Coronavirus Yellow Card reporting site

Report suspected side effects to medicines, vaccines or medical device and diagnostic adverse incidents used in coronavirus treatment to the Medicines and Healthcare products Regulatory Agency to ensure safe and effective use

Find the medicine / vaccine / device you wish to report.

Enter medicine, vaccine or device name [Start report](#)

More information about why to report, what to report, and the information you need to provide to make a report can be found in the [About this site](#) page.

Can't find what you are looking for? You can report on any other medicines, vaccines, devices, defective or falsified products (including fake coronavirus testing kits) via the [Yellow Card](#) website.

VACCINE ADVERSE REACTIONS

COVID-19 Vaccines **Latest news** [See all news](#)

Vaccines are the most effective way to prevent infectious diseases and they save millions of lives worldwide. Like all medicines, vaccines can cause side effects. Most of these

[Coronavirus \(COVID-19\) vaccine adverse reactions](#)

by Brian Gerrish
Thursday, 25th March 2021

The UK Government's COVID-19 vaccination programme is now in full swing and the general public is being bombarded with the official line that to stop the COVID-19 pandemic and regain their freedom, people must be vaccinated. In fact they are told they must be vaccinated twice. Of course the BBC has been one of the strongest repeaters of the official government line, and the [BBC proudly boasted on 23 March 2021](#) [2] that:

Almost 28 million people in the UK have received at least one dose of a coronavirus vaccine - part of the biggest inoculation programme the country has ever launched.

In a race against a faster-spreading variant of the virus, ministers have pinned their hopes of easing a third national lock down on vaccinating as many adults as possible by summer.

Reading the second BBC line, we can see this carefully crafted sentence ramps up the fear, by warning us of "**a faster-spreading variant of the virus**", and drops in hope as in "**hopes of easing third national lock-down.**" Thus in one sentence the BBC suggests to the mind of the reader that to stop a faster spreading variant of the virus and to regain 'normal-life' and freedoms, we must enthusiastically join the government's vaccination programme.

Next the BBC reinforces the "you must be vaccinated" line by targeting elderly people - **those aged 70 and over** - with the idea that they could die - "**these groups account for 88% of deaths so far.**"

The UK government aims to offer a first vaccine dose to about 32 million people in nine priority groups by 15 April.

The programme in England is now inviting those aged 50 and above to book appointments after the first four groups - those aged 70 and over, care home residents, healthcare workers and people required to shield - were offered a jab by mid-February.

These groups account for 88% of deaths so far.

If you are short of time and wish to watch our video analysis of the official MHRA data on Vaccine Adverse Reactions right away then click the video window below. We would like to remind you however, that we have inserted active links to the actual MHRA Adverse Reaction data at the end of this article, and you may wish to revisit this article after watching the video, to see this critical official vaccine data for yourself.

The COVID-19 vaccination consent form above states "**Like all medicines, vaccines can cause side effects. Most of these are mild and short term, and not everyone gets them. Please read the product (vaccine) information for more details on the vaccine and possible side effects by searching Coronavirus Yellow Card. You can also report suspected side effects on the same website or by downloading [the] Yellow Card App.**"

With carefully crafted words, and the obvious application of behavioural psychology, the leaflet leaves the reader with the impression that the vaccine only produces 'mild short term effects', and it reinforces this idea by failing to even mention the long lists of serious side effects which are listed on the MHRA Yellow Card page, but even then, require considerable searching before the direct link to the data sheets can be found.

As the NHS guidance for 'Operational Considerations of Immunisation' states in the second bullet in the image below: "**The 'informed consent' should be recorded (this is a required field on the Pinnacle Point of Care system). The patient should be provided with written information about the vaccination.**"

The image shows two screenshots of NHS guidance. The left screenshot is titled 'Operational Considerations' and contains a bullet point: 'There is no legal requirement for consent to immunisation to be in writing and a signature on a consent form is not conclusive proof that consent has been given,'. The right screenshot is a continuation of the text, discussing decision-making for individuals lacking capacity, best interests, and the role of advocates. Both screenshots have yellow brackets and highlights around specific phrases, including 'The informed consent should be recorded (this is a required field on the Pinnacle Point of Care system). The patient should be provided with written information about the vaccination.' and 'Chapter 2 of the Green Book states consent must be obtained before all vaccines. The guidance in this chapter is based both on the position and the standards expected of health professionals by their bodies.'

From the above there can be no doubt that the NHS knows and promotes that patients should be able to make 'informed decisions' before consent to any medical intervention, including vaccination. Yet it is very clear from those attending vaccination centres that the staff only speak of mild side effects, and do not provide people with the MHRA Yellow Card Adverse Effects data, even though this covers very serious effects including anaphylaxis, clotting, strokes, heart attacks, neurological problems, blindness, deafness and death.

To add to the NHS deception, those receiving a vaccination are only handed the manufacturers vaccine data sheet after they have received the vaccination. Could this be because after they have taken the vaccine very very few people read the manufacturer's data. If they did of course they would read at least some of the serious side effects, and most importantly would be alerted to the additional risks presented by those who have pre-existing medical conditions and / or allergies.

"**What do the public get told then?**", is probably the question that comes to the reader's mind. The answer is not a lot. The NHS has this to say [3]:

The vaccines approved for use in the UK have met strict standards of safety, quality and effectiveness set out by the independent Medicines and Healthcare products Regulatory Agency (MHRA).

Any coronavirus vaccine that is approved must go through all the clinical trials and safety checks all other licensed medicines go through. The MHRA follows international standards of safety.

Other vaccines are being developed. They will only be available on the NHS once they have been thoroughly tested to make sure they are safe and effective.

So far, millions of people have been given a COVID-19 vaccine and reports of serious side effects, such as allergic reactions, have been very rare. No long-term complications have been reported.

We consider the last sentence in the paragraph above to be a deliberately misleading lie, which many would regard as criminal, in that the reality is that a great many people have suffered, and are suffering, very unpleasant and dangerous side effects from the vaccine. In fact all of the adverse side effects stated in the MHRA data base. And again we state here that those side effects include death, heart attacks, abortions, deafness, blindness, clotting, adverse effects of the immune and nervous systems, and many many others.

"**Surely that cannot be true?**" Is perhaps a likely and immediate response from many people who have, to date, only been informed on vaccine matters by the UK Government, NHS, BBC and other mass media and press outlets. Unfortunately it is true, and it is the government's own data that says so. Data which is deliberately hidden from all those who do not search for it.

That is why the UK Column is making the links to the **MHRA Vaccine Adverse Reaction data** very visible and accessible here:
