarded from development to ensure its long-term potential for food production and to protect the soil resource, with development not to be permitted unless it is for one of the four listed uses. The policy goes on to state that where development is proposed on sites of one hectare or greater on Grade 3a BMV agricultural land, development will only be permitted if one of the listed criteria are met. 4. Paragraph 188 of the Framework states that "Plans should: distinguish between the hierarchy international, national and locally designated sites; allocate land with the least environmental or amenity value, where consistent with other policies in this Framework". 5. Footnote 65 goes on to state that "where significant development of agricultural land is demonstrated to be necessary, areas of poorer quality land should be preferred to those of a higher quality. (emphasis added). 6. The draft wording of Policy DP53 goes far beyond the requirements of the Framework which seeks to direct development towards areas of poorer quality land where "significant" development of agricultural land is demonstrated to be necessary. The draft policy wording indicates no threshold and instead appears to apply to development of any size however small. 7. Furthermore, the Framework does not seek to prevent development of BMV land, instead encouraging consideration of the availability of agricultural land used for food production and other policies in the Framework in order to determine which sites are most appropriate for development. As such, agricultural land classification is but one consideration of many to be weighed up when ascertaining locations for sustainable development. 8. It is this interpretation of the Framework that has clearly been adopted in selecting the sites proposed for allocation in the emerging Local Plan. Indeed, there appear to be proposed allocations on Grade 1 & 2 land. Strict adherence to Policy DP53 would render these allocations unimplementable and the policy approach is therefore internally inconsistent.			Policy DP53 (BMV) for Various (Dec 25).pdf

								9. In light of the foregoing, the wording of draft Policy DP53 should be amended in order to ensure consistency with national policy.			
29403105	Diverse Partnerships Yatton Ltd	Pegasus Group		No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Yes	Yes	The policy is unsound as it is not justified, positively prepared or consistent with national policy. The policy as presented is quite plainly designed to resist speculative development than to place a proportionate consideration of loss of Best and Most Versatile (BMV) agricultural land, placing an effective moratorium upon development within BMV land with only very limited exceptions. The policy refers to “significant, inappropriate and unsustainable” proposals, which it then defines by allowing exceptions for a limited range of specific development types without regard to any criteria setting out scale. This is contrary to the guidance presented by Natural England only countenances losses of BMV land of over 20ha as ‘significant’, but the policy as drafted sets no such threshold. Moreover, the policy fails to balance the assessment of the value of BMV land as prescribed in the NPPF with other locational considerations both at a strategic level (i.e. directing development to the most sustainable locations) and within a site layout; prioritising domestic gardens alongside allotments and orchards on areas of higher agricultural quality that will in practice have no significant bearing on food production or security. By way of comparison the accompanying topic paper identifies all but one of the greenfield allocations upon Grade 3 or above land. The policy overall overrepresents considerations of BMV land and should be amended. At the very least the sustainability exception should be extended to Grades 1 and 2 also. Without such changes the policy is not justified, compliant with national policy, evidenced or positively prepared.	The policy overall overrepresents considerations of BMV land and should be amended. At the very least the sustainability exception should be extended to Grades 1 and 2 also. 63043809	Wain Homes	Russell Smith	Wain Homes	No	' Justified ' Effective	No	No		This section sets out representations in relation to development management policy. DP53 Best and Most Versatile Land. Policy DP53 states that Grade 1 and 2 BMV land will be safeguarded from development except in limited circumstances. Similarly development on sites of one hectare or more on Grade 3a BMV land will only permitted in limited circumstances. Wain Homes considers that Policy DP53 is not sound as it is not consistent with national policy. NPPF para 187b sets out that planning policies and decisions should contribute to and enhance the natural and local environment by “recognising the intrinsic character and beauty of the countryside, and the wider benefits from natural capital and ecosystem services – including the economic and other benefits of the best and most versatile agricultural land, and of trees and woodland.” The provisions of Policy DP53 are significantly more restrictive than national policy and in effect, represent a blanket ban of residential development on sites containing BMV. In practice many sites will contain a blend of BMV and non BMV land. Detailed investigations are required to confirm the quality of soils shown in predictive mapping. As drafted the restrictions of Policy DP53 would apply to sites containing any BMV, even though it may only be a small component of the overall site. Furthermore consideration must also be given to whether its economically viable agricultural land. Overall, while consideration should be given to the harm of losing BMV land, it should be a matter of planning balance overall.		North Somerset Local Plan Regulation 19 Wain Homes.pdf
41434017	Wain Homes (Severn Valley) Limited	J Millard	Wain Homes (Severn Valley) Limited	No	' Justified ' Effective	Yes	Yes	The supporting text to Policy DP53 acknowledges that the Local Plan allocates land which is located on higher quality agricultural land, i.e. BMV land, and explains that the purpose of this policy to is “protect remaining BMV land from speculative development”. This is effectively introducing a two-tier framework aimed at restricting speculative development. Given the historic failure of North Somerset Council to meet its identified housing needs, and the significant uplift now required, DP53 will introduce a restrictive policy framework that may frustrate wider opportunities for development, particularly in circumstances where the Local Plan is failing to meet its identified housing needs. This policy seeks to impose a highly restrictive policy framework relating to BMV on land which is not allocated. For subgrade 1 and 2, Policy DP53 is highly restrictive on the basis that this is a “finite resource”, this is despite specific allocations proposed through this Local Plan being located in areas of Grade 1, such as Land East Backwell and areas of Grade 2, Land South of Nailsea. In both cases, the October 2025 BMV background paper, explains that the loss of BMV is outweighed by wider sustainability benefits and key infrastructure delivery. For Grade 1 and 2 BMV land there is no recognition within Policy DP53 in respect of the consideration of wider sustainability benefits, where proposals may come forward and include land which is classified as BMV. Whilst DP53 does allow for some limited forms of development on unallocated land which is BMV, it effectively imposes a moratorium on residential development on land classified as Grade 1 and 2. A moratorium which is not applied in the process of identifying allocations within this Re 19 plan, which includes land of the highest agricultural value. For sub-grade 3a (which is still BMV), there is more flexibility in the wording of Policy DP53, where it confirms that if the sustainability benefits of the proposal clearly outweigh the long-term loss of BMV then development may be permitted. The NPPF does not seek to imposes a blanket restriction on development on BMV land, of any grade, rather it sets out that areas of poorer quality land should be preferred to those of higher quality (NPPF, footnote 65).	Reference to the “The sustainability benefits of the proposal clearly outweigh the long-term loss of the best and most versatile agricultural land” should be applied to all grades of BMV Land. Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The intent of DP53 is not objected to as a matter of principle, however there is concern that the approach is too restrictive and fails to set in a place a policy framework that is consistent with the NPPF. Therefore, Policy DP53 should be revised such that the consideration of wider sustainability benefits, as part of the planning balance, should be applied to BMV of all grades. PLEASE SEE ATTACHED DOCUMENT			
63213025	BackwellPC NailseaTC Flax BourtonPC BrockleyPC BackwellRA Nailsea Action Group	Lucy White Planning Limited	BackwellPC NailseaTC Flax BourtonPC BrockleyPC BackwellRA Nailsea Action Group	No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Unsure	Unsure		The proportion of Grade 1 land in North Somerset is approximately 7% and 10% for Grade 2. 60% falls in Grade 3. The policy approach recognises the benefits of all best and most versatile land (BMV) and provides stricter safeguards for the more limited amount of grade 1 and 2 in North Somerset. BPC and NTC support the inclusion of this policy in the plan. However, they query why the policy only applies to non-allocated sites. As evidenced in response to Policy SP8, the proposed designation of Nailsea and Backwell as a strategic development location would sterilise around 270 hectares of best and most versatile agricultural land (BMV), of which almost 200 hectares are Grade 1 and 2. In accordance with the Framework the Local Plan should guide development to areas of poorer quality agricultural land before considering these 6 Paragraph 6.81, Habitat Regulations Assessment, AECOM October 2025 43 locations. The justification provided for allocating BMV at Nailsea and Backwell is based solely on the flawed transport mitigation strategy to deliver a strategic rail crossing from the A370 to Nailsea. If the allocation of BMV land is deemed necessary to make the plan sound, the terms of Policy DP53 should apply to the development proposals for the allocation, to ensure the loss of BMV agricultural land is minimised.		251118 Local Plan Reg 19 2025 reps FINAL.pdf R01 - Transport Statement - Rev 3 FINAL.pdf Hydrology LP3 BPC_NTC Appendix_2.2-compressed.pdf Hydrology LP3 BPC_NTC Appendix_2.1-compressed.pdf Hydrology LP3 BPC_NTC Appendix_9-compressed.pdf Hydrology LP3 BPC_NTC Appendix_7-compressed.pdf Hydrology LP3 Summary BPC_NTC Part 2 (1).pdf Hydrology LP3 Summary BPC_NTC Part 1 (1).pdf
20583553	Bleadon Parish Council		Bleadon Parish Council	No	' Justified ' Effective ' Consistent with national policy	No	Unsure	The reasons for Bleadon Parish Council reaching this conclusion are as follows: The Plan does not afford land used for food production sufficient protection from development (other than residential development). This is despite the fact that food security is one of the 13 national infrastructure sectors identified by the National Protective Security Authority. Conversely, DP52 (Protection of open space and recreation) – which is not land forming part of a national infrastructure sector - establishes a far higher standard of protection in that a condition of development is (amongst other aspects) a requirement for any land to be used for development purposes to be replaced 'by at least equivalent or better'. The UK is already heavily reliant upon imported food in a number of respects. The loss of any further land currently used for food production will, therefore, only serve to exacerbate the current position. DP53 states that the proportion of Grade 1 land in North Somerset is approximately 7% and 10% for Grade 2. 60% falls in Grade 3 and that the best and most versatile (BMV) land (grades 1, 2 and 3a) will be protected from significant, inappropriate and unsustainable proposals. However, there is no clear distinction between the proportion of land which is classified as Grade 3a and Grade 3b. The definition of permitted development as currently worded is where development is proposed on sites of one hectare or greater on Grade 3a BMV agricultural land, development will only be permitted if: • It is one of the exceptions listed under Grades 1 and 2; or • It is to be used for renewable energy production where the land could be returned to agriculture without a loss of quality; or • Is for aVordable housing; or • The sustainability benefits of the proposal clearly outweigh the long-term loss of the best and most versatile agricultural land. As a consequence, the protection afforded to Grade 3a land is limited and no protection is offered to Grade 3b land. Significant areas of land within the Bleadon Parish boundary currently used in relation to food production is classified as Grade 3 and this land is vulnerable to development in relation to such aspects as renewable energy development. This vulnerability is likely to be compounded by pressures upon/incentives for landowners arising from aspects such as the Biodiversity Net Gain regulations. Whilst it is recognized that the proposed wording includes reference to permission being granted only if land could be returned to agriculture without loss of quality, the wording fails to recognize the practical implications of any change of use upon existing communities. By way of an example, agreements in relation to the placing of solar panels will likely be for a number of decades and once such land is lost, the farming communities (and knowledge and skills base) will also be lost. As currently framed, the Parish Council is of the view that DP53 runs contrary to the expectations of the efficient use of land expectations as set out in paragraphs 124 to 127 of the NPPF. Specifically, the NPFF states the following: Planning policies and decisions should promote an e6ective use of land in meeting the need for homes and other uses, while safeguarding and improving the environment Planning policies and decisions should: … b) recognise that some undeveloped land can perform many functions, such as for wildlife, recreation, flood risk mitigation, cooling/shading, carbon storage or food production;	In order to make the Plan legally compliant and sound in respect of DP53, the Parish Council would wish to see more explicit protection of Grade 3 (and above) land currently used to support food production. If North Somerset Council proposes that such protection/clarification might come by way of the preparation of a Supplementary Planning Document, then the Parish Council would urge early completion of such a document. The Council would also suggest that there is an opportunity for the wording under DP8 (Efficient Use of Land) to be strengthened. At the moment, the wording of DP8 is heavily influenced by the NPPF in terms of housing targets. Whilst this is understandable, DP8 could be strengthened to clarify expectations around use of land to limit impacts elsewhere. A prime example of an approach which would potentially limit the impact upon agricultural land would be for DP8 to be clear on the need for solar panels on roofs rather than on agricultural land – with a corresponding cross reference to DP7 (Large scale renewable and low carbon renewable energy).		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Planning policies and decisions need to reflect changes in the demand for land. The Parish Council is of the opinion that – in providing insufficient protection for agricultural land under DP53 – the Plan fails to meet these requirements and that there is a serious risk of agricultural land being lost to the extent that any requirements identified by the National Protective Security Agency will not be able to be met. Furthermore, the Parish Council is of the view that the plan relies upon land classifications which are out of date e.g. Chris Hinchcliff MP states, “We must urgently update our agricultural land classification. The system we use to determine potential farmland productivity is desperately out of date. It uses rainfall data from 1941 to 1970 and temperature measurements from 1961 to 1980. The impacts of climate change are already being severely felt on our farmland and intensive farming is degrading soils, with 5.3 million tonnes of organic carbon lost from our soils every year, so the likelihood is that the current agricultural land classification system substantially overestimates land productivity. We must update it.” Westminster Hall debate regarding the impact of land use change on food security (Tuesday 18 November 2025) and related Hansardtranscript.			
58553441	Sarah Berridge			No	Justified	Unsure	Unsure	Argument Against Building on Grade 1 Soil and Local Wildlife Habitat 1. Loss of irreplaceable Grade 1 agricultural land Grade 1 soil is the highest-quality, most productive farmland in the UK. Only a very small percentage of national land is classified at this level. Once it is built on, it is permanently lost to food production. In a time of increasing food insecurity, climate instability, and reliance on imports, protecting Grade 1 soil is a matter of public interest and long-term resilience, not local preference. Allowing development on Grade 1 land directly undermines national food strategy goals, climate adaptation planning, and local sustainability commitments. 2. Damage to a functioning wildlife ecosystem The proposed site is not just “empty green space”: it is an active ecosystem supporting birds, pollinators, insects, small mammals, and plant species. These habitats provide vital ecological functions, including: Pollination of crops and local gardens Natural flood mitigation Soil regeneration Biodiversity corridors connecting larger habitats Destroying or fragmenting this area would have a disproportionate ecological impact, particularly at a time when UK wildlife populations are in severe decline. 3. Increased flood risk to the local community Agricultural land and wildlife habitats act as natural sponges, absorbing rainfall and reducing runoff. Replacing them with hard surfaces (roads, houses, driveways) increases: Flood risk Soil erosion Pressure on drainage systems Given the well-documented flood history in the region, building on this land poses a serious and foreseeable threat to local homes and infrastructure. 4. Contradiction of local planning policies and climate commitments Most councils have explicit planning policies that require: Prioritising brownfield sites Protecting prime agricultural land Safeguarding biodiversity Reducing carbon emissions Approving development on Grade 1 soil and a wildlife area contradicts these policies and undermines local and national commitments to: Biodiversity Net Gain Climate resilience Sustainable land use It also sets a dangerous precedent for future land-use decisions. 5. Loss of community wellbeing and public value			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The land provides ongoing benefits that are not captured in financial assessments, such as: Spaces for walking, observing nature, and community identity Clean air and reduced noise Educational opportunities for schools and families A sense of local heritage and rural character Once built over, these public goods disappear permanently. 6. Better alternatives exist Most local areas have: Underused brownfield sites Empty commercial buildings suitable for conversion Opportunities for town-centre renewal Potential for higher-density, low-impact development in already built-up zones These alternatives: Protect farmland Support biodiversity Regenerate local spaces Avoid unnecessary climate and flood risks There is no compelling justification for choosing Grade 1 soil and wildlife habitats when these smarter options exist. Building on Grade 1 agricultural land and an established wildlife habitat is environmentally unsound, economically short-sighted, and socially irresponsible. It threatens food security, biodiversity, community wellbeing, and climate resilience. Saying no to this development is not a barrier to progress - it is a commitment to sustainable, responsible planning that protects the landscape we depend on.			
1019201	Wrington Parish Council		Wrington Parish Council							Countryside Policies – We are broadly supportive of the Polices within this Section. Policy 53 – Best and most versatile land We very much support the protection contained in this Policy. The loss of our best and most versatile land is unacceptable. We are a small country with a rising population in an unsettled world. We must retain our quality land for food production in order to be properly sustainable and less reliant on external sources. Food has been identified as one of the 13 critical national infrastructures (see https://www.npsa.gov.uk/about-npsa/critical-national-infrastructure).	
27395649	C Butler		Bleadon BOB Community Website	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	Unsure	Poorly protected food production land under DP53 (Best and most versatile land) vs better protected DP52 (Protection of open space and recreation). DP52 states, “Development on open space will only be permitted provided: • The open space is clearly shown through an assessment to be surplus to local requirements and will not be required for current or future needs; or • The loss of open space is to be replaced by at least equivalent or better in terms of quantity, quality and accessibility and there will be no overall negative impact on the provision of open space; or • The development is for alternative sports and recreational provision, which meets locally identified needs and clearly outweighs the loss of the current or former use”. These minimum protections are needed in the Local Plan for essential food producing land. Backwell is an example of how NSC is currently not protecting prime agricultural land, nor does it appear to intend to do so in the future. The village of Backwell is making a strong appeal to North Somerset Council to reconsider plans that would see precious grade one farmland developed for housing. https://somersetdaily.co.uk/village-urges-council-to-protect-grade-one-farmland from-development/ The use of currently used, productive agricultural land for housing, solar and other green initiatives doesn’t reflect the work that would be required			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								to restore that land to a productive state in the future, if that is at all possible. NSC policies do not clearly indicate the environmental (mining, water pollution, disposal, recycling) and social costs (slave labour) Protecting and keeping the land is fundamental to our future ability to support our future food needs. The next generation of farmers must be recognised, encouraged and supported. The proposed Local Plan is not sound. Create protective farming, food production and food security policies. Ensure any decision or policy has been considered in relation to farming, food production and food security. The proposed Local Plan is not sound. Create a farming, food production and food security policies. Ensure any decision or policy has been considered in relation to farming, food production and food security. Create strategic gaps around all urban areas to protect rural agriculture/ farming communities. In Full Council, 19 September 2023, a NSC Cabinet member stated, "… so in the absence of government action we have no choice but to face these challenges ourselves, this will mean making bold decisions as we prepare, adapt and make the most of the opportunities a green transition will bring North Somerset through new job opportunities… " So it seems that NSC can be bold enough to tackle very real local farming, food production and security issues. However, despite being its power, the current proposed Local Plan does not address the critical, life affecting, issues of farming, food production or security, It does not protect the future physical, emotional or economic health and wellbeing of our residents and communities at local, regional or national levels. This proposed Local Plan is not sound. The proposed Local Plan is not sound. Create protective farming, food production and food security policies. Ensure any decision or policy has been considered in relation to farming, food production and food security. Create strategic gaps around all urban areas to protect rural agriculture/ farming communities.			
30921569	Lucy Byrne			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I understood that the land next to the A369 by Pill was grade 2 agricultural land? it is next to Markham brook with ancient woodland either side. I don't understand why this land is allowed to be allocated with housing when there are suitable brown feild sites in the county such as in Portishead and Weston supermare that have not been proposed to be built on to maximum capacity?	re-consult about all brown feild sites and utilize all to maximum density before proposing to build on green belt grade 2 argicultural land. The land by the A369 in Pill could be used as an area of economic growth if developed as productive cider orchards or flower growing for example, providing new ares of employment for the additional residents. To build on such valuable agricultural land does not make sense.		
58516481	Mr Thomas Catling (Woodstock Homes, Knightcott Road, Banwell)		Woodstock Homes (Construction) Ltd	Unsure	• Justified • Effective • Consistent with national policy	Unsure	Unsure	Policy DP53: Best and more versatile land looks to safeguard Grades 1, 2 and 3a agricultural land by proposing strict criteria significantly restricting potential development on BMV land. This will be problematic for many settlements within North Somerset where the spatial strategy already severely constraints opportunities for sustainable growth. This will rule out potential opportunities for small scale developments on BMV land going against the approach which does envisage the use of BMV land where necessary to ensure the delivery of sustainable development.			CP-01 PH2 Knightcott Rd, Banwell - Concept Plan @ A2 Notes.pdf Knightcott Road Banwell - Representations Reg 19.pdf
58622465	David Davies		David Davies	No	• Positively prepared • Justified	Unsure	Unsure	North Somerset Local Plan 2041: Pre-submission Plan is unsound because: North Somerset Local Plan 2041 is not positively prepared or justified in respect in relation to food security and this relate to land use. On the one hand, DP52 (Protection of open space and recreation) appears to be relatively strong and DP53 (Best and most versatile land) appears to be relatively weak on the other. Protecting our future rural and food security issues needs both DP52 and DP53 to work together with equal strength. The Local Plan should provide a consistent approach to rural and food security issues. NSC has a specific responsibility and duty for planning local food security through their Local Plan. The latest functions and responsibilities are given in "A UK government food strategy for England" (July 2025), "UK Food Security Report 2024" (2024), and Minister for Food Security (Daniel Zeichner, July 2025) "Good Food Cycle". While national government sets the overall framework, NSC has the responsibility use place-based approaches to build resilience, promote public health, and support local economies. The current proposed plan falls short of this responsibility. The Plan must demonstrate it is sufficiently and actively protecting agricultural land in terms of food security, but the current proposed Plan wording gives rise to a significant risk that pressure from / for housing development will destroy productive farming land and put food security at risk. Specifically, the proposed Local Plan needs to address retention of grazing land for dairy and sheep incl land used to produce hay crop. In terms of farming viability, the Plan must protect enough land for farmers and, importantly, tenant farmers. Allowing the erosion of farm size and infrastructure (including barns and networks of adjacent fields that surround settlements) will make the scale and economics of farming unviable. Sufficient food security land protection will allow existing and future tenant farmers to continue farming an avoids the assumption that farmers don't want to farm. This also supports the economic responsibilities that the Local Plan must provide for. Furthermore, to support this food security land protection there is more than sufficient brownfield supply in North Somerset to allow the Local Plan to protect food production land.	Steps to be taken by NSC Modifications: 2. Strengthen DP53 in line with DP52 to include and protect future rural and food security issues against the pressure of non-brownfield housing development.

63052097	Stephanie Fowler	Pegasus Group		No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes		The policy is unsound as it is not justified, positively prepared or consistent with national policy. The policy as presented places an effective moratorium upon development within Best and Most Versatile (BMV) agricultural land, with only very limited exceptions. This would appear to significantly constrain the permissively framed rural exceptions site policy DP43 to only Grade 3a and below land, which may therefore preclude rural exception sites from being delivered adjoining some rural settlements. It would also likely constrain the delivery of commercial scale renewable energy, where their locations are often defined by grid connection opportunities contrary to the plan's wider ambitions towards net zero. The policy refers to "significant, inappropriate and unsustainable" proposals, which it then defines without setting out criteria relating to scale. This is contrary to the guidance presented by Natural England only countenances losses of BMV land of over 20ha as 'significant', but the policy as drafted sets no such threshold. Moreover, the policy fails to balance the assessment of the value of BMV land as prescribed in the NPPF with other locational considerations both at a strategic level (i.e. directing development to the most sustainable locations) and within a site layout; prioritising domestic gardens on areas of higher agricultural quality will in practice have no significant bearing on food production or security. The policy overall overrepresents considerations of BMV land and should be amended. Modification: Policy DP53 should be modified to include criteria reflecting 'significant' scale of BMV loss as over 20ha in accordance with Natural England guidance. 7800929	Wraxall and Failand Parish Council		Wraxall and Failand Parish Council	No	• Effective	Unsure	Yes	The NSC mapping does not reflect the detailed analysis (at para 6.2 and Drawing 1 in Agricultural Land Classification on Land north of Nailsea by Soil Environment Services Ltd dated October 2023 for PA 24/P/1586/OU2) which shows that 33% of the land is either Grade 2 or Grade 3a which falls into the Best and Most Versatile (BMV) category agricultural land, which should be protected under this policy. Further information is provided at the W&F PC Position paper.			Wraxall & Failand Parish Council Position Paper - North Somerset Local Plan 2041 - 11 Dec 2025.pdf
58594049	Woodstock Homes (Land west of Butts Batch, Wrington)	Oliver Ansell	Woodstock Homes	No	• Justified • Effective • Consistent with national policy	Unsure		Please see representations document Policy DP53 seeks to safeguard Grades 1, 2 and 3a agricultural land and introduces a strict set of criteria which significantly restrict the potential for development on BMV land. While the protection of BMV land is supported in principle, the approach taken in DP53 goes beyond national policy and risks unnecessarily constraining otherwise sustainable development opportunities. The NPPF requires decision makers to consider the economic and other benefits of BMV land, but also explicitly states at footnote 65 that where significant development of agricultural land is necessary, areas of poorer quality land should be preferred. The NPPF does not impose an absolute bar on development of BMV land, nor require the stringent protection mechanisms set out in DP53. The inflexibility of DP53 is problematic in a district such as North Somerset where the spatial strategy already severely constrains opportunities for growth. Many sustainable rural settlements, including Wrington, are surrounded by a mix of Grades 2, 3a and 3b land. If DP53 is applied rigidly, it will effectively rule out proposals on even small pockets of BMV land, regardless of whether the majority of a site is lower grade, or whether the scheme delivers significant sustainability benefits such as affordable housing, accessible village growth or early delivery of new homes. This contradicts the more balanced approach envisaged by the Framework, which clearly anticipates that some BMV land may be required where necessary to deliver sustainable development. DP53 also fails to acknowledge the practical reality that ALC mapping at a site level often reveals a mosaic of grades, with small and irregular pockets of Grade 3a occurring within wider areas of Grade 3b or lower. The approach taken in DP53 would treat such sites as if they were entirely BMV, meaning that minor inclusions of 3a land could preclude development entirely or severely constrain masterplanning. This is directly at odds with national policy and risks undermining good place-making by forcing layouts to "work around" small fragments of higher-grade soil, regardless of whether these areas are functionally or visually significant. For Wrington, this is particularly relevant. The settlement has not been identified for any planned growth despite being a sustainable Service Village, and the Local Plan relies on windfall to meet local needs. Yet DP53 would make windfall or edge-of settlement opportunities more difficult to deliver if any part of a site contains small pockets of 3a land. This further reduces the already limited scope for new homes in Wrington and directly undermines the deliverability of the spatial strategy and the flexibility required by SP8. DP53 should therefore be amended to provide greater flexibility, consistent with the NPPF. The policy should distinguish between significant areas of BMV land and small inclusions, and should recognise that sustainable development proposals may justify the loss of limited areas of 3a land where wider benefits clearly outweigh the harm, as set out in footnote 58 of the Framework. Without such modifications, DP53 is not justified, not effective, and not consistent with national policy	Please see representations document DP53 should be amended to provide greater flexibility, consistent with the NPPF. The policy should distinguish between significant areas of BMV land and small inclusions, and should recognise that sustainable development proposals may justify the loss of limited areas of 3a land where wider benefits clearly outweigh the harm, as set out in footnote 58 of the Framework. 62810017	Guy Stone			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	This policy seems to be being completely ignored in the face of the vast aount of residential housing proposed on high quality greenfield land at Backwell.	Take out the excessive housing on greenfield sites.		
63085185	National Farmers Union		National Farmers Union					The National Farmers' Union (NFU) represents over 44,000 farming and growing businesses across England and Wales. The NFU supports farmers, growers, agricultural workers, and rural communities across a diverse range of sectors, encompassing all agricultural life, campaigning for a stable and sustainable future. The NFU has a number of members with farming and growing businesses across North Somerset. Our aim is to support members to champion British agriculture and horticulture and campaign for a stable and sustainable future for British farmers. It is critical that farming businesses within the county remain economically and environmentally sustainable, as a valued part of Somerset. We welcome the opportunity to provide input to this consultation in relation to the proposed Somerset Local Plan and its vision, policy framework and delivery. The farming community continues to face formidable challenges including the ongoing impacts of the Ukraine war, labour shortages and input cost inflation which is disproportionately impacting agriculture. Alongside these challenges farmers are working under increasingly changeable climate conditions. Successive governments have acknowledged that food security is national security, and with this background it is more important than ever that we support farming businesses to develop and modernise to secure their ongoing operation.			North Somerse Council Local Plan 2026-2041 - NFU consultation response.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Farming has shaped our landscapes, creating varied fabrics and bringing value to local and rural economies. Our landscapes are living, working landscapes that are constantly changing through continuous management by farmers through grazing, cropping and cultivations, and management of boundaries. We welcome the Local Plan's recognition of the countryside as a valuable resource and its commitment to protecting the best and most versatile (BMV) agricultural land. High-quality farmland underpins food security and supports resilient farm businesses that deliver benefits for climate and nature. NFU members strongly support the principle that Grades 1 and 2 land should be safeguarded from development, and we would like to see this commitment strengthened with clear wording that exceptions will only apply in cases of genuine necessity and with full restoration plans. We stress the importance of ensuring that objectives for nature recovery and climate resilience are practical and work alongside food production. Agriculture plays a vital role in delivering environmental outcomes while producing food, and planning policy should reflect this dual purpose. We welcome recognition of water as a critical resource for food production and urge greater support for water management infrastructure on farms, which will be essential for future resilience. The Local Plan should remain open to a range of approaches to achieving net zero, including recognising the positive contributions farming can make through energy crops, renewable energy generation, and land management practices. We also welcome policies that enable farm diversification, rural workers' housing and infrastructure development, as these are key to building resilient businesses and supporting the rural economy. Whilst we acknowledge the need for public access to the countryside, it is essential to recognise that this is a working landscape. Increased access must consider biosecurity, wildlife, animal and public safety, and landowner rights. We would welcome options for funded fencing along footpaths where appropriate, as well as improved signage to promote responsible access and protect both livestock and visitors. We would like to see clarity on terms such as "regenerative land use practices", along with practical guidance for farms to adopt these practices. Many farms already employ techniques that could be considered regenerative without using the label. Finally, we stress the principle of "the right tree in the right place," ensuring that woodland expansion does not occur on BMV land and that food production remains a priority. Summary The NFU welcomes the Local Plan's approach to countryside development and support of development for agriculture. The Local Plan must recognise the essential role of agriculture in delivering food security, climate resilience, and a thriving rural economy. Protecting the best and most versatile land, supporting farm infrastructure, and enabling sustainable practices are critical to achieving these goals, alongside policies that allow diversification and innovation. We urge the Council to ensure planning decisions work in harmony with productive farming, safeguarding this vital sector while balancing environmental objectives for future generations.		
62846721	Cleeve Parish Council		Cleeve Parish Council	No	• Positively prepared • Justified • Effective			We do not consider the North Somerset Local Plan 2041: Pre-Submission Plan to be sound. Based on the detailed representations of Cleeve Parish Council, we believe the Plan fails three of the tests of soundness set out in NPPF paragraph 36: Positively Prepared, Justified, and Effective. 1. Positively Prepared The Plan does not adequately address the needs of young people or newly forming households, nor does it ensure that new development will be properly supported by essential infrastructure. The repeated use of discretionary language ("will be expected", "should have regard to") leaves critical requirements—such as drainage, healthcare capacity, active travel connections, affordable housing percentages, biodiversity measures, renewable energy deployment, and sustainable design—insufficiently guaranteed. The Plan also fails to provide a clear and sustainable policy position on future growth at Bristol Airport, or on how Green Belt releases will be compensated or justified. As a result, the Plan does not convincingly meet the district's needs in a sustainable and deliverable way. 2. Justified The policy choices taken in the Plan do not always represent the most appropriate strategy when tested against reasonable alternatives. The evidence base appears inadequate or incomplete in several areas, including: (a) the justification for Green Belt releases at Bristol Airport; (b) the robustness of climate-adaptation measures given the known risks of flooding, sea level rise, extreme heat, and pressure on water resources; (c) the lack of evidence demonstrating that non-mandatory design guidance will achieve sustainable outcomes; (d) the omission of low-rise flats in existing towns as a viable and necessary option for delivering affordable housing for young people; and (e) insufficient assessment of the landscape, safety, environmental and carbon impacts of airport-related growth, including the absence of a cumulative emissions assessment. In each case, reasonable and more sustainable policy alternatives have not been adequately explored. 3. Effective The Plan's delivery mechanisms are weak and do not provide confidence that its policies will be realised. Critical infrastructure (roads, drainage,	Noting that there are exceptions to the protection of Best and Most Versatile Land, Cleeve Parish Council is concerned that the conditions of temporary development stated "A limited temporary use where the land and soil could be returned to its former quality and plans for its reinstatement are secured;" are insufficiently robust. We propose a more stringent formulation "A limited temporary use where the land and soil could be returned to its former quality and plans for its reinstatement are contractually and legally secured;".		Submission on behalf of Cleeve Parish Council in respect of Pre.docx

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								healthcare, active travel routes, mass transit provision and energy resilience) is not tied to development in a sufficiently enforceable manner. Policies that rely on voluntary interpretation or “expectations” are unlikely to secure required outcomes, particularly in relation to affordable housing percentages, design quality, biodiversity net gain, native woodland expansion, protection of commons, and the safeguarding of Best and Most Versatile agricultural land. Policies concerning Bristol Airport do not demonstrate effective cross-boundary working or credible mitigation strategies, while the approach to flood-risk management does not provide sufficient assurance that developments requiring the Exception Test would be safe, sustainable, or financially deliverable. As drafted, there is insufficient certainty that the Plan can be implemented as intended.			
62471329	Environment Agency		Environment Agency						Residential proposals must be sequentially located to the lowest areas of flood risk.		
59945953	Rich Coleman			No	• Positively prepared • Justified • Effective		No	Food Security exists and is recognised worldwide. Why allow development / building on grade 1 agricultural land ?	Ensure all brownfield sites are developed before even considering touching valuable farmland.

30361825	K Riches			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I would like to propose a more comprehensive policy on Agriculture here, or in a new Policy. There are sections in the Local Plan addressing eg Mineral Extraction as well as other major industries eg Portbury Dock and The Airport. Agriculture is a significant industry in North Somerset. It employs people and produces an important output - food. Note issues relating to Food Security. The Local Plan should address Agriculture by considering the current situation and crucially, the impact which must surely result from allocating significant areas of agricultural land, including Grade 1&2 Best and Most Versatile Land - including reduced output and impact on Food Security. At the moment, the absence of this information creates the impression that agricultural land is simply a resource to be used for new housing and employment with no other effects on the local economy etc. This is Unsound.	Address the above.		
62471329	Environment Agency		Environment Agency							New buildings must be sequentially located to the lowest areas of flood risk. Stockpiles must also be located away from flood zones and watercourses.	

Policy DP56: Equestrian development

Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
18477217	Kit Stokes	Kit Stokes	StokesMorgan Planning Ltd	Yes	• Effective • Consistent with national policy	No		Objection to Policy DP57 I object to Policy DP57 as it is unnecessarily onerous and out of step with broader Green Belt policy for house extensions. The proposed restrictions discourage reasonable investment in existing homes, which has several negative implications: Key Points: • Economic Benefits: Home improvement projects stimulate the local economy by employing builders, tradespeople, and suppliers. Restrictive policies risk reducing this activity and harming local businesses. • Community Stability: Allowing homeowners to extend or adapt their properties enables families to remain in their communities rather than being forced to relocate. This supports social cohesion and reduces pressure on housing supply. • Policy Alignment: DP57 appears more restrictive than national Green Belt policy, which allows for limited extensions and alterations provided they do not result in disproportionate additions. Local policy should align with national guidance to ensure fairness and consistency.	Recommendation: Revise DP57 to adopt a balanced approach that permits reasonable extensions and alterations, subject to scale and design controls, rather than imposing overly rigid restrictions. This will support economic activity, family stability, and compliance with national policy.		
62471329	Environment Agency		Environment Agency						Dwellings must be designed to reduce the risk of flooding, be two-storey within flood risk areas and incorporate flood resilience measures where possible.		EA Response - NSC Reg 19.pdf

62471329	Environment Agency		Environment Agency						Flood resilience measures to be incorporated where possible. Access, egress and location of sleeping accommodation to be considered (particularly as this type of building is often single storey).		

Policy DP59: Previously developed land in the countryside

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
4601665	Leigh & Glennie Ltd		Leigh & Glennie Ltd	No	• Justified • Consistent with national policy	Yes	Yes	Policy DP59 This policy supports the redevelopment of previously developed land outside settlement boundaries, provided three requirements are met: • the physical impact of the development is commensurate with the previous development, • the type and scale of development does not harm the countryside setting • that access to the proposal does not comprise access or safety on rural roads. The policy is therefore a positive one: it supports the redevelopment of land where those requirements are met. Those requirements are concerned with the physical manifestation of any development scheme, character, and safety. The policy then states that any development that occurs under this policy should ensure: • The character and appearance of the countryside is not harmed • Existing structurally sound buildings on the site which contribute to the rural character of the area are maintained and converted • The materials, form, bulk and general design of new buildings are in keeping with their surroundings • The location has safe and convenient access to the highway network and would not result in a significant adverse impact • There are no significant adverse impacts on living conditions of adjoining occupiers or uses • Redevelopment would bring significant local environmental, economic or social benefits. The matters to be ensured are therefore, again, relating to physical manifestation of any development, character and design, amenity, and safety. There is also a positive aspiration to the policy of seeking environmental, economic OR social benefits (ie one or more of those benefits, not a requirement for ALL to be met). Given both the requirements and matters to be ensured relate to the purposes set out above, it is inappropriate for the Policy to state that residential use will only be permitted 'if it can be demonstrated that all attempts to secure an employment or alternative use have been unsuccessful'. That is a very different policy test: it is one that relates to use classes, rather than what the Policy says is its objective, ie physical layout, character, amenity and safety. This approach is also inconsistent with the rest of the draft Plan relating to protection of employment uses. Policy DP21 is entitled 'Safeguarding employment sites' and defines what the Council see as employment uses, by stating 'land with existing or proposed employment uses (Use Classes B2, B8 and E(g))'. There is no other definition of 'employment use' in the Plan (the Glossary refers to 'Economic development' but that, of course, is not the term used in either Policy DP21 or in Policy PD59). Thus, by definition with the Plan's wording at Policy DP21, any 'employment use' to be protected falls within Use Classes B2, B8 and E(g). It is therefore inappropriate and inconsistent for Policy DP59 to introduce some new wide-ranging, non-defined reference to 'employment use' that applies only to existing parts of the District and existing types of development, ie previously developed land outside settlements, and only when certain types of new development are proposed, ie residential. Policy DP59 sets out what must be achieved through any redevelopment of previously developed land. The two lists of requirements set out in the Policy are clear and should be kept, but it is inappropriate and inconsistent to seek to put a use class requirement to also be satisfied in order to satisfy those tests.	Policy DP59 should be modified by deleting the following paragraph: ----- Residential use will be permitted if: • It can be demonstrated that all attempts to secure an employment or alternative use have been unsuccessful; and • The location is close to an existing settlement with a good range of facilities and services.		
18477217	Kit Stokes	Kit Stokes	StokesMorgan Planning Ltd	No	• Effective • Consistent with national policy	No	Unsure	Objection to Policy DP59: Previously Developed Land in the Countryside We object to Policy DP59 because it is more onerous than national Green Belt policy set out in the National Planning Policy Framework (NPPF). The NPPF allows for the redevelopment of previously developed land in the Green Belt provided it does not have a substantial impact on openness than the existing development. DP59 imposes stricter limitations that go beyond this principle, creating unnecessary barriers to sustainable redevelopment. This approach risks stifling opportunities for rural regeneration and adaptive reuse of land, contrary to national objectives for making effective use of previously developed sites.	We recommend aligning DP59 with NPPF guidance to ensure consistency, fairness, and support for sustainable rural development.		
62471329	Environment Agency		Environment Agency						Flood resilience measures to be incorporated where possible.

21472417	Mead Realisations Ltd	Oneleven Property		No	• Positively prepared				Objection is raised to this policy as it would unreasonably restrict the expansion of existing business in the countryside. This is of particular concern in relation to large employment generation business such as Puxton Park which contribute significantly to the local economy. The policy should be amended as follows:		Reg 19 Final Representations Mead Realisations 12.12.25 including appendices.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					• Justified • Effective • Consistent with national policy				Replacement buildings, extensions to buildings, ancillary buildings or the intensification of use for existing businesses, located outside settlements will be permitted provided that: • The scale of the proposal is not harmful to the character and appearance of the countryside; • The materials, form, bulk and general design of buildings are in keeping with their rural surroundings; • There is no significant adverse impact on living conditions of adjoining occupiers; and • The proposed development has safe and convenient access to the highway network and would not result in a significant adverse impact. The re-use of existing buildings is given priority over new development and only where no suitable buildings are available will new development be acceptable. (Remove...Proposals to extend outside the curtilage into surrounding countryside will need to be fully justified and not be harmful to the character and appearance of the countryside. Retailing, other than proposals that are strictly ancillary to the main use or proposals under 200m², will not be permitted.)		
62471329	Environment Agency		Environment Agency						New buildings must be sequentially located to the lowest areas of flood risk on the vulnerability of their use. Buildings to be designed to reduce the risk of flooding both today and with climate change. Flood resilience measures to be incorporated where possible.		

Policy DP62: Visitor accommodation in the countryside including camping and caravanning

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
21472417	Mead Realisations Ltd	Oneleven Property		No	• Positively prepared • Justified • Effective • Consistent with national policy				Objection is raised to this policy as it would unreasonably restrict the provision of visitor accommodation which could provide an important contribution to the local economy. The policy should be amended as follows: The construction of new buildings for use as visitor accommodation outside the Green Belt and AONB will be permitted provided that: • There are no other existing buildings suitable for conversion; • The proposal is set within the well-established curtilage of an existing building and is located adjacent to that building; • The development will not result in an (add..unacceptable) adverse effect on the landscape or settlement character of the area due to the proliferation of tourist accommodation; • The building is capable of providing a high standard of tourist accommodation in accordance with a national quality assessment scheme; • The scale of the proposal is not harmful to the character and appearance of the countryside; • (remove...The proposal would result in an enhancement of the immediate setting, and the impact of external facilities (curtilage treatment, parking) is minimal and landscaping respects the local rural character; and) • The materials, form, bulk and general design of buildings are in keeping with their rural surroundings. Proposals for new or extended touring and static caravan sites outside the Green Belt and AONB will be permitted provided that: • The proposal respects the scale, form, materials and design of any existing buildings and does not harm the character of the surrounding area; • (remove..The re-use of existing buildings is given priority over new development and only where no suitable buildings are available will new development be acceptable); and • Proposals are sited so as to minimise their visual and landscape impact, and extensions to existing sites that are considered intrusive must include environmental improvements to the existing site. All visitor accommodation should: • Not have a significant adverse effect on the living conditions of adjoining occupiers or adversely affect the operation of working farms; • Ensure there is safe and convenient access to the highway network and will not result in significant adverse impacts; and • Ensure lighting is as unobtrusive as possible taking into account the impact on living conditions and ecology. (remove....For new build and conversions, subsequent applications to change holiday accommodation to permanent residential use or the removal of conditions for holiday accommodation will not be permitted within 10 years of their construction unless the existing use is shown to be unviable. Caravan parks and lodges will be conditioned to ensure they are used solely for holiday use. Proposals to use mobile homes on longstanding existing holiday parks for permanent residential accommodation will only be permitted if: • They are outside flood zone 3; and • They are easily accessible in relation to existing facilities and services)		Reg 19 Final Representations Mead Realisations 12.12.25 including appendices.pdf
62471329	Environment Agency		Environment Agency						New and existing development must be designed to reduce the risk of flooding both today and with climate change. Flood resilience measures to be incorporated where possible.		

Policy DP63: Infrastructure delivery and development contributions

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
39325825	Highgrove Strategic Land	Lichfields (Bristol)		No	• Positively prepared • Justified • Effective	Yes	No	The land at Cox's Green, Wrington, does not require significant infrastructure upgrades to make it acceptable in planning terms and is deliverable within the first five years of the Plan period. This means it is a prime candidate for allocation, particularly given the lack of identified constraints. Development at Cox's Green could support the delivery of the proposed Active Travel Route 'Strawberry Line Extension'.	The land at Cox's Green, Wrington, should be allocated for residential development to meet housing needs without the need for significant infrastructure upgrades.		Highgrove Strategic Land - Local Plan Reg 19 Reps 2025.10.12.pdf
63136321	National Grid (Electricity Distribution) South West Plc	Lucy White Planning Limited	National Grid	No	• Effective	Unsure	Unsure		Policy DP63 and the accompanying Infrastructure Delivery Plan do not make specific reference to electricity infrastructure, which makes it challenging for NGED to provide detailed feedback at this stage. However, we strongly encourage that, where appropriate, masterplans include provision for the electricity infrastructure required to support future development. This may include space for new substations and associated assets to ensure sufficient capacity for the area. The justification for the policy refers to new development providing "connection to utilities". It should go further to explain the need for additional utility infrastructure, e.g. sub-stations to ensure sufficient capacity.		251211 Rep Reg 19.pdf
63186689	Vistry Group	Boyer	Vistry Group	Yes					Vistry consider a breakdown of how education contributions would be provided, whether through s106 or CIL, should be provided at the end of the policy. The Council's adopted Community Infrastructure Levy 123 List confirms that early years provision, primary school provision at Strategic Development Areas and the secondary school provision at the Weston Villages will be secured via planning obligations with all other education provision to be provided via CIL funding		North Somerset Local Plan Pre-submission Plan - Representation form Policy LP5.pdf
63191617	Various Taylor Wimpey Crest Nicholson Barratt Redrow Vistry Group	Nick Matthews (Savills)		No	• Consistent with national policy	Yes	Yes		These representations have been prepared and submitted by Savills on behalf of various clients including Taylor Wimpey, Crest Nicholson, Barratt Redrow, and Vistry Group. This policy requires development proposals to provide a contribution towards the cost of infrastructure through Section 106 agreements and CIL. It goes on to lists matters for which contributions may be collected.		Policy DP63 (Infra & Contribs) for Various (Dec 2025).pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									Residential developments make a very significant contribution towards the delivery of new infrastructure and our clients are proud that they help fund and deliver new schools, health centres, children's play areas etc. The provision of infrastructure alongside new homes must be proportionate and reflect the needs arising from the proposed development. For that reason, we consider that the policy wording should expressly reference the statutory tests in Regulation 122 of The Community Infrastructure Levy Regulations 2010 (as amended), which state that planning obligations must be: a) necessary to make the development acceptable in planning terms; b) directly related to the development; and c) fairly and reasonably related in scale and kind to the development. These tests are reiterated in Paragraph 57 of the Framework and, as such, the draft policy wording should be updated to ensure consistency with national planning policy and provide clarity for users of the Local Plan		
21472417	Mead Realisations Ltd	Oneleven Property		No	• Positively prepared • Justified • Effective • Consistent with national policy				This policy confirms that Infrastructure will be provided in step with new development and co◈ordinated through the Infrastructure Delivery Plan (IDP). The IDP includes reference to coastal management schemes and flood mitigation although it is far from clear exactly what works are proposed and how they will be funded. The local plan evidence base makes it clear that large areas of North Somerset, including the existing development area of Weston-super-Mare are at risk of flooding and as a result the spatial strategy seeks to locate new development accordingly. However, neither the local plan or evidence base appear to consider what options have been consider for reducing this flood risk and how this mitigation could be funded (i.e through CIL receipts and other sources of funding). This is a fundamental step in the plan making process which does not appear to have been given sufficient consideration. This should be addressed.		Reg 19 Final Representations Mead Realisations 12.12.25 including appendices.pdf
63183425	National Grid Electricity Transmission	NG Planning	National Grid							New Infrastructure Demand for electricity is expected to rise as the way NGET power our homes, businesses and transport changes. As the nation moves towards net zero, the fossil fuels that once powered the economy will be replaced with sources of low-carbon electricity, such as offshore wind farms. The UK Government has committed to reach net zero emissions by 2050. This means achieving a balance between the greenhouse gases put into the atmosphere and those taken out. Decarbonising the energy system is vital to this aim. NGET's infrastructure projects in England and Wales will support the country's energy transition and make sure the grid is ready to connect to more and more sources of low carbon electricity generated in Britain. The way NGET generate electricity in the UK is changing rapidly, and NGET are transitioning to cheaper, cleaner and more secure forms of renewable energy such as new offshore windfarms. NGET need to make changes to the network of overhead lines, pylons, cables and other infrastructure that transports electricity around the country, so that everyone has access to clean electricity from these new renewable sources. These changes include a need to increase the capability of the electricity transmission system between the North and the Midlands, and between the Midlands and the South. It is also needed to facilitate the connection of proposed new offshore wind, and subsea connections between England and Scotland, and between the UK and other countries across the North Sea. Accordingly, we request that the Council is cognisant of the above. NGET is able to provide advice and guidance to the Council concerning their networks and encourages high quality and well-planned development in the vicinity of its assets. Developers of sites crossed or in close proximity to NGET assets should be aware that it is NGET policy to retain existing overhead lines in-situ, though it recognises that there may be exceptional circumstances that would justify the request where, for example, the proposal is of regional or national importance. NGET's 'Design guidelines for development near pylons and high voltage overhead power lines' promote the successful development of sites crossed by existing overhead lines and the creation of well◈designed places. The guidelines demonstrate that a creative design approach can minimise the impact of overhead lines whilst promoting a quality environment. The guidelines can be downloaded here: https://www.nationalgrid.com/document/345326/download The statutory safety clearances between overhead lines, the ground, and built structures must not be infringed. Where changes are proposed to ground levels beneath an existing line then it is important that changes in ground levels do not result in safety clearances being infringed. National Grid can, on request, provide to developers detailed line profile drawings that detail the height of conductors, above ordnance datum, at a specific site.NGET's statutory safety clearances are detailed in their Technical Guidance Note 'Third-party guidance for working near National Grid Electricity Transmission equipment', which can be downloaded here: https://www.nationalgrid.com/document/349291/download	North Somerset Local Plan 2041 Pre-Submission Consultation - NGET Response.pdf
62718401	Ian Bowen		Mendip Hills National Landscape	No	• Consistent with	No	Yes	The Reasoned Justification to Policy DP63 is not consistent with national policy. It omits, contrary to NPPF paras 58, 189 and 190(c) in particular (and relevant parts of the PPG), reference to the need for s106 planning obligations and/or CIL monies which may be necessary to address off-site recreational	"Regardless of the provision of local community facilities, occupiers of new development within or near the designated Mendip Hills National Landscape are likely to resort to key routes and destinations within the area to enjoy outdoor

					national policy			pressures within the Mendip Hills National Landscape, resulting from new development within or near the designated area.	recreation including by foot, cycling and horse riding. Where appropriate, s106 and/or Community Infrastructure Levy monies will be secured to mitigate off-site harm and/or enhance facilities commensurate with increased recreational pressures resulting from the development.”.		
9138657	Home Builders Federation		Home Builders Federation	No	• Justified • Effective • Consistent with national policy				Policy DP63 is not considered to be sound as it is not effective, justified or consistent with national policy This policy should include reference to flexibility in the case of site specific viability issues		North Somerset 2nd Reg 19 Dec 25.docx
43203041	National Highways		National Highways						Policy DP63: Infrastructure delivery and development contributions National Highways support the policy which requires infrastructure to be “provided in step with new development and co-ordinated through the Infrastructure Delivery Plan”. It is stated that development proposals will be expected to contribute towards the cost of infrastructure. We support the coordination of investment in necessary infrastructure and regular reviews of the Infrastructure Delivery Plan. Nevertheless, in our response to the earlier North Somerset Local Plan 2039 Pre-Submission Consultation we commented that, where a highway improvement is required to accommodate traffic generated by a specific development and to avoid unacceptable impacts, mitigation may need to be secured by way of planning conditions to any consent, or in some cases via a funding agreement, as per paragraph 52 of DfT Circular 01/2022. We therefore repeat our suggestion that additional text is added to policy DP63 to emphasise that where infrastructure investment is necessary to enable the development to proceed, then this may need to be secured by condition. Infrastructure Delivery Plan We have reviewed the Draft Infrastructure Delivery Plan (IDP) and associated IDP Transport Schedule dated October 2025. We accept that the IDP is a ‘live’ document and that further amendments may be made prior to submission of the plan and throughout the Examination process. However, based on a review of the IDP Schedule the following items are of interest to National Highways: ◈ TR65: M5 J21 capacity improvements northbound – currently under construction and understood to be part of bridge maintenance scheme. ◈ TR66: M5 J21 bypass linking Wolvershill Road to A370 – funding not currently identified. The schedule advises that other long-term schemes associated with reducing severance and/or improving access to the SRN within the Weston-super-Mare area are to be kept under review. ◈ TR69: Wolvershill strategic site: proposed upgrade of the existing Wolvershill Road bridge over the M5 to enhance active travel connectivity – identified developer contributions/ grant funding. ◈ TR70: Wolvershill strategic site: active travel route between the development and Worle Railway Station & District Centre - Summer Lane Bridge. Understood to be the existing accommodation bridge over the M5 - identified developer contributions/ grant funding. ◈ TR75: M5 J21 - improved signalisation. Identified to be funded through development contributions. ◈ TR77: A370 Somerset Avenue approach to M5 J21. Scheme to improve capacity on approach to M5 J21, identified to be delivered through development contributions. ◈ TR83: Enhancements to M5 J20/Ettlingen Way to increase capacity. The schedule notes that the specific scheme has yet to be identified, with options including signalisation; introducing a free-flow slip from Ettlingen Way to the M5 northbound; along with minor widening or road marking changes. We will continue to review the IDP Transport Schedule as further operational assessment work is completed to inform an understanding of SRN impacts. We note that the draft IDP Schedule makes no reference to any capacity improvement scheme at M5 J19 despite the inclusion of a concept improvement scheme in the modelling work. The need for improvements at this and other SRN junctions will be discussed and reviewed with North Somerset Council and AECOM.	Policy DP63: Infrastructure delivery and development contributions National Highways support the policy which requires infrastructure to be “provided in step with new development and co-ordinated through the Infrastructure Delivery Plan”. It is stated that development proposals will be expected to contribute towards the cost of infrastructure. We support the coordination of investment in necessary infrastructure and regular reviews of the Infrastructure Delivery Plan. Nevertheless, in our response to the earlier North Somerset Local Plan 2039 Pre-Submission Consultation we commented that, where a highway improvement is required to accommodate traffic generated by a specific development and to avoid unacceptable impacts, mitigation may need to be secured by way of planning conditions to any consent, or in some cases via a funding agreement, as per paragraph 52 of DfT Circular 01/2022. We therefore repeat our suggestion that additional text is added to policy DP63 to emphasise that where infrastructure investment is necessary to enable the development to proceed, then this may need to be secured by condition. Infrastructure Delivery Plan We have reviewed the Draft Infrastructure Delivery Plan (IDP) and associated IDP Transport Schedule dated October 2025. We accept that the IDP is a ‘live’ document and that further amendments may be made prior to submission of the plan and throughout the Examination process. However, based on a review of the IDP Schedule the following items are of interest to National Highways: ◈ TR65: M5 J21 capacity improvements northbound – currently under construction and understood to be part of bridge maintenance scheme. ◈ TR66: M5 J21 bypass linking Wolvershill Road to A370 – funding not currently identified. Understood to be the existing accommodation bridge over the M5 - identified developer contributions/ grant funding. ◈ TR75: M5 J21 - improved signalisation. Identified to be funded through development contributions. ◈ TR77: A370 Somerset Avenue approach to M5 J21. Scheme to improve capacity on approach to M5 J21, identified to be delivered through development contributions. ◈ TR83: Enhancements to M5 J20/Ettlingen Way to increase capacity. The schedule notes that the specific scheme has yet to be identified, with options including signalisation; introducing a free-flow slip from Ettlingen Way to the M5 northbound; along with minor widening or road marking changes. We will continue to review the IDP Transport Schedule as further operational assessment work is completed to inform an understanding of SRN impacts. We note that the draft IDP Schedule makes no reference to any capacity improvement scheme at M5 J19 despite the inclusion of a concept improvement scheme in the modelling work. The need for improvements at this and other SRN junctions will be discussed and reviewed with North Somerset Council and AECOM.	NSC Reg19 Local Plan Consultation.pdf
39179649	Adrian Mealing			No	• Positively prepared • Justified • Effective • Consistent with national	Yes	Yes	I consider Policy DP63 to be unsound because it is not positively prepared, not justified, not effective, and not consistent with national policy. DP63 states that the Local Plan must be supported by timely, deliverable infrastructure covering transport, drainage, education, healthcare, green infrastructure, biodiversity, utilities, and community services. However, the Infrastructure Delivery Plan (IDP) supporting the Local Plan provides no funded, deliverable or evidenced infrastructure for the 183 dwellings allocated in Congresbury, which makes the Plan fundamentally	To make DP63 sound, the Plan must: Produce a Congresbury Infrastructure Delivery Schedule covering: school capacity expansion, GP and healthcare upgrades,		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					policy			unsound. 1. DP63 is not positively prepared The IDP fails to identify any of the essential infrastructure required to support Congresbury's growth, including: no new school capacity or expansion, no GP or healthcare expansion, no highway improvements to the A370 or Smallway, no active travel schemes (crossings, footways, cycle lanes), no drainage or SuDS upgrades, no green infrastructure projects, no biodiversity mitigation, no public transport enhancements, no community facilities (play space, recreation, youth, sport), no village-centre resilience upgrades. The Local Plan allocates large-scale development but provides zero infrastructure to support it. This is not "positively prepared" planning. 2. DP63 is not justified For DP63 to be justified, the Council must provide: a clear evidence base of infrastructure need, costed projects, delivery mechanisms, phasing, identified funding, and realistic implementation plans. However, for Congresbury: no evidence has been provided on school capacity shortfalls, no modelling exists for healthcare or GP demand, no transport capacity modelling exists for the A370 or local junctions, no drainage or flood management evidence has been provided, no ecology mitigation strategy exists (despite SAC sensitivity), no walking or cycling assessments exist, no funding sources are identified for any infrastructure. DP63 is therefore not justified by the evidence. 3. DP63 is not effective DP63 is not effective because none of the required infrastructure is deliverable: The IDP does not contain any Congresbury projects. No schemes are costed. No schemes are funded. No delivery agencies are identified. No phasing or triggers are included. No link exists between planning permissions and infrastructure provision. No mechanism ensures infrastructure is in place before development is occupied. This means the 183 dwellings would be delivered in a village with no additional capacity, rendering DP63 ineffective and undeliverable. 4. DP63 is not consistent with national policy The NPPF requires that:	A370/Smallway junction improvements, safe walking and cycling routes, public transport enhancements, SuDS and drainage upgrades, ecological/SAC mitigation works, green infrastructure creation, community facilities and play space. Include costings, phasing, delivery responsibility, and funding for all required infrastructure. Ensure infrastructure is provided before occupation of allocated housing. Require that planning applications in Congresbury demonstrate how necessary infrastructure will be delivered if the Council cannot. Revise the IDP to include Congresbury as a priority infrastructure area, not a policy vacuum. Without these modifications, DP63 remains undeliverable and unsound.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								development is supported by infrastructure that is available and deliverable (NPPF 20, 34, 73, 104, 106, 112, 122), plans demonstrate critical infrastructure can be funded, infrastructure needs are identified and addressed at plan stage, the overall plan strategy must be deliverable. The Congresbury allocations breach these requirements because: No transport, school, healthcare, flood, drainage, GI or ecological mitigation infrastructure is identified. No funding exists for any of the required mitigation. The Plan allocates development without showing the infrastructure needed to make it acceptable. DP63 therefore fails the NPPF's deliverability and infrastructure tests.			
51207009	Barratt Bristol	Arwel Evans - Lichfields	Barratt Bristol	No	• Justified • Effective		No	As the largest housebuilder in the country, Barratt Redrow has considerable experience of the real world costs of these policy requirements across a wide range of development sites and sizes. Throughout our representations we have commented on the wide range of development inputs required by the emerging draft Local Plan and the consequential impacts on development viability and what this means for the deliverability and therefore soundness of the plan. It is critical that the policy requirements are properly understood and backed up by robust and up to date evidence. In this context, we question therefore why the Council are relying on out-of-date evidence to substantiate the viability appraisal. An example of this is that the BNG cost assumption is based on a very high-level DEFRA publication 'Biodiversity net gain and local nature recovery strategies: impact assessment' from 2019, the costings of which are from 2017. BNG has been a statutory requirement for major developments since November 2023 and there is therefore now a good degree of understanding of the cost implications of this policy requirement. We consider that NSC should revisit this cost assumption as we feel that the real-life costs of providing BNG is significantly higher, especially when there is a need to buy off site credits. We also query the use of £500 per dwelling for SPA/SAC costs. The notes in the viability assessment notes that this is "Based on a range of data, pending further NSC specific data". Given that a large part of North Somerset is within the bat SAC consultation zone, providing replacement bat habitat is a common occurrence. Based on our experience the cost of providing SAC mitigation is significantly more than £500 per home. Another example is that the build costs used in assessing the additional sites are from July 2023. By the time the examination commences the build costs will be over 3 years old and out of date. We query why the build costs used to assess the new sites are from 2023. We also query why the viability testing for the remaining sites have not been re-run given the time that has passed since the consultation on the first reg 19 plan. We also note that the adopted CIL rates have been applied using 2025 indexed rates for the 'additional sites'. However, viability testing for the other sites has not been updated and relies on 2023 figures. The new sites also have more onerous water efficiency standards (100 lpppd compared to 110 lpppd) although we note that this cost difference would be nominal. The viability evidence uses a cost assumption of 9% of the base build cost for sustainable design/climate change/carbon reduction. Flats are 4% and a mix of houses and flats 7%. The assumption notes that cost uplift is based on a range of evidence provided by NSC and this then references "evidence based on range of sources including Cornwall Council - Etude with Currie & Brown, 2021". Whilst we have not been able to have sight of this document it is clear that it is several years old now and may not provide a robust evidence base for the cost assumption especially given that the net zero technologies are advancing rapidly. We note that the viability assessment for the South Gloucestershire Local Plan (also undertaken by Dixton Searle) uses an 8% assumption which suggests that North Somerset's sustainability policies are more onerous. The general development cost assumptions in the 2025 additional sites assessment does not include a residual s106 cost whereas the 2023 Development Cost Assumptions & Key Sensitivity Testing Parameters includes a residual s.106 contribution of £3,000 per unit and £5,000 per unit respectively. It is unclear why this is the case but we note that this is another flaw and inconsistency within the viability work that should be rectified for consistency so that the true viability of development is known. To summarise we feel that the evidence base behind the policies and their costs need to be more up to date and based on real and robust evidence. The out of datedness of the evidence base could be as a result of the protracted length of the plan preparation process. However, there is no reason why this cannot be rectified so that the policy asks are more realistic and therefore more deliverable. The evidence base should be updated so that the Plan is justified (test of soundness 36.b) which requires plans to be based on proportionate evidence.	The evidence base should be updated so that the Plan is justified (test of soundness 36.b) which requires plans to be based on proportionate evidence.

The data and assumptions used for the viability evidence should be up to date so that an accurate picture of development viability can be obtained.		
31022913	Peter Sims			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The infrastructure delivery and development contribution policy document states that the Infrastructure will be provided in step with new development and co-ordinated through the Infrastructure Delivery Plan. The Local Plan 2041 does not contain a Infrastructure Delivery Plan. The planning and delivery of such a comprehensive and complex plan as the Plan to ensure that the infrastructure is in step with the new development is an absolutely mammoth undertaking. Its easy to write the words in the Plan but it deserves much more consideration and information in the Plan to provide information on how it will be achieved, and not just a statement. The policy also states that the costs involved in the provision of the required infrastructure will in large part met by the developers. However, the amounts provided by the developers will in no way cover the cost of the required infrastructure. These costs will be substantial. The Plan does not mention how this infrastructure will be financed in step with the developments Therefore, as in the past the money will not be forthcoming and the infrastructure will not be delivered on time. The result of which will be that the residents both existing and new and will have houses without the required infrastructure. The Local Plan 2041 is unsound			
62471329	Environment Agency		Environment Agency	No	• Effective				We agree with this policy. However, we recommend expanding this policy to include contributions towards maintenance and upgrades to flood defences from any Risk Management Authority (RMA)	We agree with this policy. However, we recommend expanding this policy to include contributions towards maintenance and upgrades to flood defences from any Risk Management Authority (RMA)	EA Response - NSC Reg 19.pdf
51572577	BNSSG ICB		NHS Property Services						We support Policy DP63, as it requires development proposals to provide financial contributions towards the cost of infrastructure to accommodate growth, including health facilities. We also emphasise the importance of effective implementation mechanisms so that healthcare infrastructure is delivered alongside new development, especially for primary healthcare services as these are the most directly impacted by population growth associated with new development. We welcome the inclusion of the following: "The council may also seek non-financial contributions and obligations where appropriate, such as Local Labour Agreements or works-in-kind". Policy DP63 provides the NHS with flexibility when determining the most appropriate means of meeting the relevant healthcare		NSC Reg 19 Local Plan - NHS BNSSG ICB Response 101225.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									needs arising from a new development. Where new developments create a demand for health services that cannot be supported by incremental extension and/or internal modification of existing primary care facilities, the provision of new purpose-built healthcare facility will be required. BNSSG ICB considers that Policy DP63 will enable the NHS to deliver the most appropriate form of mitigation. We note also that Policy DP63 makes reference to the supporting IDP. Our specific comments on this matter are detailed below. Evidence Base: Infrastructure Delivery Plan The provision of adequate healthcare infrastructure is in our view critical to the delivery of sustainable development. BNSSG ICB is pleased to have been proactively engaged with during the preparation of the Infrastructure Delivery Plan. We are concerned that the IDP in its current form is lacking in evidence and could therefore be made more effective by including information regarding current primary care infrastructure challenges and opportunities, including capacity issues. The Draft IDP references healthcare under the umbrella of 'Social Infrastructure' and fails to set out baseline evidence on each respective infrastructure sub-type. We trust that future iterations of the IDP will provide more comprehensive baseline evidence and will include a rationale to justify the approach taken to establishing future primary care health infrastructure requirements. These additions will help ensure that the Local Plan and IDP's Project Schedule has been informed by sound local evidence. We welcome further opportunities to engage with and inform the IDP. We note that the IDP Schedules October 2025 includes the following three healthcare projects: • Healthcare provision at Nailsea and Backwell Strategic Location - new or enhanced • Healthcare provision at Wolvershill/ Banwell Parish - scope to deliver facility as part of the Wolvershill Local Centre and/or enhancement of existing facilities. • Healthcare provision at Woodspring Strategic Location BNSSG ICB strongly supports the inclusion of these projects. The ICB requests that the above IDP Schedule entries are amended as follows (remove..Healthcare) (insert..Primary care-led) provision at Nailsea and Backwell Strategic Location – (insert..to be delivered via extension and/or remodelling of impacted Primary Care Networks. • (remove..Healthcare) (insert..Primary care-led) provision at Wolvershill/ Banwell Parish - scope to deliver facility as part of the Wolvershill Local Centre and/or enhancement of existing facilities. (insert...Should an on-site primary care provision be pursued by the developer(s), the resultant mitigation should meet the NHS's minimum requirements regarding commercial terms, scale and design of the primary care facility. Where on-site provision is deemed unsuitable by BNSSG ICB, off-site financial contributions will be necessary. These funds will provide appropriate and proportionate funding in order to mitigate the impacts of the proposed development off-site. • (remove..Healthcare) (insert.. Primary care-led) provision at Woodspring Strategic Location - (insert..safeguard potential for on-site provision if required by BNSSG ICB, otherwise off-site financial contribution will be sought. Should an on-site primary care provision be pursued by the developer(s), the resultant mitigation should meet the NHS's minimum requirements regarding commercial terms, scale and design of the primary care facility. Where on-site provision is deemed unsuitable by BNSSG ICB, off-site financial contributions will be necessary. These funds will provide appropriate and proportionate funding in order to mitigate the impacts of the proposed development off-site) BNSSG ICB consider that the above amendments are necessary to ensure that the Local Plan is sound by providing clarity on how primary care mitigation will be delivered. We are also content with 'developer contributions' being recognised as the main funding source for the aforementioned projects. We do note that 'other' is also referenced as a funding source within the Schedules. We would like to reiterate that NHS Capital Guidance 2025/26 states that "capital allocations do not cover additional facilities required due to housing developments. NHS organisations should work with local authorities to secure developer contributions for extra capacity". We therefore expect capital costs associated with each of the healthcare projects listed above are to be met by developer contributions. In addition to the above amendments, we kindly request that the IDP Schedule includes an entry to state that "additional provision of primary care infrastructure" will be necessary for each proposed allocation, and the associated funding source should be referenced as "financial contributions (S106/CIL)". These proposed amendments are essential, as, as current, there is concern that the IDP fails to recognise the cumulative impact of the proposed allocations on the existing primary care estate, which, in turn, would result in unsustainable pressures on the existing local primary care system. These proposed amendments

63191617	Various Taylor Wimpey Crest Nicholson Barratt Redrow Vistry Group	Nick Matthews (Savills)		No	• Justified • Effective • Consistent with national policy	Yes	Yes	These representations have been prepared and submitted by Savills on behalf of various clients including Taylor Wimpey, Crest Nicholson, Barratt Redrow, and Vistry Group. Policy DP64 'expects and encourages' adoption of open space and green infrastructure by the Council or community, with safeguards for maintenance. Policy DP64 states: 'Developers will implement the infrastructure to the Council's required standards, pay supervision and adoption fees and commuted sums to fund the reasonable costs of its future maintenance' There is no clear evidence base demonstrating why adoption by the Council is necessary in all cases, particularly where robust private management arrangements can achieve the same outcomes. The justification provided focuses on risks of private management failure, but these risks can be mitigated through site-specific planning conditions and Section 106 agreements, without imposing blanket adoption requirements. Long-term maintenance and quality control can already be secured through planning conditions, Section 106 agreements, and management company arrangements, making the policy unnecessary and duplicative. The proposed approach risks creating administrative burdens for the Council and developers without clear added value. Policy DP64 is unsound because it is not justified, is overly prescriptive, and fails to demonstrate consistency with national policy.			Policy DP64 (Adoption of Open Space) for Various (Dec 25).pdf

Wolvershill (north of Banwell)

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
51524513	Bellway Homes Ltd	tor&co	Bellway Homes Ltd					tor&co has been appointed by Bellway Homes Ltd. (Bellway) to respond to the North Somerset Local Plan Pre-Submission (Regulation 19) consultation. Bellway is currently the UK's 4th largest housebuilder, having built and sold 8,749 homes in the 2024/2025 trading year, marking an upturn following the industry wide contraction due to the Cost-of-Living Crisis (2023/2024 - 7,654). It caters for first time buyers through to more seasoned home buyers and their families, with their reputation built on designing and creating beautiful developments which meet the needs of today and consider the demands of the future. Their homes are designed, built and marketed by local regional offices managed and staffed by local people. This allows the company to stay close to its customers and take key decisions about design, build, materials, planning and marketing in response to local as opposed to national demands. Bellway is actively promoting land known as 'Land east of Summer Lane, Banwell' (the Site). The land forms a small parcel within the strategic allocation at Wolvershill (north of Banwell), allocated in the Local Plan under Draft Policy LP1 (please see Site Location Plan at Appendix 1). The Site and wider strategic allocation offer the opportunity to secure sustainable, plan-led development, delivering a significant portion of housing across the plan period to help provide resilience for the district in terms of its housing land supply. Bellway has an option on the Site and has undertaken technical work to explore the feasibility of development, in line with the wider strategic allocation and masterplan for Wolvershill, which is set out in the Framework Masterplan attached at Appendix 2. This demonstrates that the whole Bellway Site, as shown as part of the draft strategic allocation, represents a suitable site for development. The technical work progressed to date has not identified any fundamental constraints that would prevent the delivery of housing on the site. The site is available now and would meet the definition of deliverable and developable in the NPPF. This representation responds to North Somerset's latest consultation on the Pre Submission Regulation 19 document policies in the order that they appear in the plan for ease of reference. The comments provided are based on the 'tests of soundness' prescribed in NPPF paragraph 36. Finally, Bellway is aware of the emerging Wolvershill Masterplan Framework SPD which is being prepared for the proposed strategic allocation. This forms a significant part of the housing land supply for the Local Plan and incorporates the Site which Bellway is promoting. Therefore, it would like to reserve the right to comment on its detail as soon as a draft version can be shared. Bellwayunderstand the document is due to be considered by Cabinet in February 2026 and as a key stakeholder, would welcome engagement with the Council prior to its publication.			20251212 504317 JE - North Somerset Reg 19 (Reps obo Bellway Homes).pdf
30301601	Ainscough Strategic Land	Chris Price	Ainscough Strategic Land					Full submissions attached. ASL supports the principle of draft Policy LP1 and the identification of Wolvershill as a Strategic Location for growth. Policy LP1 will support the delivery of much needed housing alongside other land uses, creating a sustainable new community for North Somerset. ASL has collaborated with the other two main site promoters Bloor Homes and Wain Estates in the preparation of a comprehensive Masterplan Framework for the site to ensure the overall vision and its necessary infrastructure and facilities are delivered in a sustainable manner. Wolvershill is a clear and logical location for a new sustainable community in North Somerset in respect of the proposed spatial strategy, particularly given the infrastructure commitments related to the Banwell Bypass scheme which is scheduled for completion in mid-2027. This provides a good level of certainty through the plan process of site deliverability and the strategic infrastructure required to deliver the strategic location. ASL, along with Bloor Homes and Wain Estates, have a positive ongoing dialogue with both Banwell Parish Council and NSC Officers, with workshop sessions held in 2023 and 2024 to inform the evolution of the Masterplan Framework by the Consortium which has now been published and accompanies the Consortium's planning applications. All three parties have submitted outline planning applications supported by Environmental Statements in the past year (ASL 25/P/0046/OU2; Bloor Homes 24/P/2690/OU2; and Wain Estates 24/P/2446/OU2). Discussions are now well progressed with NSC with a timeline agreed to determination for all three applications in Spring 2026. The Masterplan Framework provides the key structure and principles on which the three planning applications have been based. As is inevitable with a site of this size at this stage of the Local Plan process, there are some elements of the proposed policy that require refinement or further clarification. We discuss these elements in detail below, with comments on the specific policy requirements to follow. We request that Policy LP1 is updated accordingly. A separate note confirming all of the proposed changes to the policy wording is included at Appendix 3.	Appendix 3 Proposed amendments to the wording of Policy LP1 are set out below – (strikethrough shows our deletion, bold text shows our addition). "A new mixed use strategic location is proposed at Wolvershill (north of Banwell) at the broad location defined shown on the Policies Map to accommodate up to around 3,300 dwellings, including 990 a percentage of affordable homes The development will create a new low carbon community with high quality placemaking and a clear sense of identity. It will be designed to ensure that walking, cycling and public transport are the most convenient and attractive ways to move around the development with easy access to services and facilities. The development will minimise energy use and incorporate renewable energy generation including for community use. The development will incorporate high quality green spaces both within the built-up area and through provision of green spaces adjacent to the development linking it to the surrounding countryside. A single masterplan covering the entire allocation and proposed development, delivery plan nand strategic design code and supporting design codes will be prepared to guide its coordinated and comprehensive development and the creation of a sustainable community. This will include a phasing strategy linking the delivery of development parcels to infrastructure provision and a strategy for its future maintenance. Where required Design Codes will be developed for relevant areas within the strategic location. Proposals for development must demonstrate compliance with the following development principles: • The new development must complement Banwell village in respect of the scale and range of facilities and encourage integration between the existing and new communities;		61683 - NSC Reg 19 Representations December 2025 2-12-25.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									• Development proposals must demonstrate how they have sensitively responded to existing uses on the site including existing businesses and residential areas. Master planning should ensure effective integration of new development with existing, maximising benefits to new and existing residents • The proposed development is reliant upon, and must be integrated effectively with the design and delivery of the Banwell Bypass; • A Strategic Gap is defined between the new development area and Banwell to retain the character and setting of Banwell; • The creation of attractive, easily accessible, safe and direct walking, wheeling (wheelchairs, mobility scooters and other wheel-based mobility aids), and cycling routes linking the new development with local facilities, within Banwell and into Weston-super-Mare, Parklands, and Worle, including the three M5 crossing points (two road bridges and a direct cycle/pedestrian access into Parklands Village). This is likely to require alterations to the future role and function of a section of Wolvershill Road to facilitate active travel in the centre of the development in order to achieve this. Creationof new cycle and pedestrian links to Parklands to be delivered during the initial phases of residential development; • The creation of effective public transport links into Weston-super-Mare, Parklands, and Worle, employment areas and other destinations such as railway stations, transport hubs (including designated bus corridors) and improving accessibility for existing Banwell residents; • The development must respect the landscape setting, including minimising any adverse impact on the Mendip Hills National Landscape through sensitive design; •The creation of a mixed-use local centre focused on Wolvershill Road to form the heart of the new community with a high-quality public realm, planned with the provision of a community space from the outset of development but with the ability to grow and develop in step with the development and its needs. Other mixed uses to include retail, business space appropriate to a local centre location, extra care accommodation, healthcare provision, family and children's centre services, residential, and a transport hub, all set within a high-quality public realm with public space and appropriate species selection and planting of trees; • Subject to confirming needs generated by the development, the development must ensure suitable land provision is made available to facilitate the provision of appropriate healthcare infrastructure onsite or appropriate financial contributions towards healthcare for new and/or improved facilities off-site; • Liveable neighbourhoods within the scheme should be planned for to ensure convenient and safe walking and cycling access to the local centre and key facilities; • The development will comprise predominantly medium to high density [this needs cross reference to Policy DP8 and further clarification, otherwise it should be deleted and Policy DP8 relied upon] living in well-designed buildings, with the highest densities close to the new local centre, facilities and public transport nodes to ensure that these are accessible by the highest number of people on foot; • Provision of a package of transport measures as identified in the Infrastructure Delivery Plan (subject to viability) including provision of a transport hub at the local centre, delivery of key access junctions onto the Banwell Bypass and wider transport mitigation schemes. Development proposals should ensure that any future planning and delivery of a new motorway junction on the M5 south of J21 is not precluded; • The development must deliver ecological, habitat and environmental enhancement, particularly in relation to horseshoe bats, linking habitat along key green corridors between new development and Banwell. The eastern fringe of the development in particular will be a focus for ecological and environmental mitigation, with provision of a new North Somerset Nature Park to provide bat mitigation, provision of land for biodiversity and habitat enhancement. 'Dark corridors' for bats will be provided on agreed green corridors within and adjacent to the development effectively integrating with mitigation agreed through the Banwell Bypass project; • Green infrastructure should form an interconnected and multifunctional network throughout the development and where appropriate with integrated sustainable drainage systems including rain gardens and other features. Additional woodland and tree planting surrounding and throughout the development will be required, including as part of the landscaping adjacent to the M5 motorway; • Development should seek to retain as far as appropriate, the existing field boundaries and the native and historic hedgerows across the site, offering areas of open space to break up the urban density of the overall site. This may be particularly important for		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									mitigating impact on heritage features; • A strategy to support and maximise climate change resilience will be required including an approach to maximising carbon storage and other measures across the development with exploration of opportunities for community-based renewable energy generation; • Defined areas of green infrastructure should be planted with wildflower species within a wider natural landscape setting; • Where appropriate, in accordance with their significance, heritage and archaeological features will be integrated into the development including any identified archaeology that should be reflected in the new development including appropriate interpretation to maximise the recreational and educational value of the assets; • The setting of historic farmsteads will be sensitively addressed including through the creation of open space designed around these features to provide a visual buffer, allowing their historical significance to be reflected, contributing to the wider sense of place. Additional design measures will be required to address these assets including appropriate materials and design styles, lower surrounding development heights, and lower density of street patterns allowing for views to the features and to avoid overdominance of them; • The provision of a minimum of 3 hectares of new employment delivered through the creation of a new business park and potential for smaller-scale business land provision as part of the mixed use local centre; • Effective management and treatment of surface water, controlling run-off into surrounding watercourses and integrating into the green infrastructure network. Provision of sustainable drainage adjacent to new highway will also be supported; • Rainwater should be treated as a resource and proposals should maximise its reuse; • Provision for on site, or contributions for off site, recreation including indoor facilities as part of a new community hall, outdoor sports pitches and changing facilities, three outdoor tennis courts, a skatepark, and a multi-use games area; • Educational facilities located within the new development, including delivery of two primary schools, each with a land take of circa 2.4ha, capable of delivering a total of up to 6FE (up to 1,260 pupil places) three 420 place primary schools (to include early years provision in line with government requirements) within a safe walking route from the new homes, access to additional early years settings and walkable access to services used by children and families within a reasonable distance; • Financial contribution towards off-site secondary, special educational needs and Post education provision; Provision should be made for a minimum of 18 gypsy and traveller pitches if required within the site, or alternatively through the provision of suitable land off-site along with a financial contribution to support off-site delivery. • The production of a public art strategy to be approved by the council following engagement with the local community to ensure the delivery of high-quality public art which contributes to the legibility and sense of place and supports community development • The development will be located having regard to any noise or other environmental impacts, and suitable mitigation will be delivered to address any impacts including provision of a landscaped noise bund barrier designed for its attractiveness and wildlife value located adjacent to the M5. This feature should respond to the topography of the site, be of varying width, and should facilitate the delivery of a recreational cycle and walking route surrounding the Wolvershill development; and • The creation of distinct character areas across the development, particularly distinct residential neighbourhoods, with materials, and design, referencing the local context and demonstrating best practice in placemaking. To include high quality design solutions for access points into the site, the local centre, business sites, and the immediate vicinity of educational buildings.		
43203041	National Highways		National Highways							We welcome the need for development adjacent to the M5 motorway in Pill and Easton-in-Gordano to undertake detailed noise modelling to assess noise from the nearby M5. National Highways receives many ineligible requests for	NSC Reg19 Local Plan Consultation.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										compensation from homes in new developments built close to existing motorways, and the early consideration of potential noise issues, masterplanning and mitigation is therefore recommended. We suggest the requirement for detailed noise modelling is also applied to the Wolvershill development (Policy LP1) given its proximity to the M5. The Pre-Submission Plan requires that development of the Land west of Trenchard Road site should not preclude any new motorway junction south of M5 J21. We understand the same restriction is proposed for the Wolvershill site (Policy LP1).	
62772801	Tessa Reece							Re: Elborough/ Locking/ Banwell housing development site. I am writing in support of the comments made by Hutton Parish and local residents in opposition to the proposed housing development in the Elborough area. I agree that the Elborough area is not suitable for a housing development. The main concerns raised were the loss of green land, the removal of the strategic gap between Locking and Elborough parishes, deficiencies in infrastructure; lack of facilities such as school places and already stretched services (Doctors, public transport), the narrow roads that are not wide enough for increased traffic, public opinion not supporting the proposals for new housing in Elborough and the major issue of sustainability. I live in Banwell and would like to share my concerns with you; • New houses means additional people putting more pressure on already stretched services. For example: it has been very difficult to register with an NHS dentist in North Somerset. I had severe tooth ache and the NHS dentist I was registered with went Private . I called 111 and was advised to take paracetamol and to wash my mouth out with salt water. I was in so much pain I had to pay for private dental care. Not everyone can afford this. It's also not easy to get an appointment with a GP and A&E is often extremely busy. Weston General A & E has been closed overnight for several years. When I had a medical emergency I had to travel all the way to Bristol. More demand for medical assistance in an emergency would surely put lives at risk when the system is struggling as it is. More people living in the area would lead. to services being stretched even further. • The existing road network from Banwell to Weston General Hospital is not suitable for supporting a new housing development. The existing road network cannot support additional demand which the new development would bring. I have frequent hospital appointments and it already takes twice as long as it should in a car because of road closures and congestion from the construction of the new bypass. Getting to and from hospital from my home is very stressful, there is always a lot of traffic on the narrow country lanes past the proposed development site and the longer main road route is blocked with traffic from temporary traffic lights and road closures. More traffic in the direction of the hospital could affect Ambulances and other emergency services. • The main road from Banwell (A38) to Weston town centre is often flooded. There is clearly a drainage issue that could get worse with more houses using the drainage and sewage systems. • Flash flooding during heavy rainfall makes the A38 like a river and can be very challenging to drive through. I worry that a development in the Elborough area would make this problem even worse with the run off from the farmland next to Elborough farm finding its way along more impermeable surfaces and increasing the risk of further and more frequent flooding. • The road network in and around Banwell is not suitable for heavy construction vehicles. The lanes near the proposed site in the Elborough area are very narrow and trying to pass large construction vehicles would be very difficult and dangerous • Building new houses will increase traffic and cause more mayhem on the roads. The new proposals would add to the traffic issues because more people mean more cars and more people driving to work during rush hour. Increased traffic is a major concern of mine because the current road systems are already struggling, with traffic in and around Banwell ever increasing as it is without the pressure of more cars and construction vehicles from a new development site in the area. • Building the Bypass has already had a huge impact on residents in Banwell with road closures and temporary traffic lights causing traffic jams for miles. Construction of the bypass has made getting in and out of Banwell, travelling into Weston town centre or accessing the motorway a nightmare. The Bypass is likely to remove traffic from the A38 but may not solve the huge issue of congestion through Banwell. It could simply shift traffic problems to places in and around Banwell and past the proposed development site. Construction on the Bypass is already causing huge traffic jams and could ultimately worsen the traffic in Banwell. More houses means more people and increased traffic and is bound to have a negative impact on an already heavily congested area. It would make sense to put planning applications for new developments in and around Banwell on hold until the Bypass is completed in 2027. • As a local resident living in Banwell I worry that new houses will change the character of the place I call home. I fear that Banwell will no longer be the pretty little village it is known for being and if more housing developments are built Banwell could lose its identity and look very different in ten years time. With new housing developments popping up all over the area Banwell could easily lose it's appeal to tourists and less visitors to the area throughout the summer months will have a detrimental affect on local businesses. • The loss of this green belt land will be devastating. Development on the proposed site would ruin the current environment and impact on the wildlife living in the area. Building will destroy the habitats of bats, hedgehogs and other protected species and the deer would run away and live somewhere else. Many creatures would die with their homes destroyed. • I agree that green belt land on the edge of Bristol should be considered in the first instance due to its sustainable location and proximity to jobs and services in Bristol and that other locations should be explored before looking at sites on the edge of villages in North Somerset. • Noise from construction will affect wildlife in the area and disturb local residents. • We should protect the historical character of Banwell and keep the strategic gap between the Locking and Elborough Parishes. Development within a strategic gap is usually restricted to only essential use such as agriculture so that the gap is preserved. It is important that we keep the parishes separate. There was strong opposition to Banwell being Identified as a strategic growth location. Banwell is a beautiful semi-rural area with some great walks over stunning green belt land. Banwell is surrounded by beautiful countryside. I		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								understand that protecting it needs to be carefully balanced with the need for more affordable housing. The people who believe new housing should be distributed around the towns and villages in North Somerset (so every place took 'their share') should consider the part that Banwell has already played with the new developments along Wolvershill Road. I believe that Banwell has done enough and already sacrificed more than enough of its green belt land for new houses and the controversial bypass. I am strongly against the new development proposals and believe new houses in the Elborough area would have a very detrimental impact on Banwell and its residents including myself. Please consider the issues I have raised and my opposing views when submitting the pre-submission.			
14339745	Paul Watkins			No	• Positively prepared	No		So, NSC sells a by pass to Banwell on the grounds of easing traffice... and fails to engage with neighbouring villages, and now plans to add 3000 plus homes...and just what effect will this have on transport infrastructure locally? Of course it will be disastrous, and by highlighting this area for development NSC will merely encourage developers..and will not scrutinise their plans...since the NSC document already states that the development will take place.... a true case of transparency (or not)			

Land at North West Nailsea

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
63186689	Vistry Group	Boyer	Vistry Group	Yes						Development to the north of Hanham Way, Nailsea, is in accordance with adopted Policy SA1 North west Nailsea and draft Policy LP2 Strategic location at Nailsea and Policy LP5 Housing allocations set out in Schedule 1. The NPPF identifies three dimensions of sustainable development: economic, social and environmental. We have summarised the proposed site allocation against each of these roles, in accordance with paragraph 8 of the NPPF below: Economic Role • New home bonus to enable the Council to spend within the local community; • Additional council tax receipts to pay for local services; • A boost to the local economy in terms of construction work in building the new homes; • A boost to local shops and services from increased trade because of the new homes; and • S.106 Obligations and CIL payments to help deliver local Social Role • Provision of up to 150 homes to	North Somerset Local Plan Pre-submission Plan - Representation form Policy LP5.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 										fulfil housing need at a local level; • 30% affordable homes with a tenure split between affordable and shared ownership; • More choice in private and affordable housing options within Nailsea; • Provision of a mix of family homes, range of homes within the scheme allowing for people to move around the proposed site and create a community within the area; • Near to community sport provision, including football and rugby clubs; and • Health and well-being benefits of the provision of a new community recreation resource including walking routes, play spaces, community growing and allotments. Environmental Role • Enabling the Council to maintain a five-year housing land supply and housing trajectory to the end of the current plan period, thus safeguarding other land in less sustainable locations from development; • Delivering housing to fulfil the Council's Spatial Strategy; • Improved pedestrian and cycle connectivity to the to surround area; • The provision of quality public open space and enhanced green infrastructure; • The provision of linear attenuation basins to the west of the developed part of the site offering a sustainable urban drainage system (SuDS) which also offer	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										a wetland habitat for wildlife; • A substantial ecological buffer (up to 50m) along the western and north western boundary of the site to conserve natural habitat where wildlife can thrive, and bat flight paths are protected; and • Onsite 10% biodiversity net gain (due to on-site constraints)	
8668193	Tickenham Parish Council		Tickenham Parish Council	No	• Positively prepared • Justified • Effective	Unsure	Unsure	The proposed development will produce additional traffic onto the B3130 and B3128. A proportion of this traffic will want to travel west to Clevedon and M5 Junction 20, and east to M5 Junction 19 or to Bristol. There is no amelioration planned for these routes. The B3130 and B3128 are already up to capacity. The B3130 is a sub standard road that runs through part of Tickenham. Substandard means: a pinch point where HGVs/buses cannot pass each other, a pinch point where HGVs/buses struggle to pass each other, 3 x 90degree bends, inadequate road width below accepted national standards, lack of footpaths and narrow footpaths below accepted national standards, 145 houses directly access onto a length of the B3130 less than 1.5miles long. Tickenham school children walking to school are forced to walk on narrow footpaths with traffic thundering by within inches. The Causeway, Washingpound Lane and Church Lane are rural lanes and although proposed to be classified as Rural Quiet Lanes there are no proposals in the transport section of the Infrastructure Delivery Plan to provide any works to improve them or reduce traffic onto them, and North Somerset Council have warned that any improvements are highly susceptible to funding issues. The Local Plan needs to establish that funding will be available. All of the aforementioned roads will be subject to traffic flows above their capacity.	Provide suitable transport infrastructure to cater for the proposed 4,000 house developments in Nailsea and Backwell, in terms of: the construction of a road link between Nailsea and Clevedon using existing and improved roads as shown on the plan attached to this response. infrastructure improvements to The Causeway, Washingpound Lane and Church Lane to make these routes more attractive to those travelling by active modes, and less attractive to general traffic.		NailseaTickenhamLink.pdf
31066273	Joan Bannister			No		Unsure	Unsure	This plan does not take account of how narrow and busy the roads around the area are already without extra traffic from all this development. I have personally been caught up in traffic jams at the pinch points as well as serious delays through Tickenham. The location is not easily accessible from the train station and cycling is not practicable. Nor is walking so people will have to use their cars to get into Bristol and surrounding areas. We already have problems with flooding as seen by me only recently and this development will make things worse. There is an SSSI nearby which would be badly affected. The Council's Nature Emergency Toolkit says development should protect and strengthen wildlife corridors and natural drainage. This site would do the opposite. There is a high pressure pipeline running right across the site which is another reason for it being unsuitable. The site should not be considered as suitable for release of green belt as the Council has not demonstrated that all other reasonable options have been exhausted. No sustainable transport links have been shown to compensate for loss of green belt. The allocation for North Nailsea conflicts with the Wraxall and Failand Neighbourhood Plan which has already been adopted by the Council and forms part of the legal development plan which strongly protects the Green Belt, rural character and road safety. Another site should be found for any extra houses that may be required.			
62850849	Alan Bannister			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I have commented in March relating to the unsuitability of this land for development and nothing appears to have changed in particular as regards the flooding risks on both the site and its access points, the loss of wildlife habitat and corridor. There is no solution to the already congested pinch points for traffic and the limited access to the railway. My email of 18 March 2025 to the planning.policy covers this in more detail but the issues I raised then have not been addressed The Council's own Nature Emergency Toolkit is not mentioned and the Wraxall and Failand Neighbourhood Plan conflicts with this development despite having been adopted by North Somerset Council. The aviation fuel pipeline is not even mentioned as a constraint. This land is probably the least suitable for building on let alone its release from Green Belt status.			
51115713	A Barker			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I believe this plan is unsound as the infrastructure (in particular) the rural road network will not cope with the additional traffic. Church Lane Tickenham is already a rat run used 24 hours a day by vehicles using it to short cut to and from Nailsea and Backwell. These developments will exacerbate this even more. The Causeaway is being repaired on a weekly basis costing the tax payer an enormous amount of money,this will get worse and worse until the road and bridges will eventually fail. The developments will also attract construction traffic,again LGV already ignore the signage for weight limits which just adds to the problem.All of this adds to a very dangerous environment for a all road users.	A link road to the M5 Better signage Speed reduction initiatives Better policing,cameras etc		IMG_7723.jpeg IMG_1052.jpeg IMG_5286.jpeg IMG_9271.jpeg
58205505	Susie Bevan			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	This area is not suitable for houses to be built on as it floods regularly whenever it rains for a prolonged period, which can just be light rain fall on consecutive days. Removing this flood plain would put the houses on Causeway View at jeopardy from flooding, as there will be no flood plain to protect them. A point to also mention is that this site is right next to Watery Lane, which regularly floods! This site is also a habit for many species, including the Great and Lesser Horseshoe Bats, which are a Protected Species. Therefore, it will be illegal to build on this site and disrupt the habit and food source of the Horseshoe Bat population. We need to protect the biodiversity that lives and thrives within this site, not destroy it with a few houses, that Nailsea does not require			
62584449	Karen Bird			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	These comments apply to all proposed development sites in Nailsea. The proposed figure for development will lead to a total overdevelopment of the town. There is no funding for additional infrastructure, such as the new road, schools and no evidence that these will be provided. Land to the north of Nailsea will be removed from the greenbelt. Development is planned on land which is prone to consistent flooding.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								There will be notable increases in vehicles on the network of rural lanes around Nailsea, and no clear workable plans to mitigate against this. Roads will be unsafe to use for pedestrians, cyclists and horse riders Existing accident blackspots at Stone Edge Batch, Wraxall Hill or Portbury Lane have no plans to improve them and they will see a marked increase in vehicles.			
62813697	Ian Bloom			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	No	No	The proposed figure of 1817 new homes in Nailsea would lead to a total over development of the town. The proposed new road would not serve Nailsea's traffic or relieve congestion on Station Road, nor would it help traffic travelling from Backwell towards the M5. The new link road under-rail crossing is likely to be extremely expensive and the engineering problematic due to the proximity to the River Kenn. Although three new primary schools are proposed for Nailsea and Backwell, they will be funded through developer contributions and will be phased with no locations identified as yet. Additional development will place immense pressure on the town's existing health and leisure provision. There will be no direct investment to combat this pressure. Land to the north of Nailsea is proposed to be removed from the Green Belt and will be replaced to the south. Positively, the new section of Green Belt to the south is greater in size than the area being removed and will replace the Strategic Gap. Greenfield Crescent Playing Field is not protected under local Green Space Policy LP15. All proposed development sites in Nailsea have been assessed to be foraging locations for the rare Greater and Lesser Horseshoe Bats, which are Protected Species. Transport modelling shows there will be notable increases in vehicle movements on the network of rural lanes around Nailsea. There are no clear, workable plans to mitigate against this. The lanes will become congested and unsafe for pedestrians, cyclists and horse-riders. There are no plans in place to improve the accidents blackspots at Stone Edge Batch, Wraxall Hill or Portbury Lane all of which will see a marked increase in vehicle movements. Development is proposed west and south of Backwell Lake (Reservoir). The new roads and housing will be in the floodplain, which actually does flood regularly. The railway station is not fit for purpose as a transport hub; it remains inaccessible for people with mobility issues and presents serious challenges when travelling with young children.			
21206817	R Bowden			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Unsure	Unsure	Green Belt: the area to the north of nailsea is a significant contributor to the prevention of urban sprawl. The proposed plan ignores this and simply seeks to perform a swap of one area for another with no consideration to the current contribution to the greenbelt. The greenbelt is supposed to be protected by the necessity of using other land first and justification of change through exceptional circumstances, yet neither is demonstrated in the plan - in particular the council has not demonstrated that all other alternatives have been exhausted, nor demonstrated that they have challenged the government's policy with respect to the particular challenges that north somerset faces in terms of the availability of viable land for development. Traffic: there are significant traffic challenges at and near the junction with tickenham hill (3128) and clevedon road (3130) - both a pinch point and traffic backing up everyday from the junction. Designating the land north of nailsea as a strategic development area for housing and the resulting additional traffic will greatly exacerbate an existing problem and no remedies are proposed for this. National strategic assets: A little research indicates the presence of a strategic aviation fuel line running through the area proposed north of nailsea. No mention is made of this in the plan let alone how it should be dealt with - not how, nor who pays for it. Existing plans: The Wraxall & Failand Neighbourhood Plan (2022–2038) has already been adopted and the proposed north somerset plan conflicts with that plan.			
62830593	Maureen Brady		Nailsea Playing Fields Association	No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Unsure	Unsure	Response to Proposed Local Plan for Nailsea Dear Sirs, I am writing to provide my response to the proposed local plan for Nailsea, both as a resident of the town and in my capacity as Chairman of the Nailsea Playing Fields Association (Charity Ref 307081). Impact of Housing Development on Infrastructure The suggested figure of 1,817 new homes for Nailsea would impose an unmanageable strain on the town’s infrastructure, which is already under considerable pressure. The road network serving Nailsea is insufficient, and all main routes present difficulties for large lorries that supply shops, industry and warehouses, as well as for public transport. Additionally, the railway station requires significant improvements to make it accessible for all users. Increased traffic resulting from further development will only worsen the current travel issues. The proposed new road does not offer relief to Nailsea’s existing routes, and there are doubts regarding the feasibility and eventual realisation of such an expensive project. Concerns for Sport, Leisure, and the Local Environment At present, Nailsea lacks adequate provision for sport and leisure. The anticipated rise in traffic along nearby country lanes will negatively affect walkers and cyclists. The ongoing loss of land to housing development further reduces the potential for enhanced sports facilities and adequate pitches for a range of sports. It also negatively impacts on the local biodiversity and wildlife habitats. Nailsea Playing Fields Association Land The Nailsea Playing Fields Association manages an area of land north of Greenfield Crescent (BS48 1HL), located within the parish of Wraxall and Failand. This land is currently used by Nailsea Junior Football Club and the Wessex Reserves Air and Army Cadets. The land is vested in the Charity Commissioners, and a covenant stipulates that it must be used for sport and leisure purposes. With the removal of this land north of Nailsea from the Green Belt, I seek assurance that it will not be allocated for housing, as this would further limit sports facilities and reduce opportunities for youth recreation Yours faithfully, Maureen Brady 27, Sedgemoor Close, Nailsea, BS48 4YR			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
21419201	David Coates		Retired	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The plan refers to Land North of Nailsea. This land is not under the jurisdiction of Nailsea Town Council, it is under the jurisdiction of Wraxall and Failand Parish Council and is designated Green Belt. The stewardship of Wraxall and Failand Parish Council has ensured that the land has been managed as such, resulting in maintenance of wildlife corridors and natural drainage. As a consequence the area is populated with a wide and diverse range of animal and plant life that would be lost if such development were allowed to take place. The Green Belt designation preserves the rural setting of the Wraxall settlements and the openness of the countryside enjoyed by many of the residents of surrounding areas. It maintains the character of the different settlements having different historical backgrounds, and prevents the sprawl from Nailsea. The area is already congested with traffic. No new road improvements are being proposed. Any development would exacerbate the existing problems. There is a serious issue of flooding. The land has natural drainage into the Land Yeo. which floods regularly. Insurance companies raise concerns when property is within 250m of water. This can sometimes be mitigated if the property is elevated. This is an expensive addition which, along with the flooding itself, has not been properly considered. Nailsea Town Council appears to have seen the redesignation of the land as a way to fulfil its housing challenge. At the same time it is also assuming that there will be a new section of Green Belt in Nailsea to the south which is greater in size that will compensate for this. It might reasonably be considered as a 'Land Grab' as the land being offered up for development is not under its jurisdiction. In any event, Green Belt release can only be justified under a framework which requires that harm be minimised and that other reasonable options have been exhausted such as brownfield, urban infill, higher densities of existing settlements. Nailsea Town Council has not demonstrated this. Note also the that the land it proposes to redesignate Green Belt is clearly not currently designated as such! The proposed use of the land conflicts with the Wraxall and Failand Neighbourhood Plan (2022-2038). This has already been adopted by the Council and forms part of the legal Development Plan. That plan strongly protects the Green Belt, rural character and road safety. The land to the north of Nailsea that falls under the jurisdiction of the Wraxall and Failand Parish Council should be removed from the sites proposed for housing development.			
51431393	Janet Court			No		Unsure	Unsure	Nailsea cannot cope with further housing development. 1817 new homes would be an un-needed over development of the town, which in essence is a small village with facilities struggling to support the existing population. The proposed new road will not aid this situation as it would not serve Nailsea's traffic. Further to the lack of facilities/infrastructure there are no locations identified for the three new primary schools proposed for Nailsea/Backwell. It would appear that these are something of an afterthought to the rush to build new housing. Further to this the Nailsea will surely struggle to cope with pressure on the town's health and leisure provision. (I suggest very strongly from numerous examples of anecdotal evidence that these are already under a great deal of pressure.) With this in mind it would appear that Greenfield Crescent Playing Field is not protected under the local green space Policy LP15. What a disappointing thought that Nailsea is due to lose high quality agricultural land if the development to the south of Nailsea goes ahead. Further to the ecological concerns it would be foolhardy to develop on sites that are foraging locations for the rare Greater and Lesser Horseshoe Bats. The thought that so much development is due to take place adjacent to Moor End Spout Nature reserve which hosts protected species is depressing. Please think about the possibilities (or not!) for children in nearby schools to continue observing nature in such a venue. Overall there appears to be little serious, in-depth thought given to the realistic impact on the residents (human or otherwise) of Nailsea, a small town which is, it could be argued, already over developed. There is clearly a lack of in depth forward planning to cope with increased traffic demands on the lanes in and around Nailsea and Backwell. The lanes are inevitably going to become congested and unsafe for pedestrians, cyclists and, yes, horse riders. It would appear that some development is in a flood plain (land to the west and south of Backwell Lake) which does actually flood regularly. Finally, in addition to road transport concerns expressed above, the railway station is not fit for purpose. I respectfully ask that the proposed develop is not actioned.			
62796097	R Crabtree			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	1. Development of 582 houses and road next to Backwell lake. 1.1 Developing farmland to provide housing so close to a nature preservation area is unacceptable, due to the disruption this will cause from the noise development and access to the site proposed. 1.2 Cattle graze on these fields and they are often flood from excess water flowing from the stream. 2. Birds - Nesting. 2.1 The lake provides a sanctuary for the swans, ducks, other bird species and fish. Moving residents into this space will disrupt and effect the wild life living at the lake. 3. Road Building. 3.1 Building a road across acres of farmland to ease congestion in the village will also effect the wildlife living in the farmland. Habitats will be destroyed and harm the biodiversity in the area. 3.2 The railway bridge will also cause tremendous disruption to the railway network which is a major connection to London and the South Coastline for business. 4. Amenities. 4.1 Pressure on our Schools, Doctors, Dentist and Social Care facilities will be undoubtable stretched due to the huge increase in the residents in the area. Nailsea is already stretched at capacity to provide high standards of care which we have all been used to receiving. The proposal, as it stands, is unsound, unsustainable, and inconsistent with the long-term interests of the community. I respectfully request that the planning authority reject this development proposal.			
62863649	Chris Dobbs			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I consider the Local Plan to be unsound in its current form for the following reasons: Failure to Select the Most Sustainable Sites The sites allocated do not represent the most sustainable development locations. They carry disproportionate environmental, heritage and flooding impacts and do not best meet identified housing needs. More appropriate and sustainable alternatives exist elsewhere in North Somerset, yet these have not been adequately considered. Failure to Properly Consider Flood Risk The Council has not adequately considered the flood risks associated with development in Nailsea and Backwell—particularly at land west of Nailsea (Poplar Farm), land east of Backwell, land south of Nailsea, and the proposed road infrastructure serving these sites. Consequently, Policy LP3 is unsound. Non-Compliance with Walkable-Neighbourhood and Accessibility Principles The housing allocations in Nailsea are all located far beyond the 800-metre walkable-neighbourhood standard. They do not prioritise access to services, facilities or employment opportunities, contrary to the Plan’s stated objectives. Furthermore, the Plan provides no strategy for	The allocation of land South of Long Ashton would almost entirely compensate for the deletion of the Nailsea and Backwell strategic location for development. The site lies adjacent to the £400 million approved EPIC employment campus and would have excellent transport links. Feels like a no-brainer…. In addition, efforts should be focused on identifying deliverable mitigation schemes along the B3130 and B3128 corridor that are essential to safeguarding travel into and out of Nailsea for current residents.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								improving job provision within Nailsea. Overreliance on a Railway Station Acknowledged as Inadequate Although the Plan relies heavily on the presence of the railway station, it simultaneously recognises substantial deficiencies—lack of step-free access, insufficient shelters, unsafe routes and limited cycle parking—yet proposes no solutions. The station is also situated outside any realistic active-travel catchment, and cycling access is further constrained by the accident black spot at Buckland Batch. Lack of Evidence for Transport Mitigation and Infrastructure Delivery Nailsea's ability to accommodate additional development sustainably is already restricted by existing transport infrastructure. The Plan provides no evidence for the design, funding or deliverability of the proposed "strategic rail link." Even if feasible, it would not be delivered in advance of development, meaning it cannot be relied upon as mitigation. This renders the proposals unsound. Use of Vague, Aspirational Commitments Instead of Defined Measures Across the proposals for Nailsea and Backwell, the Plan relies on broad, aspirational statements with no specific schemes, timelines, costings or responsible bodies identified. This lack of clarity is unacceptable given the significant risks posed to current and future residents and fails to meet the tests of soundness.			
29268353	Alan Drake			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Unsure	Unsure	NSC do not appear to have properly considered the traffic impacts to the roads and lanes around Tickenham which are currently seriously congested and unsafe for cyclists and pedestrians. These roads/lanes cannot support the increase in new homes proposed by the Local Plan. I make these comments based upon several key factors: (i) whenever there are roadworks, the traffic build up through the village is excessive, typically lasting half a mile in each direction, (ii) when a lorry stops to unload outside a property, a similar backlog can arise (iii) in both the previous cases this can make it even more difficult for emergency services vehicles to pass through the village, (iv) when HGV drive through the village there are several locations where they cannot pass without stopping and sometimes reversing to allow the other to squeeze past, (v) cyclists are vulnerable to all traffic and in particular HGVs, and in them selves can cause long tailbacks, again affecting emergency vehicles, (vi) there are many sections along the road where pedestrians are unsafe due to very narrow pathways (or in some places none) and where large vehicles passing close to the kerb can brush pass a pedestrian – I have had a close experience where a lorry mirror nearly touched my head. Driving in/out of my drive has become increasingly difficult over the past few years (I have lived in the village almost 40 years) and sometimes needing to wait several minutes before exiting my own driveway.	I understand the village "Tickenham Road Action Group" have made representations with practical recommendations to alleviate the matters I have raised above		
62851041	A Dyer			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Unsure	Unsure	such a high number of homes would lead to over development of the town. the proposed new road would have limited benefit for the area as it would not serve Nailsea, reduce traffic along station road, or help with traffic travelling between Backwell and the M5. The under rail link road is likely to be very expensive and potentially difficult to develop due to location near River Kenn. Three new schools have been proposed for Nailsea & Backwell, but no locations have been identified. Such significant development will place huge pressure on the town's health & leisure services. No direct investment is proposed to address this. Land north of Nailsea will be removed from greenbelt and replaced to the south. Although this green belt land to south will be greater in size than the area being removed. Greenfield Crescent Playing field is not protected under Local Green Space Policy LP15. Grade 2 agricultural land, that is high quality and high yielding will be lost through housing development in the south. Greater and Lesser Horseshoe bats, which are protected species, have been identified as foraging in all proposed development sites in Nailsea. Developing 100 homes adjacent to the Moore End Spout Nature reserve would destroy valuable wildlife habitat and harm biodiversity. There are no clear plans to address the increase in vehicle movements that transport modelling has identified in the lanes around Nailsea - they will become congested and unsafe for other road users (horses, walkers & cyclists). No plans have been made to improve local accident blackspots, which will see an increase in vehicle traffic at Stone Edge Batch, Wraxall Hill and Portbury Lane. The proposed development west and south of Backwell will be on flood planes that regularly flood. There are significant accessibility issues at Backwell train station for those with mobility issues, pushchairs and young children. It is not a suitable set up for a transport hub.			
20905985	Jane Evans		Mrs	No		No		1. I do not consider the North Somerset Local Plan 2041 to be sound, and in particular I focus responses in relation to the proposed allocation of land north of Nailsea for inclusion in the Local Plan for development. The plan fails to meet the four tests of soundness in paragraph 36 of the National Planning Policy Framework (NPPF): • Not Positively Prepared – The plan does not demonstrate that Nailsea's constrained B-road network to the north of the town, with long-standing bottlenecks and places where two vehicles cannot safely pass, can safely or sustainably support the proposed level of development. There is no credible infrastructure or funding strategy to address these constraints. • Not Justified – The evidence base does not show that the north Nailsea allocation is the most appropriate strategy compared with reasonable alternatives. I cannot find evidence of sufficient engagement with neighbouring authorities and infrastructure to justify inclusion, and the site's extensive drainage, flood and access issues indicate that it was not objectively chosen. As an aside, the June Cabinet Meeting waived this land through with vague references to the need for housing; the mobile library debate was given more air time. • Not Effective – The allocation depends on mitigation measures that are vague or uncosted, including a 20 mph internal route and contributions to unspecified transport schemes. These do not address the fundamental capacity and safety problems identified in the Nailsea and Backwell Transport Strategy or the site requirements schedule. • Not Consistent with National Policy – The proposal conflicts with several NPPF requirements, including: • safe and suitable access and sustainable transport; • Green Belt protection (no exceptional circumstances have been demonstrated for its release); • flood risk (the site lies on sloping land draining toward a river that floods regularly - see attached photos) and • on protecting biodiversity and natural networks (the site forms part of a green wildlife corridor identified in the Council's Nature Emergency Toolkit). Please see attached aerial photo which illustrates clearly the corridor and how it feeds into the SSSI. The plan also fails to reference the North Somerset Nature Toolkit at all, despite it being adopted by the Council to guide development under its declared Nature Emergency. This omission further undermines justification and consistency.			IMG_1408.jpeg IMG_9384.jpg IMG_1078.jpeg

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The site requirements themselves acknowledge major engineering and drainage constraints, while making no reference to the Exoleum underground fuel pipeline that crosses the site — a serious safety and deliverability omission. Its presence may render mortgages and insurance difficult. I would not want to live anywhere near a pipeline carrying high pressure aviation fuel. Finally, the allocation conflicts with the Wraxall & Failand Neighbourhood Plan (2022–2038), which forms part of the statutory Development Plan and emphasises protection of the Green Belt, rural character, and transport safety. For these reasons, the plan is not positively prepared, not justified, not effective, and not consistent with national policy. It cannot therefore be considered sound in its current form. 2. I do not consider the North Somerset Local Plan 2041 to be legally compliant, particularly in relation to the proposed allocation of land north of Nailsea. The Council's own Duty to Co-operate Statement of Compliance (October 2025, pp. 11, 16–17, 20 and 32) confirms that engagement with key partners—including National Highways, the Environment Agency, and neighbouring authorities—remains "ongoing." This indicates that effective cooperation had not been completed before the Plan's publication. There is no evidence of targeted engagement concerning the severe access constraints and flood risks affecting the land north of Nailsea. The Plan also fails to integrate or even reference the Council's adopted North Somerset Nature Toolkit, despite the Council having declared a Nature Emergency and promoting this Toolkit as a framework for biodiversity, drainage and landscape protection. Its omission calls into question whether the Plan has been prepared in full accordance with the Council's own environmental. Furthermore, the Plan makes no reference to the Exolum underground fuel pipeline that runs through the north Nailsea site. This is a nationally significant item of infrastructure, and the operator should be a non-statutory consultee. The absence of consultation evidence or safety assessment suggests that the Plan has not been prepared in consultation with all relevant bodies, contrary to legal requirements. In addition, the allocation conflicts with the Wraxall & Failand Neighbourhood Plan (2022–2038), and undermines the latter's policies on Green Belt protection, settlement character, and transport safety. For these reasons, I do not consider the Plan legally compliant. 3. I do not consider the North Somerset Local Plan 2041 to comply with the statutory Duty to Co-operate, particularly in relation to the proposed allocation of land north of Nailsea. The Duty to Co-operate Statement of Compliance (October 2025) itself (pages 11, 16–17, 20 and 32) admits that discussions with key partners were still "ongoing" at the time of publication. This demonstrates that the Council has not completed effective cooperation with all relevant authorities and infrastructure bodies before submitting the Plan. There is no clear evidence of substantive joint working with Bristol City Council, National Highways, the Environment Agency, or Exolum UK Ltd (the operator of the strategic underground fuel pipeline crossing the site) on the specific issues of access, flood risk, or infrastructure capacity for north Nailsea. The absence of consultation with these statutory bodies means the Plan cannot be regarded as having been prepared "constructively, actively and on an ongoing basis." There is no evidence that the Council has engaged meaningfully with the principles of its own North Somerset Nature Toolkit or with neighbouring authorities on biodiversity connectivity, contrary to current requirements. For these reasons, the Plan does not comply with the legal Duty to Co-operate and should not be submitted for examination until evidence of full engagement and signed Statements of Common Ground with the relevant bodies are provided. I would suggest from studying the documents that the Land North of Nailsea be removed in full from the Local Plan. Reason: The allocation is not positively prepared, not justified, not effective and not consistent with national policy due to unresolved access on constrained B-roads, Green Belt harm (no demonstrated exceptional circumstances), flood-risk and drainage issues (including an overland flood route and strict SuDS limits), biodiversity and corridor fragmentation, omission of the Exolum pipeline constraint.			
8037089	K Gardner			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	I object to this application for the following reasons. Local infrastructure issues Nailsea is already the subject of hundreds of new houses under development with nothing being spent on improving the local roads which are essentially country lanes which were suited to the town in the 1970s but not now. Every single access road to Nailsea has a pinch point where two buses or lorries cannot pass, and in the Backwell direction a single span low railway arch. Most people who live in Nailsea work elsewhere which largely involves commuting to Bristol, where access to the M5 is very poor, relying on narrow country lanes and the A370 which has recently been downgraded from a dual carriageway to a single lane road with adverse impact on local villages such as Long Ashton. The Highways Agency have advised that most M5 junctions in North Somerset are at capacity with peak time traffic queuing on the motorway. The country roads from Nailsea to Bristol through Backwell are already badly congested and the Backwell Station Road junction with the A370 is frequently backed up for miles, which creates fumes from idling traffic, contrary to NSC climate plans. Alternatives to car travel by rail and bus to Bristol are slow, inconvenient and insufficiently attractive to remove cars from the roads. Backwell rail station is oft quoted to be nearby but it is too far to walk conveniently for most in Nailsea. In addition it is acknowledged by Network Rail that the station is often overcrowded with narrow platforms and passengers are unable to board overcrowded trains. The station does not meet required accessibility standards with no wheelchair ramp on the southbound side. Problems on the M5 as recently seen simply cause gridlock around Backwell, Congresbury and Tickenham. Roads to the M5 from Nailsea are either narrow lanes or through Tickenham with already carries too much heavy traffic.			
28796449	D A Gray			Unsure	• Justified	Unsure	Unsure	The requirement for a new primary school at the North West Nailsea site has not been carried forward from the adopted Sites and Policies Plan and a new primary school for Nailsea is only included in the consultation draft plan in the Site Requirements for the South Nailsea site. The scale of local residential development since adoption of the Sites and Policies plan together with that proposed in the consultation draft plan is such that there is likely to be a need for increased primary school provision for the additional children north of the center of town. Consequently the Site Requirements for one of the northern Nailsea sites should leave open the possibility of further school provision.	The Site Requirements for one of the sites in northern Nailsea should include an assessment of the need for an additional future primary school and a requirement for all of those sites to contribute to the cost of that future provision.		
62772545	Margot Held			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Loss of Access to Nature and Impact on Protected Species This development will significantly reduce access to nature for local residents. One of the main reasons I chose to live in Nailsea was its proximity to open countryside, which is vital for wellbeing. The proposed site consists of open fields that provide habitats for many species and have been identified as foraging grounds for the rare Greater and Lesser Horseshoe Bats, which are protected under UK and European law. In addition, the development will result in the loss of trees, hedgerows, and a general reduction in wildlife corridors. These features are critical for supporting biodiversity and connecting habitats. The impact on wider ecology has not been properly considered, and once these corridors are broken, the consequences for local wildlife will be severe and irreversible.	I understand that some development will need to happen to meet housing needs. However, it must be planned with nature in mind, not at its expense. Destroying habitats and green corridors is short-sighted and conflicts with sustainability goals. To make this plan more sound, the following options should be considered: Retain and Enhance Green Corridors: Preserve existing trees, hedgerows, and wildlife corridors including waterways within the site design. Where removal is		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Ecological and Planning Policy Concerns The proposal appears inconsistent with local planning policies that prioritise environmental protection and sustainable development. It also fails to demonstrate how it will achieve biodiversity net gain, as required by the National Planning Policy Framework (NPPF) and North Somerset Local Plan. At a time when nature is under increasing pressure, developments should enhance biodiversity and climate resilience, not erode it. Potential Impact on Waterways and Flood Risk I am concerned that the development could affect the existing network of waterways and drainage systems in the area. These open fields likely provide natural flood management and habitat for aquatic and riparian species. Replacing permeable land with hard surfaces may increase surface water runoff, raising the potential for localised flooding both on-site and downstream, especially during heavy rainfall. Changes to water flow and drainage patterns could also disrupt wildlife that depends on these ecosystems. Without a robust, evidence-based plan for sustainable drainage and water management, these risks remain unaddressed.	unavoidable, create compensatory corridors to maintain habitat connectivity. Accessible Green Space: Integrate public green spaces and maintain rights of way to ensure residents retain access to nature for wellbeing. Buffer Zones: Establish buffer areas between development and sensitive habitats to minimise disturbance. Biodiversity Net Gain Plan: Provide a clear, measurable strategy for achieving at least 10% biodiversity net gain, as required by the Environment Act and NPPF. This could include habitat creation, native planting, and funding local conservation projects. Compliance with Local Plan Policies: Demonstrate alignment with North Somerset Local Plan policies (e.g., CS4 on Nature Conservation, CS9 on Sustainable Transport) and NPPF paragraphs 174 and 180. Protect Riparian Habitats: Maintain and enhance natural watercourses and surrounding vegetation to support wildlife and water quality.		
62846433	S Johnson			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	Totally disregards green belt land and biodiversity. Land is already prone to flooding and further development on the flood plain will exacerbate this. Climate change is already bringing increased flooding. Roads are not suitable for increased vehicles. There is no plan to increase infrastructe in Nailsea town. The Causeway already can't handle the current traffic volume and this will be the main road out of Nailsea. Likewise development at Jacklands on an already narrow hairpin bend at Stone Edge Batch - the location is not suitable.			
62862881	Bryn Jones			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The proposed number of new homes, 1,817 in Nailsea, will be a total over development of the town. The resulting population increase will overload local infrastructure including healthcare, schools, leisure facilities and town centre parking. The policy states that to accommodate the additional housing, transport infrastructure development is needed. NSC proposes that an East Backwell Link Road is built. Developers will be expected to contribute to the funding for the road; however, developer contributions will not cover the whole cost of the road. The developer has stated that it will only connect the road through their site once the housing has been built. This statement does not align with NSC statement on linking proposed development to infrastructure provision in a phased plan. Whilst the East Backwell Link Road will improve access from Nailsea to the A370 it will do nothing to alleviate the current and increasing traffic through Nailsea. Developments will use existing B roads out towards Wraxall and Clevedon and Portbury Lane. Developments east of Backwell wishing to get to the M5 will travel through Nailsea. It will not reduce traffic to and from Backwell and Bristol and junctions 19 and 20 of the M5. NSC has failed to address the junctions to the north of Nailsea along the B3128 and B3130 which are already at capacity and are known accident black spots. There is no mitigation suggested, meaning an even greater volume of traffic, delays and more accidents. NSC has failed to address how they will protect the rural lanes around Nailsea and Backwell from rat-running. Traffic volumes on the lanes have steadily increased in recent years as developments to the west of Nailsea have been built. This is noticeable on The Causeway to the north, and West End Lane and Netherton Wood Lane to the west, and Chelvey Lane to the south west. This also happens on Chapel Hill leading into Backwell Bow, with people attempting to bypass queues on the A370 at Backwell Crossroads. This rat-running down rural lanes will only get worse with the proposed developments. All these lanes are single track with no pavements.			
62852993	W Morrison			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Introducing 1,817 new homes in Nailsea would overwhelm and massively over-develop the town. The expected population increase in population could not be matched in terms of infrastructure. The surrounding road-networks are already at capacity, a 55% (Nailsea) and 80% (Backwell) increase would grind the surrounding routes to a standstill. The new link road across Backwell Common, under rail crossing is likely to be extremely expensive and the engineering problematic due to the proximity to the River Kenn and railway line. Even so, it leads out on to the A370, which is already running at capacity at busy times. Other routes out of Nailsea and Backwell are narrow country roads not designed for the capacity increase, leading to possible safety issues. Additionally, the current rail network already struggles to support the capacity required at rush hour, and such an increase would leave the service heavily overcrowded. Nailsea & Backwell station already does not lend itself to overcrowding on the platforms without putting passengers at risk. Beyond that, other important infrastructure would not support the new development. The proposal for new primary schools is dependent on the developer and no locations have been identified. Additional demand on health facilities would be overwhelming. In terms of the general environment, such a large population increase and loss of greenbelt and agricultural land, together with dramatic change to the landscape will be detrimental. The loss of green space and natural habitats will be a huge loss to the area. Removal of the green space between Nailsea and Backwell (either side of the railway track) means the two locations become more or less as one - but with double the population. This may also have an affect on the wildlife found at Backwell lake, and possible water quality there (especially being a floodplain).			
62864001	E Morrison			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Introducing 1,817 new homes in Nailsea would overwhelm and massively over-develop the town. Even so, it leads out on to the A370, which is already running at capacity at busy times. Other routes out of Nailsea and Backwell are narrow country roads not designed for the capacity increase, leading to possible safety issues. Additionally, the current rail network already struggles to support the capacity required at rush hour, and such an increase would leave the service heavily overcrowded. Nailsea & Backwell station already does not lend itself to overcrowding on the platforms without putting passengers at risk.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Beyond that, other important infrastructure would not support the new development. The proposal for new primary schools is dependent on the developer and no locations have been identified. Additional demand on health facilities would be overwhelming. In terms of the general environment, such a large population increase and loss of greenbelt and agricultural land, together with dramatic change to the landscape will be detrimental. The loss of green space and natural habitats will be a huge loss to the area. Removal of the green space between Nailsea and Backwell (either side of the railway track) means the two locations become more or less as one - but with double the population. This may also have an affect on the wildlife found at Backwell lake, and possible water quality there (especially being a floodplain).			
58582945	Nailsea Action Group		Nailsea Action Group			Unsure	Unsure		Request extension of the site requirements to reflect items not carried forward from the adopted Sites and Policies Plan: “New Primary School to be included as part of development” – Reason: A new primary school for Nailsea is only included in the consultation draft plan in the Site Requirements for the South Nailsea site. The requirement for a new primary school at the North West Nailsea site has not been carried forward from the adopted Sites and Policies Plan. The scale of local residential development since adoption of the Sites and Policies plan together with that proposed in the consultation draft plan is such that there is likely to be a need for increased primary school provision for the additional children north of the centre of town. Consequently the Site Requirements for one of the northern Nailsea sites should include additional primary school. “Consideration of fact that site is within 5km consultation zone for Bats SAC.”	NAG is broadly supportive of this development, as some requested changes were made in the Site Requirement relative to the requirements in the adopted Sites and Policies document. Support • Changes related to completion National Grid’s power supply • Reduction of site capacity to 225 • Retention of: - “Where possible, retention of Tree Preservation Order trees” - “Retention of strong hedge boundaries especially to the north” - “PROW links to Causeway View” - “Relocation or replacement of Fryth Way sports pitch” - “Coal Mining Risk Assessment required” - “Protection of adjacent Tickenham, Nailsea and Kenn Moor Site of Special Scientific Interest”	
58582945	Nailsea Action Group		Nailsea Action Group	No	‘ Positively prepared ‘ Justified ‘ Effective ‘ Consistent with national policy	No	No	No green belt sites, including this one, should be carried forward into the emerging plan. The proximity of this area to SSIs, ancient hedgerows and an abundance of wildlife will gravely endanger the local environment and its ecology. Developers, as in this case, constantly – and planning officers sometimes - misunderstand or ignore the need for a substantial buffer zone beyond the technical boundary of the land on which they apply for permission to build, and the impact on the quality of the water flowing through the site on the environment downstream of the site. Nailsea Action Group objects to this application as outlined below. It will be said that new housing has always taken over open green space, but those were times when the interdependency of the environment with the well-being, if not the survival, of the human race, was very little understood. What may have been the accepted case in former times – even relatively recently – cannot be said to be so now, and should not, for the good of all people and creatures, be applied to every, or possibly any, case made for building. The houses that the country’s population is deemed to need should only be built where there is the least possible detrimental impact on the immediate environment. The north Nailsea site carries far from such a description. In the last fifty years 73% of the world’s natural habitat has been lost to urban and agricultural development. The north Nailsea site is tiny by comparison, and may be considered and argued to be insignificant globally, but it is the relentless chipping away at the natural habitat that eventually aggregates to a quantity that means that life as we, or our children and grandchildren, know it will become unsustainable. Even if the green belt in which the site currently sits is re-classified as grey belt under current government proposals, almost no amount of justification and advertised affordable mitigation and remediation will change the following:- 1. The impact of the site’s boundary, however much softened by parkland and attenuation ponds, on the surrounding countryside and the habitat it provides for many creatures, some relatively rare including otters and owls, and the creatures they feed on. This development needs to be seen in the round, the consequential destruction of the area in the context of being yet another albeit tiny contributor to the destruction of the planet and its human inhabitants. Ultimately the overall food chain ends in us. When the chain is broken or destroyed, so will we be in the end. And it will be the end. 2. The impact of the site within its boundaries on the ecology of the area particularly on its invasion by a significant road cutting the site in two, including an ancient and life-sustaining hedgerow, and destroying the habitats and foraging routes of many small creatures. Evidence from other recently developed areas of Nailsea suggest that the alternative pathways and locations for these provided by the developers are not adopted, and the creatures either desert or die. More explicitly, the loss of good quality farmland directly affects the human food supply. 3. The impact on the quality of the water in the river (Land Yeo), especially as it subsequently passes through the nearby SSSI. 4. The impact of the increased traffic particularly on the B3130 past the notorious pinch point at Stone Edge Batch (via which traffic heads for	Remove this site from the plan.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								both junctions 19 and 20 of the M5 motorway), and the already very busy road through Tickenham. On every road into Nailsea from outside it there are significant pinch points making the town a very unsuitable location for a significant increase in population, which is what is happening cumulatively, without any appropriate, foreseeable or planned meaningful mitigation or remediation. It is said that infrastructure development will follow house building, but, contrary to what happens in many other European countries where it precedes house building, this rarely happens here and certainly not in North Somerset or Nailsea, and is not planned to precede or follow at any significant level. 5. Despite attenuation ponds and SuDS (Sustainable Drainage Systems) which will be clearly insufficient as currently planned, the impact of potential flooding in the area to the new houses and, more likely, to the older ones immediately to the south of the site, with the resulting damage, distress and cost this generates not least increased by the local sewerage system overflowing into homes, and the common overall consequential inability of the homeowners to acquire affordable insurance, or any insurance at all. 6. Green belt or grey belt, the impact of effectively joining two separate communities – Wraxall and Nailsea – together, with the threat echoed to the south of Nailsea by the Gleesons development between it and Backwell. 7. The impact on local historic houses such as Birdcombe Court (The Tower House).			
62839137	Brian O'Donovan		Nine	No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Unsure	Unsure	The loss of the green belt is a major concern especially with the amount of flooding already seen in the area. The added extra housing will not improve the situation and will leave even more areas at risk of flooding. As a keen runner / walker it is disappointing how current developments take no ownership of their responsibility and close off paths that have been used for decades and have been majorly beneficial to the people of Nailsea and Backwell and the surrounding areas.	Not enough considerations have been taken to manage the extra traffic this development will bring and hence the impact the way of life of current residence. As a avid cyclists I find the lack of cycle infrastructure for all the extra recent developments disappointing and putting cyclists in danger on narrow roads due to the extra traffic on the roads.

58510465	Patrick Smallbone			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	No	Unsure	Local Plan 2041: Objection to proposed Green Belt release - Land Yeo Valley, North of Nailsea. It is my understanding that the North Somerset Local Plan 2041 was developed based upon guidance within the Arup Strategic Green Belt Assessment Interim Report (30 October 2025). The Arup document confirms that their interim report 'has been prepared to support North Somerset Council's Submission Draft Local Plan consultation (Regulation 19) for their Local Plan 2041. This report provides an overall summary of the findings of the SGBA Update for Green Belt parcels within the North Somerset administrative boundary and an interim conclusion of 'fundamentally important' areas of Green Belt within North Somerset based on assessments undertaken to date, accounting for new policy and guidance set out in the NPPF (2024) and PPG (2025).' I am submitting this response to challenge the reliance on "professional judgement" in the Strategic Green Belt Assessment (SGBA) (Arup, 2025) used to justify the release of Green Belt at Land Yeo Valley, (LYV) north of Nailsea. The SGBA is methodologically consistent but inherently flawed. Labels such as "moderate" or "weak contribution" are opinion based, without benchmark, justification or reference. Its reliance on professional judgement produces subjective outcomes, excludes critical environmental and social evidence and fails to demonstrate the exceptional circumstances required by National Planning Policy Framework. (NPPF- para.145) I therefore suggest that the proposed Local Plan 2041 is unsound and request that the proposed release of LYV land be rejected, and that the site remain within the Green Belt. The SGBA acknowledges that 'this report takes into account the particular instructions and requirements of our client'. This admission undermines the independence of the evidence base. It demonstrates that the methodology was shaped by the commissioning authority's brief, which in my view prioritises identifying parcels for potential release rather than safeguarding the Green Belt's ecological integrity and community wellbeing. Reliance on such consultant outputs risks privileging development pressures over the statutory purposes of Green Belt Policy set out in NPPF 2024 (NPPF Section 13). A sound Local Plan must rest on impartial evidence, not reports constrained or influenced by client directives. The SGBA assessment methodology, which is inherently subjective, considers only the five statutory Green Belt Purposes (NPPF – para. 145). It ignores wider values such as ecological corridors, food production, climate resilience, flood plain and community wellbeing. These omissions undermine the conclusions of the SGBA and so the result is a distorted picture that undervalues the real contribution of the LYV land. Arup applied the five ((a) to (e)) GB purposes from (NPPF-143) preventing sprawl, preventing towns merging, safeguarding countryside, preserving historic towns, encouraging regeneration. Each land parcel considered in the SGBA was assessed against these purposes with descriptors 'strong,' 'moderate' or 'weak' contributions being used. These descriptors are not based on measurable data (like biodiversity counts or soil productivity) but on professional opinion and interpretation. The SGBA notes that 'PPG (2025) provides guidance on how to assess purposes (a), (b) and (d), and provides illustrative features to assess contribution of the Green Belt to these purposes. These illustrative features have informed the criteria that have been applied. 'No national guidance exists for purposes (c) and (e), as such, the assessment criteria for these purposes is based on previous experience, best practice and recent examples. Where possible, consideration has been given to the need to respect local circumstances and the unique characteristics that affect the way the NPPF Green Belt purposes are appraised.' Such subjectivity, without benchmark evidence, demonstration of recent experience, best practice and recent examples, particularly for (c) and (e), cannot meet the (NPPF-145/146) requirement for exceptional circumstances to justify Green Belt release. Councils are under government pressure to deliver housing numbers, however, the evidence supporting Green Belt release must be independent and robust, not shaped by housing targets, or any other form of bias, but through a process of genuine objectivity. The SGBA assessment presents itself as balanced, yet its reliance on professional judgement in certain areas, without substantive evidence, means it can be challenged as flawed, incomplete or unproven. The NPPF, at paragraph 44, states that: "the right information is crucial to good decision-making particularly where formal assessments are required. Parcels P005 and P006, which are identified as potential areas for release, are wrongly scored as 'moderate' contributors to Green Belt purposes. They are critical in preventing sprawl, maintaining separation between settlements and safeguarding countryside character. The Assessment's parcel table underplays these functions, reflecting the client led instructions rather than presenting impartial evidence. Releasing these parcels would undermine NPPF 2024 para.145 and set a precedent for further erosion of the Green Belt. In respect of parcel P006, the assessment is fundamentally flawed in resect of two of the five main purposes of Green Belt (NPPF 2024 Detailed	No valid demonstrable circumstances have been offered within the Arup Strategic Green Belt Assessment Interim Report (30 October 2025) to change the status of this parcel and the findings within this interim report should be rejected and a review undertaken to generate a balanced and more considered view on behalf of their client.		North Somerset Local Plan 2041_ 09 December 2025V1ps.pdf North Somerset Local Plan 2041_Arup Commentary 09 December 2025 V1ps.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Policy Review) – specifically b) and c) which are rated as 'moderate' and that should be 'strong'. Exceptional Circumstances do not apply in this case because they would fundamentally undermine the most critical elements of this Green Belt parcel. The report for P006 plays down the 'openness' aspect disproportionately and ignores that the parcel prevents coalescence between Nailsea, Long Ashton and Bristol fringe. The P006 Green Belt should be judged on permanence and not convenience for development. Further, Footnote 7 applies, because this area Tickenham, Nailsea and Kenn Moors is a designated 129-hectare biological SSSI. Therefore, no valid demonstrable circumstances have been offered within the SGBA to change the status of this parcel and the findings within this interim report should be rejected and a review undertaken to generate a balanced and more considered view on behalf of their client. This can only conclude that the SGBA was tailored to North Somerset Council's instructions, to meet the Councils planning needs, and is not an impartial analysis. It prioritises development pressures over NPPF purposes, undermining its reliability as a valid source of guidance. In respect of specific matters, I would like to raise the following points. 1. Loss of Green Belt The proposed area for development (Land North of Nailsea) focusses on a wide swathe of land between Wraxall and the Nailsea/Tickenham border. This land is recognised green belt and deserves protection in recognition of the multiple benefits the land brings to the local communities and the preservation of the demarcation between Wraxhall, Nailsea and Tickenham. Without this separation the area will degenerate into an urban sprawl, lacking green space and any form of planned infrastructure to support the increase in traffic and demands for essential local facilities. In addition, the allocation for north Nailsea conflicts with the Wraxall & Failand Neighbourhood Plan (2022–2038), which has already been adopted by the Council and forms part of the legal Development Plan. That plan strongly protects the Green Belt, rural character and road safety. 2. Threat to local environment and business Development in the Land North of Nailsea will have a detrimental impact on the immediate area, by taking away a huge area of open land which is greatly valued by both the local and neighbouring communities as a wildlife refuge, a quiet, green open and safe space for adults and children which is comforting and promotes wellbeing. The Fishing Lakes immediately to the north of the development will be adversely affected by the encroaching construction due to loss of passing wildlife which is an important part of the visitor attraction for those fishing and many others who visit the facility for the relaxing, outdoor natural space. The pollution resulting from any significant construction in this area and its in-use life is likely to damage the ecology of the local environment. The North Somerset Local Plan 2041 does not consider the risk of contamination of local springs which should be safeguarded and their continued flow paths given consideration. 3. Loss of wildlife corridor Wildlife depends on this green corridor (Land North of Nailsea) which runs almost uninterrupted between the north of Long Ashton to Clevedon and beyond into the Somerset Levels, for safe passage between habitat and secluded breeding grounds. Development in this area will destroy this natural movement corridor and will deprive wildlife of the safe movement they depend upon for survival. This will be a tragic, irreversible and unnecessary situation because alternative solutions to the destruction of this natural and precious facility are available. 4. Land North of Greenfield Crescent / Sports Field The fields forming the green belt in this area (Land North of Nailsea) act as a natural sponge, attenuating the flow of water to the Land Yeo, which is a narrow river that collects storm water run-off from the surrounding areas which are largely marshland, within a designated flood plain, and which are waterlogged for most of the autumn and winter. The Land Yeo in the area directly north of the proposed development area is narrow, no longer maintained by the Environment Agency, heavily overgrown in parts and is regularly in flood. The river, adjacent to the B3130 at the western end of the proposed development breaches in heavy rain and flows across the B3130 close to Jacklands Bridge because the river cannot contain the storm water run-off. Development in the proposed area will obviate the attenuation function provided by the fields, replacing them with hard surfaces, paths, and roads and driveways, overloading the capacity of the Land Yeo that cannot currently cope with heavy rainstorms. 5. Light pollution There is no reference in the North Somerset Local Plan 2041 to limit the negative effects caused by the significant levels of artificial light that will result from development in this area (Land North of Nailsea) that is currently uninhabited green belt with extremely low artificial light levels during dark hours. It is widely accepted that artificial outdoor light disrupts the natural patterns of wildlife (birds, pollinators, and mammals), obscures views of the night sky and generally reduces human wellbeing. There is a wide variety of wildlife that will be adversely affected by artificial light, for example, Horseshoe Bats that thrive in the area. Development in this area (North of Nailsea) will have long-term, irreversible and damaging consequences across the immediate area and will adversely affect the environment, wildlife and residents across a much wider geographical area. 6. Danger to wildlife Development in this area (Land North of Nailsea) will restrict the land available for existing and future wildlife. Some will undoubtedly be forced away forever as their environment is destroyed. Some larger mammals may attempt to remain in a reduced habitat, forcing them into contact with the negative aspects of the any development such as new roads and buildings. The consequence will be a permanent, damaging impact upon a vast variety of birds, mammals, insects and reptiles that have used these facilities for hundreds of years and whose future, should development in this area (Land North of Nailsea) proceed, is undoubtedly eradication. 7. Pollution The green belt area (Land North of Nailsea) is a completely natural area comprising marsh and wetlands, with grassland for grazing and agricultural use. There is nothing to generate any pollution to the land other than the occasional agricultural vehicle being used. Any development in this area (Land North of Nailsea) will generate significant levels of pollution resulting in lower air quality due to combustion engines (vehicles, garden equipment), biological contaminants from household outdoor processes, rubber particulate from car tyres, oils and fuels. All of these will drain from the newly developed area and contaminate the Land Yeo to the detriment of flora, forna and humans. Wastewater / sewage discharge from the new development will cause contamination when the main sewerage system is surcharged and the contents of the sewerage system flow into the environment, contaminating the roads, footpaths, the green belt to the west of the B3130, and the Land Yeo itself. During any construction period the surrounding areas including the Land Yeo, will be contaminated through combustion engines, paints, solvents, chemicals, construction debris and dirt. Clearing the green belt land cover will result in soil erosion leading to silt-bearing run-off and sediment pollution to the Land Yeo which is already suffering from maintenance neglect because the Environment Agency no longer maintain this river and so flow rates are severely restricted in numerous locations along this vital drainage channel. 8. Travel / commuting Nailsea has relatively few significant employers and so most of the working population commutes daily. The main vehicle routes from the proposed development area (Land North of Nailsea) to Bristol and Weston super Mare, via the A370, or towards Clevedon and the M5, via			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Tickenham depend upon the B3130. The B3130 does not have capacity for substantial additional vehicle movements per day particularly at the two pinch points (east and west of the site) where the road serving the new development connects the B3130. Nailsea and Backwell railway station is a small village facility with hardly any amenities, a part time ticket office, relatively little dry waiting space, no toilet facilities and limited car parking. The additional load on these basic facilities from any development in the Land North of Nailsea will lead to an increase in on-road parking in the Nailsea / Backwell area, overcrowding on the narrow platforms, and frustration with the limited and problematic ticket purchasing/ collection facilities. 9. Local road networks (B3130 / B3138) The B3130 between Jacklands Bridge (BS21) and the junction with the B3138 (Tickenham Hill) at Stone Edge Batch is very narrow with no footpaths on either carriageway. Traffic flow is regularly halted for several minutes because two goods vehicles, lorries or buses cannot pass each other over a significant distance, requiring extended careful manoeuvring, or more difficult backing-up, to re-start traffic flows. This scenario is a regular occurrence during the daily rush-hour periods but occurs sporadically throughout the day depending upon vehicle types and timing of movements. The additional log jams and tail backs that will result from the increased vehicular traffic stemming from any development in this area (Land North of Nailsea) will cause delays to commuters, school buses and emergency services, reduce air quality, increase general pollution and noise. Traffic jams and stationery vehicles consume vast amounts of energy needlessly, and the resulting carbon footprint cannot possibly be justified based on an increased number of residential dwellings in an area that has inadequate supporting infrastructure. 10. Flooding and dangers to life and property The storm water run-off from the proposed development area (Land North of Nailsea) is accommodated by the Land Yeo from the east of the proposed development, close to Wraxhall and to the west of the development at Jacklands Bridge and beyond through Tickenham and Clevedon. The river cannot cope with periods of heavy rainfall throughout the year. This is particularly so since the Environment Agency no longer remove seasonal vegetation, nor will dredging be continued as has been completed in previous years. Any development in this area will cause more intense run-off volumes within a shorter space of time. This will lead to more regular flooding of the Land Yeo, more regular breaching, and overflows to the B3130 at Jacklands Bridge, across the narrow pedestrian footpath, generating hazards to road users and pedestrians. There is a genuine threat to public and life safety in terms of road users and pedestrians resulting from development of the Land North of Nailsea. The result of high-water levels in the Land Yeo will be experienced throughout its lower-level catchment area, detrimentally affecting businesses and residential accommodation between Watercress Farm, Wraxhall House and all the way to Clevedon. 11. Economic restraints The Land Yeo used to be maintained on a regular basis by a combination of the Environment Agency and the Lead Local Flood Authority, whereby vegetation was removed, and dredging carried out to ensure the river was free flowing. In addition, the spillway adjacent the B3130 at Jacklands Bridge was regularly inspected, maintained and operated to prevent overtopping or breaching of the Yeo at this location. The maintenance of the Land Yeo and spillway no longer takes place, resulting in more frequent overtopping and flooding of the surrounding areas. These maintenance activities, within and outside the proposed development site will involve cleaning, removing vegetation, desilting and dredging to address the consequences of the proposed building project. 12. Other options There are alternative brownfield sites in Nailsea in the Blackfriars's Road area and the Coates Industrial Estate, where the redevelopment of outmoded areas would be viable and where infrastructure such as roads and utility services already exist. Such redevelopment would benefit the community because it would be a better use of existing built-up areas, without the need to destroy green belt and damage the local environment in a permanent manner. 13. Loss of wellbeing It is recognised by many learned organisations, for example the National Institute of Health, that green open spaces are beneficial in terms of mental health and wellbeing. Individuals have less mental distress, less anxiety and depression when living in areas with more green space compared with less greenspace. Health and access to green spaces are intricately linked and so to remove a widely appreciated and extensively used area of green belt to provide residential accommodation in an area with limited local employment and where brownfield areas are available for positive redevelopment would be an irreversible and damaging mistake. 14. Construction traffic The impact upon the local environment and disruption caused by the construction process due to development of the Land North of Nailsea will cause prolonged disruption, congestion and inconvenience to residents, businesses and school transport for a prolonged period, possibly four to five years. 15. School traffic There are several schools and key school transport routes near the proposed development area (Land North of Nailsea). Construction in this area will have a devastating effect upon children walking to / from school past the development site. In addition, the likely delays to school buses, taxis and car share / rota schemes will be overwhelming. 16. Emergency vehicle response times The fire, police and ambulance facilities are co-located in Nailsea at the junction of the B3130 and Pound Lane. This area is on the immediate western boundary of the proposed development site (Land North of Nailsea). Any development in this area will generate a substantial volume of vehicle movements, to and from the area, via the B3130 at the east and west junctions. This increased vehicular activity will cause delays and tailbacks because the road infrastructure cannot accommodate existing traffic flows at busy times, particularly at specific pinch points. Any significant construction works will cause similar traffic disruption due the number of HGVs and general construction traffic needing access to the development site. As a result, both short and long term, the ability of the emergency services to deploy quickly from their current location will be severely compromised because they depend upon the B3130 to reach the A370, Tickenham, Bristol, Bristol Airport and the M5 motorway. 17. The Causeway (west Nailsea to Tickenham passing Tickenham Church) A narrow route exists between the west of Nailsea and the B3130 at Tickenham (passing by Tickenham Church). This route is often used as a shortcut by motorists to avoid the regularly congested B3130 at the Stone Edge Batch (B3130/B3128) junction. Emergency vehicles occasionally use this route for expediency on route to Tickenham, Clevedon and or the M5 motorway. The Causeway is also used to move livestock between pastures which can interrupt traffic flow for between 15 and 20 minutes. Should development in this area (Land North of Nailsea) progress, this Causeway shortcut is likely to become a more favoured route for motorists trying to avoid the B3130 and the B3128 pinch points. This will lead to more tailbacks, increased accident risk, increased delays to emergency vehicle response times and saturation of the road network in the southwest of Nailsea towards Backwell, which already has a major limiting traffic flow interrupter due to the bridge at Nailsea and Backwell railway station. Overall, any proposed development will result in regular peak hour traffic gridlock across Tickenham, Nailsea and Backwell. 18. Pipeline – there is a strategic high-pressure aviation fuel pipeline running right across the site. This is not mentioned as a constraint. End. PDF attached with photographs.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
58629345	J Skelton		long term resident and supporter of the campaign group	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I object very strongly to the proposals. It is extremely important that the green belt is saved for public health and wildlife and the environment in general. Houses and other buildings must not be built in the floodplain. Grade 2 agricultural land must not be lost through building new housing. The Horseshoe bats must keep their foraging areas. The More End Spout Nature reserve must be protected. Nailsea is already overflowing and cannot cope with more residents. The roads cannot cope with more traffic. It is already extremely dangerous. The proposed new road will not help with traffic heading for the M5 or around the town and such a road would take a very long time to be constructed. There is no certainty that there will be enough schools, or when they might appear. There are insufficient doctors and pharmacies already. The health and leisure provisions are already insufficient. There is STILL no swimming pool. The railway station is not accessible for those who cannot [for whatever reason] climb the steps. There is no ramp on the Backwell side. For any who could use that.	I do not have any proposals		
31071425	J Smallbone			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I do not think the Pre-submission Plan is sound for the following reasons. This parcel of land is Green Belt within the Parish of Wraxall and Failand. As such it fulfills the function of separating the town of Nailsea from the villages of Wraxall and Failand, and from the village of Tickenham. It is open space, accessible by public footpaths and is agricultural in nature, being grazed by cattle, sometimes sheep, and has been used for growing crops within the previous decade. It is bordered to the north by the Land Yeo River and otherwise encircled by the B3130, Clevedon Road. It slopes down to the Land Yeo River and acts as a natural sponge to attenuate rainfall running into the river. At its lower levels it is marshy and within the Flood Plain. High winter rainfall causes the river to rise and spread outwards, this is now exacerbated as the Environment Agency no longer remove summer growth of vegetation from the river, which now impedes flow, nor do they maintain and adjust the spillage gate next to the B3130 at Jacklands Bridge. The river now stays at high level for much longer after a spell of heavy rain due to the lack of flow. At the west and the east end of this parcel of land, the ground is low and bridged by the B3130 road, so when there is flooding water encroaches the road at these places, posing a hazard and disruption to traffic. Development of this area of land would increase the volume of run off, the river would be higher and the risk of road flooding more likely. The B3130 Clevedon Road has pinch points at Stone Edge Batch and at the Battle Axes in Wraxall, being too narrow for vehicles to pass in opposite directions without stopping. Increased number of vehicle journeys resulting from development on this site would further add to the general volume of traffic and slow down traffic movement at these points. The emergency services have Fire, Police and Ambulance facilities next to the B3130 as it exits Nailsea towards Tickenham, their journey times would be negatively impacted by larger volumes of road use. To the northeast Tower House Wood is adjacent, a site of Ancient Woodland and to the west is Tickenham Moor, a SSSI, thus this land links these two areas and is a corridor for wildlife and for people to utilize the natural space. A strategic high-pressure aviation fuel pipeline runs right across the site. This would need a wide avoidance channel by any development works. It is not mentioned in the plan. The Local Plan 2041, pg. 29, “Justification” states twelve sites have been identified for Release from Green Belt, the land north of Nailsea being one of them. The plan was developed from the October 2025 Arup Strategic Green Belt Assessment Interim Report (SGBA), which was prepared to support North Somerset Council’s Draft Local Plan Consultation (Regulation 19). The SGBA acknowledges that “this report takes into account the particular instructions and requirements of our client,” which undermines the independence of the evidence base, the methodology being shaped by the clients brief of needing to find land for potential release rather than preserving the Green Belt. The Arup Report applied five Green Belt purposes from (NPPF-143) these being preventing sprawl, preventing towns merging, safeguarding countryside, preserving historic towns, encouraging regeneration. Each area of land under consideration was assessed and scored in contribution to Green Belt as ‘strong,” “moderate,” “weak,” or “no contribution.” Theses labels are not based on measurable data but on professional opinion and interpretation, they are subjective, without benchmark evidence and so cannot meet the (NPPF-145/146) requirement for exceptional circumstances to justify Green Belt Release. The NPPF, paragraph 44 states that “the right information is crucial to good decision-making particularly where formal assessments are required”. The SGBA presents itself as balanced but relies on professional judgment in certain areas, meaning it can be challenged as flawed, incomplete or unsubstantiated. North Somerset Council is under government pressure to deliver housing but the evidence supporting Green Belt Release must be robust and independent, a process of objectivity rather than one shaped by housing targets or any other form of bias. Reliance on consultant reports risks privileging development pressures over the statutory purposes of Green Belt Policy, NPPF 2024 (Section 13). A sound Local Plan must rest on impartial evidence, not being constrained or influenced by client objectives. I suggest that the proposed Local plan 2024 is unsound and request the proposed release of Land Yeo Valley land be rejected, it should remain within Green Belt. Releasing any current Green Belt land undermines NPPF 2024 para.145 and sets a precedent for further erosion of the Green Belt. The Wraxall and Failand Neighbourhood Plan (2022-2038), already adopted by North Somerset Council forms part of the legal Development Plan, that plan strongly protects the Green Belt, rural character and road safety. The Council’s own Nature Emergency Toolkit says that development should protect and strengthen wildlife corridors and natural drainage, developing this Wraxall and Failand Green Belt site would achieve the exact opposite. We are all facing increasing risk of climate change, extreme weather events, food insecurity, physical and mental health challenges. At this point it would be remiss of any council to choose to permanently remove an area of land that currently provides agricultural and recreational use to the community.	I suggest that the proposed Local plan 2024 is unsound and should be reconsidered and a new report prepared with the proposed release of Land Yeo Valley land rejected. This land should remain within Green Belt. Releasing any current Green Belt land undermines NPPF 2024 para.145 and sets a precedent for further erosion of the Green Belt.		JS 11 December final.pdf JS North Somerset Local Plan 2041_ 09 December 2025V1ps.pdf
39037377	Barry Stirling			Unsure		Unsure	Unsure	Some of the areas proposed to be built on may not been on land actually defined as a currently mapped flood plain area, but are adjacent to them and are areas that may flood. Building would mean hard impermeable surface areas, resulting in water runoff and less land to absorb water. Thus sites would be even more prone to flooding than current flood plain definitions would suggest. It would be a big risk to build in such areas and potnetially non-compliant with council policy to avoid development on areas that flood.			
62864097	Joe Tallis-Chisnall			No	• Positively prepared	No	No	I object to Policy LP7 – Land North of Nailsea (Schedule 1) on the grounds that its inclusion renders the North Somerset Local Plan 2041 unsound, not legally compliant, and inconsistent with national policy. The site comprises open countryside, part of the Strategic Gap between Nailsea and surrounding settlements, and supports important landscape, ecological, and hydrological functions. Its allocation is contrary to the National Planning Policy Framework (NPPF 2021) in several respects:	To achieve soundness and legal compliance, the following modifications are required: Remove or significantly reduce the LP7 allocation until		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					• Justified • Effective • Consistent with national policy			NPPF para 137 & 138: The Plan does not demonstrate exceptional circumstances for Green Belt/Strategic Gap release. NPPF para 92 & 104: The allocation fails to provide safe, sustainable, and accessible transport options, with cumulative impacts on the B3130, Clevedon Road, and local junctions unmitigated. NPPF para 174 & 180: There is insufficient evidence that ecological networks, protected species, and biodiversity will be preserved or enhanced. NPPF para 159 & 167: Flood risk and surface-water management for this elevated site and downstream receptors have not been satisfactorily addressed. The Sustainability Appraisal does not demonstrate that reasonable alternatives were considered, including brownfield-first approaches or growth redistribution to less constrained settlements. The site's allocation is therefore not positively prepared, not justified, not effective, and not consistent with national policy, failing the tests of soundness set out at NPPF para 35.	exceptional circumstances for Green Belt/Strategic Gap release are demonstrated, including a clear comparative assessment of alternatives consistent with NPPF paras 137–139. Update the Sustainability Appraisal to show that reasonable alternatives were properly assessed, including brownfield sites, urban intensification, and redistributing growth to locations with superior infrastructure and sustainable transport access. Provide a fully funded, deliverable transport mitigation strategy, including cumulative modelling of the B3130 corridor, Clevedon Road, and key junctions, with clear links to the Infrastructure Delivery Plan (NPPF paras 104–105). Strengthen the ecological and landscape evidence base, including protected species surveys, habitat networks, and Biodiversity Net Gain proposals (NPPF paras 174–180). Provide detailed flood risk and drainage assessments, demonstrating compliance with NPPF paras 159–167, including sustainable drainage solutions and no increase in fluvial or surface-water flood risk downstream. Demonstrate Duty to Cooperate compliance (Planning & Compulsory Purchase Act 2004, s33A) with neighbouring authorities and statutory infrastructure providers regarding transport, utilities, and cross-boundary planning impacts. Without these modifications, Policy LP7 is not justified, not effective, and cannot be considered sound or legally compliant.		
29245537	PJ Trenchard			No		Unsure	Unsure	Tickenham has not been properly consulted about the additional traffic the large scale developments will generate. The B3130 and B3128 plus local country lanes are already at capacity. The pavements are narrow or non existent making it unsafe for the 100 children to access the village school. The planners even comment on the unsafe road when making a decision and Developers are told they have to contribute towards school transport. Tickenham is mainly a ribbon development where the majority of houses have independent driveways making it currently difficult to join the stream of passing vehicles. We do not receive regular postal deliveries as the Posties find it difficult to deliver house to house. Large HGVs making deliveries to existing Retail & Warehousing in Nailsea regularly create a bottleneck at Stone Edge Batch Junction. More houses in this area will mean additional problems. More development means more construction vehicles using this narrow road. The single lane Causeway is a favourite rat run for commuters wishing to join the B3130. This road is totally inadequate for the volume and weight it carries. Land North of Southfield Road frequently floods. Both this site and Pound Lane site are in the greenbelt which should be preserved. Pound Lane site also includes a Nature Reserve. If these developments proceed it would link Tickenham with Nailsea and Tickenham should be kept as a village not a suburb of Nailsea. When the Motorway is closed due to a major incident the traffic is diverted through Tickenham. I do not understand why Clevedon has not been targeted for more housing and industrial development. It is close to Junction 20 which already has provision for another road to be built to link with the Long Ashton by-pass taking the majority of traffic away from Tickenham, Failand, Wraxall. This was planned 50 years ago! If you build a house you first put in the foundations. If you plan to built 4000 additional houses around a small town with existing inadequate road links, you need to plan the infastructure first!			
58018017	David Phillip Charles Trump		Trump	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	NSC have not properly considered the traffic impacts to Tickenham roads and lanes which are currently seriously congested and unsafe for cyclists and pedestrians. These roads/lanes cannot support the increase in new homes proposed by the Local Plan. Church Lane and the Causeway in Tickenham are not suitable for even more traffic. Church Lane is a single track road with houses on both sides. It is dangerous to walk along, pull out of driveways. Please provide more details on the quiet lane proposals for these lanes before ANY further development commences. NSC appears to be relying on the on the Backwell bypass solving all traffic issues locally. This may resolve traffic issues in SW Nailsea but seems to ignore the rest of the area.			
62471329	Environment Agency		Environment Agency							We agree with site requirements in areas at risk of future flooding.	
6011425	M G West			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The town has already taken on new housing estates. It will not cope with this huge additional increase in population. Where will the new primary schools be sited? Will they serve the existing new estates? The existing doctors and dental surgeries will not cope with the increase in population. They will need additional qualified staff, buildings and facilities. NB No mention of NHS dental surgeries. The taking of land from the South Nailsea is removing from use valuable farming land. Plus, there will be a loss of wild life from all the sites. Already we have lost wild birds and badgers from the building of recent estates. How will the back lanes cope with the additional traffic which are regularly used by pedestrians, cyclists and horse riders? Is there a realistic transport plan? It does not look sensible to build on flood plains. Elsewhere in the country there have been regrets when this has happened. Also the houses may uninsurable.			
30797793	P Jones			No	• Positively prepared	Unsure	Unsure	NSC have not properly considered the traffic impacts to Tickenham roads and lanes which are currently seriously congested and unsafe for cyclists and pedestrians. These roads/lanes cannot support the increase in new homes proposed by the Local Plan. The footpaths through Tickenham are woefully inadequate for pedestrians on this busy main link road to Nailsea and beyond. The footpaths are either non existent or where they do exist they are too narrow or the adjacent road narrows to such an extent that HGVs and even light vans overhang the pavement.	Nailsea needs to have a new link road to Clevedon and the motorway. This strategic infrastructure needs to be put in place prior to the development of further housing sites in the Nailsea and Backwell area.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					• Justified • Effective			Pedestrians and cyclists cannot safely make the short journeys to Nailsea or Backwell. In fact pedestrians would have to spend most of the journey walking in a live carriageway. There are a number of pinch points on the highway where HGVs are unable to pass. This occurs around Moor Lane, in the centre of the village, where the carriageway narrows to under 5.5m, at the junction with Church Lane and at Stone Edge Batch. The Cause Way, a single track ancient road across the moor, has already become an over used rat run following the new housing developments in Engine Lane, and this situation will only worsen. The village itself has already seen a number of infill developments over the last few years which has increased the number of access points on to the main road. There are over 130 points of access on to Clevedon Road. A 20mph speed restriction was considered for the village but not fully supported by the residents. The village is well over a mile in length, a 20mph limit over this distance would have frustrated through traffic to the point where they would attempt to overtake and expose residents pulling out of their drives to significant risk. The potential significant increase in traffic from the sites identified in the local plan will generate a similar risk.	Tickenham needs to have a robust, consistent and safe network of footpaths and cycle paths that allows residents to safely make short journeys the length of the village and to Nailsea and Clevedon.		

Youngwood Lane

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 62828065	Craig Andrews			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	These comments are in respect of Nailsea but could be applied to any town within North Somerset. It would appear that North Somerset are so desperate to build houses that they consider this to be the 1st priority and then wave a magic wand to deal with all the infrastructure issues at a later date and if nothing is done, what the hell, we have achieved our house building goals. Without considering doctors, schools, shops, wildlife and areas of land that are prone to flooding we would like to focus initially on the road structure. Nailsea is served by many 'B' roads. Many of these 'B' roads are very narrow and are being used more and more. There seems to be one potential plan to build a proposed road to the south of Nailsea through land that could flood and under a railway line. There appears to be no funding for this and only has the potential to help one side of Nailsea. In my opinion the infrastructure should be funded and developed prior to the houses being built to ensure that something is done and not forgotten about. You are probably unaware but within Nailsea there are only a couple of what I would class as decent roads and since North Somerset introduced parking charges these roads have now started to be cluttered with cars parking. This causes annoyance and delays to anyone that is driving in Nailsea whether this is people who live there, lorries delivering, buses or emergency vehicles. If houses have to be built and further ruin the village, now town, I have lived in for 55+ years then I would implore that North Somerset sit down and work out all the infrastructure requirements and get these funded and dealt with in advance. I would hate for North Somerset to waste money like they have previously done on projects which ultimately we as council tax payers end up footing the bill for. Further comments have been attached below.			Further Comments 1.png Further Comments 2.png
58205505	Susie Bevan			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Nailsea is a beautiful, small, rural town. It is proud to be a farming town and North Somerset council should be trying to protect much of the land that is being discussed in the Development Plan, especially as 1. some of the big sites proposed are on Green Belt land, and 2.are on Grade 2 Agricultural Land, which is an underused asset to the town. Nailsea simply will not be able to handle an additional 1,817 new homes – as Nailsea is a small, rural town and does not have the infrastructure to handle a few hundred new homes, let alone 1,817 new homes. And there are not enough schools, doctors' surgeries, and leisure facilities for all these new residents. We are already struggling to accommodate the residents that we do have! And although, three new schools have been promised by the developers, a promise doesn't actually mean that these Schools will ever be built. Nailsea is currently struggling with the additional traffic that the most recent new housing developments have brought, and that's just a few hundred extra homes. There are many 'village' parts of Nailsea, with some lanes to drive down. I have noticed whilst on my daily dog walks, that the traffic now flowing down North Street, has more than doubled. And a lot of the traffic is going far too fast for a little lane without a pathway for pedestrians. More traffic, equals more potential for accidents, especially down roads that are no more than a little country lane. I have myself seen the damage and wreckage from three car crashes at the bottom of my road (the junction of North Street, Hanham Way, Hannah More Road and Silver Street) in the past two years. Please North Somerset Council, protect our pedestrians, especially the children! We need to protect the biodiversity that lives and thrives within Nailsea. All the sites listed are home to a protected species, Greater and Lesser Horseshoe Bats. Any developments on these sites, will destroy the Bats habit and foraging opportunities, and the UK law protects All Bat species and their habits. So, any housing developments on these sites should be against the law. Another site of great nature beauty and biodiversity is the Moor End Sprout Nature Reserve. To build ANY houses near this site, would most definitely disturb mush of the wildlife and their habits. The Nature Reserve needs to be protected – and our council should be doing all that they can to protect such areas of nature beauty and biodiversity. Nailsea is blessed with Grade 2 Agricultural Land – this land is high yielding and of a very good quality. This is worth protecting for the town and for the Country. We NEED land that we can grow various crops on. This should be seen by the Council as something to protect and capitalize on, not to simply build houses on. Therefore, as a town, we should be protecting such land as being able to grow and sell crops helps to support the economy of the town and the country. And we cannot build on all spare green land. Nailsea is prone to flooding in many areas, and many of the sites listed to be developed are flood plains. To remove these flood defences, only puts the current residents at higher risk. This does not make any sense. Please North Somerset Council, protect our beautiful, rural town, by not accepting these proposed developments and by maximising what the town does have already – more agriculture on the wonderfully fertile soil, more supporting biodiversity that exists here in abundance and supporting the residents who already live here.			
62584449	Karen Bird			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	These comments apply to all proposed development sites in Nailsea. The proposed figure for development will lead to a total overdevelopment of the town. There is no funding for additional infrastructure, such as the new road, schools and no evidence that these will be provided. Land to the north of Nailsea will be removed from the greenbelt. Development is planned on land which is prone to consistent flooding. There will be notable increases in vehicles on the network of rural lanes around Nailsea, and no clear workable plans to mitigate against this. Roads will be unsafe to use for pedestrians, cyclists and horse riders Existing accident blackspots at Stone Edge Batch, Wraxall Hill or Portbury Lane have no plans to improve them and they will see a marked increase in vehicles.			
62577217	M Davis			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Unsuitable for level of expansion planned owing to lack of adequate road access There is no direct access to motorway (Unlike Weston, Clevedon, Portishead) Access outbound involves a right turn at the top of Wraxall Hill (accident blackspot) Inbound involves a right turn at the top of Portbury Lane (long delays in rush hour) All three main routes out of Nailsea have problems Station Road towards A370 has a restricted bridge at the station plus speed bumps on the Backwell side and traffic lights at the Backwell Junction Clevedon Road has a major 'pinch point' just before it meets Tickenham Hill. Large vehicles such as lorries and buses cannot pass each other. This causes significant delays at busy times. Bristol Road through Wraxall is narrow with limited visibility in places. In addition to the above all the lanes around Nailsea are totally unsuited to any increase in traffic. The Causeway is likely to be particularly badly affected as it will be the shortest way from many of the proposed housing to the motorway.			
31049857	J Eade			No	• Justified	Unsure	Unsure	In laypersons' terms the proposed Gleesons plan for building off remaining fields above Youngwood Lane would have a detrimental effect on the wildlife that uses the triangle of ponds in the area - Nailsea Railway Ponds, Youngwood Farm ponds, and Backwell Lake. There is also no road access towards Nailsea, and it is a long way from the town centre facilities, and uphill, for walking or cycling. Access to the lake and railway station has recently been closed, and the bridleway is not safe, for exit on to Bucklands Batch - a piece of road which is between Nailsea Station road and Backwell Station road, which is on a hill, with a bend, with 4 residential roads and other houses trying to exit/enter on to it. A new road, possibly built across the newly formed Green belt, which is to replace the existing green belt close to the A370 in Backwell, and going close to the railway side of the lake, coming out on Backwell Station Road, close to, and between the lake car park and the station car park, and the route where many pedestrians and cyclists access the station and to Backwell school, would be very dangerous. There are also 2 footpaths that exit Moorfield Farm fields, close to each other, and in the same vicinity. They provide access to walk either to Backwell Common, and across to the A370, or towards Nailsea, without the need to walk along the 'main' road, with its narrow pavement.	Don't build more houses below Morgan's Hill or Sedgemoor Close, or at the lake end of Youngwood Lane.		
31049857	J Eade							In addition to my previous comments - i can't even understand what your map coloured orange is showing. Apart from Netherton Wood Lane labelled, and a road shown through the balancing pond (Backwell Lake!), Youngwood Lane is not shown, it is not at all obvious where The Grove, Sedgemoor Close, The Perrings, or anything even is - or is it just showing the houses that are already under construction (with the footpath closed from the top of Morgan's hill to the bottom corner of Youngwood Lane), and the houses that are already occupied/built??			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								It does not appear to be possible to comment, in general, about the lack of infrastructure and facilities that are planned. Backwell has nothing (except a swimming pool), a few small shops and a small health centre. Ye,s it has the a370 running through it, but not everybody needs to go to Bristol (or locally) to work. Many p[eople need to access the M5 north, which means going down Chapel Hill, then along Backwlel bow and Lodge Lane, on to the Wraxall Road, up Wraxall Hill, along, and down Portbury Lane. All of these roads are at best B roads - and most are unclassified, narrow, and with bends, and are totally unsuitable for more traffic. The same is true for roads out of Nailsea in all other directions. Stone Edge Batch, on the Clevedon Road, is dangerous - especially when a bus, and/or a lorry are coming along there, and the road through Tickenham gets clogged up if there are any temporary traffic lights, the queue goes back nearly to the rabbit place on the bends towards Nailsea. Queues to get out of Portbury Lane, on to the Failand Road, in the evenings are long. The exit from the Failand Road at Stone Edge Batch, where it joins the Clevedon Road, has long queues - all of these made worse if there is a problem on the M5. Other unclassified roads out of Nailsea are dangerous - The Causeway, which passes Tickenham church has potholes along the edge, and sat. nav.s take vehicles along there. If you pass a van then you may tip into the rhyne. The alternative road to the M5 at Clevedon, through West End, is narrow, has potholes, and is dangerous, with bends, dwellings, the rhyne along Nailsea Wall... The roads through Chelvey and Brockley, to to join the A370, to go in the direction of the airport, and to Weston, to that M5 junction, are also narrow and dangerous, with bends. As already mentioned, the road along Lodge Lane/Backwlel Bow and Chapel hill, which is used as a rat run, to avoid Backwell speed bumps and traffic lights, is dangerous, floods under the railway bridge, and is dangerous when you are trying to use the footpaths that come out on to it, and continue on the other side of the road - or not. The road through Wraxall is dangerous, especially when two buses are trying to pass, and they, or a lorry, have to mount the pavement. again footpaths come out on to it and you need to cross to carry on, up towards Tyntesfield, Truckle wood, etc. There was a swan in the road at the bottom of Bucklands Batch, near Backwell Lake, yesterday, stopping traffic.There have been other accidents on Bucklands Batch, including a jack-knifed horsebox, and a bike going down the cycle path that is for cycling up, and colliding with a pedestrian who was coming out of Bucklands Lane, and injuring her. There is no pedestrian crossing to go from one pavement to the other side, either near the station, or its car park, or the lake, or the footpaths that exit the fields of Moorfield farm along there. The pavement under the railway bridge is very narrow. There is only a slope access on the Nailsea side of the railway 'station' (halt). There are 3 other pedestrian footpath access points under the railway, that connect Nailsea to Backwell, as well as the footpath along Station Close, up to The Grove area. The health centres will not cope with the extra population. Neither will the dentists, leisure centres etc.			
62755649	G Faulkner		None	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	A proposed figure of over 1800 houses would overwhelm this small town which has already been heavily developed in recent times. Traffic congestion would be increased leading to more accidents and the current health education transport and leisure facillities would collapse under the increased demand. There is inadequate provision in the Plan for any of the issyes above in the Plan and it must bw rejected as defective.			
62681025	Chris Foggin		University Education	No		Unsure	Unsure	The current infrastructure does not support the Pre-submission plan; I do not consider it sound at all. Reason 1. For example, last Friday I phoned Brockway Surgery at 8.00 a.m. to try to make an appointment and was informed that I was number 22 in the queue. Reason 2. Youngwood lane's extension will cause a bottleneck, probably in many places, but certainly where it meets the Backwell/Nailsea railway station. Reason 3. The other lanes, Chelvey lane, Netherton Wood lane, Brockley lane, Brockley way, Lower Claverham lane are already fiendishly dangerous already as they are all very narrow lanes and are a nightmare at times for motorists, walkers, horse riders and cyclists. As an avid and regular user of these lanes, both as a motorist and cyclist I can attest to the truth of the above statements. These are not opinions but fact. Anyone who wishes to conduct research into these statements will find what I have written about their narrowness and concomitant congestion to be factual. Reason 4: Although three new primary schools are planned they do not, of course, address the problems of congestion which are getting worse. Take a look at Mizzymead Road for example particularly at peak times and at the start and close of schools especially Nailsea and Backwell High schools but also the primary schools, Reason 5. Grade 2 agricultural land will be lost permanently. Reason 6. The intersection of Wraxall Hill and the B3128 (Clevedon Road) is already quite a tricky intersection to navigate for vehicles approaching the Clevedon Road and wanting to turn left or right. North Somerset Council staff , after receiving information about this intersection, conducted their own research into this intersection but as yet, no action was deemed necessary. This intersection will only become more problematic as more and more vehicles converge on it. Reason 7. Backwell/Nailsea railway station is already a risky spot with school children moving all too casually through and around the tunnel. There are already too many vehicles crowding the roads and lanes in and around Nailsea and Backwell. Reason 8. The rural nature of this area, the ability to access green fields will be completely destroyed. To lose green space is massively important. The " green and pleasant land" is slowly but surely being destroyed. The demolition of fields and the resultant loss of spaces near to homes for leisure activities and the like will impact negatively on the mental health of residents. Access to fresh air, walks, nature, these activities are being lost. Reason 9. There are two huge estates being built in Nailsea. Already occupants are neglecting to maintain these houses and the gardens; it is both depressing and disappointing to see rubbish discarded in and around the houses. Reason 10. The impact of the additional houses on the shopping precinct will also be felt; the library in Nailsea is now much smaller than its former home.			
62779361	Sue Francis			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The proposed development is not viable due to the increase flood risk to floodplains between Nailsea and Backwell. The proposed access road and bridge cross the River Kenn floods regularly, which makes this proposal unviable and directly contradicts the planning policy. The developer’s flood modelling remains unapproved by the Environment Agency after several revisions. In addition it is uncalibrated, omits known flood events and uses outdated hydrological data. Drainage features proposed in the strategy would be submerged during heavy rain conditions and therefore will not function. Housing in and around the vicinity of Station Close will be at serious risk of additional flooding from surrounding fields and cannot be protected. The development would significantly increase car usage on already narrow access roads and the proposal for housing is simply too far from the town centre for any viable alternative - the development is not on flat ground. Nailsea and Backwell train station is not fit for the increase in commuter volume, e.g. platform length, and does not provide disabled access needs for anyone travelling south. Both Nailsea and Backwell lack the basic infrastructure capacity for this scale of development, in both primary & secondary schools & medical centres and there has been no confirmed funding to address any these shortfalls. Based on the typical housing developments, the proposed new road off the A370 link road and new underbridge would not be progressed or completed before any housing is complete and then likely to be subject to delays, cost overruns and risks to it's actual completion. Moreover a new road would alter flood pathways on Backwell Common, worsening downstream flood risk which is not permitted in the NPPF. The subsequent overall increase in traffic through the villages will increase the risk of serious road traffic accidents, injury and death. Existing roads which cannot be widened will have to manage significantly more vehicles which put pedestrians and school children at unacceptable risk, especially those needing to walk form Nailsea to Backwell (& vice versa) and those crossing the busy A370. The site is valuable agricultural land and an important feeding ground for the Brockley Bat maternity roost. Otters use the local river and streams to travel to and from Backwell Lake. Any increase in the height of flooding to the Backwell Lake would endanger birds which overwinter there and other wildlife.			
62772545	Margot Held			No	• Positively prepared • Justified • Effective • Consistent with national	Unsure	Unsure	1. Loss of Access to Nature and Impact on Protected Species This development will significantly reduce access to nature for local residents. One of the main reasons I chose to live in Nailsea was its proximity to open countryside, which is vital for wellbeing. The proposed site consists of open fields that provide habitats for many species and have been identified as foraging grounds for the rare Greater and Lesser Horseshoe Bats, which are protected under UK and European law. In addition, the development will result in the loss of trees, hedgerows, and a general reduction in wildlife corridors. These features are critical for supporting biodiversity and connecting habitats. The impact on wider ecology has not been properly considered, and once these corridors are broken, the consequences for local wildlife will be severe and irreversible. 2. Traffic and Infrastructure Issues	I understand that some development will need to happen to meet housing needs. However, in this case I generally object the planned proposal on this space. If it is to ahead it must be planned with nature in mind, not at its expense. Destroying habitats and green corridors is short-sighted and conflicts with sustainability goals. To make this plan more sound, the		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					policy			Transport modelling shows notable increases in vehicle movements on the network of rural lanes around Nailsea. There are no clear, workable plans to mitigate this impact. The lanes will become congested and unsafe for pedestrians, cyclists, and horse riders. In addition, there is general concern about the significant increase in traffic and the lack of any clear adjustments to local public transport options to accommodate this new pressure. Without improvements to sustainable transport infrastructure, the development risks creating long-term congestion and safety issues, and could lead to further land destruction if road widening or additional infrastructure is required in the future. 3. Loss of Agricultural Land and Food Security The development will result in the permanent loss of agricultural land, which is vital for future food security. At a time when sustainability and resilience are key priorities, sacrificing productive land for housing undermines these goals.	following options should be considered: • Preserve and Enhance Wildlife Corridors: Retain existing trees, hedgerows, and green spaces, and integrate them into the site design. • Achieve Biodiversity Net Gain: Provide clear, measurable plans for at least 10% biodiversity net gain, including habitat creation and native planting. • Buffer Zones: Establish buffer areas between the development and sensitive ecological sites. • Green Infrastructure: Include accessible green spaces and maintain public rights of way for community wellbeing. • Transport Improvements: Commit to upgrading local public transport and active travel routes to reduce car dependency. • Sustainable Land Use: Prioritise brownfield sites over agricultural land wherever possible. • Community Engagement: Work with residents to ensure development supports wellbeing and environmental protection.		
62863361	Peter Jennings			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I would like to appeal against the implementation of the NSC REG 19 Local Plan 2041 on the grounds detailed below: - The proposed development of 1,817 new homes in Nailsea would lead to a total over development of our town. - New primary schools would be required, and with no locations and firm funding provisions in place, this would not facilitate the proposed population increases to the town. - The new link road, under the rail crossing is likely to be very expensive with problematic engineering given the proximity to the River Kenn. - The plans will lead to the permanent loss of Grade 2 Agricultural land which is of good quality and high yielding, as a result of the housing development to the south of Nailsea. - The town's existing health and leisure provisions are already under considerable pressure and would become unacceptably pressured without firm investment committed to developing these facilities further. - Proposed sites for development in Nailsea are recognised foraging sites for Greater and Lesser Horseshoe bats. - The proposed development to the west and south of Backwell Lake (reservoir) mean that new roads and housing will be in the floodplain which does flood regularly. - Plans are not currently in place for accident blackspots at Wraxall Hill, Stone Edge Batch and Portbury Lane, which will see a marked increase in vehicle movements. - The railway station is already not fit for purpose as a transport hub, since it remains inaccessible for people with mobility issues and presents considerable challenges for adults travelling with small children. - The proposed new road would not serve Nailsea's traffic or relieve congestion on Station Road, nor would it help traffic moving from Backwell to the M5.			
62846433	S Johnson			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	Totally disregards green belt land and biodiversity. Land is already prone to flooding and further development on the flood plain will exacerbate this. Climate change is already bringing increased flooding. Recent building development at the South West of Nailsea has already reduced green spaces for dog walking, exercise and general well being.			
62852993	W Morrison			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Introducing 1,817 new homes in Nailsea would overwhelm and massively over-develop the town. The expected population increase in population could not be matched in terms of infrastructure. The surrounding road-networks are already at capacity, a 55% (Nailsea) and 80% (Backwell) increase would grind the surrounding routes to a standstill. The new link road across Backwell Common, under rail crossing is likely to be extremely expensive and the engineering problematic due to the proximity to the River Kenn and railway line. Even so, it leads out on to the A370, which is already running at capacity at busy times. Other routes out of Nailsea and Backwell are narrow country roads not designed for the capacity increase, leading to possible safety issues. Additionally, the current rail network already struggles to support the capacity required at rush hour, and such an increase would leave the service heavily overcrowded. Nailsea & Backwell station already does not lend itself to overcrowding on the platforms without putting passengers at risk. Beyond that, other important infrastructure would not support the new development. The proposal for new primary schools is dependent on the developer and no locations have been identified. Additional demand on health facilities would be overwhelming. In terms of the general environment, such a large population increase and loss of greenbelt and agricultural land, together with dramatic change to the landscape will be detrimental. The loss of green space and natural habitats will be a huge loss to the area. Removal of the green space between Nailsea and Backwell (either side of the railway track) means the two locations become more or less as one - but with double the population. This may also have an affect on the wildlife found at Backwell lake, and possible water quality there (especially being a floodplain).

60404705	Terri Mazur			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I consider the Local Plan to be unsound in its current form for the following reasons: Failure to Select the Most Sustainable Sites The sites allocated do not represent the most sustainable development locations. They carry disproportionate environmental, heritage and flooding impacts and do not best meet identified housing needs. More appropriate and sustainable alternatives exist elsewhere in North Somerset, yet these have not been adequately considered. Failure to Properly Consider Flood Risk The Council has not adequately considered the flood risks associated with development in Nailsea and Backwell—particularly at land west of Nailsea (Poplar Farm), land east of Backwell, land south of Nailsea, and the proposed road infrastructure serving these sites. Consequently, Policy LP3 is unsound. Non-Compliance with Walkable-Neighbourhood and Accessibility Principles The housing allocations in Nailsea are all located far beyond the 800-metre walkable-neighbourhood standard. They do not prioritise access to services, facilities or employment opportunities, contrary to the Plan's stated objectives. Furthermore, the Plan provides no strategy for improving job provision within Nailsea. Overreliance on a Railway Station Acknowledged as Inadequate Although the Plan relies heavily on the presence of the railway station, it simultaneously recognises substantial deficiencies—lack of step-free access, insufficient shelters, unsafe routes and limited cycle parking—yet proposes no solutions. The station is also situated outside any realistic active-travel catchment, and cycling access is further constrained by the accident black spot at Buckland Batch. Lack of Evidence for Transport Mitigation and Infrastructure Delivery Nailsea's ability to accommodate additional development sustainably is already restricted by existing transport infrastructure. The Plan provides no evidence for the design, funding or deliverability of the proposed "strategic rail link." Even if feasible, it would not be delivered in advance of development, meaning it cannot be relied upon as mitigation. This renders the proposals unsound. Use of Vague, Aspirational Commitments Instead of Defined Measures Across the proposals for Nailsea and Backwell, the Plan relies on broad, aspirational statements with no specific schemes, timelines, costings or responsible bodies identified. This lack of clarity is unacceptable given the significant risks posed to current and future residents and fails to meet the tests of soundness.	The allocation of land South of Long Ashton would almost entirely compensate for the deletion of the Nailsea and Backwell strategic location for development. The site lies adjacent to the £400 million approved EPIC employment campus and would have excellent transport links. Feels like a no-brainer.... In addition, efforts should be focused on identifying deliverable mitigation schemes along the B3130 and B3128 corridor that are essential to safeguarding travel into and out of Nailsea for current residents.

Land north of Nailsea

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
63359201	Nailsea Holdings LVA LLP	Matthew Kendrick	Nailsea Holdings LVA LLP	Unsure	' Justified ' Effective ' Consistent with national policy	Unsure	Unsure			We strongly support the allocation of the North Nailsea site under policies LP3 and LP7 and note the site requirements that are set out at page 266 of the LP document. It is noted that the allocation is based on the initial submission for the site that put forward 381 dwellings, a care home and employment land. The proposals for the site have now changed as explained below and the planning application that relates to the land now proposes the site accommodate up to 429 dwellings. As a minor point and suggestion, we recommend that each allocation be given a specific reference for clarity. A suffix based on each site's location would be useful – for example the land at North Nailsea could be referenced NS1, and others sites such as the adjacent Pound Lane allocation be NS2, NS3 etc. In terms of the site requirements we have the following observations, some of which require amendments to the plan to be made to ensure that the site is deliverable and the plan sound. Drainage Matters The LP currently sets out a range of site-specific requirements relating to drainage. The current planning application has robustly considered this matter, cumulating in the Environment Agency (EA) and LLFA raising no objection to the proposals. In terms of the site-specific requirements that relate to drainage there are no issues relating to the development maintaining overland flows across the site and taking a sequential approach to the areas subject to flood risk. However, the policy requirements relating to restrictions on flow rates from the site, and easements, have not been properly considered in our view. Firstly, the requirement to restrict discharge rates for surface water to 2 litres a second is very onerous and would require large swathes of the site to be reserved for attenuation basins which would be an inefficient use of land and has not been requested by the EA or LLFA as part of the current application.The current drainage strategy for the site has been designed to Qbar rate which is an approach supported by national guidance and the LLFA has raised no objection to this approach as part of our current application. In light of this we consider that the current flow rate restriction set out in the emerging LP is unduly onerous and not required or reasonable – instead this should be deleted because guidance and requirements can change and it is more appropriate that this matter so considered as part of the development management process. The second requirement that is of concern is reference that: '6 metre corridor space will need to be provided for the maintenance of the drainage features'. This is not well defined because 'drainage features' could include all forms of SUDs (for example swales, rain gardens etc) and providing a 6m maintenance easement to all such features would be unduly restrictive and render achieving a well planned and designed layout impossible. We assume that the Council did not intend a 6m easement to apply in this way, and were instead seeking that it apply to the River Yeo and existing drainage ditches and would like clarity on this. Notwithstanding the need for clarity from the Council on this point, we propose that the wording of the site requirements be changed to provide further flexibility because ultimately the management regime and related easements needs to be agreed with whoever is nominated to manage these features in the future and they may consider that smaller easements are acceptable, therefore we suggest then relevant bullet point be reworded to: 'Suitable easements, to be agreed		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										with the adopting body, will need to be provided for the maintenance of the drainage features.' Highways Requirements We note the requirement that the site be designed to a 20mph speed limit and we have amended the proposals to achieve this. The reference to proportionate contributions to schemes identified in the Nailsea and Backwell Transport Strategy, as well as further contributions for improving public rights of way to link the site to then nearby Town centre, is also noted. In the absence of an adopted Strategy Document, we have already set out our proposed highways improvements that the North Nailsea site will deliver as part of our application and are looking forward to discussing and agreeing these measures with your highway's colleagues. If agreed, we would suggest that the development requirements text may need to be slightly amended to reflect any final agreement and S106 for consistency. In respect of the final bullet point requirement, we can confirm that our highways consultants have checked the proposed new roundabout junction that is proposed as part of our planning application and they have confirmed that what is proposed will not preclude the delivery of the proposed allocation for 100 Units off Pound Lane. The Current Planning Application Separate to the above specific comments on the site requirements we would also draw the Planning Policy Departments attention to recent updates to planning application 24/P/1586/OU2 which are enclosed as follows for ease of reference, these do not include the full suite of documents because we do not anticipate your department will want to review items like the ES Addendum, but please let us know if you wish to see these and they can be provided: • Appendix A - Report Summarising the Changes Made • Appendix B - Amended Site Master Plan • Appendix C - Updated set of Parameter Plans • Appendix D – Technical Note dealing with the issue of Active Travel In summary the amendments that have been made can be summarised as follows: • Removal of the proposed care home and extra care facilities and their replacement with additional dwellings in this central area of the site; • Proposed reconfiguration of the eastern access on to Clevedon Road to address flooding issues, resulting in the access being moved further south and the removal of some dwellings here; • The main through route proposed within the development has been re-orientated slightly to respond to an easement that applies to a pipeline that runs through the site, allowing for offsets and working zones as requested through consultation with the pipeline operators (Exolum); • Secondary streets have also been amended as a result of the pipeline easements with the requested offsets allowed for in the illustrative master plan design; • Traffic calming measures have also been introduced to this main route to slow traffic speeds, including the provision of raised table junctions and crossing points for key active travel linkages that give priority to pedestrian/ cyclists over the private car; • The root protection zones for the retained trees have been shown on the illustrative masterplan with the development extents being amended after consultation was held with the Council's tree officer specifically in respect of offsets to trees that could be considered to be of veteran status; • The location of the proposed MUGA and play areas, adjacent to the community hub have been reorientated; • The heights of the development have been increased within the western and central locations of the site to maximise densities in response to a council request that the site yield be maximised; and • Following a request that we look to maximise the yield from the site, we also examined the car parking provision that the illustrative master plan allows for. This involved slightly reducing parking provision based on the Council's methodology to reassess this matter in respect accessibility (with James Wigmore, Lead Transport Planner) and the layout now allow for this which has allowed housing numbers to be elevated slightly. The rationale behind these changes is set out in detail as part of Appendix A, and we hope this is clear. While re-consultation on these changes is ongoing we consider that, given that much of them respond directly and positively to previous consultee comments, that the revised plan is likely to be acceptable. Accordingly, we would suggest the emerging allocation be amended to reflect the revised scheme – primarily that should include changing the site yield to	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										‘up to 429’ from the 381 units previously identified, which reflects the deletion of the care home element and increase in densities on some part of the site. Conclusion We welcome the council’s change in approach that the pre-submission draft of the LP sets out, specifically the efforts it now makes to provide an increased housing supply to better meet its objectively assessed housing needs. However, dealing with the land supply and delivery issues that affect the area is a pressing problem that requires action now – namely the realise of land via planning permissions in advance of the Local Plan adoption, and immediately after it. Therefore, both development management decisions and the plan itself need to engender a flexible approach to allow this to be achieved. This should include making site specific requirements easy to understand, infrastructure delivery that does not require extensive periods of time to be formulated and agreed – and where possible ‘oven ready’ sites being released as soon as possible.	
30964641	Sally Ambrose					No			As your consultation link is not working, I am resorting to sending my comments on your Local Plan by email. I do not believe that your Plan is sound. You may feel under pressure from our current and inept government to provide overly large numbers of houses, but this is no excuse to try to convince us that land which has always been Green Belt is no longer. With particular reference to Land North of Southfield Road, Nailsea (within the Parish of Wraxall and Failand), this area of Green Belt continues to fulfill greenbelt criteria. It prevents the northward spread of Nailsea, thereby preventing the village of Wraxall from being overrun. It is not Greybelt, although yourselves and consultants employed by LVA are trying to make it out to be. Should you not be investigating brownfield (as instructed by the government), infill, increased densities in existing settlements? We know from CPRE's regular surveys that there are 1.2m brownfield sites in England alone. Use these before destroying so much of our countryside, which can never be restored. Nailsea and Wraxall are two completely different entities and there are hundreds of people in Wraxall and Nailsea who do not want to see this area destroyed. The fields are used for grazing and meat production and are certainly viable agriculturally, much of them being Grade 1 and 2. There have also been arable crops here. It is a recognised fact that fields abutting a town boundary can be just as productive as those further away. (CPRE) The mature hedgerows and trees are very useful for carbon capture. They also provide an excellent wildlife habitat - please see responses to the LVA Outline Planning Application for this land. There are many detailed responses demonstrating excellent knowledge of the wildlife and the land from which a great deal can be learned. We are told all the time how we have lost 90% of our wildlife, we have the lowest biodiversity, and yet here we are happily wanting to destroy even more. This land provides both visual and physical amenity to many people and its loss to the community would be enormous. Why is it that so little attention is paid to the effects of such huge developments on small pre-existing settlements? It is also land which has been considered totally unsuitable for development for many, many years. Why is it now suddenly being considered as most suitable? It obviously is not suitable for many reasons, flooding, destruction of the wildlife corridor, the aviation fuel pipeline, mine workings, and pollution of The Land Yeo flowing into the SSRI and the North Somerset Levels and Moors area. Pollution of The Land Yeo will also damage the ecosystem on the north side of the river. Not to mention transport issues and the inability to walk to the Railway Station for large numbers of people. I would certainly not wish to purchase a property sitting on unstable ground due to		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									coal seams and coal workings (3 mine workings exist within proximity of the Wraxall Villa Site, and there are also bell pits on this land). Increased surface run-off will cause serious problems. Your Plan also conflicts with the Wraxall and Failand Parish Neighbourhood Plan which NSC has already accepted! Green Belt and rurality should be strongly supported. It is almost impossible to understand why NSC wants to be responsible for causing housing etc. to be constructed on the sloping side of a river valley with all its attendant problems which will spread into wider areas, particularly at a time of climate change with much more heavy rainfall occurring regularly. To me, and others, it seems highly irresponsible. Do you think that you can win over what nature throws at us? I will refer you again to the 330 responses online about this Green Belt land which should never have been proposed for housing.		
8668193	Tickenham Parish Council		Tickenham Parish Council	No	• Positively prepared • Justified • Effective	Unsure	Unsure	The proposed development will produce additional traffic onto the B3130 and B3128 A proportion of this traffic will want to travel west to Clevedon and M5 Junction 20, and east to M5 Junction 19 and/or Bristol. There is no amelioration planned for these routes. The B3130 and B3128 are already up to capacity. The B3130 is a sub standard road that runs through part of Tickenham. Substandard means: a pinch point where HGVs/buses cannot pass each other, a pinch point where HGVs/buses struggle to pass each other, 3 x 90 degree bends, inadequate road width below accepted national standards, lack of footpaths and narrow footpaths below accepted national standards, 145 houses directly access onto a length of the B3130 less than 1.5miles long. Tickenham school children walking to school are forced to walk on narrow footpaths with traffic thundering by within inches. The area of the proposed development is prone to flooding. An attachment to this response shows the flooding that occurred in November 2025 at Jacklands Lake adjacent to the proposed development. The northern boundary of proposed development runs in part along the southern boundary of the Parish of Tickenham. The proposed development is on land that is currently classed as Green Belt. One of the purposes of Green Belt is to prevent urban sprawl and the merging of differing conurbations. The merging of Nailsea and Tickenham will happen if this development in the Green Belt is allowed to happen.	Provide suitable transport infrastructure to cater for the proposed 381 house development on land north of Nailsea, and the 3,728 houses proposed for construction in the Nailsea and Backwell, in terms of the construction of a road link between Nailsea and Clevedon using existing and improved roads as shown on the plan attached to this response. Do not build houses in flood zones. Do not build in Green Belt.		NailseaTickenhamLink.pdf JacklandsLakeFlooding.jpg
58205505	Susie Bevan			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Nailsea is a beautiful, small, rural town. It is proud to be a farming town and North Somerset council should be trying to protect much of the land that is being discussed in the Development Plan, especially as 1. some of the big sites proposed are on Green Belt land, and 2.are on Grade 2 Agricultural Land, which is an underused asset to the town. Nailsea simply will not be able to handle an additional 1,817 new homes – as Nailsea is a small, rural town and does not have the infrastructure to handle a few hundred new homes, let alone 1,817 new homes. And there are not enough schools, doctors' surgeries, and leisure facilities for all these new residents. We are already struggling to accommodate the residents that we do have! And although, three new schools have been promised by the developers, a promise doesn't actually mean that these Schools will ever be built. Nailsea is currently struggling with the additional traffic that the most recent new housing developments have brought, and that's just a few hundred extra homes. There are many 'village' parts of Nailsea, with some lanes to drive down. I have noticed whilst on my daily dog walks, that the traffic now flowing down North Street, has more than doubled. And a lot of the traffic is going far too fast for a little lane without a pathway for pedestrians. More traffic, equals more potential for accidents, especially down roads that are no more than a little country lane. I have myself seen the damage and wreckage from three car crashes at the bottom of my road (the junction of North Street, Hanham Way, Hannah More Road and Silver Street) in the past two years. Please North Somerset Council, protect our pedestrians, especially the children! We need to protect the biodiversity that lives and thrives within Nailsea. All the sites listed are home to a protected species, Greater and Lesser Horseshoe Bats. Any developments on these sites, will destroy the Bats habit and foraging opportunities, and the UK law protects All Bat species and their habits. So, any housing developments on these sites should be against the law. Another site of great nature beauty and biodiversity is the Moor End Sprout Nature Reserve. To build ANY houses near this site, would most definitely disturb mush of the wildlife and their habits. The Nature Reserve needs to be protected – and our council should be doing all that they can to protect such areas of nature beauty and biodiversity. Nailsea is blessed with Grade 2 Agricultural Land – this land is high yielding and of a very good quality. This is worth protecting for the town and for the Country. We NEED land that we can grow various crops on. This should be seen by the Council as something to protect and capitalize on, not to simply build houses on. Therefore, as a town, we should be protecting such land as being able to grow and sell crops helps to support the economy of the town and the country. And we cannot build on all spare green land. Nailsea is prone to flooding in many areas, and many of the sites listed to be developed are flood plains. To remove these flood defences, only puts the current residents at higher risk. This does not make any sense. Please North Somerset Council, protect our beautiful, rural town, by not accepting these proposed developments and by maximising what the town does have already – more agriculture on the wonderfully fertile soil, more supporting biodiversity that exists here in abundance and supporting the residents who already live here.			
62584449	Karen Bird			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	These comments apply to all proposed development sites in Nailsea. The proposed figure for development will lead to a total overdevelopment of the town. There is no funding for additional infrastructure, such as the new road, schools and no evidence that these will be provided. Land to the north of Nailsea will be removed from the greenbelt. Development is planned on land which is prone to consistent flooding. There will be notable increases in vehicles on the network of rural lanes around Nailsea, and no clear workable plans to mitigate against this. Roads will be unsafe to use for pedestrians, cyclists and horse riders Existing accident blackspots at Stone Edge Batch, Wraxall Hill or Portbury Lane have no plans to improve them and they will see a marked increase in vehicles.			
3332705	Gill Brown		-	No	• Positively prepared	Unsure	Unsure	I do not believe that North Somerset Council has demonstrated the exceptional circumstances that justify this land being removed from the Green Belt. Allowing development ignores the strategic importance of the land for wildlife recovery and demonstrates a	Reallocate the Land North of Nailsea as an undeveloped Nature Park

					' Justified ' Effective ' Consistent with national policy			lack of green infrastructure planning. The area is part of a blue/green corridor between the major rewilding project at Watercress Farm and The Tickenham, Nailsea and Kenn Moors SSI which supports a number of endangered species including otters and dormice. It is adjacent to a Site of Nature Conservation Interest including ancient woodland, alder carr, springs and floodplain meadows. It is part of a historic landscape and has species rich hedgerows with veteran trees. It is in the North Somerset Bat SAC and is an increasingly important foraging area for a nationally important bat roost. It also supports a colony of house martins. Due to the scale of mitigation needed to overcome the danger of flooding, and the constraints of a high pressure pipe line, the area would be challenging to develop and it is hard to see how it would be possible to deliver the required percentage of affordable dwellings. The cost of riparian management will be an ongoing issue now that the management of the Land Yeo has been transferred from the Environment Agency to the riparian landowner. For the reasons stated above, it would be more sound to enhance this already nature rich area and include it in the wildlife recovery strategy than designate it as a site for development. The site has been primarily used for grazing for over 30 years. As insects associated with grazing animals play an important part of the diet of Greater and Lesser Horseshoe Bats, loss of grazing on this site could be catastrophic for the already declining Horseshoe Bat population. There are no A roads leading to Nailsea and the roads that will service this site are inadequate with pinch points and accident blackspots which already cause major hold ups on the B3130 to the east and west of the town. Nailsea and Backwell station is not within walking distance. It is already inadequate for the needs of the current population, the platform is too short for Intercity trains and there are accessibility problems which have not been addressed due to the cost of the extensive engineering works that would be required. It is not a suitable transport hub. The cumulative effect of adopting all the sites in this area would lead to Nailsea and Backwell becoming overdeveloped to the extent that they would lose their rural character and local services, and infrastructure would be stretched to breaking point.			
21202337	A Bryant			No	' Consistent with national policy	Unsure	Yes	I disagree with the recommendation to remove the land north of Nailsea from the green belt. There is no way that the government's so called 'golden rules' to release the green belt will be met by this development. It would appear to me that the government has said, 'you need to build xxxx more houses or else' suddenly the tune of North Somerset council has changed completely. It was previously against building on this site and against removing it from the green belt.	Don't recommend the removal of green belt land where the conditions for doing so are not realistically going to be met.		
58578593	Jo Bryant			Unsure		Unsure	Unsure		This planned growth, for so many new houses in one area is completely unsustainable for Nailsea and Backwell. Objections have already been raised on multiple occasions due to the environmental, traffic, flooding and public services impact, which would simply leave the area unable to cope and are not adequately addressed by this Plan.		
39126657	A Burgess			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Unsure	Unsure	The plan to build the additional 1193 homes across 4 locations around Nailsea is unsound in my opinion for the following reasons: 1. The proposed 1817 new homes in Nailsea would be a total over development of the town. This will place immense pressure on health and leisure facilities. There are no obvious investment plans to meet the health/ leisure/educational needs of this major increase in population. 2. The proposed new link road across Backwell Common and under the railway bridge would be prohibitively expensive and a major engineering feat It would not allviate traffic congestion on Station Road nor adequately serve Nailsea traffic. The new road will be in a flood plain which regularly floods. There is no indication of how this project would be funded. 3. Land to the north of Nailsea is greenbelt and should be preserved as such. 4. Land to the south of Nailsea is grade 2 agricultural land which is good quality, high yielding land which will be permanently lost due to this development. 5. Protected species of bat will lose their foraging ground if all proposed sites are developed. Valuable wildlife habitats of the Moorend Spout Nature Reserve will be destroyed if the land adjacent to it is developed. 6. Development on the proposed scale would result in a vast increase in vehicular movement causing congestion in the rural lanes making it unsafe for pedestrians, cyclists & horses riders. 7. The railway station would not accommodate the substantial increase in passengers numbers expected with the development of 1817 homes not to mention the 1762 new homes proposed in Backwell. The platforms are short and narrow and there is no access for mobility vehicles or pushchairs south bound.			
62811873	R Burgess			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Unsure	Unsure	The plan to build the additional 1193 homes across 4 locations around Nailsea is unsound in my opinion for the following reasons: 1. 30659041	C Cox			No	' Positively	Unsure	Unsure	Backwell Common and the whole of the surrounding area is prone to flooding. This housing would further aggravate the problem and make everything even worse. Chapel Hill has already been on the news a few times for being flooded and impassable. Further housing would make this worse., and this isn't even allowing			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					prepared • Justified • Effective • Consistent with national policy			for worse weather conditions that have been predicted for the future. Where there isn't flooding there is high quality agricultural land which would be lost for ever. Only 7% of all of North Somerset's land is high quality agricultural, and you are intending to use it for housing? Government policy actually states that we must protect our best and most versatile land to safeguard food security. These proposals contradict this policy. Backwell is not an employment hub. People living there would have to commute to Bristol or Weston-Super-Mare and the roads are already at capacity, as is the railway. The railway station itself is not fit for purpose as a transport hub. After all these years, it is still inaccessible for people with mobility issues and dangerous for people travelling with young children. The proposed road would not serve its purpose of relieving traffic on Station Road or Nailsea, and would be extremely costly. The Infrastructure Delivery Plan lacks analysis and costings, and there are no funding guarantees for this new road, even if it were to prove to be useful. Backwell does not have the infrastructure to support such a development, and the village has already had an increase of 40% in its housing numbers with no improvement. It makes no sense to build another 1000 houses in that area. The whole proposal is unsustainable and undeliverable.			
62532065	Josh Dyer			No	• Positively prepared • Justified • Effective	Unsure	Unsure	There is daily traffic north and south of this site. The most recent traffic survey was completed during school holidays which is deliberately cynical timing. The road to the north goes past a secondary school, with sections of reduced and zero pavement. The lorries moving around other local building sites in Backwell have consistently demonstrated a lack of safety. Roads have been torn up, cars have been scratched, and a woman received life changing injuries after being hit by a truck less than 300m from this site. The train station is overcrowded at rush hours. There is not enough space for people to safely stand. Also there is no ramp access on one platform, meaning that mums with pushchairs and wheelchair users are excluded and vulnerable, especially during busy periods. The site is a known flood plain. It is literally flooded this week, as is the case at least twice a year every year. It's also connected to Backwell Common, another flood risk area. Given that so many of the new build houses in Nailsea have failed to sell in Iver 12 months, why are we trying to squeeze more nearby, in an area prone to flooding and further from local shops and amenities?			
58398081	Andy Eastwood			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Paragraph 154 of the NPPF states that the construction of new buildings is inappropriate within the Green Belt and this proposed development does not fall within any of the exceptions and nor does it represent any of the other forms of development that are not inappropriate within the Green Belt as set out in paragraph 155. The development falls outside of the settlement boundary for Nailsea, and within the rural parish of Wraxall, whose Neighbourhood Plan acknowledges its importance, its vision being 'To protect and enhance the Green Belt' (Vision 4.3.) and to 'continue to seek protection and enhancement of the area's rural character'. This proposed development would have a direct impact on the openness of the Valley and would create urbanisation from Nailsea into rural Wraxall and Tickenham land. The risk of development in regard to encroachment on the openness of the Green Belt area (one of the key aims of Green Belt) is High, this area performs highly on three of the criteria for Green Belt and has every right to remain in the Green Belt. This site is not suitable for affordable housing in accordance with the Governments National Planning Policy Framework (NPPF). The proposed land is in an area of well preserved medieval landscape, with probable Saxon antecedents, of small irregular fields, some of which suggest that they may have been created from open strip fields. It is clear that this site has numerous constraints including Flood Zones 2 and 3, numerous underground services, tree preservation orders, an archaeological zone, numerous Sud's, nature walks, enhancement to current sports facilities, major link road, furthermore 381 dwellings plus commercial and community buildings is a hugely costly development. This makes for a very expensive site to develop and for the developer to make any profit they must build properties of signifiant value, therefore it is unlikely that affordable houses in accordance with the Governments NPPF will be built on this site. Increased Traffic. The B3130 between Jacklands Bridge (BS21) and the junction with the B3138 (Tickenham Hill) at Stone Edge Batch is very narrow with no footpaths on either carriageway. Traffic flow is regularly halted because goods vehicles, lorries or buses cannot pass each other over a significant distance, requiring careful manoeuvring, or difficult backing-up, to re-start traffic flows. This scenario is a regular occurrence during the daily rush-hour periods. The additional log jams and tail backs that will result from the increased vehicular traffic stemming from the proposed development will cause delays to commuters, school buses and emergency services, reduce air quality, increase general pollution and noise. Traffic jams and stationery vehicles consume vast amounts of energy needlessly, and the resulting carbon footprint cannot possibly be justified based on an increased number of residential dwellings in an area that has inadequate supporting infrastructure. The new link road through the proposed development will be used as a shortcut for traffic from the east and west ends of the estate to avoid the traffic lights in Nailsea. This means that the traffic flow through the proposed residential area will be significant, effectively becoming a Nailsea by-pass, introducing noise and pollution into another location which is currently quiet, unspoilt green belt. Pollution. New proposed link Road runs parallel to the Land Yeo River. This is of concern as it is recognised that Road runoff is a major contributor to river pollution, in particular, Road runoff contains levels of poly aromatic hydrocarbons far above the Environmental Quality Standards, it also contains toxic metals at levels that can kill fish and insects. The Land Yeo flows directly into a designated Site of Special Scientific Interest (SSSI) - the Tickenham, Nailsea, and Kenn Moors of North Somerset.			
62751297	Ian Edmondson		Retired	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The planned developments will have a massive impact on Nailsea, in 2022 estimated dwellings 7039, the 1817 new houses would represent a 26% increase. The infrastructure even taking the possible new link road to the A370 into account, will be inadequate and will not assist vehicle movements to the North of the town, and place added pressure on the B3130 to Clevedon and Wraxall which even now is not fit for purpose with many pinch points including sharp bends where buses and large lorries are unable to pass. Development on Green Belt land rather than Brownfield sites is not a good idea, as once the Green belt is developed it is lost forever and we as a nation need to be growing more of our own food rather than relying on imports Land with a flood risk should not be considered for housing, if local plans to mitigate the risk are successful usually this impacts on areas further down the watercourse, particularly where the water tables are near the surface. In addition occupants may have difficulty with insurance and obtaining mortgages, as flood risk would effect the property values. The biodiversity of the area will be disturbed and in some cases completely destroyed. Occupants of the new dwellings are unlikely to find local employment and will need to travel to Bristol, Weston Super mare or other larger centres either by car, or possibly public transport. Nailsea station has access issues particularly for the disabled, and if to be used by residents in the North of Nailsea will place additional strain on Station Road in Nailsea and also Backwell with new housing developments planned in	Further consideration and research into the points raised above, resultant amendments and more detail of how the plan will mitigate or remove the detrimental impact of these massive planned developments		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								both areas. Access to Doctors and Dentists will further be impacted unless additional resource placed in Nailsea. New primary schools are planned and part funded from developer contributions but where will the additional funds required be coming from? The current parlous state of local government finance would indicate that central government would need to provide the shortfall. Once established how would the schools be funded including maintenance and staff costs?			
21233057	P Evans			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I do not consider the North Somerset Local Plan 2041 to be sound, and in particular I focus responses in relation to the proposed allocation of land north of Nailsea for inclusion in the Local Plan for development. The plan fails to meet the four tests of soundness in paragraph 36 of the National Planning Policy Framework (NPPF): • Not Positively Prepared – The plan does not demonstrate that Nailsea's constrained B-road network to the north of the town, with long-standing bottlenecks and places where two vehicles cannot safely pass, can safely or sustainably support the proposed level of development. There is no credible infrastructure or funding strategy to address these constraints. • Not Justified – The evidence base does not show that the north Nailsea allocation is the most appropriate strategy compared with reasonable alternatives. I cannot find evidence of sufficient engagement with neighbouring authorities and infrastructure to justify inclusion, and the site's extensive drainage, flood and access issues indicate that it was not objectively chosen. As an aside, the June Cabinet Meeting waived this land through with vague references to the need for housing; the mobile library debate was given more air time. • Not Effective – The allocation depends on mitigation measures that are vague or uncosted, including a 20 mph internal route and contributions to unspecified transport schemes. These do not address the fundamental capacity and safety problems identified in the Nailsea and Backwell Transport Strategy or the site requirements schedule. • Not Consistent with National Policy – The proposal conflicts with several NPPF requirements, including: • safe and suitable access and sustainable transport; • Green Belt protection (no exceptional circumstances have been demonstrated for its release); • flood risk (the site lies on sloping land draining toward a river that floods regularly); and • on protecting biodiversity and natural networks (the site forms part of a green wildlife corridor identified in the Council's Nature Emergency Toolkit). The plan also fails to reference the North Somerset Nature Toolkit at all, despite it being adopted by the Council to guide development under its declared Nature Emergency. This omission further undermines justification and consistency. The site requirements themselves acknowledge major engineering and drainage constraints, while making no reference to the Exoleum underground fuel pipeline that crosses the site — a serious safety and deliverability omission. Finally, the allocation conflicts with the Wraxall & Failand Neighbourhood Plan (2022–2038), which forms part of the statutory Development Plan and emphasises protection of the Green Belt, rural character, and transport safety. For these reasons, the plan is not positively prepared, not justified, not effective, and not consistent with national policy. It cannot therefore be considered sound in its current form. 2. Do you consider the North Somerset Local Plan 2041: Pre-submission Plan to be legally compliant?" I do not consider the North Somerset Local Plan 2041 to be legally compliant, particularly in relation to the proposed allocation of land north of Nailsea. The Council's own Duty to Co-operate Statement of Compliance (October 2025, pp. 11, 16–17, 20 and 32) confirms that engagement with key partners—including National Highways, the Environment Agency, and neighbouring authorities—remains "ongoing." This indicates that effective cooperation had not been completed before the Plan's publication. There is no evidence of targeted engagement concerning the severe access constraints and flood risks affecting the land north of Nailsea. The Plan also fails to integrate or even reference the Council's adopted North Somerset Nature Toolkit, despite the Council having declared a Nature Emergency and promoting this Toolkit as a framework for biodiversity, drainage and landscape protection. Its omission calls into question whether the Plan has been prepared in full accordance with the Council's own environmental. Furthermore, the Plan makes no reference to the Exolum underground fuel pipeline that runs through the north Nailsea site. This is a nationally significant item of infrastructure, and the operator is a non-statutory consultee. The absence of consultation evidence or safety assessment suggests that the Plan has not been prepared in consultation with all relevant bodies, contrary to legal requirements. In addition, the allocation conflicts with the Wraxall & Failand Neighbourhood Plan (2022–2038), and undermines the latter's policies on Green Belt protection, settlement character, and transport safety. As a statutory body Sport England are also required to be consulted in connection with the any loss or alteration of sports facilities. For these reasons, I do not consider the Plan legally compliant. 3. Do you consider the North Somerset Local Plan 2041: Pre-submission Plan to comply with the Duty to Co-operate?" I do not consider the North Somerset Local Plan 2041 to comply with the statutory Duty to Co-operate, particularly in relation to the proposed allocation of land north of Nailsea. The Duty to Co-operate Statement of Compliance (October 2025) itself (pages 11, 16–17, 20 and 32) admits that discussions with key partners were still "ongoing" at the time of publication. This demonstrates that the Council has not completed effective cooperation with all relevant authorities and infrastructure bodies before submitting the Plan. There is no clear evidence of substantive joint working with Bristol City Council, National Highways, the Environment Agency, or Exolum UK Ltd (the operator of the strategic underground fuel pipeline crossing the site) on the specific issues of access, flood risk, or infrastructure capacity for north Nailsea. The absence of consultation with these statutory bodies means the Plan cannot be regarded as having been prepared "constructively, actively and on an ongoing basis." The existence and proximity of a high pressure aviation fuel pipeline must call into question the very safety of the site and the ability of any prospective purchasers to obtain finance to purchase any of the new residential units. Failure to consult properly on this matter alone could lay the Council open to subsequent legal action. There is no evidence that the Council has engaged meaningfully with the principles of its own North Somerset Nature Toolkit or with neighbouring authorities on biodiversity connectivity, contrary to current requirements. For these reasons, the Plan does not comply with the legal Duty to Co-operate and should not be submitted for examination until evidence of full engagement and signed Statements of Common Ground with the relevant bodies are provided. I consider it to be neither sound nor legal for the reasons given above. It also directly contradicts the Wraxall & Failand Neighbourhood Plan and would substantially alter the nature of the Parish of Wraxall.	I would suggest from studying the documents that the Land North of Nailsea be removed in full from the Local Plan. Reason: The allocation is not positively prepared, not justified, not effective and not consistent with national policy due to unresolved access on constrained B-roads, Green Belt harm (no demonstrated exceptional circumstances), flood-risk and drainage issues (including an overland flood route and strict SuDS limits), biodiversity and corridor fragmentation, omission of the Exolum pipeline constraint.

21402753	Judy Hall		Nailsea resident	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I oppose the plan because: The land is often flooded and unsuitable for housing. There is an oil pipe line which will be traversed many times in building. Additional development will place immense pressure on existing health and leisure provision. The land in question is Green Belt, and building on this will destroy much needed green space. The houses planned at Moorend Spout will destroy the nature reserve which houses many protected species. The B3130 is too narrow to support associated increase in traffic. The local station is not nearby and walkable, so more traffic will be on the connecting roads.			
58409825	S Hall			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I strongly oppose North Somerset Councils Reg 19 Local plan 2041 which proposes to build over the Yeo Valley Green Belt land, North of Nailsea plus the Moor End Spout Nature Reserve in Nailsea. The Yeo valley and Moor End Spout are unique places of natural beauty and importance for both endangered flora and fauna but also accessibility for the many local people for whom these are places of peacefulness and escape from busy lives. These are places of tranquillity for people to recharge and for their mental wellbeing. In the centuries old hedgerows which are classified by DEFRA as “species rich” live Hazel Dormice which are a protected species, with laws in place to stop their habitat being destroyed. These hedgerows will be destroyed. There are at least 12 species of bats living in the valley, dependant on the grazing pastures, with endangered Barn Owls and Kestrels also breeding there. The Ancient woodlands and fields next to the river are designated as Sites of Conservation interest. Green belt land is there for a purpose, the current UK government “National Planning Policy Framework” document states: “The government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl” The Government goes on to outline how the Green Belt is protected: “Inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances.” There is talk of redefining the Yeo Valley as “Grey Belt” so that it can be developed, but the government also states that this can only be done if the “Green Belt” is of low quality or has had buildings on it already. The land here is Grade 2 Agricultural it is high yielding and of very good quality. It is used as pastureland with cows and sheep grazing throughout the year. It has never had any buildings on it so by the Governments’ own definition it cannot be redefined as Grey Belt. The Government states: “When considering any planning application, local planning authorities should ensure that substantial weight is given to any harm to the Green Belt. “Very special circumstances” will not exist unless the potential harm to the Green Belt by reason of inappropriateness, and by any other harm resulting from the proposal, is clearly outweighed by other considerations. A local planning authority should regard the construction of new buildings as inappropriate in the Green Belt.” Moor End Spout Nature reserve should also continue to be protected from development, it is home to countless protected species and local people have dedicated their time to looking after this area. Any development would destroy all they have worked for, the wildlife habitats and biodiversity in our area. Both of the proposed sites are also regularly waterlogged, Moor End Spout is a wetlands area, and the Yeo Valley is a flood plain, often in the winter the cows are walking up to their knees in mud. This should also be a red flag to permitting development in both sites. Please listen to local peoples’ concerns and objections and don’t allow these areas to be destroyed.			
62772545	Margot Held			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I understand that some development will need to happen to meet housing needs. However, it must be planned with nature in mind, not at its expense. Destroying habitats and green corridors is short-sighted and conflicts with sustainability goals. To make this plan more sound, the following options should be considered: 1. Loss of Access to Nature and Impact on Protected Species This development will significantly reduce access to nature for local residents. One of the main reasons I chose to live in Nailsea was its proximity to open countryside, which is vital for wellbeing. The proposed site consists of open fields that provide habitats for many species and have been identified as foraging grounds for the rare Greater and Lesser Horseshoe Bats, which are protected under UK and European law. In addition, the development will result in the loss of trees, hedgerows, and a general reduction in wildlife corridors. These features are critical for supporting biodiversity and connecting habitats. The impact on wider ecology has not been properly considered, and once these corridors are broken, the consequences for local wildlife will be severe and irreversible. 2. Ecological and Planning Policy Concerns The proposal appears inconsistent with local planning policies that prioritise environmental protection and sustainable development. It also fails to demonstrate how it will achieve biodiversity net gain, as required by the National Planning Policy Framework (NPPF) and North Somerset Local Plan. At a time when nature is under increasing pressure, developments should enhance biodiversity and climate resilience, not erode it. 3. Potential Impact on Waterways and Flood Risk I am concerned that the development could affect the existing network of waterways and drainage systems in the area. These open fields likely provide natural flood management and habitat for aquatic and riparian species. Replacing permeable land with hard surfaces may increase surface water runoff, raising the potential for localised flooding both on-site and downstream, especially during heavy rainfall. Changes to water flow and drainage patterns could also disrupt wildlife that depends on these ecosystems. Without a robust, evidence-based plan for sustainable drainage and water management, these risks remain unaddressed. 4. Pressure on Transport and Town Infrastructure There is concern about the significant increase in traffic resulting from over 300 new homes, with no clear	1. Loss of Access to Nature and Impact on Protected Species • Retain and Enhance Green Corridors: Keep existing trees, hedgerows, and wildlife corridors wherever possible. Where removal is unavoidable, create compensatory corridors and plant native species. • Protected Species Mitigation: Carry out detailed ecological surveys (including bats) and implement measures such as bat-friendly lighting, roosting boxes, and habitat buffers. • Accessible Green Space: Include public green spaces and maintain rights of way to ensure residents retain access to nature for wellbeing. • Buffer Zones: Establish buffer areas between development and sensitive habitats to minimise disturbance. • Community Engagement: Work with residents to ensure development supports wellbeing and environmental protection. 2. Ecological and Planning Policy Concerns • Biodiversity Net Gain: Provide a clear, measurable plan for achieving at least 10% biodiversity net gain, as required by the Environment Act and NPPF. This could include habitat creation, native planting, and funding local conservation projects. • Policy Compliance: Demonstrate alignment		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								plans to address this impact. The development will add hundreds of additional vehicles to local roads, increasing congestion and safety risks on routes that are already under pressure. Beyond traffic, the increase in population will place additional strain on the town's infrastructure—schools, healthcare services, utilities, and community facilities—yet there appear to be very few plans to accommodate this growth. Public transport options also remain unchanged, meaning residents will be heavily reliant on cars, which conflicts with sustainability goals and local planning policies promoting active travel and reduced car dependency. Without a comprehensive strategy for transport improvements, sustainable travel options, and infrastructure upgrades, this development risks creating long-term congestion, reduced safety, and diminished quality of life for existing and new residents.	with NPPF paragraphs 174 and 180 and North Somerset Local Plan policies (CS4 on Nature Conservation, CS9 on Sustainable Transport). • Climate Resilience: Incorporate green infrastructure and tree planting to support carbon capture and reduce heat island effects. _____ 3. Potential Impact on Waterways and Flood Risk • Hydrological Assessment: Undertake a full study of water flow and flood risk before approval. • Protect Riparian Habitats: Maintain natural watercourses and surrounding vegetation to support wildlife and water quality. • Monitoring Plan: Commit to long-term monitoring and maintenance of drainage systems. 4. Pressure on Transport and Town Infrastructure • Public Transport Enhancements: Expand bus routes and frequency to reduce car dependency. • Active Travel Infrastructure: Include safe cycle lanes and pedestrian paths to encourage sustainable travel. • Community Infrastructure Contributions: Through planning obligations (e.g., Section 106), fund improvements to schools, healthcare, and utilities to accommodate population growth. •		
27745249	Alan Hooley		Tickenham Road Action Group	No	• Positively prepared • Justified • Effective	Unsure	Unsure	I DO NOT CONSIDER the North Somerset Local Plan 2041: Pre-submission Plan TO BE SOUND. The NS Local Plan 2041 proposes to build over 24,000 new houses - almost 4,000 of these in the Nailsea and Backwell area! This represents an increase of approx. 40% over current residential properties, and hence a similar pro-rata increase in population and traffic. Tickenham sits on the B3130 which is already seriously congested and unsafe for pedestrians & cyclists. The reason why the Plan is NOT SOUND is that there has been no review of this increase of traffic on this very popular route from the M5 to Nailsea, Backwell and also as a rat-run to Bristol.	To build an additional 4,000 homes in Backwell & Nailsea consideration must be made to relieve traffic capacity of the B3130 by the introduction of another route from these towns to the M5. This should be achieved by extending the Long Ashton by-pass (A370) from current junction at Flax Bourton to the M5 junction 20 alongside the route of the nearby railway line, this new road would have junctions serving Backwell (nr. Backwell Common/ Farleigh) and Nailsea (nr. Netherton Grange/Station). The new road would also facilitate a future link up to the expanding Bristol airport and the new U.S. pharmaceutical HQ planned at Long Ashton. This new road would negate any need for the new proposed Backwell link road.		
62843233	Chris Jenks			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	We already have new houses scattered around Nailsea off young Wood Lane, engine lane, the perrings, treadle wood way, new houses behind causeway view, we do not have infrastructure here for all the new houses, schools, doctor surgery, and roads around Nailsea this particular site north of Nailsea is green belt land that is on a floodplain land, our train station is not fit for purpose for the disabled or elderly and car park is even now getting full with no availability to expand, this land has been known to have rare species of bats, the entrance and exit to the proposed site will be on to a main road out of Nailsea which is already struggling with amount of traffic coming in and out,main roads around Nailsea are already struggling and has a river flowing through the proposed site, how much more are the council prepared to lose our green belt land to profit from more housing when Nailsea only has B roads surrounding it enough is enough we are full.			
62863361	Peter Jennings			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I would like to appeal against the implementation of the NSC REG 19 Local Plan 2041 on the grounds detailed below: - The proposed development of 1,817 new homes in Nailsea would lead to a total over development of our town. - New primary schools would be required, and with no locations and firm funding provisions in place, this would not facilitate the proposed population increases to the town. - The new link road, under the rail crossing is likely to be very expensive with problematic engineering given the proximity to the River Kenn. The plans will lead to the permanent loss of Grade 2 Agricultural land which is of good quality and high yielding, as a result of the housing development to the south of Nailsea. The town's existing health and leisure provisions are already under considerable pressure and would become unacceptably pressured without firm investment committed to developing these facilities further. - Proposed sites for development in Nailsea are recognised foraging sites for Greater and Lesser Horseshoe bats. - Proposed homes adjacent to the Moor End Spout Nature Reserve, would destroy wild life habitats and biodiversity in our town, since the site hosts many protected species. - The proposed development to the west and south of Backwell Lake (reservoir) mean that new roads and housing will be in the floodplain which does flood regularly. - Plans are not currently in place for accident blackspots at Wraxall Hill, Stone Edge Batch and Portbury Lane, which will see a marked increase in vehicle movements. - The railway station is already not fit for purpose as a transport hub, since it remains inaccessible for people with mobility issues and presents considerable challenges for adults travelling with small children. - Greenfield Cresent playing field is not protected under Local Green Space Policy LP15. - The proposed new road would not serve Nailsea's traffic or relieve congestion on Station Road, nor would it help traffic moving from Backwell to the M5.			
62846433	S Johnson			No	• Positively	Unsure	No	Totally disregards green belt land and biodiversity. This site in particular is already prone to flooding and further development on the flood plain will exacerbate this. Climate change is already bringing increased flooding. Jacklands lake was flooded in early December without this additional pressure. Road floods by the			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					prepared Justified Effective Consistent with national policy			fire station. Roads are not suitable for increased vehicles. There is no plan to increase infrastructe in Nailsea town. Narrow hairpin bend at Stone Edge Batch and the other side at Wraxall cannot handle extra traffic. It will be a tragedy for the environment to destroy this land by the river and woodland.			
21232289	Paul Keen			No	Positively prepared Justified Effective Consistent with national policy	Unsure	Unsure	The Local Plan whilst considering the traffic impacts of the isolated additional housing developments mentioned in the Local Plan does not address overall traffic growth over the 15- year period of the Local Plan, nor provide a strategic view of how traffic will be routed through key transport routes in North Somerset. 1.1. This is important because the proposed housing developments may restrict options to provide adequate transport routes for traffic growth within and through North Somerset. 1.2. Without key strategic routes being identified and allocated within the plan increasing traffic volumes will be routed through rural areas and villages using existing roads that are unfit for current traffic volumes/types and not able to support increased traffic volumes. 1.3. The key arterial routes to Nailsea are based on country lanes that have not been upgraded over the last 60 years despite considerable growth in the size and commercial use of Nailsea. This presents severe bottlenecks and capacity constraints in meeting current traffic demand. 1.4. The traffic growth assessment needs to consider the following in the context of the roads serving North Somerset: 1.4.1. Impact of adding 24,010 new dwellings in North Somerset, the expansion of Bristol Airport, the additional 34,000plus dwellings by 2040 in the Bristol Local Authority and the increased number of dwellings in other surrounding Local Authorities. These together with the growth of traffic using the South Bristol ring road including the new Epic pharmaceutical headquarters (Collitor Way joining A370) will all have a major effect on the already congested roads in the Nailsea and Tickenham area. 2. The Local Plan does not address existing traffic issues in impacted villages and rural lanes/roads which will be subject to a 25% proportional increase in traffic through the increased number of homes alone. 2.1. There are approximately 97,000 dwellings in North Somerset. Adding 24,010 dwellings will therefore increase traffic volumes by approximately 25% and on key routes this increase will be much higher. 2.2. Current road activity puts the Tickenham roads and lanes at or near capacity without additional infrastructure. 2.3 Ability to access My road due to number of vehicles blocking entrance - caused my traffic jams at Stoneedge Batch. Road is impassible for two large commercial vehicles. No safety in catching bus to Clevedon. Need a new road from Nailsea through to the M5.			
58638081	Jackie Kemmish			No	Positively prepared Justified Effective Consistent with national policy	Unsure	Unsure	The land to the North of Nailsea should not be included in the north somerset plan as a potential area for development as it is part of the flood plain as it regularly flooded.This land is at the same level of flood risk as those areas in Clevedon that have not been identified as appropriate due to the flood risk.I would like to see the legal reasoning for why this section of land is suggested as suitable for development with such significant flood risk in comparison to the areas in Clevedon that are deemed as unsuitable. The land North of Nailsea is frequently flooding and the properties neighbouring this land are also at increased risk of flooding if this land is developed. The land to the North of Nailsea is part of the Tickenham ridge and is not geologically sound for development.NSC have previously commissioned a report seeking advice regarding the suitability of this area that runs alongside the ridge in relation to its suitability for development.The conclusion of this report was that the land that includes the area to the North of Nailsea not to be suitable for development due to its Geology.I would like NSC to demonstrate more in-depth understanding around the Geological significance of this site in reference to suitability of the land structure. The land North of Nailsea is designated as green belt land and fulfils the purpose of preventing sprawl from Nailsea and preserving the openness of the countryside and enables people to be able to access nature and historic woodlands in a natural setting.There is significant importance to the wildlife of having the ancient woodland that runs along the ridge to the north of this land.There is a significant bio diversity of the type of land/land structure/type of geology/type of water flow/areas of marsh land/flood plain and full wildlife corridor. This section of land forms a corridor from the SSI along the Tickenham ridge to Tyntsfield and is flanked by ancient woodland with ancient hedgerows that are essential for wildlife and for survival of endangered birds/ bats of which there are several listed in this area.The formation of the habitat in this area with the Yeo river enables full biodiversity and eco systems to be maintained. The area is natural floodplain and this differs to the flat areas in North Somerset that are brownfield sites.NSC has not proved that they have exhausted all these other options which I understand there is a legal requirement to do so? Release of the greenbelt requires legal changes that must be justified and the evidence has not been provided from NSC.NSC has a legal obligation to work within its own Nature emergency tool kit that states development should protect and strengthen wildlife corridors and natural drainage-this area meets all these significant wildlife credentials and therefore should not be included as an area for development within this plan. The land to the North of Nailsea lies within the boundary of Wraxall and Failand parish council.NSC proposal to include this land area for possible development is in conflict/contradicts the adopted local plan which was recently passed. Traffic infrastructure/access: The area to the North of Nailsea is significantly impacted by the pinch point at the B3130.This section /junction becomes impassible when there is a van/lorry trying to pass a car.This road is not safe to be carrying more HGV traffic and this becomes a significant concern with emergency services. This is the main access road from Clevedon/access to the top road to Bristol and already a significant pinch point and safety concern and is is not a safe or sustainable option for the proposed plan. Gas Pipeline:I would like to see justification from NSC regarding the safety and efficacy of building on this area that has a significant pipeline along this route.I would like NSC to clearly document the risk assessment that has been carried out in regards to this. General infrastructure concerns: NSC plan has disproportionate number of homes planned for these areas that do not have the highway or road networks structure.I am unclear why the plan is not considering growth in areas that already have road infrastructures in place and easy access to motorways etc.Clevedon has a tiny			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								amount of development included in this plan yet has the road and highway infrastructure in place.I would like NSC to be able to clearly and legally justify why these other areas are not being considered for development and why these other areas of low grade or brownfield sites are not being included.If the reasoning is due to the flood plain/flood risk then I this NSC local plan is NOT SOUND. The area to the North of Nailsea has so many justifiable reasons not to be suitable for development and the reasoning of the NSC local plan is not sound. I oppose the development of the area to the land to the North of Nailsea and I do not think that NSC have fully considered the appropriateness of this area of land for development.			
30953921	Andrew Lowe			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	There is not the appropriate surrounding road infrastructure to accommodate the extra proposed cars this will bring to the area. There are several pinch points at present for traffic where the Clevedon Road meets Tickenham Road. The area is not easily accessible down narrow roads and some distance from public transport and the railway station. The proposed land regularly floods, and to build houses on flooding land seems irresponsible. The proposed land is also an area of Green Belt, once developed on is lost forever, we should be preserving this area for future generations to enjoy, not to mention all the wildlife that would be damaged and destroyed. We should be looking to develop on brown sites, not destroying green belt land. Building on Green Belt Land should not be an option, and even considered.			
62838401	David Martin			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	North Nailsea !!! Green belt !! Bats feeding ground. Flood risk high .			
18479073	Kate McKee			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Loss of Green Belt - The site lies in a portion of the Green Belt which fulfils the purpose of preventing sprawl from Nailsea, and preserving the rural setting of the settlement and openness of the countryside. Green Belt release must be justified within a strict framework that prioritizes minimizing harm and using other land first. The Council has not demonstrated that all other reasonable options have been exhausted (brownfield, urban infill, higher densities in the existing settlement). No sustainable transport links have been shown which would compensate for the loss of green belt. This site should not be considered as suitable for release of green belt. Traffic - B roads at either end of the Valley, no plans seen to alleviate this to cope with extra burden on these roads. They are already narrow, with well-known pinch points at both ends Location is not easily accessible from train station, too far to walk, and cycling on narrow roads dangerous. Extra buses to the site would exacerbate the problems already on the narrow B roads at either end of the site. People will get into their cars. Flooding – a serious issue, witnessed by all residents living locally. The land slopes down towards the river, which floods regularly. Developing it would almost certainly increase surface-water run-off and make flooding worse further downstream. The Land Yeo flows directly in the SSSI of the Nailsea and Tickenham Moors. Road at west end of the Valley flood. Nature Conservation - The Council's own Nature Emergency Toolkit says development should protect and strengthen wildlife corridors and natural drainage, yet this site would do the opposite. It is disappointing that this important Toolkit is not even mentioned in the Plan. Pipeline – there is a strategic high-pressure aviation fuel pipeline running right across the site. This is not mentioned as a constraint. In addition, the allocation for north Nailsea conflicts with the Wraxall & Failand Neighbourhood Plan (2022–2038), which has already been adopted by the Council and forms part of the legal Development Plan. That plan strongly protects the Green Belt, rural character and road safety.			
62864001	E Morrison			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Introducing 1,817 new homes in Nailsea would overwhelm and massively over-develop the town. The expected population increase in population could not be matched in terms of infrastructure. The surrounding road-networks are already at capacity, a 55% (Nailsea) and 80% (Backwell) increase would grind the surrounding routes to a standstill. The new link road across Backwell Common, under rail crossing is likely to be extremely expensive and the engineering problematic due to the proximity to the River Kenn and railway line. Even so, it leads out on to the A370, which is already running at capacity at busy times. Other routes out of Nailsea and Backwell are narrow country roads not designed for the capacity increase, leading to possible safety issues. Additionally, the current rail network already struggles to support the capacity required at rush hour, and such an increase would leave the service heavily overcrowded. Nailsea & Backwell station already does not lend itself to overcrowding on the platforms without putting passengers at risk. Beyond that, other important infrastructure would not support the new development. The proposal for new primary schools is dependent on the developer and no locations have been identified. Additional demand on health facilities would be overwhelming. In terms of the general environment, such a large population increase and loss of greenbelt and agricultural land, together with dramatic change to the landscape will be detrimental. The loss of green space and natural habitats will be a huge loss to the area. Removal of the green space between Nailsea and Backwell (either side of the railway track) means the two locations become more or less as one - but with double the population. This may also have an affect on the wildlife found at Backwell lake, and possible water quality there (especially being a floodplain).			
58582945	Nailsea Action Group		Nailsea Action Group	No	• Positively prepared • Justified • Effective	Unsure	Unsure	No green belt sites, including this one, should be carried forward into the emerging plan. The proximity of this area to SSIs, ancient hedgerows and an abundance of wildlife will gravely endanger the local environment and its ecology. Developers, as in this case, constantly – and planning officers sometimes - misunderstand or ignore the need for a substantial buffer zone beyond the technical boundary of the land on which they apply for permission to build, and the impact on the quality of the water flowing through the site on the environment downstream of the site.	It is not positively prepared, Justified or effective to convert this Green Belt area to 'Grey" belt. The rationale is adequately covered in the comment above		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Nailsea Action Group objects to this application as outlined below. It will be said that new housing has always taken over open green space, but those were times when the interdependency of the environment with the well-being, if not the survival, of the human race, was very little understood. What may have been the accepted case in former times – even relatively recently – cannot be said to be so now, and should not, for the good of all people and creatures, be applied to every, or possibly any, case made for building. The houses that the country's population is deemed to need should only be built where there is the least possible detrimental impact on the immediate environment. The north Nailsea site carries far from such a description. In the last fifty years 73% of the world's natural habitat has been lost to urban and agricultural development. The north Nailsea site is tiny by comparison, and may be considered and argued to be insignificant globally, but it is the relentless chipping away at the natural habitat that eventually aggregates to a quantity that means that life as we, or our children and grandchildren, know it will become unsustainable. Even if the green belt in which the site currently sits is re-classified as grey belt under current government proposals, almost no amount of justification and advertised affordable mitigation and remediation will change the following:- 1. The impact of the site's boundary, however much softened by parkland and attenuation ponds, on the surrounding countryside and the habitat it provides for many creatures, some relatively rare including otters and owls, and the creatures they feed on. This development needs to be seen in the round, the consequential destruction of the area in the context of being yet another albeit tiny contributor to the destruction of the planet and its human inhabitants. Ultimately the overall food chain ends in us. When the chain is broken or destroyed, so will we be in the end. And it will be the end. 2. The impact of the site within its boundaries on the ecology of the area particularly on its invasion by a significant road cutting the site in two, including an ancient and life-sustaining hedgerow, and destroying the habitats and foraging routes of many small creatures. Evidence from other recently developed areas of Nailsea suggest that the alternative pathways and locations for these provided by the developers are not adopted, and the creatures either desert or die. More explicitly, the loss of good quality farmland directly affects the human food supply. 3. The impact on the quality of the water in the river (Land Yeo), especially as it subsequently passes through the nearby SSSI. 4. The impact of the increased traffic particularly on the B3130 past the notorious pinch point at Stone Edge Batch (via which traffic heads for both junctions 19 and 20 of the M5 motorway), and the already very busy road through Tickenham. On every road into Nailsea from outside it there are significant pinch points making the town a very unsuitable location for a significant increase in population, which is what is happening cumulatively, without any appropriate, foreseeable or planned meaningful mitigation or remediation. It is said that infrastructure development will follow house building, but, contrary to what happens in many other European countries where it precedes house building, this rarely happens here and certainly not in North Somerset or Nailsea, and is not planned to precede or follow at any significant level. 5. Despite attenuation ponds and SuDS (Sustainable Drainage Systems) which will be clearly insufficient as currently planned, the impact of potential flooding in the area to the new houses and, more likely, to the older ones immediately to the south of the site, with the resulting damage, distress and cost this generates not least increased by the local sewerage system overflowing into homes, and the common overall consequential inability of the homeowners to acquire affordable insurance, or any insurance at all. 6. Green belt or grey belt, the impact of effectively joining two separate communities – Wraxall and Nailsea – together, with the threat echoed to the south of Nailsea by the Gleesons development between it and Backwell. 7. The impact on local historic houses such as Birdcombe Court (The Tower House).			
62772737	Marianne Claire Nolan			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I totally oppose the NSC Reg 19 Local Plan for a number of reasons: The proposed figure of 1817 new homes in Nailsea would lead to a total overdevelopment of the town The land to the North of Nailsea is planned to be removed from the Green Belt. This will lead to a reduction in green open space which has been proven to be so important for health and wellbeing. Additional development will place huge pressure on the town's existing health and leisure provision. Development would destroy valuable wildlife habitats, for example Moorend Spout nature reserve and foraging locations for the rare Greater and Lesser Horseshoe bats, which are a protected species. There are no clear, workable plans to mitigate against notable increases in vehicle movements on the network of rural lanes around Nailsea.			
31078145	Jason Pitchers			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The allocation of land north of Nailsea conflicts with the Wraxall & Failand Neighbourhood Plan (2022-2038) which has already been adopted by the Council and forms part of the legal Development Plan. The roads at both ends of the proposed allocation are already pinch points that often get log jammed with traffic. Further development will result in frequent traffic gridlock. The proposed site lies in the Green Belt and the Council has not demonstrated that all other reasonable options have been exhausted. In particular, the local need is for more social housing, genuinely affordable starter homes and smaller homes for older people to downsize. This means that other proposed developments in the area should only be for higher density, lower cost homes obviating the need to take away more greenbelt. Development North of Nailsea will result in increased surface water run-off into an area that is already prone to flooding. The proposed site will negatively impact wildlife corridors and increase noise and light pollution.	Remove the land north of Nailsea as a proposed residential development area and leave it as greenbelt.		
30624833	J Palmer			No	• Positively prepared	Unsure	Unsure	WRAXALL LAND, NORTH OF NAILSEA The North Somerset Local Plan 2041: Pre-submission Plan has not been positively prepared because it does not fully consider the implications of flooding due to climate change. ENVIRONMENT AND FLOODING The site is not a huge expanse of green land. The fields are known to be subject to flooding; see photos below. There are also natural springs that affect the foundations of houses at the edge of Southfield estate. 21426689	J Panes			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Green Belt Status – North Nailsea. The Green Belt North of Nailsea has been designated as green belt land and for good reason, it thoroughly satisfies at least 4 of the 5 purposes as set out in the National Planning Policy Framework "[the] Fundamental aim of Green Belt Policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence". This land meets the criteria for the definition and inclusion of green belt status. This was true for this land when green belt areas were first introduced and were considered an important asset and the purpose & criteria that this land offers, are still valid today. The stated 5 purposes of Green Belt; 1) To check the unrestricted sprawl of large built up areas by keeping land permanently open. [To act as a buffer between towns, towns and countryside.] If this development is allowed to proceed, it will be built on land in the parish of Wraxall but visually it will appear as though Nailsea has just spilled out (or sprawled) into the only remaining narrow strip of countryside that is still in place before the wooded hill rises up. There will be nothing separating the town of Nailsea from Wraxall, there will be no buffer other than in places, a simple 4 foot hedge, in other places the plans show the gardens of the 'new' proposed Wraxall residents adjoining the existing gardens of the Nailsea houses. The development will also facilitate the joining of Tickenham/Nailsea & Wraxall. In this regard, the green belt status is still valid and required to stop the urban sprawl and act as a buffer between towns, towns and countryside. I believe attempting to change the parish boundary lines to accommodate the developers wishes and the local Councils coffers, is morally reprehensible. 2) Prevent neighbouring towns from merging into one another. Please see my comments under 1) 3) Assist in safeguarding the countryside from encroachment. This planning proposal could not demonstrate or have a more flagrant disregard for this aspect of green belt purpose. Building and encroaching on the countryside that is designated green belt - is not safeguarding. Allowing the green belt area to stay as it is - will be self fulfilling point 3. 4) To preserve the setting & special character of historic towns. With Nailsea's unique history of Glass making and the colleries that supported this trade and generally the coal industry at that time, I would consider that Nailsea certainly qualified as a historic town. I interpret the comments made on this planning portal from the National Trust, to be that the view within the natural setting that the Roman Fort at Cadbury Camp has always had, would be to the detriment if the surrounding green fields were to be lost. 5) To assist in urban regeneration by encouraging the recycling of derelict and other urban land. There has recently been fairly large scale development to the west of Nailsea and development in other pockets of infill in Nailsea. There is scope and opportunity to concentrate further development in these green field areas, which are not so openly viewed or utilised as is this area of land by the inhabitants of Nailsea. Proportionately North Somerset has such a small percentage of Green Belt when compared to the percentage of green field possibilities. Why would we as a community be willing to sacrifice our already established Green Belt? Simply swapping the already designated Green Belt area from the North of Nailsea to the South, is not acceptable. The two very different areas and the attributes that each possess - are not comparable. Having in depth and first hand knowledge of both North Nailsea Green Belt area and it's associated wildlife and South Nailsea proposed Green Belt area, I can honestly say that the variety and abundance of birds, mammals and insects are far greater in the North Nailsea established Green Belt, possibly attributed to the adjacent woods and all year round flooded ground - than that of the proposed South Green Belt area. Even with the Government's rather vague definition of the newly invented "Grey Land" there is still no justification or exceptional circumstances for removing the green belt status or development on this land. A Labour press release states that Grey land is "a new class of land to ensure grey and poor quality parts of the Green Belt are prioritised" – Labour refer to prioritising "poor quality and ugly areas" that have not previously been developed. There is no argument for considering this beautiful valley as ugly or poor quality given the high regard that local people have for it, or its use for enjoyment and interaction with wildlife. Open Countryside & Wildlife – North Nailsea. Large stretches of unaltered natural land are crucial in order for biodiversity to be maintained. This section of the valley forms part of the of the continuous Nailsea & Tickenham moors leading into the Wraxall valley and plays an important part in not only supporting wildlife but absorbing and holding the run off rainwater, spring water and assisting in the land drainage in this area. Other comments have highlighted the abundance of wildlife that this diverse landscape supports such as wild fowl, wading birds, Egrets, 2 types of Wood Peckers, Swallows, House Martins, Hedge Hogs, Damsel & Dragon Fly's and various types of Bats that all forage & feed on the insects, Water Voles, Otters, Field Mice & Slow Worms to name but a few. It is well documented that all of the UK's insect and wild life population is under threat & in decline. Removing their habitat is not something that in good conscience should be permitted. Extreme Road congestion & Blockage – North Nailsea. I note that the proposed development is to be serviced with a bye pass and roundabouts at the points where the proposed new road joins the Wraxall end of the B3130 & Tickenham end of the B3130. Simply creating two new roundabouts where the road is already wider will not ease the problems already in existence where			Wraxall Road 3.jpg Wraxall Road 7.jpg Wraxall Road blockage 1.jpg Wraxall Road 5.jpg Wraxall Road Buses 4.jpg Wraxall Road 8.jpg Wraxall Road blockage 2.jpg Wraxall Road 6.jpg

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								the roads are extremely narrow. As other people have attested it is often impossible to pass through the pinch points both on the brow of Tickenham Hill road and indeed in many places throughout the village of Wraxall. In both cases the road simply isn't wide enough for opposing traffic flow, or in places wide enough for one large vehicle without it requiring the use of the entire road width. Two cars can pass without incidence but a car and for example, small home food delivery van such as Tesco, then successful navigation has to be with extreme caution. A bus and small delivery van, most likely passing will not be accomplished without tricky reversing for all vehicles on the road, sometimes back down the hill and around the blind corner and as a result delays are inevitable. If this is scaled up to two passing buses or worse still, two HGV's or a bus & a HGV then I personally have waited for up to 20 minutes or longer, whilst the vehicle manoeuvres in or out of the hedge or occasionally someone's stone wall. I have seen drivers leave their large vehicles to fold in/out the wing mirrors and try to unhitch parts of their vehicles from another's. A resident in Wraxall has had the overhanging gable end/fascia of his house smashed off on more than one occasion. I have much documented, photographic evidence of the jams and tailbacks if anyone would care to view. I have witnessed ambulances caught up in the long tailbacks but thankfully never one with its blues and two's on. However, I am fearful that this is just a question of time as the main Ambulance Station & Fire Station for several of the surrounding towns, is situated adjacent to the proposed new roundabout on the B3130 at the Tickenham end of the Development. I would imagine that should the new development be allowed in this area, that there would be somewhere in the region of 700+ extra cars on these already grid locked prone roads. The town does not need the headache of more HGV's accessing the proposed new light industrial area. Flooding – North Nailsea. Much has already been said about the flooding, swampy, bog like conditions of the fields. This is not something new, I have been a resident in Nailsea for 60 years & it's always been this way. What is probably less well known, is how all the natural springs and spring water that flow from higher up in Nailsea & that naturally filter down towards the Land Yeo River, & how they contribute to this problem. For many months of the year which often include the summer months if a spell of wet weather has occurred, a lot of the ground is not capable of supporting human or bovine weight without sinking considerably. The cattle spent a long time this winter/spring literally up to their arm pits in squelchy mud – even on the highest parts of the field on the Nailsea/Wraxall parish boundary. This may be in part because of the well documented local springs & clay nature of the ground. A Mr T Smith wrote a very interesting article on 'The Hydrology of Nailsea' he talks about the pockets of impervious clay and the various natural water supply to Nailsea, of particular interest are the springs that many years ago supplied & facilitated the "Heath Mineral Water" business, which I believe was situated around the Heathfield Road/ Southfield Road area and still to this day drain down towards the proposed new development. Of course there are many local springs in this area that possibly all contribute to the saturation of the land. A few years ago we had problems with flooding in our garages and driveways – it took a couple of years for the North Somerset Environmental Department to try to discover the source of the water (which they couldn't) and to re-dig underground drains that lead out into the field. Our gardens are still squelchy and do not drain at all well. How will the associated burden of extra run off water from any new development be dealt with sufficiently? How will this affect the residents of Riverway, Yeomeade, Woodland Road & Greenfield Crescent when the land that lies below and beyond is developed therefore creating more run off water onto already saturated land that does not drain at all well. There will be large areas covered with impervious concrete and Tarmac that will not absorb water, I cannot imagine that there is a drainage system that will cope with the issue we already have let alone predicted higher rainfall that accompanies climate change. Proposed Community Centre – North Nailsea. We already have numerous similar facilities in Nailsea. Scotch Horn Community/Leisure Centre, Nailsea Town Council Tythe Barn, Grove Sports Centre and many large & small Church Halls readily available for hire. I appreciate that this looks good on paper but is there any actual demand for another community centre that is further removed from the centre of Nailsea than the existing facilities already underused? Residents Wellbeing & Pure Enjoyment – North Nailsea. The Department of Health & Social Care identify that sedentary behaviour is a major contributor to many associated health conditions including stokes, coronary heart disease and type 2 diabetes, amongst many other health conditions, the NHS advise regular exercise such as walking. It also advises that regular [outside] exercise such as walking will not only extend one's life span but will help with depression and mental health wellbeing. My family and I regularly enjoy evening and weekend walks along the footpaths, fields and riverbanks, nothing is better for the soul after a day at work often spent sitting and focusing on a screen. We truly appreciate the feeling of green, natural, open space and scenery which will disappear or be blocked by bricks, mortar and tarmac if this development is allowed. It is not purely dog walkers that use this space, many local people walk daily in this open, beautiful environment whilst taking in the varied wildlife that is currently abundant. This has an extremely positive effect on people's wellbeing both physically and mentally and this valuable aspect of this Green Belt land should not be underestimated or played down.			
62687457	V Parfitt			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	This plan is unsound and ill thought out for the following reasons: The effects of the number of new houses on Nailsea and Backwell would cause unsustainable over development. Backwell is a large village. Nailsea is a small commuter town, with limited within town work opportunities and many working residents commuting to nearby larger centres such as Bristol and Weston super Mare to work. Backwell and Nailsea should therefore not be considered a 'Strategic Location' as they do not meet North Somersets Council's (NSC) Policy SP1 for a variety of reasons, including: • Most of the proposed sites will fall outside the usual catchment for walking distances (town centres, school, bus stops and train station) and will therefore not prioritise walking and cycling and the use of public transport. • The plan does not support the delivery of economic growth and job creation in Nailsea as the location is not easily accessible, (B roads in and out) and there are no plans to improve existing highways network (see below). Nailsea and Backwell are unlikely to be a site for local employment so most new residents will end up commuting elsewhere. • More development in and around Backwell and Nailsea is will have negative environmental impacts regarding water, pollution, flooding risk and safety of residents, congestion on roads and rat running down rural lanes with increased accident risk.	Proposed new housing should be significantly reduced or reconsidered altogether as an expansion of population of the extent suggested is never going to be sustainable and represents an overdevelopment of Nailsea and Backwell without any realistic likelihood of local employment increasing to match the population increase or of local infrastructure being able to increase to accomodate this. A maximum 10% increase in population over Nailsea and Backwell would be a far more realistic target to aim for. • Before any new housing is proposed there should be a clear policy led, not developer led, plan for all the necessary infrastructure improvements, including healthcare, GP surgeries, leisure facilities, schools and transport modifications. These should be		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								• Nailsea Railway station is not an appropriate major transport hub. It is small, with short platforms, and difficult to access for those with mobility issues. Currently the populations of Nailsea and Backwell are, according to the Census in 2021: Nailsea 15,917 Backwell 4,589 The Local Plan housing allocation is for 3,728 new dwellings across these sites. Based on 2.3 persons per household (the average household in North Somerset according to the 2021 Census), that means an additional 8,574 persons across the two towns, an overall increase of 42%. For each town, the growth would be: Nailsea - an extra 4,179 persons or an additional 26% Backwell - an extra 3,870 persons or an additional 84% This is a huge increase in population which is completely unsustainable with the current local infrastructure and will ruin the lives of current and future residents of Nailsea and Backwell. This degree of expansion would have a detrimental impact on the character and nature of Backwell and Nailsea and their communities. • Nailsea has already had significant development with over 350 homes already built and several hundred more granted planning permission, this all in addition to the above proposed expansion. No new infrastructure has attended any of this. Effects on local infrastructure This further population increase will overload local infrastructure including healthcare, schools, leisure facilities and town centre parking. The Local Plan suggests developer-led delivery of infrastructure to support this, rather than a policy driven approach. This will inevitably mean that the infrastructure to support this increased population, in terms of schools, healthcare, leisure facilities and travel and transport is not guaranteed, may not happen and at best would be delayed long after it is needed. This means that access to these facilities, particularly healthcare and schools, will be badly affected, for current and new residents. Effects on travel and highways There is no A road directly into and out of Nailsea, only B roads which are narrow and already heavily congested with traffic. Access to Nailsea from the A 370, which passes between Nailsea and Backwell, is only via the busy and congested Backwell crossroads and Station Road. Station Road is an accident black spot with both pedestrians and cyclists coming into conflict with the vehicles when passing under the railway line bridge on the single track, traffic lights controlled junction. Backwell School creates a significant amount of traffic. • The policy states that to accommodate the additional housing transport infrastructure development is needed. NSC proposes that an East Backwell Link Road is built. The road would go under the London to Penzance mainline rail track from Station Road to the A370. • However this link road would be extremely hard to build from an engineering perspective and very expensive because it is close to the river Kenn. The road would require a water pumping solution as it will go through an area susceptible to flooding. It will need cutting through the railway embankment. Developers will be expected to contribute to the funding for the road, however developer contributions will not cover the whole cost of the road. The developer Rubix has stated that it will only connect the road through their site once the housing has been built, this statement does not align with NSC statement on linking proposed development to infrastructure provision in a phased plan. • The East Backwell Link Road will only assist the Nailsea developments to the south of Nailsea. Developments to the north of Nailsea will use existing B roads out towards Wraxall and Clevedon and Portbury Lane. Developments east of Backwell wishing to get to the M5 will travel through Nailsea. It will not reduce traffic to and from Backwell and Bristol and junctions 19 and 20 of the M5. • NSC has failed to address the junctions to the north of Nailsea along the B3138 and B3130 which are already at capacity and are known accident black spots. There is no mitigation suggested meaning an even greater volume of traffic and more accidents. • NSC has placed a lot of emphasis on Active Travel (walking, cycling, horse riding) however many development sites are too far from the town of village centre to make walking a viable solution. • Rural "Quiet" Lanes. NSC has failed to address how they will protect the rural lanes around Nailsea and Backwell from rat-running. Traffic volumes on the lanes have steadily increased in recent years as developments to the west of Nailsea have been built. This is noticeable on The Causeway to the north and West End Lane and Netherton Wood Lane to the west and Chelvey Lane to the south west. This also happens on Chapel Hill leading into Backwell Bow, with people attempting to bypass queues on the a70 at Backwell Crossroads. This rat-running down rural lanes will only get worse with the proposed developments. All these lanes are single track with no pavements. • Backwell and Nailsea Train Station has not been identified within Policy LP3 for improvements. The station is currently not accessible for many and the platforms too short for intercity services. No funding has been identified for this work. Effects on environment and ecology There will be loss of green space and local countryside. Access to nature and countryside for walking etc is very important for the physical and mental health of residents and should not just be built over without consideration of this. On Backwell Common there will be a significant loss of Grade 1 and 2 agricultural land, particularly with the proposed East Backwell New Road and housing developments in this area. Other development areas will cause similar loss. Farmland of this quality is essential for growing food, for food resilience for the local population, reducing reliance on imported food and future proofing the population against climate and political changes that may make imported food more expensive and difficult to obtain in the future. The development off Pound Lane will have a bad impact on Moor End Spout Nature Reserve. Development south of Nailsea is too close to Backwell Lake which is a designated reservoir and an important area for wildlife particularly birds. Much of this area is a flood plain and dwellings here will be liable to flooding. Most areas around Nailsea are low lying and in areas at risk of flooding, which will become an increasing problem with climate change. There will be adverse effects on wildlife and biodiversity, e.g. with wildlife corridors being cut off.	planned prior to any new development.		
31079073	Ruth Pitchers			No	• Positively prepared • Justified	Unsure	Unsure	The valley, the lungs of Nailsea where our people go to ride, run, walk their dogs, meet their friends, and where children play and explore nature. The passage to the woods, and the route to school for children that live on the hill because the roads have no other safe routes as the roads are without footpaths. Yes you have to ‘put on your wellies’ even in the summer because it is wet, waterlogged and often flooded but everyone in Nailsea loves the flood plain and it’s natural environment. Nailsea doesn’t have a seafront, a diverse shopping	Remove development of land North of Nailsea		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					• Effective • Consistent with national policy			centre or even a swimming pool but we are surrounded by the fields and this is 'where we go' in our leisure time. Loss of Bio Diversity as a human species makes us vunerable to further pandemics and disease as wildlife is forced from it's home to share human space, where we put concrete to build homes that our children can't afford and wouldn't buy anyway for fear of flooding and not getting insurance. Nature is not separate from us we are part of it and our wellbeing is linked with the plants, wildlife and landscape and we need to prepare for a future of climate change by protecting our environments and particularly the diversity of all the types of flood plain that are interlinked. From Weston, to Worle and all around acres of the flood plain that make up North Somerset have been built on and covered in tarmac and this is evident by the increased amount of flooding in the valley after heavy rain. One lady recently, out walking her dog got so stuck in the sinking mud the fire brigade had to rescue her on a surf board! If you build on 'this sponge' where will the water go? Access to the site from any direction has 'pinch points' that cannot be widened and impassable by 2 vehicles coming from different directions so intricate planning of the highways would be needed before any construction vehicles could start to build and they can't be widened!! The kids in Nailsea have already had their rugby pitches built on and there are waiting lists to join the football clubs and yet developers want to get their hands on the little land left where our communities bond and play. May 'common sense' prevail. Building in the valley is quite frankly not only 'bonkers' for so many reasons but 'so sad'. It's our happy space and it doesn't deserve concrete for the sake of a government policy that makes building over the green belt acceptable because when it's gone there is no place left to go. It was designated green belt 'for a reason'!			
62864289	Louise Power			Unsure		Unsure	Unsure	The proposed development of land alongside Land Yeo will further eat into more local green belt land, reducing further our green space and local area of biodiversity. It will have a major effect on the flood plain area that already struggles to cope with anything other than small rain showers (photo attached). Clevedon road between Wraxall and Nailsea already floods significantly on a fast, partially sighted bend causing significant danger to road users and pedestrians alike and further flooding is inevitable with a development of this size pushing water towards its boundaries (video attached shows how dangerous the current road can be when flooded). It will also result in significant additional traffic to the area: there are already large tailbacks into Nailsea from Wraxall at multiple times of day and this would be significantly worsened by the addition of a roundabout in the middle of that road and nearly 400 new homeowners using it. I have taken photos of the flooding over the last few years which are attached. Other photos show the flooded areas in the valley following rainfall and the steady flow of rainwater coming down from Tickenham Hill which gathers at the bottom of Tower House Lane, causing build up of silt and blocking drains.			IMG_3781.jpeg IMG_1435.jpeg IMG_3897.jpeg IMG_7202.mov IMG_1436.jpeg IMG_4222.jpeg IMG_7757.jpeg
62853505	Sarah Robbins			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Building over 1800 homes in Nailsea will lead to overdevelopment. The proposed new road would not help the poor access in and out of Nailsea. All roads already very busy and would not help with congestion for Nailsea residents or help with access to the M5 for Nailsea or Backwell residents. The proposed road link will be costly and difficult to construct particularly under the rail crossing and near to the river Kenn. The area will need new schools and early years provision (early years provision already at full capacity due to new builds) The three new primary schools have not been allocated build sites. There is no provision in the plan for new health or leisure services putting current provision under extreme pressure. Land to the North of Nailsea is already very developed and should not be removed from the green belt. Loss on land to walk for leisure. The proposed replacement green belt to the south of Nailsea is extremely wet and unsuitable for leisure. The LP15 Local green spaces policy does not protect the Greenfield Crecent playing field used for leisure. Housing development to the south of Nailsea will result in the loss of Grade 2 Agricultural land which is of high quality and an asset to the county and country. Development with loose this asset for future generations. Rare Greater and Lesser Horseshoe bats are found in all proposed development locations in Nailsea. These are protected bats. Moor End Spout Nature reserve Nailsea has many protected species. Development in this area will create the loss of species due to destroyed habitats and with affect the biodiversity of the area. The rural lanes around Nailsea and Backwell are already very busy and have seen an increase due to recent development. Roads have become more dangerous already with increased traffic and pot holes. Already dangerous for walkers, cyclists, and horse riders these will become much worse with more housing development. Country walks are almost impossible now in the rural network of roads. There are no plans to help to make rural lanes safe. The roads to and from Nailsea already have very bad accident blackspots including Wraxall Hill, Portbury Lane and Stone Edge Batch. The Tickenham road is almost always congested with road works, Backwell also extremely busy with station road very dangerous and Wraxall road not suitable for large lorries. There are no plans to improve these roads or the accident blackspots which will all have increased traffic due to developments. Backwell lake was created to take excess water to prevent flooding when Nailsea was developed in the seventies but areas all around there and the train track are prone to flooding at all times of year. The proposed new developments will add to the risk of already flooding areas in this floodplain. The railway station at Nailsea and Backwell is not fit for purpose. Having twin grandsons who love trains we have not been able to make any train journeys from Nailsea and Backwell due to lack of ramps but have had to travel to Bristol or Yatton to board a train. It cannot cater for young families or people with mobility issues despite trying to improve for years. To could not be used as a transport hub in its current state.			
21234433	P Roberts			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	This site is land at present designated green belt. It is an area of fields separating the north end of Nailsea settlement from Tickenham & Wraxall settlement boundaries, the very definition of a green belt. Other reasonable options have not been fully exhausted such as brownfield sites or unban infilling. It does not in any part fulfil the government description of 'Greybelt' The roads at each end of the site are small often narrower than B roads with well known pinch points eg Stone-edge Batch where a meeting of any HGV or large vans or buses create long jams now. The station is 5 miles away & the roads already too crowded & narrow for safe cycling. there is no pavement at either end of the site. It would mean even more cars. As the previous owner of the Fishing Lakes at the northern border of the site I can attest to the regular & persistent flooding of the whole of the lower slopes of the valley often to a depth of 2-3 feet in our shop & bungalow. On applying for permission to rebuild our flood damaged buildings the environment agency required us to build the entire place raised 2m above the ground & provide an upper story as an escape hatch. Building over this area will increase the run off & flood risk greatly in spite of the developers suggestion of a water butt at each house & small extra ponds. The valley is a haven of wildlife between the settlements, everything from swans, egrets, kingfishers to voles, otters, deer & ravens. The loss of the green strip would greatly reduce this nature conservation wildlife corridor	This plan is in direct conflict with the Wraxall & Failand Neighbourhood plan 2022-2038 which has been legally adopted by the Council & is part of the Development Plan protecting Green Belt & road safety.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								There is a strategic high pressure aviation fuel pipeline running along the slope straight through the whole site how will this be managed?			
21177857	Andrew Sellers			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Complete over development of the town. The proposed new road would not lead to any improvement and does not take into account this development. The new road proposed would be ridiculously expensive and a complete waste of time. Where are the new primary schools proposed and who will pay for them? The field during the winter are always flooded. Cows sinking. Beautiful green belt land. The destruction of wildlife in and along the river in an area of outstanding natural beauty. Bats. The health centres in Nailsea are already overwhelmed. The fields are flanked by old oaks all under Tree Preservation. The existing road system cannot cope with the present traffic let alone local traffic being substantially increased. There is no proposed alleviation of the problem.			
21179233	D J Smith			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The destruction of the Yeo Valley corridor for wild life by the construction proposed will do untold damage to the various species that I have personally witnessed using it during the last 12 months. They include deer, owls, badgers, bats, foxes, and birds (including the endangered song thrush). The proposal to replace this area with a larger green area to the east of Nailsea which has no significant water course is certainly not like for like as far as the wild life is concerned. The Nailsea road network, with its pinch points on all principal thoroughfares, despite assurances to contrary will struggle to cope with the additional volume of traffic generated by the proposed number of houses without significant improvements. To partially alleviate the situation a transport hub, in the true sense of the words, should be developed close to the railway station. It would be logical for as much housing as possible to be built as close as possible to this hub to encourage the use of public transport. I note with dismay that there appears to be no concrete proposals for expansion of schools or medical facilities and I can only hope that after the construction and occupation of the proposed additional housing that lack of commitment or funding does not leave the town unable to properly serve the needs of its increased population.			
8052353	Diane Snape			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I strongly object to the identification of Nailsea and Backwell as a proposed strategic growth area. Large scale development at these locations is not deliverable or sustainable for many reasons including: 1. Very limited existing or potential new employment in these locations, resulting in significant out-commuting. 2. Located in what is essentially a narrow valley, with flood plain in the valley bottom and steep hills to either side, placing major constraints on the development of new infrastructure, which even if feasible would at best be very expensive to develop. 3. Heritage assets and wildlife habitats including bat conservation areas. 4. Loss of scarce high quality agricultural land. 5. Impact on heritage assets/listed buildings including numerous farms. 6. Impact on local nature reserves such as Backwell Lake. 7. Surrounded by sensitive landscapes, heritage assets such as Tyntesfield, Cadbury Camp, and Tickenham Moor SSSI 8. Ageing population, with many in retirement or reaching retirement age. Over the coming few years, a large number of family homes will be vacated by this ageing population, providing opportunities for families to move in. Large-scale new development is not needed. The 1211 new dwellings now additionally proposed for Nailsea and 889 for Backwell on top of the substantial numbers already committed, built in the past few years and/or under construction would lead to great strain on infrastructure of all kinds, including transport. This plan is unsustainable and undeliverable. Transport Transport hub and rail I strongly object to the proposed expansion of Nailsea and Backwell railway station on Station Road. It is not suitable for development as a future transport hub. There is insufficient space for increased parking and bus interchange facilities. The current station is very small and basic and there is very limited scope to improve the facilities in its current location. It is inaccessible for people with mobility challenges and is difficult to navigate when travelling with young children. Additionally, any incursion onto the land to the east of Station Road (for additional parking, bus hub, for example) would adversely impact the setting of the listed Moorside Farm A better solution would be to relocate the station from its current, highly constrained location to a new location further west where space is less constricted and it is more feasible to establish a transport hub, with appropriate walking/cycling and bus connections to the Grove Farm and Youngwood Lane developments. This could also provide a new multi-modal railway crossing point west of Nailsea and Backwell, to the west of the Backwell crossroads, which could be delivered as a below ground structure, as described in s 4.3 of the Nailsea and Backwell Local Transport Strategy. It would also facilitate improvement of the rail service by providing longer platforms and lift/disabled access and extended parking. Link road I strongly object to the proposal to construct new Cross Rail Link from the south of Nailsea to the east of Backwell, from Station Road near the station, in an easterly direction, to connect with the A370 East of Backwell. Such are the complications and enormous costs associated with such a road that it has previously been struck out of plans as unfeasible. The route would impact many hundreds if not thousands of residents in South & East Nailsea and North Backwell/Backwell Common/Farleigh, with the pollution, noise, light pollution and visual intrusion being magnified by the terrain, which necessitates the siting of the highway in the bottom of the valley (with incumbent flood risk: Flood Zone 3) and most of the properties sitting above it, with no possibility of adequate mitigation. N.B: Impact on residents and environment are missing from the list of considerations on page 26 of the Nailsea and Backwell Local Transport Strategy, and in section 4.7.4, next steps, mitigations for residents (which are critically required but undeliverable) are completely missing. These adverse effects, whilst already substantial for the under-bridge concept (which was previously under consideration but now seems to have been ruled out due to the flood risk which would be very difficult and expensive if not impossible to overcome) would be magnified many times by the overbridge structure which is			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								now contemplated, involving a bridge 12.5m high, with ramps 250m long on either side, as described on page 28 section 8.4.3.12 of the Nailsea and Backwell Local Transport Strategy. Such a structure would also result in significant visual intrusion into the landscape, including sight lines from Tyntesfield, All Saints Church Wraxall and St Andrews Church Backwell. This is underlined by the Landscape Sensitivity Assessment, Nailsea, s.6.2.58 on page 34 which defines the land as high sensitivity: "…and to the south-east of the town is gently sloping and vegetation on field boundaries is generally limited. Consequently, this land is visually prominent. In addition, there is existing visual coalescence between Backwell Common and Nailsea in some locations. Owing to the above, this land is of high sensitivity." The proposed road would cross sensitive landscape, located in the green belt, consisting of prime agricultural land and would also pass close to Backwell Lake Local Nature Reserve and local green spaces/wildlife habitats ie Backwell Common and Trendlewood Park/Kenn Hedge. It would have a significant impact on the setting of the Listed Heritage Asset of Moorside Farm. Note: the "Low" sensitivity assessment for Moorside Farm in the Heritage Sensitivity Paper, page 13, East Backwell, completely neglects to consider the impact of the proposed road link. Similarly, the "Low" sensitivity assessments for Dibdens Farm, Cider Farm and Old Farm completely neglect the impact of the proposed road on the setting of these Heritage assets and their surroundings ie Backwell Common. The intersection of the route with Station Road would lead to significant incremental congestion and pollution close to residential properties and the Backwell Lake Nature Reserve due to standing traffic waiting for right of way. The increased traffic, and the need to negotiate the junction, would substantially increase danger to pedestrians and cyclists, particularly students at Backwell primary and secondary schools and Nailsea commuters using the station. It would rapidly become a very busy and congested route, leading to major noise and air pollution. It would increase "rat running" through the area, particularly from M5 Junction 19 to Bristol Airport, an issue which is already problematic. This effect ould be exacerbated by the proposed associated measures to discourage traffic from using Station Road, Backwell. It would also funnel the increased northbound (Nailsea-bound) traffic generated by the proposed East Backwell development into the constriction of Bucklands Batch on the South side of Nailsea. This is a narrow section of road which has already been widened to the extent possible by incorporating a strip of the frontage of each property along its East side, and has been the scene of numerous accidents causing injury to cyclists and pedestrians despite the addtion of a one-way cycleway. There are no firm costings or funding guarantees for the proposed new road in the Infrastructure Delivery Plan. If the East Backwell housing site allocation (to which I am submitting my objections concurrently) is dropped, the option to develop a North Nailsea Link Road should be seriously considered. This option would provide an onward link from Clevedon Road to the B3130 Nailsea to Wraxall road, serving the development sites to the West and North West of Nailsea already allocated within the local plan to 2026 and the industrial estates in the West and North of Nailsea, as well as the proposed allocations in North and West Nailsea, and deflect traffic from the Nailsea developments away from the congested centre of Backwell, avoiding the massive infrastructure complexity, cost and lead time to deliver a new link road. It would also maintain the separate identity and character of Nailsea and Backwell by avoiding the construction of a major link road in the green belt between the settlements. It would improve the routings for fire appliances, ambulances and police vehicles, improving safety and taking this inappropriate traffic away from Nailsea town centre. Such traffic will no doubt be forecast to increase significantly as a result of the new developments.			
50775041	S Steel			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Nailsea does not need any more houses. The local roads will NOT cope with the extra traffic. The flood prone areas will be made worse. Wild life habitats will be destroyed. Local facilities will not cope with all the extra people/traffic.			
62864097	Joe Tallis-Chisnall			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	I object to Policy LP7 – Land North of Nailsea (Schedule 1) on the grounds that its inclusion renders the North Somerset Local Plan 2041 unsound, not legally compliant, and inconsistent with national policy. The site comprises open countryside, part of the Strategic Gap between Nailsea and surrounding settlements, and supports important landscape, ecological, and hydrological functions. Its allocation is contrary to the National Planning Policy Framework (NPPF 2021) in several respects: NPPF para 137 & 138: The Plan does not demonstrate exceptional circumstances for Green Belt/Strategic Gap release. NPPF para 92 & 104: The allocation fails to provide safe, sustainable, and accessible transport options, with cumulative impacts on the B3130, Clevedon Road, and local junctions unmitigated. NPPF para 174 & 180: There is insufficient evidence that ecological networks, protected species, and biodiversity will be preserved or enhanced. NPPF para 159 & 167: Flood risk and surface-water management for this elevated site and downstream receptors have not been satisfactorily addressed. The Sustainability Appraisal does not demonstrate that reasonable alternatives were considered, including brownfield-first approaches or growth redistribution to less constrained settlements. The site's allocation is therefore not positively prepared, not justified, not effective, and not consistent with national policy, failing the tests of soundness set out at NPPF para 35.	To achieve soundness and legal compliance, the following modifications are required: Remove or significantly reduce the LP7 allocation until exceptional circumstances for Green Belt/Strategic Gap release are demonstrated, including a clear comparative assessment of alternatives consistent with NPPF paras 137–139. Update the Sustainability Appraisal to show that reasonable alternatives were properly assessed, including brownfield sites, urban intensification, and redistributing growth to locations with superior infrastructure and sustainable transport access. Provide a fully funded, deliverable transport mitigation strategy, including cumulative modelling of the B3130 corridor, Clevedon Road, and key junctions, with clear links to the Infrastructure Delivery Plan (NPPF paras 104–105). Strengthen the ecological and landscape evidence base, including protected species surveys, habitat networks, and Biodiversity Net Gain proposals (NPPF paras 174–180).	No	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 									Provide detailed flood risk and drainage assessments, demonstrating compliance with NPPF paras 159–167, including sustainable drainage solutions and no increase in fluvial or surface-water flood risk downstream. Demonstrate Duty to Cooperate compliance (Planning & Compulsory Purchase Act 2004, s33A) with neighbouring authorities and statutory infrastructure providers regarding transport, utilities, and cross-boundary planning impacts. Without these modifications, Policy LP7 is not justified, not effective, and cannot be considered sound or legally compliant.		

Land off Pound Lane, Nailsea

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
63114593	Bloor Homes (North of Pound Lane Nailsea site)	Turley		No	' Positively prepared ' Justified ' Effective ' Consistent with national policy		No		We have suggested some minor policy changes to the site◇specific policy requirements for land North of Pound Lane in Schedule 1. We set out adjustments to provide some flexibility which, in our view, will support high quality sustainable development on the Site in coming forward, including:. -the schedule be updated to reflect drainage solutions may also be provided within this northern strip – such drainage in itself can offer ecological benefits. -the policy should be clear that drainage attenuation within the northern part of the site is suitable. In addition, it would be helpful to explain within the site policy requirements the rationale for this restriction to 2l/s/ha. - it is recommended that the wording be changed to ‘take account of key views and preserve where possible’. -it would be helpful for the policy to be amended as follows: “A planning application on the site shall be supported by a Heritage Assessment and Masterplan which demonstrate how key views from heritage assets, as set out in the Historic Environment Assessment (HEA), have been taken into account and preserved where possible.” The requirement that tree boundaries be retained and created to maintain rural views from Tickenham Church and Cadbury Camps should be amended to state ‘where possible’ to ensure appropriate flexibility is built in.	Land North of Pound Lane The proposed allocation of residential development on Land North of Pound Lane is supported. From reviewing the Policy Map and Schedule 1 of the emerging plan, it confirms the northern parcel will remain within the Green Belt, to provide ecological mitigation associated with the southern parcel. The proposed location for the repositioned Green Belt boundary is supported in principle. Regarding site requirements listed in Schedule 1: This proposed Green Belt boundary is supported, ecological mitigation can be accommodated on the northern parcels. Given the environmental considerations on he site, it is considered the schedule be updated to reflect drainage solutions may also be provided within this northern strip – such drainage in itself can offer ecological benefits. As the watercourse borders the northern nedge, and the northern strip will be retained in the Green Belt, this is can be accommodated. Overland flows and attenuations volumes required on the Site can be suitable considered and addressed by the emerging development proposals on the Site. Whilst restricted down to 2l/s/ha will increase the required attenuation on Site, this can be accommodated by the proposals although, as per our comments above, the policy should be clear that drainage attenuation within the northern part of the site is suitable. In addition, it would be helpful to explain within the site policy requirements the rationale for this restriction Flexibility should be built into this requirement to ensure the developable area can be maximised when having due consideration of the environmental considerations on site. It is expected that contributions required to schemes identified in the Nailsea and Backwell Transport Strategy.will be appropriately calculated and methodology shared. No objection to the requirement for active travel provision along site frontage on Pound Lane, and active travel priority crossing required on Pound Lane and Clevedon Road. No objection to the requirement for direct access to public right of way A13/11/30 . Whilst the development can take account of access proposals for Land North of Nailsea, it is expected that the main access for the Site will be from Pound Lane itself and the Site could be delivered without any new junction or roundabout on the B3130, but equally would not prejudice a future access in that location from being developed, as part of ‘Land North of Nailsea’. As such, it would be helpful if the policy could be amended to confirm that this is “…as required.” Whilst any future development will have regard to heritage assets surrounding the site, this policy requirement is too prescriptive and rather that ‘preserve key views’, it is recommended that the wording be changed to ‘take account of key views and preserve where possible’. It is also expected that a	BLOA3068 - Nailsea - North Somerset Local Plan Regulation 19 Consultation - Dec 25.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										future application will be supported by its own heritage assessment, and it would be helpful for the policy to be amended as follows: "A planning application on the site shall be supported by a Heritage Assessment and Masterplan which demonstrate how key views from heritage assets, as set out in the Historic Environment Assessment (HEA), have been taken into account and preserved where possible." There is no need for the specific policy requirement that the view from B3130 to Tickenham Church be preserved. No objection to archaeological assessment required. What is considered to be 'traditional scale' and an 'attractive vernacular' is ambiguous. Detailed building matters should be dealt with by other plan polices, if specific local standards are justified. This aspect of the policy is not sufficiently precise and the language of this requirement is ill-defined. The requirement that tree boundaries be retained and created to maintain rural views from Tickenham Church and Cadbury Camps should be amended to state 'where possible' to ensure appropriate flexibility is built in.	
8668193	Tickenham Parish Council		Tickenham Parish Council	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	The proposed development will produce additional traffic onto the B3130 and mB3128 A proportion of this traffic will want to travel to the west to Clevedon and M5 Junction 20, and east to M5 Junction 19 or to Bristol. There is no amelioration planned for these routes. The B3130 and B3128 are already up to capacity. The B3130 is a sub standard road that runs through part of Tickenham. Substandard means: a pinch point where 2 HGVs cannot pass each other, 3 x 90 degree bends, inadequate road width below accepted national standards, lack of footpaths and narrow footpaths below accepted national standards, 145 houses directly access onto a length of the B3130 less than 1.5miles long. Tickenham school children walking to school are forced to walk on narrow footpaths with traffic thundering by. The area of the proposed development is prone to flooding. An attachment to this response shows the flooding that occurred in November 2025 at Jacklands Lake adjacent to the proposed development. The northern boundary of proposed development runs adjacent to the southern boundary of the Parish of Tickenham. The proposed development is on land that is currently classed as Green Belt. One of the purposes of Green Belt is to prevent urban sprawl and the merging of differing conurbations. The merging of Nailsea and Tickenham will happen if this development in the Green Belt is allowed to happen. Pound Lane is currently a physical divide to the northern boundary of Nailsea. This proposed development breaches this physical divide and puts the development adjacent to the vitally important Moorend Spout Nature Reserve run by Nailsea Environment and Wildlife Trust. There is no mention of this vital resource in the site requirements for this site.	Provide suitable transport infrastructure to cater for the proposed 381 house development on land north of Nailsea, and the 3,728 houses proposed for construction in the Nailsea and Backwell, in terms of the construction of a road link between Nailsea and Clevedon using existing and improved roads as shown on the plan attached to this response. Do not build houses in flood zones. Keep development away from Nature Reserves.		NailseaTickenhamLink.pdf JacklandsLakeFlooding.jpg
58205505	Susie Bevan			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	It would be ludicrous to build on this site - as it is literally on a Nature Reserve. Having 100 house built on this land will negatively impact the Moor End Sprout Nature Reserve, which is a site to many protected species. Any housing development in this area would destroy wildlife habits and cause untold harm to the biodiversity here. Also, another important point to add is that two of the species affected will be the Greater and lesser Horseshoe Bats, which are a protected species. It is there illegal to cause any harm to their habit. Pound Lane will not be able to cope with the additional traffic from another 100 houses. It will become unsafe for the children that go to the Primary and Second Schools to cross this road. And this road cannot handle the traffic and parking congestion that it already sees daily. This area also is prone to flooding.			
62813697	Ian Bloom			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	1. The proposed figure of 1817 new homes in Nailsea would lead to a total over development of the town. 2. The proposed new road would not serve Nailsea's traffic or relieve congestion on Station Road, nor would it help traffic travelling from Backwell towards the M5. 3. The new link road under-rail crossing is likely to be extremely expensive and the engineering problematic due to the proximity to the River Kenn. 4. Although three new primary schools are proposed for Nailsea and Backwell, they will be funded through developer contributions and will be phased with no locations identified as yet. 5. Additional development will place immense pressure on the town's existing health and leisure provision. There will be no direct investment to combat this pressure. 6. Land to the north of Nailsea is proposed to be removed from the Green Belt and will be replaced to the south. Positively, the new section of Green Belt to the south is greater in size than the area being removed and will replace the Strategic Gap. 7. Greenfield Crescent Playing Field is not protected under local Green Space Policy LP15. 8. Grade 2 Agricultural Land, which is high yielding and of very good quality, will be lost permanently through housing development to the south of Nailsea. 9. All proposed development sites in Nailsea have been assessed to be foraging locations for the rare Greater and Lesser Horseshoe Bats, which are Protected Species. 10. One hundred homes are proposed adjacent to Moor End Spout Nature Reserve, a site hosting many protected species. Development would destroy valuable wildlife habitats and further harm biodiversity in our area. 11. Transport modelling shows there will be notable increases in vehicle movements on the network of rural lanes around Nailsea. There are no clear, workable plans to mitigate against this. The lanes will become congested and unsafe for pedestrians, cyclists and horse-riders. 12. There are no plans in place to improve the accidents blackspots at Stone Edge Batch, Wraxall Hill or Portbury Lane all of which will see a marked increase in vehicle movements. 13. Development is proposed west and south of Backwell Lake (Reservoir). The new roads and housing will be in the floodplain, which actually does flood regularly. 14. The railway station is not fit for purpose as a transport hub; it remains inaccessible for people with mobility issues and presents serious challenges when travelling with young children.			
39126657	A Burgess			No	• Positively prepared • Justified • Effective	Unsure	Unsure	The plan to build the additional 1193 homes across 4 locations around Nailsea is unsound in my opinion for the following reasons: 1. The proposed 1817 new homes in Nailsea would be a total over development of the town. This will place immense pressure on health and leisure facilities. There are no obvious investment plans to meet the health/leisure/educational needs of this major increase in population. 2. The proposed new link road across Backwell Common and under the railway bridge would be prohibitively expensive and a

30659041	C Cox			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell Common and the whole of the surrounding area is prone to flooding. This housing would further aggravate the problem and make everything even worse. Chapel Hill has already been on the news a few times for being flooded and impassable. Further housing would make this worse., and this isn't even allowing for worse weather conditions that have been predicted for the future. Where there isn't flooding there is high quality agricultural land which would be lost for ever. Only 7% of all of North Somerset's land is high quality agricultural, and you are intending to use it for housing? Government policy actually states that we must protect our best and most versatile land to safeguard food security. These proposals contradict this policy. Backwell is not an employment hub. People living there would have to commute to Bristol or Weston-Super-Mare and the roads are already at capacity, as is the railway. The railway station itself is not fit for purpose as a transport hub. After all these years, it is still inaccessible for people with mobility issues and dangerous for people travelling with young children. The proposed road would not serve its purpose of relieving traffic on Station Road or Nailsea, and would be extremely costly. The Infrastructure Delivery Plan lacks analysis and costings, and there are no funding guarantees for this new road, even if it were to prove to be useful. Backwell does not have the infrastructure to support such a development, and the village has already had an increase of 40% in its housing numbers with no improvement. It makes no sense to build another 1000 houses in that area. The whole proposal is unsustainable and undeliverable.			
62772545	Margot Held			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I strongly object to the proposed development of 100 homes adjacent to Moor End Spout Nature Reserve. This site is home to many protected species and provides an important wildlife corridor. Building next to the reserve would destroy valuable habitats and fragment ecosystems, causing irreversible harm to local biodiversity. The ecological impact of this development has not been fully understood or assessed, and once these habitats are lost, they cannot be replaced. One of the main reasons I chose to live in Nailsea was its proximity to nature. Access to green spaces is vital for wellbeing, and Moor End Spout is a cherished part of our community. Losing this natural environment would diminish the quality of life for residents and undermine efforts to protect wildlife. The proposal also contradicts wider environmental commitments to safeguard biodiversity and promote sustainable development. At a time when nature is under increasing pressure, we should be enhancing and protecting these areas, not building over them. For these reasons, I urge the local planning authority to reject this application and prioritise the long-term health of our local environment and community.			
62863361	Peter Jennings			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I would like to appeal against the implementation of the NSC REG 19 Local Plan 2041 on the grounds detailed below: - The proposed development of 1,817 new homes in Nailsea would lead to a total over development of our town. - New primary schools would be required, and with no locations and firm funding provisions in place, this would not facilitate the proposed population increases to the town. - The new link road, under the rail crossing is likely to be very expensive with problematic engineering given the proximity to the River Kenn. - The plans will lead to the permanent loss of Grade 2 Agricultural land which is of good quality and high yielding, as a result of the housing development to the south of Nailsea. - The town's existing health and leisure provisions are already under considerable pressure and would become unacceptably pressured without firm investment committed to developing these facilities further. - Proposed sites for development in Nailsea are recognised foraging sites for Greater and Lesser Horseshoe bats. - Proposed homes adjacent to the Moor End Spout Nature Reserve, would destroy wild life habitats and biodiversity in our town, since the site hosts many protected species. - The proposed development to the west and south of Backwell Lake (reservoir) mean that new roads and housing will be in the floodplain which does flood regularly. - Plans are not currently in place for accident blackspots at Wraxhall Hill, Stone Edge Batch and Portbury Lane, which will see a marked increase in vehicle movements. - The railway station is already not fit for purpose as a transport hub, since it remains inaccessible for people with mobility issues and presents considerable challenges for adults travelling with small children. - The proposed new road would not serve Nailsea's traffic or relieve congestion on Station Road, nor would it help traffic moving from Backwell to the M5.			
62846433	S Johnson			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	Totally disregards green belt land and biodiversity. Land is already prone to flooding and further development on the flood plain will exacerbate this. Climate change is already bringing increased flooding. There is on the edge of a nature reserve. There are otters and all kinds of wildlife in this location which will be devastated by development.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 62852993	W Morrison			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Unsure	Unsure	Introducing 1,817 new homes in Nailsea would overwhelm and massively over-develop the town. The expected population increase in population could not be matched in terms of infrastructure. The surrounding road-networks are already at capacity, a 55% (Nailsea) and 80% (Backwell) increase would grind the surrounding routes to a standstill. The new link road across Backwell Common, under rail crossing is likely to be extremely expensive and the engineering problematic due to the proximity to the River Kenn and railway line. Even so, it leads out on to the A370, which is already running at capacity at busy times. Other routes out of Nailsea and Backwell are narrow country roads not designed for the capacity increase, leading to possible safety issues. Additionally, the current rail network already struggles to support the capacity required at rush hour, and such an increase would leave the service heavily overcrowded. Nailsea & Backwell station already does not lend itself to overcrowding on the platforms without putting passengers at risk. Beyond that, other important infrastructure would not support the new development. The proposal for new primary schools is dependent on the developer and no locations have been identified. Additional demand on health facilities would be overwhelming. In terms of the general environment, such a large population increase and loss of greenbelt and agricultural land, together with dramatic change to the landscape will be detrimental. The loss of green space and natural habitats will be a huge loss to the area. Removal of the green space between Nailsea and Backwell (either side of the railway track) means the two locations become more or less as one - but with double the population. This may also have an affect on the wildlife found at Backwell lake, and possible water quality there (especially being a floodplain).			
62864001	E Morrison			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Unsure	Unsure	Introducing 1,817 new homes in Nailsea would overwhelm and massively over-develop the town. 58582945	Nailsea Action Group		Nailsea Action Group	No	' Positively prepared	Unsure	Unsure	No green belt sites including this one should be carried forward into the emerging plan This could not be closer to the flood zones if it tried: an extremely unwise location on which to build and in which to purchase a property. Caveat Emptor applies of course, but it would be from an ethicless builder.	Any land around Nailsea and Backwell should not be converted from Green belt to Grey belt. The reasons for this have been covered on many of the subsets of this consultation, but some are listed below: - Most residents will commute to Bristol and other towns. Greatly improve commuting facilities - Grey belt should be commissioned closer to the facilities and employment facilities of bristol - This area is good farming land, and food production farms should not be removed from green belt. Identify other areas which are not prime farming land, or convert brown field sites.		
58582945	Nailsea Action Group		Nailsea Action Group	No	' Effective	Unsure	Unsure	No green belt sites including this one should be carried forward into the emerging plan This could not be closer to the flood zones if it tried: an extremely unwise location on which to build and in which to purchase a property. Caveat Emptor applies of course, but it would be from an ethicless builder.	Remove this site form the plan		
30789441	JP Tickenham			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Unsure	Unsure	I do not think that NSC have properly considered the traffic impacts to Tickenham roads and lanes which are currently seriously congested and unsafe for cyclists and pedestrians. These roads/lanes cannot support the increase in new homes proposed by the Local Plan. Before any housing is commenced the infrastructure of a fully thought-out and implemented road network must be put in place. The road through Tickenham is too narrow, without footpaths in some areas, to be considered a main link from the M5 to Nailsea which is what NSC are proposing. I live on one of the many “pinch points” on Clevedon road and often see buses and HGV lorries screeching to a halt as they try to pass one another. We already have to push out into the road to force other traffic to give way before we can exit our property so what will it be like if we have a 40% increase in traffic. I have already given up cycling as I consider it is too dangerous now with the current level of traffic on both Clevedon Road and the surrounding lanes so I dread to think what it will be like in the future. The road network must be put in place before the houses are built as the increase in HGV lorries during and after construction will lead to congestion and accidents on an unacceptable scale.			
8052353	Diane Snape			No	' Positively prepared ' Justified ' Effective ' Consistent	Unsure	Unsure	I strongly object to the identification of Nailsea and Backwell as a proposed strategic growth area. Large scale development at these locations is not deliverable or sustainable for many reasons including: 1. Very limited existing or potential new employment in these locations, resulting in significant out-commuting. 2. Located in what is essentially a narrow valley, with flood plain in the valley bottom and steep hills to either side, placing major constraints on the development of new infrastructure, which even if feasible would at best be very expensive to develop. 3. Heritage assets and wildlife habitats including bat conservation areas. 4. Loss of scarce high quality agricultural land.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					with national policy			5. Impact on heritage assets/listed buildings including numerous farms. 6. Impact on local nature reserves such as Backwell Lake. 7. Surrounded by sensitive landscapes, heritage assets such as Tyntesfield, Cadbury Camp, and Tickenham Moor SSSI 8. Ageing population, with many in retirement or reaching retirement age. Over the coming few years, a large number of family homes will be vacated by this ageing population, providing opportunities for families to move in. Large-scale new development is not needed. The 1211 new dwellings now additionally proposed for Nailsea and 889 for Backwell on top of the substantial numbers already committed, built in the past few years and/or under construction would lead to great strain on infrastructure of all kinds, including transport. This plan is unsustainable and undeliverable. Transport Transport hub and rail I strongly object to the proposed expansion of Nailsea and Backwell railway station on Station Road. It is not suitable for development as a future transport hub. There is insufficient space for increased parking and bus interchange facilities. The current station is very small and basic and there is very limited scope to improve the facilities in its current location. It is inaccessible for people with mobility challenges and is difficult to navigate when travelling with young children. Additionally, any incursion onto the land to the east of Station Road (for additional parking, bus hub, for example) would adversely impact the setting of the listed Moorside Farm A better solution would be to relocate the station from its current, highly constrained location to a new location further west where space is less constricted and it is more feasible to establish a transport hub, with appropriate walking/cycling and bus connections to the Grove Farm and Youngwood Lane developments. This could also provide a new multi-modal railway crossing point west of Nailsea and Backwell, to the west of the Backwell crossroads, which could be delivered as a below ground structure, as described in s 4.3 of the Nailsea and Backwell Local Transport Strategy. It would also facilitate improvement of the rail service by providing longer platforms and lift/disabled access and extended parking. Link road I strongly object to the proposal to construct new Cross Rail Link from the south of Nailsea to the east of Backwell, from Station Road near the station, in an easterly direction, to connect with the A370 East of Backwell. Such are the complications and enormous costs associated with such a road that it has previously been struck out of plans as unfeasible. The route would impact many hundreds if not thousands of residents in South & East Nailsea and North Backwell/Backwell Common/Farleigh, with the pollution, noise, light pollution and visual intrusion being magnified by the terrain, which necessitates the siting of the highway in the bottom of the valley (with incumbent flood risk: Flood Zone 3) and most of the properties sitting above it, with no possibility of adequate mitigation. N.B: Impact on residents and environment are missing from the list of considerations on page 26 of the Nailsea and Backwell Local Transport Strategy, and in section 4.7.4, next steps, mitigations for residents (which are critically required but undeliverable) are completely missing. These adverse effects, whilst already substantial for the under-bridge concept (which was previously under consideration but now seems to have been ruled out due to the flood risk which would be very difficult and expensive if not impossible to overcome) would be magnified many times by the overbridge structure which is now contemplated, involving a bridge 12.5m high, with ramps 250m long on either side, as described on page 28 section 8.4.3.12 of the Nailsea and Backwell Local Transport Strategy. Such a structure would also result in significant visual intrusion into the landscape, including sight lines from Tyntesfield, All Saints Church Wraxall and St Andrews Church Backwell. This is underlined by the Landscape Sensitivity Assessment, Nailsea, s.6.2.58 on page 34 which defines the land as high sensitivity: “...and to the south-east of the town is gently sloping and vegetation on field boundaries is generally limited. Consequently, this land is visually prominent. In addition, there is existing visual coalescence between Backwell Common and Nailsea in some locations. Owing to the above, this land is of high sensitivity.” The proposed road would cross sensitive landscape, located in the green belt, consisting of prime agricultural land and would also pass close to Backwell Lake Local Nature Reserve and local green spaces/wildlife habitats ie Backwell Common and Trendlewood Park/Kenn Hedge. It would have a significant impact on the setting of the Listed Heritage Asset of Moorside Farm. Note: the “Low” sensitivity assessment for Moorside Farm in the Heritage Sensitivity Paper, page 13, East Backwell, completely neglects to consider the impact of the proposed road link. Similarly, the “Low” sensitivity assessments for Dibdens Farm, Cider Farm and Old Farm completely neglect the impact of the proposed road on the setting of these Heritage assets and their surroundings ie Backwell Common. The intersection of the route with Station Road would lead to significant incremental congestion and pollution close to residential properties and the Backwell Lake Nature Reserve due to standing traffic waiting for right of way. The increased traffic, and the need to negotiate the junction, would substantially increase danger to pedestrians and cyclists, particularly students at Backwell primary and secondary schools and Nailsea commuters using the station. It would rapidly become a very busy and congested route, leading to major noise and air pollution. It would increase “rat running” through the area, particularly from M5 Junction 19 to Bristol Airport, an issue which is already problematic. This effect ould be exacerbated by the proposed associated measures to discourage traffic from using Station Road, Backwell. It would also funnel the increased northbound (Nailsea-bound) traffic generated by the proposed East Backwell development into the constriction of Bucklands Batch on the South side of Nailsea. This is a narrow section of road which has already been widened to the extent possible by incorporating a strip of the frontage of each property along its East side, and has been the scene of numerous accidents causing injury to cyclists and pedestrians despite the addtion of a one-way cycleway. There are no firm costings or funding guarantees for the proposed new road in the Infrastructure Delivery Plan. If the East Backwell housing site allocation (to which I am submitting my objections concurrently) is dropped, the option to develop a North Nailsea Link Road should be seriously considered. This option would provide an onward link from Clevedon Road to the B3130 Nailsea to Wraxall road, serving the development sites to the West and North West of Nailsea already allocated within the local plan to 2026 and the industrial estates in the West and North of Nailsea, as well as the proposed allocations in North and West Nailsea, and deflect traffic from the Nailsea developments away from the congested centre of Backwell, avoiding the massive infrastructure complexity, cost and lead time to deliver a new link road. It would also maintain the separate identity and character of Nailsea and Backwell by avoiding the construction of a major link road in the green belt between the settlements. It would improve the routings for fire appliances, ambulances and police vehicles, improving safety

								and taking this inappropriate traffic away from Nailsea town centre. Such traffic will no doubt be forecast to increase significantly as a result of the new developments.			
12476353	Historic England (R Torkildsen)		Historic England					As the Plan (Reg 19) was prepared prior to the completion of the HEA, its findings and recommendations may, understandable, not be fully reflected in the 'Site requirements' on page 267 of the Local Plan. For example, on page 93 of the HEA refers to the following mitigations: • a generous buffer of orchard planting around Jacklands Farmhouse and along the B3130, to reinstate a sense of the historic agricultural curtilage to the building and to retain a sense of separation between Nailsea and Stone-Edge Batch; • retain greenspace and include planning buffer, particularly at Moorend Spout, where the site • abuts the Moorend Nature reserve, and is visible in distant views from Tickenham Church, and • create new, easily accessible views of Tickenham Church. We strongly recommend these are reflected in the Plan. To ensure any allocation is justified and addresses a legal duty under Section 66 of the Planning (Listed Buildings and Conservation Areas) Act 1990 to "have special regard to the desirability of preserving" the settings of listed buildings, and the need to afford great weight to the conservation of designated heritage assets (NPPF paragraph 212), we feel it is appropriate for you to take account of the HEA "to avoid or minimise any conflict between the heritage asset's conservation and any aspect of the proposal" (NPPF paragraph 208). We note that the HEA may also not have been available to inform the Sustainability Appraisal.	We strongly recommend the mitigations are reflected in the Plan.		20251210 NSCLP Reg 19 response Dec 2025 RT.docx
62471329	Environment Agency		Environment Agency						The Land Yeo (Main River) has flooding issues around Jacklands Bridge near Stone-Edge-Badge. The proposed developments at Land North of Nailsea and Land of Pound Lane needs to consider this issue and not increase flood risk. Additionally, access routes for Environment Agency maintenance could be affected and will need further consideration.		

Poplar Farm, Nailsea

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 63175041	Crest Nicholson Operations Ltd	Savills (Victoria Button)		No	• Effective	Yes	Yes		Summary of Representation • Poplar Farm, Nailsea is a justified, deliverable, and sustainable opportunity for residential development of circa 130 dwellings. • Crest Nicholson supports the allocation in principle but seeks an amendment to policy wording to ensure soundness and deliverability. Crest has also made separate representation to Policy LP3 – Strategic Location: Nailsea and Backwell, which should be read in conjunction. • The Sustainability Appraisal (SA), Spatial Strategy, Site Selection and Capacity Paper collectively endorse Poplar Farm as a justified location. (Paragraphs 8-11). • Poplar Farm is deliverable and developable location for residential development. (Paragraphs 12-18) • Poplar Farm is a sustainable location when the 'policy on' proposals for the site are assessed against the objectives of the Sustainability Appraisal. (Paragraphs 19-23) • Despite 'in principle' support, Crest Nicholson has one area of objection to policy wording that seeks to ensure compliance with CIL Regulation 122 tests (Paragraph 24-27) • A change is proposed to the draft Policy which addresses these objections. (Paragraph 29) Introduction 1. This representation has been submitted by Savills on behalf of Crest Nicholson Operations Ltd (herein referred to as 'Crest Nicholson' or 'Crest'). Crest has a number of land interests in North Somerset, including land at Poplar Farm, Nailsea (also referred to as 'Poplar Farm, Nailsea'), which is included as a residential allocation in the North Somerset Local Plan 2041 Pre-submission Plan, ('emerging local plan') as set out in Schedule 1 of Policy LP5: Housing and employment. 2. Crest Nicholson strongly supports the principle of the proposed allocation. However, it does have some detailed objections to aspects of the draft policy wording, which have the potential to undermine deliverability. This representation is split into three sections. Section 'A' explains why Crest Nicholson supports the allocation of land at Poplar Farm in the emerging Local Plan and why it represents a justified, developable and sustainable location for residential development. In so doing, it also outlines the number and variety of benefits that development of the site would deliver, including, that Poplar Farm: a) is capable of making a valuable contribution to the delivery of the new open market and affordable homes needed in North Somerset during the plan period through a high-quality development; b) is controlled by Crest, which holds all land required to deliver residential development and there are no legal or ownership constraints. It is, therefore, demonstrably deliverable and capable of providing a meaningful addition to the open market and affordable housing stock of the District in the short to medium term; c) is in a sustainable location, providing opportunities for future residents to use non-car modes of travel, including Nailsea and Backwell train station which provides frequent, short duration train services to Bristol Temple Meads and to Weston-Super-Mare; and the X9 bus which runs from a stop less than 10 minutes' walk from the site, providing transport into Bristol City Centre; d) is located where infrastructure investment is planned, including through the Bus Service Improvement Plan (BSIP), thereby maximising the benefit of central government infrastructure investment; e) has no technical or environmental impediments, which cannot be mitigated or otherwise overcome; f) is well placed for future residents to access to a number of employment opportunities; g) represents an opportunity to deliver a multifunctional network of green spaces and corridors with the green infrastructure incorporated into development proposals; h) is capable of supporting the delivery of key transport and movement infrastructure through proportionate contributions to relevant schemes identified in the Nailsea and Backwell Transport Strategy, where such contributions meet the CIL Regulation 122 tests; i) would have direct and indirect economic benefits. 4. Turning to the areas of objection, there are certain aspects of the allocating policy, which are not considered to be justified or consistent with national policy. Section 'B' of this representation explains why that is the case and the subsequent section 'C' shows, in tracked form, the change considered to be necessary to make the policy sound. A.Soundness			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									This section of the representation explains why the draft allocation at Poplar Farm represents a suitable, deliverable and sustainable location to deliver new homes during the plan period. It does so by reference to Paragraph 36 of the Framework and the following four tests of soundness: a) Positively prepared; b) Justified; c) Effective; and d) Consistent with national policy. These tests apply to the development plan as a whole and some elements are not, therefore, relevant to testing the soundness of individual development allocations. In so far as an individual allocation is concerned, Savills interprets these tests of soundness and the policy elsewhere within the Framework as requiring allocations to be: a) Justified when considered against all of the reasonable alternatives; b) Developable both technically and within the timeframe of the plan period; and c) Sustainable in location and form, in accordance with national policy. In the remainder of this section it is explained why the principle of the proposed allocation at Poplar Farm is consistent with all three of these tests. a) Why an allocation at Poplar Farm is 'Justified' A large number of sites have been put forward for development through the North Somerset Strategic Housing Land Availability Assessment (SHLAA) process. These sites vary from the very small areas of land, capable of accommodating a few homes, through to strategic urban extensions and new communities with the capacity to accommodate thousands of houses. It is the role of the local planning authority to analyse and filter the submitted sites to determine the most sustainable combination of sites consistent with the spatial strategy of the Local Plan. A key component of the evidence base informing this analysis is the Sustainability Appraisal (SA). Later in this section of the representation, consideration is given to the assessment of Poplar Farm against the objectives of the SA but in so doing an adapted 'policy on' analysis approach is taken, which reflects the detailed knowledge of the location, and its opportunities and constraints. In parallel with the SA, the local planning authority has been through a structured assessment of the potential sources of housing supply in order to determine which should be allocated. This assessment was contained in the Spatial Strategy, Site Selection and Capacity Paper (October 2025). The Paper sets out a sound sequential and filtering approach, which first considers sites that fall into the top tier before moving onto the next. This process of testing 'reasonable alternatives' was transparent and, whilst comments are not provided on the merits of any other site evaluated, the broad approach appears to be sound. In particular, there is satisfaction that the authority considered the 'reasonable alternatives' available for the emerging local plan, in the context of its consistency with the emerging Spatial Strategy. Based on all of the available evidence, the conclusion of the Paper, that the Poplar Farm location should be proposed for allocation, is supported. Indeed, overall the evidence available, principally within the SA, the Spatial Strategy, Site Selection and the Capacity Paper together endorses the conclusion that the proposed allocation of Poplar Farm represents a 'justified' location for development when considered against all of the reasonable alternatives. Why an allocation at Poplar Farm is 'Developable' The definition of 'developable' in the Framework and the test to be applied to this emerging allocation is whether the development is "in a suitable location for housing development with a reasonable prospect that it will be available and could be viably developed at the point envisaged". The first part of this test, "in a suitable location for housing development", is addressed separately in relation to the suitability and sustainability of the proposed allocation. In this sub-section, the focus is on the latter part of the 'developable' test; whether the site is available and could be viably developed. Poplar Farm represents an opportunity to allocate a sizeable development on land subject to an option agreement between the landowner and Crest Nicholson. The landowner has confirmed their support for development, and there are no legal constraints, offering significant advantages for the timely delivery of the site. Crest intends to exercise the option to purchase the site upon obtainment of planning permission. Second, is the duration of the planning process. Crest Nicholson has undertaken extensive survey work to ensure a sound knowledge of the site opportunities and constraints, which will ensure a robust planning application can be preparation quickly. Ownership by a single entity means there is no need for consortium agreements, which can protract matters. Since Crest controls the entire allocation, the supporting infrastructure can be coordinated and phased accordingly, and its delivery captured within a single Section 106 Agreement between a limited number of parties e.g. the developer, the Council and the landowner. Whilst sites in multiple and interdependent ownership are not, by definition, undevelopable, unless the landownerships can be developed independently, it adds complexity and challenges, which do not exist for sites such as Poplar Farm. Third, in addition to being 'developable', for an allocation of the scale envisaged within the emerging local plan, it is crucial that the development is demonstrably 'deliverable' from very early in the plan period. Due to the characteristics of the location, land ownership / control and the technical and environmental assessment work completed to date, the entire development is capable of being completed early in the plan period. Overall, Poplar Farm performs extremely well when considered against each facet of 'deliverability', relevant to the plan-making process. Not only is the land available, there are no impediments to the delivery, relevant transport infrastructure schemes will be delivered through proportionate contributions, and the development would provide housing in a sustainable location. Accordingly, there can be a great deal of certainty that Poplar Farm would make a positive contribution towards meeting the housing requirement during the plan period. Why an allocation at Poplar Farm is 'Sustainable' The Poplar Farm site is a sustainable location for growth in North Somerset. To demonstrate and evidence this, the site and proposed development has been assessed against the criteria used in the SA. In order to provide a true assessment of the sustainability of the site against the sustainability objectives of the SA, an assessment based upon detailed knowledge of the technical and environmental characteristics of the site has been produced. Crest Nicholson has commissioned a comprehensive suite of specialist assessments, which removes uncertainty and caution in how the site has been evaluated through the SA. This provides a more accurate understanding of the effects that development at Poplar Farm would have on the 15 SA Objectives than the SA assessment,which is based upon only a high-level understanding of the technical and environmental characteristics of the areas/locations it considers. (See table attached) On the basis of the information provided in response to the individual SA objectives, an evidenced 'policy on' assessment of the sustainability of the proposed allocation reveals a very positive position for Land at Poplar Farm. A summary table of the updated scoring has been provided in Figure 2 below: (See table attached) Due to land control of the site and its location, there are robust opportunities to minimise and mitigate harmful impacts associated with development and to maximise positive opportunities such as the on-site provision of green infrastructure and blue infrastructure. The combination of these affects		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									notably enhances the sustainability scoring of the proposal against the SA objectives and provides a far more accurate and realistic interpretation of the proposed allocation's sustainability. Conclusion The Poplar Farm allocation represents justified, deliverable and sustainable location for residential development of circa 130 dwellings. For the reasons explained within this and other representations, Crest Nicholson strongly supports the principle of its allocation for development. B. Objections to the Allocation Policy Wording As explained earlier in this representation, Crest Nicholson supports the principle of the proposed allocation at Poplar Farm. In the preceding sections, explanations have been provided to support the conclusion that the proposed development to be in a suitable, sustainable and sound location. Crest, nevertheless, has objections to specific elements of the allocation policy. An explanation of these objections is set out below, followed by the proposed alternative wording for these aspects of the policy in 'tracked change' format in the concluding section of this representation. Nailsea and Backwell Transport Strategy Contributions The policy requires 'proportionate' contributions to be made to schemes identified in the Nailsea and Backwell Transport Strategy. Whilst Crest agrees that contributions should be proportionate, the policy does not specify what schemes the contributions should relate to nor is this detailed within the Transport Strategy. Whilst it is noted that identifying relevant schemes and exact funding requirements may not be possible at this stage in the plan-making process, without clarifying that contributions must relate to 'relevant' schemes, there remains a risk that a development could be required to fund measures that are not directly connected to its impact. This would directly conflict with the CIL Regulation 122 tests, which sets out that: "A planning obligation may only constitute a reason for granting planning permission for the development if the obligation is (a) necessary to make the development acceptable in planning terms; (b) directly related to the development; and (c) fairly and reasonably related in scale and kind to the development." Crest Nicholson considers that a minor but important change to policy wording to state 'relevant schemes' would sufficiently provide clarity that any contributions sought should be directly related to the development. C.Proposed Policy Wording The preceding section of this representation raises concern with Schedule 1: Large sites for residential development of draft Policy LP5 Housing and employment allocations, as currently worded. Below is the proposed amendment (additional text underlined) that is considered necessary to the small section of Schedule 1, which is referenced by the policy text in LP5, to remedy the situation, overcome the objection and make the policy sound. Whilst the change proposed appears to be a modest adjustment to the policy, it is nevertheless important to ensure the soundness of it. Policy LP5 housing and Employment Allocations Schedule 1 Large Sites for residential development Strategic locations – Nailsea and Backwell Nailsea – Poplar Farm 'Site requirements': • 'Proportionate contributions required to relevant schemes identified in the Nailsea and Backwell Transport Strategy.'		
8668193	Tickenham Parish Council		Tickenham Parish Council	No	• Positively prepared • Justified • Effective	Unsure	No	The proposed development will produce additional traffic onto the B3130 and B3128. A proportion of this traffic will want to travel west to Clevedon and M5 Junction 20, and east to M5 Junction 19 or to Bristol. There is no amelioration planned for these routes. The B3130 and B3128 are already up to capacity. The B3130 is a sub standard road that runs through part of Tickenham. Substandard means: a pinch point where HGVs/buses cannot pass each other, a pinch point where HGVs/buses struggle to pass each other, 3 x 90 degree bends, inadequate road width below accepted national standards, lack of footpaths and narrow footpaths below accepted national standards, 145 houses directly access onto a length of the B3130 less than 1.5miles long. Tickenham school children walking to school are forced to walk on narrow footpaths with traffic thundering by within inches. The Causeway, Washingpound Lane and Church Lane are rural lanes and although proposed to be classified as Rural Quiet Lanes there are no proposals in the transport section of the Infrastructure Delivery Plan to provide any works to improve them or reduce traffic onto them, and North Somerset Council have warned that any improvements are highly susceptible to funding issues. The Local Plan needs to establish that funding will be available. All of the aforementioned roads will be subject to traffic flows above their capacity.	Provide suitable transport infrastructure to cater for the proposed approximately 4,000 house developments in Nailsea and Backwell, in terms of: 1. the construction of a road link between Nailsea and Clevedon using existing and improved roads as shown on the plan attached to this response. 2. infrastructure improvements to The Causeway, Washingpound Lane and Church Lane to make these routes more attractive to those travelling by active modes, and less attractive to general traffic. 58205505	Susie Bevan			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	This site is unsuitable for houses to be built on. The site leads down to the many fields of the drove farmland and is rich in biodiversity and wildlife habits, including the Protected species, the Greater and Lesser Horseshoe Bats. To harm this beautiful site would be illegal. This site is also used regularly for growing crops, and I believe it to be Grade 2 agricultural land, which is graded in the farming industry as 'very good agricultural land. Therefore, as a town, we should be protecting such land as being able to grow and sell crops helps to support the economy of the town and the country. This site also is prone to flooding and building here would put the residents that live in the surrounding areas at greater risk from flooding themselves.			
62584449	Karen Bird			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	These comments apply to all proposed development sites in Nailsea. The proposed figure for development will lead to a total overdevelopment of the town. There is no funding for additional infrastructure, such as the new road, schools and no evidence that these will be provided. Land to the north of Nailsea will be removed from the greenbelt. Development is planned on land which is prone to consistent flooding. There will be notable increases in vehicles on the network of rural lanes around Nailsea, and no clear workable plans to mitigate against this. Roads will be unsafe to use for pedestrians, cyclists and horse riders Existing accident blackspots at Stone Edge Batch, Wraxall Hill or Portbury Lane have no plans to improve them and they will see a marked increase in vehicles.			
62813697	Ian Bloom			No		Unsure	Unsure				
62813697	Ian Bloom			No	• Positively prepared • Justified • Effective • Consistent	Unsure	Unsure	1. The proposed figure of 1817 new homes in Nailsea would lead to a total over development of the town. 2. The proposed new road would not serve Nailsea's traffic or relieve congestion on Station Road, nor would it help traffic travelling from Backwell towards the M5. 3. The new link road under-rail crossing is likely to be extremely expensive and the engineering problematic due to the proximity to the River Kenn. 4. Although three new primary schools are proposed for Nailsea and Backwell, they will be

Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					with national policy			funded through developer contributions and will be phased with no locations identified as yet. 5. Additional development will place immense pressure on the town's existing health and leisure provision. There will be no direct investment to combat this pressure. 6. Land to the north of Nailsea is proposed to be removed from the Green Belt and will be replaced to the south. Positively, the new section of Green Belt to the south is greater in size than the area being removed and will replace the Strategic Gap. 7. Greenfield Crescent Playing Field is not protected under local Green Space Policy LP15. 8. Grade 2 Agricultural Land, which is high yielding and of very good quality, will be lost permanently through housing development to the south of Nailsea. 9. All proposed development sites in Nailsea have been assessed to be foraging locations for the rare Greater and Lesser Horseshoe Bats, which are Protected Species. 10. Transport modelling shows there will be notable increases in vehicle movements on the network of rural lanes around Nailsea. There are no clear, workable plans to mitigate against this. The lanes will become congested and unsafe for pedestrians, cyclists and horse-riders. 11. There are no plans in place to improve the accidents blackspots at Stone Edge Batch, Wraxall Hill or Portbury Lane all of which will see a marked increase in vehicle movements. 12. Development is proposed west and south of Backwell Lake (Reservoir). The new roads and housing will be in the floodplain, which actually does flood regularly. 13. The railway station is not fit for purpose as a transport hub; it remains inaccessible for people with mobility issues and presents serious challenges when travelling with young children.		
39126657	A Burgess			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The plan to build the additional 1193 homes across 4 locations around Nailsea is unsound in my opinion for the following reasons: 1. The proposed 1817 new homes in Nailsea would be a total over development of the town. This will place immense pressure on health and leisure facilities. There are no obvious investment plans to meet the health/leisure/educational needs of this major increase in population. 2. The proposed new link road across Backwell Common and under the railway bridge would be prohibitively expensive and a major engineering feat It would not alleviate traffic congestion on Station Road nor adequately serve Nailsea traffic. The new road will be in a flood plain which regularly floods. There is no indication of how this project would be funded. 3. Land to the north of Nailsea is greenbelt and should be preserved as such. 4. Land to the south of Nailsea is grade 2 agricultural land which is good quality, high yielding land which will be permanently lost due to this development. 5. Protected species of bat will lose their foraging ground if all proposed sites are developed. Valuable wildlife habitats of the Moorend Spout Nature Reserve will be destroyed if the land adjacent to it is developed. 6. Development on the proposed scale would result in a vast increase in vehicular movement causing congestion in the rural lanes making it unsafe for pedestrians, cyclists & horses riders. 7. The railway station would not accommodate the substantial increase in passengers numbers expected with the development of 1817 homes not to mention the 1762 new homes proposed in Backwell. The platforms are short and narrow and there is no access for mobility vehicles or pushchairs south bound.

31069121	Geoffrey Connock			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Local Plan for Nailsea and Backwell: General comments Introduction: I detail below why I believe the draft Local Plan for Nailsea and Backwell as a whole is unsound. Please note any reference below to ”Local Plan” or “Plan” relates to Nailsea and Backwell only. At the end, I summarise how my comments in respect of the Local Plan for Nailsea and Backwell relate specifically to the Poplar Farm development. Housing: Given the current size of Nailsea (and the limited road access, see below), an increase of 1817 houses represents overdevelopment. If such overdevelopment takes place, there will be a significant population growth. However, the Plan does not come to terms with the necessary level of roads, facilities, schools, services etc which need to created either in advance of, or alongside it. Transport and Roads: Active travel and sustainability are “buzz” words used by North Somerset Council (NSC). However, despite these admirable objectives, the fact still remains that until there is properly funded, safe, clean, well maintained, reliable, frequent public transport services with easy		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								access as well as appropriately placed cycle paths, people will still resort to cars, not necessarily fossil fuel driven, but powered by electric, sustainable fuel, hydrogen or whatever is the most commercially available over the next few generations. Therefore, a massive improvement in roads is one of the most important issues when considering any development in Nailsea. Firstly, the proposal in the Plan for a new road is woefully inadequate. Indeed, from cost and engineering perspectives, this may become too difficult to build. In essence the Plan with regard to housing will increase the volume of traffic in and around Nailsea. Furthermore, the Plan's proposed increase in houses in Backwell will inevitably have a significant impact on the traffic coming through Nailsea to the M5. There is also the matter of the doubtful quality roads in and around Nailsea and below are the current shortcomings drivers of all vehicles face: 1) Access to the centre of Nailsea, via Station Road, already busy. 2) Access to Clevedon and Junction 20, M5 via the busy Tickenham Road and Clevedon Road and/or by narrow rural roads with no pavements (The Causeway, West End Lane, Netherton Wood Lane). 3) Access to Junction 19 of the M5 from Nailsea via the narrow Stone Edge Batch (even now not fit for purpose) to the Failand Road and left at the notorious junction with Portbury Lane. Alternatively, instead of Stone Edge Batch using the narrow, twisting Wraxall Hill. 4) For commuters needing to drive to Bristol, as many do, it's a choice between Station Road to Backwell (A370), the already busy and occasionally narrow Wraxall Road or Failand Road. Wherever a driver needs to go, none of these options, notably at peak times, are particularly desirable and this is before vast developments in Nailsea and Backwell are built. Rural roads are the most concerning: as aforementioned, they are narrow with no pavements. They are also poorly maintained, well used by agricultural equipment, car and van drivers taking a quicker route to the M5, houseowners in the country as well as cyclists, horse riders, pedestrians and dog-walkers. Given these are currently well used roads, imagine the impact on those roads with buyers of new houses driving on them as well. Please note, when the M5 was closed on 1st December 2025, the rural lanes to and from Clevedon and Nailsea from 8.00am to 9.00am were clogged with commuters. I can only liken the Plan's proposals for new developments and lack of new highways to pouring a pint of milk into an already full pint bottle, without admitting or realising that a two pint bottle was needed in the first place! Until NSC take the highway situation more seriously and decide on major (ie far greater than currently proposed in the Plan) investment in new roads, any new housing developments in the Nailsea / Backwell area must be abandoned altogether. This is, of course, alongside other considerations detailed below. Turning now to public transport. I have made comments above with reference to the level and standard of service required, in particular for buses, but is also relevant to trains. The Nailsea and Backwell Station needs long overdue investment in wheelchair access and improvement for families with young children, eg lifts, ramps, shelters etc. Extended platforms are required for inter-city services. What is the point of building new houses and encouraging residents to use trains when facilities are so underwhelming? Finally for this section, many developments are situated a good distance away from the town centre, therefore making "active travel" by way of walking and cycling redundant (see Poplar Farm comments below). Community Facilities: To cope with the additional population, leisure facilities need to be increased. Where is the direct investment to cope with this? Scotch Horn and Backwell Leisure Centres are no longer new facilities, so investment in new or redeveloped centres has to be made. Nailsea and Backwell are served by three of the Tyntesfied Medical Group health centres. How will these centres deal with the additional number of patients? Will there be new health centres and how will they be funded? Where are the new schools to be located? Much of Nailsea's space in the Plan is taken up by proposed developments. There are many questions in the above comments that need to be answered before housing development takes place. Furthermore, provision must be made to allow these facilities to be created alongside the development. Ecology, Environment and Agriculture: Greater and Lesser Horseshoe Bats are a Protected Species and are found foraging in all the proposed development sites. In recent years there has been signs of serious decline and it seems that NSC has no desire to stop this. The Plan proposes 100 homes close to the Moor End Spout Nature Reserve which has many protected species. Wildlife habitats will be eliminated and biodiversity would be severely reduced. It is very likely that all new developments in the area will have a detrimental effect on water, pollution and safety of residents. Indeed, the new roads and housing development near Backwell Lake will be in a flood plain. Although there is a demand for houses, surely there must be a demand to retain agricultural land. If Covid and the war in Ukraine taught us anything, the more we can grow and rear animals on our own land, the better it must be for the population locally and nationally. In NSC's knee jerk, developer led reaction to creating a Local Plan for primarily house building, other equally important matters like promoting agriculture have been largely ignored.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								People need outdoor space and want to be a part of nature. Conclusion: Despite its length, this is a poorly researched and prepared Local Plan. It does not take into account the area with all its current infrastructure shortcomings and does not come to terms with regard to how so many developments will impact detrimentally on the future of the people, the environment etc. This Plan must not go ahead. Comments above relating to the Poplar Farm Development: Having this development included in the Plan is unsound for the following reasons: Housing and Transport Drivers from this proposed estate will have the choice of the various options detailed above relating to the M5 junctions, Clevedon, Station Road, A370, etc., but, in particular, they immediately face a narrow country lane (West End Lane) situated right by the estate. Additionally, to travel to Nailsea, it would mean driving out of the estate into North Road, narrow with no pavements in places. Also alternative access to Clevedon / M5 via Engine Lane and the narrow, winding Netherton Wood Lane is within very easy reach of this estate. The nearest bus stop is 0.7 miles away from the furthest end of the site, whilst the railway station is much further than that. “Active travel” for this proposed development is irrelevant: the site is too far away from the town centre. It is difficult to see families, particularly those with young children, but also the elderly, walking or cycling back from Tesco’s or Waitrose to the Poplar Farm site with multiple bags of shopping. Given the lack of quality roads and the lack of nearby public transport services, Poplar Farm is about the last place in Nailsea where houses should be built. Other considerations: As the nearest primary school is full, where will the young children of a new development start their education? Bats are seen often over the fields. Development is likely to have a detrimental effect on the Parish Brook rhyne and surrounding land. It has been a working farm and keeping its agricultural heritage is key part to the betterment of Nailsea. General With regard specifically to this development within the Plan for Nailsea and Backwell, NSC has obviously seen this as an opportunity to increase CO2 emissions, fill up country roads, destroy green fields and endanger the country feel of this side of Nailsea. It must be removed from the Plan.			
62821249	Lesley Connock			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Poplar Farm Development Environment The proposal of this development will have significant impact. Crest Nicholson have said that if they develop this land they cannot guarantee there will be no pollution to the Parish Brook. This rhyne is a SSSI and supports wild life across the entire area and feeds in to the wider waterways across this low lying land. The farmers use the fields to the lower area for grazing and any contamination of the waterways would have profound impact on the farming community. All these fields are a feeding area for bats and are seen nightly feeding across the fields, they include Pippestrelle and possibly the Greater Horseshoe bat. No mention of a bat survey is made in Crest Nicholson’s report. I observed the dormice and wild flower survey being done in these fields and neither of them met recommendations for monitoring. Any reports on this should be ignored as unsafe and unreliable. This land has been farmed continuously for over a century until 2020 and is prime agricultural land. These fields sit on the edge of the flood plain and the lower margins of the fields flood yearly. Trying to build on these fields would have a major impact on the Parish Brook rhyne and the wildlife that it supports. Infrastructure The road that this proposed development leads onto is single track with passing places only and whilst the area around the development could be widened it will not solve the problem as the entire length of the road remains narrow. If this development goes ahead the traffic to Clevedon along a single track will significantly increase causing danger to walkers, cyclists and horse riders. NSC are promoting active travel, however by building this development they will be putting lives at risk. When there are issues on any of the major routes around the area, ie M5, this road is used as a short cut and can cause major problems for farmers and householders. The route to the nearest bus stop is 0.7 mile which is further than recommended. This is also the distance to the nearest small shop. The nearest supermarket is 1.2 miles, too far to walk on the existing pavements which cannot take mobility buggies or a double buggy, meaning families would have to drive increasing CO2 emissions. The nearest schools are all full and parents having to take children to school in Backwell or further and will increase CO2 omissions which NSC is trying to reduce. Should this development go ahead lorries to the site will have to travel along roads with no pavements which will endanger children walking to school and the general public. Accessing the development via Leighwood Drive will mean that a high volume of traffic will be trying to access West End Lane on a blind bend. Once traffic leaves North Street and heads to Tickenham or Bristol they will use the Causeway which already sees high volume of traffic and is crumbling at its edges. Any increase will cause damage to an ancient road and bridge.			
8113089	National Trust		National Trust	No	• Consistent with	Unsure	Unsure	In respect of the proposed allocation of Poplar Farm, Nailsea - we consider the allocation unsound in its current form, taking into account NPPF chapter 16 on conserving and enhancing the historic environment. Specifically in respect of Cadbury Camp Iron Age hill fort and "the desirability of sustaining and enhancing the significance of heritage assets". Cadbury	A site requirement should be added for ‘Tree boundaries to be retained and created to maintain rural views from Cadbury Camp’ or words to that effect (similar to the site requirement for ‘Land off Pound Lane Nailsea’).		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					national policy			Camp, located on the Tickenham Ridge, is open access land and has sweeping views to the south and south west. The Popular Farm site lies due south, and effectively 'juts out' from the urban mass of Nailsea.			
58279457	L Harrisis			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The Local Plan is unsound because it fails the tests of justification and consistency with national policy. The evidence base underpinning the plan is incomplete and, in places, misleading. Sustainability Appraisals have overstated benefits while underplaying constraints such as flood risk, infrastructure capacity, and reliance on unsustainable transport. This means the plan is not the most appropriate strategy when considered against reasonable alternatives (details of which have not been made transparent for specific sites for residential development), nor is it consistent with national policy requirements to direct development away from areas of highest environmental risk (such as SSSIs) and towards locations that can be supported by infrastructure. By relying on flawed evidence and failing to demonstrate that allocations are deliverable (fully costed and in line with housing growth) and resilient, the Local Plan cannot be considered justified or consistent with national policy, and is therefore unsound.	Greater clarity as to exactly which brownfield sites have been explored and disregarded in favour of those greenfield sites with grade 1 agricultural land and within a Flood Zone 3. Fully costed commitments for the delivery of improved transport infrastructure and schools in line with the proposed residential housing plans. Full environmental impact assessments for land with highly sensitive ecology considerations.		
58279457	L Harrisis			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	Unsure	Failure of Legal Compliance North Somerset Council's (NSC) own Sustainability Appraisal shows Poplar Farm scores negatively on flood risk, biodiversity, and climate change. The site lies next to and partially in a Flood Zone 3 and a nationally important SSSI. The Council has not demonstrated which safer, reasonable alternatives (i.e. suitable, available and achievable) in Flood Zone 1 were properly considered. Allocating Poplar Farm therefore fails the legal duty under Section 19(5) of the Planning and Compulsory Purchase Act 2004 and the SEA Regulations 2004, and makes the Local Plan unsound. Furthermore, the Habitats Regulations Assessment is inadequate: Regulation 63 of the Conservation of Habitats and Species Regulations 2017 requires a full Appropriate Assessment (AA) where significant effects cannot be excluded, yet NSC relied only on strategic screening and deferred mitigation to later stages. This breaches the precautionary principle and statutory duties under Section 28G of the Wildlife and Countryside Act 1981 to protect SSSIs, exposing the plan to judicial review. Failure of Soundness The allocation at Poplar Farm fails all four NPPF soundness tests. • It is not positively prepared: NSC Habitat Regulations Assessment produced by AECOM notes that Poplar Farm is functionally linked to North Somerset and Mendip Bats SAC and development has potential for adverse impact on the site. The report suggests that mitigation 'may' be required and suggests deferring this to after the Local Plan has been finalised. The plan therefore does not adequately address all the necessary environmental needs from the outset. The site is also adjacent to an SSSI, Paragraph 179, Chapter 15 of the NPPF states LPA's would 'not normally permit development on land within or outside an SSI which is likely to have an adverse affect on it. The SSSI supports the corridors for the Lesser and Greater Horse Shoe Bat, development on Poplar Farm would have an adverse effect and therefore breached the NPPF guidance. The cumulative impact on bat habitats and corridors of surrounding development will only exacerbate the issues at Poplar Farm. • It is not justified: The Council's Sustainability Appraisal scores Poplar Farm positively for accessibility to services because of its proximity to Nailsea town centre and existing facilities. However, this conclusion is misleading and not based on proportionate evidence. The appraisal ignores critical capacity issues in local schools and healthcare, underestimates the distance to Nailsea & Backwell railway station, and fails to account for the site's reliance on private car travel. By overstating accessibility and omitting these constraints, the Council has not demonstrated that Poplar Farm is the most appropriate strategy when considered against reasonable alternatives. There are also safer, more appropriate alternative locations in Flood Zone 1 (e.g. Weston and Clevedon allocations) which score better than Poplar Farm on key sustainability objectives. NSC's SA proforma misclassifies Poplar Farm as 'a site that is not within an area identified as being at risk of flooding from fluvial or tidal sources or surface water yet it is within a Flood Zone 3. This evidence is flawed as it is not accurate. For the above reasons, the allocation therefore fails the "Justified" test of soundness under the National Planning Policy Framework. • It is not effective: Delivery depends on unfunded and uncertain infrastructure including a strategic rail crossing and new schools, with no binding funding commitments or plans aligned to housing development phases. The site is not well served by public transport and lacks proximity to key services, undermining its ability to create an inclusive and accessible neighbourhood. Poplar Farm's location makes complying with NSC Active travel policy unfeasible and car dependency will increase. Insufficient pavements and unsuitable footpaths make walking or wheelchair use dangerous given the additional traffic from this site and existing additional sites in the surrounding area. Access from outside of Nailsea to the site will increase pressure on rural roads insufficient to cope with additional traffic and the Causeway, already under pressure and close to capacity with daily use. NSC has not provided definitive deliverable actions, only 'possible actions' and therefore fails the legal requirement for proportionate evidence under Section 19 of the Planning and Compulsory Purchase Act 2004 and the NPPF. • It is not consistent with national policy: the site would harm biodiversity, conflict with statutory duties under the Natural Environment and Rural Communities Act 2006, and lacks a credible transport strategy to reduce car dependency. Furthermore, the NPPF requires Local Plans to promote mixed communities and sustainable development (paras 62–65). Without clear evidence of housing diversity, service access, and integration, the allocation is not the most appropriate strategy and fails to deliver sustainable development. Collectively, these deficiencies mean the allocation is unsound and should be removed in favour of more sustainable alternatives.	Correct misleading information in the SA proformas to reflect Poplar Farm's proximity and location within a Flood Zone 3. Correct information within the SA proforma to better reflect the fact that the nearest primary school is close to capacity and does not therefore meet the objective 2.3 'achieve reasonable access to a wide range of community, education and health care facilities' as access will be reduced or denied to prospective residents. Conduct an Environmental Impact assessment to fully understand the potential impacts of the removal of and interruption of habitats on the Lesser and Greater Horseshoe bats and other protected species such as herons, owls and badgers within the site. Produce definitive actions to mitigate the impact where necessary. Detail why a breach of the NPPF policy is being allowed regarding development adjacent to an SSSI with exact details of alternative reasonable sites and the rationale for why they had been discounted. Provide detailed and definitive transport improvements which outline safety measures for pedestrians using North and Silver street from Poplar Farm i.e. account for measures to mitigate against missing pavements and single lane traffic increases along a proposed new bus route. Provide evidence of an Active Travel Plan that has been assessed against an Equality Impact Assessment to demonstrate safety for wheelchair users.		
62772545	Margot Held			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	1. Loss of Access to Nature and Impact on Protected Species This development will significantly reduce access to nature for local residents. One of the main reasons I chose to live in Nailsea was its proximity to open countryside, which is vital for wellbeing. The proposed site consists of open fields that provide habitats for many species and have been identified as foraging grounds for the rare Greater and Lesser Horseshoe Bats, which are protected under UK and European law. In addition, the development will result in the loss of trees, hedgerows, and a general reduction in wildlife corridors. These features are critical for supporting biodiversity and connecting habitats. The impact on wider ecology has not been properly considered, and once these corridors are broken, the consequences for local wildlife will be severe and irreversible.	I generally object for this space to be built on. However, mitigation actions could include: Retain the access to the fields as this is a popular walking, birdwatching, dog walking, jogging, recreation route for local residents. Preserve Existing Habitats: Retain trees, hedgerows, and wildlife corridors wherever possible. Where removal is unavoidable, create compensatory corridors and plant native species. Protected Species Safeguards: Conduct detailed ecological surveys (including bats) and implement mitigation measures such as bat-friendly lighting, roosting boxes, and habitat buffers. Maintain Public Access to Nature: Integrate accessible green spaces and protect existing rights of way for walking and cycling. Buffer Zones: Establish buffer areas between development and sensitive habitats to minimise disturbance.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								2. Ecological and Planning Policy Concerns The proposal appears inconsistent with local planning policies that prioritise environmental protection and sustainable development. It also fails to demonstrate how it will achieve biodiversity net gain, as required by the National Planning Policy Framework (NPPF) and North Somerset Local Plan. At a time when nature is under increasing pressure, developments should enhance biodiversity and climate resilience, not erode it. 3. Potential Impact on Waterways and Flood Risk I am concerned that the development could affect the existing network of waterways and drainage systems in the area. These open fields likely provide natural flood management and habitat for aquatic and riparian species. Replacing permeable land with hard surfaces may increase surface water runoff, raising the potential for localised flooding both on-site and downstream, especially during heavy rainfall. Changes to water flow and drainage patterns could also disrupt wildlife that depends on these ecosystems. Without a robust, evidence-based plan for sustainable drainage and water management, these risks remain unaddressed. There is concern about the significant increase in traffic resulting from 100 new homes, with no clear plans to address this impact. The development will add hundreds of additional vehicles to local roads, increasing congestion and safety risks. Beyond traffic, the increase in population will place additional strain on the town's infrastructure—schools, healthcare services, utilities, and community facilities—yet there appear to be few plans to accommodate this growth. Public transport options also remain unchanged, meaning residents will be heavily reliant on cars, which conflicts with sustainability goals and local planning policies promoting active travel and reduced car dependency. Without a comprehensive strategy for transport improvements, sustainable travel options, and infrastructure upgrades, this development risks creating long-term congestion, reduced safety, and diminished quality of life for existing and new residents.	Biodiversity Net Gain Plan: Provide a clear, measurable strategy for achieving at least 10% biodiversity net gain, as required by the Environment Act and NPPF. This could include habitat creation, native planting, and funding local conservation projects. Policy Compliance: Demonstrate alignment with NPPF paragraphs 174 and 180 and North Somerset Local Plan policies (CS4 on Nature Conservation, CS9 on Sustainable Transport). Climate Resilience Measures: Incorporate green infrastructure, tree planting, and sustainable drainage systems (SuDS) to support climate adaptation and ecological health. Hydrological Assessment: Undertake a full study of water flow and flood risk before approval. Implement SuDS: Use permeable surfaces, swales, and retention ponds to manage runoff and reduce flood risk. Protect Watercourses: Maintain natural waterways and riparian habitats to support wildlife and water quality. Monitoring and Maintenance: Commit to long-term monitoring of drainage systems and ecological impacts. Public Transport Enhancements: Expand bus routes and frequency to reduce car dependency. Active Travel Infrastructure: Include safe cycle lanes and pedestrian paths to encourage sustainable travel. Community Infrastructure Contributions: Through planning obligations (e.g., Section 106), fund improvements to schools, healthcare, and utilities to accommodate population growth.		
62857953	Misha Herwin			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	North Somerset Council's Local Plan is unsound because its evidence base, environmental assessments, and spatial strategy collectively fail to meet the NPPF soundness tests of being positively prepared, justified, effective, and consistent with national policy. Key allocations, are advanced despite clear environmental constraints, unresolved flood risk, inadequate Habitats Regulations Assessment, and misclassified Sustainability Appraisal findings. The Plan repeatedly defers essential mitigation, relies on uncertain or unfunded infrastructure, and overstates the accessibility and deliverability of several sites. Reasonable alternatives in safer, more sustainable locations have not been properly assessed, undermining the requirement for proportionate evidence and a robust strategy. The cumulative effect is a Local Plan that cannot demonstrate that it meets statutory duties, protects designated ecological assets, delivers sustainable transport, or provides a coherent, deliverable pattern of growth.	1 Reassess and reallocate growth away from high risk environmentally constrained site. Reallocate growth to more sustainable locations in Flood Zone 1, including sites with existing infrastructure capacity or clear deliverability evidence. 2 Undertake full appropriate assessment for any site with potential significant effect on SSSI s. 3 Provide a deliverable infrastructure strategy. Publish a clear costed and phased Infrastructure Delivery Plan aligned to housing growth. 4 Update transport evidence base. Strengthen policies to reduce car dependency and guarantee safe walking routes and realistic public transport improvement. 5 Strengthen environmental protection policies. Require measurable biodiversity net gain at the allocation stage not deferred to planning applications. Introduce mandatory biodiversity buffers around SSSIs and SAC linked habitats.		
62857953	Misha Herwin			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Poplar Farm fails the NPPF soundness tests because the allocation is neither positively prepared nor justified. The Council's own evidence identifies significant environmental constraints, including proximity to a Flood Zone 3 area, functional linkage to the North Somerset and Mendip Bats SAC, and adjacency to a nationally important SSSI. Despite this, the Local Plan relies on incomplete Habitat Regulations Assessment work, defers essential mitigation to later stages, and misclassifies the site's flood risk within the Sustainability Appraisal. The appraisal also overstates accessibility by ignoring school and healthcare capacity issues, underestimating distances to key services, and failing to recognise the site's reliance on private car travel. These errors mean the Council has not demonstrated that Poplar Farm is the most appropriate strategy when compared with safer, more sustainable alternatives in Flood Zone 1. The allocation is also ineffective and inconsistent with national policy. Delivery depends on major infrastructure, such as a strategic rail crossing, new schools, and active travel routes, that currently lack funding, certainty, or alignment with housing delivery. The site's location and poor transport connectivity make reducing car dependency unrealistic, conflicting with national policy requirements for sustainable transport and mixed, well-integrated communities. The cumulative impact on protected species, the absence of credible mitigation, and the failure to demonstrate biodiversity protection further undermine compliance with statutory duties. Taken together, these deficiencies show that Poplar Farm cannot be delivered sustainably or in accordance with national policy, rendering the allocation unsound.	1 Modify the spatial strategy and site allocation policy so that Poplar Farm is no longer under consideration unless NSC can first produce robust corrected evidence on flood risk, ecology, transport and infrastructure. 2 Require a full Appropriate Assessment now at planning stage for Poplar Farm in relation to functional linkage to the North Somerset and Mendip Bats SAC and effect on the adjacent SSSI. 3 Introduce realistic transport and accessibility requirements to reflect actual distance and travel times to Nailsea and Backwell Station and key services. Provide detailed assessment and mitigation of impact on rural roads and The Causeway, including cumulative impact with other growth. 4 Update the Infrastructure Plan and allocation policy to identify specific school and health care capacity serving Poplar Farm quantified deficits. Specify new schools/health facilities required as a direct consequence of the development of Poplar Farm. Mandate no development of Poplar Farm without secured funding and timing for the strategic rail crossing and other critical infrastructure.		
62852993	W Morrison			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Introducing 1,817 new homes in Nailsea would overwhelm and massively over-develop the town. The expected population increase in population could not be matched in terms of infrastructure. The surrounding road-networks are already at capacity, a 55% (Nailsea) and 80% (Backwell) increase would grind the surrounding routes to a standstill. The new link road across Backwell Common, under rail crossing is likely to be extremely expensive and the engineering problematic due to the proximity to the River Kenn and railway line. Even so, it leads out on to the A370, which is already running at capacity at busy times. Other routes out of Nailsea and Backwell are narrow country roads not designed for the capacity increase, leading to possible safety issues. Additionally, the current rail network already struggles to support the capacity required at rush hour, and such an increase would leave the service heavily overcrowded. Nailsea & Backwell station already does not lend itself to overcrowding on the platforms without putting passengers at risk. Beyond that, other important infrastructure would not support the new development. The proposal for new primary schools is dependent on the developer and no locations have been identified. Additional demand on health facilities would be overwhelming. In terms of the general environment, such a large population increase and loss of greenbelt and agricultural land, together with dramatic change to the landscape will be detrimental. The loss of green space and natural habitats will be a huge loss to the area. Removal of the green space between Nailsea and Backwell (either side of the railway track) means the two locations become more or less as one - but with double the population. This may also have an affect on the wildlife found at Backwell lake, and possible water quality there (especially being a floodplain).

58582177	John Ricketts			No	• Justified	Unsure	Unsure	I do not feel that this proposal is soundly based.The road network to the site is inadequate particularly along North Street at the junction with Firlease where traffic becomes one way only.I overlook the site and confirm Bat activity to be very high on summer evenings. Then main drain,which also crosses my property,is overloaded as evidenced by back flows into my domestic system.Wessex Water have had to clear up several times.The site is prime agricultural land which would be taken out of productive use.			
9072129	Michael Rose			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure		Theis site has inadequate road connecrions.. The public transport proposals are inadequate and fail to comply wirt Local Pkan aspirations.			
8052353	Diane Snape			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I strongly object to the identification of Nailsea and Backwell as a proposed strategic growth area. Large scale development at these locations is not deliverable or sustainable for many reasons including: 1. Very limited existing or potential new employment in these locations, resulting in significant out-commuting. 2. Located in what is essentially a narrow valley, with flood plain in the valley bottom and steep hills to either side, placing major constraints on the development of new infrastructure, which even if feasible would at best be very expensive to develop. 3. Heritage assets and wildlife habitats including bat conservation areas. 4. Loss of scarce high quality agricultural land. 5. Impact on heritage assets/listed buildings including numerous farms. 6. Impact on local nature reserves such as Backwell Lake. 7. Surrounded by sensitive landscapes, heritage assets such as Tyntesfield, Cadbury Camp, and Tickenham Moor SSSI 8. Ageing population, with many in retirement or reaching retirement age. Over the coming few years, a large number of family homes will be vacated by this ageing population, providing opportunities for families to move in. Large-scale new development is not needed. The 1211 new dwellings now additionally proposed for Nailsea and 889 for Backwell on top of the substantial numbers already committed, built in the past few years and/or under construction would lead to great strain on infrastructure of all kinds, including transport. This plan is unsustainable and undeliverable. Transport Transport hub and rail I strongly object to the proposed expansion of Nailsea and Backwell railway station on Station Road. It is not suitable for development as a future transport hub. There is insufficient space for increased parking and bus interchange facilities. The current station is very small and basic and there is very limited scope to improve the facilities in its current location. It is inaccessible for people with mobility challenges and is difficult to navigate when travelling with young children. Additionally, any incursion onto the land to the east of Station Road (for additional parking, bus hub, for example) would adversely impact the setting of the listed Moorside Farm A better solution would be to relocate the station from its current, highly constrained location to a new location further west where space is less constricted and it is more feasible to establish a transport hub, with appropriate walking/cycling and bus connections to the Grove Farm and Youngwood Lane developments. This could also provide a new multi-modal railway crossing point west of Nailsea and Backwell, to the west of the Backwell crossroads, which could be delivered as a below ground structure, as described in s 4.3 of the Nailsea and			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Backwell Local Transport Strategy. It would also facilitate improvement of the rail service by providing longer platforms and lift/disabled access and extended parking. Link road I strongly object to the proposal to construct new Cross Rail Link from the south of Nailsea to the east of Backwell, from Station Road near the station, in an easterly direction, to connect with the A370 East of Backwell. Such are the complications and enormous costs associated with such a road that it has previously been struck out of plans as unfeasible. The route would impact many hundreds if not thousands of residents in South & East Nailsea and North Backwell/Backwell Common/Farleigh, with the pollution, noise, light pollution and visual intrusion being magnified by the terrain, which necessitates the siting of the highway in the bottom of the valley (with incumbent flood risk: Flood Zone 3) and most of the properties sitting above it, with no possibility of adequate mitigation. N.B: Impact on residents and environment are missing from the list of considerations on page 26 of the Nailsea and Backwell Local Transport Strategy, and in section 4.7.4, next steps, mitigations for residents (which are critically required but undeliverable) are completely missing. These adverse effects, whilst already substantial for the under-bridge concept (which was previously under consideration but now seems to have been ruled out due to the flood risk which would be very difficult and expensive if not impossible to overcome) would be magnified many times by the overbridge structure which is now contemplated, involving a bridge 12.5m high, with ramps 250m long on either side, as described on page 28 section 8.4.3.12 of the Nailsea and Backwell Local Transport Strategy. Such a structure would also result in significant visual intrusion into the landscape, including sight lines from Tyntesfield, All Saints Church Wraxall and St Andrews Church Backwell. This is underlined by the Landscape Sensitivity Assessment, Nailsea, s.6.2.58 on page 34 which defines the land as high sensitivity: “…and to the south-east of the town is gently sloping and vegetation on field boundaries is generally limited. Consequently, this land is visually prominent. In addition, there is existing visual coalescence between Backwell Common and Nailsea in some locations. Owing to the above, this land is of high sensitivity.” The proposed road would cross sensitive landscape, located in the green belt, consisting of prime agricultural land and would also pass close to Backwell Lake Local Nature Reserve and local green spaces/wildlife habitats ie Backwell Common and Trendlewood Park/Kenn Hedge. It would have a significant impact on the setting of the Listed Heritage Asset of Moorside Farm. Note: the “Low” sensitivity assessment for Moorside Farm in the Heritage Sensitivity Paper, page 13, East Backwell, completely neglects to consider the impact of the proposed road link. Similarly, the “Low” sensitivity assessments for Dibdens Farm, Cider Farm and Old Farm completely neglect the impact of the proposed road on the setting of these Heritage assets and their surroundings ie Backwell Common. The intersection of the route with Station Road would lead to significant incremental congestion and pollution close to residential properties and the Backwell Lake Nature Reserve due to standing traffic waiting for right of way. The increased traffic, and the need to negotiate the junction, would substantially increase danger to pedestrians and cyclists, particularly students at Backwell primary and secondary schools and Nailsea commuters using the station. It would rapidly become a very busy and congested route, leading to major noise and air pollution. It would increase “rat running” through the area, particularly from M5 Junction 19 to Bristol Airport, an issue which is already problematic. This effect ould be exacerbated by the proposed associated measures to discourage traffic from using Station Road, Backwell. It would also funnel the increased northbound (Nailsea-bound) traffic generated by the proposed East Backwell development into the constriction of Bucklands Batch on the South side of Nailsea. This is a narrow section of road which has already been widened to the extent possible by incorporating a strip of the frontage of each property along its East side, and has been the scene of numerous accidents causing injury to cyclists and pedestrians despite the addtion of a one-way cycleway. There are no firm costings or funding guarantees for the proposed new road in the Infrastructure Delivery Plan. If the East Backwell housing site allocation (to which I am submitting my objections concurrently) is dropped, the option to develop a North Nailsea Link Road should be seriously considered. This option would provide an onward link from Clevedon Road to the B3130 Nailsea to Wraxall road, serving the development sites to the West and North West of Nailsea already allocated within the local plan to 2026 and the industrial estates in the West and North of Nailsea, as well as the proposed allocations in North and West Nailsea, and deflect traffic from the Nailsea developments away from the congested centre of Backwell, avoiding the massive infrastructure complexity, cost and lead time to deliver a new link road. It would also maintain the separate identity and character of Nailsea and Backwell by avoiding the construction of a major link road in the green belt between the settlements. It would improve the routings for fire appliances, ambulances and police vehicles, improving safety and taking this inappropriate traffic away from Nailsea town centre. Such traffic will no doubt be forecast to increase significantly as a result of the new developments.			

Land south of Nailsea

	(Youngwood Lane, Nailsea)									Youngwood Lane, (partly comprising SHLAA site HE20591 together with additional land) as part of a larger housing allocation at Youngwood Lane, Nailsea. It can be demonstrated that allocation can come forward promptly and in a properly coordinated manner to deliver a substantial number of market and affordable homes, supporting infrastructure and public facilities in a highly sustainable location, contributing to the vitality and viability of this existing settlement. The Council's SA states that the site performs poorly in three key areas that considerably undervalue the site. This in part relates to its Agricultural Land Classification grading, which while accepted as Grade 1 and 2 land pertains mostly to an existing farm complex and yard not utilised for agricultural production. The remaining cropped land is relatively limited in scope and would therefore not result in significant harm to agricultural production. In addition, the landscape sensitivity status of the site significantly overvalues this when considering the live development/permission close by and wider allocation that is not allowed for within the sensitivity assessment. In this context the site is visually contained and would have only a 'minor negative' impact upon landscape by virtue of its greenfield status.	
58601857	S Ashworth			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Objection The proposed scale and locations of development in both Nailsea (1,817 new homes) and Backwell (an additional 1,000 on top of 800 already approved) represent significant overdevelopment, far beyond what local infrastructure, the environment, and transport networks can sustain. 1. Severe Environmental Damage & Loss of Green Belt / High-Quality Agricultural Land * Large areas of Green Belt around both Nailsea and Backwell would be removed, including Grade 1 and Grade 2 high-quality agricultural land, which is essential for food production and protected under government policy. * New Green Belt proposed south of Nailsea does not compensate for the permanent loss of productive farmland and established habitats. * All proposed Nailsea and Backwell development sites are known foraging grounds for rare Greater and Lesser Horseshoe Bats, protected species that depend on the landscape linking the Brockley Maternity Roost and SSSI. * Development near Moor End Spout Nature Reserve and Backwell Lake would destroy habitats for many protected species, further damaging biodiversity in an area already critically nature-depleted. 2. Traffic Congestion, Unsafe Roads & Inadequate Transport Infrastructure * The proposed new road and rail underpass will not relieve congestion on Station Road, Backwell Common, Chapel Hill, or routes to the M5. * Engineering the rail crossing near the River Kenn is likely high-risk, extremely costly, and potentially unfeasible. * Transport modelling shows significant increases in traffic on the rural lanes around Nailsea, with no realistic mitigation for congestion or road safety, especially for pedestrians, cyclists, and horse riders. * Accident blackspots at Stone Edge Batch, Wraxall Hill, and Portbury Lane are left unaddressed, even though traffic will increase. * Backwell railway station is not fit for purpose as a transport hub, remaining inaccessible for many users. 3. Flood Risk & Unsuitable Development Locations * Development west and south of Backwell Lake would place homes directly on floodplain, which floods regularly.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								* These proposals increase flood risk not only to new homes but also to surrounding areas already vulnerable, such as Backwell Common. 4. Insufficient Schools, Healthcare & Community Facilities * Nailsea and Backwell lack the capacity to absorb such large population increases. * Although three new primary schools are suggested, they rely on uncertain developer funding, will be phased, and no sites have been identified. * No investment is planned to expand overstretched healthcare or leisure services in either town. 5. Disproportionate Housing Burden Of North Somerset's 24,495 homes, the allocations are: * Nailsea: 9% * Backwell: 7% (higher than Clevedon at 2%) This is an unbalanced load on two neighbouring communities that lack the infrastructure of larger towns. Conclusion The developments in Nailsea and Backwell would: * Cause unacceptable environmental damage, including the loss of Green Belt, top-grade farmland, and protected wildlife habitats. * Create unmanageable traffic increases and road safety issues, with no feasible or funded transport solutions. * Place homes in active flood zones, exposing residents to unnecessary risk. * Overstretch schools, healthcare, and community facilities, with no guaranteed investment to support growth. The NSC local plan 2041 is unsustainable, environmentally harmful, and undeliverable, posing long-term risks to both communities and the wider district.			
58529345	C Attwood			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Nailsea has over the last decade had significant residential development. This to date has not been supported by infrastructure and service provision. The additional 1193 homes now proposed across 4 sites is again with no firm plans for infrastructure provision, either in funding and identified sites. The residential developments proposed (582 homes) near Backwell Lake are on an identified floodplain, which does regularly flood. The new link road identified from the A370 to join Station Road near Backwell Lake is across a floodplain, uses up high quality productive agricultural land, crosses minor roads that are used in cycling, walking, horse riding and other leisure pursuits. I cannot see in the Draft Plan any indication of costs and how these will be met for the road construction nor any timescale for construction. The proposed route would increase traffic movements on Station Road both ways into Backwell and Nailsea. A proportion of the traffic into Nailsea would drive past the primary schools of St Francis and Golden Valley. This at school opening and home time would cause significant additional congestion and risk of injury to pedestrians and pupils. The route of this proposed new road will not assist traffic movements towards the M5 at junctions, 20, 19 and 21. My previous comments on proposed development sites to the land near Backwell Lake commented on the underestimation of traffic movements from those proposed houses, both in number of vehicles per home and number of journeys per day. The consultants report with that planning proposal did contain, from my reading of that proposal at that time some rather unrealistic assumptions on likely traffic movements to lessen the impact. The proposed residential developments around Nailsea will see increased traffic movements on the rural lanes around Nailsea, bringing increased danger to pedestrians, cyclists, walkers, hose riders and wildlife. When looking at all the development proposed around Nailsea, this town does look to be taking a new homes number well in excess of its current footprint when compared to other areas in North Somerset, whilst there is no coordinated infrastructure plan, both regarding funding and timely provision. The proposed number of new homes will bring a total over development of the town. The present facilities at Nailsea and Backwell station are not at the level you would expect at an important transport hub. There appears a lack of a joined up approach in the plan of how to provide more homes around Nailsea, whilst making the town a sought after place to live for all residents and families, both existing and new, in the 2030s - 2050s.			
62852801	Peter Baker			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The lack of infrastructure cannot support another 582 houses. This has been evident where lanes to the West of Nailsea are clogged up since the construction of houses at Parish Brook, Netherton Grange and the Uplands. All these additional houses will put more pressure on the roads which will continue to deteriorate. The developers / house builders have no interest in the local community. As an example, they have not contributed to upgrading roads in the West of Nailsea, Engine Lane is sinking since all the construction traffic used it and all the additional cars that use to get to the new houses. The roads leading out across to Tickenham and Netherton Wood Lane are literally crumbling. The addition of an additional 582 houses with no additional roads will lead to the quiet country lanes becoming even more dangerous and gridlocked. Furthermore, there appears to be a total disregard for the local community with litter levels evidently higher, presumably from residents new to the area who have no regard for the community and feel it is ok to disregard waste out of their car windows. Nailsea generally is not an employment hub, most residents commute. This will add more cars to already busy roads, leading to further gridlock at main access points to the M5 which is already not fit for purpose. Many people do not use public transport for work as its not viable, hundreds more cars will lead to further traffic issues across the wider area. This will increase traffic along Netherton Wood Lane towards the M5 at Clevedon. This road is totally unsuitable for this significant increase in traffic. This is also an area of natural beauty used by the local community and the proposals would take away this beauty removing an area where people can walk and cycle in peace, which			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								ultimately could contribute to people having to exercise further afield and adding more cars to the roads or sadly and more likely people stopping exercising and leading to an increase in physical and mental health issue and more pressure on the NHS. This proposal is ill thought through with no regard for the local communities in Backwell and Nailsea. Development would destroy valuable wildlife habitats and further harm biodiversity in one of the world's most nature-depleted countries. The beautiful quiet valley where families can walk and cycle in relative safety would be lost and replaced with another soulless housing development.			
8668193	Tickenham Parish Council		Tickenham Parish Council	No	• Positively prepared • Justified • Effective	Unsure	No	The proposed development will produce additional traffic onto the B3130 and B3128. A proportion of this traffic will want to travel west to Clevedon and M5 Junction 20, and east to M5 Junction 19 or to Bristol. There is no amelioration planned for these routes. The B3130 and B3128 are already up to capacity. The B3130 is a sub standard road that runs through part of Tickenham. Substandard means: a pinch point where HGVs/buses cannot pass each other, a pinch point where HGVs/buses struggle to pass each other, 3 x 90 degree bends, inadequate road width below accepted national standards, lack of footpaths and narrow footpaths below accepted national standards, 145 houses directly access onto a length of the B3130 less than 1.5miles long. Tickenham school children walking to school are forced to walk on narrow footpaths with traffic thundering by within inches. The Causeway, Washingpound Lane and Church Lane are rural lanes and although proposed to be classified as Rural Quiet Lanes, there are no proposals in the transport section of the Infrastructure Delivery Plan to provide any works to improve them or reduce traffic onto them, and North Somerset Council have warned that any improvements are highly susceptible to funding issues. The Local Plan needs to establish that funding will be available. All of the aforementioned roads will be subject to traffic flows above their capacity.	Provide suitable transport infrastructure to cater for the proposed 4,000 house developments in Nailsea and Backwell, in terms of: 1. the construction of a road link between Nailsea and Clevedon using existing and improved roads as shown on the plan attached to this response. 2. infrastructure improvements to The Causeway, Washingpound Lane and Church Lane to make these routes more attractive to those travelling by active modes, and less attractive to general traffic.		NailseaTickenhamLink.pdf
62774465	M Barmes			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	1. Introduction: I've been a resident on the B3130 for over 35 years. Volume, speed and mix of traffic, has always been a significant issue. Planning consents have previously been given which impact on the traffic. Proper consideration for residents occupying houses on this road have not been adequately addressed. 2. Lorries, Wagons, Articulated lorries, Large lorries with attached trailers and Buses: The road has for some time and certainly now, been inadequate for these vehicles. Vehicles in this class that attempt to pass, going in opposite directions, present a danger to themselves, other road traffic and are a danger to pedestrians. They mount the pavement to get past at certain pinch points. Pedestrian priority is rarely honoured - exterior mirrors overhang the pedestrian footpath (where there is a path) . The approval of a significant development in Nailsea will require the road to be used during the building process to carry spoil wagons, building materials lorries etc., the road is inadequate to take on this extra burden. On completion, the extra volume from new occupiers in Nailsea, using the B3130 as their route to and from Clevedon and the M5, will increase significantly. It is bad now. We have cracked boundary walls adjacent to the road, and problems with sewer and gas main collapse. Vibration and noise levels are escalating. These issues have been ignored in the past by planners and steps need to be taken to prevent it escalating to levels where residents' health and safety is under further significant threat. 3. Inconsiderate Speeding Traffic: This is a regular problem even at current volumes, which are excessive. More traffic - more issues. We have difficulty gaining access to the road because there are few gaps in traffic at peak times. Turning off the road onto our property is hazardous because of close queuing traffic disinclined to take account of residents' needs. The plan that will give rise to more traffic will lead to the problem getting worse. 4. Using the B3130 as a Motorway Diversion: This is incomprehensible, to add Motorway traffic to the background level of traffic on this road. If traffic volumes are increased due to this development then this issue will become significantly worse. 5. Pedestrian impact: No continuous pavement. Volume speed and weight of traffic prompts cyclists to mount the pavements where they exist. Crossing the road is hazardous. Some drivers find closing up gaps to make it more difficult to cross and soak pedestrians when they can't avoid puddles, due to the width of the road and volume of traffic. 6. Bus services: For example: Bramley Rise bus stop is one foot from the road edge with no pavement or refuge for those waiting, even though land offered to NSC for the construction of a refuge was ignored. There are other stops that present significant risk to bus users. With the acceptance of this proposal, causing increased traffic on this road, the problem will get worse. 7. Conclusion: I cannot comprehend how a plan can be proposed that will knowingly add to the problems detailed above. I appeal to the planning authority to take account of the concerns expressed and develop a plan that will mitigate these issues.			
21212833	Eileen Bax			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The significant development either underway or due to commence for the area means a 40% increase for the village is already agreed. This additional proposal exacerbates how disproportionate this is within North Somerset, certainly for a village – as an example, Clevedon (town) taking 2% of the allocation, vs Backwell's 7%. It equates to overdevelopment in relation to roads and public transport - trains and buses area already overcrowded at key times, and timetabling provides an insufficiently frequent or reliable service; roads are already busy, only worsened by the addition of 24hr rather than peak time bus lanes. Trains in particular are already problematic when travelling with children or with mobility issues where accessibility at the station is a live issue. The lack of employment opportunities here in Backwell and the surrounding areas makes that all the more concerning as residents tend to need to use these links to commute. The proposed road will not support alleviation of congestion and there is a lack of certainty as to the funding and timely delivery of such a route, not least the chaos and cost associated with any road in the environs (over/under) the railway. What's more, there is no planned investment in education, health or leisure services to accommodate such a significant population increase. The continued development on our green spaces and agricultural land are of real long term concern. We are continually seeing worsening impacts from heavy rainfall, with areas around Backwell Common amongst others as already prone to flooding – its visibly worse since the

27752129	Bob Beale		Tickenham Road Action Group	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The Council Pre-Submission Plan is not sound because it fails to address adequately the impact of the proposed level of housing development on the infrastructure in the area around Nailsea, Clevedon and Backwell and, in particular, the roads in and around Tickenham. These include the B3130 through the Village, including the stretch known as “The Batch”, Washingpound Lane, The Causeway and Church Lane. These are narrow roads carrying heavy volumes of traffic from Nailsea to Bristol and the M5 junction at Clevedon as well as traffic from that junction to Bristol. This includes public service vehicles (fire and ambulance stations are based in Nailsea) as well as heavy goods vehicles. The narrowness of the roads, the inadequacy and/or complete lack of pavements and, particularly in the case of The Causeway the poor maintenance of the roads make them inadequate for the amount and type of vehicles they carry. These factors also discourage active travel which seems to be an aim of the various local plans produced over the last few years and represent a risk to health and safety. This was the case even before recent development in and around the Youngwood Lane area of Nailsea. This saw a significant increase of traffic between Nailsea and Tickenham, particularly along The Causeway. Whilst walking over The Causeway on five occasions I counted the amount of traffic between the ‘Monkey Bridge’ near Tickenham Church and Parish Brook Road, a walk of approximately 12 minutes depending on how long was spent standing in the verge to allow traffic past. The results were as follows: Sat. August 16th c 10.40 (Note 1) 41 vehicles (Note 2) Sun August 17th 16.00 64 vehicles Sat August 23rd 10.10 71 Tues Sept 16th 11.10 82 Mon Nov 17th 14.15 99 Note 1. This shows the time I was at the Bridge at the start of the survey. Note 2. This was the volume I counted on one leg of the journey. All others are on both legs. “Pinch points” of delays and risk to safety on the roads mentioned in paragraph 1 innclude: 1. “The Batch” where buses and large HGVs are unable to pass in opposite directions. This is exacerbated by the junction of Tickenham Hill with the B3130. 2. As previously mentioned The Causeway, Church Lane and Washingpound Lane, particularly at the junction of the first two mentioned where there is a blind corner. On an anecdotal note I met a group of walkers at this junction one Sunday morning. A welcome but now seldom seen feature. Noting the volume of traffic one of the group said to me “What is this, the busiest road in Nailsea?”. When I mentioned that North Somerset Council were keen to promote active travel along that stretch of road, he laughed. 3. The Middletown area of Tickenham. School parents and carers have to walk their children from the Village Hall car park to the School in one direction and from the Garden Park to School in the other. Although there is a set of pedestrian traffic lights (between the School and Hall) the pavements are inadequate and carers and children run the risk of being struck by vehicle mirrors or vehicles mounting the pavement because of the narrowness of the road and size of vehicles. This overall position is made worse on the occasions, of which there have been many recently, when there are road or utility works going on, some related to housing development in the Village, and when the M5 is shut. As mentioned previously, the current traffic flow already makes the roads mentioned inadequate. Building 3,728 homes in the Nailsea and Backwell area will mean a 42 pc increase in traffic volumes which will put all the mentioned roads over capacity, resulting in even more serious delays and risk to safety. It also undervalues the importance of a proper transport infrastructure to the economy.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant? 								These figures also do not take in to account the effect of factors such as the expansion of Bristol International Airport and development at Long Ashton and Weston-super-Mare. There is no adequate solution in the proposed Plan to these issues. The proposal should be to construct an enhanced link road from Nailsea West End at the Youngwood Lane development area along Nailsea Wall to the M5 at Clevedon.			
62783617	Cath Bees		University of Bristol	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I am writing to object to the proposals in the North Somerset Local Plan that allocate a further 1,000 houses to Backwell, along with the additional development next to Backwell Lake. Backwell already has approval for around 800 new homes, which represents a very large increase for a village of this size. Adding another 1,000 homes on top of this would push the total growth to more than 80 percent, which is entirely out of proportion. There is no matching investment in health services, school places, transport, or leisure facilities, and the current infrastructure cannot support development on this scale. The proposed site sits on Grade 1 agricultural land. Only a small amount of this high quality land remains across North Somerset, and national policy is clear that it should be protected to support long term food security. Using it for housing would cause irreversible harm and would conflict with that guidance. There are also serious environmental concerns. The land supports important habitats, including protected bat species connected with the Brockley SSSI. The Backwell Common area already floods, and further building will make this worse. The fields around Backwell Lake also sit on a floodplain and already experience significant flooding. The plan relies heavily on a new road across the Common. No detailed plans, studies or funding information have been provided. It is unclear whether it can be delivered at all, let alone in time or at a cost that represents good value. Without this road, the development would place even more pressure on Station Road, Backwell Common and Chapel Hill, all of which already experience congestion. Backwell has been asked to take a higher proportion of new housing than any other village in North Somerset, and a higher percentage increase than several towns. There is no clear evidence that this allocation is justified, nor is there a needs or viability assessment for the additional 1,000 homes. For these reasons, I do not believe the plan is sound. It does not reflect local conditions, it is not proportionate, it does not protect important environmental assets, and it relies on infrastructure that appears uncertain or undeliverable. I ask that the proposals for Backwell East and the development next to Backwell Lake are removed from the plan.			
58205505	Susie Bevan			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Nailsea is a beautiful, small, rural town. It is proud to be a farming town and North Somerset council should be trying to protect much of the land that is being discussed in the Development Plan, especially as 1. some of the big sites proposed are on Green Belt land, and 2.are on Grade 2 Agricultural Land, which is an underused asset to the town. Nailsea simply will not be able to handle an additional 1,817 new homes – as Nailsea is a small, rural town and does not have the infrastructure to handle a few hundred new homes, let alone 1,817 new homes. And there are not enough schools, doctors' surgeries, and leisure facilities for all these new residents. We are already struggling to accommodate the residents that we do have! And although, three new schools have been promised by the developers, a promise doesn't actually mean that these Schools will ever be built. Nailsea is currently struggling with the additional traffic that the most recent new housing developments have brought, and that's just a few hundred extra homes. There are many 'village' parts of Nailsea, with some lanes to drive down. I have noticed whilst on my daily dog walks, that the traffic now flowing down North Street, has more than doubled. And a lot of the traffic is going far too fast for a little lane without a pathway for pedestrians. More traffic, equals more potential for accidents, especially down roads that are no more than a little country lane. I have myself seen the damage and wreckage from three car crashes at the bottom of my road (the junction of North Street, Hanham Way, Hannah More Road and Silver Street) in the past two years. Please North Somerset Council, protect our pedestrians, especially the children! We need to protect the biodiversity that lives and thrives within Nailsea. All the sites listed are home to a protected species, Greater and Lesser Horseshoe Bats. Any developments on these sites, will destroy the Bats habit and foraging opportunities, and the UK law protects All Bat species and their habits. So, any housing developments on these sites should be against the law. Another site of great nature beauty and biodiversity is the Moor End Sprout Nature Reserve. To build ANY houses near this site, would most definitely disturb mush of the wildlife and their habits. The Nature Reserve needs to be protected – and our council should be doing all that they can to protect such areas of nature beauty and biodiversity. Nailsea is blessed with Grade 2 Agricultural Land – this land is high yielding and of a very good quality. This is worth protecting for the town and for the Country. We NEED land that we can grow various crops on. This should be seen by the Council as something to protect and capitalize on, not to simply build houses on. Therefore, as a town, we should be protecting such land as being able to grow and sell crops helps to support the economy of the town and the country. And we cannot build on all spare green land. Nailsea is prone to flooding in many areas, and many of the sites listed to be developed are flood plains. To remove these flood defences, only puts the current residents at higher risk. This does not make any sense. Please North Somerset Council, protect our beautiful, rural town, by not accepting these proposed developments and by maximising what the town does have already – more agriculture on the wonderfully fertile soil, more supporting biodiversity that exists here in abundance and supporting the residents who already live here.			
62584449	Karen Bird			No	• Positively prepared • Justified • Effective • Consistent with	Unsure	Unsure	These comments apply to all proposed development sites in Nailsea. The proposed figure for development will lead to a total overdevelopment of the town. There is no funding for additional infrastructure, such as the new road, schools and no evidence that these will be provided. Land to the north of Nailsea will be removed from the greenbelt. Development is planned on land which is prone to consistent flooding. There will be notable increases in vehicles on the network of rural lanes around Nailsea, and no clear workable plans to mitigate against this.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					national policy			Roads will be unsafe to use for pedestrians, cyclists and horse riders Existing accident blackspots at Stone Edge Batch, Wraxall Hill or Portbury Lane have no plans to improve them and they will see a marked increase in vehicles.			
62813697	Ian Bloom			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	1. The proposed figure of 1817 new homes in Nailsea would lead to a total over development of the town. 2. The proposed new road would not serve Nailsea's traffic or relieve congestion on Station Road, nor would it help traffic travelling from Backwell towards the M5. 3. The new link road under-rail crossing is likely to be extremely expensive and the engineering problematic due to the proximity to the River Kenn. 4. Although three new primary schools are proposed for Nailsea and Backwell, they will be funded through developer contributions and will be phased with no locations identified as yet. 5. Additional development will place immense pressure on the town's existing health and leisure provision. There will be no direct investment to combat this pressure. 6. Greenfield Crescent Playing Field is not protected under local Green Space Policy LP15. 7. Grade 2 Agricultural Land, which is high yielding and of very good quality, will be lost permanently through housing development to the south of Nailsea. 8. All proposed development sites in Nailsea have been assessed to be foraging locations for the rare Greater and Lesser Horseshoe Bats, which are Protected Species. 9. One hundred homes are proposed adjacent to Moor End Spout Nature Reserve, a site hosting many protected species. Development would destroy valuable wildlife habitats and further harm biodiversity in our area. 10. Transport modelling shows there will be notable increases in vehicle movements on the network of rural lanes around Nailsea. There are no clear, workable plans to mitigate against this. The lanes will become congested and unsafe for pedestrians, cyclists and horse-riders. 11. There are no plans in place to improve the accidents blackspots at Stone Edge Batch, Wraxall Hill or Portbury Lane all of which will see a marked increase in vehicle movements. 12. Development is proposed west and south of Backwell Lake (Reservoir). The new roads and housing will be in the floodplain, which actually does flood regularly. 13. The railway station is not fit for purpose as a transport hub; it remains inaccessible for people with mobility issues and presents serious challenges when travelling with young children.			
39126657	A Burgess			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The plan to build the additional 1193 homes across 4 locations around Nailsea is unsound in my opinion for the following reasons: 1. The proposed 1817 new homes in Nailsea would be a total over development of the town. This will place immense pressure on health and leisure facilities. There are no obvious investment plans to meet the health/leisure/educational needs of this major increase in population. 2. The proposed new link road across Backwell Common and under the railway bridge would be prohibitively expensive and a major engineering feat It would not alleviate traffic congestion on Station Road nor adequately serve Nailsea traffic. The new road will be in a flood plain which regularly floods. There is no indication of how this project would be funded. 3. Land to the north of Nailsea is greenbelt and should be preserved as such. 4. Land to the south of Nailsea is grade 2 agricultural land which is good quality, high yielding land which will be permanently lost due to this development. 5. Protected species of bat will lose their foraging ground if all proposed sites are developed. Valuable wildlife habitats of the Moorend Spout Nature Reserve will be destroyed if the land adjacent to it is developed. 6. Development on the proposed scale would result in a vast increase in vehicular movement causing congestion in the rural lanes making it unsafe for pedestrians, cyclists & horses riders. 7. The railway station would not accommodate the substantial increase in passengers numbers expected with the development of 1817 homes not to mention the 1762 new homes proposed in Backwell. The platforms are short and narrow and there is no access for mobility vehicles or pushchairs south bound.

								housing will be in the floodplain, which actually does flood regularly. 6. The Nailsea and Backwell railway station is not fit for purpose as a transport hub. It remains inaccessible for people with mobility issues and presents serious challenges to those travelling with young children. 7. Transport modelling shows that there will be notable increases in vehicle movements on the network of rural lanes around Nailsea. There are no clear, workable plans to mitigate against this. The lanes will become congested and unsafe for pedestrians, walkers, cyclists and horse riders. 8. There are no plans in place to improve the accident blackspots at Stone Edge Batch, Wraxall Hill or Portbury Lane: all of which will see a marked increase in vehicle movements as a consequence of this plan. 9. Although three new primary schools are proposed for Nailsea and Backwell, they will be funded through developer contributions and will be phased, with no locations identified as yet. 10. Additional development will place immense pressure on the town's existing health and leisure provision. There is no direct investment included within the current proposal to combat that pressure. 11. Grade 2 agricultural land which is high yielding and of very good quality will be lost permanently through housing development to the south of Nailsea. 12. Land to the north of Nailsea is proposed to be removed from the Green Belt and replaced with that to the south. What guarantee is there that this will actually happen and that the new Green Belt designated land will not then be subject to future attack and removal to the detriment of the environmental and amenity value of the locale? 13. Greenfield Crescent Playing Field is not protected under Local Green Space Policy LP15. 14. All proposed development sites in Nailsea have been assessed to be the foraging locations for the rare Greater and Lesser Horseshoe Bats, which are Protected Species. 15. One hundred homes are proposed adjacent to Moor End Spout Nature Reserve, a site hosting many Protected Species. Development will destroy valuable wildlife habitats and further harm biodiversity on our area.			
51460097	K Collier			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The allocation of Land South of Nailsea should be removed from the Local Plan because the required new road is unlikely to be delivered, is technically difficult, and would not relieve existing congestion. Much of the land is flood-prone, making large-scale development unsafe. The site includes scarce Grade 1 agricultural land that should be protected for food security, and development would destroy important habitats, including those used by protected species. There is no evidence of need, viability, or funding for the required infrastructure, and the scale of proposed growth is disproportionate and unsustainable for the area. The area is surrounded by minor single track country roads not designed to cope with large scale housing developments, associated traffic and ongoing use.			
30659041	C Cox			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell Common and the whole of the surrounding area is prone to flooding. This housing would further aggravate the problem and make everything even worse. Chapel Hill has already been on the news a few times for being flooded and impassable. Further housing would make this worse., and this isn't even allowing for worse weather conditions that have been predicted for the future. Where there isn't flooding there is high quality agricultural land which would be lost for ever. Only 7% of all of North Somerset's land is high quality agricultural, and you are intending to use it for housing? Government policy actually states that we must protect our best and most versatile land to safeguard food security. These proposals contradict this policy. Backwell is not an employment hub. People living there would have to commute to Bristol or Weston-Super-Mare and the roads are already at capacity, as is the railway. The railway station itself is not fit for purpose as a transport hub. After all these years, it is still inaccessible for people with mobility issues and dangerous for people travelling with young children. The proposed road would not serve its purpose of relieving traffic on Station Road or Nailsea, and would be extremely costly. The Infrastructure Delivery Plan lacks analysis and costings, and there are no funding guarantees for this new road, even if it were to prove to be useful. Backwell does not have the infrastructure to support such a development, and the village has already had an increase of 40% in its housing numbers with no improvement. It makes no sense to build another 1000 houses in that area. The whole proposal is unsustainable and undeliverable.			
29062017	Jo Cox		resident	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	Although North Somerset Council started the correct procedure of a public consultation in 2025, there was no regard for the serious comments that were made or for information that was imparted to them from the public. In this way the consultation was ineffective, planning could not be influenced and the duty to cooperate was not followed. For example, at one of the community consultation meetings, we spoke to Lyndsay Margerison (Transport Policy Team Manager , NSC) and learned that NSC was still considering a new road and bridge across the river Kenn floodplain below Backwell reservoir as recently proposed by Gleeson Land Ltd in their planning application. He was unaware that such a road and bridge would pose an unacceptable flood risk and that the Environment Agency, Lead Local Flood Authority and Internal Drainage Board had already objected to the Gleeson Land proposal for this reason. Their flood risk modelling had been unacceptable (and a new model recently submitted by them has also been rejected by the EA). Despite him hearing this in person and despite our comments on the website and to NSC Highways and Transport in writing, we find that this road is still being suggested in the Local Plan 2041 (TR33) to provide access for the proposed new developments South of Nailsea to a new link road east of Backwell to the A370 and make transport connections between Clevedon Nailsea Backwell and Bristol. This road, if built, will cause an increased flood risk to several adjacent properties including our own and the lack of cooperation with the public could have serious consequences. Backwell Lake is in fact a reservoir and building new road structures close to this and across the floodplain will cause an increase risk of reservoir flooding and erosion it's banks. In addition, the safety issues of increased traffic from a new road exiting close to the busy station and between two comprehensive schools are prohibitive to this suggested project and particularly to the proposed new A370 Link road. There has recently been a death caused by a vehicle close to the junction of Station Close and Station Road, which is close to where these proposed new roads would meet Station Road. Flooding is already a big problem in Backwell, particularly in the floodplain areas of the River Kenn and other streams nearer Backwell Common. The proposed A370 Link road and adjoining proposed East Backwell housing development will greatly increase flood risk to already vulnerable properties, including our own. This proposal along with climate change	Other areas should be looked at more closely for development without the flood risk and transport issues eg. Long Ashton and along the proposed Portishead railway line.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								affects will affect our safety. We have evidence that the National Policy Planning Framework especially in regard to flood risk modelling has not been adhered to by developers and the EA has not approved the flood risk model. The housing allocation for Backwell is out of proportion to the rest of North Somerset purely because there is a station. It is inappropriate for such a small village with few facilities. The enormous amount of new housing will turn it into a town with none of the required infrastructure that other North Somerset towns enjoy. It will essentially be a commuting ghetto with inadequate shcools, medical access and shops. The roads will be congested and unsafe and properties will be flooded.			
62848897	Rachel Cox			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The proposed development is not viable due to flood risk, nonviable access arrangements, and significant infrastructure deficiencies. The proposed access road and bridge cross the River Kenn floodplain, which floods regularly, directly contradicting national planning policy. The developer's flood modelling remains unapproved by the Environment Agency after three revisions. In addition it is uncalibrated, omits known flood events and uses outdated hydrological data. SuDS features proposed in the Drainage Strategy would be submerged during storm conditions and therefore cannot function. Thus planning permission cannot currently be granted. It is our understanding, having sought expert advice, that in order for the access road and bridge not to increase flood risk elsewhere the engineering requirements would be cost prohibitive. Critical access alternatives have not been reliably assessed, and The Perrings route, proposed by Persimmon, appears too narrow with visibility constraints. The development would significantly increase car dependency being too far from the town centre, while the railway station is not fit for commuter or disabled access demands. Nailsea and Backwell lack infrastructure capacity for this scale of development (schools, health facilities), and no confirmed funding exists. The proposed A370 link road and underbridge are unlikely to be delivered before 2040, and likely to be not only unaffordable but also may be technically unfeasible, and would alter flood pathways on Backwell Common, worsening downstream flood risk which is not permitted in the NPPF. The site is valuable agricultural land and an important feeding ground for the Brockley Bat maternity roost. Otters use the local river and rhyne network to travel to and from Backwell Reservoir. Any increase in the height of flooding to the Backwell Reservoir would endanger birds which overwinter there and other wildlife.			
62796097	R Crabtree			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Excessive Cumulative Housing Growth — 582 Houses - Land South of Nailsea 1. Disproportionate Housing Allocation Compared with other North Somerset Settlements. 1.1. Any additional allocation materially exceeds what could be considered proportionate or sustainable for Nailsea town and Backwell village. In my opinion they should NOT be lumped together. 1.2. Emphasis planning for large-scale housing growth needs to be properly supported by infrastructure which will be inadequate, should these proposed developments go ahead. 1.3. Local Plans to deliver sustainable growth. A disproportionate concentration of development in Backwell compared with nearby service centres, does not meet the requirement for a justified spatial strategy. 2. Transport, Highway Safety & Connectivity Commuter Pressures & Unsustainable Travel Patterns. 2.1. Station Road and surrounding road networks are already operating at capacity especially at peak times (school runs and with increased summer traffic). 2.2. It requires developments to ensure safe and suitable access for all users; this is demonstrably unachievable without extensive planning. 2.3. The proposed allocation is unsound etc. and should be removed from the draft local plan. More importantly the land suggested to build a road system is totally unsuitable. This area regularly floods and the streams in the hedges are overflowing. If a road system is built on this land where is the excess water be displaced to? Houses in the area are going to suffer as a result. 2.4 Alternatives, such as widening the existing railway bridge, which are constrained by regular flooding. This is unpassable at times which prohibits allocating land at high flood risk areas when safer alternatives exist. 2.5. The planned road access will also cause untold disruption to the engineering conflicts with the railway corridor (a major arterial route) which needs to be available for commuters travelling to London and Southern England. The area also needs to be protected, as it is of value to the wildlife and landscape. 2.6. The proposed development area supports species reliant on open fields and hedgerows. This development would result in a substantial impact on the wildlife. The overall loss of peace and tranquillity for the habitat at the Backwell lake. 2.7. Backwell/Nailsea is heavily reliant on commuting by rail and car. Travel to Bristol is already congested at peak times and in the summer months. 3. Biodiversity Impact. Significant Flood Risk. 3.1. Climate-conscious policy direction supports retention of agricultural land and minimisation of carbon-intensive development. 3.2 Backwell Common and Backwell Lake are known flood plains. Past rainfall events already cause closures and property damage. 3.3. Development on flood plains is strongly discouraged. 3.4. Increased hard surfacing will worsen downstream flooding.			
31072289	Jeanne Craske			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Although this site is just within the Nailsea boundary it is very close to Backwell which is potentially taking a disproportionate share of the North Somerset housing allocation. Several housing developments in Backwell are already in progress and the effects of these have yet to be assessed. Most Backwell residents use Station Road on a regular basis to access the better facilities in Nailsea. The health and well-being of existing and new residents will inevitably suffer if permission is granted for a site as large as this, on top of those which already have permission in the area. Residents of the wider area will also suffer from the congestion on narrow routes through Nailsea or towards the M5 and those travelling along the A370 are likely to be held up in standing traffic. This plan does nothing to mitigate the effects of climate change. There is no clear indication as to whether a new road is viable. It is not known whether this number of houses is actually needed in this location. There is insufficient evidence that the infrastructure will support a development of this size. The area is also at risk	Reduce the number of houses allocated to Nailsea and Backwell to reflect environmental and infrastructure constraints. Prioritise finding alternative locations with brownfield capacity and transform disused buildings and those adjacent to town centres (of which there are plenty in Nailsea – eg the old Weston College which is an eyesore.) Avoid development on flood plains. Ensure that the effects of previously permitted developments are assessed before giving permission for more. Ensure that improvements to infrastructure are carried out prior to new		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								of flooding. Our already depleted wildlife will be further adversely affected if this goes ahead. Whilst Nailsea and Backwell are being targeted for large scale development on the strength of having a railway station, the station cannot be regarded as suitable for a transport hub as the road layout around it is so poor. Added to which it is unsuitable for use by the disabled, having a ramp on only one side.	developments. Ensure that sites for schools and community facilities are provided in a timely manner. Reallocate housing so that Nailsea and Backwell take only their fair share of the North Somerset allocation.		
51424929	Michael Craske			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Unsure	Unsure	Whilst this site is just within the Nailsea boundary there is a wider issue of overdevelopment in the area as a whole as Backwell is already taking a disproportionate share of the North Somerset housing allocation and development of this site near Backwell Lake would exacerbate the situation still further. The local infrastructure cannot support developments of this scale. The nearby Station Road is narrow and congested and there is no guarantee that a new road would be built to ease the situation as there are cost implications in having to cross the railway line. The nearby railway station is not fit for purpose, being inaccessible on one side by the disabled or those with young children and the roads in the wider area are insufficient to cope with proposed developments on a large scale. Neither Nailsea or Backwell can be considered as employment hubs so residents inevitably have to commute elsewhere, yet there are no A roads into and out of Nailsea and the most direct route to the motorway going north is via the winding and dangerous Wraxall Hill. The health and well-being of existing residents would inevitably be severely affected by a development in this locality, Station Road being a route regularly used by Backwell residents to access the shops and other facilities in Nailsea. Development here would destroy valuable wildlife habitats and the area is also prone to flooding.	Review the housing allocations to distribute them more sustainably across the county, ensuring that brownfield sites are revitalised first. Ensure that improvements to infrastructure are carried out prior to new developments.		
62806817	Roger Crook			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Unsure	Unsure	I appreciate NSDC is in the invidious position of having housing targets imposed on them. Worse still that the overall national housing targets set by the current government are nothing but a political gesture based on misguided thinking and are devolved to the provinces for implementation by others. Shame on the administrators of the UK, this is not the quality of service I expect in return for my taxes. • North Somerset is one of the areas in the UK most at risk of future flooding in the coming 50 years. There's plenty of areas at far lower risk, it really is not fair to take people's income for homes that will flood (developers, of course, have different priorities). • Bristol is one of the UK's most overcrowded cities. Expanding its satellite towns will make matters worse. The West of England's Spatial Strategy should be looking to distribute employment more evenly by developing established hubs e.g Weston, Taunton, Bridgwater, Chippenham. Housing would be built adjacent to these areas of increased employment If North Somerset is to contribute, let's do it properly, rather than cobble together an appeasement to Westminster. • Establish long term transport infrastructure i.e. link the M5/Clevedon to the A370 and on to the airport via Brockley. • In the vicinity of Chelvey, build a new station with a decent road/rail/air hub • Build houses in the West End of Nailsea and West Town area of Backwell • Build the social infrastructure necessary to support the new housing Of course, none of this will happen, because it cannot be afforded, so a cobbled appeasement is all that's possible and the proposals summarised in the Local Plan Consultation (The Plan) regarding LAND TO THE SOUTH OF NAILSEA are ill considered for the following reasons: • I believe 600 homes are proposed for this area. It appears access is either via Netherton Wood Lane (narrow lane) or The Perrings, which feeds on to Station Road, which is already over-subscribed and, frankly, DANGEROUS (3 schools on its length). Who is willing to bear the responsibility for the inevitable increase in accidents? • I recall a suggestion to build a relief road between Backwell Lake and the station. This would not mitigate issues mentioned above and would interfere with the flood mitigation that Backwell Lake was designed to provide (it is a balancing pond, not a natural lake). • The idea that Nailsea and Backwell Station can become a transport hub is UNTENABLE as: o The bridge at the station would need to be widened and the road straightened to accommodate increased volume and size of traffic. o Station Road would need widening between the station and Backwell and the existing traffic calming measures improved to facilitate flow. o Access to the platforms would need to be much improved. The Backwell side requires substantial changes to improve access for the elderly and infirm. o The cost would be PROHIBITIVE and the consequences of trying to get by with the existing infrastructure are frightening • I've read that 2,400 new homes are proposed bringing a 36% population increase However, NO INVESTMENT IS BEING PROVIDED FOR SERVICES TO SUPPORT THIS INCREASE • The Plan for the South of Nailsea needs to be considered together with other plans for Nailsea and those for Backwell, as taken together there would be close to a DOUBLING OF POPULATION. The Plans together do not take a holistic approach for transport or social infrastructure. Regretably, I cannot support the Plan being proposed for LAND TO THE SOUTH OF NAILSEA and have grave concerns about other plans for Nailsea and Backwell. However, I have outlined a forward looking proposal above that is a far more credible solution.			
29066945	Charlie Crooks			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Unsure	Unsure	The land next to Backwell Lake (resevoir) is a floodplain which floods frequently. Building houses or a road on this would increase the flooding risk to homes on Station Close. It would also effectively remove the strategic gap between Nailsea and Backwell, removing the independent character of the two settlements. The very narrow green corridor adjacent to Backwell Lack connects populations of wildlife, such as greater and lesser horseshoe bats. Building homes or roads in this area will distrupt the wildlife connectivity and potentialy make the populations unsustainable.			
62577217	M Davis			No	' Positively prepared ' Justified ' Effective	Unsure		Proposed road from Backwell This is likely to be very expensive to build and will not ease traffic from Nailsea to Bristol or Backwell to the motorway. Building a tunnel under the railway will be particularly difficult and expensive. Without an engineering review and without funding allocated, this road can be little but a planning daydream.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					• Consistent with national policy						
62577217	M Davis			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Lack of Community Facilities There are no firm plans to improve or expand any of the existing community facilities such as schools or healthcare. It is already difficult to obtain GP appointments. The nearest primary school to most of the planned development south of the town is already almost full. This could mean children being driven to schools outside Nailsea. This is not good for the children or for council finances.			
51397441	Marian Donovan			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The development is guaranteed to have very adverse effects on the local amenity of Backwell Lake. The wildlife has been carefully encouraged and the Lake is a very valuable asset to both Nailsea and Backwell. It was built there to alleviate drainage issues as the area is in a very well known/acknowledged flood plain. Putting another 600 houses there would bring the town boundaries right alongside each other and so Nailsea/Backwell would become one large conurbation, totally destroying the character of each town. The infrastruture is very poor there - traffic going north via the A370 would create major traffic jams on Station Road into Backwell and equally bad circulation on Staition Road going into Nailsea and subsequently on the Wraxall Road or Tickenham Road to the motorway junction.			
51450017	Christopher Dunford			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The proposed development of 582 homes on land next to Backwell Lake is vastly out of proportion with development elsewhere in the county, it compounds a shortfall in infrastructure and services following recent overdevelopment, and it depletes our vital and dwindling green space. This rapid overdevelopment is vastly out of proportion with the rest of the county. Whilst Backwell and Nailsea (which would essentially become one) would experience an 80% and 55% increase in population respectively, other towns in the county are not receiving anywhere near that scale of development. Portishead and Pill have a new railway station and yet they are only taking 14% growth. Clevedon is only taking 6% growth. And why not build more at the new Ashton Vale location which is strategically close to employment opportunities? The housing number that North Somerset is trying to meet has been imposed by central government. The number set by central government is based upon an algorithm that DOES NOT take into account flood risk to the area. Flood protection for North Somerset due to climate change shows a significant loss if land, therefore the housing allocation for North Somerset should be decreased accordingly. The UK is home to three of the best climate research institutes in the world (Cabot Institute, Tyndall Centre, and Priestly Centre) so it seems bizarre that the UK's planning of housing development is not taking into account these climate impact predictions. The new road proposed is not guaranteed. If the new road does not go ahead then traffic congestion on station road will be unworkable. Station road is narrow, has a single pavement, and takes foot traffic for two primary schools and a secondary school. The risk of harm is already high and pushing traffic from these 889 new homes onto it is unjustifiably dangerous. Even if the new road does somehow go ahead in this short timescale and at considerable cost, the traffic problems will shift onto Backwell Common. Backwell Common forms part of National Cycle Route 33, losing this has a significant impact on those trying to travel into Bristol on bicycle and will result in them switching to less sustainable forms of transport. A 55% increase in the size of population in such a timescale will mean that essential services cannot keep up. You would not double the size of Bristol or London in less than 15 years. There will be significant shortage of schooling, retail and leisure, and medical services. A shortage of health services can be life threatening and a shortage of schooling significantly impacts the life outcomes of young people. Once the housing developers have moved on, who will be left to solve these problems? And they will be serious problems. Rapid growth on this scale is not strategic. There are few employment opportunities in Nailsea. Everyone will need to travel into Bristol for work. The issues around congestion on station road are already detailed above. The rail station in Nailsea has no ramp access and rail services at rush hour are already at capacity, people are already standing packed in the carriages and vestibules, I do not know how all these new people are supposed to get on a train. As mentioned in, the proposed new road will impact National Cycle Route 33, and few cyclists are brave enough to cycle along the A370 at rush hour, so residents of those 889 new homes are inevitably going to be commuting by car. This is not a good location for sustainable transport – simply having a train station does not mean than an area can somehow absorb endless housing without creating serious problems. Loss of this much green space will result in a drop in biodiversity. North Somerset Council has declared an ecological emergency, as has the neighbouring Bristol City Council. I do not understand how a local authority can declare an ecological emergency and then eradicate green space that provides previous biodiversity, including hunting grounds for the lesser horseshoe bat and the greater horseshoe bat. No doubt the new housing development will come with 'biodiversity features', but any ecologist can tell you then these are just tokenistic compared to the damage caused by loss of green belt at this scale. This area is prone to flooding. Climate change will increase the frequency and severity of this flooding. Building 889 new homes is going to place these residences, and those adjacent to them, at greater risk of flooding. Thank you for taking the time to read this.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 39272545	R Eade			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	1. The existing highway network has no improvements shown. Hot spots that will become worse are the top of Wraxall Hill, Stone Edge Batch (where traffic will flow to the M5) and Portbury Lane. The proposed east Backwell New Road is (a) unfunded with developers only building roads for their developments, (b) Nailsea station is an unrealstic transport hub as double decker buses still cannot pass under the railway, (c) shuttle traffic working would be required where the new road hooks up with Backwell Common road for safety. With additional traffic being thrown on to station road a passenger refuge will be required at the popular crossing point at the Horwood Rd junction as people access the town centre. 2. The proposed developments are well away for walking distances to town centre, train station etc. 3. Proposed developments increase housing in the area by 41% with no corresponding increase in medical nor leisure facilities 4. No improvements planned for Nailsea & Backwell station 5. Developments south of Nailsea are on quality agricultural land helping the nations food security. 6. No real employment facilities which implies more commuting on an existing busy road network grappling with HGV's on narrow roads. In addition existing lanes within Nailsea are at risk of issues. 7. Why are we building on flood plane areas?			
31049857	J Eade			No	• Justified			Same comments as for other land off Youngwood lane. New proposed road too close to Backwell lake, and will come out between the lake, and the station car park, and on a busy piece of pavement, where people walk, and cycle, and drive, to the station, Backwell School, the new Co-op and Backwell motors..... Other footpaths go from almost opposite the lake entrance, towards Nailsea, and towards Backwell, across Backwell Common and on, to come out next to the swimming pool, or the allotments, and Chapel Hill.....as well as the footpaths down Station Close that go up and across Youngwood Lane and up to The Grove and beyond. Then there is the bridlepath that goes from the top of Engine Lane, right across Morgan's Hill and down behind the houses in Sedgemoor close, coming out at the top of Youngwood Lane. Then continuing from further down the hill in Youngwood Lane, to the bottom of the The Perrings grass - and did, until recently, go down to the lake, and out on to Station Road, to acces the station and Backwell School. Also you can continue on to Backwell Common, and then the A370. Now the only option is the dangerous exit on to Bucklands Batch, since the path down from The Perrings grass to the lake has been closed.	Don't build these extra houses then there will be no need for this road. It has been 'in the pipeline' for nearly 40 years, if not more. The exit/roundabout, is dangerous for all of those on foot or bike, trying to access the station, and Backwell, school, let alone the lake etc.		
29289473	Shirley Edwards			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	This proposal is a non starter because the area around Backwell Lake and across Backwell Common regularly flood so no amount of attenuation ponds would offset flooding issues from a housing development. There is a plan for major infrastructure which is thought to help sweeten this proposal but there is a railway line is in the way and there is no feasibility study!			
62833217	Kate Enright			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I am a resident of Backwell and I’m writing to strongly object to the current housing planning proposals for new development. Backwell already has 800 new houses approved. That alone is a huge change for a small village. Adding another 1,000 houses on top of that is completely unreasonable. It feels like Backwell is being targeted—expected to take far more growth than any other village in North Somerset, and even more than some towns. Being handed 7% of the district’s total housing numbers, while places like Clevedon take just 2%, is totally unbalanced. There is also no proper needs or viability analysis to justify this huge extra number of houses. There’s nothing that explains why Backwell needs this level of development - why the numbers have not be spread over other areas in North Somerset to minimise the negative impact - or whether the area can realistically support it. The simple truth is that these numbers are not sustainable. There’s no clear or credible plan showing how essential services—healthcare, schools, transport, shops, community facilities, leisure spaces, utilities—are meant to cope. Nothing in the proposals demonstrates how the area will sustainably absorb thousands more people in the area without significant negative impact. Part of the plan seems to rest on a new link road, yet there are no proper plans, no costings, and no confirmed funding at all. It’s impossible to take this seriously when nobody can say who will build it or pay for it. Our roads are already overloaded and struggling. Sticking 1,000 more houses here without a guaranteed transport solution will make everyday life worse for everyone who already lives in the village. The proposals would also destroy Grade 1 agricultural land—some of the best farmland we have. Only a tiny amount of this land is left in North Somerset. Government policy says we should protect our most productive land, yet this plan ignores that completely. Once this land is built on, it’s gone forever. In a time when food security is becoming more important, it makes no sense to concrete over high-quality farmland. On top of that, the plan chips away at the Green Belt and the character of the village. It changes Backwell beyond recognition, and it does so without proving that the infrastructure or road network can support it. Even the council’s own documents raise concerns about flooding, the loss of high-quality land, and whether the road can even be delivered on time—yet the proposals still push ahead regardless. Flooding is already a serious issue. Backwell Common and the surrounding areas flood regularly, and building on this land will only make the situation worse. The proposals offer no convincing solutions and no long-term protection for the community. Overall, the scale and intensity of what’s being proposed is the real problem. Forcing this much development into Backwell—without the evidence, without the infrastructure, without the funding, and without any clear justification—is destabilising, unsustainable and undeliverable. It puts huge pressure on a village that simply cannot cope with what’s being demanded of it.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								For all of these reasons, I strongly object to the proposal.			
50199169	Trevor George Essex			No	Positively prepared Justified Effective Consistent with national policy	Unsure	Unsure	I object to the proposal to allocate the site for 582 houses on land in Nailsea next to Backwell Lake. The proposed link road will not effectively serve Nailsea traffic nor relieve congestion on Backwell Station Road as it will still be used for all westbound traffic. It is quite likely that traffic will increase significantly on the lanes around Nailsea and Backwell despite the traffic plan suggesting that these will become more cyclist/walker/equestrian friendly routes. The land proposed for new housing allocations is currently used as Grade 1 Agricultural Land for farming. If this land is developed then future generations will not be able to revert the land back to agricultural use. The loss of agricultural land will reduce the country's ability to be self sufficient in food production and more reliant on imports. This seems to be a wholly retrograde step given the environmental impact of transporting goods and food from abroad, and also given the political instability in the world. The loss of Greenbelt will impact on the area's character, wildlife, ecology and residents health and well being.			
63052097	Stephanie Fowler	Pegasus Group		No	Positively prepared Justified Effective Consistent with national policy	Yes	Yes		Our client welcomes the effective reinstatement of Policy LP3 and the identification of Nailsea and Backwell as a strategic focus for development, given the significant challenges presented in terms of satisfying the need for new homes and the inherent sustainability of both settlements in terms of local employment, services and transport. The inclusion of our client's land within the wider draft allocation at Land South of Nailsea, is complementary to the strategic level of growth already underway southwest of the settlement, forming a logical and integrated extension of the Netherton Wood Lane development further west and existing residential form at The Perrings, Sedgemoor Close and Paddock Rise, consolidating the urban envelope within appropriately defined parameters, namely the route of Youngwood Lane, and coordinated supporting infrastructure.		
29242145	Katie Gore			No	Positively prepared Justified Effective Consistent with national policy	Unsure	Unsure	These houses would be located next to Backwell Lake, which is on a flood plain and floods regularly. There are already hundreds of houses planned to be built in the Nailsea and Backwell area, with no additional infrastructure provisions. The road from these 582 houses would emerge onto Station Road which can already become log-jammed at peak travel times			
62811169	Liz Gritten		Home owner	No	Positively prepared Justified Effective Consistent with national policy	Unsure	Unsure	The proposed pans of the Nailsea and Backwell area, if all granted, will completely change a small town and charming village into one big, soulless satellite town, that is completely overdeveloped. The roads, that struggle already under the weight of traffic, will remain overused and roads such as the A370 through Backwell, Station rd in Backwell and into Nailsea will be even more congested as the new road will not offer any help to these sections of road and will merely add extra vehicles. The road will cut through beautiful green belt land that houses much flora and fauna. Many rare species' habitats are under threat as a result of the plan, including Horseshoe bats, which are a protected species. The whole plan will basically rip out so much precious green belt land. The link road under the railway will become expensive as the nature of the work and will be built in an area rich in wildlife. The local provisions like schools, healthcare and leisure will be put under additional strain - they are struggle to cope currently. The main roads that service the areas are already connected at certain point and are not built to take that much traffic.There is a huge risk of more accidents in areas such as Wraxall Hill, Stone Edge Batch and Portbury lane due to an increase in vehicles but there is no evidence of any plans to improve these areas. The small lanes will become congested and dangerous for cyclists and walkers.The whole area south of nails and north of Blackwell is a FLOOD PLAIN as it's I a low valley and is almost always flooded even in summer. These unbelievable proposals will not only be building housing on a flood plain (not very sound building sense) but will also add to the Huge environmental issues we have with flooding,lackof adequate drainage and excess water in the winter. Constructing more buildings in an already flooded area will contribute to more of a problem and be environmental suicide.	Don't build all of the houses. If building work has tp happen, really consider the suitability of the site and reduce the planning. 3728 more houses in a small town and village like Nailsea and Backwell is ridiculous.		
21333377	Tim Harland			No	Positively prepared Justified Effective Consistent with national policy	No	Unsure	This land is WET, it is on a flood plain next to a surface water reservoir and sensitive ecology with otters and other wildlife. This is adjacent to the conservation area. Due to the floodplan the road would need to be on stilts and is unfeasible. The railway station poorly equipped and inaccessible, it is too far to work with a busy road with one narrow pavement so this development will be car dependent.	The EA are still very unhappy with the planning appreciation and have not agreed with the proposed mitigation - this site needs to be deleted and alternatives sought.		
29187873	B Harland			No	Positively prepared Justified Effective Consistent with national policy	No	No	Backwell Lake (Surface Water Reservoir) and adjacent fields, where the new roads and housing is planned and are on a floodplain, which floods regularly. The NNPF Clearly states that you cannot build on a flood plain. The lake regularly overtops putting birdlife in this sanctuary at risk as well as the conservation This is an important strategic gap outside of the settlement boundary on a floodplain. Further building of 582 houses and the necessary bridge/new road infrastructure would require so much mitigation that the sites ae untenable. This is the only site which would benefit from the new road across Backwell common, This road will never happen, there is no funding and the embankment is unstable. There is NO comment from network rail or GWR for addition rolling stock, the site itself is too far away for the average person to walk to the railway station or nearest bus stop. The transport plans are thin to say the least, full of assumptions, do not reflect reality. Yes we have a railway, but it is well documented in its inaccessibility, it is one of the most inaccessible in the country. Network rail and GWR have continually refused to address this as it is too expensive. The platform is short because the embankment is sensitive and unstable. This is the main line from Paddington to Penzance, these through trains are given priority. They do not all stop at Backwell, when they do you must be in the correct carriages to get off otherwise you are taken to Yatton and must make your way back.	The sheer volume of growth with the required investment infrastructure and services over such a short period is destabilising, unsustainable and undeliverable within the lifetime of the plan. The only sensible, fair and honest way forward is to remove this allocation. Reallocating some houses to each of the new villages, then to some of the larger villages which do not seem to have anything, like Wrington and finally give more to the urban areas that already have infrastructure and services. It is reasonable that each area takes some. Backwell would have been willing to take its fair share, 40% over 10 years we are told, will be tough, there is no support, NSC are close to another £10m deficit to cover – so there is no chance of the extra amenities we require to thrive.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Cancellations are frequent, if a mainline train is late the smaller local trains are pulled or the larger trains fail to stop at Backwell. There is a good reason why we don't use the railway more, trains get pulled, cancelled, you book at seat, but it does not exist! Railway staff tell us that the rolling stock is at capacity, they do not have enough trains or staff OR line. There is no intention of investing in rail services on this line. Indeed, the highspeed rail link was stopped at Swindon, it did not even go as far as Bristol. If you are wheelchair bound, you must travel from Yatton. If you are elderly, have mobility issues, pushchairs or more than one child with you, the gap is so large you cannot get on or off. Even my husband who is fit said the other day as he arrived back from London that the gap was so intimidating to look down at he was not sure it was possible. We would appreciate the Inspector visiting the station and getting off at Backwell.			
62688385	Jacky Hawley			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The plan does not take into account the large number of homes already under construction in and around Nailsea. The infrastructure is already deficient for the new developments that have already increased the population using the town's facilities, so that roads, schools and medical and sports facilities are already inadequate. The essential qualities of the region, such as health-giving open spaces would be diminished or lost and air, sound and light pollution would increase enormously. Much of the proposed development would be on areas that often flood . Indeed the purpose of a flood plain is to protect the surrounding area by providing a run-off area for heavy rain. Climate change forecasts more and increasingly dangerous rain. It would be irresponsible to build in areas of high risk. Greenbelt areas have already been sacrificed to residential construction. Once covered in cement etc., these areas of natural beauty (needed for mental and physical health) and environmental resources such as protected species (eg bats) can never be recovered. The loss of natural flora and fauna would be catastrophic. The proposed new road will add to an already overcrowded road network in Nailsea, and do nothing to mitigate the dangers of busy, crowded roads. These roads carry traffic ranging from cyclists to heavy lorries and already represent a danger to children, elderly people and the disabled, as well as road users. The Nailsea & Backwell railway station does not meet required standards for accessibility, and should be upgraded before more passenger numbers are indicated.			
62772545	Margot Held			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	This development concerns me especially due its size and the potential significant impact it will have on the local community and nature. 1. Loss of Access to Nature and Impact on Protected Species This development will significantly reduce access to nature for local residents. One of the main reasons I chose to live in Nailsea was its proximity to open countryside, which is vital for wellbeing. The proposed site consists of open fields that provide habitats for many species and have been identified as foraging grounds for the rare Greater and Lesser Horseshoe Bats, which are protected under UK and European law. In addition, the development will result in the loss of trees, hedgerows, and a general reduction in wildlife corridors. These features are critical for supporting biodiversity and connecting habitats. The impact on wider ecology has not been properly considered, and once these corridors are broken, the consequences for local wildlife will be severe and irreversible. 2. Ecological and Planning Policy Concerns The proposal appears inconsistent with local planning policies that prioritise environmental protection and sustainable development. It also fails to demonstrate how it will achieve biodiversity net gain, as required by the National Planning Policy Framework (NPPF) and North Somerset Local Plan. At a time when nature is under increasing pressure, developments should enhance biodiversity and climate resilience, not erode it. 3. Pressure on Transport and Town Infrastructure There is concern about the significant increase in traffic resulting from 582 new homes, with no clear plans to address this impact. The development will add hundreds of additional vehicles to local roads, increasing congestion and safety risks on routes that are already under pressure. Beyond traffic, the increase in population will place additional strain on the town's infrastructure—schools, healthcare services, utilities, and community facilities—yet there appear to be few plans to accommodate this growth. Public transport options also remain unchanged, meaning residents will be heavily reliant on cars, which conflicts with sustainability goals and local planning policies promoting active travel and reduced car dependency. Without a comprehensive strategy for transport improvements, sustainable travel options, and infrastructure upgrades, this development risks creating long-term congestion, reduced safety, and diminished quality of life for existing and new residents. 4. Additional Impacts of Significant Population Growth A development of this scale will have far-reaching consequences beyond housing: Healthcare Capacity: GP surgeries, dental practices, and hospitals may not cope with the increased demand, leading to longer waiting times and reduced access to care. Education Pressure: Schools may become overcrowded, forcing children to travel further for education. Emergency Services: Police, fire, and ambulance services will face higher demand, potentially affecting response times. Utilities and Waste: Water supply, sewage systems, and energy infrastructure will need upgrades to prevent service disruption. Waste collection and disposal services will also require expansion. Community Facilities: Parks, leisure centres, and public spaces will experience higher usage, reducing quality of life if not expanded. Economic Impact: Without local job creation, commuting pressures will increase, adding to traffic and emissions. Cumulative Impact: Combined with other planned developments, the strain on infrastructure could be overwhelming. 5. Loss of Agricultural Land and Food Security	While I understand housing needs must be met, I object to the development in this specific site. If it is to go ahead it should be planned with nature and community in mind, not at their expense. To make this proposal more sound, the following actions are essential: Preserve and Enhance Wildlife Corridors: Retain trees, hedgerows, and green spaces; create compensatory habitats where loss is unavoidable. Achieve Biodiversity Net Gain: Provide a clear, measurable plan for at least 10% net gain, including habitat creation and native planting. Transport and Infrastructure Upgrades: Improve roads, expand public transport, and add safe walking/cycling routes. Community Contributions: Through planning obligations (e.g., Section 106), fund improvements to schools, healthcare, utilities, and community facilities. Policy Compliance: Demonstrate alignment with NPPF paragraphs 174 and 180 and North Somerset Local Plan policies CS4 and CS9.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The development will result in the permanent loss of agricultural land, which is vital for future food security. At a time when sustainability and resilience are key priorities, sacrificing productive land for housing undermines these goals.			
18214849	Lorraine H-P			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Building next to Backwell Lake. which is on a flood plain is not feasible and would cause huge problems. Backwell Lake was built as a balancing pond between Backwell and Nailsea. It is now managed by Wessex Water and is a wildlife haven for birds, otters and wildlife and is now a designated "Reservoir". It is the jewel in the crown for Wessex Water and is a regular visitor attraction. Building next to this lake would impact the wild life massively and is completely unacceptable. The proposed road emerging onto an already overstretched Station Road is also completely inappropriate and unsustainable.			
39171041	RiSC - Residents in Station Close Backwell		Resident North Somerset	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	This site is not viable because the access road and bridge cross the River Kenn floodplain, which regularly floods. This would increase flood risk to (1) properties in the lower part of the development and (2) elsewhere, which is not permitted under the National Planning Policy Framework. The flood risk model produced by Gleeson remains unapproved by the Environment Agency despite three revisions, the latest reviewed in October 2025. All submitted models claimed there was no history of flooding on the floodplain and consequently have not been calibrated or validated. Calibration and validation are key considerations under the updated EA hydraulic modelling guidelines. Gleeson has been provided with written and photographic evidence of flooding, yet this has not been reflected in their modelling. Their hydrology has not been updated since 2021 despite direct EA advice noting that several national datasets and methodologies have been updated since then (EA, November 2025). It is unclear why this hydrology has not been updated or why Gleeson has not obtained flood records from the NSC Flood Management Team, which include documented flooding on the floodplain at Station Close. These data should have been used to calibrate and validate their model. In addition: 1. The Gleeson flood risk assessment includes inaccurate information. For example: o The model does not include output nodes to assess the impact of the new road and bridge on key receptors outside the development. o Flood depth increases reported in the text are lower than those shown in model tables. o Model assumptions are based on SuDS design parameters not permitted under national CIRIA SuDS manual. 2. The drainage assessment includes SuDS features that are not permitted (CIRIA) and would not work . For example, swales running alongside the road into which lower development properties surface water drain will themselves be flooded during storm events, preventing them from functioning! Therefore, it is not possible to conclude that the development, including its access road and bridge, will be safe from flooding over its lifetime, nor that it would avoid increasing flood risk elsewhere. Without an access road the development cannot be constructed, and residents would only be able to enter or exit their properties by foot or bicycle with no access for removal vans, rubbish collection etc and emergency vehicles. There is reference to access via The Perrings, yet this has not been formally evaluated. In an earlier LP consultation (preferred options 2022) Persimmon sumbitted this as a potential access route but the diagrams suggest this route would likely be too narrow with limited visibility for a development of this scale. Additional matters: • The distance of the site from the town centre will encourage car travel. • Nailsea Railway Station is insufficient as a commuter hub. It lacks toilets, adequate shelter, and has unacceptable disabled access (only one directional step-free access), making it largely unusable for disabled travellers and difficult for parents with young children. • The proposed development forms part of 1,817 new homes in Nailsea, which would represent overdevelopment given the lack of supporting infrastructure. There is no central government funding to expand schools, medical or dental provision. The proposed A370 link road and underbridge are unlikely to be delivered because: • Engineering the road over/under the rail line is likely to be extremely expensive and may be technically unfeasible. • Timelines for permissions, funding and construction extend beyond 2040, so it will not relieve congestion created by new homes. • National planning policy requires 50% affordable housing on Green Belt land, reducing the funds developers can contribute to infrastructure. • The Station Road roundabout connection point lies in Flood Zone 3 and should not be built on. • The road and underbridge would alter groundwater and surface runoff pathways, increasing flood risk elsewhere. Without the A370 link road, traffic impacts on Station Road will be severe if access via The Perrings or across the floodplain is deemed feasible.(see above) Travel delays could increase reckless driving behaviours (frustration, distraction, phone use), putting pedestrians at risk. Station Road risks are heightened by: 1. sudden change from 20mph zone by the Station which has poor visibility 2. peak-time congestion (school and commuter). Pavements are narrow, discontinuous and below expected safety standards. Further safety risks may arise from drivers using rural bypass routes (Church Lane and Backwell Common) to avoid Backwell Crossroads queues. These routes have blind bends, limited speed enforcement, and are used by schoolchildren. One route is due to become a national cycle corridor under the Grove Farm development, further increasing risk. The land is productive agricultural land which should not be lost. Finally, the development threatens key habitat areas and biodiversity. • It poses a risk to the Brockley maternity bat roost and designated SSSI. Rare Lesser and			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								Greater Horseshoe bats rely on this land for foraging and habitat continuity. • Otters use the river Kenn to travel between Backwell reservoir and Clevedon Moor • Any increase in height of flooding to the Backwell Reservoir would threaten birds which overwinter there and other wildlife			
62773569	A Howell			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Unsure	Unsure	Destroys valuable wildlife habitats and biodiversity. Grade 1 agricultural land. Greater risk of flooding. Overdevelopment of the village like no others nearby.			
21228289	Lesley Hudswell		Mrs	No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Unsure	Unsure	It is neither sound nor sensible to increase the number of homes in Nailsea without making changes to the roads that feed Nailsea. The road through Tckenham is already unsuited to the level of traffic it is expected to bear. it is increasingly impossible to sustain a healthy and active community life in the village. the air is polluted, the roads are dangerous and it takes very little for the road to become gridlocked. All of the roads in/out of Nailsea are inadequate but the road through Tickenham is the worst because it provides access to the motorway.			
39402561	Stellan Jara			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Unsure	Unsure	Backwell already has approval for 800 new homes — a 40% increase in the size of the village — and adding even more would amount to overdevelopment. The proposed new road would not meaningfully improve traffic for Nailsea or ease congestion on Station Road, Backwell Common, or Chapel Hill. Creating an underpass or bridge over the railway would be extremely costly and may not even be achievable. Even with the planned growth, there is already a shortage of school places, and no investment has been made in healthcare or leisure facilities. The current infrastructure cannot cope with another 1,000 homes. Backwell has been allocated more new housing than any other village in North Somerset, and a higher growth rate than some towns. The village is expected to take on 7% of the district's total housing allocation, compared with Clevedon's 2%. No needs assessment or viability study has been carried out to justify an extra 1,000 homes. Backwell is not a centre for employment, and most residents have to travel elsewhere for work. No assessment has been provided on the impact this would have on social cohesion. The development would build on Grade 1 agricultural land currently used for food production and grazing. Only 7% of this top-quality land remains across North Somerset. Government policy says that "we must protect our best and most versatile land" to ensure long-term food security, yet these proposals go against that policy and put food production at risk. The plans would destroy important wildlife habitats and further damage biodiversity in a country that is already one of the most nature-depleted in the world. They also threaten the Brockley Maternity Roost and nearby SSSI, where rare Lesser and Greater Horseshoe Bats depend on the land for feeding. The Infrastructure Delivery Plan provides no proper analysis, costings, or guaranteed funding for the road or other essential services. Backwell Common and the surrounding area already suffer from flooding, which would worsen with additional housing. There are major concerns about the strategic growth designation — including impacts on local character, loss of Green Belt and high-quality farmland, increased flood risk, and uncertainty over whether the required road can be funded and delivered in time to support the development. The fields around Backwell Lake (where the housing and new road are planned) lie on a floodplain that floods frequently. Government policy requires 50% affordable housing on Green Belt land, but this reduces the money developers contribute to infrastructure. The scale of development — along with the level of investment needed in infrastructure and services — is too much, too fast, and ultimately unsustainable. Backwell railway station is also not suitable as a transport hub. It is not accessible to people with mobility issues and is difficult to use for families with young children.			
62863361	Peter Jennings			No	' Positively prepared ' Justified ' Effective ' Consistent with national policy	Unsure	Unsure	I would like to appeal against the implementation of the NSC REG 19 Local Plan 2041 on the grounds detailed below: - The proposed development of 1,817 new homes in Nailsea would lead to a total over development of our town. - New primary schools would be required, and with no locations and firm funding provisions in place, this would not facilitate the proposed population increases to the town. - The new link road, under the rail crossing is likely to be very expensive with problematic engineering given the proximity to the River Kenn. - The plans will lead to the permanent loss of Grade 2 Agricultural land which is of good quality and high yielding, as a result of the housing development to the south of Nailsea.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								- The town's existing health and leisure provisions are already under considerable pressure and would become unacceptably pressured without firm investment committed to developing these facilities further. - Proposed sites for development in Nailsea are recognised foraging sites for Greater and Lesser Horseshoe bats. - The proposed development to the west and south of Backwell Lake (reservoir) mean that new roads and housing will be in the floodplain which does flood regularly. - The railway station is already not fit for purpose as a transport hub, since it remains inaccessible for people with mobility issues and presents considerable challenges for adults travelling with small children. - The proposed new road would not serve Nailsea's traffic or relieve congestion on Station Road, nor would it help traffic moving from Backwell to the M5.			
62863681	Natalie Jennings			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The proposed development of 1,817 new homes in Nailsea would lead to a total over development of our town. New primary schools would be required, and with no locations and firm funding provisions in place, this would not facilitate the proposed population increases to the town. The new link road, under the rail crossing is likely to be very expensive with problematic engineering given the proximity to the River Kenn. The plans will lead to the permanent loss of Grade 2 Agricultural land which is of good quality and high yielding, as a result of the housing development to the south of Nailsea. The town's existing health and leisure provisions are already under considerable pressure and would become unacceptably pressured without firm investment committed to developing these facilities further. Proposed sites for development in Nailsea are recognised foraging sites for Greater and Lesser Horseshoe bats. Proposed homes adjacent to the Moor End Spout Nature Reserve, would destroy wild life habitats and biodiversity in our town, since the site hosts many protected species. The proposed development to the west and south of Backwell Lake (reservoir) mean that new roads and housing will be in the floodplain which does flood regularly. Plans are not currently in place for accident blackspots at Wraxhall Hill, Stone Edge Batch and Portbury Lane, which will see a marked increase in vehicle movements. The railway station is already not fit for purpose as a transport hub, since it remains inaccessible for people with mobility issues and presents considerable challenges for adults travelling with small children. Greenfield Cresent playing field is not protected under Local Green Space Policy LP15. Land to the north of Nailsea is proposed to be removed from the green belt and will be replaced to the south. Positively, the new section of green belt to the south is a greater size than the area being removed and will replace the strategic gap. The proposed new road would not serve Nailsea's traffic or relieve congestion on Station Road, nor would it help traffic moving from Backwell to the M5.			
51431169	Jessica King			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I do not believe the plan is sound, based on a multitude of reasons. These are my main concerns: The proposed development would destroy valuable wildlife habitats. It is situated on an area highly prone to flooding. The road systems between Nailsea and Backwell are already strained, and prone to high levels of traffic, which the proposed road would not address sufficiently. It also requires engineering to route it under or over the railway line, which is prohibitively expensive as well as possibly unfeasible. Finally, the large population of school children who attend schools in the area would become more vulnerable to dangerous road conditions, when walking to school. Station Road, sees considerable daily pedestrian traffic from 1000s of school children of all ages. The narrow pavements are already a health risk, which would worsen considerably within the proposed plans as they stand.			
62849697	S Lane			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I strongly object to the proposed development. Backwell already faces a huge 40 percent increase with 800 new houses approved. Adding more homes would overwhelm Backwell and destroy the rural community my family chose for its countryside and quality of life. The roads are already under immense pressure. Station Road, Backwell Common and Chapel Hill are often gridlocked, and the proposed new road would not solve this. It would simply funnel even more cars into an area that is already struggling. Public transport is not a realistic alternative either. Backwell train station is inaccessible for people with mobility issues and extremely difficult for anyone travelling with young children or pushchairs - have you tried getting a baby, toddler and pushchair down the stairs? Because I have and it's a logistical and physical nightmare. There is no plan for extra school places, GP appointments or leisure facilities. As a parent, I am very worried about how this will affect my children's education, health and daily life. Backwell is being forced to take far more housing than any other village in North Somerset and it cannot cope. Flooding is already a serious problem around Backwell Common and Backwell Lake. I have seen water reach my knees in these fields. Building on this land will make flooding worse for existing and future residents. Government policy says we must protect our best and most versatile land to safeguard food security. This plan does the opposite and threatens important wildlife, including the Brockley bat roost which relies on these fields for feeding. We moved here for the countryside and a safe environment for our children. These proposals put all of that at risk. I urge you to reject them.			
62855169	B Lawrence		N/A	No	• Positively prepared • Justified • Effective	Unsure	Unsure	This plan is unsound and ill thought out for the following reasons: The effects of the number of new houses on Nailsea and Backwell would cause unsustainable over development. Backwell is a large village. Nailsea is a small commuter town, with limited within town work opportunities and many working residents commuting to nearby larger centres such as Bristol and Weston super Mare to work. Backwell and Nailsea should therefore not be considered a 'Strategic Location' as they do not meet North Somersets Council's (NSC) Policy SP1 for a variety of	Proposed new housing should be significantly reduced or reconsidered altogether as an expansion of population of the extent suggested is never going to be sustainable and represents an overdevelopment of Nailsea and Backwell without any realistic likelihood of local employment increasing to match the population increase or of local infrastructure being able to increase to accomodate this. A maximum 10% increase in population over		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					• Consistent with national policy			reasons, including: • Most of the proposed sites will fall outside the usual catchment for walking distances (town centres, school, bus stops and train station) and will therefore not prioritise walking and cycling and the use of public transport. • The plan does not support the delivery of economic growth and job creation in Nailsea as the location is not easily accessible, (B roads in and out) and there are no plans to improve existing highways network (see below). Nailsea and Backwell are unlikely to be a site for local employment so most new residents will end up commuting elsewhere. • More development in and around Backwell and Nailsea is will have negative environmental impacts regarding water, pollution, flooding risk and safety of residents, congestion on roads and rat running down rural lanes with increased accident risk. • Nailsea Railway station is not an appropriate major transport hub. It is small, with short platforms, and difficult to access for those with mobility issues. This especially applies to access to the Down Platform (for trains from Bristol or towards the Weston) which is non-existent for wheelchair users. Currently the populations of Nailsea and Backwell are, according to the Census in 2021: Nailsea 15,917 Backwell 4,589 The Local Plan housing allocation is for 3,728 new dwellings across these sites. Based on 2.3 persons per household (the average household in North Somerset according to the 2021 Census), that means an additional 8,574 persons across the two towns, an overall increase of 42%. For each town, the growth would be: Nailsea - an extra 4,179 persons or an additional 26% Backwell - an extra 3,870 persons or an additional 84% This is a huge increase in population which is completely unsustainable with the current local infrastructure and will ruin the lives of current and future residents of Nailsea and Backwell. This degree of expansion would have a detrimental impact on the character and nature of Backwell and Nailsea and their communities. • Nailsea has already had significant development with over 350 homes already built and several hundred more granted planning permission, this all in addition to the above proposed expansion. No new infrastructure has attended any of this. Effects on local infrastructure This further population increase will overload local infrastructure including healthcare, schools, leisure facilities and town centre parking. The Local Plan suggests developer-led delivery of infrastructure to support this, rather than a policy driven approach. This will inevitably mean that the infrastructure to support this increased population, in terms of schools, healthcare, leisure facilities and travel and transport is not guaranteed, may not happen and at best would be delayed long after it is needed. This means that access to these facilities, particularly healthcare and schools, will be badly affected, for current and new residents. Effects on travel and highways There is no A road directly into and out of Nailsea, only B roads which are narrow and already heavily congested with traffic. Access to Nailsea from the A 370, which passes between Nailsea and Backwell, is only via the busy and congested Backwell crossroads and Station Road. Station Road is an accident black spot with both pedestrians and cyclists coming into conflict with the vehicles when passing under the railway line bridge on the single track, traffic lights controlled junction. Backwell School creates a significant amount of traffic. • The policy states that to accommodate the additional housing transport infrastructure development is needed. NSC proposes that an East Backwell Link Road is built. The road would go under the London to Penzance mainline rail track from Station Road to the A370. • However this link road would be extremely hard to build from an engineering perspective and very expensive because it is close to the river Kenn. The road would require a water pumping solution as it will go through an area susceptible to flooding. It will need cutting through the railway embankment. Developers will be expected to contribute to the funding for the road, however developer contributions will not cover the whole cost of the road. The developer Rubix has stated that it will only connect the road through their site once the housing has been built, this statement does not align with NSC statement on linking proposed development to infrastructure provision in a phased plan. • The East Backwell Link Road will only assist the Nailsea developments to the south of Nailsea. Developments to the north of Nailsea will use existing B roads out towards Wraxall and Clevedon and Portbury Lane. Developments east of Backwell wishing to get to the M5 will travel through Nailsea. It will not reduce traffic to and from Backwell and Bristol and junctions 19 and 20 of the M5. • NSC has failed to address the junctions to the north of Nailsea along the B3138 and B3130 which are already at capacity and are known accident black spots. There is no mitigation suggested meaning an even greater volume of traffic and more accidents. • NSC has placed a lot of emphasis on Active Travel (walking, cycling, horse riding) however many development sites are too far from the town of village centre to make walking a viable solution. • Rural "Quiet" Lanes. NSC has failed to address how they will protect the rural lanes around Nailsea and Backwell from rat-running. Traffic volumes on the lanes have steadily increased in recent years as developments to the west of Nailsea have been built. This is noticeable on The Causeway to the north and West End Lane and Netherton Wood Lane to the west and Chelvey Lane to the south west. This also happens on Chapel Hill leading into Backwell Bow, with people attempting to bypass queues on the a70 at Backwell Crossroads. This rat-running down rural lanes will only get worse with the proposed developments. All these lanes are single track with no pavements. • Backwell and Nailsea Train Station has not been identified within Policy LP3 for improvements. The station is currently not accessible for many and the platforms too short for intercity services. No funding has been identified for this work. Effects on environment and ecology There will be loss of green space and local countryside. Access to nature and countryside for walking etc is very important for the physical and mental health of residents and should not just be built over without consideration of this. On Backwell Common there will be a significant loss of Grade 1 and 2 agricultural land, particularly with the proposed East Backwell New Road and housing developments in this area. Other development areas will cause similar loss. Farmland of this quality is essential for growing food, for food resilience for the local population, reducing reliance on imported food and future proofing the population against climate and political changes that may make imported food more expensive and difficult to obtain in the future. The development off Pound Lane will have a bad impact on Moor End Spout Nature Reserve. Development south of Nailsea is too close to Backwell Lake which is a designated reservoir and an important area for wildlife particularly birds. Much of this area is a flood plain and dwellings here will be liable to flooding. Most areas around Nailsea are low lying and in areas at risk of flooding, which will become an increasing problem with climate change. There will be adverse effects on wildlife and biodiversity, e.g. with wildlife corridors being cut off.	Nailsea and Backwell would be a far more realistic target to aim for. • Before any new housing is proposed there should be a clear policy led, not developer led, plan for all the necessary infrastructure improvements, including healthcare, GP surgeries, leisure facilities, schools and transport modifications. These should be planned prior to any new development. In particular the new road between Nailsea and Blackwell avoiding Station Road should be in place before more houses add more congestion and danger to Station Road.		
39231681	Priscille Lesne			No	• Positively	Unsure	Unsure	I object to the allocation of 582 homes on the Land South of Nailsea / Backwell Lake on the grounds that it is unsound, not effective, and fundamentally conflicts with local and national planning policy concerning Green Belt protection, environmental conservation, and			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					prepared Justified Effective Consistent with national policy			deliverability. 1. Green Belt Encroachment and Separation The site falls within the Green Belt and its development would constitute an unacceptable encroachment into the countryside and a failure to maintain the separation between the settlements of Nailsea and Backwell. Breach of Green Belt Purpose: The land is currently open, undeveloped countryside, fulfilling the Green Belt's primary function to prevent urban sprawl and safeguard the countryside from encroachment. This allocation significantly weakens the existing separation, leading to the coalescence of the two villages. Irreplaceable Landscape Character: The site forms a key part of the landscape character near Backwell Lake. Developing it will result in the permanent loss of this open space, negatively impacting the local visual amenity enjoyed by both residents and visitors. 2. Environmental Impact and Habitat Destruction The site's proximity to Backwell Lake makes it highly sensitive ecologically and unsuitable for large-scale development. The proposal poses a significant threat to protected species and critical habitats. Proximity to Backwell Lake: The lake and surrounding land are important ecological assets, forming a key wildlife corridor and habitat for numerous species, including bats, amphibians, and wildfowl. The development of 582 homes will introduce intolerable levels of light pollution, noise pollution, and run-off, permanently damaging the functionality of this vital area. Surface Water Management and Flood Risk: The site is explicitly identified as having flood risk issues, requiring a sequential test for access and significant surface water attenuation. The allocation is therefore inherently high-risk. Paving a large area for 582 houses will exacerbate downstream flood risk, contrary to the Plan's sustainability goals, regardless of the attenuation measures proposed. The Council must ensure that flood risk will not be worsened elsewhere as a result, a commitment that is difficult to guarantee with a development of this size near sensitive water bodies. The allocation of 582 dwellings on land south of Nailsea/Backwell Lake is unsustainable due to the irreparable environmental harm to an ecologically sensitive area, and the unacceptable breach of the Green Belt. The proposal is therefore Unsound. I urge the Council to remove this allocation and redirect future growth to genuinely sustainable locations that do not sacrifice the environment, green belt integrity, or compromise the long-term viability of the communities.			
62800833	M Lynch		None	No	Positively prepared Justified Effective Consistent with national policy	Unsure	Unsure	The traffic generated by these developments will exceed the capacity of all the roads serving Nailsea and Backwell, especially at junctions. There are no suitable roads for any increase in HGV & PSV traffic. Also all routes to and from Nailsea have several accident "black Spots". Consequently, the plan is UNSOUND as it cannot support economic growth, job creation and it does not include or allow for any capacity or safety improvements to the highway network. The area is crossed by many public footpaths that are extensively and frequently utilised for recreation and access to and from Nailsea to Backwell Swimming Pool. Any loss of these routes during or after the proposed developments will increase pedestrian traffic on Station Road, which currently has substandard unsafe footways, which are already extremely busy at the start and end of the school day. The plan seems to be largely developer led who do not have compulsory purchase powers and consequently many of the highways improvements needed to support this plan are not deliverable. Consequently, the plan is strategically UNSOUND.	Any new railway crossing, part of the East Backwell New Road (EBNR), will require a corridor about 40 meters wide for cuttings or embankments (which will significantly reduce the plan area designated for dwellings) to facilitate either an underline or overline bridge, which will also require a pumped drainage system. There appears to have been no consultation with National Rail on their requirements for an underline or overline bridge. Any underline bridge, which will require a pumped drainage system, would be a very high cost significant infrastructure provision and probably need to be constructed off line and slid into place with an overnight or weekend track closure. The plan is UNSOUND because, in the absence of any preliminary requirements of the track authority, it is very unlikely that the economics of developing the Site 1 is viable. A preliminary design for the EBNR would need to be developed to accurately identify the area of this site that could be developed for dwellings so that: a highway and bridge can be designed and built (with 5.3metres maintained headroom) that has sufficient traffic capacity and which can accommodate HGV and PSV vehicles. This will also be required to accurately assess any developer contributions towards these highway improvements.		
29293889	Alison Jones-Moran			No	Justified Effective Consistent with national policy	Unsure	Unsure	The proposed road from the A370, through the proposed new development in Backwell would not directly serve these new houses proposed for Nailsea. So there would be an unsustainable increase in traffic up station road, along Queen's road and into the Perrings to access this proposed housing development. There is no new plan for a road to connect this housing development to Nailsea and Backwell station, and if there were one in place it would be unsustainable as it would have to be built on flood plain, which is not realistic or sustainable as an infrastructure plan. The current plan for the first 2 parts of the road from the A370 to the railway line, under the line, and on to the station are already not costed and present huge engineering and cost challenges that are unrealistic. This part of the project would have to be approved and built first before an additional section could be considered to join up the station to the proposed Nailsea housing development. The new housing development would be on a flood plain, there are no analysis or costings for the additional engineering that would be required to overcome this problem and make the housing development viable. There are no additional school places proposed; Nailsea School is already oversubscribed or full, and with additional housing already underway in Backwell, Backwell School would not be able to take on children from Nailsea, which would be out of their catchment area. There aren't the infrastructure plans to accompany this considerable population growth: no extra leisure, transport, medical, dental or retail facilities are proposed. This would put an unacceptable pressure on existing infrastructure in the town. There is no needs or viability analysis for this extra development of 500+ houses in Nailsea. This housing development will further reduce and threaten the feeding area of the Brockley Maternity Roost and SSSI, with rare Lesser and Greater Horseshoe Bats relying on the land for food. Development would destroy valuable wildlife habitats and further harm biodiversity in one of the world's most nature-depleted countries.

62864801	Nancy Morgan			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The proposed figure of 1,817 new home in Nailsea will lead to a total over development of the town which is already suffering from too many homes with not enough facilities or infrastructure to support it. In the last few years, we have already had 350 homes built in Nailsea with more already planned for. There are no new amenities, infrastructure or services detailed with these plans, except for 3 new primary schools to be funded by developers. Where are the new leisure facilities, where are new Doctor surgery, Nailsea and Backwell does not have enough of these facilities to support our current population. The roads around the west end of Nailsea are already congested and difficult to navigate through with some areas being single track. Nailsea has no A roads and all routes into town are restricted. The proposed new road will not reduce traffic on Station Road but add to the traffic which is already congested. A link road which appears to go under a rail crossing seems extremely expensive and problematic. How can permission be granted to put 100 houses near the Moor End Spout nature reserve which is a site hosting many protected species and on Grade 2 Agricultural land to the south of Nailsea. Nailsea and Backwell villages are already over developed and under funded adding a further 1193 houses in Nailsea and 1800 in Backwell will only increase the problem. The plans put forward are not thought out or detailed enough.			
58575841	A Morris			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	The Infrastructure Delivery Plan lacks analysis and costings, and there are no funding guarantees for the new road or essential services for residents and businesses. I have concerns regarding the strategic growth location designation include the impact on the area's character, the loss of Greenbelt and high-quality agricultural land, the risk of flooding. Backwell Lake (Reservoir) and adjacent fields are on a floodplain, which floods regularly. Also there has to be major uncertainty over whether changes to the local road infrastructure can be funded and delivered on time to support the proposed housing			
62852993	W Morrison			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Introducing 1,817 new homes in Nailsea would overwhelm and massively over-develop the town. The expected population increase in population could not be matched in terms of infrastructure. The surrounding road-networks are already at capacity, a 55% (Nailsea) and 80% (Backwell) increase would grind the surrounding routes to a standstill. The new link road across Backwell Common, under rail crossing is likely to be extremely expensive and the engineering problematic due to the proximity to the River Kenn and railway line. Even so, it leads out on to the A370, which is already running at capacity at busy times. Other routes out of Nailsea and Backwell are narrow country roads not designed for the capacity increase, leading to possible safety issues. Additionally, the current rail network already struggles to support the capacity required at rush hour, and such an increase would leave the service heavily overcrowded. Nailsea & Backwell station already does not lend itself to overcrowding on the platforms without putting passengers at risk. Beyond that, other important infrastructure would not support the new development. The proposal for new primary schools is dependent on the developer and no locations have been identified. Additional demand on health facilities would be overwhelming. In terms of the general environment, such a large population increase and loss of greenbelt and agricultural land, together with dramatic change to the landscape will be detrimental. The loss of green space and natural habitats will be a huge loss to the area. Removal of the green space between Nailsea and Backwell (either side of the railway track) means the two locations become more or less as one - but with double the population. This may also have an affect on the wildlife found at Backwell lake, and possible water quality there (especially being a floodplain).

50605825	Vicky Moss			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I wish to object to the proposed development in Backwell, which, alongside the many other large-scale housing proposals in Nailsea and Backwell, is overwhelming the area and effectively merging two distinct communities. Both Nailsea and Backwell are already absorbing the highest levels of population growth within North Somerset, yet this expansion is not being matched by adequate improvements to local infrastructure and services. Essential community facilities are already under strain. Medical centres, secondary schools, and leisure facilities are stretched beyond capacity, and no plans have been presented to expand or support these services. Residents are routinely forced to travel to Weston-super-Mare for hospital and further education needs, highlighting the chronic imbalance in service provision across the district. The proposal also fails to meet the needs of an ageing population. There appears to be minimal provision for bungalows or sheltered accommodation, with development instead focused on family housing and high-density builds. Environmental concerns are equally serious. The proposed site lies on a flood plain, posing obvious risks to both housing and wildlife. The construction and subsequent urbanisation would severely impact local biodiversity, including the rare Lesser and Greater Horseshoe bats, which rely on the remaining habitat and feeding grounds in this area. Agricultural land is rapidly disappearing—if this and other developments proceed, only around 7% of North Somerset's farmland will remain. Backwell Lake, which supports a rich variety of birdlife, is one of the few wildlife havens left locally. Increasing housing density so close to this vital green space will disturb the habitat and diminish the wellbeing benefits it currently brings to residents. The existing transport infrastructure is wholly inadequate to cope with additional traffic volumes these developments will generate. Congestion on surrounding routes, including the A370, is already a significant issue. Government policy states that we must protect our best and most versatile agricultural land. This proposal—and others like it—appear to contradict that principle entirely. For these reasons, I strongly urge the council to reject this application.			
62777217	Barry Moss			Unsure	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell has already had 800 houses approved increasing the village size by some 40% - any additional houses would make the infrastructure for the village and surrounding areas completely unsustainable. Despite this increase, there is already a lack of school places and no investment in health services. The lack of infrastructure cannot sustain the proposed further houses. Backwell is not an employment hub and most residents commute on roads that get very congested at peak times already; further traffic will make the congestion and pollution even worse. Backwell Common and surrounding areas are prone to flooding which would be aggravated by further housing development. Further, Backwell Lake and adjacent fields where the new road and housing as planned are on a regularly flooding floodplain. Backwell alone has seen a population growth of some 80% and the wider Nailsea/Backwell are an even greater increase in population and associated road traffic impacts.			
58582945	Nailsea Action Group		Nailsea Action Group	No	• Justified • Effective	Unsure	Unsure	This is a consolidation of 4 areas on the 'sites' consultation. Nailsea Action Group is pleased that the wholly inappropriate application proposed by Gleesons in 2023 does not seem to feature in this Local Plan. However, it seems this this area has replaced the original Gleesons application, in spirit. This area has been the strategic gap between Nailsea and Backwell over many decades and our objection to building in this area still stands. There are many other reasons why this good agricultural land is not suitable for housing, and Nailsea Action Group has many reservations, some of which are listed below: 1) Access. The proximity of the end of Sedgemoor Close to the northern extremity of the site suggests that this might be applied for as an additional access point. This would turn a very quiet residential cul de sac into a busy road, and would necessarily also take up some land from one of the few green spaces in Nailsea. Needless to say, access to the town centre, and other town facilities will require the use of cars, due to the distances involved. 2) Commuting. The 500 dwellings in South Nailsea would have significant impacts on the issues detailed on the transport matters discussed above. 3) Flooding. This area is prone to flooding, particularly at the southern end.

The nearly 600 dwellings in South Nailsea would have significant impacts on the issues detailed on the transport matters discussed above. 3) Flooding. This area is prone to flooding, particularly at the southern end.	Remove this potential site from the plan		
57923841	Paul N			No	• Justified • Effective • Consistent with national policy	No	Unsure	I have already provided detailed comments in respect of the Backwell elements of the Plan under a separate comment. These additional comments are in respect of the proposed South Of Nailsea (Backwell Lake) development 1. The Plan (and previous versions thereof) have upheld the principle of maintaining a straegic gap between Nailsea (a town) and Backwell (a village).This is supported by a majority of local residents. This proposed development seriously reduces this strategic gap making it INCONSISTENT WITH POLICY 2. The proposed development wil exacerbate traffic issue between Nailsea and Backwell, already recognised as a concern. There are no proposals that appropriately address this making the plan INEFFECTIVE. 3. Backwell Lake and surrounding fields are proposed are on a floodpain, Even with current drainage ditches and the area of floodplain available to hold water, a number of the key surrounding roads such as Backwell Common and Backwell Bow flood regularly. Adding			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								further development to the floodplain will worsen this, and is therefore non-sensical and an INEFFECTIVE response to an existing problem.			
62810945	B Paige			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Until very recently I lived in Backwell, and my concern is that building to the south of Nailsea as proposed would cause extra water to run down to Backwell Lake. This then would very probably overtop and cause major flooding problems in Station Road. This would have a negative knock-on effect to the proposed building at Backwell east. Additionally, the lake is a wildlife sanctuary with otters, frogs, swans, and geese who would all be displaced or badly affected by the building.			
39305665	Marcus Plaw Persimmon Homes		Persimmon Homes Severn Valley	No	• Positively prepared • Consistent with national policy	Yes	No	North Somerset Council has a significant housing requirement. There is a need to deliver sustainable development promptly. There is also a housing supply shortfall which is significant and reflects a long-term persistent trend. Deliverable housing development is fundamental – and in allocating land for development it is essential that sites meet the quantum planned for over the Plan period. They should also plan for unmet need and the draft Local Plan is allocating development land albeit not in response to Bristol's unmet need. Transport evidence supporting the draft Plan recognises Nailsea as a settlement that benefits from a good level of access to local amenities, facilities and services whilst also having links to Bristol and its employment opportunities. Festival Way, a cycle route connecting Nailsea and the centre of Bristol, is "largely traffic-free" and would therefore have capacity for increased usage. Nailsea (and Backwell) also benefits from its train station with regular local services to Bristol and Weston-super-Mare. Whilst the Land South of Nailsea allocation is supported in principle, it is clear that adequate and well-planned access arrangements are required for it. Means of access should respond to the need for safe and convenient movement to services and facilities that will support the success delivery of the new homes and embrace sustainable planning and design principles. The draft Local Plan recognises at Schedule 1 that access is important for this allocation (and so its soundness). The Company recommends an amendment to the draft Local Plan (in the relevant policy and text) that includes reference to the use of an access at the junction of The Perrings and Youngwood Lane. The Company controls land south of the The Perrings along Youngwood Lane. Appended to these representations are access drawings options (Drawing Ref: P22-0470-SK01 and P22-0370-SK02) that illustrate options for access to the draft allocation site from Youngwood Lane. The scheme as shown illustrates how readily achievable a new access can be delivered to support development connectivity and permeability. The two drawings set out that there are multiple options for an access taken from this junction, which could facilitate a foot/ cycleway alongside the road or the road could serve a bus. The inclusion of this route as part of the allocation would support a number of the draft Local Plan's strategic priorities, including encouraging sustainable modes of movement; reducing car usage, encouraging walking and cycling and enhancing health and wellbeing. Providing access through the Company's land at the junction of The Perrings and Youngwood Lane and to this additional land presented for inclusion within the South of Nailsea allocation will enable better, more connected new development to be delivered on the edge of the town. See attachments: P22-0470_SK01_Access and P22-0470_SK02_Access	That the allocation and supporting text in the plan reference the use of the junction of The Perrings and Youngwood Land as a means of improving connectivity and sustainable movement.		P22-04~2.PDF P22-04~1.PDF
10388545	H Power				• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	This site will have a negative impact on the water flow to Backwell Reservoir. With more houses in the location the lake will almost certainly overtop and spill down the hill into Backwell. This could also have effect on the railway embankment. This proposal on this open space is plain wrong!			
27623137	Alan Raines		Mr.	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	North Somerset Council - Local Plan Comments Overview NSC have not properly considered the traffic impacts on the B3130 (including the Causeway). In particular, the significantly increased traffic volumes will use these Tickenham roads and lanes. These are currently operating at near their maximum capacity levels. The current situation is that these roads are unsafe for cyclists and pedestrians, with ensuing environmental and social consequences. These roads/lanes cannot support the increase in traffic volumes arising from new homes proposed in the Local Plan. Specifics The main factors being: - The Traffic corridor to and from the M5 junction 20 (utilising the B3130) will significantly increase traffic volumes through Tickenham village. - Road safety is severely compromised due to the lack of pavements, road geometry, and the width of roads etc. An example being, children going to and from Tickenham School are in severe danger due to the proximity of traffic, particularly the proximity of HGVs. This safety factor is relevant to all persons walking/cycling in the village. - There is already a large increase in HGV traffic through the village throughout the day, the HGV vehicles are enormous and unsuitable for the existing roads. They frequently traverse the centre road white lines whilst travelling through the village, causing other vehicles approaching from the opposite direction to take avoiding action. - The proposed cross rail connecting road will form an ideal conduit for traffic from further afield to use the B3130 corridor to the M5. This will be in addition to traffic commuting to/from the M5 to Bristol. - Local restrictions (which already occur), such as buses stopping, refuse vehicles, cyclists, road works, vehicles turning into and exiting properties, are all currently apparent in causing severe tailbacks, resulting in increased journey times, pollution issues.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								- The Data modelling criteria seem flawed: assumptions have been made with input values arbitrarily chosen; of course, this affects the outputs. The models need to be tested and calibrated against current traffic levels. The current overall approach to data modelling is at the Macro level (helicopter view). To get a true representation of vehicle capacity/movements on links, there needs to be a Micro-level analysis of the specific links. This modelling should include origin/destination matrixes and weather/local factors as stated above.			
62858113	R Ransome			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I do not consider this Plan to be sound because it fails to address a number of key issues which need to be take in to account when assessing the impact of adding such a large number of dwellings – and their residents – to the Nailsea and Backwell area. It may be true that we need to build more homes for people, but just erecting more and more dwellings without considering ALL the effects this will have on the surrounding area, as well as the resulting implications it will have for both existing and new residents in their day-to-day lives, is both socially and morally unacceptable. The proposed level of development planned for Nailsea will totally over-develop the town and seriously damage or destroy valuable wildlife habitats in the area. A large rise in the number of residents in the area will obviously place immense pressure on existing health and leisure provision in the town, but there will be no direct investment to cope with this pressure. What plans are there to address this? Equally, more residents will result in an increased demand for school places. The plan includes proposals for three new primary schools for Nailsea and Backwell, but these will be phased and no locations have yet been identified. Similarly, there will also be a resultant rise in the demand for secondary school places and this also needs to be planned for. Existing traffic congestion will only get worse, as the proposed new road will do nothing to help Nailsea residents, nor will it ease the route for traffic travelling from Backwell to the M5. Provision of the under rail crossing close to the River Kenn is likely to prove challenging and very costly – all for very little benefit to the majority of Nailsea residents. Traffic problems in the network of rural roads around Nailsea will only increase, with more vehicles using these narrow lanes, making them congested and unsafe for pedestrians, cyclists and horse riders. Increased levels of traffic using the known accident blackspots of Wraxall Hill, Portbury Lane and Stone Edge Batch will only make these routes more dangerous and add to the likelihood of accidents. There are no plans to improve these areas. The existing railway station is already not fit for purpose, as it remains inaccessible for people with mobility issues and challenging when travelling with young children. The proposed plans do not address these issues.			
14394785	A Ribbon-Miles			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	This land adjacent to the lake is flood plain and floods regularly, who would want to buy a house on this land? We need flood plains more than ever with our changing extreme weather. Building here will destroy wildlife habitats and threaten the Brockley Maternity Roost and SSSI of the rare Lesser and Greater Horseshoe Bats as well as countless other species. I will reiterate my earlier point made on the Land East of Backwell proposal which is that wildlife and being able to get out into nature was a saving grace of living in this area during the Covid pandemic. The nation seemed to understand then that this was a really important thing to be able to do for the nation's mental and physical health and yet here we are 5 years on and the proposal is to tarmac over the countryside. Presenting Backwell and Nailsea train station as a transport hub when it is not fully accessible to people with mobility issues or those travelling with children in prams undermines all of the proposals that centre on Nailsea and Backwell. More houses will create hundreds of more cars on the already overburdened local roads. There is no money to pay for better infrastructure, no costings nor serious analysis and this is a huge flaw in this proposal.			
30361825	K Riches			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Although most of this site is outside Backwell's Parish Boundary, the developer has proposed an access road across a flood prone, low lying route which is within Backwell's Parish Boundary. This is yet another large development which would exacerbate traffic issues in Backwell. This allocation would have a serious negative impact on a swathe of open country including Backwell Lake (Reservoir), in terms of character, setting and wildlife.	This allocation should only continue if Nailsea needs it, but the access should be off the Perrings and should NOT encroach into the Parish of Backwell.		
25650241	George Ricks			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	"the town (Nailsea) is fortunate enough to be large enough to meet the needs of modern families but small enough to foster community spirit" - Town Guide 2001 Continually adding on housing estates to the town periphery and adding to the population is spoiling the nature of the town. Once a sign on entering Nailsea, on Station Road, read "Welcome to Nailsea. Free Parking". With population increase townspeople now face parking charges, discouraging local shopping, no street cleaning and closed down public toilets. An ancient footpath from The Perrings to Backwell lake in public use for decades has been sealed off forcing people to walk down Bucklands Batch facing even more traffic especially if a new road joins by Backwell lake. Faced with a climate https://climateemergency.uk/ emergency, since the SARS-CoV-2 pandemic, politicians have permitted many more houses to be added to the town with almost all the new dwellings using fossil fuel boilers for heating. As houses are added further from the centre of the town, with no signs of bus stops, more people are likely to drive to shops mostly with fossil fuel powered vehicles instead of walking or cycling if living a reasonable distance from the centre. Suggest that instead new cities, with multi storey dwellings to reduce urban sprawl, plenty of green/blue spaces and designed in electrified public transport that can increasingly use renewable energy, be built to cope with non-EU immigration driving population growth.			
39205377	Frances Russell			No	• Consistent with	Unsure	Unsure	Development on the land south of Nailsea would lead to the coalescence of Nailsea and Backwell, and would not be a sustainable location in terms of transportation. Station Road is unsuitable for additional traffic. Nailsea and Backwell Station has short platforms, cannot accommodate additional passengers, and has no facilities for disabled users. Development in	If further residential development is required, sites should be identified on sustainable brownfield land.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					national policy			this location is likely to lead to adverse impact to Brockley Hall Stables SSSI, part of the North Somerset and Mendip Bats SAC. The development would be in conflict with paragraphs 154, 109-111 and 193 of the NPPF.			
62850689	Simon Russell			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I consider the allocation of Land south of Nailsea for 582 homes to make the Local Plan 2041 not sound, not legally compliant and not compliant with the Duty to Cooperate, for the following reasons. 1. The allocation is not justified There is no clear evidence that this is the most appropriate location for this scale of development when compared with reasonable alternatives. The site is made up of multiple parcels in different ownerships, includes land at risk of flooding, and already sits within an area with known drainage pressures. The Plan does not demonstrate why this complex and constrained site has been chosen ahead of less constrained options. 2. The allocation is not effective or deliverable The council's own wording confirms that: a single masterplan is required across multiple ownerships coordinated access arrangements must be secured investigation of access from The Perrings is still required any access across land at risk of flooding will need a sequential test and proof that it is safe for the lifetime of the development There is no evidence that landowners will work together under a single masterplan, that viable access can be achieved, or that flood risk can be satisfactorily managed. Without certainty on access, drainage, and cooperation between owners, the allocation is not effective or deliverable. 3. Flood risk and drainage issues are not resolved The Plan acknowledges: the need for surface water attenuation the need to assess the cumulative impact of all parcels on downstream drainage that improvements may be required to avoid increasing flood risk elsewhere However, no detailed flood risk assessment or drainage strategy is provided to show that 582 homes can be accommodated without increasing flood risk on or off site. The Plan therefore fails to demonstrate that the development can comply with national policy on flood risk and is not sound. 4. Infrastructure requirements are not fully evidenced or funded The allocation requires: land for and delivery of a new primary school early years provision contributions towards special educational needs and family centre services proportionate contributions to the Nailsea and Backwell Transport Strategy upgrades to public rights of way contributions to public transport There is no clear Infrastructure Delivery Plan setting out costs, funding sources, timing and responsibility for delivery of these items. Without a fully evidenced and funded infrastructure strategy, the allocation is not effective or justified. 5. Incomplete assessment of cumulative impacts The site is part of a wider pattern of significant growth at Nailsea and Backwell. The Plan does not clearly assess the cumulative impact of this allocation alongside other housing sites on: the local roads and junctions public transport capacity school places and healthcare services downstream drainage and flood risk This lack of cumulative assessment means the evidence base is incomplete and the Plan is not robust or legally compliant. 6. Inadequate demonstration of Duty to Cooperate Given the scale of growth proposed at Nailsea and Backwell, there should be clear evidence of cooperation with neighbouring authorities and infrastructure bodies on: transport and highway impacts beyond Nailsea	To make the North Somerset Local Plan 2041 legally compliant, justified and sound in relation to the allocation at Land south of Nailsea, the following modifications are required. 1. Remove or significantly reduce the allocation until a deliverable access strategy is evidenced The Plan must provide: a confirmed, viable and safe access solution a sequential flood risk test for any proposed access full engineering feasibility for access via The Perrings evidence that access can be delivered across multiple land ownerships Without this, the site is not deliverable. 2. Provide a complete and costed Infrastructure Delivery Plan Before the allocation can be considered sound, the Plan must include: the delivery arrangements and funding source for the new primary school confirmed contributions and capacity planning for early years, SEN and family centre services evidence of how local health and education services will accommodate additional demand a fully worked transport solution linked to the Nailsea and Backwell Transport Strategy This evidence must be published and open to consultation. 3. Produce a detailed drainage and flood risk assessment for the whole site The modifications must include: a site wide flood risk assessment covering all parcels a cumulative drainage impact assessment confirmation of downstream capacity a strategy showing how surface water attenuation will prevent increased flood risk off site This is required for legal compliance under national flood risk policy. 4. Require a binding masterplan with evidence of landowner cooperation The Plan must show that: all landowners are willing to participate in a single comprehensive masterplan delivery can be coordinated across ownership boundaries infrastructure and access routes can be secured across all parcels Without this, the site remains undeliverable and the Plan is not effective. 5. Reassess alternative sites and provide evidence of reasonable alternatives To comply with the tests of soundness, the Plan must: demonstrate why this heavily constrained, multi-ownership site has been chosen compare it against less constrained alternatives provide transparent evidence of the site selection process This modification is required because justification is currently insufficient. 6. Strengthen alignment with national policy on environmental protection Modifications should include: ecological surveys for the entire allocation protection measures for wildlife corridors mitigation for impacts on nearby habitats and floodplain areas This ensures compliance with the National Planning Policy Framework.	I do not support the allocation at Land south of Nailsea and my overall position is firmly against this proposal. However, in answering this question, I acknowledge only the following limited points, which relate to the general plan making process rather than the site itself. I support: 1. The need for an up to date Local Plan Having an adopted Local Plan is necessary to manage development across North Somerset and to reduce speculative, unplanned applications. This statement of support is for the process only and not for the allocations being proposed. 2. The principle that infrastructure should be planned alongside growth I agree with the requirement that any significant development must be supported by infrastructure such as schools, drainage strategies and transport improvements. My concern is that this has not been evidenced or secured for the Land south of Nailsea allocation. 3. The use of public consultation I support the fact that the public is being given the opportunity to comment on the Plan. This is an essential part of the legal process. Important clarity Nothing in this statement indicates support for the allocation at Land south of Nailsea or for any element of the local plan that affects Nailsea or Backwell. My position remains that the proposed allocation is unsound, unjustified and undeliverable.	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								rail and regional bus provision education and health service planning wider catchment flood and drainage strategies The Plan does not present sufficient evidence of this cooperation in relation to Land south of Nailsea, so the Duty to Cooperate has not been adequately demonstrated. Conclusion For these reasons, I consider that the allocation of Land south of Nailsea for 582 homes makes the North Somerset Local Plan 2041 not sound, not legally compliant and not in full compliance with the Duty to Cooperate.	7. Provide a realistic delivery timetable based on evidence The Plan must modify the timeline to reflect: the uncertainty around access and drainage solutions the need for new school delivery the coordination required across multiple landowners The current delivery expectations are not supported by evidence. Conclusion To make the Local Plan 2041 legally compliant and sound, the Council must provide full evidence for access, drainage, flood risk, infrastructure and landowner coordination, and must reassess the justification for allocating Land south of Nailsea in its current form.		
62529793	R Snook			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	1. The proposed figure of 1,817 new homes in Nailsea would lead to a total over development of the town. 2. The proposed new road would not serve Nailsea's traffic or relieve congestion on Station Road, nor would it help traffic travelling from Backwell to the M5 3. The new link road, under a rail crossing is likely to be extremely expensive and the engineering problematic due to the proximity to the river Kenn 4. Although 3 new primary schools are proposed for Nailsea and Backwell, they will be funded through developer contributions and will be phased with no locations identified as yet 5. Additional development will place immense pressure on the towns existing health and leisure provision. There will be no direct investment to combat this pressure 6. Greenfield Crescent playing field is not protected under Local Green Space Policy LP15 7. Grade 2 agricultural land which is high yielding and of very good quality will be lost permanently through housing development to the south of Nailsea 8. All proposed development sites in Nailsea have been assessed for foraging locations for the rare greater and lesser horseshoe bats which are protected species 9. One hundred homes are proposed adjacent to Moor End Spout nature reserve a site hosting many protected species. Development would destroy valuable wildlife habitats and further harm biodiversity in our area 10. Transport modelling shows there will be notable increases in vehicle movements on the network of rural lanes around Nailsea. There are no clear workable plans to mitigate this. The lanes will become congested and unsafe for pedestrians, cyclist and horse riders. 11. There are no plans to improve the accident blackspots at Stone Edge Batch, Wraxall Hill or Portbury Lane all of which will see a marked increase in vehicles 12. Development is proposed west and south of Backwell Lake. The new roads and housing will be in the floodplain which actually does flood regularly 13. The railway station is not fit for purpose as a transport hub, it remains unaccessible for people with mobility issues and presents serious challenges when travelling with young children			
62772609	Gail Scott-Wilson		Resident	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	We have lived in Stone Edge Batch for 21 years and are fully aware of the increase in the volume of traffic in the Tickenham area. We live on the corner where the B3128 meets the B3120. The B3130 at this junction is single lane. We witness on a daily basis pentaclicans blocking the road and creating jams on Tickenham Hill and Clevedon Road. We hear cyclists screaming abuse at motorists who are so frustrated they almost run them over and emergency services - yes, ambulance, police and fire services - they're all here - and oh then we have the double decker buses. All of this impacts hugely on our quality of life. We have to stop conversation in the garden because of the traffic noise and the house rattles as lorries head for the junction. When I let the dog it at night diesel fumes fill the air. It is abundantly clear from where we live that the roads are unsuitable for these lorries and double decker buses and further increase in traffic if more houses are to be built the added volume would be disastrous.			
62772481	Gerry Scott-Wilson		Resident	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I have lived in Wellhouse Farm, Stone Edge Batch for over 20 years. During this time we have seen a gradual build up of traffic particularly heavy goods vehicle passing our house. Over the last four or five years the volume of traffic has grown exponentially due in part to much longer lorries being allowed on our roads and also the increase in courier vehicles delivering online purchases. We are situated between the B3128 and the B3130, the bottom of Tickenham Hill and the Stone Edge Batch pinch point to Naisea. We witness on a daily basis long tailbacks of traffic on Tickenham Hill at the T Junction where we live. from our garden we witness numerous times during the day traffic snarl ups caused by the pinch point between Lavender Cottage and the perimeter wall of our neighbours at Stonewell Barn on the B3130. There is no doubt in our minds that the existing road infrastructure is already reaching a critical stage and would be unable to cope with any future increase in traffic volume			
8052353	Diane Snape			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I strongly object to the identification of Nailsea and Backwell as a proposed strategic growth area. Large scale development at these locations is not deliverable or sustainable for many reasons including: 1. Very limited existing or potential new employment in these locations, resulting in significant out-commuting. 2. Located in what is essentially a narrow valley, with flood plain in the valley bottom and steep hills to either side, placing major constraints on the development of new infrastructure, which even if feasible would at best be very expensive to develop. 3. Heritage assets and wildlife habitats including bat conservation areas. 4. Loss of scarce high quality agricultural land. 5. Impact on heritage assets/listed buildings including numerous farms. 6. Impact on local nature reserves such as Backwell Lake. 7. Surrounded by sensitive landscapes, heritage assets such as Tyntesfield, Cadbury Camp, and Tickenham Moor SSSI 8. Ageing population, with many in retirement or reaching retirement age. Over the coming few years, a large number of family homes will be vacated by this ageing population, providing opportunities for families to move in. Large-scale new development is not needed. The 1211 new dwellings now additionally proposed on top of the substantial numbers already			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								committed, built in the past few years and/or under construction would lead to great strain on infrastructure of all kinds, including transport. This plan is unsustainable and undeliverable. Transport Transport hub and rail I strongly object to the proposed expansion of Nailsea and Backwell railway station on Station Road. It is not suitable for development as a future transport hub. There is insufficient space for increased parking and bus interchange facilities. The current station is very small and basic and there is very limited scope to improve the facilities in its current location. It is inaccessible for people with mobility challenges and is difficult to navigate when travelling with young children. Additionally, any incursion onto the land to the east of Station Road (for additional parking, bus hub, for example) would adversely impact the setting of the listed Moorside Farm A better solution would be to relocate the station from its current, highly constrained location to a new location further west where space is less constricted and it is more feasible to establish a transport hub, with appropriate walking/cycling and bus connections to the Grove Farm and Youngwood Lane developments. This could also provide a new multi-modal railway crossing point west of Nailsea and Backwell, to the west of the Backwell crossroads, which could be delivered as a below ground structure, as described in s 4.3 of the Nailsea and Backwell Local Transport Strategy. It would also facilitate improvement of the rail service by providing longer platforms and lift/disabled access and extended parking. Link road I strongly object to the proposal to construct new Cross Rail Link from the south of Nailsea to the east of Backwell, from Station Road near the station, in an easterly direction, to connect with the A370 East of Backwell. Such are the complications and enormous costs associated with such a road that it has previously been struck out of plans as unfeasible. The route would impact many hundreds if not thousands of residents in South & East Nailsea and North Backwell/Backwell Common/Farleigh, with the pollution, noise, light pollution and visual intrusion being magnified by the terrain, which necessitates the siting of the highway in the bottom of the valley (with incumbent flood risk: Flood Zone 3) and most of the properties sitting above it, with no possibility of adequate mitigation. N.B: Impact on residents and environment are missing from the list of considerations on page 26 of the Nailsea and Backwell Local Transport Strategy, and in section 4.7.4, next steps, mitigations for residents (which are critically required but undeliverable) are completely missing. These adverse effects, whilst already substantial for the under-bridge concept (which was previously under consideration but now seems to have been ruled out due to the flood risk which would be very difficult and expensive if not impossible to overcome) would be magnified many times by the overbridge structure which is now contemplated, involving a bridge 12.5m high, with ramps 250m long on either side, as described on page 28 section 8.4.3.12 of the Nailsea and Backwell Local Transport Strategy. Such a structure would also result in significant visual intrusion into the landscape, including sight lines from Tyntesfield, All Saints Church Wraxall and St Andrews Church Backwell. This is underlined by the Landscape Sensitivity Assessment, Nailsea, s.6.2.58 on page 34 which defines the land as high sensitivity: “…and to the south-east of the town is gently sloping and vegetation on field boundaries is generally limited. Consequently, this land is visually prominent. In addition, there is existing visual coalescence between Backwell Common and Nailsea in some locations. Owing to the above, this land is of high sensitivity.” The proposed road would cross sensitive landscape, located in the green belt, consisting of prime agricultural land and would also pass close to Backwell Lake Local Nature Reserve and local green spaces/wildlife habitats ie Backwell Common and Trendlewood Park/Kenn Hedge. It would have a significant impact on the setting of the Listed Heritage Asset of Moorside Farm. Note: the “Low” sensitivity assessment for Moorside Farm in the Heritage Sensitivity Paper, page 13, East Backwell, completely neglects to consider the impact of the proposed road link. Similarly, the “Low” sensitivity assessments for Dibdens Farm, Cider Farm and Old Farm completely neglect the impact of the proposed road on the setting of these Heritage assets and their surroundings ie Backwell Common. The intersection of the route with Station Road would lead to significant incremental congestion and pollution close to residential properties and the Backwell Lake Nature Reserve due to standing traffic waiting for right of way. The increased traffic, and the need to negotiate the junction, would substantially increase danger to pedestrians and cyclists, particularly students at Backwell primary and secondary schools and Nailsea commuters using the station. It would rapidly become a very busy and congested route, leading to major noise and air pollution. It would increase “rat running” through the area, particularly from M5 Junction 19 to Bristol Airport, an issue which is already problematic. This effect ould be exacerbated by the proposed associated measures to discourage traffic from using Station Road, Backwell. It would also funnel the increased northbound (Nailsea-bound) traffic generated by the proposed East Backwell development into the constriction of Bucklands Batch on the South side of Nailsea. This is a narrow section of road which has already been widened to the extent possible by incorporating a strip of the frontage of each property along its East side, and has been the scene of numerous accidents causing injury to cyclists and pedestrians despite the addtion of a one-way cycleway. There are no firm costings or funding guarantees for the proposed new road in the Infrastructure Delivery Plan.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								If the East Backwell housing site allocation (to which I am submitting my objections concurrently) is dropped, the option to develop a North Nailsea Link Road should be seriously considered. This option would provide an onward link from Clevedon Road to the B3130 Nailsea to Wraxall road, serving the development sites to the West and North West of Nailsea already allocated within the local plan to 2026 and the industrial estates in the West and North of Nailsea, as well as the proposed allocations in North and West Nailsea, and deflect traffic from the Nailsea developments away from the congested centre of Backwell, avoiding the massive infrastructure complexity, cost and lead time to deliver a new link road. It would also maintain the separate identity and character of Nailsea and Backwell by avoiding the construction of a major link road in the green belt between the settlements. It would improve the routings for fire appliances, ambulances and police vehicles, improving safety and taking this inappropriate traffic away from Nailsea town centre. Such traffic will no doubt be forecast to increase significantly as a result of the new developments.			
62865217	K Snook			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	1. The proposed figure of 1,817 new homes in Nailsea would lead to a total over development of the town. 2. 8062305	John Speight			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	1)The proposed new road seems to be badly planned and uncosted . The present road under the railway is subject to a height restriction and without extensive landscaping the new road will not be an improvement and will also have to cross the river. 2)Many houses on the new estates are unsold. The demand in Nailsea is for smaller housing with facilities to suit the elderly (not homes). There are many family houses which were sold in the 1970 expansion which could be freed up as their owners face changed circumstances. We do not require estates full of 4,5 and 6 bedroom houses. 3)There are no plans to alleviate the bottlenecks on Nailsea's major roads and much of the proposed traffic will end up on the country lanesThe causeway has already become a rat run and with no speed restriction and no enforcement of the weight limit it has become a dangerous place for pedestrians. This could well be repeated on many of the other smaller routes. 4) what guarantee will there be that the removal of the greenbelt and its relocation will not set a precedent and be quoted at the convenience of any future development. 5) There are issues with the biodiversity of the area and the Environmental area controlled by the NEWT charity although not scheduled for development will be subject to major disruption and may result in the displacement of species including the otters that reside there. 6)The developers have given the usual promises re the infrastructure(possible two schools)What guarantee will we get that this will happen if they are not constructed before the estates are built. There are many other facilities that Nailsea will need if it is to absorb this housing (Doctors : dentists ; the railway station; and bus services to outlying parts of the town to name but a few. 7)Much of the area listed especially that around the pound lane area acts a soak away during the times of heavy rain. The climate forecasts are that this will continue . Although this area is not designated as a flood plain it acts as one and extensive development will greatly increase the risk of flooding for the new housing and the present surrounding areas. 8)Greenfield crescent is used as a sports field for the youth of Nailsea . Its loss would be a severe blow to a town which has precious few facilities for its children . If young families are to be encouraged into the proposed housing the need for these facilities will be even greater.			
62850721	Dan Sweet			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I wish to object to the proposed development on the grounds that it is neither sustainable nor in the long-term interests of Backwell or its residents. Local employment opportunities are extremely limited, yet the proposal offers no coherent plan for how new residents would secure work locally or how they would travel to employment without generating substantial additional car journeys. This lack of strategic foresight creates a fundamentally unsustainable pattern of development. Moreover, the proposals do nothing to improve access to genuinely affordable housing for local people. Instead, they serve primarily the financial interests of national housebuilders, who stand to profit from large-scale construction while offering little benefit to those already living in the area. The development represents short-term commercial gain rather than a meaningful or ethical response to local housing needs. The scheme would also result in the permanent loss of Grade 1 agricultural land, currently used for food crops and grazing. Only 7% of this high-quality land remains in North Somerset, making its protection vital for local and national food security. Government policy clearly states the need to safeguard “our best and most versatile land,” yet this proposal would sacrifice it for housing that is neither affordable nor justified. Once lost, this farmland—and the wildlife habitats it supports—can never be recovered. The irreversible destruction of such a valuable resource for the sake of developer profit represents a clear failure to prioritise long-term community resilience or environmental responsibility.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								Backwell already has 800 new houses approved, equating to a 40% increase in the village's size. Adding a further 1,000 homes would amount to extreme overdevelopment. There is no evidence that the scale of growth proposed is either needed or deliverable. Crucially, despite the volume of new housing planned, local people are not being provided with housing that meets their financial realities. The development, much like others recently approved, risks further inflating local prices and pushing residents—especially younger families—further out of the area. Meanwhile, Backwell is already experiencing a deficit in school places, and there are no firm commitments to invest in healthcare, leisure facilities, or transport infrastructure. Despite this, the village has been allocated a higher proportion of new housing than any other village in North Somerset, and even more than some towns. No needs assessment or viability analysis has been provided to justify this disproportionate burden. Backwell is not an employment hub, and most residents commute, yet no social cohesion assessment has been completed. The proposals would also severely harm local biodiversity. The fields earmarked for development form part of a key habitat corridor in one of the world's most nature-depleted countries. They are relied upon by protected species, including the rare Lesser and Greater Horseshoe Bats associated with the Brockley Maternity Roost and the nearby SSSI. The loss of this habitat would be permanent and impossible to mitigate effectively. The proposed new road does not offer a realistic solution to existing traffic congestion in Nailsea or on Station Road, Backwell Common, or Chapel Hill. Constructing it under or over the railway would be extraordinarily expensive and potentially unfeasible, yet the Infrastructure Delivery Plan lacks the necessary analysis, costings, or confirmed funding. This further highlights the speculative nature of the proposals. Flood risk is an additional major concern. Backwell Common and surrounding areas already flood regularly, and the fields adjacent to Backwell Lake (Reservoir) lie directly on a floodplain. Further development would exacerbate these risks significantly. The designation of this area as a strategic growth location raises serious concerns regarding landscape character, the loss of Green Belt and high-quality agricultural land, and the uncertainty of delivering essential infrastructure in time to support such extensive growth. Although government policy requires 50% affordable housing on Green Belt land, this in turn reduces developer contributions towards infrastructure, placing even greater pressure on already overstretched local services. Finally, the railway station—often cited as justification for dense development—remains wholly inadequate as a transport hub. It is inaccessible for those with mobility issues and difficult for families with young children, making it unrealistic to rely on as a primary transport solution for a development of this size. In summary, these proposals place developer profit before the needs, wellbeing, and future resilience of the community. The irreversible loss of valuable farmland and wildlife habitat, combined with a lack of infrastructure, affordability, and long-term planning, renders the development unsustainable and inappropriate. I therefore strongly urge that this application be refused.			
51427393	Zehra Tahtakilic			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	This area is prone to flooding which you acknowledge. I am aware that some homes in Backwell that are close to behind the lake already have issues with flooding. The proposed area is just not fit for building in my opinion. We're talking about adding lots of concrete to a flood zone so that left over areas of earth will reach saturation much quicker. I don't think it would make for sound, flood-proof homes. Also, building there would go a long way towards blurring the border between Nailsea and Backwell.	I don't think this area is safe to build homes due to flood risks. I doubt that can be legally compliant. I have no suggestions to mitigate for this site. I just think it's wrong/unsafe building on a flood zone.		
62864097	Joe Tallis-Chisnall			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	I object to the proposed housing allocations and associated road infrastructure in and around Backwell and Nailsea. In addition, I consider that the Local Plan fails the tests of soundness, is not legally compliant, and does not meet the Duty to Cooperate requirements. The Plan is not positively prepared. It relies on large-scale housing development in Backwell and Nailsea without a credible or funded transport and infrastructure strategy. The road upgrades and new links referred to in the Plan, including connections to the A370 and access improvements near Nailsea and Backwell Station, have no confirmed funding, no defined delivery mechanism, and no realistic prospect of being completed within the plan period. New housing would therefore come forward without the infrastructure required to support it, contrary to national policy expectations for infrastructure-led development. The Plan is not justified. The Council has not demonstrated that reasonable alternatives have been properly assessed. Alternatives such as greater use of brownfield land, directing growth toward areas with stronger transport capacity, or reducing pressure on Green Belt villages have not been robustly evaluated. The scale of proposed development in Backwell and Nailsea is disproportionate to the size, character, and environmental sensitivity of these settlements. The Plan has not evidenced exceptional circumstances for the release of Green Belt or high-quality agricultural land, nor has it justified why these areas should bear such a large share of district housing growth. The Plan is not effective. Many of the proposals rely on uncertain or speculative infrastructure provision, including highways, sustainable transport improvements, school capacity increases, and healthcare expansions. These depend on future work, funding bids, or third-party agencies without firm commitments. Without guaranteed and deliverable infrastructure, the Plan's growth strategy cannot be implemented as written. The result is an ineffective plan that will fail to meet its own objectives. The Plan is not consistent with national policy. The NPPF requires protection of the Green Belt unless exceptional circumstances are demonstrated, promotes sustainable transport, and expects local plans to create sustainable patterns of development. The proposed allocations around Backwell and Nailsea would create car-dependent extensions with no realistic prospect	To make the Local Plan legally compliant and sound, the following modifications are necessary. The scale of development proposed for Backwell and Nailsea should be reduced to a level that can be supported by realistic, funded and deliverable infrastructure. The Plan must not rely on speculative or uncosted transport schemes. The Council must produce and publish a credible, evidence-based transport strategy for the A370 corridor, Nailsea and Backwell, setting out the specific road, public transport, walking and cycling improvements required, who will deliver them, how they will be funded, and when they will be delivered. Housing allocations dependent on unfunded infrastructure should be removed or reduced. The Plan must re-evaluate all reasonable alternatives for distributing growth, including greater focus on brownfield development and areas with stronger transport capacity. A clear, robust assessment of these alternatives must be included in the Sustainability Appraisal and Green Belt review. Proposed Green Belt release around Backwell should be withdrawn unless exceptional circumstances can be demonstrated through a complete, transparent and properly evidenced process. This requires a full comparison of all alternative development options. The Infrastructure Delivery Plan must be strengthened to include firm commitments from transport bodies, education authorities, health services and utility providers, demonstrating that required infrastructure is deliverable within the plan period. The Council must provide evidence of active, ongoing and constructive Duty to Cooperate discussions with neighbouring authorities and key	Not at all applicable.	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								of achieving sustainable travel patterns. Green Belt release is proposed without clear evidence of exceptional circumstances or of the alternatives considered and discounted. The Plan therefore does not align with core NPPF principles. The Plan is not legally compliant. The evidence base, particularly relating to transport assessments, sustainability appraisal, Green Belt review, and infrastructure delivery, is incomplete and insufficient. Consultation on changes affecting Backwell and Nailsea has been inconsistent and has not met the expectations set out in the Council's own Statement of Community Involvement. Exceptional circumstances for Green Belt release have not been demonstrated in a manner consistent with statutory requirements. The Plan does not meet the Duty to Cooperate. There is no convincing evidence of active, ongoing, and constructive engagement with neighbouring authorities or key infrastructure providers such as National Highways, WECA, Network Rail, education authorities, or health service providers. There are no binding agreements or shared strategies in place to support the scale of development proposed. Key stakeholders appear not to have reached any meaningful consensus on the infrastructure needed to support the housing growth in Backwell and Nailsea. This falls short of the statutory Duty to Cooperate. I also object on site-specific grounds. The Backwell and Nailsea proposals would more than double the size of Backwell and place severe strain on an already congested road network including the A370, Station Road, and access to Nailsea and Backwell Station. Local services including schools, GP practices, and public transport are already under pressure and no viable plan is provided to expand capacity. The proposals would result in the loss of valuable agricultural land, important habitats, and areas at risk of surface-water flooding. I request that the Council removes or reduces the Backwell and Nailsea housing allocations, reassesses the spatial strategy to make better use of brownfield land, ensures infrastructure is deliverable before allocating major growth, and undertakes proper Duty to Cooperate engagement with evidence of outcomes. Until these issues are addressed, the Local Plan cannot be considered sound, legally compliant, or fit for submission.	infrastructure agencies, including the outcomes of these discussions. Where agreements are absent, the Plan must not rely on external infrastructure that has not been formally supported. Site allocations around Backwell and Nailsea must be reconsidered to avoid the loss of high-quality agricultural land, environmentally sensitive sites and locations with known flood risk constraints. The spatial strategy should be revised so that settlement expansion does not double the size of existing villages or produce car-dependent growth patterns that conflict with national policy on sustainable transport. Only by making these modifications can the Plan become justified, effective, positively prepared, legally compliant, and consistent with national policy.		
62864097	Joe Tallis-Chisnall			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	This representation submits that the North Somerset Local Plan 2041 is unsound, not legally compliant and fails the statutory Duty to Cooperate. The strategy for accommodating significant growth in Backwell and Nailsea, including allocations and cumulative schemes such as South Nailsea (Gleeson's), is unsupported by the evidence base, contrary to national policy and incapable of effective delivery. The Plan fails all four tests of soundness under NPPF paragraph 35. First, it is not positively prepared. The Plan's spatial strategy is not based on a demonstrably deliverable infrastructure framework. It relies heavily on speculative transport interventions in the A370 corridor and around Nailsea and Backwell Station without secured funding, delivery mechanisms, or evidence of capacity improvements sufficient to support the scale of growth proposed. This conflicts with the NPPF requirement for infrastructure-led development. Second, the Plan is not justified. The Sustainability Appraisal and evidence base do not demonstrate that reasonable alternatives have been objectively assessed, particularly in relation to the concentration of development in Backwell and Nailsea despite their known constraints. The proposed release of high-quality agricultural land, Green Belt, and land performing Strategic Gap functions is inadequately evidenced, and exceptional circumstances for Green Belt release have not been robustly established in accordance with national policy and case law. The assessment of alternatives is insufficiently detailed and does not demonstrate comparative advantage over brownfield or more sustainable locations. Third, the Plan is not effective. The delivery of the spatial strategy depends on infrastructure and services that lack confirmed commitment from statutory bodies including National Highways, WECA, Network Rail, education authorities and NHS bodies. The Infrastructure Delivery Plan does not provide evidence that the mitigation necessary to make the proposed allocations deliverable within the plan period is secured or realistically achievable. The reliance on future, unquantified schemes renders the strategy ineffective. Fourth, the Plan is not consistent with national policy. The concentration of development in locations with inadequate sustainable transport provision contradicts NPPF policies seeking to reduce car dependency and promote modal shift. The proposed erosion of the Strategic Gap between Nailsea and Backwell conflicts with national policy objectives relating to settlement identity, landscape protection and preventing settlement coalescence. The Plan promotes development patterns that are not aligned with climate and sustainable transport principles within national policy. The Plan is also not legally compliant. The evidence base is incomplete and does not meet statutory requirements for plan-making. The Sustainability Appraisal fails to provide a clear audit trail demonstrating how reasonable alternatives were assessed and why preferred options were chosen. The Green Belt assessment fails to articulate exceptional circumstances in accordance with section 13 of the NPPF. Consultation has not been undertaken in accordance with the Council's Statement of Community Involvement, as key elements of the strategy affecting Backwell and Nailsea have not been transparent nor subject to adequate public engagement. The Duty to Cooperate has not been met. There is insufficient evidence of constructive, active and ongoing engagement with neighbouring authorities or key infrastructure bodies as required under sections 33A and 20(5)(c) of the Planning and Compulsory Purchase Act 2004. In particular, there is no clear record of agreed outcomes relating to transport capacity, strategic infrastructure dependencies or cross-boundary housing and employment relationships. The Plan's reliance on external infrastructure bodies without agreed commitments indicates a failure of the Duty to Cooperate. On a site-specific basis, the growth proposed for Backwell and Nailsea would materially worsen congestion on constrained road networks including the A370 and key junctions at Backwell crossroads and Station Road. It would place unsustainable pressure on schools, primary healthcare and public transport services, contrary to the NPPF's requirements for adequate service capacity. The cumulative effects of allocations, when combined with speculative applications such as South Nailsea (Gleeson's), would result in loss of valued open	To make the Local Plan legally compliant and sound, the following modifications are necessary. The scale of development proposed for Backwell and Nailsea should be reduced to a level that can be supported by realistic, funded and deliverable infrastructure. The Plan must not rely on speculative or uncosted transport schemes. The Council must produce and publish a credible, evidence-based transport strategy for the A370 corridor, Nailsea and Backwell, setting out the specific road, public transport, walking and cycling improvements required, who will deliver them, how they will be funded, and when they will be delivered. Housing allocations dependent on unfunded infrastructure should be removed or reduced. The Plan must re-evaluate all reasonable alternatives for distributing growth, including greater focus on brownfield development and areas with stronger transport capacity. A clear, robust assessment of these alternatives must be included in the Sustainability Appraisal and Green Belt review. Proposed Green Belt release around Backwell should be withdrawn unless exceptional circumstances can be demonstrated through a complete, transparent and properly evidenced process. This requires a full comparison of all alternative development options. The Infrastructure Delivery Plan must be strengthened to include firm commitments from transport bodies, education authorities, health services and utility providers, demonstrating that required infrastructure is deliverable within the plan period. The Council must provide evidence of active, ongoing and constructive Duty to Cooperate discussions with neighbouring authorities and key infrastructure agencies, including the outcomes of these discussions. Where agreements are absent, the Plan must not rely on external infrastructure that has not been formally supported. Site allocations around Backwell and Nailsea must be reconsidered to avoid the loss of high-quality agricultural land, environmentally sensitive sites and locations with known flood risk constraints. The spatial strategy should be revised so that settlement expansion does not double the size of existing villages or produce car-dependent growth patterns that conflict with national policy on sustainable transport. Only by making these modifications can the Plan become justified, effective, positively prepared, legally compliant, and consistent with national policy.	N/A	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								space, increased surface-water flood risk, ecological harm and the erosion of the Strategic Gap, all of which represent material planning harms insufficiently mitigated by the Plan. In summary, the Plan requires fundamental modification. These include the removal or substantial reduction of allocations around Backwell and Nailsea; the protection of Green Belt and Strategic Gap land; a reassessment of alternatives prioritising brownfield and sustainable transport corridors; a fully evidence-based and funded transport strategy; and demonstrable Duty to Cooperate compliance. Without such modifications, the Plan cannot proceed as sound or legally compliant.			
62865249	Joe Tallis-Chisnall			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	I object to the inclusion or implied reliance on development in South Nailsea (Gleeson's site) as part of the North Somerset Local Plan 2041 because it contributes to an overall housing strategy that is unsound, not legally compliant, and inconsistent with national planning policy. This site and its cumulative impact with other large allocations around Nailsea and Backwell would contribute to disproportionate housing growth in an area already under strain from multiple high-impact development proposals. The Local Plan strategy does not evidence exceptional circumstances for large-scale development in this location and fails the tests of soundness: it is not positively prepared, not justified, not effective, and not consistent with national policy (NPPF para 35). Specific concerns include: Transport and accessibility: South Nailsea is poorly served by sustainable transport modes, with limited public transport, constrained local highway capacity and heavy existing congestion. The Local Plan does not show deliverable, funded mitigation that would address the additional travel demand generated (NPPF paras 104–105). Infrastructure delivery: There is no compelling evidence that essential services—schools, healthcare, utilities—can accommodate the growth envisaged without significant delay or additional investment, breaching the requirement that plans should ensure delivery of infrastructure to support new development (NPPF paras 92, 157). Environmental impacts: Development here would result in loss of valued open green space and would harm valued habitats and biodiversity in a district already recognised as nature-depleted, without credible ecological mitigation or net gain proposals (NPPF paras 174–180). Flooding and drainage: South Nailsea has known surface water and drainage constraints; current Sustainable Drainage Systems (SuDS) plans are demonstrably insufficient and do not protect existing residents from increased flood risk (NPPF paras 159–167). nailseaactiongroup.org.uk Community and town form: Allowing large growth sites such as South Nailsea/Gleeson's without integrated planning undermines community cohesion, erodes green gaps between settlements, and is inconsistent with sustainable settlement patterns promoted by national and local policy. The Local Plan has not adequately justified why this site (and other large allocations around Nailsea) should be prioritised over alternatives, nor demonstrated that the cumulative impacts are manageable. For these reasons, the Plan in its current form cannot be considered sound or legally compliant.	To make the Local Plan legally compliant and sound in respect of the South Nailsea / Gleeson's site and its impacts, the following modifications are necessary: Remove or significantly reduce the reliance on large allocations at South Nailsea / Gleeson's and other high-impact peripheral sites until exceptional circumstances are fully evidenced, in line with national policy on sustainable development and Green Belt/strategic gap protection. Update the evidence base with credible transport modelling that tests the cumulative impact of all allocations in the Nailsea/Backwell area and identifies deliverable and funded mitigation measures for the local highway network, sustainable transport access, and active travel infrastructure. Demonstrate infrastructure deliverability and funding, including confirmable mechanisms for schools, healthcare, utilities, and drainage capacity prior to allocation, rather than relying on future negotiations. Reinforce ecological and landscape evidence, including surveys of protected habitats and species, full biodiversity net gain proposals, and landscape sensitivity studies to justify that environmental harm is avoided or mitigated in line with national policy. Provide robust flood risk and drainage assessments, showing how surface water, sewer capacity, and SuDS measures will manage risk both on and off site without increasing flood exposure for existing and future residents. Reassess alternatives through an updated Sustainability Appraisal that transparently compares brownfield redevelopment, urban intensification and redistribution of growth away from peripheral, unconstrained greenfield sites. Ensure Duty to Cooperate compliance with neighbours and statutory agencies (education, transport, environment, water/sewerage undertakers) demonstrating active, ongoing engagement and resolutions on strategic issues relevant to South Nailsea / Gleeson's development. Without these modifications, the Local Plan, including its approach to the South Nailsea site, cannot meet the tests of positive preparation, justification, effectiveness, or consistency with national planning policy, and is not legally compliant.	N/A	
50328385	David Threlfall			No	• Positively prepared • Justified • Effective	Unsure	Unsure	This area brings the villages of Backwell and Nailsea ever closer together. Like the land East of Backwell development of this area will have significant drainage and flooding challenges and will put yet more strain on the local roads systems. The site requirements in the plan are not nearly specific enough about mitigating the traffic and planning the whole area of Nailsea as a single area			
27306113	H.l.Walton			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The proposed figure of 1,817 new homes in Nailsea would lead to over development of the town. Any significant increase in the number of homes, and in consequence vehicles, in Nailsea will have an adverse effect on the already inadequate rural road system. The proposed new road doesn't appear to help the situation. No locations identified for new schools. MEDICAL facilities are already stretched. The developments infringe on the supposedly sacrosanct "Strategic Gap" land between Nailsea and Backwell.			
62796193	Jonathan Wells			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	In planning terms, the proposal for 1,817 new homes in Nailsea represents a wholly inappropriate scale of growth, amounting to an over-development that the town simply cannot accommodate. The proposed new road offers no meaningful benefit to Nailsea, failing to address existing traffic issues or alleviate the persistent congestion on Station Road. Furthermore, the level of development envisaged would place untenable pressure on already stretched health and leisure services, undermining the quality and accessibility of local provision. The scheme would also result in the permanent loss of Grade 2 agricultural land to the south of Nailsea, an impact that is both unnecessary and irrecoverable. Transport modelling confirms that the development would generate significant additional vehicle movements on the surrounding rural lane network, creating congestion and rendering these routes increasingly unsafe for pedestrians, cyclists and horse riders. Collectively, these impacts would fundamentally alter—and ultimately diminish—the existing character of the area, to the detriment of both residents and the wider environment.			
31063873	N Whiteley			No	• Positively prepared • Justified • Effective • Consistent	No	No	The site constitutes an unjustified expansion of Nailsea, since brownfield sites elsewhere in North Somerset have no been fully considered.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 					with national policy						
62747969	Oriel Wright			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	It would lead to over development of the town. The proposed road will not serve Nailsea's traffic or relieve congestion in Station Road which is already dangerously over used putting pedestrians (especially schoolchildren) at risk. The surrounding lanes will become log-jammed. Grade 2 agricultural land will be lost.			
21229825	Anita Golding			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Adding new houses to south Nailsea will take valuable agricultural land, destroy wildlife habitats, increase congestion on the A370 towards Bristol, put more pressure on schools and local facilities. Flooding will increase.			

Grove Farm

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
62926081	Taylor Wimpey (Land at Grove Farm and Burnt House Farm, Backwell)	Pegasus Group	Taylor Wimpey UK Ltd	No	• Positively prepared • Justified • Effective • Consistent with national policy	Yes	Yes			Having regard to Schedule 1, it is noted that the estimated capacity of the component identified as 'Grove Farm, Backwell', correlating to our client's interest at Grove Farm and Burnt House Farm is, at 515no. dwellings, the same as that of the application for Outline planning permission subject of a resolution for approval and to be issued shortly upon completion of the legal Agreement. This is therefore a realistic and evidenced figure, having regard to the submission material, which shows how an efficient layout may be achieved while delivering significant amounts of public open space, strategic landscaping, ecological mitigation, sustainable drainage and supporting infrastructure.	R002v4 NSLP Reg19 Reps TW Nov25.pdf
63213025	BackwellPC NailseaTC Flax BourtonPC BrockleyPC BackwellRA Nailsea Action Group	Lucy White Planning Limited	BackwellPC NailseaTC Flax BourtonPC BrockleyPC BackwellRA Nailsea Action Group	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Objection is raised to the extent of the allocation shown for Grove Farm, Backwell. The allocation is for 515 dwellings. The Council has resolved to grant outline planning permission for up to 515 dwellings under planning application 23/P/2618/OU2. However, the policies map includes an additional, physically separate parcel of land within the Grove Farm allocation, which sits immediately adjacent to the Rodney Road site (60 dwellings). See extract from Sustainability Appraisal (attached). The Council has failed to explain the reason for including this parcel of land within the Grove Farm allocation. To BPC and NTC's knowledge it is owned by North Somerset Council and has historically been safeguarded for educational use in association with the adjoining West Leigh Infants School. The land's inclusion within the Pre-Submission Plan was wholly unexpected by BPC. Discussions have taken place over the past twelve months with NSC's Assess Management Team regarding the transfer of ownership from NSC to BPC to enable the use as an outdoor educational space. The allocation of the site for residential use is superfluous to requirements; no housing allocation is given to this parcel of land which forms part of the Grove Farm allocation. The allocation as a whole is designated to support 515 dwellings which equates to the description of the outline planning application 23/P/2618/OU2. This additional, separate parcel of land should be deleted from the Grove Farm allocation and the land designated as Local Green Space, as an important area of green space, providing public rights of way to West Leigh Infants School and the opportunity for educational/recreational use in association with the school, to help to meet the needs of the growing village population. BPC and NTC request the deletion of this parcel of land from the Grove Farm allocation and the identification of the site for educational purposes with LGS status. BPC and NTC support the policy requirement for the housing allocation at Grove Farm to include provision of a primary school. However, the Council resolution to grant planning permission was subject to a developer obligation to provide 2 hectares of land for a primary school only. No financial contributions have been sought by the Council from the applicant to pay for delivery of the primary school, putting delivery of this essential infrastructure at risk, contrary to the provisions of the Local Plan and IDP. The Council's strategy for education to support development at Nailsea and Backwell must be explained to ensure the policy is effective in delivery of necessary infrastructure.			
62810561	Tim Baines							I am a resident of Flax Bourton and so not only am interested in the Nailsea and Backwell part of the plan, but I experience daily the chaotic shambles of the A370. The Council has already given approval to 800 new homes in the area, and you are now proposing another 1000, and yet with no guaranteed improvements to road capacity, schools, healthcare, doctors, community facilities. This is complete overdevelopment of a small village and town and will create far more problems than it solves. Look elsewhere, or tell the government where to get off with its crazy housing targets			
62837825	Debra Britton		freelance	No	• Positively prepared • Justified • Effective	Unsure	Unsure	Backwell already has an influx of 800 new houses, a 40% increase for the VILLAGE. These additional numbers will complete overdevelopment. Proposed road will not relieve congestion on Station Rd , Backwell Common or Chapel Hill. Any engineering work under or over the railway seems unfeasible and vastly expensive.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					• Consistent with national policy			Local schools are full and health services in the area are already stretched . The lack of infrastructure and services can not support another 1000 houses. Backwell is allocated a higher number of houses than any other village in N Somerset and more than towns. Clevedon is allocated only 2% while Backwell is expected to accommodate 7%. There is no needs or viability for the proposed number of new houses, Most residents commute to work , Backwell is not a hub of employment Grade 1 Agriculture land currently used for crops and grazing. There is only 7% of this high quality land in the whole of N Somerset. Government says "we must protect our best and most versatile land to safeguard food security. These proposals undermine this. Development will destroy wildlife habitat and harm biodiversity in one of the worlds most nature deprived countries. The proposals threaten Brockley Maternity roost and SSSI with rare and Greater Horseshoe bats relying on land for food. The infrastructure delivery plan lacks analysis and costings and there are no funding guarantees for new roads or services. Backwell Common and surrounding areas are prone to flooding which will be aggravated by more housing, Backwell Lake and adjacent fields flood regularly . The new roads and adjacent housing are on a flood plain, Government policy requires 50% affordable housing on Greenbelt land buy this reduces the funds that developers contribute towards infrastructure, The sheer volume of growth with required investment infrastructure and services over such a short period is destabilising , unsustainable and undeliverable, The railway station is not fit for purpose as a transport hub . It remains inaccessible for people with mobility issues and presents serious challenges when travelling with young children			
62850433	Louise Chapman			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Green Field East of West Leigh Primary School The field should not be included in the Grove Farm / Rodney Road housing allocation. For West Leigh families and many residents, the land has clear current and future value for children's play, wellbeing and informal learning and outdoor activities. It saddens me to see that my daughter has started school this year at a lovely village school and she is drowned out by the noise of the current building works. Housing numbers can be met through existing allocations, meaning the field is not required to deliver the Plan's overall housing target. Policy LP3 priorities the provision of new green infrastructure and open space. This field already fulfils that purpose and should be protected, not built on. The access to the Rodney Road development should not have been agreed to as the access is not viable and never was. The land functions as an important environment buffer between the school and surrounding housing, helping reduce noise, air pollution, overheating and loss of biodiversity affecting children. Development on this field would represent avoidable harm to children's outdoor provision, at a time when national policy strongly emphasises active travel, outdoor learning, physical activity and mental wellbeing. Don't take this green space away from our future generations!			
50932513	O Cullen			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Agricultural land desecrated, wildlife destroyed, lives impacted unreasonably. Where are these people going to work, shop, relax. There is no room. It is utter madness, all to massage the pathetic egos of a talentless body of parliamentarians who are ideologically programmed to destroy the countryside. It is spiteful and harmful and completely unnecessary. No doctors, no dentists, poor transport links, regular flooding. There is an airport for the benefit brigade to fly to Malaga, I suppose, but then what will they do for the remaining 50 weeks of the year? Unconscionable. Can't wait for next election.			
18204961	Mrs Wendy Derrick			No	• Justified • Effective	No	No	Backwell already has 800 new houses approved, a 40% increase for the village. These additional numbers would lead to complete overdevelopment. The proposed road would not effectively serve Nailsea's traffic or relieve congestion on Station Road, Backwell Common, or Chapel Hill. The massive increase in housing would outway a new road even then. The small b road Station road can't cope with the traffic it has now, but have seen many a near miss, it is so dangerous and no one is thinking about the safety on these small roads, specially with 2 major school. Directly on them Engineering the road under or over the railway would be highly expensive and possibly unfeasible. Too much traffic as it is. Despite this increase, there is a deficit in school places and no investment in health services or leisure facilities. The lack of infrastructure and services cannot support another 1,000 houses. Backwell is allocated a higher number of houses than any other village in North Somerset, and even a higher growth percentage than towns. Backwell is expected to take 7% of the district's housing allocation, compared to Clevedon's 2%. There is no needs or viability analysis for an extra 1,000 houses. Backwell is not an employment hub, most residents commute No social cohesion impact assessment has been provided. Grade 1 Agricultural Land currently used for food crops and grazing. There is only 7% of this high quality land left in the whole of North Somerset. Government policy states that "we must protect our best and most versatile land"	Stick with the current permission and build no more		
62818017	Mrs Julie Goldbert		Eddisons	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	With 800 houses already approved in Backwell (40% increase for the village). The extra houses planned would lead to over development. The proposed road would do little, if any, to effectively serve Nailsea's traffic or congestion on Backwell Common, or Chapel Hill and building the road under or over the railway would be unfeasible and too expensive. There will be a deficit in school places and, with no additional investment in vital health care and leisure facilities, this lack of infrastructure cannot support an additional 1000 homes (2,000-4,000 people). Most residents commute from Backwell. The development would destroy valuable wildlife habitats and harm biodiversity. The bats at Brockley Maternity Roost are a Protected Species and their natural habitats should not be disturbed or altered.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 								Backwell Common and surrounding areas are prone to flooding and this will increase wtih global warming. Also the Backwell Reservoir and surrounding areas as prone to flooding. Owners of homes could potentially find themselves not able to insure against flooding. The railway station is not classed as a transport hub, it is inaccessible for people with mobility issues and serious challenges for people travelling with young children. The Grade 1 agricultural land is used for crops and grazing and there is only 7% of this high quality land left in the whole of north Somerset.			
58500417	Tom Henley			Yes		Yes	Yes			1. Introduction I am writing to express my support for the allocation of land at Grove Farm within the North Somerset Local Plan 2041 (Regulation 19). I recognise the need to provide new homes, employment land and supporting infrastructure across the district, and I believe that Backwell represents one of the most appropriate and sustainable locations for delivering this growth. My position is based on a balanced assessment of the evidence, the landscape and ecological sensitivities of different locations, and the degree to which each proposed allocation aligns with the Plan's spatial strategy and Policy LP3. In my view, the Backwell allocations are sound, sustainable and far less environmentally harmful than the proposed allocations at Tower Farm and Black Rock, which lie immediately adjacent to Weston Big Wood—an ancient woodland and highly sensitive ecological asset. 2. Why Backwell Is a Suitable and Sustainable Growth Location Backwell is a small but well-connected settlement offering several advantages for planned, coordinated expansion: 2.1 Existing Strategic Transport Access Backwell sits directly on: * the A370, a major route linking Weston-super-Mare, Bristol, and the airport corridor * the Nailsea & Backwell Railway Station, a key rail node providing direct services to Bristol Temple Meads * routes to Bristol Airport * bus corridors connecting to high-frequency services This gives Backwell a level of transport resilience and connectivity that supports sustainable modal shift, particularly when combined with the active travel improvements and Cross Rail Link required by LP3. 2.2 Development on Flat, Lower-Sensitivity Agricultural Land The allocations at Grove Farm are situated on: * broadly flat land		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										* agricultural fields surrounded by existing development on at least one or more sides * areas not adjacent to ancient woodland, SSSI, SNCI or irreplaceable habitats This contrasts sharply with Portishead's Tower Farm and Black Rock allocations, which directly border Weston Big Wood, an ancient woodland and SNCI, where any development—even with buffers—risks irreversible ecological fragmentation. 2.3 Capacity to Deliver Strategic Infrastructure Backwell's allocations are uniquely positioned to deliver: * the Cross Rail Link (a requirement of LP3) * new active travel connections * new primary schools * employment land, including light industrial and office space * enhanced access to the railway station These interventions serve both Backwell and Nailsea, helping address longstanding congestion issues at Backwell Crossroads and Station Road, and contributing to a cohesive transport strategy across the region. 3. Comparison With Tower Farm and Black Rock (Portishead) It is important to consider the relative environmental impact and policy alignment of the Backwell sites compared with other proposed allocations. 3.1 Proximity to Weston Big Wood – Severe Environmental Risk The Portishead allocations at Tower Farm and Black Rock directly abut Weston Big Wood, which is: * a Site of Special Scientific Interest (SSSI) * an ancient woodland, an irreplaceable habitat under the NPPF * a designated Site of Nature Conservation Interest (SNCI) * part of a wider ecological corridor across the Gordano Valley Any encroachment or buffer erosion at these locations risks permanent, adverse impacts on biodiversity, contrary to national policy requirements to protect ancient woodland and ancient/veteran trees. 3.2 Landform and Ecological Sensitivity	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
										By contrast: * Backwell's landscape is low-sensitivity farmland, highly suitable for strategic development * The Backwell allocations avoid protected ecological features * Ecological mitigation at Backwell is feasible and proportionate * Portishead's woodland-edge sites require extensive, high-risk ecological mitigation, likely reducing deliverability 3.3 Deliverability and Infrastructure Burden Backwell is already the intended location for strategic transport interventions (Cross Rail Link, active travel corridors, bus improvements), whereas Portishead's proposals face: * severe access constraints * ecological constraints * the need for significant new mitigation measures to offset harm In summary, Backwell offers a policy-aligned alternative with significantly lower environmental risk. 4. Support for the Allocation: Grove Farm (515 homes) Grove Farm is another well-selected site. I support this allocation for the following reasons: 4.1 Delivery of a New Primary School This is needed to support planned growth and is well located to serve both new and existing communities. 4.2 Active Travel Connectivity The plan requires high-quality routes linking: * Backwell Common → Festival Way * Nailsea & Backwell Station * Chelvey Road * Rushmore LaneThese connections reduce reliance on cars and integrate the site into the wider movement network. 4.3 Heritage-Sensitive Design and Layout The site requirements ensure that historic assets such as Chelvey Court and the Manor House retain their rural settings and key views. 4.4 Sustainable Drainage and Surface Water Management The site can incorporate the necessary flood mitigation through sequencing and layout, as set out in Schedule

										1. 4.5 Reduced Local Environmental Impact The Grove Farm allocation does not threaten any ancient woodland, protected ecological sites or highly sensitive biodiversity features. Ecological mitigation, including measures for SAC bats, is achievable. 5. Alignment With Policy LP3 and the Local Plan Spatial Strategy Both Backwell allocations align strongly with Policy LP3 and the plan's overarching sustainable development goals: * They support 3,500 homes across Nailsea and Backwell. * They enable infrastructure-led growth through the delivery of the Cross Rail Link. * They provide employment land, two new primary schools, and improved public transport access. * They enhance active travel routes district-wide. * They are consistent with the NPPF, particularly in relation to: * protecting ancient woodland * promoting sustainable transport * delivering affordable housing * coordinating growth with infrastructure 6. Conclusion For all the reasons set out above, I believe the allocations at Grove Farm are the most appropriate, sustainable and deliverable housing locations identified in this Local Plan. They offer: * a lower environmental impact * a better alignment with infrastructure delivery * strategic transport improvements essential for the wider area * protection of highly sensitive ecological assets elsewhere * a contribution to balanced, well-connected communities I therefore strongly support the inclusion of these allocations within the Regulation 19 Local Plan and encourage North Somerset Council to retain them as key elements of its sustainable growth strategy.	
62800769	Brockley Parish Council		Brockley Parish Council	No	• Justified • Consistent with national policy			Brockley Parish Council (BPC) refer NSC planning to our submission made regarding the North Somerset Local Plan 2039 Pre-submission (reg 19) document, published November 2023 and to our submission made regarding the Additional housing sites Consultation in February 2025. We consider our comments are still valid and wish these to be taken into consideration. BPC wish to object to the current NS Pre-submission Plan 2041 on the grounds that the proposed scale , distribution and nature of development in Backwell and the immediate area to the west of the town towards Brockley is inconsistent with the requirements of the National Policy Framework (NPPF, 2023) and fails to deliver sustainable , justified and infra-structure-led growth. BPC recognises the need for the future development of sustainable housing to support growth in the area. The scale of change proposed within the Backwell settlement area will inevitably spill environmental, traffic and service impacts into adjoining communities; Brockley is a neighbouring parish.	Brockley Parish Council (BPC) refer NSC planning to our submission made regarding the North Somerset Local Plan 2039 Pre-submission (reg 19) document, published November 2023 and to our submission made regarding the Additional housing sites Consultation in February 2025. 								With reference to key elements of the NPPF, BPC make the following comments. Failure to deliver truly sustainable development (NPPF para's 8 and 11) The area's limited public transport provision, constrained road network and already overstretched local services mean that the proposed growth would generate a disproportionate car-dependency, contradicting the NPPF's requirement that new development be located where sustainable modes of transport are available (para 8(b) , para 105). The Draft Plan does not demonstrate how Backwell can accommodate this growth safely BEFORE development occurs which conflicts with NPPF para11(b) requiring plans to be 'positively prepared' and capable of meeting needs in a sustainable manner. Inadequate Transport Evidence and conflict with NPPF policies on sustainable Travel (paras 104-108) Backwell already experiences significant congestion along the A370, Station Road and surrounding junctions, particularly during peak hours and rail station traffic. Brockley is served by a network of rural lanes mostly single track and bounded by drainage ditches, which are already experiencing problems caused by increased local traffic arising from housing developments currently under construction. The Draft Plan lacks a credible transport mitigation strategy showing how additional development will avoid severe cumulative impacts, which the NPPF (para 111) requires to be demonstrated before site allocation. Nailsea and Backwell's station has limited capacity and parking constraints. Backwell already experiences kerbside parking overspill from the station during working hours. New development will not meaningfully shift travel behaviour towards sustainable modes, conflicting with NPPF's para 104(c) and 105, which emphasise locating development where sustainable transport can be maximised. DISPROPORTIONATE Housing Allocation Relative to Settlement Role (NPPF para 11, para 60) While Backwell is identified as a "Service Village," the scale of growth proposed is disproportionate to its size, services and infrastructure. With approximately 800 new houses already approved, an additional 1000 as proposed in the draft plan, would result in an overall increase of 80% . NPPF para 60 requires local authorities to meet housing needs in full only where it is sustainable to do so; it does not justify over-concentrating new housing in smaller rural settlements where infrastructure cannot support it. The Draft Plan has not demonstrated either a justified settlement hierarchy or an evidence◈based rationale for selecting Backwell for such substantial growth relative to other locations with greater capacity. Conflict with NPPF Requirements for Infrastructure Delivery (para 34, para 20) The NPPF requires plans to be specific about the infrastructure necessary to support development and to show how and when it will be delivered (para 34). The Draft Plan includes no guaranteed or funded programme for essential upgrades to highways capacity, bus service provision, education, healthcare, drainage or utilities in Backwell. Without clear deliverability evidence, the plan fails NPPF para 20(b), which requires strategic policies to provide "sufficient certainty" over infrastructure. Harm to Local Landscape, Rural Character and Settlement Identity (NPPF para 174, para 130) Backwell sits within a sensitive landscape setting with valued rural approaches and green gaps separating it from Nailsea and the wider AONB setting to the south. Large-scale development, particularly the open countryside adjoining the Backwell village, would cause irreversible landscape harm and erode settlement separation. This conflicts with NPPF para 174(a) requiring planning policies to protect and enhance valued landscapes, and para 130 which requires developments to be sympathetic to local character and maintain a strong sense of place. Failure to Make Effective Use of Land Elsewhere (NPPF para 119, para 120) The NPPF prioritises development on brownfield, underutilised and sustainable locations before releasing large amounts of greenfield land. The Draft Plan does not demonstrate that all reasonable opportunities for urban regeneration, densification, or optimising brownfield land in Weston-super-Mare, Clevedon, Nailsea or Portishead have been maximised before allocating major greenfield extensions in Backwell. This conflicts with NPPF paras 119–121. Inadequate Consideration of Environmental Impacts and Biodiversity (NPPF paras 179–182) The Plan does not provide a robust ecological assessment for Backwell-adjacent sites. Potential biodiversity loss, woodland impact and pressure on local habitats have not been evaluated at the strategic level required for site allocation. This conflicts with NPPF para 179(b), which requires plans to protect and enhance biodiversity, and para 182, mandating avoidance of significant ecological harm. Additionally, Brockley Parish Council draw attention to our following observations : 1. Whilst having no objections to new development we have doubts over the Councils ability to monitoring and follow up and if necessary, legally enforce conditions clearly stated as part of the planning consent. Of greatest concern are those which require onward monitoring for a period of ten years, relating to 'land management, the natural environment and ecology'. 2. With a policy focussing on delivering an ever-increasing number of houses, BPC consider that this will lead to an increase in 'land banking' and subsequent overall degradation of agricultural quality. Parcels of land (often a defined field) will be purchased by developers with little interest in the local community, with little or no interest in farming and agricultural land management, leading towards fragmentation and an eventual downgrade in agricultural quality. 3. BPC are concerned that given the Government's stated intentions to relax development constraints on Green Belt land, options on such land will be acquired by developers when it is adjacent to areas designated for potential development, in anticipation of such relaxation. This is already occurring. An example of this is land in Brockley, on the western side of Chelvey Road, being part of the Grove Farm and Burnt House Farm within the present Green Belt. This land was included in the original option acquired by Countryside Homes in 1999. 4. BPC has concerns regarding the constant reference to cattle grazed land being specified as compensation for the loss of existing well used feeding grounds of the greater and lesser horseshoe bats (and others). Because of several factors, including change in farm ownership and farm inheritance tax laws, and the increasing zero grazing of cattle to minimise the risk of TB, it will become increasingly difficult to ensure that this is complied with, with subsequent negative impact on these internationally protected animals. Conclusion	wish these to be taken into consideration. BPC wish to object to the current NS Pre-submission Plan 2041 on the grounds that the proposed scale , distribution and nature of development in Backwell and the immediate area to the west of the town towards Brockley is inconsistent with the requirements of the National Policy Framework (NPPF, 2023) and fails to deliver sustainable , justified and infra-structure-led growth. Because of several factors, including change in farm ownership and farm inheritance tax laws, and the increasing zero grazing of cattle to minimise the risk of TB, it will become increasingly difficult to ensure that this is complied with, with subsequent negative impact on these internationally protected animals. Conclusion Brockley Parish Council therefore consider for the reasons stated above, the proposed development strategy for Backwell in the North Somerset Draft Local Plan is not consistent with national policy, not justified, not deliverable, and not sound under the NPPF tests. Brockley Parish Council therefore request that the Council: 1. Reduce the scale of allocations in Backwell, 2. Reassess settlement hierarchy and brownfield-first options, 3. Provide robust transport and infrastructure evidence, and 4. Ensure all allocations comply with NPPF requirements for sustainability, infrastructure, environmental protection whilst also reflecting and maintaining local identity.		
39402529	Network Rail		Network Rail					We consider that the plan should be positively prepared, justified, effective, and consistent with national policy. In relation to transport and infrastructure, we support policies that promote sustainable growth and integrated transport solutions., however we wish to highlight the following regarding the Grove Farm allocation. It should be noted that NR previously made comments on the EIA Scoping opinion in 2023/2024 for the proposed development at Grove Farm where we lodged an objection due to the increase in risk the development would cause to Grant Mills Footpath Level Crossing. We have since continued the objection to this site as without appropriate mitigation for the level crossing NR can not deem the development acceptable in safety terms due to the impact a development of this size with have on the use, and risks associated, of Grant Mills. Network Rail have provided both the Local Planning Authority and the developer with the costs of suitable mitigation. If development proceeds on this site allocation, appropriate mitigation will be necessary. This should be in the form of a grade-separated crossing or a suitable diversion of the Public Right of Way (PROW). The local plan policy should explicitly acknowledge this requirement by including policy wording that ensures the need to assess and provide mitigation at this location. As Network Rail is a publicly funded organisation with a regulated remit, it would be unreasonable to expect Network Rail to finance rail improvements arising from commercial development. Therefore, it is appropriate that developer contributions are secured to fund such improvements. We have previously included policies in other local plans for similar schemes: • The Cherwell Local Plan 2011-2031 (Part 1) Partial Review – Oxford's Unmet Housing Need- Policy PR8 – Land East of the A44 (see attachment for detailed policy wording) • Sedgemoor District Council Local Plan 2011 – 2032 (Adopted 20 February 2019) -Policy D14 - Managing the Transport Impacts of Development (page 133) (see attachment for detailed policy wording) Any development of land which would result in a material increase or significant change in the character of traffic using rail crossings should be refused unless, in consultation with Network Rail, it can either be demonstrated that the safety will not be compromised, or where safety is compromised serious mitigation measures would be incorporated to prevent any increased safety risk as a requirement of any permission.			Network Rail LDP comments.pdf

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The plan should include a specific policy for this site, requiring Assessment of the impact of development on this level crossing. The Council have a statutory responsibility under planning legislation to consult the statutory rail undertaker where a proposal for development is likely to result in a material increase in the rail volume or a material change in the character of traffic using a level crossing over a railway:- • (Schedule 4 (j) of the Town & Country Planning (Development Management Procedure) Order, 2015) requires that "…development which is likely to result in a material increase in the volume or a material change in the character of traffic using a level crossing over a railway" (public footpath, public or private road) the Planning Authority's Highway Engineer must submit details to both the Secretary of State for Transport and Network Rail for separate approval.			
62863233	T Madge			No		Unsure	Unsure	I am writing to formally object to the proposed plan for an additional 1,000 new homes in the village of Backwell. This proposal is fundamentally flawed, unsustainable, and would cause irreparable harm to our community, infrastructure, and environment. The scale of this development is grossly disproportionate. It is unjustifiable that Backwell, a village, is being allocated a higher growth percentage (7% of the district's total) than established towns like Clevedon (2%). This approach is not strategic growth; it is the destabilisation of a community. Critical Lack of Infrastructure The existing infrastructure is already under immense strain and is incapable of supporting the current population, let alone thousands of new residents. • Services: There is already a deficit in school places, and the plan includes no tangible investment in health or leisure facilities to cope with such a dramatic population increase. • Transport: The existing A370 already suffers from significant congestion, particularly when a diversion is put in place from other key roads such as the M5. The railway station itself is not fit for purpose as a modern transport hub, lacking accessibility for those with mobility issues or families with young children. • Funding: The Infrastructure Delivery Plan is devoid of proper analysis, costings, or funding guarantees for the road and other essential services. The entire proposal rests on unfunded and undeliverable promises. Irreversible Environmental Damage The proposal directly contradicts national policy and would cause permanent environmental destruction. • Loss of Prime Agricultural Land: The development is planned on Grade 1 Agricultural Land, which is currently used for food production. This land is our best and most versatile, and only 7% of it remains in all of North Somerset. Government policy explicitly states we must protect such land to safeguard national food security. This plan recklessly ignores that directive. • Destruction of Wildlife Habitats: This development would destroy invaluable wildlife habitats, including foraging grounds for the rare Lesser and Greater Horseshoe Bats from the protected Brockley Maternity Roost (SSSI). In one of the most nature-depleted countries in the world, proceeding with such a destructive plan is unconscionable. Fundamentally Flawed Planning It threatens to overwhelm our services, destroy protected land and wildlife habitats, all without a sound or funded plan. I urge the council to reject this proposal in its entirety and protect the village of Backwell from this destructive overdevelopment.	While I have submitted a formal objection to the specific housing proposals for Backwell, I am writing separately to offer constructive suggestions for improving the Local Plan as a whole. A successful Local Plan should not be measured simply by the number of houses built, but by the quality, resilience, and sustainability of the communities it creates for generations to come. I believe the current draft of the plan is fundamentally flawed because it is housing-led, developer-focused, and places a disproportionate burden on village communities while sacrificing irreplaceable natural assets. I urge the council to re-evaluate its strategy and adopt a more responsible, forward-thinking approach built on the following four core principles: 1. Adopt a 'Brownfield First and Fair Share' Policy Instead of allocating development on vital greenfield and agricultural sites, the plan must mandate the prioritisation of all available previously developed land (brownfield sites) across the entire district. This approach revitalises town centres, utilises existing infrastructure, and protects our vital countryside and food security. This must be coupled with a "Fair Share" distribution model, where housing targets are allocated equitably across the district's towns and larger settlements based on their size, services, and brownfield capacity. This would end the unsustainable practice of overburdening individual villages. 2. Transition to an 'Infrastructure-Led' Development Model The current 'housing-led' approach, where homes are built with a vague promise that services will follow, must be reversed. The plan should stipulate that no large-scale development can be approved until fully-funded, legally-binding commitments for all essential infrastructure are in place. This includes confirmed investment and timelines for new school places, GP surgeries, road improvements, and public transport services. This guarantees that growth is sustainable from day one and prevents the creation of isolated, underserved communities that place an impossible strain on existing public services.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
									3. Mandate Genuine Environmental Protection and Net Gain The plan must move beyond simple mitigation and actively enhance our natural environment. This should be achieved by: Formally protecting all Grade 1 and 2 agricultural land from development, citing national food security. Mandating a minimum 10% Biodiversity Net Gain for all new developments, forcing developers to leave our environment in a better state than they found it. Enforcing a strict ban on building on known floodplains, while investing in natural flood management schemes to protect the wider community. 4. Commit to Evidence-Based and Community-Led Planning To restore public trust and create a plan that works for everyone, the process must be transparent and collaborative. The council should commission independent, publicly available studies on housing need, traffic impact, and environmental capacity before sites are allocated. Furthermore, the process should move beyond simple consultation to active collaboration, using workshops and citizen panels to co-design the future of local areas. This ensures that development meets genuine local needs and gains community support. These principles are interconnected and form the basis of a truly sustainable development plan. By embracing this forward-thinking approach, the council can create a plan that not only meets housing needs but also strengthens our communities, protects our environment, and enhances our district for all its residents.		
62785665	Justin Mohan			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Plan is not sound or in the interest of local environment / residents. 1/ 800 Houses already approved 2/ Road access and nearby insufficient 3/ lack of infrastructure (schools) 4/ No needs or viability for houses here 5/ unfair balance in house increase in Backwell compared to other villages 6/ Backwell has no employment and all would commute on roads that are not big enough 7/ No social cohesion impact assessment 8/ grade 1 land used for grazing and crops 9/ not protecting versatile land 10/ development would destroy nature 11/ proposals threaten brockley maternity roost 12/ no funding guarantees for new roads 13/ flooding would be aggravated by more housing (common) 14/ all building is planned for a flood plain which isn't very clever

22638625	Councillor Bridget Petty			No	• Justified	Unsure	Unsure	The site Grove Farm is large in scale. It includes a site with planning for 515 houses, it has a construction site already taking place by Taylor Wimpey and then a small area has been included which is owners by North Somerset Council, this is an important open space used by families to walk to school and for dog walkers and other residents. This small area of green is highly valued but iss not required to meet the housing allocation for this site. I would ask that the boundary of this Grove Farm site is redrawn to remove the small area that is a green space valued by the community, and will become a green corridor as building takes place around it. It is an important environmental buffer. It meets the objective of local green space.	The site Grove Farm is large in scale. It includes a site with planning for 515 houses, it has a construction site already taking place by Taylor Wimpey and then a small area has been included which is owners by North Somerset Council, this is an important open space used by families to walk to school and for dog walkers and other residents. This small area of green is highly valued but iss not required to meet the housing allocation for this site. I would ask that the boundary of this Grove Farm site is redrawn to remove the small area that is a green space valued by the community, and will become a green corridor as building takes place around it. It is an important environmental buffer. It meets the objective of local green space.		
10388545	H Power			No		Unsure	Unsure	The proposed housing at Grove Farm on high class agricultural land is simply wrong. No supporting infrastructure, disturbance to wildlife habitats, and destruction of land which supports our food makes no sense at all.			
30361825	K Riches			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	On the Local Plan Policies Map, the pink area denoting the Grove Farm (GF) development extends to the east of the actual GF development site to include: 1) The separate development on land off Rodney Rd (already in construction) and 2) A small separate field owned by NSC situated between the Infants School and the site mentioned at 1). I can find no other reference to the field at 2), but note previous understanding that this field would NOT be used for housing but would be made available to the Infants School. The situation regarding this field is therefore unclear and Not Sound.	Clarify the above situation.		
31213601	John Sleigh		Backwell Climate action	Unsure		Unsure	Unsure				
62658785	C Stone		Resident	No	• Positively prepared • Justified • Effective • Consistent with national policy	No	Unsure	House building proposals would almost double the size of Backwell - an unreasonable increase leading to complete overdevelopment Current road systems would be unable to cope with the increase in traffic especially station road which is already congested . This would further endanger the students using the narrow pavements. A complete new road system would be required at great expense as the road would have to go over or under the railway line. An increase in housing of this magnitude would necessitate provision of school places both for nursery , primary and secondary students. Current health service and leisure provision would be inadequate Most residents commute - not find employment in the village Grade 1 agricultural land currently used for food production - development contradicts government policy to protect land used in food production Damage wild life habitats, including the important bat colonies Not financially viable and lack of costings			
62810017	Guy Stone			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	This development will swamp the village of Backwell with people, traffic, noise and pollution. It is entirely on valued green field sites without any justification and in contravention of planning policy. Insufficient effort has been made to ensure development is on brownfield or developed land. It will not cater for local people in need of 'affordable homes' but will be occupied by professionl and wealthy people from the rest of the UK who work in major urban centres, with no connection to the village or its surroundings. The ongoing development of the green field sites around Backwell is entirely develop led, with no opposition from North Somerset Council in any shape or form.	Go back to the drawing board, look at what brownfield and developed areas are available, insist they are used and stop pandering to developers.		
50328385	David Threlfall			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The conditions state "Adequate financial contributions towards infrastructure required, including (but not limited to) highways, education and community facilities." I dont believe this adequately imposes a requirement on the developer to provide sufficient money to develop the schools, education facilities and community facilities required. The terms are much too vague and are subject to significant watering down or delaying by the developer.	These financial contributions towards infrastructure required, including (but not limited to) highways, education and community facilities requirements should be subject to a minimum threshold of contribution that represents real community value to the area. These values should be part of the planning consent and subject to CPI from the date of consent to the date of payment. They should also be stipulated to be

									made paid in full before 25% of the houses are constructed or 15% of the properties sold.		
39220001	Christopher Watkins			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The plan proposed is not consistent with strategic priorities of North Somerset Council. Yes, it will provide additional houses, but Backwell does not have an adequate road system, primary health care facilities and schools to support such a massive increase in population. The houses will be built on prime agricultural land of which there is a national shortage. Backwell is unable to provide job opportunities locally so most residents will have to travel into other areas, principally Bristol, which provide jobs. With this development Backwell will become a dormitory and cease to be a community. The bus and rail services are at present inadequate to such a large increase in population and the railway station is inadequate.	I do not have to knowledge or expertise to comment.	I do not have to knowledge or expertise to comment.	
62849953	Trevor Watts			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The sacrifice of grade 1 agricultural land is utterly irresponsible and shortsighted. This is highlighted by the level of international instability we are living through at present. The infrastructure delivery plan has no solid substance in analysis or costings let alone commitment of funds to deliver it. The character of the area would be fundamentally altered by the level of proposed development and without investment in sound infrastructure and services (transport, education, medical and leisure facilities) the quality of life of the inhabitants would be drastically reduced - not enhanced as the planning vision requires.			
62865953	Dan Wilmott			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell already has 800 new houses approved a 40% increase and more leads to over development.			
50876097	Tom Curtis		Resident	No	• Positively prepared • Justified • Effective	No	No	This is just another joke of a document. Im just disappointed in all involved. Please do better. Not enough nature protection. Looking after farmland amd managing it properly sgould be paramount alongside building at a sensible pace. Backwells proposed population increase is not sustainable with infrastructure currently there and estimated to occur with over 1000 homes (same type). History dictates this. I love the roads to nowhere wirhon it. These will not solve issues just add due to increase in traffic. It does not solve local housing market. We dont need more executive homes. Bungalows and lower income homes at a lower pace would be suitable to allow a market to function. With more land to create significant nature pathways through backwell to truely provide improved natural ecosystems and living enviroment. The number homes is stupid. These need to have a higher affordability ratio. Stop pandering to central government. Get some imner strength....please. No i dont support this joke of a document.	As above. Nature Better buildings Less executive homes 50% affordable Allow smaller builders to bid. Read dont use ai.		
51450369	J Farr			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	backwell already has 800 houses approved . these additional development will change the nature of a village into a small town and lead to overdevelopment. the A370 already is heavy with traffic and congestion which this will only add to. Nature will be lost and good growing land also. backwell infrastructure has not been considered.			
39313345	Thomas Jackson			No	• Positively prepared • Justified • Effective	Unsure	Unsure	I do not believe this plan to be sound. The areas that are proposed for development are grade 1 listed green belt. The area is close to flood zones and the village will be decimated as a result of this over development of the village. The existing infrastructure is already at full stretch and that is before the current developments finish any more than this will cause untold pressure. The total destruction of these important eco systems, habitats and green belt is not justified by the quick fix housing solutions being proposed that do not provide adequate affordable housing, with opportunities for local employment and only benefit the house builders share price.	I believe it needs to be reconsidered to move housing closer to employment and existing infrastructure. This should be done on an environmentally focused way prioritising the use of brown field or low yield agricultural land close to existing large conurbations. Where possible we should be looking to improve and strengthen existing infrastructure that can support this scale of growth.		

Land at Farleigh Farm

								last thirty years, for a new road and the chances of this one being built considering that it has to cross a railway and ground once prolific in coal production are even more remote. Others, more knowledgeable than I, will doubtless respond with scientific and legal reasons why this is a step too far - I can only speak with the anger and resentment that I, and many, many others in the village feel at your total lack of respect or understanding of our feelings in favour of taking the easy way out.			
62810017	Guy Stone			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	I am appalled that this development has been granted planning permission. The developers own this site and every application they have submitted since the 1980s has been rejected up until now due to a lack of robust knock back from North Somerset Council and poorly made judgement from the planning inspectorate. There is no chance of these proposals offering 'affordable homes for locals', they will be sold to wealthy professionals moving in from elsewhere in the uk, exacerbating the local housing need. North Somerset Council need to stop pandering to developers and be more robust in their defence of the precious green space that is seen as a vitally important resource for the existing local residents. I'm not sure who the council think they represent, but it is certainly not the communities that currently live in the areas affected by this awful destructive approach to development.			
51450369	J Farr			No		Unsure	Unsure	again the development will impact adversely on the nature of the village. field will be lost, population will increase, traffic will increase swell as air pollution. safety for pedestrians will be compromised. Agricultural land will also be lost. school provision, medical services , shops, will not support the increased demand.			

Land west of Rodney Road

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
39255585	E Bossanyi			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The housing currently on this site is currently being built. However, the latest map indicates that the development could stretch north to engulf the remaining small green space remaining between Westleigh School, Westfield Drive and the Scout Hut. This is a vital green buffer between the school and the new development and should be designated as local green space. Also the ‘Site requirements’ are inappropriate and seem to have been copy-pasted from the Dark Lane section.	The small green space north of the houses currently being built, between Westleigh School, Westfield Drive and the Scout Hut, should be designated as a local green space.		
61125793	H Bray			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure		The field to the east of West Leigh Primary School should be removed from the Grove Farm / Rodney Road housing allocation. It currently provides a vital green buffer between the school and the new Rodney Road development, and has real present and future value for children, families and the wider community. The land functions as an important environmental buffer between the school and surrounding housing, helping reduce noise, air pollution, overheating and loss of biodiversity affecting children. Crucially, housing numbers can be met through existing allocations, meaning this field is not required to deliver the North Somerset Draft Local Plan’s overall housing target. Further, Policy LP3 prioritises the provision of new green infrastructure and open space. This field already fulfils that purpose and should be protected, not built on. It is nonsensical to justify the destruction of existing green infrastructure and open space, which has established environmental value, with promises of creation of new such areas. Development here would represent avoidable harm to children’s outdoor provision, at a time when national policy strongly emphasises active travel, outdoor learning, physical activity and mental wellbeing. The site has strong potential for designation as Local Green Space, as it is demonstrably special to the local community, local in character and offers clear recreational, educational, health and ecological benefits. Thank you		
62850433	Louise Chapman			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Green Field East of West Leigh Primary School The field should not be included in the Grove Farm / Rodney Road housing allocation. For West Leigh families and many residents, the land has clear current and future value for children's play, wellbeing and informal learning and outdoor activities. It saddens me to see that my daughter has started school this year at a lovely village school and she is drowned out by the noise of the current building works. Housing numbers can be met through existing allocations, meaning the field is not required to deliver the Plan's overall housing target. Policy LP3 priorities the provision of new green infrastructure and open space. This field already fulfils that purpose and should be protected, not built on. The access to the Rodney Road development should not have been agreed to as the access is not viable and never was. The land functions as an important environment buffer between the school and surrounding housing, helping reduce noise, air pollution, overheating and loss of biodiversity affecting children. Development on this field would represent avoidable harm to children's outdoor provision, at a time when national policy strongly emphasises active travel, outdoor learning, physical activity and mental wellbeing. Don't take this green space away from our future generations!

62862369	Clement Elphick			No	• Consistent with national policy	Yes	No	Please protect the infant school West Leigh and the green spaces surrounding the school. This is clearly house building over children's welfare. Please allow more space.			
39255457	Millie Huntley-Payne			Unsure		Unsure	Unsure	I wish to comment on the land to the east of the West Leigh primary school - I wish to request the removal of the field to the east of the west Leigh primary school from the grove farm/rodney road housing allocation. This land could instead of soulless new build housing which is overpriced and hard to sell, (of which there is countless amounts coming) this land could instead provide invaluable play, wellbeing, informal learning and outdoor activities for the adjacent school- which has a very minimal space for outdoor play within green space. Housing numbers can be met with the existing MASSIVE allocation without adding this small area in, which could prove really impactful to this school. Policy LP3 prioritises the provision of new green infrastructure and open space this field already fulfils this and therefore should be protected. this land can provide an important environmental buffer between the school and surrounding housing, reducing air pollution, noise overheating and loss of biodiversity, all of which can positively impact the children of our village. would provide strong potential on this site for designation as a local green space - it is special to the local community - offers clear recreational educational health and ecological benefits	suggested positive alternatives for this space could be designated as local green space plant as a community orchard with space for a community garden small potion potentially supporting expanded outdoor area and play space for west Leigh primary school		
62845985	Lucy MacDonald			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure		I request the removal of the field to the east of West Leigh Primary School from the Grove Farm / Rodney Road housing allocation. The field should not be included in the Grove Farm / Rodney Road housing allocation. For West Leigh families and many residents, this land has clear current and future value for children's play, wellbeing, informal learning and outdoor activities Policy LP3 prioritises the provision of new green infrastructure and open space. This field already fulfils that purpose and should be protected, not built on The site has strong potential for designation as Local Green Space, as it is: - demonstrably special to the local community, - local in character, - and offers clear recreational, educational, health and ecological benefits. Development here would represent avoidable harm to children's outdoor provision, at a time when national policy strongly emphasises active travel, outdoor learning, physical activity and mental wellbeing.			
62850081	Jack Nicholls			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	No	This is the same comment I made in relation to LP3 as it looks like it would be best made here: This allocation is not sound because it is neither justified nor consistent with national policy. The Plan conflicts with the NPPF requirements to protect valued open spaces, resist loss of land capable of recreational use unless strict criteria are satisfied, and to give great weight to the need for sufficient school infrastructure in areas of housing growth. No evidence has been provided that the field is surplus, nor that alternative provision of equal quality can be secured, nor that the educational and well-being impacts on West Leigh Primary have been assessed. The allocation is also not legally compliant in failing to demonstrate how statutory duties relating to adequate school outdoor space and the Council's own emerging policies on green infrastructure and school playing fields have been met. For these reasons, the inclusion of this site is unsound and should be removed from the housing allocation. Please see the attached document for the full case. The allocation of the field adjoining West Leigh Primary School is not sound or legally compliant when assessed against national planning law and the Council's own emerging policies. As set out in the National Planning Policy Framework (NPPF), plans must positively support healthy communities, protect valued green spaces, and resist development on open space or land capable of recreational use unless strict tests are met (NPPF paras 98, 103–104). The Plan also has a statutory duty to give "great weight" to the need to expand or enhance school facilities alongside housing growth, ensuring adequate educational infrastructure is secured (NPPF para 100). The proposal to build on this field is therefore inconsistent with the NPPF's requirements to safeguard green space, support existing school provision, and plan for health and well-being. Locally, the emerging North Somerset policies on open space and school playing fields (e.g., draft DP52) allow development on land associated with schools only in exceptional circumstances, specifically where land is proven surplus or is required for educational purposes, neither of which is demonstrated here. The Council's own precedent of safeguarding land elsewhere in Backwell for primary school playing fields also reinforces that protecting such spaces is integral to a legally compliant strategy. Furthermore, statutory regulations governing school premises require that schools are provided with "suitable outdoor space" for PE and play, meaning that removing the only realistic opportunity for West Leigh to expand its constrained grounds risks undermining legal duties around educational provision. Taken together, these national and local policy requirements show that allocating this field for housing fails the tests of soundness particularly justified and consistent with national policy and does not comply with the legal and policy framework governing open space, school infrastructure, and community well-being.	In order to make the Plan legally compliant and sound, the Council must modify the allocation by recognising that development of this field is inconsistent with national policy on the protection of open space, the promotion of healthy communities, and the requirement to give great weight to the need for sufficient school infrastructure. The modification should therefore remove the site from the housing allocation and re-designate it as protected open space, either through Local Green Space status or through a dedicated green infrastructure/education safeguarding policy. This modification should also ensure that the Plan meets its own open space and school playing-field policies by securing the land for recreational, educational, and community purposes, rather than for residential development; and that it supports statutory duties requiring adequate outdoor space for schools. Incorporating these changes would bring the Plan into alignment with NPPF paragraphs on open space protection, school provision, and community wellbeing, as well as North Somerset's emerging policies on green infrastructure and school land, thereby meeting the tests of soundness - justified, effective and consistent with national policy.		Protecting the field adjacent to West Leigh Primary School - Planning policy case JN (1).docx
62810017	Guy Stone			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	Yet another unwanted development that will impact on the residents of Rodney Road and surrounds and swallow up yet more precious greenspace and biodiversity. Residents did not want this development, it was not one of the sites put forward by the Parish Council; hoever, yet again North Somerset Council hae ignored.	North Somerset Council need to stop pandering to developers and be more robust in their defence of the precious green space that is seen as a vitally important resource for the existing local residents. I'm not sure who the council think they represent, but it is certainly not the communities that currently live in the areas affected by this awful destructive approach to development.		
62860385	Owain Thatcher			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	The field to the east of West Leigh Primary School should be removed from the Grove Farm / Rodney Road housing allocation as it is not required to meet housing targets in the North Somerset Draft Local Plan. It currently provides a vital green buffer between the school and the new Rodney Road development, and has real present and future value for children, families and the wider community. The land functions as an important environmental buffer between the school and surrounding housing, helping reduce noise, air pollution, overheating and loss of biodiversity affecting children. Further, Policy LP3 prioritises the provision of new green infrastructure and open space. This field already fulfils that purpose and should be protected, not built on. It is nonsensical to justify the destruction of existing green infrastructure and open space, which has established environmental value, with promises of creation of new such areas. Development here would represent avoidable harm to children's outdoor provision, at a time when national policy strongly emphasises active travel, outdoor learning, physical activity and mental wellbeing. 58558977	David Legg			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Plesae find be my comments on the Pre-submission which strongly disagree with. I totally disagree with this planned development of some 800 to 1000 houses. Is this housing needed in this area which is almost totally a commuter district with little local employment. There is no plan for social facilities, such as schools, shops, public buildings. If the number of dwellings is built why not develop a total village that is self-sufficient. There are not enough local facilities to support this expansion. Use some imagination! What about flats or retirement homes. The idea that a road will be built over or under the railway line is probably not realistic because of the cost. The relief road still does not give good access to Nailsea or link to motorways, Long Ashton Bypast or Bristol ring roads. The railway station is already inadequate, and among other reasons there is no disable access to trains from Bristol. How much consideration has been taken about flooding, wildlife, etc. I understand the fields are top grade agricultural land and should be kept for that use and other land options explored.			
9072129	Michael Rose			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	With reference to Backwell the lack of new local employment allocation (alongside the massive residential allocation) is contrary to one of the key principles in the Local Plan. The proposed road across East Backwell and across the railway line is currently unfunded. Without this road development in this area would cause chaos on existing surrounding roads.	Provide residential and employmentr development together. The area immediately west of the Bristol City boundary is more suitable.		
62810017	Guy Stone			No	• Positively prepared • Justified • Effective • Consistent with national policy	No	No	I am appalled that this development has been granted planning permission. The developers own this site and every application they have submitted since the 1980s has been rejected up until now due to a lack of robust knock back from North Somerset Council and poorly made judgement from the planning inspectorate. Not only would this development impact on me personally and reduce my quality of life, the access that would be be created on Dark Lane would be downright lethal for pedestrians and create traffic chaos. The road improvements that have been floated to date are not wanted by residents, we don't want double yellow lines, speed humps, constant traffic noise and fumes from cars speeding up, slowing down, changing gear and banging each time they go over a hump. There is no chance of these proposals offering 'affordable homes for locals', they will be sold to wealthy professionals moving in from elsewhere in the uk, exacerbating the local housing need. North Somerset Council need to stop pandering to developers and be more robust in their defence of the precious green space that is seen as a vitally important resource for the existing local residents. I'm not sure who the council think they represent, but it is certainly not the communities that currently live in the areas affected by this awful destructive approach to development.			
51416353	Patrick Clements			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure		This plan is not sound, many reasons including : Existing road system and proposed new roads inadequate for the increase in population. Existing facilities, car parking etc insufficient for increase in demand on top of already permitted development. Loss of agricultural land. Backwell being asked to take more housing in proportion to its present housing state than is reasonable and will become a small town.			
27088257	Jim Harwood			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Not needed. Backwell is NOT an employment hub, most people commute. Extra traffic. Dangerous roads on the school route. Loss of natural habitat. Increase in flood potential which is already as issue for Backwell. Existing infrastructure not adequate to deal with all the already proposed new builds, this would just make things worse. Doctors already stretched. Backwellbis being asked to expand 80% if all the proposed houses are built. Its not proportionate for Backwell as a village. I moved to Backwell for Backwell. If all the building goes ahead it will not be Backwell any more. Totally object.			

Land east of Backwell

26115201	Derek Broomfield			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	800 new houses have already already been approved in Backwell. A 40% increase for the village. This additional explosion in numbers would result in catastrophic overdevelopment. Despite the approved increase, there remains a shortfall in school places and a lack of investment in health services or recreational facilities. The existing infrastructure and services are insufficient to support a further 1,000 houses. Our village has been assigned a more houses than any other village in North Somerset, with a growth percentage that surpasses that of towns. Backwell is projected to absorb 7% of the district's housing allocation, in contrast to Clevedon's 2%. There is no analysis of needs or viability for an additional 1,000 houses. Backwell does not serve as an employment center; most residents commute. Increasing traffic on A370. This is frequently at a standstill. No assessment of social cohesion impacts has been submitted. Grade 1 Agricultural Land is currently utilized for food production and grazing. Only 7% of this high-quality land remains in all of North Somerset. Government policy asserts that "we must protect our best and most versatile land" to ensure food security. The proposals are in direct contradiction to this policy and jeopardize food security. Development would obliterate valuable wildlife habitats and further endanger biodiversity in one of the most nature-depleted countries globally. The proposals pose a threat to the Brockley Maternity Roost and SSSI, with rare Lesser and Greater Horseshoe Bats depending on the land for sustenance.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The Infrastructure Delivery Plan is deficient in analysis and cost estimates, and there are no assurances of funding for the new road or services. Backwell Common and its adjacent areas are susceptible to flooding, which would be exacerbated by additional housing. Concerns regarding the designation of the strategic growth location encompass the impact on the area's character, the loss of Greenbelt and high-quality agricultural land, the risk of flooding, and uncertainty about the funding and timely delivery of the road to support the proposed housing. The suggested road would not adequately accommodate Nailsea's traffic or alleviate congestion on Station Road, Backwell Common, or Chapel Hill. Constructing the road beneath or above the railway would incur significant costs and may be impractical.			
51099969	G D Brassington			No		Unsure	Unsure	This plan is NOT SOUND for they following reasons: There are already 794 new houses either approved or under construction in Backwell yet 1,000 new houses are proposed on Backwell East which is Grade 1, Greenbelt currently used for food production which completely contradicts government policy which states that “use must protect our best and most versatile land” to safeguard food security. There is no needs or viability analysis for these extra houses. In addition 582 houses are proposed next to Backwell Lake which although is in Nailsea, access will be on Station Road, an already congested road which will have a very serious negative impact on the whole of the Backwell Common area. A new road is proposed for this area but its purpose lacks any details, plans, feasibility study, costings or funding. This level of development would mean an 80% population growth completely changing the character of the village but no social cohesion impact assessment has been provided. There are no proposals to tackle the deficit in school places, no investment in health services, no improvements to infrastructure or services to support any of the proposed or approved new houses. The destruction of valuable wildlife habitat and further harm to biodiversity, in particular the threat to the Brockley Maternity Roost and SSSI with rare bats is not taken into consideration. Backwell East and surrounding areas are prone to flooding which would be aggravated by more housing. This local plan with its sheer volume of growth, necessary investment in infrastructure and services over such a short period and given the dire financial straits the local authority is in, is destabilising, unsustainable and undeliverable.			
51073697	Mr Neil A Marshall			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	With all the 800 houses already alocated to Backwell more developement would even further destroy a once vibrant village. Compred to other towns Backwell seems to be over burdened with developement by increasing its share by 7%. There appears to be no need or analysis for shuch developement. Backwell is not an employment hub as the vast majority of residents already commute to Bristol for employment. The additional traffic would swamp the local transport system which is already at its limits. Backwell would simply become a suberb of Bristol. This proposal would distroy valuable farm land which is currently used to provide food for us to eat and survive. It would destroy valuable wildlife habitat including bats. The proposal dose not mention increse in facilities within Backwell such as Doctors, dentists, pharmasists, schools and leasure facilities. The proposed new road is totally unrealistic. Who will paye for this? The construction of a bridge or tunnel under the railway line would cost many, many millions of pounds. Iam guessing it wont be the developer. This means it will have to be the local tax payer. Where is the feasability study and costing analaysis. Even if were to go ahead it would not reduce the amount of traffic in Backwell or on the route to Bristol. It would not help the much heralded Bus improvement scheme. I could go on but I think my comments so far must indicate to you that this proposal is totally inapropriate and should be dismissed.			
58632193	L Abbott			No	‣ Positively prepared ‣ Justified ‣ Effective	Unsure	Unsure	Backwell has had vast number of houses approved of the which some yet to be built and therefore true impact is not known, further development would lead to complete overdevelopment. There is no infrastructure to support additional housing, including leisure facilities health care and schooling.Backwell is not an employment hub and therefore most residents will be commuting on roads already very congested at peak times. The proposed new road has no guaranteed funding and engineering a road over or under the railway across a flood plain would be highly expensive. The development would lead to The loss of grade 1 agricultural and destruction of the biodiversity in one of the world’s most nature depleted countries. There is no needs or viability analysis for housing in this village or social impact assessment which should be crucial for an 80% increase in housing numbers. In conclusion I am not I agreement with these proposals.			
58630305	David Abbott			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	On top of the developments already approved these additional proposals would lead to complete overdevelopment in the Backwell area which is just not viable. There is very little employment in Backwell with most residents commuting by car into Bristol. Government policy states ' we must protect our best and most versatile land'. Grade 1 agricultural land used for crops and grazing in a designated Green Belt should not under any circumstance be considered for development. Backwell Common and the surrounding areas are prone to flooding (not surprising given its a floodplain!). The run off from Backwell Hill during heavy rain is substantial. The Farleigh Field development is already sending a very dangerous level of additional rainwater onto the A370. The required investment in infrastructure is undeliverable. A new road crossing the railway is probably not feasible given Network Rail's requirements and in any event would probably costs a small fortune. Bristol Water's water main from Cheddar Reservoir runs right across the fields between Backwell School and Chapel Hill. The 33 inch pipe is now 100 years old and the lead sealing the joints is regularly failing. Significant excavation is required to repair these leaks and access is required for large machinery to get to the site. Any development anywhere near this pipe would be totally irresponsible and risk demolition if a leak subsequently occurred. In summary, the loss of Green Belt and high quality agricultural land, the risk of increased flooding and uncertainty over the proposed road render these proposals totally unacceptable. The disproportionate increase in the size of Backwell would have a devastating impact on the local environment and services and is not sustainable. Developers love building houses but hate appropriate investment in infrastructure.	Withdraw it!		
62813985	Dominic Abel			No		Unsure	Unsure	This plan to build all these houses is obsurd and destroys lots of fertile greenbelt. Backwell is just a village and isn't in the right location or suitable as a town. The new road will spoil the area around backwell lake, ruining the asthetics of the village adding to congestion and pollution.			
62687617	John Addiss			No	‣ Positively prepared ‣ Justified ‣ Effective	Unsure	Unsure	There are already an excessively large number of houses planned for Backwell, representing a 40% increase in the number of houses in the village. The additional almost 1000 houses proposed for this development would lead to complete overdevelopment. The proposed road is unfeasible and nobody realistically expects it to happen - engineering the road under the railway line would be extremely expensive. In addition, the road would not relieve the extra pressure on the already at-capacity			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					‣ Consistent with national policy			Backwell crossroads that would be caused by the additional journeys from 2000 extra cars (assuming 2 cars per new household). The traffic at Backwell crossroads regularly backs up to Robinson Way heading towards Bristol. Such a new road would also damage the green belt separation between Nailsea and Backwell, and destroy the environment of Backwell common which is a very popular cycling and walking route. An additional junction from such a new road onto the A370 would only exacerbate traffic problems on the A370, more than counteracting any reduction in traffic entering the A370 from station road. There is a lack of infrastructure and services in Backwell to support another 1000 households. The new Grove Farm site being approved without any construction or contribution (other than land) towards a new school shows how empty any promises of such infrastructure are. Backwell is not an employment hub. The vast majority of residents commute, many into Bristol. Many of these commutes are done by road, and additional road traffic on the A370 will cause additional delays to the X1 service. Many of the additional 1000 households will involve one or more adults commuting daily into Bristol or Weston along the A370. Sites closer to Bristol would be more suitable for such a development. There is no needs or viability analysis for an extra 1000 houses. Backwell is allocated an excessively disproportionate number of houses in comparison to any other village in North Somerset and even many towns which have many more local employment opportunities. This stie includes Grade 1 agricultural land currently used for food crops and grazing. Government policy states that "we must protect our best and most versatile land" to safeguard food security. The proposals contradict this policy. The Infrastructure Delivery Plan lacks analysis and costings, and there is no funding guarantees for the new road or services. Given that the plan appears to acknowledge that such a new road is an essential requirement for this development, this omission is not acceptable. Backwell common and the surrounding areas are prone to flooding, which would be aggravated by more housing. The railway station is not fit for purpose as a transport hub. It is accessible on one of the platforms only by a large number of steep metal stairs, and is therefore not accessible for prams, young children or people with mobility issues. It is inappropriate to designate Backwell as an area for strategic growth given its lack of local employment opportunities, the need to develop in greenbelt farmland, the huge growth anticipated in a small period of time, and the required investment in infrastructure that is unlikely to be delivered leaving residents with health care and other services that are not fit for purpose.			
62832129	Sian Adwick			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	This plan would lead to a complete overdevelopment of Backwell. With 800 houses already approved in the village this is unsustainable. The lack of infrastructure and services along with not enough school places cannot support this level of new housing. Backwell is not a viable location for 1000 new houses – most residents in Backwell commute to work and the railway station is not fit for purpose as a transport hub - it is inaccessible for those with mobility issues or who have small children (I myself I have experienced difficulty using the train with my two young children). Based on these issues, the obvious alternative would be for people to drive but when considering the proposed road, it is clear that this would have a major and negative impact on Backwell and would not effectively reduce congestion on Station Road – a road that is not fit to manage further traffic. Furthermore there are no details or plans for this proposed road. This plan suggests that Backwell should take 7% of the district's housing allocation. Backwell is a village, we live here with our young family because of the green space and to be able to enjoy a healthier environment. It does not make sense to allocate such a large portion to this village in comparison to a town such as Clevedon which has been allocated just 2%. This plan would mean building on Grade 1 Agricultural Land - there is only 7% of this high quality land in North Somerset, it needs to be preserved and used for its current purpose – food crops and grazing. It must be highlighted that Government Policy states "we must protect our best and most versatile land" this proposal clearly contradicts this policy. Furthermore, developing on this land would also harm biodiversity and destroy valuable wildlife habitats. Another major concern is flooding. I don't believe the plans address the potential worsening of the flooding issues around Backwell Common. I feel the plans omit necessary detail that needs to be addressed round flooding and the other issues I have raised above.			
62840321	Morag Allen			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I am appalled by the proposed plans to add so many new houses to Backwell and surrounding areas. The infrastructure of roads is very difficult to expand, and there are big traffic problems at certain times of the day. There is already a massive secondary school and teenagers coming from all over the area. Station Road is a danger to them walking to school because of the narrowness of roads and pavements, and lack of pavement at many points along it, on one side or the other. The train station is also not accessible for bikes, wheelchairs and buggies on one side of the track, and it has not been improved because of the difficulty of doing so. Although there are bus links, they do not always run. My teenagers have grown up here and we know all these problems. We also value the green belt and are so saddened by the decision to build on it. It makes me want to sell up and leave, so that should show you the real impact of house building on people's life. We need green space, so to add a large area of housing at the edge of a small town without leaving green space means that all those who bought a house because it would be near fields are now denied that. I doubt if these plans will go ahead as they appear in publicity, because the flooding and old bridges and railway track, all will be big problems, and any shortage of money and funding could lead to difficulties completing.			
62827297	Rob Arnold			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	This plan is totally unviable as the Grade 1 Agricultural land should be valued. This would destroy wildlife, habitats and natural beauty forever. This poorly thought out mindless expansion would also lead to chaos due to the lack of infrastructure planning. The A370 would be overloaded with traffic as the new residents would have be commuting on this route. The schools in Backwell and Nailsea are already at capacity which would lead to more traffic to provide for the school runs. This increased traffic would also be very dangerous on the flood risk areas around Backwell common. Backwell has been unfairly targeted with a higher number of houses allocated than any other village in North Somerset. This is causing and will continue to cause substantial unrest and discontent. This plan is extremely depressing as it stands to further deplete our countries wildlife and culture leaving us as a dull, grey urban sprawl of merely housing with less of the things that make our country great like its countryside			
62814849	Mikhail Arutyunov			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national	Unsure	Unsure	Dear Sir/Madam, I am writing to formally object in the strongest possible terms to the proposed housing development in the vicinity of where I live. I am a resident of Backwell, a married man, with two children, who relies on local infrastructure. My objection is based on the significant and irreversible detrimental impact this proposal would have on the existing community, vital services, transport, and the safety of residents, particularly my young family. I have summarised my key concerns below, focusing on the most relevant issues for my family and my daily life.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					policy			1. Impact on Family Life and Essential Services The sheer scale of this proposal, coupled with the existing lack of capacity, demonstrates a complete disregard for the well-being of current and future residents. 2. Deficit in School and Health Services: The plan proposes additional housing (up to 1,000 homes) despite an existing and well-documented deficit in school places, with no concurrent investment in health services or leisure facilities. As a parent of primary and secondary school-aged children, I cannot accept a plan that fundamentally compromises their education and access to basic healthcare due to severe over-subscription. 3. Aggravated Flooding Risk: The safety of my family is paramount. Backwell Common and surrounding areas are prone to flooding, a risk that will only be aggravated by more housing and the resulting surface runoff. The fact that the proposed development, including the new roads, is planned on land adjacent to Backwell Lake (Reservoir) and adjacent fields that are known to be on a regular floodplain, makes this proposal unacceptably dangerous. 4. Lack of Social Cohesion Assessment: The lack of a social cohesion impact assessment for a development of this size is a serious omission. Introducing such a massive number of new residents without understanding the effect on the local fabric is destabilising and risks overwhelming the established community structure that we rely on for raising our children. 5. Critical Transport and Commuting Failures The proposals fail to account for the reality of life in the area and would severely worsen the commuting conditions I and many neighbours currently face. 6. Unfit Railway Station: The railway station is not fit for purpose as a transport hub, remains inaccessible for people with mobility issues, and presents serious challenges when travelling with young children or heavy baggage. This proposal assumes this inadequate facility can handle a massive surge in usage, which is completely unrealistic. 7. Ineffective Road Solution and Congestion: The proposed new road will not effectively relieve existing congestion on critical commuter routes like Station Road or Chapel Hill. It is clear that the new road is designed primarily to serve the new development, not the existing community, meaning that my daily commute will become even more gridlocked. 8. Commuter Village Status: Backwell is not an employment hub; most residents commute. Any planning that fails to acknowledge and address this reality through genuinely effective, costed, and guaranteed transport solutions is flawed. It confirms that the proposed housing is purely residential, placing a greater strain on already inadequate transport links. 7. Unsustainability and Lack of Guarantees The project is unsustainable and lacks the necessary financial backing to deliver the infrastructure it promises. 8. Complete Overdevelopment: The village already has 800 new houses approved, representing a 40% increase. These additional numbers will lead to complete overdevelopment of the village, fundamentally changing its character and ability to function effectively. 9. No Infrastructure Guarantees: The Infrastructure Delivery Plan lacks analysis and costings, and there are no funding guarantees for the new road or the essential services needed (like schools and healthcare). This means the core burden of inadequate services will fall squarely on existing residents. In conclusion, this proposal is destabilising, unsustainable, and ultimately undeliverable without significant detriment to the quality of life, safety, and infrastructure of the existing community. I urge you to reject this plan in its current form. Yours sincerely, Mikhail Arutyunov			
58556033	Tatjana Arutyunova			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I strongly oppose the proposed development because it represents unsustainable overdevelopment that Backwell is simply not equipped to absorb. The village has already been allocated a disproportionately high level of housing growth compared with other areas in North Somerset, including nearby towns. Adding a further 1,000 homes would place excessive pressure on a community that has already seen a significant increase in approved housing. There is no credible evidence to show that this scale of growth is needed or viable. No needs assessment, viability study, or social cohesion impact assessment has been provided, and the Infrastructure Delivery Plan lacks clear analysis, costings, or guaranteed funding. Without certainty that roads, schools, healthcare, and other essential services can be delivered on time, the proposals are fundamentally undeliverable. Backwell already faces serious infrastructure shortfalls. School places are limited, health services are overstretched, and there has been no corresponding investment in leisure or community facilities. As Backwell is not an employment hub, most residents commute, meaning additional housing would worsen congestion rather than reduce it. The proposed new road would not effectively relieve existing traffic problems and would be extremely costly and potentially unfeasible due to the railway crossing. The plan would also cause significant environmental harm. It would result in the loss of Grade 1 agricultural land, which is among the most fertile and scarce in North Somerset, directly contradicting national policy to protect the best and most versatile land for food security. Wildlife habitats would be destroyed, biodiversity would be further degraded, and protected sites—including the Brockley Maternity Roost and SSSI—would be put at risk, threatening rare bat species that depend on the land for feeding. Flooding is another major concern. Backwell Common, the reservoir, and surrounding fields are already prone to regular flooding, and further development on floodplain land would significantly increase flood risk both locally and downstream. This creates long-term safety, environmental, and financial risks. The proposals would also fundamentally alter the character of the area, leading to the loss of Green Belt land and undermining the rural nature of Backwell. The sheer pace and scale of growth, without the necessary infrastructure and services in place, would be destabilising and unsustainable. Finally, the railway station is not suitable to function as a major transport hub. It remains inaccessible for people with mobility issues and presents practical difficulties for parents with young children, meaning the development would not deliver the promised transport benefits. Taken together, these issues demonstrate that the plan is overambitious, poorly evidenced, environmentally damaging, and unsustainable, and should not proceed.	This area is completely unsuitable for development and Backwell would not be able to cope with such a massive scale of development, given the other locations are already under construction		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 58417825	Doug Ashby			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure		I have big concerns about the development of the land east of Backwell. I walk this area on an almost daily basis and there are multiple reasons why I think it is unsuitable. Firstly, my overarching concern is with the Backwell common road itself. This single-track country lane, with multiple blind corners, routes around the back of Backwell from Station Road and joins the A370 at the George Pub – any development that backs onto this road will ultimately lead to a massive increase in traffic on this road. As per my picture attached, you plan to include a field that is completely locked by the train track and the Backwell Common road itself, which means that access would have to be granted in some form from the Backwell common road to the larger estate on the other side of the road; whatever calming or preventive measures that you try and put in, will ultimately mean that there will be a huge increase in traffic on the Backwell common road – as I have said, not only is the road a single-tracked lane but it is also part of the national cycle route and is designated a Festival Way, which should be encouraging cycling and walking, not more cars! I believe that with all the development, the Backwell common road will be used as a rat run to escape the heavy traffic on station road and the A370, so that people can take a shortcut to drive into the estate where the opening would have to be for this section of the land-locked development (as per my picture). I fear this increase in traffic will make the road pretty much unusable for pedestrians, walkers and cyclists. My children have to walk to school along Backwell Common and it has no lighting and no pavement – this development would really make me fear for their safety. I have walked this area for nearly four years, and the Backwell Common Road is absolutely prone to flooding. There are specifically 3 locations where flooding on the road occurs: At Farleigh House under the railway bridge (right where the field in my attached picture will have to join the main estate), at number 12 Rivida Cottage, and then very heavily at the well-known location under the bridge at Chapel Hill. Again, this will lead to considerable issues related to the inevitable increase in traffic along the Common. The fields at site HE202012 also have a very high water table, and are certainly impassable during winter time next to Woolleys Farm, which again is where your entrance to the primary estate would have to be. To be clear, pretty much the whole of the Backwell common road has a trench on one side dug out by the farmers so that any excess flood water can hopefully drain off the road or fields, but from my experience these regularly overflow onto the road! We must also not forget that this is Greenbelt, and provides a very important green space for the residents of Backwell. The fields contain multiple public rights of way, which means that the sports centre and the allotments can be accessed from these fields. I really do find it sad that you would want to build over this beautiful countryside, and to also lose the use of this farmland - quality agricultural land is essential for our food security, once we concrete over it all, it will be gone forever!! On top of all of this, we have to realise that Backwell is not a land of job opportunity - people move here because they want larger houses in the countryside. If a large amount of affordable housing is created, where will all of these people find job opportunities? Let us also not forget that three quarter of a million pound detached houses do not solve a housing crisis, we should be building upwards on brown or grey belt at the edge of existing cities, thus providing affordable housing and great access to jobs and transport links!! And finally, I just have no idea when and how this additional Link Road (to relieve the additional strain on Station Road) will appear? I've heard that estimated costs are up to around £50 million - you can't seem to even afford to maintain our pavements to our schools, let alone find this amount of money to provide access to a total of around 1500 houses - I just can't understand how it is a justifiable amount of money to spend, considering the perceived benefits?! My concern would be that the link road is never built and Backwell Common and Station Road will just suffer the consequences; I walk along Station Road daily during peak school times, and the road is incredibly dangerous, it is literally just an accident waiting to happen! Hundreds of school kids file down the pavement, often walking in the road, whilst HGVs career up and down, often having to mount the pavement to make way for oncoming vehicles! In conclusion, the people of Backwell simply don't want all these additional houses and everything that comes with them: more traffic, more pollution, more crime, poorer public services and poorer education!!			landlocked.jpg
39280129	Katherine Ashby			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I do not understand why Backwell has been allocated 7% on the housing target which is the same as Portished: Backwell is a small village, Portishead is a decent-sized town with many facilities and buisnesses and much better able to absorb new housing. Clevedon is also a town and it has only be allocated 2% - this does not seem proportionate to me. Backwell is not an employment hub - it is more a commuter village with most people being employed in Bristol. Building more housing here will result in increased road traffic on the already congested A370 which does not make it a 'sustainable location'. I doubt that the proposed link road is actually deliverable. It would require an expensive crossing of the railway - can this really be funded by the government, the local authority or the developer? Backwell Common is a single track country lane which twists and turns, with many blind corners. The development of this land would inevitably lead to a dangerous increase in traffic and congestion on this road. It would also lead to accidents between cars and also between cars and pedestrians and cyclists who regularly use this road for leisure. My young children regularly walk along Backwell Common to school and Beaver Scouts; with no pavements and no street lights, I worry about their safety in the case of these developments taking place and the subsequent increase in traffic. The field bordered by The Avenue and the railway line and Backwell Common has no feasible access route except via Backwell Common - this WOULD make Backwell Common busier and therefore more unsafe for children, walkers, cyclists and cars. The fields adjacent to Backwell Common regularly have standing water during the winter months. During times of heavier rainfall (which are increasingly common), water pours from the fields onto the road and can cause flooding especially under the 2 railway bridges (by Farleigh House and at the bottom on Chapel Hill) and sometimes by Woolleys Farm.. Building on the fields will very obviously worsen this problem considerably 'sustainable' I cannot see how building on grade 1 agricultural land which is used for grazing, hay-making and food crops could be considered 'sustainable'. The world seems increasingly unstable and lessening the UK's ability to produce our own food is not really helping to increase our national security. It is also damaging to the wildlife, including bats that live and forage on our fields. If 50% of the houses built on our Greenbelt land are 'affordable' how will the developer afford any to build the link road or contribute to infrastructure improvement required as a result of all this development. There aren't any employment opportunities in Backwell and it is a village so I worry that this will not lead to a socially cohesive village.	I wish for the Land East of Backwell to be removed from the plan and a more appropriate site found at a larger settlement (e.g. WsM, Clevedon or Portishead).		
51425025	J Axam			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell already has 800 new houses approved, a 40% (1000) increase for the village. These additional numbers would lead to complete overdevelopment which would be very destabilising for the village as a whole given how quickly the houses will be built. The proposed road would not be adequate to cope with the extra traffic and would be far too expensive to build. The railway station needs to be significantly upgraded if it is to become the transport hub envisaged by North Somerset Council. Despite many attempts over the years it still remains inaccessible for people with mobility issues and very difficult for mums with young children. No funded increase in capacity for the required extra school places or doctors/dentist facilities or leisure facilities. I cannot understand why a new road, railway crossing and/or services haven’t been costed and funding agreed in advance. I am very worried the houses will be built without the necessary infrastructure.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								I feel flooding would be a major issue with the extra houses suggested. The high number of houses allocated to Backwell seems out of proportion to other local towns/villages North Somerset has not properly assessed the needs associated with the building of an extra 1000 houses. Most of the residents of the new houses would need to commute as there is very limited local employment. It is unlikely that they will all be working in central Bristol and will need to use a car. I object strongly to Grade 1 Agricultural Land to be used for housing. The loss of green space with its loss of wildlife habitats would be detrimental to the village.			
51454721	R Axford			No	‣ Positively prepared ‣ Justified ‣ Consistent with national policy	Unsure	Unsure	The proposed development in Backwell is on Grade 1 agricultural land. The UK food security is in crisis and the UK needs to respond by making sure that all good quality agricultural land is used to produce food. Using grade 1 land to build houses will have a massive impact on the country's food security. There is only 7% of this high quality land left in North Somerset. Backwell already has 800 new houses approved which means the village will already grow by 40%. These additional numbers will lead to overdevelopment. Backwell doesn't have many shops or services and there is no funding to provide additional shops or services with this development. Residents have to travel to Nailsea for most things. The only safe way of doing so with the lack of safe cycle routes and extremely limited bus service is by car. Station Road is extremely narrow and already very congested and can't cope with current volume of traffic. With this scale of development, we either need to make sure there are adequate facilities in Backwell for all new housing (shops, library, community hub, restaurants) or to make a safe, traffic free cycle route linking Nailsea and Backwell AND regular buses, at least every 30 minutes, between the two towns.			
62850113	S. B			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	This would be gross over-development of our village. 1) Numbers and Lack of Infrastructure: We already have 794 new homes being built or about to be built. That will be about 2000 new people and their cars that will definitely be moving here in the next year or two. Yet there is no additional infrastructure to serve them. And now there is this draft proposal for another 889 homes, so a further 2000+ people and their cars, again with no realistic additional infrastructure. (See my comment further down about the proposed road linking the A370 to Backwell Lake.) 2) Station Road Cannot Take More Traffic: I live near Station Road. In the mornings and school out time and evening rush hour (and often at weekends too), it is clogged with cars, all sitting in the long traffic jam with their exhausts polluting the air by the narrow pavements where children walk to and from school. New homes with more car owners means more trips to Nailsea for services such as supermarkets, which is more traffic on Station Road. Add to that all the new homes being built in Nailsea or proposed to be built there, with car owners driving along Station Road to access the A370 - Station Road can't take it. There is a proposal to build a road from the A370, across Backwell Common and the railway line to Backwell Lake if the draft proposal's 889 houses are built. BUT this is in phase 3 of the building works (according to the developer), AFTER all the proposed houses are built, and with no realistic funding for it. The Council has no spare money for major infrastructure projects like that and the house builder contributions will be nothing like enough to pay for it, so it is very unlikely to ever happen. AND narrow Station Road with it's very narrow pavements simply cannot take any more traffic. If that land is ever developed (and I sincerely hope it never is), the road has to come FIRST. 3) Public Transport: Backwell has been targeted with this huge amount of development because it is seen as having good transport links. I use public transport a lot. It is true that the X1 bus service that runs along the A370 to Bristol centre is good, but the X7 that comes along Station Road is only once an hour. If one is cancelled, that is a two hour gap between buses. If you want to go anywhere other than central Bristol, it is two buses or one bus and a long walk, so journey times become long. People who live further from the A370 or on the south side of Nailsea tend to use their cars to drive to the Park and Ride near Long Ashton, adding to congestion on both Station Road and the A370. There is a railway Station in Backwell with platforms that are too short for many trains and no access for wheelchairs/ prams on one side (just many steep steps). At peak times, there are often no free seats, and sometimes trains are so crowded that it is physically impossible to squeeze any more bodies in. The station carpark is already full on some mornings, even before all the current new houses are occupied. I do not see how this equates to being a good transport hub. People will use their cars. As the Nailsea & Backwell Transport study shows, "75% of individuals in Nailsea and Backwell commute by car or van". Also, the Transport study shows that a surprising 30% of both primary and secondary school pupils are driven to school by car. Congestion and air pollution will increase. 4) Employment: People who move to live in the new housing in Backwell are very unlikely to work locally. And there is no plan to create employment opportunities at the same time as building the housing - the housing developers do not include this in their plans at all. The two ought to go hand-in-hand. Most newcomers will work in Bristol, Avonmouth or possibly Weston, and will commute. In the NSC evidence statement it says of Nailsea and Backwell "their primary function could be considered to be as dormitory settlements for Bristol". Most of the new people will commute by car for part or all of their journey. (See my comments above on public transport.) Any new housing should be much nearer Bristol, at a cycling or walking distance from employment. 5) Green Belt and Food Security: That land is Green Belt, grade 1 agricultural land. We walk across its public footpaths more than a hundred times every year to access our allotment. Most years, the bigger fields grow wheat, although we have seen barley sometimes. The smaller fields sometimes have sheep grazing and are always cut 2 or 3 times for hay. They support a wide variety of wild flowers and pollinators. As a country, we should be growing more of our own food, not less, to insulate ourselves against global politics and climate change. Those fields should stay as the good farmland that they are. 6) Flooding: For 16 years, I worked at Wraxall School. On numerous occasions, we looked out across a very flooded valley. That land gets water-logged at times every winter. If it is tarmacked over, roofed over, and driveways installed, where will all the water go? Where Chapel Hill goes under the railway, it floods every winter. I have a photo, which I have uploaded below, of a Waitrose delivery van in flood water up to its wing mirrors in winter 2024.	If the houses are really needed (and I doubt they are), they should be built much nearer to Bristol instead, as that is where employment is, and where people can walk or cycle to reach it, or use the metro bus link.		Flooded Chapel Hill with Waitrose Van in 2024.pdf
62793889	J Berry			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The lack of infrastructure cannot support this huge development. Backwell already has recently incorporated a huge development of new houses and their construction has caused massive upheaval for the community in regard to transport and delays in travel requirements, when most residents are required to commute. The development proposed is far too big, and would compromise wildlife habitats and biodiversity, at the same time as reducing high quality agricultural land. New roads and housing proposed are on a floodplain, with risk of future further flooding complications.			
51818881	M Best			No	‣ Positively	Unsure	Unsure	A development of this size would destroy the village and its sense of community. We are already taking more than our fair share of development; it would be better to build reasonable amounts in most villages, eg Wrington, or more in urban areas where	More housing in urban areas, and a fair share in most villages.		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					prepared Justified Effective Consistent with national policy			there are the facilities. Our schools and medical facilities will not cope. This is Grade 1 agricultural land.We need to keep all our land in this category to provide food security in these uncertain times, as government policy clearly states. Our roads are barely coping now; Station Road is too narrow for modern vehicles, and the pavements are dangerously narrow for the children using them at the start and finish of school. Backwell Common has always been liable to flooding in places. There is very little employment in Backwell or around; residents in any new housing will be likely to be commuting to Bristol or beyond. The local railway station is not fully accessible, and all attempts to make it so have failed.			
62627201	A Blunden		Local resident	No	Positively prepared Justified Effective Consistent with national policy	Unsure	Unsure	I have lived locally for 35 years so I think more than familiar with this area. There are many points against this proposal. Area below floods and this will increase that Loss of good quality farm land when we need to grow more of our own crops The main road through Backwell is heavily congested There are no local facilities to allow for this continued growth			
62858465	Janet Bainbridge		BRA	No	Positively prepared Justified Effective Consistent with national policy	Unsure	Unsure	It is not sound for the following reasons There are enough houses being built already to overwhelm the following Schooling provision Medical provision Lane safety for horses and pedestrians in the nearby lanes . The road planned would totally overwhelm the neighbouring town of Nailsea . We have only 7% of prime agricultural land left in North Somerset which surely should be retained at all costs for our unsure future There is a limit to jobs available in this neighbourhood and in Bristol Perhaps consider a new town with planned built in infrastructure elsewhere where there is more room to provide suitable services in another county . This is NOT a case of not in my backyard but being able to plan social infrastructure properly eg in Herefordshire. One doesn't want to take land in another place but if houses have to built , then why not in an area where there is space to plan appropriately.			
62810561	Tim Baines				Justified Effective			I am a resident of Flax Bourton and so not only am interested in the Nailsea and Backwell part of the plan, but I experience daily the chaotic shambles of the A370. The Council has already given approval to 800 new homes in the area, and you are now proposing another 1000, and yet with no guaranteed improvements to road capacity, schools, healthcare, doctors, community facilities. This is complete overdevelopment of a small village and town and will create far more problems than it solves. Look elsewhere, or tell the government where to get off with its crazy housing targets			
62852801	Peter Baker			No	Positively prepared Justified Effective Consistent with national policy	Unsure	Unsure	The lack of infrastructure and services cannot support another 1,000 houses. This has been evident in Nailsea where lanes to the West of Nailsea are clogged up since the construction of houses at Parish Brook and Netherton Grange. All these additional houses will put more pressure on the roads which will continue to deteriorate. The developers / house builders have no interest in the local community. As an example, they have not contributed to upgrading roads in the West of Nailsea, Engine Lane is sinking since all the construction traffic used it and all of the additional cars that use to get to the new houses. The roads leading out across to Tickenham and Netherton Wood Lane are literally crumbling. I have no doubt this will be repeated in Backwell but on a larger scale with local roads used a cut throughs and rat runs with no investment from greedy developers and house builders who have little regard for the communities where they are building. Despite this increase, there is a deficit in school places and no investment in health services or leisure facilities. The lack of infrastructure and services cannot support another 1,000 houses. Backwell is not an employment hub, most residents commute. This will add more cars to already busy roads, leading to further gridlock at main access points to the M5 which is already not fit for purpose. Many people do not use public transport for work as its not viable, hundreds more cars will lead to further traffic issues across the wider area. Regardless of the new road proposed there will continue to be heavy traffic along Station Road through Backwell and along Station Road into Nailsea as commuters make their way to the M5 making the route even more hazardous and dangerous for school children walking and cycling to Nailsea and Backwell schools. Backwell Lake (Reservoir) and the adjacent fields, where the new roads and housing is planned and are on a floodplain, which floods regularly. This is also an area of natural beauty used by the local community and the proposals would take away this beauty with a noisy and busy road junction removing an area where people can relax and exercise, which ultimately could contribute to people having to exercise further afield and adding more cars to the roads or sadly and more likely people stopping exercising and leading to an increase in physical and mental health issue and more pressure on the NHS. This proposal is ill thought through with no regard for the local communities in Backwell and Nailsea. Development would destroy valuable wildlife habitats and further harm biodiversity in one of the world's most nature-depleted countries. The beautiful quiet valley where families can walk and cycle in relative safety would be lost and replaced with another soulless housing development.	Remove it in totality.		
39305217	Lilianna Bakinowska			No	Positively prepared Justified Effective Consistent with national policy	Unsure	Unsure	The plan is not sound. Backwell has 800 aproved already, this is a huge 40% increase for our village. I consider the extra numbers of houses to be an overdevelopment. That will not be a village anymore. Rural becoming a si=uburb. When I move here, I did not wanted to move to subburs, but to the small village. The trafic on Station Road and Backwell common would be extremely impacted by this, that road, which I live by, it's already very busy and hyndred of children walk up and down to and fro school BJS and secondary school. This will be unsafe for children, if traffic will increase. Then, looking at the schools and other infrastructure, that is not proposed with the houses - where all those new to the village people will send their children to school? Doctors are already stretched. There is no infrastructure in Backwell for another 1000 houses. I do not understand, why Backwell became a spot to be located so many houses, more than any other village and any other town. Backwell is expected to take 7% of the local housing allocations compared to 2% Cleevedon. This does not make sense I my opinion, I am against it. Let's not make our village a suburban town. The plan did not consider needs or variability analysis for the extra 1000 houses. Our village is not an employment hub, our residents commute mostly. No social cohesion impact assessment has been provided. I oppose from this beautiful Grade 1 Agricultural Land currently used for food crops and grazing to become a housing hub. We have only 7% of this high quality land left in the entity of the North Somerset. The Government states that we ''must protect our best and versatile land'' for the purpose of food security. This plan is insane, and do not go with this statement. Grade 1 food growing agricultural land with its wildlife habitats will be destroyed and UK as a one of the most nature-depleted countries. This plan will contribute to those being destroyed even further. Bats which are protected (Grater and Lesser Horseshoe bats) will lose their habitats if this plan will go on, and this is unacceptable.		NO	
21325153	C Ball			No	Positively prepared	Unsure	Unsure	1. Summary Position I strongly object to the proposed Strategic Growth Location in Backwell and the allocation of approximately 1,000 additional dwellings and associated highway infrastructure. Backwell has already been subject to significant housing approvals totalling around 800 homes, amounting to a 40% increase in the village's size. The further expansion			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					• Justified • Effective • Consistent with national policy			proposed is disproportionate, unjustified, and constitutes overdevelopment that would fundamentally alter the character, function and sustainability of the settlement. The proposal is unsound under the NPPF tests: • Not justified (no needs assessment, viability evidence, or proportionality in settlement hierarchy). • Not effective (infrastructure, transport and service delivery constraints). • Not consistent with national policy (failure to protect best agricultural land, biodiversity, and avoid flood risk; conflict with sustainable development principles). _____ 2. Disproportionate Growth Contrary to Settlement Hierarchy Backwell has been allocated more houses than any other village in North Somerset, and a higher proportional level of growth than several towns. Backwell is expected to take 7% of the district's total new housing, compared with Clevedon's 2%, despite Clevedon being a fully serviced town. This results in: • An 80% projected increase in Backwell's population, compared with 22% in Weston-super-Mare and 6% in Clevedon. • A scale of development completely inconsistent with the role of a rural service village. • No needs assessment, viability analysis, or evidence base demonstrating a requirement for another 1,000 homes in this location. This renders the allocation unjustified. _____ 3. Road Proposal and Transport Impacts 3.1 Ineffectiveness of the Proposed Relief Road The proposed new road would not meaningfully relieve traffic pressures on: • Station Road • Backwell Common • Chapel Hill There is no evidence that it provides a strategic solution to Nailsea's congestion. Instead, it risks creating additional traffic flows through sensitive areas. 3.2 Engineering and Environmental Harm Constructing a bridge over the railway will be: • Hugely expensive • Disruptive and visually intrusive • Harmful to wildlife habitats, including deer and hare corridors No engineering feasibility assessment or funding certainty is provided. 3.3 Increased Traffic from Additional Residents Backwell is not an employment hub, meaning most new residents will commute. This will: • Increase car dependency • Add pressure to already constrained routes • Place additional burden on the rail station, which is already at capacity during peak hours Backwell Station itself is not fit for purpose as a transport hub: • No step-free access • Platforms inadequate for modern commuting demand • Significant problems for mobility-impaired passengers, and those travelling with children This makes the growth ineffective and inconsistent with sustainable transport goals. _____ 4. Lack of Infrastructure, Services and Community Provision The Plan provides no secured or costed mitigation for the increased pressure on: 4.1 Education No provision is made for the required expansion of secondary school places, despite the development generating significant pupil numbers. 4.2 Healthcare Local GP and health services are already overstretched. No investment, land allocation, or funding mechanism is identified. 4.3 Leisure and Retail Facilities There is no proposal to enhance local leisure, community or retail services. The inevitable result is increased driving to other towns, compounding congestion and emissions. 4.4 Funding Certainty The Plan lacks detailed costings, phasing, and guaranteed funding for any of the infrastructure required to make the development sustainable. The proposal is therefore not effective. _____ 5. Harm to High-Quality Agricultural Land The proposed road would cross Grade 1 agricultural land used for crops and grazing. Only 7% of such land remains in North Somerset. Government policy states that we must protect the best and most versatile land, yet this allocation contradicts that policy and undermines local food security. _____ 6. Environmental, Ecological and Biodiversity Harm 6.1 Loss of Habitat and Wildlife The development would destroy significant areas of greenfield habitat at a time when the UK is already one of the most nature-depleted countries in the world. 6.2 Impact on Protected Species The proposals threaten: • The Brockley Maternity Roost • An SSSI containing rare Greater and Lesser Horseshoe bats These species rely on the surrounding landscape for feeding, and disruption from construction, lighting and noise would be catastrophic. 6.3 Ineffective "Eco-Area" Proposals The Plan references new ecological mitigation areas but provides no long-term funding, management strategy, or delivery mechanism. Experience in Portishead demonstrates that such areas become neglected and unused without guaranteed investment — eventually failing both wildlife and agricultural function. This makes the ecological strategy not credible or effective. _____ 7. Flood Risk and Water Management Backwell Common is already prone to flooding — and worsening annually — with frequent interventions by Wessex Water. Additional hard surfaces from: • The proposed road • 1,000 new homes • Associated infrastructure ...will significantly increase surface runoff and overwhelm small watercourses. Backwell Lake (a reservoir) and adjacent fields sit on a frequently flooded floodplain, yet the Plan provides no mitigation, modelling, or funding for waterway improvements. This is contrary to national policy, which requires avoiding flood risk and providing evidence-based mitigation. _____			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								8. Heritage Impacts Near Backwell Common, the proposed road would pass in close proximity to three Grade II listed buildings. The tranquillity, setting, and historic character of these heritage assets would be directly and irreversibly harmed. No Heritage Impact Assessment is provided, making the Plan incomplete and unjustified. _____ 9. Loss of Green Belt and Character The proposed Strategic Growth Location results in substantial loss of: • Green Belt • High-quality agricultural land • Open rural landscape fundamental to the character of Backwell This level of harm is not offset by clear evidence of exceptional need or locational justification. _____ 10. Affordable Housing and Infrastructure Funding Government policy requires 50% affordable housing on Green Belt releases. While this may be desirable, it also significantly reduces developers' contributions toward: • Infrastructure • Schools • Roads • Public transport improvements This creates a delivery gap, with no guarantee that essential services will be funded. _____ 11. Missing Evidence and Assessments The Plan fails to provide or reference: • A cohesion / community impact assessment • A full transport assessment • A flood risk strategy • A heritage assessment • Detailed costings and delivery plans • Long-term maintenance funding for ecological mitigation • A needs or viability assessment for >1,000 additional homes in Backwell The lack of evidence means the allocation fails the “justified” and “effective” tests of soundness. _____ 12. Conclusion The proposed allocation for Backwell is unsound, unjustified, and disproportionate. It would result in: • Overdevelopment of a rural village • Severe environmental and biodiversity loss • Loss of nationally important agricultural land • Increased flood risk • Unmanageable strain on transport, education, health and community services • Harm to heritage assets and village character • Significant infrastructure funding gaps with no certainty of delivery For these reasons, the Strategic Growth Location at Backwell should be removed from Schedule 1 of the Local Plan.			
62865665	Natalia Banasiak			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	1. Overdevelopment Beyond Capacity Backwell already has approval for 800 new homes—a 40% increase in the village’s size. Adding another 1,000 houses would result in extreme overdevelopment, fundamentally changing the character of the area. 2. Unrealistic and Ineffective Road Proposal The proposed road will not solve traffic congestion on Station Road, Backwell Common, or Chapel Hill, nor will it effectively serve Nailsea’s traffic. Engineering a road under or over the railway would be prohibitively expensive and may not even be feasible. 3. Infrastructure Deficit Despite the planned growth, Backwell faces a shortage of school places and lacks investment in health services and leisure facilities. The existing infrastructure cannot support such a large increase in population. 4. Disproportionate Housing Allocation Backwell is being asked to take more houses than any other village in North Somerset and even a higher growth percentage than towns. It accounts for 7% of the district’s housing allocation compared to Clevedon’s 2%, which is disproportionate and unjustified. 5. No Evidence of Need or Viability There is no needs assessment or viability analysis to justify an additional 1,000 homes in Backwell. This raises serious questions about the soundness of the plan. 6. Lack of Employment Opportunities Backwell is not an employment hub; most residents commute elsewhere. Adding more housing without local jobs will increase traffic and carbon emissions. 7. No Social Cohesion Assessment The plan does not include an impact assessment on social cohesion, which is critical when introducing such rapid and large-scale growth. 8. Loss of High-Quality Agricultural Land The development would destroy Grade 1 agricultural land currently used for food crops and grazing. Only 7% of this land remains in North Somerset. Government policy requires protecting “our best and most versatile land” to safeguard food security—this proposal directly contradicts that. 9. Environmental and Biodiversity Harm The development would destroy wildlife habitats and harm biodiversity in an already nature-depleted country. It threatens the Brockley Maternity Roost and SSSI, home to rare Lesser and Greater Horseshoe Bats that rely on this land for food. 10. Unfunded and Uncertain Infrastructure Delivery The Infrastructure Delivery Plan lacks proper analysis, costings, and funding guarantees for the new road and essential services. Without these, the plan is undeliverable. 11. Flood Risk Backwell Common and surrounding areas are prone to flooding, which would worsen with more housing. Backwell Lake and adjacent fields—where roads and housing are planned—are on a floodplain that floods regularly. 12. Affordable Housing Policy Creates Funding Gap Government policy requires 50% affordable housing on Greenbelt land, which reduces developer contributions toward infrastructure, making delivery even less viable. 13. Unsustainable Growth Pace The sheer scale and speed of growth, combined with the required infrastructure investment, is destabilizing, unsustainable, and undeliverable. 14. Transport Hub Limitations Backwell railway station is not fit for purpose. It is inaccessible for people with mobility issues and poses challenges for families with young children, undermining claims that it can support strategic growth.			
62865921	Bartek Banasiak			No	‣ Positively	Unsure	Unsure	Unfair Housing Allocation – Backwell is being asked to take more homes than any other village in North Somerset and even a higher growth rate than towns. It represents 7% of the district’s housing allocation compared to Clevedon’s 2%, which is disproportionate and unjustified.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					prepared • Justified • Effective • Consistent with national policy			Excessive Development – The village already has approval for 800 new homes—a 40% increase. Adding another 1,000 properties would overwhelm Backwell and permanently change its character. No Justification or Viability – There is no evidence of need or viability for these additional homes, which raises serious concerns about the plan's soundness. Insufficient Infrastructure – There are already shortages in school places and no planned investment in healthcare or leisure facilities. The existing infrastructure cannot cope with such a large population increase. Infrastructure Delivery Uncertain – The delivery plan lacks proper costings and funding guarantees for roads and essential services, making the proposals undeliverable. Road Proposal Is Unworkable – The suggested road will not ease congestion on Station Road, Backwell Common, or Chapel Hill, nor will it effectively handle Nailsea's traffic. Building a crossing under or over the railway would be extremely costly and may not even be practical. Transport Hub Not Fit for Purpose – Backwell station is inaccessible for people with mobility issues and difficult for families with young children, undermining its role as a strategic transport hub. Limited Local Employment – Backwell is not a job center; most residents commute. More housing without local employment will worsen traffic and emissions. Social Impact Ignored – No assessment has been made on how such rapid growth will affect community cohesion. Flooding Risks – Backwell Common and nearby areas already flood, and the proposed sites include floodplains around Backwell Lake, which regularly floods. Affordable Housing Policy Creates Shortfall – Requiring 50% affordable housing on Greenbelt land reduces developer contributions for infrastructure, making delivery even less viable. Loss of Prime Agricultural Land – The development would destroy Grade 1 farmland used for crops and grazing. Only 7% of this land remains in North Somerset. Government policy says we must protect this land to ensure food security—this plan does the opposite. Damage to Wildlife and Biodiversity – The proposals would wipe out habitats and harm biodiversity. They threaten the Brockley Maternity Roost and SSSI, home to rare Lesser and Greater Horseshoe Bats. Growth Pace Is Unsustainable – The scale and speed of development, combined with infrastructure gaps, make this plan destabilizing and unrealistic.			
39283425	Richard Charles Holland Barclay			No	• Positively prepared • Justified • Effective	Unsure	No	The plan runs roughshod over all planning guidance. Proposing building on Grade1 agricultural land and Green Belt. No infrastructure, doctors, schools, shops, parking? Link road will only move the congestion to the A370. Looks like very desperate measures to shoehorn more housing into North Somerset.	Don't develop on these fields.		
62850209	David Barclay			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell already has 800 new houses approved, a 40% increase for the village. Adding an additional 1000 houses is hugely disproportionate and constitutes overdevelopment. The lack of local infrastructure and services cannot support this level of development at such a rapid pace. Backwell has been allocated a far higher number of new houses than any other village in North Somerset. Backwell is being expected to take 7% of the district's housing allocation, compared to Clevedon's 2%. This particular site is Grade 1 agricultural land which is highly valuable - Government policy states that "we must protect our best and most versatile land" to safeguard food security. The proposals contradict this policy and undermine food security. The proposals also threaten the Brockley Maternity Roost and SSSI, with rare Lesser and Greater Horseshoe Bats relying on the land for food.			
39402305	I Barfield			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell is not equipped to deal with such an immense proportion of growth: the infrastructure is not able to sustain it and nor is the environment. A proportionate increase in population of 80% on green land and on/close to flood plains will put existing (and currently being built) houses and residents at risk. There are already homes in Backwell at substantial risk of flooding. There is only 7% of Grade 1 Agricultural Land in the whole of North Somerset. Nature is being destroyed disproportionately to the ability for the infrastructure to support this speed of growth or regenerate the natural environment elsewhere. There is no needs or viability analysis for an extra 1,000 houses! This is TOO MUCH.			
62848737	Heather Barham			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	We do not require any more homes in our village. 800 new homes have already been approved. Already this is a 40% increase in the number of dwelling. The local distinctiveness of the North Somerset village will be lost and completely over developed if each spare piece of land is built on. The proposed new road would be completely inadequate. It would not serve to ease any congestion on Station Road which is already dangerous. It's location on Backwell Common and through the railway line somehow make it an unfeasible proopsal. It's entrance onto Farleigh Road, creating a second crossroads from a residential area would be inadequate and would cause issues for commuters. I don't understand why Backwell seems to proportionally have so much of North Somerset's development proposals. 7% of the Housing allocation is too great. We are already nearly doubling in size in a short space of time - this is enough. Our roads and current infastructure would not be able to bear another 1,000 homes. Most residents commute and it would cause roads to be overloaded into the City. We do not have enough schools, doctors, dentists, leisure facilities to be able to bear this pressure on our already creaking infastructure. The proposed development are on grade 1 agricultural land. We need to safeguard this land for future food security - it is short sighted in the extreme to sacrifice this land I walk these fields daily. They are a haven for Wildlife. I have seen bats, slow worms, numerous rare birdlife such as Egrets, yellow hammers and skylarks. The meadows are an alive haven in the summer with a mosaic of interesting grassland species. We have a rewilding programme on our doorstep. These plans will cancel out their progress These creatures rely on this land and hedgerows for their food sources. I saw on the propsed plans a community orchard! We already had an orchard that was a historical relic of Nailsea's cider industry. This is part of our local heritage. it should not be destroyed. I do not think the road plan is well thought through. developers are not communicating and I fear we could have a new road which destroys habitats which leads to nowhere and would be unfinished. Building on Greenbelt land would reduce Community Infastructure contributions. It is not worth the payoff to lose valuable greenbelt. The volume of change in a short amount of time is unsustainable, dangerous, destabilising and undeliverable. the plans are poorly thought through. Our current station would not cope with the increases in population proposed. the population of Backwell would increase by 80% if this is carried out. It is totally disporoprtionate, backwell has already taken it's share of development, other bigger places in teh authority should take an equal share to meet targets			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								I belive the area will be prone to more flooding which is already an issue on Backwell Common. More building = less land for natural drainage.			
21226753	Gary Barnes			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I am concerned at the proposed loss of grade 1 agricultural land. My understanding is that planning decisions on this point are based on the outdated ALC (Agricultural land classification) which uses rainfall data from 1941 to 1970 and temperatures from 1961 to 1980. This outdated data could result in significant misjudgement of the impact on the UK's "Food security". Government policy says we should protect our Best & Most Versatile land. This planning proposal seems to be remarkably at odds with government policy. More generally I consider the plan to be unsound based on the impact that the 800 approved new houses will have on Backwell as a village let a lone the prospect of another one thousand new homes. A development on this scale will destroy Backwell's character & create a soulless dormitory town. There is inadequate car parking in Backwell at present for the local shops. An influx of an additional 1000 homes based an occupation rate of 2.3 people per household equates to a population increase of 2300. Add the approved 800 new homes & this totals 2300 + 1620 = 3920. Can the village infrastructure, schools, health centre, dentists etc withstand growth on this scale?	A reassessment of the impact on grade 1 agricultural land. The "Natural England" - Guide to assessing development proposals on agricultural land dated 5 February 2021 is clearly flawed. I consider the other items mentioned to be more a case of why don't you use common sense? rather than being politically compliant!		
62832545	Christopher Barrett			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	There are already 800 houses approved for Backwell, which would be a 40% increase on the size of the village with no investment in health services, schools or leisure facilities. There is a higher number of houses allocated in BAckwell than any other village in North Somerset and the plan doesn't look at the viability of the extra 1000 houses. The proposed road, does not effectively reduce traffic on the already congested station road and in fact puts more reliance on it. The land to the East of Backwell is grade 1 agricultural land and green belt. Government policy at the moment is to protect the most versatile land and safeguard food security. There is also already flooding that happens towards the end of Backwell Common and Backwell Bow housing would significantly increase the risk of flooding. There is a lack of costing analysis and funding gurantees for the new road or services. The railway station that would be increased has no disabled access and for anyone using a push chair. If this was to be used more frequently there should be sigificant investment to sort these issues.			
62861025	DM Barter			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	This plan is Not Sound for several reasons, mainly the scale of the development and the devastating lack of supporting infrastructure and environmental protection. The proposal for another 1,000 houses, would take Backwell’s housing growth to over an 80% total increase. With NO new infrastructure or services planned. The railway station is not currently fit for purpose as a transport hub, remaining inaccessible for people with mobility issues and challenging for those with young children. There are no propsal to improve this for the benefit of current and new residents to Backwell. The most concerning issue is that the proposed development is on precious GRADE 1 Agricultural GREENBELT Land. This land is the highest quality agricultural land, currently used for food crops and grazing. Only 7% of this Grade 1 land is left in the whole of North Somerset. Government policy clearly states we must protect our best land to safeguard food . The proposed growth for Backwell is unsustainable, and undeliverable due to the lack of infrastructure, and the unacceptable threat to our Grade 1 Greenbelt. I urge the Independent Inspector to reject this flawed plan.			
62814817	Daniel Bater			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell has already seen an additional 800 new houses approved. This is a 40% increase for the village which will lead to complete overdevelopment. The proposed road would not effectively serve Nailsea’s traffic or relieve congestion on Station Road, Backwell Common, or Chapel Hill. Engineering the road under or over the railway would be highly expensive and possibly unfeasible. It would simply serve to destroy habitat and cause light, noise and air pollution to local residents who already live adjacent to the proposed development areas. Despite significantly proposed population increase for backwell, there is a deficit in school places and no investment in health services or leisure facilities. The lack of infrastructure and services cannot support another 1,000 houses. Backwell is allocated a higher number of houses than any other village in North Somerset, and even a higher growth percentage than towns. Backwell is expected to take 7% of the district’s housing allocation, compared To Clevedon’s 2%. There is no justification for this, given the poor strategic location of this village. There is no needs or viability analysis for an extra 1,000 houses for Backwell. Backwell is not an employment hub, most residents commute, making this location a poor choice for development which will only serve to worsen traffic congestion into Bristol at rush hour. No social cohesion impact assessment has been provided for this development. This development is located on Grade 1 Agricultural Land currently used for food crops and grazing. There is only 7% of this high quality land left in the whole of North Somerset and this should be preserved instead of being seen as easy land for development. Government policy states that “we must protect our best and most versatile land” to safeguard food security. This development therefore contradicts government policy and undermine food security. Development would destroy valuable wildlife habitats and further harm biodiversity in one of the world’s most Nature-depleted countries. This would include species such as bats, voles and amphibians which are abundant in this area. Specifically the proposals threaten the Brockley Maternity Roost and SSSI, with rare Lesser and Greater Horseshoe Bats Relying on the land for food. The Infrastructure Delivery Plan lacks analysis and costings, and there are no funding guarantees for the new road or services.the roadway is unlikely to be feasible and will be too technically complex. It will cross land that is regularly flooded by heavy rainfall. Backwell Common and surrounding areas are prone to surface water flooding, which would be aggravated by more housing. I have concerns regarding the strategic growth location designation which include the impact on the area’s character, the loss of Greenbelt and high-quality agricultural land, the risk of flooding, and uncertainty over whether the road can be funded and delivered on time to support the proposed housing.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								Backwell Lake (Reservoir) and adjacent fields, where the new roads and housing is planned and are on a floodplain, which floods regularly. Government policy requires 50% affordable housing on Greenbelt Land, but this reduces the funds developers contribute towards infrastructure. It is unclear how the developer will contribute sufficiently to support the required infrastructure for the size and scale of the proposal. It's clear that the sheer volume of growth with the required investment infrastructure and services over such a short period Is destabilising, unsustainable and undeliverable. Backwell railway station is not fit for purpose as a transport hub; it remains inaccessible for people with mobility issues and presents serious challenges when travelling with young children. The platform is not sufficiently long to support increased volumes of passengers and walking routes are not suitable for significantly increases volumes of foot traffic.			
39285537	Magali Bates			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell has already had a massive amount of housing approved. This is already too much for the village - we already have an issue with traffic. There aren't enough school places. The railway station can't take this volume of increased traffic - and most people commute elsewhere. Also, WE NEED OUR GREENBELT LAND. It is utter insanity to build more housing on greenbelt land. It is needed to grow food on, and our wildlife need it. We are going to destroy the whole planet and ourselves if we keep on incessantly destroying this precious greenbelt land. Backwell has been earmarked for more houses than the other villages in North Somerset, and it just doesn't have the infrastructure to cope with this, plus it will destroy the community of this lovely village. The government has committed to acting positively to mitigate the effects of climate change, and has said that it would protect our best and most versatile land to grow food on. This directly contradicts that pledge. The land regularly floods here and this will make it worse. And again, I will say it, because I am so passionate about this - we cannot keep on destroying our environment. We as humans will pay the price for this. From a moral and a practical point of view, we have a duty to protect the environment and the wildlife in the places we live. I feel so strongly about this - I will protest, and I will take whatever peaceful action I can. It is just not right.			
39324193	Steve Bates			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	This proposed development plan is wholly unsound primarily due to the completely excessive number of dwellings proposed to be built. Backwell is a village which already has 800 new houses approved to be built which represents a 40% increase on the current number of homes which is already very excessive, but to then add a further one thousand houses is nothing short of ridiculous. Backwell does not have the infrastructure or services or employment opportunities to support this massive increase. Most workers that live in Backwell commute into Bristol or elsewhere for employment, and the limited transport provision will not cope with this increase - there aren't enough rail services, the station is not fit for purpose to serve such increases numbers. The A370 and the roads in and around Backwell will not cope with increased traffic. Other facilities such as the recycling centre in Backwell will not cope either. Equally if not more important is the irreversible loss of green space and agricultural land (already limited in North Somerset) that would be caused by this plan. Government policy states that agricultural land must be protected to safeguard food security. This plan is at complete odds with that requirement. This then has a significant negative impact to Backwell's rich local wildlife, not to mention increased flood risks that come with building on the low lying land at this proposed site. I understand that there is a shortage of affordable homes across the country, but this particular proposal will destroy forever the character of the village, a village that is home to, and loved by the people that live here. It seems complete insanity to me to disproportionately allocate this number of houses to Backwell compared to other parts of North Somerset, just in order to hit the number in the plan and benifit from the revenues bulding houses brings to the council. Please let's see sense and save Backwell from being ruined forever.			
62850817	Ava Bates			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I am 14 and I moved to Backwell from Bristol when I was 7. Having green fields around me and woods and nature instead of concrete made me feel calmer straight away. I am happier here than in the city and I love Backwell. I am passionate about animals and the environment. If we keep building more and more houses on green fields there will be nowhere left for nature and animals, and nowhere for us to grow food to eat. There is already so many new houses being built or planned in Backwell. Its just not right to plan even more. It will ruin our village.			
58603489	Debbie Baughan			No	‣ Justified ‣ Effective	Unsure	Unsure	I understand the requirement for new housing and have a family who will be looking to buy at some point however the proposal to add 889 houses to the east of Backwell seems extreme when Backwell already has approval for an additional 800 houses. Coupled with this the road system in Backwell already is congested and the additional traffic this would add to Station Road would make a very narrow road unsafe for pedestrians when it has movements of over 2000 school children along the road twice a day. The level of congestion will be unbearable and unsustainable for every day life coupled with this the level of pollution will increase greatly for residents living in close proximity to Station Road. The plan states that a new road will be built to link Nailsea and Backwell however I fail to see where the funding for this will come from. The responsibility for providing a cross rail link will lie with North Somerset Council who have no funding for this project, they don't have money to maintain the current road system adequately. Finally the area of land that is proposed to be built on regularly floods in winter, it cannot be walked on and i question where the run off created by the building of these houses will impact.	The funding for the proposed new road must be obtained and link road built before house building commences. The success of the whole scheme and sustainability of Backwell rests on effective infrastructure being in place to support both the residents of proposed new properties but also the current residents of Backwell. 582 houses are being proposed for land by Backwell lake - where will this traffic go if no additional road is built - Station Road of course. The railway station will require extensive modification if it is to be called a transport hub. Currently inaccessible for people with mobility issues and when travelling with young children. I never used the train when my children were younger as it was impossible to get to the platform with young children and a pushchair.

58298017	SamBaumn			Yes		Unsure	Unsure		In order to ensure HE203001 can be utilised effectively to contribute towards the provision of housing, in accordance with the assessed capacity identified by the HELAA and that the mitigation planting is most closely aligned with the historic planting patterns, Figure 11 should be amended to more closely reflect the orchard planting arrangement of 1888 - see attached PDF for Figure 11. HE203001 represents a relatively self-contained development site which is closely related to the existing settlement edge of Backwell. The proposed allocation of the site as part of the Land East of Backwell allocation is supported. However, the site could form an allocation in its own right, if the wider allocation were found to be unsound. As private landowners, with no current arrangement with either of the main promoters of land at East Backwell, the policy should clarify who would be responsible for the production and coordination of the overarching proposals and when this must be completed. To be sound and ensure an agreed position is reached between the parties at an early stage, which achieves the effective development of all available land within the allocation, the policy should be amended to require a single masterplan and delivery plan prior to submission of outline planning applications. The Council should lead this process in collaboration with all landowners/promoters within the allocation. See attached PDF for further information.	We support the proposed allocation of land East of Backwell through Schedule 1 of the Local Plan, most specifically the inclusion of land known as HE203001, Land near Woolley's Farm, Backwell. See attached PDF for further information.	251117 LP Reg 19.pdf
21212833	Eileen Bax			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The significant development either underway or due to commence for the area means a 40% increase for the village is already agreed. This additional proposal exacerbates how disproportionate this is within North Somerset, certainly for a village – as an example, Clevedon (town) taking 2% of the allocation, vs Backwell's 7%. It equates to overdevelopment in relation to roads and public transport - trains and buses area already overcrowded at key times, and timetabling provides an insufficiently frequent or reliable service; roads are already busy, only worsened by the addition of 24hr rather than peak time bus lanes. Trains in particular are already problematic when travelling with children or with mobility issues where accessibility at the station is a live issue. The lack of employment opportunities here in Backwell and the surrounding areas makes that all the more concerning as residents tend to need to use these links to commute. The proposed road will not support alleviation of congestion and there is a lack of certainty as to the funding and timely delivery of such a route, not least the chaos and cost associated with any road in the environs (over/under) the railway. What's more, there is no planned investment in education, health or leisure services to accommodate such a significant population increase. The continued development on our green spaces and agricultural land are of real long term concern. We are continually seeing worsening impacts from heavy rainfall, with areas around Backwell Common amongst others as already prone to flooding – its visibly worse since the commencement of some of the building work underway at approved development sites. Indeed, Backwell Lake and the fields surrounding it suffer in the same way, already part of a floodplain area. We continue to knowingly build on land which enables soakaway activity to occur across the whole county. Our Government policy states that "we must protect our best and most versatile land" in order to safeguard food security; this proposal undermines that policy. Only 7% of Grade 1 Agricultural land remains in the whole of North Somerset. Whilst policy dictates that affordable housing (50%) be delivered on Greenbelt land, this further minimises developer contribution to the required infrastructure.

								Somerset. Whilst policy dictates that affordable housing (50%) be delivered on Greenbelt land, this further minimises developer contribution to the required infrastructure.			
29270305	Monika Beauchamp			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	This is an overdevelopment. This is at the cost of grade 1 agricultural land and loss of greenbelt. It does jeopardise the future provision of food for generations to come. We cannot build on such precious land. The current roads and the proposed roads will not mitigate the increase in traffic, there is little employment in Backwell, most people commute. The sheer volume of growth with the already approved 40% growth over such a short period is destabilising and unsustainable.			
51281729	Serge Beauchamp			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwelll common is prone to flooding, which would be made worse by the loss of grass land which absorbs significant moisture.			
62864225	Margaret Beaumont			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	1. Backwell dates back to at least the Iron Age (Backwell Hillfort) and was documented in the Domesday Book in 1086 as 'Bacoile'. Its church dates back to the 13th century. The character of Backwell would be destroyed by the proposed developments resulting in an 80% growth in Backwell's population. 2. Backwell already has 800 new houses approved, a 40% increase for the village. These additional numbers would lead to complete overdevelopment. 3. The proposed road would not effectively serve Nailsea's traffic or relieve congestion on Station Road, Backwell Common, or Chapel Hill. Engineering the road under or over the railway would be highly expensive and possibly unfeasible. 4. Despite this increase, there is a deficit in school places and no investment in health services or leisure facilities. For example, the GPs' surgery operates from a small bungalow, with no parking available for patients except for a few spaces outside the practice on the main A370 road. 5. Backwell's lack of infrastructure and services cannot support another 1,000 houses. 6. Backwell is allocated a higher number of houses than any other village in North Somerset, and an even higher growth percentage than towns in the region. Backwell is expected to take 7% of the district's housing allocation, compared to Clevedon's 2%. 7. There is no needs or viability analysis for an extra 1,000 houses. 8. Backwell is not an employment hub, most residents commute. The carpark at Nailsea & Backwell Railway Station is currently full to capacity on weekdays. Where will a further 1,000 rail commuters park? A local link bus was tried some years ago, but was found not to be viable. 9.. The current bus service from Nailsea & Backwell Station to Bristol is every 70 minutes and has to be a single-decker to pass under the railway bridge on Station Road. 10. The proposed development s are on Grade 1 Agricultural Land, currently used for food crops and grazing cattle. There is only 7% of this high quality land left in the whole of North Somerset. 11. Government policy states that "we must protect our best and most versatile land" to safeguard food security. The proposals contradict this policy and undermine food security. 12. Development would destroy valuable wildlife habitats and further harm biodiversity in one of the world's most nature-depleted countries. 13. The Infrastructure Delivery Plan lacks analysis and costings, and there are no funding guarantees for the new road or services. 14. Backwell Common and surrounding areas are prone to well-publicised flooding, particularly around the railway line, which would be aggravated by more housing. 15. Concerns regarding the strategic growth location designation include the impact on the area's character, the loss of Greenbelt and high-quality agricultural land, the risk of flooding, and uncertainty over whether the highly controversial road can be permitted, funded and delivered on time to support the proposed housing. 16. Backwell Lake (Wessex Water's balancing reservoir) and adjacent fields, where the new roads and housing is planned and are on a floodplain, which floods regularly. 17. Government policy requires 50% affordable housing on Greenbelt Land, but this reduces the funds developers contribute towards infrastructure. 18. The sheer volume of growth with the required investment in infrastructure and services over such a short period is destabilising, unsustainable and undeliverable. Housing construction companies estimate that they will construct 80 houses per year, meaning an 11-year development to the north of the A370 main road. 19. The railway station is not fit for purpose as a transport hub; it remains inaccessible for people with mobility issues and presents serious challenges when travelling with young children. Wheelchair users travelling from Bristol and wishing to alight at Nailsea & Backwell Station currently need to continue on to Yatton and travel back to Nailsea & Backwell in order to descend on the ramp from the north side of the platform. There is no access or egress by wheelchair from the south side of the station owing to steep steps both on a bridge over the line and down from the platform to Station Road.			
62850881	O Beckinsale			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell already has over 800 new homes approved, a 40% increase on current numbers.. I cannot understand how another 800 houses can work without significant investment in local services inc medical and school.. so far with the current house build projects I have yet to see any plans to improve, increase either of these.. This is not about moaning about building houses in the village I live in but a genuine fear that Backwell will be a worse place to be a resident in the future. I am lucky that my children have been through the local schools already but future families will not have the same benefits of living in Backwell and North Somerset in general that I have had since moving here 37 years ago. in addition the car traffic is horrific getting into Bristol, forget about trying to get down the long Ashton bypass after 7.30am and before 9am.. this is only going to get worse.	Stop approving every single housing development. Seems like it is a green light for every development right now		
29258657	R Beckingsale			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	There are many reasons why this development should not be considered to be a sound proposal: - There does not appear to be a need for a further 900 houses in Backwell on top of the 800 new homes already approved for the village. - The current infrastucture would not cope with this huge increase in homes and it is likely that most new residents would be commuting to work placing even greater strain on the existing road network and public transport services. Backwell is not an employment hub and there are also limited employment opportunities in nearby Nailsea. Why should Backwell be required to take 7% of North Somerset's housing allocation when the much larger town of Clevedon has only been allocated 2%? - New schools would inevitably be required but I see no mention of land set aside for these in the proposal. - The proposed new road connecting the new development with Nailsea and the station is likely to be unviable due to			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								cost restraints and the almost inevitable risk of flooding. - The Grade 1 farmland on which this proposal is based should be protected for future generations. How do we expect to continue to feed the ever growing population if we continue to build all over our most high quality agricultural land? - Nailsea & Backwell station is not fit for purpose as a transport hub due to its location and inaccessability.			
50341345	Terry Bees			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Objection to the Proposed Development in Backwell I'm writing to object to the scale of development proposed for Backwell in the Regulation 19 Local Plan. Backwell already has around 800 new homes approved, which is a very large increase for a village of this size. Adding another 1,000 homes on top of this feels unreasonable. The local area simply doesn't have the capacity to absorb this level of growth without serious consequences. There are already well-known gaps in school places, GP access and other essential services. None of these have been addressed, and there is no clear plan or secured funding to put the right infrastructure in place. Without this, the development risks overloading services that are already under pressure. The transport proposals don't appear to solve the existing issues on Station Road, Backwell Common or Chapel Hill. A new road would be costly, disruptive and might not ease congestion in the way the plan suggests. Backwell's railway station also isn't set up to function as a transport hub. It remains difficult to access, especially for those with mobility needs or people travelling with children. I'm also concerned about the environmental impact. The sites include Grade 1 agricultural land, which is some of the most productive land in North Somerset. National policy is clear that we should protect our best and most versatile land. The area is home to valuable habitats and protected species, including Lesser and Greater Horseshoe Bats. Developing on a floodplain and in areas that already flood, such as around Backwell Lake, increases risk to both the environment and future residents. The scale of housing proposed for Backwell is out of proportion when compared with other areas in the district. Backwell would take a higher share of housing growth than any other village, despite not being an employment centre. Most residents already commute elsewhere, so this level of development would increase traffic rather than support local jobs or facilities. Government policy requires 50% affordable housing on Greenbelt land. While this seems positive at first glance, it reduces the contributions developers make towards infrastructure. This makes it even less likely that the roads, schools, healthcare and public services needed will actually be delivered. Overall, the plan concentrates too much growth into a small village in a short time, without credible solutions for transport, flooding, environmental protection or community services. As it stands, the proposals are unsustainable and do not meet the needs of current or future residents. I ask that North Somerset Council reconsider the scale and location of development in Backwell and adopt a strategy that is more in line with local capacity, environmental responsibilities and the long-term wellbeing of the community.			
62783617	Cath Bees		University of Bristol	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I am writing to object to the proposals in the North Somerset Local Plan that allocate a further 1,000 houses to Backwell, along with the additional development next to Backwell Lake. Backwell already has approval for around 800 new homes, which represents a very large increase for a village of this size. Adding another 1,000 homes on top of this would push the total growth to more than 80 percent, which is entirely out of proportion. There is no matching investment in health services, school places, transport, or leisure facilities, and the current infrastructure cannot support development on this scale. The proposed site sits on Grade 1 agricultural land. Only a small amount of this high quality land remains across North Somerset, and national policy is clear that it should be protected to support long term food security. Using it for housing would cause irreversible harm and would conflict with that guidance. There are also serious environmental concerns. The land supports important habitats, including protected bat species connected with the Brockley SSSI. The Backwell Common area already floods, and further building will make this worse. The fields around Backwell Lake also sit on a floodplain and already experience significant flooding. The plan relies heavily on a new road across the Common. No detailed plans, studies or funding information have been provided. It is unclear whether it can be delivered at all, let alone in time or at a cost that represents good value. Without this road, the development would place even more pressure on Station Road, Backwell Common and Chapel Hill, all of which already experience congestion. Backwell has been asked to take a higher proportion of new housing than any other village in North Somerset, and a higher percentage increase than several towns. There is no clear evidence that this allocation is justified, nor is there a needs or viability assessment for the additional 1,000 homes. For these reasons, I do not believe the plan is sound. It does not reflect local conditions, it is not proportionate, it does not protect important environmental assets, and it relies on infrastructure that appears uncertain or undeliverable. I ask that the proposals for Backwell East and the development next to Backwell Lake are removed from the plan.			
62802401	M J Bennett			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure				
62802401	M J Bennett			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national	Unsure	Unsure	The area is in GREENBELT. This area seperates Backwell from Nailsea and is the single most important green space area for Backwell residents. This plan is not sound as there are other areas to the west of Nailsea which is not greenbelt and other sites which could be developed eg dissused Fairfield school site etc. It is an area of beauty and the land is farmed for local produce. Government policy states ' We must protect our best and most versatile land' It attracts recreation in the form of walkers, dog walking, horse riding, cycling. It is the main attraction for wildlife including rare species of bats with thousands of meters of hedgerow and trees hundreds of years old and needs to be preserved.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					policy			Allocation for Backwell is hugelly disproportionate for its size nearly doubling the size of the village and is completely unsustainable turning it into a town with little to none employment opportunities. The justification is completely unsound as the cycle track is used for recreation not commuting as Backwell is situated too far away from Bristol and other employment cities to cycle and the small train station which is not fit for purpose and is increasingly too expensive to use especially for half of the proposed residents allocation of affordable housing, social housing etc. With already nearly 1000 houses approved over the last couple of years there is absolutely no need for even more housing in Backwell. Then new proposed road is far too close to Backwell lights so will not ease congestion as cars are already queued way beyond this to Flax Bourton sometimes. These proposals bottleneck huge amounts of extra traffic on A370 which is already at breaking point.			
30358657	Chris Bensted		Backwell resident	No	• Positively prepared • Consistent with national policy	No	No	The addition of 900 houses changes Backwell from a village to a small town. No thought has been given to how this will affect the people of Backwell nor it's community. No thought has been given to the existing traffic infrastructure other than the proposal for a road linking the A370 to Station road. this road allows Nailsea to further expand, but will never be built. Part of the road will be funded by the developers, whilst the majority funding will be funded by NSC and the government. Neither party has any money. Therefore considerable additional traffic will be inflicted on the existing Station Road. The proposals do not provide details of the way surface water will be disposed of , in the case of flooding	Provide details of funding for the new road. Provide details of drainage and it's affect on existing water courses and Backwell lake. Provide details of the affect of new road proposals on Backwell Common.		
21230849	J Bensted			No	• Positively prepared • Justified	Unsure	No	I object to the pre-submission plan on the basis that it will double the size of Backwell and no longer would be considered a village which then changes the way people regard Backwell . No consideration seems to be given to the infrastructure required to service an increase of this size . I object to the new road as it will cut off Backwell Common (where I live) from The village of Backwell and I consider the plan of making part of Backwell Common pedestrian completely unworkable as there are houses within that area that need through traffic . It would cut our part of the common off from station road and the village . Also who is paying for the new road I do not believe that North Somerset council has funds for this . The ground around Backwell Common is so low lying that a build of almost a thousand houses and the building of a road will have increase the possibility of flooding in the area . I object strongly to this plan .	N/A	N/A	
31048545	John Beringer			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	We were appalled when we saw the proposals for Backwell and are finding it extremely hard to see what role North Somerset Council is playing in housing development. The Council appears to be simply accepting Government demands without any effort to support existing communities. Where is the Council fight to reject the demand for 24,500 houses when there is so little suitable land for housing? Where is there any indication that if the very worse happens and the houses are built, that there will be good (let alone adequate) infrastructure? Looking at the proposed developments in Backwell and Nailsea it is very hard to see any other long-term plan than to merge the town and village because the virtual doubling of the size of Backwell is hardly compatible with it continuing to be a village. We doubt vey much that there is any value in submitting objections to the present Local Plan because of the Council's apparent indifference to local concerns. However, we feel an obligation to comment and, on that basis, have the following observations: • Backwell is a commuter village with very few local employment opportunities. Increasing the number of people living here will simply increase commuting into Bristol. Spend whatever you like on bus lanes, but who would seriously expect most of the new inhabitants to travel on public transport? • Without the proposed new road, congestion on Station Road in Backwell would move from bad to extremely bad. The B3130 and other routes from Nailsea to Bristol are already completely inadequate, so there is little room for argument that the Nailsea expansion would not add very seriously to the Backwell traffic problems. However, other than being mentioned, there is not any indication that the Council has considered the costs, environmental harm and societal disruption that building the road would entail, let alone that magnitude of the problem of crossing the railway. We do not believe that any major development should start without proper costed infrastructure planning, but sadly recognise that this has become standard practice in North Somerset. • There appears to be an assumption that the railway will carry much of the commuting burden. We see no clear vision on how to make the station accessible on both sides of the track or how services can be improved when intercity trains have priority. As stated above, the lack of detail or commitment for infrastructure is a major deficit in the Plan. • We recognise that new houses are needed and that building them will have negative environmental impacts. However, development should surely be predicated on minimising these harms. The proposed plan includes real risks to Greater Horseshoe bats as well as the harm from flood plain development, loss of Greenbelt land, and loss of Grade 1 farming land which would be additional to the usual wildlife losses from major developments?			Response to the North Somerset local plan as they affect Backwell.docx
62777921	Emma Biddle			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell Common and surrounding fields is prone to flooding which more housing would exacerbate, especially combined with climate change where hot weather for prolonged spells creates hard dry ground and makes flooding more extreme with moderate not extreme rainfall. Backwell lake is a floodplain and this will impact the new road to be created across the common. The land is grade 1 agricultural and there is only 7% of this left in of this in North Somerset but this plan is against government policy to protect the best land to safeguard food security. The infrastructure, number of school and surgery places, and others services in Backwell cannot cope with a 40% increase to the village. Congestion on roads would massively increase. Backwell Common's character would be lost and narrow single lane would not cope with extra traffic. Finally the proposed number of houses is hugely disproportionate to other villages/towns in the county	Number of houses built in east Backwell fields to completely revised and reduced by at least 80%		
62850337	M Birchenough			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell is a relatively small but growing community. It has seen significant additional housing approved in recent years adding nearly 50% to the current population. The proposal to add over 800 more houses could have a severely detrimental impact on the village and lead to overdevelopment. It is not clear if there is anything in the proposal to support this development with investment in local infrastructure such as school places or health services. Traffic would naturally increase significantly, and additional vehicles will cause issues in local roads and further afield. The A370 approaching the Gurney Roundabout, for example, is already showing strain from additional commuters from the local area and more traffic will only increase the queues. The transport links are currently inadequate for large scale expansion and cannot easily be improved – the railway station would need a complete redevelopment to be inclusive and properly useful. The development is proposed to be built on prime agricultural land which would be lost forever. What is the justification for destroying local habitats when there are numerous brown field sites across the county and over one million empty homes across the country? The homes to be built are likely to be large family homes which is not what the county needs. We are desperately short of affordable smaller housing, so this development does not fit with what is actually required. Overall, the proposed development lacks justification, lacks supporting infrastructure and will destroy the local environment. It does not appear to fit with what we need as a county or a country and will have a destabilising impact on a community which is already feeling the pressure from existing developments.	No modification the proposal for an additional 889 houses should not go ahead.	I do not support this.	
39460193	Emma Blackburn			No	• Positively	Unsure	Unsure	This additional 900 houses for Backwell has not been thought through - from a logistical, ecological, infrastructure or cultural perspective, nor does it take into account the fact that Backwell already has an additional 800 houses approved which have yet to be built, the impacts of which have yet to be seen / felt.	The proposed road linking the A370 to Backwell Lake would be absolutely critical, and would need to be		

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					prepared Justified Effective Consistent with national policy			One of my biggest concerns about this development is the increase in traffic. Our roads are already extremely congested at rush hour - it has been known to take me an hour to do the round trip from Backwell to our son's nursery in Flax Bourton. (It is ironic in itself that we need to travel to Flax Bourton for nursery because Backwell does not have any year round provisions for childcare, or any provision for childcare under 2 regardless). This is just one way in which infrastructure is not set up to support current families, let alone the 1700+ households that would be added as a result of this plan. Traffic concerns have been repeatedly dismissed with other development sites locally, whilst prioritizing bus improvements that make traffic worse for all other road users. It is only in time that we will see how poor a decision this has been. I already hate driving to Nailsea from Backwell along Station Road at school kick out time for example (or less commonly, drop off), because of how narrow the roads and pavements are, and how busy it is with both traffic and school children. It is very nerve wracking!! I note that a proposed road linking the A370 to Backwell Lake is shown on the plan, which would help, yet this is not guaranteed. We need analysis and costings of the feasibility of this road - given it will need to cross the railway, leading to secured funding, as an absolute priority. As I mentioned, traffic is just one area of this plan where the impacts on the village - and it is still just a village - have not been thought through. Can Backwell still be a village with an additional 1700 households, an estimated population growth of 80%? Certainly the current provision of school places, doctors, leisure facilities and others reflects its village status, not that of the large, sprawling, overdeveloped estate it will become when the existing approved developments are built - let alone this additional planned one. The final point I'll make (though there are many many others), is that of flooding. It doesn't need to rain much for the A370 to experience huge amounts of surface water. Downpours regularly cause large run-offs from Farleigh Fields, with many houses along the road experiencing flooding. Backwell Lake and adjacent fields, where new houses and the road are planned, also all flood regularly, being on a floodplain. I have not seen this properly dealt with in other housing developments, and again, worry that this would be aggravated further by more building.	delivered BEFORE an increase in more housing. Station Road simply CANNOT take any more traffic, it is neither safe nor practical.		
58185793	I Blenkinsop			No	Positively prepared Justified Effective Consistent with national policy	Unsure	Unsure	There are many reasons that this plan is unsound. I consider the vast increase in housing around Backwell and Farleigh to be overdevelopment. Backwell is already growing by 40% with the approved housing. Additional developments most certainly represent overdevelopment. Given that this one small village is intended to take fully 7% of the county's new housing needs, this feels unbalanced and unsustainable. No social cohesion impact assessment has been provided. I would question whether the volume and scale of growth, investment and infrastructure change, in such a short period of time in one small area would be destabilising, unsustainable, and probably undeliverable. I question the overall sustainability of this location, which is much vaunted in the literature. Most people would find it a long walk to the station, and this likely will result in increased hyper-local traffic. The rail station, when you do arrive there, is unfit for purpose as a substantial transport hub. You have narrow, short platforms - with access to only half a train, and insufficient depth to be safe at busy periods. The lack of cover, lack of accessibility options, and the narrow road and pedestrian access underneath the station only compound the unsuitability of this station, unless it sees enormous investment. Bus access into Bristol or Weston is questionable. There are bus routes, but if you've ever tried to commute or use these for leisure you would know that they are absolutely not to be relied upon. Buses at peak times are often too busy and speed past bus stops without picking up passengers, especially when travelling out of the city in the afternoon. This makes the bus an unreliable mode of transport, and means lots of people in the area opt to drive. There is very little employment in Backwell directly, meaning most workers do need to commute in some way. The fact that the new road connecting Nailsea and Backwell is merely an aspiration and is not researched, funded, routed, or planned in advance likely means it would never happen. This is perhaps one of the only things that could help to alleviate some of the impacts of all this housing - and it seems highly unlikely it would ever be delivered. The sketched out routes are also questionable, as to whether they would truly solve the issues they are aiming to fix around Station Road and Backwell Common. These factors will combine to mean that most of this new housing will add substantially to traffic, parking and congestion issues for several miles around as most people will regularly opt to use their cars, even for short journeys. Saying people will walk or cycle regularly is simply wishful thinking in most cases. Services like doctors and dentists will not have capacity to take on thousands of new residents. School places seem likely to be an issue as well. The proposal would build on Grade 1 Agricultural land, of which there is only a small amount left in North Somerset. This goes against stated government policy to "protect our best and most versatile land" to safeguard food security. The proposals involve adding substantial development in the very lowest elevations of the Vale of Backwell. Somerset is low-lying, and medium-term climate change will lead to both rising sea levels, and (according to the IPCC Sixth Assessment Report (Working Group 1) very likely to much higher rainfall. We cannot be building at the bottom of valleys if we want this housing to be sustainable - and surely we want these houses to be in use, dry, desirable and comfortable for at least a hundred years to come. The area around Backwell lake is already flood prone. This will be exacerbated by this development and will certainly become worse. There are wildlife habitats that would be destroyed, harming biodiversity. This includes the Brockley Maternity Roost - Horseshoe bats are known to use the area.			
62832385	C Blenkinsop			No	Positively prepared Justified Effective Consistent with national policy	Unsure	Unsure	These plans clearly represent overdevelopment for Backwell. The village is already ill-equipped to accommodate the influx of new residents, with 800 houses already approved, a 40% increase for the village. Adding even more homes with these additional numbers, would be both overwhelming and unsustainable. Backwell is repeatedly described as a “sustainable location” - but this is simply not true. It is not an employment hub; the vast majority of residents commute elsewhere for work. As someone who commutes regularly to Bristol and London, I see firsthand that the trains cannot cope with the current demand. Platforms are too short, many train doors do not open, and it is often impossible to move through the train once on board. Even without the additional approved homes, let alone this proposal, the station is unfit as a transport hub, in fact, the claim feels laughable. Access is entirely unsuitable for those with mobility issues or parents with young children / prams due to the steep step onto the train. Unsurprisingly, most Backwell residents drive, and nothing can realistically be done to improve the village roads. A new road is proposed, but there is far from guaranteed funding for it, and even if built, congestion will remain on Station Road and it's proposed on a floodplain. It would not effectively serve Nailsea’s traffic or relieve the gridlock we already experience on Station Road, Backwell Common, and Chapel Hill. Engineering a road under or over the railway seems unfeasible. Backwell has been allocated far more houses than any other village in North Somerset, and I cannot understand why. There appear to be based on ill-considered assumptions about its sustainability and the suitability of earmarked sites, assumptions that are absurd. No needs or viability analysis has been carried out for an extra 1,000 homes. Turning to the land itself: government policy clearly states that “we must protect our best and most versatile land” to safeguard food security. Yet Grade 1 agricultural land - currently used for crops and grazing - is proposed for			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								development. Only 7% of such high-quality land remains in North Somerset. These proposals directly contradict government policy and are therefore are clearly unsound. As a Backwell resident, I regularly witness flooding in this area, particularly on Backwell Common. This will inevitably worsen with more housing. Backwell Lake (reservoir) and the adjacent fields - where new roads and housing are planned - sit on a floodplain that floods regularly. Building here is not just unwise; it is unsafe and wholly unsustainable. This scale of growth, combined with the lack of infrastructure investment, is destabilising, unsustainable, and undeliverable. Our lived experience as residents should carry significant weight in this decision. Backwell is already absorbing substantial growth and doing its fair share, it's now expected to absorb 7% of the district's housing allocation compared to just 2% for Clevedon, this is based entirely on assumptions that are neither correct nor tested. To impose further development without any viability or needs analysis, and without addressing fundamental infrastructure and sustainability issues, is unreasonable, unsafe, contradicts Government policy, and is clearly contrary to sound planning principles.			
62767457	Diana Bloss			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The proposal represents a huge number of new houses (a share higher than other neighbouring villages) and will over develop the village. It is not positively prepared as there is -a lack of infrastructure to cope with these additional homes. The A370 and station road is already congested and the proposed new road will not alleviate this congestion . There are doubts that the road under the railway will be approved as it will be very expensive and it is not clear who will pay for it. The whole process will be very destabilising. -There have been no plans made for the additional health services needed to support a 1000 new houses. To accommodate the additional services needed will take time to plan and implement even if funding is available (which I can't see that its is) and thus lead to an undeliverable service. -Lack of provision for more school places and a lack of funding upfront for enlargement of the schools. -There has been no work on the impact of such a large expansion of the village to the social cohesion of the village or the need for such a large number of houses so can it be said to be justified? Contrary to national policy to protect our most versatile land to safeguard food Security The land chosen is Grade 1 Agricultural Greenbelt plan. There is only 7% left of this high quality land in the whole of North Somerset. I regularly walk across this land and during wet weather there are often areas of flooding. Building on this land will only increase the risk of flooding . Development will also be detrimental to biodiversity The long term destabilisation , lack of provision and funding of infrastructure necessary to support such a large number of houses quickly built will make this an ineffective development			
39255585	E Bossanyi			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	In principle I am happy to see some new housing in Backwell, as long as it is appropriate to the needs of local people, and provided that local services and infrastructure are provided at the same time. Currently approved development will already increase the number of houses by 40%, and the plans for infrastructure improvement are already inadequate for this. Development of the land east of Backwell would add a further 40%, and infrastructure and service improvements will almost certainly fail to keep pace, those mentioned being more aspirational than guaranteed. The land east of Backwell is grade 1 agricultural land used for food production and grazing (currently green belt), and housebuilding on this land would contradict Government policy on the safeguarding of food security. It would also result in a huge loss of wildlife habitat and biodiversity, as well as green space which is increasingly recognised as being so important for public health. The type of housing which would be built would almost certainly be inappropriate for Backwell. This is evident from the nature of almost all current large housing developments in the Backwell/Nailsea area and nationwide. Despite well-meaning planning constraints and fine words in local plans, large housing developers build the houses which bring them the most profit: the maximum number of very similar basic houses crammed into the space available, with very little outside space for children to play or anyone to breathe. They are usually built to the minimum environmental standards they can get away with, both in terms of energy efficiency and fossil fuel use and in terms of transport, with built-in assumptions that private cars will mainly be used for transport even if the plans mention active travel facilities and bus routes. There appears to be little or no analysis of the sort of people who will come to live in these houses, what their needs are likely to be, where they will work, how many will have young children, how many might be retired, disabled, first time buyers, or even how they will get to the shops. The default assumption is presumably that most incomers will commute to work, and mostly by car (since suggested increases in public transport provision are nowhere near sufficient). This will have detrimental effects on health, air quality and social cohesion, and the quality of life of existing and new residents alike. There appears to be no definite provision to improve the railway station: before any new housing in Nailsea and Backwell is approved, the platforms should be extended to accommodate the full length of trains, and the access to the westbound platform must be made usable for disabled passengers, as there is currently no ramp or lift to allow access for passengers with wheelchairs, pushchairs, bikes or heavy luggage. Local councils, of course, are bound to comply with Government policy on housebuilding, but this sadly appears to be driven by the desire to increase GDP, via developers' profits. The societal need for such vast increases in housing stock nationally do not appear to have been substantiated, and this is equally true more locally, in North Somerset and in Backwell.	Grade 1 agricultural land should be maintained for food production. Sufficient infrastructure improvements must be completed before new housing can be occupied. New developments must be designed to actively discourage private car use, maximise energy efficiency without any use of fossil fuels, and use sustainable low-carbon building materials and methods.		
62741089	Mo Bowerman			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell already has 800 new houses approved, a 40% increase for the village. These additional numbers would amount to complete overdevelopment. The idea of such a sheer volume of growth with the necessary infrastructure and services is ridiculous! The proposed road would have to funded, but by whom? It would be a very expensive undertaking, as well as being very difficult to engineer. There is a lack of infrastructure to support the needs of the houses being proposed. I question the need for so many houses in Backwell. Backwell has been allocated a higher number of houses than any other village in North Somerset, with no needs or viability analysis for an extra 1000 houses. Backwell is not an employment hub. The office buildings at Coles Quarry have been there for a number of years and have never been occupied for example, The land in question is Grade 1 agricultural land which is currently used for food crops and grazing. Government policy is that this sort of land must be protected. This does not seem to have been taken into consideration. There are also greenbelt preservation concerns. The infrastructure delivery plan lacks analysis and costings, and there are no funding guarantees for the new road and services. Backwell Common already has serious problems with flooding, and this would be aggravated by new housing. Also, Backwell Lake and adjacent fields are also on a flood plain. The character of Backwell will totally change with the proposed road and housing growth. The railway station is not fit for purpose as a transport hub. Although many plans have been put forward over many years, it remains inaccessible to many potential users such as people with mobility issues.			
62520641	D Box			No	‣ Positively prepared	Unsure	Unsure	Backwell has already 800 new houses approved any additional development would change the nature of a village into an urban commute. There is No industry, only local shops, mostly residential and most residents commute.		NO	

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 39211681	Diana Bramall			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell is allocated a higher number of houses than any other village in North Somerset, and an even higher growth percentage than towns. Backwell is expected to take 7% of the district's housing allocation. It already has 800 new houses approved which is a 40% increase for the village. The additional proposed numbers would lead to a complete overdevelopment, and the lack of infrastructure and services cannot support an additional 1000 houses. Backwell is not an employment hub, most residents commute. The roads in Backwell are already congested and the proposed road will likely not be sufficient, very expensive, and possibly unfeasible given it would need to run over or under the railway line. The train station is not designed as a transport hub and is inaccessible to those who are disabled or for those with young children. The land is currently used for food crops and grazing and is Grade 1 agricultural land there is only 7% of this high quality land left in North Somerset. This proposal contradicts Government policy that states that "we must protect our best and most versatile land" to safeguard food security. It would also destroy wildlife habitats and cause further harm to biodiversity. Backwell floods badly, and Backwell Lake and the adjacent fields where the housing is proposed are on a floodplain.			
51425857	Laura Brasher			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	There is already a large number of houses planned in Backwell village. These plans have no investment in health/leisure facilities. The local scout group is already struggling to accommodate all the children who want to join. Grade 1 agricultural land should not be used for housing when there are other options. These proposals undermine food security. Will the promised new road actually be delivered? This should be done before houses are built.			
38633505	Lesley Brassington			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Adding 1,000 new houses to the 800 already approved is over development. This development is on Grade 1 Agricultural Green Belt land used for food production and is contrary to Government policy which states that "we must protect our best and most versatile land" to safeguard food security. There is no needs or viability analysis for these extra houses.No social cohesion impact assessment has been provided despite Backwell being a small village. There is alack of school places and there has been no investment in health services and the lack of infrastructure and services cannot support another 1,000 new house. the development will destroy valuable wildlife habitats and further harm biodiversity. It threatens the Brockley Maternity Roost and SSSI with rare bats relying on the land for food. The proposed road would not effectively relieve congestion in the area and given the engineering problems it would face would make it hugely expensive.The Infrastructure Delivery Plan lacks analysis and costings and there are no funding guarantees for the road or services. Backwell Common and surrounding areas are prone to flooding which would be aggravated by more housing. The sheer volume of growth with the required investment infrastructure and services over such a short period is unsustainable and undeliverable.			
61125793	H Bray			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Deficiencies in planning application: No needs or viability analysis has been carried out for the proposed additional 1,000 houses. No social cohesion impact assessment has been provided. Contrary to Government Policy: Grade 1 agricultural land should not be built on: there is only 7% of this quality land left in North Somerset. Further, development of such land is contrary to Government policy: 'we must protect our best and most versatile land'. Food security risks being undermined. Conflicts with existing environmental protections: The Brockley Maternity Roost and SSSI will be adversely impacted. Flood risk: increased housing puts the existing houses at even greater risk of flooding in the changing climate.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								The reliance on the railway station to justify this extraordinary level of development is ill-informed and nonsensical: the majority of houses are not within walking distance of the station and no research has been carried out to support the claims that everyone will use the train. Crucially, the station is inaccessible to people with mobility issues and families with young children.			
62863521	C Brewster			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell is already planning to see a 40% increase in housing with the approval for 800 new homes, significantly more growth than in other villages or towns in North Somerset. This means that 7% of the district's total planned housing will be concentrated in a small village, placing strain on local infrastructure already stretched, including shortages in school places, healthcare, and leisure amenities (not to mention current roads and flooding). The planned development would also result in the destruction of important greenbelt and loss of farmland, threatening food security and contradicting government commitments to protect high-quality agricultural land. The disappearance of these open spaces, coupled with increased risk of flooding and insufficient infrastructure planning, would cause lasting harm to Backwell's rural character and natural environment.			
62848545	G Britton			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell cannot sustain the amount of housing proposed. It already has a 40% increase of housing for what is essential a small village. The proposed road is not feasible and is highly unlikely to go ahead, making busy roads impossible to navigate. Development on this land would destroy valuable wildlife habitats and further harm biodiversity- furthermore there is only 7% of grade 1 agricultural land left in the whole of North Somerset. Backwell has one secondary school, one primary school, one GP practise, one dentist etc. There is absolutely no way that the village can sustain these additional residents. It is unreasonable that Backwell takes 7% of the districts housing as it is such a small village with limited resources, unlike other nearby towns such as Clevedon. Backwell is prone to flooding which will be aggravated by the new developments. The lake at Backwell has flooded so badly in the past that the water has reached people's knees - the new developments will only exasperate the situation. There is no way thag Backwell can take these housing demands- they are destabilising, unsustainable and undeliverable.			
62850913	Ellie Britton			No	‣ Effective ‣ Consistent with national policy	Unsure	Unsure	In your own words, the development at villages "must not be of a disproportionate scale which adversely impacts on the character of the settlement or leads to a significant increase in the number of car journeys", does this not apply to the character of the village of Backwell? As after the construction of the large scale development that is being proposed, Backwell will no longer be a village, it'll be a town! Backwell has already had the building of 794 new houses approved, of which 154 are already under construction; 94 houses under construction at Farleigh Fields East, 60 under construction off Rodney Road, 125 approved for Farleigh Fields West, and 515 approved for Grove Farm and Burnt House Farm. Currently Backwell has around 2,000 houses, so those sites alone already increase the size of the village by 39.7%, and I believe building another 889 houses in East Backwell, under the North Somerset Local Plan 2041, proves to be of a 'disproportionate scale' as it brings that current increase up to 84%! How anyone can argue that increasing a village by a total of 1,683 houses, and therefore almost doubling its size, is proportionate and sustainable is beyond belief. In addition, the 552 houses proposed for the land west of Backwell Lake, whilst technically falling under the proposals for Nailsea, will have a huge effect on the village of Backwell, especially if the access road connecting this development to the A370 is constructed.			
62521217	John Brooks		Personal	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	There is no road network to support the plan and main road through Backwell is not suitable for widening. The increase in road traffic from the plan will cause traffic chaos and much increased air pollution. The Nailsea/Backwell rail station is not suitable for a substantial increase in numbers of people using it. Backwell Lake and adjacent fields where housing is planned are on a floodplane which floods regularly.			
62855777	J Brooks			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell already has approval for 800 new houses, a 40% increase in the village's size. This level of growth is disproportionate, especially when compared to other villages and towns in North Somerset. Backwell is planned to accommodate 7% of the district's total housing allocation, while larger towns like Clevedon are only expected to take 2%. Such an excessive concentration of new housing in a small village is unsustainable and threatens to overwhelm the community's character and services. The proposed development would also result in the loss of valuable greenbelt and grade 1 agricultural land. This land is currently used for food and grazing, and its loss would undermine both local food security and national government policy on food security ("we must protect our best and most versatile land"). The destruction of these green spaces would have a lasting negative impact on local wildlife habitats and biodiversity, further destroying one of the most nature-depleted countries. There is a significant deficit in local infrastructure, including school places, health services, leisure facilities, plus maintenance and performance of local roads. The Infrastructure Delivery Plan lacks proper analysis, costings, and funding guarantees for essential services and new roads. The area is already prone to flooding, and additional development would likely worsen this, especially around Backwell Common and Backwell Lake, which are already on a floodplain. The sheer volume and pace of growth required, without adequate investment in infrastructure and services, is destabilising and undeliverable. The loss of greenbelt land and high-quality agricultural land, combined with the risk of flooding and uncertainty over infrastructure delivery, makes this proposal fundamentally unsound.			
21472129	Mrs Judith M Brown		Personal	No		No		I wish to object in the strongest possible terms to the proposed further developments proposed for Backwell. The land to the east of Backwell is grade 1 agricultural land, of which there is only 7% in the whole of North Somerset. This should be protected at all costs. In early November 2025, the cross-party Science & Technology Group on Agriculture produced a report stating that we should be producing 30% more of our own food, production has decreased by 1/3 in recent years. Furthermore imports are becoming increasingly vulnerable to climate change and cyber attacks. Farmers should be supported and farm land protected as a matter of priority. The proposed area is extremely prone to flooding. The water table is high as the area is low lying, not being above 50' above sea level at the very highest, and even lower around Backwell Lake. It is a fact that these areas are already waterlogged throughout the winter. The roads are not able to sustain traffic at present, nor is Nailsea and Backwell station, which is inaccessible to anyone with mobility issues or those with young children. The proposed new road, will not ease any problems, as the cost of a bridge over, or a tunnel through the railway embankment is prohibitive. The existing tunnel on the proposed route could only be used as a pedestrian or cycle route, it is too small for vehicular access. The area has no large employers, and therefore is a 'commuter area, so roads and travel hubs are important. The current school places, health and leisure facilities are at capacity, and some in great need of upgrading. The birth rate is dropping – why is all this housing needed, where are the proposed purchasers of these properties coming from? The current developments around the area have empty properties and are not selling at the anticipated rate, why build more to remain empty.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 57940449	I Brown			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I am writing to object to the proposed allocation of Land East of Backwell for around 1,000 homes. Based on both local evidence and my own direct observations, I consider this allocation unsound, unjustified, and harmful to Backwell and the surrounding environment. 1. Green Belt and Grade 1 Agricultural Land This land is part of the Green Belt and includes areas of Grade 1 agricultural soil, some of the most productive farmland in the district. Developing this site would permanently destroy high-quality agricultural land and undermine the Green Belt's purpose of preventing urban sprawl and safeguarding the countryside. 2. No Demonstrated Need, Viability, or Social Cohesion Assessment The Plan provides no needs assessment or viability analysis to justify placing an additional 1,000 homes in Backwell.There is also no social cohesion or community impact assessment, despite the fact that this development would be larger than Backwell's recent combined growth and would fundamentally alter the character and scale of the village. 3. Local Flooding on Backwell Common, Farleigh Road and Surrounding Areas From direct experience living in the area, I have observed regular flooding on: - Backwell Common – with standing water for extended periods after rainfall, especially when the ground is saturated. - Farleigh Road – where surface water often collects and overwhelms drains. - Adjacent fields and footpaths, where groundwater levels rise quickly and runoff flows toward low-lying areas. These problems occur already, without any development. The Local Plan has not presented any site-specific hydrological or flood-risk assessment for Land East of Backwell. Even with SuDS, large-scale development on sloping, naturally water-retaining farmland would significantly increase runoff, reduce natural infiltration, and exacerbate existing flood risk for both current and future residents. 4. Transport and Infrastructure Cannot Cope From daily use of local routes, I know that: - The A370 is frequently congested at peak times. - Emergency service vehicles struggle to use this route when congestion occurs. - Station Road struggles with traffic flows and safety issues even with traffic calming measures that have been implemented over the last few years. - Bus and rail services are already near capacity. - Local schools, GP practices, and utilities are under strain. No clear, funded, or deliverable infrastructure plan has been provided to support the scale of development proposed. 5. Landscape, Rural Character, and Environmental Harm The site forms part of Backwell's distinct rural setting. I regularly walk and use local viewpoints and footpaths, and it is clear that developing this area would: - Remove open countryside, - Sever wildlife corridors, - Erode the village's landscape identity, and - Damage biodiversity that relies on these fields, hedgerows, and habitats. Conclusion - The Allocation is Not Sound The proposal fails the NPPF tests of soundness: - Not justified a lacking need, viability, hydrological evidence, and social impact analysis. - Not effective – no deliverable transport or infrastructure strategy. - Not consistent with national policy – damages Green Belt, Grade 1 agricultural land, and environmental and flood-risk objectives. For these reasons, and based on my direct experience of the area, I strongly urge North Somerset Council to remove the allocation of Land East of Backwell from the Local Plan. Proceeding with this site will cause irreversible damage.			
62849921	A Brown			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I object to the proposed allocation of land East of Backwell in the North Somerset Local Plan. The scale of development is disproportionate, unjustified and unsupported by evidence. Backwell already has more than 800 homes approved, a 40 percent increase for the village. Adding around 1,000 more would result in severe overdevelopment. Backwell is being asked to take 7 percent of the district's housing allocation, far more than any other village and even more than several towns. Essential infrastructure is already under pressure. Local schools, health services and leisure facilities do not have capacity, and there is no secured funding or delivery plan for improvements. The proposed new road will not relieve congestion, and there is no proof that a road under or over the railway is technically or financially viable. No needs assessment, viability assessment or social cohesion analysis has been provided. The site includes Grade 1 agricultural land, of which only 7 percent remains in North Somerset. National policy requires the protection of the best and most versatile farmland to support food security. The development also threatens important wildlife habitats including the Brockley Maternity Roost and the SSSI which are used by rare Lesser and Greater Horseshoe Bats. Flood risks have not been addressed. Backwell Common, Backwell Lake and surrounding fields flood regularly, and further building would worsen this. The proposal would cause the loss of Green Belt and permanently damage the character of the village. The level of growth proposed for Backwell is destabilising, unsustainable and unrealistic to deliver within the plan period. For these reasons I urge that North Somerset Council remove the East of Backwell allocation from the Local Plan.			
62850401	Alistair Brown			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with	No	Unsure	I am writing to object to the proposed allocation of the East of Backwell site for approximately 1,000 dwellings. Having reviewed the Local Plan documents and drawing on many years of personal experience living around Backwell, I believe this allocation is fundamentally unsound, inadequately justified, and would cause lasting harm to the village and its environment. 1. Loss of Green Belt and Best and Most Versatile Agricultural Land The proposed site lies within the Green Belt and contains extensive areas of Grade 1 agricultural land among the most productive soils in North Somerset. Once developed, this resource would be lost permanently.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					national policy			The Green Belt here plays a vital role in containing settlement expansion and preserving the open landscape between communities. Allocating this land directly conflicts with those national-policy purposes. The plan offers no compelling exceptional circumstances to warrant this level of Green Belt erosion or the destruction of high-value farmland. 2. Lack of Evidence on Need, Deliverability, or Social Impact No credible needs assessment, viability testing, or social cohesion analysis has been presented to justify placing a development of this magnitude on the edge of a village the size of Backwell. An additional 1,000 homes would represent an unprecedented expansion—far exceeding recent growth—and would dramatically change the settlement's scale, character, and community balance. Without evidence showing how such a major shift could be absorbed or supported, the allocation cannot be considered justified. 3. Existing Flooding Issues Ignored Living locally, I am well aware of the frequent surface-water and groundwater issues affecting: Backwell Common, where water frequently accumulates and lingers after rainfall; Farleigh Road, where drainage regularly becomes overwhelmed; Surrounding fields, footpaths, and low-lying ground, which often become saturated or waterlogged. These drainage and flooding pressures already pose concerns for residents. Yet the Local Plan provides no detailed, site-specific hydrology or flood-risk assessment for East of Backwell. Development on these sloping, water-retentive fields would inevitably increase runoff volumes, reduce natural infiltration and storage, and intensify risks to surrounding properties and roads—even with SuDS. The omission of proper evidence makes the allocation unsafe and unjustified. 4. Severe Transport and Infrastructure Constraints Through day-to-day travel, it is clear that local infrastructure is already stretched: The A370 regularly experiences heavy congestion at peak periods. Emergency service access is often hindered by traffic build-up. Station Road remains problematic despite recent interventions to manage safety and flow. Public transport—both bus and rail—is close to capacity and inconsistent in reliability. Schools, GP surgeries, and utilities are under strain and have limited ability to absorb significant additional demand. The Local Plan provides no firm, costed, or deliverable infrastructure programme capable of supporting a development of this scale. Without such provision, the allocation is not effective. 5. Damage to Rural Setting, Landscape Character, and Ecology The area east of Backwell contributes strongly to the village's distinctive rural setting. Having walked the local footpaths and viewpoints for many years, it is clear that development here would: Replace open countryside with urban form; Break apart wildlife corridors that rely on connected hedgerows and fields; Reduce habitat quality for local species; Diminish the village's landscape identity and sense of separation from neighbouring settlements. This kind of environmental and landscape impact is inconsistent with national policy objectives around biodiversity, rural character, and environmental protection. Conclusion – The Allocation Is Not Sound The proposed allocation for Land East of Backwell fails multiple NPPF soundness tests: Not justified: missing evidence on need, hydrology, viability, and social impact. Not effective: lacks a realistic, funded plan for delivering essential infrastructure. Not consistent with national policy: harms Green Belt purposes, sacrifices Grade 1 agricultural land, and exacerbates known flood-risk and environmental issues. For these reasons, and drawing on direct local knowledge, I strongly urge North Somerset Council to remove the East of Backwell site from the Local Plan 2041. Its inclusion would inflict irreversible damage on Backwell's landscape, environment, and community.			
51427969	H Brown		Resident	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	This proposed development of 889 new houses is in addition to the 784 already approved - together this would mean complete and unsustainable overdevelopment of the village which hasn't yet felt the effect of the first approved development at Farleigh Fields - it's unlikely the existing infrastructure and services will cope with the new approved developments , let alone another 889 houses . The A370 / Backwell crossroads road situation simply wouldn't cope with all the potential new traffic - especially if the proposed further 582 houses near Backwell Lake were approved - there appears to be no analysis or funding guarantees for the required new road or how it would intersect at the railway line in an area that's already prone to flooding.			
62559809	Simon Buck			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Here's a single-paragraph planning objection that uses all the themes from the document but is fully rewritten and original in tone: ◈ I wish to object to the proposed development on the grounds that it would place an unsustainable level of pressure on Backwell and the surrounding area. The village is already committed to a substantial number of new homes, and adding yet another large tranche would create severe overdevelopment without any corresponding investment in schools, healthcare, leisure facilities, or essential infrastructure. The suggested new road would neither resolve Nailsea's traffic issues nor meaningfully ease congestion on existing routes, and early indications suggest it would be highly complex and costly to engineer, with no assurance that funding is in place. Backwell has been earmarked for a disproportionately high share of North Somerset's housing quota despite offering limited employment opportunities, meaning most residents would still be forced to commute. No assessment of the social impact has been provided, and the plans involve the loss of high-grade agricultural land—of which very little remains—at a time when national policy stresses the need to safeguard food production. Large areas of the proposed site support important wildlife habitats, including rare bat roosts and SSSI-designated environments, and further development would cause irreversible ecological harm. Significant parts of Backwell Common and nearby fields are already susceptible to flooding, and placing new homes and access roads there would heighten this risk. There is also considerable uncertainty over whether the major infrastructure required—particularly the new transport links—can realistically be delivered on time or at all. Government requirements for affordable housing on Green Belt land would further reduce the funds available for vital infrastructure. The volume of growth being proposed over such a short period is, in practice, neither achievable nor sustainable. Finally, the existing railway station remains inaccessible for many residents and is not equipped to operate as a genuine transport hub, making the suggestion of rail-based mitigation unrealistic. For these reasons, the development is unsound, undeliverable, and damaging to the long-term wellbeing of the community.			
39126657	A Burgess			No	• Positively prepared • Justified • Effective	Unsure	Unsure	The plan to build circa 1000 homes on LAND EAST OF BACKWELL is unsound in my opinion for the following reasons: NSC have already approved applications for approximately 800 new homes at Grove Farm, Farleigh Fields and Moor Lane which will increase housing in the village by 40%, already altering the nature and rural feel of the village. To build a further 1000 homes would result in an increase in housing of 80% which is wholly unacceptable given the distinct lack of investment in infrastructure and services (ie schools, doctors, dentists, roads, leisure etc), with no indication of any			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					‣ Consistent with national policy			proposals of future investment. The scale and rate of growth proposed is unsustainable and undeliverable and will have a detrimental effect on the existing community. The allocation of housing for Backwell is disproportionate for the size of the village and a complete over development of a community. The land east of Backwell is GRADE 1 agricultural greenbelt land. To build on this land would be a threat to our food security in the future given that there is only 7% grade 1 agricultural land in North Somerset. The land is currently used for crop production, grazing and leisure. To build on this land would contradict the Governments stated policy of protecting our best and most versatile land. Backwell and surrounding areas are prone to flooding, the proposed development of this land is likely to aggravate the situation causing problems for existing property owners. Under the railway bridge at Chapel Hill the road regularly floods to a height of 3 to 4 feet and cars are often stranded in deep water there. The proposed new road which cuts across Backwell Common and will pass under the railway line would be a highly expensive engineering project and possibly unfeasible! There are no costings or indication of who would fund such a project. It is unlikely to ease traffic on Station Road or at the traffic lights on the cross roads at A 370. If it is the intention for a new road to serve the Nailsea community, it would be sensible to direct it south to join A370 through the new Grove Farm Development in Backwell, recently approved by NSC. The land at Backwell Lake/reservoir, adjacent fields and across the common is a flood plain which floods frequently thus making it unsuitable for road construction. Backwell is not an employment hub and most residents commute. The railway station would not accommodate the substantial increase in passengers numbers expected with the development of a further 1000 homes, yet alone the 800 homes already granted planning permission ! The platforms are short and narrow and there is no access for mobility vehicles or pushchairs south bound. A considerable investment would be required to upgrade the station to increase its capacity to accommodate housing on the scale proposed. If investment was forth coming in the future to upgrade the station, then it would be sensible to widen the bridge at the station to accommodate 2 way traffic on Station Road to ease the flow of traffic and avoid congestion. To increase Backwells housing population by 80% is disproportionate and will affect the communities social cohesion. No needs or viability study has been conducted for an additional 1000 new homes. There will be a loss of habitat for flora and fauna and a threat to our protected bat colonies if this land is developed.			
62811873	R Burgess			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The plan to build circa 1000 homes on LAND EAST OF BACKWELL is unsound in my opinion for the following reasons: NSC have already approved applications for approximately 800 new homes at Grove Farm, Farleigh Fields and Moor Lane which will increase housing in the village by 40%, already altering the nature and rural feel of the village. 18203777	Pete Butt							LAND EAST OF BACKWELL - GRADE 1 GREENBELT I strongly object to the planning proposal to build 1000 new homes on Grade 1 Agricultural land currently used for food crops ang grazing I therefore summarise some of the main reasons why I am not happy with the planning application:-You can’t continue to build houses on good agricultural land. We need our farm land to produce food for the people of this country. Two of the largest wheat exporters Russia and Ukraine are at war. China the largest exporter of wheat in the world is not on good terms with the west. We still have the crisis in the red sea, European farmers are increasing their prices, and we have a massive increase in population meaning more people to feed. The price of food is at an all time high. Prime agricultural land must be protected at all costs to continue to feed the people of this country, once the farmland is built upon it is gone forever. There is only 7% of this high quality Grade 1 Agricultural land left in the whole of North Somerset Government Policy states that “we must protect our best and most versatile land” to safeguard food security, therefore this policy must be upheld or it will be in direct breach and in contradiction of the importance as to why the Government felt it necessary to have this in place. We are all aware Councils across the UK are under a lot of pressure by the Government to build X houses by the year X but in the opinion of many residents a more sensible option would be to build nearer Bristol which will alleviate

Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								any further traffic congestion on the A370 and not destroy precious countryside.			
39326049	Anna Child			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	889 new houses in Backwell would be a net negative for the village. Backwell already has over 800 new houses approved, some of which are currently being built (notably not in line with promised building stipulations about access, damage to existing roads, dust, etc - we have noted the constant chaos caused by the construction that is not held to the standards ostensibly agreed when approved). This 40% increase to the village will lead to total overdevelopment. Backwell is the recipient of a far higher allocation of houses than any other village in the whole of North Somerset. When looking at the growth percentage this is far, far higher than each of the towns. Backwell would take 7% of the entire district's housing allocation, whereas Clevedon only 2%. The Infrastructure Delivery Plan lacks analysis and costings - essential to determine whether this is viable. There is no guarantee of funding for this new road or services, and no development should be agreed without this being set in stone. The proposed new road would presumably also not be held to any stipulations or standards - I have seen no evidence that it will effectively serve traffic between Nailsea and Backwell or relieve congestion on the current roads between the two (Station Rd, Backwell Common and Chapel Hill). It seems utterly unrealistic to engineer the road over or under the railway due to costs and potential physical restrictions. Any reduction of Grade 1 Agricultural Land should be resisted - there is precious little (7%?) of this land left in all of North Somerset. It should not be built on to reach a short-sighted housing target. Government policy is to protect this sort of land to safeguard food security. The proposals completely contradict this stated aim. We are in a climate crisis and food security could become precarious very quickly. It would be disastrous to irreversibly destroy our options for agriculture. There is no needs or viability analysis for an extra 1000 homes. There are not enough school places in our local schools to support these houses, and there has been no evidence of investment in health services or leisure facilities in the years I have lived in Backwell. The question needs to be answered as to what sort of infrastructure would support another 1000 houses and whether or how this could be achieved - not just 'hope for the best'. There is very little employment in Backwell - most residents commute. The bus in rush hour is often full, late, cancelled or infrequent - and only goes to Central Bristol, so understandably most people opt to drive. It is not feasible to assume that over 1000 people would be able to commute to various locations without serious knock-on effects to the traffic and public transport system. The rail station is not fit for purpose as a transport hub - I have relatives that cannot visit due to lack of accessibility (disability and /or young children). Many trains have carriages that don't even reach the platform as it is not long enough. No social cohesion impact assessment has been provided. This is surely relevant. Wildlife habitats, including rare species of bats, rely on the land - their habitats and food would be destroyed leading to further depletion of biodiversity. Flooding is a real, frequent and material concern - not only for residences but for the transport infrastructure (traffic has been held up by flooding more times that I can count). Backwell Common and many other areas are prone to flooding, which would be worsened by more housing. Backwell Lake and adjacent fields are also on a floodplain which floods regularly. More housing and roads being built will exacerbate thi existing problem. To conclude - the vertiginous volume of growth with the required investment into infrastructure, services and environment over such a short period is destabilising, unsustainable and undeliverable. The loss of Greenbelt and high-quality agricultural land will be disastrous along with the increased flooding and inevitable lack of concrete plans and funding for the 'new road' to support the housing.			
51424225	Rebecca J Cox			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell already has over 800 new houses approved which is a 40% increase for the village. If approved our village would no longer a village become a town without the infrastructure needed to support the extra population. The schools and doctors are already full. Backwell does not have local employment for extra population so all these new residents will be commuting on the A370. The new road proposed by the developers only goes as far as Backwell common building over or under the railway would cost millions who will fund this. North Somerset have already said they have no money. The area around the common and railway is subject to frequent flooding. The local wildlife has already been pushed off local fields their habitat is shrinking. This sheer volume of growth with the required investment, damage to green belt agricultural land I feel is destabilising and unsustainable.	Proper consideration of road infrastructure. Backwell is a village. All roads off the main A370 are narrow often not two way throughout and have parked cars from existing houses. The railway station is not fit for a main commuter hub as it doesn’t have disabled access. The trains currently running at peak times are often overloaded who has consulted the rail companies to address this. Proper funding for schools, doctors, green space and upkeep of play areas long term needs to be thought through thoroughly.		
62812353	N Cambourne			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	Backwell already has far too many new houses being built. There is no work here everyone has to commute and the roads are already overloaded. Building on a flood plain is a very bad idea. This application should be rejected.			
44514785	Brian Campbell			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	This is not an environmentally sound proposal. It merely provides houses for people who will commute to the surrounding area. This will increase congestion in the area to the detriment of all. There has already been a very large increase of house building already and it is difficult to believe that there will adequate provision of school places, GPs etc.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
58555681	Cathy Caola			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	There has already been approval for 800 new houses in Backwell, equating to a 40% increase. Backwell is a small village surrounded by Green Belt, agricultural land which needs to be protected. Adding any more houses will make Backwell a town and will stretch its amenities to breaking point. Backwell is allocated a higher number of houses than any other village in North Somerset, and even a higher growth percentage than towns. Backwell is expected to take 7% of the district's housing allocation, compared to Clevedon's 2%. The lack of infrastructure and services will not support an extra 1,000 houses, and the whole character of our small village would be affected immensely. The existing infrastructure is inadequate, yet the proposal of a new road (expensive and possibly unfeasible) would not solve the problem of a potential increase of 2,000 vehicles. Those extra vehicles would be pushed onto Station Road causing severe congestion and may cause drivers to choose Backwell Common or Chapel Hill instead, neither of which is suitable for more vehicles, being narrow lanes with an absence of sufficient passing places. Both of these lanes are part of the Festival Way and are used by many cyclists and walkers. Adding more vehicles would make these roads more dangerous to these road users, particularly to dog walkers and children. Having an exit onto the A370 would cause more traffic problems on an already busy road. The Developers' proposed contribution towards infrastructure and services is inadequate. There is not employment locally for all these residents, so they will be commuting to work. It would be better to build nearer employment hubs thus reducing the emissions produced by commuting. Where are the proposals for the support of this influx to the community? Adding 1,000 houses could add a potential 3,000 people to the area. Are there sufficient places available at the schools and doctor's surgery? How will young people be supported? Building the proposed housing development on a flood plain is only going to increase the risk of flooding. The development would be on Green Belt land, this is not a Brown Field site. It would destroy wildlife habitats, going against the Government's policy of protecting such sites. It would provide a threat to Brockley Maternity Roost and the population of lesser/greater horseshoe bats. Backwell Lake will be threatened. The extra traffic pouring out onto Station Road by the lake will disturb the resident birds. Prime agricultural land will be lost. The Nailsea & Backwell railway station is not fit for purpose as a transport hub. It is not accessible for people with mobility issues, and presents serious challenges for people travelling with young children. All in all, the already approved 800 new houses, plus 1,000 more in the proposed timescale is unsustainable, destabilising, undeliverable and dangerous – to people, wildlife and nature. It is a foolhardy proposal.			
62830049	Lisa Carey			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	As a resident of Backwell with a young family I am particularly concerned with the lack of consideration given in the plan to the pressure that growth of this scale will put on local infrastructure. The road which is mentioned in the plan, does not include analysis or costing and is lacking in detail around who is responsible and when this will be built. It's design is also unlikely to relieve many of the current congestion issues on Station Road. As it stands at the moment an increase in homes on the existing roads would create huge issues for residents and could mean increased use of unsuitable country lanes for traffic, including those on chapel hill and backwell bow which includes local cycle routes, which is potentially dangerous. In addition the plan makes no mention of any of the other vital infrastructure such as schooling, health services or leisure facilities. The services we currently have will not support a further 1000 families and yet the plans do not specifically address this. Lack of consideration on these areas will seriously impact the way of life for existing residents. I can not see that there has been any needs or viability analysis for these extra homes. The volume of growth in Backwell seems disproporiate to the current size of the village in percentage terms. I think the increased homes built here will increase the size of Backwell by 80%. There are surely areas with a more robust infrasture already in place that could support the additional needs of any residents of new housing developments without the expense and disturbance to building these additional services in Backwell. Backwell has already been approved for an additional 800 homes which will increase the size of Backwell by 40%, without any consideration to infrastructure.			
62847617	Sophie Causon-Wood			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell has already increased by 40% through the approval of 800 houses. The village has been disproportionatly targeted in the north somerset area. The approval of more large scale houses does not take into consideration the current infrastructure of the villiage. Schools, health provisions, roads, train and bus services will be overwhelmed having a negative impact on current villagers and new dwellers. The roads are already extremely busy and unable to safely serve the village. I myself have been hit by a vans wing mirror when walking on the pavement as the station road is too narrow for large vehicles passing each other. Had my son been closest to the road his head wouldve been struck. The village has many families with children and young people using these over subscribed roads. There is an environmental impact on wildlife habitats and nature in the areas looking to be developed. We are seeing increasing flooding on Backwell Common, I do not believe this too have been addressed . I do not believe there to be sufficient funding to address future issues or maintain infrastructure. We have already seen so much development in the villiage, even more will have a significantly negative impact on the area, residents and environment.			
62571265	Annabelle Cervantes			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	I am concerned by the amount of building planned in Backwell on top of a lot of building in Nailsea. My main concern is the traffic, as both these areas are surrounded by roads where there are no pavements, narrow enough at points for traffic to stop or reverse to let traffic pass and speed limits (or rather no speed limit) that is dangerous for narrow lanes being used by farmers, horse riders, cyclist and people walking. Since the building in Nailsea I have noticed a significant increase in volume on the roads around where I live, and these sites are not fully sold. At the very least there should be a speed restriction in these lanes to 20 mph We had this in Bristol where I used to live and there were pavements and you did not have to stop to let traffic past.	Restrict speed limits to 20		
39391361	Paul Chaffe			No	‣ Positively prepared	Unsure	Unsure	We do not feel the plan is sound for the following reasons: The size of Backwell is already increasing by 40%. Any additional housing will overdevelop the village, transforming it into a town, but with insufficient facilities to support the increased population. Schools, GP surgeries, Dentists etc will			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					‣ Justified ‣ Effective ‣ Consistent with national policy			be unable to support the higher population. The proposed road across Backwell common will not alleviate traffic problems already evident in the village. There is no funding guarantee from North Somerset (NS) to pay for the construction of a new road. With NS approaching bankruptcy, it seems highly unlikely that this road will ever be built, further aggravating traffic congestion in the village, and along the A370. Backwell Common and land around Backwell Lake frequently flood. This could be exacerbated by the construction of new housing. Despite the fact that Backwell is not a large employment hub, it is being allocated more houses than any other village in North Somerset. Residents will no doubt mostly commute to neighbouring towns and cities for employment, adding to road congestion and pollution. Additionally, Nailsea and Backwell railway station is inaccessible for people with mobility issues, forcing more people to use the road network. The land proposed for development is Grade 1 agricultural land and should be protected to support the nation's food security. It also provides feeding grounds for the Lesser and Greater Spotted Horseshoe Bats. Local wildlife habitat will be lost, reducing the quality of life for existing residents.			
39278241	Ian Chambers			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell already has 800 new houses approved any more would be severe overdevelopment. The proposed new roads have not been properly thought through and would not be effective. The new residents would have to commute for work so houses should be built closer to areas of employment.			
30758785	Steve Chapman			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	We strongly object to the proposals for Backwell in the North Somerset Local Plan 2041 for the following reasons: We accept the need for some additional houses in Backwell, both to help meet government targets and to provide affordable homes for local residents, but believe that growth should be sustainable and sequential, and of a scale that does not overwhelm the already stretched facilities in Backwell. There are already approved plans for about 800 extra houses for Backwell which represents a 40% addition to the village. This is already excessive and any more would be grossly out of proportion to the increases in the rest of North Somerset. The site proposed for 889 houses is currently high quality agricultural land, which is of value in itself to maintain diversity and agricultural employment in the area, it is of value to the character of the village, and development would contradict Government policy to protect our best agricultural land. The UK has a clear ambition to reduce its carbon footprint and North Somerset has declared a climate emergency. We do not accept that the provision of huge new housing developments on greenfield land is in any way compatible with the measures set out in the North Somerset Climate Emergency Strategic Action Plan. The site provides a variety of of valuable wildlife habitats and is within the foraging area of protected bat species. There is nowhere near enough employment in Backwell for the residents of the existing or planned additional houses, so the majority of residents of these houses would inevitably commute into Bristol for employment. We understand that the rail line from Nailsea and Backwell station is at or near capacity and it seems there is no viable way to make the westbound platform fully accessible to users of wheelchairs and pushchairs, so it is inevitable that the majority of these commuter journeys will be by car into Bristol. If additional housing is unavoidable it should be built in the areas of North Somerset where there are employment opportunities. Traffic in Backwell is already frequently heavy and congested. At peak times the queue on the A370 to the traffic lights in the village centre can extend well beyond the edge of the village on the South side in the morning and the North side in the evening. The proposed new road will not reduce the amount of traffic on the A370, but to avoid making the problems even worse, it must be funded and built before any new housing is occupied.			
62850433	Louise Chapman			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Summary grounds for opposing the proposal: Scale and overdevelopment: Backwell already has 800 new homes approved (circa 40% increase); adding a further 1,000 homes would constitute wholesale overdevelopment beyond the village's capacity. Infrastructure shortfalls: There is already a deficit in school places and no corresponding investment in health or leisure facilities; existing services cannot support an additional 1,000 homes. Transport inadequacy: The proposed road would not effectively serve Nailsea's traffic or relieve congestion on Station Road, Backwell Common or Chapel Hill; creating a crossing under/over the railway is likely prohibitively expensive and potentially unfeasible. Rail hub limitations: Backwell station is not fit for purpose as a transport hub, with significant accessibility failures (including no accessible ramp to the south platform), undermining sustainable travel objectives. Lack of evidence and assessments: No needs or viability analysis has been provided for the extra 1,000 homes; Backwell is not an employment hub and most residents commute; no social cohesion impact assessment is available. Conflict with agricultural land protection and food security: The site includes Grade 1 agricultural land used for food crops and grazing, of which only 7% remains in North Somerset; Government policy requires protecting the "best and most versatile land" to safeguard food security, and the proposals would contradict this policy. Funding and deliverability risks: The Infrastructure Delivery Plan lacks analysis and costings, and there are no funding guarantees for the new road or supporting services. Taken together, the scheme amounts to unsustainable, unjustified growth that lacks essential infrastructure, fails accessibility and transport objectives, and conflicts with national policy on protecting high-quality agricultural land.			
62850657	Stuart Chapman			No	‣ Positively prepared ‣ Justified	Unsure	Unsure	Environmental harm and biodiversity: The development would destroy valuable wildlife habitats and further harm biodiversity in one of the world's most nature depleted countries, undermining objectives for biodiversity recovery and net gain. Threat to designated habitats and species: The proposals threaten the Brockley Maternity Roost SSSI; rare Lesser and			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate? 					‣ Effective ‣ Consistent with national policy			Greater Horseshoe bats rely on the land for foraging and would be adversely affected. Conflict with agricultural land protection and food security: The site includes Grade 1 agricultural land used for food crops and grazing; only about 7% of this best quality land remains in North Somerset. Government policy requires protecting the “best and most versatile land” to safeguard food security, and the proposals would contradict that policy. Green Belt, local character and flood risk: The strategic growth location designation raises serious concerns over harm to local character, the loss of Green Belt and high quality agricultural land, and increased flood risk. Transport inadequacy and deliverability risks: The proposed road would not effectively serve Nailsea’s traffic or relieve congestion on Station Road, Backwell Common or Chapel Hill; engineering a crossing under/over the railway would likely be prohibitively expensive and may be unfeasible, with no clear funding or programme to deliver in step with housing. Rail hub limitations: Backwell station is not fit for purpose as a transport hub, with significant accessibility failures (including no accessible ramp to the south side platform), undermining sustainable travel objectives. Infrastructure shortfalls: There is already a deficit in school places and no investment in health or leisure facilities; existing services cannot support an additional 1,000 homes. Lack of evidence and assessments: No needs or viability analysis has been provided for the extra 1,000 homes; Backwell is not an employment hub and most residents commute; no social cohesion impact assessment has been provided. Scale and overdevelopment: Backwell already has 800 new homes approved (circa 40% increase); adding a further 1,000 homes would amount to wholesale overdevelopment beyond the village’s capacity. Funding, analysis and timing: The Infrastructure Delivery Plan lacks analysis and costings, and there are no funding guarantees for the new road or services, creating substantial risk that required infrastructure will not be delivered on time to support the proposed housing. Overall, the sheer volume and speed of growth — without assured, timely investment in infrastructure and services — is destabilising, unsustainable and undeliverable; it fails transport and accessibility objectives, lacks essential evidence, threatens designated habitats and high quality agricultural land, and conflicts with national policy.			
62864897	E Charles		Backwell Dental Care	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	• Government policy emphasises the protection of top-grade farmland to ensure food security, yet these proposals would directly undermine that goal and endanger food security. The area includes Grade 1 agricultural land, which is among the best quality for food production, and only 7% of such land remains in North Somerset. How on earth is it logical to build on this land? • The development would destroy important wildlife habitats alongside the agricultural land. The Brockley Maternity Roost and SSSI, home to rare Lesser and Greater Horseshoe Bats, would be at risk as these species depend on the land for feeding. These areas are home to many native species, of birds and mammals. In the middle of a climate and biodiversity crisis, how can concreting over this be justified? Where will this wildlife go? If the habitat is lost, the biodiversity will be lost and can’t be replaced or adequately mitigated for. There must be more suitable brownfield sites not using prime agricultural land and habitat. • Backwell ALREADY HAS 800 new homes approved representing a 40% increase for the village. This is more than enough and will already overwhelm the limited local services and roads. It is not appropriate for Backwell to take 7% of the North somerset allocation representing an 80% population growth due to all the other reasons mentioned. There is no investment in heath services, or leisure services and the infrastructure is insufficient for another 1000 houses. • The Infrastructure Delivery Plan lacks detailed analysis, costings, and confirmed funding for the new road and essential services. The planned location for new roads and homes, including Backwell Lake (Reservoir) and adjacent fields, is on a floodplain that already floods regularly. The road will not effectively relieve traffic on station road or Backwell common, how will the railway be crossed? This will cause many challenges and funding issues. • Backwell is not a centre for employment, so most residents commute elsewhere for work. Putting more traffic on the roads, more emissions and danger to schoolchildren. There is no analysis to show that Backwell needs another 1,000 homes. • Backwell is not a suitable strategic growth location, it would forever change the character of the village and the loss of wildlife habitat, agricultural land and greenbelt cannot be replaced. • No assessment has been made regarding the impact of these changes on social cohesion within the community. • Backwell Common and nearby areas are susceptible to flooding, a problem that would worsen with more housing. • The scale and speed of the proposed growth, along with the required investment in infrastructure and services, is destabilising, unsustainable, and unlikely to be delivered successfully. There are already traffic jams at busy times especially around school drop off and closure. Further traffic in the village risks children’s safety and safe routes to walk to school. • The railway station is not suitable as a transport hub, being inaccessible for those with mobility challenges and difficult for families with young children. Trains at busy time are already full as is the car park.			
58602305	Christopher Charles		Backwell Dental Care	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Planning Objection I strongly object to the planning applications on this site on the local plan for the reasons detailed below: 1. Increased Traffic. The volume of traffic will be significantly more, not least during the development of the site. The congestion during school pick up and drop off times is already significant, and will only get worse. The A370 is regularly gridlocked at peak times. This will get worse with this development. 2. Road safety. Children walk to school on all the local roads to West Leigh, Backwell Juniors and Backwell Seniors. The A370, Dark lane, Station road and Church lane already do not feel safe at school drop off times, and I do not wish to let my children walk along these roads unsupervised. More houses in the surrounding areas and the wider Backwell area will make these roads more dangerous. 3. Pollution. Increased traffic results in more pollution and poor air quality. Specifically in the area where children walk to the local schools. 4. Massive disruption during building, including noise pollution, pollution with the building materials and the vehicles. 5. Food security – removing arable farming land and replacing with houses reduces the food security two-fold, as there is less food being produced, and more houses consuming food. 6. Increased carbon emissions with more traffic, central heating, electricity and gas usage. 7. Loss of Greenbelt- destruction of habitats, loss of green space, disruption to local wildlife including bats, birds of prey, mammals, birds, insects, lizards. Replacing the local green space with concrete. The Brockley maternity roost and SSSI			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
								with rare lesser greater horseshoe bats relying on this area for food. 8. Increased risk of flooding, the A370 regularly floods already – more rainwater runoff, on an industrial scale with the new development at Grove Farm already will make this many times worse. The new developments planned to the East of Backwell will make this far worse again. 9. Disproportionate building sites already approved, such as Grove Farm. This is already outrageously disproportionate to the size of the existing village, it is appalling that even more sites are even being considered. There is already 800 houses approved, a 40% increase in the village size. This is completely outrageous and totally unfair to the residents of Backwell. Further developments would be completely disproportionate to the community of Backwell. Backwell has been allocated far higher houses than any other village in North Somerset, and higher than any towns! 10. Pressure on local services such as the swimming pool, doctors, and dentists. I work at Backwell Dental Care and a massive influx of new houses would put massive pressure on the availability of dental and hygiene appointments. 11. Confusing and inaccessible nature of the consultation. It was very challenging to find this site to raise my objection. 12. A deficit of school places already in the Backwell schools and surrounding areas. What developments would be planned to alleviate this? 13. Backwell will lose its village character, if it hasn't already after the Grove farm approval. 14. Backwell is a commuter village, very few services are provided in Backwell. It is not an employment hub. There is already limited parking at the station, what will people do when they need to park at the station for a train? 15. No funding guarantees for any infrastructure. In summary, the planned development is disproportionate, dangerous to local residents with traffic, pollution and to local biodiversity. It is detrimental to food security and flood risk, and should be rejected. Christopher Charles			
51240993	William Charnock			No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	This part of the plan seems to consist of over rapid over development combined with destruction of prime agricultural land and loss of the protected and other species which forage and depend on it Consultation is welcome if it is genuine but a rapid increase in the number of dwellings in Backwell is already approved and it will take time for all the existing infrastructure and social adjustments to take place. It would seem prudent to reduce drastically the rate of development of the village beyond the 800 additional houses for which planning permission has already been granted. The rate of proposed development is remarkably high compared with other parts of North Somerset. There are many issues relating to land usage east of Backwell. It is well known that this area consists of the highest quality farmland, that it is prone to flooding and is the foraging ground for rare and protected species of bat not just from the Brockley roost but also from Tyntesfield. I have a summer bat roost in my garden and it is clearly getting less and less use as a result of so much recent development. Owls, buzzards and ravens are becoming rare on Backwell Hill and a number of garden bird species once common eg nuthartch have also disappeared. I do not believe mitigation measures can work with this scale of development The proposal for five hectares of this valuable land to be used for light industry seems inappropriate given the availability of land in Coles quarry for which I understand there is already some planning provision which has not been utilized for years. There is also still some unused space in the Cheston Combe industrial site. If the propose development did go ahead this five hectares would be better employed as protected open space. In short and in summary the development seems unnecessary, destructive of valuable land and environmental assets, and liable to exacerbate existing problems' of flooding and social infrastructural difficulties of absorbing ne w communities. I have touched on aspects of particular concern to me but there many other drawbacks that a and railway station an d the lack of any coherent justoification.			
21308961	P Child		NA	No	• Positively prepared • Justified • Effective • Consistent with national policy	Unsure	Unsure	I am writing to formally object to the proposed development of 889 new dwellings in Backwell. When combined with the 800+ homes already approved (some currently under construction), this represents a massive 40% expansion of the village. This level of growth constitutes gross overdevelopment. Disproportionate Allocation Backwell has been assigned a housing allocation significantly higher than any other village in North Somerset, and even higher than the towns in terms of percentage growth. It is unreasonable that Backwell is expected to absorb 7% of the district's total allocation, while a town like Clevedon is only allocated 2%. Infrastructure and Feasibility The current Infrastructure Delivery Plan is fundamentally flawed. It lacks the necessary costings and detailed analysis to prove viability. Specifically: Roads: There is no guaranteed funding for the proposed new road. Furthermore, I see no evidence that a new road would successfully relieve congestion on Station Rd, Backwell Common, or Chapel Hill. Engineering a crossing over or under the railway line appears financially and physically unrealistic. Current Failures: The current developments in the village are causing chaos, with developers failing to adhere to agreed stipulations regarding dust, road damage, and access. There is no confidence that standards would be upheld for a project of this magnitude. Services: There is no needs analysis for the 1,000+ total new households. Our schools lack capacity, and there has been zero investment in health or leisure facilities during my time here. Sustainability and Transport Backwell offers very little local employment, necessitating commuting. However, the transport infrastructure is not fit for purpose. Rail: The station is not a viable transport hub. It lacks accessibility for disabled users or parents with young children, and the platforms are too short for many trains. Bus: Rush hour services to Bristol are frequently full, late, or cancelled. Traffic: Adding 1,000+ commuters will inevitably deadlock the local area. The suggestion that people will travel by bike or bus is largely a fantasy. Environmental Impact This proposal involves the destruction of Grade 1 Agricultural Land. With only roughly 7% of such land remaining in North Somerset, and amidst a climate crisis, we should be following government policy to protect food security, not concreting over it. Additionally, this development threatens local biodiversity, including rare bat species, and lacks any social cohesion impact assessment. Finally, flooding remains a material concern. Backwell Common, the Lake, and adjacent fields are on a floodplain. Increasing the concrete footprint will exacerbate runoff and worsen the regular flooding that already disrupts local transport. This plan is undeliverable and unsustainable.			
62859969	R Chubb			No	• Positively prepared	Unsure	Unsure	Backwell has already approved 800 new houses on top of the existing c.2,000 houses. This is a 40% increase before any additional sites are added in the proposed Local Plan. Full implementation of the plan would increase Backwell's population by 80% - this is disproportionate.			

Respondent ID	Respondent Name	Agent Name	Respondent Organisation	Consider the plan sound?	The plan is unsound because it is not:	Legally Compliant?	Duty to Co-operate?	Plan is not sound, not legally compliant or not in compliance with the Duty to Cooperate	Suggested modifications	Comments of support	Attachments
					‣ Justified ‣ Effective ‣ Consistent with national policy			Where is the needs and viability analysis for the extra houses proposed in the Local Plan? The additional proposed 1,000 houses at East Backwell would lead to complete overdevelopment on the village with existing roads and infrastructure unable to cope. Backwell is being asked to take 7% of the entire district's housing allocation despite being a village. Clevedon is taking 2% despite better amenities and infrastructure. The proposed road would be at a considerable expense and not affordable by NSC or the developers. It is therefore possibly unfeasible as there are no guarantees that funding would ever be available. The land is also grade 1 agricultural land and there is only 7% left in the county. Government policy states we must protect the best and most versatile land. This is in contradiction to the Local Plan.			
62861825	Helen Chuter			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The additional houses would result in Backwell being completely overdeveloped, nearly doubling the existing housing stock The proposed road would be logistically challenging and costly to build, potentially meaning it being dropped. Even if it were built its unlikely to have a positive impact on traffic flow. There is not enough infrastructure in Backwell to support these houses, ie doctors, schools, sports facilities. Where is the evidence to support the need for these additional houses and they clearly won't be affordable which is what the nation wants. The vast majority of residents commute to work from Backwell, it is not an employment hub so why build more houses here, why not focus on the outskirts of Bristol. The proposed land is grade 1 agricultural land, why on earth would this be built upon given the need to feed ourselves as a country. More food would have to be shipped in creating a carbon footprint greater than would otherwise be the case. Madness. This is in direct contravention of government policy. The land is also rich in wildlife and their associated habits, is this really the best solution and location. The infrastructure solutions are not fully costed and when the developer tries to recover their outlay and profit the chances are that a) the houses will be unaffordable to those most in need and b) of a poor quality to minimise costs and drive profits. Therefore this is not a long term viable solution. To the point of government policy being that 50% of home on green belt land are affordable, this will only incentivise the developer to cut costs both in build quality and provision of infrastructure solutions. That much is obvious.			
62849345	Justin Clayton-Jones			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	Backwell already has 800 new houses approved which is a 40% increase. The additional proposed numbers would lead to complete over development. The proposed road would not effectively serve Nailsea traffic or relieve congestion on station road, Backwell Common or Chapel Hill. Engineering the road under or over the railway would be highly expensive and possibly infeasible. There is a deficit in school places and no investment in health services or leisure facilities. Current infrastructure will not be able to support a further 1000 houses. Backwell's allocation is higher than any other North Somerset village: Backwell's increase is 7% whereas Clevedon's is only 2% - Clevedon has far more infrastructure to support new dwellings. No needs or viability analysis for an additional 1000 houses exists. Backwell is a commuter village, not an employment hub. No social cohesion impact assessment has been provided. The proposed sites will destroy Grade 1 agricultural and grazing land - only 7% of this type of land remains in North Somerset. Indeed, the proposals counter government policy which states that the 'best and most versatile land' must be preserved to sustain food security: the proposal contradicts this. Also, the development will, undeniably, destroy wildlife habitats and harm biodiversity. For example, the proposals threaten Brockley Maternity Roost and SSSI with rare lesser and greater Horseshoe bats relying on the land for food. The Infrastructure delivery plan lacks analysis and costings and there is no funding guarantee for the new road or services.Backwell common and the surrounding area are prone to flooding, a threat which would be aggravated by further housing development. The plans raise huge concern of detriment to the area's character, loss of Greenbelt and high quality agricultural land, risk of flooding and uncertainty over whether the road can be funded or delivered on time to support new housing.Backwell Lake and the surrounding fields are on a floodplain and flooding is a regular occurrence. Government policy requires that 50% of affordable housing is on Greenbelt land but this reduces the funds developers have to contribute towards infrastructure. The sheer volume of growth with the attendant development of services and infrastructure to support it is unsustainable and undeliverable over such a short timeframe. Finally, Nailsea and Backwell Railway station is not fit for purpose as a transport hub. It remains inaccessible to those with disabilities or mobility issues and presents serious challenges when travelling with young children.			
21266721	John Clement		5a, Faleigh Road	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	800 new houses are already approved in Backwell. which is a 40% increase for the village. These additional homes constitutes an over-development. There is already a deficit of school places locally and health services are already pushed. Most Backwell residents commute to work so a development of this scale would cause congestion on the already busy roads. The rail service from the local station is often full to capacity at busy commuting times and the station has accessibility issues. The area is prone to surface water flooding which would be made worse by further development.			
62684289	Karen Clement			No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	The addition of so many more houses in addition to those already approved would overwhelm the existing infrastructure in Backwell. The extra traffic generated by the increased number of commuters (there are no employment opportunities in Backwell) would cause further congestion and misery on our roads. The planned build would be on an area prone to flooding, with water also running off from the A370. More tarmac and hardstanding will make the situation worse for the surrounding area. The area is Grade 1 agricultural land, land which is being slowly eroded by builds such as this. this seems so short sighted when there is so little now left in N Somerset. Once it is gone, it cannot be recovered.			
62554401	Ann Cocks		none	No	‣ Positively prepared ‣ Justified ‣ Effective ‣ Consistent with national policy	Unsure	Unsure	800 new houses have already been approved, which already means a 40% increase in the village. Traffic congestion in the village is is currently bordering on dangerous. Although a new road is apparently "planned" , details re funding and timing are lacking. It is very worrying that there is no detail when it comes to infrastructure. Schools are mentioned but there are no details relating to when and how. The thought of 1000 new houses would lead to possibly 2000-4000 more people in Backwell but there seems to be no infrastructure plan with a funding guarantee. For the plan to be sound it is necessary to have a definite assurance that the proposed road will be in the right place at the right time, that adequate schools will be available at the right time and health care will be available at the right time			
62847521	S Coles			No	‣ Positively prepared	Unsure	Unsure	The proposed plans are totally unacceptable and are unsound for the following reasons: This development is too much, this would increase the size of the village by 40%. This means total overdevelopment. The fabric and the identity of the village would disappear forever. There is already far too much development in Backwell which is negatively affecting the day to day lives of all of us who live here.	Do not proceed with this development. If totally needed, the number of
